CONSOLIDATED TRANSLATION SURVEY

PREFACE

This survey is prepared monthly by the Foreign Documents Division, Office of Central Reference, CIA, from lists received through the cooperation of US government agencies and includes translations prepared by such agencies, private industry, universities, research institutions, and commercial translation organizations. It is a compilation of foreign documentary projects completed or started during the preceding month.

Translations are listed by area and subject category. Scientific projects are grouped as a section regardless of geographic area. Title in English, author, foreign language title of source of material, date of publication, and publication identification of the completed project are given when available. Tables of contents of journals translated cover-to-cover are reproduced from the current publications.

Projects in process, i.e., not completed as of the date of this survey, are noted with an asterisk (*), and, when available, a project-control or "in-process" number is noted in parentheses following the title. Certain details may be unavailable on such projects. New projects in process are not listed again until they are completed.

An index to authors of items in this issue is provided at the end of the survey.

INTRODUCTION

IN the present (third) part of this survey we consider the kinetic properties of metals mainly at low temperatures. Here the main consideration, as in the second part,^[1] is devoted to those phenomena and properties which are sensitive to the dispersion law for the conduction electrons. The mathematical apparatus used here is the Boltzmann kinetic equation.

In this part we restrict our treatment to static or quasi-static properties. This permits us, as shown in the first paragraph, to use the "gas" approximation, since the Fermi-liquid interaction drops out of the final formulas.

*This paper is the third part of a survey; the first part was published in U.F.N. 69, 419 (1959), and the second part is U.F.N. 78, 411 (1962) [Soviet Phys. Uspekhi 2, 831 (1960) and 5, 878 (1963)].

The majority of kinetic phenomena are extremely sensitive to the nature of the interaction of the conduction electrons with impurities, with phonons, and with one another. In particular, this interaction dictates the temperature behavior of the kinetic coefficients. The survey does not attempt to give a presentation of the wide range of theoretical material available at present concerning this question. Particular attention is devoted to those regularities and properties which are more or less independent of the character of the interaction (cf. Secs. 5-7, 9). At times in this summary we use the τ -approximation, i.e., the integral collision operator is replaced by the operator of multiplication with a phenomenological constant (the relaxation time τ); this is specifically stated in all cases.

In this part of the survey we restrict ourselves to problems concerned with the computation of the co-

Washington, D.C. 20505

7 September 2004

Ms. Roberta Schoen
Deputy Director for Operations
Defense Technical Information Center
7725 John J. Kingman Road
Suite 0944
Ft. Belvoir, VA 22060

Dear Ms. Schoen:

In February of this year, DTIC provided the CIA Declassification Center with a referral list of CIA documents held in the DTIC library. This referral was a follow on to the list of National Intelligence Surveys provided earlier in the year.

We have completed a declassification review of the "Non-NIS" referral list and include the results of that review as Enclosure 1. Of the 220 documents identified in our declassification database, only three are classified. These three are in the Release in Part category and may be released to the public once specified portions of the documents are removed. Sanitization instructions for these documents are included with Enclosure 1.

In addition to the documents addressed in Enclosure 1, 14 other documents were unable to be identified. DTIC then provided the CDC with hard copies of these documents in April 2004 for declassification review. The results of this review are provided as Enclosure 2.

We at CIA greatly appreciate your cooperation in this matter. Should you have any questions concerning this letter and for coordination of any further developments, please contact Donald Black of this office at (703) 613-1415.

Sincerely,

A handwritten signature in black ink that reads "Sergio N. Alcivar".

Sergio N. Alcivar
Chief, CIA Declassification Center,
Declassification Review and Referral
Branch
