Section 1.0 Introduction

This report presents information and data resulting from the second groundwater monitoring event of 2014 performed at the Occidental Chemical Corporation Wichita property located at 6200 S. Ridge Road, Wichita, Sedgwick County, Kansas (Site). This groundwater monitoring event was conducted to fulfill the Part II Hazardous and Solid Waste Amendments (HSWA) Section of the Facility's Resource Conservation and Recovery Act (RCRA) Permit obligations (permit number KSD007482029). Groundwater monitoring has been conducted on a semi-annual basis since 1986 in order to evaluate the groundwater flow and quality conditions around the Site and to assess the effects of historical releases on the local groundwater regime.

Groundwater monitoring reports are submitted to the United States Environmental Protection Agency (U.S. EPA) and the Kansas Department of Health & Environment (KDHE) on a semi-annual basis. The Fall 2014 semi-annual groundwater monitoring event was performed in accordance with the procedures outlined in the U.S. EPA-approved Quality Assurance Project Plan (QAPP) and Sampling and Analysis Plan (SAP). The Fall 2014 groundwater monitoring event was a semi-annual monitoring event[1] in accordance with the schedule provided in the SAP and presented in Table 1.

The interceptor wells/extraction wells operate to maintain cones of depression within the aquifers to prevent migration of contaminants. Measuring analyte concentrations and water levels on a regular periodic basis monitors the effectiveness of the system.

Section 2.0 Field Program

Field activities were conducted from November 3 through November 25, 2014. Field activities consisted of the following:

- Collect water level measurements at 164 monitoring wells and piezometers. Test select on-Site monitoring wells for the presence of non-aqueous phase liquids (NAPLs).
- Collect groundwater samples from 76 on- and off-Site wells (including monitoring wells, interceptor wells, and neighboring commercial property water wells and production wells).
- Submit collected groundwater samples for laboratory analysis of the contaminants of concern (COCs).

The COC list consists of the following parameters:

[1] A "semi-annual event" as set out by "Sampling and Analysis Plan Routine Groundwater Sampling Plan RCRA Corrective Action Program" March 9, 2012.

Volatile Organic Compounds

1,1,1-Trichloroethane
1,2-Dichloroethane
Benzene
Carbon tetrachloride
Chloroform
Chloromethane (methyl chloride)
Methylene chloride
Tetrachloroethene
Trichloroethene
Vinyl chloride
1,2-Dichloropropane (1,2-DCP)[2]

General Chemistry

Semivolatile Organic Compounds/Pesticides/Herbicides

2,3,4,5-Tetrachlorophenol
2,3,4,6-Tetrachlorophenol
2,4,5-Trichlorophenol
2,4,6-Trichlorophenol
2,4-Dichlorophenol
2,5-Dichlorophenol
2,6-Dichlorophenol
2-Chlorophenol
2,4-Dichlorophenoxyacetic acid (2,4-D)[2]
3/4-Chlorophenol
alpha-BHC
beta-BHC
delta-BHC[2]
gamma-BHC (lindane)
Hexachlorobenzene
Hexachlorobutadiene
Hexachloroethane
Pentachlorophenol

A Site location map is presented on Figure 1. A Site plan illustrating the monitoring wells, interceptor wells, and piezometer locations is shown on Figure 2. Figure 3 illustrates the monitoring wells and interceptor wells included in the Fall 2014 semi-annual monitoring program. In addition, monitoring wells MW138S2/S3 and MW138S1, and six newly installed monitoring wells (MW146S1, MW147S1, MW147S2/S3, MW148S1, MW148S2/S3, and MW149S2/S3) were sampled during this event.

Section 3.0 Groundwater Monitoring Event

Activities completed during the Fall 2014 groundwater monitoring event included water level elevation/NAPL monitoring, groundwater sampling, neighboring production well and water well sampling, well inspection activities, and surveying of the monitoring wells installed in September 2014 (MW146S1, MW147S1, MW147S2/S3, MW148S1, MW148S2/S3, and MW149S2/S3). Monitoring well MW15S1 was also surveyed as repairs were made to this well due to a bent casing. Copies of the equipment calibration forms are provided in CD format as Appendix A. Table 2 provides a summary of

[2] Parameters added to the COC list in 2009.

interceptor well, monitoring well, and piezometer construction details for the entire monitoring network.

3.1 Water Level Monitoring

A complete round of water level measurements was collected from November 3 through November 4, 2014. The round of water level measurements was collected in as short a time period as possible to obtain a representative data set of contemporaneous groundwater elevations in order to accurately evaluate groundwater flow conditions beneath the Site and surrounding area. In general, the water levels were collected initially from "clean wells"[3] and advanced toward the wells with higher parameter concentrations. Water level data collected in November 2014 (in conjunction with reference point elevation data) were used to calculate the groundwater elevations. Water level data collected in November 2014 were recorded electronically. A summary of the November 2014 groundwater elevations is provided in Table 3.

The presence of NAPL was initially assessed utilizing an oil/water interface probe. In addition, monitoring wells MW18 nest, MW19 nest, and MW27 nest were further assessed with indicator paste and disposable bailers. Measurements were recorded electronically. The procedures for determining the presence and recording the thicknesses of NAPL are detailed in the SAP.

Historically, dense non-aqueous phase liquid (DNAPL) was detected or suspected in several on-Site monitoring wells. DNAPL measurements and related observations are detailed in Section 4.2.

3.2 Groundwater Sampling

Low flow/minimal drawdown sampling techniques were utilized for the collection of groundwater samples with the exception of MW22S4 that was bailed. The procedures used for groundwater sampling are detailed in the SAP. Most of the monitoring wells were purged and sampled using dedicated bladder pumps. Monitoring wells screened within a perched water zone beneath the Site (formerly referred to as the S4 stratigraphic unit) and monitoring wells not configured with bladder pumps were purged using a dedicated or disposable bailer or a submersible stainless steel pump. During the purging process, field parameters consisting of pH, dissolved oxygen, turbidity, conductivity, temperature, and oxidation-reduction potential (ORP) were measured to determine stabilization. When a bailer was used to purge a monitoring well, pH, conductivity, and temperature were recorded. Field parameter data collected during the Fall 2014 event were recorded electronically. Table 4 provides a summary of monitoring well purging parameters. Groundwater samples were collected from 66 monitoring wells, seven interceptor wells, and three neighboring commercial property wells. Table 5 provides a sample key.

[3] i.e., monitoring wells representative of the lowest general historical contaminant concentrations.

Groundwater samples could not be collected from three monitoring wells for the reasons noted below.

MW08S4	Well was dry
MW09S4	Well was dry
MW21S4R	Well was dry

Section 4.0 Summary of Findings

The following sections present the data obtained during the Fall groundwater monitoring event of 2014.

4.1 Groundwater Flow

Utilizing the November 2014 water level data, groundwater elevation contour maps for the S1 and S2/S3 sand layers have been produced. These contours are presented on Figures 4 and 5, respectively. Based on a review of the previous and the most recent semi-annual groundwater elevation contour and sampling data, the existing interim corrective measure (ICM) appears to maintain substantially effective groundwater capture.

Two interceptor wells, IW29 and IW36, extract groundwater from the deep aquifer (S1). As shown on Figure 4, the groundwater contours generated from water level data collected from nearby monitoring wells illustrate a radial flow inward towards these two interceptor wells.

The shallower aquifer (S2/S3) extraction system is comprised of twelve interceptor wells: IW30, IW31, IW32, IW35A, IW35B, IW40, IW41, IW42, IW43 (600), IW44 (650), IW45, and IW46. As shown on Figure 5, the groundwater contours generated from water level data collected from nearby monitoring wells generally illustrate an inward radial flow towards these interceptor wells.

4.2 Detections/Measurements of Dense Non-Aqueous Phase Liquid (DNAPL)

DNAPL measurements and observations were recorded prior to purging the wells and collecting groundwater samples. Monitoring wells which historically had contained DNAPL (well nests MW18, MW19, and MW27) were initially evaluated using an oil/water interface meter and then checked for the presence of DNAPL using indicator paste, which has been found to be sensitive to DNAPL at this site. To that end, the presence of DNAPL has been confirmed in monitoring well MW27S1 (1.35 feet), and MW27S2 (3.20 feet). A DNAPL level was not measured at monitoring well MW18S4 because it was dry. DNAPL was not detected at MW18S1, MW18S3, or the MW19 well nest.

4.3 Groundwater Sampling

All of the COCs, with the exception of 1,1,1-trichloroethane, 1,2-dichloropropane, chloromethane (methyl chloride), 2,3,4,5-tetrachlorophenol, 2,3,4,6-tetrachlorophenol, 2,4,5-trichlorophenol, and 2,5-dichlorophenol, were detected during this monitoring event. The resultant data are summarized in Table 6, with the specific detections that exceeded the Maximum Contaminant Level (MCL)[4] or Regional Screening Level (RSL) highlighted.

Isoconcentration contour maps have been developed for several compounds, including beta-BHC, carbon tetrachloride, hexachlorobutadiene, hexachloroethane, and perchloroethylene. Detections of remaining site COCs are co-located with these compounds and generally well within the areal distribution shown on the maps.

- Beta-BHC isoconcentration maps for the S1 and S2/S3 sand layers have been produced; these contours are presented on Figures 6 and 7, respectively
- Carbon tetrachloride isoconcentration maps for the S1 and S2/S3 sand layers have been produced; these contours are presented on Figures 8 and 9, respectively
- Hexachlorobutadiene isoconcentration maps for the S1 and S2/S3 sand layers have been produced; these contours are presented on Figures 10 and 11, respectively
- Hexachloroethane isoconcentration maps for the S1 and S2/S3 sand layers have been produced; these contours are presented on Figures 12 and 13, respectively
- Perchloroethylene isoconcentration maps for the S1 and S2/S3 sand layers have been produced; these contours are presented on Figures 14 and 15, respectively

Copies of the original laboratory analytical reports are provided in CD format as Appendix B. Continental Analytical Services (CAS) performed the analyses of the groundwater samples. CAS is accredited by the National Environmental Laboratory Accreditation Program (NELAP) for the analyses identified in this report as confirmed by the project Quality Assurance (QA) officer.

4.3.1 Analytical Data Assessment/Validation

Data validation was conducted in accordance with methods and techniques detailed within the U.S. EPA-approved QAPP. The data assessment included a review of all technical holding times and all batch and matrix quality control (QC) information including rinse blanks, trip blanks, field duplicates, matrix spike/matrix spike duplicates (MS/MSD), matrix duplicates, surrogate recoveries, method blanks, and laboratory control sample (LCS) results. The assessment of analytical data included checks on data

[4] In the case of chloroform and chloride, reported concentrations were compared to the Maximum Contaminant Level Goal (MCLG) and secondary MCL, respectively.

consistency by looking for the comparability of field duplicate analyses and adherence to laboratory accuracy and precision control criteria.

The data validation report, provided in CD format as Appendix C, summarizes the samples reviewed, parameters reviewed, any non-conformances with the established criteria, and validation actions (including the use of data qualifiers).

Section 5.0 Certification

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision according to a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including possibility of fine and imprisonment for knowing violations.

Notes:

Top of casing elevations resurveyed in 2010.

The following wells were surveyed and/or resurveyed in October 2013: AMW101D, AMW101I, AMW101S, MW16S4R, MW21S4R, PZ45A, PZ45B, PZ46A, PZ46B, IW45, and IW46.

The following wells were surveyed and/or resurveyed in November 2014: MW146S1, MW147S1, MW147S2/S3, MW148S1, MW148S2/S3, MW149S2/S3, and MW15S1.

[1] ft AMSL - feet above mean sea level

[2] ft BGS - feet below ground surface

[3] IW - interceptor well

[4] NA - not available

Notes:

Top of casing reference elevations resurveyed in 2010.

The following wells were surveyed and/or resurveyed in October 2013: AMW101D, AMW101I, AMW101S, MW16S4R, MW21S4R, PZ45A, PZ45B, PZ46A, PZ46B, IW45, and IW46.

The following wells were surveyed and/or resurveyed in November 2014: MW146S1, MW147S1, MW147S2/S3, MW148 MW148S2/S3, MW149S2/S3, and MW15S1.

[1] ft AMSL - feet above mean sea level (2010 reference elevation)

[2] ft BTOC - feet below top of casing

[3] NM - not measured

[4] NA - water level not available due to pump stuck in well, water level below pump, or well was dry

11/8/2014: Due to excessive drawdown, increased pumping rate to purge well dry. New pumping rate not drawing water level down fast enough, will return with whale pump tomorrow.
11/9/2014: Purged well dry with whale pump. Will collect sample upon 90% water level recovery.
11/10/2014: Water level recovered within 90%. Collect grab sample.

[1] ft BTOC - feet below top of casing
[2] L/min - liters per minute
[3] Std. Units - standard units
[4] mS/cm - microsiemens per centimeter
[5] NTU - nephelometric turbidity units
[6] mg/L - milligrams per liter
[7] °C - degrees Celsius
[8] ORP - oxidation-reduction potential
[9] mV - millivolts
[10] N/A - not applicable
[11] Y - Yes, N - No
[12] -- Not Available

Notes:

- exceeds criteria

J - Estimated concentration

R - Rejected

U - Not detected at the associated reporting limit

UJ - Not detected; associated reporting limit is estimated

MCL - Maximum Contaminant Level

RSL - EPA Region IX, Regional Screening Level November 2014, http://www.epa.gov/reg3hwmd/risk/human/rb-concentration_table/Generic_Tables/docs/master_sl_table_run_NOV2014.pdf

MCLG - Maximum Contaminant Level Goal

µg/L - micrograms per liter

mg/L - milligrams per liter

FIELD DATA RECORD FORM
METER, WATER LEVEL

(QSF-251D)

Control No.:	KS-IP-02	**Project No.:**	054046
Date:	11-03-2014	**Project Name:**	OCC Wichita
User:	A Krein		
		Location:	Wichita, KS

Additional Equipment Control Numbers and Descriptions:

FIELD PROCEDURE BEFORE USE:

	Check when completed
• Check for broken or missing parts.	
• Check battery	☑
• Check operation of buzzer.	☑
• Check operation of signal light.	☑
• Test probe in water to ensure unit operates, both visually and audibly.	☑
• Check cable.	☑

Location: Wichita, KS

Additional Equipment Control Numbers and Descriptions:

FIELD PROCEDURE BEFORE USE:

Do Not Calibrate in the Field - In-House Calibration Only by Field Equipment Manager

Check when completed

Check kit contents;

- Meter [x]
- Low 0-10, medium 0-100, high 0-1000 standards [x]
- Extra AA batteries [x]
- Sample vials [x]

Test and record Gelex standards: [x]

	Gelex Standard	***Meter Reading***
• Low 0-10	5.87	5.90
• Medium 0-100	49.4	49.9
• High 0-1000	480	476

Note: Condensation on outside of sample bottles affects meter readings.

User: J. Raye, N. Laskares

Project No.: 054046
Project Name: OCC Wichita

Location: Wichita, KS

Additional Equipment Control Numbers and Descriptions:

FIELD PROCEDURE BEFORE USE:

	Check when completed
• Check kit contents.	[x]
• Check pH 7 buffer reading. Calibrate if greater than ±0.2.	Reading 6.75
PH is a two point calibration but always start with the seven standard.	
• Fill calibration cup with pH 7.0 buffer and attach to probe with probes facing down.	Calibrated Y / N
• Press Esc to enter into main menu and use down arrow key to highlight calibration menu. Press ↵ key to accept.	
• Use ↓ key to highlight pH symbol and press enter ↵.	
• Select 2 point calibration and use number pad to enter 7.0 and push ↵ to accept value. Push ↵ again to calibrate.	
• Repeat these steps to calibrate your pH value to 4.0 or 10.0.	Reading 3.89
• Press Esc to return to the calibration screen.	
Check conductivity standard near the expected range. Calibrate if greater than ±0.5%.	Standard 1.413 Reading 1.345
Conductivity is a one point calibration.	Calibrated Y / N
• Fill calibration cup with 1.413 mS standard and attach to probe with probes facing up.	
• Press Esc to return to the calibration screen.	
• Use the ↑or ↓ to select SpC and press ↵	
• Use the number key pad to enter 1.413 and push ↵ to accept value. Push ↵ again to calibrate.	
Check ORP standard:	
• Press Esc to return to the calibration screen.	Standard 237.5 mV Reading 234.1 mV
• Use the ↑or ↓ to select ORPand press ↵	
• Use the number key pad to enter the value and push ↵ to accept. Push ↵ again to calibrate.	
To calibrate DO, see manual for instructions	Calibrated Y / N

FIELD PROCEDURE BEFORE USE:

Do Not Calibrate in the Field - In-House Calibration Only by Field Equipment Manager

Check when completed

Check kit contents;

- Meter [x]
- Low 0-10, medium 0-100, high 0-1000 standards [x]
- Extra AA batteries [x]
- Sample vials [x]

Test and record Gelex standards: [x]

	Gelex Standard	***Meter Reading***
• Low 0-10	5.87	5.22
• Medium 0-100	49.4	42.7
• High 0-1000	480	488

Note: Condensation on outside of sample bottles affects meter readings.

Filing: Field File

Location: Wichita, KS

Additional Equipment Control Numbers and Descriptions:

FIELD PROCEDURE BEFORE USE:

	Check when completed
• Check kit contents.	[x]
• Check pH 7 buffer reading. Calibrate if greater than ±0.2.	Reading 7.02
PH is a two point calibration but always start with the seven standard.	
• Fill calibration cup with pH 7.0 buffer and attach to probe with probes facing down.	Calibrated Y / N
• Press Esc to enter into main menu and use down arrow key to highlight calibration menu. Press ↵ key to accept.	
• Use ↓ key to highlight pH symbol and press enter ↵.	
• Select 2 point calibration and use number pad to enter 7.0 and push ↵ to accept value. Push ↵ again to calibrate.	
• Repeat these steps to calibrate your pH value to 4.0 or 10.0.	Reading 9.98
• Press Esc to return to the calibration screen.	
Check conductivity standard near the expected range. Calibrate if greater than ±0.5%.	Standard 1.413 Reading 1.405
Conductivity is a one point calibration.	Calibrated Y / N
• Fill calibration cup with 1.413 mS standard and attach to probe with probes facing up.	
• Press Esc to return to the calibration screen.	
• Use the ↑or ↓ to select SpC and press ↵	
• Use the number key pad to enter 1.413 and push ↵ to accept value. Push ↵ again to calibrate.	
Check ORP standard:	
• Press Esc to return to the calibration screen.	Standard 237.5 mV Reading 244.5 mV
• Use the ↑or ↓ to select ORPand press ↵	
• Use the number key pad to enter the value and push ↵ to accept. Push ↵ again to calibrate.	
To calibrate DO, see manual for instructions	Calibrated Y / N

	Check when completed
• Check kit contents.	[x]
• Check pH 7 buffer reading. Calibrate if greater than ±0.2.	Reading 7.01
PH is a two point calibration but always start with the seven standard.	
• Fill calibration cup with pH 7.0 buffer and attach to probe with probes facing down.	Calibrated Y / N
• Press Esc to enter into main menu and use down arrow key to highlight calibration menu. Press ↵ key to accept.	
• Use ↓ key to highlight pH symbol and press enter ↵.	
• Select 2 point calibration and use number pad to enter 7.0 and push ↵ to accept value. Push ↵ again to calibrate.	
• Repeat these steps to calibrate your pH value to 4.0 or 10.0.	Reading 4.03
• Press Esc to return to the calibration screen.	
Check conductivity standard near the expected range. Calibrate if greater than ±0.5%.	Standard 1.413 Reading 1.420
Conductivity is a one point calibration.	Calibrated Y / N
• Fill calibration cup with 1.413 mS standard and attach to probe with probes facing up.	
• Press Esc to return to the calibration screen.	
• Use the ↑or ↓ to select SpC and press ↵	
• Use the number key pad to enter 1.413 and push ↵ to accept value. Push ↵ again to calibrate.	
Check ORP standard:	
• Press Esc to return to the calibration screen.	Standard 237.5 mV Reading 229.9 mV
• Use the ↑or ↓ to select ORPand press ↵	
• Use the number key pad to enter the value and push ↵ to accept. Push ↵ again to calibrate.	
To calibrate DO, see manual for instructions	Calibrated Y / N

The Appendix and Quality Control sections are integral parts of this laboratory report and may contain important data qualifiers.

All results are reported on a wet weight basis unless otherwise stated.

Samples will be retained for thirty days unless Continental is otherwise notified.

Continental is accredited by the State of Kansas through the National Environmental Laboratory Accreditation Program (NELAP). The results contained in this report were obtained using Continental's Standard Operating Procedures. These procedures are in substantial compliance with the approved methods referenced and the standards published by NELAP unless otherwise noted in the Appendix and Quality Control sections of this report.

Thank you for choosing Continental for this project.

ND( ), where reported, indicates the analyte was not detected above the Limit of Quantitation (LOQ). The concentration of the LOQ is inside the parentheses.

All samples which require cooling were received at a temperature of less than 6 degrees Celsius.

No analysis with a holding time of seventy-two hours or less was performed in this Continental order.

Due to the absence of sampling date and/or time information, the holding time for preparation and/or analysis may not have been qualified correctly for applicable samples within this order number. The data may or may not be useable for compliance purposes.

CE - Compound coelutes. The value and/or spike level reported is a sum of coeluting compounds.

HP - Regulatory preparation holding time for this analysis was exceeded.

M - Reporting limit higher than normal due to matrix interferences.

OC - The response for this analyte exceeded the calibration range of the instrument. Sample dilution and reanalysis is necessary to obtain an accurate result. The reported result, if provided, is estimated.

QC - QC data qualifiers were noted. See the Quality Control Report.

SR - One or more surrogate recoveries for this analysis did not meet quality control limits. Please see the Quality Control Report for the sample surrogate data.

NELAP accreditation is issued under each EPA regulatory program for a given matrix/analyte/method combination. Continental is NELAP accredited for each matrix/analyte/method and EPA program cited in this Laboratory Report, except for those listed in the table below and for analyses performed in the field. For most of the analyses listed in the table, NELAP accreditation is not offered under the listed EPA program and Continental is NELAP accredited for the analysis, using the same analytical technology, but under a different EPA program. Continental's full NELAP accreditation status may be viewed at www.kdheks.gov/envlab. Note that unless qualified otherwise in the Laboratory Report, Continental performs all analyses, including each analysis listed in the table below, utilizing NELAP protocol.

Test	Analysis	Matrix-Regulatory Program	Method	CAS NELAP Accredited in Other Reg. Program
CL351	OXY Chlorinated Hyd.	L-RCRA	8121	
CL351	Hexachloroethane	L-RCRA	8121	No

Data Qualifiers:

CE - Compound coelutes. The value and/or spike level reported is a sum of coeluting compounds.

ML - The matrix spike and/or matrix spike duplicate recovery for this analyte was below the method or laboratory control limit. See LCS data for the basis for acceptance of this sample. The reported sample concentration is estimated.

MP - The MS/MSD recoveries for this analyte exceeded the method or laboratory precision control limit. The reported sample concentration is estimated.

MN - The MS/MSD sample analyses were not performed on a sample from this Continental order number.

** - RPD calculation not applicable/not available for this analysis.

TOLUENE-d8		11/10/2014	10	µg/L	107	90.5-117

Data Qualifiers:
SL - The surrogate recovery for this analysis was below the method or laboratory control limits. The reported sample concentration may be biased low.

C - Due to matrix interference(s) and/or high concentration(s) of analyte(s) present in the sample, dilution was required causing the spike level for this analyte to be below the reporting limit and/or below the lowest point of the calibration curve.

Laboratory Number	Instrument Batch	Sample Description
14110485R	1MS6325	WG-11052014-AK-MW07S1
14110496	1MS6325	WG-11062014-AK-AMW5D
14110497	1MS6325	WG-11062014-AK-AMW5S

Analysis	Date of Analysis	Instrument Batch ID	Amount in Standard	Amount Detected	Units	Percent Recovery
OXY Volatiles by 8260	11/07/2014	1MS9311	CCV recovery acceptable for this Instrument Batch.			
OXY Volatiles by 8260	11/10/2014	1MS9314	CCV recovery acceptable for this Instrument Batch.			

Data Qualifiers:
CE - Compound coelutes. The value and/or spike level reported is a sum of coeluting compounds.

CH - The continuing calibration verification (CCV) standard recovery for this analyte was above the method or SOP limit. The reported concentration for this analyte may be biased high.

- Laboratory Report Conclusion -

The Appendix and Quality Control sections are integral parts of this laboratory report and may contain important data qualifiers.

All results are reported on a wet weight basis unless otherwise stated.

Samples will be retained for thirty days unless Continental is otherwise notified.

Continental is accredited by the State of Kansas through the National Environmental Laboratory Accreditation Program (NELAP). The results contained in this report were obtained using Continental's Standard Operating Procedures. These procedures are in substantial compliance with the approved methods referenced and the standards published by NELAP unless otherwise noted in the Appendix and Quality Control sections of this report.

Thank you for choosing Continental for this project.

ND( ), where reported, indicates the analyte was not detected above the Limit of Quantitation (LOQ). The concentration of the LOQ is inside the parentheses.

All samples which require cooling were received at a temperature of less than 6 degrees Celsius.

No analysis with a holding time of seventy-two hours or less was performed in this Continental order.

CE - Compound coelutes. The value and/or spike level reported is a sum of coeluting compounds.

OC - The response for this analyte exceeded the calibration range of the instrument. Sample dilution and reanalysis is necessary to obtain an accurate result. The reported result, if provided, is estimated.

QC - QC data qualifiers were noted. See the Quality Control Report.

NELAP accreditation is issued under each EPA regulatory program for a given matrix/analyte/method combination. Continental is NELAP accredited for each matrix/analyte/method and EPA program cited in this Laboratory Report, except for those listed in the table below and for analyses performed in the field. For most of the analyses listed in the table, NELAP accreditation is not offered under the listed EPA program and Continental is NELAP accredited for the analysis, using the same analytical technology, but under a different EPA program. Continental's full NELAP accreditation status may be viewed at www.kdheks.gov/envlab. Note that unless qualified otherwise in the Laboratory Report, Continental performs all analyses, including each analysis listed in the table below, utilizing NELAP protocol.

Test	Analysis	Matrix-Regulatory Program	Method	CAS NELAP Accredited in Other Reg. Program
CL351	OXY Chlorinated Hyd.	L-RCRA	8121	
CL351	Hexachloroethane	L-RCRA	8121	No

Data Qualifiers:
MN - The MS/MSD sample analyses were not performed on a sample from this Continental order number.

CE - Compound coelutes. The value and/or spike level reported is a sum of coeluting compounds.

MP - The MS/MSD recoveries for this analyte exceeded the method or laboratory precision control limit. The reported sample concentration is estimated.

ML - The matrix spike and/or matrix spike duplicate recovery for this analyte was below the method or laboratory control limit. See LCS data for the basis for acceptance of this sample. The reported sample concentration is estimated.

** - RPD calculation not applicable/not available for this analysis.

Data Qualifiers:
CH - The continuing calibration verification (CCV) standard recovery for this analyte was above the method or SOP limit. The reported concentration for this analyte may be biased high.

CE - Compound coelutes. The value and/or spike level reported is a sum of coeluting compounds.

- Laboratory Report Conclusion -

Seal matches Chain of Custody: Yes / No / (N/A)

Type of Packing Material: Blue Ice / (Ice) / Melted Ice / (Bubble) / Foam / Paper / Peanuts / Vermiculite / None / Other: _____

Cooler Temperature (°C): Original Reading (°C) 2.4 Corrected Reading (°C) 2.8
Temperature. By: (Temperature Blank) Surface Temperature
Thermo. ID No.: 58 Thermo. Correction Factor (°C): 0.4
☐ Evidence of Cooling and date received = date sampled

Sample Receipt Discrepancies: ☒ No ☐ Yes **(See below for discrepancies.)**

Note: If discrepancies are present, CAS will proceed with analyses until/unless directed otherwise by the client.

☐ Chain of Custody not present - information taken from:
Cover Letter ☐ Container ☐
PO ☐ CAS Proj. Mgr. ☐
☐ Container label absent
☐ Chain of Custody incomplete [see detail below]
☐ Chain of Custody missing date/time sampled (excl. TB or Dup.)
☐ Date or Time sampled obtained from container label
☐ Chain of Custody missing sampler's name
☐ Chain of Custody missing matrix (sample type)
☐ Missing relinquished information: signature date time
☐ Sample excluded from Chain of Custody
☐ Sample listed on Chain of Custody, not received
☐ Sample identification on container and Chain of Custody do not agree
☐ Air bubbles in Aqueous VOA vials larger than pea-size [approx. 6 mm]
☐ Cooler temperature exceeded 0.1 - 6.0 °C requirement
[Do not mark if samples do not require cooling to 0.1 - 6.0 °C.]
☐ Broken or leaking containers (detail actions below)
☐ Sample container type or labeled chemical preservation inappropriate
☐ Other discrepancies: _____

Dear Ms. Thurman:

This laboratory report, containing the samples indicated below, includes 57 pages for the analytical report, 2 page(s) for the chain of custody and/or analysis request, and 9 page(s) for the sample receipt form.

CAS LAB ID #	SAMPLE DESCRIPTION	SAMPLE TYPE	DATE SAMPLED
14111132	WG-11102014-JR-MW15S2	Liquid	11/10/2014
14111133	WG-11102014-JR-MW140S2/S3	Liquid	11/10/2014
14111134	WG-11102014-JR-MW137S2	Liquid	11/10/2014
14111135	WG-11102014-JR-MW22S2	Liquid	11/10/2014
14111136	WG-11102014-AK-MW141S2/S3	Liquid	11/10/2014
14111137	WG-11102014-AK-MW140S1	Liquid	11/10/2014

14111151	WG-11122014-JR-Builders	Liquid	11/12/2014

Please note that due to a laboratory error the organics for sample 14111151, Builders, was prepared and analyzed using drinking water methods.

The Appendix and Quality Control sections are integral parts of this laboratory report and may contain important data qualifiers.

All results are reported on a wet weight basis unless otherwise stated.

Samples will be retained for thirty days unless Continental is otherwise notified.

Continental is accredited by the State of Kansas through the National Environmental Laboratory Accreditation Program (NELAP). The results contained in this report were obtained using Continental's Standard Operating Procedures. These

procedures are in substantial compliance with the approved methods referenced and the standards published by NELAP unless otherwise noted in the Appendix and Quality Control sections of this report.

Thank you for choosing Continental for this project.

ND( ), where reported, indicates the analyte was not detected above the Limit of Quantitation (LOQ). The concentration of the LOQ is inside the parentheses.

All samples which require cooling were received at a temperature of less than 6 degrees Celsius.

No analysis with a holding time of seventy-two hours or less was performed in this Continental order.

QC - QC data qualifiers were noted. See the Quality Control Report.

CE - Compound coelutes. The value and/or spike level reported is a sum of coeluting compounds.

FC - The confirmation analysis on a second GC column (or detector) resulted in a greater than 40% difference between the primary and confirmation results. The lower value was reported.

SR - One or more surrogate recoveries for this analysis did not meet quality control limits. Please see the Quality Control Report for the sample surrogate data.

NELAP accreditation is issued under each EPA regulatory program for a given matrix/analyte/method combination. Continental is NELAP accredited for each matrix/analyte/method and EPA program cited in this Laboratory Report, except for those listed in the table below and for analyses performed in the field. For most of the analyses listed in the table, NELAP accreditation is not offered under the listed EPA program and Continental is NELAP accredited for the analysis, using the same analytical technology, but under a different EPA program. Continental's full NELAP accreditation status may be viewed at www.kdheks.gov/envlab. Note that unless qualified otherwise in the Laboratory Report, Continental performs all analyses, including each analysis listed in the table below, utilizing NELAP protocol.

Data Qualifiers:

ML - The matrix spike and/or matrix spike duplicate recovery for this analyte was below the method or laboratory control limit. See LCS data for the basis for acceptance of this sample. The reported sample concentration is estimated.

CE - Compound coelutes. The value and/or spike level reported is a sum of coeluting compounds.

F - MS and/or MSD sample data are not available due to insufficient sample volume.

MN - The MS/MSD sample analyses were not performed on a sample from this Continental order number.

I - Due to the concentration of analyte in the sample, the spike level is too low to allow accurate quantification of the spike recovery.

** - RPD calculation not applicable/not available for this analysis.

Data Qualifiers:
SI - One or more surrogate recoveries for this analysis were not within the method or laboratory control limits. The sample result(s) or reporting limit(s) for this analysis are estimated due to sample heterogeneity and/or sample matrix interferences.

SH - One or more surrogate recoveries for this analysis was above the method or laboratory control limits. The reported sample concentration may be biased high.

Dear Ms. Thurman:

This laboratory report, containing the samples indicated below, includes 18 pages for the analytical report, 1 page(s) for the chain of custody and/or analysis request, and 2 page(s) for the sample receipt form.

CAS LAB ID #	SAMPLE DESCRIPTION	SAMPLE TYPE	DATE SAMPLED
14112130	WG-11252014-JR-IW43	Liquid	11/25/2014
14112131	WG-11252014-JR-IW44	Liquid	11/25/2014
14112132	WG-11252014-JR-DW-7	Liquid	11/25/2014
14112133	WG-11252014-JR-AP2800	Liquid	11/25/2014
14112134	TB-11252014-JR	Liquid	11/25/2014

The Appendix and Quality Control sections are integral parts of this laboratory report and may contain important data qualifiers.

All results are reported on a wet weight basis unless otherwise stated.

Samples will be retained for thirty days unless Continental is otherwise notified.

Continental is accredited by the State of Kansas through the National Environmental Laboratory Accreditation Program (NELAP). The results contained in this report were obtained using Continental's Standard Operating Procedures. These procedures are in substantial compliance with the approved methods referenced and the standards published by NELAP unless otherwise noted in the Appendix and Quality Control sections of this report.

Thank you for choosing Continental for this project.

ND( ), where reported, indicates the analyte was not detected above the Limit of Quantitation (LOQ). The concentration of the LOQ is inside the parentheses.

All samples which require cooling were received at a temperature of less than 6 degrees Celsius.

No analysis with a holding time of seventy-two hours or less was performed in this Continental order.

FD - The confirmation analysis on a second GC column (or detector) resulted in a greater than 40% difference between the primary and confirmation results. The higher value was reported.

CE - Compound coelutes. The value and/or spike level reported is a sum of coeluting compounds.

SR - One or more surrogate recoveries for this analysis did not meet quality control limits. Please see the Quality Control Report for the sample surrogate data.

NELAP accreditation is issued under each EPA regulatory program for a given matrix/analyte/method combination. Continental is NELAP accredited for each matrix/analyte/method and EPA program cited in this Laboratory Report, except for those listed in the table below and for analyses performed in the field. For most of the analyses listed in the table, NELAP accreditation is not offered under the listed EPA program and Continental is NELAP accredited for the analysis, using the same analytical technology, but under a different EPA program. Continental's full NELAP accreditation status may be viewed at www.kdheks.gov/envlab. Note that unless qualified otherwise in the Laboratory Report, Continental performs all analyses, including each analysis listed in the table below, utilizing NELAP protocol.

Data Qualifiers:

F - MS and/or MSD sample data are not available due to insufficient sample volume.

CE - Compound coelutes. The value and/or spike level reported is a sum of coeluting compounds.

MN - The MS/MSD sample analyses were not performed on a sample from this Continental order number.

** - RPD calculation not applicable/not available for this analysis.

LIST OF TABLES
(Following Text)

1.0 Introduction

The following document details a reduced validation of analytical results for groundwater samples collected in support of the Semiannual Groundwater Sampling Program at the Wichita, Kansas Site during November 2014. Samples were submitted to Continental Analytical Services (CAS), located in Salina, Kansas. A sample collection and analysis summary is presented in Table 1. The validated analytical results are summarized in Table 2. A summary of the analytical methodology is presented in Table 3.

Standard Conestoga-Rovers & Associates (CRA) report deliverables were submitted by the laboratory. The final results and supporting quality assurance/quality control (QA/QC) data were assessed. Evaluation of the data was based on information obtained from the chain of custody forms, finished report forms, method blank data, recovery data from surrogate spikes, laboratory control samples (LCS), matrix spikes, and field QC samples.

The QA/QC criteria by which these data have been assessed are outlined in the analytical methods referenced in Table 3 and the applicable guidance from the documents entitled:

i. Quality Assurance Project Plan, Facility-Related Investigative Activities, Resource Conservation and Recovery Act (RCRA) Corrective Action Program", Occidental Chemical Corporation, Wichita, Kansas, EPA ID No. KSD007482029, June 2009

ii. "USEPA Contract Laboratory Program National Functional Guidelines for Organic Data Review", United States Environmental Protection Agency (USEPA) 540/R-99-008, October 1999

iii. "USEPA Contract Laboratory Program National Functional Guidelines for Inorganic Data Review", USEPA 540/R-94-013, February 1994

Items ii) and iii) will subsequently be referred to as the "Guidelines" in this Memorandum.

2.0 Sample Holding Time and Preservation

The sample holding time criteria for the analyses are summarized in the methods. Sample chain of custody documents and analytical reports were used to determine sample holding times. All samples were prepared and analyzed within the required holding times.

All samples were properly preserved, delivered on ice, and stored by the laboratory at the required temperature (0-6°C).

3.0 Laboratory Method Blank Analyses

Method blanks are prepared from a purified matrix and analyzed with investigative samples to determine the existence and magnitude of sample contamination introduced during the analytical procedures.

For this study, laboratory method blanks were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

All method blank results were non-detect, indicating that laboratory contamination was not a factor for this investigation.

4.0 Surrogate Spike Recoveries

In accordance with the methods employed, all samples, blanks, and QC samples analyzed for organics are spiked with surrogate compounds prior to sample extraction and/or analysis. Surrogate recoveries provide a means to evaluate the effects of laboratory performance on individual sample matrices.

All samples submitted for organic determinations were spiked with the appropriate number of surrogate compounds prior to sample extraction and/analysis.

Each individual surrogate compound is expected to meet the laboratory control limits with the exception of semi-volatile organic compound (SVOC) analyses. According to the "Guidelines" for SVOC analyses, up to one outlying surrogate in the base/neutral or acid fractions is acceptable as long as the recovery is at least 10 percent.

Surrogate recoveries were assessed against laboratory control limits. Most surrogate recoveries met the above criteria. Several surrogates recovered outside of the control limits and the associated sample results were qualified as estimated (see Table 4).

5.0 Laboratory Control Sample Analyses

LCS are prepared and analyzed as samples to assess the analytical efficiencies of the methods employed, independent of sample matrix effects.

For this study, LCS were analyzed at a minimum frequency of 1 per 20 investigative samples and/or 1 per analytical batch.

Organic Analyses

The LCS contained all compounds of interest. All LCS recoveries were within the laboratory control limits, demonstrating acceptable analytical accuracy.

Inorganic Analyses

The LCS contained all analytes of interest. LCS recoveries were assessed per the "Guidelines". All LCS recoveries were within the control limits, demonstrating acceptable analytical accuracy.

6.0 Matrix Spike/Matrix Spike Duplicate (MS/MSD) Analyses

To evaluate the effects of sample matrices on the extraction or digestion process, measurement procedures, and accuracy of a particular analysis, samples are spiked with a known concentration of the analyte of concern and analyzed as MS/MSD samples. The relative percent difference (RPD) between the MS and MSD is used to assess analytical precision.

MS/MSD analyses were performed as specified in Table 1.

Organic Analyses

The MS/MSD samples were spiked with all compounds of interest. Non-detect sample results associated with high RPDs were not qualified. Non-detect data would not be impacted by the indicated high variability. If only the MSD recovery was outside of control limits, no qualification of the data was performed based on the acceptable recovery of the companion spike. All recoveries were within the control limits demonstrating acceptable analytical accuracy and precision.

Inorganic Analyses

The MS/MSD samples were spiked with the analytes of interest, and the results were evaluated using the "Guidelines". All percent recoveries and RPD values were within the control limits, demonstrating acceptable analytical accuracy and precision with the exception of low hardness recoveries. The associated sample result was qualified as estimated (see Table 5).

7.0 Field Quality Assurance/Quality Control Samples

The field QA/QC consisted of four trip blank samples and four field duplicate sample sets.

Trip Blank Sample Analysis

To evaluate contamination from sample collection, transportation, storage, and analytical activities, four trip blank samples were submitted to the laboratory for volatile organic compound (VOC) analysis. All results were non-detect for the compounds of interest.

Field Duplicate Sample Analysis

To assess the analytical and sampling protocol precision, four field duplicate samples were collected and submitted "blind" to the laboratory, as specified in Table 1. The RPDs associated with these duplicate samples must be less than 50 percent for water samples. If the reported concentration in either the investigative sample or its duplicate is less than five times the practical quantitation limit (PQL), the evaluation criterion is one times the PQL value.

All field duplicate results were within acceptable agreement, demonstrating acceptable sampling and analytical precision.

8.0 Analyte Reporting

Non-detect results were presented as non-detect at the PQL in Table 2. Several samples were qualified as estimated for some pesticide and herbicides due to the difference in the dual column analysis (see Table 2).

9.0 Conclusion

Based on the assessment detailed in the foregoing, the data summarized in Table 2 are acceptable with the specific qualifications noted herein.

Parameters	***Units***			
General Chemistry				
Chloride	mg/L	910	1240	1230
Hardness, calculation	mgCaCO3/L	718 J	483	798

Notes:

J - Estimated Concentration
U - Not detected at the associated reporting limit
UJ - Not detected; associated reporting limit is estimated
- Not analyzed

TABLE 3

SUMMARY OF ANALYTICAL METHODS
SEMIANNUAL GROUNDWATER SAMPLING
OCCIDENTAL CHEMICAL CORPORATION
WICHITA, KANSAS
NOVEMBER 2014

Parameter	*Method*
Volatile Organic Compounds	SW-846 8260B[(1)]
Chlorinated Phenols	SW-846 8270C[(1)]
Chlorinated Hydrocarbons	SW-846 8121[(1)]
Pentachlorophenol & 2,4-D	SW-846 8151A[(1)]
Hardness	EPA 300.0[(2)]
Chloride	SM 2340B[(3)]
Volatile Organic Compounds	EPA 524.2[(4)]
Chlorinated Hydrocarbons	EPA 508[(4)]
Pentachlorophenol & 2,4-D	EPA 515.1[(4)]
