PREFACE.

In the Preface to my former work, "Ancient" India as described by Megasthenes and Arrian," I informed the reader that it was my intention to publish from time to time translations of the Greek and Latin works which relate to ancient India, until the series should be exhausted, and the present volume is the second instalment towards the fulfilment of that undertaking. It contains a translation of the Periplis (i. e. Circumnavigation) of the Erythraan Sea, together with a translation of the second part of the Indilia of Arrian describing the celebrated voyage made by Nearkhos from the mouth of the Indus to the head of the Persian Gulf. Arrian's narrative, copied from the Journal of the voyage written by Nearkhos limself, forms an admirable supplement to the l'eriplus, as it contains a minute description of a part of the Ergthrean Coast which is merely glanced at by the author of that work. The translations have been prepared from the most approved texts. The notes, in a few instances only, bear upon points of textual criticism: their main object being to present in a concise form for popular reading the most recent results of learned enquiry directed to verify, correct,
or otherwise illustrate the contents of the narratives.

The warm and unanimous approbation bestowed upon the first volume of this series, both by the Press in this country and at home, has given me great encouragement to proceed with the undertaking, and a thitd volume is now in preparation, to contain the Intilie of Ktêsias and the account of India given by Strabo in the 15th Book of his Geography.

Patra College, Jume 187.

## periplus of TIIE ERYTIIR EAN SEA.

## Introduction. ${ }^{1}$

The Periplis of the Erythroan Sea is the title prefixed to a work which contains the best account of the commerce carried on from the Red Sea and the coast of Africa to the East Indies during the time that Egypt was a province of the Roman empice. The Erythræan Sea was an appellation given in those days to the whole expanse of ocean reaching from the coast of Africa to the utmost boundary of ancient knowledge on the East-an appellation in all appearance deduced from the entrance into it by the Straits of the Red Sea, styled Erythra by the Greeks, and not excludeing the Gulf of Persia.

The author was a Greek merchant, who in the first century of the Christian era had, it would appear, settled at Borenike, a great seaport situated in the southern extremity of Egypt, whence he made commercial voyages which carried him to the seaports of Eastern Africa as far as Azania, and to those of Arabia as far as Kane, whence, by taking advantage of the south-west monsoon, he crossed over to the ports lying on the western shores of India. Having made careful

[^0]observations and inquiries regarding the navigation and commerce of these countries, he committed to writing, for the benefit of other merchants, the knowledge which he had thus acquired. Much cannot be said in praise of the style in which he writes. It is marked by a rude simplicity, wiich shows that he was not a man of literary culture, but in fact a mere man of business, who in composing restricts himself to a narrow zound of set phrases, and is indifferent alike to grace, freedom, or rariety of expression. It shows further that he was a Gireek settled in Egypt, and that he must hare belonged to an isolated community of his countrymen, whose speech had become corrupt by nuch intercourse with foreigners. It presents a very striking contrast to the rhetorical diction which Agatharkhidês, a great master of all the tricks of speech, employs in his description of the Erythrean. For all shortcomings, however, in the style of the work, there is ample compensation in the fulness, variety, accuracy, and utility of the information which it conveys. Such indeed is its superiority on these points that it must bo reckoned as a most precious treasure : for to it wo are indebted far more than to any other work for most of our knowledge of the remote shores of Eastern Africa, and the marts of India, and tho condition of ancient commerce in these parts of the world.

The name of the author is unknown. In the Heidelberg MS., which alone has preserved the little work, and coutains it after the Periphis of Arrian,
 eadarans. Trusting to the correctuess of this
title, Stuckius attributed the work to Arrian of Nikomedia, and Fabricius to another Arrian who belonged to Alesandria. No one, however, who knows how aucient books are usually treated can fail to see what the real fact here is, viz. that since not only the Periplus Maris Erythrei, but also the Anonymi Periplits Ponti Eurini (whereof the latter part occurs in the Heidelberg MS. before Arrian's Ponti Periplus) are attributed to Arrian, and the aliferent Arrians are not distinguished by any indications afforded by the titles, there can be no doubt that the well-known name of the Nikomedian writer was transferred to the books placed in justaposition to his proper works, by the arbitrary judgment of the librarians. In fact it very often happens that short works written by different authors are all referred to one and the same author, especially if they treat of the same subject and are published conjointly in the same volume. But in the case of the work hefore us, any one would have all the more readily ascribed it to Arrian who had heard by report anything of the Paraplits of the Erythræan Sea described in that author's Indilia. On this point there is the utmost unanimity of opinion among writers.

That the author, whaterer may hare been his name, lived in Egypt, is manifest. Thus he says in § 29: "Several of the trees with us in Egypt weep gum," and he joins the names of the Egyptian months with the Roman, as may be seen by referring to $\$ \$ 6,39,49$, and 50 . The place in which he was settled was probably Berenike, since it was from that port he embarked on his
royages to Africa and Arabia, and since he speaks of the one coast as on the right from Berenike, and the other on the left. The whole tenor of the work proclaims that he must hare been a merchant. That the entire work is not a mero compilation from the narratives or journals of other merchants and navigators, but that the author had himself visited some of the seats of trade which he doscribes, is in itself probable, and is indicated in § 20 , where, contrary to the custom of tho ancient writers, he speaks in his own person :-" In sailing south, therefore, we stand off from the shore and keep our course down the middle of the gulf." Compare with this what is said in § 48 : tù $\pi \rho o ̀ s$

As regards the age to which the writer belonged : it is first of all evident that he wrote after the times of Augustus, since in $\$ 23$ mention is made of the Roman Emperors. That he was older, however, than Ptolemy the Geographer, is proved by his geography, which knows nothing of Iudia beyond the Ganges except the traditional nccount current from the days of Eratosthenes to those of Pliny, while it is erident that Ptolemy possessed much more accurate information regarding these parts. It confirms this riew that while our author calls the island of Ceylon Palaisimoundou, Ptolemy calls it by the name subsequently given to it-S a lik ê. $\Lambda$ gain, from § 19, it is evident that ho wrote before the kingdom of the Nabathans was abolishod by the Romans. Moreover Pliny (VI. xxvi. 101), in proceeding to describe the marigation to the marts of India by the direct route across the
ocean with the wind called Hippalos, writes to this offect:-"And for a long time this was the mode of navigation, until a merchant discovered a compendious route whereby India was brought so near that to trade thither became very lucrative. For, every year a fleet is despatched, carrying on board companies of archers, since the Indian seas are much infested by pirates. Nor will a description of the whole voyage from Egypt tire the reader, since now for the first time correct information regarding it has been made public." Compare with this the statement of the Periplits in $\S 57$, and it will be apparent that while this route to India had only just come into use in the time of Pliny, it had been for some time in use in the days of our author. Now, as Pliny died in 79 A.D., and had completed his work two years previously, it may bo inferred that he had written the 6th book of his Natural History before our author wrote his work. A still more definite indication of his date is furnished in $\S 5$, where Zoskales is mentioned as reigning in his times over the Ausumita. Now in a list of the early kings of Abyssinia the name of Z aHakale occurs, who must have reigned from 77 to 89 A.D. This Za-Hakale is doubtless the Zoskalos of the Periplis, and was the contemporary of the emperors Vespasian, Titus, and Domitian. We conclude, therefore, that the Periplits was written a littlo after the death of Pliny, betweon the yenrs A.D. 80-89.

Opinions on this point, however, have varied considerably. Salmasius thought that Pliny and our author wrote at the same time, though their ac-
counts of the same things are often contradictory. In support of this viow he adduces the statement of the Periplis ( $\$ 51$ ), "Muziris, a place in India, is in tho kingdom of Kipprobetres," when compared with tho statement of Pliny (VI. xxvi. 10.4), "Colobothras was reigning there when I commitied this to writing;" and argues that since Kêprobotirasand Cwlobothras are but different forms of the same name, the two authors must have been contemporary. The inference is, however, unwarrantable, since the name in question, like that of P andîo n , was a commonappellation of the kings who ruled over that part of India. Dodwell, again, was of opinion that the Periphis was written after the year A. D. 161, when Marcus Aurelius and Lucius Verus were joint emperors. He bases, in the first place, his defence of this view on the statement in § 20 : "Not long before our own times the Emperor (Kaíap) destroyed the place," viz. Eudaimôn-Arabia, now Aden. This emperor he supposes must have been Trajan, who, according to Eutropius (VIII. 3), reduced Arabia to the form of a province. Eutropius, however, meant by Arabia only that small part of it which adjoins Syria. 'This Dodisell not only denies, but also asserts that the conquest of Trajan embraced the whole of the Peninsula-a sweeping inference, which he bases on a single passage in the Periplis (§ 16) where the south part of Arabia is called $\dot{\eta} \pi \rho \dot{\omega} \tau \eta$ A $\rho a \beta$ ia, "the First Arabia." From this expression he gathers that Trajan, after his conquest of the country, had divided it into several provinces, designated according to the order in which they were consti-
tuted. The language of the Periplits, however, forbids us to suppose that there is here any reference to a Roman provinco. What the passage states is that Azania (in Africa) was by nuciont right sibject to the kinglom $\tau \hat{\eta} s \pi \rho \omega \tau \eta s$
 and wos ruled by tho despot of Mapharitis.

Dodwell noxt defends the date he has fixed on by the passage in $\S 23$, where it is said that K h aribaël sought by frequent gifts and embassies to gain the friendship of the emperors ( $\tau \hat{\omega} \nu$ au̇тократо́p $\omega \nu$ ). He thinks that the time is here indicated when M. Aurelius and L. Verus were reigning conjointly, A.D. 161-181. There is no need, however, to put this construction on the words, which may without any impropriety be taken to mean ' the emperors for the time being,' viz. Vespasian, Titus, and Domitian.

Vincent adopted the opinion of Salmasius regarding the date of the work, but thinks that the Kaisar mentioned in § 26 was Claudius. "The Romans," he says, " from the time they first entered Arabia under Elius Gallus, had always maintained a footing on the coast of the Red Sen. They had a garrison at Loukô Kômê, in Nabathea, where they collected the customs; and it is apparent that they extended their power down the gulf and to the ports of the ocean in the reign of Claudius, as the freedman of AnniusPlocamus was in the act of collecting the tributes there when he was carried out to sea and over to Taprobanê. If we add to this the discovery of Hippalus in the same reign, we find a better reason for the destruction of Aden at
this time than at any other." The assortion in this extract that tho garrison and custom-house at Leukê Kômèbelonged to the Romans is not. warranted by the language of the Periphis, which in fact shows that they belonged to Malikhos the king of the Nabatheans. Again, it is a mere conjecture that the royage which the frecelman of Plocamus (who, according to Pliny, farmed the revenues of the Rad Sca) was making along tho coast of Arabia, when he was carried awny by the monsoon to 'Taprobane, was a voyage undertaken to collect tho revenues due to the Roman treasury. With regard to the word Kaivap, which has occasioned so much perplexity, it is most probably a corrupt reading in a text notorious for its corruptness. The proper reading may perhaps be E.IIEAP. At any rate, had one of the emperors in reality destroyed Aden, it is unlikely that their historians rould have failed to mention such an important fact.

Schwanbeck, although he saw the weakness of the arguments with which Salmasius and Vincent endeavoured to establish their position, nevertheless thought that our author lived in the age of Pliny and wrote a little before him, because those particulars regarding the Indian navigation which Pliny says became known in his age agree, on the whole, so well with the statement in the Periplis that they must have been extracted therefrom. No doubt thare are, he allows, some discrepancies; but those, he thinks, may be ascribed to the haste or negligence of the copyist. A careful examination, however, of parallel passages in Pliny and the Periplis show this assertion to be
untenable. Vincent himself speaks with caution on this point:-"There is," he says, " no absolute proof that either copied from the other. But those who are acquainted with Pliny's methods of abbreviation would much rather conclude, if one must be a copyist, that his title to this office is the clearest."

From theso proliminary points wo passe on to consider the contents of the work, and these may be conveniently reviowed under the three heads Geography, Navigation, Commerce. In the commentary, which is to accompany the translation, the Geography will be examined in detail. Meanwhile we shall enumerato the voyages which are distinguishable in the Periplis, ${ }^{2}$ and the articles of commerce which it specifies.

## I. Voyages mentioned in the Periplus.

I. A voyage from Berenike, in the south of Egypt, down the western coast of the Red Sea through the Straits, along the coast of Africa, round Cape Guardufui, and then southward along the castern coast of Africa as far as Rhâpta, a place about six degrees south of the equator.
II. Weare informed of two distinct courses confined to the Red Sea : one from Myos Hormos, in the south of Egypt, across the northern end of the sea to Leukê Kômê, on the opposite coast of Arabia, near the mouth of the Elanitic Gulf, whence it was continued to Mouza, an Arabian port lying not far westward from tho Straits; the other from Berenikè directly down the gulf to this same port

[^1]III. There is described next to this a voyage from the mouth of the Straits along the southern coast of Arabia round the promontory now called Ras-cl-Had, whence it was continued along the eastern coast of Arabia as far as Apologos (now Oboleh), an important emporium at the head of the Persian Gulf, near the mouth of the river Euphrates.
IV. Then follorrs a passage from the Straits to India by three different routes: the first by adkering to the coasts of Arabia, Karmania, Gedrosia, and Indo-Skythia, which terminated at Barugaza (Bharôch), a great emporium on the river Nammadios (the Narmadâ), at a distance of thirty miles from its mouth; the second from Kanê, a port to the mest of Suagros, a great projection ou the south coast of Arabia, now Cape Fartaque ; and the third from Cape Guardafui, on the African side-both across the ocean by the monsoon to Mouzirisand Nelkunda, great commercial cities on the coast of Malabar.
V. After this we must allow a similar voyage performed by the Indians to Arabia, or by the Arabians to India, previous to the performance of it by the Greeks, because the Greeks as late as the reign of Philomêtôr met this commerce in Sabæa.
VI. We obtain an incidental knowledge of a voyage conducted from ports on the east coast of Africa over to India by the monsoon long before Hippalos introduced the knowledge of that wind to the Roman world. This voyage was connected, no doubt, with the commerce of Arabia, since the Arabians were the great traffickers of antiquity, and held in subjection part of the sea-board of Eastern

Africa. The Indian commodities imported into Africa were rice, ghee, oil of sesamum, sugar, cotton, muslins, and sashes. These commodities, tho Periplûs informs us, were brought sometimes in vessels destined expressly for the coast of Africa, while at others they were only part of the cargo, out of vessels which were proceeding to another port. Thus we have two methods of conducting this commerce perfectly direct; and another by touching on this coast with a final destination to Arabia. This is the reason that the Greeks found cinnamon and the produce of India on this coast, when they first ventured to pass the Straits in order to seek a cheaper market than Sabæa.

## II. Articles of Commerce mentioned in tie Periplus.

I. Animals:-
 girls for the haram, imported into Barugaza for the king (49). ${ }^{3}$
 Opônê, imported into Egypt (1.4).
3. इஸ́ $\mu a \tau a \quad \theta_{\eta} \lambda \nu \kappa \dot{a}-$ Female slaves, procured from Arabia and India, imported into the island of Dioskoridês (31).
4. इ'́n $\mu$ ãa.-Slaves imported from Omana and Apologos into Barugaza (36), and from Moundou and Malaô $(8,9)$.
 king, and into Mouza for the despot (23, 24).

[^2]6. 'H H iovat $\nu \omega \boldsymbol{\eta} \eta \gamma^{\circ} \mathrm{i}$-Sumpter mules imported into Monza for the despot (24).
II. Animal Products:-

1. Boúrvpoy-Butter, or the Indian preparation therefrom called ght, a product of Ariake (41); exported from Barugaza to the Barbarine markets beyond the Straits (14). The word, according to Pliny (xxviii. 9), is of Skythian origin, though apparently counected with Boûs, tupòs. The reading is, howorer, suspected by Lassen, who would substituto Böq $\mu \circ \rho o \nu$ or Bóg $\pi o \rho o v$, a kind of grain.
 ported from Barbarikon, a mart on the Indus (39). Vincent suspected the reading ס́fpuara, but groundlessly, for Pliny mentions the Sêres sending their iron along, with restments and hides (vestibus pellibusque), and among the presents sent to Yudhishṭhira by the Śaka, Tushâra and Kañka skins are enumerated.-Mahabh. ii. 50, quoted by Lassen.
2. 'EXé申as-Irory. Exported from Adouli (6), Aualitês (8), Ptolemaïs (3), Niossulon (10), and the ports of Azania (16, 17). Also from Barugaza (49), Mouziris and Nelkunda (56); a species of ivory called Beaapŋ̀ is produced in Desarênê (62).
3. "Epıov $\Sigma \eta p ı$ кò̀-Chinese cotton. Imported from the country of the Thinai through Baktria to Barugaza, and by the Ganges to Bengal, and thence to Dimurikê (64). By "Epor Vincont seems to undersiand silk in the raw state.
4. Képara-Horns. Exported from Barugaza to the marts of Omana and Apologos (36). Müller suspects this reading, thinking it strange that
such an article as horns should be mentioned between wooden beams and logs．He thinks，there－ fore，that K $\mathrm{f}_{\mathrm{f}} \mathrm{ara}$ is either used in some technical sense，or that the reading Koр $\mu \omega \bar{\nu}$ or Kop $\boldsymbol{i}^{\omega} \omega \nu$
 planks of ebony，are at all events mentioned by Athênaios（p．201a）where he is quoting Kal－ lixenos of Rhodes．

6．Kopá入入ıoy－Coral．（Sans．pravala，Hindi munga．）Imported into Kanê（28），Barbarikon on the Indus（39），Barugaza（49），and Naoura， Tundis，Mouziris，and Nolkunda（56）．

7．几áккоs $\chi$ рюди́тьшоs－Coloured lac．Exported to Adouli from Ariake（6）．The Sanskrit word is liksht，which is probably a later form of ratksha， connected，as Lassen thinks，with raga，from the root raij，to dye．The vulgar form is lakkha． Gum－lac is a substance produced on the leaves and branches of certain trees by an insect，both as a covering for its egg and food for its young． It yields a fine red dye．${ }^{4}$ Salmasius thinks that by 入érкоs $\chi \rho \omega \mu$ útivos must be understood not lac itself，but vestments dyed therewith．

8．Maprapítns－Pearl．（Sans．multa，Hindi， moti．）Exported in considerable quantity and of superior quality from Mouziris and Nelkunda（56）． Cf．$\pi$ ıviкóv．

9．Nîua $\Sigma \eta \rho \iota x_{o ́ v-S i l k ~ t h r e a d . ~ F r o m ~ t h e ~ c o u n-~}^{\text {－}}$

[^3]
## 14

try of the Thinai: imported into Barugaza and the marts of Dimurike (64). Exported from Barugaza (49), and also from Barbarikon on the Indus (39)." It is called $\mu$ éraॄ̆ a by Procopius and all the later writers, as well as by the Digest, and was known without either name to Pliny "-Vincent.
10. Пıviкıos кóyरos-the Pearl-oyster. (Sans. 6uliti.) Fished for at the entrance to the Persian Gulf (35). Pearl (rivokov) inferior to the Indian sort exported in great quantity from the marts of Apologos and Omana (36). A pearl fishery (Пıvıкoû ко $\lambda \dot{v} \mu \beta \eta \sigma$ (s) in the neighbourhood of Kolkhoi, in the kingdom of Pandion, near the island of Epiodôros; the produce transported to Argalou, in the interior of the country, where muslin robes with
 cated (59). The reading of the MS. is $\sigma$ ovóves, ¿ßupyapeitióes $\lambda \in \gamma \dot{\mu} \mu \in \nu a t$, for which Salmasius proposed to read mapyapitıófs. Müller suggests instead ai 'Apyapitiofs, as if the muslin bore the name of the place Argarou or Argulou, where it was made.

Pearl is also obtained in Taprobanê (61) ; is imported into the emporium on the Ganges called Gangê (63).
11. Mopфúpa-Purple. Of a common as well as of a superior quality, imported from Egypt into Mouza (2.1) and Kanê (28), and from the marts of Apologos and Omana into Barugaza (36).
12. 'Pıvókepws-Rhinoceros (Sans. lihadgad)— the horn or the teeth, and probably the skin. Exported from Adouli (16), and the marts of Azania (7). Bruce found the hunting of the rhinoceros still a trade in Abyssinia.

## 15

13. Xe $\boldsymbol{\lambda} \dot{\omega} \nu \eta$-Tortoise (Sans. kachchhapa) or tortoise-shell. Exported from Adouli (6) and Aualitês (7); a small quantity of the genuine and land tortoise, and a white sort with a small shell, exported from Ptolemaïs (3) ; small shells (X $\mathrm{X}_{\epsilon} \lambda_{\text {avápaa) }}$ exported from Mossulon (10); a superior sort in great quantity from Opônê (13); the mountain tortoise from the island of Menouthias (15); a kind next in quality to the Indian from the marts of Azania ( 16,17 ); the genuine, land, white, and mountain sort with shells of extraordinary size from the island of Dioskoridês $(30,31)$; a good quantity from the island of Serapis (33) ; the best kind in all the Erythromn-that of the Golden Khersonêsos (63), sent to Mouziris and Nelkunda, whence it is exported along with that of the islands off the coast of Dimurike (probably the Laccadive islands) (56); tortoise is also procured in Taprobanê (61).
III.-Plants and their products :-
14. A入ón-the alve (Sans. agariu). Exported from Kane (28). The sort referred to is probably the bitter cathartic, not the aromatic sort supposed by some to bo the sandalwood. It grows abundantly in Sokotra, and it was no doubt exported thenco to Kanê. "It is remarkable," says Vincent, "that when the author of the Periplis arrives at Sokotra he says nothing of tho aloo, and montions only Indian cimnabar as a gum or resin distilling from a tree: but the confounding of cinnabar with dragon's-blood was a mistake of ancient date and a great absurdity" (II. p. 689).
15. 'Арผ́ $\mu \pi \tau a-$ aromatics ( $\epsilon \dot{\omega} \omega \delta i a, \quad \theta \nu \mu l a ́ \mu a \tau a$.) Exported from Aualitês (7), Mossulon (10). Among
the spices of Tabai (12) are enumerated $\dot{a} \sigma \dot{v} \beta \eta$ kai äршца каí $\mu \dot{d} \gamma \lambda a$, and similarly among the commodities of Opônê каббia каі̆ äpшца каї $\mu$ о́ть; and in these passages perhaps a particular kind of aromatic (cinnamon?) may by preëminence be called ap $\rho \mu a$. The occurrence, however, in two instances of such a familiar word as ápo $\mu$ a between two outlandish words is suspicious, and this has led Müller to conjecture that the proper reading may be appì̀, which Salmasius, citing Galen, notes to be a kind of cassia.
16. Aovỉß from Tabai (12). "This term," says Vincent, "if not Oriental, is from the Greek a $\sigma \sigma{ }^{\prime} \phi \eta \lambda o s$, signifiying cheap or ordinary ; but we do not find ávú $\eta$ used in this manner by other anthors: it may be an Alexandrian corruption of the language, or it may bo tho nbbreviation of a merchant in his invoice." (Asufretidu, Sans. hingu or Luilhika, Mar, hing.)
17. BSé $\lambda \lambda a$, (common form Bóch $\lambda \iota o \nu$ ). Bdella, Bdellium, produced on the sea-const of Gedrosia (37) ; exported from Barbarikon on tho Indus (39); brought from the interior of India to Barugaza (.18) for foreigu export (49). Bdella is the gum of the Bulsamodendron Mukul, a troe growing in Sind, Kâthiâvâd, and the Distî district. ${ }^{\text {. }}$. It is used both as an incense and as a cordial medicine. The bdellium of Scripture is a crystal, and has nothing in common with the bdellium of the Periplis but its transparency. Conf. Dioskorid. i. 80 ; Plin. xii. 9 ; Galen, Therapeut. ac! Glauc. II. p. 106 ; Lassen,
[^4]Ind. Alt. vol. I. p. 290; Vincent, vol. II. p. 690; Yule's Marco Polo, vol. II. p. 387. The etymology of the word is uncertain. Lassen suspects it to be Indian.
5. rijetp-Gizeir, a kind of cassia exported from Tabai (12). This sort is noticed and described by กioskoridês.
6. $\Delta$ óкos-Beams of wood. Exported from Barugaza to the marts of Omana and Apologos (36). (? Blackwood.)
7. Dov́aka-Douaka, a kind of cassia. Exported from Malao and Moundou (8, 9). It was probably that inferior species which in Dioskorid, i. 12, is called סúkzap or סaкáp or סápka.
 melanoxylon.) Exported from Barugaza to the marts of Omana and Apologos (36).
9. Eגaıo -Oil (tila), Exported from Egypt to
 product of Ariakê (41). Exported from Barugaza to the Barbarine markets (14), and to Moskha in Arabia (32). ${ }^{6}$
 gul2.) Exported from Skythic Barbarikon (39). It appears pretty certain that the culture of the indigo plant and the preparation of the drug have been practised in India from a very remote epoch. It has been questioned, indeed, whether the Indicum mentioned by Pliny (xxxp. 6) was indigo, but, as it would seem, without any good reason. Ho states that it was brought from India, and that when diluted it produced an admirable mixture

[^5]of bluo and purple colours. Vide McCulloch's Commer. Dict. s. v. Indigo. Cf. Salmas, in Exerc. Plin. p. 181. The dye was introduced into Rome only a little before Pliny's time.
11. Kúyкадоу-Kankamon. Exported from Malao and Moundou ( 8,10 ). According to Dioskoridês i. 23, it is the exudation of a wood, like myrrh, and nsed for fumigation. Cf. Plin. xii. 44. According to Scaliger it was gum-lac used as a dyo. It is the "dekamalli" gum of the bazars.
12. Kápтa⿱os-Karpasus (Sans. kitrpisa'; Heb. karpas,) Gossypium arboreum, fino muslin-a product of Ariakê (41). "How this word found its way into Italy, and became the Latin carbasus, fine linen, is surprising, when it is not found in tho Greck language. Tho Kapríatoy 入ivoy of Pausanias (in Atticis), of which the wick was formed for the lamp of Pallas, is asbestos, so called from Karpasos, a city of Crete-Salmas. Plin. Exercit.p. 178. Conf. Q. Curtius viii. 9 :-'Carbaso Indi corpora usque ad pedes velant, corumque res lecticâ margaritis circumpendentibus recumbit distinctis nuro et purpurî carbasis cquâ indutus est.'" Vincent II. 699.
13. Kacoia or Káia (Sans. kuta, IIeb. kiddah and keziah). Exported from Tabai (12); a coarso kind exported from Malao and Moundou ( 8,9 ) ; a vast quantity exportedfrom Mossulon and Opônê( 10,13 ).
"This spice," says Vincent, " is mentioned frequently in the Periplis, and with various additions, intended to specify the different sorts propertics, or appearances of the commodity. It is a species of cinnamon, and manifestly the same as what wo call cinuarnon at this day; but dif-
forent from that of the Greeks and Romans, which was not a bark, nor rolled up into pipes, like ours. Theirs was the tender shoot of the samo plant, and of much higher value." "If our cimnamon," he adds, "is the ancient casia, our casia again is an inferior sort of cinnamon." Pliny (xii. 19) states that the cassia is of a larger size than the cinnamon, and has a thin rind rather than a bark, and that its valuo consists in being hollowed out. Dioskoridôs mentions cassia as a product of Arabia, but this is a mistake, Arabian cassia having been an import from India. Herodotos (iii.) had made the same mistake, saying that cassia grow in Arabia, but that cinnamon was brought thither by birds from the country where Bacchus was born (India). The cassia shrub is a sort of laurel. There are ten kinds of cassia specified in the Periplits. ${ }^{7}$ Cf. Lassen, Ind. Alt. I. 279, 283; Salmas. Plin. Exercit. p. 1304; Galen, de Autidotis, bk. i.
14. Kıvváßapı 'Ivóıкд̀-Dragon's-blood, damu'l aklawein of tho Arabs, a gum distilled from Pterocarpus Draco, a loguminous treo ${ }^{8}$ in the island of Dioskoridês or Sokotra (30). Cinnabar, with which this was confounded, is the red sulphuret of mercury. Pliny (lib. xxis. c. 8) distinguishes it as 'Indian cinnabar.' Dragon'sblood is ono of the concrete balsams, the produce of Calamus Draco, a species of rattan palm of tho Eastern Archipelago, [of Pterocarpus Draco, allied to tho Indian Kino tree or Pt. marsupium of

[^6]South India, and of Dracana Draco, a liliaceous tree of Madeira and the Canary Islands].
15. Kóotos (Sansk. kushta, Mar. choka, Guj. katha and pushkara mîla,)-Kostus. Exported from Barbarikon, a mart on the Indus (39), and from Barugaza, which procured it from Kâbul through Proklais, \&c. This was considered the best of aromatic roots, as nard or spikenard was the best of aromatic plants. Pliny (xii. 25) describes this root as hot to the taste and of consummate fragrance, noting that it was found at the head of Patalènê, where the Indus bifurcates to form the Delta, and that it was of two sorts) black and white, black being of an inferior quality. Lassen states that tro kinds are found in India-one in Multân, and the other in Kâbul and Kâsmir. "Tho Costus of the ancients is still exported from Western India, as well as from Calcutta to China, under the name of Putchok, to be burnt as an incense in Chinese temples. Its identity has been ascertained in our own days by Drs. Royle and Falconer as tho root of a plant which they called Aucllandia Costus. . . . . . . Alexander Hamilton, at the beginning of last century, calls it ligna dulcis (sic), and speaks of it as an export from Sind, as did the author of the Periplus 1600 jears carlier." Yule's Marco Polo, vol. Il. p. 388.
16. Kро́кos-Crocus, Saffron. (Sans. kármiraja, Guj. lesir, Pers. naficlu.) Exported from Egypt to Mouza (2.1) and to Kanê (28).
17. Kúnepos-Cyprus. Exported from Egypt to Mouza (24). It is an aromatic rush used in modioine (Pliny xxi. 18). Herodotos (iv. 71) describes
it as an aromatic plant used by the Skythians for embalming. Kúnefos is probably Ionic for Kútetpos-Kútєєpos ivסıкòs of Dioskoridês, and Cypria herba indica of Pliny.-Perhaps Turmeric, Curcuma longa, or Galingal possibly.
18. Névita, (Lat. lintea)-Linen. Exportedfrom Egypt to Adouli (6).
19. nißavos (Heb. lebonah, Arab. luban, Sans. sriviisa)-Frankincense. Peratic or Libyan frankincense exported from the Barbarine marketsTabai (12), Mossulon (10), Malaô and Moundou, in small quantities $(8,9)$; produced in great abundance and of the best quality at Akannai (11); Arabian frankincense exported from Kanê (28). A magazine for frankincense on the Sakhalitic Gulf. near Cape Suagros (30). Moskha, the port whence it was shipped for Kanê and India (32) and IndoSkythia (39).

Regarding this important product Yule thus writes:-"The coast of Hadhramaut is the true
 indicated or described under those names by Theophrastus, Ptolemy, Pliny, Pseudo-Arrian, and other classical writers, $i . e$. the country producing the fragrant gum-resin called by the Hebrews Lebonah, by the Arabs Luban and Kundur, by the Greeks Libanos, by the Romans Thus, in medioval Latin Olibanum (probably the Arabic al-luban, but popularly interpreted as oleum Libani), and in English frankincense, i.c. I apprehend, 'genuino incenso' or "incense proper." ${ }^{0}$ It is still produced in this

[^7]region and exported from it, but the larger part of that which enters the markets of the world is exported from the roadsteads of the opposite Sumâlî coast. Frankincense when it first exudes is milky white; whence the name white incense by which Polo speaks of it, and the Arabic name luban apparently refers to milk. The elder Nicbuhr, who travelled in Arabia, depreciated the Libanos of A rabia, representing it as greatly inferior to that brought from India, called Benzoin. He adds that the plant which produces it is not native, but originally from Abyssinia."-Marco Polo, vol. II. p. $4 \cdot 43$, \&c.
20. ^úxıoy-Lycium. Exported from Barbarikon in Indo-Skythia (39), and from Barugaza (49). Lycium is a thorny plant, so called from being found in Lykia principally. Its jnice was used for dying yellow, and a liquor drawn from it was used as a medicine (Celsus v. 26, 30, and vi. '7). It was held in great esteem by the ancients. Pliny (xxiv. 77) says that a superior kind of Lycium produced in India was made from a thorn called also Pyxacanthus (box-thorn) Chironia. It is known in India as Ruzot, an extract of the Berberis lycium and B. aristata, both grown on the Himâlayas. Conf. the 入úkıod ivóıxòv of Dioskor. i. 133. ( P Gamboge.)
21. Má $\gamma \lambda a-M a g l a-a$ kind of cassia mentioned only in the Periplis. Exported from Tabai (12).
22. Máкetp-Macer. Exported from Malaô and Moundou ( 8,9 ). According to Pliny, Dioskoridês, and others, it is an Indian bark-perhaps $\Omega$ kind of cassia. The bark is red and the root large. The bark was used as a medicine in dysenteries. Pliny
zii. 8; Salmasius, 1302. ( $P$ The Karachald of the bâzârs, Kutajatvak).
23. Ma ${ }^{1} \beta a \theta \rho o \nu$ (Sans. tamalapattra, the leaf of the Laurus Cassia), Malabathrum, Betel. Obtained by the Thinai from the Sesatai and exported to India ${ }^{10}$ (65); conveyed down the Ganges to Gangê near its morth (63); conveyed from the interior of India to Mouziris and Nelkunda for export (56). That Malabathrum was not only a masticatory, but also an unguent or perfume, may be inferred from Horace (Odes, II. vii. 89) :-
Malabathro Syrio capillos",
and from Pliny (xii. 59) : "Dat et Malabathrum Syria, arborum folio convoluto, arido colore, ex quo exprimitur olcum ad unguenta: fertiliore cjusdem Egypto : laudatius tamen ex India venit." From Ptolemy (VII. ii. 16) we learn that the best Malabathrum was produced in Kirrhadia-that is, Rangpur. Dioskoridês speaks of it as a masticatory, and was aware of the confusion caused by mistaking the nard for the betel.
 (Sans. B́arkara, Prâkrit sâkara, Arab. sukkar, Latin saccharum)-Honcy from canes, called Sugar. Exported from Barugaza to the marts of Barbaria (14). The first Western writer who mentions this article was Theophrastos, who continued the labours of Aristotle in natural his. tory. He called it a sort of honey extracted from reeds. Strabo states, on theauthority of Nearkhos, that reeds in India yield honey without bees.

[^8]Elian (Hist. Anim.) speaks of a kind of honey pressed from reeds which grew among the Prasii. Seneca (Epist. 84) speaks of sugar as a kind of honey found in India on the leaves of reeds, which had either been dropped on them from the sky as dew, or had exuded from the reeds themselvos. This was a prevalent error in ancient times, e.g. Dioskoridês says that sugar is a sort of concreted honey found upon caues in India and Arabia Felis, and Pliny that it is collected from canes like a gum. He describes it as white and brittle between the tecth, of the size of a hazel-nut at most, and used in medicine ouly. So also Lucan, alluding to tho Indians near the Ganges, sags that they quaff sweet juices from tender reeds. Sugar, however, as is well known, must be extracted by art from the plant. It has been conjectured that the sugar described by Pliny and Dioskoridês was sugar candy obtained from China.
25. Me入ìдатov-Melilot, Honey-lotus. Exported from Egypt to Barugaza (49). Nelilot is the Egyptian or Nymphea Lotus, or Lily of the Nile, tho stalk of which contained a sireet nutritive substance which was made into bread. So Vincent ; but Melilot is a kind of clover, so called from the quantity of honey it contains. The nymphea lotus, or what was called the Lily of the Nile, is not a truc lotus, and contains no edible substance.
26. Mokpórov. Exported from Moundou (9) and Mossulon (10). It is a sort of incense, mentioned only in the Periplis.
27. Mót - Motô-a sort of cassia exported from Tabai and Opônê (13).
28. Mípou-Myrrh. (Sans. bola.) Exported from

Egypt to Barugaza as a present for the king (49). It is a gum or resin issuing from a thorn found in Arabia Felix, Abyssinia, \&c., vide $\sigma \mu \dot{\mu} \rho \nu \eta$ inf.
29. Náp $\delta o s$ (Sans. nalada, 'kaskas,' Heb. nerd) Nard, Spikenard. ${ }^{11}$ Gangetic spikenard brought down the Ganges to Gangê, near its mouth (63), and forwarded thenco to Mouziris and Nelkunda (56). Spikenard produced in the regions of the Upper Indus and in Indo-Skythia forwarded through Ozênê to Barugaza (48). Imported by the Egyptians from Barugaza and Barbarikon in IndoSkythia (49, 39).

The Nardos is a plant called (from its root being shaped like an ear of corn) vápoov $\sigma \tau a ́ \chi u s$, also vapóóotazus, Latin S'pica nardi, whence ' spikenard.' It belongs to the species Valeriana. "No Oriental aromatic," says Vincent, "has caused greater disputes among the critics or writers on natural history, and it is only within these few years that we have arrived at the true knowledge of this curious odour by means of the inquiries of Sir W. Jones and Dr. Roxburgh. Pliny describes the nard with its spica, mentioning also that both the leaves and the spica are of high value, and that the odour is the prime in all unguents; the price 100 denarii for a pound. But he afterwards visibly confounds it with the Malabathrum or Betel, as will appear from his usage of Hudrospherrum, Mesospherum, and Microsphoer:m, terms peculitr to the Betel"-II. 743-4. See Sir W. Jones on the spikenard of the ancients in As. Res. vol. II. pp. 416 et seq., and Roxburgh's

[^9]additional remarks on the spikenard of the ancients, vol. IV. pp. 97 et seq., and botanical observations on the spikenard, pp. 433. See also Lassen, Ind. Alt. vol. I. pp. 288 et seq.
30. Naúnतtos-Nauplius. Exported in small quantity from the marts of Azania (17). The signification of the word is obscure, and the reading suspected. For NaYחidos Müller suggests NaPridıos, the Indian cocoanut, which the Arabians call Nargil (Sansk. nârikêla or nallikita, Guj. maliyér, Hindi miliyar). It farours this suggestion that cocoanut oil is a product of Zangibar, and that in four different passages of Kosmas Indikopleustês nuts are called d̀pyé $\lambda \lambda \iota a$, which is cither a corrupt reading for vapүé $\lambda \lambda \iota a$, or Kosmas may not hare known the name accurately enough.
31. 'OOínoov-Muslin. Sêric muslin sent from the Thinnai to Barugaza and Dimurike (6.1). Coarse cottons produced in great quantity in Ariakê, carried down from Ozênê to Barugaza (48) ; large supplies sent thither from Tagara also (51); Indian muslins exported from the markets of Dimurikê to Egypt (56). Muslins of every description, Seric and dyed of a mallow colour, exported from Barugaza to Egypt (49); Indian muslin taken to the island of Dioskorides (31); wide Indian muslins called $\mu$ ovaxì, monaliki, i. e. of the best and finest sort; and another sort called бaүرaтorív ${ }^{\text {, sagmatogêné, i. e. coarse cotton unfit for }}$ spinning, and used for stuffing beds, cushions, \&c., exported from Barugaza to the Barbarine markets (14), and to Arabia, whence it was exported to Adouli (6). The meanings given to mondlhe and sagmatogene (for which other readings have
been suggested) are conjectural. Vincent defends the meaning assigned to sagmatogên $\hat{\theta}$ by a quotation from a passage in Strabo citing Near-khos:-" Fine muslins are made of cotton, but the Makedonians use cotton for flocks, and stuffing of couches."
32. 'Oivos-Wine. Lnodikean and Italian wine exported in small quantity to Adouli (6); to Aualitês (7), Malaô (8), Mouza (24), Kanê (28), Barbarikon in Indo-Skythia (39); the same sorts, together with Arabian wine, to Barugaza (49); sent in small quantity to Mouziris and Nelkunda (56) ; the region inland from Oraia bears the vine (37), which is found also in the district of Mouza (24), whence wine is exported to the marts of Azania, not for sale, but to gain the good will of the natives (17). Wine is exported also from the marts of Apologos and Omana to Barugaza (36). By Arabian wine may perhaps be meant palm or toddy wine, a great article of commerce.
 the sour grape of Diospolis. Exported from Egypt to Aualitês (7). This, says Vincent, was the dipse of the Orientals, and still used as a relish all over the East. Dipse is the rob of grapes in their unripe state, and a pleasant acid.II. 751. This juice is called by Dioskoridês (iv. 7) in one word O 0 фdáкoy, and also ( v . 12) 'Oîyos 'O $\mu$ факiтns. Cf. Plin. xii. 27.
34. "Opuga (Sansk. vrihi)-Rice. Produced in Oraia and Ariakê (37, 41), exported from Barugaza to the Barbarine markets (14), and to the island of Dioskoridês (31).
35. Пє́ $\pi \epsilon \rho \iota$ (Sansk. pippali,) long pepper-Pep.
per. Kottonarik pepper exported in large quantities from Mouziris and Nelkunda (56); long pepper from Barugaza (49). Kottonara was the name of the district, and Kottonarikon the name of the pepper for which the district was famous. Dr. Buchanan identifies Kottonara with Kadattanâlu, a district in the Calicut country celebrated for its pepper. Dr. Burnell, however, identifies it with Kolatta-Naḍu, the district about 'lellicherry, which, he says, is the pepper district.
36. Hupos - Wheat. Esported in small quantity from Egypt to Kane (28), some grown in the district around Mouza (2.4).
37. Éíxzapı-Sugar: see under Ménı.
38. Eavóapák bazars) ; a resin from the Thuja articulata or Callitris quadrivalvis, a small coniferous tree of North Africa; it is of a faint aromatic smell and is used as incense. Exported from Egypt to Barugaza (49); conveyed to Mouziris and Nelkunda (56). ${ }^{12}$

Sandarako also is a red pigment-red sulphuret of arsenic, as orpiment is the yellow sulphuret. Cf. Plin. xxxv. 2.2, Hard. "Juba informs us that sandarace and ochre are found in an island of the Red Sea, 'Topazas, wheuce they are brought to us."
39. Eavtádıva and ซaбámıva 乡úda-Logs of Sandal and Sasame (santalum album). Exported from Barugaza to the marts of Omana and Apologos (30). Eavtádıva is a correction of the MS. reading бayá入ıva proposed by Salmasius. Kosmas Indiko-

[^10]pleustes calls sandalwood $\tau \zeta a \not a ́ v a$. For $\sigma a \sigma a ́ \mu \iota \nu a$ of the MS. Stuckius proposed $\sigma \eta \sigma a \dot{\mu} \nu \boldsymbol{\nu}-a$ futile emendation, since sesame is known only as a leguminous plant from which an oil is expressed, and not as a treo. But possibly Red Saunders wood (Pterocarpus Santalinus) may be meant.

 Bengal muslins exported from the Ganges (63); other muslins in Taprobanô (61); Mapyapítoóes (?), made at Argalou and thence exported (59); muslins of all sorts and mallorv-tinted ( $\mu$ о入óxıvaı) sent from Ozênô to Burugaza (48), exported thence to Arabia for the supply of the market at Adouli (6).
42. Sîtos-Corn. Exported from Egypt to Adouli (7), Malaô (8); a little to Mouza (24), and to Kanê (28), and to Muziris and Nelkunda for ships' stores (56) ; exported from Dimurikê and Ariakè into the Barbarine markets (14), into Moskha (32) and the island of Dioskoridos (31); exported also. from Mouza to the ports of Azania for presents (17).
43. $\Sigma \mu \nu \dot{\rho} \imath \eta-$ Myrrh (vide $\mu \nu \rho \rho o \nu$ ). Exported from Malâ̂,Mounulou, Mossulon ( $8,9,10$ ); from Aualitês a small quantity of the best quality (7); a choice sort that trickles in drops, called Abeirminaia
 (24). For ' $\Lambda \beta \epsilon \iota \rho \mu \nu v a i a$ of the MS. Müller suggests to read $\gamma a \beta \epsilon \iota \rho \mu \iota \nu a i a$, inclining to think that two kinds of myrrh are indicated, the names of which have been erroncously combined into one, viz. the Gabirean and Minwan, which are mentioned by Dioskoridês, Hippokratês, and Galon. There is a Wadi Galir in Omân.

44．ミrípa§－Storax（Sans．turuska，selarasa of the bazars），－one of the balsams．Exported from Egypt to Kanê（28），Barbarikon on the Indus （39），Barugaza（40）．Storax is the produce of the tree Liquidambar orientale，which grows in the south of Europe and the Levant．${ }^{13}$ The purest kind is storax in grains．Another kind is called styrax calamita，from being brought in masses wrapped up in the leaves of a certain reed．An－ other kind，that sold in shops，is semi－fluid．

45．Фoive－the Palm or Dates．Exported from the marts of Apologos and Omana to Barugaza （36，37）．
IV．－Metals and Metallic Articles ：－
1．＇A $\rho \gamma \cup \rho \hat{a}$ бкє⿱㇒⿻二乚㇒ Exported from Egypt to Mossulon（10），to Bar－ barikon on the Indus（39）．Silver plate chased or polished（торvevtà or tetopvevikéva）sent as presents to the despot of Mouza（2．），to Kane for the king （28）．Costly（ Bapúrıá）plate to Barugaza for the $^{2}$ king（4．9）．Plate made according to the Egyptian fashion to Adouli for the king（6）．

2．＇Aprevicòv－Arsenic（somal）．Exported from Egypt to Mouziris and Nelkunda（56）．

3．$\Delta \eta$ vápoov－Denary．Exported in small quan－ tity from Egypt to Adouli（6）．Gold and silver denarii sent in small quantity to the marts of Barbaria（ 8,13 ）；exchanges with advantage for native money at Barugaza（49）．

The denary was a Roman coin equal to about $8 \frac{1}{2} d$ ．， and a little inferior in value to the Greek drachma．

4．Kádтıs－Kaltis．A gold coin（ $\nu о \mu \sigma \mu \grave{a})$ cur－
${ }^{23}$ In early times it was obtained chiefly from Styras officinalis，a native of the same region．－J．B．
rent in the district of the Lower Ganges (63); Benfey thinks the word is connected with the Sanskrit kalita, i.e, numeratum.
5. Kaббitepos (Sans. baña, kathila)-Tin. Exported from Egypt to Aunlitês (7), Malaô (8) Kanô (28), Barugaza (49), Mouziris and Nelkunda (56). India produced this metal, but not in those parts to which the Egyptian trade carried it.
6. Mồußסos-Lead (Sansk. naga, Guj. sîsuñ). Exported from Egypt to Barugaza, Muziris, and Nelkunda (49, 56).
7. 'Oрєіхалкоs-Orichalcum (Sans. tripus, Prak. pitala)-Brass. Used for ornaments and cut into small pieces by way of coin. Exported from Egypt to Adouli (6).
The word means 'mountain copper.' Ramusio calls it white copper from which the gold and silver have not been well separated in extracting it from the ore. Gold, it may be remarked, does not occur as an export from any of the African marts, throughout the Periplis.
8. Eíõךpos, $\sigma \iota ə ̊ \eta \rho a ̂$ $\sigma \kappa є u ́ \eta$-Iron, iron utensils. Exported from Egypt to Malaô, Moundou, Tabai, Opônê $(8,9,12,13)$. Iron spears, swords and adzes exported to Adouli (6). Indian iron and sword-blades ( $\sigma \tau \boldsymbol{\sigma} \mu \omega \mu \mathrm{a}$ ) exported to Adouli from Arabia (Ariakô?). Spears ( $\lambda_{0} \gamma \chi^{a \iota}$ ) manufactured at Mouza, hatchets ( $\pi \epsilon \lambda \dot{\kappa} \kappa \iota a$ ), swords ( $\mu$ íxaı $\rho a \iota$ ), awls ( $\quad \pi \pi$ '́t $\tau a$ ) exported from Mouza to Azania (17).

On the Indian sword see Ktêsias, p. 80, 4. The Arabian poets celebrate swords made of Indian steel. Cf. Plin. xxxiv. 41 :-" Ex omnibus autem generibus palma Serico ferro est." This iron, as
has already been stated, was sent to India along with skins and cloth. Cf. also Edrisi, vol. I. p. 65, ed. Joubert. Indian iron is mentioned in the Pandects as an article of commerce.
9. £riцци-Stibium (Sans. sauvirinjana, Prîk. surma). Exported from Egypt to Barugaza (49), to Mouziris and Nelkunda (56).

Stibium is a sulphuret of antimony, a dark pigment, called kohol, much used in the East for dyeing the eyelids.
10. Xàkòs-Copper (Sans. tîmra) or Brass. Exported from Egypt to Kanê (28), to Barugaza (49), Mouziris and Nelkunda (56). Vessels mado
 to the despot (2). Drinking-vessels ( $\pi$ (2тipa) exported to the marts of Barbaria $(8,13)$. Big and round drinking-cups to Alouli (6). A few ( $\mu \in \lambda$ í $\phi \theta$ oa ¿̉íya) to Malầ (8); $\mu \in \lambda i \not \epsilon \phi e a \chi^{a \lambda \kappa a ̂ ~ f o r ~ c o o k i n g ~ w i t h, ~}$ and being cut into bracelets and anklets for women to Adouli (6).

Regarding $\mu \epsilon \lambda i \epsilon \notin, \theta_{a}$ Vincent says: "No usage of the word occurs elsewhere; but metals were prepared with several materials to give them colour, or to make them tractable, or malleable. Thus रodóßadon in Hesychius was brass prepared with ox's gall to give it the colour of gold, and used, like our tinsel ornaments or foil, for stage dresses and decorations. Thus common brass was neither ductile nor malleable, but the Cyprian brass was both. And thus perhaps brass, $\mu \in \lambda i \epsilon \phi \theta a$ was formed with some preparation of honey." Mialler cannot accept this riew. "It is evident," he says, "that the reference is to ductile copper from which, as Pliny says, all impurity has been
carefully removed by smelting, so that pots, bracelets, and articles of that sort could be fabricated from it. One might therefore think that the reading should be $\pi \epsilon \rho i \epsilon \phi \theta a$ or $\pi v$ pí $\phi \theta a$, but in such a case the writer would have said $\pi$ repieq $\theta$ on $\chi \begin{aligned} & \\ & \lambda \kappa o ́ v \\ & \text {. }\end{aligned}$ In vulgar speech $\mu \in \lambda i \epsilon \phi \theta_{a}$ is used as a substantive noun, and I am therefore almost persuaded that, just as molten copper, $\dot{\delta} \chi^{a \lambda \kappa o} s$ ¿ रutòs, cıbprum calilarium, was called $\tau \rho o ́ x$ дos, from tho likeness in shape of its round masses to hoops, so lamine of ductilo copper (plaques de cuivre) might havo been called $\mu \in \lambda i \epsilon \phi \theta a$, becauso shaped like thin honey-cakes, $\pi \dot{\epsilon} \mu \mu a \tau a \mu \epsilon \lambda i \epsilon \phi \theta a$."
11. Xpuois-Gold. Exported from the marts of Apologos and Omana to Barugaza (36). Gold plate- $\chi \rho v \sigma \dot{\omega} \mu a \tau a-$ exported from Egypt to Mouza for the despot (21), and to Adouli for the king (6).
V. Stones :-
 Taprobane (63) ; exported in every variety from Mouziris and Nelkunda (56).
2. Aóápas-Diamonds. (Sans. vajra, pîraka). Exported from Mouziris and Nelkunda (56).
3. Ka $\lambda \lambda$ кavòs $\lambda i$ iOos-Gold-stone, yellow crystal, chrysolith? Exported from Barbarikon in IndoSkythia (39).

It is not a settled point what stone is meant. Lassen says that the Sanskrit word kalydna means gold, and would therefore identify it with the chrysolith or gold-stone. If this view be correct, the reading of the MS. need not be altered into ка入入aìvos, as Salmasius, whom the editors of the Periplis generally follow, enjoins. In support of the alteration Salmasius adduces Pliny, xxxvii.

50 ：－＂Callais sapphirum imitatur，candidior et litoroso mari similis．Callainas vocant e turbido Callaino＂，and other passages．Schwanbeck，how－ ever，maintaining the correctness of the MS． reading，says that the Sanskrit word kalydna generally signifies money，but in a more general sense anything beautiful，and might therefore hare beenapplied to this gem．Kulyina，he adds，would
 than ka入入ainis．$I_{s}$ like manner kalyaint of the Indians appears in our auther not as кa入入áiva，but， as it ought to be，кал入ieva．
4．Aíyoos－Alabaster．Exported from Mouza （24）．Salmasius says that an imitation of this alabaster was formed of Parian marble，but that the best and original lyglus was brought from Arabia，that is，Mouza，as noted in tho Periplis． Cf．Pliny（xxxvi．8）：－＂Lygdinos in＇Tauro re－ pertos ．．．antea ex Arabia tantum advehi solitos candoris eximii．＂

5．＇Opuxwij Xioa－Onyx（akika－agate）．Sent in vast quantities（ $\pi \lambda$ ciorq）from Ozênê and Paithana to Barugaza（ 48,51 ），and thence exported to Egypt（49）．Regarding the onyx mines of Gujarât vide Ritter，vol．VI．p． 603.

6．Movppiv, sup．$\lambda_{i} \theta_{i}$－Fluor－spath．Sent from Ozênê to Barugaza，and exported to Egypt（49）． Porcelain made at Diospolis（ $\mu$ ovppiv $\lambda_{1} \theta i a$ in
 Adouli（6）．

The reading of the MS．is $\mu$ oppivns．By this is to be understood vitrum murrhinum，a sort of china or porcelain made in imitation of cups or vases of murrha，a precions fossil－stone resembling，
if not identical with, fuor-sputh, such as is found in Derbyshire. Vessels of this stone were exported from,India, and also, as we learn from Pliny, from Karmania, to the Roman market, where they fetched extravagant prices. ${ }^{14}$ The " cups baked in Parthian fires" (pocula Partlis focis cocta) mentioned by Propertius (1V. v. 26) must be referred to the former class. The whole subject is one which has much exercised the pens of the learned. "Six hundred writers," says Müller, "emulously applying themselves to explain what had the best claim to be considered the murrha of the ancients, have advanced the most conflicting opinions. Now it is pretty well settled that the murrhine vases were made of that stone which is called in German glusspath (spato-fluore)". He then refers to the following as the principal authorities on the subject:-Pliny-xxxiii. 7 et seq.; xxxiii. proom. Suetonius-Oct. c. 71; Scneca-Epist. 123; Martial-iv. 86 ; xiv. 43 ; Digest-xxxiii. 10, 3; xxxiv. 2. 19 ; Rozière-Mémoire sur les Vases murrlins, de.; in Description de l'Égypt, vol. VI. pp. 277 et seq. : Corsi-Delle Pietre antiche, p. 106; Thiersch-Ueber die Vasa Murrhina der Alten, in Abhandl. d. Munchn. Akad. 1835, rol. I. pp. 443-509; A learned Englishman in the Classical Journal for 1810, p. 472; Witzsch in Pauly's Real Encycl. rol. V. p. 253 ; See also Vincent, vol. II. pp. 723-7. *
7. 'Oษıavos Xi ios-the Opsian or Obsidian stune, found in the Bay of Hanfelah (5). Pliny says,"The opsians or obsidians are also reckoned as a

[^11]sort of glass bearing the likeness of the stone which Obsius（or Obsidius）found in Ethiopia，of a very black colour，sometimes even translucent， hazier than ordinary glass to lonk throughi，and when used for mirrors on the walls reflecting but shadows instead of distinct images．＂（Bk． xxxri．37）．The only Obsius mentioned in history is a M．Obsius who had been Prator，a friend of Germanicus，referred to by Tacitus（Ann．IV．63， 71）．He had perhaps been for a time prefect of Egypt，and had coasted the shore of Ethiopia at the time when Germanicus trarersed Egypt till he came to the confines of Ethiopia．Perhaps， however，the name of the substance is of Creck origin－＇o廿的ds，from its reflecting power．

8．ミímptipos－the Sapphirc．Exported from Barbarikon in Indo－Skythia（39）．＂The ancients distinguished two sorts of dark blue or purple， one of which was spotted with gold．Pliny says it is never pellucid，which seems to make it a different stone from what is now called sapphire．＂－ Vincent（vol．II．p．7it），who adds in a note，＂Dr． luargess has specimens of both sorts，the one with gold spots like lapis lazuli，and not transparent．＂${ }^{5}$

9．＇Yákıəos－Hyacinth or Jacinth．Exported from Muzaris and Nelkunda（56）．According to Salmasius this is the Ruby．In Solinus axx． it would seem to be the Amethyst（Sansk． pushkarija．）

10．＇Ya入os＇ap ${ }^{\circ} \eta$－Glass of a coarse kind．Ex－ ported from ligypt to Barugaza（49），to Mouziris and Nelkunda（ 50 ）．Vessels of glass（íadì oкeún）ex－

[^12]
## 37

ported from Egypt to Barbarikon in Indo-Skythia (39). Crystal of many sorts ( $\lambda_{1} \theta_{i a s} \dot{u} a \lambda \hat{\eta} s$ $\pi \lambda \in i \sigma \tau a$ $\gamma^{\prime}(\nu \eta)$ exported from Egypt to Adouli, Aualitês, Mossulon (6, 7, 10) ; from Mouza to Azania (17).
11. XpyaódıOos-Chrysolite. Esported from Egypt to Barbarikon in Indo-Skythia (39), to Barugaza (43), to Mouziris and Nelkunda (56). Some take this to be the topaz (Hind. pirojd).
VI. Wearing Apparel :-

1. 'I $\mu$ ítıa ärvaŋa-Cloths undressed. Manufactured in Egypt and thence exported to Adouli (6). These were disposed of to the tribes of Barbaria -the Troglorlyte shepherds of Upper Egypt, Nubia and Ethiopia.
 Cloths for the Barbarine markets, dressed and dyed of various colours. Exported to Malaô and Aualitês $(8,7)$.
 Arabian markets. Exported from Egypt (24). Different kinds are enumeratod: - X $\epsilon \iota \rho \boldsymbol{\delta} \omega \boldsymbol{\sigma} \delta \mathrm{s}$, with sleoves reaching to the wrist; "Ore $d \pi \lambda o u s$ kal ó kowos, with single texture and of the common sort; oкотоv入átos, wrought with figures, checkered; the word is a transliteration of the Latin scutulatus, from scutum, the checks being lozonge-shaped, liko a shield: sce Juvenal, Sat. ii. 79; סáxpuoros, shot with grold; $\pi$ odvte $\lambda_{i j}$, a kind of great price sent to the despot of Monza; Koıvòs kai ándoûs kai $\dot{\delta} \nu \dot{d} \theta$ os, cloth of $a$ common sort, and cloth of simple texture, and cloth in imitation of a better commodity, sent to Kanê (28); $\Delta u$ úpooos a $\dot{\pi} \lambda$ oûs, of superior quality and single texture, for the king (28) ; ' $\Lambda \pi \lambda o u ̂ s$, of single texture, in great rquantity, and
víos，nu inferior sort imitating a better，in small quantity，sent to Barbarikon in Indo－Skythia（39）， ＇am入oûs кaì vétos mavtoios，and for the king dimdoùs
 modús－cloth in small quantity sent to Muziris and Nelkunda（56）；і̀чтótios，of native manufac－ ture，exported from the marts of Apologos and Omana to Barugaza（36）．

4．＇Aßódat－Riding or watch cloaks．Ex－ ported from Egypt to Mouza（3ト），to Kanê（28）． I＇his word is a transliteration of the Latin Alolla．It is supposed，however，to be derived from Greek：$\alpha \mu \beta o \lambda \lambda \eta$ ，i．e．$\quad i \mu \phi \iota \beta 0 \lambda \eta$ ．It was a woollen cloak of close texture－often mentioned in the Roman writers：e．g．Juren．Sat．iii． 115 and ir． 76 ；Sucton．Calig．c．35．Where the word occurs in sec． 6 the reading of the MS．is äßo入ot， which Miillere has corrected to disódat，though Salmasius had defended the original reading．

5．Dikpiogata（Lat．Mantilia utrinque fimbriata） －Cloths with a double fringe．Fxported from Egypt to Adouli（6）．＇Ihis word occurs only in the Periphis．The simple Kpóaбtov，however，is met with in Herodian，Epim．p．72．An adjective dixporaos is found in Pollux vii．72．＂We cannot err much，＂says Vincent，＂in rendering the Suxpiogra of the Periplis either cloth fringed，with Salmasius，or stripeil，with Apollonius．Meursius says devzia äкробба are plaia linens not striped．

6．Závat $\pi$ оли́ $\mu$ เтоє $\pi \eta \chi$ vaiot－Flowered or em－ broidered girdles，a cubit broad．Exported from Egypt to Barugaza（49）．$\Sigma$ кı $\omega$ тai－girdles（kicha） shaded of different colours，exported to Mouza（24）． This word occurs only in the Periphes．
7. Kavváкaı-Garments of frieze. Exported from Arabia to Adouli (6); a pure sort- $\alpha \pi \lambda_{0} \hat{i}-$ exported to the same mart from Egypt (6). In the latter of these two passages the MS. reading is $\gamma$ auvákaı. Both forms are in use : conf. Latin gaunace-Varro, de L. L. 4, 35. It means also a fur garment or blanket-vestis stragula..
8. $\Lambda \dot{\omega} \delta$ ıkes-Quilts or coverlids. Exported in small quantity from Egypt to Mouza (24) and Kanê (28).
 Exported from Barugaza to Adouli (6), and into Barbarin (14).
10. Поג $\dot{\mu} \iota \tau a-S t u f f s$ in which sereral threads were taken for the woof in order to weare flowers or other objects: Latin polymita and plumatica. Exported from Egypt to Barbarikon in Indo-Skythia (39), to Mouziris and Nelkunda (56).
 -Coarse cloaks mado at Arsinoê, dressed and dyed. Exported from Egypt to Barbaria (8, 13).
 at Arsinoĉ. Exported from Egypt to Adouli (6).
13. Xitĉves-'Tiunics. Exported from Egypt to Malaû, Moundou, Mossulon (8, 9, 10).

V1I. In addition to the above, works of art are mentioned.
'Avópuiutes-Imnges, sent as presents to Kharibaël (18). C'f. Strabo (p. 714), who among the articles sent to Arabin enumerates тípev $\mu$, र $\rho a \phi i{ }^{2}$, $\pi \lambda \dot{\sigma} \sigma \mu a$, pieces of sculpture, painting, statucs.

Movaıka-Instruments of music, for presents to the king of Ariakê (49).

## ANONYMI [ARRIANI UT FERTUR] PERIPLUS MARIS ERYTHRAI.

1. The first of the important roadsteads established on the Red Sen, and the first also of the great trading marts upon its coast, is the port of My os-hormosin Egypt. Beyond it

## Commentary.

(1) Myos IIormos.-Its situation is determined by the cluster of islands now called Jifatin [lat. $27^{\circ} 12^{\prime} \mathrm{N} .$, long. $33^{\circ} 55^{\prime} \mathrm{E}$. ] of which the three largest lie opposite an indenture of the const of Egypt on the curve of which its harhour was situated [near Ras Abu Somer, a little north of Satijah Island]. It was founded by 1'tolemy Philadelphos is. c. 27f, who selected it as the principal port of the Egyptian trade with Indiat in preference to Arsinoe, ${ }^{20}$ N. N. E. of Suez, on account of the difficulty and tediousness of the navigation down the Iferoöpolite Gulf. The vessels bound for Africa and the south of Arabia left its harbour about the time of the autumnal equinox, when the North West wind which then prevailed carried them quickly down the Gulf. 'ihose bound for the Malabar Coast or Ceylon lelt in July, and if they eleared the Red Sea before the lst of

[^13]at a distance of 1800 stadia is Berenik $\hat{\theta}$, which is to your right if you approach it by sea.

September, they had the monsoon to assist their passage across the occan. Myos Hormos was distant from K optos [lat. $26^{\circ} \mathrm{N}$.], the station on the Nile through which it communicated with Alexandria, a journey of seven or eight days along a road opened through the desert by Philadelphos. The name Myos Hormos is of Greek origin, at.d may signify either the Harbour of the Mouse, or, more probably, of the Mussel, since the pearl mussel abounded in its neighbourhood. $\Lambda$ gatharkhidês calls it Aphrodites Hormos, and Pliny Vencris Portus. [Vencris Portus however was probably at Sherm Sheikh, lat. $24^{\circ} 30^{\prime} \mathrm{N}$. Off the coast is Wade Jemâl Island, lat. $24^{\circ} 39^{\prime}$ N., long. $35^{\circ} 8^{\prime}$ E., called Iambe by Pliny, and perhaps the Aphroditês Island of Ptolemy IV. v. 77.] Referring to this name Vincent says: "Here if the reader will advert to Aphroditê, the Greek title of Venus, as springing from the foam of the occan, it will immediately appear that the Greeks were translating here, for the native term to this day is Suffange-el-Bahri, 'sponge of the sea'; and the vulgar error of the sponge being the form of the sea, will immediately account for Aphroditê."

The rival of Myos-Hormos was Berenikê, a city built by Ptolemy Philatelphos, who so named it in honour of his mother, who was the daughter of Ptolemy Lagos and Antigonc. It was in the same parallel with Syence and therefore not far from the Tropic [lat. $\left.23^{\prime} 65^{\prime} \mathrm{N}.\right]$. It stood nearly

These roadsteads are both situate at the furthest end of Egypt, and are bays of the Red Sea.
2. The country which adjoins them on the right below Berenikè is Barbaria: Here the sea-board is peopled by the Ikhthy ophagoi, who live in scattered huts built in the narrow gorges of the hills, and further inland aro the
at the bottom of Foul Bay (ìv Bá $\theta_{\epsilon \iota}$ toû 'Axa甘áptov Kid $\lambda_{\pi o v) \text {, so called from the coast being foul with }}$ shoals and breakers, and not from the impurity of its water, as its Latin name, Sinus Immundus, would lead us to suppose. Its ruins are still pereeptible even to the arrangement of the streets, and in the centre is a small Egyptian temple adorned with hieroglyphics and bas-reliefs of Greek workmanship. Opposite to the town is a very fine natural harbour, the entrance of which has been deep enough for small vessels, though the bar is now impassable at low water. Its prosperity under the l'tolemies and afterwards under the Romans was owing to its safe anchorage and its being, like Myos-Hormos, the terminus of a great road from Koptos along which the traffic of Alexandria with Ethiopia, Arabia, and India passed to and fro. Its distance from Koptos was 288 Roman miles or 11 days' journey. The distance between Myos-IIormos and Berenikê is given in the Periplis at 225 miles, but this is considerably above the mark. The difficulty of the navigation may probably have made the distance seem greater than it was in reality.
(2) Adjoining Berenikê was Barbaria

Berbers, and beyond them the Agriophagoi and Moskhophagoi, tribes under regular government by kings. Beyond these again, and still further inland towards the west [is situated the metropolis called Merồ].
3. Below the Moskhophagoi, near the sea, lies a little trading town distant from Bere( $\dot{\eta}$ Bapßapıк̀ $\chi \dot{\omega} \rho a$ )-the land about Ras Aba Fatima [lat. $22^{\circ} 26^{\prime}$ N.-Ptol. IV. vii. 28]. The reading of the MS. is $\dot{\eta}$ Tıoŋßapıкों which Müller rejects because the name nowhere occurs in any work, and because if Barbaria is not mentioned here, our author could not afterwards (Section 5) say $\dot{\eta} a ̈ \lambda \lambda \eta$ Bapßapia. The Agriophagoi who lived in the interior are mentioned by Pliny (vi. 35), who says that they lived principally on the flesh of panthers and lions. Vincent writes as if iustead of A $\gamma$ poopayas the reading should be Aкpiooфáy $\omega$ locust-eaters, who are mentioned by Agatharkhidês in his De Mari Erythraeo, Section 58. Another inland tribe is mentioned in connection with them-the Mos. khophagoi, who may be identified with the Rizophagoi or Spermatophagoi of the same writer, who were so named because they lived on roots 0 : the tender suckers and buds of trees, called in Greek $\mu$ ór $\chi o$. This being a term applied also to the young of animals, Vincent was led to think that this tribe fed on the brinde or flesh cut out of the living animal as described by Bruce.
(3) T'o the south of the Moskhophagoi lies Ptolemais Thêrôn, or, as it is called by
niké abont. 4000 stadia, called Ptolemais Thêrôn, from which, in the days of the Ptolemies, the hunters employed by them used to go up into the interior to catch elephants. In this mart is procured the true (or marine) tortoise-shell, and the land kind also, which, however, is scarce, of a white colour, and smaller size. A little ivory is also sometimes obtainable, resembling that of A douli. This place has no port, and is approachable only by boats.

Pliny, Ptolemais Epitheras. [On Er-rila island, lat. $18^{\circ} 9^{\prime} \mathrm{N}$., long $38^{\circ}-7^{\prime}$ E., are the ruins of an ancient town-probably Ptolemais Therûn, Müller however places Suche here.-Ptol. I. viii. 1.; IV. vii. 7; VIII. xvi. 10]. It was origimally an Ethiopian village, but was extended and fortified by l'tolemy Philadelphos, who made it the depôt of the elephant trade, for which its situation on the skirts of the great Nubian forest, where these animals abounded, rendered it peculiarly suitable. The Egyptians before this had imported their elephants from Asia, but as the supply was precarious, and the cost of importation very great, Philadelphos made the most tempting offers to the Ethiopian elephant-hunters (Elephantophagoi) to induce them to abstain from eating the animal, or to reserve at least a portion of them for the royal stables. They rejected howerer all his solicitations, declaring that even for all Egypt they would not forego the luxury of their repast. The king resolsed thereupon to procure his supplies by employing hunters of his orn.
4. Leaving Ptolemaïs Thêrôn we are conducted, at the distance of about 3000 stadia, to A douli, a regular and established port of trade situated on a deep bay the direction of which is
(4) Beyond Ptolemaïs Thêrôn occur Adoulê, at a distance, according to the Periplîs, of 3000 stadia-a somewhat excessive estimate. The place is called also Adoulei and more commonly Adoulis by ancient writers (Ptol. IV. vii. 8; VIII. xvi. 11). It is represented by the modern Thulla or Zula [pronounced Azule,-lat. $15^{\circ} 12^{\prime}-15^{\circ} 15^{\prime}$ N., long. $39^{\circ} 36^{\prime}$ E.].--To the West of this, according to Lord Valentia and Mr. Salt, there are to be found the remains of an ancient city. It was situated on the Adoulikos Kolpos (Ptol. I. xv. 11.; IV. vii. 8), now called Annesley Bay, the best entrance into Abyssinia. It was erroneously placed by D'Anville at Dokhuau or Harkiko, close to Musawwâ [lat. $15^{\circ} 35^{\prime}$ N.] There is much probability in the supposition that it was founded by a party of those Egyptians who, as we learn from Herodotos (II. 30), to the number of 240,000 fled from their country in the days of Psammêtikhos (B. c. 671-617) and went to as great a distance beyond Meroë, the capital of Ethiopia, as Meroë is beyond Elephantinê. This is the account which Pliny (VI. 3-4) gives of its foundation, adding that it was the greatest emporium of the Troglodytes, and distant from Ptolemaïs a five days' voyage, which by the ordinary reckoning is 2,500 stadia. It was an emporium for rhinoceros' hides, ivory and tortoise-shell. It had not only a large sea-borne traffic, but was also a
due south. Facing this, at a distance seaward of about 200 stadia from the inmost recess of the bay, lies an island called Oreine (or' the mountainous'), which runs on either side parallel
caravan station for the traffic of the interior of Africa. Under the Romans it was the haven of Auxumê (Ptol. IV. vii. 25,-written also Auxumis, Axumis), now Axum, the capital of the kingdom of Tigre in Abyssinia. Auxumê was the chief centre of the trade with the interior of Africa in gold-dust, ivory, leather, hides and aromatics. It was rising to great prosperity and power about the time the Periplas was written, which is the earliest work extant in which it is mentioned. It was probably founded by the Egyptian exiles alroady referred to. Its remaining monuments are perfectly Egyptian and not pastoral, Troglodytik, Greek, or Arabian in their character. Its name at the same time retains traces of the term Asmak, by which, as we learn from Herodotos, those exiles were designated, and Heeren considers it to have been one of the numerous priest-colonies which were sent out from Meroë.

At Adouli was a celebrated monument, a throne of white marble with a slab of basanite stone behind it, both covered with Greek characters, which in the sixth century of our era were copied by KosmasIndikopleustês. The passage in Kosmos relating to this begins thus: "Adulê is a city of Ethiopia and the port of communication with $\mathrm{A} x$ iomis, and the whole nation of which that city is the capital.

## 47

with the mainland. Ships, that come to trade with Adouli, now-a-days anchor here, to avoid being attacked from the shore; for in former times when they used to anchor at the very head of the bay, beside an island called Diodoros, which was so close to land that the sea was fordable, the neighbouring barbarians, taking advantage of this, would run across to attack the ships at their moorings. At the distance of 20 stadia from the sea, opposite Orein $\hat{\theta}$, is the village of Adouli, which is not of any great size, and inland from this a three

In this port we carry on our trade from Alexandria and the Elanitik Gulf. The town itsolf is about a milo from tho shoro, and as you enter it on the Western side which leads from Axiômis, there is still remaining a chair or throne which appertained to one of the Ptolemys who had subjected this country to his authority." The first portion of the inscription records that Ptolemy Euergetês (247-222 b.c.) received from the Troglodyte Arabs and Ethiopians certain elephants which his father, the second king of the Makedonian dynasty, and himself had taken in hunting in the region of $A d u l \hat{\theta}$ and trained to war in their own kingdom. The second portion of the inscription commemorates the conquests of an anonymous Ethiopian king in Arabia and Ethiopia as far as the frontier of Egypt. Adouli, it is known for certain, received its name from a tribe so designated which formed a part of the D anakil shepherds who are still found in the neigh-
days' journey is a city, Kolö $\hat{e}$, the first market where ivory can be procured. From Koliê it takes a journey of five days to reach the metropolis of the people called the $\mathrm{A} u \times \mathrm{x} \mathrm{mi}$ tai, whereto is brought, through the province called Kyêneion, all the ivory obtained ou the other side of the Nile, before it is sent on to Adouli. The whole mass, I may say, of the elephants and rhinoceroses which are killed tosupply the trade frequent the uplands of the interior, though at rare times they are seen near the coast, even in the neighbourhood of Adouli. Besides the islands already mentioned, a cluster consist-
bourhood of Annesley Bay, in the island of Diset [lat. $15^{\circ} 28^{\prime}$, long. $39045^{\prime}$, the Diodôros perhaps of the Periples] opposite which is the town or station of Masawâ (anc. Saba) [lat. $15^{\circ} 37^{\prime}$ N., long. $39^{\circ} 28^{\prime} \mathrm{E}$. ], and also in the archipelago of Dhalak, called in the Periplits, the islands of Alalaiou. The merchants of Egypt, we learn from the work, first traded at Masawwâ but afterwards removed to Oreine for security. This is an islet in the south of the Bay of Masawwâ, lying 20 miles from the coast; it is a rock as its name imports, and is of considerable clevation.

Aduli being the best entrance into Abyssinia, came prominently into notice during the late Abyssinian war. Beke thus speaks of it, "In our recent visit to Abyssinia I saw quito enough to confirm the opinion I have so long entertained, that when the ancient Greeks founded Aclule or Adulis at the mouth of the river Hadâs, now only
ing of many small ones lies out in the sea to the right of this port. They bear the name of Alalaiou, and yield the tortoises with which the Ikhthyophagoi supply the market.
5. Below Adouli, nbout 800 stadia, occurs another very deep bay, at the entrance of which on the right are vastaccumulations of sand, wherein is found deeply embedded the Opsian stone, which is not obtainable anywhere else. The king of all this country, from tho Moskhophagoi to the otherend of Barbaria, is Zôskales, a man at once of penurious

[^14] Adouli the coast is indented by another bay now known as II anfelah bay [near Rais Itanfelah in lat. $14^{\circ} 44^{\prime}$, long. $40^{\circ} 49^{\prime} \mathrm{E}$.] about 100 miles from Annesley Bay and oppositoan island called Daramsas or Hanfelah. It has wells of good water and a small lake of fresh water after the rains; the coast is inhabited by the Dummoeta, a tribe of the Danakil]. This is the locality where, and where only, the Opsian or Obsidian stone was to bo found. Pliny calls it an unknown bay, because traders making for the ports of Arabia passed it by without deviating from their course to enter it. He was aware, as well as our author, that it contained the Opsian stone, of which he gives an accomet, alroady produced in the introduction.
habits and of a grasping disposition，but other－ wise honourable in his dealings and instructed in the Greek language．

6．The articles which these places import are the following：－
 －Cloth undressed，of Egyptian manufucture，for the Barbarim market．
Stodiu＇＇Apaıvoŋтıк⿺尢丶－Robes manufacturedat Ar－ $\sin \alpha \hat{\text { ．}}$
 poor cloth imitating a better quality，and dyed．

Aévtı－Linens．
Dıxpoírota－Striped cloths and fringed．Mantles with a double fringe．
 yıvonév crystal，and of that other transparent stone called Myrrhina，made at Diospolis．
＇Opeixa入kos－Yellow copper，for ornaments and cut into pieces to pass for money．

$(6,7)$ From this bay the const of the gulf， according to our author，has a more easterly direction to the Straits，the distance to which from Adouli is stated at 4,000 stadia，an estimate much too liberal．In all this extent of coast the Periplis mentions only the bay of the Opsian－ stones and conducts us at once from thence to Aualites at the straits．Strabo however，and Juba，and Pliny，and Ptolemy mention several places in this tract，such as $\Delta r \operatorname{sinoë}$, Bere－
culinary vessels and cutting into bracelets and anklets worn by certain classes of women．
siónpos－Iron．Consumed in making spear－ heads for hunting the elephant and other animals and in making weapons of war．

Пели́кıa－Hatchets．
ミкéтариа－Adzes．
Máxatpat－Swords．
 vessels of brass，large and round．
$\Delta \eta \nu a ́ \rho \iota o \nu$ d̀íyov－A small quantity of denarii： for the use of merchants resident in the country．

Oívos Naoóıкпиòs кaì＇Ita入ıкòs où mo入̀̀s－Wine， Laodikean，i．e．Syrian，from Laodike，（now Latakia） and Italian，but not much．
＂E入atov oủ $\pi$ oरú－Oil，but not much．
 катєбкєvaгре́vat－Gold and silver plate made ac－ cording to the fashion of the country for the king．
＇Aßó̀えat－Cloaks for riding or for the camp．
Kavváкaı ám入ô̂－Dresses simply made of skius with the hair or fur on．These two articles of dress are not of much value．
nikê，Epideirês，the Grove of Eumenês， the Chase of Puthangelos，the Territory of the Elephantophagoi，\＆c．The straits are called by Ptolemy Deirê or Dêrê（i．e．the neck），a word which from its resemblance in sound to the Latin Dirae has sometimes been explained to mean ＂the terrible．＂（I．xv．11；IV．vii．9；VIII． xvi．12）．＂The Periplus，＂Vincent remarks， ＂makes no mention of Deirê，but observes that the point of contraction is close to Abalitês

These articles are imported from the interios parts of Ariakê ：－

Eíonpos＇Iレס̌ıòs－Indian iron．
ミтó $\mu \omega \mu$－Sharp blades．
 －Monakhe，${ }^{17}$ Indian cotton cloth of great width．

Eayparoy $\eta$ var－Cotton for stuffing．
Перьऽ＇́ $\mu$ ata－Sashes or girdles．
Kavvíkat－Dresses of skin with the hair or fur on．
Moגóxıva－Webs of cloth mallow－tinted．
玉ıv⿱宀⿻三丨口巾es＇odírat－Fine muslins in small qumatity．
＾áккоs Xpouitevos－Gum－lac：yielding Lake．
The articles locally produced for export are ivory，tortoisc－shell，and rhinoceros．Most of the gools which sulply the market anve any time from January to September－that is，from Tybi to Thûth．＇The best season，however，for ships from Eyrget to pat in here is about the month of September．
or the Abalitik mart；it is fiom this mart that the coast of Africa filling down first to the South and curving afterwards towards the East is styled the Bay of Aurlitês by Ptolemy，（IV．vii． $10,20,97,30,39$, ）but in the Peripltis this namo is confined to a bay immediately beyond the straits which D＇Anville has likervise inserted in his map，but which I did not fully understand till I obtatined Captain Cook＇s chart and found it perfectly consistent with the Periplics．＂It is the gulf of T＇ejureh or Zeyla．

7. From this bay the Arabian Gulf trends eastward, and at Aualitês is contracted to its narrowest. At a distance of about 4000 stadia (from Adouli), if you still sail along the same coast, you reach other marts of B arbaria, called the marts beyond (the Straits), which occur in successive order, and which, though harbourless, afford at certain seasons of the year good and safe anchorage. The first district you come to is that called $\mathrm{A} u$ alit $\hat{\mathrm{e}} \mathrm{s}$, where the passage across the strait to the opposite point of Arabia is shortest. Here is a small port of trade, called, like the district, Aualitês, which can bo approached only by little boats and rafts. The imports of this place aro-
 sorts.
 grape of Diospolis.

The tract of country extending from the Straits to Cape Arômata (now Guardafui) is called at the present day Adel. It is described by Strabo (XVI. iv. 14), who copies his account of it from Artemidoros. He mentions no emporium, nor any of the names which occur in the Periplas except the haven of Daphnous. [Bandar Mariyah, lat. $11^{\circ} 46^{\prime} \mathrm{N}$., long. $50^{\circ} 38^{\prime}$ E.] Ho supplies however many particulars regarding the region which are left unnoticed by our author as having no reference to commerce-particulars, howerer, which prove that these parts which were resorted to in the times of the Ptolemies for elephant-hunt-

The barbarians forming the population of the place are rude and lawless men.
ing were much better known to the ancients than they were till quite recently known to ourselves. Ptolomy gives nearly tho samo series of names (IV. vii. 9, 10) as the Periplis, but with some discrepancies in the matter of their distances which he does not so accurately state. His list is: D êre, a city; Abalitês or Aualitês, a mart; Malaô, a mart; Moundou or Mondou, a mart; Mondou, an island; Mosulon, a cape and a mart; Kobê, a mart; Elephas, a mountain; Akkanai or Akanuai, a mart; Aromata, a cape and a mart.

The mart of Abalitês is represented by the modern Zeyla [lat. $11^{\circ} 22^{\prime}$ N., long. $43^{\circ} 29^{\prime}$ E.,

## 55

8. Beyond Aualites there is another mart, superior to it, called Malâ, at a distance by sea of 800 stadia. The anchorage is an open road, sheltered, however, by a cape protruding eastward. The people are of a more peaceable disposition than their neighbours. The imports are such as have been already specified, with the addition of-

Máset $\rho$-The spice mactr; which is carried to Arabia.

9. Distant from Malaô a two days' sail is the trading port of Moundou, where ships find a safer anchorage by mooring at an island which lies very close to shore. The exports and imports are similar to those of tho preceding marts, with the addition of the fragrant gum called Mulroton, a peculiar product of the place. The native traders here are uncivilized in their manners.
10. After Moundou, if you sail eastward as before for two or three days, there comes
greater. From the description he gives of its situation it must be identified with Berbereh [lat. $10^{\circ} 25^{\prime} \mathrm{N} .$, long. $\left.45^{\circ} 1^{\prime} \mathrm{E}.\right]$ now the most considerable mart on this part of the coast. Vincent erroneously places it between Zeyla and the straits.
(9) The nest mart after Malaô is Moundou, which, as we lean from l'tolemy, was also the name of an adjacent ishand-that which is now called Meyct or Burnt-island [lat. $11^{0} 12^{\prime}$ N., long. $47^{\circ} 17^{\prime}$ E., 10 miles cast of Bandar Jedid ${ }^{\circ}$ ].
(10) At a distance beyond it of two or three days' sail occurs Mosulon, which is the name both of a mart and of a promontory. It is mentioned
next Mosullon, where it is difficult to anchor. It imports the same sorts of commodities as have been already mentioned, and also utensils of silver and others of iron but not so many, and glass-ware. It exports a vast amount of cinnamon (whence it is a port requiring ships of heavy burden) and other fragrant and aromatic products, besides tortoise shell, but in no great quantity, and the incense called mokrotou inferior to that of Moundou, and frankincense brought from parts further dis-
by Pliny (VI. 34), who says: "Further on is the bay of Abalitês, the island of Diodorus and other islands which are desert. On the mainland, which has also deserts, occur a town Gaza [Bandar Gazim, long. $49^{\circ} 13^{\prime}$ E.], the promontory and port of Mosylon, whence cinnamon is exported. Sesostris led his army to this point and no further. Some writers place one town of Ethiopia beyond it, Baricaza, which lies on the coast. According to Juba the Atlantic Sea begins at the promontory of Mossylon." Juba evidently confounded this promontory with Cape Arômata, and Ptolemy, perhaps in consequence, makes its projention more considerable than it is. D'Anville and Gosselin thought Mossulon was situated near the promontory Mete, where is a river, called the Soal, which they supposed preserved traces of the name of Mossulon. This position however cannot be reconciled with the distances given in the Periphis, which would lead us to look for it where Guesele is placed in the
tant, and ivory and myrrh though in small quantity.
11. After leaving Mosullon, and sailing past a place called Neiloptolemaios, and past T a patêg $\hat{\theta}$ and the Little Laurel-grove, you are conducted in two days to Cape Ele-
latest description given of this const. Vincent on very inadequate grounds would identify it with Barbara or Berbera. [Müller places it at Bandar Barthe and Ras Antarah, long. $49^{\circ} 35^{\prime}$ E.]
(11) After Mosulon occurs Cape Elephant, at some distance beyond Neiloptolemaios, Tapatege $\hat{e}$, and the Little Laurel-grove. At the Cape is a river and the Great Laurel-grove called Akannai. Strabo in his account of this coast mentions a Neilospotamia which however can hardly be referred to this particular locality which pertains to the region through which the Khori or San Pedro flows, of which Idrisi (I. 45) thus writes: "At two journeys' distance from Markah in the desert is a river which is subject to risings like the Nile and on the banks of which they sow dhorra." Regarding Cape Elephant Vincent says, "it is formed by a mountain conspicuous in the Portugnese charts under the name of Mount Felix or Felles from the native term Jibel Fil, literally, Mount Elephant. The cape [Ras Filik, 800 ft. high, lat. $11^{\circ} 57^{\prime}$ N., long. 50 $37^{\prime}$ L.] is formed by the land jutting up to the North from the direction of the coast which is nearly East and West, and from its northernmost point the land falls off again South-East to Rits 'Asir-Cape Cuardafun, the Arônata of the
phant. Here is a stream called Elephant River, and the Great Laurel-grove called A kann ai, where, and where only, is produced the peratic frankincense. The supply is most abundant, and it is of the very finest quality.
12. After this, the coast now inclining to the south, succeeds the mart of Arômata, and a
ancients. We learn from Captain Saris, an English navigator, that there is a river at Jibel Fil. In the year 1611 he stood into a bay or harbour there which he represents as having a safe entrance for three ships abreast : he adds also that several sorts of gums very sweet in burning were still purchased by the Indian ships from Cambay which touched here for that purpose in their passage to Mocha." The passage in the Peripluts where these places are mentioned is very corrupt. Vincent, who regards the greater Daphnôn (Laurel-grove) as a river called Akannai, says, "Neither place or distance is assigned to any of these names, but we may well allot the rivers Daphôn and Elephant to the synonymous town and cape; and these may be represented by the modern Mete and Santa Pedro." [Müller places Elephas at Ras el Fîl, long. $50^{\circ} 37^{\prime}$ E., and Akannai at Ulalah Bandar, long. $50^{\circ} 56^{\prime}$ E., but they may be represented by Ras Ahileh, where a river enters through a lagoon in $11^{\circ} 46^{\prime}$, and Bonah a town with wells of good water in lat. $11^{\circ} 58^{\prime} \mathrm{N} .$, long. $50^{\circ} 51^{\prime} \mathrm{E}$.]
(12) Wo come now to the great projection Cape Arômata, which is a continuation of Mount Elephant. It is called in Arabic Jerd Hafan
bluff headland ranning out eastward which forms the termination of the Barbarine coast. The roadstead is an open one, and at certain seasons dangerous, as the place lies exposed to
or Ras Asir; in Idrisi, Carfouna, whence the name by which it is generally known. ['the South point $11^{\circ} 40^{\circ}$ is Râs Sheuarif or Jerd Hafûn: the N. point $11^{\circ} 51^{\prime}$ is Râs 'Asir.] It formed the limit of the knowledge of this coast in the time of Strabo, by whom it is called Notou Keras or South Horn. It is described as a rery high bluff point and as perpendicular as if it were scarped. [Jerd Hafun is 2500 feet high.] The current comes round it out of the gulf with such violence that it is not to be stemmed without a brisk wind, and during the South-West Monsoon, the moment you are past the Cape to the North there is a stark calm with insufferable heat. The current below Jerd Hafun is noticed by the Periplis as setting to the South, and is there perhaps equally subject to the change of the monsoon. With this account of the coast from the straits to the great Cape may be compared that which has been given by Strabo, XVI. iv. 14:
"From Deirê the next country is that which bears aromatic plants. The first produces myrrh and belongs to the Iehthyophagi and Creophagi. It bears also the persea, peach or Egyptian almond, and the Egyptian fig. Beyond is Licha, a hunting ground for elephants. There are also in many places standing pools of rainwater. When these are dried up, the elephants with their trunks and tusks dig holes and find
the north wind. A coming storm gives warning of its approach by a peculiar prognostic, for the sea turns turbid at the bottom and changes its colour. When this occurs, all hasten for refuge
water. On this coast there are two very large lakes extending as far as the promontory Pytholaus. One of them contains salt water and is called a sea; the other fresh water and is the haunt of hippopotami and crocodiles. On the margin grows the papyrus. The ibis is seen in the neighbourhood of this place. Next is the country which produces frankincense; it has a promontory and a temple with a grove of poplars. In the inland parts is a tract along the banks of a river bearing the name of Isis, and another that of Nilus, both of which produce myrrh and frankincense. Also a lagoon filled with water from the mountains. Next the watch-post of the Lion and the port of Pythangelus. The next tract bears the false cassia. There are many tracts in succession on the sides of rivers on which frankincense grows, and rivers extending to the cinnamon country. The river which bounds this trant produces rushes ( $\phi \lambda$ ous) in great abundance. Then follows another river and the port of Daphuls, and a valley called Apollo's which bears besides frankincense, myrrh and cinnamon. The latter is more abundant in places far in the interior. Next is the mountain Elephas, a mountain projecting into the sea and a creek; then follows the large harbour of Ps ygmus , a watering place called that of Cyocephali and the last promontory of this coast Notu-ceras (or the
to the great promontory called Tabai , which affords a secure shelter. The imports into this mart are such as have been already mentioned; while its products are cinnamon, gizeir (a finer sort of cinnamon), asuphê (an ordinary sort),
Southern Horn). After doubling this cape towards the south we have no more descriptions of harbours or places because nothing is known of the sea-coast beyond this point." [Bohn's Transl.] According to Gosselin, the Sonthern Horn corresponds with the Southern Cape of Bandel-caus, where commences the desert coast of Ajan, the ancient Azania.

According to the Periplis Cape Arômata marked the termination of Barbaria and the beginning of Azania. Ptolemy however distinguishes them differently, defining the former as the interior and the latter as the sea-board of the region to which these names were applied.
The description of the Eastern Coast of Africa which now follows is carried, as has been already noticed, as far as $R$ h a pta, a place about 6 degrees South of the Equator, but which Vincent places much farther South, identifying it with Kilwa.

The places named on this line of coast are: a promontory called Tabai, a Khersonesos; Opône, a mart ; the Little and the Great Apokopa; the Little and the Great Coast; the Dromoi or courses of Azania (first that of Serapiôn, then that of Nikôn); a number of rivers; a succession of anchorages, seven in number; the Paralaoi islands; a strait or canal; the island of Menouthias; and then Rhapta,
fragrant gums, magla, motô (an inferior cinnamon), and frankincense.
13. If, on sailing from T a bai, you follow the coast of the peninsula formed by the promontory, you are carried by the force of a strong current to another mart 400 stadia distant, called Opon $\hat{\theta}$, which imports the commodities already mentioned, but produces most abundantly cin-
beyond which, as the author conceived, the ocean curved round Africa until it met and amalgamated with the Hesperian or Western Ocean.
(13) Tabai, to which the inhabitants of the Great Cape fled for refuge on the approach of a storm, cannot, as Vincent and others have supposed, be Cape Orfui, for it lay at too great a distance for the purpose. The projection is meant which the Arabs call Banna. [Or, Tabai may be identified with Râs Shenarif, lat. $11^{\circ} 40^{\prime}$ N.] Tabai, Müller suggests, may be a corruption for Tabannai.
"From the foreign term Banna," he says, " certain Greeks in the manner of their countrymen invented Panos or Panôn or Panô or Panôna Kômê. Thus in Ptolemy (I. 17 and IV. 7) after Arômata follows Panôn Kôm ê, which Mannert has identified with Benna. [Khor Banneh is a salt lake, with a village, inside Râs Ali Beshgêl, lat. $11^{\circ} 9^{\prime}$ N., long. $51 \circ 9^{\prime}$ E.] Stephen of Byzantium may be compared, who speaks of Panos as a village on the Red Sea which is also called Panôn." The conjecture, therefore, of Letromius that $\mathrm{Panôn}$ Kômê derived its name from the large apes found there, called Pâes, falls to the ground.
namon, spice, moth, slares of a very superior sort, chiefly for the Eggptian market, and tor-toise-shell of small size but in large quantity and of the finest quality known.
14. Ships set sail from Egypt for all these ports beyond the straits about the month of July-that is, Epiphi. The same markets are also regularly supplied with the products of places far beyond them-A riakê and Barugaza. These products are-

Sitos-Corn.

Boúrvpoz-Butter, i. e. ght.
*Eえutov $\sigma \eta \sigma a ́ \mu \iota \nu o \nu-O i l ~ o f ~ s e s a m u m . ~$

Opûnê was situated on the Southern shores of what the Periplus calls a Khersonese, which can only be the projection now called Ras Hafan or Cape D'Orfui (lat. $10^{\circ} 25^{\prime} \mathrm{N}$. ). Ptolemy (I. 17) gires the distance of Oponê from Panôn Kômê at a 6 days' journcy, from which according to the Periphis it was only 400 stadia distant. That the text of Ptolemy is here corrupt cannot be doubted, for in his tables the distance between the two places is not far from that which is given in the Periplus. Probably, as Miller conjectures, he wrote ódóv $\dot{\eta} \mu$ ќpas (a day's journey) which was converted into ó oov $\dot{\eta} \mu \epsilon \rho$.s' (a six-days' journey).
(14) At this harbour is introduced the mention of the voyage which was annually made between

[^15]cotton called Monakh8, and a coarse kind for stuffing called Sagmatogene.

 honey of a reed, called sugar.

Some traders undertake voyages for this commerce expressly, while others, as they sail along the coast we are describing, exchange their cargoes for such others as they can procure. There is noking who reigns paramount over all this region, but each separate seat of trade is raled by an independent despot of its own.
15. After Opônê, the coast now trending more to the south, you come first to what are called the little and the great A pokopa (or Bluffs) of Azania, where there are no har-
the coast of India and Africa in days previous to the appearance of the Grecks on the Indian Ocean, which has already been referred to.
(15) After learing O pônê the coast first runs due south, then bends to the south-west, and here begins the coast which is called the Little and the Great Apokopa or Bluffs of Azania, the voyage along which occupies six days. This rocky coast, as we learn from recent explorations, begins at Râs Mabber [about lat. $9^{\circ} 25^{\prime} \mathrm{N}$.], which is between 70 and 80 miles distant from Ras Hafûn and extends only to Râ s-ul-Kheil [about lat. $7^{\circ} 45^{\prime}$ N.], which is distant from Rês Mabber about 140 miles or a voyage of three or four days only. The length of this rocky const (called Uazine by the Arabs) is therefore much exaggerated in the Peri-
bours, but only roads in which ships can conveniently anchor. The navigation of this coast, the direction of which is now to the southwest, occupies six days. Then follow the Little Coast and the Great Coast, occupying other six days, when in due order sneceed the Dromoi
plis. From this error we may infer that our author, who was a very careful observer, had not personally visited this coast. Ptolemy, in opposition to Marinos as well as the Periplês, recognizes but one A pokopa, which he speaks of as a bay. Müller concludes an elaborate note regarding the Apokopa by the following quotation from the work of

- Oren, who made the explorationalready referred to, " It is strange that the descriptive term Hazine should have produced the names Ajan, Azan and Azania in many maps and charts, as the country never had any other appellation than Barra Somali or the land of the Somali, a people who hare never yet been collected under one government, and whose limits of subjection are only within bow-shot of individual chiefs. The coast of Africa from the Red Sea to the river Juba is innabited by the tribe called Somali. They are a mild people of pastoral habits and confined entirely to the coast; the whole of the interior being occupied by an untameable tribe of sarages called Galla."

The coast which follors the Apokopa, called the Little and the Great $\Delta$ igialos or Coast. is so desolate that, as Vincent remarks, not a name occurs on it, neither is there an anchorago noticed, nor the least trace of commerce to be
(or Courses) of Azania, the one going by the name of $S a r a p i o n$, and the other by that of Nikôn. Proceeding thence, you pass the mouths of numerous rivers, and a succession of other roadsteads lying apart one from another a day's distance either by sea or by
found. Yet it is of great extent-a six days' royage according to the Periplis, but, according to Ptolemy, who is here more correct, a voyage of eight days, for, as we have seen, the Periplus has unduly extended the Apokopa to the South.

Next follow the Dromoi or Courses of Azania, the first called that of Serapion and the other that of Nikon. Ptolemy interposes a bay between the Great Coast and the port of Serapionn, on which he states there was an emporium called Essina-a day's sail distant from that port. Essina, it would therefore appear, must have been somewhere near where Makdashu [Magadoxo, lat. $\left.2^{\circ} 3^{\prime} \mathrm{N}.\right]$ was built by the Arabs somewhere in the eighth century A.D. The station called that of Nikôn in the Periplus appears in Ptolemy as the mart of Tonikê. These names are not, as some have supposed, of Greek origin, but distortions of the native appellations of the places into names familiar to Greek ears. That the Greeks had founded any settlements here is altogether improbable. At the time when the Periplits was written all the trade of these parts was in the hands of the Arabs of Mouza. The port of Serapiôn may be placed at a promontory which occurs in $1^{\circ} 40^{\prime}$ of N. lat. From this, Tonike, according to
land. There are seven of them altogether, and they reach on to the Puralaoi islands and the narrou: strait called the Canal, beyond which, where the coast changes its direction from southwest slightly more to south, you are conducted by a voyage of two days nnd two nights to 11 e-
the tables of Ptolemy, was distant $45^{\prime}$, and its position must therefore have agreed with that of Torre or 'lorra of our motern maps.

Next occurs a succession of rivers and roadsteads, seren in mamber, which being frassed we are conducted to the Puralait Fslands, and what is called a canal or channel ( $\delta(\dot{\omega} \rho v \xi)$. These islands are not mentioned elsewhere. They catr readily be identified with the two called Manda and Lamou, which are sitnate at the mouths of large rivers, and are separated from the mainland and from each other by a narrow chamel. Vincent would assign a Greek origin to the name of these islands. "With a very slight alteration," he says, "of the reading, the Puralian Islands (חivp $\hat{u}$ doov, murine fire, are the islands of the Fiery Ocean, and nothing seems more consonant to reason tham for a Greek to apply the mame of the Fiery Ocean to a spot which was the centre of the 'lorrid Zone and subject to the perpendicular rays of an equinoctial sun." [The Juba islands run along the coast from Juba to about Lat. $1^{\circ} 50^{\prime} \mathrm{S}$., and Manda bay and island is in Lat. $2^{\circ} 12 \mathrm{~S}$.]

Beyoud these islands occurs, after a voyage of two days and two nights, the islund of Me nouthias or Menouthesias, which it has
nouthias, anisland stretching towards sunset, and distant from the mainland about 300 stadia. It is low-lying and woody, has rivers, and a vast variety of birds, and yields the mountain tortoise, but it has no wild beasts at all, except only crocodiles, which, however, are quite
been found difficult to identify with any certainty. " It is," says Vincent, " the Litenediommenouthesias of the Periplits, a term egregiously strange and corrupted, but out of which the commentators unanimonsly collect Menoothias, whatever may be the fate of the remaining syllables. 'Ihat this Menoothias," he continues, " must hare been one of the Zangibar islands is indubitable; for the distance from the coast of all three, Pemba, Zangibar, and Momfia, affords a character which is indelible; a character applicable to no other island from Guardufui to Madagascar." He then identifies it with the island of Zangibar, lat. $6^{\circ} 5^{\prime}$ S., in preference to Pemba, $5^{\circ} 6^{\prime}$ S., which lay too far out of the course, and in preference to Momfia, $7^{\circ} 50^{\prime}$ S. (though more doubtfully), because of its being by no means conspicuous, whereas Zangibar was so prominent and obvious above the other two, that it might well attract the particular attention of navigators, and its distance from the mainland is at the same time so nearly in accordance with that given in the Periplis as to counterbalance all other objections. A writer in Smith's Classical Geography, who seems to have overlooked the indications of the distances both of Ptolemy and the Periplit, assigns it a position much further to the north than is reconcilable with these distances.
harmless. The boats are here made of planks sewn together attached to a keel formed of a single $\log$ of wood, and these are used for fishing and for catching turtle. This is also caught in another mode, peculiar to the island, by lowering wicker-baskets instead of nets, and fixing
He places it about a degree south from the mouth of the River Juba or Govind, just where an opening in the coral-reefs is now found. "The consting voyage," he says, " stecring S. W., reached the island on the east side-a proof that it was close to the main. . . . It is true the narigator says it was 300 stadia from the mainland; but ns there is no reason to suppose that ho surveyed the island, this distance must be taken to signify the estimated width of the northern inlet separat. ing the island from the main, and this estimate is probably much exaggerated. The mode of fishing with baskets is still practised in the Juba islands and along this coast. The formation of the coast of E. Africa in these latitudes-where the hills or downs upon the coast are all formed of $n$ coral conglomerate comprising fragments of madrepore, shell and sand, renders it likely that the island which was close to the main 16 or 17 centurics ago, should now be united to it. Granting this theory of gradual transformation of the coast-line, the Monouthias of the Periplus may be supposed to have stood in what is now the rich garden-land of Shamba, where the rivers carrying down mud to mingle with the marine deposit of coral drift covered the chokedup estuary with a rich soil."

them against the mouths of the cavernous rocks which lie out in the sea confronting the beach.
16. At the distance of a two days' sail from this island lies the last of the marts of Azania, called Rbapta , a name which it derives from the sewn boats just mentioned. Ivory is procured here in the greatest abundance, and also turtle. The indigenous inhabitants are

The island is said in the Periplis to extend towards the West, but this does not hold good either in the case of Zangibar or any other island in this part of the coast. Indeed there is no one of them in which at tho present day all the characteristics of Menouthias are found combined. Momfia, for instance, which resembles it somewhat in name, aud which, as modern trarellers tell us, is almost entirely occupied with birds and covered with their dung, does not possess any streams of water. These are found in Zangibar. The author may perhaps have confusedly blended together the accounts he had received from his Arab informants.
(16) We arrive next and finally at R hap ta, the last emporium on the coast known to the author. Ptolemy mentions not ouly a city of this name, but also a river and a promontory. The name is Greek (from $\dot{\rho}$ ántetv, to sew), and was applied to the place because the vessels there in use were raised from bottoms consisting of single trunks of trees by the addition of planks which were sewn together with the fibres of the cocoa.
men of huge stature, who live apart from each other, every man ruling like a lord his own domain. The whole territory is governed by the despot of Mopharitis, because the sovereignty over it, by some right of old standing, is rested in the kingdom of what is called the First Arabif. The merchants of Mouza farm its revenues from the king , and employ in trading with it a great many ships of heavy burden, on board of which they have Arabian commanders and factors who are intimately acquainted with the natives and have contracted marriage

[^16]with them, and know their language and the navigation of the coast.
17. The articles imported into these marts are principally javelins manufactured at Mouza, hatchets, knives, awls, and crown glass of various sorts, to which must be added corn and wine in no small quantity landed at particular ports, not for sale, but to entertain and thereby conciliate the barbarians. The articles which these places export are ivory, in great abundance but of inferior quality to that obtained at Adouli, rhinoceros, and tortoise-shell of fine quality, second only to the Indian, and a little nauplius.
geographers, began here. Another capo however is mentioned by Ptolemy remoter than Rhaptum and called Prasum (that is tho Green Cape) which may perhaps be Cape Delgado, which is noted for its luxuriant vegetation. The same nuthor calls tho people of Rhapta, the lhapsioi Aithiopes. They are described in the Periplas as mon of lofty stature, and this is still a characteristic of the Africans of this const. The Rhapsii were, in the days of our author, subject to the people of Mouza in Arabia just as their descendants are at the present day subject to the Sultan of Maskat. Their commerce moreover still maintains its ancient characteristics. It is the African who still builds and mans the ships while the Arab is the navigator and supercargo. The jrory is still of inferior quality, and the turtle is still captured at certain parts of the coast.
18. These marts, we may say, are about the last on the coast of Azania -the coast, that is, which is on your right as you sail south from Berenik $\hat{e}$. For begond these parts an ocean, hitherto unexplored, curves round towards sunset, and, stretehing along the southern extremities of Lethiopia, Libya, and Africa, amalgamates with the Western Sea.
19. To the left, again, of Berenikê, if you
$(18,19)$ Our author hasing thus described the African coast as far southward as it was known on its Wastern side, reverts to Berenikê andenters at once on a narrative of the second voyage--that which was made thence across the Northern head of the grulf and along the coast of Arabia to the emporium of Mou\%a near the Straits. 'The courso is first northward, and the parts about Berenike ns you bear aray lie therefore now on your left hand. Having touched at M yos Hormos the course on leaving it is shaped eastward across the gulf by the promontory Pharan, and Leukekome $\hat{e}^{\text {bo }}$ is reached after three or four days' sailing. 'This was a port in the kingdom of the Nabathoans (the Nebaioth of seripture), situated perhaps near the mouth of the Elanitic Giulf or eastern arm of the Red Sea, now called the Gulf of Akabah. Much difterence of opinion has prevailed as to its exact position, since the encroachment of the land upon the sea has much altered the line of coast here. Mamert identified it with the modern Yenbo [lat. $24^{\circ} 5^{\prime}$ N., long. $38^{\prime} 3^{\prime}$ E., the port
${ }^{10}$ Meaning ulite village.
sail eastward from Myos-Hormos across the adjacent gulf for two days, or perhaps three, you arrive at a place having a port and a fortress which is called Le ukt $\mathrm{K} \hat{\mathrm{o}} \mathrm{m} \hat{\mathrm{e}}$, and forming the point of communication with Petra, the residence of Malikhas, the king of the Nabatarans. It ranks as an emporium of trade, since small vessels come to it laden with merchandize from Arabia; and henco au officer is deputed to
of Medina], Gosselin with Mowilah [lat. $27^{\circ}$ $38^{\prime}$ N., long. $35^{\circ} \varrho 8^{\prime}$ E.,] Vincent with Ey nounah [lat. $28^{\circ} 3^{\prime}$ N.; long. $35^{\circ} 13^{\prime}$ E. -the Onne of Ptolemy], Reichhard with Istabel Antai, and Rippel with Wojh [lat. $26^{\circ} 13^{\prime}$ N., long. $36^{\circ}$ $27^{\prime}$ L]. Miiller prefers the opinion held by Bochart, D'Anville, Quatremêre, Noel des Vergers, and Ritter, who agree in placing it at the port called Hauara 「lat. $24^{\circ} 59^{\prime}$ N., long. $37^{\circ} 16^{\prime}$ E.) mentioned by Idrisi (I. p. 332), who describes it as a village inhabited by merchants carrying on a considerable trade in earthen vases manufactured at a clay-pit in their neighbourhood. Near it lies the island of Hassani [lat. $24^{\circ} 59^{\prime}$ N., long. $\left.37^{\circ} 3 \prime \mathrm{E}.\right]$, which, as Wellsted reports, is conspicuous from its white appearance. Loukô Kômê is mentioned by various ancient authors, as for instance Strabo, who, in a passago wherein he recounts the misfortunes which befel the. expedition which Aclius led into Nabathaca, speaks of the place as a large mart to which and from which the camel traders travel with ease and in safety from Petra and back to Petra
collect the duties which are levied on imports at the rate of twenty-five per cent. of their value, and also a centurion who commands the garrison by which the place is protected.
20. Beyond this mart, and quite contiguous to it, is the realm of Arabia, which stretches to a great distance along the coast of the Red Sea. It is inhabited by various tribes, some speaking the same language with a certain degree of
with so large a body of men and camels as to differ in no respect from an army.

The merchandize thus conveyed from Leuk $\hat{\theta}$ Kômê to l'etra was passed on to Rhinokoloura in Palestine near Egypt, and thence to other nations, but in his own time the greater part was transported by the Nile to Alexandria. It was brought down from India and Arabia to Myos Hormos, whence it was first conreyed on camels to K optos and thence by the Nile to Alexandria. The Nabathaean king, at the time when our author sisited Leuke Kômê, was, as he cells us, Malikhas, a name which means 'king.' 'I'wo Petraem sovereigns so called are mentioned by Josêphos, of whom the latter was contemporary with Herod. The Malikhas of the Periplis is however not mentioned in any other work. 'The Nabathaen kinglom was subserted in the time of 'Trajan, A.d. 10's, is we learn from Dio Cassius (cap. 1xviii. 14), and from Eutropius (viii. 2, ?), and from Ammianms Marcellinus (xiv. 8).
(2()) At nogreat distance from Leukê K $\hat{\mathrm{c}} \mathrm{m} \hat{\mathrm{e}}$ the Nahathaean realn termiuates and Arabia
uniformity, and others a language totally differ: ent. Here also, as on the opposite continent, the sea-board is occupied by Ikhthyophagoi, who live in dispersed huts; while the men of the interior live either in villages, or where pasture can be found, and are an evil race of men, speaking two different languages. If a vessel is driven from her course upon this shore she is plundered, and if wrecked the crew on escaping to land are reduced to slavery. For this reason they are treated as enemies and captured by the chiefs and kings of Arabia. They are called Kanraitai. Altogether, therefore, the navigation of this part of the Arabian coast is very dangerous: for, apart from the barbarity of its people, it has neither harbours nor good roadsteads, and it is foul with breakers, and girdled'with rocks which render it inaccessible. For this reason when sailing south we stand off
begins. The coast is here described as most dismal, and as in every way dangerous to navigation. The inhabitants at the same time are barbarians, destitute of all humanity, who scruple not to attack and plunder wrecked ships and to make slaves of their crews if they escaped to land. The mariner therefore, shumed these inhospitable shores, and standing well cut to sen, sailed down the middle of the gulf. The tribe here spoken of was that perhaps which is represented by the Hutemi of the present day, and the coast belonged to the part of Arabia now called II ejid.
from a shore in every way so dreadful, and keep our course down the middle of the gulf, straining our utmost to reach the more civilized part of Arnbia, which begins at Burnt Island. From this onward the people are under a regular government, and, as their country is pastoral, they keep herds of cattle and camels.
21. Beyond this tract, and on the shore of a bay which occurs at the termination of the left (or east) side of the gulf, is Mouza, an established and notable mart of trade, at a distance

[^17]south from Berenike of not more than 12,000 stadia. The whole place is full of Arabian shipmasters and common sailors, and is absorbed in the pursuits of commerce, for with ships of its own fitting out, it trades with the marts beyond the Straits on the opposite coast, and also with Barugaza.
22. Above this a three days' journey off lies the city of $\mathrm{Sau} \hat{\hat{\theta}}$, in the district called Mopharitis. It is the residence of Kholaibos , the despot of that country.
probability supposes to be the ancient mart now carried inland to this distance by the recession of the coast." [He must have confounded it with Jebel Musa, due east of Mokhî, at the commencement of the mountain country.] It is a mere village badly built. Its water is good, and is said to be drunk by the wealthier inhabitants of Mokha. Bochart identified Mouza with the Mesha montioned by Moses.
(22) The Periplis notices two cities that lay inland from Mouza-the 1st Sauê, the Savê of Pliny (VI. xxvi., 10.1), and also of Ptolemy (VI. vii., p. 411), who places it at a distance of 500 stadia S. E. of Mouza. The position and distance direct us to the city of Taaes, which lies neara mountain called Saber. Sauê belonged to a districtcalled Mapharitis or Mophareitês, a name which appears to survive in the modern Mharras, which designates a mountain lying N. E. from 'Taaes. It was ruled by Kholaiboos (Arabicé - Khaleb), whom our author calls a tyrant,
23. A journey of nine days more conducts us to Saphar, the metropolis of Kharibaêl, the rightful sovereign of two contiguous tribes, the Homêrites and the Sabaitai, and, by means of frequent embassies and presents, the friend of the Emperors.
and who was therefore probably a Sheikh who had rerolted from his lawful chief, and established himself as an independent ruler.
(23) The other city was S aphar, the metropolis of the Homeritai, ic. the Ilimaryi-the Arabs of Yemen, whose power was widely extended, not only in Yemen but in distant countries both to the Bast and West. Saphar is called Sapplar Ly Ptolemy (VI. vii.), who places it in $14^{\circ} \mathrm{N}$. lat. Philostorgios calls it Tapharon, and Stephen of Byzantium Tarphara. It is now Dhafar or Dsoffar or Zaphar. In Edrisi (I. p. 148) it appears as Dhofar, and he thus writes of it :-" It is the capital of the district Jahsseb. It was formerly one of the greatest and most famous of cities. The kings of Yemen made it their residence, and there was to be seen the palace of Zeidan. 'These structures are now in ruins, and the population has been much decreased, nevertheless the inhubitants have preserved some remnants of their ancient riches." The ruins of the city and palace still exist in the neighbourhood of Jerim, which Niebuhr places in $14^{\circ} 30^{\prime} \mathrm{N}$. lat. The distance from Suue to Saphar in the Periplis is a nine days' journey. Niebuhr accomplished it however in six. Perhaps, as Müller suggests, the nine days' journey is from
24. The mart of Mouza has no harbonr, but its sea is smooth, and the anchorage good, owing to the sandy nature of the bottom. The commodities which it imports are-
 and ordinary.

MouzatoSaphar. The sovereign of Saphar is called by our author Kharibaêl, a name which is not found among the Himyaritic kings known from other sources. In Ptolemy the region is called Elisarôn, from a king bearing that name.
(24) Adjacent to tho Homeritai, and subject to them when the Periplis was written, were the Sabaeans, so famous in antiquity for their wealth, ${ }^{k}$

The country produces a little wheat and a great abundance of wine. Both the king and the despot above mentioned receive presents consisting of horses, pack-saddle mules, gold plate, silver plate embossed, robes of great value, and utensils of brass. Mouza exports its own local products-myrrh of the finest quality that has oozed in drops from the trees, both the Gabirean and Mincean kinds; white marble (or alabaster), in addition to commodities brought from the other side of the Gulf, all such as were enumerated at Adouli. The most favourable season for making a voyage to Mouza is the month of September,-that is Thoth,-but there is nothing to prevent it being made earlier.
25. If on proceeding from Mouza you sail by the coast for about a distance of 300 stadia,
luxury and magnificence. Their country, the Sheba of Scripture, was noted as the land of frankincense. Their power at one time extended far and wide, but in the days of our author they were sulject to the Homerites ruled over by Kharibact, who was assiduous in courting the friendship of Rome.
(25) At a distance of 300 stadia beyond Mouza we reach the straits where the shores of Arabia and Africa adrance so near to each other that the possage between them has ouly, according to the Periplus, a width of 60 stadia, or $7 \frac{1}{3}$ miles. In the midst of the passage lies the island of Diodôros (now Perim), which is about $4 \frac{1}{3}$ miles long by 2 broad, and rises 230 feet above the level of the
there occurs, where the Arabian mainland and the opposite coast of Barbaria at Aualitês now approach each other, a channel of no great length which contracts the sea and encloses it within narrow bounds. This is 60 stadia wide, and in crossing it you come midway upon the island of Diodoros, to which it is owing that the passage of the straits is in its neighbourhood exposed to violent winds which blow down from the adjacent mountains. There is situate upon the shore of the straits an Arabian village subject to the same ruler (as Mouza), Okêlis by name, which is not so much a mart of commerce as a place for anchorage and supplying water, and where those who are bound for the . interior first land and halt to refresh themselves.
sea. The straits, according to Moresby, are $14 \frac{1}{3}$ geographical miles wide at the entrance between Bab-el-Mandab Cape (near which is Perim) and the opposite point or volcanic peak called Ji bel Sijan. The larger of the two entrances is 11 miles wide, and the other only $l_{\frac{1}{3}}$. Strabo, A gathemeros, and Pliny all agree with the Periplis in giring 60 stadia as the breadth of the straits. The first passage of those dreaded straits was regarded as a great achievement, and was naturally ascribed to Sesostris as the voyage though tho straits of Kalpê was ascribed to Heraklôs.

Situated on the shores of the straits was a place called $O k e ̂ l i s$. This was not a mart of commerce, but merely a bay with
26. Beyond O k e lis, the sea again widening out towards the east, and gradually expanding into the open main, there lies, at about the distance of 1,200 stadia, Eudaimôn Arabia, a maritime villago subject to that kingdom of which Kharibait is sovereign-a placo with good anchorage, and supplied with sweeter and better water than that of Okêlis, and standing at the entrance of a bay where the land begins to
good anchorage and well supplied with water. It is identical with the modern Ghalla or Cella, which has a bay immediately within the straits. Strabo following Artemidoros notes here a promontory called Akila. Pliny (VI. axxii. 157) mentions an emporium of the same name "ex quo in Indiam navigatur." In xxvi., 104 of the same Buok he says: "Indos petentibus utilissimun estal, O celi egredi." P'tolemy mentions alseudokêlis, which he places at the distance of half a degree from the emporium of Okolis.
(26) At a distance beyond Okêlis of 1,200 stadia is the port of Eudaimôn Arabia, which beyond doubt corresponds to 'Aden, [lat. 120 $45^{\prime}$ N., long. $45^{\circ} 21^{\prime}$ E.] now so well-known as the great packet station between Suca and India. The opinion held by some that Aden is the Eden mentioned by the Prophet Ezekicl (xxrii. 23) is opposed by Ritter and Winer. It is not mentioned by Pliny, though it has been erroneously held that the Attanae, which he mentions in tho following passage, was Adcu. "Homuae

## 85

retire inwards. It was called Eudaimôn (' rich and prosperous'), because in bygone days, when the merchants from India did not proceed to Egypt, and those from Egypt did not venture to cross over to the marts further east, but both came only as far as this city, it formed the common centre of their commerce, as Alexandria receives the wares which pass to and fro between Egypt and the ports of the Mediter-
et Attanae (v.l. Athanae) qua nunc oppida maxime celcbrari a Persico mari negotiatores dicunt." (vi. 32.) Ptolemy, who calls it simply Arabia, speaks of it as an emporium, and places after it at the distance of a degree and a half Melan Horos, or Black Hill, 17 miles from the coast, which is in long. $46^{\circ} 59^{\prime} \mathrm{E}$. The place, as the 'Periplas informs us, received the name of Eudaimon from the great prosperity and wealth which it derived from being the grent entrepût of the trado between India and Egypt. It was in deeay when that work was written, but even in the time of Ptolemy had begun to show symptoms of returning prosperity, and in the time of Constantine it was known as the 'Roman Em-' porime, and had almost regained its former consequence, as is gathered from a passage in the works of the ecelesiastical historian Philostorgios. It is thus spoken of by Edrisi (I p. 51) : "'Aden is a small town, but renowned for its seaport whence slips depart that are destined for Sind, India, and China." In the middle ages it became again the centre of the trade between India and
ranean. Now, however, it lies in ruins, the Emperor having destroyed it not long before our own times.
27. To Eudaimôn Arabia at once succeeds a great length of coast and a bay extending 2,000 stadia or more, inhabited by nomadic tribes and Ikhthyophagoi settled in villages. On doubling a cape which projects from it you come to another trading seaport, K an $\hat{0}$, which
the Red Sea, and thus regained that wonderful prosperity which in the outset had given it its name. In this flourishing condition it was found by Marco Polo, whose account of its wealth, power and influence is, as Vincent remarks, almost as magnificent as that which Agatharkhidês attributed to the Sabeans in the timo of the Ptolemies, when the trade was carried on in the same manner. Agatharkhidès does not howerer mention the place by name, but it was probably the city which he describes without naming it as lying on the White Sca without the straits, whence, he says, the Sabrans sent out colonies or factories into India, and where the fleets from Persis, Karmania and the Indus arrived. The name of Aden is supposed to bo a corruption from Eudaimôn.
(27) The coast beyond Aden is possessed partly by wandering tribes, and partly by tribes settled in villages which subsist on fish. Here occurs a bay-that now called Ghubhet-al-Kamar, which extends upwards of 2,000 stadia, and ends in a promontory-that now called Râs-al-Asîdah or
is subject to Eleazos, king of the incense country. Two barren islands lie opposite to it, 120 stadia off-one called Orneôn, and the other Troullas. At some distance inland from $K a n \hat{e}$ is $S a b b a t h a$, the principal city of the district, where the king resides. At Kan $\hat{\theta}$ is collected all the incense that is produced in the country, this being conveyed to it partly on camols, and partly by sea on floats

Bû-l-hâf [lat. $13^{\circ} 58^{\prime}$ N., long $48^{\circ} 9^{\prime}$ S.-a capo with a hill near the fishing village of Gillah]. Beyond this lies another great mart called K a n ê. It is mentioned by Pliny, and also by Ptolemy, who assigns it a position in agreement with the indications given in the Periplits. It has been identified with the port now called Hisn Ghorâb [lat. $14^{\circ} 0^{\prime} \mathrm{N}$. long. $48^{\circ} 19^{\prime} \mathrm{E}$.]. Not far from this is an island called Halani, which answers to the Troullas of our author. Further south is another island, which is called by the natives of the adjacent coast Sikkah, but by sailors Jibus. This is covered with the dung of birds which in countless multitudes have always frequented it, and may bo therefore identified with the Orneôn of the Periplus. Kan ô was subject to Eleazos, the king of the Frankincense Country, who resided at Sabbatha, or as it is called by Pliny (VI. xxxii. 155) Sabota, the capital of the Atramitae or Adramitae, a tribe of Sabæans from whom the division of Arabia now known as Hadhramaut takes its name. The position of this city cannot be determined with certainty. Wellsted, who pro-
supported on inflated skins, a local invention, and also in bonts. Kanê carries on trade with ports ncross the occan-Barugaza, Skythia, and Omana, and the adjacent coast of Persis.
28. From Egypt it imports, like Monza, corn and a little wheat, cloths for the Arabian
ceeded into the interior from the coast near Hisn Ghorab through Wadi Meifah, camo after a day's journcy and a half to a place called Nakb-elHajar, situated in a highly cultivated district, where he found ruins of an ancient city of the Himyarites crowning an eminence that rose gently with a double summit from the fertilo plain. The city appeared to heve been built in the most solid style of architecture, and to have been protected by a very lofty wall formed of square blocks of black marble, while the inseriptions plainly betokened that it was an old seat of the Himyarites. A close similarity could be traced between its ruins and those of Kan $\hat{e}$, to which there was an easy communication by the ralley of Meifah. This place, however, can hardly be regarded as S a b batha without setting aside the distances given by Ptolemy, and Wellsted moreover learned from the natires that other ruins of a city of not less size were to be met with near a village called Esan, which could be reached by a three days' journey.-(Sce Haines, Mem. of the S. Coast of Arab.)
(28) With regard to the staple product of this region-frankincense, the Periplis informs us that
market, both of the common sort and the plain, and large quantities of a sort that is adulterated; siso copper, tin, coral, styrax, and all the other articles enumerated at Mouza. Besides these there are brought also, principally for the king, wrought silver plate, and specio as well as horses and carved images, and plain cloth of a superior quality. Its exports are its indigenous products, frankincense and aloes, and such commodities as it shares in common with other marts on the same coast. Ships sail for this port at the same season of the year as those bound for Mouza, but earlier.
29. As you proceed from K and the land
it was brought for exportation to K a $\mathrm{n} \hat{0}$. It was howerer in the first place, if we may credit Pliny, conveyod to the Metropolis. He says (xv. 32) that when gathered it was carricd into Sabota on camels which could enter the city only by one particular gate, and that to take it by any other route was a crimo punished by death. The priests, he adds, take a tithe for a deity named Sabis , and that until this impost is paid, the article cannot be sold.

Some writers would identify Sabbatha with Mariabo (Marab), but on insufficient grounds. It has also been conjectured that the name may bo a lengthened form of Sab a (Sheba), a common appellation for cities in Arabia Felis. [Müller places Sabbatlia at Sawa, lat. $16^{\circ} 13^{\prime} \mathrm{N}$., long. $48^{\circ} 9^{\prime}$ E.]
(29) The next place mentioned by our author $l$
retires more and more, and there succeeds another very deep and far-stretching gulf, Sakhalitês by nome, and also the frankincense country, which is mountainous and difficult of access, having a dense air loaded with rapours [and] the frankincense exhaled from the trees. 'These trees, which aro not of any great size or height, yield their incense in the form of $\Omega$ concretion on the bark, just as several of our trees in Eggpt exude gum. The incenso is collected by the hand of the king's slaves, and malefactors condemued to this service as a punishment. The country is unhealthy in the extreme :-pestilential even to those who sail along the coast, and mortal to the poor wretches who gather the incense, who also suffer from lack of food, which readily cuts them off.
30. Now at this gulf is a promontory, the greatest in the world, looking towards the east,
afterKanêis a Bay called Sakhalites, which terminates at Suagros , a promontory which looks eastward, and is the greatest cape in the whole world. There was much difference of opinion among the ancient geographers regarding the position of this Bay, and consequently regarding that of Cape Suagros.
(30) Some would identify the latter with Râs-el-Had, and others on account of the similarity of the name with Cape Saugra or Saukirah [lat. $18^{\circ} 8^{\prime}$ N., long. $56^{\circ} 35^{\prime}$ E.], where Ptolemy places a city Suagros at a distance of C degrees

## 91

and called Sungros , at which is a fortress which protects the country, and a harbour, and a magazine to which the frankincense which is collected is brought. Out in the open sea, facing this promontory, and lying between it and the promontory of Arômata, which projects from the opposite coast, though nearer to Suagros, is the island going by the name of Dioskoridês, which is of great extent, but
from Kanê. But Suagros is undoubtedly Ras Fartak [lat. $15^{\circ} 39^{\prime} \mathrm{N}$., long $52^{\circ} 15^{\prime} \mathrm{E}$.], which is at a distance of 4 degrees from Hisn Ghorab, or Kanê, and which, rising to the height of 2,500 feet on a coast which is all low-lying, is a very conspicuous object, said to be discernible from a distance of 60 miles out at soa. Eighteen miles west from this promontory is a village called Saghar, a name which might probably have suggested to the Greeks that of Suagros . Consistent with this identification is the passage of Pliny (VI. 32) where he speaks of the island Dioscoridis (Sokotra) as distant from Suagros, which he calls the utmost projection of the coast, 2,240 stadia or 280 miles, which is only about 30 miles in excess of the real distance, 2,000 stadia.

With regard to the position of the Bay of S:ikhalitês, Ptolemy, followed by Marcianus, places it to the East of Suagros. Marinos on the other haud, like the Periplis, places it to the west of it. Müller agrees with Fresnel in regarding Sakhlû, montioned by Ptolemy (VI. vii. 41) as
desert and very moist, having rivers and crocodiles and a great many vipers, and lizards of enormous size, of which the flesh serves for food, while the grease is melted down and used as a substitute for oil. This island does not, however, produce either the grape or corn. The population, which is but scanty, inlabits the north side of the island-that part of it which looks towards the mainland (of Arabia). It
$1 \frac{1}{2}$ degreo East of Makalleh [lat. $14^{\circ} 31^{\prime}$ N., long $49^{\circ} 7^{\prime} \mathrm{W}$.] as the same with Shehr-which is now the name of all that mountainous region extending from the seaport of Mahulleh to the bay in which lio the islands of Kurya Marja. He therefore takes this to bo in tho Regio Sakhalitês, and rejects the opinion of Ptolemy as inconsistent with this determination. With regard to Shehr or Shehar [lat. $14^{\circ} 38^{\prime}$ N., long. $49^{\circ} 22^{\prime}$ E.] Yule (M. Polo, II. vol. p. 440, nute) says: "Shihr or Shehr still exists on the $\Lambda$ rabian Coast as a town and district about 330 miles east of Aden." The name Shehr in some of the oriental geographies includes the whole Coast up to Oman. The hills of the Shehr and Dhafar districts were the great source of produce of the Arabian trankincense.

Tho island of Dioskoridôs (now Sokotra) is placed by tho Periphis neurer to Capo S uagros than to Capo Arômata-althoughitsdistance from the former is nearly double the distance from the latter. The name, though in appearance a Greek one, is in reality of Sanskrit origin ; from Dripa Sukhiddra, i.e. insula fortunatu,' Island abode
consists of an intermixture of foreigners, Arabs, Indians, and even Greeks, who resort hither for the purposes of commerce. The island produces the tortoise,-the genuine, the land, and the white sort: the latter very abundant, and distinguished for the largeness of its shell ; also the mountain sort which is of extraordinary size and has a very thick shell, whereof the underpart cannot be used, being too hard to cut,
of Bliss.' The accuracy of the statements made regarding it in the Periplis is fully confirmed by the accounts given of it by subsequent writers. Kosmas, who wrote in the 6th century, says that the inhabitants spoke Greek, and that he met with people from it who were on their way to Ethiopin, and that they spoko Greok. "The ecelesiastical historian Nikephoros Kallistos," says Yule, " seems to allude to the people of Sokotra when he says that among the mations visited by the Missionary 'I'heophilus in the time of Constuntius, were 'the Assyrians on the verge of the outer Occan, towards the East . . whom Alexander the Great, after driving them from Syria, sent thither to settle, and to this day they keep their mother tongue, though all of the blackest, through the power of the sm's rays.' The Arab voyagers of the 9th century say that tho island was colonized with Greeks by Alexander the Great, in order to promote the culture of the Sokotrine aloes; when the other Greeks adopted Christianity these did likewise, and they had continued to retain their profession of it. Tho colonizing by
while the serviccable part is made into moneyboxes, tablets, escritoires, and ornamental articles of that description. It yields also the vegetable dye (кıvvißapı) called Indicum (or Dragon'sblood), which is gathered as it distils from trees.
31. The island is subject to the king of the frankincense country, in the same way as Azania is subject to Kharibaêl and the despot of Mopharitis. It used to be visited by some (merchants) from Mouza, and others on the homeward voyage from Limurike and Barugaza would occasionally touch at it, importing rice, corn, Indian cotton and female-slaves, who, being rare, always commanded a ready market. In exchange for these commodities they would receive as fresh cargo great quantities of tortoise-shell. The revenues of tho island are at the present day farmed out by its sovereigns, who, however, maintain a garrison in it fur the protection of their interests.

Alexander is probably a fable, but invented to account for facts." (Marco Pulo II. 491.) 'The aloe, it may be noted, is not mentioned in the Pcriphte as one of tho products of the island. The islanders, though at one time Christians, are now Muhammadans, and subject as of yore to Arabia. 'Tho people of the interior are still of distinct race with curly hair, Indian complexion, and regular features. The coast people aro mongrels of Arab and mixed descent. Probably in old times
32. Immediately after Suagros follows a gulf deeply indenting the mainland of Omana , and having a width of 600 stadia. Beyond it are high mountains, rocky and precipitous, and inhabited by men who live in caves. The range extends onward for 500 stadia, and beyond where it terminates lies an important harbour called Moskha, the appointed port to

[^18] to the littoral foreigners. Marco Polo notes that so fitr back as the loth century it was one of the stations frequented hy the Indian corsairs called Baw $\hat{\mathrm{a}} \mathrm{rij}$, belonging to Kachh and Gujarat.
(32) Returning to the mainland the narrative conducts us next to Moskha, a seaport trading with Kan $\hat{\theta}$, and a wintoring place for vessels arriving late in the season from Malabar and the Gulf of Khambit. The distance of this place from Suigros is set down at upwards of 1,100 stadia, 600 of which represent the breadth of a bay which begins at the Cape, and is called 0 mana Al-Kamar. The occurrence of the two names Omana and Moskha in such closo connexion led D'Anville to suppose that Moskha is identical with Maskat, the capital of O man , the country lying at the south-east extremity of Arabin, and hence that Ras-cl-Had, beyond which Maskat lics, must bo Capo Suagros. This supposition is, however, untenublo, sinco the identification of Moskhn with tho modern $\Delta u$ sora is complote. For, in the first place, tho Bay of Seger, which begius at Cape Fartak, is of exactly the same monsure.
which the Selihalitili frankincense is forwarded. It is regularly frequented by a number of ships from Kanê; and such ships as come from Limurikê and Barugaza too late in tho season put into harbour here for the winter, where they dispose of their muslins, corn, and oil to the king's officers, receiving in exchange frankincense, which lies in piles throughout the
ment across to Cape Thurbot Ali as the Bay of Omana, and again the distance from Cape Thurbot Ali [lat. $16^{\prime \prime}$ i8 $8^{\circ}$ N., long. $\left.53^{\circ} 3^{\prime} \mathrm{E}.\right]$ to Ras-alSair, the Ausara of I'tolemy, correspondsalmost as exactly to the distance assigned by our author from the same Cape to Moskha. Moreover Pliny (XII. 35) notices that one particular kind of incense bore the name of Auscritis, and, as the Periplis states that Moskha was the great emporium of the incense trade, the identification is satisfactory.

There was another Moskha on this coast which mas also n port. It lay to tho west of Suagros, and has been identified with Keshin [lat. $15^{\circ} 21^{\prime}$ N. long. $51^{\circ} 39^{\prime}$ E.]. Our nuthor, though correct in his description of the coast, may perhaps have erred in his nomenclature; and this is the more likely to bare happened ns it searcely admits of doubt that ho had no personal knowledge of Suath Arabia beyond Kane and Cape Suagros. Besides no other author speaks of an Omana so far to westward as the position assigned to the Bay of that name. The tract immediately beyond Moskha or Auscra is low and fertile,

## 97

whole of Sakhalitis without a guard to protect it, as if the locality were indebted to some divine power for its security. Indeed, it is impossible to procure a cargo, either publicly or by connivance, without the king's permission. Should one take furtively on board were it but a single grain, his vessel can by no possibility escape from harbour.
and is called Dofar or Zhafar, after a famous city now destroyed, but whose ruins are still to be traced between Al-hâfûh and Addahariz. "This Dhafur," says Yule (Marco Polo II. p. 442 note) "or the bold mountain above it, is supposed to be the Sophar of Genesis X. 30." It is certain that the Hirnyarites had spread their dominion as far eastward as this place: Marco Polo thus describes. Dhafâr :-" It stands upon the sea, and has a very good haven, so that there is a great traffic of shipping between this and India; and the merchants take hence great numbers of Arab horses to that market, making great profits thereby. . . . Much white incenso is produced here, and I will tell you how it grows. The trees are like small fir-trees; these are notched with a knife in several places, and from these notches tho incense is exuded. Sometimes, also, it flows from the tree without nny notch, this is by reason of the grent heat of the sun thero." Mailler would idontify Moskha with Zhafîr, and accounts for the discrepancy of designation by supposing that our author had confounded the name Maskat, which was the great seat of the traffic in frankincense with
33. From the port of Moskha onward to Asikh, a distance of about 1,500 stadia, runs a range of hills pretty close to the shore, and at its termination there are soven islands bearing the name of Z ênobios, beyond which again we come to another barbarous district not subject to any power in Arabia, but to Persis. If when sailing by this coast you stand well out
the name of the greatest city in the district which actually produced it. A similar confusion he thinks transferred the name of Oman to the sams part of the country. The climate of the incense country is described as being extremely unhealthy, but its unhealthiness scems to hare been designedly exaggerated.
(33) Beyond Moskha tho coast is mountainous as far as $\Lambda$ sikh and the islands of Leno-bios-a distance excessively estimated at 1,500 stadia. The mountains referred to are 5,000 feet in height, and are those now called Subaha. A sikh is readily to beidentified with the Hi $\hat{u}$ sek of Arabian geographers. Edrisi (I. p. 51) says: "Thence (from Marbat) to the town of Hâsck is a four days' journey and a two days' sail. Before II a s e k aro the two islands of Khartan and Martan. Abore Hasek is a high mountain maned Sous, which commands the sea. It is an inconsiderable torn but populous." This place is now in ruins, but has left its name to the promontory on which it stood [Ras Hasck, lat. $17^{\circ} 23^{\prime}$ N. long. $55^{\circ} 20^{\prime}$ E. opposite the island of Hasiki]. The islands of Zênobios are mentioned by Ptolemy as seven in
to sea so as to keep a direct course, then at about a distance from the island of Zênobios of 2,000 stadia you arrive at another island, called that of S ar a p is, lying off shore, say, 120 stadia. It is about 200 stadia broad and 600 long, possessing three villages inhabited by a savage tribe of Ikhthyophagoi, who speak the Arabic language, and whose clothing con-
number, and arethose called by Edrisi K h artan and Martan, now known as the Kuriyan Muriytin islands. The inhabitants belonged to an Arab tribe which was spread from Hasek to Ras-el-Had, and was called Boit or Beni Jenabi, whence the Greek name. M. Polo in the 31st chapter of his travels "discourseth of the two islands called Male and Female," the position of which he vaguely indicates by saying that "when you leavo the kingdom of Kesmacoran (Mekrain) which is on the mainland, you go by sea some 500 miles towards the south, and then you find the 2 islands Male and Female lying about 30 miles distant from one another." (See also Marco Polo, vol. II. p. 396 note.)

Beyond Asikh is a district inhabited by barbarians, and subject not to Arabia but to Persis. Then succeeds at a distance of 200 stadia beyond the islands of Zenobios the island of Sarapis, (the Ogyris of Pliny) now called Masira [lat. 20。 $10^{\prime}$ to $20^{\circ} 42^{\prime} \mathrm{N}$., long. $58^{\circ} 37^{\prime}$ to $58^{\circ} 59^{\prime}$ E.] opposite that part of the coast where Oman now begins. The Pcriplits exaggerates both its breadth and its distance from the continent. It was still in-
sists of a girdle made from the leaves of the cocoa-palm. The island produces in great plenty tortoise of excellent quality, and the merchants of $\mathrm{Kan} \hat{\theta}$ accordingly fit out little boats and cargo-ships to trade with it.
34. If sailing onward you wind round with the adjacent coast to the north, then as you appronch the entrance of the Persian Gulf you
habited by a tribe of fish-caters in the time of Ebn Batuta, by whom it was visited.

On proceeding from $S$ arapis the adjacent coast bends round, and the direction of the voyage changes to north. The great cape which forms the suuth-eastern extremity of Arabia called Ras-el-II a d [lat. $22^{\circ} 33^{\prime}$ N. long. $59^{\circ} 43^{\prime}$ E.] is here indicated, but without leing named; Ptolemy calls it Korod a mon (VI. vii. 11.)
(3.1) Beyoud it, and near the entrance to the Persian Gulf, occurs, according to the Periplís, a group of many islands, which lie in a range along the coast over a space of 2,000 stadia, and are culled the islands of K alaiou. Hereour author is obriously in crror, for there are but three groups of islands on this coast, which are not by any means near the entrance of the Gulf. They lie boyond Maskat [lat. $23^{\circ} 38^{\prime}$ N. long. $58^{\circ} 36^{\prime}$ E.] and extend for a considerable distance along the Batinah coast. The central group is that of the Deymantiych islands (probably the Damnia of Pliny) which are seven in number, and lio nearly opposite Birkeh [lat $23^{\circ} 42^{\circ}$ N. loug. $57^{\circ} 55^{\prime}$ E.]. The error, as Miiller suggests, may be accounted
fall in with a group of islands which lie in a range along the coast for 2,000 stadia, and are called the islands of Kalaiou. The inhabitarits of the adjacent coast are cruel and treacherous, and see imperfectly in the daytime.
35. Near the last headland of the islands of Kalaiou is the mountain called Kalon
for by supposing that the tract of country called El Battinah was mistaken for islands. 'This tract, which is very low and extremely fertile, stretches from Birkch [lat. $23^{\circ} 42^{\prime}$ N. long. $57^{\circ} 55^{\prime}$ E.] onward to Jibba, where high mountains approach the very shore, and run on in an unbroken chain to the mouth of the Persian Gulf. The islands are not mentioned by any other author, for the Calacou insulae of Pliny (VI. xxxii. 150) must, to avoid utter confusion, be referred to the coast of the Arabian Gulf. There is a place called El Kilhat, the Akilla of Pliny [lat. $22^{\circ} 40^{\prime} \mathrm{N}$. long. $59^{\circ} 24^{\prime} \mathrm{E}$.]-but whether this is connected with the Kalaiou islands of the Periplas is uncertain [Conf. Ind. Ant. vol. IV. p. 48. El Kilhât, south of Maskat and close to Ṣur, was once a great port.]
(35) Before the mouth of the Porsian Gulf is reached occurs aheight called Kal on(Fair Mount) at the last head of the islands of Papias-т $\boldsymbol{\omega}$ Haniou $\nu \eta \dot{\prime} \sigma \nu$. This reading has been altered by Fabricius and Schwanbeck to tồ Kaגátov $\nu j \sigma \omega \nu$. The Fair Mount, according to Vincent, would answer sufficiently to Cape Fillam, if
(Pulcher), ${ }^{\text {an }}$ to which succeeds, at no great distance, the mouth of the Persian Gulf, where there are very many pearl fisheries. On the left of the entrance, towering to a vast height, are the mountains which bear the name of Asaboi, and directly opposite
that be high land, and not far from Fillam are the straits. The great cape which Arabia protrudes at theso straits towards Karmania is now called Ras Mussendom. It was seen from the opposite coast by the expedition under Nearkhos, to whom it appeared to be a day's sail distant. The height on that coast is called Semiramis, and also Strongyle from its round shape. Mussendom, the 'Asabôn akron' of Ptolemy, Vincent says, " is a sort of Lizard Point to the Gulf; for all the Arabian ships take their departure from it with some ceremonies of superstition, imploring a blessing on their voyage, and setting afloat a toy like a vessel rigged and decorated, which if it is dashed to pieces by the rocks is to be accepted by the ocean asan offering for the escape of the vessel." [The straits between the island of Mussendom and the mainland are called El Bab, and this is the origin of the name of the Papios islands.Miles' Jour. R. A. Soc. N. S. vol. x. p. 168.]

The actual width of the straits is 40 miles. Pling gives it at 50 , and the Periplus at 75. Cape Mussendom is represented in the Periplus as in

[^19]on the right you see another mountain high and round, called the hill of Semiramis. J.he strait which separates them has a width of 600 stadia, and through this opening the Persian Gulf pours its vast expanse of waters far up into the interior. At the very head of this gulf

Ptolomy by the Mountains of the Asabi which are describod as tremondous heights, black, grim, and abrupt. They are named from the tribe of Beni Asab.

We enter now the Gulf itself, and here the Peri. plus mentions only two particulars: the famous Pearl Fisheries which begin at the straits and extend to Bahrein, and the situation of a regular trading mart called Apologos, which lies at the very head of the Gulf on the Euphrates, and in the vicinity of Spasinou Kharax. This place does not appear to be reforred to in any other classical work, but it is frequently mentioned by Arabian writers under the name of Oboleh or Obolegh. As an emporium it took the place of Torêdôn or Diridôtis, just as Basra (below which it was situated) under the second Khaliphate took the place of Oboleh itself. According to Vincent, Oboleh, or a village that represents it, still exists between Basra and the Euphrates. The canal also is called the canal of Oboleh. Kharax Pasinou was situated where the Karun (the Eulaous of the ancients) flows into the Pasitigris, and is represented by the modern trading town Muhammarah. It was founded by Alexander the Great, andafter its
there is a regular mart of commerce, called the city of Apologos, situnto near PasinouKharaxand the river Euphrates.
36. If you const along the month of the gulf you are conducted by a six days' voyage to another seat of trado belonging to Persis, called Omana. ${ }^{\text {a1 }}$ Barugaza maintains a regular commercial intercourse with both these Persian

#### Abstract

destruction, was rebuilt by Antiokhos Epiphanes, who changed its name from Alexandreia to Antiokhein. It was afterwards occupied by an Arab, Chief called Pasincs, or rathor Spasines, who gave it the name by which it is best known. Pliny states that the original town was only 10 miles from the sea, but that in his time the existing place was so much as 120 miles from it. It was the birth-place of two eminent geographersDionysius Pericgetes and Isidôros. (36) After this cursory glance at the great gulf, our author returns to the straits, and at once

[^20]
## 105

ports, despntching thither large vessels freighted with copper, sandalwond, beams for rafters, horn, and logs of sasumina and ebony. Omana imports also frankinconso from Kanê, while it exports to Arabia a particular species of vessels called madara, which have their planks sewn togother. But both from Apologos and Omana there are exported to Barugaza and to Arabia great quantities of pearl, of mean quality however compared with the Indian sort, together with purple, cloth for the natives, wine, dates in great quantity, and gold and slaves.
37. After leaving the district of Omana
conducts us to the Eastern shores of the Erythraean, where occurs another emporium belonging to Persis, at a distance from the straits of 6 courses or 3,000 stadia. This is Omana. It is mentioned by Pliny (VI. xxxii. 149) who makes it belong to Arabia, and accuses preceding writers for placing it in Karmania.

The name of $O m a n a$ has been corrapted in the MSS. of Ptolemy into Nommana, Nombana, Kommana, Kombana, but Marcian has preserved the correct spelling. From Omana as from Apologos great quantities of pearl of an inferior sort were exported to Arabia and Barugaza. No part however of the produce of India is mentioned as among its exports, although it was the centre of commerce between that country and Arabia.
(37) The district which succeeds Omana belongs to the Parsidai, a tribe in Gedrosia next neigh-
the country of the Prrsidai succeeds, which belongs to another government, and the bay which bears the name of Terabdoi, from the midst of which a cape projects. Here also is a river large enough to permit the entrance of ships, with $\Omega$ small mart at its month callod Oraia. Behind it in the interior, at the distance of $a$ seven days' journey from the coast, is the city where the king resides, called Khambakia. This district, in addition to corn, produces wino, rice, and dates, though in the tract near the sea, only the fragrant gum called belellium.
bours to the Arbitae on tho East. They are mentioned by Ptolemy (VI. xx., p. 439) and by Arrian (Indika xxvi.) who calls them Pasirees, and notes that they had a small town called Pasira, distant about 60 stadia from the sea, and a harbour with good anchorage called Bagisara. The Promoutory of the Periplts is also noted and described as projecting far into the sea, and being high and precipitous. It is the Cape now called Arabahor Urmarah. The Bay into which it projects is called Terabdôn, $n$ name which is found only in our author. Vincenterroncously identifies this with the Paragon of Ptolemy. It is no doubt the Bay which extends from Cape Gundel to Capo Monze. The river which enters this Bay, at the mouth of which stood the small mart called Oraia, was probably that which is now called the Akbor. The royal city
38. After this region, whore the const is already doeply indented by gulfs caused by the land advancing with a vast curve from the east, succeeds the seaboard of Skythia, a region which extends to northward. It is vory low and flat, and contains the mouths of the Sinthos (Indus), the largest of all the rivers which fall into the Erythroan Sea, and whicb, indoed, pours into it such a vast body of water that while you are yot far off from the land at its mouth you find the sen turned of a whito colour by its waters.

The sign by which voyagers bofore sighting
which lay inland from the sea a seven days' journoy was porhaps, as Mannort has conjectured, Rambakia, mentioued by Arrian (Anab. vi. 21) as the capital of the Oreitai or Horitai.
(38) We now approach the mouths of the Indus which our author calls the S in th os , transliterating tho native namo of it-S indhu. In his time the wide tract which was watered by this river in the lower part of its course was called Indoskythia. It derived its name from the Skythian tribes (tho Sitka of Sansk.) who after the orecthrow of the Graeco-Baktrian empire gradually passed southward to the const, where they established thomselves about the year 120 B. c., occupying all the region between tho Indus and the Narmadi. They are callod by Dionysios Periegetes Notioi Skythai, the Southern Skythians. Our author mentions two cities which
land know that it is near is their meeting witht serpents floating on the water; but higher up and on the coasts of Persia the first sign of land is seeing them of a different kind, called graai. [Sansk. gralut-an alligator.] The river hassoven mouths, all shallow, marshy and unfit for navigation except only the middle stream, on which is Barbarikon, a trading seaport. Before this town lies a small islet, and behind it in the interior is Minnagar, the metropolis of Skythia, which is governed, however, by Parthian prinecs, who are perpetually at strife among themselves, expelling each the other.

3!. Ships accordingly anchor near Barbarik $\hat{c}$, but all their cargoes are conveyed by the river up to the king, who resides in the metropolis.
The articles imported into this emporium are-
'I $\mu$ arofpis 'athous ixavis-Clothing, plain and in considerable quantity.
belonged to them-Barbarikonand Minnagar; the former of which was an emporium situated near the sea on the middle and only navigable brunch of the Indus. Ptolemy has a Bar bareilin the Delta, but the position he assigns to it, does not correspond with that of Barbari kon. Minnagar was the Skythian metropolis. It lay inland, on or near the banks of the Indus.
(39) Ships did not go up to it but romained at Barbarikon, their cargoes being conveyed up the riser in small loats. In Ptolemy (VII. i. 61)

the form of tho namo is Binagara，which is less correct since the word is composed of Min，the Indian name for the Skythians，and nagar，a city． Ritter considers that TThathais its modern re－ presentative，since it is called Saminagar by the Jâlejê Rajputs who，though settled in Kachh， derive their origin from that city．To this view it is objected that T？hatha is not near the position which Ptolemy assigns to his Binagara．Man－ nert places it at Bakkar，D＇Anville at Man－ sura，and Vincent at Menhabery mentioned

Ships destined for this port put out to sea when the Indian monsoon prevails-that is, about the month of July or Epiphi. The voyage at this season is attended with danger, but being shorter is more expeditions.
by Edrisi (I. p. 161) as distant two stations or 60 miles from D a b il, which again was threo stations or 90 miles from the mouth of the Indus, that is it lay at the head of the Delta. Our author informs us that in his time Minagar was ruled by Parthian princes. The Parthians (the Parada of Sanskrit writers) must therefore have subverted a Skythian dynasty which must have been that which (as Benfey has shown) was founded by Yeukaotschin between the years 30 and 20 B.C., or about 30 years only after the fanous Indian Ara called Silkibda (the year of the Síka) being that in which Vikramaditya expelled the Skythians from Indian soil. The statement of the Periplis that Parthian rulers succeeded the Skythian is confirmed by Parthian coins found everywhere in this part of the country. These sovercigns must have been of consequence, or the trade of their country very lucrative to the merchant as appears by the presents necessary to ensure his protection-plate, musical instruments, handsome girls for the Harem, the best wine, plain cloth of high prioe, and the finest perfumes. The profits of the trade must therefore have been great, but if Pliny's account be true, that every pound laid out in India produced a hundred at Rome, greater exactions than these might easily have been supported.

## 111

40. After the river Sinthos is passed we reach another gulf, which cannot be easily seen. It has two divisions,- the Great and the Little by name,-both shoal with violent and continuous eddies extending far out from the shore, so that before ever land is in sight ships are often grounded on the shoals, or being eaught within the eddies are lost. Over this gulf hangs a promontory which, curving from Eirin on first to the east, then to the south, and finally to the west, encompasses the gulf called Barako, in the bosom of which lie seven islands. Should a vessel approach the entrance of this gulf, the only chance of escape for those on board is at once to alter their course and stand out to sea, for it is all over with them if they are once fairly within the womb of $B a r a k \hat{e}$,
(40) The first place mentioned after the Indus is the Gulf of Eirinon, a name of which traces remain in the modern appellation the $\mathrm{K} \Omega \mathrm{n}$ of Kachh. This is no longer covered with water except during the monsoon, when it is flooded by sea water or by rains and inundated rivers. At othor seasons it is not even a marsh, for its bed is hard, dry and sandy; a mere saline waste almost entirely devoid of herbage, and frequented but by one quadruped-the wild ass. Burnes conjectured that its desiccation resulted from an upheaval of the earth caused by one of those earthquakes which are so common in that part of India. The Ran is comnected with the Gulf of Kachh,
which surges with vast and mighty billows, and where the sea, tossing in violent commotion, forms eddies and impetuous whirlpools in every direction. The bottom varies, presenting in places sudden shoals, in others being scabrous with jagged rocks, so that when an anchor grounds its cable is either at once cut through, or soon broken by friction at the bottom. The sign by which royagers know they are approaching this bay is their sceing serpents floating about on the water, of extraordinary size and of a black colour, for those met with lower down and in the neighbourhood of Barugaza are of less size, and in colour green and golden.
41. To the gulf of Barak $\hat{c}$ succeeds that
which our author calls the Gulf of Barake. His account of it is far from clear. Perhaps, as Müller suggests, he comprehended under Eirinon the interior portion of the Gulf of Kachh, limiting the Gulf of $\mathrm{B} a \mathrm{rak} \hat{\mathrm{e}}$ to the exterior portion or entrmes to it. This gulf is called that of Kanthi by Ptolemy, who mentions Barakê only as an island, [and the south coast of Kachh is still known by the name of Kantha]. The islands of the Periplus extend westward from the neighbourhood of Navanagar to the very entrance of the Gulf.
(41) To Barakê succeeds the Gulf of Barugnza (Gulf of Khambhtht) and the sen-board of the region called Ariak $\hat{0}$. The reading of the
 rupt. Müller substitutes $\dot{\eta}$ ग̈лtє
of Barugaza and the mainland of Ariakè, a district which forms the frontier of the kingdom of Mombaros and of all India. The interior part of it which borders on Skyth ia is called Abêria, and its sea-board Surastrênê. It is a region which produces abundantly corn and rice and the oil of sesamum, butter, muslins and the coarser fabrics which are
x' $\rho$ pas, though Mannert and others prefer $\Lambda a \rho ı \kappa \bar{\xi} s$ $\chi \dot{\omega} \rho a s$, relying on Ptolemy, who places Ariakêto the south of Larike, and says that Larikê comprehends the peninsula (of Gujarât) Barugaza and the parts adjacent. As Ariake was however preciously mentioned in the Periplus (sec. 14) in comexion with Barugaza, and is afterwards mentioned (sec. 51) as trading with Muziris, it must no doult have been mentioned by the author in its proper place, which is here. [Bhagvanlâl Indraji Pandit has shewn reasons however for correcting the readings into A $\beta$ apatık $\eta$, the Prakrit form of $A p a r \hat{i} n t i k \hat{n}$, an old name of the western sea board of India.-Ind. Ant. vol. VII., pp. 259, 263.] Regarding the name Larikê, Yule has the following note (Travels of Mr. Polo vol. II., p. 353) :-"Lâr-Deśa, the country of Lar," proporly Lat-deśa, was an early name for the territory of Gujrat and the northern Konkan, embracing Saimur (the modern Chaul as I believe) Thana, and Bharoch. It appears in Ptolomy in the form Larike. The sea to the west of that coast was in the early Muhammadan times called the sea of Lâr, and the language spoken on its shores is

## 114

manufactured from Indian cotton. It has also numerous herds of cattle. The natives are men of large stature and coloured black. The metropolis of the district is Minnagar, from which
called by $M a$ s'u di, Lấri. Abulfeda's authority, Ibn Said, speaks of Lâr and Gujarât as identical."

Ariakê (Aparântikâ), our author informs us, was the berginning or frontier of India. That part of the interior of Ariakêwhich bordered on Skythia was called Aberia or Abiria (in the MS. er:oneously Ibêria). The corresponding Indian word is Abhira, which designated the district near the mouths of the river. Having been even in very early times a great seat of commerce, some (as Lassen) hare been led to think from a certain similarity of the names that this was the Ophir of scripture, a vicw opposed by Ritter. Abiria is mentioned by Ptolemy, who took it to be not a part of India but of Indoskythia. The sea-board of Ariakê mas called Surastrênê, and is mentioned by Ptolemy, who says (VII. i. 55) it was the region nbout the mouthis of the Indus and the Gulf of Kanthi. It answers to the Sanskrit $S u r \hat{\text { un }} \mathrm{s}$ ṭra. Itscapital was Minnagar,-a city which, as its name shows, had onco belonged to the Min or Skythians. It was different of course from the Minnagar already mentioned as thecapital of IndoSkythia. It was situated to the south of Oz ênê (Uijayinî, or Ujjain), and on the roadwhich led from that city to the River Narmadâ, probably near where Indor now stands. It must hare been the capital only for a short time, as Plolemy informs us (II. i. 6:3) that O z $\hat{0} \mathrm{n} \hat{e}$ was in his time the
cotton cloth is exported in great quantity to Barugaza. In this part of the country there are preserved even to this very day memorials of the expedition of Alexander, old temples, foundations of camps, and large wells. The extent of this coast, reckoned from Barbarikon to the promontory called Papikê, near Astakapra, which is opposite Barugaza, is 3,000 stadia.
capital of Tiashanes [probably the Chashtana of Coinsand the Cave Temple inscriptions]. From both places a great variety of merchandise was sent down the Narmadâ to Barugaza.

The next place our author mentions is a promontory called Papike projecting into the Gulf of Khambât from that part of the peninsula of Gujarât which lies opposite to the Barugaza const. Its distance from Barbarikon on the middle mouth of the Indus is correctly given at 3,000 stadia. This promontory is said to be near Astakapra, a place which is mentioned also by Ptolemy, and which (Ind. Ant. vol. V. p. 314) has been identified by Colonel Yule with Hastakavapra (now Hâthab near Bhaunagar), a namo which occurs in a copper-plate grant of Dhruvasena I of Valabhi. With regard to the Greek form of this name Dr. Bühler thinks it is not derived immediately from the Sanskrit, but from an intermedinto old Prakrit word Hastakampra, which had been formed by the contraction of the syllables ava to $a$, and the insertion of a nasal, according to the habits of the Gujarâtis. The loss of the

## 116

42. After Papike there is another gulf, exposed to the violence of the waves and running up to the north. Near its mouth is an island called Bai ônês, and at its very head it receives a vast river called the Mais. Those bound for Barugaza sail up this gulf (which has a breadth of about 300 stadia), leaving the island on the left till it is scarcely visible in the horizon, when they shape their course east for the mouth of the river that leads to Barugaza. This is called tho Namnadios.
initial, he adds, may be explained by the difficulty which Gujarûtís have now and probably had 1,600 years ago in pronouncing the spirans in its proper place. The modern name Hâthab or Hathap may be a corruption of the shorter Sanskrit form Hastavapra.
(42) Beyond Papike e, we are next informed, there is another gulf running northward into the interior of the country. This is not really another Gulf but only the northern portion of the Gulf of Khambitt, which the Periphis calls the Gulf of Barugaza. It receives a great river, the Mais, which is easily identified with the Mahi, and contains an island called Baiônês [the modern Peram], which you leare on the left hand as you cross over from Astakapra to Barugaza.

We are now conducted to Barugaza, the greatest seat of commerce in Western India, situated on a river called in the MS. of the Periplus the Lamnaios, which is no doubt an erroneous reading for Namados, or Namuados or Namar-
43. The passage into the gulf of $B$ aragaza is narrow and difficult of access to those approaching it from the sea, for they are carried either to the right or to the left, the left being the better passage of the two. On the right, at the very entrance of the gulf, lies a narrow stripe of shoal, rough and beset with rocks. It is called Hêrône, and lies opposite the village of Kammôui. On the left side right against this is the promontory of Papik $\hat{\theta}$, which lies in front of Astakapra, where it is difficult to anchor, from the strength of the current and because the cables are cut through by the sharp rocks at the bottom. But even if the passage into the gulf is secured the mouth of the Barugaza river is not easy to hit, since the coast is low and there are no certain marks to be seen until you are close upon them. Neither, if it is discovered, is it easy to enter, from the presence of shoals at the mouth of the river.
dios. This river is the $\mathrm{Narmad} \hat{\mathrm{n}}$. It is called by Ptolemy the Namadês.
(43) Barugaza (Bharoch) which was 30 miles distant from its mouth, was both difficult and dangerous of access; for the entrance to the Gulf itself was, on the right, beset with a parilous stripe (tainia) of rocky shoal called Herônê, and on the left, (which was the safer course,) the violent curronts which swept round the promontory of Papikê rendered it unsafe to approach the shore or to cast anchor. The shoal of Herônê was opposite
44. For this reason native fishermen appointed by Government are stationed with wellmanned long boats called trappaga and kotumba at the entrance of the river, whence they go out ns far as Surastrêne to meet ships, and pilot them up to Barugaza. At the head of the gulf the pilot, immediately on taking charge of a ship, with the help of his own boat's crew, shifts her head to keep her clear of the shoals, and tows her from one fixed station to another, moving with the beginning of the tide, and dropping anchor at certain roadsteads and basins when it ebbs. These basins occur at points where the river is deeper than usual, all the way up to Barugaza, which is 300 stadia distant from the mouth of the river if you sail up the stream to reach it.
45. India has everywhere a great alundance of rivers, and her seas ebb and flow with tides of extraordinary strength, which increase with
a village on the mainland called Kammoni , the Kamane of Ptolemy (VII. i.), who however places it to the north of the river's mouth. Again, it was not only difficult to hit the mouth of the river, but its navigation was endangered by sandbanks and the violence of the tides, especially the high tide called the 'Bore,' of which our author gives a description so particular and so vivid as suffices to show that he was describing what he had seen with his own eyes, and seen moreover for the first time. With regard to the name
the moon, both when new and when full, and for three days after each, but fall off in the intermediate space. About Barugaza they are more violent than elsewhere ; so that all of a sudden you see the depths laid bare, and portions of the land turned into sea, and the sea, where ships were sailing but just before, turned without warning into dry land. The rivers, again, on the access of tlood tide rushing into their channels with the whole body of the sea, are driven upwards against their natural course for a great number of miles with a force that is irresistible.
46. This is the reason why ships frequenting this emporium are exposed, both in coming and going, to great risk, if handled by those who are unacquainted with the navigation of the gulf or visit it for the first time, since the impetuosity of the tide when it becomes full, having nothing to stem or slacken it, is such that

[^21]anchors cannot hold against it. Large vessels, moreover, if caught in it are driven athwart from their course by the rapidity of the current till they are stranded on shoals and wrecked, while the smaller craft are capsized, and many that have taken refuge in the side channels, being left dry by the receding tide, turn over on one side, and, if not set erect on props, are filled upon the return of the tide with tho very first head of the flood, and sunk. But at new moons, especially when they occur in conjunction with a night tide, the flood sets in with such extraordinary violence that on its beginning to advance, even though the sea be calm, its roar is heard by those living near the river's mouth, sounding like the tumult of battlo heard far off, and soon after the sea with its hissing waves bursts over the bare shoals.
47. Inland from Barugaza the country is inhabited by numerous races-the Aratrioi,

[^22](47) The account of the 'bore' is follored by an
> and the Arakhôsioi, and the Gandaraioi, and the people of Proklais, in which is Boukephalos Alexandreia. Beyond these are the Baktrianoi, a most warlike race, governed by their own independent sovereign. It was from these parts Alexander issued to invade India when he marched as far as the Ganges, without, however, attacking Limurikê and the southern parts of the country. Hence up to the present day old drachmai bearing the

enumeration of the countries around and beyond Barugaza with which it had commercial relations. Inland are the Aratrioi, Arakhosioi, Gandarioiand the people of Proklais, a province wherein is Boukephalos Alexandreia, beyond which is the Baktrian nation. It has been thought by some that by the Aratrioiare meant the Arii, by others that they were the Arâstrâs of Sanskrit called Aratti in the Prakrit, so that the Aratrioi of the Periplits hold anintermediate place between the Sanskrit and Prakrit form of the name. Müller however says "if you want a people known to the Greeks and Romans as familiarly as the well-known names of the Arakhosii, Gandarii, Peukelitae, you may conjecture that the proper reading is $\triangle$ PAГГ $\Omega \mathrm{N}$ instead of APATPI $\Omega \mathrm{N}$. It is an error of course on the part of our author when he places Boukephalos (a city built by Alexander on the banks of the Hydaspês, where he defeated Pôros), in the neighbourhood of Proklais, that is Pekhely in the neighbourhood of Peshawar. He makes a still more

Greek inscriptions of Apollodotos and Menander are current in Barugaza.
48. In the same region eastward is a city called $\mathrm{Oz} \hat{\mathrm{n}} \hat{\theta}$, formerly the capital wherein the king resided. From it there is brought down to Barugaza every commodity for the supply of the country and for export to our own markets-onyx-stones, porcelain, fine muslins, mallow-coloured muslins, and no small quantity of ordinary cottons. At the same time there is brought down to it from the upper country by way of Proklais, for transmission to the coast, Kattyboarine, Patropapigic, and Kabalitic spikenard, and another kind which reaches it by way of the adjacent province of Skythia; also kostus and bdellium.
49. The imports of Barugaza are-

The proper season to set sail for Barugaza from Egypt is the month of July, or Epiphi.
50. From Barugaza the coast immediately adjoining stretches from the north directly to the south, and the country is therefore called Dakhinabades, because Dakhan in the language of the natives signifies south. Of this country that part which lies inland towards the east comprises a great space of desert country, and large mountains abounding with all kinds of wild animals, leopards, tigers, clephants, huge snakes, hyenas, and baboons of many different sorts, and is inhabited right across to the Ganges by many and extremely popalous nations.
for the 'myrobolans of Kâbul.' Nard, as Edrisi also observes, has its proper soil in Thivet.
(50) Barugaza had at the same time commercial relations with the Dekhan also. This part of India our author calls Dakhinabadês, transliterating the word $D a k \operatorname{shin} \hat{\mu} p a t h a-$ (the Dakshinâ, or the South Country). "Here," says Vincent, " the author of the Periplis gives the true direction of this western coast of the Peninsula, and states in direct terms its tendency to the South, while Ptolemy stretohes out the whole angle to a straight line, and places the Gulf of
51. Among the marts in this South Country there are two of more particular importancePaithana, which lies south from Barugaza, a distance of twenty days, and Tagara, ten days east of Paithana, the greatest city in the country. Their commodities are carried down on wagons to Baragaza along roads of extreme difficulty,-that is, from $\mathrm{Paith} a n a$ a great

Cambay almost in the same latitude as Cape Comorin."
(51) In the interior of the Dekhan, the Periplas places two great seats of commerce, Paithana , 20 days' journey to the south of Barngaza, and T'agara, 10 days' journey eastward from Paithana. Paithana, which appears in Ptolemy as Baithana, may be identified with Paithana. 'I'agara is more puzzling. Wilford, Vincent, Mannert, Ritter and others identify it with D êvagiri or Deogarh, near Elurâ, about 8 miles from Aurangâbâd. The name of a place called Tagarapura occurs in a copper grant of land which was found in the island of Salsette. There is however nothing to show that this was a name of Dêvagiri. Besides, if Paithana be correctly identified, Tagara camnot be Dêragiri unless the distances and directions are very erroncously given in the Periplus. This is not improbable, and Tagara may therefore be Junnar (i.e. Juna-nagar = the old city), which from its position must always have been an emporium, and its Buddha caves belong to about B. C. 100 to A.d. 150 (see Archreolog. Surv. of West. Indir, vol. III., and Elphinstone's History of Intict, p. 223).
quantity of oncx-stone, and from Tagara ordinary cottons in abundance, many sorts of muslins, mallow-coloured cottons, and other articles of local production brought into it from the parts along the const. The length of the entire rogage as far as Limurike is 700 stadia, and to reach Aigialos you must sail very many stadia further.

Our author introduces us next to another division of India, that called Limurike, which begins, as he informs us, at a distance of 7,000 stadia (or nearly ! 100 miles) Leyond Barugaza. This estimate is wide of the mark, being in fact about the distance between Barugaza and the southern or remote extremity of Limurikê. In the Indian segment of the Roman mapss called from their discoverer, the Peatinger Tables, the portion of India to which this name is applied is called $\mathrm{D}_{\mathrm{a}} \mathrm{mi}$ riko. Wo can searcely err, say's Di. Caldwell (Dravid. Gram. Intr. page 14), in identifying this name with the Tamil country. If so, the earliest appearance of the namo 'lamil in any foreign documents will be found also to be most perfeetly in accordance with the native 'Tamil mode of spelling the name. Damirike evidently means Dumir-ike... In another place in the same map a district is called Scytia Dymirice; and it appears to have been this word which by a mistake of $\Delta$ for A Ptolemy wrote Av $\mu$ iptci!. The D retains its place howerer in the Cusmography of the amonymons geographer of Ravema, who repeatedly mentions Dimirica as one of the three divisions of India and the one furihest to the East.
52. Tho local marts which occur in order alony the const after Barugaza are Akabarou, Souppara, Kalliena, a city which was raised to the rank of a regular mart in the times of the elder Saraganes, but after

Ho shows also that the Thmil country must have been meant by the namo by mentioning Modura as one of the cities it contained.
(52) Reverting to Barugaza our author next enumerates the less important omporin baving merely a local trado which intervenes between it and Dimurike. These are first Akabarou, Souppara, and Kalliena-followed by Somulla, Mandagora, Palaipatmai, Meligeizara, Buzantion, Toperon, and 'I'uranosboas,-beyond which occurs a succession of islands, some of which give shelter to pirates, and of which tho last is called Leuke or White Island. The actual distance from Barugaza to Nuoura, the first port of Dimurike, is 4,500 stadia.

To take these emporia in detail. Akabarou cannot be identified. The reading is probably corrupt. Between the mouths of the Namados and those of the Goaris, Ptolemy interposes Nousaripa, Poulipoula, Ariakê Sadinôn, and Soupara. Nausaripais Nausari, about 18 miles to the south of Surat, and Soupara is Supara near Vasiii. Benfey, who takes it to be the name of a region and not of a city, regards it as the Ophir of the Bible-called in the Septuagint Ewфnprí. Sophir, it may be added, is the Coptic name for India. Kallicna is now Kalyậ̣a near

Sandanes becrme its master its trade was put under the severest restrictions; for if Greek vessels, even by accident, enter its ports, a guard is put on board and they are taken to Barugaza.
53. After Kalliena other local marts oc-

Bombay [which must have been an important place at an early date. It is named in the Kanhêri Rauddha Cave Inscriptions]. It is mentioned by Kosmas (p. 337), who states that it produced copper and sesamum and other kinds of logs, and cloth for wearing apparel. The name Sandanea, that of the Prince who sent Greek ships which happened to put into its port under guard to Barugaza, is thought by Benfey to be a territorial titlo which indicated that he ruled orer Ariake of the Sindineis. [But the elder " Saraganes" probably indicates one of the great Sátakarṇi or Ândhrabhṛitya dynasty.] Ptolemy does not mention Kallienâ, though he supplies the name of a place omitted in the Periplis, namely Doungr (VII. i. 6) near the mouth of the river Bonda.
(53) Somulla (in Ptolemy Timoula and Simulla) is identified by Yule with Chên val or Chaui, a seaport 23 miles south of Bombay; [but Bhagvanlal Indraji suggests Chimula in Trombny islund at the head of the Bombay harbour; and this is curiously supported by one of the Kanherri inscriptions in which Chemula is mentioned, apparently as a large city, like Suparia and Kalyinna, in the neighbourhood]. After Simulla Ptolemy mentions IIippokoura [possibly, as suggested by the same,
cur-Sêmulla, Mandagora, Palaipat. mai, Melizeigara, Buzantion, Toparon, and Turannosboas. You come next to the islands called Setsekreienai and the island
a partial translation of Ghodabandar on the Choda nadi in the T!hana strait] and Baltipatna as places still in Ariakê, but Mandagara Buzantoion, Khersonêsos, Armagara, the mouths of the river Nanagouna, and an emporium called Nitra, as belonging to the Pirate Coast which extended to Dimurikê, of which Tundis, hesays, is the firstecity. Ptolemy therefore agrees with our author in assigning the Pirate Coast to the tract of country between Bombay and Goa. This coast continued to be infested with pirates till so late a period as tho year 1765 , when they were finally exterminated by the Britisharms. Mandagaraand Palaipatm a may havo corresponded pretty nearly in situation with the towns of Rajapur and Bankut. Yule places them respectively at Bankut and Debal. Melizeigara (Milizêguris or Milizigêris of Ptolemy, VII. i. 95), Vincentidentifies with Jaygaḍh or Sidê Jaygaṛh. The same place appears in Pliny as Sigerus (VI. xxvi. 100). Buzantium may bo referred toabout Vijayadrug or Esvantgadh,'To paron may bo a corrupt reading for Togaron, and may perhaps therefore be Devagaḍh which lies a little beyond Vijayadrug. Turannosboas is not mentioned elsewhere, but it may have been, as Yule suggests, the Banda or Tirakal river. Müller placed it at Acharê. The first island on this part of the coast is Sindhudrug near Mâlwan,
of the Aigidioiand that of the Kaineitai, near what is called the Khersonêsos, places in which are pirates, and after this the island Lonkê (or 'tho White'). Then follow Naoura

- to which succeeds a group called the Burnt Islands, among which the Vingorla rocks are conspicuous. These are no doubt the Heptanêsia of Ptolemy (VII. i. 95), and probably the Sêsikrienai of the Periplis. The island Aigidion called that of the Aigidii may be placed at Goa, [ but Yule suggests Angediva south of Sadaśivagallh, in lat. $14^{\circ} 45^{\prime}$ N., which is better]. Kaineiton may be the island of St. George.

We come next to Naoura in Dimurikê. This is now IIonâar, written otherwise Onore, situated on the estuary of a broad river, the Sarâatî, on which are the falls of Gersappa, one of the most magnificent and stupendous eataracts in the world. If the Nitra of Ptolemy (VII.i. 7)and the Nitria of Pliny be the same as Naoura, then theso authors extend the pirate const a little further south than the Periplies does. But if they do not, and therefore agree in their views as to where Dimurike begins, the Nitra may be placed, Mïller thinks, at Mirjan or Komta, which is not far north from Honavar. [Yule places it at Mangalur.] Muiller regards the first supposition however as the more probable, and quotes at length a passage from Pliny (VI. xxvi. 101) reforring thereto, which must hare been excerpted from some Periplis like our author's, but not from it as some have thought. "To those bound for India it is most convenient to depart
and Tundis, the first marts of Limurik $\theta$, and after these Mouziris and Nelkunda, the seats of Government.
54. To the kingdom under the sway of
from Okelis. They sail thence with the wind Hipalus in 40 days to the first emporium of India, Muziris, which is not a desirable place to arrive at on account of pirates infesting the neighbourhood, who hold a place called Nitrias, while it is not well supplied with merchandize. Besides, the station for ships is at a great distance from the shore, and cargoes have both to be kanded and to be shipped by menns of little boats. There reigned there when I wrote this Caelobothras. Another port belonging to the nation is more convenient, Neacyndon, which is called Becare (sic. codd., Barace, Harduin and Sillig). There reigned Pandion in an inland town far distant from the emporium called Mo o. dura. The region, however, from which they convey pepper to Becare in boats formed from single logs is Cottonara."
(5.1) With regard to the names in this extract which occur also in the Periplits the following passages quoted from Dr. Caldwell's Dravidian Grammar will throw much light. He says (Introd. p. 97 ):-"Muziris appears to be the Muyiri of Muyiri-kotta. Tyndis is Tuṇ̣̣i, and the Kynda, of Nelkynda, or ns Ptolemy has it, Melkynda, i. e. probably Western kingdom, seems to be Kannettri, the southern boundary of Kêrala proper. One MS. of Pliny writes the second part of this word not Cyndon but Canidon. The first

Kêprobotras ${ }^{20} \mathrm{~T} u n d i s$ is subject, a village of great note situate near the sea. Mouziris, which pertains to the same realm, is a city at the height of prosperity, frequented as it
of these places was identified by Dr. Gundert, for the remaining two we are indebted to Dr. Burnoll.
"Cottonara, Pliny; Kottonarike, Periplus, the district where the best pepper was produced. It is singular that this district was not mentioned by Ptolemy. Cottonara was cvidently the name of the district. кortovapıкoy the name of the pepper for which the district was famous. Dr. Buchanan identifies Cottonara with Kaḍattan a d u , the name of a district in the Calicut country celebrated for its pepper. Dr. Burnell identifies it with Kolatta-nadu, the district about Tellicherry which he says is the pepper district. Kadatta in Malayîlam means ' transport, conreyance,' Nûddí, Tam.-Mal., means a district."
"The prince called Kêrobothros by Ptolemy (VII. i. 86) is called Kêprobotros by the author of the Periplis. The insertion of $\pi$ is clearly an error, but more likely to be the error of a copyist than that of the author, who himself had visited the territories of the prince in question. He is called Caëlobothras in Pliny's text, but one of the MSS. gives it more correctly as Celobotras. The name in Sanskrit, and in full is ' Keralaputra,' but both kira and kêla are Dravidian abbreviations of kêrald. They are Malayillam however, not Tamil abbreviations, and the district over which Keralaputra ruled is that in which the Malayâlam language is now
is by ships from A riakê and Greek ships from Egypt. It lies near a river at a distance from Tundis of 500 stadia, whether this is measured from river to river or by the length of the sea
spoken" (p. 95). From Ptolemy we learn that the capital of this prince was Karoura, which has been " identified with K arur an important town in the Koimbatur district originally included in the Chèra kingdom. Karar means the black town. . Ptolemy's word Karoura represents the Tamil name of the place with perfect accuracy." Nelkunda, our author informs us, was not subject to this prince but to another called Pandion . This name, says Dr. Caldwell, " is of Sanskrit origin, and Pandr, the form which Pliny, after Megasthenes, gives in his list of the Indian nations, comes very near the Sanskrit. The more recent local information of Pliny himself, as well as the notices of Ptolemy and the Periplits, supply us with the Dravidian form of the mord. The Tamil sign of the masc. sing. is an, and Tramil inserts $i$ euphonically nfter n?, consequently Pandion, and still better the plural form of the word Pandiones, faithfully represents the Tamil masc. sing. Pandiynn." In another passage the same scholar says: "The Sanskrit Paṇlya is written in Tamil Pâṇliga, but the more completely tamilized form Pânc̣i is still more commonly used all over southern India. I derive Pàndi, as native scholars always derive the mord, from the Sanskrit Pârc̣u, the name of the father of the Pândara brothers." The capital of this prince, as Pliny has stated, was Modura, mhich is the Sanskrit Mathum pro-
voyage, and it is 20 stadia distant from the mouth of its orm river. The distance of Nelkunda from Mouziris is also nearly 500 stadia, whether measured from river to river or
nounced in the Tamill manner. The corresponding city in Northern India, Mathura, is written by the Greeks Methora.

Nelkunda is mentioned by variousauthors under varying forms of the name. As has been already stated, it is Melkunda in Ptolemy, who places it in the country of the Aii. In the Peutingerian Table it is Nincylda, and in the Geographer of Ravenna, Nilcima. At the mouth of the river on which it stands was its shipping port Bakare or Becare, according to Müller now represented by Markari (lat. $12^{\circ} \mathrm{N}$.) Yule conjectures that it must have been between Kanetti and Kolum in Trarancore. Regarding the trade of this place we may quote a remark from Vincent. "We find," he says, " that throughout tie whole which the Periplus mentions of India we have a catalogue of the exports and imports only at the two ports of Barugaza and Nelcynda, and there seems to be a distinction fixed between the articles appropriate to each. Fine muslins and ordinary cottons are the principal commodities of the first; tortoise shell, precious stones, silk, and above all pepper, seem to have been procurable only at the latter. This pepper is said to be brought to this port from Cottonara, famous to this hour for producing the best pepper in the world except that of Sumatra. The pre-eminence of these two ports will account for the little that is said of the others by the author, and why he has
by the sea voyage, but it belongs to a different kingdom, that of Pandiôn. It likewise is situate near a river and at about a distance from the sea of 120 stadia.

## 55. At the very mouth of this river lies

left us so few characters by which we may distinguish one from another."

Our author on concluding his account of Nelkunda interrupts his narrative to relate the incidents of the important discovery of the monsoon made by that Columbus of antiquity Hippalus. This account, Vincent remarks, naturally excites a curiosity in the mind to enquire how it should happen that the monsoon should hare been noticed by Nearkhos, and that from the time of his voyage for 300 years no one should have attempted a direct course till Hippalus ventured to commit himself to the ocean. He is of opinion that there was a direct passage by the monsoons both in going to and coming from India in use anong the Arabians before the Greeks adopted it, and that Hippalus frequenting these seas as a pilot or merchant, had met with Indian or Arabian traders who made their voyages in a more compendious manner than the Greeks, and that he collected Uuformation from them which he had both the prudence and courage to adopt, just as Columbus, while owing much to his own nautical experience and fortitude was still under obligations to the Portuguese, who had been resolving the great problems in the art of navigation for almost a century previous to his expedition.
(55) Nolkunda appears to lare been the
another village, Bakarê, to which the ships despatched from Nelkunda come down empty and ride at anchor off shore while taking in cargo : for the river, it may be noted, has sunken reefs and shallows which make its navigation difficult. The sign by which those who come hither by sea know they are nearing land is their meeting with snakes, which are here of a black colour, not so long as those already mentioned, like serpents about the head, and with eyes the colour of blood.

56 . The ships which frequent these ports are of a large size, on account of the great amount and bulkiness of the pepper and betel of which their lading consists. The imports here are principally-

 toise-shell from the Golden Island, and another sort which is taken in the islands which lie off the coast of Limurikô.

The proper season to set sail from Egypt for
notices, while his details are scanty, and sometimes grossly inaccurate. Thus he makes the Malabar Coast extend southwards beyond Cape Comorin
this part of India is about the month of July that is, Epiphi.
57. The whole round of the voyage from Kanê and Eudaimôn Arabia, which we have just described, used to be performed in small vessels which kept close to shore and followed its windings, but Hippalos was the pilot who first, by observing the bearings of the ports and the configuration of the sea, discovered the direct course across the occan; whence as, at the season when our own Etesians are blowing, a periodical wind from the occan likewise blows in the Indian Sea, this wind, which is the south-west, is, it seems, called in these seas Hippalos [after the name of the pilot who first discovered the passage by means of $i t]$. From the time of this discovery to the present day, merchants who sail for India either from Kanê, or, as others do, from Arômata, if Limurikê be their destination, must often change their tack, but if they are bound for Barugaza and Skythia, they are not retarded for more than three days, after which, committing themselves to the monsoon which blows right in the direction of their course, they stand far out to sea, leaving all the gulfs we have mentioned in the distance.

[^23]58. After Bakarê occurs the mountain called Pyrrhos (or the Red) towards the sonth, near another district of the country called Paralia (where the pearl-fisheries are which belong to king Pandiôn), and a city of the name of Kolkhoi. In this tract the first place met with is called Balita, which has a good harbour and a village on its shore. Next to this is another place called Komar, where is the cape of the same name and a haven. Those who wish to corisccrate the closing part of their lives to religion come hither and bathe and engage themselves to celibacy. This is also done by women ; since it is related that the
(58) The first place mentioned after Bakare is Purrhos, or the Red Mountain, which extends along a district called Paralia. "There are," says Dr. Caldwell (Introd. p. 99), "three Paralias mentioned by the Greeks, two by Ptolemy . . . one by the author of the Periplus. The Paralia mentioned by the latter corresponded to Ptolemy's country of the "Aiol, and that of the Kapeoi, that is, to South Trarancore and South Tinnevelly. It commenced at the Red Cliffs south of Quilon, and included not only Cape Comorin but also Kódxot, where the pearl fishing was carried on, which belonged to King Pandion. Dr. Burnell identifies Paralia with Parali, which he states is an old name for Travancore, but I am not quite able to adopt this riew." "Paralia," he adds afterwards," may possibly have corresponded in meaning, if not in sound, to some native word
goddess (Kumírí) once on a time resided at the place and bathed. From K omarei (towards the south) the country extends as far as K ol khoi, where the fishing for pearls is carried on. Condemned criminals are employed in this service. King Pandiôn is the owner of the fishery. To Kolkhoi succeeds another coast lying nlong a gulf having a district in the interior bearing the name of Argalou . In this single place are obtained the peatls collected near the island of Epiodoros. From it are exported the muslins called ebargareitites.
60. Among the marts and anchorages along this shore io which merchants from Limurik $\hat{\boldsymbol{\theta}}$
neaning coast,-viz., Karci." On this coast is a place called Balita, which is perhaps the B a mmala of I'tolemy (VII. i. 9), which Mannert identifies with Manpalli, a little north of Anjenga.
(i6) Wo now reach the great promontory called in the Peripluis Komar and Komarei, Capo Kumari. "It has derived its name," says Caldwell, " from the Sans. Kumari, a virgin, one of the names of the goddess Durgi, tho presiding divinity of the place, but the shape which this word has taken is, especially in komar, distinctively 'Tamilian." In ordinary Tamil Kumdrí becomes Kumarí; and in the vulgar dialect of the people residing in the neighbourhood of the Cape a virgin is neither Kumârî nor Kumări but Kŭmăr prouounced Kơmür. It is remarkable that this vulgar corruption of the Sanskrit is identical with the name given to the place by the
and the north resort, the most conspicnons are Kamara and Podoukô and Sôpatma, which occur in the order in which we have named them. In these marts are found those native vessels for coasting voyages which trade as far as Limurikê, and another kind called
author of the Periplus .. . The monthly bathing in honor of the goddess Durgat is still continued at Cape Comorin, but is not practised to the same extent as in ancient times... Through the continued encroachments of the sea, the harbour the Greck mariners found at Cape Comorin and the fort (if dpoupıov is the correct rending for $\beta$ pıápıov of the MS.) have completely disnppeared ; but a fresh water well remains in the centre of a rock, a little way out at sea. Regarding Kolkhoi, the next place mentioned after Komari, the same anthority as we have seen places it (Ind. Ant. vol. VI. p. 80) near Tuticorin. It is mentioned by Ptolemy and in the Peutinger Talles, where it is called 'Colcis Indorum'. The Gulf of Manaar was called by the Greeks the Colchic Gulf. The Tamil name of the place Kolkei is almost identical with the Greek. "The place," according to Caldwell, "is now about threo miles inland, but there are abundant traces of its having once stood on the coast, and I have found the tradition that it was once the seat of the pearl fishery, still surviving amongst its in. habitants. After the sea had retired from Kó入дot... a new emporium arose on the coast. This was K àyal, the Cael of Marco Polo. Kâyal in turn became in time too far from the sea.. and Tuticorin (Tuttrukuḍi) was raised instead by the
sangara, made by fastening together large vessels formed each of a single timber, and also others called kolandiop/ûnta, which are of great bulk and employed for voyages to Khruso and the Ganges . These martsimport all the commodities which rench Limurikê for com-

Portuguese from the position of $a$ fishing village to that of the most important port on the southern Coromandel coast. The identification of Kolkoi with Kolkei is one of much importance. Being perfectly certain it helps forward other identifications. Kol. in 'Tami] means 'to slay.' Kei is ' hand.' It was the first capital of Pandion.

The const beyond Kolkhoi, which has an inland district belonging to it called Argalou, is indented by a gulf called by Ptolemy the Argariknow Pulk Bay. Ptolemy mentions also a promontory called Kôru and beyond it a city called A rgeir ou and an emporium called Salour. This Kôru of Itolemy, Caldwell thinks, represents the Kolis of the geographers who preceded him, and the Koṭi of Tamil, and identifies it with "the island promontory of Râmeśvaram, the point of land from which there was always the nearest access from Southern India to Ceylon." An island occurs in these parts, called that of Epiodoros, noted for its pearl fishery, on which account Ritter would identify it with the island of Manaar, which Ptolemy, as Mannert thinks, speaks of as Návıynpis (VII. i. 95). Müller thinks, however, it may be compared with Ptolemy's Kôru, and so be Râmêsvaram.
This coast has commercial intercourse not only
mercial purposes, absorbing likewise nearly every species of goods brought from Egypt, und most descriptions of all the goods exported from Limurike and disposed of on this coast of India.
61. Near the region which succeeds, where
with the Malabar ports, but also with the Ganges. and the Goldon Khersonese. For the trade with the former a species of canoes was used called Sangara. The Malayâlam name of these, Caldwell says, is Changidam, in Tuld Jangala, compare Sanskrit Samghidam a raft (Ind. Ant. vol. I. p. 309). The large vessels employed for the Eastern trade were called Kolandiophonta, a name which Caldwell confesses his inability to explain.

Three cities and ports are named in the order of their occurrence which were of great commercial importance, Kamara, Podouke, and Sopatma. Kamara may perhaps bo, as Müller thinks, the emporium which Ptolemy calls Khabêris, situated at the mouth of the River Khabêros (now, the Kavery), perhaps, as Dr. Burnell suggests, the modern Kaveripattam. (Ind. Ant. vol. VII. p. 40). Pôdoukê appears in Ptolemy as Podoukê. It is Puduchchêri, i.e. 'new town,' now well known as Pondicherry ; so Bohlen, Ritter, and Benfey. [Yule and Lassen place it at Pulikat]. Sopatma is not mentioned in Ptolemy, nor can it now be traced. In Sanskrit it transliterates into Su-patna, i. e., fair town.
(61) The next place noticed is the Island of Ceylon, which is designated Palaisimoundou, with the remark that its former name was

## 144

the course of the voyage now bends to the east, there lies out in the open sea stretching towards the west the island now called Palaisimoundou, but by the ancients Taprobane. To cross over to the northern side of it takes a day. In the south part it gradually stretches towards the west till it nearly reaches the opposite coast of $\Lambda$ zania. It produces pearl, precious (transparent) stones, muslins, and tortoise-shell.
62. (Returning to the coast,) not far from the

Teprobane . This is the Greek transliteration of Tannraparni, the name given by a band of colonists from Magadha to the place where they first landed in Ceylon, and which was afterwards extended to the whole island. It is singular, Dr. Caldwell remarks, that this is also the name of the principal river in Timnevelly on the opposite coast of India, and he infers that the colony referred to might previously have formed a settlement in Tinnerelly at the mouth of the Tâmra. parni river-perhaps at Kolkei, the earliest residence of the Pûndya kings. The passage in the Periplis which refers to the island is very corrupt.
(62) Recurring to the mainland, the narrative notices a district called Masalia, where great quantities of cotton were manufactured. This is the Maisolia of Ptolemy, the regionin which he places the mouths of a river the Mais ôlos, which Benfey identifies with tho Godivvari, in opposition to others who would make it the Krishnit, which is perhaps Ptolemy's Tuna. The
three marts wo have mentioned lies Masalia, the seaboard of a country extending far inland. Here immense quantities of fine muslins are manufactured. From Masalia the course of the voyage lies eastward across a neighbouring bay to Dêsarênê, which has the breed of elephants called Bôsarô. Leaving D êsaren ê the course is northerly, passing a variety of barbarous tribes, among which are the K ir rhadai, savages whose noses are flattened to the face, and another tribe, that of the Bargusoi,
name Maisôlia is taken from the Sanskrit Mausala, preserved in Machhlipatana, now Masulipatam. Beyond this, after an intervening gulf running eastward is crossed, another district occurs, Desarêne, noted for its elephants. This is not mentioned by Ptolemy, but a river with a similar namo, the Dôsarôn, is found in his enumeration of the rivers which occur between the Maisôlos and tho Ganges. $\Lambda \mathrm{s}$ it is the last in the list it may probally be, as Lassen supposes, the Brâhmini. Our author howrver places Dosarônô at a much greater distanco from tho Ganges, for ho peoples tho intermediato space with a variety of tribes which Ptolemy relogates to the East of tho river. The first of these tribes is that of the Kirradai (Sanskrit, Kirâtas), whose features are of the Mongolian type. Next are the Bargusoi, not mentioned by Ptolemy, but perhaps to be identified with tho camnibal race ho speaks of, the Barousai thought by Yule to bo possibly the inhabitants of the Nikobar islands, and lastly the
as well as the Hippioprosôpoior Makroprosof oi (the horse faced or long faced men), who are reported to be cannibals.
63. After passing these the course turns again to the east, and if you sail with the ocean to your right and the coast far to your left, you reach the Ganges and the extremity of the continent towards the east called Khruse (the Golden Khersonese). The river of this region called the Ganges is the largest in India; it has an annual increase and decrease like the Nile, and there is on it a mart called aftor it, Gangê, through which passes a considerable trafic consisting of betel, the Gangetic spike-
tribe of the long or horse-faced men who were also cannibals.
(63) When this coast of savages and monsters is left behind, the course lies eastward, and leads to tho Ganges, which is the greatest river of India, and adjoins the extremity of the Eastern continent called Khrusê, or the Golden. Near the river, or, according to Ptolemy, on the third of its mouths stands a great emporium of trade called Gangô, exporting Dfalabathrum and cottons and other commodities. Its exact position there are not sufficient data to determine. Khrusê is not only the name of the last part of the continent, but also of an island lying out in the ocean to castward, not far from the Ganges. It is the last part of the world which is said to bo inbabited. The situation of Khrusê is differently defined by different ancient authors. It was not known to
nard, pearl, and the finest of all muslins-those called the Gangetic. In this locality also there is said to be a gold mine and a gold coin called Kaltis. Near this river there is an island of the ocean called Khrusê (or the Golden), which lies directly under the rising sun and at the extremity of the world towards the east. It produces the finest tortoise-shell that is found throughout the whole of the Erythrean Sea.
64. Beyond this region, immediately under the north, where the sea terminates outwards, there lies somewhere in Thín a a very great city, -not on the coast, but in the interior of the country, called Thinn,-from which silk, whether in the raw state or spun into thread
the Alexandrine geographers. Pliny scems to have preserved the most ancient report circulated regarding it. He says (VI. xxiii. 80) : "Beyond the mouth of the Indus are Chrysê and Argyre abounding in metals as I believe, for I can hardly credit what some have related that the soil consists of gold and silver." Mela (III. 7) assigns to it a very different position, asserting it to be near Tabis, the last spur of the range of Taurus. He therefore places it where Eratosthenês places Thinai, to the north of the Ganges on the confines of the Indian and Skythian oceans. Ptolemy, in whose time the Transgangetic world was better known, refers itto the peninsula of Malacca, the Golden Khersonese.
(64) The last place which the Periplis mentions is Thinai, an inland city of the Thinaior
and woven into cloth, is brought by land to Barugaza through Baktrin, or by the Ganges to Limarikê. To penetrate into Thîna is not an easy undertaking, and but few merchants come from it, and that rarely. Its situation is under the Lesser Bear, and it is said to be contorminous with the remotest end of Pontos, and that part of the Kaspian Sea which adjoins tho Maiôtic Lake, along with which itissues by one and the same month into the occan.
65. On the confines, however, of Thinai an annual fair is held, attended by a race of men of squat figure, with their faco very broad, but mild in disposition, called the Sêsatai, who in appearance resemble wild animals. They come with their wives and children to this fair, bringing heary loads of goods wrapped up in mats resombling in outward appearance tho early leaves of the vine. Their place of assembly is where their own territory borders with that of Thinai ; and here, squatted on the mats on which

Sinai, having a large commorco in silk and roollen stuffs. The ancient writers are not at all agreed as to its position, Colonel Yule thinks it was probably the city described by Marco Polo under tho name of Kenjan-fu (that is Si-ngan-fu or Chauggan,) the most celebrated city in Chinese history, and the capital of several of the most potent dynasties. It was the metropolis of Shi IIwengti of the 'I'Sin dynasty, properly the first emperor, and whose conquestsalmost
they exhibit their wares, they feast for several days, after which they return to their homes in the interior. On observing their retreat the people of Thinai, repairing to the spot, collect the mats on which they had been sitting, and taking out the fibres, which are called petroi, from the reeds, they put the leaves two and two together, and roll them up into slender balls, through which they pass the fibres extracted from the reeds. Threo kinds of Malabathrum are thus made-that of the large ball, that of the middle, and that of the small, according to the size of the leaf of which the balls are formed. Hence there are threo kinds of Malabathrum, which after boing mado up aro forwarded to India by the manufacturers.
66. All the regions boyond this are unexplored, boing difficult of access by reason of the extremo rigour of tho climato and tho severe frosts, or perhaps because such is the will of the divine power.

[^24]
## THE

## VOYAGE OF NEARKHOS,

## FROM THE INDUS TO THE HEAD OF THE PERSIAN GULF,

as described in the second part of THE INDIKA OF ARRIAN, (From Ceapter XVIII. to tae end.)

TRANSLATED FROM MÜLLER'S EDITION (Ae given In the Geographi Grach Minores: Paris, 1855).

WITH INTRODUGTION AND NOTES.

## THE VOYAGE OF NEARKHOS.

## Introduction.

The coasting voyage from the mouth of the Indus to the head of the Persian Gulf, designed by Alexander the Great, and executed by Nearkhos, may be regarded as the most important achievement of the ancients in navigation. It opened up, as Vincent remarks, a communication between Europe and the most distant countrios of Asia, and, at a lator period, was the source and origin of the Portuguese discoveries, and consequently the primary cause, however remote, of the British establishments in India. A Journal of this voyage was written by Nearkhos himself, which, though not extant in its original form, has been preserved for us by Arrian, who embodied its contents in his little work on India, ${ }^{\text {b }}$ which he wrote as a sequel to his history of the expedition of Alexander.

Nearkhos as a writer must be acknowledged to be most scrupulously honest and exact,-for the result of explorations made in modern times along the shores which ho passed in the course of his voyage shows that his description of them is accurate even in the most minute particulars. His veracity was nevortheless oppugned in ancient times by Strabo, who unjustly stigmatises the whole class of the Greek writers upon India as mendacious. "Generally speaking," ho says (II. i. 9), "the men who have written upon Indian

[^25]affairs were a set of liars．Dcimakhos holds the first place in the list，Megasthenês comes next， while Onêsikritos and Nearkhos，with others of the same class，stammer out a few words of truth．＂ （тара廿e入入i§ovтєs）．Strabo，however，in spite of this censure did not hesitate to use Nearkhos as one of his chicf authorities for his description of India，and is indebted to him for many facts re－ lating to that country，which，however extraordi－ nary they might appear to his contemporaries， have been all confirmed by subsequent observa－ tion．It is therefore fairly open to doubt whether Strabo was altogether sincere in his ill opinion， seeing it had but little，if any，influence on his prac－ tice．We know at all events that he was too much inclined to undervalue any writer who retailed fables，without discriminating whether the writer set them down as facts，or merely as stories，which ho had gathered from hearsay．

In modern times，the charge of mendacity has been repeated by Hardouin and Huet．Thero are， howerer，no more than two passages of the Journal which can be adduced to support this imputa－ tion．The first is that in which the excessive breadth of 200 stadia is given to the Indus，and the second that in which it is asserted that at Malana（situated in $25^{\circ} 17^{\prime}$ of N ．latitude）the shadows at noon were obsersed to fall south－ ward，and this in the month of November．With regard to the first charge，it may be supposed that the breadth assigned to the Indus was probably that which it was observed to have when in a state of inundation，and with recrard to the second， it may be ret by the supposition，which is quite
admissille, that Arrian may have misapprehended in some measure the import of the statement as made by Nearkhos. The passage will be afterTrards examined, ${ }^{2}$ but in the meantime we may say, with Vincent, that if the difficulty it presents admits of no satisfactory solution, the misstatemont ought not, as standing alone, to be insisted upon to the invalidation of the whole work.

But another charge besides that of mendacity has boen preferred against the Journal. Dodwell has denied its authenticity. His attack is based on the following passage in Pliny (VI. 23):Onesciriti et Nearchi narigatio nec nomina habet mansiomum nee spatia. The Journal of Onesicritus and N:archus has neither the names of the anchorages nor the measure of the distances. From this Dodwell argucs that, as the account of the royage in Arrian contains both the names and the distances, it could not hare been a transcript of the Journal of Nearkhos, which according to Pliny gave neither names nor distances. Now, in the first place, it may well be asked, why the authority of Pliny, who is by no means always a careful writer, should be set so high as to override all other testimony, for instance, that of Arrian himself, who expressly states in the outset of his narratie that he intended to gire the account of the royage which had been written by Nearkhos. In the second place, the passago in question is probably corrupt, or if not, it is in direct conflict with the passage which immediately fullows it, aud cortains Pliny"s own summary of the royage in which little else

[^26]is given than the names of the anchorages and the distances. Dodwell was aware of the inconsistency of the two passages, and endearoured to explain it away. In this he entirely fails, and there can therefore be no reasonable doubt, that in Arrian's work we have a record of the voyage as anthentic as it is reracious.

Of that record we proceed to give a brief abstract, adding a fer particulars gathered from other sources.

The flect with which Nearkhos accomplished the royage consisted of war-galleys and transports which had been partly built and partly collected on the banks of the river Hydaspes (now the Jhelam), where Alexander had supplied them with crews by selecting from his troops such men as had a knowledge of seamanship. The fleet thus manned sailed slowly down the Hydaspes, the Akesines, and the Indus, its movements being regulated by those of the army, which, in marching down tormards the sea, mas engaged in reducing the warlike tribes settled along the banks of these rivers. This downward rogage occupied, according to Strabo, ten months, but it probably did not occupy more than nine. The fleet haring at length reached the apex of the Delta formed by the Indus remained in that neighbourhood for some time at a place called Pattala, which has generally been identified with Thatha-a town near to where the western arm of the Indus bifurcates,--but which Cunningham and others would prefer to identify with Nirankol or Haidarâbâd. ${ }^{3}$ From Pattala

Alexander sailed down the western stream of the river, where some of his ships were damaged and others destroyed by encountering the Bore, a phenomenon as alarming as it was new to the Greeks. ${ }^{4}$ He returned to Pattala, and thence made an excursion down the Eastern stream, which he found less difficult to navigate. On again returning to Pattala he removed his fleet down to a station on the Western branch of the river (at an island called Killouta), ${ }^{5}$ which was at no great distance from the sea. He then set out on his return to Persia, leaving instructions with Nearkhos to start on the royage as soon as the calming of the monsoon should render navigation safe. It was the king's intention to march near to the coast, and to collect at convenient stations supplies for the victualling of the fleet, but he found that such a route was impracticable, and he was obliged to lead his army through the inland provinces which lay between India and his destination, Sussa. ${ }^{6}$ He left Leonnatos, however, behind him in the country of the Oreitai, with instructions to render every assistance in his power to the expedition under Nearkhos when it should reach that part of the const.

Nearkhos remained in the harbour at Killouta for about a month after Alexander had departed, and then sailed during a temporary lull in the monsoon, as he was apprehensive of being at-

[^27]lacked by the natires who had been but imperfeetly subjugated, and whose spirit was hostile.' 'The date on which he set sail is fixed by Vineent as the lst of October in the year n.c. 326 . He proceeded slowly dorn tho river, and anchored first at a place called Stoura, which was only 100 stadia distant from the station they had quitted. Here the fleet remained for two days, when it proceeded to an anchorage only 80 stadia farther down the stream at $\pi$ place called Kaumana. ${ }^{8}$ Thence it proceeded to Korcitis (v. 1. Koreëstis)-where it again anchored. When once more under weigh its progress was soonarrested by a dangerous rock or bar which obstructed the mouth of the river. ${ }^{\circ}$ After some delay this difficulty was overcome, and the fleet was conducted in safety into the open main, and onward to an island called Krôkala ( 150 stadia distant from the bar), where it remained at anchor throughout the day following its arrival. On leaving this island Nearkhos had Mount Eiros (now Manora) on his right hin. l, and a low flat island on his left; and this, as Cunningham remarks, is a very accurate description of the entranco to Karâchi harbour. The flect was conducted into this harbour, now so well known as the great emporium of the trade of the Indus, and here, as the monsoon was still blowing with great violence, it remained for four and twenty days. The harbour was so commodious and secure that Nearkhos designated it the Port

[^28]of Alexander. It was well sheltered by an island lying close to its mouth, called by Arrian, Bibakta, but by Pliny, Bibaga, and by Philostratos, Biblos.

The expedition took its departure from this station on the 3rd of November. It suffered both from stress of weather and from shortness of provisions until it reached Kôkala on the coast of the Oreitai, where it took on board the supplies which had been collected for its use by the exertions of Leonnatos. Hero it remained for about 10 days, and by the time of its departure the monsoon had settled in its favour, so that the courses daily accomplished were now of much greater length than formerly. The shores, however, of the Ikhthyophagoi, which succeeded to those of the Orcitai, were so miserably barren and inhospitable that provisions were scarcely procurable, and Nearkhos was apprchensive lest the men, famished and despairing, should desert the ships. Their sufferings were not relieved till they approached the straits, which open into the Persian Gulf. When within the straits, they entered the month of the river Anamis (now the Minâb or Ibrahim river), and having landed, formed a dock yard and a camp upon its banks. This place lay in Harmozeia, a most fertile and beautiful district belonging to Karmania. Nearkhos, having here learned that Alexander was not moro than a 5 days' journey from the sea, proceeded into the interior to meet him, and report the safety of the expedition. During his absence the ships were repaired and provisioned, and therefore soon after his return to the camp he gave orders for the resumption of the voyage. 'The time spent at Har-
mozeia was one and twenty days. The fleet again under weigh coasted the islands lying at the mouth of the gulf, and then having shaped its course towards the mainland, passed the western shores of Karmania and those of Persis, till it arrived at the mouth of the Sitakos (now the Kara-Agach), where it was again repaired and supplied with provisions, remaining for the same number of days as at the Anamis. One of the next stations at which it touched was Mesembria, which appears to have been situated in the neighbourhood of the modern Bushire. The coast of Persis was difficult to navigate on account of intricate and oozy chamuels, and of shoals and breakers which frequently extended far out to sea. 'I'he coast which succeeded, that of Sousis (from which Persis is separated by the river A rosis or Oroattis, now the 'lab) was equally difficult and dangerous to navigate, and therefore the fleet no longer crept along tho shore, but stood out more into the open sea. At the head of the gulf Sousis bends to westward, and here are the mouths of the Tigris and Euphrates, which appear in those days to have entered the sea by separate chamels. It was the inteution of Nearkhos to have sailed up the former river, but he passed its mouth unawares, and continued sailing westward till he reached Diridôtis (or Terêdon), an emporium in Babylonia, situated on the Pallacopas branch of the Euphrates. From Diridûtis he retraced his course, and entering the mouth of the 'Tigris sailed up its stream till he reached the lower end of a great lake (not now existing), through which its current
flowed. At the upper end of this lake was a village callod Aginis, said to have been 500 stadia distant from Sousa. Nearkhos did not, as has been orroncously supposed by some, sail up the lake to Aginis, but entered the mouth of a river which flows into its south-castern extremity, called the Pasitigris or Eulacus, the Ulai of the Prophet Daniel, now the Karan. The fleet proceeded up this river, and came to $a$ final anchor in its stream immediately below a bridge, which continued the highway from Persis to Sousa. This bridge, according to Ritter and Rawlinson, crossed the Pasitigris at a point near the modern village of $\Lambda$ hwaz. Here the fleet and the army were happily reunited. Alexander on his arrival embraced Nearkhos with cordial warmth, and rewarted approprintely the splendid services which he had rendered by bringing the expedition safely through so many hardships and perils to its destination. The date on which the fleet anchored at the lridge is fised by Vircent for the 24th of February 13. c. 325 , so that the whole voyage was performed in 146 days, or somewhat less than 5 months.

The following tables show the names, positions, Se., of the different places which occurred on the route taken by the expedition :-

${ }^{20}$ The Olympic statium, which was in general use throughout Grecee, contained com Greck feet $=625$ Roman feet, or GOlG: linglish feet. The Roman mile contained eight stadia, being about half a stadium less than an English mile. Nut a few of the measurements given by Arrian are excessise, and it has therefore been conjectured that he may have used sume standard different from the Olympie, -which, however, is hardly probable. See the sulgect discussedin Smith's Dictivnary of Autiquities, S. V. stection.

## Translation.

XVIII. When the flect formed for Alexander upon the banks of the Hydaspes was now ready, he provided crews for the ressels by collecting all the Phonikians and all the Kyprians and Egyptians who had followed him in his Eastern campaigns, and from these he selected such as were skilled in scamanship to manage the vessels and work the oars. He had besides in his army not a fer islanders familiar with that kind of work, and also natires both of Iunia and of the IIellespont. The following officers he appointed as Commanders of the different galleys ${ }^{11}$ :-

## Makedonians.

## Citizens of Pella.

1. Hephaistiôn, son of Amyntor.
2. Leonnatos, son of Anteas.
3. Lysimakhos, son of Agathoklês.
4. Asklepiodûros, son of 'limander.
5. Arkhôn, son of Kleinias.

[^29]6. Demonikos, son of Athenaios.
7. Arkhias, son of Anaxidotos.
8. Ophellas, son of Seilênos.
9. Timanthês, son of Pantiadês.

Of Amphipolis.
10. Nearkhos, son of Androtîmos, who wrote a narrative of the voyage.
11. Laomedôn, sou of Larikhos.
12. Androsthenês, son of Kallistratos. Of Oresis.
13. Krateros, $\mathrm{s}, \mathrm{m}$ of Alexander.
14. Perdikkas, son of Orontes.

Of Eördaia.
15. Ptolemaios, son of Lagos.
16. Aristonous, son of Peisaios. Of Pydna.
17. Metrôn, son of Epikharmos.
18. Nikarkhidês, son of Simos. Of Stymphaia.
19. Attalos, son of Andromenês. Of Mieza.
20. Peukestas, son of Alexander. Of Alkomenai.
21. Peithôn, son of Krateuas. Of Aigai.
22. Leomatos, son of Antipater. Of Alôros.
23. Pantoukhos, son of Nikohäos. Of Beroia.
21. Mylleas, son of Zôilos.

All these were Makedonians.
Greeks,-of Larisa :
25. Mêdios, son of Oxynthemis. Of Kardia.

## 26. Eumenês, son of Hierônymos. Of Kûs.

27. Kritoboulos, son of Plato. Of Magnêsia:
28. Thoas, son of Mênodôros.
29. Maiander, son of Mandrogenês.

Or Tcos:
30. Andrôn, son of Kabêlas.

Of Soloi in Cyprus :
31. Nikoklê̂s, son of lasikratês.

Of Salamis in Cyprus:
32. Nithaphôn, son of Pnutagoras.

A Persian was also appoiuted as a Trierarch :
33. Bagoas, son of Pharnoukhês.

The Pilot and Master of Alexander's own ship was Onésikritos of Astypalaia, and the SecretaryGeneral of the fleet Euagoras, the son of Eukleôn, a Corinthian. Nearkhos, the son of Androtimos, a Kretan by birth, but a citizen of Amphipolis on the Strymôn was appointed as Admiral of the expedition.

When these dispositions had been all completed, Alexander sacrificed to his ancestral gods, and to such as had been indicated by the oracle; also to Poscidôn and Amphitritê and the Nêreids, and to Okeanos himself, and to the River Hydaspês, from which he was setting forth on his enterprise; and to the Akesinês into which the Hydaspês pours its stream, and to the Indus which receives both these rivers. He further celebrated the occasion by holding contests in music and gymmastics, and by distributing to the whole army, rank by rank, the sacrificial victims.
XIX. When all the preparations for the voyage
had been made, Alexander ordered Krateros, with a force of horse and foot, to go to one side of the Hydaspûs ; while Hephaistiôn commanding a still larger force, which included 200 elephants, should march in a parallel line on the other side. Alexander himself had under his immediate command the body of foot guards called the Hypaspists, and all the archers, and what was called the companion-cavalry,-a force consisting in all of 8,000 men. The troops under Krateros and Hephaistiôn marching in adrance of the flect had received instructions where they were to wait its arrival. Philip, whom he had appointed satrap of this region, was despatched to the banks of the Akesinês with another: large division, for by this time he had a following of 120,000 soldiers, ${ }^{12}$ including those whom he had himself led up from the sea-coast, as well as the recruits enlisted by the agents whom he had deputed to collect an army, when he admitted to his ranks barbarous tribes of all countries in whatever way they might be armed. Then weighing anchor, he sailed down the Hydaspês to its point of junction with the Akesinês. The ships numbered altogether 1800 , including the long narrow war galleys, the round-shaped roomy merchantmen, and the transports for carrying horses and provisions to feed the army. But how the flect sailed down the rivers, and what tribes Alexander conquered in the cuurse of the royage, and how he was in danger among the Malli, ${ }^{13}$ and

[^30]how he was wounded in their country, and how Peukestas and Leonnatos corered him with their shields when he fell,-all these incidents have been already related in my other work, that which is written in the Attic dialect. ${ }^{3+}$ My present object is to gire an account of the coasting royage which Nearkhos accomplished with the flect when starting from the mouths of the Indus he sailed through the great ocean as far as the Persian Gulf, called by some the Red Sea.
XX. Nearkhos himself has supplied a narrative of this royage, which runs to this effect. Alexamder, he informs us, had set his heart on marigating the whole circuit of the sea which extends from India to Persia, but the length of the royage made him hesitate, and the possibility of the destruction of his fleet, should it be cast on some desert coast either quite harbourless or too barren to furnish adeyuate supplies; in which case a great stain tarnishing the splendour of his former actions rould obliterate all his good fortune. His ambition, however, to be always doing something new and astonishing prevailed orer all his scruples. Then arose a difficulty as to what commander he should choose, haring genius sufficient for working out his plans, and a difficulty also with regard to the men on ship-board how he could orercome their fear, that in being despatched on such a service they were recklessly sent into open peril. Nearkhos here tells us that Alexander consulted him on the choice of a commander, and that when the king had mentioned
${ }^{26}$ Anal). VI. 11.
one man after another, rejecting all, some because they were not inclined to expose themselves for his sake to danger, others because they were of a timid temper, others because their only thought was how to get home, making this and that objection to each in turn, Nearkhos then proffered his own services in these terms: "I, then, 0 king, engage to command tho expedition, and, under the divine protection, will conduct the fleet and the people on board safe into Persia, if the sea lee that way navigable, and the undertaking within the power of man to perform." Alexander made a pretence of refusing the offer, saying that he could not think of exposing any. friend of his to the distresses and hazard of such a royage, but Nearkhos, so f:ur from withdrawing his proposal, only persisted the more in pressing its acceptance upon him. Alexander, it need not be said, warmly appreciated the promptitude to serve him shown by Nearkhos, and appointed him to be com-mander-in-chief of tho expedition. When this became known, it had a great effect in calming the minds of the troops ordered on this service and on the minds of the sailors, since they felt assured that Alexander would never have sent forth Nearkhos into palpable danger unless their lives were to be preserved. At the same time the splendour with which the ships were equipped, and the enthusiasm of the officers rying with each other who should collect the best men, and have his complement most effective, inspired even those who had long hung back with nerve for the work, and a good hope that success would crown the undertaking. It added to the cheer-
fulness pervading the army that Alexander himself sailed out from both the mouths of the Indus into the open main when he sacrificed victims to Poseidôn and all the other sea-deities, and presented gifts of great magnificence to the sea; and so the men trusting to the immeasurable good fortune which had hitherto attended all the projects of Alexander, believed there was nothing he might not dare-nothing but would to him bo feasible.
XXI. When the Ditesian winds, ${ }^{15}$ which continue all the hot season blowing landward from tho sea, making navigation on that coast im- . practicable, had subsided, then the expedition started on the royage in the year when Kephisidoros was Arehon at Athens, on the Quth day of the month Boeddromion according to the Athenian Kilendar, but as the Makedonians and Asiatics reckon * * in the 11th year of the reign of Alecander. ${ }^{16}$ Nearkhos, before putting to

[^31]
## 175

sea sacrifices to Zeus the Preserver, and celebrates, as Alexander had done, gymnastic games. Then clearing out of harbour they end the first day's voyage by anchoring in the Indus at a creek called Stoura, where they remain for two days. The distance of this place from the station they had just left was 100 stadia. On the third day they resumed the voyage, but proceeded no further than 30 stadia, coming to an anchor at another creek, where the water was now salt, for the sea when filled with the tide ran up the creck, and its waters even whon the tide receded commingled with the river. The name of this place was Kaumana. 'The next day's course, which was of 20 stadia only, brought them to Korecitis, where they once more anchored in the river. When again under weigh their progress was soon interrupted, for a bar was visible which there obstructed the mouth of the Indus; and the waves were heard breaking with furious roar upon its strand which was wild and rugged. Observing, however, that the bar at a particular part was soft, they made a cutting through this, 5 stadia long, at low water, and on the return of the flood-tide carried the ships through by the passage thus formed into the

[^32]
## ujpen sen. ${ }^{17}$. Then following the winding of the coust they raua course of $1: 0$ stadia, and reach Krôkala, ${ }^{18}$

${ }^{17}$ Recardinethesunken reef encounteredby tho feet fto leaving Koreatis, Sir Alexamder Burnes says: "Near tho mouth of the river we passed a rock stretching across tho etream, whech is particularly mentioned by Nearchas, who calls it a dungerous rock, and is the more remarkable sinco there is not even a stone below 'latta in any other pard of the Indun." The rock, he adds, is at a distance of sis miles up the Pitti. "It is vaiu," says Captain Wood in the marrative of his Joumey to the Source of the Oxus, " in the delta of such a river (as the Indus), to identify existing localities with descriptions handed down to us by the hidtorians of Alexander the Great. . . . . (but) Burnes has, I think, shown that the mouth hy which the Grecian fleet left the Indus was the modern l'iti. 'The 'dangerous rock' of Nearchus completely identifies the spot, and as it is still in existence, without any other within a circle of many miles, we can wish for mostronger evidence." With regard to the canal dug through this rock, Burues remarks: "Iho (ireck admiral only availed himself of the experience of the people, for it is yet customary amons the natives of Sind to dig shallow canals, and leave the tides or river to denpen them; and a distance of five stadia, or half a mile, would call for not great lahour. It is not to bo supposed that sandbanks will continue analtered for centuries, but I may observe that there was a large bank contiguons to the island, between it and which a passage like that of Nearchus might have been dug with the greatest advantage." 'The same author thus describes the mouth of the P'iti:-"Begiuning from the nestward we have the Pitti mouth, an embouchare of the Burgar, that falls into what may bo called the Bay of Karachi. It has no bar, but a large samdbank, together with an island outside prevont is direct passage into it from the sea, and uarrow the channel to alrout half a mile at its month."
is All inguirers havo agreed in identifying the Kolalat of Itcolemy, and the sandy island of Krokola where Near. chus tarried with his fleet for one day, with a small island in tho bay of Karachi. Krokala is further deseribed as lying off the mainiand of the Arabii. It was 150 stadia, or 17 in miles, from the westem mouth of the Indus, - Which agrees exactly with the relative positions of Karathi and the mouth of the Ghana river, if, as we may fairly assume, the present coast-line has advanced five or six mile's durines the twenty-one centuries that have clapsed since the death of Alexamder. The identification is contirmed by the fact that the district in which Karachi is situated is called K a r -

## 177

a sundy island whero they anchored and remained all next day. The country adjoining was inhabited by an Indian race called the Arabies, whom I have mentioned in my longer work, where it is stated that they derive their name from the River Arabis, which flows through their country to the sea, and parts them from the Oreitai. ${ }^{10}$ Weighing from Krokala they had on their right hand a mountain which the natives called Eiros, and on their left a flat island almost level with the sea, and so near the mainland to which it runs parallel that the intervening channel is extremely narrow. Having quite cleared this passage they come to anchor in a well-sheltered harbour, which Nearkios, finding large and commodious, designated Alexander's Haven. This harbour is protected by an island lying about 2 stadia off from its entranco. It is called Bibakta, and all the country round about Sangada. ${ }^{20}$ The existence of the harbour is due altogether to the island which opposes a barrier to the violence of the sea. Here heavy gales blew from seaward for many days without intermission, and Nearkhos

[^33]fearing lest the barbarians might, some of them,

- combine to attack and plunder the camp, fortified his position with an enclosure of stones. Here they were obliged to remain for 24 days. The soldiers, we learn from Nearkhos, caught mussels and oysters, and what is called the razor-fish, these being all of an extraordinary size as compared with the sorts found in our own sea. ${ }^{82}$ He adds that they had no water to drink but what was brackish.
XXII. As soon as the monsoon ceased they put again to sea, and haring run fully 60 stadia came to anchor at a sandy beach under shelter of a desert island that lay near, called Domai. ${ }^{22}$ On the shore itself there was no water, but 20 stadia inland it was procured of good quality. The following day they procecded 300 stadia to Saranga, where they did not arrive till night. They anchored close to the shore, and found water at a distance of about 8 stadia from it. Weighing from Saranga they reach Sakala, a desert place, and anchored. On leaving it they passed two rocks so close to each other that the oar-blades of the galleys grazed both, and after a course of 300 stadia they came to anchor at Morontobara. ${ }^{2 s}$

[^34]The harbour here was deep and capacious, and well sheltered all round, and its waters quite tranquil, but the entrance into it was narrow. In the native language it was called Women's Haven, because a woman had been the first sovereign of the place. They thought it a great achievement to have passed those two rocks in safety, for when they were passing them the sea was boisterous and running high. They did not remain in Morontobara, but sailed the day after their arrival, when they had on their left hand an island which sheltered them from the sea, and which lay so near to the mainland that the intervening channel looked as if it had been artificially formed. Its length from one end to the other was 70 stadia. ${ }^{24}$ The shore was woody and the island throughout over-grown with trees of every description. They were not able to get fairly through this passage

[^35]till towards daybreak, for the sea was not only rough, but also shoal, the tide being at ebb. They sailed on continuously, and after a course of 120 stadia anchored at the mouth of the river Arabis, where there was a spacious and very fine haven. ${ }^{2 s}$ The water here was not fit for drinking, for the sea ran up the mouths of the Arabis. Having gone, however, about 40 stadin up the river, they found a pool from which, having drawn water, they returned to the flect. Near the harbour is an island high and bare, but the sea around it supplied oysters and fish of various kinds. ${ }^{20}$ As far as this, the country was possessed by the Arabies,

[^36]the last Indian people living in this direction; and the parts beyond were occupied by the Oreitai. ${ }^{27}$
XXIII. On weighing from the mouths of the Arabis, they coasted the shores of the Oreitai, and after running 200 stadia reached Pagala, ${ }^{93}$ where there was a surf but nevertheless good anchorage. The crew were obliged to remain on board, a party, however, being sent on shore to procure water. They sailed next morning at sunrise, and after a course of about 430 stadia, reached Kabana ${ }^{20}$ in the evening, where they anchored at some distance from the shore, which was a desert; the violence of the surf by which the vessels were much tossed preventing them from landing. While rumning the last course the fleet had been caught in a heary gale blowing from seaward, when two galleys and a transport foundered. All the men, however, saved themselves by swimming, as the vessels at the time of the disaster were sailing close to the shore. They weighed

[^37]from Kabana about midnight, and having proceeded 200 stadia arrived at Kôkala, where the ressels could not be drawn on shore, but rode at anchor out at sea. As the men, however, had suffered severely by confinement on board, ${ }^{30}$ and were very much in want of rest, Nearkhos allowed them to go on shore, where he formed a camp, fortifying it in the usual manner for protection against the barbarians. In this part of the country Leonnatos, who had been commissioned by Alexander to reduce the Oreitai and settle their affairs, defeated that people and their allies in a great battle, wherein all the leaders and $6,000 \mathrm{men}$ were slain, the loss of Leommatos, being only 15 of his horse, besides a fow foot-soldiers, and one man of note Apollophanes, the satrap of the Gedrosians. ${ }^{31}$ A full account, however, of these transactions is given in my other work, where it is stated that for this service Leonnatos had a golden crown placed upon his head by Alexander in presence of the Makedonian army. Agrecably to orders given by Alexander, corn had been here collected for the victualling of the ressels, and stores sufficient to last for 10 days were put on board. Here also such ships as had been damaged during the

[^38]voyage were repaired, while all the mariners that Nearkhos considered deficient in fortitude for the enterprise, he consigned to Leonnatos to be taken on by land, but at the same time he made good his complement of men by taking in exchange others more efficient from the troops under Leonnatos.
XXIV. From this place they bore away with $\Omega$ fresh breeze, and having made good a course of 500 stadia anchored near a winter torrent called the Tomêros, which at its mouth expanded into an estuary. ${ }^{32}$ The natives lived or the marshy ground near the shore in cabins close and suffocating. Great was thoir nstonishment when they descried the flect approaching, but they were not without courage, and collecting in arms on tho shore, drew up in line to attack the strangers when landing. They carricd thick spears about 6 cubits long, not headed with iron, but what was as good, hardened at the point by fire. Their number was about 600, and when Nearkhos saw that they stood their ground prepared to fight, he ordered his vessels to advance, and then to anchor just within bowshot of the shore, for he had noticed that the thick spears of the barbarians were adapted only for close fight, and were by no means formidable as missiles. He then issued his directions: those men that were lightest equipped, and the most active and best at swim-

32 From the distances given, the Tomeros must be identified with the Maklow or Hingal river; some would, however, make it the Bhush . The form of the name in Pliny is 'lomberus, and in Mola-Tubero. 'these authors mention another river in connection with the Tomerns,- the Arosapes or Arusaces.
ming were to swim to shore at a given sigual: when any one had swum so far that he could stand in the water he was to wait for his next neighbour, and not advance against the barbarians until a file could be formed of three men deep: that done, they were to rush forward shouting the war-cry. The men selected for this service at onco plungedinto the sea, and swimming rapidly touched ground, still keeping due order, when forming in file, they rushed to the charge, shouting the warcry, which was repeated from the ships, whence all the while arrows and missiles from engines were launched against the enemy. Then the barbarians terrified by the glittering arms and the rapidity of the landing, and wounded by the arrows and other missiles, against which they had no protection, being all but entirely naked, fled at once without making any attempt at resistance. Some perished in the ensuing flight, others were taken prisoners, and somo escaped to tho mountains. Those they captured had shaggy hair, not only on their head but all over their body; their mails resembled the claws of wild beasts, and were usod, it would seem, instead of iron for dividing fish and splitting the softer kinds of wood. Things of a hard consistency they cut with sharp stones, for iron they had none. As clothing they wore the skins of wild beasts, and occasionally also the thick skins of the large sorts of fish. ${ }^{33}$
XXV. After this action they draw the ships on

[^39]shore and repair all that had been dannaged. On the 6th day they weighed again, and after a course of 300 stadia reached a place called Malana, the last on the coast of the Oreitai. ${ }^{3 *}$ In the interior these people dress like the Indians, and use similar weapons, but differ from them in their language and their customs. The length of the const of the Arabies, measured from the place whence the expedition had sailed, was about 1,000 stadia, and the extent of the coast of the Oreitai 1,600 stadia. Nearkhos mentions that as they sailed along the Indian coast (for the people beyond this are not Indians), their shadows did not fall in the usual direction, for when they stood out a good way to the sonthward, their shadows appeared to turn and fall southward. ${ }^{35}$ Those constellations,

[^40]moreover, which they had been accustomed to see high in the heavens, were either not visible at alt, or were seen just on the verge of the horizon, while the Polar constellations which had formerly been always visible now set and soon afterwards rose again. In this Nearkhos appears to me to assert nothing improbable, for at Syênê in Egypt they show a well in which, when the sun is at the Tropic, there is no shadow at noon. In Meroë also objects project no shadow at that particular time. Hence it is probable that the shadow is subject to the same law in India which lies to the south, and more especially in the Indian ocean, which extends still further to the southrard.
XXVI. Next to the Oreitai lies Gedrosia, ${ }^{36}$ an inland province through which Alexander led his army, but this with difficulty, for the region was so desolate that the troops in the whole course of the expedition never suffered such direful extremities as on this march. But all the particulars
jaciuntur. Now Pliny was indelted for his knowledge of Mons Maleus to Bacton, who places it however not in the country of the Orcitai but somewhere in the lower Gangetic region among the Suari and Moneden. It would thas nppear that what Bacton had said of Mount Malens was applied to Malame of the Oreitai, no doubt on aneount of the likeness of tho two names. Add to :his that the expression in the passage under consideration, for the peryle be?gom this (Ilalana) are not lidians, is no doubt an interpilation into the text of tho Jourmal, for it makes the (Oreitai to be ma Indian people, whereas the Jourmal had a little before made the Arabies to be the last people of Indian descent living in this direction.
so 'This comitry, which corresponds generally to Mek. ritn, was called also Kedrosia, Giadrosia, or Gadrusia. The people were an $\AA$ riusian race akin to the Arakhusii, Arii, and Drangiani.
relating to this I have set down in my larger work (VI. 22-27). The seaboard below the Gedrosians is occupied by a people called the Ikhthyophagi, and along this country the fleet now pursued its way. Weighing from Malamabout the second watch they ran a course of 600 stadia, and reached Bagisîra. Here they found a commodious harbonr, and at a distance of 60 stadia from the sea at small town called Pasira, whence the people of the neighbourhood were called Pasireës. ${ }^{37}$ Weighing early next morning they had to double a headland which projected far out into the sea, and was high and precipitous. Here having dug wells, and got only a small supply of bad water, they rode at anchor that day because a high surf prevented the vessels approaching tho shore. They left this place next day, and sailed till they reached Kolta after a course of 200 stadia. ${ }^{33}$ Weighing thence at daybreak they reached Kilama, after a course of

[^41]
# Gino stadia, and there anchored. ${ }^{39}$ Near the beach was a village around which grew a few palmtrees, the dates on which were still green. There was here an island called Karbinê, distant from the shore about 100 stadia. ${ }^{40}$ The villagers by way 

[^42]of showing their hospitality brought presents of sheep and fish to Nearkhos, who says that the mutton had a fishy taste like the flesh of sea birds for the sheep fed on fish, there being no grass in the place. Next day they proceeded 200 stadia, and anchored off a shore near which lay a village called Kissa, 30 stadia inland. ${ }^{42}$ That coast was however called Karbis. There they found little boats such as might belong to miserably poor fishermen, but the men themselves they saw nothing of, for they had fled when they observed the ships dropping anchor. No corn was here procurable, but a few goats had been left, which were seized and put on board, for in the fteet provisions now ran short. On weighing they doubled a steep promontory, which projectedabout 150 stadia into the sea, and then put into a well-sheltered haven called Mosirna, where they anchored. Here the matives were fishermen, and here they obtained water. ${ }^{42}$
XXVII. From this place they took on board, Nearkhos says, as pilot of the fleet, a Gedrosian called Hydrakês, who undertook to conduct them as far as Karmania. ${ }^{33}$ Thenceforth until they

[^43]reached the Persian Gulf, the royage was more practicable, and the names of the stations more familiar: Departing from Mosarna at night, they sailed 750 stadia, and reached the coast of Batomon. 'They touched next at Barna, which was 400 stadia distant." Here grew many palm trees, and here was a garden wherein were myrtles and flowers from which the men wove chaplets for their hair. ${ }^{15}$ They saw now for the first time culiirated trees, and met with natives in a conditionabove that of mere savages. Leaving this they followed the winding of the coast, and arrived at Dendrobosa, where they anchor in the open sea. ${ }^{45}$ They weighed from this about midnight, and after a course of about 400 stadia gained the haven of
of Churber or Chewabad. . . . Upon the acquisition of Mydrakes or the Mydriakan two circumstances oceur, that give a new face to the future course of the voyage, one is the very great addition to the length of each day's course; and the other, that they generally weighed during the night: the former depending upon the confidence they acquired by having a pilot on board; and the latter on the nature of the land breeze." - Vincent 1., p. 24.

* This place is called in Ptolemy and Marcianns Badera or Bodera, and may have been situated near the Cape now ealled Chemanl Bunder. It is mentioned moder the form Balara by Philostratos (Vit. Apoll. 1II. aif), whose deseription of the place is in cluse agreement with Arrian's.
${ }^{\text {es }} \boldsymbol{\tau} \boldsymbol{\eta} / \sigma \iota$ кíp! $\eta \sigma \iota \nu$. Another reading, not so good however, is, $\tau!\hat{\jmath} \sigma t$ к $\omega \mu \eta \tau \eta \sigma \iota \nu$ for the village women, hut the Greeks were not likely to liave indulged in such gallantry. Wearing chaplets in the hair on festive occasions was a common practice with the Greeks. Cf. our author's Auab. V. 2. 8.
$\therefore$ In Ptolemy a placo is mentioned called Derenoibila, which may be the same as this. The old name perhaps survives in the mod m Daramor Duram, the mame of a highland on part of the coast between Cape fassence and Cupe Ciuadel.

Kôphas. ${ }^{47}$ The inhabitants were fishermen possessed of small and wretched boats, which they did not manage with oars fastened to a row-lock according to the Grecian manner, but with paddles which they thrust on this side, and on that into the water, like diggers using a spade. They found at this haven plenty of good water. Weighing about the first watch they ran 800 stadia, and put into Kyiza, where was a desert shore with a high surf breaking upon it. ${ }^{43}$ They were accordingly obliged to let the ships ride at anchor and take their meal on board. Leaving this they ran a course of 500 stadia, and came to a small town built on an eminence not far from the shore. On turning his eyes in that direction Nearkhos noticed that the land had some appearance of being cultivated, and thereupon addressing Arkhias (who was the son of Anaxidotos of Yella, and sailed in the Commander's galley, being a Makedonian of distinction) pointed out to him

[^44]that they must take possession of the place, as the iuhabitants would not willingly supply the army with food. It could not howerer be taken by assault, a tedious siege would be necessary, and they were already short of provisions. But the country was one that produced corn as the thick stubble which they saw corering the fields near the shore clearly proved. This proposal being approved of by all, he ordered Arkhias to make a feint of preparing the flect, all but one ship to sall, while he himself, pretending to be left behind with that ship, approached the town as it merely to view it.

XXVIIL. When he approached the walls the inhabitants came out to mect him, bringing a present of tumy-fish broiled in pans (the first instance of cookery among the Ikhthyophagi, although these were the rery last of them), accompanied with small cakes and dates. Ho accepted their offering with the proper acknowledgments, but said he wished to see their town, which he was accordingly allowed to enter. No sooner was he within the gates than he ordered two of his archers to seize the portal by which they had entered, while he himself with two attendants and his interpreter mounting the wall hard by, made the preconcerted signal, on seeing which the troops under Arkhias were to perform the service assigned to them. The Makedonians, on seeing tho signal, immediately ran their ships towards land, and without loss of time jumped into the sea. The barbarians, alarmed at these procedings, flew to arms. Upon this Nearkhos ordered his interpreter to proclaim that if they wished theire eity to be preserved from pillage they must supply his army

## 193

with provisions. They replied that they had none, and proceeded to attack the wall, but were repulsed by the archors with Nearkhos, who assailed them with arrows from the summit of the wall. Accordingly, when they saw that their city was taken, and on the point of being pillaged, they at once begged Nearkhos to take whatever corn they had, aud to depart without destroying the place. Nearkhos upon this orders Arkhias to possess himself of the gates and tho ramparts adjoining, and sends at the same time officers to see what stores were available, and whether these would be all honestly given up. The stores were produced, consisting of a kind of meal made from fish roasted, and a little wheat and barley, for the chief diet of these people was fish with bread added as a relish. The troops having appropriated these supplies returned to the fleet, which then hauled off to a cape in the neighbourhood called Bagia, which the natives regarded as sacred to the sun. ${ }^{*}$
XXIX. They weighed from this cape about midnight, and having made good a course of 1,000 stadia, put into Talmena, where they found a harbour with good auchorage. ${ }^{30}$ They sailed

[^45]thence to Kanasis, n deserted town 400 stadia distant, where they find a well ready-dug and wild palm-trees. ${ }^{91}$ These they cut down, using the tender heads to support life since provisions had again run scarce. They sailed all day and all night suffering great distress from hunger, and then came to an auchor off a desolate coast. Nearkhos fearing lest the men, if they landed, would in despair desert the flect, ordered the ships to be mored to a distance from shore. Weighing from this they ran a course of 8.50 stadia, and came to anchor at Kanate, a place with an open beach and some water-courses. ${ }^{52}$ Weighing again, and making 800 stadia, they reach Taoi, where they drop anchor. ${ }^{53}$ the place contained some small and wretehed villages, which were deserted by the inhabitants upon the approach of the fleet. Here the men found a little food and dates of the palm-tree, beside seven camels left by the rillagers which were killed for food. Weighing thence about daybreak they ran a course of 300 stadia, and came to anchor at Dagrasira, where the people were nomadic. ${ }^{54}$ Weighing again they sailed all night and all day without intermission, and haring thus accomplished a course of 1,100

[^46]stadia, left behind them the nation of the Ikhthyophagi, on whose shores they had suffered such severe privations. They could not approach the beach on account of the heary surf, but rode at anchor out at sea. In navigating the Ikhthyophagi const the distance traversed was not much short of 10,000 stadia. The people, as their name imports, live upon fish. Few of thent, however, are fishermen, and what fish they obtain they owe mositly to the tide at whose reflux they catch them with nets made for this purpose. These nets are generally about 2 stadia long, and are composed of the bark (or fibres) of the palm, which they twine into cord in the same way as the fibres of flax are trined. When the sea recedes, hardly any fish are found among the dry sands, but they abound in the depressions of the surface where the water still remains. The fish are for the most part small, thotigh some are canght of a considerable size, these loeing taken in the nets. The more delicate kinds they cat ratr as soon as they are taken out of the water. The large and coarser kinds they dyy in the sum, and when properly dried grind into a sort of meal from which they make bread. This meal is sometimes also used to bake cakes with. The cattle as well as their masters fare on dried fish, for the cometry has no pastures, and hardly cren a blade of grass. In most parts crabs, oysters and mussels add to the means of subsistence. Natural salt is found in the country, **: * from these they make oil. ${ }^{58}$
"Schmieder suggensts that instend of the common
 have written disò Gúv⿻日ע є. $\pi$. they malie oil from thun. nies, i. e. ușe the fat for oil.

Certain of their communities inhobit deserts where not a tree grows, and where there are not even wild fruits. Fish is their sole means of subsistence. In some few places, however, they sorw with grain somo patches of land, and eat the produce as a riand of luxury along with tho fish which forms the staple of their diet. The better class of the population in building their houses use, instead of wood, the bones of whales stranded on the coast, the broadest bones being employed in the framework of the doors. Poor people, and these are the great majority, construct their dwellings with the backbones of fish. ${ }^{\text {s }}$
XXX. Whales of enormous size frequent the outer ocean, besides other fish larger than those found in the Mediterrancan. Nearkhes relates that when they were bearing away from Kyiza, the sea early in the morning was observed to bo blown up into the nir as if by the force of a whirlwind. The men greatly alarmed earquired of the pilots the nature and cause of this phenomenon, and wore informed that it proceeded from the blowing of the whales as they sported in the sea. This. report did not quict their alarm, and through astonishment they let the oars drop from their hands. Nearkhos, howerer, recalled them to duty, and encouraged them by his presence, ordering the prows of those vessels that were near him to be turned as in a sea-fight towards the creatures as they approached, while the rowers were just then to shout as loud as they could the alala,

[^47]and swell the noise by dashing the water rapidly with the oars. The men thus encouraged on seeing the preconcerted signal advanced to action. Then, as they approached the monstors, they shouted the alctans loud as they could bawl, sounded tho trumpets, and dashod the water noisily with the oars. Thercupon the whales, which were seen alicad, plunged down terror-struck into the depths, and soon after rose astern, when they vigoronsly continued their blowing. The men by loud acelamations expressed their joy at this unexpected deliverance, the credit of which they gave to Nearkhos, who had shown such admirable fortitude and judgment.

We leam further, that on many parts of the coast whales are occasionally stranded, being left in shallow water at ebb-tide, and thus prevented from escaping back to sea, and that they are sometimes also cast ashore by violent storms. 'Chus porishing, their flesh rots away, and gradually drops off till the bones are left bare. These are used by the natives in the construction of their huts, the larger ribs making suitable bearing beams, and the smaller serving for rafters. The jaw-bones make arches for the door-ways, for whales are sometimes five and twenty orguice (fathoms) in length. ${ }^{57}$
XXXI. When they were sailing along the Tkhthyophagi coast, they were told about an island which was said to be about 100 stadia dis-

[^48]tant from the maimand, and uninhabited. Its name was Nosaln, and it was according to the local tradition sacred to the sun. No ono willingly risited this island, and if any one was carried to it mawares, he was never more seen. Nearkhos states that a transport of his fleet, manned with on Egyptian crew, disappeared not far from this island, and that the pilots accounted for their disnppearmee by saying that they must have lamded on the island in ignorance of the danger which they would therelyy incur. Nearkhos, howeser, sent a galley of 30 ones to sail round the islund, instrueting the men not to hand, but to approach as near as they conld to the shore, and hail the men, shouting out the name of the captain or any other name they had not forgotten. No one answered to the call, and Nearkhos says that he then sailed in person to the island, and compelled his company much agninst their will to go on shore. He too landed, and showed that the story about the island was nothing but an empty fable. Concerning this same island he hoard also another story, which ran to this effect: it had been at one time the residence of one of the Nereids, whose name, he says, he could not learn. It was her wont to have intercourso with nny man who visited the island, changing him thereafter into a fish, and casting him into the sea. The sum, however, being displeased with the Nereid, ordered her to remore from the island. She agreed to do this, and seek a home elsewhere, but stipulated that she should bo cured of her malady. To this condition the sun assented, and then the Nereid, taking pity upon
the men whom she had transformed into fish, restored them to their human shape. These men were the progenitors of the Ikhthyophagi, the line of succession remaining umbroken down to the time of Alexander. Now, for my part I have no praise to bestow on Nearkhos for expending so much time and ingenuity on the not very diflicult tasic of proving the falsehood of these stories, for, to tako up antiquated fables merely with a view to prove their falschood, I can only regard as a contemptible piece of folly. ${ }^{\text {s8 }}$
XXXII. 'lo the 1khthyophagi succeed the Gadrûsii, who oceupy $a$ most wretched tract of country full of sandy deserts, in penetrating which Alexander and his army wero reduced to the greatest extremities, of which an account is to be found in my other work. But this is an inland region, and therefore when the expedition left the 1khthyophagi, its course lay along Karmania. ${ }^{\text {s3 }}$ Here, when they first drew towards shore,

[^49]they could not effect a landing, but had to remain all night on board anchored in the deep, because a vioient surf spread along the shore and far out to sea. Thereafter the direction of their courso changed, and they sailed no longer towards sunset, but turned the heads of the ressels more to the north-west. Karmania is better wooded and produces better fruit than the country either of the Ikhthyophagi or the Oreitai. It is also more grassy, and better supplied with water. They anchor next at Badis, an inhabited place in Garmania, where grew cultivated trees of many different kinds, with the exception of the olive, and where also the soil faroured the growth of the vine and of corn. ${ }^{\text {co }}$ Weighing thence they ran 800 stadia, and came to an anchor off a barren coast, whence they descried a headland projecting far out into the sea, its nearest extremity being to nppearance about a day's sail distant. l'ersons aequainted with those regions asserted that this cape belonged to Arabia, and was called Maketa, whence cinnamon and other products wereexported to the Assyrians. ${ }^{01}$ And from this cuast where

[^50]the Hleet was now anchored, and from the hendland which they saw projecting into the sea right opposite, the gulf in my opinion (which is also that of Nearkhos) extends up into the intorior, and is probably the Red Sea. When this headland was now in view Onesikritos, the chief pilot, proposed that they should proceed to explore it, and by so shaping their course, escape the distressing passage up the gulf; but Nearkhos opposed this proposal. Onesikritos, he said, must be wanting in ordinary judgment if he did not know with what design Alexander had sent the fleet on this voyage. He certainly hal not sent it, because thero were no proper means of conducting the whole army safely by land, but his express purpose was to obtain a knowledge of the consts they might pass on their voyage, together with the harbours and islets, and to have the bays that might occur explored, and to ascortain whether there were towns bordering on the ocem, and whether the combtries were habitable or desert. They ought not therefore to lose sight of this object, seeing that they were now near the end of their toils, and especially that they were no longer in want of the necessary supplies for prosecuting the royage.

[^51]He feared, moreover, since the headland stretehed towards the south, lest they should find the country there a parched desert destitute of water and insufferably hot. This argument provailed, and it appears to me that lyy this counsel Nearkhos saved the expedition, for all accoments represent this capo and the parts adjacent as an arid waste where water camnot possibly bo procured.

## XXXIII. On resuming the voyage they eailed

 close to land, and after making about 700 stadia anchored on another shore called Neoptana. ${ }^{68}$ From this they weighed next day at dawn, and after a course of 100 stadia anchored at the mouth of the river Anamis ${ }^{\text {cs }}$ in a country called Harmozeia. ${ }^{\text {c* }}$. Here at last they found a hospitable[^52]region, one which was rich in every production except only the olive. Here accordingly they landed, and enjoyed a welcome respite from their many toils-heightening their pleasure by calling to remembrance what miseries they had suffered at sea and in the Ikhthyophagi country, where the shores were so sterile, and the natives so brute-like, and where they had been reduced to the last extremities of want. Here, also, some of them in scattered parties, leaving the encampment on the shore, wandered inland searching for one thing and another that might supply their several requirements. Whilo thus engaged, they fell in with a man who wore a Greek mantle, and was otherwise attired as a Greek and spoke the Creek language. Those who first discovered him declared that tears started to their eyes, so strange did it appear, after all they had suffered, to see once more a countryman of their own, and to hear the acconts of their native tongue. They asked him whence he came, and who he was. Ho replied that he had straggled from the army of Alexander, and that the army led by Alexandor in person was not far off. On hearing this thoy hurry the man with shouts of tumultuous joy to the presence of Nearkhos, to whom he repeated all that he had already said, assuring him that the army and the king were not more than a 5 days' march distant from the sea. The Governor of the province, he added, was on the spot, and he would present him to Nearkhos, and he presented him accordingly. Nearkhos consulted this person regarding the route he should take in order to reach the king, and then they all went off, and made
their way to the ships. Early next morning the ships lyy orders of Nearkhos were drawn on shore, partly for repair of the damages which some of them had suffered on the royage, and partly because he had resolved to leare here the greater part of his army. Having this in view, he fortified the roadstead with a double palisade, and also with an earthen rampart and a deep ditch extending from the banks of the river to the dockyard where the ships were lying.
XXXIV. While Naarkhos was thus occupied, the Gusernor being aware that Alexamder was in great anxiety about the fate of this espedition, concluded that he wond receive some great adsantage from Alexander should he be the first to apprize him of the safety of the fleet and of the "Iproaching visit of Nearkhos. Accordingly he lastened to Alexander by the shortest ronte, and amounced that Nearkhos was coming from the fleet to visit him. Alexander, though ho could scarecly believe the report, nevertheless received the tidinge with all the joy that might have been expected.
1)ay after day, howerer, passed without confirmation of the fnet, till Alexander, on compming tho distance from the sea with the date on which the report had reached him, at last gave up all belief in its truth, the more especially as several of the parties which he had successively despatcher to fied Nearkhos and escort him to the camp, had returned without him, after going a short distance, and meeting no one, white others who had prosecuted the seareh finther, and failed to find Nearkhos and his company were still absent. He therefure
ordered the Governor into continement for having brought delusive intelligence and rendered his rexation more acute by the disappointment of his hopes, and indeed his looks and perturbation of mind plainly indicated that he was pierced to the heart with a great grief. Meanwhile, however, ono of the parties that had been despatched in search of Nearkhos, and his escort being furnished with horses and waggons for their accommodation, fell in on the way with Nearkhos and Arkhias, who were followed by five or sixattendants. At first sight they recognized neither the admiral himself nor Arkhias, so much changed was their appearance, their hair long and neglected, their persons filthy, encrusted all over with brine and shrivelled. their complexion sallow from want of sleep and other severe privations. On their asking where Alexander was, they were told the name of the place. Arkhias then, perceiving who they were, said to Nemrhos--" It strikes me, Nearkhos, these men are traversing the desert by the rotite we pursue, for no other reason than because they have been sent to our relicf. 'Truc, they did not know us, but that is not at all surprising, for our appearance is so wretched that wo are past all recognition. Let us tell them who wo are, and ask them why they are travelling this way." Nearkhos, thinking ho spoke with reason, asked the men whither they were bound. They replicd that they were searching for Nearkhos and the fleet. "Well! I am Nearkhos," said the admiral, "and this man here is Arkhins. 'Inke us under your conduct, and we will report to Alexander the whole history of the expedition."
XXXV. They were aceordingly accommodated
in the waggons, and conducted to the camp. Some of the horsemen, however, wishing to be the first to impart the news, hastened forward, and told Alexander that Nenrkhos himself, and Arkhins with him, and fise attendants, would soon arrive, but to enquiries about the rest of the people in the expodition they had no information to give. Alexander, concluding from this that all the expedition had perished exeept this small band, which had been unaccountably sared, did not so much feel pleasure for the preservation of Nearthos and Arkhias as distress for the loss of his whole flect. During this conversation Nearkhos and Arkhias arrived. It was not without difficulty Alexander after a close serutiny recognized who the hirsute, ill-clad men who stond before him were, and being contimed by their miseraablo appearance in his belief that the expedition had perished, he was still more overcome with grief. At length he held out his hand to Ncarthos, and leading him apart from his attendunts and his guards he burst into tears, and wept for a long time. Having, after a good while, recovered some composure, "Nearkhos!" he says, "since you and Arkhias have been restored to me alive, I can bear more patiently the calamity of losing all my fleet; but tell me now, in what manner did the vessels and my people perish." "O my king !" replied Nearkhos, " the ships are safe and the people also, and we are here to give you anaccount of their preservation." 'Iears now fell much faster from his eyes than before, but they were tears of joy for the salvation of his fleet which he had given up for lust. "And where are now my ships," ho then
enquired. "They are drawn up on shore," replied Nearkhos, "on the beach of the river Annmis for repairs." Upon this Alexander, swearing by Zeus of the Greeks and Ammon of the Libyans, declared that he felt happior at receiving these tidings than in being the conqueror of all $\Lambda$ sin, for, had the expedition been lost, the blow to his peace of mind would have been a counterpoise to all the success he had achieved.
XXXVI. But the Governor whom Alexander had put into confinement for bringing intelligence that appeared to be false, sceing Nearkhos in the camp, sunk on his knees before him, and said: "I am the man who brought to Alexander the news of your safe arrival. You sce how I am situated." Nearkhos interceded with Alexander on his behalf, and he was then liberated. Alexander noxt proceeded to offer a solemn sucrifice in gratitude for the preservation of his fleet unto Zeus the Preserver, and Heraklôs, and Apollo the Averter of Destruction, and unto Poseidôn, and every other deity of ocean. He colebrated likewise a contest in gymnastics and music, and exhibited $a$ splendid procession wherein a foremost place was assigned to Nearkhos. Chaplets were wreathed for his head, and flowers were showered upon him by tho admiring multitude. At the end of these proceedings the king said to Nearkhos, "I do not wish you, Nenrkhos, either to risk your life or expose yourself again to the hardships of sea-voyaging, and I shall therefore sond somo other oflicer to conduct the expedition onward to Sumsa." But Nenklios answered, and sside : "It is my duty, O king! as it is ulso my
desire, in all things to obey you, but if your object is to gratify me in some way, do not take the command from me until I complete the voyage by bringing the ships in safety to Sousa. I have been trusted to execute that part of the undertaking in which all its difficulty and danger lay; transfer not, then, to another the remaining part, which hardly requires an effort, and that, too, just at the time when the glory of final success is ready to be won." Alexander scarcely allowed him to conclude his request, which he granted with grateful acknowledgment of his services. ${ }^{15}$ Then he sent him down again to the coast with only a small escort, believing that the country through which he would pass was friendly. He was not permitted however to pursue his way to the coast without opposition, for the barbarians, resenting the action of Alexander in deposing their satrap, had gathered in full force and seized all the strongholds of Karmania before 'Ilepolemos, the newly appointed Governor, had yet succeeded in fully establishing his authority. ${ }^{60}$ It happened therefore that several times in the course of a day Nearkhos encountered bands of the insurgents with whom ho had to do battle. Ho therefore hurried forward without lingering by the way, and reached the coast in safety, though not without severe tuil and difficulty. On arriv-

[^53]
## ing he sacrificed to Zeus the Preserver, and celebrated gymnastic games.

XXXVII. These pious rites having been duly performed, they again put to sea, and, after passing a desolate and rocky island, arrised at another island, where they anchored. This was ore of considerable size and inhabited, and 300 stadia distant from Harmozein, the harbour which they had last left. The desert island was called Organa, and that where they anchored Oärakta. ${ }^{67}$ It produced vines, palm-trees, and corn. Its length is 800 stadia. Mazênês, the chief of this island, accompanied them all the way to Sousa, having volunteered to act as pilot of the flect. The natives of the island professed to point out the tomb of the very first sovercign of the country, whose name they said was Ergthrês, after whom the sea in that part of the world was called the Erythraean. ${ }^{\text {cs }}$ Weighing thence their course lay

[^54]along the island, and they anchored on its shores at a place whence another island was visible at a distance of about 40 stadia. They learned that it was sacred to Poseidon, and inaccessible. ${ }^{\text {co }}$ Next morning, as they were putting out to sea, tho ebbtide enught them with such violence that three of the galleys were stranded on the beach, and the rest of the fleet escaped with difficulty from the surf into deep water. The stranded vessels were however floated off at the return of the tide, and the day after rejoined the fleet. They anchored at another island distant from the mainland somewhere about 300 stadia, after rumning a course of 400 stadia. Towards daybreak they resumed the royage, passing a desert island which lay on

[^55]their left, called Pylôra, and anchored at Sisidône, a small town which could supply nothing but wnter and fish. ${ }^{0}$ Here again the natives were fish eaters, for the soil was utterly sterile. Having taken water on board, they weighed again, and having run 300 stadia, anchored at Tarsia, the extremity of a cape which projects far into the sea. The next place of anchorage was Kataia, a desert island, and very flat. ${ }^{11}$ It was said to be sacred to Hermês and Aphrodite. The length of this course was 300 stadia. Tho this island sheep and goats are ammally sent by the people of the adjoining continent who consecrate them to Hermês and Aphroditê. Theseanimals were to be seen running about in a wild state, the effect of time and the barren soil.
XXXVIII. Karmania extends as far as this island, but the parts beyond appertain to Persia. The extent of the Karmanian coast was 3,700

[^56]stadia. ${ }^{13}$ The people of this province live like the Persians, on whom they border, and they have similar weapons and a similar military system. When the fleet left the eacred island, its course lay along the coast of Persis, and it first drew to land at a place called Ila, where there is a harbour under cover of a small and desert island called Kaikander. ${ }^{1 s}$ The distance run was 400 stadia. Towards daybreak they came to another island which was inhabited, and anchored thereon. Nearkhos notices that there is here a fishery for pearl as there is in the Indian Sea. ${ }^{{ }^{7}}$ Hasing sailed along the shores of the promontory in which this ishand terminates, a distance of about 40 stadia, they came to an anchor upon its shores. The next anchorage was in the vicinity of a lofty hill called Okhos, where the harbour was well sheltered and the inhabitants were fishermen. ${ }^{75}$ Weighing thence they ran a course of

[^57]
## 213

400 stadia, which brought them to Apostana, where they anchored. At this station they saw a great many boats, and learned that at a distance of 60 stadia from the shore there was a village. From Apostana they weighed at night, and proceeded 4.00 stadia to a bay, on the borders of which many villages were to be seeu. Here the fleet anchored under the projection of a cape which rose to a considerable height. ${ }^{76}$ Palm-trees and other fruitbearing trees similar to those of Greece, adorned the country round. On weighing thence they sailed in a line with the coast, and after a course of somewhere about 600 stadia reached Gôgana, which was an inhabited place, where they anchored at the mouth of a winter torrent called the Areôn. It was difficult to anchor, for the approach to the mouth of the river was by a narrow channel, since the ebbing of the tide had left shoals which lay all round in a circle." Weighing thence they gained, after rumning as many as 800 stadin, the mouth of another river called the Sitakos, where also it was troublesome to anchor. Indeed all along the coast of Persis the fleet had to be navigated through shoals and breakers and oozy channels.

[^58]At the Sitakos they took on board a large supply of provisions, which under orders from the king had been collected expressly for the fleet. They remained at this station one-and-twenty days in all, occupied in repairing and kareening the ships, which had been drawn on shore for the purpose. ${ }^{\text {P }}$
XXXIX. Weighing thence they came to an inhabited district with a town called Hieratis, after accomplishing a distance of 750 stadia. They anchored in a canal which drew its waters from a river and emptied into the sea, and was called IE Eatemis. ${ }^{70}$ Weighing next morning about sumrise, and sailing by the shore, they reached a winter torrent called the Padargos, where the whole place was a peninsula, wherein were many gardens and all kinds of trees that bear fruit. The name of the place was Mesam-

[^59]bria. ${ }^{\text {so }}$ Weighing from Mesambria and running a course of about 200 stadia, they reach Taokê on the river Granis, and there anchor. Inland from this lay a royal city of the Persians, distant from the mouths of the river about 200 stadia. ${ }^{81}$ We learn from Nearkhos that on their way to Taôkê a stranded whale had been observed from the fleet, and that a party of the men having rowed alongside of it, measured it and brought back word that it had a length of 50 cubits. Its skin, they added, was clad with scales to a depth of about a cubit, and thickly clustered orer with parasitic mussels, barnacles, and seaweed. The monster, it was also noticed, was attended by a great number of dolphins, larger than are ever seen in the Mediterranean. Weighing from 'Taôkê they proceeded to Rhogonis, a winter torrent. where : they anchored in a safe harbour. ${ }^{83}$ The course thither was one of 200 stadia. Weighing

[^60]thence, and ruming 400 stadia, they arrived at mother winter torrent, called Brizana, where they land and form an encampment. They had here difficulty in anchoring because of shoals and breakers and reefs that showed their heads above the sea. They could therefore enter the roads only when the tide was full; when it receded, the ships were left high and dry.s ${ }^{\text {ss }}$ They weighed with the next flood tide, and came to anchor at the mouth of a river called the Arosis, the greatest, necording to Nearkhos, of all the rivers that in the course of his voyage fell into the outer ocean. ${ }^{\text {s }}$
XL. The Arosis marks the limit of the possessions of the Persians, and divides them from the Susimes. Above the Susimes occurs an independent race called the Uxians, whom I have described in my other work (Anab. VII. 15, 3) as robbers. The length of the Persim coast is 4,400 stadia. Persis, according to general report, has three different climates, ${ }^{85}$ for that part of it which lies along the Erythraean sea, is sandy and barren

[^61]from the violence of the heat, while the part which succeeds enjoys a delightful temperature, for there the mountains stretch towards the pole and the North wind, and the region is clothed with verdure and has well-watered meadows, and bears in profusion the vine and every fruit else but the olive, while it blooms with gardens and pleasure parks of all kinds, and is permeated with crystal streams and abounds with lakes, and lake and stream alike are the haunts of every variety of water-fowl, and it is also a good country for horses and other yoke cattle, being rich in pasture, while it is throughout well-wooded and wellstocked with gane. The part, however, which lies still further to the North is said to be bleak and cold, and covered with snow, so that, as Nearkhos tells us, certain ambassudors from the Euxine Sea, after a very brief journey, mot Alexander marching forward to Persis, whereat Alexander being greatly surprised, they explained to him how very inconsiderable the distance was. ${ }^{96}$ I have already stated that the immediate neighbours to the Susians are the Uxians, just as the Mardians, a race of robbers, are next neighbours to the Persians, and the Kossacans to the Medes. All these tribes Alexander subdued, attacking them in the winter time when their country was, as they imagined, inaccessible. He then founded cities to reclaim them from their wandering life, and encouraged them to till their lands and devote themselves to agriculturo. At the

[^62]same time he appointed magistrates armed with the terrors of the law to prevent them having recourse to violence in the settlement of their quarrels. On weighing from the Arosis the expedition consted the shores of the Susians. The remainder of the royage, Nearkhos says, he cannot describe with the same precision; he can but give the names of the stations and the length of the courses, for the coast was full of shoals and beset with breakers which spread firr out to sea, and made the approach to land dangerous. The mavigation thercafter was of courso almost entirely restricted to the open sca. In mentioning their departure from the mouth of the river where they had encamped on the borders of Persis, he states that they took there on board a five days' supply of water, as the pilots had brought to their notice that none could be procured on the way.
XLI. 1 course of 500 stadia having been accomplished, their next anchorage was in ma estuary, which swarmed with fish, called Kataderbis, at the entranco of which lay an island called Margastama. ${ }^{\text {. }}$ They weighed at daybreak, the ships sailing out in single file through shoals. The direction of the shoal was indicated by stakes fixed both on the right and the left side, just as posts are erected as signals of danger in the passage between the island of Leukadia and Akarnania to prevent vessels grounding on the shoals. The shoals of Leukadia, however, are of firm sand, and

[^63]it is thuseasy to flont off ressels should they happen to strand, but in this passage there is a deep mud on both sides of such tenacity that if vessels once touched the bottom, they could not by any appliances be got off; for, if they thrust poles into the mud to propel the vessels, theso found no resistance or support, and the people who got overboard to case them off into mavigable water found no footing, but sunk in the mud higher than the waist. The flect proceeded 600 stadia, having such difficulties of navigation to contend with, and then camo to an anchor, each crew remaining in their own vessel, and taking their repast on board. From this anchorage they weighed in the night, sailing on in deep water till about the close of the ensuing day, when, after completing a courso of 900 stadia, they dropped mehor at the mouth of the Euphrates near a town in Babylonia called Diridetis-tho emporium of the sen-borne trade in frankincense and all the other fragront productions of Aralbia. ${ }^{84}$ the distance from the mouth of the Euphrates up stream to Bubylon is, accord. ing to Nearkhos, 3,300 stadia.
XLII. Here intelligence having been receised that Alexander was marching towards Sousa, they retraced their courso from Diridutis so as to join

[^64]him by sailing up the Pasitigris. They had now Sonsis on their left hand, and were coasting the shores of a lake into which the 'Tigris empties itself, a river, which flowing from Armenia past Nineveh, a city once of yore great and flourishing, encloses between itself and the Euphrates the tract of country which from its position between the two rivers is called Mesopotamia. It, is a distance of 600 stadia from the entrance into the lake up to the river's mouth at Aginis, a village in the province of Sousis, distant from the city of Somsa 500 stadia. The length of the voyage along the coast of the Sousians to the month of the lasitigris was 2,010 stadia. ${ }^{\text {so }}$ Weighing from the

[^65]month of this river they sailed up its stream through a fertile and populous country, and having proceeded 150 stadia dropped anchor, awaiting the return of certain messengers whom Nearkhos had sent off to ascertain where the king was. Nearkhos then presented sacrifices to the gods their preservers, and celebrated games, and full of gladness were the hearts of cill that had taken part in the expedition. The messengers havitg returned with tidings that Alexander was approaching, the fleet resumed its voyago up the river, and anchored near the bridgo by which Aloxamber intended to lead his army to Sousa. In that same phace tho troops were remited, when sacrifices were oflered by Alexander for the preservation of his ships and his men, and games wero celebrated. Nearkhos, whenever he was seen among the troops, was decorated by them with garlands and pelted with flowers. There also both Nearkhos and Leommatos were crowned by Alexander with golden diadems-Nearkhos for the safety of the expedition by sea, and Leomatos for the victory which ho had graned over the Oreitai and the neighbouring barbarians. It was thus that the expedition which had begun its voynge from the mouths of tho Indus was brought in safety to Alexamder.

[^66]XLIII. Now ${ }^{10}$ the parts which lie to the right of the Erythraanin Sea beyond the realins of Babylonia belong principally to Arabia, which extends in one directionas far as the sea that washes the shores of Phonikia and SyrianPalestine, while towards sunset it borders on the Egyptians in the direction of tha Mediterranean Sea. Egypt is penetrated by a gulf which extends up from the great ocean, and as this ocean is connected with the Erythrwan Sea, this fact proves that a royage could be made all the way from Babylon to Egypt by means of this gulf. But, owing to the heat and utter sterility of the coast, no one has erer made this royage, exeept, it may be, some chance navigator. For the troops belonging to the army of Kambyses, which escaped from Egy.pt, and reached Sousia in safety, and the troops sent by Ptolemy, the son of Lagos, to Seleukos Nịkator to Babylon, traversed the Arabian isthmus in eight days altogether.02 It was a waterless and sterile region, and they had to cross it mounted on swift camels carrying water, travelling only by night, the heat by day being so fierce that they could not expose themselves in the open air. So far are the parts lying beyond this region, which we have spoken of as an isthmus extending from the Arabian Gulf to the Erythrian Sea

[^67]from being inhabited, that oven the parts which run up further to the north are $\Omega$ desert of sand. Moreover, men setting forth from the Arabian Gulf in Egypt, after having sailed round tho greater part of Arabia to reach the sea which washes the shores of Persis and Sousa, have returned, after sailing as far along the coast of Arabia as the water they had on board lasted them, and no further. The exploring party again which Aloxandersent from Babylon with instructions to sail as far as they could along the right-hand coast of the Erythrwan Sea, with a view to examine the regions lying in that direction, discovered some islands lying in their route, and touched also at certain points of the mainland of $\Lambda$ rabia. Butas for that cape which Nearkhos states to have been seen by the expedition projecting into the sea right opposito to Karmania, there is no one who has been able to double it and gain the other side. But if the place could possibly be passed, either by sea or by land, it seems to me that Alexander, boing so inquisitive and enterprising, would have proved that it could bo passed in both theso ways. But again Hanno the Libyan, setting out from Carthage, sailed out into the ocean beyond the Pillars of Hercules, having Libya on his left hand, and the time until his course was shaped towards the rising sun was five-and-thirty days; but when he steered sonthward he oncomitered many diflicultios from the want of water, from the scorching heat, and from streams of fire that fell into the sea. Kyrêne, no doubt, whish is situated in a some-
what barren part of $\mathrm{I}_{\mathrm{i}} \mathrm{ib}$ y a, is verdant, possessed of a genial climate, and well watered, hats groves and meadows, and yields abmendintly all kinds of useful animals and vegetable products. But this is only the case up to the limits of the area within which the fennel-plant can grow, while beyond this area the interior of Kyrence is but a desert of siand.

So ends my narrative relating to Alexauder, the son of Philip the Makedonian.

[^0]:    ${ }^{2}$ The Introduction and Commentary embody the main substance of Miller's Prolegomena and Notes to the Periplis, and of Vincent's Commerce and Navigation of the Ancients so far as it relates specially to that works. The most recent authorities accessible have, however, been also consulted, and the result of their inquiries noted. I may mention particularly Bishop Caldwell's Dravidian Grammar, to which Lam indebted for the identification of places on the Malabar aud Coromandel coasts.

[^1]:    ${ }^{3}$ The enumeration is Vincent's, altered and abridged.

[^2]:    ${ }^{3}$ The numerals indicate the sections of the Periplas in which the articles are mentioned.

[^3]:    ＊Bhagvânlâl Indraji Pandit points out that the colour is called alantaka，Prakrit alito：it is used by women for dying the nails and feet，－also as a dye．The gulalt or pill－like balls used by women are made with arrowroot coloured with alito，and cotton dipped in it is sold in the bazars under the name of pothi，and used for the same purposes．He has also coutributed many of the Sauskrit names，and some notes．

[^16]:    " It is a singular fact," as Vincent remarks, "that this peculiarity should be one of the first objects which attracted the attention of the Portuguese upon their reaching this coast. They saw them first at Mozambifue, where they were called Almeidas, but the principal notice of them in most of their writers is generally stated at Kilwa, the rery spot which we have supposed to receive its name from vessels of the same construction." Vincent has been led from this coincidence to identify Rhapta with Kihwa [lat. $8^{\circ} 50^{\prime}$ S.]. Müller however would place it not so far sonth, but somewhere in the Bay of Zangibar. The promontory of Rhaptum, he judges from the indications of the Periplis to be the projection which closes the bay in which lies the island of Zangibar, and which is now hnown as Moinanokalu or Point Pouna, lat. $7^{\circ} \mathrm{S}$. The parts beyond this were unknown, and the southern coast of Africa, it was accordingly thought by the ancient

[^17]:    A more civilized region begins at an island called Burnt island, which answers to the modern Zebâyir [about lat. $15^{\circ} 5^{\prime}$ N., long. $42^{\circ} 12^{\prime}$ E.], an island which was till recently volcanic.
    (21) Beyond this is the great emporium called Mouza, [lat. $13^{\circ} \cdot 43^{\prime}$ N., long. $43^{\circ} 5^{\prime} 14^{71}$ E.] situated in a bay near the termination of the Gulf, and at a distance from Berenike of 12,000 stadia. JIere the population consistsalmost entirely of merchants and mariners, and the place is in the highest degree commercial. The commodities of the country are rich and numerous (though this is denied by Pliny), and there is a great traffic in Indian articles brought from Barugaza (Bharoch). This port, once the most celebrated and most frequented in Yemen, is now the village Musa about twenty-fire miles north from Mokhâ, which has replaced it as a port, the foundation of which dates back no more than 400 years ago. "Twenty miles inland from Mokhâ," says Vincent, "Niebuhr discorered a Musa still existing, which he with great

[^18]:    civilization and Greck may have been confined

[^19]:    20 "This" (Mons Pulcher) says Major-General Miles, " is Jebol Lahrim or Shaum, the loftiest and most conspicuous peak on the whole cape (Mussendom), being nearly 7,000 feot high."-Jour. K. As. Soc. (N.S.) vol. X. p. 1C8.-Ed.

[^20]:    2s "The city of Omana is Solar, the aucient capitul of Omana, which name, as is weli known, it then bore, and Pliny is quite right in correcting former writers who had placed it in Caramania, on which coast there is no good eridence that there was a place of this name. Nearchus does not mention it, and though the author of the Periplis of the E'rythrean Sea does locato it in Persis, it is pretty evident he never visited the place himself, and he must have mistaken the information he obtained from others. It was this city of Solar most probably that bore tho ap. pellation of Emporium Persarum, in which, as Philustorgius relates, permission was giren to 'lheophilus, tho ambassador of Constantine, to crect a Christian church." The Honna of Pliny may bo a repetition of Omana or Soḷar, which he had already mentioned.-Miles in Jour. R. As. Soc. (N. S.) rol. X. pp. 164-5.-Ed.

[^21]:    Barugaza the following passage, which I quote from Dr. Wilsou's Indian Castes (vol. II. p. 113) will elucidate its etymology:-"The Bhargavas derive their designation from Bhargava, the adjective form of $\mathrm{Bh} \boldsymbol{r} \mathrm{ig} \mathrm{u}$, the name of one of the ancient Rishis. Their chief habitat is the district of Bharoch, which must have got its name from a colony of the school of Bhrigu having been early established in this Kshêtra, probably granted to them by some conqueror of the district. In the name Barugazagiven to it by Ptolemy, we have

[^22]:    a Greek corruption of Bhrigukshêtra (the territory of Bhṛigu) or Bhṛigukachha (the tongueland of Bhrigu)." Speaking of the Bhârgavas Dr. Drummond, in his Grammatical Illustrations, says:"These Brâhmans are indeed poor and ignorant. Many of them, and other illiterate Gujarâtîs, would, in attempting to articulate Bhṛigushêtra, lose the half in coalesence, and call it Bargacha, whence the Grecks, having no Ch , wrote it Barugaza."

[^28]:    - Strab. ib. 5.
    * This may perhaps be represented by the modern Khâu, the name of one of the western mouths of the Indus.
    - See infra, p. 176 , nute 17.

[^29]:    ${ }^{11}$ This list does not apecify those officers who performed the voyage, but such as had a temporary command during the passage down the river. The only names which oceur afterwards in the narrative are those of Arkhias and Onexikritos. Nearkhos, hy his silence, leaves it uncertain whether any other ofticers enumerated in his list necompanied him throughout the expedition. The following are known not to have done so: Mephaistion, Leonnatos, Lysimahhos, Ptolemy, Krateros, Attalos and Peukestas. It does not clearly appar what number of ships or men accompanied Neathios to the conclusion of the voyage. If we suppose the shipg of war only fit for the servies, ;al galleys might possibly contain from two to three thousand men, but this estmation is uncertain.
    see Vincent, 1. lilo sic.

[^30]:    ${ }^{12}$ So also Platareh in the Lifo of Alexander (C.66) says that in returning from ludia Alexander had 120,000 foot and 15,000 cavalry.
    ${ }_{13}$ Sansk. Malava. The name is preserved in the modern Moultiu.

[^31]:    ${ }^{15}$ The general effect of the monsoon Nearkhos certainly kuew; he was a native of Crete, and a resident at Amphipolis, both which lie within the track of the annual or Eitesian winds, which commencing from the IIellespont and probably from the Euxine sweep the Egein sea, and stretching quite across the Mediterranean to the coast of Africa, enterel through Esypt to Nubia or Ethiopia. Arrian has aerordingly mentioned the monsoon by the name of the Etesian winds; his expression is remarkable, and attendml with a precision that does his accuracy credit. 'lhese Iftesian winds, says he, do not blow from the north in the summer months as with us in the Mediterranean, but from the South. On the commencement of winter, or at latest on the setting of the lleiades, the sea is said to be navigable till the winter solstice (Auab. VI. 21-1) Vincent I. 43 sq.
    ${ }^{10}$ The dato here fixed hy Arrian is the and of October 326 B.c., but the computation now generally accepted refers the event to the yeur after to suit the chronology of Alevamder's suhseguent histary (see Clinton's F'. Well. II. pp. 17 and $5(23$, 3 rd ed.). There was an Archon called

[^32]:    Kephisidoros in offleo in tho year в.c. 323-322; so Arrian has here either made a mistake, or perhaps an Archon of the year $326-325$ may have died during his tenure of office, and a substitute called Kephisidôros been elected to fill the vacancy. The lacune marked by the asterisks has been supplied by inserting the nume of the Makedonian month Dius. The Ephesians adopted the names of the months used by the Makedonians, and so began their year with the month Dins, the first day of which corresponds to the 2.1th of September. The 20th day of Boedromion of the year 13.c. 325 correspouded to the 21 st of September.

[^33]:    19 The name of the Arabii is variously written,-Arabito, Arbii, Arabies, Arbies, Aribes, Arbiti. The name of their river has also several forms,-Arabis, Arabius, Artabis, Artabius. It is now called the Purali, the river which flows through the present district of Las into the bay of Sonmiyâni. The name of the Oreitai in Curtins is Horitm. Cunningham identifies them with the people on the Aghor river, whom he says the Greeks would have named Agorite or Aoritie, by the suppression of the guttural, of which a trace still remains in the initial aspirate of 'Horita.' Some would connect the name with Haur , a town which lay on the route to Firabaz, in Mekrân.
    ${ }^{20}$ 'This name Saugada, D'Anville thought, survived in that of a race of noted pirates who infested the shores of the gulf of Kachh, called the Sang adians or Sangarians.

[^34]:    21 "The pearl oyster abounds in 11 or 12 fathoms of water all along the coast of Scinde. There was a fishery in the harbour of Kurrachee which had been of some importance in the days of the native rulers."-W Wanderings of 0 Naturalist in India, p. 36.
    ${ }^{22}$ This island is not known, hut it probably lay near the rocky headlaud of Irus, now called M a n or i , which protects the port of Karâchi from the sea and bad weather.
    ${ }^{23}$ "The name of Morontobara," says Cunningham, "I would identify with Muâri, which is now applied to the headland of Ras Muâri or Cape Monze, the last point of the Pab range of mountains. Bara, or Bari, means a

[^35]:    roadstead or haven; and Moranta is evidently connected with the Persian Mard a man, of which the feminine is still preserved in Kásmiri as Maluin a woman. From the distances given by Arrian, I am inclined to fix it at the mouth of the 13 ahar rivulet, a small stream which falls into the sea about midway between Cape Monze and Soumiyâni." Women's Haven is mentioned by Ptolemy and Ammianus Marcellinus. There is in the neighbourhood a mountain now called Mor, which may bea remnant of the name Morontobari. The channel through which the fleet passed after leaving this place no longer exists, and the island has of course disappeared.

    2* Tho coast from Karachi to the Purâli has undergone considerable changes, so that the position of the intermediate places cannot be precisely determined. "From Cape Monze to Sonmiyani," says Blair, "the coast bears evident marks of having suffered considerable alterations from the encroachments of the sea. We found trees which had been washed down, and which afforded us a supply of fuel. In some parts I saw imperfect creeks in a parallel direction with the coast. These might probably be the vestiges of that narrow chanuel through which the Greek galleys passed."

[^36]:    ${ }^{25}$ Ptolemy and Marcian enumerate the following places as lying between the Indus and the Arabis: Rhizana, Koiamba, Women's Haven, Phagiaura, Arbis. P'tolemy does not mention the Oreitai, but extends the Arabii to the utmost limit of the district assigned to them in Arriau. He makes, notwithstanding the river Arabis to be the boundary of the Arabii. His Arabis must therefore be identified not with the Pirali, but with the Kurmat, called otherwise the Rumsice or Kalami, where the position of Arrian's Kalama must be fixed. Pliny (vi. 25) places a people whom he calls the Arbii between the Oritae and Karmania, assigning as the boundary between the Arbii and the Oritae the river Arbis.
    so The Arabis or Purali discharges its waters into the bay of Sonmiyani. "Sonmiyâni," says Kempthrone, " is a small town or fishing village situated at the mouth of a creck which runs up some distance inland. It is governed by a Sheikh, and the inhabitants appear to be very poor, chiefly subsistiug on dried fishaud rice. A very extensive bar or sandbank runs across the mouth of this inlet, and noue but vessels of small burden can get over it even at high water, but inside the water is deep." The inhabitants of the present day are as badly off for water as their predecessors of old. "Everything," eays one who visited the place, " is searce, even water, which is procured by digging a hole five or six feet deep, and as many in djameter, in a place which was formerly a swamp; and if the water oozes, which sometimes it does not, it serves them that day, and perhaps the next, when it turns quite brachish, owing to the nitrous quality of the earth."

[^37]:    ${ }^{27}$ Strabo agrees with Arrian in representing the Oreitai as non-Indian. Cunningham, however, relying on statement made by Curtius, Diodorus and the Chinese pilgrim Itwen Thsang, a most competent observer, considers them to be of Indian origin, for their customs, according to the Pilgrim, were like those of the people of Kachh, and their written characters closely resembled those of India, while their language was only slightly different. The Oreitai as early as the 6th century 13.c. were tributary to Darius IIystaspes, and they were still subject to Persia nearly 12 ceuturies later whon visited by Hwen Thsang.Geag. of An. Ind.pp. 30.4 sqq.
    ${ }^{2}$ Another form is Pegadm, met with in Philostratos, who wrote a work on India.
    ${ }_{29}$ To judge from the distances given, this place should be near the stream now called Agbor, on which is situated Harkâna. It is probably the Koiamba of Ptolemy.

[^38]:    ${ }^{30}$ " In vessels like those of the Greeks, which afforded neither space for motion, nor convenience for rest, the enntinuing on board at night was always a calamity. When a whole crew was to sleep on bourd, the suffering was in proportion to the confinement."-Vincent, I. p. 209 note.
    ${ }^{31}$ In another passage of Arrian (Anab. VI. 27, 1,) this Apollophanês is said to have been deposed from his satrapy, when Alexander was halting in the capital of Gedrosia. In the Journal Arrian follows Nearkhos, in the History, Ptolemy or Aristobulus.-Vincent.

[^39]:    33 Similar statements are mado regarding this savage race by Curtius IX. 10, 9 ; Diodoros XVII, 105; Pliny V1. 28: Strabo p. 720 ; Philostratos V.Ap. 111., 57. Cf. Agatharbhides passim.-Milller.

[^40]:    :s lis modern representativo is doubthess R îs Malin, Malen or Moran.

    33 Such a phenomenon could not of courno have been obsurved at Malana, which is about 2 degreas north of thos 'I'opic, and Nearlihos, as has boon alremly moticed (lntrod. p. 155), has on aecount mainly of this statement been reprosented as a mendacions writer. Selsmieder and (lossolin ntompt to vindiente bim by sumpesting that Arrinn in eopying him jomrmil had eithor missed the memning of this passage, ornltored it to bring it into necordance with his own goosraphical theories. Miller, however, has a better and probably the correct oxplamation to offer. Te thinks that the text of Nearkhos which Arrian used contained passages interpolated from One. sikritos and writers of his stamp. The interpolations may have been inserted by tho Aloxandrian gengraphers, who, following Eratosthones, belioved that India lay between the Tropics. In support of this view it is to be noted that Arrian's account of the shadow oceurs in that part of his work whero he is speaking of Malana of tho Oreitai, and that Pliny (VIII.75) gives a similar a count of tho shadows that fall on a mountain of a somewhat similar name in the country of that vary people. Iifs words are: In Indine qente Oietum Mons est Maleus nomine, jutu quen sembrae aestute in Aushrum, hieme in Septemtrionem

[^41]:    3" Bagisara, says Kempthonne, "is now known by the name of Arabah or II ormarah Bay, and is deep and commodious with good anchorage, sheltered from all winds but those from the southward and eastward. 'The point which forms this buy is very hich and precipitons, und runs ont some distance into tho sea. A rather latge fishing village is situated on a low sandy isthmus about one mile across, which divides the bay from nnother. . . . . The only articlas of provision wo conld ohtain from tho inlabs. tants were a fow fowls, some dried finh, and koate. 'They grow so kind of vegotahle or corn, it fow water-molons being the only thing these desolate regions bring forth. Sundy deserts extend into the interior ne fire an the ayo ean remelt, and at tho latek of these riso ligh mountains." 'I'ho R bapma of I'tolemy composponde to the Baginara or I'asiron of Aroinn, mal exidently surviven in the present mame of the bay and the headhand of $\Lambda$ raba.
    a* Kolta.-A place manown. It was situnted on the wostern side of the isthmus which connects $\mathbb{R}$ as Araba with the mons land.

[^42]:    ${ }^{33}$ A different form is Kaluboi. Situated on the river now called K a lami, or Kumra, or Kurmut, the Arabis of Ptolemy, who was probatly misled by the likeness of the name to Karbis as the littoml district was designated here.
    © Other forms-Karnine, Karmina. 'The coast was probably called Karmin, if Karmis is represented iu Kurmat. The island lying twelve miles off the mouth of the Kalami in now called A stola or Sanga-dip, which Kempthrone thus describes:-"Ashtola is a small desolate istand about four or five miles in circumference, situated twelve miles from the coast of Mekrin. Its eliffs rise rather abruptly from the sea to the heisht of about 300 feet, and it is inaceessible except in one place, which is a fatudy beach alrout one mile in extent on the northem side. (ireat quantities of turtle frequent this island for the purpose of depositing their exgs. Nearches anchored ofl it, and catled it Kamine. He says also that he receised hospiahhe enteratimment from its imbabitants, their presents being cattle and tirh; but not a vestige of any hatitation now remains. 'The Ambs come to this island, and kill immense numbers of these turthes,- - ot for the purpose of foos!, but they trathic with the shell to China, where it is made into a kind of paste, and then into combs, ornaments, Se., in imitation of tortoise-shell. The eareasses caused at stench almost unheamhle. The only land auimals we could see on the island were rats, and they were swarming. They feed chiety on the dead turtle. The island was one famous as the rendezrous of the Jowassimee pirates." Vineent guotes Blair to this effect regarding the island:"We wre warned by the natives at l'assence that it would be danerems to approach the island of Asthola, as it was enchanted, asd that a ship hat be n turned into a rock. The superstitions story did not deter us; we visited the island, found plenty of excellont turtle, and saw the rock alluded to, which at a distance had the apparance of a ship under sail. The story was probblly told to prevent our disturhing the furtle. It has, howeser, sume athinity to the tale of Nearchas's transport." As the enchanted island mentioned afterwards (chap. xxxi.), under the name of Nicala, was lot stadia distant from the roast, it was probably the same na Karuiue.

[^43]:    *2 Another form of the name is Kysa.
    t2 I'he place according to Ptolemy is 900 stadia distant from the Kalami river, but according to Murcianus 1,300 stadia. It must latve been situnted in tho neighbourhood of Cope P'assence. The distances here are so great. exargerated that the text is suspected to be corrupt or disturbed. From Mosarna to Kophas the distunce is represented as 1,750 stadia, and yet the distance from Ciape Passence to Râs K oppa (the Kophas of tho text) is barely 500 ntadia. According to L'toleny and Marcian Karmania begins at Mosarna, but aceording to Arian much further westward, at Badic moa Cape Jask.
    os "from the mane given to this pilot. I imagine that lo was an inhabitant of Hydriakns, atown nem the bay

[^44]:    *7 The name appears to survive in a cognominal CapoRals Compa. The natives use the same kind of boat to this day; it is a curve made of several small planks nailed or sewn together in a rude manner with cord made from the bark of date trees and called kair, the whole being then smeared over with dammer or pitch.-Kempthorne.
    ty According to Ptolemy and Marcianus this place lay 400 stadia to the west of the promontory of Alambator (now Rits Guadel). Some trace of the word may be recognized in $\mathbf{R}$ t̂s $G \mathrm{hunse}$, which now designates a point of land situated about those parts. Arrian passes Cape Guadel without notice. "We should be reasonably surprised at this," says Vincent (I. 218), "as the doubling of a cape is always an achievement in the estimation of a Greek navigator; but having now a native pilot on board, it is evident he took advantago of the land-breeze to give the Heet an otling. This is clearly the reason why wo hear nothing in Arrian of P'tolemy's Alabagium, or Alambateir, the prominent feature of this coast."

[^45]:    ${ }^{19}$ The little town attached by Nearchus lay on Gwattar Bay. Tho promontory in its neighbourhood called Bagia is mentioned by l'tolemy and Marcianus, the latter of whom gives its distanco from Kyiza at 250 stadia, which is but half the distance as given by Arriau. To the west of this was the river Kaudryaces or II ydriaces, the modern Baghwar Dasti or Muhani river, which falls into the Bay of Giwattar.
    su A name not found elsewhere. To judge by the distance assigned, it must be placed on what is now called Chaubar Bay, on the shores of which are three towns, one being called T'iz,-perhaps the modern representative of Tisa, a place in those parts mentioned by Ptolemy, and which may hare been the 'I'almenit of Arrian.

[^46]:    ${ }^{51}$ The neme is not found elsewhere. It must have been situated on a bay enclosed within the two headlands Râs Fuggem aud Râs Gudem.
    ${ }^{53} \mathrm{Kanate}$ probably stood on the site of the modern Kungoun, which is near R âs Kalat, and not far from the river $B$ unth.
    ${ }^{33}$ Another and the common form is Troisi. The villages of the 'I'aoi must have been where the Sudieh river enters the sea. Here P'tolemy places his Kommana or Nomnana and his follower Marcian his Ummana. See ante p. 101 note.
    ${ }^{61}$ The place in Ptolemy is called Agrispolis,-in Mar. cianus, Agrisa. The modern name is Girishk.

[^47]:    so "This description of the natives, with that of their mode of living and the country they inhabit, is strictly correct even to the present day."-Kempthorne.

[^48]:    strabo (XV. ii. 12, 13) has extracted from Nearkhos the same passage regarding whales. See Nearchi fragm. 25. Cf Onesikritos (fr. 30) and Orthagoras in Aclian. N. An. XVII. 6; Diodor. XVII, 106; Curtius X. 1, 11.

[^49]:    ${ }^{5 s}$ Tho story of the Nereid is evidently an Eastern version of the story of the enchantress Kirke. The island hero ealled Nosala is that already mentioned under the name of liarbine, now 4 sthola.
    ${ }^{50}$ Karmania extended from Capo Jask to Râs Nabend, and comprehended the districts now called Moghostín, Kirman, and LAristan. Its metropolis, necording to l'tolemy, was karmana, now Kirman, which gives its name to the whole province. 'the tirst port in Karmania reached by tho expedition was in the neighbour. hood of Cape Jask, where the coast is described as being very rocky, and dangerous to mariners on account of shoals and rocks under water. Kempthorno says: "Ihe clifl's along this part of the coast are very high, and in many places almost perpendicular. Some havo a singular appearance, ono near Jask being exactly of the shatpe of a quoin or wedge; and another is a very remarkable peak, being formed by three stones, as if placed by human hauds, one on the top, of the other. It is very high, and has the resemblance of a chimuey."

[^50]:    ©o Badis must have been near where the village of Jask now stands, beyond which was the promontory now called Ris Kerazi or Keroot or Bombarak, which marks the entrance to the Straits of Ormus. This projection is the Cape Karpella of Ptolemy. Badis may be the same as tho Kanthatis of this geographer.
    at Maketa is now called Cape Mesandum in Omân. It is thus described by Palgrave in the Narrative of his I'ravels through Central and Ciastern Arabia (Vol. I1. pp. 316.7). The afternoon was already far advanced when we reached the headland, and waw before us the narrow sea-pass which runs between the farthest rocks of Mesandun and the "mainland of the Cape. This strait is called the "Bab" or "gate:" it presents an imposing spectacle, with lofty precipices on either side, and the water flowing decp and black

[^51]:    below ; the eliffs are utterly bare and extremely well adapted for shivering whatever vessels have the ill luck to come upon them. Hence and from the ceaseless dash of the dark waves, the name of "Mestmilun" or "Anvil," a term seldom botter nuplied. But this is not all, for some way out at sea rises at huge sequare mass of hasalt of ahandred feet and nore in height sbeer ahove the water; it bears the mane of "Salimah" or "safety," "t euphemism of grood augury for "danger." Soveral small jagered peaks, just projecting above the surface, cluster in its neighbourhood; these bear the endearing name of "Benât Saltimah," or "Daughters of Salamah."

[^52]:    os This place is not mentioned elsewhere, hat must have been situated somewhere, in the ueighbourhood of the village of Karun.
    "is The Anamis, called by Pliny the Amanis, and by Ptolemy and Mela the Andanis, is nove the Minth or Ibrahim River.

    6t Other forms-Hormazia, Armizia regio. The name mas transferred from the mainland to the islaud now called Ormus, when the inhabitants fled thither to escape from the Moghals. It is called by Arrian Organa (chap, xxxii.) The Arabians called it Jjerun, a name which it continued to bear up to tho loth century. Pliny mentions an island called Oguris, of which perhaps Djerun is a corruption. He ascribes to it the honour of having been the birthplace of Jiry thres. The description, however, which he gives of it is more applicable to the island called by Arrian (chap, xxerii.) Ofrakta (uow Kishm) than to Ormus. Arrian's deseription of Itarmozia is stillapplicalle to the region adjacent to the Minib. "It is termed," says Kempthorne, "the Paradise of Persia. It is certainly most beantifully fertile, and abounds in orange groves, orchards containiug apples, pears, peaches, and apricots, with vincgards producing a delicieus grape, from which was mado at one time a wine called Amber rosolia, generally cousidured the white wine of Kishma; but no wine is made here now." The old name of Kishma-OArakita-is preserved in one of its moderu names, Vrokt or Broki.

[^53]:    ${ }^{05}$ Diodorros (XVII. 106) gives quite a aifferent account of the visit of Nearhhos to Alexamder.
    no 'The precerling satrap' was Sibytios, the friend of Meqasthemos. He had been tamstered to govern the Gadrosime and the Amabotians.

[^54]:    ${ }^{07}$ As stated in Note 64, Organa is now Ormuz, and Oarakta, Kishm. Ormuz, once so renowned for its wealth and commerce, that it was said of it by its Portaguese occupauts, that if the world weie a golden ring, Ormuz would be the diamond signet, is now in utter decay. "I have seen," says lalgrave (II. 319), the abasement of Tyre, the decline of Surat, the degradation of Goa: but in none of those fallen seaports is aught resembling the utter desolation of Ormuz." A recent triveller in Persia (Binning) thas describes the coast: "It presents no view but sterile, barren, and desolate chains of rocks and hills: and the general aspect of tho Gulf is dismal and forbidding. Moore's charming allusions to Oman's sea, with its 'banks of pearl and palmy isles' are unfort anately gaite vivionary; for uglier and more unpicturesque secuery 1 never beheld." -Two Y'ears' Trarel in l'ersia, I. pp. 136, 137.
    as For the legend of Erythres see Agatharkhides De Mari Eryth. I. 1-4 and Strabo XVI. iv. 20. The Erythrwan Sea included the Indian Ocean, the Persian Gulf, and the Red Sea, the last being called also the Arabian Gulf, when it was necessary to distinguish it from the Erythrean

[^55]:    in general. It can hardly be doubted that the epithet E'rythrean (which means red, Greek épugpos) first designated the Arabian (iulf or Red Sea, and was atterwards extended to the ecas beyond the Straits by those who first explored them. The Red Sea was so called because it washed the shores of Arahia, called the led Land (Ldom), in contradistinction to Egypt, called the Black Land (Kemi), from the darkness of the soil deposited by the Nile. Some however thought that it received its name from the quantity of red coral found in its waters, especially along the eastern shores, and Strabo says (loc. cit.):
    "Some say that the sea is red from the colour arising from reflexion either from the sun, which is vertical, or from the mountains, which are red by being scorched with intense heat; for the colour it is supposed may be produced by both of these causes. Ktesias of Knidos spealis of a spring which discharges into the sea a red and ochrous water."-Cf. Fustath. Comment. 28.
    ou This island is that nowr called Angar, or Il anjam, to the south of Kishm. It is described as being nearly destitute of vegetation and uniuhabited. Its hills, of voleanic origin, rise to a height of 300 feet. The other island, distant from the mainland about 800 stadia, is now called the Great 'lombo, near which is a smaller island called Little Tombo. They are low, flat, and uninlabited. They are 25 miles distant from the western extremity of Kishm.

[^56]:    ${ }^{70}$ The island of Pylora is that now called Polior. Sisidone appears in other forms-Prosidodone, proSidodone, pros Sidune, pros Dodone. Kempthorne thought this was the small fishing village now called Mogos, situated in a bay of the same name. The name may perhaps be preserved in the name of a village in the same neighbourhood, called Dnan Tarsia-now Râs-el-Djard -described as high and rugged, and of a reddish colour.
    ${ }^{n}$ Kataia is now the island called $K a e s$ or Kenn. Its character has altered, being now covered with dwarf trees, and growing whent and tobacco. It supplies ships with refreshnent, chiefly goats and sheep aud a few vegetables.. "At morning," says Binning (I. 137), " we passed Polior, aud at noon were running along the South side of the Isle of Keesh, called in our maps Keun; a fertile and populous island about 7 miles in length. The inhabitants of this, as well as of every other island in the Gulf, are of Arab blood-for every true Persian appears to hate the very sight of the sea."

[^57]:    is The boundary between Karmania and Persis was formed by a range of mountains opposite the island of Katain. P'tolemy, howewer, makes Karmania extend much further, to the river Bagradas, now called the Nabanor Nabend.
    is Kaikander has the other forms-Kekander, Kikander, Kaskamdrus, Karkundras, Karskandrus, Saselkander. This island, which is now called Inderabia, or Andaravia, is about four or five miles from the mainlaed, having a small town on the north side, where is a safe and conmodions harbour. The other island meationed immediatelyafter is probally that now called Busheab. It is, aceording to Kempthorne, a low, flat island, about eleven miles from the mainland, containing a small town priucipally inhabited by Arabs, who live on fish and dates. The harbour has good anchorage even for large vessels.

    74 The pearl oyster is found from Ras Musendom to the head of the Gulf. There are no famed banks on the Persian side, but near Bushire there are some good ones.
    ${ }^{23}$ Apostana was near a place now called Schevar. It is thought that the name may be traced in Dahra

[^58]:    Ahbîn, an adjacent mountain ridge of which Okhos was probably the southern extremity.
    ${ }^{70}$ I'his bay is that on which Naban or Nabend is now situated. It is not far from the river called by Ptolemy the Bagradas. 'ihe place abounds with palm-trees as of old.
    ${ }^{27}$ Gôgana is now Konkan or Konaun. The bay lacks depth of water; a stream still falls juto it-the Areon of the text. 'To the north-west of this place in the interior lay Pasargada, the ancient capital of Persia, and the burial-place of Kyros, in the neighbourhood of Murghâb, a place to the N. E. of Shiraz ( $30^{\circ} 24^{\prime} \mathrm{N}$. $50^{\circ} 2 y^{\prime} \mathrm{E}$.).

[^59]:    Is The Sitakos has been identified with the Kara Agach, Mand, Mund or Kakee river, which has a course of 300 miles. Its source is near Kodiyan, which lies N. W. of Shiraz. At a part of its course it is called the Kewar River. The meaning of its name is black wood. In l'liny it appears as the Sitioganus. Sitction was probably the name as Nearkhos heard it pronounced, us it freguently happens that when a Greek writer comes upon a name like an obliquecase in Greek, he invents a nominative for it. Witl: regard to the form of the name in Pliny, ' $g$ ' is but a phonetic change instead of ' $k$ '. The ' $i$ ' is probably an error in transcription for ' $t$ '. 'The Sitakos is probably the Brisoma of Ptolemy, which can have no comnexion with the later-mentioned Brizana of our author. See Report on the Persian Gielf by Colonel Ross, lately issued. Pliny states that from the month of the Sitiogus an ascent could be made to Pasargada, in seven days; but this is manifestly an error.
    ${ }^{10}$ The changes which have taken place along the coast have been so considerable that it is difficult to explain this part of the narrative consistently with the now existing state of things.

[^60]:    so The peninsula, which is 10 miles in length and 3 in breadth, lies so low that at times of high tide it is all but submerged. The modern Abu-Shahr or Bushir is situated on it.
    ${ }^{61}$ Nearkhos, it is probable, put into the mouth of the river now called by some the K is ht , by others the Boshavir. A town exists in the neighbourhood called Gra or Graw, which may have received its name from the Granis. The royal city (or rather palace), 200 stadia distant from this river, is mentioned by Strabo, xv. 3, 3, as being situate on the coast. Ptolemy does not mention the Granis. He makes Taökê to be an inland town, and calls all the district in this part Taokênê. Taokê may bo the 'Touag mentioned by Idrisi, which is now represented by*Konar Takhta near the Kisht.
    ${ }^{62} \mathrm{Rhog}$ on is.-It is written Rhogomanis by Ammianus Marcellinus, who mentions it as one of the four largest rivers in Persia, the other three being the Vatrachitis, Brisoana, and Bagrada. It is the river at the mouth of which is Bender-lligh or Regh, which is considered now as in the days of Nearkhos to be a day's sail from Bushire.

[^61]:    83 "The measures here are neglected in the Journal, for we have only 800 stadia specified from Mesambria to Brizana, and none from Brizana to the Arosis; but 800 stadia are short of 50 miles, while the real distance from Mesambria (13ushir) to the Arosis with the winding of the coast is above 140. In these two points we cannot be mistaken, and therefore, besides the omission of the interval between Brizama and the Arosis, there must be some defect in the Journal for which it is impossible now to account." -Vincent. 1. 1. $40{ }^{\circ}$.

    * Another form of the name of this river is the Aroitis. It answers to the Zarotis of Pliny, who states that the navigation at its mouth was difficult, except to those well nequainted with it. It formed the boundary between Persis and Susiana. The form Oroatis corresponds to the Zend word aumat 'swift.' It is now called the Tâb.
    ${ }^{\text {os }}$ On this point compare Strabo, bk. xx. 3, 1.

[^62]:    ${ }^{\text {sis }}$ It has been conjectured that the text here is imperfect. Schmieder opines that the story about the ambassadors is a fiction.

[^63]:    ${ }^{81}$ The bay of Kataderbis is that which receives the streams of the Mensurehand Dorak; at its entrance lie two islands, Bunah and !eri, oue of which is the Margastana of Arriau.

[^64]:    * Diridôtis is called by other writers Terêdon, nnd is arid to have beou founded by Nabukliodonosor. Mannert places it ou the island now called Bubian; Colonel Chesney, however, fixes its position at JobelSan $\mathrm{A} m$, a gigantic mound near the Pallacopas branch of the Euphrates, considerably to the north of the embouchure of the mesent Euphrates. Nemphos had evidently passed unawares the stream of the 'ligris and sailed too far westward. Hence he had to retrice his course, as mentioned in the next chapter.

[^65]:    *) This is the liulutus, now called the Karun, one arm of which united with the 'ligris, while the wther fell into the sea by an independent month. It is the Ulai of the prophet Danicl. Pes is said to be an old Persian word, menaing small. Dys some writers the name l'asitigris was applied to the unitod retram of tho 'ligris amd Liuhlates, now ealled tho Shat-e l-Arab. The courses of the rivers and the conformation of the country in the parts hore have all underpone preat changes, and hence tho identilication of localities is a matter of ditticulty and uncertanty. The following extract from Strabo will illustrate thin part of the mometive:

    Polycletus mys that the Chons pos, and the Eulans, and the ' I 'igris also enter a lake, and thence dischargo themselves into the sea; that on the side of the lake is a mart, as the rivers do not reede the merehandizo from the mea, nor consey it down to the sea, on necome of dams in the river, parposely constracted; and that theremode are tramemorted liy land, a distance of som stadia, fo Susin: areorling to others, the rivers which flow though Susis diselarge themselves by the intermediate camals of the Buphrates into the single strean of the 'Iigris, which on this account has at its mouth the name of lasitigris. According to Nearchus, the sea-coast of Susis is swampy, and terminates at the river Euphrates; at its mouth is a village which receives the merchandize from Arabia, for the const of Arahia appoaches close to the monthe of the Suphrates and the l'asitigris ; the whole internediate space

[^66]:    oceupied by a lake which receives the 'ligris. On sailing up the Pasitigris 150 stadia is a bridgo of rattes leading to Susa from Persin, and is distant from Su*a 60 ( $6000^{2}$ ) stadia ; the L'asitigris is distant from the Oroitis about 2,000 stadia; the aseent through the lake to the mouth of the 'ligris is 000 stadia; near the month stands the Susian village Aginis, distant from Susa 000 stadia; the journey by water from the mouth of the Enphnates up to Babylon, throngh a well-imhabited trate of country, is a distance of more than 3,000 stadia." -Buok xv. 3, Bohn's trons.

[^67]:    Do The 3rd part of the Indilia, the purport of which is to prove that the sonthern parts of the world are uniuhabitable, begins with this chapter.

    - Here and subsequently meaning the Persian Gulf.
    ${ }^{2}$ It is not known when or wherefore 1'tolemy sent troops on this expedition.

[^68]:    bOMBAY: PRINTED AT TIF. FEUCATION SUCIETY'S PRESS.
