To the Ingenious

*R E A D E R.*

**F**OR some *reasons* I apprehend my self engaged to give an *account* of *two* things, that refer to the ensuing *piece*: The one, for not *publishing* this *Catalogue* untill now: The other, of the *mode & manner* thereof, being partly *Latine*, and partly *English*.

About three yeares agoe,

goe, ( by the perswasion  
of some *friends* ) I was re-  
solved to take a *Catalogue*  
of those *Rarities* and *Cu-  
riosities* which my *Father*  
had scedulously collected,  
and my *selfe* with conti-  
nued diligence have *aug-  
mented*, & hitherto *preser-  
ved* together: They then  
pressed me with that Ar-  
gument, *That the enume-  
ration of these Rarities, ( be-  
ing more for variety than  
any one place known in Eu-  
rope could afford ) would be*

*To the ingenious Reader.*

*an honour to our Nation,  
and a benefit to such ingeni-  
ous persons as would become  
further enquirers into the  
various modes of Natures  
admirable workes, and the  
curious Imitators thereof: I  
readily yeilded to the thing  
so urged, and with the as-  
sistance of two worthy  
friends (well acquainted  
with my design,) we then  
began it, and many exami-  
nations of the materialls  
themselves, & their agree-  
ments with severall Au-  
thors*

thors compared, a Draugh was made, which they gave into my hands to examine over. Presently thereupon my onely Son dyed, one of my Friends fell very sick for about a yeare and my other Friend by unhappy Law-suits much disturbed. Upon these accidents that first Draugh lay neglected in my hand another year. Afterward my said Friends call again upon me, and the designe of Printing, a-new contri-

ved, onely the prefixed  
*Pictures* were not ready,  
and I found my kinde  
friend Mr *Hollar* then en-  
gaged for about tenne  
Moneths, for whose hand  
to finish the *Plates*, I was  
necessarily constrained to  
stay untill this time.

Now for the *materialls*  
themselvs I reduce them  
into two sorts; one *Nat-*  
*urall*, of which some are  
more familiarly known &  
named amongst us, as di-  
uers sorts of Birds, foure-  
a 2      footed

footed Beasts and Fishes, to whom I have given usual *English* names. Others are lesse familiar, and as yet unfitted with apt *English* termes, as the shell-Creatures, Insects, Mine-ralls, Outlandish-Fruits, and the like, which are part of the *Materia Medica*; (Encroachers upon that faculty, may try how they can crack such shells.) The other sort is *Artifici-alls*, as Vtenfills, Householdstusse, Habits, Instru-  
ment

ments of VVarre used by severall Nations, rare curiosities of Art, &c. These are also expressed in *English*, (saving the Coynes, which would vary but little if Translated) for the ready satisfying whomsoever may desire a view thereof. The *Catalogue* of my *Garden* I have also added in the Conclusion (and given the names of the *Plants* both in *Latine* and *English*) that nothing may be wanting which at

and might bee expected
