IUCN – The World Conservation Union

IUCN – The World Conservation Union brings together States, government agencies and a diverse range of non-governmental organisations in a unique world partnership: some 770 members in all, spread across 123 countries.

As a union, IUCN exists to serve its members – to represent their views on the world stage and to provide them with the concepts, strategies and technical support they need to achieve their goals. Through its six Commissions, IUCN draws together over 5000 expert volunteers in project teams and action groups. A central secretariat coordinates the IUCN Programme and leads initiatives on the conservation and sustainable use of the world's biological diversity and the management of habitats and natural resources, as well as providing a range of services. The Union has helped many countries to prepare National Conservation Strategies, and demonstrates the application of its knowledge through the field projects it supervises. Operations are increasingly decentralised and are carried forward by an expanding network of regional and country offices, located principally in developing countries.

IUCN – The World Conservation Union seeks above all to work with its members to achieve development that is sustainable and that provides a lasting improvement in the quality of life for people all over the world.

World Conservation Monitoring Centre

The World Conservation Monitoring Centre (WCMC) is a joint venture between the three partners who developed the *World Conservation Strategy* and its successor, *Caring for the Earth: IUCN – The World Conservation Union, UNEP – United Nations Environment Programme, and WWF – World Wide Fund For Nature (formerly World Wildlife Fund)*. Its mission is to support conservation and sustainable development through the provision of information on the world's biological diversity.

WCMC has developed a global overview database that includes threatened plant and animal species, habitats of conservation concern, critical sites, protected areas of the world, and the utilisation and trade in wildlife species and products. Drawing on this database, WCMC provides an information service to the conservation and development communities, governments and the United Nations agencies, scientific institutions, the business and commercial sector, and the media. WCMC produces a wide variety of specialist outputs and reports based on analyses of its data. It is also actively involved in building the capabilities of other institutions, particularly in developing countries, for promoting and planning their own biological resources.

FOREWORD

Periodically, the Red List forces us to take stock of where we are in our knowledge of the conservation status of species. Our knowledge has changed in expression through the years, as IUCN's small book *The Road to Extinction*¹, published in 1987 testifies. For some while, members of IUCN's Species Survival Commission have been considering the redefinition of the categories of threatened status of species in order to make them more realistic measures. The essay by Georgina Mace that follows is an up-to-date report on this process. We anticipate that the next Red List will reflect the adoption of new and redefined categories by IUCN. In the meantime we look to cooperation from all parties as systematic re-examination of the status of taxonomic groups and surveys of regional and national biotas proceed. To inform conservation actions we will need ever better specification of the population and distributional status of species the world over from people in touch with the real situations of these species.

In closing her essay, Dr Mace calls attention to other dimensions, both biological and human, that should be taken into account as we determine the best responses to the threats of extinction. One need is to link a quantitative grid of population and distribution criteria such as outlined in her essay to an assessment of the relative importance of a species. The evolutionary and ecological values of a species should be factored into our prioritization of conservation action. Weighting and decision making systems such as that developed by Williams, Vane-Wright, and Humphries, lend themselves to this purpose.² The integration of such systems will, however, require cooperation by systematists and ecologists with conservation biologists to a degree not previously envisaged.

Given that we can foresee a three-dimensional assessment of conservation status from a biological standpoint, it remains to factor in the human dimensions. From simple human population impact relationships on a species or its ecosystem to complexities of consumptive and non-consumptive uses of species, we need conservationists to foster collaboration by demographers, economists, and sociologists. The human domain in which issues of extinction generally will be settled is political, at local, national, and international levels. There a balance has to be struck among ethical, financial, socioeconomic, and biological considerations. We need the most cogent information to bring to the decisions in this realm, and we need it organized to best effect. To these ends, the conservation community must encourage the rapid development of systems for not only better categorizing the conservation status of species, but also for determining logical priorities for conservation action more comprehensively than we have in the past.

In signing off this foreword, it is a pleasure to acknowledge and commend the diligence of WCMC staff, in particular Dr Brian Groombridge, in compiling this new Red List. They have made it a much more informative catalogue than previous editions, incorporating tabular formats developed for *Global Biodiversity* (WCMC, 1992)³, and have extended themselves in trying to minimize nomenclatorial confusions and choose appropriate taxonomies. I commend it to all concerned with the status of faunas worldwide, for the List makes obvious that all of us should be concerned by its magnitude and meaning for the existence of our fellow creatures.

INTRODUCTION

PURPOSE

The *IUCN Red List of Threatened Animals* includes lists of those species and subspecies known or suspected to be threatened with extinction, and those known or believed to have become extinct in the wild. The Red List complements the IUCN and IUCN/ICBP Red Data Books and the IUCN-SSC Action Plans, which contain more detailed information; it is published periodically, usually at two-year intervals.

The Red List is compiled and maintained for IUCN by the World Conservation Monitoring Centre (WCMC) with the advice of the IUCN-SSC Specialist Groups and the assistance, with regard to birds, of BirdLife International (formerly ICBP).

The present edition differs greatly from its predecessors. The contents have been rearranged, the size and layout have been redesigned to make the book easier to use, and more distribution information is given, usually including a full list of range states. We have endeavoured to update or correct information on nomenclature and distribution, to change categories as appropriate, and to add species that have been recognised as globally threatened since the last edition (a few species previously listed but now not considered threatened have been removed). For the first time in the Red List a more complete list of species known or believed to have become extinct in the wild since around 1600 AD is provided.

STRUCTURE OF THE 1994 RED LIST

The lists are arranged taxonomically. For each threatened species, the scientific name, IUCN status category and countries of occurrence are given (for widespread and strictly marine species a general description of the range is provided instead of a list of countries). For many species common names are indicated, usually in English but sometimes in other languages.

Previous editions of the Red List contained a single list. In order to improve clarity in the present edition we have divided the material as follows:

List 1: THREATENED SPECIES, comprising the central catalogue of threatened species, including species suspected to be threatened (category K);

List 2: EXTINCT SPECIES, including those species categorised by IUCN as Ex or Ex? together with other species that have become extinct since around 1600 AD but have not previously been categorised in the Red List;

List 3: THREATENED GENERA (etc), comprising entries for genera and other higher taxa used in previous editions that were not resolved to species level;

List 4: THREATENED AND EXTINCT SUBSPECIES, including all threatened subspecies whatever their category and extinct subspecies;

List 5: COMMERCIALLY THREATENED species.

The reader is referred to the Explanatory Notes below for further discussion of the content of these lists, and of the tables derived from them.

Our intention in making this rearrangement has been to provide the most sound basis possible for the next edition of the Red List, in which use of the new IUCN system of categorisation is envisaged. At the time of writing (late 1993) this is nearing its final formulation (see the Guest Essay for further discussion).

SOURCES OF STATUS INFORMATION AND OPINION

The threatened species lists are based on information provided by numerous scientists and naturalists working in the field. The core of the present Red List consists of species known or suspected to be threatened, as identified over many years during production by IUCN, WCMC and BirdLife International of earlier Red Data Books and Red Lists. In this revised edition of the Red List we have incorporated information from two main sources:

- the IUCN-SSC taxonomic and regional Specialist Groups;
- national Red Data Books or equivalent listings.

The Specialist Groups were notified of this revision process in February 1993 and the majority of groups responded, either with recommendations for no change, or with extensive new listings and re-categorisations. Compilation was completed in early October 1993.

We have added many threatened species from national Red Data Books available to us whenever we were able to determine that the species in question is endemic to that country, or virtually endemic, and so by definition globally threatened at the species level. Most such additions have been among the reptiles, amphibians or fishes; few invertebrates have been added from these sources because it has rarely been possible in the time available to determine which are single country endemics. No subspecies have been entered from national sources.

BirdLife International have, as in previous editions, been responsible for the basic list of bird species considered threatened, and for their categorisation. We have in a few cases modified the nomenclature of genera and species to accord with Sibley and Monroe (1990, 1993). A new global assessment and listing of threatened birds is in an advanced stage of preparation by Birdlife International, and rather than attempt a partial and provisional revision of the bird section of this present Red List, which would soon be outdated by the new bird list, it has jointly been decided to retain substantially the same species treated in *Birds to Watch* (the 1988 ICBP world list of threatened birds). These species were subsequently given an IUCN category in the 1990 IUCN Red List. This 1990 publication, revised to take account of *Threatened Birds of the Americas* (Collar *et al.*, 1992), has provided the basis for the present list. We have therefore not added any threatened and endemic bird species from national sources, or changed any categories, even in the many instances where this would have been possible. There are a few minor differences between the present list and *Birds to Watch* in addition to those consequent upon publication of *Threatened Birds of the Americas* (see Explanatory Notes: List 1).

The national Red Data Books and other national sources from which species have been extracted are listed in the References below. We have reviewed a large number of such sources but not all; several that have been reviewed contain no species that we were able to identify as nationally endemic; these sources are not listed. Most national Red Data Books or similar works have used IUCN status categories and, where this is so, we have entered the same category. Where other systems have been used, we have used the equivalent IUCN category where the category given was defined unambiguously; otherwise, we have used the 'Insufficiently Known' (K) category, unless sufficient background documentation was provided to allow us to assign a category independently. We have not added species from national lists which provide no category or documentation unless supporting information was available from another source.

The use of multiple sources of information entails the risk of taxonomic inconsistency; we have tried to verify the nomenclature and distribution given in national sources, but it remains possible that a few species may have been listed twice under different names, or taxa may have been listed at an inappropriate rank.

Our task during this revision has been primarily to gather and collate information, and to produce the listings. We have not attempted a comprehensive review of the existing list beyond revisions suggested by

Specialist Groups, nor have we been responsible for critically reviewing proposals from the Specialist Groups, or the listings given in national Red Data Books (other than the general conditions noted above). This kind of thorough review will of necessity be undertaken when the new revised IUCN status categories come into use.

We have unilaterally added a few species which were not proposed by a Specialist Group or were not derived from a national Red Data Book. An example is the recently-described Vu Quang bovid *Pseudoryx nghetinhensis* (Vu Van Dung *et al.*, 1993), which, in view of its very small estimated population size and very restricted known range, we have listed as Endangered.

In a very few cases we have unilaterally changed existing or proposed category designations, or removed species previously listed, where the existing criteria for a particular category, or for listing at all, were beyond dispute not satisfied. This has usually been on the basis of new evidence or opinion. In the absence of such evidence, we have left categories unchanged even where they might not withstand challenge. In one or two marginal cases, rather than risk removing a species prematurely, we have revised the existing category to indicate a lesser degree of threat, or less certainty (to Insufficiently Known).

THE EXTENT OF STATUS ASSESSMENT

The Red List is a global catalogue of those species that have been assessed in some degree and which meet, or are suspected to meet, the current criteria for threatened status. It is not comprehensive, because not all species have been collected and described, and the conservation status of all described species has not been evaluated.

The proportion of each phylum or class that has received such assessment differs greatly between groups. Virtually all bird species have been subject to at least provisional assessment. Probably a little more than half of mammal species have been considered, although a large number of insectivores, rodents and microbats remain unassessed. Our best estimates suggest that around 20% of reptiles, 12% of amphibians, probably less than 10% of fishes, and an insignificant proportion of invertebrate animals have been assessed (although many species in certain invertebrate groups, such as dragonflies, butterflies and molluscs have been considered). Informal estimates of the proportion of species assessed, and the proportion threatened, in vertebrate higher taxa are shown graphically in Figure 1.

It has not consistently been past practice in compiling Red Data Books or Red Lists to attempt to include each and every species that could be assigned to the categories Insufficiently Known or Rare. Such species will require attention in future if the goal is to increase the number of higher taxa that have been thoroughly assessed. One very large subset of these species is comprised of those known only from their type locality (in many instances, the type material was collected many decades ago). For example, of the 4,014 nominal species of amphibian listed in Frost (1985), around 700 are reportedly known only from the type locality. Each one of these is at least Insufficiently Known or Rare, on present information, and should be categorised as Indeterminate (ie. possibly Endangered) if habitat change has been extensive in the vicinity of the type locality. There will be no exact equivalent of the current Rare category in the proposed new category system, and 'type locality only' species are likely to be classed as Insufficiently Known until better data are available (this does not denote threatened status in the new system).

SOURCES OF TAXONOMIC INFORMATION

The conflicting interests of promoting stability, following the latest or best systematic opinion, and the preferences of particular SSC Specialist Groups, have resulted in some compromises.

The following paragraphs note the main taxonomic sources used. We have whenever possible used recent global checklists of species for both nomenclature and sequence of taxa. There is a good deal of merit in following the practice of the world list of amphibians edited by Frost (1985), where orders, families, genera

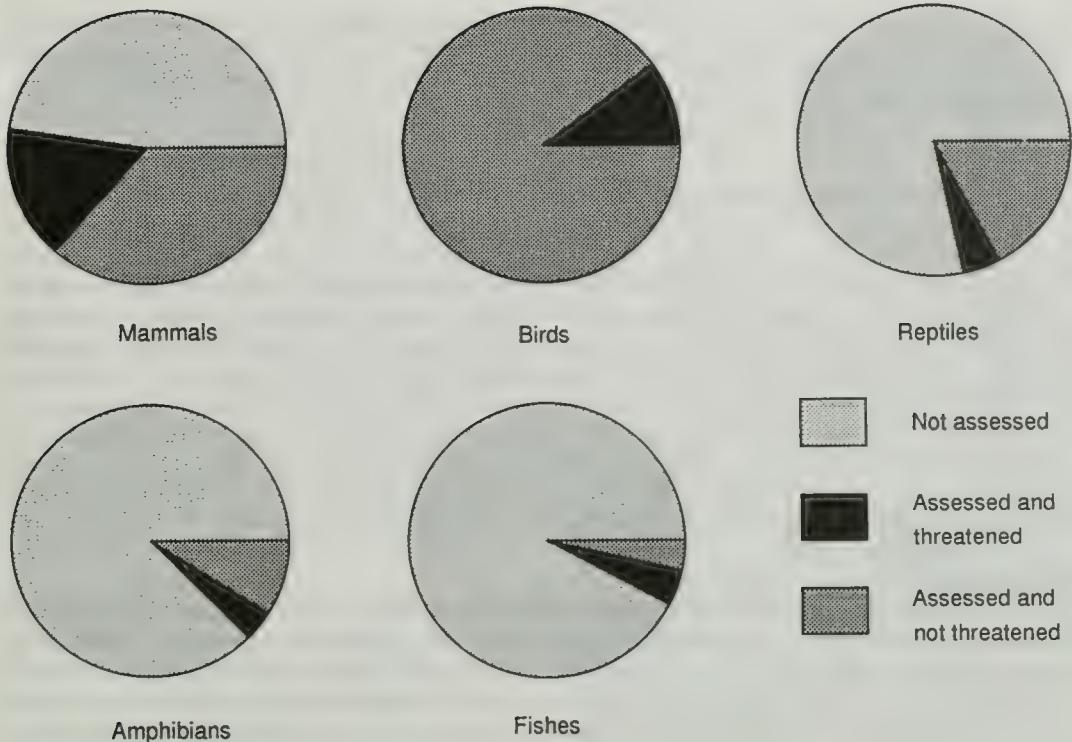

Figure 1. Pie charts to show the approximate percentage of species in major vertebrate groups that have been assessed for threatened status, together with the proportion of those assessed that are considered threatened or not threatened.

and species are all listed alphabetically. We did not adopt this for the present revision because many users are very familiar with the traditional and supposed evolutionary sequence in mammals and birds. Familiarity also caused us to adopt the conservative higher taxonomy of Morony, Bock and Farrand (1975) rather than the somewhat radical system of Sibley and Monroe (1990), although we have followed the latter source at the species level. Throughout the Red List, familiar synonyms (and sometimes other nomenclatural comments) are given in parentheses.

Mammals

The names and sequence of orders and families, and the species content of families follows Wilson and Reeder (1993). Genera and species are alphabetical within families. Species nomenclature generally also follows this source, except when a Specialist Group has expressed a very strong preference for another system, or has used nomenclature different from Wilson and Reeder and we have been unable to resolve consequent ambiguities about the population content of species and their distribution. Principal departures from Wilson and Reeder, relatively few in number, are found in the primates and bovids.

Birds

Nomenclature for genera and species follows Sibley and Monroe (1990, 1993). The names and sequence of orders and families, and the species content of families follows the more familiar system of Morony, Bock and Farrand (1975).

Reptiles

Turtles and tortoises generally follow Iverson (1992). The chief exception is *Chelonia agassizii*; recent work on mitochondrial DNA (K. Bjorndal, *in litt.*) has shown treatment at species rank separate from

Chelonia mydas, which many conservationists had adopted, to be inappropriate. Crocodilians follow King and Burke (1992). Names in common use, including by Specialist Groups or in national sources, have been employed for other groups of reptiles: there is as yet no standard world species checklist for lizards, amphisbaenians or snakes.

Amphibians

Nomenclature and sequence consistently follow Frost (1985).

Fishes

The names and sequence of orders and families, and the species content of families follows Eschmeyer (1990). Genera and species are alphabetical within families. Names in common use, including by Specialist Groups or in national sources, have been employed at the species level: there is as yet no published standard world species checklist for fishes. We have changed some family names given in contributions from the SSC Freshwater Fish Specialist Group in order to conform with the taxonomy of Eschmeyer. In particular, the Australasian Rainbowfish are given subfamily rank by Eschmeyer (Atherinidae: Melanotaeniinae) but family rank (Melanotaenidae) by local ichthyologists. Similarly, we have followed Eschmeyer in treating the Pseudomugilidae of Australasian sources, and the Austroglanidae used by Southern African sources, as subfamilies of Atherinidae and Bagridae, respectively.

Invertebrates

Parker (1982) has in general been followed for nomenclature at family level and above. Molluscs, which follow Vaughan (1989) for genera and above, are the primary exception. In one or two cases a contributor has recommended against use of a name in Parker (1982); for example, in view of current shifts in systematic opinion no family name is given for the terrestrial nemertean worms. A variety of sources, mostly listed in the references below, or cited therein, have been used for insects and other invertebrate groups.

TAXONOMY AND CONSERVATION

The interaction of taxonomy and conservation raises many issues, including the problem of identifying the units of conservation concern, and the divergence between the need for stability of nomenclature and the pursuit of systematic excellence.

In general, a threatened species tends to be given higher priority than a threatened subspecies, largely on the assumption (founded on the biological species concept) that a more distinct element of biodiversity is at risk. It is entirely legitimate, on both theoretical and pragmatic grounds, for the species to be the basic currency in global conservation action and biodiversity assessment. We have deliberately focused attention on threatened species in this Red List. Nevertheless, some difficulties must be recognised. Firstly, although the species is conceptually a real and fundamental unit in the biological hierarchy, there is no universal and operational definition of what constitutes 'a species'. The properties deemed sufficient to justify full species status vary among taxonomists working on the same group of animals. They also of necessity vary between groups (because they possess different features that can be identified as taxonomic characters), so that a species in a family of large mammals is not the precise equivalent of a species in a family of beetles. A second difficulty is that there is an opportunity for taxonomy to take on a strategic element, and for more populations to be recognised as species than might otherwise be the case.

These factors give rise to the basic truism that the delineation of species boundaries and the taxonomic rank of populations will have a fundamental impact on the conduct and efficiency of conservation actions. Similarly, they ensure that for the foreseeable future there will be a large margin of error associated with statistical treatment of biodiversity measures and listings of threatened and extinct species. This should be recalled when considering the various tabulations provided in this book.

Conservationists, particularly those involved in conservation legislation and control of illegal trade, require

stability of nomenclature to help avoid misunderstandings, both unintentional and otherwise. This need underlies the widespread move toward use of 'standard taxonomy' by CITES (Convention on International Trade in Endangered Species of Wild Fauna and Flora). One risk of this approach is that it become difficult to take account quickly enough of new systematic evidence and opinion. Taxonomists generate nomenclature and classifications based on current systematic philosophy, hypotheses, and research tools, which ensures a degree of instability. Comparison of the first and second editions of the familiar *Mammal Species of the World* is of interest (the former volume was adopted by CITES as the standard taxonomy of mammals).

A total of 4,170 species were listed in the first edition of *Mammal Species of the World* (Honacki *et al.*, 1982) and 4,629 in the second (Wilson and Reeder, 1993); a net increase of 459 species. Only in the South American marsupial Orders Didelphimorphia (63 instead of 76), Paucituberculata (five instead of seven) and in Hyracoidea (six instead of seven) are there fewer species listed in 1993 than in 1982. The size of the net increase is somewhat surprising, given that mammals are a relatively well known group, but perhaps the most interesting point is that new species descriptions, of which 172 are recorded, comprise the lesser proportion of this total. The remaining 287 species of the total added in the second edition must be the result of taxonomic splitting (or largely so, if there is difference in the extent to which extinct species are listed, or some similar factor). Some of these changes are portrayed graphically in Figure 2. This very marked trend may be correlated with the fact that the second edition explicitly takes a far less consensual approach than the first, and so reflects closely the views of a relatively small number of mammalogists. The Orders Rodentia, Primates and Artiodactyla have increased most in species content, with in each case around 75% resulting from taxonomic splitting (and many of these primates appear in this Red List). Primates, with an additional 52 species, have undergone by far the largest percentage increase of any mammal Order (except for Notoryctemorphia, erected for *Notoryctes* which now has two species instead of one).

Clearly, changes in opinion on species boundaries such that populations formerly given subspecies rank (or perhaps not recognised as formal taxa) come to be treated as full species, have had a major impact on our world view of mammalian diversity and will in turn have repercussions for the users of this taxonomy, including the conservation community.

Some level of taxonomic change is both inevitable and desirable, if new methods and new studies are to

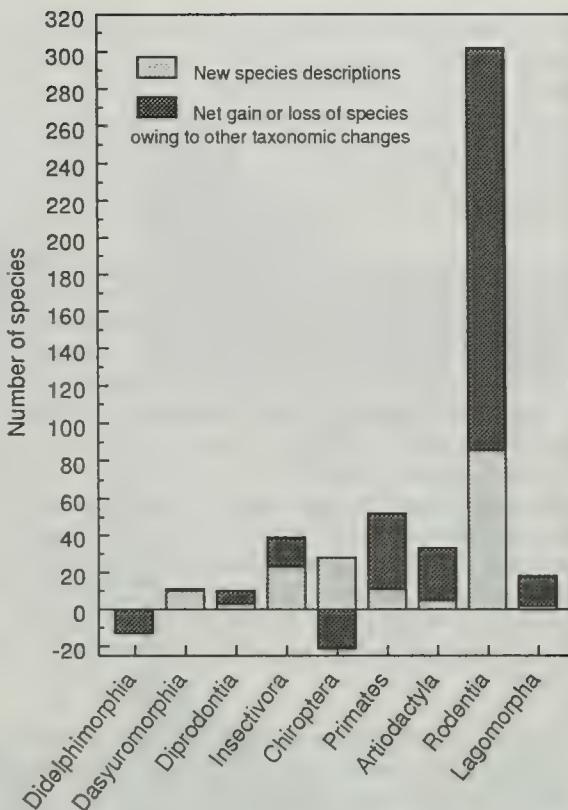

Figure 2. Changing concepts of species richness in mammals: 459 more species are recognised in the second (1993) edition of *Mammals of the World* than in the first (1982). Graph to show both (a) the number of new species descriptions and (b) net gain or loss of species largely or entirely because of changes in the taxonomic rank of populations. Note that taxonomic splitting has had greater effect on the overall increase in species number than new species descriptions. Based on data in Wilson and Reeder (1993); graph does not show Orders with trivial or no change.

Clearly, changes in opinion on species boundaries such that populations formerly given subspecies rank (or perhaps not recognised as formal taxa) come to be treated as full species, have had a major impact on our world view of mammalian diversity and will in turn have repercussions for the users of this taxonomy, including the conservation community.

be pursued, but taxonomists sometimes appear oblivious to the needs of users of taxonomies. As just one example, sources in Wilson and Reeder (1993) note that the dormouse genus *Glis* Brisson 1762 is invalid and the earliest valid replacement is *Myoxus* Gray 1821. Adoption of this name, not used for decades, requires changing the family name from Gliridae to Myoxidae, and denies mammalogists *Glis glis*, a name both familiar and euphonious. The pragmatic taxonomist would not have agonised over the validity or otherwise of eighteenth century names, but kept his own counsel, or petitioned the International Commission on Zoological Nomenclature to conserve the familiar name under Article 79 of the Code.

The case of the second *Sphenodon* (Tuatara), discussed by Daugherty *et al* (1990) exemplifies some practical consequences of changes in taxonomic rank of populations. This genus is of exceptional zoological interest as the only survivor of the Order Rhychocephalia, otherwise known by a wide diversity of fossil forms mainly of Triassic age. Since 1904 all extant Tuatara populations had been recognised as comprising the single species *Sphenodon punctatus*, restricted to offshore islands of New Zealand, although in neglected nineteenth century literature one additional extant species and one recently extinct were recognised. Recent analysis of allozymes and morphology reported by Daugherty *et al* demonstrated that the form originally described at species level but traditionally put in the synonymy of *S. punctatus* is indeed sufficiently distinct to require full species status as *Sphenodon guntheri*. The practical consequences are that while the Tuatara was perceived as monotypic, the 'species' appeared relatively abundant, although localised and at risk. Some 25% of island populations are known to have become extinct during the past century, and *S. guntheri* could very easily have disappeared with little or no notice being taken. Now *guntheri* is recognised as the second Tuatara species it immediately takes on a very high priority for conservation, particularly because it is restricted to 1.7 ha of scrub on North Brother Island, its single world locality.

Given the general goal of maintaining biological diversity, it is in theory desirable to identify and promote the wise management of all genetically distinct populations; the existing scheme of biological taxonomy seems not in practice the best tool for identifying and cataloguing such populations, and was surely never intended to be. While a subspecific name can often serve as a useful label, and may reflect substantial genetic differences between geographically isolated populations on islands or mountain tops, where there is no correlated geographic isolation it may be a poor indicator of the magnitude of intraspecific genetic differentiation. Subspecific taxa seem too often based on small samples, arbitrary division of clinal variation, and superficial characters of pelage colour, squamation and suchlike (discussed for reptiles by Thorpe, 1980, 1984), to be universally a useful surrogate for assessment of the extent of geographic isolation and use of more direct markers of genetic differentiation.

THREATENED ANIMALS: COMMENTARY

Statistical data derived from the 1994 Red List are presented in Tables 1-6. Some preliminary remarks on these are provided below; the intention is to note some features of interest while further analysis of these and related data is pending.

The tables include threatened full species only, together with the extinct full species treated in Table 6. Subspecies and commercially threatened (CT) species are excluded. The species assigned to genera in List 3 have usually also been taken into account, but this has not been possible in all cases.

It is vital to keep in mind that these data are shaped by many factors. Some groups of species have been assessed more completely than others; some countries have carried out national assessments and produced national Red Data Books. These species and these countries will be represented in the lists more fully or more accurately than others. Further, there is significant variation in the way status categories have been interpreted and applied, and uncertainty over species boundaries and the taxonomic level of populations. However, although these data are not globally comprehensive, and have some margin of error arising from misclassification of entities into taxa or status categories, they are the best and most complete set of data available.

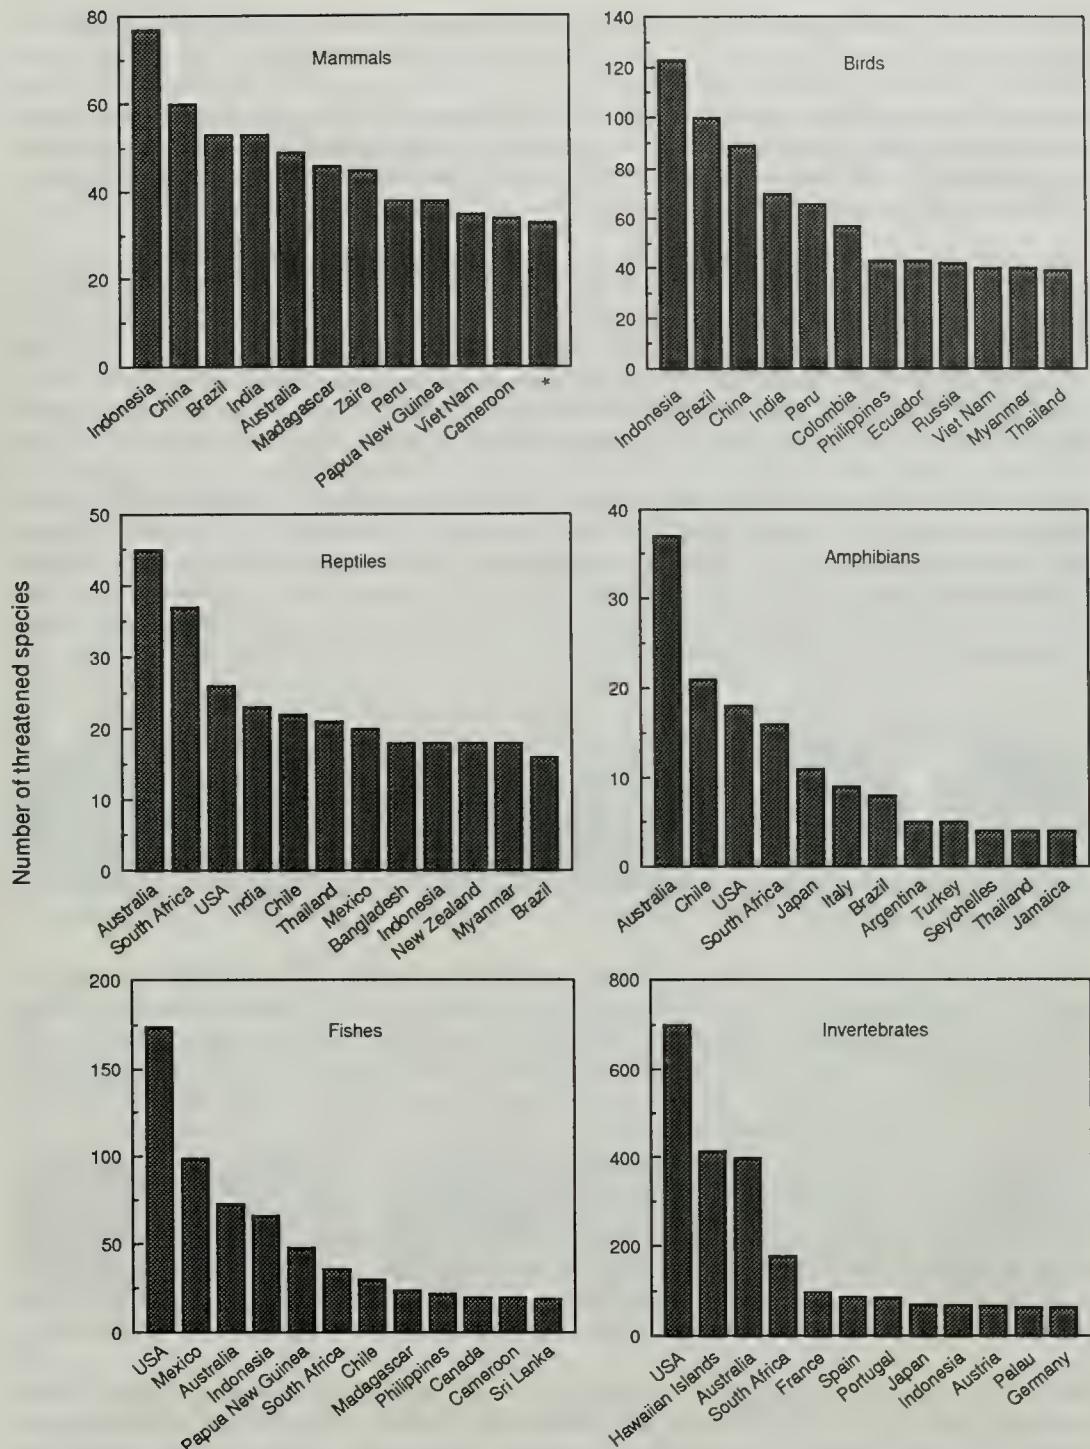

Figure 3. Bar graphs to show the 12 countries with the highest number of threatened species in each major taxonomic group. Note that this includes species suspected to be threatened (K) as well as those known to be threatened (E, V, R and I). The asterisk * in the mammal graph denotes three countries with an equal score (Argentina, Laos, Thailand).

Table 1 summarises the number of species in each threat category for each Order of animals in the Red List.

Virtually all animals are invertebrates, and most threatened animals are invertebrates, but the total number of invertebrates listed as threatened (2,754) is a scarcely perceptible proportion of the estimated global species richness of invertebrates. This last has been estimated conservatively at around ten million species, of which perhaps one-tenth have been described (Hammond, in WCMC, 1992).

This relatively very low representation of invertebrates seems probably to be more a reflection of the low level of information on the range and status of such animals, than an indication of a generally low risk of extinction, but this must be properly assessed on a group by group basis. Almost all the invertebrate species listed are molluscs or insects, in about equal proportion. Around half the insects are beetles, nearly half are butterflies and moths, most of the remainder are damsel- and dragonflies. Many of these animals can be monitored in the field without insuperable difficulty; molluscs because of the hard shells of most species, and the insects because many are relatively conspicuous diurnal winged forms.

Among the vertebrates, fishes and birds have similar numbers of species listed as threatened (977 and 971 respectively); these totals comprise about 4% of fish species but 10% of birds. This disparity is certainly due to a difference in the extent to which these two groups have been assessed. Many more fishes appear in this edition of the Red List than previously because more ichthyofaunas have been evaluated. One clear lesson to have emerged from this compilation is that wherever surveys are made, more fishes are found to be threatened, usually by introduced non-native fish species or habitat modification.

A total of 741 mammal species are considered threatened; this represents almost 16% of the 4,629 species now recognised. This is the highest proportion of the total species content for any of the higher taxa considered.

Mammals and birds have a similar number of Endangered category species, 177 and 188 respectively, representing 3.8% and 1.9% of all the species in each group. Reptiles, amphibians, fishes and invertebrates have 47, 32, 158 and 582 Endangered species, representing 0.7%, 0.7%, 0.6% and at the very most 0.05% of species in each group.

Two very small mammal Orders have all extant species listed as threatened: the two elephants and four sirenians. Most Perissodactyla, 12 of 18 species, are threatened. In terms of number alone, seven Orders have more than 50 threatened species listed. These are, in descending sequence: Rodentia 118, Primates 113, Carnivora 99, Artiodactyla 81, Cetacea 77, Insectivora 73 and Chiroptera 72. If Insufficiently Known taxa are excluded, there are five Orders with more than 50 species listed: Primates 105, Rodentia 87, Artiodactyla 75, Chiroptera 64 and Carnivora 63. It is interesting to note that the top three Orders are also those that have undergone most taxonomic splitting (Figure 2). If the five values are calculated as a percentage of described species in each Order, the sequence is: Primates 45%, Artiodactyla 34%, Carnivora 23%, Chiroptera 6.9% and Rodentia 4.3%. Primates, with 43, have by far the highest number of Endangered species among mammal Orders; Artiodactyla are second with 31, about twice as many as any of the remaining Orders. It remains to be seen whether continuing conservation assessment of other mammal groups, which generate less popular concern, will shift the balance of these figures, or whether they are an accurate measure of relative extinction risk.

Tables 2 and 3 give country-based data on threatened animals. Figure 3 shows countries with the highest number of threatened (E, V, R, I) and possibly-threatened (K) species combined in each higher taxonomic group. It is difficult objectively to disentangle the factors that contribute to these rankings. Certainly the extent to which countries have carried out national faunal surveys and conservation assessments is a major determinant, as is the extent to which IUCN-SSC Specialist Groups have been active. Species richness, land area and the magnitude of faunal depletion are other key factors.

Indonesia, Brazil, China and India are among the five countries with the most threatened mammals and birds. They are all also large, ecologically diverse and species-rich countries, and hold a large number of species in the better-assessed groups. Australia, USA and South Africa also figure prominently in Figure 3; these are similarly large and species-rich, and their faunas have been subject to detailed study and assessment. However, while the relationships involved are complex, there is no reason to suspect that the ranking of countries in this compilation is not a reasonable working indication of the overall geopolitical location of species at risk of extinction.

Table 5 summarises the number of species in each major taxonomic group listed as threatened in the 1990 and 1994 Red Lists. All groups except birds have many more species listed in 1994 than in 1990: approximately 1500 more species overall are listed in the present edition. This can not be interpreted directly as an overall increase in the risk of extinction. Among reptiles, amphibians, fishes and invertebrates, virtually all the increase can be attributed either to recent assessment of groups not or incompletely evaluated before, or to the inclusion in this edition of species from national Red Data Books and lists. Much the same appears true for mammals. For example, many more cetaceans and bats are listed following publication, respectively, of a Red Data Book and an Action Plan for these groups (Klinowska, 1991; Mickleburgh *et al.*, 1992). In several instances, and virtually only among mammals, species previously evaluated and not considered threatened have been moved to one of the threatened status categories; this may reflect the collection of new data, a deterioration in status, or inconsistency in the application of categories. Only the total for birds is lower in 1994 than in 1990. This reduction is mainly because a number of birds are no longer considered threatened *sensu* IUCN following reassessment during preparation of the *Threatened Birds of the Americas* Red Data Book (Collar *et al.*, 1992); changes to the taxonomic rank of a few populations have reduced the total of those listed at species level.

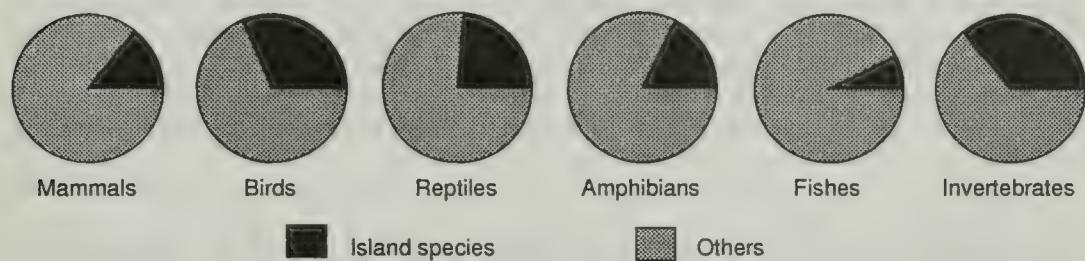

Figure 4. Pie charts to show approximate numbers of threatened species restricted to islands as opposed to 'others' - those occurring on continents or continents plus islands. Madagascar, Japan (main group), Borneo, Sumatra and Java have not been counted as islands for the purposes of this estimation.

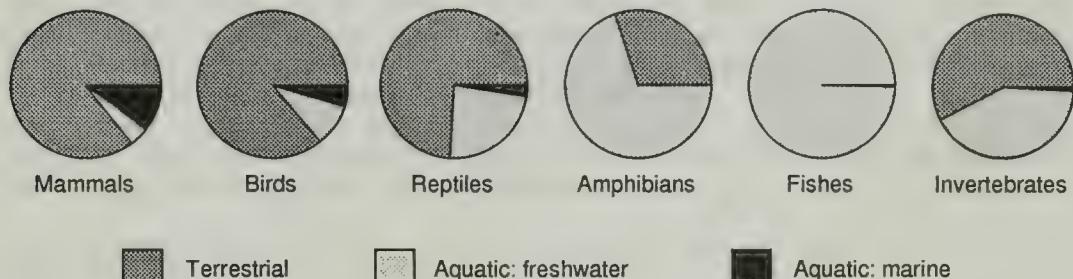

Figure 5. Pie charts to show approximate numbers of threatened species present in terrestrial or aquatic habitats. Aquatic species include cetaceans and a few other mammals, waterbirds, seabirds, sea turtles and water snakes, most amphibians, invertebrates with an aquatic stage in the life cycle, and of course all fishes. The aquatic species are divided into freshwater and marine.

A high, but not the greater, proportion of threatened species are restricted to islands; see Figure 4 (islands, for the purposes of this very broad overview, exclude Madagascar, Borneo, Japan, Sumatra but include most others). A high proportion of threatened species are aquatic; see Figure 5. These comprise both fully aquatic forms and those, including most of the amphibians and many invertebrates, with an obligatory aquatic stage in the life cycle. Few of the aquatic forms listed are marine species; cetaceans comprise the majority of these.

There is good reason to believe that historical records of extinctions since around 1600 AD are heavily biased geographically and taxonomically. The data that are available indicate that around 75% of recorded extinctions in this period have occurred on islands; almost all bird and mollusc extinctions have been recorded on islands. Very few species extinctions have been recorded in continental tropical forest habitats, where mass extinction events have been predicted to be underway. The patchy and similarly biased time-series data that can be assembled indicate that island extinctions in this period began some 200 years earlier than continental extinctions, and that rates in both areas have increased rapidly from around the middle of the last century to the middle of the present century. Extended discussion of extinct species and rates of extinction is provided in WCMC (1992: chapter 16).

ACKNOWLEDGEMENTS

The assistance of many people has been essential during the compilation of this document. We thank in particular the many SSC Specialist Group chairpersons and other members, and the many other field scientists who have provided data and opinions for this revision, usually adding to an already heavy workload. We hope not to have overlooked anyone in the list below, and trust that those who have made especially valuable contributions will not object to our alphabetical sequence. Particular thanks are due to Georgina Mace for agreeing to prepare the Guest Essay for this edition, an essay that will ensure that a wide audience gains insight into the new status categories and the considerations that went into their revision. The successful execution of this project was dependent on the timely liaison carried out by Simon Stuart (Head, Species Survival Programme), for which we are also grateful.

¹ the Action Plans listed include only published documents not used in the 1990 Red List; it excludes the draft Cat Action Plan, used in provisional form for the present Red List, and excludes those used in draft form for the 1990 Red List which have since been published.

² this is not a bibliography of country Red Data Books; it only includes sources from which single-country endemic species have been extracted for the 1994 IUCN Red List.

³ excluding those cited in the 1990 Red List and not consulted for this revision.

EXPLANATORY NOTES

NOTES ON THE LISTS AND TABLES

Each entry includes: a single letter (E, V, I, K) or two (Ex, Ex?, CT) indicating the IUCN status category, the scientific name, and geopolitical distribution. Many entries also include a common name. Some marine species have a general distribution rather than a list of countries. The following annotated examples should aid interpretation of the taxon entries.

E ¹	<i>Eulemur mongoz</i> ² (<i>Lemur mongoz</i>) ³ Mongoose Lemur ⁴ Comoros ⁵ ; Mwali ⁶ , Nzwani; Madagascar ⁷
I	<i>Pterodroma hasitata</i> Black-capped Petrel Cuba; Dominican Republic; Haiti. * ⁸ Caribbean and western North Atlantic
R	<i>Syrmaticus reevesii</i> Reeve's Pheasant China [Czechoslovakia ⁹] ¹⁰

¹ IUCN status category

² Scientific name.

³ Alternative scientific name (synonym).

⁴ Common name (usually English).

⁵ First country of occurrence.

⁶ Island (or other area) within first country.

⁷ Second country of occurrence (countries separated by semi-colon).

⁸ Within birds only, an asterisk separates breeding range (left) from non-breeding range (right); vagrant records are excluded.

⁹ Recent political events are reflected as accurately as possible but there are some entries for the former Czechoslovakia and USSR that have not been resolved in terms of new boundaries, and many entries for the former Yugoslavia retain the name of the old federation.

¹⁰ Square brackets indicate introduced populations; populations that have been reintroduced within their former range are denoted by appropriate text.

List 1. Threatened species

This list includes those populations recognised at the species level by the taxonomic sources used that have been assessed and assigned to one of the current (non-revised) IUCN status categories. These categories are named and defined below.

Only species regarded as globally threatened are included. This has the regrettable but unavoidable consequence that no attention is drawn to purely local or national problems. For example, there is great concern in India about the Grizzled Giant Squirrel *Ratufa macroura*; the population, restricted to the southern states of Tamil Nadu and Kerala, has been estimated at only 300 animals. However, the species also occurs in Sri Lanka, where it widespread at a variety of altitudes and in different habitats, and is not

listed as threatened in the country (Wijesinghe *et al.*, 1989). Because it is not globally threatened it is not listed in the present Red List. This is just one example among very many.

All species have been assigned to a single category except those from *Threatened Birds of the Americas* (Collar *et al.*, 1992) that were given a dual category in that book (the reader is referred to the introduction of that volume for discussion). Very many species are given a mixed R/K category in the provisional draft of the Action Plan for Australian Reptiles made available to us, but given a policy of not using mixed categories and a recommendation not to include all potential K species from the draft, we have omitted them from this list.

Confusion and possible inconsistency exists over the position of 'Insufficiently Known' (K) taxa. Some texts include this category with others which collectively denote threatened status, other texts exclude it from that group. Insufficiently Known species are commonly regarded as threatened species even though while insufficient data are available to make a firm determination they remain only *suspected* of being threatened, and so by definition have not actually been identified as threatened species. We feel it would have been very useful clearly to distinguish such taxa from species known to be threatened, but have retained 'K' species in the main listing, largely in deference to common usage, which tends to class 'K' species with those more certainly threatened (R, I, V and E categories). As noted above, Insufficiently Known species are in the draft new category system explicitly not to be understood as threatened species.

The few 'T' designations given in past editions, indicating that different populations of the species in question had been assigned different status categories, have all been modified by us to reflect a provisional category for the species as a whole.

As noted above, it has jointly been decided by the SSC and BirdLife International that the bird listing will remain substantially the same as in the 1990 Red List (which gave categories to species listed in *Birds to Watch* (Collar and Andrew, 1988). The list has been revised to take account of *Threatened Birds of the Americas* (Collar *et al.* 1992), which entailed the removal of many species and the addition of others. There are a few other differences between the present list and the 1990 Red List. One bird species (*Dasyornis brachypterus*) inadvertently omitted from the 1990 list has been included, with the status category given in *The Action Plan for Australian Birds* (Garnett, 1992). In two cases, populations previously treated as subspecies of species themselves categorised as 'Rare' (R) (*Phalacrocorax carunculatus*, *Polyplectron malacense*) have been elevated to species rank in Sibley and Monroe (1992) and are here provisionally listed as 'R'. Similarly, a few taxa formerly treated at species level are given subspecific rank in Sibley and Monroe, and this is followed herein. This has had two effects on the present lists. Where other conspecifics were previously listed in the 1990 Red List there is now an appropriate revised entry in the main threatened species list (eg. *Gallinula nesiotis*, for the Tristan da Cunha form *nesiotis*, regarded as extinct, plus the Gough Island form *comperi*, previously listed as Rare). Where conspecifics were not listed previously there is now an entry in the subspecies list (eg. *Pterodroma hasitata caribbaea* for the probably extinct Jamaica Petrel, treated as E/Ex at species level *P. caribbaea* in Collar *et al.* 1992).

List 2. Extinct and probably extinct species

This list includes species that have been assigned to the IUCN status category Extinct (Ex) in previous editions of the Red List and in Red Data Books. This category includes species that have not definitely been located in the wild during the past 50 years. Many species have not been seen within this period, but nor have they been looked for, and there has been no attempt to list all such species here. A subset of this category (Ex?) includes species that have been seen within the past 50 years but are believed with near certainty to be extinct. Similar species that are only possibly extinct should according to the current definitions be listed as Endangered.

We have also included here species that are known or believed to have become extinct since 1600 AD or thereabouts (WCMC, 1992) and which have never appeared in previous Red Lists nor been given a status

category. To distinguish these they remain without a category in the list. For many of these latter species (and some of those with a category) the date shown in parentheses indicates variously the last collection, the last observation in the wild, or the time of extinction.

There are 23 bird taxa which have been given the joint category 'E/Ex' by BirdLife International. Those that are treated at species level by Sibley and Monroe (1990) (not the Magdalena Tinamou or Jamaica Petrel [see notes to List 1 above]) are listed in the main threatened species list even though at least seven of the 21 species are almost certainly extinct. None is included in the Extinct species list. The full species are counted as Endangered in the tables.

In almost all cases there is no positive evidence of extinction, only an accumulation of negative evidence; several species once thought recently extinct have been rediscovered and doubtless others will be in future. On the other hand, there are good grounds for believing that many species have become extinct unnoticed and sometimes undescribed. Note that changes in species level taxonomy have a significant effect on this list; a few extinct populations formerly treated as full species are now treated as conspecific with extant populations, and so do not appear below (the reverse is also possible).

List 3. Entries for genera and other higher taxa

This list includes entries for genera or higher taxa, entire or in part, that appeared in the 1990 Red List or earlier publications and that have not been resolved to the single species level. Some previous group entries have been so resolved and now appear in the main threatened species list. The category assigned to the Lake Victoria cichlid fishes has been changed from Endangered (E) to Indeterminate (I) in the absence of adequately detailed species-specific population data for the lake as a whole (Indeterminate is an inclusive category covering inadequately known taxa that may have recently become extinct, or which are seriously declining or which may simply be Rare; see status category definitions below). There is no doubt that a very marked decline in cichlid abundance has occurred in Lake Victoria (Witte *et al.*, 1992) linked to the introduction of a large predator (Nile Perch *Lates* sp.) and probably to over-fishing, but it is not possible to determine which individual species are actually Endangered. Where possible, the relevant number of species within the groups listed here are included in the tabulations.

List 4. Threatened and extinct subspecies

Previous editions of the Red List mixed full species and subspecies in a single list. This led to some minor confusion. Threatened populations at subspecies rank are by most standards (and all else being equal) of lesser priority than threatened species, assuming reasonable taxonomic consistency between taxa being compared. It is also evident that subspecies descriptions are not infrequently based on minor superficial features; in several cases subspecies names in common use have been demonstrated to accord only poorly with genetic differentiation assessed by biochemical and other tools. These several considerations have led us to list subspecies separately from species.

In the subspecies list we have made no attempt to add subspecies other than those suggested by contributors. We have tried to ensure that, if appropriate, an entry exists in the full species list whenever all described subspecies have been proposed as threatened. The list therefore consists largely of taxa previously listed, and while some nomenclature has been revised, some outdated names and other inconsistencies are likely to remain.

Subspecies have been excluded from all tables.

List 5. Commercially Threatened species

This contains species categorised as Commercially Threatened (CT). These species should not be regarded as threatened with extinction in the same sense that those in the main species list categorised as

Endangered, Vulnerable, Indeterminate or Rare are believed to be. The CT category means that the species were considered to be threatened as a sustainable commercial resource; pending further evaluation of the full implications of listing such species we have thought it advisable to distinguish them clearly from other listed species. All species (with the exception of the Pigtail Macaque, proposed in 1993 for listing as V or CT) were previously listed as Commercially Threatened in the 1990 Red List or earlier publications and have not been critically evaluated since. We have not attempted to update nomenclature or resolve marine distribution at country level.

Commercially Threatened species have been excluded from all tables.

Distribution information

Distribution is generally given in terms of country names; it is geopolitical not purely geographic. Unless geographically very remote from each other, islands and other territories are included with the parent country; the Hawaiian Islands have been recorded separately. Many distribution entries include within-country information. This is usually when a species occurs on a few islands of an island state; occasionally when otherwise restricted, a mountain or river system is named.

Although we have given general distribution information for all marine species, including cetaceans, we have not given country distribution records for cetaceans other than the freshwater and estuarine or coastal species with a relatively restricted range. In most other cases, country records for cetaceans reflect the distribution of research or whaling activity more fully than the presumed world distribution of the species. We have attempted to give complete country records for other marine animals. All country records are included in the summary tabulations above.

Countries where a species is known to have become extinct in recent decades are not included. In several cases, a country name is followed by the annotation: (ex?). This indicates a significant possibility that the species is extinct in that country; this ancillary information should not be confused with the IUCN status category.

Geopolitical events during recent years have led to some inconsistency and possible errors. In the absence at the time of writing of internationally recognised boundaries and names within the former Yugoslavia, we have continued to use that name in the distribution information and in the country tabulations. Of the component republics of the former federation of Yugoslavia, only Slovenia has been distinguished herein, although there are likely to be some species occurring there for which only Yugoslavia appears in the distribution section. For most species within the boundaries of the former USSR, we have been able to determine with reasonable confidence which new state they are present in. Some unresolved USSR entries remain in the invertebrate section. Similarly, there are a few entries for the former Czechoslovakia in cases where we have been unable to determine whether a particular species occurs in the Czech Republic or Slovakia, or both.

Notes on tables

All the tables cover taxa of species rank only; subspecies are excluded. The tables cover species that have been assigned to one of the standard IUCN-SSC status categories; the Commercially Threatened taxa (CT) set out in List 5 are excluded.

Tables 2, 3 and 6 for simplicity use the same major geopolitical units as in the distribution entries in the species lists. This results in loss of geographical resolution of some biological interest; in particular it should be noted that island territories of mainland countries are in most cases included with their parent countries. For example, the Canary Islands, which feature prominently in the mollusc lists, are included with Spain in the tables. However, the distribution entries in the species lists will indicate "Spain: Canary Islands", so the relevant information can be retrieved. The same applies to Madeira, the Azores, and several

other islands. Tristan da Cunha is included with St Helena. The Hawaiian Islands have a separate entry.

In the distribution entries in the lists below, unconfirmed occurrence of a species is indicated by "?" after the relevant country. All such unconfirmed occurrences are counted in the tables.

Note that a few species, mainly cosmopolitan marine forms, have distribution indicated in a generalised format, not country names; these are not included in the country-based tables (Tables 2 and 3). This applies to most cetaceans, three elasmobranch fishes, and very few invertebrates. It also applies to a larger number of species included in the genera recorded in List 3 (entries for genera and Lake Victoria cichlid fishes) for which country-specific data are lacking. We have retained the figure of 250 haplochromine and 2 tilapiine cichlid fishes in Lake Victoria cited in the 1990 Red List, although recent estimates suggest more than 300 haplochromine species are present, of which around 200 may be critically threatened. All these species (except in two genera for which we have no count of species number) are included in the taxonomic summary tables (Tables 1, 4 and 5).

In all relevant tables we have treated the 21 E/Ex and the 78 V/R bird species given mixed categories as categories E and V, respectively.

IUCN THREATENED SPECIES CATEGORIES

EXTINCT (Ex)

Species not definitely located in the wild during the past 50 years (criterion as used by the Convention on International Trade in Endangered Species of Wild Fauna and Flora).

N.B. On a few occasions, the category Ex? has been assigned; this denotes that it is virtually certain that the taxon has recently become extinct.

ENDANGERED (E)

Taxa in danger of extinction and whose survival is unlikely if the causal factors continue operating.

Included are taxa whose numbers have been reduced to a critical level or whose habitats have been so drastically reduced that they are deemed to be in immediate danger of extinction. Also included are taxa that may be extinct but have definitely been seen in the wild in the past 50 years.

VULNERABLE (V)

Taxa believed likely to move into the 'Endangered' category in the near future if the causal factors continue operating.

Included are taxa of which most or all the populations are decreasing because of over-exploitation, extensive destruction of habitat or other environmental disturbance; taxa with populations that have been seriously depleted and whose ultimate security has not yet been assured; and taxa with populations that are still abundant but are under threat from severe adverse factors throughout their range.

N.B. In practice, 'Endangered' and 'Vulnerable' categories may include, temporarily, taxa whose populations are beginning to recover as a result of remedial action, but whose recovery is insufficient to justify their transfer to another category.

RARE (R)

Taxa with small world populations that are not at present 'Endangered' or 'Vulnerable', but are at risk.

These taxa are usually localised within restricted geographical areas or habitats or are thinly scattered over a more extensive range.

INDETERMINATE (I)

Taxa known to be 'Endangered', 'Vulnerable' or 'Rare' but where there is not enough information to say which of the three categories is appropriate.

INSUFFICIENTLY KNOWN (K)

Taxa that are suspected but not definitely known to belong to any of the above categories, because of lack of information.

THREATENED (T)

Threatened is a general term to denote species which are 'Endangered', 'Vulnerable', 'Rare', 'Indeterminate', or 'Insufficiently Known' and should not be confused with the use of the same term by the U.S. Office of Endangered Species. In previous volumes it has been used to identify taxa comprised of several sub-taxa which have differing status categories.

COMMERCIALLY THREATENED (CT)

Taxa not currently threatened with extinction, but most or all of whose populations are threatened as a sustainable commercial resource, or will become so, unless their exploitation is regulated.

This category applies only to taxa whose populations are assumed to be relatively large.

N.B. In practice, this category has only been used for marine species of commercial importance that are being overfished in several parts of their ranges.

TOTAL	1184	1488	1148	1546	5366	563	5929

¹ Subtotal includes species categorised E, V, R or I; these are known to be threatened species. Category K comprises those suspected to be threatened.

This table does not include beetles of the genera *Itodacnus* and *Oudemans* in List 3 from the Hawaiian Islands for which we do have an estimate of species number.

We have used the figure of 250 haplochromine and 2 tilapiine cichlid fishes in Lake Victoria given in the 1990 Red List, although recent estimates suggest >300 species are present of which some 200 may be critically threatened.

Classes are in the same taxonomic sequence as List 1; Order within Classes are in alphabetical sequence.

¹ The figure for fishes does not include 252 cichlids in Lake Victoria for which we have insufficient data on the range of individual species. These species are included in Table 4. The total of 250 haplochromine and 2 tilapiine cichlid fishes in Lake Victoria is given in the 1990 Red List, but recent estimates suggest >300 haplochromine species are present of which some 200 may be critically threatened.

² The figure for invertebrates does not include 62 earthworms of the genera *Microcoleus* and *Udeina* in List 3 which occur in Lesotho and South Africa but for which we have insufficient data on the range of individual species.

³ The invertebrate total does not include species of the insect genera *Itodacnus* and *Oudemus* for which we have been unable to determine the number of recognised species.

Widespread marine cetaceans lacking full country-specific range data are excluded. All the tables cover taxa of species rank only; subspecies are excluded. The tables cover species that have been assigned to one of the standard IUCN-SSC status categories; the Commercially Threatened taxa (CT) set out in List 5 are excluded.

Tables 2, 3 and 6 for simplicity use the same major geopolitical units as in the distribution entries in the species lists. This results in loss of geographical resolution of some biological interest; in particular it should be noted that island territories of mainland countries are in most cases included with their parent countries. For example, the Canary Islands, which feature prominently in the mollusc lists, are included with Spain in the tables. However, the distribution entries in the species lists will indicate "Spain: Canary Islands", so the relevant information can be retrieved. Tristan da Cunha is included with St Helena. The Hawaiian Islands have a separate entry. All unconfirmed occurrences (indicated in the lists by "?" after the country name) are counted in the tables.

INVERTEBRATES ⁴	582	702	422	941	2647	107	2754
TOTAL	1184	1488	1148	1546	5366	563	5929

¹ Subtotal includes species categorised E, V, R or I; these are known to be threatened species. Category K comprises those suspected to be threatened.

² BirdLife International have given mixed categories to many birds. In Tables 2 and 3 the 21 E/Ex species are treated as E, and 78 V/R as V.

³ Includes 252 species of Lake Victoria cichlids in List 3 with category I. The figure of 250 haplochromine and 2 tilapiine cichlid fishes in Lake Victoria was given in the 1990 Red List, but recent estimates suggest >300 species are present.

⁴ Includes 160 category E insects, 143 category V earthworms and 78 category I insects in List 3.

Table 5. Threatened species: totals by group in 1990 and 1994

	1990	1994
MAMMALS	535	741
BIRDS	1026	970
REPTILES	169	316
AMPHIBIANS	57	169
FISHES	713	979
INVERTEBRATES	1977	2754
TOTAL	4477	5929

The figures for 1990 (1990 Red List) and 1994 (this book) are not exactly comparable; 1990 figures exclude Ex species but include Ex? and include 182 Commercially Threatened (CT) invertebrates, 1994 figures exclude all these.

The figures include species listed as Ex and Ex? They also include species that are known or believed to have become extinct since 1600AD or thereabouts (WCMC, 1992) and which have never appeared in previous Red Lists nor been given a status category.

GUEST ESSAY

The status of proposals to redefine the IUCN threatened species categories

Georgina M. Mace

Introduction

The threatened species categories now used in Red Data Books and Red Lists have been in place, with some modification, for almost 30 years (see Scott, Burton & Fitter 1987). Since their inception they have become recognised internationally, and they are now used in a whole range of publications and listings, not only those produced by IUCN. Their value is that they provide an easily comprehended method for highlighting those species at risk of extinction, in order to focus attention on conservation measures designed to protect them. Nowadays, with the increasing recognition that the resources available for conservation are finite and limited, the categories have become applied more frequently to setting priorities for conservation action. It is this change in emphasis that has provoked recent moves to redefine the categories.

The application of threatened species categories

To play an effective role in conservation planning the categories need to have a number of characteristics. They need to be equally applicable across broad taxonomic groups whose basic biology and life histories differ in fundamental ways. They also need to be applicable to taxonomic levels below that of species, and to regional or national subsets. Because the amount of information about species varies widely from almost nothing (in the vast majority of cases) to full life history and distribution data (in a very few) the system used for placing taxa into categories also needs to make best use of data that are available, but should not preclude listing when information is sparse. Finally, and most importantly, the system should be based around an evaluation of how likely the taxon in question is to go extinct.

In this context, the current system has some drawbacks. The definitions are merely stated in terms of "... in danger of extinction...". Without any reference to a time frame, or to the likelihood of extinction within this time frame, the definition can be interpreted in different ways by different authorities. This can result in the same species being classified quite differently, or in different taxa or different regional floras and faunas being judged by quite different standards. If conservation action is to be based upon them, threatened species categories will require an approach that is better validated. A more objective system that can be challenged and judged against an accepted set of rules is needed.

A second drawback of the current system is that a number of different kinds of variables are embedded in the definitions, which complicates their application to setting priorities. Thus while *Endangered* and *Vulnerable* measure the likelihood of extinction, *Rare* is defined in terms of the kind of distribution a species has. Species can be rare in a number of different ways: some have always had very restricted distributions (eg. some endemic island forms), others have been reduced from a formerly wide range; some are always found in small but scattered populations, others are widely distributed but limited to very specific habitat types (see Rabinowitz *et al.* 1986). The relationship between these different forms of rarity and extinction risk is not simple or well understood. *Insufficiently Known* is a category that simply describes the quality and quantity of information about a particular species and thus has no direct relationship to the severity of threat. Other categories that appear in some publications also measure different characteristics. For example, *Commercially Threatened* is a statement primarily about the cause of the extinction risk.

Many other threatened species classification schemes exist, focusing on particular regional or taxonomic groups, but most use definitions that are broadly similar in nature to the IUCN ones (Munton 1987).

The publication of Red Data Books and Lists has other implications. Diamond (1987), among others, has

discussed how this immediately puts a limit on the number of taxa that are recognised as being under threat of extinction because only described species can be listed, and once a list exists conservationists and survey expeditions focus especially on those species. Little attention is paid to taxa that are not listed, either because they have not been described or are not listed as threatened, and their plight worsens. In addition, once a taxonomic or regional list is produced, there is an implicit message that all described taxa in that group or region have been evaluated. This is often far from the case. Even among the vertebrates only a proportion of all the described species have been evaluated by IUCN. The birds have been fully reviewed; but only a proportion of other taxa have (see Introduction above and WCMC, 1992). Despite these difficulties, threatened species categories are widely used and recognised, especially at an international level. If the existing level of credibility given to them is to continue, they need to be more soundly based and more consistently applied.

New Proposals

In 1990, the IUCN/SSC began a process to redefine the categories of threat used in Red Data Books. Russ Lande and I (Mace and Lande, 1991) proposed a new basis for the categories where the definitions were given explicitly and solely in terms of the estimated probability of extinction. The definitions we proposed were for three threat categories which we named *Critical*, *Endangered* and *Vulnerable*, which had decreasing probabilities of extinction over increasing time frames:

CRITICAL:	50% probability of extinction within 5 years or 2 generations, whichever is the longer.
ENDANGERED:	20% probability of extinction within 20 years or 10 generations, whichever is the longer.
VULNERABLE:	10% probability of extinction in 100 years

We chose to vary both time scale and extinction probability for a variety of reasons. First, a shorter time scale for the most threatened forms would focus attention on the immediacy of the problem and hopefully stimulate appropriately prompt action. But such short time scales would not be appropriate for the less threatened forms which might then seem to have very low extinction probabilities. The longest time scale for the lowest level of threat was set at 100 years which seems to be generally agreed as about the longest period for effective foresight and planning of human activities while a 5 or 10% chance of extinction within this period is about the highest level that conservation biologists have recommended (eg. see Shaffer, 1981).

We recognised that these definitions would be inadequate to classify species because there are no simple rules to translate from basic ecological information to extinction risk. We therefore also suggested a set of quantitative criteria which might be used operationally. The criteria that we proposed were based around population size, population structure and sub-structure, and observed or projected rates of decline. Although only a proposal, the Mace-Lande criteria (as they have become known) have been applied to a large number of species over the last couple of years, mainly through the Conservation and Assessment Management Plans (CAMPs) undertaken by the IUCN/SSC Captive Breeding Specialist Group and various taxon specialist groups of the SSC (Seal *et al.*, 1993). This has provided invaluable material for assessing the proposal. A number of positive and negative aspects have emerged. On the positive side it is clear that with the informed input of specialists in the CAMP workshops, it is possible to classify the majority of species using the quantitative criteria. In the latest summary tables compiled by CBSG, 3130 out of 3559 (88%) of vertebrates species were classified as Safe or in one of the three new threat categories (Seal *et al.*, 1993). With the comprehensive review procedure that is characteristic of CAMPs the proportion of described species that are listed as threatened increases substantially from previous levels. Of the 3130 vertebrate taxa classified by CAMPs, 1345 (43%) are listed as threatened. This is much higher than the levels previously seen in IUCN Red Lists. There are some factors that may in part explain this increase. First, CAMPs have tended to focus on higher order taxa that contain many species which are of

conservation concern; a higher proportion of threatened forms might therefore be expected in this subset. Second, by necessity, many CAMP classifications are made on the basis of very little information, and group dynamics in workshop sessions are likely to lead to the more conservative estimates being accepted. Thus there may be a tendency for over-listing in this context, especially in the lower risk categories. Finally, CAMPs have routinely classified many sub-species which may, through restricted range and number, be more threatened than are species. However, a systematic examination of the data suggests that the increase is not simply an artefact of sub-species listing (Mace, in press).

Although widely used for vertebrates it soon became clear that there were difficulties in applying the Mace-Lande criteria to other taxa. Some of the terminology used was especially inappropriate for plants and invertebrates. With this background data available, the process for developing new categories continued in 1992 and 1993.

IUCN proposed criteria

During the summer of 1992 a number of discussion papers were prepared presenting alternative methods for classifying species according to severity of threat. Among these was an investigation of the potential for using distribution and habitat data, and an alternative method based around management. These and some other papers provided the framework for a workshop held in November 1992, at which about 30 people representing a wide diversity of interests met to discuss the different proposals. In general, the technical workshop approved the general kinds of definitions that we had earlier proposed, but felt that additional kinds of information needed to be incorporated in the criteria. In order to formulate criteria for major taxonomic groups, four working groups were set up with responsibility for higher vertebrates, lower vertebrates, plants and invertebrates. Using the background papers as a starting point, they developed criteria appropriate for each major taxonomic grouping. At the end of the technical workshop there were four sets of criteria, all based around the categories Critical, Endangered, Vulnerable and a new lower risk category called Susceptible. The criteria drafted for plants included both population and distribution-based criteria, those for lower vertebrates and invertebrates were based around the number and status of known and suitable locations and populations, and the higher vertebrate criteria were largely population-based.

A drafting group was then formed to assimilate all these criteria into a single coherent proposal. The drafting group included at least one person from each of the taxonomic working groups, and for practical reasons most were based in the UK. The group produced an interim report in March 1993 which was subsequently published in *Species* (Mace *et al.*, 1992). This proposal was presented as a draft for discussion and evaluation and is reproduced in summary form here for general information (see Figures 6 and 7). Since its distribution a large number of comments have been received and a number of species have been classified. As this Red List goes to press, the precise proposal is still under active development and refinement. We expect that there will be some modifications to the criteria, to the notes for guidance and to the definitions of terms used, all of which form an integral part of the proposal. The formulation presented here should therefore be taken as a *general* description only, and should not be applied without reference to the full document (Mace *et al.*, 1992); the final version of the system will be available in early 1994.

One of the more controversial aspects of the working group's report was the decision to merge all the criteria from the different taxonomic working groups into a single consolidated set. This decision is worth explaining in detail. The reason that different criteria are needed for different major taxa is that there are broad life history differences between them. Thus, for example, population size can rarely be measured for a number of invertebrate groups, and even if it could be it may not provide a good predictor of extinction risk, which for many invertebrate species is more likely to be a function of a limited habitat availability. In general therefore, it is appropriate to have different criteria for different groups. However, there is not a complete correspondence between major taxonomic grouping and life history. For example, some plants and invertebrates have life histories more similar to higher vertebrates and some lower vertebrates have life histories more characteristic of plants. With the taxonomically split criteria it seemed likely that those species that were untypical for their group would be judged by inappropriate criteria. An alternative

strategy, to group the criteria by broad kinds of life history patterns, was felt to be unworkable because of the difficulties of making judgements about which set of criteria to judge any particular species by. In fact, on closer inspection, the criteria provided by each of the major taxon working groups could be seen to be generally quite similar. With little substantial change it was found that it was possible to include almost all of these criteria in a single list, and this seemed to be the most conservative solution to the problem. Using this approach, a species has only to qualify under any one criterion to be listed, and the fact that other criteria are not met, or even that they are wildly inappropriate, does not matter. For example, the fact that the home range size of a single large carnivorous mammal may exceed the qualifying range area for a threat category does not invalidate the range size criterion. The large carnivorous mammals are much more appropriately judged by their population size and status, so that what matters in terms of validating the criteria is whether any one is met, not whether all are appropriate.

Once the draft criteria were published, a period of about 6 months was available for comments to be submitted from all interested parties, and for trial classifications to be made using the criteria. There are still more comments coming in as this book goes to press but several major points have already emerged.

The IUCN review

One evident concern is over the extent to which the proposed system relies on the ability of the person undertaking the evaluation to make appropriate estimations, inferences and projections about the status of the taxon in question. The system is quantitative so that all taxa are judged against a common standard, but we recognise that sufficient data of high quality rarely exist. Therefore it will be necessary to use available information to make explicit judgements. For example, known or estimated areas for current distributions along with characteristic population densities for similar species can be used to judge whether or not the taxon is likely to have a population size falling below the numbers specified in the criteria A or B for any category, and future decline rates calculated from estimated rates of habitat loss can be used to see whether the taxon will qualify under D for any category. This kind of reasoning does not come easily to many field biologists, but as the CAMP workshops have shown, it can be done for a majority of species once the context and methodology is understood. It is however an essential component of the system we have proposed, and it is clear that we need to give more guidance on how this should be done. We are also concerned to ensure that explicit reasoning should always accompany classifications.

A second issue relates to the many species that are now substantially reduced in numbers from historical levels, but which are now held relatively stable at moderate population sizes by continuing management. Depending on their current status, these species will sometimes not be listed because the category is a statement of current status and extinction risk, not a relative measure of current status compared to some previous level. We are looking at ways of highlighting these species, while recognising that effective management has limited the extent to which they are now threatened. Other systems will be needed to highlight those species that particular management authorities believe should be in greater numbers or distributed over wider areas.

A third issue concerns the general applicability of the range size values under criterion C which is now under special study for different taxa as well as for aquatic species.

Conclusions

Some of the consequences and side-benefits that we expect to result from application of the proposed system are as follows:

1. Because the new categories are based around explicit definitions, the reasons for listing will be evident. Thus classifications will be accompanied by an indication of which criteria and sub-criteria (Figure 7) were operative. This will enable judgements to be understood, and if necessary challenged and refined.
2. With appropriate input, and informed use of estimation, inference and projection, it will be

possible to classify the great majority of taxa into one of the new categories. The new set of categories should be more applicable to conservation planning as they are more explicit about what is being measured and what actions are therefore appropriate. Where there is really very little data, taxa can be classified as *Insufficiently known*. This is now not a threatened category but a separate status assessment indicating those species for which additional information is needed. Another category, again measuring a different status variable, is *Not Evaluated*. This is allocated to species that have not been evaluated at all against the categories. With effective use of all these categories it should be possible to arrive at useful and reliable data on many species, and summary data for particular taxa and regions should give a better idea of the status of species generally.

3. On the basis of the validations carried out so far, the proportion of threatened species in major taxa is likely to rise, although to what extent is not yet clear. The correspondence between species classified as highly threatened under the proposed and existing systems is high, but there are differences among the *Vulnerable* taxa. Some taxa previously listed as threatened will no longer qualify and *vice versa*.
4. A major benefit will be that data on fundamental species biology (population size and structure, geographical range area and decline rates) will become available. These data exist in a variety of forms and locations for many species, but are rarely collated into a useful form. The application of the new categories will result in these data being collected, stored and maintained over time, thus enabling monitoring of the status of many species. This is a fundamental pre-requisite for effective species conservation.

The new categories measure the severity of threat being faced by particular taxa. But this is only one aspect of setting priorities. In practice, priority assessment needs to include an assessment of logistical, political and financial factors, as well as incorporating other aspects of biodiversity. The taxonomic distinctiveness of the species and the number of other species that will benefit from its protection are both important biological components. There is a need to develop rational methods to incorporate all this information in decision-making processes.

ACKNOWLEDGEMENTS

Nigel Collar and Kevin Gaston made helpful comments on an earlier draft of this essay. Along with the other members of the drafting group (Justin Cooke, Josh Ginsberg, Nigel Leader-Williams, Mike Maunder and E.J. Milner-Gulland) they have provided a great deal towards the development of the proposals. The process has been guided throughout by Simon Stuart. I am grateful to the Pew Scholars Program in Conservation and the Environment for financial support.

Figure 6. NEW DRAFT DEFINITIONS FOR THREATENED SPECIES CATEGORIES

EXTINCT	A taxon is <i>Extinct</i> when there is no reasonable doubt that the last individual has died. A taxon is presumed extinct when exhaustive surveys in known and/or expected habitat, at appropriate times, throughout its historic range have failed to record an individual. Surveys should be over a time frame appropriate to the taxon's life cycle and life form.
EXTINCT IN THE WILD	A taxon is <i>Extinct in the wild</i> when it is known only to survive in cultivation, in captivity, or as a naturalised population (or populations) outside the historical range.
CRITICAL	A taxon is <i>Critical</i> when it is facing an extremely high probability of extinction in the wild in the immediate future. A taxon is defined as Critical by any of the quantitative criteria (A-E) (see Figure 7).
ENDANGERED	A taxon is <i>Endangered</i> when it is not Critical but is facing a very high probability of extinction in the wild in the near future. A taxon is defined as <i>Endangered</i> by any of the quantitative criteria (A-E) (see Figure 7).
VULNERABLE	A taxon is <i>Vulnerable</i> when it is not Critical or Endangered but is facing a high probability of extinction in the wild in the medium-term future. A taxon is defined as <i>Vulnerable</i> by any of the quantitative criteria (A-E) (see Figure 7).
SUSCEPTIBLE	A taxon is <i>Susceptible</i> when it does not qualify for any of the categories above, but is of concern because its range area is restricted (typically less than 100 km ² , and/or it is found at few locations, which render it prone to the effects of human activities.
SAFE/LOW RISK	A taxon is <i>Safe/Low Risk</i> when it has been evaluated and found not to qualify for any of the threatened categories above.

Figure 7. OUTLINE OF DRAFT CRITERIA FOR QUANTITATIVE CATEGORIES

	Any one of ↓	CRITICAL	ENDANGERED	VULNERABLE
A	VERY SMALL POPULATION SIZE number of mature individuals	≤50	≤250	≤1,000
B	SMALL POPULATION SIZE number of mature individuals and either all populations small or small no. sub-pops and declining	≤250 ≤50 ≤1 any rate	≤2,500 ≤250 ≤1 any rate	≤10,000 ≤1,000 ≤1 any rate
C	SMALL DISTRIBUTION either geographical extent or range area and 2 of: - declining - either fragmented or small no. sub-pops - fluctuating	≤100km ² ≤10km ² any rate + ≤1 ≥2 ≥1 ≥1 order/mag.	≤5,000km ² ≤500km ² any rate + ≤2 ≥2 ≥1 order/mag.	≤20,000km ² ≤2,000km ² any rate + ≤5 ≥1 order/mag.
D	DECLINE RATE population decline rate at least in any of: - observed rates - inferred rates - projected rates	25%pa over 5 yrs	50% in 5 yrs or 2 generations*	50% in 10 yrs or 3 generations*
E	QUANTITATIVE ANALYSIS showing the probability of extinction in the wild is expected to be at least * whichever is the longer.	50% in 5 yrs or 2 generations*	20% in 20 yrs or 5 generations*	10% in 100 yrs

Note that this table is for reference purposes only. To apply the criteria refer to the full document which provides definitions for terms used.

List 1

THREATENED SPECIES

Class MAMMALIA	
Order MONOTREMATA	
Family TACHYGLOSSIDAE	
E	<i>Zaglossus bruijni</i> Long-beaked Echidna Indonesia: Irian Jaya; Papua New Guinea
Order DASYUROMORPHIA

E	<i>Bettongia tropica</i> (may be included in <i>B. penicillata</i>) Northern Bettong Australia	V	<i>Petrogale lateralis</i> Black-footed Rock-wallaby Australia
E	<i>Potorous longipes</i> Long-footed Potoroo Australia	V	<i>Petrogale penicillata</i> Brush-tailed Rock-wallaby Australia
	Family MACROPODIDAE	E	<i>Petrogale persephone</i> Prosperine Rock-wallaby Australia
V	<i>Dendrolagus dorianus</i> Doria's Tree-kangaroo Indonesia: Irian Jaya; Papua New Guinea	V	<i>Thylogale bruini</i> Southern Bush Wallaby Indonesia: Irian Jaya, Aru Islands; Papua New Guinea
E	<i>Dendrolagus goodfellowi</i> Goodfellow's Tree-kangaroo Papua New Guinea	E	<i>Thylogale calabyi</i> Alpine Wallaby Papua New Guinea
V	<i>Dendrolagus inustus</i> Grizzled Tree-kangaroo Indonesia: Irian Jaya; Papua New Guinea		Family BURRAMYIDAE
V	<i>Dendrolagus matschiei</i> Matschie's Tree-kangaroo Papua New Guinea	E	<i>Burramys parvus</i> Mountain Pygmy-possum Australia
E	<i>Dendrolagus scottae</i> Scott's Tree-kangaroo Papua New Guinea		Family PSEUDOCHIRIDAE
V	<i>Dendrolagus spadix</i> Lowland Tree-kangaroo Papua New Guinea	K	<i>Pseudocheirus caroli</i> Weyland Ringtail Indonesia: Irian Jaya
V	<i>Dendrolagus ursinus</i> White-throated Tree-kangaroo Indonesia: Irian Jaya	V	<i>Pseudocheirus occidentalis</i> (<i>P. peregrinus occidentalis</i>) Western Ringtail Australia
V	<i>Dorcopsis atrata</i> Black Dorcopsis Wallaby Papua New Guinea: Goodenough Island	K	<i>Pseudocheirus schlegeli</i> Arfak Ringtail Indonesia: Irian Jaya
V	<i>Dorcopsulus macleayi</i> (<i>Dorcopsis macleayi</i>) Macleay's Dorcopsis Papua New Guinea		

Family PETAURIDAE

- V *Dactylopsila megalura*
Great-tailed Troik
Indonesia: Irian Jaya; Papua New Guinea
- E *Dactylopsila tatei*
Fergusson Island Striped Possum
Papua New Guinea: Fergusson Island
- E *Gymnobelideus leadbeateri*
Leadbeater's Possum
Australia
- V *Petaurus abidi*
Northern Glider
Papua New Guinea
- E *Petaurus gracilis*
Mahogany Glider
Australia

Order XENARTHRA

Family BRADYPODIDAE

- E *Bradypus torquatus*
Maned Sloth
Brazil

Family DASYPODIDAE

- K *Chlamyphorus retusus*
(*Burmeisteria retusa*)
Greater Pichi Ciego
Argentina; Bolivia; Paraguay

- K *Chlamyphorus truncatus*
Lesser Pichi Ciego
Argentina

- V *Priodontes maximus*
(*P. giganteus*)
Giant Armadillo
Argentina; Bolivia; Brazil; Colombia; French Guiana; Guyana; Paraguay; Peru; Suriname; Venezuela

- E *Tolypeutes tricinctus*
Brazilian Three-banded Armadillo
Brazil

Family MYRMECOPHAGIDAE

- V *Myrmecophaga tridactyla*
(*M. jubata*)
Giant Anteater
Argentina; Belize (ex?); Bolivia; Brazil; Colombia; Costa Rica; Ecuador?; French Guiana; Guyana; Honduras; Nicaragua; Panama; Paraguay; Peru; Suriname; Uruguay; Venezuela

Order INSECTIVORA

Family SOLENODONTIDAE

- E *Solenodon cubanus*
Cuban Solenodon
Cuba
- E *Solenodon paradoxus*
Haitian Solenodon
Dominican Republic; Haiti

Family TENRECIDAE

- K *Geogale aurita*
Large-eared Tenrec
Madagascar
- I *Limnogale mergulus*
Aquatic Tenrec
Madagascar
- K *Microgale brevicaudata*
(includes *M. occidentalis*)
Short-tailed Shrew-tenrec
Madagascar
- K *Microgale gracilis*
Gracile Shrew-tenrec
Madagascar
- K *Microgale longicaudata*
(includes *M. majori*)
Lesser Long-tailed Shrew-tenrec
Madagascar
- K *Microgale parvula*
Pygmy Shrew-tenrec
Madagascar
- K *Microgale pulla*
(may be synonymous with *M. parvula*)
Dusky Shrew-tenrec
Madagascar

- K *Microgale thomasi*
Thomas's Shrew-tenrec
Madagascar

- E *Micropotamogale lamottei*
Nimba Otter-shrew
Côte d'Ivoire; Guinea; Liberia

- I *Micropotamogale ruwenzorii*
Ruwenzori Otter-shrew
Uganda; Zaire

Family CHRYSOCHLORIDAE

- I *Amblysomus gunningi*
Gunning's Golden Mole
South Africa

THREATENED SPECIES

I	<i>Amblysomus iris</i> Zulu Golden Mole South Africa	Family SORICIDAE
K	<i>Congosorex polli</i> (<i>Myosorex polli</i>) Zaire	
I	<i>Amblysomus julianae</i> Juliana's Golden Mole South Africa	<i>Crocidura ansellorum</i> Zambia

K	<i>Dusicyon microtis</i> (<i>Atelocynus microtis</i>) Small-eared Dog Bolivia?; Brazil; Colombia; Ecuador; Peru	K	<i>Vulpes corsac</i> Corsac Fox Afghanistan; China; Kazakhstan; Kyrgyzstan; Mongolia; Russia; Turkmenistan
K	<i>Dusicyon sechurae</i> (<i>Pseudalopex sechurae</i>) Sechuran Zorro Ecuador; Peru	K	<i>Vulpes pallida</i> Pale Fox Burkina Faso; Cameroon; Chad; Guinea; Libya; Mali; Niger; Nigeria; Senegal; Sudan
K		K	<i>Vulpes rueppelli</i> Ruepell's Fox Afghanistan; Algeria; Chad; Egypt; Ethiopia; Iraq; Iran; Libya; Morocco; Niger; Saudi Arabia; Somalia; Sudan; Yemen

THREATENED SPECIES

Family FELIDAE

V *Acinonyx jubatus*

Cheetah

Afghanistan (ex?); Algeria (ex?); Angola; Benin; Botswana; Burkina Faso; Cameroon; Chad; Ethiopia; Iran; Jordan (ex?); Kenya; Libya; Malawi; Mali; Mauritania; Morocco (ex?); Mozambique; Namibia; Niger; Nigeria; Pakistan (ex?); Saudi Arabia (ex?); Senegal; Somalia; South Africa; Sudan; Swaziland; Tanzania; Turkmenistan; Uganda; Western Sahara (ex?); Zaire; Zambia; Zimbabwe

K *Catopuma badia*

(*Felis badia*)

Bay Cat

Brunei; Indonesia: Kalimantan; Malaysia: Sabah, Sarawak

I *Catopuma temmincki*

(*Felis temmincki*)

Asiatic Golden Cat

Bangladesh; Bhutan; Cambodia; China; India; Indonesia: Sumatra; Laos; Malaysia; Peninsular Malaysia; Myanmar; Nepal; Thailand; Viet Nam

K *Felis bieti*

Chinese Desert Cat

China

K *Felis margarita*

Sand Cat

Algeria; Egypt; Iran; Israel; Jordan; Kazakhstan; Morocco; Niger; Oman; Pakistan; Qatar; Saudi Arabia; Senegal; Turkmenistan; Uzbekistan; Yemen

K *Leopardus tigrinus*

(*Felis tigrina*)

Little Spotted Cat

Argentina; Brazil; Colombia; Costa Rica; Ecuador; French Guiana; Guyana; Nicaragua?; Paraguay?; Peru?; Suriname; Venezuela

K *Leopardus wiedii*

(*Felis wiedii*)

Margay

Argentina; Belize; Bolivia; Brazil; Colombia; Costa Rica; Ecuador; El Salvador; French Guiana?; Guatemala; Guyana; Honduras; Mexico; Nicaragua; Panama; Paraguay; Peru; Suriname; Uruguay; Venezuela

E *Lynx pardinus*

(*L. lynx pardinus*, sometimes included in *Felis*)

Spanish Lynx

Portugal; Spain

V *Neofelis nebulosa*

Clouded Leopard

Bangladesh (ex?); Bhutan; Brunei; Cambodia?; China; India; Indonesia: Kalimantan, Sumatra; Laos; Malaysia; Peninsular Malaysia, Sabah, Sarawak; Myanmar; Nepal; Taiwan; Thailand; Viet Nam

I *Oncifelis colocolo*

(*Felis colocolo*)

Pampas Cat, Chilean Pampas Cat

Argentina; Bolivia; Brazil; Chile; Ecuador; Paraguay; Peru; Uruguay

I *Oncifelis guigna*

(*Felis guigna*)

Kodkod, Chilean Cat

Argentina; Chile

K *Oreailurus jacobita*

(*Felis jacobita*)

Andean Cat

Argentina; Bolivia; Chile; Peru

K *Otocolobus manul*

(*Felis manul*)

Pallas's Cat

Afghanistan; Armenia; China; India; Iran; Kazakhstan; Kyrgyzstan; Mongolia; Pakistan; Russia; Tajikistan; Turkmenistan; Uzbekistan

E *Panthera tigris*

Tiger

Afghanistan (ex?); Bangladesh; Bhutan; Cambodia; China; India; Indonesia: Java, Sumatra; Kazakhstan; Korea D.P.R (ex?); Kyrgyzstan; Laos; Malaysia; Peninsular Malaysia; Myanmar; Nepal; Russia; Tajikistan; Thailand; Turkmenistan; Uzbekistan; Viet Nam

K *Pardofelis marmorata*

(*Felis marmorata*)

Marbled Cat

Bangladesh?; Bhutan?; Brunei; Cambodia; China; India; Indonesia: Kalimantan, Sumatra; Laos; Malaysia; Peninsular Malaysia, Sabah, Sarawak; Myanmar; Nepal; Thailand; Viet Nam

K *Prionailurus planiceps*

(*Felis planiceps*)

Flat-headed Cat

Brunei; Indonesia: Kalimantan, Sumatra; Malaysia; Peninsular Malaysia, Sabah, Sarawak; Thailand

K *Prionailurus rubiginosa*

(*Felis rubiginosa*)

Rusty-spotted Cat

India; Sri Lanka

K	<i>Prionailurus viverrinus</i> (<i>Felis viverrinus</i> , <i>F. viverrina</i>) Fishing Cat	Family MUSTELIDAE
	Bangladesh; Bhutan; Cambodia; China; India; Indonesia; Bali, Java, Sumatra; Laos; Malaysia; Peninsular Malaysia; Nepal; Pakistan; Sri Lanka; Taiwan; Thailand; Viet Nam	K <i>Aonyx cinerea</i> Oriental Small-clawed Otter Bangladesh; Bhutan; Brunei; Cambodia; China; India; Indonesia; Java, Kalimantan, Sumatra; Laos; Malaysia; Peninsular Malaysia, Sabah, Sarawak; Myanmar; Nepal; Philippines; Palawan; Singapore; Sri Lanka; Thailand; Viet Nam
K	<i>Profelis aurata</i> (<i>Felis aurata</i>) African Golden Cat	V <i>Gulo gulo</i> Wolverine Canada; Estonia; Finland; Mongolia; Norway; Russia; Sweden; USA
	Angola; Burkina Faso; Burundi; Cameroon; Central African Republic; Congo; Côte d'Ivoire; Equatorial Guinea; Gabon; Gambia; Ghana; Guinea?; Kenya; Liberia; Niger?; Rwanda; Senegal; Sierra Leone; Togo?; Uganda; Zaire	V <i>Lutra felina</i> (<i>Lontra felina</i>) Marine Otter Argentina; Chile; Peru
E	<i>Uncia uncia</i> (<i>Panthera uncia</i>) Snow Leopard Afghanistan; Bhutan; China; India; Kazakhstan; Kyrgyzstan; Mongolia; Nepal; Pakistan; Russia; Tajikistan; Uzbekistan	K <i>Lutra perspicillata</i> Smooth-coated Otter Bangladesh; Bhutan; Cambodia; China; India; Indonesia; Java, Kalimantan, Sumatra; Iraq; Laos; Malaysia; Peninsular Malaysia, Sabah, Sarawak; Myanmar; Nepal; Pakistan; Thailand; Viet Nam
Family HERPESTIDAE		V <i>Lutra provocax</i> Southern River Otter Argentina; Chile
K	<i>Bdeogale jacksoni</i> Jackson's Mongoose Kenya; Uganda	K <i>Lutra sumatrana</i> Hairy-nosed Otter Brunei; Cambodia; Indonesia; Bangka, Kalimantan, Sumatra; Laos?; Malaysia; Peninsular Malaysia, Sabah, Sarawak; Singapore; Thailand; Viet Nam
I	<i>Galidictis fasciata</i> Broad-striped Mongoose Madagascar	V <i>Martes gwatkinsii</i> (<i>M. flavigula gwatkinsii</i>) Nilgiri Marten India
R	<i>Galidictis grandidieri</i> (<i>G. grandidiensis</i>) Giant-striped Mongoose Madagascar	K <i>Melogale everetti</i> Kinabalu Ferret-badger Malaysia; Sabah
E	<i>Liberictis kuhni</i> Liberian Mongoose Liberia; Côte d'Ivoire; Guinea	I <i>Mustela africana</i> Tropical Weasel Brazil; Colombia?; Ecuador; Peru
V	<i>Mungotictis decemlineata</i> Narrow-striped Mongoose Madagascar	E <i>Mustela felipei</i> Colombian Weasel Colombia; Ecuador
K	<i>Salanoia concolor</i> Brown-tailed Mongoose Madagascar	
Family HYAENIDAE		
V	<i>Hyaena brunnea</i> Brown Hyaena Angola; Botswana; Mozambique; Namibia; South Africa; Zimbabwe	

THREATENED SPECIES

E	<i>Mustela lutreola</i> European Mink Belarus; Estonia; Finland (ex?); France; Georgia; Latvia; Lithuania; Poland (ex?); Romania; Russia; Spain	E	<i>Monachus schauinslandii</i> Hawaiian Monk Seal USA: Hawaiian Islands
K	<i>Mustela lutreolina</i> Indonesian Mountain Weasel Indonesia: Java, Sumatra	V	<i>Phoca caspica</i> Caspian Seal (Caspian Sea) Azerbaijan; Iran; Kazakhstan; Russia; Turkmenistan
E	<i>Mustela nigripes</i> Black-footed Ferret [Reintroduced in USA]		Family PROCYONIDAE
K	<i>Mustela strigidorsa</i> Back-striped Weasel Bhutan; China; India; Laos; Myanmar; Thailand; Viet Nam	K	<i>Bassaricyon beddardi</i> Brazil?; Guyana; Venezuela?
K	<i>Mydaus marchei</i> Palawan Stink Badger Philippines: Palawan, Calamian Islands	I	<i>Bassaricyon gabbii</i> Colombia; Costa Rica; Ecuador; Nicaragua; Panama
V	<i>Pteronura brasiliensis</i> Giant Otter Argentina; Bolivia; Brazil; Colombia; Ecuador; French Guiana; Guyana; Paraguay; Peru; Suriname; Uruguay (ex?); Venezuela	I	<i>Bassaricyon lasius</i> Costa Rica
	Family OTARIIDAE	I	<i>Bassaricyon pauli</i> Panama
V	<i>Arctocephalus philippii</i> Juan Fernandez Fur Seal Chile: Juan Fernandez Archipelago	V	<i>Bassariscus sumichrasti</i> Belize; Costa Rica; El Salvador; Guatemala; Honduras?; Mexico; Nicaragua; Panama
V	<i>Arctocephalus townsendi</i> Guadalupe Fur Seal Mexico; USA	I	<i>Nasua nelsoni</i> (<i>N. narica nelsoni</i>) Cozumel Island Coati Mexico: Cozumel Island
V	<i>Eumetopias jubatus</i> Steller's Sea Lion Canada; Japan?; Russia; USA	K	<i>Nasuella olivacea</i> Colombia; Ecuador; Venezuela
R	<i>Neophoca cinerea</i> Australian Sea Lion Australia	I	<i>Procyon insularis</i> (<i>P. lotor insularis</i>) Mexico: Tres Marias Is (Maria Madre, Maria Magdalena)
V	<i>Phocarcots hookeri</i> Hooker's Sea Lion New Zealand: Aukland Islands	I	<i>Procyon maynardi</i> (<i>P. lotor maynardi</i>) Bahamas: Nassau
	Family PHOCIDAE	I	<i>Procyon minor</i> (<i>P. lotor minor</i>) Guadeloupe
E	<i>Monachus monachus</i> Mediterranean Monk Seal Albania; Algeria; Bulgaria; Cyprus (ex?); Greece; Italy: Sardinia (ex?); Lebanon (ex?); Libya; Mauritania; Morocco; Portugal; Madeira, Desertas Islands; Spain: Canary Islands (ex?); Chafarinas Islands; Syria (ex?); Tunisia: La Galite (ex?); Turkey; Western Sahara; Yugoslavia	K	<i>Procyon pygmaeus</i> (<i>P. lotor pygmaeus</i>) Cozumel Island Raccoon Mexico: Cozumel Island
	Family URSIDAE		Family URSIDAE
E		E	<i>Ailuropoda melanoleuca</i> Giant Panda China
V		V	<i>Ailurus fulgens</i> Lesser Panda Bhutan; China; India; Laos; Myanmar; Nepal

V	<i>Helarctos malayanus</i> (<i>Ursus malayanus</i>) Sun Bear Brunei; Cambodia; China; India; Indonesia: Kalimantan, Sumatra; Laos; Malaysia; Peninsular Malaysia, Sabah, Sarawak; Myanmar; Thailand; Viet Nam	V	<i>Fossa fossa</i> (<i>F. fossana</i>) Malagasy Civet Madagascar
V	<i>Melursus ursinus</i> (<i>Ursus ursinus</i>) Sloth Bear Bangladesh; Bhutan?; India; Nepal; Sri Lanka	K	<i>Genetta abyssinica</i> Abyssinian Genet Djibouti; Ethiopia; Somalia
V	<i>Selenarctos thibetanus</i> (<i>Ursus thibetanus</i>) Asiatic Black Bear Afghanistan; Bangladesh; Bhutan; Cambodia; China; India; Iran; Japan; Korea D.P.R.; Korea Republic; Laos; Malaysia?: Peninsular Malaysia; Mongolia; Myanmar; Nepal; Pakistan; Russia; Taiwan; Thailand; Viet Nam	E	<i>Genetta cristata</i> (<i>G. servalina cristata</i>) Crested Genet Cameroon; Nigeria
V	<i>Tremarctos ornatus</i> Spectacled Bear Argentina; Bolivia; Brazil; Colombia; Ecuador; Panama; Peru; Venezuela	K	<i>Genetta johnstoni</i> Johnston's Genet Côte d'Ivoire; Liberia; Guinea
V	<i>Ursus maritimus</i> (<i>Thalarctos maritimus</i>) Polar Bear Canada; Greenland; Norway; Svalbard and Jan Mayen Islands; Russia; USA	R	<i>Macrogalidia musschenbroekii</i> Sulawesi Palm Civet Indonesia: Sulawesi
Family VIVERRIDAE		K	<i>Mungos gambianus</i> Gambian Mongoose Côte d'Ivoire; Gambia; Ghana; Niger; Nigeria; Senegal; Sierra Leone; Togo
I	<i>Chrotogale owstoni</i> Owston's Palm Civet China; Laos; Viet Nam	V	<i>Paradoxurus jerdoni</i> Jerdon's Palm Civet India
K	<i>Cryptoprocta ferox</i> Fossa Madagascar	Order CETACEA	
E	<i>Cynogale bennettii</i> (includes <i>C. lowei</i>) Otter-civet Brunei; Indonesia: Kalimantan, Sumatra; Malaysia: Peninsular Malaysia, Sabah, Sarawak; Singapore?; Thailand; Viet Nam	Family BALAENIDAE	
I	<i>Diplogale hosei</i> Hose's Palm Civet Malaysia: Sabah, Sarawak	V	<i>Balaena mysticetus</i> Bowhead Whale (Arctic Ocean, Beaufort, Barents and Chukchi Seas; North Atlantic - arctic waters; North Pacific - arctic waters, Japan, Okhotsk and Bering Seas)
V	<i>Eupleres goudotii</i> (includes <i>E. major</i>) Falanouc Madagascar	V	<i>Eubalaena australis</i> (<i>E. glacialis australis</i> ; sometimes included in <i>Balaena</i>) Southern Right Whale (Circumpolar in Southern Hemisphere from ca 20°S to 50°S)
E	<i>Eubalaena glacialis</i> (<i>Balaena glacialis</i>) Northern Right Whale (Northern temperate and sub-polar waters: North Atlantic from Florida to Greenland and from Spain to Svalbard; North Pacific from China Sea to Sea of Okhotsk and from California to Bering Sea, including Hawaiian Islands)		

THREATENED SPECIES

Family BALAENOPTERIDAE

K *Balaenoptera acutorostrata*

Minke Whale

(Widespread in all oceans but rarer in the tropics; extends into polar pack ice; recorded from Baltic and Black Seas)

V *Balaenoptera borealis*

Sei Whale

(Widespread in most oceans and seas, favouring temperate oceanic waters)

K *Balaenoptera edeni*

Bryde's Whale

(Circum-equatorial in tropical and warm temperate waters between ca 40°N and 40°S)

E *Balaenoptera musculus*

Blue Whale

(Occurs in all major oceans, especially cold and temperate waters)

V *Balaenoptera physalus*

Fin Whale

(Occurs in all major oceans, extending to pack ice zones but rare in warmest waters at latitudes less than about 20°)

V *Megaptera novaeangliae*

Humpback Whale

(Found in all major oceans from Arctic to Antarctic, but absent from pack ice zones)

Family NEOBALAENIDAE

K *Caperea marginata*

Pygmy Right Whale

(Temperate waters of the Southern Hemisphere between ca 31°S and 52°S)

Family DELPHINIDAE

K *Cephalorhynchus commersonii*

Commerson's Dolphin

(Coastal temperate waters off southern South America and some South Atlantic and southern Indian Ocean islands)

Argentina; Chile; Falkland Islands; French Southern and Antarctic Territories; Kerguelen Islands

K *Cephalorhynchus eutropia*

Black Dolphin

(Cold, inshore waters of Chile, between 33°S and 55°S)

Chile

K *Cephalorhynchus heavisidii*

Heaviside's Dolphin

(Cold, inshore waters of Benguela current, South Atlantic)

Angola?; Namibia; South Africa

I *Cephalorhynchus hectori*

White-headed Dolphin, Hector's Dolphin

(Coastal waters of New Zealand)

New Zealand

K *Delphinus delphis*

(includes *Delphinus tropicalis*)

Common Dolphin

(Recorded from all warm temperate and tropical waters, including the Mediterranean and Black Seas)

K *Feresa attenuata*

(*F. occulta*)

Pygmy Killer Whale

(Recorded sporadically from warm temperate and tropical waters, including North and South Atlantic, Indian Ocean and North Pacific)

K *Globicephala macrorhynchus*

(*G. sieboldii*)

Short-finned Pilot Whale

(Warm temperate and tropical waters, including Atlantic, Pacific and Indian Oceans)

K *Globicephala melas*

(*Globicephala melaena*; includes *G. edwardii*)

Long-finned Pilot Whale

(Occurs in two separate populations, the southern being circumpolar in cool temperate waters of Atlantic, Pacific and Indian Oceans north of the Antarctic Convergence; the North Atlantic population extending from USA and the Mediterranean to the Barents Sea. Apparently absent from North Pacific)

K *Grampus griseus*

Risso's Dolphin

(Worldwide distribution in tropical and warm temperate waters)

K *Lagenodelphis hosei*

Fraser's Dolphin

(Circum-equatorial in oceanic tropical waters)

K *Lagenorhynchus acutus*

Atlantic White-sided Dolphin

(Northern North Atlantic, including North and Baltic Seas; vagrants further south)

K *Lagenorhynchus albirostris*

White-beaked Dolphin

(North Atlantic and western Arctic from the USA and Spain to Svalbard, including the Baltic, Davis Strait and Barents Sea)

K *Lagenorhynchus australis*

Peale's Dolphin

(Cold, coastal waters of southern South America)

Argentina; Chile; Falkland Islands

K	<i>Lagenorhynchus cruciger</i> Hourglass Dolphin (Circumpolar in Antarctic and sub-Antarctic, recorded from high southern latitudes to the edge of the pack ice)	K	<i>Sotalia fluviatilis</i> (includes <i>S. brasiliensis</i> , <i>S. guianensis</i>) Tucuxi (All major rivers in the Amazon system, extending to Central America) Bolivia?; Brazil; Colombia; Ecuador; French Guiana; Guyana; Panama; Peru; Suriname; Trinidad and Tobago; Venezuela
K	<i>Lagenorhynchus obliquidens</i> Pacific White-sided Dolphin (Temperate waters of the North Pacific)	K	<i>Sousa chinensis</i> (includes <i>S. borneensis</i> , <i>S. lentiginosa</i> , <i>S. plumbea</i>) Indo-Pacific Hump-backed Dolphin (Coastal and inshore waters of the Indian and western Pacific Ocean, including Red Sea and Arabian Gulf to South-east Asia and south China coast; occurs in estuaries and occasionally lower reaches of rivers) Australia; Bahrain; Bangladesh; Brunei; Cambodia; China; Djibouti; Egypt; Ethiopia; Hong Kong; India; Indonesia; Iran; Iraq; Israel; Kenya; Kuwait; Madagascar; Malaysia; Sarawak; Mozambique; Myanmar; Oman; Pakistan; Papua New Guinea; Philippines; Qatar; Saudi Arabia; Somalia; South Africa; Sri Lanka; Sudan; Taiwan; Tanzania; Thailand; United Arab Emirates; Viet Nam; Yemen
K	<i>Lagenorhynchus obscurus</i> (includes <i>L. superciliosus</i>) Dusky Dolphin (Temperate and cold temperate circumpolar waters near land masses in the Southern Hemisphere) Argentina; Chile; Falkland Islands; French Southern and Antarctic Territories; Kerguelen Islands; New Zealand; Campbell and Auckland Islands; Peru; South Africa	K	<i>Sousa teuszii</i> Atlantic Hump-backed Dolphin (West coast of Africa, from Angola to Mauritania; enters rivers) Angola?; Benin; Cameroon; Congo?; Côte d'Ivoire; Equatorial Guinea?; Gabon?; Gambia; Ghana; Guinea; Guinea-Bissau; Liberia; Mauritania; Nigeria; Senegal; Sierra Leone; Togo; Zaire?
K	<i>Lissodelphis borealis</i> Northern Right Whale Dolphin (Temperate waters of the North Pacific)	K	<i>Stenella attenuata</i> Pantropical Spotted Dolphin (Widespread in warm deep waters)
K	<i>Lissodelphis peronii</i> Southern Right Whale Dolphin (Circumpolar in temperate waters of the Southern Hemisphere, extending to 19°S off Chile and to Indonesia)	K	<i>Stenella clymene</i> Helmet Dolphin, Clymene Dolphin (Tropical and subtropical waters of North Atlantic)
K	<i>Orcaella brevirostris</i> Irrawaddy Dolphin (Coastal waters from Bay of Bengal to South-east Asia and Australia, including major rivers - Ganges, Brahmaputra and Irrawaddy) Australia; Bangladesh; Brunei?; Cambodia; India; Indonesia; Java, Kalimantan, Sumatra; Laos?; Malaysia; Sabah, Sarawak; Myanmar; Papua New Guinea; Philippines?; Singapore?; Thailand; Viet Nam	K	<i>Stenella coeruleoalba</i> (includes <i>S. styx</i>) Striped Dolphin (Widespread in tropical, subtropical and warm temperate waters)
K	<i>Orcinus orca</i> (includes <i>O. glacialis</i>) Killer Whale (Reported from all sea areas, especially in cooler regions; extending well into the pack ice zone)	K	<i>Stenella frontalis</i> (<i>S. plagiodon</i> , <i>S. attenuata frontalis</i>) Atlantic Spotted Dolphin (Tropical, subtropical and warm temperate Atlantic)
K	<i>Peponocephala electra</i> Melon-headed Whale (Widespread scattered records from warm temperate and tropical seas)		
K	<i>Pseudorca crassidens</i> False Killer Whale (Widespread, mainly in warm waters but strandings as far north as the Baltic)		

THREATENED SPECIES

- K *Stenella longirostris*
 (includes *S. microps*, *S. roseiventris*)
 Long-snouted Dolphin, Spinner Dolphin
 (Circum-equatorial in tropical and subtropical waters, occasionally in warm temperate waters)
- K *Steno bredanensis*
 Rough-toothed Dolphin
 (Widespread in tropical and warm temperate ocean areas, including Red, Caribbean, Mediterranean and North Seas)
- K *Tursiops truncatus*
 (includes *T. aduncus*, *T. gilli*, *T. nuanus*)
 Bottlenose Dolphin
 (Known from all temperate and tropical marine areas)
- Family MONODONTIDAE
- K *Delphinapterus leucas*
 White Whale, Beluga
 (Circumpolar in Arctic and sub-Arctic with scattered records to France and Japan; often in estuaries)
 Canada; Greenland; Norway; including Svalbard and Jan Mayen Islands; Russia; USA (excludes vagrants)
- K *Monodon monoceros*
 Narwhal
 (Circumpolar and virtually confined to limits of Arctic pack ice; vagrants as far south as the United Kingdom)
 Canada; Greenland; Iceland; Norway; including Svalbard and Jan Mayen Islands; Russia; USA (excludes vagrants)
- Family PHOCENIDAE
- K *Australophocaena dioptrica*
 (*Phocoena dioptrica*)
 Spectacled Porpoise
 (Coastal waters of southern South America and Southern Ocean islands)
 Argentina; Australia; Macquarie Island; Chile; Falkland Islands; including South Georgia; French Southern and Antarctic Territories; Kerguelen Islands; New Zealand; Auckland Islands; Uruguay
- K *Neophocaena phocaenoides*
 Finless Porpoise
 (Coastal and freshwater Indo-Pacific from China and Japan to the Gulf of Arabia, including South-East Asian archipelago)
 Bahrain; Bangladesh; Brunei?; Cambodia; China; Hong Kong?; India; Indonesia; Iran; Iraq; Japan; Korea D.P.R.; Korea Republic;
- K *Phocoena phocoena*
 (includes *P. vomerina*)
 Common Porpoise, Harbour Porpoise
 (Coastal waters of North Pacific, North Atlantic and Arctic Oceans, from Japan and California to Chukchi Sea, and from Baffin Island to west Africa, including Baltic, Mediterranean and Black Seas)
 Belgium; Bulgaria; Canada; Cape Verde; China?; Denmark; Faeroe Islands; Finland; France; Germany; Georgia; Greenland; Iceland; Ireland; Japan; Korea D.P.R.; Korea Republic; Mauritania; Mexico; Morocco; Netherlands; Norway; Poland; Portugal; including Azores; Romania; Russia; Senegal; Spain; Sweden; Tunisia; Turkey; Ukraine; United Kingdom; USA
- E *Phocoena sinus*
 Vaquita
 (Northern half of Gulf of California)
 Mexico
- K *Phocoena spinipinnis*
 Burmeister's Porpoise
 (Coastal South America)
 Argentina; Brazil; Chile; Peru; Uruguay
- K *Phocoenoides dalli*
 Dall's Porpoise
 (North Pacific from Japan and Mexico to Bering Sea)
 Canada; Japan; Korea D.P.R.; Korea Republic; Mexico; Russia; USA
- Family PHYSETERIDAE
- K *Kogia breviceps*
 Pygmy Sperm Whale
 (Recorded from nearly all temperate, subtropical and tropical waters)
- K *Kogia simus*
 Dwarf Sperm Whale
 (Recorded from nearly all temperate, subtropical and tropical waters)
- K *Physeter catodon*
 (*P. macrocephalus*)
 Sperm Whale
 (Found in all major oceans, from Arctic to Antarctic, including semi land-locked seas such as Mediterranean)

Family PLATANISTIDAE

- V *Inia geoffrensis*
Boto, Amazon River Dolphin
(Found in all major rivers of the Orinoco and Amazon systems)
Bolivia; Brazil; Colombia; Ecuador; Guyana?; Peru; Venezuela
- E *Lipotes vexillifer*
Baiji, Yangtze River Dolphin
(Only found in the Chiangjiang River of China, may occasionally enter other rivers during times of flood)
China
- V *Platanista gangetica*
Ganges River Dolphin
(Ganges and Brahmaputra river systems)
Bangladesh; Bhutan; India; Nepal
- E *Platanista minor*
(*P. indi*, *P. gangetica minor*)
Indus River Dolphin
(Indus River)
Pakistan
- K *Pontoporia blainvilliei*
La Plata River Dolphin
(La Plata estuary and adjacent rivers and coasts)
Argentina; Brazil; Uruguay

Family ZIPHIIDAE

- K *Berardius arnuxii*
Arnoux's Beaked Whale
(Cool temperate sub-Antarctic and Antarctic waters)
- K *Berardius bairdii*
Baird's Beaked Whale
(Apparently confined to deep waters of North Pacific)
- K *Hyperoodon ampullatus*
(*H. rostratus*)
Northern Bottlenose Whale
(Deep waters of the northern North Atlantic)
- K *Hyperoodon planifrons*
Southern Bottlenose Whale
(Entire Southern Ocean north to ca 30°S)
- K *Indopacetus pacificus*
(*Mesoplodon pacificus*)
Indo-Pacific Beaked Whale
(Probable Indo-Pacific distribution, known only from 2 skulls found on beaches in Australia and Somalia and a possible sighting in the Seychelles)

- K *Mesoplodon bidens*
Sowerby's Beaked Whale
(Cold temperate waters of the North Atlantic, mostly around British Isles)
- K *Mesoplodon bowdoini*
Splaytooth Beaked Whale, Andrews' Beaked Whale
(Temperate South Pacific and southern Indian Ocean)
- K *Mesoplodon carlhubbsi*
(*M. bowdoini carlhubbsi*)
Arch-beaked Whale, Hubbs' Beaked Whale
(Cold temperate North Pacific)
- K *Mesoplodon densirostris*
Blainville's Beaked Whale
(Circum-equatorial; temperate and tropical waters)
- K *Mesoplodon europaeus*
Gervais' Beaked Whale
(North Atlantic, where population probably concentrated in south-west)
- K *Mesoplodon ginkgodens*
Ginkgo-toothed Beaked Whale
(Warm temperate and tropical Pacific and Indian Oceans)
- K *Mesoplodon grayi*
Gray's Beaked Whale
(Circumpolar in Southern Hemisphere, south of 30°S, but mainly around New Zealand)
- K *Mesoplodon hectori*
Hector's Beaked Whale
(Temperate latitudes of Southern Hemisphere and temperate eastern North Pacific)
- K *Mesoplodon layardii*
Layard's Beaked Whale, Strap-toothed Whale
(Circumpolar distribution in Southern Hemisphere between ca 30°S and Antarctic convergence)
- K *Mesoplodon mirus*
True's Beaked Whale
(North Atlantic and temperate waters in Southern Hemisphere)
- K *Mesoplodon peruvianus*
Lesser Beaked Whale
(Eastern South Pacific and eastern North Pacific: cold temperate to tropical waters)
- K *Mesoplodon stejnegeri*
Stejneger's Beaked Whale
(Cold temperate waters of the North Pacific)

THREATENED SPECIES

K *Tasmacetus shepherdi*
Shepherd's Beaked Whale
(Cooler waters of the Southern Hemisphere between 33°S and 50°S)

K *Ziphius cavirostris*
Cuvier's Beaked Whale
(Widespread in all major oceans, but rarely found in polar regions)

Order SIRENIA

Family DUGONGIDAE

V *Dugong dugon*
Dugong
(Shallow tropical and subtropical coastal and inland waters of the Indian and western Pacific Oceans from east Africa and the Red Sea to Vanuatu)
Australia; Bahrain; Bangladesh; Brunei?; Cambodia; China; Comoros?; Djibouti; Egypt; Ethiopia; Federated States of Micronesia; Yap; Guam; India; Indonesia; Iran; Iraq; Israel; Japan; Ryukyu Islands; Jordan; Kenya; Kuwait; Madagascar; Malaysia; Peninsular Malaysia, Sabah, Sarawak; Mauritius; Mozambique; Myanmar; New Caledonia; Oman; Pakistan; Palau; Papua New Guinea; Philippines; Saudi Arabia; Singapore; Solomon Islands; Somalia; South Africa; Sri Lanka; Sudan; Taiwan; Tanzania; Thailand; United Arab Emirates; Vanuatu; Viet Nam; Yemen

Family TRICHECHIDAE

V *Trichechus inunguis*
Amazonian Manatee
(Major rivers of the Amazon drainage basin)
Brazil; Colombia; Ecuador; Peru; Venezuela

V *Trichechus manatus*
Caribbean Manatee
(Tropical and subtropical coastal waters and rivers of the Caribbean and Atlantic regions of the Americas)
Bahamas; Belize; Brazil; Colombia; Costa Rica; Cuba; Dominican Republic; French Guiana; Guatemala; Guyana; Haiti; Honduras; Jamaica; Mexico; Nicaragua; Panama; Puerto Rico; Suriname; Trinidad and Tobago; USA; Venezuela

V *Trichechus senegalensis*
African Manatee
(River systems of West Africa)
Angola; Benin (ex?); Cameroon; Chad; Congo; Côte d'Ivoire; Equatorial Guinea; Gabon; Gambia; Ghana; Guinea?; Guinea-Bissau?; Liberia; Mali; Mauritania; Niger; Nigeria; Senegal; Sierra Leone; Togo; Zaire

Order PROBOSCIDEA

Family ELEPHANTIDAE

E *Elephas maximus*
Indian Elephant
Bangladesh; Bhutan; Brunei; Cambodia; China; India; Indonesia; Kalimantan, Sumatra; Laos; Malaysia; Peninsular Malaysia, Sabah; Myanmar; Nepal; Sri Lanka; Thailand; Viet Nam

Loxodonta africana

African Elephant
Angola; Benin; Botswana; Burkina Faso; Cameroon; Central African Republic; Chad; Congo; Côte d'Ivoire; Equatorial Guinea; Ethiopia; Gabon; Ghana; Guinea; Kenya; Liberia; Malawi; Mali; Mauritania; Mozambique; Namibia; Niger; Nigeria; Rwanda; Senegal; Sierra Leone; Somalia; South Africa; Sudan; Tanzania; Togo; Uganda; Zaire; Zambia; Zimbabwe

Order PERISSODACTYLA

Family EQUIDAE

E *Equus africanus*
(sometimes given the same name as the domestic donkey or ass *E. asinus*)
African Wild Ass
Ethiopia; Somalia
(Free-living animals of uncertain pedigree occur elsewhere in northern Africa)

E *Equus grevyi*
Grevy's Zebra
Ethiopia; Kenya

V *Equus hemionus*
Asian Wild Ass (Kulan, Khur, Onager, Dziggetai)
China; India; Iran; Kazakhstan; Mongolia; Turkmenistan
[Reintroduced in: Israel; Uzbekistan]

V *Equus zebra*
Mountain Zebra
Angola; Namibia; South Africa

Family TAPIRIDAE

V *Tapirus bairdii*
Central American Tapir
Belize; Colombia; Costa Rica; Ecuador; Guatemala; Honduras; Mexico (ex?); Nicaragua; Panama

- E *Tapirus indicus*
Malayan Tapir
Indonesia: Sumatra; Laos; Malaysia;
Peninsular Malaysia; Myanmar; Thailand;
Viet Nam
- E *Tapirus pinchaque*
(*T. roulini*)
Mountain Tapir
Colombia; Ecuador; Peru; Venezuela
- Family RHINOCEROTIDAE
- V *Ceratotherium simum*
White Rhinoceros
South Africa; Zaire
[Reintroduced in: Botswana; Kenya; Namibia;
Swaziland; Zambia (ex?); Zimbabwe]
- E *Dicerorhinus sumatrensis*
(*Didermocerus sumatrensis*)
Sumatran Rhinoceros
Cambodia (ex?); India (ex?); Indonesia:
Kalimantan, Sumatra; Laos (ex?); Malaysia:
Peninsular Malaysia, Sabah, Sarawak;
Myanmar, Thailand; Viet Nam
- E *Diceros bicornis*
Black Rhinoceros
Angola; Botswana; Cameroon; Central African
Republic (ex?); Chad (ex?); Congo (ex?);
Ethiopia (ex?); Kenya; Malawi (ex?);
Mozambique; Namibia; Nigeria (ex?); Rwanda;
South Africa; Sudan (ex?); Swaziland;
Tanzania; Zambia; Zimbabwe
- E *Rhinoceros sondaicus*
Javan Rhinoceros
Cambodia; Indonesia: Java; Laos; Myanmar
(ex?); Thailand (ex?); Viet Nam
- E *Rhinoceros unicornis*
Great Indian Rhinoceros
Bhutan; India; Nepal
- Order HYRACOIDEA
- Family PROCAVIIDAE
- I *Dendrohyrax validus*
Eastern Tree Hyrax
Kenya; Tanzania: including Pemba Island,
Zanzibar
- Order ARTIODACTYLA
- Family SUIDAE
- V *Babyrousa babyrussa*
Babirusa
Indonesia: Buru, Sula Islands, Sulawesi,
Togian Islands
- E *Sus cebifrons*
(*Sus barbatus cebifrons*)
Visayan Warty Pig
Philippines: Cebu and Negros Islands
- E *Sus salvanius*
Pygmy Hog
Bhutan (ex?); India; Nepal (ex?)
- V *Sus verrucosus*
Javan Warty Pig
Indonesia: Bawean Island, Java
- Family TAYASSUIDAE
- E *Catagonus wagneri*
Chacoan Peccary
Argentina; Bolivia; Paraguay
- Family HIPPOPOTAMIDAE
- V *Hexaprotodon liberiensis*
(*Choeropsis liberiensis*)
Pygmy Hippopotamus
Côte d'Ivoire; Guinea; Guinea-Bissau?;
Liberia; Sierra Leone
- Family CAMELIDAE
- V *Camelus bactrianus*
(*C. ferus*)
Wild Bactrian Camel
China; Mongolia
- V *Vicugna vicugna*
Vicuña
Argentina; Bolivia; Chile; Peru.
- Family MOSCHIDAE
- E *Moschus moschiferus*
(*M. sibiricus*, includes *M. anhueiensis*)
Siberian Musk Deer
China; Korea D.P.R.; Korea Republic;
Mongolia; Russia
- Family CERVIDAE
- E *Axis calamianensis*
(*Axis porcinus calamianensis*, sometimes
included in *Cervus*)
Calamian Hog Deer
Philippines: Calamian Islands
- E *Axis kuhlii*
(*Axis porcinus kuhlii*, sometimes included in
Cervus)
Kuhl's Hog Deer, Bawean Deer
Indonesia: Bawean Island
- V *Blastocerus dichotomus*
Marsh Deer
Argentina; Bolivia; Brazil; Paraguay; Peru

THREATENED SPECIES

V	<i>Cervus albirostris</i> Thorold's Deer China	K	<i>Ozotoceros bezoarticus</i> Pampas Deer Argentina; Bolivia; Brazil; Paraguay; Uruguay
E	<i>Cervus alfredi</i> (<i>C. unicolor alfredi</i>) Visayan Spotted Deer Philippines: Visayan Islands	I	<i>Pudu mephistophiles</i> Northern Pudu Colombia; Ecuador; Peru
E	<i>Cervus duvaucelii</i> Swamp Deer India; Nepal	K	<i>Pudu puda</i> Southern Pudu Argentina; Chile
V	<i>Cervus eldii</i> Thamin Cambodia; China (ex?); India; Laos; Myanmar; Thailand; Viet Nam	Family BOVIDAE	
R	<i>Cervus mariannus</i> Philippine Brown Deer Philippines	E	<i>Addax nasomaculatus</i> Addax Algeria (ex?); Chad; Egypt (ex?); Libya (ex?); Mali; Mauritania; Niger; Sudan (ex?)
E	<i>Dama mesopotamica</i> (<i>Dama dama mesopotamica</i> , sometimes included in <i>Cervus</i>) Persian Fallow Deer Iran; Iraq (ex?)	V	<i>Ammodorcas clarkei</i> Dibatag Ethiopia; Somalia
E	<i>Elaphurus davidianus</i> Père David's Deer [Captive populations only, reintroduction in progress in China]	I	<i>Ammotragus lervia</i> Aoudad Algeria; Chad; Libya; Mali; Mauritania (ex?); Morocco (ex?); Niger; Sudan; Tunisia (ex?) [USA]
V	<i>Hippocamelus antisensis</i> North Andean Huemul Argentina; Bolivia; Chile; Peru	V	<i>Antilope cervicapra</i> Blackbuck India, Nepal, Pakistan [Argentina; USA]
E	<i>Hippocamelus bisulcus</i> South Andean Huemul Argentina; Chile	V	<i>Bison bonasus</i> (<i>B. bison bonasus</i>) European Bison [Reintroduced in: Belarus; Lithuania; Moldova; Poland; Romania; Russia; Ukraine]
V	<i>Hydropotes inermis</i> Chinese Water Deer China; Korea D.P.R.; Korea Republic [France; United Kingdom]	V	<i>Bos gaurus</i> (alternatively given the same name as the domestic Gayal or Mithan <i>B. frontalis</i>) Gaur Bangladesh; Bhutan; Cambodia; China; India; Laos; Malaysia; Peninsular Malaysia; Myanmar; Nepal; Thailand; Viet Nam
I	<i>Mazama chunyi</i> Chunyi Bolivia; Peru	V	<i>Bos javanicus</i> (<i>B. banteng</i>) Banteng Bangladesh (ex?); Cambodia?; Indonesia; Bali, Java, Kalimantan; Laos; Malaysia; Peninsular Malaysia (ex?). Sabah; Myanmar; Thailand; Viet Nam
V	<i>Muntiacus crinifrons</i> Black Muntjac China	E	<i>Bos mutus</i> (alternatively given the same name as the domestic Yak <i>B. grunniens</i>) Wild Yak Afghanistan?; Bhutan?; China; India; Nepal
E	<i>Muntiacus feae</i> Fea's Muntjac China; Myanmar; Thailand		
I	<i>Muntiacus gongshanensis</i> Gongshan Muntjac China; Myanmar?		

E	<i>Bos sauveti</i> (<i>Novibos sauveti</i>) Kouprey Cambodia; Laos; Thailand (ex?); Viet Nam	V	<i>Capricornis swinhoei</i> (<i>Naemorhedus swinhoei</i>) Formosan Serow Taiwan
E	<i>Bubalus arnee</i> (alternatively given the same name as the domestic buffalo <i>B. bubalis</i>) Wild Water Buffalo Bhutan; India; Nepal; Thailand (Free-living animals of uncertain pedigree occur in adjacent countries)	V	<i>Cephalophus adersi</i> Aders' Duiker Kenya; Tanzania; Zanzibar
E	<i>Bubalus depressicornis</i> (<i>Anoa depressicornis</i>) Lowland Anoa Indonesia: Sulawesi	E	<i>Cephalophus jentinki</i> Jentink's Duiker Côte d'Ivoire; Liberia; Sierra Leone
E	<i>Bubalus mindorensis</i> (<i>Anoa mindorensis</i>) Tamaraw Philippines: Mindoro	V	<i>Cephalophus ogilbyi</i> Ogilby's Duiker Cameroon; Congo?; Côte d'Ivoire; Equatorial Guinea; Bioko; Gabon; Ghana; Guinea?; Liberia; Nigeria; Sierra Leone
E	<i>Bubalus quarlesi</i> (<i>Anoa quarlesi</i>) Mountain Anoa Indonesia: Sulawesi, Buton	V	<i>Cephalophus spadix</i> Abbott's Duiker Tanzania
R	<i>Capra caucasica</i> (<i>C. ibex caucasica</i>) Kuban, West Caucasian Tur Georgia; Russia	V	<i>Cephalophus zebra</i> Zebra Duiker Côte d'Ivoire; Liberia; Sierra Leone
R	<i>Capra cylindricornis</i> Daghestan Tur, East Caucasian Tur Azerbaijan?; Georgia; Russia	V	<i>Connochaetes gnou</i> Black Wildebeest Lesotho; South Africa; Swaziland
E	<i>Capra falconeri</i> Markhor Afghanistan; India; Pakistan; Tajikistan; Turkmenistan; Uzbekistan	E	<i>Damaliscus hunteri</i> Hirola Kenya; Somalia
I	<i>Capra nubiana</i> (<i>C. ibex nubiana</i>) Nubian Ibex Egypt; Ethiopia; Israel; Jordan; Oman; Saudi Arabia; Sudan; Yemen	K	<i>Dorcatragus megalotis</i> Beira Antelope Djibouti?; Ethiopia; Somalia
E	<i>Capra walia</i> (<i>C. ibex walia</i>) Walia Ibex Ethiopia	V	<i>Gazella bennetti</i> Chinkara Afghanistan?; India; Iran; Pakistan
I	<i>Capricornis sumatraensis</i> (<i>Naemorhedus sumatraensis</i>) Mainland Serow Bangladesh; Bhutan; Cambodia; China; India; Indonesia; Sumatra; Laos; Malaysia; Myanmar; Nepal; Thailand; Viet Nam	E	<i>Gazella cuvieri</i> Cuvier's Gazelle Algeria; Morocco; Tunisia
		E	<i>Gazella dama</i> Dama Gazelle Algeria (ex?); Burkina Faso; Chad; Mali; Niger; Sudan
		V	<i>Gazella dorcas</i> Dorcas Gazelle Algeria; Burkina Faso; Chad; Djibouti; Egypt; Eritrea; Ethiopia; Israel; Jordan?; Libya; Mali; Mauritania; Morocco; Niger; Nigeria; Saudi Arabia?; Senegal; Somalia; Sudan; Tunisia; Western Sahara

THREATENED SPECIES

V	<i>Gazella gazella</i> Mountain Gazelle Israel; Jordan; Lebanon?; Oman; Saudi Arabia; Syria?; Yemen	E	<i>Oryx leucoryx</i> Arabian Oryx [Reintroduced in Oman]
E	<i>Gazella leptoceros</i> Slender-horned Gazelle Algeria; Chad; Egypt; Libya; Mali; Mauritania?; Niger; Sudan; Tunisia; Western Sahara?	K	<i>Procapra przewalskii</i> Przewalski's Gazelle China
V	<i>Gazella rufifrons</i> Red-fronted Gazelle Burkina Faso; Cameroon; Central African Republic; Chad; Eritrea; Ethiopia; Gambia?; Ghana?; Mali; Mauritania; Niger; Nigeria; Senegal; Sudan; Togo	E	<i>Pseudois schaeferi</i> (<i>P. nayaur schaeferi</i>) Dwarf Blue Sheep China
V	<i>Gazella soemmerringii</i> Soemmerring's Gazelle Djibouti; Eritrea; Ethiopia; Kenya; Somalia; Sudan	E	<i>Pseudoryx nghetinhensis</i> Vu Quang Ox Laos?; Viet Nam
V	<i>Gazella spekei</i> Speke's Gazelle Ethiopia; Somalia	V	<i>Tetracerus quadricornis</i> Four-horned Antelope India; Nepal
K	<i>Hemitragus jemlahicus</i> Himalayan Tahr China; India; Nepal	E	<i>Tragelaphus buxtoni</i> Mountain Nyala Ethiopia
V	<i>Hemitragus hylocrius</i> Nilgiri Tahr India	V	<i>Tragelaphus derbianus</i> (<i>Taurotragus derbianus</i>) Giant Eland Cameroon; Central African Republic; Chad?; Guinea?; Guinea Bissau; Mali?; Nigeria?; Senegal; Sudan; Uganda?; Zaire
Order RODENTIA			
Family SCIURIDAE			
E	<i>Cynomys mexicanus</i> Mexican Prairie Dog Mexico	V	<i>Cynomys parvidens</i> Utah Prairie Dog USA
V	<i>Hemitragus jayakari</i> Arabian Tahr Oman; United Arab Emirates?: Abu Dhabi	K	<i>Epixerus ebii</i> Côte d'Ivoire; Ghana; Liberia; Sierra Leone
V	<i>Kobus leche</i> Lechwe Angola; Botswana; Namibia; Zaire; Zambia [South Africa]	V	<i>Funisciurus carruthersi</i> Carruther's Mountain Squirrel Burundi; Rwanda; Uganda; Zaire?
V	<i>Kobus megaceros</i> Nile Lechwe Ethiopia; Sudan	V	<i>Marmota menzbieri</i> Menzbier's Marmot Kazakhstan; Tajikistan; Turkmenistan; Uzbekistan
K	<i>Madoqua piacentinii</i> Silver Dikdik Somalia	E	<i>Marmota vancouverensis</i> Vancouver Island Marmot Canada: Vancouver Island
I	<i>Naemorhedus caudatus</i> Long-tailed Goral China; Korea D.P.R.; Korea Republic; Laos; Russia; Thailand	V	<i>Myosciurus pumilio</i> African Pygmy Squirrel Cameroon; Equatorial Guinea; Bioko; Gabon; Nigeria
E	<i>Oryx dammah</i> (<i>O. tao</i>) Scimitar-horned Oryx Chad		

R	<i>Paraxerus vexillarius</i> Tanzania	I	<i>Batomys granti</i> Luzon Forest Rat Philippines: Luzon
R	<i>Pteromys momonga</i> Small Japanese Flying-squirrel Japan	V	<i>Beamys hindei</i> Lesser Hamster-rat Kenya; Tanzania
K	<i>Syntheosciurus brochus</i> Mountain Squirrel Costa Rica; Panama	V	<i>Beamys major</i> (<i>B. hindei major</i>) Greater Hamster-rat Malawi; Tanzania; Zambia
Family GEOMYIDAE			
I	<i>Zygogeomys trichopus</i> Michoacan Pocket Gopher Mexico	R	<i>Chrotomys gonzalesi</i> Mt Isarog Striped Rat Philippines: Luzon
Family HETEROMYIDAE			
R	<i>Dipodomys elator</i> Texas Kangaroo-rat USA	K	<i>Crateromys australis</i> Dinagat Island Cloud Rat Philippines: Dinagat Island
E	<i>Dipodomys gravipes</i> San Quintin Kangaroo Rat Mexico	R	<i>Crateromys schadenbergi</i> Giant Bushy-tailed Cloud Rat Philippines: Luzon
I	<i>Dipodomys ingens</i> Giant Kangaroo Rat USA	K	<i>Crateromys</i> sp. Panay Bushy-tailed Cloud Rat Philippines: Panay
E	<i>Dipodomys stephensi</i> Stephens' Kangaroo Rat USA	R	<i>Delanymys brooksi</i> Delany's Mouse Rwanda; Uganda; Zaire
V	<i>Perognathus alticola</i> (<i>Perognathus parvus alticola</i>) White-eared Pocket Mouse USA	R	<i>Dendromus kahuziensis</i> Zaire
Family DIPODIDAE			
V	<i>Allactaga tetradactyla</i> Egypt; Libya	R	<i>Dendoprionomys rousseloti</i> Congo
Family MURIDAE			
I	<i>Abrawayaomys ruschi</i> Brazil	V	<i>Diplothrix legatus</i> Ryukyu Long-tailed Giant Rat Japan: Nasei-shoto
R	<i>Aethomys silindensis</i> Selinda Veld Rat Mozambique?; Zimbabwe	K	<i>Eliurus minor</i> Madagascar
K	<i>Ammodillus imbellis</i> Ethiopia; Somalia	K	<i>Gerbillus acticola</i> Somalia
K	<i>Anonymomys mindorensis</i> Mindoro Climbing Rat Philippines: Mindoro	K	<i>Gerbillus maghrebi</i> (<i>Dipodillus maghrebi</i>) Morocco
R	<i>Archboldomys luzonensis</i> Mt Isarog Shrew-mouse Philippines: Luzon	K	<i>Gerbillus mauritaniae</i> Mauritania
		K	<i>Gerbillus muriculus</i> (<i>G. nanus muriculus</i>) Sudan
		K	<i>Gerbillus nancillus</i> Sudan
		K	<i>Gerbillus rosalinda</i> Sudan

THREATENED SPECIES

R	<i>Gymnuromys roberti</i> Madagascar	K	<i>Microdillus peeli</i> Somalia
R	<i>Hylomyscus baeri</i> Côte d'Ivoire; Ghana	R	<i>Microtus breweri</i> (<i>M. pennsylvanicus breweri</i>) Beach Vole USA: Muskeget Island
K	<i>Hylomyscus fumosus</i> Cameroon; Central African Republic; Gabon	V	<i>Muriculus imberbis</i> Ethiopia
K	<i>Hylomyscus parvus</i> Cameroon; Congo; Gabon	K	<i>Myomys ruppi</i> (<i>Praomys ruppi</i>) Ethiopia
K	<i>Hypogeomys antimena</i> Madagascar	E	<i>Neotoma anthonyi</i> Anthony's Woodrat Mexico: Todos Santos Island
E	<i>Juscelinomys candango</i> Brazil	E	<i>Neotoma bunkeri</i> (<i>N. lepida bunkeri</i>) Bunker's Woodrat Mexico
I	<i>Kunsia tomentosus</i> Bolivia; Brazil	E	<i>Neotoma martinensis</i> San Martin Island Woodrat Mexico: San Martin Island
K	<i>Leggadina lakedownensis</i> Lakeland Downs Mouse Australia	K	<i>Notomys aquilo</i> (includes <i>N. carpentarius</i>) Northern Hopping-mouse Australia
R	<i>Lemniscomys mittendorfi</i> (<i>L. striatus mittendorfi</i>) Cameroon	V	<i>Notomys fuscus</i> Dusky Hopping-mouse Australia
R	<i>Leporillus conditor</i> Greater Stick-nest Rat Australia: Franklin Island	V	<i>Pelomys hopkinsi</i> Kenya; Rwanda; Uganda
K	<i>Lophuromys cinereus</i> Zaire	V	<i>Pelomys isseli</i> Uganda: Bugala, Bunyama, Kome Islands (Lake Victoria)
R	<i>Lophuromys medicaudatus</i> Rwanda; Zaire	E	<i>Phaenomys ferrugineus</i> Brazil
R	<i>Lophuromys melanonyx</i> Ethiopia	R	<i>Phaulomys andersoni</i> (<i>P. imaizumii</i> , <i>P. niigatae</i> , sometimes referred to <i>Eothenomys</i> or <i>Clethrionomys</i>) Wakayama Red-backed Vole Japan: Honshu
R	<i>Lophuromys rahmi</i> Rwanda; Zaire	R	<i>Phloeomys cumingi</i> Southern Giant Slender-tailed Cloud Rat Philippines
K	<i>Macrotarsomys ingens</i> Madagascar	R	<i>Praomys hartwigi</i> Cameroon; Nigeria
K	<i>Macruromys elegans</i> Western Small-toothed Rat Indonesia: Irian Jaya	R	<i>Prionomys batesi</i> Dollman's Tree Mouse Cameroon; Central African Republic
K	<i>Malacomys verschureni</i> Zaire		
K	<i>Mastomys pernanus</i> Kenya; Rwanda; Tanzania		
R	<i>Megadendromus nikolausi</i> Ethiopia		
K	<i>Melomys albidens</i> White-toothed Melomys Indonesia: Irian Jaya		

R	<i>Pseudomys fumeus</i> Smoky Mouse Australia	R	<i>Xenuromys barbatus</i> Rock-dwelling Rat Indonesia: Irian Jaya; Papua New Guinea
R	<i>Pseudomys occidentalis</i> Western Mouse Australia	R	<i>Xeromys myoides</i> False Water-rat Australia
R	<i>Pseudomys oralis</i> Hastings River Mouse Australia	R	<i>Zelotomys woosnami</i> Botswana; Namibia; South Africa
I	<i>Pseudomys pilligaensis</i> Pilliga Mouse Australia	E	<i>Zyzomys pedunculatus</i> Central Rock-rat Australia
R	<i>Pseudomys paeconis</i> Shark Bay Mouse Australia	Family ANOMALURIDAE	
V	<i>Pseudomys shortridgei</i> Heath Rat Australia	K	<i>Zenkerella insignis</i> Flightless Scaly-tailed Squirrel Cameroon; Central African Republic; Equatorial Guinea; Gabon
R	<i>Rattus giluwensis</i> Giluwe Rat Papua New Guinea	Family CTENODACTYLIDAE	
K	<i>Rattus tawitawiensis</i> Tawitawi Island Rat Philippines: Tawitawi Island	K	<i>Felovia vae</i> Felou Gundi Mali; Mauritania; Senegal
E	<i>Reithrodontomys raviventris</i> Saltmarsh Harvest Mouse USA	Family MYOXIDAE	
E	<i>Rhagomys rufescens</i> Brazil	R	<i>Girulus japonicus</i> Japanese Dormouse Japan
R	<i>Rhynchosomys isarogensis</i> Mt Isarog Shrew-rat Philippines: Luzon	Family BATHYERGIDAE	
E	<i>Solomysponceleti</i> Poncelet's Giant Rat Papua New Guinea: Bougainville	V	<i>Bathyergus janetta</i> Namibia; South Africa
R	<i>Steatomys jacksoni</i> Ghana; Nigeria	K	<i>Cryptomys zechi</i> Ghana; Togo
K	<i>Thamnomys venustus</i> Rwanda; Uganda; Zaire	Family ERETHIZONTIDAE	
V	<i>Tokudaia muenninki</i> (<i>T. osimensis muenninki</i>) Japan: Nansei-shoto (Okinawa)	V	<i>Chaetomys subspinosus</i> Thin-spined Porcupine Brazil
V	<i>Tokudaia osimensis</i> Japan: Nansei-shoto (Amami-oshima)	Family CHINCHILLIDAE	
I	<i>Wilfredomys oenax</i> Brazil; Uruguay	I	<i>Chinchilla brevicaudata</i> Short-tailed Chinchilla Argentina; Bolivia; Chile; Peru (ex?)

THREATENED SPECIES

Family OCTODONTIDAE

- V *Octomys barrerae*
(Tympanoctomys barrerae)
 Red Vizcacha Rat
 Argentina

Family CAPROMYIDAE

- E *Capromys angelcabrerai*
(Mesocapromys angelcabrerai)
 Cabrera's Hutia
 Cuba: Cay Ana Maria

- E *Capromys auritus*
(Mesocapromys auritus)
 Large-eared Hutia
 Cuba: Cay Fragoso

- E *Capromys garridoi*
(Mysateles garridoi)
 Garrido's Hutia
 Cuba: Canarreos Archipelago

- I *Capromys gundlachi*
(Mysateles gundlachi)
 Chapman's Prehensile-tailed Hutia
 Cuba: Isle de Juventud

- R *Capromys melanurus*
(Mysateles melanurus)
 Bushy-tailed Hutia
 Cuba

- I *Capromys meridionalis*
(Mysateles meridionalis)
 Isla de la Juventud Tree Hutia
 Cuba: Isle de Juventud

- E *Capromys nanus*
(Mesocapromys nanus)
 Dwarf Hutia
 Cuba

- E *Capromys sanfelipensis*
(Mesocapromys sanfelipensis)
 Little Earth Hutia
 Cuba

- I *Geocapromys brownii*
 (includes *G. thoracatus*, sometimes included in
Capromys)
 Jamaican Hutia
 Jamaica

- R *Geocapromys ingrahami*
(Capromys ingrahami)
 Bahamian Hutia
 Bahamas: Plana Keys

- R *Plagiodontia aedium*
 (includes *P. hylaeum*)
 Hispaniolan Hutia
 Dominican Republic; Haiti

Order LAGOMORPHA

Family OCHOTONIDAE

- K *Ochotona forresti*
 Forrest's Pika
 Bhutan, China, India, Myanmar

- I *Ochotona gaoligongensis*
 Gaoligong Pika
 China

- I *Ochotona iliensis*
 Ili Pika
 China

- V *Ochotona koslowi*
 Kozlov's Pika
 China

- I *Ochotona muliensis*
 Muli Pika
 China

- I *Ochotona nubrica*
 Nubra Pika
 China, India, Nepal

- V *Ochotona pusilla*
 Steppe Pika, Little Pika
 Russia

- I *Ochotona thomasi*
 Thomas' Pika
 China

Family LEPORIDAE

- V *Brachylagus idahoensis*
 Pygmy Rabbit
 USA

- E *Bunolagus monticularis*
 Riverine Rabbit
 South Africa

- E *Caprolagus hispidus*
 Hispid Hare
 Bangladesh; India; Nepal

- I *Lepus callotis*
 White-sided Jackrabbit
 Mexico, USA

- E *Lepus flavigularis*
 Tehuantepec Jackrabbit
 Mexico

- K *Lepus hainanus*
(*L. pequensis hainanus*)
Hainan Hare
China
- R *Lepus insularis*
Black Jackrabbit
Mexico
- K *Lepus othus*
(*Lepus timidus othus*)
Alaskan Hare
USA: Alaska
- E *Nesolagus netscheri*
Sumatran Rabbit
Indonesia: Sumatra
- E *Pentalagus furnessi*
Amami Rabbit
Japan
- E *Romerolagus diazi*
Volcano Rabbit
Mexico
- K *Sylvilagus dicei*
(*S. brasiliensis dicei*)
Dice's Cottontail
Costa Rica; Panama
- E *Sylvilagus graysoni*
Tres Marias Rabbit
Mexico: Tres Marias Islands
- E *Sylvilagus insonus*
Omiteme Rabbit
Mexico
- I *Sylvilagus mansuetus*
(*Sylvilagus bachmani mansuetus*)
San Jose Brush Rabbit
Mexico
- Order MACROSCELIDEA
- Family MACROSCELIDIDAE
- V *Rhynchoyon chrysopygus*
Golden-rumped Elephant-shrew
Kenya
- R *Rhynchoyon petersi*
Black-and-rufous Elephant-shrew
Kenya; Tanzania: including Pemba Island,
Zanzibar

Class AVES		K	<i>Tachybaptus pelzelnii</i> Madagascar Grebe Madagascar
Order APTERYGIFORMES		E	<i>Tachybaptus rufolavatus</i> Alaotra Grebe Madagascar
Family APTERYGIDAE		Order PROCELLARIIFORMES	
V	<i>Apteryx owenii</i> Little Spotted Kiwi New Zealand	Family DIOMEDEIDAE	
Order TINAMIFORMES		E	<i>Diomedea albatrus</i> Short-tailed Albatross Japan: Izu Islands. * North Pacific inc. China; USA: Hawaiian Islands; Russia; Taiwan
Family TINAMIDAE		E	<i>Diomedea amsterdamensis</i> Amsterdam Island Albatross French Southern and Antarctic Territories: Amsterdam Island
I	<i>Crypturellus kerriae</i> Choco Tinamou Colombia; Panama	Family PROCELLARIIDAE	
E/Ex	<i>Nothoprocta kalinowskii</i> Kalinowski's Tinamou Peru	E	<i>Procellaria parkinsoni</i> Black Petrel New Zealand. * South Pacific north to Costa Rica; Ecuador; Peru
V	<i>Nothoprocta tacjanowskii</i> Taczanowski's Tinamou Peru	V	<i>Procellaria westlandica</i> Westland Petrel New Zealand. * Australia
I	<i>Nothura minor</i> Lesser Nothura Brazil	E	<i>Pterodroma aterrima</i> (<i>Pseudobulweria aterrima</i>) Mascarene Petrel Réunion
I	<i>Taoniscus nanus</i> Dwarf Tinamou Argentina (ex?); Brazil	E	<i>Pterodroma axillaris</i> Chatham Islands Petrel New Zealand: Chatham Islands
K	<i>Tinamus osgoodi</i> Black Tinamou Colombia; Peru	I	<i>Pterodroma becki</i> (<i>Pterodroma rostrata becki</i>) Beck's Petrel Papua New Guinea (ex?); Solomon Islands (ex?)
Order SPHENISCIFORMES		E	<i>Pterodroma cahow</i> Bermuda Petrel Bermuda
Family SPHENISCIDAE		R	<i>Pterodroma cookii</i> Cook's Petrel New Zealand. * seas off South America; Chile; Peru
V	<i>Megadyptes antipodes</i> Yellow-eyed Penguin New Zealand: Auckland Islands, Campbell Island, South Island, Stewart Island	V	<i>Pterodroma defilippiana</i> Defilippe's Petrel Chile: Desventuradas Islands; Juan Fernández Islands
K	<i>Spheniscus demersus</i> Jackass Penguin Namibia; South Africa. * Angola; Mozambique		
Order PODICIPEDIFORMES			
Family PODICIPEDIDAE			
E/Ex	<i>Podiceps andinus</i> Colombian Grebe Colombia		
E	<i>Podiceps tacjanowskii</i> Puna Grebe Peru		

THREATENED SPECIES

R	<i>Pterodroma seae</i> Cape Verde Petrel Cape Verde; Portugal; Madeira. * Tropical and subtropical Atlantic	K	<i>Oceanodroma tristrami</i> Tristram's Storm-Petrel USA: Hawaiian Islands; Japan: Izu Islands, Kazan-reto (Volcano Islands)
I	<i>Pterodroma hasitata</i> Black-capped Petrel Cuba; Dominican Republic; Haiti. * Caribbean and western North Atlantic		Family PELECANOIDIDAE
E	<i>Pterodroma madeira</i> Madeira Petrel Portugal: Madeira	V	<i>Pelecanoides garnotii</i> Peruvian Diving-Petrel Chile; Peru
E	<i>Pterodroma magentae</i> Magenta Petrel New Zealand: Chatham Islands. * South Pacific		Order PELECANIFORMES
I	<i>Pterodroma macgillivrayi</i> (<i>Pseudobulweria macgillivrayi</i>) MacGillivray's Petrel Fiji: Gau Island		Family PELECANIDAE
E	<i>Pterodroma phaeopygia</i> (<i>P. p. phaeopygia</i>) Galapagos Petrel Ecuador: Galapagos Islands. * Chile; Colombia: Malpelo Island; Costa Rica; Ecuador; French Polynesia: Clipperton Island; Mexico; Panama; Peru	V	<i>Pelecanus crispus</i> Dalmatian Pelican Albania; Armenia; Azerbaijan; Bulgaria; China; Greece; Iran; Kazakhstan; Mongolia; Romania; Russia; Turkey; Turkmenistan; Ukraine; Uzbekistan; Yugoslavia. * Afghanistan; Bangladesh; Egypt; Hong Kong; India; Iraq; Lebanon; Pakistan; Syria
V	<i>Pterodroma pycrofti</i> Pycroft's Petrel New Zealand	I	<i>Pelecanus philippensis</i> Spot-billed Pelican India; Sri Lanka. * Bangladesh; Cambodia; China; Indonesia: Java, Sumatra; Laos; Malaysia; Peninsular Malaysia; Myanmar; Nepal; Thailand; Viet Nam
E	<i>Pterodroma sandwichensis</i> (<i>P. p. sandwichensis</i>) Hawaiian Petrel USA: Hawaiian Islands (Hawaii, Kauai?, Lanai, Maui, Molokai). * French Polynesia?: Marquesas Islands; Kiribati: Line Islands		Family SULIDAE
I	<i>Puffinus auricularis</i> Townsend's Shearwater Mexico: Revillagigedo Islands	E	<i>Papasula abbotti</i> (<i>Sula abbotti</i>) Abbott's Booby Christmas Island; Costa Rica?: Cocos (Keeling) Islands. * Indonesia: Java
V/R	<i>Puffinus creatopus</i> Pink-footed Shearwater Chile: Isla Mocha, Juan Fernández Islands. * Cocos (Keeling) Islands; Costa Rica; Ecuador; Peru; USA		Family PHALACROCORACIDAE
I	<i>Puffinus heinrothi</i> Heinroth's Shearwater Papua New Guinea: Bougainville, New Britain	R	<i>Phalacrocorax carunculatus</i> Rough-faced Shag New Zealand: Cook Strait
	Family HYDROBATIDAE	R	<i>Phalacrocorax chalconotus</i> Bronze Shag (<i>P. carunculatus chalconotus</i>) New Zealand: South Island, Stewart Island
E/Ex	<i>Oceanodroma macrodactyla</i> Guadalupe Storm-Petrel Mexico: Guadalupe Island	R	<i>Phalacrocorax harrisi</i> (<i>Nannopterum harrisi</i>) Flightless Cormorant Ecuador: Galapagos Islands: Fernandina, Isabela
		R	<i>Phalacrocorax onslowi</i> (<i>P. carunculatus onslowi</i>) Chatham Islands Shag New Zealand: Chatham Islands

- K** *Phalacrocorax pygmeus*
(Halietor pygmeus)
Pygmy Cormorant
Albania; Azerbaijan; Bulgaria; Greece;
Hungary; Iran; Iraq; Italy; Kazakhstan;
Moldova; Romania; Russia; Tajikistan;
Turkey; Turkmenistan; Uzbekistan;
Yugoslavia. * Afghanistan; Austria; Georgia;
Israel
- Family FREGATIDAE**

THREATENED SPECIES

- E *Eretmochelys imbricata*
Hawksbill Turtle
(Nesting recorded on beaches of tropical and subtropical seas [Atlantic, Caribbean, Indian, Pacific]. Wandering individuals occasionally recorded in temperate waters.)
American Samoa; Anguilla; Antigua and Barbuda; Aruba; Australia; Bahamas; Bangladesh; Barbados; Belize; Brazil; British Indian Ocean Territory; British Virgin Islands; Cambodia; Cameroon?; Cape Verde?; China?; Colombia; Comoros; Cook Islands; Costa Rica; Côte d'Ivoire?; Cuba; Djibouti?; Dominica; Dominican Republic; Ecuador; Egypt; El Salvador?; Equatorial Guinea; Bioko; Ethiopia; Federated States of Micronesia; Fiji; French Guiana; French Polynesia?; Gabon?; Ghana?; Grenada; Guadeloupe; Guam; Guatemala; Guinea?; Guinea-Bissau?; Guyana; Haiti; Honduras; India; Indonesia; Iran; Jamaica; Japan; Kenya; Kiribati?; Kuwait?; Madagascar; Malaysia; Peninsular Malaysia; Sabah; Sarawak; Maldives; Marshall Islands; Martinique; Mauritania?; Mayotte; Mexico; Montserrat; Mozambique; Myanmar; Netherlands Antilles; New Caledonia?; Nicaragua; Nigeria?; Northern Marianas?; Oman; Palau; Panama; Papua New Guinea; Philippines; Puerto Rico; Qatar; Réunion; Iles Glorieuses; São Tomé and Príncipe?; Saudi Arabia; Senegal?; Seychelles; Sierra Leone; Solomon Islands; Somalia; Sri Lanka; Saint Kitts-Nevis; Saint Lucia; Saint Vincent; Sudan; Suriname; Taiwan?; Tanzania; Thailand; Tokelau; Tonga?; Trinidad and Tobago; Turks and Caicos Islands; Tuvalu?; United Arab Emirates?; USA: including Hawaiian Islands; US Pacific Islands?; Virgin Islands of the United States; Vanuatu; Venezuela; Viet Nam?; Western Sahara?; Western Samoa; Yemen
- E *Lepidochelys kempii*
Kemp's Ridley
(Virtually all nesting occurs at Rancho Nuevo on the Gulf coast of Mexico [Tamaulipas State]. Single or sparse nesting elsewhere in Mexico, Colombia and USA. At sea, most frequently recorded in the Gulf of Mexico, also regular in Atlantic waters, particularly along the coast of North America, and very occasionally in the Mediterranean.)
[USA: attempts are being made to establish a nesting colony at Padre Island].
Mexico; USA
- E *Lepidochelys olivacea*
Olive Ridley
(Nesting recorded on beaches of tropical and subtropical seas [Atlantic, Indian, Pacific]. Major mass nesting occurs in India, Costa Rica and Mexico.)
Angola; Australia; Bangladesh; Brazil; Costa Rica; El Salvador; French Guiana; Guatemala; Guyana; Honduras; India; Indonesia; Kenya; Madagascar; Malaysia; Peninsular Malaysia; Sarawak; Mexico; Mozambique; Myanmar; Nicaragua; Oman; Pakistan; Panama; Papua New Guinea; Peru; Senegal; South Africa; Sri Lanka; Suriname; Tanzania; Thailand; Trinidad and Tobago; Venezuela
- V *Natator depressus*
Flatback
(Nests in Australia; recorded at sea in Indonesia and Papua New Guinea)
Australia; Indonesia; Papua New Guinea
- Family DERMOCHELYIDAE
- E *Dermochelys coriacea*
Leatherback
(Nesting recorded on beaches of tropical and subtropical seas [Atlantic, Indian, Pacific]. Notable nesting in Mexico, Irian Jaya, Malaysia and French Guiana. Foraging populations regularly occur in cool temperate waters.)
Angola; Anguilla; Antigua and Barbuda; Australia; Brazil; British Virgin Islands; Colombia?; Costa Rica; Côte d'Ivoire; Cuba; Dominica; Dominican Republic; Ecuador; El Salvador; Fiji; French Guiana; Ghana; Grenada; Guadeloupe; Guatemala; Guyana; Honduras; India; Indonesia; Israel (ex?); Liberia; Malaysia; Peninsular Malaysia; Martinique; Mexico; Montserrat; Mozambique; Myanmar; Netherlands Antilles; Nicaragua; Panama; Papua New Guinea; Peru?; Puerto Rico; Senegal; Solomon Islands; South Africa; Sri Lanka; Saint Kitts-Nevis; Saint Lucia; Saint Vincent; Suriname; Thailand; Togo; Trinidad and Tobago; USA; Virgin Islands of the United States; Venezuela?; Zaire

THREATENED SPECIES

Family HYRIIDAE

- I *Hyridella moretonicus*
(Vellesunio moretonicus)
Australia: Tasmania

Order VENEROIDA

Family TRIDACNIDAE

- I *Hippopus hippopus*
Bear Paw Clam
(Indo-Pacific: including Bay of Bengal, South China Sea, East China Sea, Coral Sea)
American Samoa (ex?); Australia: Queensland, Western; Federated States of Micronesia; Fiji (ex?); Guam (ex?); India?: Andaman and Nicobar Islands; Indonesia; Japan; Ogasawara-shoto (Bonin Islands) (ex?); Ryukyu Islands (ex?); Kiribati: Gilbert Islands; Malaysia; Marshall Islands; Myanmar; New Caledonia; Northern Marianas (ex?); Palau; Philippines; Papua New Guinea; Paracel Islands?; Samoa (ex?); Singapore; Solomon Islands; Taiwan (ex?); Thailand?; Tonga (ex?); Tuvalu; Vanuatu

- I *Hippopus porcellanus*

China Clam
(Indo-Pacific: including Flores Sea, South China Sea)
Indonesia; Palau; Philippines: Sulu Archipelago, Masbate Island; South China Sea reefs

- K *Tridacna crocea*

Crocus Clam
(Indo-Pacific: including South China Sea, Coral Sea)
Australia; Guam (ex?); Indonesia; Japan: Ryukyu Islands; Malaysia; Northern Marianas (ex?); Palau; Papua New Guinea; Philippines; Singapore; Solomon Islands; Thailand; Tuvalu?; Vanuatu?; Viet Nam

- V *Tridacna derasa*

Southern Giant clam
(Indo-Pacific: Coral Sea)
Australia: Queensland; Cocos (Keeling) Islands?; Fiji; French Polynesia?: Tuamoto Archipelago; Guam (ex?); Indonesia: Irian Jaya, Taka Bone Rate in Sulawesi; New Caledonia; Northern Marianas (ex?); Palau; Papua New Guinea; Philippines; Solomon Islands; Tonga: Tongatapu; Tuvalu?; Vanuatu?
[American Samoa; Cook Islands; Federated States of Micronesia; Marshall Islands]

- V *Tridacna gigas*

Giant Clam
(Indo-Pacific: including South China Sea, Coral Sea)
Australia: Queensland, Western; Federated States of Micronesia; Lamotrek Atoll, Wesy Fagu; Fiji (ex?); Indonesia; Japan: Ryukyu Islands (ex?); Kiribati: Gilbert Islands; Malaysia; Marshall Islands; Myanmar; New Caledonia (ex?); Northern Marianas (ex?); Palau; Papua New Guinea; Philippines; Solomon Islands; Taiwan (ex?); Thailand; Tuvalu; Vanuatu (ex?)
[Guam (ex?); USA: including Hawaiian Islands]

- K *Tridacna maxima*

Small Giant Clam
(Indian Ocean; Pacific Ocean)
American Samoa; Australia: including Lord Howe Island; British Indian Ocean Territory; Chagos Archipelago; China; Cook Islands; Egypt; Federated States of Micronesia; Fiji; French Polynesia; Guam; India: Andaman and Nicobar Islands, Lakshadweep; Indonesia; Japan; Kenya; Kiribati: Gilbert, Phoenix, Line Islands; Madagascar; Malaysia; Maldives; Marshall Islands; Mauritius; Mozambique; Myanmar; New Caledonia; Northern Marianas; Palau; Papua New Guinea; Philippines; Pitcairn Islands: Henderson Island; Samoa; Saudi Arabia; Seychelles; Singapore; Solomon Islands; South Africa; Sri Lanka; Taiwan; Thailand; Tokelau; Tonga; Tuvalu; USA Pacific Islands; Vanuatu; Viet Nam

- I *Tridacna squamosa*

Scaly Clam, Fluted Clam
(Indian Ocean; Pacific Ocean)
American Samoa; Australia; British Indian Ocean Territory; Chagos Archipelago; Egypt; Federated States of Micronesia; Fiji; French Polynesia; Tuamotu Archipelago; India: Andaman and Nicobar Islands, Lakshadweep; Indonesia; Japan (ex?); Kenya; Kiribati; Gilbert Islands; Madagascar; Malaysia; Maldives; Marshall Islands; Mauritius; Mozambique; Myanmar; New Caledonia; Northern Marianas (ex?); Palau; Papua New Guinea; Philippines; Samoa; Saudi Arabia; Seychelles; Singapore; Solomon Islands; South Africa; Sri Lanka; Thailand; Tokelau; Tonga; Tuvalu; Vanuatu; Viet Nam
[Guam (ex?); USA: including Hawaiian Islands]

- K *Tridacna tevoroa*
Tevoro Clam
(South Pacific)
Fiji; Lau Islands; Tonga: Ha'apai and Vava'u Groups

Family PISIDIIDAE

- I *Pisidium sanguinichristi*
USA

- I *Pisidium ultramontanum*
Montane Peaclam
USA

Phylum ANELIDA

Class POLYCHAETA

Order EUNICIDA

Family EUNICIDAE

- K *Eunice viridis*
Palolo Worm
(South Pacific)

Class HIRUDINEA

Order ARHYNCHOBELLAE

Family HIRUDINIDAE

- I *Hirudo medicinalis*
Medicinal Leech
Albania; Armenia; Austria; Azerbaijan?; Belarus?; Belgium; Bulgaria; Czech Republic?; Denmark; Estonia?; Finland; France; Georgia; Germany; Greece; Hungary; Italy; Kazakhstan?; Latvia?; Lithuania; Luxembourg; Moldova; Netherlands; Norway; Poland; Portugal; Romania; Russia; Spain; Sweden; Switzerland; Turkey; Ukraine; United Kingdom; Yugoslavia

Class OLIGOCHAETA

Order HAPLOTAXIDA

Family KOMAREKIONIDAE

- V *Komarekiona eatoni*
USA

Family LUTODRILIDAE

- R *Lutodrilus multivesiculatus*
USA

Family MEGASCOLECIDAE

- E *Driloleirus americanus*
(*Megascolides americanus*)
Washington Giant Earthworm
USA

- E *Driloleirus macelfreshi*
(*Megascolides macelfreshi*)
Oregon Giant Earthworm
USA

- V *Megascolides australis*
Giant Gippsland Earthworm
Australia

Phylum ARTHROPODA

Class MEROSTOMATA

Order XIPHOSURA

Family LIMULIDAE

- K *Carcinoscorpius rotundicauda*
Horseshoe Crab
Coastal waters - India; Indonesia; Malaysia;
Philippines; Singapore; Thailand

- K *Limulus polyphemus*
Horseshoe Crab
Coastal waters - Canada; Mexico; USA

- K *Tachypleus gigas*
Horseshoe Crab
Coastal waters - India; Indonesia; Malaysia;
Singapore; Thailand

- K *Tachypleus tridentatus*
Horseshoe Crab
Coastal waters - China; Indonesia; Japan;
Malaysia; Philippines; Taiwan; Viet Nam

Class ARACHNIDA

Order ARANAEAE

Family THERAPHOSIDAE

- K *Euathlus smithi*
(*Brachypelma smithi*)
Red-kneed Tarantula
Mexico

Family HEXATHELIDAE

- I *Macrothele cretica*
Greece: Crete

THREATENED SPECIES

Family CTENIZIDAE

- I *Cyclocosmia torreya*
Torreya Trap-door Spider
USA

Family GRADUNGULIDAE

- I *Spelungula cavernicola*
Nelson Cave Spider
New Zealand

Family LEPTONETIDAE

- E *Leptoneta myopica*
Tooth Cave Spider
USA

Family LINYPHIIDAE

- R *Troglolophantes gracilis*
Kocevje Subterranean Spider
Yugoslavia

- R *Troglolophantes similis*
Kocevje Subterranean Spider
Yugoslavia

- R *Troglolophantes spinipes*
Kocevje Subterranean Spider
Yugoslavia

Family ARANEIDAE

- I *Meta dolloff*
Dolloff Cave Spider
USA

Family GNAPHOSIDAE

- I *Cesonia irvingi*
Key Gnaphosid Spider
Bahamas; USA

Family LYCOSIDAE

- E *Adelocosa anops*
No-eyed Big-eyed Wolf Spider
USA: Hawaiian Islands

- I *Lycosa ericeticola*
Rosemary Wolf Spider
USA

- R *Pardosa diurna*
Glacier Bay Wolf Spider
USA

- I *Sosippus placidus*
Lake Placid Funnel Wolf Spider
USA

Family ASAURIDAE

- V *Dolomedes plantarius*
Great Raft Spider
Austria; Belarus?; Belgium; Denmark; France;
Georgia?; Germany; Hungary; Italy; Latvia;
Lithuania; Netherlands; Poland; Romania;
Russia; Slovakia; Sweden;

Order PSEUDOSCORPIONIDA

Family NEOBISIIDAE

- I *Microcreagris imperialis*
Empire Cave Pseudoscorpion
USA

- E *Microcreagris texana*
Tooth Cave Pseudoscorpion
USA

Order OPILIONES

Family PHALANGODIDAE

- V *Banksula melones*
Melones Cave Harvestman
USA

Class CRUSTACEA

Order CLADOCERA

Family DAPHNIDAE

- R *Daphnia jollyi*
Water Flea
Australia: Western Australia

- R *Daphnia occidentalis*
Water Flea
Australia: Western Australia

- R *Daphnia nivalis*
Water Flea
Australia: New South Wales

Family CHYDORIDAE

- R *Rhynchochydorus australiensis*
Water Flea
Australia: New South Wales

Order ANOSTRACA

Family ARTEMIIDAE

- I *Artemia monica*
Mono Lake Brine Shrimp
USA

Family BRANCHINECTIDAE

- I *Branchinecta gigas*
Giant Fairy Shrimp
Canada; USA

Family BRANCHIPODIDAE

- I *Parartemia contracta*
Brine Shrimp
Australia: Western Australia

Family THAMNOCEPHALIDAE

- K *Branchinella apophysata*
Fairy Shrimp
Australia: Western Australia
- K *Branchinella basispina*
Fairy Shrimp
Australia: Western Australia
- K *Branchinella denticulata*
Fairy Shrimp
Australia: Western Australia
- K *Branchinella simplex*
Brine Shrimp
Australia: Western Australia
- K *Branchinella wellardi*
Fairy Shrimp
Australia: Western Australia

Order MYODOCOPINA

Family CYPRIDINIDAE

- K *Zonocypretta kalimna*
Seed Shrimp
Australia: Western Australia

Family NOTODROMADIDAE

- K *Newnhamia fuscata*
Seed Shrimp
Australia: New South Wales
- K *Newnhamia insolita*
Seed Shrimp
Australia: New South Wales

Order PODOCOPINA

Family LIMNOCYTHERIDAE

- K *Limnocythere porphyreata*
Seed Shrimp
Australia: Western Australia

Order CALANOIDA

Family CENTROPAGIDAE

- R *Boeckella nyoraensis*
Australia
- R *Calamoecia australica*
Australia: Victoria

- R *Calamoecia elongata*
Australia: Western Australia

Order HARPACTICOIDA

Family CANTHOCAMPTIDAE

- K *Canthocamptus echinopyge*
Australia: Tasmania
- K *Canthocamptus dedeckkeri*
Australia: Victoria
- K *Canthocamptus tasmaniae*
Australia: Tasmania
- K *Canthocamptus longipes*
Australia: Victoria
- K *Canthocamptus mammillifurca*
Australia: Victoria
- K *Canthocamptus sublaevis*
Australia: Victoria
- K *Fibulacamptus gracilior*
Australia: Victoria
- K *Fibulacamptus bisetosus*
Australia: Western Australia

Order THORACICA

Family BALANIDAE

- I *Armatobalanus nefrens*
USA
- I *Balanus aquila*
USA

Order ANASPIDACEA

Family ANASPIDIDAE

- I *Allanaspides helonomus*
Syncarid Shrimp
Australia: Tasmania
- V *Allanaspides hickmani*
Syncarid Shrimp
Australia: Tasmania
- K *Anaspides sp.*
Syncarid Shrimps
Australia: Tasmania
- I *Paranaspides lacustris*
Great Lake Shrimp
Australia: Tasmania

Family PSAMMASPIDIDAE

- K *Eurennonaspides oinotheke*
Australia: Tasmania

THREATENED SPECIES

Order ISOPODA

Family CIROLANIDAE

- V *Antrolana lira*
Madison Cave Isopod
USA
- I *Arubolana imula*
Aruba
- K *Mexilana saluposi*
Mexico
- K *Speocirolana affinis*
Mexico
- K *Speocirolana interstitialis*
Mexico
- K *Speocirolana thermydromis*
Mexico
- Family SPAEROMATIDAE
- K *Thermosphaeroma dugesii*
Mexico
- K *Thermosphaeroma milleri*
Mexico
- K *Thermosphaeroma smithi*
Mexico
- K *Thermosphaeroma subequalum*
Mexico
- E *Thermosphaeroma thermophilum*
Socorro Isopod
USA

Family TRICHONISCIDAE

- K *Metatrichoniscoides celticus*
United Kingdom

Family STYLONISCIDAE

- I *Stylocniscus* sp.
Australia: Tasmania

Family ARMADILLIDAE

- I *Echinodillo cavaticus*
Australia: Tasmania

Family PHREATOICIDAE

- I *Mesacanthotelson setosis*
Australia: Tasmania
- R *Onchotelson brevicaudatus*
Australia: Tasmania

- I *Nesosydne kuschei*
Kusche's Planthopper
USA: Hawaiian Islands
- I *Nesosydne leahi*
Diamond Head Planthopper
USA: Hawaiian Islands
- I *Nesosydne longipes*
Long-footed Planthopper
USA: Hawaiian Islands
- I *Nesosydne sulcata*
Keanae Planthopper
USA: Hawaiian Islands
- Family CICADIDAE
- V *Magicicada cassini*
Cassini Periodical Cicada
USA
- V *Magicicada septendecim*
Decim Periodical Cicada
Canada
- V *Magicicada septendecula*
Decula Periodical Cicada
USA
- I *Maoricicada myersi*
Myers' Cicada
New Zealand
- Family TETTIGARCTIDAE
- I *Tettigarcta tormentosa*
Australia: Tasmania
- Family CICADELLIDAE
- I *Felexamia rubranura*
Red-veined Prairie Leafhopper
USA
- Family APHIDIDAE
- I *Ceriferella leucopogonis*
Australia: Tasmania
- Order NEUROPTERA
- Family ITHONIDAE
- I *Oliarces clara*
USA: California, Hawaiian Islands
- Family HEMEROBIIDAE
- I *Nesothauma halakalae*
Haleakala Spongillafly
USA: Hawaiian Islands
- I *Pseudopsectra cookeorum*
Cooke's Spongillafly
USA: Hawaiian Islands
- I *Pseudopsectra lobipennis*
Lobe-wing Spongillafly
USA: Hawaiian Islands
- I *Pseudopsectra swetzeyi*
Swetzey's Spongillafly
USA: Hawaiian Islands
- I *Pseudopsectra usingeri*
Usinger's Spongillafly
USA: Hawaiian Islands
- Family MYRMELEONTIDAE
- I *Eidoleon perjurus*
Molokai Antlion
USA: Hawaiian Islands
- Order COLEOPTERA
- Family CARABIDAE
- I *Agonum belleri*
Beller's Ground Beetle
USA
- E *Aplotherax burchelli*
Saint Helena

List 2

EXTINCT SPECIES

Class MAMMALIA		<i>Nesophontes micrus</i>
Order DASYUROMORPHIA		Western Cuban Nesophontes Cuba
Family THYLACINIDAE		<i>Nesophontes paramicrus</i>
Ex	<i>Thylacinus cynocephalus</i> Thylacine Australia: Tasmania (1934)	Saint Michel Nesophontes Dominican Republic; Haiti
Order PERAMELEMORPHIA		<i>Nesophontes zamicrus</i>
Family PERAMELIDAE		Haitian Nesophontes Dominican Republic; Haiti
Ex	<i>Chaeropus ecaudatus</i> Pig-footed Bandicoot Australia (1907)	<i>Nesophontes</i> sp. Cayman Islands
Ex		Order CHIROPTERA
Ex	<i>Macrotis leucura</i> Lesser Bilby Australia (1931)	Family PTEROPODIDAE
Ex	<i>Perameles eremiana</i> Desert Bandicoot Australia (1935)	Ex <i>Acerodon lucifer</i> Panay Giant Fruit Bat Philippines: Panay (1888)
Order DIPROTODONTIA		Ex? <i>Dobsonia chapmani</i> Philippine Bare-backed Fruit Bat Philippines: Cebu, Negros (1964)
Family POTOROIDAE		Ex <i>Nyctimene sanctacrucis</i> Solomon Islands: Santa Cruz Islands
Ex	<i>Caloprymnus campestris</i> Desert Rat-kangaroo Australia (1935)	Ex? <i>Pteropus brunneus</i> Australia: Percy Island
Ex	<i>Potorous platyops</i> Broad-faced Potoroo Australia (1875)	Ex <i>Pteropus loochoensis</i> (<i>Pteropus mariannus loochoensis</i>) Okinawa Flying-fox Japan: Nansei-shoto (Okinawa)
Family MACROPODIDAE		Ex <i>Pteropus pilosus</i> Palau Flying-fox Palau (19th C)
Ex	<i>Lagorchestes asomatus</i> Central Hare-wallaby Australia (1931)	Ex <i>Pteropus subniger</i> Mauritius; Réunion
Ex	<i>Lagorchestes leporides</i> Eastern Hare-wallaby Australia (1890)	Ex? <i>Pteropus tokudae</i> Guam Flying-fox Guam (1968)
Ex	<i>Macropus greyi</i> Toolache Wallaby Australia (1927)	Family PHYLLOSTOMIDAE
Ex	<i>Onychogalea lunata</i> Crescent Nailtail Wallaby Australia (1964)	Ex <i>Phyllonycteris major</i> Puerto Rican Flower Bat Puerto Rico
Order INSECTIVORA		Family VESPERTILIONIDAE
Family NESOPHONTIDAE		Ex? <i>Kerivoula africana</i> Tanzanian Woolly Bat Tanzania
<i>Nesophontes hypomicrus</i> Atalaye Nesophontes Dominican Republic; Haiti		Ex <i>Pipistrellus sturdee</i> Bonin Pipistrelle Japan: Ogasawara-shoto

Family MYSTACINIDAE

- Ex *Mystacina robusta*
New Zealand Greater Short-tailed Bat
New Zealand: Big South Cape Island,
Solomon Island (1960s)

Order CARNIVORA

Family CANIDAE

- Ex *Dusicyon australis*
Falkland Island Wolf
Falkland Islands (1876)

Family PHOCIDAE

- Ex *Monachus tropicalis*
Caribbean Monk Seal
Bahamas; Colombia: Isla de Providencia;
Cuba; Guadeloupe; Haiti: Alta Vela; Honduras;
Jamaica: Pedro Cays; Mexico; USA (1962)

Family PROCYONIDAE

- Ex? *Procyon gloveralleni*
(*Procyon lotor gloveralleni*)
Barbados Raccoon
Barbados

Order SIRENIA

Family DUGONGIDAE

- Ex *Hydrodamalis gigas*
Steller's Sea Cow
(Bering Sea; North Pacific Ocean)
Russia; USA? (1768)

Order PERISSODACTYLA

Family EQUIDAE

- Ex *Equus quagga*
(*Equus burchellii quagga*)
Quagga
South Africa (1883)

Order ARTIODACTYLA

Family SUIDAE

- Ex? *Sus bucculentus*
(*Sus verrucosus bucculentus*)
Vietnam Warty Pig
Viet Nam

Family CERVIDAE

- Cervus schomburgki*
(*Cervus duvaucelii schomburgki*)
Schomburgk's Deer
Thailand (1932)

Family BOVIDAE

- Ex *Gazella rufina*
Red Gazelle
Algeria (19th C)

- Ex *Hippotragus leucophaeus*
Bluebuck
South Africa (1800)

Order RODENTIA

Family MURIDAE

- Ex *Conilurus albipes*
Rabbit-eared Tree-rat
Australia (1875)

- Ex? *Crateromys paulus*
Ilin Island Cloud Rat
Philippines: Ilin Island

- Ex? *Leimacomys buettneri*
Togo

- Ex *Leporillus apicalis*
Lesser Stick-nest Rat
Australia (1933)

- Megalomys desmarestii*
Martinique Rice Rat
Martinique (1902)

- Megalomys luciae*
Saint Lucia Rice Rat
Saint Lucia (19th C)

- Nesoryzomys darwini*
Santa Cruz Rice Rat
Ecuador: Galapagos Islands

- Ex *Notomys amplus*
Short-tailed Hopping-mouse
Australia (1894)

- Ex *Notomys longicaudatus*
Long-tailed Hopping-mouse
Australia (1901)

- Ex *Notomys macrotis*
(includes *N. megalotis*)
Big-eared Hopping-mouse
Australia (pre 1850)

- Ex *Notomys mordax*
Darling Downs Hopping-mouse
Australia (pre 1846)

- Oligoryzomys victus*
Saint Vincent Rice Rat
Saint Vincent (1897)

Ex?	<i>Oryzomys nelsoni</i> Nelson's Rice Rat Mexico	Order LAGOMORPHA Family OCHOTONIDAE
Ex	<i>Peromyscus pembertoni</i> Pemberton's Deer Mouse Mexico: San Pedro Nolasco Island	Ex <i>Prolagus sardus</i> Sardinian Pika Italy: Sardinia; France: Corsica (18th C)
Ex	<i>Pitymys bavaricus</i> Bavarian Pine Vole Germany	Class AVES Order STRUTHIONIFORMES
Ex	<i>Pseudomys fieldi</i> Alice Springs Mouse Australia (1895)	Family DROMAIIDAE <i>Dromaius ater</i> King Island Emu Australia: King Island
Ex	<i>Pseudomys gouldii</i> Gould's Mouse Australia (1930)	<i>Dromaius baudinianus</i> (<i>Dromaius diemenianus</i>) Kangaroo Island Emu Australia: Kangaroo Island (1803)
	<i>Rattus macleari</i> Maclear's Rat Christmas Island (1908)	Family AEPYORNITHIDAE <i>Aepyornis maximus</i> Great Elephantbird Madagascar (1650)
	<i>Rattus nativitatis</i> Bulldog Rat Christmas Island (1908)	Family ANOMALOPTERYGIDAE <i>Dinornis torosus</i> Brawny Great Moa New Zealand (1670)
	Family ECHIMYIDAE	<i>Eurapteryx gravis</i> Burly Lesser Moa New Zealand (1640)
	<i>Boromys offella</i> Cuba	<i>Megalapteryx didinus</i> South Island Tokoeka New Zealand (1785)
	<i>Boromys torrei</i> Cuba	Order PODICIPEDIFORMES
	<i>Brotomys contractus</i> Dominican Republic; Haiti	Family PODICIPEDIDAE
	<i>Brotomys voratus</i> Dominican Republic; Haiti	Ex <i>Podilymbus gigas</i> Atitlan Grebe Guatemala (1980-1986/7)
	Family CAPROMYIDAE	Order PROCELLARIIFORMES
	<i>Capromys</i> sp. Cayman Islands	Family PROCELLARIIDAE
	<i>Geocapromys columbianus</i> Cuba	<i>Pterodroma</i> sp. Mauritius: Rodrigues (1726)
	<i>Geocapromys</i> sp. Cayman Islands	Order PELICANIFORMES
	<i>Isolobodon portoricensis</i> Dominican Republic; Haiti [Puerto Rico] (20th C)	Family PHALACROCORACIDAE
	<i>Plagiodontia velozi</i> Dominican Republic; Haiti	<i>Phalacrocorax perspicillatus</i> Pallas's Cormorant Russia: Bering Straits (1852)

EXTINCT SPECIES

Order CICONIIFORMES

Family ARDEIDAE

Ixobrychus novaezelandiae

Black-backed Bittern

New Zealand (1900)

Nycticorax mauritianus

Mauritius Night-heron

Mauritius (by 1700)

Nycticorax megacephalus

Rodrigues Night-heron

Mauritius: Rodrigues (1761)

Nycticorax sp.

Réunion (by 1700)

Family CICONIIDAE

Ciconia sp.

Réunion (1674)

Family THRESKIORNITHIDAE

Borbonibis latipes

Réunion Flightless Ibis

Réunion (1773)

Order ANSERIFORMES

Family ANATIDAE

Alopochen mauritanus

Mauritian Shelduck

Mauritius (1698)

Anas theodori

Mauritian Duck

Mauritius; ?Réunion (1696)

Camptorhynchus labradorius

Labrador Duck

Canada; USA (1878)

Cygnus sumnerensis

Chatham Island Swan

New Zealand: Chatham Island (1590-1690)

Mergus australis

Auckland Islands Merganser

New Zealand (1905)

Ex *Rhodonessa caryophyllacea*

Pink-headed Duck

India; Myanmar; Nepal (1935)

Order FALCONIFORMES

Family FALCONIDAE

Falco sp.

Réunion (1674)

Ex *Polyborus lutosus*

Guadalupe Caracara

Mexico: Guadalupe Island (1900)

Order GALLIFORMES

Family PHASIANIDAE

Coturnix novaezelandiae

New Zealand Quail

New Zealand (1875)

Ex *Ophrysia superciliosa*

Himalayan Quail

India (1868)

Order GRUIFORMES

Family RALLIDAE

Aphanapteryx bonasia

Red Rail

Mauritius (1700)

Aphanapteryx leguati

Rodrigues Rail

Mauritius: Rodrigues (1761)

Atlantisia elpenor

Ascension Flightless Crake

United Kingdom: Ascension Island (1656)

Fulica newtoni

Mascarene Coot

Mauritius; Réunion (1693)

Gallinula pacifica

Samoan Moorhen

Western Samoa: Savaii (1908-1926)

Gallirallus dieffenbachii

Dieffenbach's Rail

New Zealand: Chatham Island (1840)

Gallirallus lafresnayanus

New Caledonian Rail

New Caledonia (1904)

Gallirallus modestus

Chatham Islands Rail

New Zealand: Chatham Island (1900)

Gallirallus pacificus

Tahiti Rail

French Polynesia (1773-4)

Gallirallus wakensis

Wake Island Rail

USA: Wake Island (1945)

Ex *Nesoclopeus woodfordi*

Woodford's Rail

Papua New Guinea; ?Solomon Islands: Guadalcanal, Santa Isabel (1936)

<i>Porphyrio albus</i>	<i>Columba jouyi</i>
(<i>Notornis alba</i>)	Ryukyu Pigeon
Lord Howe Swamphen	Japan: Nansei-shoto (1936)
Australia: Lord Howe Island (1834)	
<i>Porzana monasa</i>	<i>Columba versicolor</i>
Kosrae Crake	Bonin Wood Pigeon
Federated States of Micronesia (1827)	Japan: Ogasawara-shoto (1889)
<i>Porzana palmeri</i>	<i>Ectopistes migratorius</i>
Laysan Crake	Passenger Pigeon
USA: Hawaiian Islands (Laysan) (1944)	USA (1914)
<i>Porzana sandwichensis</i>	Ex <i>Microgoura meeki</i>
Hawaiian Crake	Choiseul Pigeon
USA: Hawaiian Islands (1898)	Solomon Islands: Choiseul (1904)
Order CHARADRIIFORMES	Ex <i>Ptilinopus mercieri</i>
Family SCOLOPACIDAE	Red-moustached Fruit-Dove
<i>Prosobonia leucoptera</i>	French Polynesia: ?Fatuhiva, Hivaoa, ?Tahuata
Tahitian Sandpiper	(1922)
French Polynesia: Moorea, Tahiti (1773)	
Family CHARADRIIDAE	Order PSITTACIFORMES
<i>Haematopus meadewaldoi</i>	Family LORIIDAE
Canary Islands Oystercatcher	<i>Charmosyna diadema</i>
Spain: Canary Islands (1913)	New Caledonian Lorikeet
Family LARIDAE	New Caledonia (1860)
<i>Alca impennis</i>	Family PSITTACIDAE
Great Auk	<i>Ara tricolor</i>
Canada; Denmark: Faeroe Islands; Greenland;	Cuban Red Macaw
Iceland; Russia; United Kingdom (1844)	Cuba (1885)
Order COLUMBIIFORMES	<i>Conuropsis carolinensis</i>
Family RAPHIDAE	Carolina Parakeet
<i>Pezophaps solitaria</i>	USA (1914)
Rodrigues Solitaire	<i>Cyanoramphus olietenanus</i>
Mauritius: Rodrigues (1765)	Raiatea Parakeet
<i>Raphus cucullatus</i>	French Polynesia: Raiatea (1773)
Dodo	<i>Cyanoramphus zealandicus</i>
Mauritius (1665)	Black-fronted Parakeet
<i>Raphus solitarius</i>	French Polynesia: Tahiti (1844)
Réunion Solitaire	<i>'Lophopsittacus' bensonii</i>
Réunion (1710-1715)	Mauritius Grey Parrot
Family COLUMBIDAE	Mauritius (1765)
<i>Alectroenas nitidissima</i>	<i>Lophopsittacus mauritianus</i>
Mauritius Blue Pigeon	Mauritius Parrot
Mauritius (1835)	Mauritius (1675)
<i>'Alectroenas' rodericana</i>	<i>Mascarinus mascarinus</i>
Rodrigues Pigeon	Mascarene Parrot
Mauritius: Rodrigues (1726)	Réunion (1775 in wild, 1834 in captivity)
	<i>'Necropsittacus' rodericanus</i>
	Rodrigues Parrot
	Mauritius: Rodrigues (1761)

EXTINCT SPECIES

Ex	<i>Nestor productus</i> Norfolk Island Kaka Norfolk Island (1851)	Family PYCNONOTIDAE <i>Hypsipetes</i> sp. Mauritius: Rodrigues (1600s?)
	<i>Psephotus pulcherrimus</i> Paradise Parrot Australia (1927)	Family MUSCICAPIDAE
Ex	<i>Psittacula exsul</i> Newton's Parakeet Mauritius: Rodrigues (1876)	Ex <i>Eutrichomyias rowleyi</i> Cerulean Paradise-Flycatcher Indonesia: Sangihe (1978)
	<i>Psittacula wardi</i> Seychelles Parrot Seychelles (1870)	<i>Gerygone insularis</i> Lord Howe Gerygone Australia: Lord Howe Island
	Order CUCULIFORMES	<i>Turnagra capensis</i> Piopio New Zealand (1955)
	Family CUCULIDAE	<i>Turdus ravidus</i> Grand Cayman Thrush Cayman Islands (1938)
Ex	<i>Coua delalandei</i> Snail-eating Coua Madagascar (1930)	<i>Zoothera terrestris</i> Bonin Thrush Japan: Ogasawara-shoto (1928)
	Order STRIGIFORMES	Family ZOSTEROPIDAE <i>Zosterops strenuus</i> Robust White-eye Australia: Lord Howe Island (1928)
	Family STRIGIDAE	Family MELIPHAGIDAE <i>Chaetoptila angustipluma</i> Kioea USA: Hawaiian Islands (1860)
	'Athene' murivora Rodrigues Little Owl Mauritius: Rodrigues (1726)	<i>Moho apicalis</i> Oahu Oo USA: Hawaiian Islands (Oahu) (1837)
	? <i>Sauzieri</i> sp. Mauritian Owl Mauritius	<i>Moho nobilis</i> Hawaii Oo USA: Hawaiian Islands (Hawaii) (1934)
Ex	<i>Sceloglaux albifacies</i> Laughing Owl New Zealand (1914)	Family DREPANIDAE <i>Chloridops kona</i> Kona Grosbeak USA: Hawaiian Islands (1894)
	'Scops' commersoni Mauritian Owl Mauritius (1836)	<i>Ciridops anna</i> Ula-ai-hawane USA: Hawaiian Islands (1892)
	Family AEGOTHELIDAE	<i>Drepanis funerea</i> Black Mamo USA: Hawaiian Islands (1907)
	<i>Aegotheles savesi</i> New Caledonian Owlet-nightjar New Caledonia (1880)	<i>Drepanis pacifica</i> Hawaii Mamo USA: Hawaiian Islands (1899)
	Order APODIFORMES	
	Family TROCHILIDAE	
	<i>Chlorostilbon bracei</i> Grace's Emerald Bahamas (1877)	
	Order PASSERIFORMES	
	Family XENICIDAE	
	<i>Xenicus lyalli</i> Stephens Island Wren New Zealand: Stephens Island (1874)	

Ex	<i>Paroreomyza flammea</i> Molokai Creeper USA: Hawaiian Islands (Molokai) (1963)	Family CALLAEIDAE <i>Heteralocha acutirostris</i> Huia New Zealand (1907)
	<i>Rhodacanthis flavigeps</i> Lesser Koa-finches USA: Hawaiian Islands (1891)	Class REPTILIA
	<i>Rhodacanthis palmeri</i> Greater Koa-finches USA: Hawaiian Islands (1896)	Order TESTUDINES
	<i>Viridonia sagittirostris</i> Greater Amakihi USA: Hawaiian Islands (1900)	Family TESTUDINIDAE
	Family ICTERIDAE	
	<i>Quiscalus palustris</i> Slender-billed Grackle Mexico (1910)	<i>Cylindraspis borbonica</i> Réunion (1800)
	Family FRINGILLIDAE	<i>Cylindraspis indica</i> Réunion (1800)
	<i>Chaunoproctus ferreorostris</i> Bonin Grosbeak Japan: Ogasawara-shoto (1890)	<i>Cylindraspis inepta</i> Mauritius (early 18th C)
	<i>Spiza townsendi</i> Townsend's Finch USA (1833)	<i>Cylindraspis peltastes</i> Mauritius: Rodrigues (1800)
	Family PLOCEIDAE	<i>Cylindraspis triserrata</i> Mauritius (early 18th C)
	<i>Foudia</i> sp. Reunion Fody Réunion (1671)	<i>Cylindraspis vosmaeri</i> Mauritius: Rodrigues (1800)
	Family STURNIDAE	Order SAURIA
	<i>Aplonis corvina</i> Kosrae Mountain Starling Federated States of Micronesia: Kosrae (1828)	Family GEKKONIDAE
	<i>Aplonis fusca</i> Tasman Starling Australia: Lord Howe Island, Norfolk Island	<i>Hoplodactylus delcourtii</i> New Zealand (mid 19th C)
	<i>Aplonis mavornata</i> Mysterious Starling Unknown (1825)	Ex <i>Phelsuma gigas</i> (includes <i>P. edwardnewtonii</i> and <i>P. newtonii</i>) Rodrigues Day Gecko Mauritius: Rodrigues
Ex	<i>Aplonis pelzelni</i> Pohnpei Starling Federated States of Micronesia: Pohnpei (1956)	Family IGUANIDAE
	<i>Fregilupus varius</i> Réunion Starling Réunion (1854)	<i>Leiocephalus eremitus</i> USA: Navassa Island (1900)
	<i>Necrospar rodericanus</i> Rodrigues Starling Mauritius: Rodrigues (1726)	<i>Leiocephalus herminieri</i> Martinique (1830s)
		Family TEIIDAE
		<i>Ameiva cineracea</i> Guadeloupe (early 20th C)
		<i>Ameiva major</i> Martinique Giant Ameiva Martinique
		Family SCINCIDAE
		<i>Leiolopisma mauritiana</i> Mauritius (1600)
Ex?	<i>Macroscincus coctei</i> Cape Verde Giant Skink Cape Verde: Branco, Razo (early 20th C)	

EXTINCT SPECIES

Ex? <i>Tachygia microlepis</i> Tonga Ground Skink Tonga: Tongatapu	Class ACTINOPTERYGII
Ex? <i>Tetradactylus eastwoodae</i> Eastwood's Longtailed Seps South Africa	Order CYPRINIFORMES
Family ANGUIDAE	Family CYPRINIDAE
Ex? <i>Celestus occiduus</i> Jamaica Giant Galliwasps Jamaica (1840)	Ex? <i>Acanthobrama hulensis</i> Israel: Lake Huleh
Order SERPENTES	Ex? <i>Cyprinus yilongensis</i> China: Yunnan Province
Family TYPHLOPIDAE	Ex <i>Evarra bustamantei</i> Mexican Dace Mexico (1970)
<i>Typhlops cariei</i> Mauritius (17th C)	Ex <i>Evarra eigenmanni</i> Mexican Dace Mexico (1970)
Family BOIDAE	Ex <i>Evarra tlahuacensis</i> Mexican Dace Mexico (1970)
Ex? <i>Bolyeria multocarinata</i> Round Island Boa Mauritius: Round Island (1975)	Ex <i>Gila crassicauda</i> Thicktail Chub USA (1957)
Family COLUBRIDAE	Ex <i>Lepidomeda altivelis</i> Pahranagat Spinedace USA (1940)
<i>Alsophis sancticrucis</i> Saint Croix Racer Virgin Islands of the United States (20th C)	Ex <i>Notropis amecae</i> Ameca Shiner Mexico (1970)
Class AMPHIBIA	Ex <i>Notropis aulidion</i> Durango Shiner Mexico (1965)
Order ANURA	Ex <i>Notropis orca</i> Phantom Shiner Mexico; USA (1975)
Family DISCOGLOSSIDAE	Ex <i>Pogonichthys ciscooides</i> Clear Lake Splittail USA (1970)
Ex? <i>Discoglossus nigrovincter</i> Israel Painted Frog Israel: Lake Huleh (1940)	Ex <i>Rhinichthys deaconi</i> Las Vegas Dace USA (1955)
Family RANIDAE	Ex <i>Stypondon signifer</i> Stumptooth Minnow Mexico (1930)
Ex? <i>Arthroleptides dutoiti</i> Kenya: Mt. Elgon	Family CATOSTOMIDAE
Ex? <i>Rana fisheri</i> (<i>Rana onca</i> , <i>Rana pipiens fisheri</i>) Vegas Valley Leopard Frog USA (1960)	Ex <i>Chasmistes murieci</i> Snake River Sucker USA (1928)
Ex? <i>Rana tlahoci</i> Mexico	Ex <i>Lagochila lacera</i> Harelip Sucker USA (1910)
Class CEPHALASPIDOMORPHI	
Order PETROMYZONTIFORMES	
Family PETROMYZONTIDAE	
Ex <i>Lampetra minima</i> Miller Lake Lamprey USA (1953)	

Order SILURIFORMES

Family TRICHOMEYCTERIDAE

Ex *Rhizosomichthys totae*
Colombia: Lake Tota

Order SALMONIFORMES

Family RETROPINNIDAE

Ex *Prototroctes oxyrhynchus*
New Zealand Grayling
New Zealand (1920s)

Family SALMONIDAE

Ex *Coregonus alpenae*
Longjaw Cisco
(Great Lakes)
Canada; USA (1978)

Ex *Coregonus johannae*
Deepwater Cisco
(Great Lakes)
Canada; USA (1955)

Ex *Salvelinus agassizi*
Silver Trout
USA (1930)

Order AETHERINIFORMES

Family MELANOTAENIIDAE

Ex? *Melanotaenia eachamensis*
(possibly a form of *M. splendida*)
Lake Eacham Rainbowfish
Australia

Order CYPRINODONTIFORMES

Family CYPRINODONTIDAE

Ex *Cyprinodon latifasciatus*
Perrito de Parras
Mexico (1930)

Ex? *Cyprinodon* spp.
Perritos de Sandia
Mexico

Ex *Fundulus albolineatus*
Whiteline Topminnow
USA (1900)

Family GOODEIDAE

Ex *Characodon garmani*
Parras Characodon
Mexico (1900)

Ex *Empetrichthys merriami*
Ash Meadows Killifish
USA (1953)

Family POECILIIDAE

Ex *Gambusia amistadensis*
Amistad Gambusia
USA (1973)

Ex *Gambusia georgei*
San Marcos Gambusia
USA (1983)

Ex *Priapella bonita*
Guayacon Ojiazul
Mexico

Order SYNGNATHIFORMES

Family SYNGNATHIDAE

Ex *Syngnathus watermayeri*
River Pipefish
South Africa

Order SCORPAENIFORMES

Family COTTIDAE

Ex *Cottus echinatus*
Utah Lake Sculpin
USA (1928)

Order PERCIFORMES

Family PERCIDAE

Ex? *Etheostoma sellare*
Maryland Darter
USA

Phylum PLATYHELMINTHES

Class TURBELLARIA

Order TRICLADIDA

Family KENKIIDAE

Ex? *Romankenkius pedderensis*
Lake Pedder Planarian
Australia: Tasmania

Phylum MOLLUSCA

Class GASTROPODA

Order ARCHEOGASTROPODA

Family LOTTIIDAE

Ex *Lottia alveus*
Eelgrass Limpet
USA

Family HELICINIDAE		Ex? <i>Posticobia norfolkensis</i> Australia: Norfolk Island
Ex	<i>Ogasawarana chichijimana</i> Japan: Ogasawara	
Ex	<i>Ogasawarana habei</i> Japan: Ogasawara	Family ASSIMINEIDAE
Ex	<i>Ogasawarana hirasei</i> Japan: Ogasawara	Ex <i>Conacmella vagans</i> Japan: Ogasawara
Ex	<i>Ogasawarana metamorpha</i> Japan: Ogasawara	Ex <i>Omphalotropis plicosa</i> Mauritius
Ex	<i>Ogasawarana rex</i> Japan: Ogasawara	Family PLEUROCERIDAE
Ex	<i>Ogasawarana yoshiwarana</i> Japan: Ogasawara	Ex <i>Anculopsis anthonyix</i> (<i>Leptoxis anthonyix</i>) Anthony's River Snail USA
Order MESOGASTROPODA		Ex <i>Anculosa clipeata</i> (<i>Leptoxis clipeata</i>) Agate Rocksnail USA
Family CYCLOPHORIDAE		Ex <i>Anculosa formanii</i> (<i>Leptoxis formanii</i>) Interrupted Rocksnail USA
Ex	<i>Cyclosurus mariei</i> Mayotte	Ex <i>Anculosa ligata</i> (<i>Leptoxis ligata</i>) Rotund Rocksnail USA
Ex	<i>Cyclophorus horridulum</i> Mayotte	Ex <i>Anculosa lirata</i> (<i>Leptoxis lirata</i>) Lyrate Rocksnail USA
Family POMATIASIDAE		Ex <i>Anculosa occulata</i> (<i>Leptoxis occulata</i>) Bigmouth Rocksnail USA
Ex	<i>Tropidophora carinata</i> Mauritius; Réunion (1881)	Ex <i>Aculopsis praerosa</i> (<i>Leptoxis praerosa</i>) Onyx Rocksnail USA
Ex	<i>Tropidophora desmazuresi</i> Mauritius: Rodrigues	Ex <i>Anculosa showalteri</i> (<i>Leptoxis showalteri</i>) Coosa Rocksnail USA
Ex	<i>Tropidophora semilirata</i> Mayotte	Ex <i>Anculosa vittata</i> (<i>Leptoxis vittata</i>) Striped Rocksnail USA
Family ACICULIDAE		Ex <i>Goniobasis alabamensis</i> (<i>Elimia alabamensis</i>) Mud Elimia USA
Ex?	<i>Renea bourguignatiana</i> France; Italy	
Family HYDROBIIDAE		
Ex	<i>Bythinella intermedia</i> Austria	
Ex	<i>Bythiospeum pfeifferi</i> Austria	
Ex?	<i>Bythiospeum tschapecki</i> Austria	
Ex?	<i>Iglica gratulabunda</i> Austria	
Ex	<i>Lithoglyphus umbilicata</i> (<i>Clappia umbilicata</i>) Umbilicate Pebblesnail USA	
Ex	<i>Ohridohauffenia drimica</i> Yugoslavia (1980s)

I	<i>Heteronympha cordacea comptena</i> Australia: Tasmania	I	<i>Ectemnius nesocarbo bidecoratus</i> Bidecoratus Sphecid Wasp USA: Hawaiian Islands	
I	<i>Hypolimnas dubius drucei</i> Comoro Islands; Madagascar; Mauritius	Family ANDRENIDAE		
R	<i>Neptis sankara nar</i> India: Andaman Islands	I	<i>Perdita hirticeps luteocincta</i> Yellow Banded Andrenid Bee USA	
		I	<i>Perdita scitula antiochensis</i> Antioch Andrenid Bee USA	

List 5

COMMERCIALLY THREATENED SPECIES

COMMERCIALLY THREATENED SPECIES

Class MAMMALIA

Order PRIMATES

Family CERCOPITHECIDAE

CT *Macaca nemestrina*

Pigtail Macaque

Bangladesh; Brunei; Cambodia?; China; India;
Indonesia; Laos; Malaysia; Myanmar;
Thailand; Viet Nam

Phylum CNIDARIA

Class ANTHOZOA

Order GORGONACEA

Family CORALLIIDAE

CT *Corallium* (20 species)

Precious Corals

Mediterranean Sea, Pacific Ocean

Order ANTIPATHARIA

Family ANTHIPATHIDAE

CT *Anthipathidae* (c 150 species)

Black Coral

Caribbean, Indo-Pacific

Phylum MOLLUSCA

Class GASTROPODA

Order ARCHAOGASTROPODA

Family TURBINIIDAE

CT *Turbo marmoratus*

Green Snail

Indo-Pacific

Family STROMBIDAE

CT *Strombus gigas*

Queen Conch

Caribbean

Class BIVALVIA

Order PTERIOIDA

Family PTERIIDAE

CT *Pinctada margaritifera*

Black-lipped Pearl Oyster

Indo-Pacific

CT *Pinctada maxima*

Gold-lipped Pearl Oyster
Indo-Pacific

Phylum ARTHROPODA

Class CRUSTACEA

Order DECAPODA

Family NEPHROPIDAE

CT *Homarus americanus*

American Lobster
North Atlantic

CT *Homarus gammarus*

European Lobster
North-east Atlantic

CT *Nephrops norvegicus*

Norway Lobster
North-east Atlantic

Family PALINURIDAE

CT *Jasus edwardsii*

Rock Lobster
New Zealand

CT *Panulirus argus*

Caribbean Spiny Lobster
Caribbean

CT *Panulirus guttatus*

Spotted Spiny Lobster
Caribbean

CT *Panulirus penicillatus*

Pronghorn Spiny Lobster
Indo-Pacific

Phylum ECHINODERMATA

Class ECHINOIDEA

Order ECHINOIDA

Family ECHINIDAE

CT *Paracentrotus lividus*

Purple Urchin
North-east Atlantic, Mediterranean

IUCN Species Survival Commission

The Species Survival Commission (SSC) is one of six volunteer commissions of IUCN – The World Conservation Union, a union of sovereign states, government agencies and non-governmental organizations. IUCN has three basic conservation objectives: to secure the conservation of nature, and especially of biological diversity, as an essential foundation of the future; to ensure that where the earth's natural resources are used this is done in a wise, equitable and sustainable way; and to guide the development of human communities towards ways of life that are both of good quality and in enduring harmony with other components of the biosphere.

The SSC's mission is to conserve biological diversity by developing and executing programmes to save, restore and wisely manage species and their habitats. A volunteer network comprised of 4,800 scientists, field researchers, government officials and conservation leaders from 169 countries, the SSC membership is an unmatched source of information about biological diversity and its conservation. As such, SSC members provide technical and scientific counsel for conservation projects throughout the world and serve as resources to governments, international conventions and conservation organizations.

The SSC has long been associated with the Red Data Book concept, which was originated by the former SSC Chair, Sir Peter Scott, in the mid-1960s. The Red Data Books are catalogues of information on species threatened with extinction, and they aim to focus attention of the plight of the earth's vanishing wildlife. The concept has been outstandingly successful and, over two decades later, many national, regional and global Red Data Books have been published, while many more countries are in the process of compiling their own lists of threatened species. The information provided in national and regional compilations is inevitably more detailed than the global overview produced by SSC. The demand for a simple international list that categorises the status of globally threatened taxa is growing, partly as a result of the increasing number of relevant international conventions, and it was to meet this need that the first *IUCN Red List of Threatened Animals* was published in 1986. Further editions appeared in 1988 and 1990, and this edition is a further update of the 1990 version. The SSC is currently in the process of revising and improving the IUCN Red List categories for threatened species, and it is hoped that the next version, to be published in 1996, will be based on the new categories.

Produced from the advice of SSC members and the databases of the World Conservation Monitoring Centre, the Red List presents, for each species, the scientific name, the English vernacular name (where possible), the IUCN Red List category, and countries of its regular occurrence. In addition, there is an introductory guest essay by Georgina Mace on the process to develop the new IUCN Red List categories, and also a foreword by the current SSC Chair, George Rabb. This edition of the Red List has been edited by Brian Groombridge of the World Conservation Monitoring Centre.

Whilst the length of the Red List makes depressing reading, the information it presents should be of fundamental value to scientists, managers and decision-makers responsible for conservation programmes.
