## Common name

Cut-leaved xanthosia

## Family

Apiaceae

## Where found

**Woodland**, wet **heath**, and along streams, and swamps. Coast, ranges, and the eastern part of the tablelands.

## Notes

**Perennial** herb to 0.1 m high, often sprawling. Leaves mostly basal, a few **alternating** up the stems, 0.5–2 cm long, 15–25 mm wide, usually becoming hairless, deeply **dissected** into 3 lobes, the lobes often divided again, the **ultimate segments linear** to oval, the whole leaf almost **compound**. Individual flowers white or reddish, with 5 **petals** to about 1.5 mm long, and 5 petal-like **sepals** each to 1.7 mm long, mostly in clusters of 1–6 flowers. Flower clusters may look like individual flowers. **Bracteoles** below the flower sub-clusters petal-like, green or green with red tinges, 3.5–4 mm long. Flowers September–January.
