Department of the Navy Operation and Maintenance, Navy

Budget Activity: I Strategic Forces (SUMMARY)

I. Description of Operations Financed.

The Navy's mission in the Strategic Forces program area is to provide an undersea strategic missile launch capability which will ensure that the United States maintains a credible and survivable deterrent to nuclear war. The Navy's strategic deterrent force in FY 1987 consists of thirty-nine nuclear submarines (SSBNs) which provide the launch platforms for the undersea strategic missile system, four submarine tenders, one launch area support ship, related service craft, and three ships chartered from the Military Sealift Command (MSC).

Each alert submarine must be ready on patrol to respond to an operational order. Because of this mission they operate under conditions of complete self-sufficiency, including maintaining only one-way communications. Each SSBN is operated alternately by two crews who must know the status and condition of the submarine and the weapon system at all times.

Readiness of this weapon system must be continuously maintained, and the Joint Chiefs of Staff and the Fleet Commanders have prescribed a program of systematic tests which provide both strategic planners and the operating fleet with a high degree of confidence that predictable numbers of warneads will impact on target. The funding requested in this budget provides the support for the fleet ballistic missile forces to maintain the readiness and reliability required to meet the objectives and to support the testing necessary to determine whether the weapon systems are working as intended. An intensive, collaborative effort is undertaken between the fleet and the supporting complex ashore to demonstrate the ship's capability of sustaining high reliability standards. The result is a closed loop system which is the integral concept behind fleet ballistic missile system operational support.

The program increase of \$306.6 million in FY 1987 reflects two additional SSBNs and one more support ship than in the FY 1986 maintenance and modernization program and increased requirements in FBM Communications and Naval Space Command. In FY 1987 there are six overhauls requested.

Department of the Navy Operation and Maintenance, Navy

Activity Group: TRIDENT Program
Budget Activity: I Strategic Forces

Description of Operations Financed.

The Trident Mission Support Program is dedicated to establishing and maintaining TRIDENT at a high degree of operational readiness. TRIDENT is a three part weapon system comprised of longer range missiles and dedicated weapon support system, a nuclear powered submarine which is more survivable than earlier designs and a life cycle logistic support concept which has been designed to meet TRIDENT's reliability and readiness goals. Through the logistic support systems, which are dedicated to establishing and maintaining a high degree of operational readiness, TRIDENT is achieving an increase in at sea availability over the current POSEIDON force.

The preponderence of funding provides for engineering services and technical support for the TRIDENT submarines. Although a wide range of efforts are comprehended within this request, collectively they provide the means for keeping equipments operating. This includes testing to determine problems, developing corrections and maintaining up-to-date documentation. This type of life cycle logistic support is more disciplined for TRIDENT than for other programs and is the key to maintaining readiness goals. The concept is built on the premise of strict configuration management and pre-planned maintenance work which is accomplished during the ship's refits. The 95 day submarine operational cycle consists of 70 days at sea on patrol and 25 days off patrol. 18 days of the off patrol time are planned to accomplish a refit and incremental cychaul of the ship. After 10 years of operations, an extended availability is planned to accomplish alterations and repairs that are not feasible during the normal 18 day refits.

Support in this activity group provides the detailed pre-planning and engineering necessary to make maximum use of the 25 day off patrol periods. By knowing exactly what configuration and equipments are onboard, how many hours various equipment have been operating, what equipments are scheduled for maintenance removal and repair and other similar data, a specific maintenance plan for each refit can be developed. Thus, when the ship comes in for refit, the repair work has been scheduled, materials prepositioned and the right personnel and equipment are on hand.

Other aspects of the current life-cycle logistic support program include rigid training to ensure crew personnel are familiar with equipment operations, periodic tests to evaluate hardware and system performance, and maintenance of data base information.

こうしょうとう 日本できる こうじょうない

Activity Group: Trident Mission Support (cont'd)

OHIO Class Submarines are currently joining the Fleet at a rate of about one every eight months. The increase in number of ships and refits that will require support from FY 84 through FY 87 is 5 additional ships and 19 more refits. The increase in number of ships and refits results in increased work in maintenance and moderization.

ያኒልችን ሲሆል የእናቸው ያለ ለሚያለው የእናቸው የእናቸው የእናቸው ያለ እንዲያለው እና እና እናቸው ለሚያለው እንዲያለው እና እና

TRIDENT Command and Control System Maintenance Activity (TRICCSMA), a NAVSEA field activity located at Naval Undersea Systems Center, Newport, R.I., provides for the life cycle operation and maintenance of CHIO Class Command and Control System (CCS) equipments and computer software from a total systematic program approach. The subsystems composing the CCS include the following functional areas requiring system assessment:

Command
Sonar
Defensive Weapons
Monitoring
Data Processing
Tactical Navigation
Periscope

Integrated Radio Room
Radio Antennas
Radar
IFF (Identification Friend or Foe)
Interior Communication
Electronic Support Measures
Strategic System Interface

Life cycle maintenance of the CCS begins well in advance of ship construction/delivery in order to establish and maintain computer software and equipment and maintenance baselines through system level status accounting and configuration change management. The OHIO Class Submarine Maintenance Concept requires that such equipment subsystems be supported by subsystem In-Service Engineering Activities (ISEA) as well as equipment vendors even after ship transition to operational status. TRICCSMA is tasked to provide the requisite management and coordination of maintenance support to insure that the objectives of the TRIDENT Maintenance Concept are met. Primary objectives of TRICCSMA are to:

- Deploy and support the CCS operations of OHIO Class Submarines.
- Develop and maintain the CCS Maintenance baselines or OHIO Class Submarines.
- Formulate an upgrade program for the CCS that will correct deficiencies and improve reliability of the system.

The Land Base Evaluation Facility (LBEF) supports TRIDENT I and TRIDENT II efforts. Funding provides installation design for equipment configuration, acquisition of installation materials (cables, trays, pipes), and test procedures for equipment relocation.

Department of the Navy Operation and Maintenance, Navy

Activity Group: Strategic Weapons Systems

Budget Activity: I Strategic Forces

I. Description of Operations Financed.

The objective of Strategic Weapons Systems (SWS) funding is to assure the effectiveness of the strategic force levels defined by the Secretary of Defense. The Joint Chiefs of Staff and Fleet Commands have prescribed a program of systematic tests designed to test the readiness and reliability of crews and equipment and to detect actual or potential degradation of POSEIDON C-4 Backfit, and TRIDENT systems. Strategic Weapons Systems funding provides support for the twenty-eight POSEIDON and C-4 Backfit SSBNs, the seven TRIDENT I SSBNs, strategic weapons systems equipment aboard tenders, and other support ships. Strategic System Project Office (SSPO) is also responsible for all planning and other efforts required for support of the TRIDENT II weapon system currently being developed.

The SSPO has developed an operational support system for strategic weapons systems designed to maintain the readiness and reliability required to meet program objectives and to support the testing necessary to determine whether the systems are working as intended. With this system, the Secretary of Defense, the Chief of Naval Operations and other officials are able to evaluate with confidence the performance of the POSEIDON, C-4 Backfit, and TRIDENT forces and to anticipate problems before they materially degrade that performance. As a result, both strategic planners and the operating fleet have a high degree of confidence that predictable numbers of warheads will impact on target should they be needed.

Strategic Weapons Systems funding provides for the following categories of requirements:

Strategic Weapons Systems Support. A strategic weapons system consists of the launcher, fire control, navigation, test instrumentation, missile, missile checkout, and guidance subsystems. Funding provides support for all subsystem equipments aboard POSEIDON, C-4 Backfit and TRIDENT SSBNs and at shore facilities. Efforts funded include: maintenance for subsystem equipments aboard SSBNs; equipment renewal and updating during overhauls; repair of failed components; logistics control procedures; operational flight testing; support of crew training; technical services required to test, analyze and maintain reliability of the weapons sytems; missile maintenance operations at missile processing facilities; targeting support; and the operating expenses of field activities and headquarters.

Activity Group: Strategic Weapons Systems

I. Description of Operations Financed. (cont'd)

- Surface Support Ships. Efforts funded include engineering services, repair efforts and weapons system overhaul requirements necessary for surface vessels to support the POSEIDON, C-4 Backfit and TRIDENT programs, Surface ships supporting these programs include the USNS REDSTONE (TAGM-20), the USNS RANGE SENTINEL (TAGM-22), and the USNS POINT LOMA (AGOS-2), utilized to gather test data during operational flight tests, and the four tenders which serve as second echelon repair facilities and supply ships for POSEIDON and C-4 Backfit submarines.
- TRIDENT System Support. Provides for TRIDENT systems support costs not uniquely identifiable to the submarine or the strategic weapons system. Specific efforts include: facility planning, industrial engineering, outfitting, equipment installation and checkout, and other efforts required for development and activation of the Naval Submarine Base, Kings Bay; operation and maintenance of the TRIDENT Logistics Data System; TRIDENT training support, including support of training hardware, software and curricula at the existing TRIDENT Training Facility, Bangor and system design and hardware/software acquisition and planning for the TRIDENT Training Facility to be located at Kings Bay; development and implementation of an integrated TRIDENT Logisitics support assessment system; TRIDENT program management support; and the operating expenses for the TRIDENT Refit Facility and TRIDENT Training Facility at Kings Bay.

Department of the Navy Operation and Maintenance, Navy

Activity Group: FBM Snip Operations Budget Activity: I - Strategic Forces

I. Description of Operations Financed.

This program provides a fleet of 39 Strategic submarines as the launch platform for the undersea strategic missile system. The submarines together with four submarine tenders, one launch area support ship, related service craft, and three chartered ships are operationally supported in this program. Operational expenses include:

<u>Fuel</u> - includes ship propulsion fuel to operate the main plant/engines of the conventionally powered ships, auxiliary equipment, and small boats, and small quantities of fossil fuel used in auxiliary diesel engines of nuclear submarines. The major portion of fuel is used by the tenders while in port to support ships' power and heat needs, as well as hotel services to submarines that are moored alongside during periods of intermediate maintenance.

<u>Utilities</u> - includes the cost of steam, electricity, water, sewage treatment and other utilities (excluding telephone and garbage removal) incurred by FBM submarines and support ships while in port.

NO TO SELECTION OF THE PROPERTY OF THE PROPERT

<u>Supplies and Equipage (S&E)</u> - includes expenses of repair parts and other operating target (OPTAR):

Repair parts - include all repair related consumables required to accomplish organizational level equipment maintenance. Organizational level maintenance is that corrective and preventive maintenance accomplished by the ship's crew.

Other operating target (OPTAR) - includes administrative and housekeeping items; items having a limited life such as lubricants, boiler compound and bilge cleaner; devices such as power tools, office machines, duplicators; General Purpose Test Equipment (GPETE); Automated Data Processing (ADP) requirements; the cost of tugs, pilotage, and other related services provided by commercial or other non-naval forces; and the cost of material purchased for medical and dental purposes.

Leaseback (Charter) - includes two FBM cargo ships (T-AK) and a Range Instrument ship (T-AGM) leased from the Military Sealift Command (MSC). The T-AKs provide regularly scheduled service to the FBM replenishment sites in Holy Loch, Scotland, Charleston, South Carolina and Kings Bay, Georgia. The T-AGM provides range safety (destruction) tracking, surveillance, communication and other services, such as monitoring the demonstration and snakedown operations of new SSBNs, as well as monitoring firings following SSBN overhaul. Costs include maritime crew salaries, fuel, ship repairs, supplies and equipage and administrative expenses.

Activity Group: FBM Ship Operations (cont'd)

Department of the Navy Operation and Maintenance, Navy

Activity Group: FBM Ship Maintenance Budget Activity: I Strategic Forces

I. Description of Operations Financed

This program funds depot and intermediate level maintenance and modernization, initial outfitting and associated technical support for the strategic forces as follows:

Regular Overhaul of the ship is that maintenance performed by the shipyards on material requiring major overhaul; or complete rebuild of parts, assemblies, subassemblies, and end items; and correction of all discrepancies found during pre-overhaul tests and inspections or developed from maintenance history analysis. The repairs restore the ship, including all operating subsystems which affect safety or current combat capability, to established performance standards. Depot level repairs for the family of detection and tracking (unique) SONARS installed on SSBNs includes overhaul, refurbishment, and certification of SONARS and interface equipment.

Restricted and Technical Availability (RA/TA). A Restricted Availability (RAV) is for the accomplishment of specific items f work by a repair activity, normally with the ship present, during which period the ship is rendered incapable of fully performing its assigned mission and tasks due to the nature of the repair work. A Technical Availability (TAV) is for the accomplishment of specific items of work by a repair activity, normally with the ship not present, during which period the ship's ability to fully perform its assigned mission and tasks is not affected by the nature of the repair work. RA/TA repairs include voyage repairs, selected restricted availabilities, repairs during Post shakedown availabilities for new units, and miscellaneous repairs.

Fleet Modernization. The strategic forces portion of the Fleet Modernization Program provides for the modernization of the POSEIDON and TRIDENT submarines, FBM submarine tenders and strategic support ships. It funds the preliminary design, preparation of blueprints and associated documents, installation of equipment, and updating of ship records. Installation is accomplished during overhaul, at a forward site, or in conjunction with a restricted or technical availability.

Initial outfitting provides initial outfitting and allowance support for active fleet strategic force ships, supporting ships, and craft. Initial outfitting and allowance requirements are provided for stock-funded expense type material, spares, repair parts, special tools, shipboard equipage allowances and listings, and follow-on equipment improvement programs.

Activity Group: FBM Ship Maintenance (cont'd)

I. Description of Operations Financed (cont'd)

Intermediate Level Maintenance is that maintenance which is normally performed by Navy personnel on tenders and repair ships, or at Fleet support bases. It normally consists of calibration, repair, or replacement of damaged or unserviceable parts, components, or assemblies; the emergency manufacture of unavailable parts; and providing technical assistance to using organizations. IMAs are assigned to repair and test weight handling equipment, repair periscopes, electronic equipment and electric motors, overhaul diesel engines and provide such services as printing, photography, optical repairs, engraving, canvas work, strainer shield manufacture, and certain preventive maintenance actions. The principal components of the Fleet Ballistic Missile Force IMA establishment are the submarine tenders and the TRIDENT shore based facility at Bangor, Washington.

Technical and Engineering Programs provide necessary support for submarines and SONARS subjected to longer operational intervals by the Engineered Operating Cycle (EOC) program.

<u>Inactivations</u> provides funds to defuel and dismantle POLARIS submarines for various reasons including compliance with prevailing arms limitation agreements.

The FY 1987 program increases by two SSBN overhauls, one support ship overhaul, and increased support required at the TRIDENT Refit Facility at Bangor, Washington.

5. Program Decreases

-25,114

	er Program Decreases in FY 1987	(-25,114)
1)	Reduction for fewer Post Shake-	-843
	down Availabilities.	
2)		-5,963
	overhaul repairs and modernization.	
3)	Reduction in Ship IMA material cost	-2,537
	to support in-house workload re-	
	quirements based on quality im-	
	provement techniques and lower	
	workload requirements.	
1)	Reduction in Design Services	-4,496
	Allocation program requirements	
	due to smaller FY 1988 and FY 1989	
	strategic force modernization	
	programs.	
5)	Reduction of SSBN package alteration	-2,404
	funding requirements.	
6)	Elimination of two separte funding	-1,160
	line requirements, type 15D MOD 1 C	
	periscope and SNAP I, as strategic	
	force installations complete in	
	FY 1986.	

Activity Group: FBM Snip Maintenance (cont'd)

B. Reconciliation of Increases and Decreases (cont'd)

7)	Miscellaneous decreases for: Submarine Battery Renewals (-858)	-2,808
	Emergent Service Craft Support (-35)	
	Steam Generator cleaning/inspection (-1,915)	
8)	Decrease in requirements for Classic	-1,836
	Wizard and Pen and Ink outfitting	
	changes.	
9)	Decrease in operational engineering	-2,726
	services resulting in decrease of	
	7.5 operational sonar years.	
10)	Savings attributable to more efficient	-341
	and economical execution of workload	
	experienced from waivers of statutory	
	end strength ceiling in FY 1987.	

6. FY 1987 President's Budget Request.

\$1,115,142

語の方式のは、日本の方式の方式の一種の方式の方式を含ま

III. Performance Criteria and Evaluation

A. Ship Overhauls

The following depicts the regular overhaul program for fiscal year 1985, 1986 and 1987. At Congressional direction, the budget request reflects funding for long lead time material for public starts and funding to completion of all public and private overhauls in the induction year.

	FY 1985		FY 1986		FY	1987
	Ships	\$M	Ships	\$M	Ships	\$14
Ship Type						
SSBNs	4	547.0	3	382.2	5	619.6
Tenders	1	28.5			1	23.9
Advance Funding						
Public Shipyards		24.4		0		0
Private Shipyards Public/Private		0		0		0
competition		Э		60.2		61.0
AERP/PERA*		11.9		8.1		6.6
Total Program	5	611.8**	3	450.5	6	711.1

^{*} Advanced Equipment Repair Program/Planning, Engineering Repair and Alteration represents preoverhaul effort/repairs accomplished outside the shipyard facilities and directly funded by the customer.

^{**} Includes \$45.1 million unobligated for completion of work begun in FY 1985.

LIBUT/0

Activity Group: F8M Snip Maintenance

III. Performance Criteria and Evaluation (cont'd)

B. Restricted and Technical Availability. The resources required for voyage repairs are based on historical experience for each ship type and number of ships. Resources for planning availabilities are based on the schedule in each category. A summary of requirements follows:

	FY 1985		FY 1986			1987
Type of Repair	Ships	\$M	Ships	\$M	Ships	<u>\$M</u>
Voyage (ship yrs) Battery Renewals Selected Rest. Avail. Habitability Impro. Post Shakedown Avail. Service Craft Ovhl Misc. Availabilities	41.3 5 4	15.8 2.2 27.9 4.0 16.5 15.5	42.8 5 2 2 7	13.0 2.3 24.6 2.7 1.7 26.0 9.6	42.9 3 7 1 6	13.0 1.4 49.3 2.9 .9 21.7 9.3
Total		81.9*		79.9		98.5

* Include \$13.6 million unobligated for completion of work tegun in FY 1985.

		FY 1985	FY 1986	FY 1987

Department of the Navy Operation and Maintenance, Navy

Activity Group: Communications Budget Activity: I Strategic Forces

I. <u>Description of Operations Financed.</u>

The Fleet Ballistic Missile Ship/Shore Communication system provides support for operational and newly-introduced communications systems for the FBM forces. The program encompasses High Frequency/Very Low Frequency/Low Frequency broadcast subsystems developed to provide improved reliability and the certainty of reception of messages from the National Command Authority to deployed FBM submarines, secure ship-to-shore communications, a method of communicating the loss or disability of a submarine to shore locations and a continuing evaluation program which ensures the effectiveness and readiness of the various systems. This program provides funds for engineering technical services and maintenance of deployed equipments and systems, as well as shore receiver sites. Shore transmitting and receiving sites are operational 24 hours a day.

Airborne Communication maintains a continous airborne communications coverage for Fleet Command and Control as an integral part of national defense strategy in support of world wide retaliatory forces. Operations financed in this program include aircraft operating costs and aviation TAD. Current activity within this program provides synchronized low frequency spectrum communication coverage without interruption to deployed strategic forces. Maintenance and coverage requires airborne on-station relief with aircraft flying rotational patterns that utilize foreign and domestic air fields. To preclude interrupting coverage, a back-up aircraft and crew is positioned in a ready status. TAD funds are required to support travel requirements associated with operations, training and administrative travel.

II. Financial Summary (Dollars in Thousands).

A. Sub-Activity Group Breakout.

Department of the Navy Operation and Maintenance, Navy

Activity Group: Naval Space Command Budget Activity: I - Strategic Forces

I. Description of Operations Financed.

The Naval Space Command (NAVSPACECOM) Dahlgren, Virginia, supports naval space policy and strategy by providing direct support to fleet units worldwide through integrated control of naval space programs. The Command coordinates Navy-wide operational space resources and personnel required to fulfill Fleet missions. While reflecting the Navy's reliance on space for maritime communications, navigation, environmental prediction and surveillance, it also provides an organizational structure for effective space coordination with other Department of Defense (DoD) elements. NAVSPACECOM has been designated as the naval component of the U.S. Space Command which was established on 23 September 1985.

NAVSPACECOM commands the Naval Space Surveillance System (NAVSPASUR) and the Navy Astronautics Group (NAVSTROGRU).

NAVSPASUR operates a large continuous wave radar system to detect and track satellites. Evaluated satellite information from this system supports over 600 activities, consisting of all fleet units, various naval shore installations, other DoD activities and Defense contractors, and other departments of the Government. Data provided includes satellite overflight alerts; radar pointing angles; satellite ephemeral predictions; orbital elements (for input into shipboard computers); look angles; orbit breakup fragments and "problem" satellites; and uncorrelated detection data. Primary mission for Fleet support is vulnerability data for United States Navy and Marine Corps operating forces. NAVSPASUR, as a force assigned to U.S. Space Command, provides 75% of the space surveillance data for the space object catalog maintained at the Space Surveillance Center (SSC) located at the Cheyenne Mountain Complex in NAVSPASUR is also designated as the Alternate Space Surveillance Center (ASSC) with a backup control function for the entire Space Detection and Tracking Surveillance System (SPADATS). In the event of a failure at SSC, HAVSPASUR provides all support including command and control for each SPADAT sensor and maintains the space object catalog for the SSC.

Navy Astronautics Group (NAVASTROGRU) maintains and operates astronautic systems, including spacecraft and ground based components and subsystems, to fulfill naval and national requirements. The Navy Navigation Satellite System (NNSS) is the major operational space system to support navigation requirements of all Fleet units. Primary mission Fleet support is provided to Fleet Ballistic Missile (FBM) submarines, which impose the most stringent navigational accuracy requirements on NNSS. Expanded roles for NAVASTROGRU in spacecraft management include upgrade for Extremely High Frequency (EHF) operations support and use of existing ADP capabilities to obtain geolecation of Radio Frequency Interface (RFI).

Activity Group: Naval Space Command (cont'd)

Description of Operations Financed (cont'd)

Naval Space Command (NAVSPACECOM) provides around-the-clock operational Fleet support and operational management of communications satellite capability for Fleet communications. During FY 1987, NAVSPACECOM will also assume responsibility for the Fleet Satellite Extremely High Frequency Program (FEP) and its operations centers (FEPOCs).

Additional responsibilities include operational management of Relocatable Over the Horizon Radar (ROTHR) and Tactical Exploitation of National Capabilities (TENCAP) as well as support for several Naval compartmented projects.

Activity Group: Command & Staff Budget Activity: I Strategic Forces

I. Description of Operations Financed.

The purpose of this program is to provide the Fleet operational support required to permit Fleet Ballistic Missile (FBM) submarines to carry out their mission. Support provided includes material control and supply support, fleet temporary additional duty (TAD) for FBM crew rotations between continental United States and overseas sites and for crew training, and use of the Atlantic Underwater Test and Evaluation Center (AUTEC).

The submarine squadron and group commander staff requirements are also included. The staffs' mission is to operationally direct and administer material and logistic support and TAD.

The AUTEC range is used to conduct torpedo, Harpoon and Tomahawk proficiency firings, crew qualifications, and to test and certify shipboard weapons systems. The range is operated and managed by the Naval Underwater Systems Center (NUSC). Requested funds represent the direct costs for support of AUTEC range, open ocean firings, torpedo retrievals and post firing evaluations.

Department of the Navy Operation and Maintenance, Navy

Activity Group: Maintenance of Real Property

Budget Activity: I Strategic Forces

I. Description of Operations Financed.

This program provides maintenance, repair and minor construction for all buildings, structures, grounds and utility systems at strategic submarine bases and the Naval Space Command to permit assigned forces and tenants to perform their missions.

The major elements of this program are:

- o Facilities Maintenance finances scheduled, day-to-day recurring maintenance, and emergency service work needed to preserve facilities.
- o Major Repairs provides major repairs necessary to bring existing facilities into adequate condition to support assigned missions.
- o Minor Construction finances the erection, installation or assembly of real property facilities; the addition, extension alteration, conversion or replacement of existing real property facilities; the relocation of real property facilities; and the installation of equipment which becomes part of a facility.

Department of the Navy Operation and Maintenance, Navy

Activity Group: Base Operations Budget Activity: I Strategic Forces

I. Description of Operations Financed.

This program group provides the base support services and material required at strategic submarine bases and the Naval Space Command to permit assigned forces and tenants to perform their missions.

The major elements of this program are:

- o <u>Base Communications</u> Includes costs for administrative telephones, telecommunications centers, industrial security networks and paging networks.
- o <u>Utility Operations</u> Includes operating expenses for purchased electricity, electricity generating plants, purchased steam and hot water, heat plants, utility distribution systems, waste systems, air conditioning and refrigeration plants.
- o <u>Personnel Operations</u> Support required for personnel related functions include expenses for:
 - Bachelor Housing Operations and Furnishings provides support for the operation of barracks and the purchase and maintenance of personnel support equipment related to this housing.
 - Other Personnel Support provides for mess halls, sales activities, laundry and dry cleaning facilities.
 - Morale, Welfare and Recreation provides authorized appropriated fund support for shore based recreation activities.
 - Station Hospitals, Medical and Dental Clinics direct and indirect health care costs for Health Care Facilities not under the financial control of the Navy Medical Command.
 - <u>Human Goals</u> provides support for programs which focus on improving organizational and individual effectiveness and the administrative support of the Alcohol and Drug programs.
- o Base Operations Mission Support for those Base Operations functions which are required in direct support of the mission of the base. For example, Fleet Training Support, Logistics Support, etc. Expenses are included for the following functions:

I. <u>Description of Operations Financed (con't)</u>

Retail Supply Operations - In addition to standard supply functions, this item includes the procurement, receipt, storage and issue of bulk liquid fuel, including operating aircraft fuel servicing facilities. Additionally, waterfront operations such as handling incoming and outgoing cargo and loading/unloading live ammunition onto and from combatant vessels are included.

- Maintenance of Installation Equipment provides for maintenance of major shore based equipment including: service and miscellaneous craft, construction equipment (non-deployable), weapons, electronics, electronic engineering, and fleet moorings.
- Other Base Services provides for the maintenance and operation of vehicles/other transportation equipment, port services (includes navigational assistance to ships, operation of service craft, degaussing operations, and oil spillage cleanup).
- o <u>Base Operations Ownership</u> Support required at shore bases regardless of type of mission being performed which must be sustained to have a functioning base. Expenses are included for the following functions:
 - Other Engineering Support Public Works Department Administration, engineering services, custodial services, refuse/garbage collection and disposal, snow removal, rental and leasing of real property, and fire protection and firefighting for Nav 1 activities and their tenants.
 - Administration provides support related to financial/resource management, civilian manpower management, and maintaining military personnel records.
 - Automated Data Processing provides analysis programming, equipment rental, operations and maintenance, contractual services and supplies.
 - Hazardous Waste Material Handling includes personnel, supplies and training associated with the identification and disposal of hazardous wastes.
 - Audiovisual provides supplies and services required for audiovisual support.
 - <u>Physical Security</u> provides shore base physical security.

Department of the Navy Operation & Maintenance, Navy

Sudget Activity: II - General Purpose Forces (Summary)

I. Description of operations financed.

, ram ains

The Navy's mission in General Purpose Forces to provide combat ready fleet forces capable of conducting strike operations to ensure control of the sea and air in the event of war. This program includes 499 general purpose snips; 3,489 average operating aircraft, and a network of shore installations and commands. These forces, operating under the control of the unified and specified commanders, deploy to the Indian Ocean; northern, eastern, and western Pacific; north Atlantic; central and eastern Mediterranean; Caribbean and Central America regions.

9-31 1-4-1 Assigned general purpose ship forces include 14 aircraft carriers, 3 battleships, 199 combatants (cruisers, destroyers, and frigates), 102 submarines, 60 amphibious ships, 11 patrol and mine warfare ships, 57 mobile logistic forces, and 53 support forces.

During FY 1987, the ship operations program supports an increase of 13 new ships. Increases in the conventionally powered fleet include 3 TICONDEROGA class guided missile cruisers, 2 PERRY class guided missile frigates, 1 dock landing ship, and 2 mine countermeasure ships. The nuclear powered fleet increases by 4 nuclear attack submarines of the 688 class and 1 CVN aircraft carrier. The FY 1987 operating tempo is level for non-deployed and deployed at 29 and 50.5 days per quarter, respectively.

The General Purpose Forces flying hour program provides 1,479 thousand hours to allow combat aircrews (both Navy and Marine) to maintain proficiency to conduct operations at 87% Primary Mission Readiness (PMR), including 2% simulators. PMR represents the flying hours available to keep the crews qualified to perform their primary mission in assigned aircraft. The program also includes flying hours for aircrew training in the Fleet Readiness Squadrons (FRS) and fleet air support operations.

The Ship Maintenance and Modernization Program represents a major expense of this budget activity and provides for regular overhauls, alterations, non-scheduled repairs, intermediate maintenance, outfitting, berthing and messing, and technical support for the naval forces. The \$5.3 billion programed in FY 1987 provides major overhauls for 31 ships, including 1 aircraft carrier, 8 submarines, 15 surface combatants, and 7 other ships to

restore the ships to established performance standards; restricted and technical availabilities which provide shorter duration depot repair periods and voyage repair support to operating units; material required to perform prescribed intermediate level maintenance; modernization which includes design and installation of new equipments or systems to enhance capability or effectiveness of major combat systems, communications and other mission-essential ship systems during overhaul and emphasizes upgrading defensive and offensive capabilities, combat systems, detection sonars and weapon systems to improve combat readiness; technical support to monitor ships for which overhauls cycles have been extended under the Engineered Operating Cycle (EOC) program and for upgrading of ships and ship equipments; associated costs for initial outfitting of ships' repair parts and equipment; and required berthing and messing for crews during major overhaul.

The Base Operations and Maintenance of Real Property programs provide support services and maintenance, repair, and minor construction for a world-wide complex of shore installations required to support fleet operational units. These installations encompass air facilities, ranges, naval stations, and support installations such as island facilities at Diego Garcia, Indian Ocean Littoral, and NATO Infrastructure costs associated with the Navy's use of NATO facilities.

The balance of this budget activity pays the operations costs of special combat forces, mobile construction battalions, support of unified and operational commands, ship and aircraft support programs such as travel for fleet personnel, undersea surveillance, and the cruise missile program.

Department of the Navy Operation and Maintenance, Navy

Program Package: TACAIR/ASW

Budget Activity: Ii General Purpose Forces

I. Description of Operations Financed.

This program provides funds for Navy/Marine Corps Tactical Air (TACAIR) and aviation Anti-Submarine Warfare (ASW) forces at a level of readiness which will enable them to perform their primary mission as required in support of national objectives. Tactical squadrons conduct strike operations against a wide range of threats identified in the national strategy and provide long range and local protection against airborne and surface threats. Anti-Submarine Warfare Squadrons locate, destroy and provide force protection against sub-surface threats, and conduct maritime surveillance operations.

Aviation Intermediate Maintenance Department's (AIMD's). This program funds the pay of civilian personnel and day to day operations at the AIMD's.

Primary Mission Readiness (PMR). The Department's peacetime goal for PMR is 88% (including simulators). The FY 1985 thru FY 1987 PMR levels are 87% for all years, including a 2% simulator contribution. Deployed crews and crews in workup receive 100% PMR, while non-deployed crews fly at reduced levels. Funds requested include the cost of petroleum, oil, and lubricants (POL); organizational and intermediate (O&I) maintenance, squadron supplies, and Aviation Depot Level Repairables. The cost per operating hour for each type/model aircraft is based on actual experience over the previous 18 months.

Department of the Navy Operation and Maintenance, Navy

Program Package: Fleet Air Support

Budget Activity: II General Purpose Forces

I. Description of Operations Financed.

This program provides funds for those support functions necessary to achieve and maintain the required operational capabilities of fleet squadrons, as follows:

- Flying Hours. Provides flying hours for electronic warfare (EW) services, combat support aircraft, ship and shorebased air logistic support, drug interdiction support and special test and evaluation support. Funds requested include the cost of petroleum, oil, and lubricants (POL); organizational and intermediate (O&I) maintenance, aviation depot repairables, and squadron supplies. The cost per operating hour for each type/model aircraft is based on actual experience over the previous 18 months.
- o Air TAD. Funds for Temporary Additional Duty requirements in support of operational missions of TACAIR/ASW and other support squadrons including transportation, per diem and miscellaneous expenses.
- Other Aircraft Support. Includes costs not specifically identifiable to the Flying Hour Program. For example, Individual Material Readiness List (IMRL) Outfitting Funds are used to finance initial issues of Ground Support Equipment. These items are used by aviation activities to perform organizational and intermediate levels of aircraft maintenance. The activities' IMRL is a tailored allowance list which is updated annually to support modified equipment or the introduction of new or addition aircraft/system. Also, the operation and maintenance of drones, transportion of squadron supplies/equipment during squadron rotations are included in this activity group.

Department of the Navy Operation and Maintenance, Navy Exhibit OP-5

Activity Group: General Purpose Ship Operations Budget Activity: II General Purpose Forces

I. Description of Operations Financed

This program provides resources for operating tempo, organizational level repairs, training exercises and associated support required to continuously deploy fully combat ready ships in support of national objectives and to ensure control of the sea.

The General Purpose Naval Force is comprised of 499 units, including 14 aircraft carriers, 3 battleships, 199 surface combatants, 102 submarines, 60 amphibious forces, 11 patrol and mine warfare types, 57 mobile logistic and 53 support forces. Funding provides fossil fuel, utilities, supplies and equipage (S&E), nuclear material consumption and nuclear core reprocessing and charter of lease back units, as follows:

Ship's Fuel - includes ship propulsion fuel to operate the main engines of the conventionally powered ships, auxiliary diesel engines of nuclear vessels, auxiliary equipment and small boats.

Ship's Utilities - includes the cost of steam, electricity, water, sewage treatment and other utilities (excluding telephone and garbage removal) incurred by active fleet ships and certain centrally managed service craft while partially or totally "cold iron" in port.

<u>Supplies and Equipage (S&E)</u> - includes repair parts and other operating target costs:

Repair Parts (organizational maintenance) funding provides parts and repair related consumables required to accomplish organization level equipment maintenance. Organizational level maintenance is that corrective and preventive maintenance accomplished by the ship's crew. This is the lowest level of maintenance achievable, is cost effective in that ship's force perform the repairs, and is directly related to readiness of the operating units.

Other Operating Target (OPTAR) funding includes administrative and housekeeping items; and items having a limited life such as lubricants, boiler compound and bilge cleaner; equipage items, such as damage control pumps and blowers; lapor savings devices such as power tools, office machines, duplicators; general purpose test equipment; Automated Data Processing (ADP); the cost of tugs, pilotage, and other related services provided by commercial or other non-naval forces; and the cost of material purchased for medical and dental purposes.

Activity Group: General Purpose Ship Operations

Description of Operations Financed (con't)

Leaseback (Charter) includes costs associated with leasing stores ships (TAFS) which provide dry cargo resupply for ships on station in operating areas, oilers (TAOs) which provide complete replenishment of petroleum products at sea, ocean tugs (TATFs) which operate as units of the Mobile Logistic Salvage forces and take-in-tow Navy ships which have battle damage or are otherwise inoperable, and the ammunition ship (TAE) which provides rapid transfer of missiles and other munitions to ships alongside or with helicopters. Leaseback costs include maritime crew salaries, fuel, ship repairs, supplies and equipage, conversion as applicable, and administrative expenses. Other charter services include leased tanker support for forward deployed units, barge rental to support fleet operations, deep submergence support and lease of commercial tug support.

Nuclear Material funding provides reimbursement to U.S. Department of Energy ($\overline{D0E}$) for consummed nuclear material and cost of reprocessing expended nuclear cores.

Department of the Navy
Operation and Maintenance, Navy

Program Package: Ship Maintenance and Modernization

Budget Activity: II General Purpose Forces

I. Description of Operations Financed.

This program funds depot and intermediate level maintenance and modernization, initial outfitting and associated technical support, for the General Purpose Forces as follows:

Regular Overhaul is that maintenance performed by the shipyards on material requiring major overhaul, or complete rebuilding of parts, assemblies, subassemblies and end items, and correction of all discrepancies found during pre-overhaul tests and inspections or developed from maintenance history analysis. The repairs restore the ship, including all operating subsystems which affect safety or current combat capability, to established performance standards.

Restricted and Technical Availabilities (RA/TA). A restricted availability (RAV) is for the accomplishment of specific items of work by a repair activity, normally with the ship present, during which period the ship is rendered incapable of fully performing its assigned mission and tasks due to the nature of the repair work. A technical availability (TAV) is for the accomplishment of specific items of work by a repair activity, normally without the ship present, during which period the ship's ability to fully perform its assigned mission and tasks is not affected by the nature of the repair work. RA/TA repairs include voyage repairs, selected restricted availabilities, phased maintenance availabilities, service craft overhauls, repairs during post shakedown of new units, interim drydockings, battery renewals and various other repairs.

Ship Modernization. The ship modernization program for General Purpose Forces is designed to upgrade ships of the fleet to improve capability in countering current and projected threats, and comply with imposed requirements. Installation of improvements are programmed to coincide with equipment deliveries and snips' availabilities. Funding includes cost of preliminary design, preparation of blueprints, installation of equipment and updating of snips' records to reflect the installation.

<u>Initial Outfitting</u> provides outfitting and allowance support for active fleet ships, and supporting ships and craft by funding initial outfitting and allowance requirements for all stock funded expense type material, spares, repair parts, special tools, shipboard equipage allowances and listings, and funds all follow on equipment improvement program outfitting requirements.

<u>Berthing and Messing</u> provides for leasing of berthing and messing facilities from commercial sources or government quarters for the use of shipboard personnel assigned to ships undergoing repair and alteration

Program Package: Ship Maintenance and Modernization (cont'd)

availabilities at Supervisors of Shipbuilding (SUPSHIPS) and Navy Shipyards when ships are made unimbabitable due to shipwork. This program also provides for operation and maintenance of 98 berthing and messing facilities including the cost of major overhauls and ongoing repairs.

Intermediate Level Maintenance is that fleet maintenance which is normally performed by Navy personnel on tenders, repair ships, aircraft carriers and shore intermediate maintenance activities (SIMAs). The IMAs use either their specialized equipment and specialized skills to perform maintenance actions aboard a customer ship or use their own organic shop facilities to repair and maintain equipment on a ship-to-shop basis. IMAs are assigned to repair and test weight handling equipment, to repair small boats, to repair service craft and to overhaul small boat engines. The major IMA effort involves structural, mechanical, and electronic repairs to ships and ship-board equipment. All afloat IMAs are assigned divers who perform repairs to the external underwater hull, propellers, and rudders. IMAs also provide such services as printing, photography, optical repairs, engraving, canvas work, strainer shield manufacture, and certain IMA designated preventive maintenance actions.

Maintenance Improvement Support includes:

Surface Ship Maintenance and Performance Monitoring System supports placing and maintaining various designated surface ship classes on engineered maintenance strategies, and devising and implementing engineering, technical, and logistic support approaches to extend the ship operating cycle under these maintenance strategies to the maximum extent practical without degrading material readiness of the fleet. These maintenance strategies result in fewer ship overhauls on the elimination of snip overhauls in some cases.

Surface Ship Engineered Operating Cycles which develop expanded depot capability for repair and overhaul of electronic equipment and modules installed on ships.

Intermediate Maintenance Activity Upgrade program which provides required general engineering and analysis, modern industrial plant equipment, and collateral equipment necessary to ensure the installation and repair of equipment by IMA personnel.

Submarine Extended Operating Cycle funding provides for engineering/technical management and logistics support for nuclear attack submarines which have extended operational intervals between major overhaul.

Program Package: Ship Maintenance and Modernization (cont'd)

II. Financial Summary (Dollars in Thousands)

A. Subactivity Breakout

			FY 1986			
	FY 1985	Budget Request	Approp- riation	Current Estimate	FY 1987 Budget Request	Change

4. Program Increases (continued)

4) Establishment of an Integrated Logistic Overhaul site at Mayport and continuing support for 6 existing ILO sites. 4,550 219,662

5) Fleet Modernization Program.

a) One additional SSN 688 class special hull treatment during post shakedown availability and the addition of six SSN restricted availabilities. (9,667)

b) Increased Design Services Allocation primarily to accomplish installation drawings in support of expanding FY 1988 and FY 1989 programs. (14.134)

c) Asbestos removal from carrier machinery boxes, main spaces, and auxiliary spaces and certification of berthing spaces as "asbesins free". (3,216)

d) Introlition of communications security funding the to accomplish replacement of existing communications gear with systems which are compatable with all components of the armed services. (9,505)

e) Modifications to weapons and cargo elevators aircraft carriers to

improve safety. (6,567)

f) Surface combatant silencing modifications. (970)

g) Modifications associated with an increase of 6 surface combatant regular overhauls. (50,437)

n) Modernization efforts associated with 24 additional surface combatant nonoverhaul availabilities. (31,182)

i) Installation of alterations on one AOE during regular overhaul. (2,778)

j) Addition of DD 953 close-in weapons system mount backfit and amphibious ship installations. (1.575)

k) BQQ-5D somar installations for 688 class submarines. (3,385)

1) Introduction of special efforts to increase surface ship survivability through installation of firefighting and damage control modifications, shock hardening, and additional armored magazine protection. (22.525)

Reconciliation of Increases and Decreases

\$ in 000

1,452

Program Increases (continued)

m) Increase in Nuclear Alteration requirements primarily due to first-time installation of noise quieting alterations in SSN 688 class main coolant systems and steam generators and the modernization of the presently inactive nuclear aircraft carrier refueling barge. This barge is essential for use in the FY-90 refueling of CVN 65 and subsequent CVN refuelings. (28,967) n) Increase in Ordnance Alteration requirements due to New Threat Upgrade (NTU) capability being installed on CG 16, CG 26, and DDG 993. (2,874) o) Additional Submarine Extended Operating Cycle (SEOC) modernization program requirements due to an increase of 15 SSNs and 114 additional installations. (13,675) p) Increase in Submarine Steam Plant Safety Improvements as actual installations commence in FY 1987. (4,978) q) Increase in auxiliary ship conveyor upgrade program as installations begin in FY 1987. (5,180) r) Addition of two craft receiving installations in the Swimmer Delivery Vehicle program. (705) s) Increase in aircraft carrier and amphibious ship SRC-47 (V) requirements due to eleven (11) additional ships receiving installation. (2,450) t) Increase in LST Propeller Control retrofit line as number of installations increases by six (6). (1,030) u) Installation of electronics related items including LINK 11 USQ-97 data terminal, ULQ-16 radar pulse reader, and NAVMACS Front End Processor. (3,961) Increase for technical and logistic services at intermediate maintenance activities. 1.385 7) Industrial plant and minor expense equipment and installation costs at two shore intermediate maintenance activities.

8) Reproduction of 21,028 test program package

sets which consist of electronic modules and printed circuit boards for use with automatic test equipment. Also funds

development of 20 additional test programs.

	B. Reconciliation of Increases and Decreases	\$ in 000
4.	Program Increases (continued) 9) Fleet Outfitting a) Increase for regular overhauls includes additional funding for the cost of Depot Level Repairable spare aviation ships which were previously funded through the stock fund. (9,704) b) Increase for outfitting ships being modified during selected restricted availabilities. (18,418) c) Increase of 8 docking restricted availabilities. (6,210) d) Increase for 13 additional Phased Maintenance Availabilities including 4 docking availabilities. (2,929) e) Realignment of battledress funding from BA 2 Ship Operations. (19,300) f) Availability Centered Inventory Model implementation for MK 92 gun fire control system, AN/SPS-49 radar, and FFG 7 class load out. (27,998)	83,859
	10) Increase of 9 ship operating months for ships under the submarine ship system performance monitoring program. Increases are for test, inspection, and maintenance documentation (803), and material support (780);	1,583
	11) Submarine Extended Operating Cycle (SEOC) program transitions from feasibility studies to implementation of expanded performance monitoring, logistic support and upgrade of SEOC support facilities at Intermediate Maintenance Activities.	8,182
5.	A. Other Program Decreases in FY 1987 1) Overhaul Schedule Changes a) Carriers (CVN) b) Cruisers (CGN) c) Submarines (SSN) d) Amphibious Assualt (LPH) e) Amphibious Landing (LSD) f) Salvage and Rescue Ships (ATS) g) Submarine Tender (AS) (-1 -168,450 -132,800 -341,525 -44,200 -40,360 -21,500 g) Submarine Tender (AS)	-1,161,170 ,161,170) -776,335
	2) RA/TA Schedule Changes a) Centrally managed service craft main- tenance support decreases as the number of overhauls decrease from 44 to 36.	-7,590
	b) Interim drydockings decrease from 6 to 2.	-5,699

III. Performance Criteria and Evaluation: (con't)

G. Intermediate Maintenance provides for repair parts and materials for intermediate level support of the active forces including self-support for the tenders. The cost associated with the intermediate maintenance effort is identified to productive marhours in the repair departments and a cost per material year. The commercial industrial (CIS) program identifies the workyears of effort purchased and the total cost.

H. Engineering Support:

SSN Performance Monitoring and Support Program. Permits placing submarines on an extended operating cycle without endangering safety of operations. The measure of achievement is the number of ships supported and the ability to place additional ships on the program as they fit the criteria. The following projects the number

of submarines on performance monitoring in each fiscal year and provides a summary of the effort being planned:

Number of Submarine Submarine Sys.Perf. Monitoring Prog. Submarine EOC	FY 1985 52 83	FY 1986 66 86	FY 1987 71 90
Engineering Technical and	69.7	66.0	63.0
Management Support * iMaintenance Planning*	69.7	66.0	63.0
Ship Subsystem Performance Data and Performance Assessment*	48.0	55.8	56.5

^{*} Workload indicators are in submarine operating years.

Program Package: Ship Maintenance and Modernization (cont'd)

III. Performance Criteria and Evaluation: (con't)

H. Engineering Support (continued):

Surface Ship Maintenance and Performance Monitoring System (SMMPMS). This program supports placing and maintaining various designated surface ship classes on engineered maintenance strategies, and devising and implementing engineering, technical, and logistical support approaches to extend the ship operating cycle under these maintenance strategies to the maximum extent practical without degrading material readiness. These maintenance strategies result in fewer overhauls or the elimination of overhauls and an increase in ship operational time. The three maintenance strategies are Engineered Operating Cycle (extended regular overhaul intervals with condition-directed maintenance), the Phased Maintenance Program (elimination of regular overhaul with condition-directed maintenance and use of Port Engineers), and LO-MIX progressive overhaul (elimination of regular overhaul with time-directed maintenance).

Department of the Navy Operation and Maintenance, Navy

Activity Group: Combat Support Forces

Budget Activity: II - General Purpose Forces

I. Description of Operations Financed.

The operations of Navy Mobile Construction Battalions (NMCB's) and Special Combat Support Forces, together with repair of combatant craft, are financed in this program.

NMCB's - Funding requested provides for training, operational support, and camp maintenance for nine construction battalions, two construction regiments, two underwater construction teams, two fleet battalion commanders, and two civic action teams. Travel is necessary to carry out NMCB deployment schedules and construction taskings and is usually arranged via Military Air Command (MAC) special aircraft charter.

Special Combat Support - Funding requested provides for trained special combat forces to deploy either aboard ship or to a forward base to conduct special or unconventional warfare operations. Working jointly or independently, the three special warfare component commands (Seal Team, Underwater Demolition Team, and Special Boat Squadron), Explosive Ordnance Disposal Groups, an airborne mine countermeasure squadron, and the Naval Beach Group component commands (Beach Master Unit, Mobile Technical Unit, Amphibious Construction Battalion, Assault Craft Unit, and Naval Cargo Handling Battalion), provide a wide range of capabilities. Expenses include civilian personnel salaries, repair parts, equipage, equipment maintenance, travel and transportation, communications, medical/dental material, fuel, contract services, facilities maintenance, and ADP support.

<u>Craft Repair</u> - Funds requested finance repairs to combatant craft consisting of various landing, mine countermeasure, Seal Team support craft, and other craft. Repairs include organizational, intermediate, and depot level maintenance. As a general policy, craft maintenance is performed at the lowest level of maintenance practical in order to provide maximum availability of craft.

Department of the Navy Operation and Maintenance, Navy

Activity Group: Fleet Operations Support
Budget Activity: II - General Purpose Forces

I. Description of Operations Financed.

The funds requested support the following functions in support of fleet operations:

- a. Fleet Temporary Additional Duty (TAD) Includes centrally managed travel required for operational training, administrative travel for ship to shore assignments and hospitalization or other emergencies.
- b. Combat Systems Readiness Includes expenses for personnel based at selected Naval Security Group sites to install, maintain and operate special cryptologic equipment aboard selected combatants. Funds also provide for testing weapon systems operations and readiness at the Atlantic Underwater Test and Evaluation Center, and various Pacific fleet ranges.
- c. <u>Undersea Surveillance</u> Includes expenses for performing oceanographic observations in selected areas in order to provide the U.S. Navy with more extensive information on oceanographic conditions and for training of personnel employed in observing and analyzing oceanographic conditions. Raw data is collected by naval facilities and then coordinated, analyzed, and evaluated by the Oceanographic Systems Commanders and certain NAVFACs prior to dissemination to fleet users and compilation for statistical studies. This supports the Navy anti-submarine warfare (ASW) capability by contributing to detection of potential enemy submarine movements through the use of acoustic sensor systems. Operating expenses include civilian personnel, contractual services for repair, data processing, training, supplies, and operation of T-AGOS ships.
- d. Anti-Submarine Warfare Operations Centers (ASWOC) Includes expenses for nineteen operational ASWOC installations located world wide in support of fleet operations, two abbreviated systems, located at North Island and Cecil Field (in support of the S-3A), a training site at Dam Neck, and a prototype/maintenance support site at the NAVELEXDET, NATC, Patuxent River. These commands meet the tactical support requirements of the P-3C long range air ASW weapon system and provide terminals for the ASW area commanders in the overall Navy Command and Control System. Funds requested finance operational maintenance; installation and checkout of hardware change kits; integrated logistics support; life cycle support of operational and system test software to respectively control mission aspects and detect and isolate system maifunctions; implementation of system software reliability and maintainability improvements; and software modifications to maintain compatibility with airborne systems changes and other systems.

Activity Group: Fleet Operations Support (cont'd)

Description of Operations Financed (con't)

e. Ship Operations EW Support - Includes various equipments, devices, subsystems, and systems which will provide the capability to degrade the effectiveness of enemy weapons by perfroming countermeasure functions against his command, control and communications and weapons targeting systems. In addition, systems included in this program provide the capability to maintain the integrity of USN command, control, and communications networks and targeting systems.

ジャン・ 日本のできない はいこう はんりんかん ないない はんしょくかん しっしょう しょうしょう こうしゅうしょう

f. Fleet Electronic Command and Control Systems - Includes expenses for hardware and software maintenance; within-envelope conversions of software; site surveys and preparation, installation and check-out of hardware and software; technical support services; and, documentation for Navy Command and Control Systems (NCCS), the Ocean Surveillance Information System, Navy WWMCCS Software Standardization, Tactical Flag Command Centers, and Over-the-Horizon Targeting. Funding also provides for the replacement of shipboard VERDIN VLF receivers with the Compact VLF; software and technical support services for Link 11 in support of Command, Control and Communication mission requirements; and, installation, engineering and technical services for hardware and software, refurbishment of equipment, and life-cycle support for Special Electronic Warfare and Command, Control and Communications Countermeasures.

Department of the Navy Operation and Maintenance, Navy

Activity Group: Other Warfare Support

Budget Activity: II - General Purpose Forces

Description of Operations Financed.

Funding in this activity group is used primarily for the planning, execution, and analysis of various exercise programs.

Operational Readiness Assessment:

Provides for analysis and reporting of combat system performance and effectiveness based on results of battle group exercises. Areas analyzed include Anti-Aircraft Warfare (AAW), Anti-Submarine Warfare (ASW), and Anti-Surface Warfare (ASUW). Resulting analyses are provided to the Chief of Naval Operations (CNO), fleet Commanders-in-Chief (FLT CINCS), and System Command Headquarters personnel for planning and program management purposes. Specific functions of this program include: exercise planning, installation of monitoring instrumentation aboard ships and aircraft, data collection, data verification and reconstruction, data analysis, and reporting exercise results to participants and planners.

Warfare Tactics Documentation:

Warfare Tactics Documentation provides funding for definition, specification, verification, assimilation, analysis, and formulation of data into warfare concepts of utilization for existing equipment and systems, mobilization planning, threat assessments, requirements definition, and fleet deployment operations planning. The product provides fleet users with detailed force deployment data and methods of using data in a timely manner.

Fleet Logistics Support:

It is essential that full utilization and exploitation of weapons, techniques and capabilities of forces contribute effectively to overall military objectives. To execute and enhance these capabilities, fleet exercises provide required training in simulated wartime scenarios. Fleet exercise participation enhances fleet unit proficiency in operating and employing weapon systems and war game strategy. To train units effectively in various geographical, climatic, and diversified economic and political areas, fleet units must deploy to all parts of the world. Funding in this activity group will be used to plan and execute training deployments and redeployments to maintain maximum readiness and rapid deployment capabilities throughout the fleet areas of responsibility.

Activity Group: Other Warfare Support (cont'd)

Description of Operations Financed (cont'd)

Tactical Training/Wargaming Support

The Tactical Training/Wargaming Support program is directed toward the phase-in of advanced concepts in tactical training for battle group commanders and senior staff officers. This objective is accomplished through the addition of new curricula centered around, but not limited to, the Enhanced Naval Warfare Gaming System and evolutionary development of the basic wargaming system at the Naval War College in Newport. Funding in this activity group provides support for the Tactical Training Groups at Norfolk and San Diego which have substantial computerized equipment linked by land lines to Newport. Through these Tactical Training Groups, wargaming strategies and concepts are brought directly to the Fleet for their evaluation and participation. Funds are required for site preparation, installation of equipment, operating and technical support for the new systems at the Fleet sites, as well as for associated tactical training support.

Department of the Navy Operation and Maintenance, Navy

Activity Group: Fleet Air Training

Budget Activity: II General Purpose Forces

I. <u>Description of Operations Financed.</u>

This program provides funds for flying hours and aviation training support of Navy/Marine Fleet Readiness Squadrons (FRS). The operations financed in this program are the day-to-day operating costs for civilian labor, administrative supplies, materials, equipment, maintenance service contracts, and travel of personnel required in support of the training mission.

Fleet Air Training. There are 28 Navy and 6 Marine Corps Fleet Readiness Squadrons funded in this program. Thirty squadrons train replacement air crews for the Navy and Marine TACAIR/ASW communities in weapons tactics training, weapons delivery qualifications and where applicable, carrier landing qualifications. Graduates of these replacement squadrons are qualified for assignment to active squadrons. The other four squadrons provide instrument training and flight training to fleet pilots, and adversary services to fleet squadrons in air-to-air combat training. This program also provides flying hours for instructors at Naval Fighter Weapons School and the Naval Strike Warfare Center.

Student training levels are based on authorized TACAIR/ASW force levels and aircrew/maintenance personnel rotation rates. Funds requested include the cost of petroleum, oil and lubricants (POL), organizational and intermediate maintenance and squadron supplies, and Aviation Depot Level Repairables. The cost per operating hour for each aircraft is based on actual operating data over the previous 18 month period.

Fleet Air Training Support. The purpose of this program is to support Navy/Marine FRS's in their mission of conducting replacement air crew training. Included in this program are the Fleet Aviation Specialized Operational Training Groups Atlantic Fleet and Pacific Fleet (FASOTRAGRU).

The mission of the FASOTRAGRU's is to provide training in weapon systems and equipment (including special weapons) and to maintain proficiency by conducting special program inspections. Associated training of personnel includes:

Anti-Submarine Warfare Equipment/Tactics
Anti-Ship Missile Defense Equipment Tactics
Electronic Warfare Equipment Tactics/Radar Navigation/Communication/other
electronics aircraft systems and equipment
Special weapons delivery tactics, procedures, and handling.
Land survival, Evasion Techniques, and Prisoner of War conduct

Department of the Navy Operation and Maintenance, Navy

Activity Group: Fleet Training

Budget Activity: II - General Purpose Forces

I. Description of Operations Financed.

Functions which are financed within this program include classroom instruction, shipboard training, shipboard inspections of special weapons underway, shakedown and refresher training, shipboard team training using mobile simulators, the cost of using fleet training ranges, and fleet electronic warfare training.

Specifically, funding is requested to support special weapons technical inspections and assist visits where units are located. Special Weapons Acceptance Inspections are conducted to ensure that a ship is capable of properly handling nuclear weapons prior to their being placed aboard ship. Special Weapons Technical Proficiency Inspections are conducted on board ships which carry special weapons to ensure that training, security, safety, emergency, technical, command control, and administrative procedures comply with established guidelines. Classroom training in various special weapons subject areas, (including basic fundamentals, logistic support, safety, officer orientation and indoctrination in special weapons, chemical warfare programs, and biological research) provide trained personnel directly to fleet units. Shipboard special weapons training emphasizes security handling administration, emergency destruction and accident response.

Shakedown and refresher training is conducted for ships which have recently been constructed, reactivated, or overhauled and are preparing for overseas deployments or fleet exercises. Training is provided and exercises are conducted in such key shipboard areas as damage control, firefighting, gunnery, navigation, engineering, communcations, ship handling, and basic seamanship so that the ship is fully prepared for combat and can safely and effectively participate in fleet operations. The time required for training can range from two days to seven weeks, depending upon the size of the ship and the previous training the crew has received. In addition to shipboard training, crews receive training in electronic warfare and weapons team training while the ships are in port.

Training range operations funding provides aerial and surface targets, electronic warfare training, anti-submarine warfare readiness effectiveness measuring, and mine recovery operations.

Consolidated fleet electronic warfare training is provided at both the fleet commander-in-chief and battle group levels. Emphasis is on a consolidated training function which includes all aspects of electronic warfare. This training provides battle group commanders with consolidated electronic warfare operators and supervisors, as well as generic input to Operational Plans (OPLANS), Operational Orders (OPORDS), Electronic Order of Battle (EOB) and specialized integrated tactical applications.

Activity Group: Unified Commands

Budget Activity: II - General Purpose Forces

Description of Operations Financed.

The unified commands direct tri-service forces in joint operations in support of national objectives. The unified commands supported are the Commanders in Chief, U. S. Atlantic (USCINCLANT) and Pacific (USCINCPAC), subordinate commands, and special tri-service programs. The funds requested provide for the day-to-day operating cost of these commands, including pay of civilian personnel, administrative supplies and equipment, travel, training, maintenance of office equipment, utilities, and communications.

Funds in this program are also requested for Overseas Military Banking. The cost of this program is determined on a defense-wide basis and allocated to the services in relation to the banking facilities within their respective areas of responsibility. Expenses include normal operating expenses and a fixed management fee. Income includes service charges and interest income earned on balances of accounts maintained at the banking facilities. Funds required for Overseas Military Banking vary inversely with interest rates.

Department of the Navy Operation and Maintenance, Navy

Activity Group: Fleet Command and Staffs
Budget Activity: II - General Purpose Forces

I. Description of Operations Financed.

Fleet Commands and Staffs exercise command, operational control and coordination over assigned forces including employment of all units (ships, aircraft, support activities and other related units). They plan for, and when required conduct, operations to protect assigned forces, control vital sea areas, and protect sea lines of communications.

The funds requested provide for the day-to-day operating costs of the Commander-in-Chief, U.S. Naval Forces Europe, the Atlantic and Pacific Fleet Commanders and their staffs, and other staffs reporting directly to the Chief of Naval Operations and directly supporting the operating forces. Funding also pays for the operation of Armed Forces Radio and Television service, the Mavy Imaging Command and Mavy Internal Relations Activity.

II. Financial Summary (Dollars in Thousands).

Department of the Navy Operations and Maintenance, Navy

Activity Group: Cruise Missile

Budget Activity: II - General Purpose Forces

I. Description of Operations Financed.

The mission of the Joint Cruise Missile Project (JCMP) is to develop, test, evaluate, acquire and support the Navy and Air Force Cruise Missiles and to maximize subsystem, component and software commonality to derive maximum benefit from the management of the several Cruise Missile programs. Through this program, JCMP provides for overall management and engineering support of the Sea Launched Cruise Missile and Ground Launched Cruise Missiles.

Project Office support is requested to fund salaries for Navy civilian personnel and general operating expenses including rentals, office furniture, equipment, supplies, and administrative travel needed to sustain the Joint Project Office. The efforts provided by the project staff include procurement, development and production contract management; planning, programming and budgeting support; and office and administrative services.

Engineering Support funds the Operations and Engineering effort required to maintain the TOMAHAWK Weapon System. This includes:

A. OPERATIONAL TEST LAUNCH (OTL) FLIGHT TEST

OTL flight tests are the primary means for evaluating production missiles to determine and monitor operational readiness and aging effects of the deployed weapons system. Tests will also be used to support fleet training, tactics development and to provide diagnostic information which can be used to enhance weapon system effectiveness.

The OTL scenario encompasses returning a fleet "All-Up-Round" (AUR) to the TOMAHAWK Weapons Facility (TWF) for pre-flight preparation including installation of a Range Safety System or a Recovery Exercise Module. Detailed test planning in concert with appropriate fleet activities and the flight test is conducted using a realistic operational scenario.

Following an OTL flight test, the missile is recovered, refurbished at the TWF and returned to the operational inventory. Program costs include range support, flight test instrumentation, target support, data reduction, and labor performed during pre-flight preparation and post-flight refurbishment.

The OTL program is the only method for accurately monitoring flight reliability of production rounds to ensure product integrity.

B. DEPOT MAINTENANCE

TOMAHAWK missiles will be returned to the TOMAHAWK Weapons Facilities (TWF) for examination and recertification (periodic maintenance). Any

Activity Group: Cruise Missile (cont'd)

I. Description of Operations Financed (con't)

retrofits and or modifications of the missile will be accomplished during the recertification process. Also, missiles are refurbished after an OTL or reworked if damaged during fleet handling at the TWF.

C. NUCLEAR SAFETY AND CERTIFICATION AND SEARA EFFORTS

The Nuclear Safety and Certification effort includes Nuclear Safety Analysis (NSA) update to support changes to the baseline (IOC) Software and Nuclear Safety Analysis (ISNSA) for changes to the software and firmware. Both Surface Ship and Submarine TOMAHAWK Weapons Systems are covered. The Stockpile Evaluation and Reliability Assessment (SEARA) includes Quality Assurance Stockpile Tests (QAST), Stockpile Laboratory Tests and Joint Integrated Laboratory Tests.

D. MAINTENANCE/TECHNICAL SUPPORT

Maintenance/Technical Support includes software maintenance, platform maintenance requirements, and logistics and technical support. Software upkeep is required separately for the anti-ship and land-attack cruise missile variants. Platform maintenance requirements include support of the Surface Snip Weapons Control Systems, the Armored Box Launchers, the Submarine Combat Control Systems MK 1 and Torpedo Tube Launchers. Logistics and technical support includes ILS management, training, technical manual updates, in-service engineering, and TOTEM support. The TOMAHAWK Test Missile (TOTEM) is an unboosted, launchable and recoverable encapsulated test missile for use in testing TOMAHAWK compatibility with the Submarine MK 1 Fire Control System and the Torpedo Tube Launcher.

E. MISSION PLANNING CENTERS (MPC'S)

The mission Planning Centers develop and maintain the software programs which control automatically by computer the Land Attack Cruise Missiles. O&M,N costs associated with the MPC's are for software maintenance and upkeep of the centers.

Activity Group: Foreign Currency Fluctuation Budget Activity: II - General Purpose Forces

I. Description of Operations Financed.

This program provides resources for foreign currency exchange rate fluctuation. Operations financed include the cost of foreign currency gains or losses against the U.S. dollar. The use of this fund has been instrumental in permitting an orderly execution of the budgeted program and in preventing turbulence caused by unbudgeted increases in the value of foreign currencies.

Activity Group: Maintenance of Real Property Budget Activity: II General Purposes Forces

I. Description of Operations Financed.

This program provides maintenance, repair and minor construction of all buildings, structures, grounds and utility systems at major fleet bases and aviation activities to permit assigned forces and tenants to perform their missions.

The major elements of this program are:

- Facilities Maintenance finances scheduled, day-to-day recurring maintenance, and emergency service work needed to preserve facilities.
- o Major Repairs provides major repairs necessary to bring existing facilities into adequate condition to support assigned missions.
- o Minor Construction finances the erection, installation or assembly of real property facilities; the addition, extension alteration, conversion or replacement of existing real property facilities; the relocation of real property facilities; and the installation of equipment which becomes part of a facility.

Department of the Navy Operation and Maintenance, Navy

Activity Group: Base Operations

Budget Activity: II General Purpose Forces

I. Description of Operations Financed.

In is program provides the base support services and material required at major fleet bases and air stations to permit assigned forces and tenants to perform their missions.

The major elements of this program are:

- o Base Communications Includes costs for administrative telephones, telecommunications centers, industrial security networks and paging networks.
- O <u>Utility Operations</u> Includes operating expenses for purchased electricity, electricity generating plants, purchased steam and not water, heat plants, utility distribution systems, waste systems, air conditioning and refrigeration plants.
- o <u>Personnel Operations</u> Support required for personnel related functions to include expenses for:
 - Bachelor Housing Operations and Furnishings provides support for the operation of 3EQ's and the purchase and maintenance of personnel support equipment related to this housing.
 - Other Personnel Support provides for mess halls, sales activities, laundry and dry cleaning facilities.
 - Morale Welfare and Recreation provides authorized appropriated fund support for shore based recreation activities.
 - Station Hospitals, Medical and Dental Clinics direct and indirect health care costs for Health Care Facilities not under the financial control of the Naval Medical Command.
 - <u>Human Goals</u> provides support for programs which focus on improving organizational and individual effectiveness and the administrative support of the Alcohol and Drug programs.
- o <u>Base Operations Mission</u> Support for those Base Operations functions which are required in direct support of the mission of the base. For example, Fleet Training Support, Logistics Support, etc. Expenses are included for the following functions:

Activity Group: Base Operations (cont'd)

- Retail Supply Operations In addition to standard supply functions, this item includes the procurement, receipt, storage and issue of bulk liquid fuel, including operating aircraft fuel servicing facilities. Additionally, waterfront operations such as handling incoming and outgoing cargo and loading/unloading live ammunition onto and from combatant vessels are included.
- <u>Maintenance of Installation Equipment</u> provides for maintenance of major shore based equipment including: service and miscellaneous craft, construction equipment (non-deployable), weapons, electronics, electronic engineering, and fleet moorings.
- Other Base Services provides for the maintenance and operation of vehicles/other transportation equipment, port services (includes navigational assistance to ships, operation of service craft, degaussing operations, and oil spill cleanup).
- o <u>Base Operations Ownership</u> Support required at shore bases regardless of type of mission being performed, which must be sustained to have a functioning base. Expenses are included for the following functions:
 - Other Engineering Support Public Works Department Administration, engineering services, custodial services, refuse/garbage collection and disposal, snow removal, rental and leasing of real property, and fire protection and firefighting for Naval activities and their tenants.
 - Administration provides support related to financial/resource management, civilian manpower management, and maintaining military personnel records.
 - Automated Data Processing provides analysis programming, equipment rental, operations and maintenance, contractual services and supplies.
 - Hazardous Waste Material Handling includes personnel, supplies and training associated with the identification and disposal of hazardous wastes.
 - <u>Audiovisual</u> provides supplies and services required for audiovisual support.
 - Physical Security Provides shore base physical security.

Budget Activity: IV Airlift and Sealift Forces (Summary)

I. Description of Operations Financed.

The sealift prepositioning program provides for rapid movement of supplies and equipment loaded on cargo ships and tankers to a deployment area by placing the ships in forward areas. In addition the program funds a sealift surge capability by CONUS based ships for early on-berth loadout of deploying units. This includes movement of pre-designated Army divisions by fast sealift (FSS). For other rapid sealift deployment the program funds the Ready Reserve Force (RRF) which consist of government owned shipping that is maintained in the custody of the Maritime Administration (MARAD). Preparation and repair of ships to enter the RRF as well as activation, operation (including no notice tests), and inactivation are funded in the program. During FY 1987, an additional 6 ships will be added to the RRF bringing the total to 93. FY 1937 reflects the continuation of the enhancement of existing government owned or controlled merchant ships to provide for greater military utility for movement of unit equipment and sustaining support along with the enhancement of designated ships for that support. Due to a delay in delivery, new to the program in FY 1987 is the cost associated with two hospital ships in reduced operational status.
