## PREFACE.

---

It was in June, 1875, as I chanced to be for a day or two in Leipzig, that I was unexpectedly invited to prepare the Sanskrit grammar for the Indo-European series projected by Messrs. Breitkopf and Härtel. After some consideration, and consultation with friends, I accepted the task, and have since devoted to it what time could be spared from regular duties, after the satisfaction of engagements earlier formed. If the delay seems a long one, it was nevertheless unavoidable; and I would gladly, in the interest of the work itself, have made it still longer. In every such case, it is necessary to make a compromise between measurably satisfying a present pressing need, and doing the subject fuller justice at the cost of more time: and it seemed as if the call for a Sanskrit grammar on a somewhat different plan from those already in use — excellent as some of these in many respects are — was urgent enough to recommend a speedy completion of the work begun.

The objects had especially in view in the preparation of this grammar have been the following:

To make a presentation of the facts of the language primarily as they show themselves in use in the literature, and only secondarily as they are laid down by the native grammarians. The earliest European grammars were by the necessity of the case chiefly founded on their native predecessors; and a traditional method was thus established which has been perhaps somewhat too closely adhered to, at the expense of clearness and of proportion, as well as of scientific truth. Accordingly, my attention has not been directed toward a profounder study of the grammatical science of the Hindu schools: their teachings I have been contented to take

as already reported to Western learners in the existing Western grammars.

To include also in the presentation the forms and constructions of the older language, as exhibited in the Veda and the Brāhmaṇa. Grassmann's excellent Index-Vocabulary to the Rig-Veda, and my own manuscript one to the Atharva-Veda (which I hope soon to be able to make public), gave me in full detail the great mass of Vedic material; and this, with some assistance from pupils and friends, I have sought to complete, as far as the circumstances permitted, from the other Vedic texts and from the various works of the Brāhmaṇa period, both printed and manuscript.

To treat the language throughout as an accented one, omitting nothing of what is known respecting the nature of the Sanskrit accent, its changes in combination and inflection, and the tone of individual words — being, in all this, necessarily dependent especially upon the material presented by the older accentuated texts.

To cast all statements; classifications, and so on, into a form consistent with the teachings of linguistic science. In doing this, it has been necessary to discard a few of the long-used and familiar divisions and terms of Sanskrit grammar — for example, the classification and nomenclature of "special tenses" and "general tenses" (which is so indefensible that one can only wonder at its having maintained itself so long, the order and terminology of the conjugation-classes, the separation in treatment of the facts of internal and external euphonic combination, and the like. But care has been taken to facilitate the transition from the old to the new; and the changes, it is believed, will commend themselves to unqualified acceptance. It has been sought also to help an appreciation of the character of the language by putting its facts as far as possible into a statistical form. In this respect the native grammar is especially deficient and misleading.

Regard has been constantly had to the practical needs of the learner of the language, and it has been attempted, by due arrangement and by the use of different sizes of

type, to make the work as usable by one whose object it is to acquire a knowledge of the classical Sanskrit alone as those are in which the earlier forms are not included. The custom of transliterating all Sanskrit words into European characters, which has become usual in European Sanskrit grammars, is, as a matter of course, retained throughout; and, because of the difficulty of setting even a small Sanskrit type with anything but a large European, it is practiced alone in the smaller sizes.

While the treatment of the facts of the language has thus been made a historical one, within the limits of the language itself, I have not ventured to make it comparative, by bringing in the analogous forms and processes of other related languages. To do this, in addition to all that was attempted beside, would have extended the work, both in content and in time of preparation, far beyond the limits assigned to it. And, having decided to leave out this element, I have done so consistently throughout. Explanations of the origin of forms have also been avoided, for the same reason and for others, which hardly call for statement.

A grammar is necessarily in great part founded on its predecessors, and it would be in vain to attempt an acknowledgment in detail of all the aid received from other scholars. I have had at hand always especially the very scholarly and reliable brief summary of Kielhorn, the full and excellent work of Monier Williams, the smaller grammar of Bopp (a wonder of learning and method for the time when it was prepared), and the volumes of Benfey and Müller. As regards the material of the language, no other aid, of course, has been at all comparable with the great Petersburg lexicon of Böhtlingk and Roth, the existence of which gives by itself a new character to all investigations of the Sanskrit language. What I have not found there or in the special collections made by myself or by others for me, I have called below "not quotable" — a provisional designation, necessarily liable to correction in detail by the results of further researches. For what concerns the verb, its forms and their classification and uses, I have had, as every one

must have, by far the most aid from Delbrück, in his *Altindisches Verbum* and his various syntactical contributions. Former pupils of my own, Prof. Avery and Dr. Edgren, have also helped me, in connection with this subject and with others, in a way and measure that calls for public acknowledgment. In respect to the important matter of the declension in the earliest language, I have made great use of the elaborate paper in the *Journ. Am. Or. Soc.* (printing contemporaneously with this work, and used by me almost, but not quite, to the end of the subject) by my former pupil Prof. Lanman; my treatment of it is founded on his. My manifold obligations to my own teacher, Prof. Weber of Berlin, also require to be mentioned: among other things, I owe to him the use of his copies of certain unpublished texts of the *Brāhmaṇa* period, not otherwise accessible to me; and he was kind enough to look through with me my work in its inchoate condition, favoring me with valuable suggestions. For this last favor I have likewise to thank Prof. Delbrück — who, moreover, has taken the trouble to glance over for a like purpose the greater part of the proof-sheets of the grammar, as they came from the press. To Dr. L. Schröder is due whatever use I have been able to make (unfortunately a very imperfect one) of the important *Mātrīāyanī-Sanhitā*.

Of the deficiencies of my work I am, I think, not less fully aware than any critic of it, even the severest, is likely to be. Should it be found to answer its intended purpose well enough to come to another edition, my endeavor will be to improve and complete it; and I shall be grateful for any corrections or suggestions which may aid me in making it a more efficient help to the study of the Sanskrit language and literature.

GOTHA. July 1879.

W. D. W.

## INTRODUCTION.

### BRIEF ACCOUNT OF THE INDIAN LITERATURE.

It seems desirable to give here such a sketch of the history of Indian literature as shall show the relation to one another of the different periods and forms of the language treated in the following grammar, and the position of the works there quoted.

The name "Sanskrit" (*samskṛta*, 1087 d, 'adorned, elaborated, perfected'), which is popularly applied to the whole ancient and sacred language of India, belongs more properly only to that dialect which, regulated and established by the labors of the native grammarians, has led for the last two thousand years or more an artificial life, like that of the Latin during most of the same period in Europe, as the written and spoken means of communication of the learned and priestly caste; and which even at the present day fills that office. It is thus distinguished, on the one hand, from the later and derived dialects — as the Prakrit, forms of language which have datable monuments from as early as the third century before Christ, and which are represented by inscriptions and coins, by the speech of the uneducated characters in the Sanskrit dramas (see below), and by a limited literature; the Pali, a Prakritic dialect which became the sacred language of Buddhism in Farther India, and is

still in service there as such; and yet later and more altered tongues forming the transition to the languages of Modern India. And, on the other hand, it is distinguished, but very much less sharply and widely, from the older dialects or forms of speech presented in the canonical literature, the Veda and Brāhmana.

This fact, of the fixation by learned treatment of an authorized mode of expression, which should thenceforth be used according to rule in the intercourse of the educated, is the cardinal one in Indian linguistic history; and as the native grammatical literature has determined the form of the language, so it has also to a large extent determined the grammatical treatment of the language by European scholars.

Much in the history of the learned movement is still obscure, and opinions are at variance even as to points of prime consequence. Only the concluding works in the development of the grammatical science have been preserved to us; and though they are evidently the perfected fruits of a long series of learned labors, the records of the latter are lost beyond recovery. The time and the place of the creation of Sanskrit are unknown; and as to its occasion, we have only our inferences and conjectures to rely upon. It seems, however, altogether likely that the grammatical sense of the ancient Hindus was awakened in great measure by their study of the traditional sacred texts, and by their comparison of its different language with that of contemporary use. It is certain that the grammatical study of those texts (*çākḥās*, lit'ly 'branches'), phonetic and other, was zealously and effectively followed in the Brahmanic schools; this is attested by our possession of a number of phonetico-grammatical treatises, *prātiçākhyas* (*prati çākhām*, 'belonging to each several text'), one having for subject each principal Vedic text, and noting all its peculiarities of form; these, both by the depth and exactness of their own researches and by the number of authorities which they quote, speak plainly of a lively scientific activity continued during a long time. What part, on the other hand, the notice of differ-

ences between the correct speech of the learned and the altered dialects of the vulgar may have borne in the same movement is not easy to determine; but it is not customary that a language has its proper usages fixed by rule until the danger is distinctly felt of its undergoing corruption.

The labors of the general school of Sanskrit grammar reached a climax in the grammarian Pāṇini, whose text-book, containing the facts of the language cast into the highly artful and difficult form of about four thousand algebraic-formula-like rules (in the statement and arrangement of which brevity alone is had in view, at the cost of distinctness and unambiguousness), became for all after time the authoritative, almost sacred, norm of correct speech. Respecting his period, nothing really definite and trustworthy is known; but he is with much probability held to have lived some time (two to four centuries) before the Christian era. He has had commentators in abundance, and has undergone at their hands some measure of amendment and completion; but he has not been overthrown or superseded. The chief and most authoritative commentary on his work is that called the *Mahābhāṣya*, 'great comment', in which Kātyāyana's strictures on his rules are examined and discussed by Patanjali.

A language, even if not a vernacular one, which is in tolerably wide and constant use for writing and speaking, is, of course, kept in life principally by direct tradition, by communication from teacher to scholar and the study and imitation of existing texts, and not by the learning of grammatical rules; yet the existence of grammatical authority, and especially of a single one, deemed infallible and of prescriptive value, could not fail to exert a very strong regulative influence, leading to the avoidance more and more of what was, even if lingering in use, inconsistent with his teachings, and also, in the constant reproduction of texts, to the gradual effacement of whatever they might contain that was unapproved. Thus the whole more modern literature of India has been Paninized, so to speak, pressed into the mould prepared by him and his school. What are the

limits of the artificiality of this process is not yet known. The attention of special students of the Hindu grammar (and the subject is so intricate and difficult that the number is exceedingly small of those who have mastered it sufficiently to have a competent opinion on such general matters) has been hitherto mainly directed toward determining what the Sanskrit according to Pāṇini really is, toward explaining the language from the grammar. And, naturally enough, in India, or wherever else the leading object is to learn to speak and write the language correctly — that is, as authorized by the grammarians — that is the proper course to pursue. This, however, is not the way really to understand the language. The time must soon come, or it has come already, when the endeavor shall be instead to explain the grammar from the language; to test in all details, so far as shall be found possible, the reason of Pāṇini's rules (which contain not a little that seems problematical, or even sometimes perverse); to determine what and how much genuine usage he had everywhere as foundation, and what traces may be left in the literature of usages possessing an inherently authorized character, though unratified by him.

By the term "classical" or "later" language, then, as constantly used below in the grammar, is meant the language of those literary monuments which are written in conformity with the rules of the native grammar: virtually, the whole proper Sanskrit literature. For although parts of this are doubtless earlier than Pāṇini, it is impossible to tell just what parts, or how far they have escaped in their style the levelling influence of the grammar. The whole, too, may be called so far an artificial literature as it is written in a phonetic form (see grammar, 103) which never can have been a truly vernacular and living one. Nearly all of it is metrical: not poetic works only, but narratives, histories (so far as anything deserving that name can be said to exist), and scientific treatises of every variety, are done into verse; a prose and a prose literature (except in the commentaries) hardly has an existence. Of linguistic history there is next to nothing in it all; but only a history of style, and this

for the most part showing a gradual depravation. an increase of artificiality and an intensification of certain more undesirable features of the language — such as the use of passive constructions and of participles instead of verbs, and the substitution of compounds for sentences.

This being the condition of the later literature, it is of so much the higher consequence that there is an earlier literature, to which the suspicion of artificiality does not attach, or attaches at least only in a minimal degree, which has a truly vernacular character, and abounds in prose as well as verse.

The results of the very earliest literary productiveness of the Indian people are the hymns with which, when they had only crossed the threshold of the country, and when their geographical horizon was still limited to the river-basin of the Indus with its tributaries, they praised their gods, the deified powers of nature, and accompanied the rites of their comparatively simple worship. At what period these were made and sung cannot be determined with any approach to accuracy: it may have been as early as 2000 B.C. They were long handed down by oral tradition, preserved by the care, and increased by the additions and imitations, of succeeding generations; the mass was ever growing, and, with the change of habits and beliefs and religious practices, was becoming variously applied — sung in chosen extracts, mixed with other material into liturgies, adapted with more or less of distortion to help the needs of a ceremonial which was coming to be of immense elaboration and intricacy. And, at some time in the course of this history, there was made for preservation a great collection of the hymn-material, mainly its oldest and most genuine part, to the extent of over a thousand hymns and ten thousand verses, arranged according to traditional authorship and to subject and length of hymn: this collection is the *Rig-Veda*, 'Veda of verses (*ṛc*) or hymns'. Other collections were made also out of the same general mass of traditional material: doubtless later, although the inter-relations of this period are as yet too unclear to allow of

our speaking with entire confidence as to anything concerning them. Thus, the *Sāma-Veda*, 'Veda of chants (*sāman*)', containing only about a sixth as much, its verses nearly all found in the Rig-Veda also, but appearing here with numerous differences of reading; these were passages put together for chanting at the soma-sacrifices. Again, collections called by the comprehensive name of *Yajur-Veda*, 'Veda of sacrificial formulas (*yajus*)': these contained not verses alone, but also numerous prose utterances, mingled with the former, in the order in which they were practically employed in the ceremonies; they were strictly liturgical collections. Of these, there are in existence several texts, which have their mutual differences: the *Vājasaneyi-Samhitā* (in two slightly discordant versions, *Mādhyandina* and *Kāṇva*), sometimes also called the White Yajur-Veda; and the various and considerably differing texts of the Black Yajur-Veda, namely the *Taittirīya-Samhitā*, the *Maitrāyaṇī-Samhitā*, and the *Kāthaka* (the two last not yet published). Finally, another historical collection, like the Rig-Veda, but made up mainly of later and less accepted material, and called (among other less current names) the *Atharva-Veda*, 'Veda of the Atharvans (a legendary priestly family)'; it is somewhat more than half as bulky as the Rig-Veda, and contains a certain amount of material corresponding to that of the latter, and also a number of brief prose passages. To this last collection is very generally refused in the orthodox literature the name of Veda; but for us it is the most interesting of all, after the Rig-Veda, because it contains the largest amount of hymn-material (or *mantra*, as it is called, in distinction from the prose *brāhmaṇa*), and in a language which, though distinctly less antique than that of the other, is nevertheless truly Vedic. Two versions of it are extant, one of them only in a single known manuscript.

A not insignificant body of like material, and of various period (although doubtless in the main belonging to the latest time of Vedic productiveness, and in part perhaps the imitative work of a yet more modern time), is scattered through the texts to be later described, the *Brāhmaṇas* and

the *Sūtras*. To assemble and sift and compare it is now one of the pressing needs of Vedic study.

The fundamental divisions of the Vedic literature here mentioned all have had their various schools of sectaries, each of these with a text of its own, showing some differences from those of the other schools: but those mentioned above are all that are now known to be in existence; and the chance of the discovery of others grows every year smaller.

The labor of the schools in the conservation of their sacred texts was extraordinary, and has been crowned with such success that the text of each school, whatever may be its differences from those of other schools, is virtually without various readings, preserved with all its peculiarities of dialect, and its smallest and most exceptional traits of phonetic form, pure and unobscured. It is not the place here to describe the means by which, in addition to the religious care of the sectaries, this accuracy was secured: forms of text, lists of peculiarities and treatises upon them, and so on. When this kind of care began in the case of each text, and what of original character may have been effaced before it, or lost in spite of it, cannot be told. But it is certain that the Vedic records furnish, on the whole, a wonderfully accurate and trustworthy picture of a form of ancient Indian language (as well as ancient Indian beliefs and institutions) which was a natural and undistorted one, and which goes back a good way behind the classical Sanskrit. Its differences from the latter the following treatise endeavors to show in detail.

Along with the verses and sacrificial formulas and phrases in the texts of the Black Yajur-Veda are given long prose sections, in which the ceremonies are described, their meaning and the reason of the details and the accompanying utterances are discussed and explained, illustrative legends are reported or fabricated, and various speculations, etymological and other, are indulged in. Such matter comes to be called *brāhmaṇa* (apparently 'relating to the *brahman* or worship'). In the White Yajur-Veda, it is separated into

a work by itself, beside the *samhitā* or text of verses and formulas, and is called the *Çatapatha-Brāhmaṇa*, 'Brāhmaṇa of a hundred ways'. Other similar collections are found, belonging to various other schools of Vedic study, and they bear the common name of *Brāhmaṇa*, with the name of the school, or some other distinctive title, prefixed. Thus, the *Āitareya* and *Kāushītaki-Brāhmaṇas*, belonging to the schools of the Rig-Veda, the *Pañcaviṅça* and *Shadviṅça-Brāhmaṇas* and other minor works, to the Sāma-Veda; the *Gopatha-Brāhmaṇa*, to the Atharva-Veda; and a *Jāimini-Brāhmaṇa*, to the Sāma-Veda, has just (Burnell) been discovered in India; the *Tāittirīya-Brāhmaṇa* is a collection of mingled *mantra* and *brāhmaṇa*, like the *samhitā* of the same name, but supplementary and later. These works are likewise regarded as canonical by the schools, and are learned by their sectaries with the same extreme care which is devoted to the *samhitās*, and their condition of textual preservation is of a kindred excellence. To a certain extent, there is among them the possession of common material: a fact the bearings of which are not yet fully understood.

Notwithstanding the inanity of no small part of their contents, the Brāhmaṇas are of a high order of interest in their bearings on the history of Indian institutions; and philologically they are not less important, since they represent a form of language in most respects intermediate between the classical and that of the Vedas, and offer specimens on a large scale of a prose style, and of one which is in the main a natural and freely developed one — the oldest and most primitive Indo-European prose.

Beside the Brāhmaṇas are sometimes found later appendices, of a similar character, called *Āraṇyakas* ('forest-sections'): as the *Āitareya-Āraṇyaka*, *Tāittirīya-Āraṇyaka*, *Bṛhad-Āraṇyaka*, and so on. And from some of these, or even from the Brāhmaṇas, are extracted the earliest *Upanishads* ('sittings, lectures on sacred subjects') — which, however, are continued and added to down to a comparatively modern time. The Upanishads are one of the lines

by which the Brāhmaṇa literature passes over into the later theological literature.

Another line of transition is shown in the *Sūtras* ('lines, rules'). The works thus named are analogous with the Brāhmaṇas in that they belong to the schools of Vedic study and are named from them, and that they deal with the religious ceremonies: treating them, however, in the way of prescription, not of dogmatic explanation. They, too, contain some *mantra* or hymn-material, not found to occur elsewhere. In part (*ṣrāuta* or *kalpa-sūtras*), they take up the great sacrificial ceremonies, with which the Brāhmaṇas have to do; in part (*gr̥hya-sūtras*), they teach the minor duties of a pious householder; in some cases (*sāmayācārīka-sūtras*) they lay down the general obligations of one whose life is in accordance with prescribed duty. And out of the last two, or especially the last, come by natural development the law-books (*dharma-ṣāstras*), which make a conspicuous figure in the later literature: the oldest and most noted of them being that called by the name of *Manu* (an outgrowth, it is believed, of the Māmava Vedic school); to which are added that of Yājñavalkya, and many others.

Respecting the chronology of this development, or the date of any class of writings, still more of any individual work, the less that is said the better. All dates given in Indian literary history are pins set up to be bowled down again. Every important work has undergone so many more or less transforming changes before reaching the form in which it comes to us, that the question of original construction is complicated with that of final redaction. It is so with the law-book of Manu, just mentioned, which has well-founded claims to being regarded as one of the very oldest works of the proper Sanskrit literature, if not the oldest (it is variously assigned, to periods from six centuries before Christ to soon after Christ). It is so, again, in a still more striking degree, with the great legendary epic of the *Mahābhārata*. The ground-work of this is doubtless of very early date; but it has served as a text into which

materials of various character and period have been inwoven, until it has become a heterogeneous mass, a kind of cyclo-pedia for the warrior-caste, hard to separate into its constituent parts. The story of *Nala*, and the philosophical poem *Bhagavad-Gītā*, are two of the most noted of its episodes. The *Rāmāyaṇa*, the other most famous epic, is a work of another kind: though also worked over and more or less altered in its transmission to our time, it is the production, in the main, of a single author (Vālmiki); and it is generally believed to be in part allegorical, representing the introduction of Aryan culture and dominion into Southern India. By its side stand a number of minor epics, of various authorship and period, as the *Raghavaṅca* (ascribed to the dramatist Kālidāsa), the *Māghakāvya*, the *Bhāṭṭikāvya* (the last, written chiefly with the grammatical intent of illustrating by use as many as possible of the numerous formations which, through taught by the grammarians, find no place in the literature).

The *Purāṇas*, a large class of works mostly of immense extent, are best mentioned in connection with the epics. They are pseudo-historical and prophetic in character, of modern date, and of very small value. Real history finds no place in Sanskrit literature, nor is there any conscious historical element in any of the works composing it.

Lyric poetry is represented by many works, some of which, as the *Meghadūta* and *Gītāgovinda*, are of no mean order of merit.

The drama is a still more noteworthy and important branch. The first indications of dramatical inclination and capacity on the part of the Hindus are seen in certain hymns of the Veda, where a mythological or legendary situation is conceived dramatically, and set forth in the form of a dialogue — well-known examples are the dialogue of Saramā and the Panis, that of Yama and his sister Yamī, that of Vasishtha and the rivers, that of Agni and the other gods — but there are no extant intermediaries between these and the standard drama. The beginnings of the latter date from a period when in actual life the higher and educated

characters used Sanskrit, and the lower and uneducated used the popular dialects derived from it, the Prakrits; and their dialogue reflects this condition of things. Then, however, learning (not to call it pedantry) intervened, and stereotyped the new element; a Prakrit grammar grew up beside the Sanskrit grammar, according to the rules of which Prakrit could be made indefinitely on a substrate of Sanskrit; and none of the existing dramas need to date from the time of vernacular use of Prakrit, while most or all of them are undoubtedly much later. Among the dramatic authors, Kālidāsa is incomparably the chief, and his *Çakuntalā* as distinctly his masterpiece. His date has been a matter of much inquiry and controversy; it is doubtless some centuries later than our era. The only other work deserving to be mentioned along with Kālidāsa's is the *Mṛchakaṭī* of Çūdraka, also of questionable period, but believed to be the oldest of the extant dramas.

A partly dramatic character belongs also to the fable, in which animals are represented as acting and speaking. The most noted works in this department are the *Pañcatantra*, which through Persian and Semitic versions has made its way all over the world, and contributes a considerable quota to the fable-literature of every European language, and, partly founded on it, the comparatively recent and popular *Hitopadeça* ('salutary instruction').

Two of the leading departments of Sanskrit scientific literature, the legal and the grammatical, have been already sufficiently noticed; of those remaining, the most important by far is the philosophical. The beginnings of philosophical speculation are seen already in some of the later hymns of the Veda, more abundantly in the Brāhmanas and Āraṇyakas, and then especially in the Upanishads. The evolution and historic relation of the systems of philosophy, and the age of their text-books, are matters on which much obscurity still rests. There are six systems of primary rank, and reckoned as orthodox, although really standing in no accordance with approved religious doctrines. All of them seek the same end, the emancipation of the soul from the

necessity of continuing its existence in a succession of bodies, and its unification with the All-soul; but they differ in regard to the means by which they seek to attain this end.

The astronomical science of the Hindus is a reflection of that of Greece, and its literature is of recent date; but as mathematicians, in arithmetic and geometry, they have shown more independence. Their medical science, although its beginnings go back even to the Veda, in the use of medicinal plants with accompanying incantations, is of little account, and its proper literature by no means ancient.

## CHAPTER I.

### ALPHABET.

1. THE natives of India write their ancient and sacred language in a variety of alphabets — generally, in each part of the country, in the same alphabet which they use for their own vernacular. The mode of writing, however, which is employed throughout the heart of Aryan India, or in Hindustan proper, is alone adopted by European scholars: it is called the *devanāgarī*.

This name is of doubtful origin and value. A more comprehensive name is *nāgarī* (perhaps, 'of the city'); and *deva-nāgarī* is '*nāgarī* of the gods,' or 'of the Brahmans.'

2. Much that relates to the history of the Indian alphabets is still obscure. The earliest written monuments of known date in the country are the inscriptions containing the edicts of Açoka or Piyadasi, of about the middle of the third century B. C. They are in two different systems of characters, of which one shows distinct signs of derivation from a Semitic source, while the other is also probably, though much less evidently, of the same origin (Burnell). From the latter, the *Lath*, or Southern Açoka character (of Girnar), come the later Indian alphabets, both those of the northern Aryan languages, and those of the southern Dravidian languages. The *nāgarī*, *devanāgarī*, Bengālī, Guzerātī, and others, are varieties of its northern derivatives; and with them are related some of the alphabets of peoples outside of India — as in Tibet and Farther India — who have adopted Hindu culture or religion.

There is reason to believe that writing was first employed in India for practical purposes — for correspondence and business and the like — and only by degrees came to be applied also to literary use. The literature, to a great extent, and the more fully in proportion to its claimed sanctity and authority, ignores all written record, and assumes to be kept in existence by oral tradition alone.

3. Of the *devanāgarī* itself there are minor varieties, depending on differences of locality or of period, as also of individual hand (see examples

in Weber's catalogue of the Berlin Sanskrit MSS., in Rājendralāla Mitra's notices of MSS. in Indian libraries, in the published fac-similes of inscriptions, and so on); and these are in some measure reflected in the type prepared for printing, both in India and in Europe. But a student who makes himself familiar with one style of printed characters will have little difficulty with the others, and will soon learn, by practice, to read the manuscripts. A few specimens of types other than those used in this work will be given in an Appendix.

On account of the difficulty of combining them with the smaller sizes of our Roman and Italic type, the *devanāgarī* characters will be used below only in connection with the first or largest size. And, in accordance with the laudable usage of recent grammars, they will, wherever given, be also transliterated in *italic* letters; while the latter alone will be used in the other sizes.

4. The student may be advised to try to familiarize himself from the start with the *devanāgarī* mode of writing. At the same time, it is not necessary that he should do so until, having learned the principal paradigms, he comes to begin reading and analysing and parsing; and many will find the latter the more practical, and in the end equally or more effective, way.

5. The characters of the *devanāgarī* alphabet, and the European letters which will be used in transliterating them, are as follows:

		short.	long.					
Vowels:	simple	1 अ <i>a</i>	2 आ <i>ā</i>					
		3 इ <i>i</i>	4 ई <i>ī</i>					
		5 उ <i>u</i>	6 ऊ <i>ū</i>					
		7 ऋ <i>r̥</i>	8 ॠ <i>r̄</i>					
diph-	thongs	9 लृ <i>l̥</i>	[10 लृ <i>l̄</i> ]					
		11 ए <i>e</i>	12 ऐ <i>āi</i>					
Visarga	Anusvāra	13 औ <i>o</i>	14 औ <i>āu</i>					
		15 : <i>ḥ</i>	.					
Mutes		16 ः, ं <i>ñ</i> or <i>m̐</i> (see 73)						
			surd	surd asp.	sonant	son. asp.	nasal	
		guttural	17 क <i>k</i>	18 ख <i>kh</i>	19 ग <i>g</i>	20 घ <i>gh</i>	21 ङ <i>ṅ</i>	
		palatal	22 च <i>c</i>	23 छ <i>ch</i>	24 ज <i>j</i>	25 ञ <i>jh</i>	26 ञ <i>ñ</i>	
		lingual	27 ट <i>t</i>	28 ठ <i>th</i>	29 ड <i>ḍ</i>	30 ढ <i>dh</i>	31 ण <i>ṇ</i>	
dental	32 त <i>t</i>	33 थ <i>th</i>	34 द <i>d</i>	35 ध <i>dh</i>	36 न <i>n</i>			
labial	37 प <i>p</i>	38 फ <i>ph</i>	39 ब <i>b</i>	40 भ <i>bh</i>	41 म <i>m</i>			

Semivowels	{	palatal	42	य	y
		lingual	43	र	r
		dental	44	ल	l
		labial	45	व	v
Sibilants	{	palatal	46	श	ç
		lingual	47	ष	ş
		dental	48	स	s
Aspiration			49	ह	h

To these may be added a lingual  $l$  ऌ, which in some of the Vedic texts takes the place of  $z$   $d$  when occurring between two vowels (54).

6. A few other sounds, recognized by the theories of the Hindu grammarians, but either having no separate characters to represent them, or only very rarely and exceptionally written, will be noticed below (71, 230). Such are the guttural and labial breathings, the nasal semivowels, and others.

7. The order of arrangement given above is that in which the sounds are catalogued and described by the native grammarians; and it has been adopted by European scholars as the alphabetic order, for indexes, dictionaries, etc. (to the Hindus, the idea of an alphabetic arrangement for such practical uses is wanting).

In some works (as the Petersburg lexicon), a *visarga* which is regarded as equivalent to and exchangeable with a sibilant (172) is, though written as *visarga*, given the alphabetic place of the sibilant.

8. The theory of the *devanāgarī*, as of the other Indian modes of writing, is syllabic and consonantal. That is to say, it regards as the written unit, not the simple sound, but the syllable (*akṣara*); and further, as the substantial part of the syllable, the consonant (or the consonants) preceding the vowel — this latter being merely implied, or, if written, being written by a subordinate sign attached to the consonant.

9. Hence follow these two principles:

A. The forms of the vowel-characters given in the

alphabetic scheme above are used only when the vowel forms a syllable by itself, or is not combined with a preceding consonant: that is, when it is initial, or preceded by another vowel. In combination with a consonant, other modes of representation are used.

**B.** If more consonants than one precede the vowel, forming with it a single syllable, their characters must be combined into a single compound character.

Ordinary Hindu usage does not divide the words of a sentence, any more than the syllables of a word; a final consonant is combined into one syllable with the initial vowel or consonant of the next following word.

10. Under **A**, it is to be noticed that the modes of indicating a vowel combined with a preceding consonant are as follows:

**a.** The short **अ** *a* has no written sign at all: the consonant-sign itself implies a following **अ** *a*, unless some other vowel-sign is attached to it (or else the *virāma*: 11). Thus the consonant-signs as given above in the alphabetic scheme are really the signs of the syllables *ka*, *kha*, etc. etc. (to *ha*).

**b.** The long **आ** *ā* is written by a perpendicular stroke after the consonant: thus, का *kā*, घा *dhā*, द्वा *hā*.

**c.** Short **इ** *i* and long **ई** *ī*, by a similar stroke, which for short *i* is placed before the consonant and for long *ī* is placed after it, and in either case is connected with the consonant by a hook above the upper line: thus, कि *ki*, की *kī*; भि *bhi*, भी *bhī*; नि *ni*, नी *nī*.

The hook above, turning to the left or to the right, is historically the essential part of the character, having been originally the whole of it; the hooks were only later prolonged, so as to reach all the way down beside the consonant. In the MSS., they almost never have the horizontal stroke drawn across them above, though this is added in all the printed forms of the characters\*.

\* Thus, originally के *kī*, की *kī*; in the MSS., कि, की; in print, कि, की.

d. The *u*-sounds, short and long, are written by hooks attached to the lower end of the consonant-sign: thus, कु *ku*, कू *kū*; डु *ḍu*, डू *ḍū*. On account of the necessities of combination, *du* and *ḍū* are somewhat disguised: thus, ड, ड़; and the forms with र *r* and ह *h* are still more irregular: thus, रु *ru*, रू *rū*; हु *hu*, हू *hū*.

e. The *r*-vowels, short and long, are written by a subjoined hook, single or double, opening toward the right: thus, कृ *kr*, कृरू *kr̄*; दृ *ḍr*, दृरू *ḍr̄*. In the *h*-sign, the hooks are usually attached to the middle: thus, ह्र *hr*, ह्ररू *hr̄*.

As to the combination of *r* with preceding *r*, see below, 14.

f. The *l*-vowel is written with a reduced form of its full initial character: thus, क्ल *kl*: the corresponding long has no real occurrence (23), but would be written with a similar reduced sign.

g. The diphthongs are written by strokes, single or double, above the upper line, combined, for औ *o* and औ *āu*, with the *ā*-sign after the consonant: thus, के *ke*, कै *kāi*; को *ko*, कौ *kāu*.

In some *devanāgarī* MSS. (as in the Bengālī alphabet), the single stroke above, or one of the double ones, is replaced by a sign like the *ā*-sign before the consonant: thus, के *ke*, कै *kāi*, को *ko*, कौ *kāu*.

11. A consonant-sign, however, is capable of being made to signify the consonant-sound alone, without an added vowel, by having written beneath it a stroke called the *virāma* ('rest, stop'): thus, क् *k*, द् *d*, ह् *h*.

Since, as was pointed out above, the Hindus write the words of a sentence continuously, like one word (9, end), the *virāma* is in general called for only when a final consonant occurs before a pause. But it is also occasionally resorted to by scribes, or in print, in order to avoid an awkward or difficult combination of consonant-signs; and it is used freely in published texts which for the convenience of beginners have their words printed separately.

12. Under B, it is to be noticed that the consonant combinations are for the most part not at all difficult to

make or to recognise for one who is familiar with the simple signs. The characteristic part of a consonant-sign that is to be added to another is taken (to the exclusion of the horizontal or of the perpendicular framing-line, or of both), and they are put together according to convenience, either side by side, or one above the other: in some combinations either arrangement is allowed. The consonant that is to be pronounced first is set before the other in the one order, and above it in the other order.

Examples of the side-by-side arrangement are: ग्ग *gga*, ज्ञ *jjā*, प्य *pya*, न्म *nma*, त्थ *ttha*, भ्य *bhya*, स्क *ska*, ष्ण *ṣṇa*, त्क *tka*.

Examples of the above-and-below arrangement are: क्क *kka*, च्च *cca*, ञ्ण *ñña*, द्द *dda*, त्त *pta*, त्त *tna*.

13. In some cases, however, there is more or less abbreviation or disguise of the independent form of a consonant-sign in combination.

Thus, of क *k* in क्त *cta*, क्ल *kla*; and in कण *kṇa* etc.;

of त *t* in त्त *tta*;

of द *d* in द्ग *dga*, द्न *dna*, etc.;

of म *m* and य *y*, when following other consonants: thus, क्य *kya*, क्म *kma*, अन्म *ñma*, अन्य *ñya*, द्म *dma*, द्य *dya*, ह्य *hya*, च्य *chya*, ध्य *ḍhya*;

of श *ṣ*, which generally becomes ष when followed by a consonant: thus, ष्च *ṣca*, ष्ण *ṣṇa*, ष्व *ṣva*, ष्य *ṣya*. The same change is usual when a vowel-sign is added below: thus, षु *ṣu*, षृ *ṣṛ*.

Other combinations, of not quite obvious value, are ण *ṇa*, ल्ल *lla*, द्ध *ddha*, द्भ *dbha*, ष्ट *ṣṭa*, ष्ठ *ṣṭha*; and the compounds of ह *h*: as ह्ण *hṇa*, ह्न *hna*.

In a case or two, no trace of the constituent letters is recognisable: thus, क्श *kṣa*, ज्ञ *jña*.

14. The semivowel र *r*, in making combinations with

other consonants, is treated in a wholly peculiar manner, analogous with that of the vowels. If pronounced before another consonant (or consonant-combination), it is written with a hook above, opening to the right (like the subjoined sign of *r*: 10e): thus, र्क *rka*, र्ष *rṣa* (र्त्स *rtsna*). If pronounced after another consonant (alone or in combination), it is written with a slanting stroke below: thus, ग्र *gra*, प्र *pra*, स्र *sra* (and ग्र्य *grya*, सर्व *sra*); and, with modifications of the preceding consonant-sign like those noted above, त्र *tra*, ग्र *gra*, द्र *dra*.

When र *r* is to be combined with a following र् *r*, it is the vowel which is written in full, with its initial character, and the consonant in subordination to it: thus, र्र *rr*.

15. Further combinations, of three, or four, or even five consonant-signs, are made according to the same rules. Examples are:

of three consonants, त्र *ttva*, द्र *ddhya*, द्र *drya*, द्र *drya*, द्र्य *dhrya*, प्स्र *psva*, ष्र्य *ṣya*, श्र्य *ṣhya*, ह्र्य *hrya*;

of four consonants, क्र्य *ktrya*, ङ्र्य *ṅksya*, श्र्य *ṣhya*, त्स्र्य *tsmya*;

of five consonants, र्त्स्र्य *rtsnya*.

The manuscripts, and the type-fonts as well, differ from one another more in their management of consonant combinations than in any other respect, often having peculiarities which one needs a little practice to understand. It is quite useless to give in a grammar the whole series of possible combinations (many of them excessively rare) which are provided for in any given type-font, or even in all. There is nothing which due familiarity with the simple signs and with the above rules of combination will not enable the student to analyse and explain.

16. A sign called the *avagraha* ('separator') — namely, √ — is used in the manuscripts, sometimes in the manner of a hyphen, sometimes as a mark of hiatus, sometimes to mark the elision of initial अ *a* after final ए *e* or ओ *o* (135). In printed texts, especially European, it is ordinarily limited

to the use last mentioned: thus, ते ऽब्रुवन् *te 'bruvan*, सो ऽब्रवीत् *so 'bravit*, for *te abruvan*, *so abravīt*.

The sign ° is used to mark an omission of something. In some texts, it has also the value of a hyphen.

Signs of punctuation are † and ‡.

17. The numeral figures are

१ 1, २ 2, ३ 3, ४ 4, ५ 5, ६ 6, ७ 7, ८ 8, ९ 9, ० 0.

In combination, to express larger numbers, they are used in precisely the same way with European digits: thus, २५ 25, ६३० 630, १००० 1000, १८७९ 1879.

18. The Hindu grammarians call the different sounds, and the characters representing them, by a *kāra* ('maker') added to the sound of the letter, if a vowel, or to the letter followed by *a*, if a consonant. Thus, the sound or character *a* is called *akāra*; *k* is *kakāra*; and so on. But the *kāra* is also omitted, and *a*, *ka*, etc. are used alone. The *r*, however, is never called *rakāra*, but only *ra* or *repha* ('snarl': the only example of a specific name for an alphabetic element of its class). The *anusvāra* and *visarga* are also known by these names alone.

## CHAPTER II.

### SYSTEM OF SOUNDS: PRONUNCIATION.

#### I. Vowels.

19. THE *a*, *i*, and *u*-vowels. The Sanskrit has these three earliest and most universal vowels of Indo-European language, in both short and long form — अ *a* and आ *ā*, इ *i* and ई *ī*, उ *u* and ऊ *ū*. They are to be pronounced in the "Continental" or "Italian" manner — as in *far* or *father*, *pin* and *pique*, *pull* and *rule*.

20. The *a* is the openest vowel, an utterance from the ex-

panded throat; it stands, therefore, in no relation of kindred with any of the classes of consonantal sounds. The *i* and *u* are close vowels, made with marked approach of the articulating organs to one another: *i* is palatal, and shades through *y* into the palatal and guttural consonant-classes; *u* is similarly related, through *v*, to the labial class, as involving in its utterance a narrowing and rounding of the lips.

The Paninean scheme (commentary to Pāṇini's grammar, i.1.9) classes *a* as guttural, but apparently only in order to give that series as well as the rest a vowel: no one of the Prātiçākhyas puts *a* into one class with *k* etc. All these authorities concur in calling the *i* and *u*-vowels respectively palatal and labial.

21. The short *a* is not pronounced in India with the full openness of  $\bar{a}$ , as its corresponding short, but usually as the "neutral vowel" (English so-called "short *u*", of *but*, *son*, *blood*, etc.). This peculiarity appears very early, being acknowledged by Pāṇini and by two of the Prātiçākhyas (APr.i.36; VPr.i.72), which call the utterance *saiṃvrta*, 'covered up, dimmed'. It is, however, of course not original; and it is justly wont to be ignored by Western scholars (except those who have studied in India).

22. The *a*-vowels are the prevailing vowel-sounds of the language, being about twice as frequent as all the others (including diphthongs) taken together. The *i*-vowels, again, are about twice as numerous as the *u*-vowels. And, in each pair, the short vowel is more than twice ( $2\frac{1}{2}$  to 3 times) as common as the long.

For more precise estimates of frequency, of these and of the other alphabetic elements, and for the way in which they were obtained, see below, 75.

23. The *r* and *l*-vowels. To the three simple vowels already mentioned the Sanskrit adds two others, the *r*-vowels and the *l*-vowel, both of them plainly generated by the abbreviation of syllables containing a  $\text{र}$  *r* or  $\text{ल}$  *l* along with another vowel: the  $\text{ऋ}$  *r* coming (almost always: see 237, 241-3) from  $\text{अर}$  *ar* or  $\text{रा}$  *ra*, the  $\text{ऌ}$  *l* from  $\text{अल}$  *al*.

Some of the Hindu grammarians add to the alphabet also a long *l*; but this is only for the sake of an artificial symmetry, since the sound does not occur in a single genuine word in the language.

24. The vowel  $\text{ठ}$  *r* is simply a smooth or untrilled *r*-sound, assuming a vocalic office in syllable-making —

as, by a like abbreviation, it has done also in certain Slavonic languages. The vowel ऌ  $l$  is an  $l$ -sound similarly uttered — like the English  $l$ -vowel in such words as *able*, *angle*, *addle*.

The modern Hindus pronounce these vowels as *ri*, *ri*, *li* (or even *lri*), having long lost the habit and the facility of giving a vowel value to the pure  $r$  and  $l$ -sounds. Their example is widely followed by European scholars; and hence also the (distorting and quite objectionable) transliterations *ri*, *ri*, *li*. There is no real difficulty in acquiring and practising the true utterance.

Some of the grammarians (see APr. i. 37, note) attempt to define more nearly the way in which, in these vowels, a real  $r$  or  $l$ -element is combined with something else.

25. Like their corresponding semivowels,  $r$  and  $l$ , these vowels belong respectively in the general lingual and dental classes; the euphonic influence of  $r$  and  $\bar{r}$  (180) shows this clearly. They are so ranked in the Paninean scheme; but the Prātiçākhyas in general strangely class them with the *jihvāmūtiya* sounds, our "gutturals".

26. The short  $r$  is found in every variety of word and of position, and is not rare, being just about as frequent as long  $\bar{u}$ . Long  $\bar{r}$  is very much more unusual, occurring only in certain plural cases of noun-stems in  $r$  (374, 378). The  $l$  is met with only in some of the forms and derivatives of a single not very common verbal root (*kṛp*).

27. The diphthongs. Of the four diphthongs, two, the  $\bar{r}e$  and  $\bar{r}o$ , are in great part original Indo-European sounds. In the Sanskrit, they wear the aspect of being products of the increment or strengthening of  $\bar{r}i$  and  $\bar{r}u$  respectively; and they are called the corresponding *guṇa*-vowels to the latter (see below, 235). The other two,  $\bar{r}\bar{a}i$  and  $\bar{r}\bar{a}u$ , are by the prevalent and preferable opinion held to be of peculiar Sanskrit growth (there is no certain trace of them to be found even in the Zend); they are also in general results of another and higher increment of  $\bar{r}i$  and  $\bar{r}u$ , to which they are called the corresponding *vrddhi*-vowels (below, 235). But all are likewise sometimes gene-

rated by euphonic combination (127); and औ *o*, especially, is common as result of the alteration of a final अस् *as* (175).

28. The ए *e* and औ *o* are, both in India and in Europe, usually pronounced as they are transliterated — that is, as long *e* (English “long *a*”, or *e* in *they*) and *o*-sounds, without diphthongal character.

Such they apparently already were to the authors of the Prāṭiçākhyas, which, while ranking them as diphthongs (*sandhyakṣara*), give rules respecting their pronunciation in a manner implying them to be virtually unitary sounds. But their euphonic treatment (131-4) clearly shows them to have been still at the period when the euphonic laws established themselves, as they of ‘course were at their origin, real diphthongs, *ai* (*a + i*) and *au* (*a + u*). From them, on the same evidence, the heavier or *vrddhi* diphthongs were distinguished by the length of their *a*-element, as *āi* (*ā + i*) and *āu* (*ā + u*).

The recognisable distinctness of the two elements in the *vrddhi*-diphthongs is noticed by the Prāṭiçākhyas (see APr. i. 40, note); but the relation of those elements is either defined as equal, or the *a* is made of less quantity than the *i* and *u*.

29. The lighter or *guṇa*-diphthongs are much more frequent (6 or 7 times) than the heavier or *vrddhi*-diphthongs, and the *e* and *āi* than the *o* and *āu* (a half more). Both pairs are somewhat more than half as common as the simple *i* and *u*-vowels.

30. The general name given by the Hindu grammarians to the vowels is *svara*, ‘tone’; the simple vowels are called *samānākṣara*, ‘homogeneous syllable’, and the diphthongs are called *sandhyakṣara*, ‘combination-syllable’. The position of the organs in their utterance is defined to be one of openness, or of non-closure.

As to quantity and accent, see below, 76 ff., 80 ff.

## II. Consonants.

31. The Hindu name for ‘consonant’ is *vyañjana*, ‘manifest’. The consonants are divided by the grammarians into *sparça*, ‘contact’ or ‘mute’, *antaḥsthā*, ‘intermediate’ or ‘semivowel’, and *ūṣman*, ‘spirant’. They will here be taken up and described in this order.

32. Mutes. The mutes, *sparça*, are so called as involving a complete closure or contact (*sparça*), and not an approximation

only, of the mouth-organs by which they are produced. They are divided into five classes or series (*varga*), according to the organs and parts of organs by which the contact is made; and each series is composed of five members, differing according to the accompaniments of the contact.

33. The five mute-series are called respectively guttural, palatal, lingual (or cerebral), dental, and labial; and they are arranged in the order as just mentioned, beginning with the contact made furthest back in the mouth, coming forward from point to point, and ending with the frontmost contact.

34. In each series there are two surd members, two sonant, and one nasal (which is also sonant): for example, in the labial series,  $\text{क् } p$  and  $\text{क् } p^h$ ,  $\text{ब् } b$  and  $\text{भ् } bh$ , and  $\text{म् } m$ .

The members are by the Hindu grammarians called respectively 'first', 'second', 'third', 'fourth', and 'last' or 'fifth'.

The surd consonants are known as *aghoṣa*, 'toneless', and the sonants as *ghoṣavant*, 'having tone'; and the descriptions of the grammarians are in accordance with these terms. All alike recognise a difference of tone, and not in any manner a difference of force, whether of contact or of expulsion, as separating the two great classes in question. That the difference depends on *vivāra*, 'opening', or *saivāra*, 'closure' (of the glottis), is also recognised by them.

35. The first and third members of each series are the ordinary corresponding surd and sonant mutes of European languages: thus,  $\text{क् } k$  and  $\text{ग् } g$ ,  $\text{त् } t$  and  $\text{द } d$ ,  $\text{प् } p$  and  $\text{ब } b$ .

36. Nor is the character of the nasal any more doubtful. What  $\text{म् } m$  is to  $\text{प् } p$  and  $\text{ब } b$ , or  $\text{न् } n$  to  $\text{त् } t$  and  $\text{द } d$ , that is also each other nasal to its own series of mutes: a sonant expulsion into and through the nose, while the mouth-organs are in the mute-contact.

The Hindu grammarians give distinctly this definition. The nasal (*anunāsika*, 'passing through the nose') sounds are declared to be formed by mouth and nose together; or their nasality (*ānunāsikya*) to be given them by unclosure of the nose.

37. The second and fourth of each series are aspirates: thus, beside the surd mute  $\text{क् } k$  we have the corresponding

surd aspirate  $\text{क्व} \text{kh}$ , and beside the sonant  $\text{ङ्ग} \text{g}$ , the corresponding sonant aspirate  $\text{ङ्ग} \text{gh}$ . Of these, the precise character is more obscure and difficult.

That the aspirates, all of them, are real mutes or contact sounds, and not fricatives (like European *th* and *ph* and *ch*, etc.), is beyond question.

It is also not doubtful in what way the surd *th*, for example, differs from the unaspirated *t*: such aspirates are found in many Asiatic languages, and even in some European: they involve the slipping-out of an audible bit of *flatus* or aspiration between the breach of mute-closure and the following sound, whatever it may be. They are accurately enough represented by the *th* etc., with which, in imitation of the Latin treatment of the similar ancient Greek aspirates, we are accustomed to write them.

The sonant aspirates are generally understood and described as made in a similar way, with a perceptible *h*-sound after the breach of sonant mute-closure. But there are insuperable theoretical difficulties in the way of accepting this explanation; and some of the best phonetic observers (as A. J. Ellis) deny that the modern Hindu pronunciation is of such a character, and define the element following the mute as a "glottal buzz", rather, or an emphasized utterance of the beginning of the succeeding sound. The question is one of great difficulty, and upon it the opinions of the highest authorities are still much at variance. Sonant aspirates are still in use in India, in the pronunciation of the vernacular as well as of the learned languages.

By the Prātiçākhyas, the aspirates of both classes are called *soṣman*: which might mean either 'accompanied by a rush of breath' (taking *uṣman* in its more etymological sense), or 'accompanied by a spirant' (below, 59). And some authorities define the surd aspirates as made by the combination of each surd non-aspirate with its own corresponding surd spirant; and the sonant aspirates, of each sonant non-aspirate with the sonant spirant, the *h*-sound (below, 65). But this would make the two classes of aspirates of quite diverse character, and would also make *th* the same as *ts*, *th* as *tʃ*, *ch* as *cç* — which is in any measure plausible only of the last. Pāṇini has no name for aspirates; the scheme given in his comment (to i.1.9) attributes to them *mahāprāṇa*, 'great expiration', and to the non-aspirates *alpaprāṇa*, 'small expiration'.

It is usual among European scholars to pronounce both classes of aspirates as the corresponding non-aspirates with a following *h*: for example,  $\text{क्व} \text{th}$  nearly as in English *boat-hook*,  $\text{फ़} \text{ph}$  as in *haphazard*,  $\text{ड्ध} \text{dh}$  as in *madhouse*, and so on. This is (as we have seen above) confessedly accurate only as regards the surd aspirates.

38. The sonant aspirates are (in the opinion of most), or at least represent, original Indo-European sounds, while the surd

aspirates are generally regarded as a special Indian development. The former are more than twice as common as the latter. The unaspirated (non-nasal) mutes are very much more frequent (5 times) than the aspirates (for the special frequency of *bh* and original *gh*, see 50 and 66); and among them the surds are more numerous (2½ times) than the sonants. The nasals (chiefly *n* and *m*) are nearly as frequent as the surd non-aspirates.

We take up now the several mute-series.

39. Guttural series: क् *k*, ख् *kh*, ग् *g*, घ् *gh*, ङ् *ñ*.

These are the ordinary European *k* and *g*-sounds, with their corresponding aspirates and nasal (the last, like English *ng* in *singing*).

The gutturals are defined by the Prātiçākhyas as made by contact of the base of the tongue with the base of the jaw, and they are called, from the former organ, *jihvāmūliya*, 'tongue-root sounds'. The Paninean scheme describes them simply as made in the throat (*kañṭha*). From the euphonic influence of a *k* on a following *s* (below, 180), we may perhaps infer that in their utterance the tongue was well drawn back into the hinder mouth.

40. The *k* is by far the commonest of the guttural series, occurring considerably more often than all the other four taken together. The nasal, except as standing before one of the others of the series, is found only as final (after the loss of a following *k*), and in a very small number of words.

41. The Sanskrit guttural series represents only a minority of Indo-European gutturals; these last have suffered more and more general corruption than any other class of consonants. By processes of alteration which are proved to have begun in the Indo-European period, since the same words exhibit connected changes also in other languages of the family, the palatal mutes, the palatal sibilant *ç*, and the aspiration *h*, have come from gutturals. See these various sounds below.

42. Palatal series: च् *c*, च् *ch*, ज् *j*, ज् *jh*, ञ् *ñ*. This whole series is derivative, being generated by the corruption of original gutturals. The *c* comes from an original *k* — as does also, by another degree of alteration, the palatal sibilant *ç* (see below, 64). The *j*, in like manner, comes from a *g*; but the Sanskrit *j* includes in itself two degrees of alteration, one corresponding to the alteration of *k* to *c*, the other to that of *k* to *ç* (see below, 219: in the Zend, these two degrees are held distinctly apart). The *c* is somewhat more common than the *j* (about as four to three). The aspirate *ch* is very much less frequent (a tenth of *c*), and comes from the original group *sk*. The sonant aspirate *jh* is excessively rare (occurring but once

in the Vedic texts, and not half-a-dozen times in the Brāhmaṇas); where found, it is either onomatopoetic or of anomalous or not Indo-European origin (in the so-called root *ujh*, it comes from *j* and *h*). The nasal, *ñ*, never occurs except immediately before — or, in a small number of words, also after (201) — one of the others of the series.

43. Hence, in the euphonic processes of the language, the treatment of the palatals is in many respects peculiar. In some situations, the original unaltered guttural shows itself — or, as it appears from the point of view of the Sanskrit, the palatal reverts to its original guttural. No palatal ever occurs as a final. The *j* is differently treated, according as it represents the one or the other degree of alteration. And *c* and *j* (except artificially, in the algebraic rules of the grammarians) do not interchange, as corresponding surd and sonant.

44. The palatal mutes are by European scholars, as by the modern Hindus also, pronounced with the compound sounds of English *ch* and *j* (in *church* and *judge*).

Their description by the old Hindu grammarians, however, gives them a not less absolutely simple character than belongs to the other mutes. They are called *tālavya*, 'palatal', and declared to be formed against the palate by the middle of the tongue. They seem to have been, then, brought forward in the mouth from the guttural point, and made against the hard palate at a point not far from the lingual one (below, 45), but with the upper flat surface of the tongue instead of its point. Such sounds, in all languages, pass easily into the (English) *ch* and *j*-sounds. The value of the *ch* as making the preceding vowel "long by position" (227), and its frequent origination from *t* + *ç* (203), lead to the suspicion that it, at least, may have had this character from the beginning: compare 37, above.

45. Lingual series:  $\bar{t}$  *t*,  $\bar{th}$  *th*,  $\bar{d}$  *d*,  $\bar{dh}$  *dh*,  $\bar{n}$  *n*. The lingual mutes are by all the native authorities defined as uttered with the tip of the tongue turned up and drawn back into the dome of the palate (somewhat as the usual English smooth *r* is pronounced). They are called by the grammarians *mūrdhanya*, literally 'head-sounds. capitals. cephalics'; which term is in many European grammars rendered by 'cerebrals'. In practice, among European Sanskritists, no attempt is made to distinguish them from the dentals:  $\bar{t}$  *t* is pronounced like  $\bar{t}$  *t*,  $\bar{d}$  *d* like  $\bar{d}$  *d*, and so with the rest.

46. The linguals are another non-original series of sounds, coming mainly from the phonetic alteration of the next series, the dentals, but also in part occurring in words that have no traceable Indo-European connection, and are perhaps derived from the aboriginal languages of India. The tendency to lingualization is a positive one in the history of the language: dentals easily pass into linguals under the influence of contiguous or neighboring lingual sounds, but not the contrary; and all the sounds of the class become markedly more frequent in the later literature. The conditions of their ordinary occurrence are briefly these: **a.**  $\text{ṣ}$  comes from  $s$ , much more rarely from  $\text{ç}$ ,  $j$ ,  $k\text{ṣ}$ , in euphonic circumstances stated below (180, 218, etc.); **b.** a dental mute following  $\text{ṣ}$  is assimilated to it, becoming lingual ( $\text{ṣ}$ ,  $\text{ṣh}$ ,  $\text{ṣ}$ ); **c.**  $n$  is often changed to  $\text{ṣ}$  after a lingual vowel or semivowel or sibilant in the same word (189 etc.); **d.**  $\text{dh}$ , which is of very rare occurrence, comes from assimilation of a dental after  $\text{ṣ}$  (198 a) or  $h$  (222); **e.**  $\text{ṣ}$  and  $\text{ḍ}$  come occasionally by substitution for some other sound which is not allowed to stand as final (142, 145). When originated in these ways, the lingual letters may be regarded as normal; in any other cases of their occurrence, they are either products of abnormal corruption, or signs of the non-Indo-European character of the words in which they appear.

In a certain number of passages numerically examined (below, 75), the abnormal occurrences of lingual mutes were less than half of the whole number (74 out of 159), and most of them (43) were of  $\text{ṣ}$ : all were found more frequent in the later passages. In the Rig-Veda, only 15 words have an abnormal  $\text{ṣ}$ ; only 6, such a  $\text{ṣh}$ ; only 1, such a  $\text{dh}$ ; about 20 (including 9 roots, nearly all of which have derivatives) show an abnormal  $\text{ḍ}$ , besides 9 that have  $\text{ṣḍ}$ ; and 30 (including 1 root) show a  $\text{ṣ}$ .

Taken all together, the linguals are by far the rarest class of mutes (about  $1\frac{1}{2}$  per cent. of the alphabet) — hardly half as frequent even as the palatals.

47. Dental series:  $\text{ṭ}$   $t$ ,  $\text{ṭh}$   $th$ ,  $\text{ḍ}$   $d$ ,  $\text{ḍh}$   $dh$ ,  $\text{ṇ}$   $n$ . These are called by the Hindus also *dantya*, 'dental', and are described as formed at the teeth (or at the roots of the teeth), by the tip of the tongue. They are practically the equivalents of our European  $t$ ,  $d$ ,  $n$ .

But the modern Hindus are said to pronounce their dentals with the tip of the tongue thrust well forward against the upper teeth, so that these sounds get a slight tinge of the quality belonging to the English and Modern Greek *th*-sounds. The absence of that quality in the European (especially

the English) dentals is doubtless the reason why to the ear of a Hindu the latter appear more analogous with his linguals, and he is apt to use the linguals in writing European words.

48. The dentals are one of the three Indo-European original mute-classes. In their occurrence in Sanskrit they are just about as frequent as all the other four classes taken together.

49. Labial series: प् *p*, फ् *ph*, ब् *b*, भ् *bh*, म् *m*. These sounds are called *oṣṭhya*, 'labial', by the Hindu grammarians also. They are, of course, the equivalents of our *p*, *b*, *m*.

50. The numerical relations of the labials are a little peculiar. Owing to the absence (or almost entire absence) of *b* in Indo-European, the Sanskrit *b* also is greatly exceeded in frequency by *bh*, which is the most common of all the sonant aspirates, as *ph* is the least common of the surd. The nasal *m* (notwithstanding its frequent euphonic mutations when final: 212 ff.) occurs just about as often as all the other four members of the series together.

51. Semivowels: य् *y*, र् *r*, ल् *l*, व् *v*. The name given to this class of sounds by the Hindu grammarians is *antahsthā*, 'standing between' — either from their character as utterances intermediate between vowel and consonant, or (more probably) from the circumstance of their being placed between the mutes and spirants in the arrangement of the consonants.

The semivowels are clearly akin with the several mute series in their physical character, and they are classified along with those series — though not without some discordances of view — by the Hindu grammarians. They are said to be produced with the organs "slightly in contact" (*iṣatsprṣṭa*), or "in imperfect contact" (*duḥsprṣṭa*).

52. The र् *r* is clearly shown by its influence in the euphonic processes of the language to be a lingual sound, or one made with the the tip of the tongue turned up into the dome of the palate. It thus resembles the English smooth *r*, and, like this, seems to have been untrilled.

The Paninean scheme reckons *r* as a lingual. None of the Prātiçākhyas, however, does so; nor are they entirely consistent with one another in its description. For the most part, they define it as made at 'the roots of the teeth'. This would give it a position like that of the vibrated *r*; but no authority hints at a vibration as belonging to it.

In point of frequency, *r* stands very high on the list of consonants; it is about equal with *v*, *n*, *m*, and *y*, and only exceeded by *t*.

53. The  $\text{ऌ}$  *l* is a sound of dental position, and is so defined and classed by all the native authorities.

The peculiar character of an *l*-sound, as involving expulsion at the sides of the tongue along with contact at its tip, is not noticed by any Hindu phonetist.

It is a disputed question whether *r* and *l* were distinguished from one another in Indo-European speech; in the Sanskrit, at any rate, they are very widely interchangeable, both in roots and in suffixes: there is hardly a root containing an *l* which does not show also forms with *r*; words written with the one letter are found in other texts, or in other parts of the same texts, written with the other. In the later periods of the language they are more separated, and the *l* becomes decidedly more frequent, though always much rarer than the *r* (only as 1 to 7 or 8 or 10).

54. Some of the Vedic texts have another *l*-sound, written with a slightly different character (it is given at the end of the alphabet, 5), which is substituted for a lingual *ḍ* (as also the same followed by *h* for a *ḍh*) when occurring between two vowels. It is, then, doubtless a lingual *l*, one made by breach (at the sides of the tongue) of the lingual instead of the dental mute-closure.

55. The  $\text{य}$  *y* in Sanskrit, as in other languages generally, stands in the closest relationship with the vowel  $\text{इ}$  *i* (short or long); the two exchange with one another in cases innumerable.

And in the Veda (as the metre shows) an *i* is very often to be read where, in conformity with the rules of the later Sanskrit euphony, a *y* is written. Thus, the final *i*-vowel of a word remains *i* before an initial vowel; that of a stem maintains itself unchanged before an ending; and an ending of derivation — as *ya*, *tya* — has *i* instead of *y*. Such cases will be considered in more detail later, as they arise. The constancy of the phenomenon in certain words and classes of words shows that this was no merely optional interchange. Very probably, the Sanskrit *y* had everywhere more of an *i*-character than belongs to the corresponding European sound.

56. The *y* is by its physical character a palatal utterance; and it is classed as a palatal semivowel by the Hindu phonetists. It is one of the most common of Sanskrit sounds.

57. The  $\text{व}$  *v* is pronounced as English or French *v* (German *w*) by the modern Hindus — except when pre-

ceded by a consonant in the same syllable, in which case it has the sound of English *w*; and European scholars follow the same practice (with or without the same exception).

By its whole treatment in the euphony of the language, however, the *v* stands related to an *u*-vowel precisely as *y* to an *i*-vowel. It is, then, a *v* only according to the original Roman value of that letter — that is to say, a *w*-sound in the English sense: though (as was stated above for the *y*) it may well have been less markedly separated from *u* than English *w*, more like French *ou* in *oui* etc. But, as the original *w* has in most European languages been changed to *v* (English), so also in India, and that from a very early time: the Paninean scheme and two of the Prāṭiçākhyas (VPr. and TPr.) distinctly define the sound as made between the upper teeth and the lower lip — which, of course, identifies it with the ordinary modern *v*-sound. As a matter of practice, the usual pronunciation need not be seriously objected to; yet the student should not fail to note that the rules of Sanskrit euphony and the name of "semivowel" have no application except to a *w*-sound in the English sense: a *v*-sound (German *w*) is no semivowel, but a spirant, standing on the same articulate stage with the English *th*-sounds and the *f*.

58. *V* is classed as a labial semivowel by the Hindu phonetical authorities. It has a somewhat greater frequency than the *y*.

In the Veda, under the same circumstances as the *y* (above, 55), *v* is to be read as *u*.

59. Spirants. Under the name *ūṣman* (literally 'heat, steam, *flatus*'), which is usually and well represented by 'spirant', some of the Hindu authorities include all the remaining sounds of the alphabet; others apply the term only to the three sibilants and the aspiration — to which it will here also be restricted.

The term is not found in the Paninean scheme; by different treatises the guttural and labial breathings, these and the *visarga*, or all these and *anusvāra*, are called *ūṣman* (see APr. i. 31 note). The organs of utterance are described as being in the position of the mute-series to which each spirant belongs respectively, but unclosed, or unclosed in the middle.

60. The  $\text{ṣ}$  s. Of the three sibilants, or surd spirants, this is the one of plainest and least questioned character:

it is the ordinary European *s* — a hiss expelled between the tongue and the roof of the mouth directly behind the upper front teeth.

It is, then, dental, as it is classed by all the Hindu authorities. It is the one primitive Indo-European sibilant. Notwithstanding the great losses which it suffers in Sanskrit euphony, by conversion to the other sibilants, to *r*, to *visarga*, etc., it is still very high among the consonants in the order of frequency, or considerably more common than both the other two sibilants together.

61. The  $\text{श}$   $\text{ś}$ . As to the character of this sibilant, also, there is no ground for real question: it is the one produced in the lingual position, or with the tip of the tongue reverted into the dome of the palate. It is, then, a kind of *śh*-sound; and by European Sanskritists it is pronounced as an ordinary *sh* (French *ch*, German *sch*), no attempt being made (any more than in the case of the other lingual sounds: 45) to give it its proper lingual quality.

Its lingual character is shown by its whole euphonic influence, and it is described and classed as lingual by all the Hindu authorities (the APr. adds, i. 23, that the tongue in its utterance is trough-shaped). In its audible quality, it is a *śh*-sound rather than a *s*-sound; and, in the considerable variety of sibilant-utterance, even in the same community, it may coincide with some people's *sh*. Yet the general and normal *sh* is palatal (see below, 63); and therefore the sign  $\text{ś}$ , marked in accordance with the other lingual letters, is the only unexceptionable transliteration for the Hindu character.

In modern pronunciation in India,  $\text{ś}$  is much confounded with *kh*; and the MSS. are apt to exchange the characters. Later grammatical treatises, too, take note of the relationship (see Weber's *Prātijñā*, p. 84).

62. This sibilant (as was noticed above, 46, and will be more particularly explained below, 180 ff.) is no original sound, but a product of the lingualization of *s* under certain euphonic conditions. The exceptions are extremely few (9 out of 145 noted occurrences: 75), and of a purely sporadic character. The Rig-Veda has (apart from  $\text{व}$  *śah*, 182) only twelve words which show a  $\text{ś}$  under other conditions.

The final  $\text{ś}$  of a root has in some cases attained a more independent

value, and does not revert to *s* when the euphonic conditions are removed, but shows anomalous forms (225).

63. The ञ *ç*. This sibilant is by all the native authorities classed and described as palatal, nor is there anything in its history or its euphonic treatment to cast doubt on its character as such. It is, then, made with the flat of the tongue against the forward part of the palatal arch — that is to say, it is the usual and normal *sh*-sound. By European scholars it is variously pronounced — more often, perhaps, as *s* than as *sh*.

The two *sh*-sounds, *ś* and *ç*, are made in the same part of the mouth (the *ś* probably rather further back), but with a different part of the tongue; and they are doubtless not more unlike than, for example, the two *t*-sounds, written *ṭ* and *t̤*; and it would be not less proper to pronounce them both as one *sh* than to pronounce the linguals and dentals alike. To neglect the difference of *ś* and *ç* is much less to be approved. The very near relationship of *ś* and *ç* is attested by their euphonic treatment, which is to a considerable extent the same, and by their not infrequent confusion by the writers of manuscripts.

64. As was mentioned above (41), the *ç*, like *c*, comes from the corruption of an original *k*-sound, by loss of mute-contact as well as forward shift of the articulating point. In virtue of this derivation, it sometimes (though less often than *c*) "reverts" to *k* — that is, the original *k* appears instead of it; while, on the other hand, as a *sh*-sound, it is to a certain extent convertible to *ś*. In point of frequency, it slightly exceeds the latter.

65. The remaining spirant,  $\overline{h}$ , is ordinarily pronounced like the usual European surd aspiration *h*.

This is not, however, its true character. It is defined by all the native authorities as not a surd element, but a sonant (or else an utterance intermediate between the two); and its whole value in the euphony of the language is that of a sonant: but what is its precise value is very hard to say. The Paninean scheme ranks it as guttural, as it does also *a*: this means nothing. The Prātiçākhyas bring it into no relation with the guttural class: one of them quotes the opinion of some authorities that "it has the same position with the beginning of the following vowel" (TPr. ii. 47) — which so far identifies it with our *h*. There is nothing in its euphonic influence to mark it as retaining any trace of gutturally articulated character. By some of the native phonetists it is identified with the aspiration of the sonant aspirates

— with the element by which, for example, *gh* differs from *g*. This view is supported by the derivation of *h* from the aspirates (next paragraph), by that of *l+h* from *ḍh* (54), and by the treatment of initial *h* after a final mute (163).

66. The *h*, as already noticed, is not an original sound, but comes in nearly all cases from an older *gh* (for the few instances of its derivation from *dh* and *bh*, see below, 223). It is a vastly more frequent sound than the unchanged *gh* (namely, as 7 to 1): more frequent, indeed, than any of the guttural mutes except *k*. It appears, like *j* (219), to include in itself two stages of corruption of *gh*: one corresponding with that of *k* to *c*, the other with that of *k* to *ç*; see below, 223, for the roots belonging to the two classes respectively. Like the other sounds of guttural derivation, it sometimes exhibits "reversion" to its original.

67. The *ḥ*, or *visarga* (*visarjanīya*, as it is uniformly called by the Prātiçākhyas and by Pāṇini, probably as 'belonging to the end' of a word), appears to be merely a surd breathing, a final *h*-sound (in the European sense of *h*), uttered in the articulating position of the preceding vowel.

One Prātiçākhyā (TPr. ii. 48) gives just this last description of it. It is by various authorities classed with *h*, or with *h* and *a*: all of them are alike sounds in whose utterance the mouth-organs have no definite shaping action.

68. The *visarga* is not original, but always only a substitute for final *s* or *r*, neither of which is allowed to maintain itself unchanged. It is a comparatively recent member of the alphabetic system; the other euphonic changes of final *s* and *r* have not passed through *visarga* as an intermediate stage. And the Hindu authorities are considerably discordant with one another as to how far *ḥ* is a necessary substitute, and how far a permitted one, alternative with a sibilant, before a following initial surd.

69. Before a surd guttural or labial, respectively, some of the native authorities permit, while others require, conversion of final *s* or *r* into the so-called *jihvāmūṭīya* and *upadhmānīya* spirants. It may be fairly questioned, perhaps, whether these two sounds are not pure grammatical abstractions, devised (like the long *ī*-vowel: 23) in order to round out the alphabet to greater symmetry. At any rate, neither printed texts nor manuscripts (except in the rarest and most sporadic cases) make any account of them. Whatever individual character they may have must be,

it would seem, in the direction of the (German) *ch* and *f*-sounds. When written at all, they are wont to be transliterated by *χ* and *φ*.

70. The *anusvāra*, *ñ* or *ṁ*, is a nasal sound lacking that closure of the organs which is required to make a nasal mute (36); in its utterance there is nasal resonance along with some degree of openness of the mouth.

71. There is discordance of opinion both among the Hindu phonetists and their modern European successors respecting the real character of this element: hence a little detail is necessary here with regard to its occurrence and their views of it.

Certain nasals in Sanskrit are of servile character, always to be assimilated to a following consonant, of whatever character that may be. Such are final *m* in sentence-combination (213), the penultimate nasal of a root, and a nasal of increment (255) in general. If one of these nasals stands before a contact-letter or mute, it becomes a nasal mute corresponding to the latter — that is, a nasal utterance in the same position of the mouth-organs which gives the succeeding mute. If, on the other hand, the following consonant does not involve a contact (being a semivowel or spirant), the nasal element is also without contact: it is a nasal utterance with unclosed mouth-organs. The question is, now, whether this nasal utterance becomes merely a nasal infection of the preceding vowel, turning it into a nasal vowel (as in French *on*, *en*, *un*, etc., by reason of a similar loss of a nasal mute); or whether it is an element of more individual character, having place between the vowel and the consonant; or, once more, whether it is sometimes the one thing and sometimes the other. The opinions of the Prātiçākhyas and Pāṇini are briefly as follows:

The Atharva-Prātiçākhyas hold that the result is everywhere a nasalized vowel, except when *n* or *m* is assimilated to a following *l*; in that case, the *n* or *m* becomes a nasal *l*: that is, the nasal utterance is made in the *l*-position, and has a perceptible *l*-character.

The other Prātiçākhyas teach a similar conversion into a nasal counterpart to the semivowel, or nasal semivowel, before *y* and *l* and *v* (not before *r* also). In most of the other cases where the Atharva-Prātiçākhyas acknowledge a nasal vowel — namely, before *r* and the spirants — the others teach the intervention after the vowel of a distinct nasal element, called the *anusvāra*, 'after-tone'.

Of the nature of this nasal afterpiece to the vowel no intelligibly clear account is given. It is said (RPr.) to be either vowel or consonant; it is declared (RPr., VPr.) to be made with the nose alone, or (TPr.) to be nasal like the nasal mutes; it is held by some (RPr.) to be the sonant tone of the nasal mutes; in its formation, as in that of vowel and spirant, there is (RPr.) no contact. As to its quantity, see farther on.

There are, however, certain cases and classes of cases where these other

authorities also acknowledge a nasal vowel. So, especially, wherever a final *n* is treated (208) as if it were *ns* (its historically older form); and also in a small number of specified words. They also mention the doctrine of nasal vowel instead of *anusvāra* as held by some (and TPr. is uncertain and inconsistent in its choice between the one and the other).

In Pāṇini, finally, the prevailing doctrine is that of *anusvāra* everywhere; and it is even allowed in many cases where the Prātiçākhyas prescribe only a nasal mute. But a nasal semivowel is also allowed instead before a semivowel, and a nasal vowel is allowed in the cases (mentioned above) where some of the Prātiçākhyas require it by exception.

It is evidently a fair question whether this discordance and uncertainty of the Hindu phonetists is owing to a real difference of utterance in different classes of cases and in different localities, or whether to a different scholastic analysis of what is really everywhere the same utterance. If *anusvāra* is a nasal element following the vowel, it cannot well be any thing but either a prolongation of the same vowel-sound with nasality added, or a nasalised bit of neutral-vowel sound (in the latter case, however, the altering influence of an *i* or *u*-vowel on a following *s* ought to be prevented, which is not the case: see 183).

72. The assimilated nasal element, whether viewed as nasalized vowel, nasal semivowel, or independent *anusvāra*, has the value of something added, in making a heavy syllable, or length by position (79).

The Prātiçākhyas (VPr., RPr.) give determinations of the quantity of the *anusvāra* combining with a short and with a long vowel respectively to make a long syllable.

73. Two different signs, ð and ʒ, are found in the MSS., indicating the nasal sound here treated of. Usually they are written above the syllable, and there they seem most naturally to imply a nasal affection of the vowel of the syllable, a nasal (*anunāsika*) vowel. Hence some texts (Sāma and Yajur Vedas), when they mean a real *anusvāra*, bring one of the signs down into the ordinary consonant-place; but the usage is not general. As between the two signs, some MSS. employ, or tend to employ, the ʒ where a nasalized (*anunāsika*) vowel is to be recognized, and elsewhere the ð; and this distinction is consistently observed in many European printed texts; and the former is called the *anunāsika* sign: but it is very doubtful whether the two are not originally and properly equivalent.

It is a very common custom of the manuscripts to write the *anusvāra*-sign for any nasal following the vowel of a syllable, either before another consonant or as final (not before a vowel), without any reference to whether it is to be pronounced as nasal mute, nasal semivowel, or *anusvāra*. Some printed texts follow this slovenly and undesirable habit; but most write a nasal mute

whenever it is to be pronounced — excepting where it is an assimilated *m* (213).

It is convenient also in transliteration to distinguish the assimilated *m* by a special sign, *m̃*, from the *anusvāra* of more independent origin, *ñ*; and this method will be followed in the present work.

74. This is the whole system of sounds recognised by the written character; for certain transitional sounds, more or less widely recognised in the theories of the Hindu phonetists, see below, 230.

75. The whole spoken alphabet, then, may be arranged in the following manner, so as to show, so far as is possible in a single scheme, the relations and important classifications of its various members :

						$a, \bar{a}$ 19-78 8-19							
						$\bar{u}, e$ 31 2-84							
						$\bar{o}, \bar{au}$ 1-88 -18							
						$i, \bar{i}$ 4-85 1-19	$r, \bar{r}$ -74 -01	$l$ -01	$u, \bar{u}$ 2-61 -73			} Vowels	
Son.						$y$ 4-25	$r$ 5-05	$l$ -69	$v$ 4-99				Semivowels
						$\bar{n}$ -22	$\tilde{n}$ -35	$\tilde{n}$ 1-03	$n$ 4-81	$m$ 4-34			Nasals
						$\tilde{n}$ -63							Anusvāra
					$h$ 1-07							Aspiration	
Surd						$\bar{h}$ 1-31							Visarga
						$\zeta$ 1-57	$\xi$ 1-45	$s$ 3-56				Sibilants	
Son.	$gh$ -15		$j\bar{h}$ -01		$dh$ -03		$d\bar{h}$ -83		$bh$ asp. 1-27			} Mutes	
	$g$ -82		$j$ -94		$d$ -21		$d$ 2-85		$b$ unasp. -46				
Surd	$kh$ -13		$ch$ -17		$\bar{t}h$ -06		$th$ -58		$p\bar{h}$ asp. -03				
	$k$ 1-99		$c$ 1-26		$\bar{t}$ -26		$t$ 6-65		$p$ unasp. 2-46				
			Gutt.	Pal.				Ling.	Dent.	Lab.			

The figures set under the characters give the average percentage of frequency of each sound, found by counting the number of times which it occurred in an aggregate of 10,000 sounds of continuous text, in 10 different passages, of 1,000 sounds each, selected from different epochs of the literature: namely, two from the Rig-Veda, one from the Atharva-Veda, two from different Brāhmaṇas, and one each from Manu, Bhagavad-Gītā, Çakuntalā, Hitopadeça, and Vāsavadattā\*.

### III. Quantity of sounds and syllables.

76. The Hindu grammarians take the pains to define the quantity of a consonant (without distinction among consonants of different classes) as half that of a short vowel.

77. They also define the quantity of a long (*dīrgha*) vowel or diphthong as twice that of a short vowel — making no distinction in this respect between the *guṇa* and the *vṛddhi*-diphthongs.

78. Besides these two vowel-quantities, the Hindus acknowledge a third, called *pluta* (literally 'swimming'), or protracted, and having three *moras*, or three times the quantity of a short vowel. A protracted vowel is marked by a following figure ३: thus, ऋ३ *ā* ३.

The protracted vowels are practically of rare occurrence (in RV., three cases; in AV., fifteen; in the Brāhmaṇa literature, rather more frequent). They are used in cases of questioning, especially of a balancing between two alternatives, and also of calling to a distance or urgently. The protraction is of the last syllable in a word, or in a whole phrase; and the protracted syllable has usually the acute tone, in addition to any other accent the word may have; sometimes it takes also *anusvāra*, or is made nasal.

Examples are: *adhāḥ svid āsī3d upāri svid āsī3t* (RV.), 'was it, forsooth, below? was it, forsooth, above?' *idām bhūyā3 idā3m īti* (AV.), 'saying, is this more, or is that?' *āgnā3i pātñvā3ḥ sōmam piba* (TS.), 'oh Agni! thou with thy spouse! drink the soma'.

A diphthong is protracted by prolongation of its first or *a*-element: thus, *e* to *ā3i*, *o* to *ā3u*.

\* See J. A. O. S., vol. X.

The sign of protraction is also sometimes written as the result of accentual combination, when so-called *kampa* occurs: see below, 90b.

79. For metrical purposes, syllables (not vowels) are distinguished by the grammarians as 'heavy' (*guru*) or 'light' (*laghu*). A syllable is heavy if its vowel is long, or short and followed by more than one consonant ("long by position"). *Anusvāra* and *visarga* count as full consonants in making a heavy syllable. The last syllable of a *pāda* (primary division of a verse) is reckoned as either heavy or light.

The distinction in terms between the difference of long and short in vowel-sound and that of heavy and light in syllable-construction is valuable, and should be retained.

#### IV. Accent.

80. The phenomena of accent are, by the Hindu grammarians of all ages alike, described and treated as depending on a variation of tone or pitch; of any difference of stress involved, they make no account.

81. The primary tones (*svara*) or accent-pitches are two: a higher (*udātta*, 'raised'), or acute; and a lower (*anudātta*, 'not raised'), or grave. A third (called *svarita*: a term of doubtful meaning), is always of secondary origin, being (when not enclitic: see below, 85) the result of actual combination of an acute vowel and a following grave vowel into one syllable. It is also uniformly defined as compound in pitch, a union of higher and lower tone within the limits of a single syllable. It is thus identical in physical character with the Greek and Latin circumflex, and fully entitled to be called by the same name.

82. Strictly, therefore, there is but one distinction of tone in the Sanskrit accentual system: the accented syllable is raised in tone above the unaccented; while then further, in certain cases of the fusion of an accented and an unaccented element

into one syllable, that syllable retains the compounded tone of both elements.

83. The *svarita* or circumflex is only rarely found on a pure long vowel or diphthong, but almost always on a syllable in which a vowel, short or long, is preceded by a *y* or *v* representing an originally acute *i* or *u*-vowel.

In transliteration, in this work, the *udatta* or acute will be marked with the ordinary sign of acute, and the *svarita* or circumflex (as being a downward slide of the voice forward) with what is usually called the grave accent: thus, *á*, acute, *yà* or *và*, circumflex.

84. The Prātiçākhyas distinguish and name separately the circumflexed tones arising by different processes of combination: thus, the circumflex is called

a. *Kṣāipra* ('quick'), when an acute *i* or *u*-vowel (short or long) is converted into *y* or *v* before a dissimilar vowel of grave tone: thus, *vyāpta* from *vī-āpta*, *apsvāntār* from *apsú antār*.

b. *Jātya* ('native') or *nitya* ('own'), when the same combination lies further back, in the make-up of a stem or form, and so is constant, or belongs to a word in all circumstances of its occurrence: thus, *kvà* (from *kúa*), *svār* (*súar*), *nyàk* (*nák*), *budhnyà* (*budhná*), *kanyà* (*kaná*), *nadyàs* (*nad-ás*), *tanvà* (*tanú-ā*).

The words of both these classes are in the Veda, in the great majority of cases, to be read with restoration of the acute vowel as a separate syllable: thus, *apsú antār*, *súar*, *nad-ás*, etc. In some texts, part of them are written correspondingly: thus, *súvar*, *tanúvā*, *budhníya*.

c. *Praçliṣṭa*, when the acute and grave vowels are of such character that they are fused into a long vowel or diphthong (128): thus *diví 'va* (RV. and AV.), from *diví iva*; *sūdgātā* (TS.), from *sú-udgātā*; *naè 'vā 'çñiyāt* (ÇB.), from *nā evā açñiyāt*.

d. *Abhinihita*, when an initial grave *a* is absorbed by a final acute *é* or *ó* (135): thus, *tè 'bruvan*, from *té abruvan*; *sò 'bravit*, from *só abravít*.

85. But further, the Hindu grammarians agree in declaring the (naturally grave) syllable following an acute, whether in the same or in another word, to be *svarita* or circumflex — unless, indeed, it be itself followed by an acute or circumflex; in which case it retains its grave tone. This is called by European scholars the enclitic or dependent circumflex.

Thus, in *téna* and *té ca*, the syllable *na* and word *ca* are regarded and marked as circumflex: but in *téna té* and *té ca svār* they are grave.

This seems to mean that the voice, which is borne up at the higher pitch to the end of the acute syllable, does not ordinarily drop to grave pitch by an instantaneous movement, but descends by a more or less perceptible slide in the course of the following syllable. No Hindu authority suggests the theory of a middle or intermediate tone for the enclitic, any more than for the independent circumflex. For the most part, the two are identified with one another, in treatment and designation. The enclitic circumflex is likewise divided into a number of sub-varieties, with different names: they are of too little consequence to be worth reporting.

86. The essential difference of the two kinds of circumflex is shown clearly enough by these facts: **a.** the independent circumflex takes the place of the acute as the proper accent of a word, while the enclitic is the mere shadow following an acute, and following it in another word precisely as in the same word; **b.** the independent circumflex maintains its character in all situations, while the enclitic before a following circumflex or acute loses its circumflex character, and becomes grave; moreover, **c.** in many of the systems of marking accent (below, 88), the two are quite differently indicated.

87. The accentuation is marked in manuscripts only of the older literature: namely, in the different Vedic texts, in two of the Brāhmaṇas (Tāittirīya and Çatapatha), and in the Tāittirīya-Āraṇyaka. There are a number of methods of writing accent, more or less different from one another; the one found in MSS. of the Rig-Veda, which is most widely known, and of which most of the others are only slight modifications, is as follows: the acute syllable is left unmarked; the circumflex, whether independent or enclitic, has a brief perpendicular stroke above; and the grave next preceding an acute or (independent) circumflex has a brief horizontal stroke below. Thus,

अग्निम् *agnim*; जुहोति *juhóti*; तन्वा *tanvā*; क्व *kvā*.

The introductory grave stroke below, however, cannot be given if an acute syllable is initial, whence an unmarked syllable at the beginning of a word is to be understood as acute; and hence also, if several grave syllables precede an acute at the beginning of a sentence, they must all alike have the grave sign. Thus,

इन्द्रः *índrah*; ते *té*; कुरिष्यसि *kuriṣyási*; तुविज्ञाता *tuvijáta*.

All the grave syllables, however, which follow a marked circumflex are left unmarked, until the occurrence of another accented syllable causes the one which precedes it to take the preparatory stroke below. Thus,

सुदृशीकसंदृक् *sudṛśīkasandṛk*;

but

सुदृशीकसंदृग्गवाम् *sudṛśīkasandṛg gāvām*.

88. The other methods it is not worth while to attempt to set forth. They may be found illustrated in the different texts, and explained by the editors of them. In part, their peculiarities consist in other forms or places given to the grave and circumflex signs. In some methods, the acute is itself marked, by a slight stroke above. In several, the independent circumflex is distinguished from the enclitic. The most peculiar systems are the scanty and imperfect one of the Çatapatha-Brahmana, with a single sign, written below; and the highly intricate one of the Sāma-Veda, with a dozen different signs, written above.

89. In this work, as everything given in the *devanāgarī* characters is also given in transliteration, it will in general be unnecessary to mark the accent except in the transliterated form; where, however, the case is otherwise, there will be adopted the method\* of marking only the accented syllables, the acute and the independent circumflex: the latter by the usual *svarita*-sign, the former by a small *u* (for *udatta*) above the syllable: thus,

इन्द्र indra, अग्ने āgne, स्वर svar, नद्यस् nadyās.

These being given, everything else which the Hindu theory recognises as dependent on and accompanying them can readily be understood as implied.

90. The theory of the Sanskrit accent, as here given (a consistent and intelligible body of phenomena), has been overlaid by the Hindu theorists, especially of the Prātiçākhyas, with a number of added features, of a much more questionable character. Thus:

a. The unmarked grave syllables, following a circumflex (either at the end of a sentence, or till the near approach of another acute), are declared to have the same high tone with the (also unmarked) acute. They are called *pracaya* or *pracita* ('accumulated': because liable to occur in an indefinite series of successive syllables).

b. The circumflex, whether independent or enclitic, is declared to begin on a higher pitch than acute, and to descend to acute pitch in ordinary cases: the concluding instant of it being brought down to grave pitch, however, in the case of an independent circumflex which is immediately followed by another ascent of the voice to higher pitch (in acute or independent circumflex).

This last case, of an independent circumflex followed by acute or circumflex, receives peculiar written treatment. In the Rig-Veda method, a figure 1 or 3 is set after the circumflexed vowel, according as it is short or long, and the signs of accent are thus applied:

\* Introduced by Böhlingk, and used in the Petersburg lexicon and elsewhere.

अप्स्वर्णः *apsv ðIntáh* from *apsú antáh*;

रायोर्वनिः *rāyò3 'vāniḥ* from *rāyó avāniḥ*.

The other methods, more or less akin with this, need not be given.

In the scholastic utterance of such a syllable is made a peculiar quaver or *roulade* of the voice, which is called *kampa* or *vikampana*.

c. Pāṇini gives the ambiguous name of *ekaṣṛuti* ('monotone') to the *prācīta* syllables, and says nothing of the uplifting of the circumflex to a higher plane: he teaches, however, a depression below the grave pitch for the marked grave syllable before acute or circumflex, calling it *sannatara* (otherwise *anuāttatara*).

91. The system of accentuation as marked in the Vedic texts has assumed in the traditional recitation of the Brahmanic schools a peculiar and artificial form, in which the designated syllables, grave and circumflex (equally the enclitic and the independent circumflex), have acquired a conspicuous value, while the undesignated, the acute, has sunk into insignificance\*.

92. The Sanskrit accent taught in the native grammars and represented by the accentuated texts is essentially a system of word-accent only. No general attempt is made (any more than in the Greek system) to define or mark a sentence-accent, the effect of the emphasis and modulation of the sentence in modifying the independent accent of individual words. The only approach to it is seen in the treatment of vocatives and personal verb-forms.

A vocative is usually without accent except at the beginning of a sentence: for further details, see the chapter on Declension.

A personal verb-form is usually accentless in an independent clause, except when standing at the beginning of the clause: for further details, see the chapter on Conjugation.

93. Certain other words also are, usually or always, without accent.

a. The particles *ca*, *vā*, *u*, *sma*, *iva*, *cid*, *svīd*, *ha*, are always without accent.

b. The same is true of certain pronouns and pronominal stems: *mā*, *me*, *nāu*, *nas*, *tvā*, *te*, *vām*, *vas*, *ena-*, *tva-*.

c. The cases of the pronominal stem *a* are sometimes accented and sometimes accentless.

An accentless word is not allowed to stand at the beginning of a sentence: also not of a *pāda* or primary division of a verse; a *pāda* is, in all matters relating to accentuation, treated like an independent sentence.

\* Haug, *Wedischer Accent*, in *Abh. d. Bayr. Akad.*, vol. XIII, 1874.

94. Some words have more than a single accented syllable. Such are :

- a. Dual collective compounds: as *īndrāvāruṇāu*.
- b. A few other compounds, in which each member irregularly retains its own accent: as *tānūnāpāt*, *vānaspāti*, *bḥaspāti*. In a rare case or two, also their further compounds, as *bḥaspātiprapūta*.
- c. Infinitive datives in *tavāt*: as *ētavāt*.
- d. A word naturally barytone, but having its final syllable protracted: see above, 78.
- e. The particle *vāvā* (in the Brāhmaṇas).

95. On the place of the accented syllable in a Sanskrit word there is no restriction whatever depending upon either the number or the quantity of the preceding or following syllables. The accent rests where the rules of inflection or derivation or composition place it, without regard to any thing else.

Thus, *īndre*, *agnāū*, *īndreṇa*, *agninā*, *agninām*, *bāhūcyuta*, *ānapacyuta*, *parjanyaḥjivita*, *abhimātiṣāhā*, *ānabhīmlātavarṇa*, *abhiṣastīcātana*, *hiraṇyavāṣimattama*.

96. Since the accent is marked only in the older literature, and the statements of the grammarians, with the deduced rules of accentuation, are far from being sufficient to settle all cases, the place of the stress of voice for a considerable part of the vocabulary is undetermined. Hence it is a general habit with European scholars to pronounce Sanskrit words according to the rules of the Latin accent.

97. In this work, the accent of each word and form will in general be marked, so far as there is authority determining its place and character. Where specific words and forms are quoted, they will only be so far accentuated as they are found with accent in accentuated texts.

## CHAPTER III.

### RULES OF EUPHONIC COMBINATION.

#### Introductory.

**98.** THE individual elements composing a language as actually used are its words. These are in part uninflected vocables (indeclinables, particles); in the main, they are inflected forms.

**99.** The inflected forms are analysable into inflective endings, of declension or of conjugation, and inflected stems to which those endings are added.

**100.** The inflected stems, again, are for the most part — as are also in part the uninflected words — analysable into derivative endings or suffixes, and roots, to which, either directly or through more primary stems, those endings are added.

But, not a few stems and particles are irreducible to roots; and, on the other hand, roots are often used directly as inflected stems, in declension as well as in conjugation.

**101.** The roots are, in the condition of the language as it lies before us, the ultimate attainable elements; to a great extent not actually ultimate, but, where otherwise, the result of processes of development too irregular and obscure to be made the subject of treatment in a grammar.

**102.** The formative processes by which both inflectional forms and derivative stems are made, by the addition of endings to bases and to roots, are more regular and transparent in Sanskrit than in any other Indo-European language, and the grammatical analysis of words into their component elements is correspondingly complete. Hence it became the method of the native grammarians, and has continued to be that of their European successors, to teach the language by presenting the endings and stems and roots in their analysed forms, and laying down the ways in which these are to be combined together to make words. And hence a statement of the euphonic rules which govern the combination of elements occupies in Sanskrit grammar a more prominent and important place than in other grammars.

**103.** Moreover, the formation of compound words, by the putting together of two or more stems, is a process of very exceptional frequency in Sanskrit; and this kind of combination also has its own euphonic rules. And once more, in the form

in which the language is handed down to us by the literature, the words composing a sentence or paragraph are adapted to and combined with each other by nearly the same rules which govern the making of compounds, so that it is impossible to take apart and understand the simplest sentence in Sanskrit without understanding those rules. Hence also a greatly added degree of practical importance belonging to the subject of euphonic combination.

This euphonic interdependence of the words of a sentence, which is unknown to any other language in anything like the same degree, is shown to be at least in considerable measure artificial, implying an erection into necessary and invariable rules of what in the living language were only optional practices, by the evidence of the older dialect of the Vedas and the younger Prakritic dialects, in both of which these rules (especially as regards hiatus: 113) are very often violated.

104. We have, therefore, in the first place to consider the euphonic principles and laws which govern the combination of the elements of words (and the elements of the sentence); and then afterward to take up the subject of inflection, under the two heads of declension and conjugation; to which will succeed some account of the classes of uninflected words.

105. The formation of conjugational stems (tense and mode-stems, etc.) will be taught, as is usual, in connection with the processes of conjugational inflection; that of uninflected words, in connection with the various classes of those words. But the general subject of derivation, or the formation of declinable stems, will be taken up by itself later for a brief presentation; and it will be followed by an account of the formation of compound stems.

Although, namely, the general plan of this series of grammars excludes the subject of derivation, yet, because of the comparative simplicity and regularity of the principal processes of derivation in Sanskrit, and the importance to the student of accustoming himself from the beginning to trace those processes, in connection with the analysis of derived forms, back to the root, an exception will be made in regard to the subject in the present work.

106. We assume, then, for the purposes of the present chapter, the existence of the material of the language in a grammatically analysed condition, in the form of roots, stems, and endings.

107. What is to be taken as the proper form of a root or stem is not in all cases clear. Very many of both classes show in a part of their derivatives a stronger and in a part a weaker form (260). This is, in most cases, the only difficulty affecting

stems — whether, for example, we shall speak of derivatives in *mat* or in *mant*, of comparatives in *yas* or in *yāns*, of a perfect participle in *vat* or in *vāns* or in *us*. The Hindu grammarians usually give the weaker form as the normal one, and derive the other from it by a strengthening change; some European authorities adopt the one form and some the other: the question is an unessential one, giving rise to no practical difficulty.

108. As regards the roots, the difficulty is greater, partly because complicated with other questions, arising from practices of the Hindu grammarians, which have been more or less widely followed by their European successors. Thus:

a. More than half of the whole number of roots given by the Hindu authorities (which are over 2000) have never been found actually used in the literature; and although some of these may yet come to light, or may have existed without finding their way into any of the preserved literary documents, it is certain that most are fictitious, made in part for the explanation of words claimed to be their derivatives, and in part for other and perhaps unexplainable reasons. Of the roots unauthenticated by traceable use no account will be made in this grammar — or, if at all considered, they will be carefully distinguished from the authenticated.

b. Those roots of which the initial *n* and *s* are regularly converted to *ṇ* and *ṣ* after certain prefixes are by the Hindu grammarians given as beginning with *ṇ* and *ṣ*: no European authority follows this example.

c. A number of roots ending in *ā* which is irregularly treated in the inflection of the present-system are written in the Hindu lists with diphthongs — *e* or *āi* or *o*; and so, after this example, by many Western scholars. Here they will be regarded as *ā*-roots: compare below, 251. The *o* of such roots, especially, is purely arbitrary; no forms made from the root justify it.

d. The roots showing interchangeably *ṛ*, *ar*, and *ir* and *īr* or *ur* and *ūr* forms are written by the Hindus with *ṛ*, or with *īr*, or with both. Here also the *īr* is arbitrary and indefensible. As between *ṛ* and *ar*, even the latest European authorities are at variance, and it may be left to further research to settle whether the one or the other is alone worthy to be accepted. Here (mainly as a matter of convenience: compare below, 237) the *ṛ*-forms will be used.

e. In the other cases of roots showing a stronger and a weaker form, choice is in great measure a matter of minor consequence — unless further research and the settlement of pending phonetic questions shall show that the one or the other is decidedly the truer and more original. From the point of view of the Sanskrit alone, the question is often impossible to determine.

f. The Hindus classify as simple roots a number of derived stems: reduplicated ones, as *dīdhī*, *jāgr*, *daridrū*; present-stems, as *ūrṇu*; and denominative stems, as *avadhīr*, *kunār*, *sabhāj*, *mantr*, *sāntv*, *arth*, and the like. These are in European works generally reduced to their true value.

g. But it is impossible to draw any definite line between these cases

and others in which root-forms evidently of secondary origin have attained a degree of independent value in the language which almost or quite entitles them to rank as individual roots. Even the weak and strong forms of the same root — as *vad* and *vand*, *cit* and *cint*, *mah* and *mañh* — may have such a difference of use that they count as two; or a difference of inflection combined with a difference of meaning in a root has the same effect — as in *vr vr̥ṇoti* and *vr vr̥ṇīte*, in *hā jahāti* and *hā jihīte*; or an evident present-stem becomes a separate root — as *jinv* and *pinv*. Not a few roots occur in more or less clearly related groups, the members of which are of various degrees of independence. Thus, a considerable class of roots show an added *ā*; and such as *mnā* and *dhmā* are reckoned only as side-forms of *man* and *dham*; while *trā*, *prā*, *pyā*, *psā*, and others, presumably made in the same manner, figure as separate from their probable originals. Many final consonants of roots have the value of “root-determinatives”, or elements of obscure or unknown origin added to simpler forms. A class of derivative roots show signs of reduplication, as *cakṣ*, *jakṣ*, *dudh*; or of a desiderative development, as *bhakṣ* and *bhūkṣ*, *ṛuṣ*, *akṣ*, *nakṣ*. Yet another class seem to contain a preposition fused with a root, as *vyac*, *āp*, and the later *uḥ* and *vyas*.

With most of such cases it is not the part of a Sanskrit grammar, but rather of a general Indo-European comparative grammar, to deal according to their historical character. We must be content to accept as roots what elements seem to have on the whole that value in the existing condition of the language; with due recognition of authorized differences of opinion on many points, as well as of the fact that further knowledge will set many things now doubtful in a clearer light.

### Principles of Euphonic Combination.

109. The rules of combination are in some respects different, according as they apply

a. to the internal make-up of a word, by the addition of derivative and inflectional endings to roots and stems;

b. to the more external putting together of stems to make compound stems, and the yet looser and more accidental collocation of words in the sentence.

Hence they are usually divided into rules of internal combination (or *sandhi*, ‘putting together’), and rules of external combination.

110. In both classes of cases, however, the general principles of combination are the same — and likewise, to a great extent, the specific rules. The differences depend in part on

the occurrence or non-occurrence of certain combinations in the one class or the other; in part, on the difference of treatment of the same sound as final of a root or of an ending, the former being much more persistent than the latter; in part, on the occurrence in external combination of certain changes which are apparently phonetic but really historical; and, most frequent and conspicuous of all, on the fact that (157) vowels and semi-vowels and nasals exercise a sonantizing influence in external combination, but not in internal. Hence, to avoid unnecessary repetition as well as the separation of what really belongs together, the rules for both kinds of combination will be given below in connection with one another.

111. Moreover, before case-endings beginning with *bh* and *s* (namely, *bhis*, *bhyas*, *bhyām*, *su*), the treatment of the finals of stems is in general the same as in the combinations of words (*pada*) with one another — whence those endings are sometimes called *pada*-endings, and the cases they form are known as *pada*-cases. And with some of the suffixes of derivation the same is the case.

The importance of this distinction is somewhat exaggerated by the ordinary statement of it. In fact, *dh* is the only sonant mute initial of an ending occurring in conjugation, as *bh* in declension; and the difference of their treatment is in part owing to the one coming into collision usually with the final of a root and the other of an ending, and in part to the fact that *dh*, as a dental, is more assimilable to palatals and linguals than *bh*. A more marked and problematic distinction is made between *su* and the verbal endings *si*, *sva*, etc., especially after palatal sounds and *ṣ*.

112. The leading rules of internal combination are those which are of highest and most immediate importance to a beginner in the language, since his first task is to master the principal paradigms of inflection; the rules of external combination may better be left untouched until he comes to dealing with words in sentences, or to translating. Then, however, they are indispensable, since the proper form of the words that compose the sentence is not to be determined without them.

The general principles of combination underlying the euphonic rules, and determining their classification, may be stated as follows:

< 113. Hiatus. A hiatus is avoided.

There are but two or three words in the language which in their accepted written form exhibit successive vowels forming different syllables: they are *tītaū*, 'sieve' (perhaps for *tītasu*, BR.) and *prāūga*, 'wagon-pole' (for *prayuga*?); and, in RV., *suūti*. For the not infrequent instances of composition and sentence combination where the recent loss of *s* or *y* or *v* leaves a permanent hiatus, see below, 132ff., 175 b, 177.

It has been already noticed that in the Veda, as the metrical form of the hymns plainly shows, there is no avoidance of hiatus, either as between the stem-finals and endings of words, between the members of compounds, or between the words composing a sentence. In cases innumerable, a *y* and *v* (especially after two consonants, or a long vowel and consonant) are to be read as *i* and *u*. But also a long vowel is sometimes to be resolved into two syllables — oftenest, *ā* into *a-a*: this resolution is sometimes historical, but ordinarily purely metrical. For details, see below. It is with regard to the hiatus that the rules of the grammatically regulated classical Sanskrit are most demonstrably and conspicuously different from the more living usages of the sacred dialect.

114. **Deaspiration.** An aspirate mute is liable to lose its aspiration, being allowed to stand unchanged only before a vowel or semivowel or nasal.

115. **Assimilation.** The great body of euphonic changes in Sanskrit, as elsewhere, falls under the general head of assimilation — which takes place both between sounds which are so nearly alike that the difference between them is too insignificant to be worth preserving, and between those which are so diverse as to be practically incompatible.

116. In part, assimilation involves the conversion of one sound to another of the same series, without change of articulating position; in part, it involves a change of position, or transfer to another series.

117. Of changes within the series, the most frequent and important occur in the adaptation of surd and sonant sounds to one another; but the nasals and *l* have also in certain cases their special assimilative influence. Thus:

a. In the two classes of non-nasal mutes and spirants, surd and sonant are wholly incompatible; no surd of either class can either precede or follow a sonant of either.

A mute, surd or sonant, is assimilated by being changed to its correspondent of the other kind; of the spirants, the surd *s* is the only one having a sonant correspondent, namely *r*, to which it is convertible in external combination.

b. The nasals are more freely combinable: a nasal may either precede or follow a mute of either kind, or the sonant spirant *h*; it may also follow a surd spirant (sibilant); no nasal, however, ever precedes a sibilant in the

interior of a word (it is changed instead to *anusvāra*); and in external combination their concurrence is usually avoided by insertion of a surd mute.

c. A semivowel has still less sonantizing influence; and a vowel least of all\*: both are freely preceded and followed by sounds of every other class, in the interior of a word.

Before a sibilant, however, is found, of the semivowels, only *r* and very rarely *l*. Moreover, in external combination, *r* is often changed to its surd correspondent *s*.

But

d. In composition and sentence-collocation, initial vowels and semivowels and nasals also require the preceding final to be sonant. And

e. Before a nasal and *l*, the assimilative process is sometimes carried further, by the conversion of a final mute to a nasal or *l* respectively.

118. Of conversions involving a change of articulate position, the most important are those of dental sounds to lingual, and, less often, to palatal. Thus:

a. The dental *s* and *n* are very frequently converted to *ʃ* and *ɲ* by the assimilating influence of contiguous or neighboring lingual sounds: the *s*, even by sounds — namely, *i* and *u*-vowels and *k* — which have themselves no lingual character.

b. A non-nasal dental mute is (with a few exceptions in external combination) made lingual when it comes into collision with a lingual sound.

c. The dental mutes and sibilant are made palatal by a contiguous palatal.

But also:

d. A *m* (not radical) is assimilated to a following consonant, of whatever kind.

119. The euphonic combinations of the palatal mutes, the palatal sibilant, and the aspiration, as being sounds derived by phonetic alteration from more original gutturals (42 ff.), are made peculiar and complicated by two circumstances: their reversion to a guttural form (or the appearance of the unaltered guttural instead of them); and the different treatment of *j* and *h* according as they represent one or another degree of alteration — the one tending, like *c*, more to the guttural reversion, the other showing, like *ç*, a more sibilant and lingual character.

120. The lingual sibilant *ʃ*, also of derivative character (from dental *s*, shows as radical final a peculiar and problematic mode of combination.

121. Extension and abbreviation of consonant-groups. The native grammarians allow or require certain extensions, by duplication or insertion, of groups of consonants. And, on the other hand, abbreviation of cer-

\* In conformity with general phonetic law: see Sievers, Lautphysiologie, p. 140.

tain other groups is allowed, and found often practised in the manuscripts.

**122. Permitted Finals.** The permitted occurrence of consonants at the end of a word is quite narrowly restricted. In general, only one consonant is allowed after the last vowel; and that must be neither the aspiration, nor a sibilant, nor a semivowel (save rarely  $\text{ऌ}$ ), nor an aspirate mute, nor a sonant mute if not nasal, nor a palatal.

**123. Increment and Decrement.** Besides these more or less regular changes accompanying the combination of the parts that make up words, there is another class of a somewhat different character, not consisting in the mutual adaptations of the parts, but in strengthening or weakening changes of the parts themselves.

**124.** It is impossible to carry through a perfectly systematic arrangement of the detailed rules of euphonic combination, because the different varieties of euphonic change more or less overlap and intersect one another. The order followed below will be as follows :

1. Rules of vowel combination, for the avoidance of hiatus.
2. Rules as to permitted finals (since these underlie the farther treatment of final consonants in external combination).
3. Rules for loss of aspiration of an aspirate mute.
4. Rules of surd and sonant assimilation, including those for final *s* and *r*.
5. Rules for the conversion of dental sounds to lingual and palatal.
6. Rules for the changes of final nasals, including those in which a former final following the nasal reappears in combination.
7. Rules regarding the special changes of the derivative sounds — the palatal mutes and sibilant, the aspiration, and the lingual sibilant.
8. Rules as to extension and abbreviation of consonant groups.
9. Rules for strengthening and weakening processes.

Everywhere, rules for more sporadic and less classifiable cases will be given in the most practically convenient connection; and the Index will render what help is needed toward finding them.

### Rules of Vowel Combination.

125. The concurrence of two vowels, or of vowel and diphthong, without intervening consonant, is forbidden by the euphony of the later or classical language. It is avoided, according to the circumstances of the case, either by fusion of the two concurrent sounds into one, by the reduction of one of them to a semivowel, or by development of a semivowel between them.

The texts of the older or Vedic dialect are written according to the euphonic rules of the later, although in them (as was pointed out above, 113) the hiatus is really of very frequent occurrence. Hence they are not to be read as written, but with almost constant reversal of the processes of vowel combination which they have artificially undergone.

The rules of vowel combination, as regards both the resulting sound and its accent, are nearly the same in internal and in external *sandhi*.

126. Two similar simple vowels, short or long, coalesce and form the corresponding long vowel: thus, two *a*-vowels (either or both of them short or long) form आ *ā*; two *i*-vowels, ई *ī*; two *u*-vowels, ऊ *ū*; and, theoretically, two *r*-vowels form ॠ *rī*, but it is questionable whether the case ever practically occurs. Examples are:

स चाप्रजः *sa cā 'prajāḥ* (*ca + aprajāḥ*);

अतिव *ati 'va* (*ati + iva*);

सूक्तम् *sūktam* (*su-uktam*);

राजासीत् *rājā 'sīt* (*rājā + āsīt*);

अधीश्वरः *adhīṣvarah* (*adhi-iṣvarah*).

As the above examples indicate, it will be the practice everywhere in this work, in transliteration (but not in the *devanāgarī* text), to separate independent words; and if an initial vowel of a following word has coalesced with a final of the preceding, this will be indicated by an apostrophe — single if the initial vowel be the shorter, double if it be the longer, of the two different initials which in every case of combination yield the same result.

127. An *a*-vowel combines with a following *i*-vowel to ए *e*; with an *u*-vowel, to ओ *o*; with ॠ *rī*, to अर *ar*; with

ल (theoretically), to अल् *al*; with ए *e* or ऐ *ai*, to ऐ *ai*; with ओ *o* or औ *au*, to औ *au*. Examples are:

राजिन्द्र *rājendra* (*rāja-indra*);

हितोपदेशः *hitopadeṣaḥ* (*hita-upadeṣaḥ*);

महर्षिः *maharṣiḥ* (*mahā-ṛṣiḥ*);

सैव *sai'va* (*sā + eva*);

राजिञ्चर्यम् *rājaiṅcaryam* (*rāja-aiṅcaryam*);

दिवीकसः *divīkaśaḥ* (*divā-okasāḥ*);

ज्वरौषधम् *jvarāuśadhām* (*jvara-āuśadhām*).

In some of the Vedic texts, the vowel *r* is written unchanged after the *a*-vowel, which, if long, is shortened: thus, *maharṣiḥ* instead of *maharṣiḥ*. The two vowels, however, are usually pronounced as one syllable.

When successive words like *indra ā ihi* are to be combined, the first combination, to *indrā*, is made first, and the result is *indre* " *hi* (not *indrai* " *hi*, from *indra e 'hi*).

128. As regards the accent of these vowel combinations, it is to be noticed that, **a.** as a matter of course, the union of acute with acute yields acute, and that of grave with grave yields grave: that of circumflex with circumflex cannot occur; **b.** a circumflex with following acute yields acute, the final grave element of the former being raised to acute pitch; a grave with following acute does the same, as no upward slide of the voice on a syllable is acknowledged in the language; but, **c.** when the former of the fused elements is acute and the latter grave, we might expect the resulting syllable to be in general circumflex, to represent both the original tones. Pāṇini in fact allows this accent in every such case; and in a single accentuated Brāhmaṇa text (ÇB.), the circumflex is regularly written. But the language shows, on the whole, an indisposition to allow the circumflex to rest on either long vowel or diphthong as its sole basis, and the acute element is suffered to raise the other to its own level of pitch, making the whole syllable acute. The only exception to this, in most of the texts, is the combination of *i* and *i*, which becomes *î*: thus, *divî'va*, from *divi'iva*; in the Tāittiriya texts alone such a case follows the general rule, while *û* and *u*, instead, make *û*: thus, *sûdgâtâ* from *sû-udgâtâ*.

129. The *i*-vowels, the *u*-vowels, and ऋ *r*, before a dissimilar vowel or a diphthong, are regularly converted each into its own corresponding semivowel, य् *y* or व् *v* or र् *r*. Examples are:

इत्याह *ity āha* (*iti + āha*);

मध्व *madhv iva* (*madhu + iva*);

दुहित्रे *duhitrarthe* (*duhitṛ-arthe*);

ह्यस्य *stry asya* (*strī + asya*);

वध्वै *vadhvāi* (*vadhū-āi*).

But in internal combination (never in external) the *i* and *u*-vowels are not seldom changed instead to *iy* and *uv* — and this especially in monosyllables, or after two consonants, where otherwise a group of consonants difficult of pronunciation would be the result. The cases will be noticed below, in explaining inflected forms.

A radical *i*-vowel is converted into *y* even before *i* in perfect tense-inflection: so *ninyima* (*nīnī + ima*).

{ 130. As regards the accent — here, as in the preceding case (128), the only combination requiring notice is that of an acute *i* or *u*-vowel with a following grave: the result is circumflex; and such cases of circumflex are many times more frequent than any and all others. Examples are:

व्युष्टि *vyūṣṭi* (*vi-uṣṭi*); अभ्यर्चति *abhyārcati*;

नद्यौ *nadyāu* (*nadī-āu*);

स्विष्ट *sviṣṭa* (*sū-iṣṭa*); तन्वस् *tanvās* (*tanū-as*).

Of a similar combination of acute *i* with following grave, only a single case has been noted in accented texts: namely, *viñātr ètāt* (ÇB. xiv. 6. 8<sup>11</sup>): the accentuation is in accordance with the rules for *i* and *u*.

{ 131. Of a diphthong, the final *i* or *u*-element is changed to its corresponding semivowel, *y* or *v*, before any vowel or diphthong: thus, ए *e* (really *ai*: 28) becomes अय् *ay*, and औ *o* (that is, *au*) becomes अव् *av*; ऐ *āi* becomes आय् *āy*, and औ *āu* becomes आव् *āv*.

No change of accent, of course, occurs here; each original syllable retains its syllabic identity, and hence also its own tone.

Examples can be given only for internal combination, since in external combination there are further changes: see the next paragraph. Thus,

नय *naya* (*ne-a*); नाय *nāya* (*nāi-a*);

भव *bhava* (*bho-a*); भाव *bhāva* (*bhāu-a*).

{ 132. In external combination, we have the important additional rule that the semivowel resulting from the conversion of the final element of a diphthong is in general

dropped; and the resulting hiatus is left without further change.

133. That is to say, a final *ṛ e* (by far the most frequent case) becomes simply *अ a* before an initial vowel (except *अ a*: see 135, below), and both then remain unchanged; and a final *ṛ ai*, in like manner, becomes (everywhere) *ā*. Thus,

त आगताः *ta āgatāh (te + āgatāh)*;

नगर इह *nagara iha (nagare + iha)*;

तस्मा अद्दात् *tasmā adadāt (tasmāi + adadāt)*;

स्त्रिया उक्तम् *striyā uktam (striyāi + uktam)*.

The later grammarians allow the *y* in such combinations to be either retained or dropped; but the uniform practice of the MSS., of every age, in accordance with the strict requirement of the Vedic grammars (Prātiçākhyas), is to omit the semivowel and leave the hiatus.

The persistence of the hiatus caused by this omission is a plain indication of the comparatively recent loss of the intervening consonantal sound. Instances of the combination of the remaining final and initial are not unknown, but they are of sporadically rare occurrence.

134. The diphthong *o* (except as phonetic alteration of final *as*: see 175 a) is an unusual final, appearing only in the stem *go* (356), in the voc. sing. of *u*-stems, in words of which the final *a* is combined with the particle *u*, as *atho*, and in a few interjections. In the last two classes it is uncombinable (below, 138); the vocatives sometimes retain the *v* and sometimes lose it (the practices of different texts are too different to be briefly stated); *go* (in composition only) does not lose its final element, but remains *gav* or *go*. A final *as* becomes *a*, with following hiatus, before any vowel save *a* (for which, see the next paragraph).

The *v* of *आव् āv* from *औ āu* is usually retained: thus,

तविव *tāv eva (tāu + eva)*;

उभाविन्द्राग्नी *ubhāv indrāgnī (ubhāu + indrāgnī)*.

In some texts, however, it is lost before an *u*-vowel, the *ā* alone remaining, with hiatus; in at least one text (Kāthaka), it is dropped before every vowel. The later grammarians allow it to be either retained or dropped.

135. After final *ṛ e* or *औ o*, an initial *अ a* disappears.

The resulting accent is as if the *a* were not dropped, but rather absorbed into the preceding diphthong, having its tone

duly represented in the combination. If, namely, the *e* or *o* is grave or circumflex and the *a* acute, the former becomes acute; if the *e* or *o* is acute and the *a* grave, the former becomes circumflex, as usually in the fusion of an acute and a grave element. If both are acute or both grave, no change, of course, is seen in the result. Examples are:

ते ऽब्रुवन् *tè 'bruvan (té abruvan);*

मो ऽब्रवीत् *sò 'bravīt (sāḥ abravīt);*

हिंसितव्यो ऽग्निः *hīnsitavyò 'gnih (hīnsitavyāḥ agnih);*

यदिन्द्रो ऽब्रवीत् *yád indró 'bravīt (yád indrah ābravīt);*

यद्राजान्यो ऽब्रवीत् *yád rājanyò 'bravīt (yád rājanyāḥ ābravīt).*

As to the use of the *avagraha* sign in the case of such an elision, see above, 16. In transliteration, the reversed apostrophe, or rough breathing, will be used in this work to represent it.

This elision or absorption of initial *a* after final *e* or *o*, which in the later language is the invariable rule, is in the Veda only an occasional occurrence; and there is no close accordance with regard to it between the written and the spoken form of the Vedic texts. In the Atharvan, for example, the *a* is omitted in writing in about one third of the cases, but is to be omitted in reading in less than one fifth (including a number in which the written text preserves it. See APr. iii. 54, note.

To the rules of vowel combination, as above stated, there are certain exceptions. Some of the more isolated of these will be noticed where they come up in the processes of inflection etc.; a few require mention here.

136. In internal combination:

a. The augment *a* makes with the initial vowel of a root the combinations *āi, āu, ār* (*vṛddhi*-vowels), instead of *e, o, ar* (*guṇa*-vowels), as required by 127.

b. The final *o* of a strengthened stem (238 b) becomes *av* before the suffix *ya* (originally *ia*);

c. The final vowel of a stem is often dropped when a secondary suffix is added.

For the weakening and loss of radical vowels, and for certain insertions, see below, 249 ff., 257—8.

137. In external combination:

a. The final *a* or *ā* of a preposition, with initial *r* of a root, makes *ār* instead of *ar*.

b. The final *a* of a preposition before roots beginning with *e* or *o* is usually omitted.

c. A final *a* in composition may be cut off before *otu* and *oṣṭha*.

d. The form *ūh* from *√vah* sometimes makes the heavier (*vṛddhi*)

diphthongal combination with a preceding *a*; thus, *prāuha*, *prāuḍha*, *akṣāuhiṇī* (from *pra-ūha* etc.).

138. Certain final vowels, moreover, are uncombinable (*pragr̥hya*), or maintain themselves unchanged before any following vowel. Thus,

a. The vowels *ī*, *ū* and *e* as dual endings, both of declensional and of conjugational forms. Thus, *bandhū āsāte imāu*; *girī ārohatam*.

b. The pronoun *amī* (nom. pl.); and the Vedic pronominal forms *asmé*, *yusmé*, *tvé*.

c. A final *o* made by combination of a final *a*-vowel with the particle *u*: thus, *atho*, *mo*, *no*.

d. A final *ī* or *ū* of a Vedic locative case.

e. A protracted final vowel (78).

f. The final, or only, vowel of an interjection, as *aho*, *he*, *ā*, *i*, *u*.

### Permitted Finals.

139. The sounds allowed to occur as finals in Sanskrit words, standing by themselves (not in euphonic combination with something following), are closely limited, and those which would etymologically come to occupy such a position are often variously altered, in general accordance with their treatment in other circumstances, or are sometimes omitted altogether.

The variety of consonants that would ever come at the end of either an inflected form or a derivative stem in the language is very small: namely, in forms, only *t* (or *d*), *n*, *m*, *s*; in derivative stems, only *t*, *d*, *n*, *r*, *s* (and, in a few rare words, *j*). But almost all consonants occur as finals of roots; and every root is liable to be found, alone or as last member of a compound, in the character of a declined stem.

140. All the vowel sounds, both simple and diphthongal, may be sounded at the end of a word.

But neither *ṛ* nor *ḷ* ever actually occurs; and *ṛ* is very rare (only as neuter sing. of a stem in *ṛ* or *ar*, or as final of such a stem in composition).

Thus, *indra*, *ṣivāyā*, *ākāri*, *naḍī*, *dātu*, *camū*, *janayitṛ*, *agne*, *ṣivāyāi*, *vāyo*, *agnāū*.

141. Of the non-nasal mutes, only the first in each series, the non-aspirate surd, is allowed; the others — surd

aspirate, and both sonants — whenever they would etymologically occur, are converted into this.

Thus, *agnimát* for *agnimáth*, *suhít* for *suhíd*, *virít* for *virúdh*.

In a few roots, when their final (sonant aspirate) thus loses its aspiration, the original sonant aspiration of the initial reappears: compare क् ह, below, 147.

Thus, *dagh* becomes *dhak*, *budh* becomes *bhut*, and so on.

The roots exhibiting this change are stated below, 155.

There was some question among the Hindu grammarians as to whether the final mute is to be estimated as of surd or of sonant quality; but the great weight of authority, and the invariable practice of the MSS., favor the surd.

142. The palatals, however, form here (as often elsewhere) an exception to the rules for the other mutes. No palatal is allowed as final. The च् *c* reverts to its original क् *k*: thus, वाक् *vák*, अहोमुक् *añhomúk*. The च् *ch* (extremely rare: perhaps only in the root प्रक् *prach*) becomes ट् *t*: thus, प्राट् *prát*. The ज् *j* either reverts to its original guttural or becomes ट् *t*, in accordance with its treatment in other combinations (219): thus, भिषक् *bhisák*, विरट् *virát*. The ज् *jh* does not occur, but is by the native grammarians declared convertible to ट् *t*.

143. Of the nasals, the म् *m* and न् *n* are extremely common, especially the former (म् *m* and स् *s* are of all final consonants the most frequent); the ण् *n* is allowed, but is quite rare; ङ् *ñ* is found (remaining after the loss of a following क् *k*) in a very small number of words; ञ् *ñ* never occurs.

But the final *m* of a root is changed to *n* (compare 212. below): thus, *agan* from *gam*, *ánán* from *nam*.

144. Of the semivowels, the ल् *l* alone is an admitted final, and it is very rare. The र् *r* is (like its nearest surd correspondent, स् *s*: 145) changed as final to *visarga*. Of य् *y* and व् *v* there is no occurrence.

145. Of the sibilants, none may stand unaltered at the end of a word. The स् *s* (which of all final consonants

would otherwise be the commonest) is like  $\mathfrak{r}$   $r$  changed to a breathing, the *visarga*. The  $\mathfrak{c}$  either reverts to its original  $\mathfrak{k}$   $k$ , or, in some roots, is changed to  $\mathfrak{t}$   $t$  (in accordance with its changes in inflection and derivation; see below, 218). The  $\mathfrak{s}$  is likewise changed to  $\mathfrak{t}$   $t$ .

The change of  $\mathfrak{s}$  to  $\mathfrak{t}$  is of very rare occurrence: see below, 226.

Final radical  $s$  is said by the grammarians to be changed to  $t$ : thus, *dhvas*: but no example of the conversion appears to occur: see 168.

146. The compound  $\mathfrak{k}\mathfrak{s}$  is prescribed to be treated as simple  $\mathfrak{s}$  (not becoming  $\mathfrak{k}$   $k$  by 150, below). But the case is a rare one, and its actual treatment in the older language irregular.

In the only RV. cases where the  $k\mathfrak{s}$  has a quasi-radical character — namely *anāk* from *anākṣ*, and *āmyak* from  $\mathfrak{v}\mathfrak{m}\mathfrak{y}\mathfrak{k}\mathfrak{s}$  — the conversion is to  $k$ . Also of forms of the  $s$ -aorist (see this aorist below) we have *adhāk*, *asrāk*, *arāik*, etc. for (*adhākṣ-t* etc.); but also *aprāt*, *abhrāt*, *ayāt* (for *aprākṣ-t* etc.). And AV. has in two cases *srāḥ* (i. e. *srās*), apparently for *asrākṣ-s*, from  $\mathfrak{v}\mathfrak{s}\mathfrak{r}\mathfrak{j}$  (wrongly referred by BR. to  $\mathfrak{v}\mathfrak{s}\mathfrak{r}\mathfrak{a}\mathfrak{n}\mathfrak{s}$ ).

The numeral *ṣaṣ*, 'six', is perhaps better to be regarded as *ṣakṣ*, with its  $k\mathfrak{s}$  treated as  $\mathfrak{s}$ , according to the accepted rule.

147. The aspiration  $\mathfrak{h}$  is not allowed to maintain itself, but (like  $\mathfrak{j}$  and  $\mathfrak{c}$ ) either reverts to its original guttural form, appearing as  $\mathfrak{k}$   $k$ , or is changed to  $\mathfrak{t}$   $t$  — both in accordance with its treatment in inflection; see below, 222. And, also as in inflection, the original sonant aspiration of a few roots (given at 155) reappears when their final thus becomes unaspirated. Where the  $\mathfrak{h}$  is from original  $\mathfrak{d}\mathfrak{h}$  (223), it becomes  $\mathfrak{t}$   $t$ .

148. The *visarga* and *anusvāra* are nowhere etymological finals; the former is only the substitute for an original final  $\mathfrak{s}$  or  $\mathfrak{r}$   $r$ ; the latter occurs as final only so far as some later grammarians allow it to be substituted for  $\mathfrak{m}$   $m$ .

149. Apart from the vowels, then, the usual finals, nearly in the order of their frequency, are :  $\mathfrak{h}$ ,  $\mathfrak{m}$   $m$ ,  $\mathfrak{n}$   $n$ ,

त् *t*, क् *k*, प् *p*, ट् *t*; those of only sporadic occurrence are ड् *n̄*, ल् *l*, ण् *n*; and, by permitted substitution, ः *m̄*.

150. In general, only one consonant, of whatever kind, is allowed to stand at the end of a word; if two or more would etymologically occur there, the last is dropped, and again the last, and so on, till only one remains.

Thus, *tudants* becomes *tudant*, and this *tudan*; *udañc-s* becomes *udank*, and this *udañ*; and *achāntst* (*s*-aor., 3d sing., of *√chand*) is in like manner reduced to *achān*.

But a non-nasal mute, if radical and not suffixal, is retained after *r*: thus, *ūr̥k* from *ūrj*, *vār̥k* from *√vrj*, *āmār̥t* from *√mrj*, *suhār̥t* from *suhārd*. The case is not a common one.

For relics of former double finals, preserved by the later language under the disguise of apparent euphonic combinations, see below, 207 ff.

151. Anomalous conversions of a final mute to one of another class are occasionally met with. Examples are:

a. Of final *t* to *k*, in a few words that have assumed a special value as particles: thus, *jyók*, *tājūk* (beside *tājūt*), *pṛthak*, *ṛdhak*; — but also now and then in a verbal form, as *sūviṣak* (AV. and VS. Kāñ.), *aviṣyak* (Pārask.); — and in the feminines in *knī* (as *asiknī* beside *asita*). SV. has once *pṛkṣū* for *pṛtsū*.

b. Of *k* or *j* to *t*, in an isolated example or two, as *samyāt* and *āsṛt* (TS., K.).

c. In Tāittirīya texts, of the final of *anuṣṭūbh* and *triṣṭūbh* to a guttural: as, *anuṣṭūk ca*, *triṣṭūgbhis* (Weber, Ind. St., xiii. 109 ff.).

d. Of a labial to a dental: in *kakūd* for and beside *kakūbh*; in *sainsṛdbhis* (TS.) from *√srp*; and in *adbh̥ts*, *adbhyās*, from *ap* or *āp* (chap. V). Excepting the first, these look like cases of dissimilation; yet examples of the combination *bbh* are not unknown in the older language: thus, *kakubbhyām*, *triṣṭubbhis*, *anuṣṭub bhi*.

152. For all the processes of external combination — that is to say, in composition and sentence-collocation — a stem-final or word-final is in general to be regarded as having, not its etymological form, but that given it by the rules as to permitted finals. From this, however, are to be excepted the *s* and *r*: the various transformations of these sounds have nothing to do with the *visarga* to which as finals before a pause they have come — doubtless at a comparatively recent period of phonetic history — to be reduced. Words will everywhere in this work be written with final *s* or *r* instead of *ḥ*; and the rules of combination will be stated as for the two more original sounds, and not for the *visarga*.

### Deaspiration.

153. An aspirate mute is changed to its corresponding non-aspirate before another non-nasal mute or before a sibilant; it stands unaltered only before a vowel or semi-vowel or nasal.

Such a case can only arise in internal combination, since the processes of external combination presuppose the reduction of the aspirate to a non-aspirate surd (152).

Practically, also, the rules as to changes of aspirates concern almost only the sonant aspirates, since the surd, being of later development and rarer occurrence, are hardly ever found in situations that call for their application.

154. Hence, if such a mute is to be doubled, it is doubled by prefixing its own corresponding non-aspirate.

But in the MSS., both Vedic and later, an aspirate mute is not seldom found written double — especially, if it be one of rare occurrence: for example (RV.), *akhhkhatī*, *jājhhjatī*.

155. In a few roots, when a final sonant aspirate (घ् *gh*, ध् *dh*, भ् *bh*; also ङ् *h*, as representing an original घ् *gh*) thus loses its aspiration, the initial sonant consonant (ग् *g* or ढ् *d* or ब् *b*) becomes aspirate.

That is to say, the original initial aspirate of such roots is restored, when its presence does not interfere with the euphonic law, of comparatively recent origin, which (in Sanskrit as in Greek) forbids a root to both begin and end with an aspirate.

The roots which show this peculiar change are :

in *gh* — *dagh*;

in *h* (for original *gh*) — *dah*, *dih*, *duh*, *druh*, *dṛñh*, *guh*; and *grah* (in the later desiderative *jighṛkṣa*);

in *dh* — *bandh*, *bād̄h*, *budh*;

in *bh* — *dabh* (but only in the later desiderative *dhipsa*, for which the older language has *dipsa*).

The same change appears when the law as to finals causes the loss of the aspiration at the end of the root: see above, 141.

But from *dah*, *duh*, and *guh* are found in the Veda also forms without the restored initial aspirate: thus, *dakṣat*; *adukṣat*, *dudukṣa* etc.; *jugukṣa*.

The same analogy is followed by *dadh*, the abbreviated substitute of the present-stem *dadhā*, from √*dhā*, in some of the forms of conjugation; thus, *dhatthas* from *dadh* + *thas*, *adhatta* from *adadh* + *ta*, etc.

### Surd and Sonant Assimilation.

156. Under this head, there is especially one very marked and important difference between the internal combinations of a root or stem with suffixes and endings, and the external combinations of stem with stem in composition and of word with word in sentence-making: namely,

157. In internal combination, the initial vowel or semivowel or nasal of an ending of derivation or inflection exercises no altering influence upon a final consonant of the root or stem to which it is added.

To this rule there are a few exceptions only: thus, a reverted palatal sometimes before a nasal (216. 4,5); *d* before the participle-suffix *na* (161); a final consonant before *maya* (161).

In external combination, on the other hand, an initial sonant of whatever class, even a vowel or semivowel or nasal, requires the conversion of a final surd to sonant.

It has been pointed out above (152) that in the rules of external combination only admitted finals, along with *s* and *r*, need be taken account of, all others being regarded as reduced to these before combining with initials.

158. Final vowels, nasals, and ण् *l* are nowhere liable to change in the processes of surd and sonant assimilation.

The *r*, however, has a corresponding surd in *s*, to which it is changed in external combination under circumstances that favor a surd utterance.

159. With the exceptions above stated, the collision of surd and sonant sounds is avoided in combinations — and, regularly and usually, by assimilating the final to the following initial.

Thus, in internal combination: *átsi*, *átti*, *atthás*, *attá* ( $\sqrt{ad} + si$  etc.); *ṣagdhí*, *ṣagdhvám* ( $\sqrt{\text{ṣak}} + dhí$  etc.); — in external combination, *ábhūd ayám*, *jyóg jīva*, *ṣáḍ aṣitáyah*, *triṣṭúb ápi*; *diggaja*, *ṣadakhá*, *bṛhádabhānu*, *abhá*.

160. If, however, the final sonant aspirate of a root is followed by ण् *t* or थ् *th* of an ending, the assimilation is in

the other direction: the combination is made sonant, and the aspiration of the final (lost according to 153, above) is transferred to the initial of the ending.

Thus, *gh* with *t* or *th* becomes *gdh*; *dh* with the same becomes *ddh*, as *baddhá* ( $\sqrt{\text{badh}} + \text{ta}$ ), *runddhás* ( $\sqrt{\text{rundh}} + \text{thas}$  or *tas*); *bh* with the same becomes *bdh*, as *labdhá* ( $\sqrt{\text{labh}} + \text{ta}$ ), *labdhwá* ( $\sqrt{\text{labh}} + \text{twá}$ ).

Moreover, *h*, as representing original *gh*, is treated in the same manner: thus, *dugdhá*, *dogdhím* from *duh* — and compare *rūḍhá* and *līḍhá* from *ruh* and *lih* etc., 222.

In this combination, as the sonant aspiration is not lost but transferred, the restoration of the initial aspiration (155) does not take place.

In *dadh* from  $\sqrt{\text{dhā}}$  (155, end), the more normal method is followed; the *dh* is made surd, and the initial aspirated: thus, *dhatthas*, *dhattas*. And RV. has *dhaktam* instead of *dagdham* from  $\sqrt{\text{dagh}}$ .

161. Before a nasal in external combination, a final mute may be simply made sonant, or it may be still further assimilated, being changed to the nasal of its own class.

Thus, either *tád námas* or *tán námas*, *vág me* or *vān me*, *bāḍ mahān* or *bāṅ mahān*, *trīṣṭúb nūnám* or *trīṣṭúm nūnám*.

In practice, the conversion into a nasal is almost invariably made in the MSS., as, indeed, it is by the Prātiçākhyas required and not permitted merely. Even by the general grammarians it is required in the compound *śāṅṅavati*, and before *mātrā*, and the suffix *maya* (really a noun in composition): thus, *vāṅmāya*, *mṛṅmāya*.

Even in internal combination, final *d* of a root becomes *n* before the participle-suffix *na*: thus, *bhinná*, *sanná*, *tunná*.

162. Before *l*, a final *t* is not merely made sonant, but fully assimilated, becoming *l*: thus, *tál labhate*, *illuptam*.

163. Before  $\bar{h}$  (the case occurs only in external combination), a final mute is made sonant; and then the *h* may either remain unchanged or be converted into the sonant aspirate corresponding with the former: thus, either  $\bar{t}d\bar{h}$  *tád hi* or  $\bar{t}d\bar{h}$  *tád dhi*.

In practice, the latter method is almost invariably followed; and the grammarians of the Prātiçākhyas period are nearly unanimous in requiring it. The phonetic difference between the two is very slight.

Examples are: *vág ghutáh*, *śaddhotā* ( $\text{ṣaṭ} + \text{hotā}$ ), *tād-  
dhita* (*tat* + *hita*), *anuṣṭúb bhi*.

### Combinations of final *s* and *r*.

164. The euphonic changes of  $\text{स्} s$  and  $\text{र} r$  may best be considered together, because of the practical relation of the two sounds, in composition and sentence-collocation, as corresponding surd and sonant: in a host of cases  $\text{स्} s$  becomes  $\text{र} r$  in situations requiring or favoring the occurrence of a sonant; and, less often,  $\text{र} r$  becomes  $\text{स्} s$  where a surd is required.

In internal combination, the two are far less exchangeable with one another: and this class of cases may best be taken up first.

165. Final *r* radical or quasi-radical (that is, not belonging to an ending of derivation) remains unchanged before both surd and sonant sounds, and even before *su* in declension: thus, *pī-parṣi*, *caturthā*, *catīrṣu*, *pūrṣū*.

166. Final radical *s* remains before a surd in general, and usually before *s*, as in *çāssi*, *çāssva*, *āçīṣṣu* (but the last is also written *āçīṣṣu*: 172): it is however dropped in *āsi* (for *assi*:  $\sqrt{\text{as}} + \text{si}$ ). Before a sonant (that is, *bh*) in declension, it is treated as in external combination: thus, *āçīrbhis*. Before a sonant (that is, *dh*) in conjugation, it is dropped: thus, *çādhi*, *ādhvām* (but cases like the latter may be by abbreviation [232] for *āddhvām*): in *edhi* (*as + dhi*), the preceding vowel is anomalously altered.

167. In a very few cases, final radical *s* before *s* is changed to *t* (perhaps by dissimilation): they are, from  $\sqrt{\text{vas}}$ , the future *vatsyāmi* and aorist *āvātsam*; from  $\sqrt{\text{ghas}}$ , the desiderative stem *jīghatsa*.

168. According to the grammarians, the final *s* of certain other roots, used as noun-stems, becomes *t* at the end of the word, and before *bh* and *su*: thus, *dhvat*, *dhvadbhis*, *sradbhyas*, *sratsu*. But genuine examples of such change do not appear to have been met with in use.

Sporadic cases of a like conversion are found in the Veda: namely, *mādbhis* and *mādbhyās* from *mās*; *uṣādbhis* from *uṣās*; *svātavadbhyas* from *svātavas*; *svāvadbhis* etc. (not found in use), from *svāvas*. But the reality of the conversion here is open to grave doubt; it rather seems the substitution of a *t*-stem for a *s*-stem. The same is true of the change of *vāns* to *vat* in the declension of perfect participles (chap. V.).

In the compounds *ducchūnā* (*dus-çunā*) and *pāruccheṭṭa* (*parus-çeṭṭa*), the final *s* of the first member is treated as if a *t* (203).

For *t* as apparent ending of the 3d sing. in *s*-verbs, see chap. VIII.

169. As the final consonant of derivative stems and of inflected forms, both of declension and of conjugation, *s* is extreme-

ly frequent; and its changes form a subject of first-rate importance in Sanskrit euphony. The *r*, on the other hand, is quite rare, being found only in certain forms of *r*-stems and in a few particles.

The euphonic treatment of *s* and *r* yielding precisely the same result after all vowels except *a* and *ā*, there are certain forms with regard to which it is uncertain whether they end in *s* or *r*, and opinions differ respecting them. Such are *us* (or *ur*) of the gen.-abl. sing. of *r*-stems, and *us* (or *ur*) of the 3d plur. of verbs.

170. a. The  $\text{स्र}$  *s*, as already noticed (145), becomes *visarga* before a pause.

b. It is retained unchanged only when followed by  $\text{त्}$  *t* or  $\text{थ्}$  *th*, the surd mutes of its own class.

c. Before the palatal and lingual surd mutes —  $\text{च्}$  *c* and  $\text{च्}$  *ch*,  $\text{त्}$  *t* and  $\text{थ्}$  *th* — it is assimilated, becoming the sibilant of either class respectively, namely  $\text{स्र्}$  *ç* or  $\text{स्रः}$  *ṣ*.

d. Before the guttural and labial surd mutes —  $\text{क्}$  *k* and  $\text{क्}$  *kh*,  $\text{प्}$  *p* and  $\text{प्}$  *ph* — it is also theoretically assimilated, becoming respectively the *jihvāmūlīya* and *upadhmanīya* spirants (69); but in practice these breathings are unknown, and the conversion is to *visarga*.

Examples are: to b. *tatas te*, *caḥsus te*; to c. *tataç ca*, *ta-syāç chāyā*; to d. *nalah kāmam*, *puruṣah khanati*; *yaçah prāpa*, *vrkṣah phalavān*.

171. The first three of these rules are almost universal; to the last there are numerous exceptions, the sibilant being retained (or, by 180, converted into *ṣ*), especially in compounds; but also, in the Veda, even in sentence combination.

In the Veda, the retention of the sibilant in compounds is the general rule, the exceptions to which are detailed in the Vedic grammars.

In the later language, the retention is mainly determined by the intimacy or the antiquity and frequency of the combination. Thus, the final sibilant of a preposition or a word filling the office of a preposition before a verbal root is wont to be preserved; and that of a stem before a derivative of  $\sqrt{\text{kr}}$ , before *pati*, before *kalpa* and *kāma*, and so on. Examples are *namaskāra*, *vācaspati*, *āyuskāma*, *payaskalpa*.

The Vedic retention of the sibilant in sentence-collocation is detailed in full in the Prātiçākhyas. The chief classes of cases are: a. the final of a preposition or its like before a verbal form; b. of a genitive before a governing noun: as *divās putrāh*, *iḍās padé*; c. of an ablative before *pāri*: as

*himāvatas pāri*; d. of other less classifiable cases: as *dyāús pitá*, *tríḥ pūtá*, *yás pátih*, *paridhís pátāti*, etc.

172. Before an initial sibilant — ष्, ष, स् — स् is either assimilated, becoming the same sibilant, or it is changed into *visarga*.

The native grammarians are in some measure at variance (see APr. ii. 40, note) as to which of these changes should be made, and in part they allow either at pleasure. The usage of the MSS. is also discordant; the conversion to *visarga* is the prevalent practice, though the sibilant is also not infrequently found written. European editors generally write *visarga*; but the later dictionaries and glossaries make the alphabetic place of a word the same as if the sibilant were read instead.

Examples are: *manuḥ svayam* or *manus svayam*; *indraḥ çūrah* or *indraç çūrah*.

173. There are one or two exceptions to these rules:

a. If the initial sibilant has a surd mute after it, the final *s* may be dropped altogether — and by some authorities is required to be so dropped. Thus, *vāyava stha* or *vāyavaḥ stha*; *catustanām* or *catuḥstanām*.

With regard to this point the usage of the different MSS. and editions is greatly at variance.

b. Before *ts*, the *s* is allowed to become *visarga*, instead of being retained.

174. Before a sonant, either vowel or consonant (except *ṛ r*: see 179), स् is changed to the sonant *ṛ r* — unless, indeed, it be preceded by *अ a* or *आ ā*.

Examples are: *devapatir iva*, *çrīr iva*; *manur gacchati*, *tanūr apsu*; *tayor adrṣṭakūmah*; *sarvūr guṇāih*; *agner manve*.

For a few cases like *dūdūça*, *dūnāça*, see below, 199.

The endings *अस् as* and *आस् ās* (both of which are extremely common) follow rules of their own, as follows:

175. a. Final *अस् as*, before any sonant consonant and before short *अ a*, is changed to *ओ o* — and the *अ a* after it is lost.

The resulting accentuation, and the fact that the loss of *a* is only occasional in the older language of the Veda, have been pointed out above, 135.

Examples are: *nalo nāma*, *brahmanyō vedavit*; *hantavyo 'smi*.

b. Final *अस् as* before any other vowel than *अ a* loses its स्, becoming simple *अ a*; and the hiatus thus occasioned remains.

That is to say, *as* is treated as an original *o*, or an *e*, would be treated in the same situation: see 132—4.

Examples are: *vr̥hadāçva wāca*, *āditya iva*, *nāmaūkti*.

176. Exceptions to the rules as to final *as* are:

a. The pronouns *sas* and *eshas* (also *syas* in the Veda) lose their *s* before any consonant: thus, *sa dadarça*, *esha puruṣaḥ*; but *sadā tu saḥ*, so 'bravīt. The exclamation *bhos* loses its *s* before all vowels and all sonant consonants.

b. In the Veda, and more rarely in the later language, the rule for the maintenance of the hiatus is sometimes violated, and the remaining contiguous vowels are combined into one: for example, *se 'd agne*, *se 'mām*, *sāu 'ṣadhīḥ* (for *sa id agne*, *sa inām*, *sa oṣadhīḥ*).

c. A few instances are found (almost all Vedic) of *s* apparently changed to *r* after *a*, as after other vowels: but in nearly every case there is to be assumed, rather, a stem in *ar* beside that in *as*, evidences of the former being sometimes found in the kindred languages: thus, in forms of *ūdhas* and *āhas* (see chap. V.); in *amnas* (no occurrence); in *bhāvas* (second of the trio *bhūs*, *bhuvas*, *svar*), except in its oldest occurrences; in *avās* (once, in RV.); in *uśās* (voc., and in *uṣarbudh*); in *vādhar* and *vadhary* (RV.); in *vanargū*, *ānarviç*, *vasarhān*, *sabardūgha*, and one or two other more doubtful words; and in a series of words in a single passage of TS. and K., viz. *jinvār*, *ugrār*, *bhīmār*, *tveṣār*, *çrutār*, *bhūtār*, and (K. only) *pūtār*.

In *aharpāti* (VS.), and *vanarsād* and *vanarṣād* (RV.), we see the same change even before a surd consonant.

d. Final *as* is once changed to *o* in RV. before a surd consonant: thus, *adó pito*.

177. Final *आम् ās* before any sonant, whether vowel or consonant, loses its *म् s*, becoming simple *आ ā*; and the hiatus thus occasioned remains.

The maintenance of the hiatus in these cases, as in that of *o* and *e* and *āi* (above, 133—4), seems to indicate a recent loss of the intermediate sound. Opinions are divided as to what this should have been. Some of the native grammarians assimilate the case of *ās* to that of *āi*, assuming the conversion to *āy* in both alike — but probably only as a matter of formal convenience in rule-making.

178. Final *र r*, in general, shows the same form which *म् s* would show under the same conditions. But

a. Original final *r*, after *a* or *ā*, maintains itself unchanged before a sonant: thus, *pūnar eti*, *prātar-jit*, *dhār dāmnā*, *ākar jyótiḥ*.

b. Also before a surd, *r* is preserved in a few Vedic compounds: thus, *svārcanas*, *svārcakṣas*, *svārpati*, *svarṣā*, *svārṣāti*; *dhūrṣād*, *dhūrṣāh*; *pūrpati*,

*vārkāryā, ācīrpaḍa, punartta*. In some of these, the *r* is optionally retained even in the later language.

c. On the other hand, *r* is lost, like *s*, in one or two Vedic cases: *akṣū induh, āha evā*.

179. A double *r* is nowhere admitted: if such would occur, either by retention of an original *r* or by conversion of *s* to *r*, one *r* is omitted, and the preceding vowel, if short, is made long by compensation.

— In some Vedic texts, however (Yajur-Veda), *ar* becomes *o* before initial *r*: thus, *svd rohāva*.

### Conversion of $\text{स् } s$ to $\text{ष् } ṣ$ .

180. The dental sibilant  $\text{स् } s$  is changed to the lingual  $\text{ष् } ṣ$ , if immediately preceded by any vowel save  $\text{अ } a$  and  $\text{आ } ā$ , or by  $\text{क् } k$  or  $\text{र् } r$  — unless the  $\text{स् } s$  be final, or followed by  $\text{र् } r$ .

The assimilating influence of the preceding lingual vowels and semi-vowel is obvious enough; that of *k* and the other vowels appears to be due to a somewhat retracted position of the tongue in the mouth during their utterance, causing its tip to reach the roof of the mouth more easily at a point further back than the dental one.

The general Hindu grammar prescribes the same change after a *l* also; but the Prātiṅkhyas give no such rule, and phonetic considerations, the *l* being a dental sound, are decidedly against it. Actual cases of the combination, if they occur at all, are excessively rare.

The vowels that cause the alteration of *s* to *ṣ* may be called for brevity's sake "alterant" vowels.

As a consequence of this rule,

181. In the interior of a Sanskrit word, the dental *s* is not usually found after any vowel save *a* and *ā*, but, instead of it, the lingual *ṣ*. But

a. A following *r* prevents the conversion: thus, *usra, tisras, tamisra*. And it is but seldom made in the forms and derivatives of a root containing an *r*-element (whether *r* or *ṛ*), whatever the position of that element: thus, *sisarti, sisrtam, sarisṛpā, tistire, parisrūt*. To this rule there are a few exceptions, as *viṣṭārā, niṣṭrta, viṣpardhas, gāviṣṭhira*, etc. In *ajuṣran* the final *ṣ* of a root is preserved even immediately before *r*.

This dissimilating influence of a following *r*, as compared with the invariable assimilating influence of a preceding *r*, is peculiar and problematical.

b. The recurrence of *ṣ* in successive syllables is sometimes avoided by

leaving the former *s* unchanged: thus, *sisakṣi*, but *siṣakti*; *yāsisīṣṭhās*, but *yāsiṣimahi*. Similarly, in certain desiderative formations: see below, 184 c.

c. Other cases are sporadic: RV. has the forms *sisice* and *sisicus* (but *siṣicatus*), and the stems *ṛbīsa*, *kistā*, *bīsa*, *busā*, *bīsayā*; a single root *pis*, with its derivative *pesuka*, is found once in ÇB.; for *puṅs* and the roots *niṅs* and *hiṅs*, see below, 183.

182. On the other hand (as was pointed out above, 62), the occurrence of *ṣ* in Sanskrit words is nearly limited to cases falling under this rule: others are rather sporadic anomalies — except where *ṣ* is the product of *ç* or *kṣ* before a dental, as in *draṣṭum*, *caṣṭe*, *traṣṭar*: see 218, 221). Thus, we find:

a. Four roots, *kaṣ*, *laṣ*, *bhaṣ*, *bhāṣ*; of which the last is common and is found as early as the Brāhmaṇas.

b. Further, in RV., *āṣa*, *kavāṣa*, *caṣāla*, *cāṣa*, *jālāṣa*, *pāṣyā*, *baṣkāya*, *vāṣat* (for *vakṣat*?), *kāṣṭhā* (for *kakṣta*, Fick); and, by anomalous alteration of original *s*, *-ṣāh* (*turāṣāh*, etc.), *āṣādha*, *upaṣṭāt*, and probably *apāṣṭhā* and *aṣṭhīvānt*. Such cases grow more common later.

The numeral *ṣaṣ*, as already noted, is more probably *ṣakṣ*.

183. The nasalization of the alterant vowel — or, in other words, its being followed by *anusvāra* — does not prevent its altering effect upon the sibilant: thus, *haviṅṣi*, *parūṅṣi*. And the alteration takes place in the initial *s* of an ending after the final *s* of a base, whether the latter be regarded as also changed to *ṣ* or as converted into *visarga*: thus, *haviṣṣu* or *haviḥṣu*, *paruṣṣu* or *paruḥṣu*.

But the *s* of *puṅs* (chap. V.) remains unchanged, apparently on account of the retained sense of its value as *puns*; also that of *ṽhiṅs*, because of its value as *hiṅs* (*hinasti* etc.); *ṽniṅs* (RV. only) is more questionable (perhaps *nims*, from *nam*).

184. The principal cases of alteration of *s* in internal combination are:

a. In endings, inflectional or derivative, beginning with *s* — *su*; *si*, *se*, *sva*; *s* of sibilant-aorist, future, and desiderative; suffixes *sna*, *snu*, *sya*, etc. — after a final alterant vowel or consonant of root or stem, or a union-vowel: thus, *juhoṣi*, *çeṣe*, *anāṣam*, *bhaviṣyāmi*, *çucrūṣe*, *deṣṇa*, *jiṣṇu*, *vikṣu*, *akārṣam*.

b. The final *s* of a stem before an ending or suffix: thus, *haviṣā*, *haviṣas*, etc., from *havis*; *çakṣuṣmant*, *çociṣka*, *mānuṣa*, *manuṣya*.

Roots having a final sibilant (except *ç*) after an alterant vowel are — with the exception of fictitious ones and *pis*, *niṅs*, *hiṅs* — regarded as ending in *ṣ*, not *s*; and concerning the treatment of this *ṣ* in combination, see below, 225 ff.

c. The initial *s* of a root after a reduplication: thus, *si-  
syade*, *suṣvāpa*, *siṣāsati*, *coṣkūyate*, *saniṣvanat*.

Excepted is in general an initial radical *s* in a desiderative stem, when the desiderative-sign becomes *ṣ*: thus, *sisañṣati* from  $\sqrt{\text{san}}$ , *sisañṣati* from  $\sqrt{\text{sañj}}$ .

185. But the same change occurs also, on a considerable scale, in external combination, especially in composition: thus,

Both in verbal forms and in derivatives, the final *i* or *u* of a preposition or other like prefix ordinarily lingualizes the initial *s* of the root to which it is prefixed; since such combinations are both of great frequency and of peculiar intimacy, analogous with those of root or stem and affix: thus, *abhiṣāc*, *pratiṣṭhā*, *niṣikta*, *viṣita*; *anuṣvadhām*, *suṣēka*.

The principal exceptions are in accordance with the principles already laid down: namely, when the root contains an *r*-element, and when a recurrence of the sibilant would take place. But there are also others, of a more irregular character; and the complete account of the treatment of initial radical *s* after a prefix would be a matter of great detail, and not worth giving here.

In a few cases, the initial *s*, usually altered after a certain prefix, retains the altered sibilant even after an interposed *a* of augment or reduplication: thus, *abhy aṣṭhām*, *pary aṣusvajat*, *vy aṣahanta*, *ny aṣadāma*, *abhy aṣiñcan*, *vy aṣtabhnāt*; *vi taṣṭhe*, *vi taṣṭhire*.

Much more anomalous is the occasional alteration of initial radical *s* after an *a*-element of a prefix. Such cases are *ava ṣṭambh* (against *ni stambh* and *prati stambh*) and (according to the grammarians) *ava ṣvan*.

186. In other compounds, the final alterant vowel of the first member not infrequently (especially in the Veda) lingualizes the initial *s* of the second: for example, *yudhiṣṭhira*, *pitṛṣvasṛ*, *goṣṭhā*, *agniṣṭomā*, *anuṣṭūbh*, *triṣandhi*, *diviṣād*, *parameṣṭhīn*, *abhiṣenā*, *pitṛṣād*, *puruṣṭutā*.

A very few cases occur of the same alteration after an *a*-element: thus, *savyaṣṭhā*, *apūṣṭhā*, *upaṣṭūt*; also  $\sqrt{\text{sah}}$ , when its final, by 146, becomes *t*: thus; *satrāṣāt* (but *satrāśāham*).

187. The final *s* of the first member of a compound often becomes *ṣ* after an alterant vowel: thus, the *s* of a prepositional prefix, as *niṣṣidhvan*, *duṣṭāra* (for *duṣṣṭāra*), *āviṣkrta*; and, regularly, a *s* retained instead of being converted to *visarga* before a labial or guttural mute (171), as *haviṣpā*, *jyotiṣkr̥t*; *tapuṣpā*.

188. Once more, in the Veda, the same alteration, both of an initial and of a final *s*, is not infrequent even between the words composing a sentence. The cases are detailed in the Prātiçākhyā belonging to each text, and are of very various character. Thus,

a. The initial *s*, especially of particles: as *ū ṣū*, *hī ṣma*, *kām u ṣvīt*;

— also of pronouns: as *hī śāh*; — of verb-forms, especially from *√as*: as *hī śthā*, *divī śtha*; — and in other scattering cases: as *u śtuhi*, *nū śthirām*, *trī śadhāsthā*.

b. A final *s*, oftenest before pronouns (especially toneless ones): as *agnīḥ tvā*, *nīḥ te*, *īyās tē*, *śūcīḥ tvām*, *sādhiḥ tāva*; — but also in other cases, and wherever a final *s* is preserved, instead of being turned into *visarga*, before a guttural or labial (171): as *trīḥ pūtvā*, *āyus kṛnotu*, *vāstoḥ pātiḥ*, *dyāuḥ pitā*.

### Conversion of *n* to *ṅ*.

189. The dental nasal *ṅ*, when immediately followed by a vowel or by *ṅ* *n* or *m* *m* or *y* *y* or *v* *v*, is turned into the lingual *ṅ* *n* if preceded in the same word by the lingual sibilant or semivowel or vowels — that is to say, by *ṣ*, *r*, or *ṣ* *r* or *ṣ* *r̄* —: and this, not only if the altering letter stands immediately before the nasal, but at whatever distance from the latter it may be found: unless, indeed, there intervene (a consonant moving the front of the tongue: namely) a palatal (except *y*), a lingual, or a dental.

We may thus figure to ourselves the *rationale* of the process: in the marked proclivity of the language toward lingual utterance, especially of the nasal, the tip of the tongue, when once reverted into the loose lingual position by the utterance of a non-contact lingual element, tends to hang there and make its next nasal contact in that position: and does so, unless the proclivity is satisfied by the utterance of a lingual mute, or the organ is thrown out of adjustment by the utterance of an element which causes it to assume a different posture. This is not the case with the gutturals or labials, which do not move the front part of the tongue (and, as the influence of *k* on following *s* shows, the guttural position favors the succession of a lingual): and the *y* is too weakly palatal to interfere with the alteration (as its next relative, the *i*-vowel, itself lingualises a *s*).

This is a rule of constant application; and (as was pointed out above) the great majority of occurrences of *ṅ* in the language are the result of it.

190. The rule has force especially

a. When suffixes, of inflection or derivation, are added to roots or stems containing one of the altering sounds: thus, *rudrēna*, *rudrāṅām*, *vāriṇe*, *vāriṇi*, *vāriṇi*, *dātīṇi*, *hārāṇi*, *dvēśhāṇi*, *kriṇāmi*, *ṣṛṇōti*, *kṣubhāṇā*, *ghṛṇā*, *kārṇa*, *vṛkṇā*, *rugṇā*, *drāvīṇa*, *iṣāṇi*, *purāṇā*, *rēkṇas*, *cāksṇa*, *cīkīṣamāṇa*, *kṛpamāṇa*.

b. When the final *n* of a root or stem comes to be followed, in inflection or derivation, by such sounds as allow it to feel the effect of a preceding altering cause: thus, from  $\sqrt{\text{ran}}$ , *rāṇanti*, *rāṇyati*, *rāraṇa*, *arāṇiṣus*; from *brahman*, *brāhmaṇā*, *brāhmāṇi*, *brāhmaṇā*, *brahmaṇā*, *brāhmaṇvant*.

191. This rule (like that for the change of *s* to *ṣ*) applies strictly and especially when the nasal and the cause of its alteration both lie within the limits of the same integral word; but (also like the other) it is extended, within certain limits, to compound words — and even, in the Veda, to contiguous words in the sentence.

192. Especially, a preposition or similar prefix to a root, if it contain *r* or end in euphonic *r* for *s* (174), very often lingualizes the *n* of a root or of its derived stems and forms. Thus:

a. The initial *n* of a root is usually and regularly so altered, in all forms and derivatives, after *parū*, *pari*, *pra*, *nir* (for *nis*), *antar*, *dur* (for *dus*): thus, *pārū ṇaya*, *pāri ṇiyate*, *prā ṇudasva*; *parāṇutti*, *pariṇāma*, *praṇavā*, *nirṇī*, *durṇāca*.

Roots suffering this change are written with initial *ṅ* in the native root-lists. The only exceptions of importance are *nṛt*, *nabh*, *nand* (very rare), and *naç* when its *ç* becomes *ṣ* (as in *prānaṣta*).

b. The final *n* of a root is lingualized in some of the forms of *an* and *han*: thus, *prā ṇiti*, *prāṇā*, *prā haṇyate*, *prahāṇana*.

c. The class-signs *nu* and *nā* are altered after the roots *hi* and *mi*: thus, *pāri hiṇomi*, *prā miṇanti* (but the latter not in the Veda).

d. The 1st sing. impv. ending *āni* is sometimes altered: thus, *prā bhavāṇi*.

e. Derivatives by suffixes containing *n* sometimes have *ṅ* by influence of a preposition: thus, *prayāṇa*.

f. The *n* of the preposition *ni* is sometimes altered, like the initial of a root, after another preposition: thus, *praṇipāta*, *praṇidhi*.

193. In compound words, an altering cause in one member sometimes lingualizes a *n* of the next following member — either its initial or final *n*, or *n* in its inflectional or derivative ending. The exercise of the altering influence can be seen to depend in part upon the closeness or frequency of the compound, or its integration by being made the base of a derivative. Examples are: *grāmaṇī*, *triṇāman*, *urūṇasā*; *vṛtrahāṇam* etc. (but *vṛtraghnā* etc.: 195), *nṛmāṇas*, *drughāṇā*; *pravāhaṇa*, *nṛpāṇa*, *pūryāṇa*, *pītryāṇa*; *svargēṇa*, *durgāṇi*, *usrāyāṇne*, *tryāṅgāṇām*.

194. Finally, in the Veda, a *n* (usually initial) is lingualized even by an altering sound in another word. The toneless pronouns *nas* and *ena-* are oftenest thus affected: thus, *pāri ṇas*, *prāṇi ṇān*, *īndra eṇam*; but also the particle *nā*, 'like': thus, *vār nā*; and a few other cases, as *vār ṇāma*, *pūnar ṇayāmasi*, *agnér āveṇa*.

195. The immediate combination of a *n* with a preceding guttural or labial seems in some cases to hinder the conversion to *ṅ*: thus, *vṛtraghnā* etc. *kṣubhnāti*, *tṛpnoti* (but in Veda *tṛpṇu*).

### Conversion of dental mutes to linguals and palatals.

196. When a dental mute comes in contact with a lingual or palatal mute or sibilant, the dental is usually assimilated, becoming lingual or palatal respectively.

The cases are the following:

197. A dental surd mute or nasal, or the dental sibilant, when immediately preceded by a *ṣ*, is everywhere converted into the corresponding lingual.

Under this rule, the combinations *ṣt*, *ṣth*, and *ṣṇ* are very common; *ṣṣ* is rarely so written, the *visarga* being put instead of the former sibilant: thus, *jyótiḥṣu* instead of *jyótiṣṣu*.

Those cases in which final *ṣ* becomes *ṭ* before *su* (226 b) do not, of course, fall under this rule.

198. In the other (comparatively infrequent) cases where a dental is preceded by a lingual in internal combination, the dental (except of *su* loc. pl.) becomes lingual. Thus:

a. A *dh* after *ḍ* from *ṣ* of a root or stem (226 b): as *ádvidḍhvam* etc.

b. Only a very few other instances occur: *ítte* and *áitta* from *vid*; *ṣaddhā* (also *ṣaddhā* and *ṣodhā*), and *ṣaṇṇām* (*ṣaṣ* + *nām*: anomalous gen. pl. of *ṣaṣ*); *tṛṇṇá* (*√tṛd* + *na*). A small number of words follow the same rule in external combination: see below, 199.

But *tādhi* (Vedic: *√taḍ* + *dhi*) shows loss of the final lingual after assimilation of the dental, and compensatory lengthening.

Some of the cases of abnormal occurrence of *ḍ* are explained in a similar way, as results of a lingualized and afterward omitted sibilant before *d*: thus *nīdá* from *nīḍa*, *ṣpīḍ* from *ṣpīḍ*, *ṣmṛḍ* from *ṣmṛḍ* (Zend *mareshdā*). For words exhibiting a like change in composition, see below, 199 b.

199. In external combination,

a. A final *t* is directed to be assimilated to an initial lingual mute: thus, *taṭ-ṭikā*, *taḍ ḍayate*, *taṭ-ṭhālinī*, *taḍ ḍhāukate*: but the case never occurs in the older language, and very rarely in the later. For final *n* before a lingual, see 205.

b. An initial dental after a final lingual usually remains unchanged; and *su* of the loc. pl. follows the same rule: thus, *ṣaṭṣú*, *rāṭṣú*.

Exceptions are: a few compounds with *ṣaṣ*, 'six': namely, *ṣaṇṇavati*, *ṣaṇṇābhi* (and one or two others not quotable from the literature).

In a few compounds, moreover, there appears a lingualized dental, with compensatory lengthening, after a lost lingual sibilant or its representative: namely, in certain Vedic compounds with *dus*: *dūdābha*, *dūdāc*, *dūdāhē*, *dūnāca*, *dūnāca*; and, in the language of every period, certain compounds of *śaś*, with change of its vowel to an alterant quality (as in *voḍhum* and *soḍhum*: 224 b): *śōḍaça*, *śoḍhā* (also *śaddhā* and *śaḍdhā*), *śoḍant*.

c. Between final *t* and initial *s*, the insertion of a *t* is permitted — or, according to some authorities, required: thus, *śāt sahāsrūh* or *śātt sahāsrūh*.

200. The cases of assimilation of a dental to a contiguous palatal occur almost only in external combination, and before an initial palatal. There is but one case of internal combination, namely:

201. A *n̄* coming to follow a palatal mute in internal combination is itself made palatal:

Thus, *yācñā* (the only instance after *c*), *yajñā*, *jajñé*, *ajñata*, *rājñā*, *rājñī*.

202. An final *t̄* before an initial palatal mute is assimilated to it, becoming *ç̄* before *ç̄* or *ç̄h*, and *ñ̄* before *ñ̄* (*ç̄h̄* does not occur).

A final *n̄* is assimilated before *ñ̄*, becoming *ñ̄*.

All the grammarians, of every period, require this assimilation of *n̄*; but it is more often neglected, or only sporadically made, in the MSS.

For *n̄* before a surd palatal, see below, 208.

203. Before the palatal sibilant *ç̄*, both *t̄* and *n̄* are assimilated, becoming respectively *ç̄* and *ñ̄*; and then the following *ç̄* may be, and in practice almost always is, converted to *ç̄h*.

Some authorities regard the conversion of *ç̄* to *ç̄h* as everywhere obligatory, others as only optional; some except, peremptorily or optionally, a *ç̄* followed by a mute. And some require the same conversion after every mute save *m*, reading also *vīpāt̄ chutudrī*, *ānaç̄ chúci*, *anuṣṭup̄ chāradī*, *çuk̄ chuci*. The MSS. generally write *ch*, instead of *çh*, as result of the combination of *t̄* and *ç̄*.

### Combinations of final *n̄*.

204. Final radical *n̄* is assimilated in internal combination to a following sibilant, becoming *anusvāra*.

Thus, *vānsi*, *vānsva*, *vānsat*, *maṅsyāte*, *jīghāṅsati*.

According to the grammarians, it is treated before *bh* and *su* in declen-

sion as in external combination. But the cases are extremely rare, and RV. has *rāṅsu* and *vāṅsu* (the only Vedic examples).

Final *n* of a derivative suffix is regularly and usually dropped before a consonant in inflection and composition — in composition, even before a vowel; and a radical *n* occasionally follows the same rule.

For assimilation of *n* to a preceding palatal, see 201.

The remaining cases are those of external combination.

205. The assimilation of *n* in external combination to a following sonant palatal and the palatal sibilant *ç* have been already treated (202, 203).

The *n* is also declared to be assimilated (becoming *ñ*) before a sonant lingual (*ḍ*, *ḍh*, *ṇ*), but the case hardly ever occurs.

206. A *n* is also assimilated to a following initial *l*, becoming (like *m*: 213 c) a nasal *l*.

The MSS. in general attempt to write the combination in accordance with this rule.

207. Before the lingual and dental sibilants, *ṣ* and *s*, final *n* remains unchanged; but a *t* may also be inserted between the nasal and the sibilant: thus, *tān ṣāt* or *tānt ṣāt*; *mahān śan* or *mahānt śan*.

According to most of the grammarians of the Prātiçākhyas (not RPr.), the insertion of the *t* in such cases is a necessary one. In the MSS. it is very frequently made, but not uniformly. It is probably a purely phonetic phenomenon, a transition-sound to ease the double change of sonant to surd and nasal to non-nasal utterance — although the not infrequent cases in which final *n* stands for original *nt* (as *bharan*, *abharan*, *agnimān*) may have aided to establish it as a rule. Its analogy with the conversion of *n ç* into *ñch* (203) is palpable.

208. Before the surd palatal, lingual, and dental mutes, there is inserted after final *n* a sibilant of each of those classes respectively, before which the *n* becomes *anusvāra*: thus, *ñç c*; *ñç çh*; *ñṣ ṭ*; *ñṣ ṭh*; *ñs t*; *ñs th*.

This rule, which in the classical language has established itself in the form here given, as a phonetic rule of unvarying application, really involves a historic survival. The large majority of cases of final *n* in the language (not far from three quarters: see APr. ii. 26, note) are for original *ns*; and the retention of the sibilant in such cases, when once its historical ground had been forgotten, was extended by analogy to all others.

Practically, the rule applies only to *n* before *c* and *t*, since cases involving the other initials occur either not at all, or only with extreme rarity (the Veda does not present an example of any of them). In the Veda, the insertion is not always made, and the different texts have with regard to it different usages, which are fully explained in their Prātiçākhyas; in general,

it is less frequent in the older texts. When the *ç* does not appear between *n* and *c*, the *n* is assimilated, becoming  $\bar{n}$  (as before *j*: 202).

209. The same retention of original final *s* after a nasal, and consequent treatment of (apparent) final  $\bar{an}$ ,  $\bar{in}$ ,  $\bar{un}$ ,  $\bar{r}n$  as if they were  $\bar{ans}$ ,  $\bar{ins}$ ,  $\bar{uns}$ ,  $\bar{r}ns$  (long nasalized vowel with final *s*), shows itself also in other Vedic forms of combination, which, for the sake of unity, may be briefly stated here together :

a. Final  $\bar{an}$  becomes  $\bar{an}$  (nasalized  $\bar{a}$ ) before a following vowel: that is to say,  $\bar{ans}$ , with nasal vowel, is treated like  $\bar{as}$ , with pure vowel (177): thus, *devān é hā*, *āpabaddhān ihā*, *mahān asi*. This is an extremely common case, especially in RV. Once or twice, the *s* appears as *ḥ* before *p*: thus, *svātavānḥ pāyāḥ*.

b. In like manner, *s* is treated after nasal  $\bar{i}$ ,  $\bar{u}$ ,  $\bar{r}$  as it would be after those vowels when pure, becoming *r* before a sonant sound (174), and (much more rarely) *ḥ* before a surd (170): thus, *raçmīnr iva*, *sunūr yuvanyūr út*, *nṛnr abhī*; *nṛnḥ pātram*.

210. The nasals *n*,  $\bar{n}$ ,  $\bar{n}$ , occurring as finals after a short vowel, are doubled before any initial vowel: thus, *pratyān̄n̄ úd eṣi*, *udyan̄n̄ ādityāḥ*.

This is also to be regarded as a historical survival, the second nasal being an assimilation of an original consonant following the first. It is always written in the MSS., although the Vedic metre seems to show\* that the duplication was sometimes omitted.

211. The nasal  $\bar{n}$  and  $\bar{n}$  before a sibilant are allowed to insert respectively *k* and *t* — as *n* (207) inserts *t*: thus, *pratyān̄k sómah̄*.

### Combinations of final *m*.

212. Final radical  $\bar{m}$ , in internal combination, is assimilated to a following mute or spirant — in the latter case, becoming *anusvāra*; in the former, becoming the nasal of the same class with the mute.

Before *m* or *v* (as when final: 143), it is changed to *n*: thus, from  $\sqrt{gam}$ , *āganma*, *aganmahi*, *ganvahi*, *jaganvāns* (which appear to be the only quotable cases). According to the grammarians, the same change is made in the inflection of root-stems, before *bh* and *su*: thus, *praçānbhis*, *praçānsu* (from *praçām*: *pra* +  $\sqrt{çam}$ ). No derived noun-stem ends in *m*.

Ç.B. has once the anomalous *kāmavant*, from the particle *kām*.

213. Final  $\bar{m}$  in external combination is a servile sound, being assimilated to any following consonant. Thus:

\* Kuhn, in his *Beiträge* etc., iii. 125.

a. It remains unchanged only before a vowel or a labial mute.

But also, by an anomalous exception, before *r* of the root *rāj* in *samrāj* and its derivatives *samrājñī* and *sāmvrājya*.

b. Before a mute of any other class than labial, it becomes the nasal of that class.

c. Before the semivowels *y*, *l*, *v* it becomes, according to the Hindu grammarians, a nasal semivowel, the nasal counterpart of each respectively (see 71).

d. Before *r*, a sibilant, or *h*, it becomes *anusvāra* (see 71).

The MSS. and the editions in general make no attempt to distinguish the nasal tones arising from the assimilation of *m* before a following semivowel from that before a spirant.

e. But if *h* be immediately followed by another consonant (which can only be a nasal or semivowel), the *m* is allowed to be assimilated to that following consonant.

This is because the *h* has no position of the mouth-organs peculiar to itself, but is uttered in the position of the next sound. The Prātiçakhyas do not take any notice of the case.

It has been pointed out above (73) that the assimilated *m* is generally represented in texts by the *anusvāra*-sign, and that in this work it is transliterated by *m̄* (instead of a nasal mute or *ñ*). Also, that the general grammarians allow *m* to be pronounced before any and every consonant as *anusvāra*.

### The palatal mutes and sibilant, and *h*.

214. These sounds show in some situations a reversion to the original gutturals from which they are derived. The treatment of *j* and *h*, also, is different, according as they represent the one or the other of two different degrees of alteration from their originals.

215. The palatals and *h* are the least stable of alphabetic sounds, undergoing, in virtue of their derivative character, alteration in many cases where other similar sounds are retained.

216. Thus, in derivation, even before vowels, semivowels, and nasals, reversion to guttural form is by no means rare. The cases are the following:

1. Before *a* of suffix *a*, final *c* becomes *k* in *añkā*, *arkā*, *pākā*, *vākā*, *parkā*, *markā*, *vṛkā*, *prātīkā* etc., *reka*, *sēka*, *moka*, *rokā*, *çōka*, *tokā*, *mrokā*, *vraskā*: — final *j* becomes *g* in *tyāgā*, *bhāga*, *bhāgā*, *yāga*, *bhañgā*, *sañga*, *varga*, *mārga*, *mṛgā*, *sarga*, *vega*, *bhōga*, *yugā*, *yōga*, *rōga*: — final *h* becomes *gh* in *aghā*, *maghā*, *arghā*, *dīrghā* (and *drāghāyas*, *drāghīṣṭha*), *meghā*, *dōgha*, *drōgha*, *mōgha*; and in *dūghāna*.

In another series of derivatives with *a*, the altered sound appears: examples are *ajā*, *yāja*, *çucā*, *çoca*, *vrajā*, *vevijā*, *yujā*, *ūrjā*, *dōha*.

Before the suffixes *as* and *ana*, the guttural only rarely appears: namely, in *āñkas*, *ókas*, *rókas*, *śókas*, *bhārgas*; and in *rogaṇa*.

2. Before an *i*-vowel, the altered sound appears (except in the doubtful *ūbhogī*): e. g. *ājī*, *tujī*, *rāci*, *śāci*, *vīvici*, *rocīṣṇā*.

3. Before *u*, the guttural reappears, as a rule (the cases are few): thus, *añku*, *vañkū*, *rekū*, *bhīgu*.

4. Before *n*, the examples of reversion are few, except of *j* (becoming *g*) before the participial ending *na*: thus, *rékṇas*, *vagnū* (with the final also made sonant); and participles *bhagnā*, *rugnā*, etc.; and apparently *prṇa* from *√prc*.

5. Before *m* (of *ma*, *man*, *min*), the guttural generally appears: thus, *rukṃá*, *tigmá*, *śagmá* (with sonant change); *vákman*, *sákman*, *rukṃán*; *ṛgmín* and *vāgmín* (with sonant change): — but *ájman*, *ojmán*, *bhujmán*.

6. Before *y*, the altered sound is used: thus, *pacya*, *yajya*, *yajyu*, *yujya*, *bhujyu*. Such cases as *bhogya* and *yogyā* are doubtless secondary derivatives from *bhoga* and *yoga*.

7. Before *r*, the cases are few, and the usage apparently divided: thus, *çukrá*, *ugrá*, *mṛgra*; but *vájra* and *pajrá*(?).

8. Before *v* (of the suffixes *va*, *van*, *vin*, etc., and participial *vāñs*), the guttural is regularly preserved: thus, *ṛkvá*, *pakvā*; *ṛkvan*, *ṛikvan*, *çukvan*, *mṛgvan*, *yugvan*; *vāgvín* (with further sonant change); *riřikvāñs*, *rurukvāñs*, *çuçukvāñs*; *çuçukvanā*, *çuçukvāni*: also before the union-vowel *i* in *okivāñs* (RV., once). An exception is *yájvan*.

The reversion of *h* in derivation is exhibited only before the suffix *a* (and in the participle *dúghāna*, RV.). The final *j* which is analogous with *ç* (219) shows much less proclivity to reversion than that which corresponds with *c*.

9. A like reversion shows itself also to some extent in conjugational stem-formation and inflection. Thus, the initial radical becomes guttural after the reduplication in the present or perfect or desiderative or intensive stems of the roots *ci*, *cit*, *ji*, *hi*, *han*; and *han* becomes *ghn* on the elision of *a*. The RV. has *vivakmi* from *√vac*. And before *ran* etc. of 3d pl. mid. we have *g* for radical *j* in *aṣṛgran*, *aṣṛgram*, *asaṣṛgram* (all in RV.).

217. Final  $\bar{c}$  of a root or stem, if followed in internal combination by any other sound than a vowel or semivowel or nasal, reverts to its original guttural value, and shows everywhere the same form which a  $\bar{k}$  would show in the same situation.

Thus, *vákṭi*, *wákṭha*, *vákṣi*, *vakṣyāmi*, *vagḍhi*; *vāgbhis*, *vākṣú*; *uktá*, *ukthá*, *vaktár*.

And, as final *c* becomes *k* (above, 142), the same rule applies also to *c* in external combination: thus, *vák ca*, *vág úpi*, *vān me*.

Examples of *c* remaining unchanged in inflection are: *ucyáte*, *viricré*, *vāci*, *mumucmáhe*.

218. Final  $\text{क्}$  *c* reverts to its original  $\text{क्}$  *k*, in internal combination, only before the  $\text{स्}$  *s* of a verbal stem or ending (whence, by 180,  $\text{क्}$  *ks*); before  $\text{त्}$  *t* and  $\text{थ्}$  *th*, it everywhere becomes  $\text{क्ष}$  *ś* (whence, by 197,  $\text{ष्ट}$  *śt* and  $\text{श्थ}$  *śth*); before  $\text{ध्}$  *dh*,  $\text{भ्}$  *bh*, and  $\text{सु}$  *su* of the loc. pl., as when final (145), it regularly becomes the lingual mute ( $\text{त्}$  *t* or  $\text{द}$  *d*).

Thus, *āvikaśata*, *vekśyāmi*; *vāṣṭi*, *viśṭá*, *dideṣṭu*; *didiḍḍhi*, *viḍbhís*.

But a few roots exhibit the reversion of final *c* to *k* before *bh* and *su*, and also when final (145): they are *diç*, *drç*, *spçç*, and optionally *naç* (always, in V.); and *viç* has in V. always *vikaśú*, loc. pl., but *viṭ*, *viḍbhís*, etc. Examples are *dikaśañcita*, *drçgbhís*, *hrdispçk*, *nák*.

Examples of *c* remaining unchanged before vowels etc. are: *viçi*, *viviçyās*, *aviçran*, *açnomi*, *vaçmi*, *uçmási*.

A *c* remains irregularly unchanged before *p* in the compound *viçpāti*.

219. Final  $\text{क्}$  *j* is in one set of words treated like  $\text{क्}$  *c*, and in another set like  $\text{क्}$  *c*.

Thus, from *yuj*: *áyukthās*, *áyukta*, *yuñkté*, *yukti*, *yóktra*, *yoksyāmi*, *yukśú*; *yuñgdhi*, *dyugdhwam*, *yugbhís*.

Again, from *mṛj* etc.: *ámṛkṣat*, *sraksyāmi*; *mūrṣṭi*, *mṛṣṭá*, *sṛṣṭi*, *rāṣṭrá*; *mṛḍḍhi*, *mṛḍḍhwám*, *rāḍbhís*, *rāṣṭú*, *rāṣṭ*.

To the former or *yuj*-class belong (as shown by their quotable forms) about twenty roots and radical stems: namely, *bhaj*, *saj*, *tyaj* (not V.), *raj* 'color', *svaj*, *majj*, *nij*, *tij*, *vij*, 1 and 2*bhuj*, *yuj*, *ruj*, *vṛj*, *añj*, *bhañj*, *çiñj*; *ūj*, *sraj*, *bhiśáj*, *ásrj*; — also, stems formed with the suffixes *aj* and *ij* (383. 5), as *trṣṇáj*, *vañj*; and *rtvñj*, though containing the root *yaj*.

To the latter or *mṛj*-class belong only about one third as many: namely, *yaj*, *bhrajj*, *vraj*, *rāj*, *bhrāj*, *mṛj*, *sṛj*.

A considerable number of *j*-roots are not placed in circumstances to exhibit the distinction; but such roots are in part assignable to one or the other class on the evidence of the related languages\*. The distinction appears, namely, only when the *j* occurs as final, or is followed, either in inflection or in derivation, by a dental mute (*t*, *th*, *dh*), or, in noun-inflection, by *bh* or *su*. In derivation (above, 216) we find a *g* sometimes from the *mṛj*-class: thus, *mārga* (in *apāmārga*) and *sarga*; and before *r* of Vedic 3d pl. mid. endings, *asṛgran*, *asṛgram*, *asasṛgram* (beside *sasṛjrire*) — while from the *yuj*-class occur only *yuyujre*, *ayujran*, *bubhujrire*, with *j*.

\* See Hübschmann, in KZ. xxiii. 384 ff.

220. Final *ch* falls under the rules of combination almost only in the root *praçh*, in which it is treated as if it were *ç* (and *praç* is perhaps its more original form): thus, *prakṣyāmi*, *praçtā*; and also the derivative *praçná*. As final and in noun-inflection (before *bh* and *su*), it is directed to be changed to the lingual mute.

*Mūrtá* is called the participle of *mūrch*, and a gerund *mūrtvá* is given to the same root. They (with *mūrti*) must doubtless come from a simpler form of the root.

Of *jh* there is no occurrence: the grammarians declare it to be treated like *c*.

221. The compound *kṣ* is not infrequent as final of a root (generally of demonstrably secondary origin), or of a tense-stem (*s*-aorist: see below, chap. XI.); and, in the not very frequent cases of its internal combination, it is treated as if a single sound, following the rules for *ç*: thus, *cákṣe* (*cakṣ* + *se*), *cákṣva*; *cákṣte*, *ácakṣta*, *ásrākṣtam*, *ásrākṣta*, *tvákṣtar*. As to its treatment when final, see 146. We are taught by the grammarians to make such forms as *gorát*, *gorátbhis*, *gorátṣu* (from *gorákṣ*); and we actually have *ṣát*, *ṣadbhis*, *ṣatṣu* from *ṣakṣ* or *ṣaṣ* (146, end).

In the single anomalous root *vraçe*, the compound *çc* is said to follow the rule for simple *ç*: thus, *vraçsyāti*, *ávraçṣam*; *vraçṣtam*, *vraçṣtā*. Its *c* reverts to *k* in *vraska*. Its participle is *vṛkṣná*; it has a Vedic gerund *vṛkṣtvá*.

222. The roots in final  $\overline{c}h$ , like those in  $\overline{ñ}j$ , fall into two classes, exhibiting a similar diversity of treatment, appearing in the same kinds of combination.

In the one class, as *duh*, we have a reversion of *h* (as of *c*) to a guttural form, and its treatment as if it were still its original *gh*: thus, *ádhuḥṣam*, *dhoksyāmi*; *dugdhām*, *dugdhá*; *ádhok*, *dhúk*, *dhugbhis*, *dhukṣu*.

In the other class, as *ruh* and *sah*, we have a guttural reversion (as of *ç*) only before *s* in verb-formation and derivation: thus, *áruckṣat*, *rokṣyāmi*, *sākṣiyá*, *sakṣāmi*. As final, in external combination, and in noun-inflection before *bh* and *su*, the *h* (like *ç*) becomes a lingual mute: thus, *turāṣát*, *prtanāṣād* *ayodhyáh*. *turāṣadbhis*, *turāṣatṣu*. But before a dental mute (*t*, *th*, *dh*) in verb-inflection and in derivation, its euphonic effect is peculiarly complicated: it turns the dental into a lingual (as would *ç*); but it also makes it sonant and aspirate (as would *dh*: see 160); and further, it disappears itself, and the preceding vowel, if short, is lengthened by way of compensation: thus, from *ruh* with *ta* comes *rūdhá*, from *leh* with *ti* comes *lēdhi*, from *guh* with *tar* comes *gūdhár*, from *meh* with *tum* comes *mēdham*, from

*lih* with *tas* or *thas* comes *liḍhás*, from *lih* with *dhvam* comes *liḍhám*, etc.

This is as if we had to assume as transition sound a sonant aspirate lingual sibilant *zh*, with the euphonic effects of a lingual and of a sonant aspirate (160), itself disappearing under the law of the existing language which admits no sonant sibilant.

223. The roots of the two classes, as shown by their forms found in use, are:

of the first or *duh*-class: *dah*, *dih*, *duh*, *druh*, *muh*, *snih* (and the final of *uṣṇih* is similarly treated);  
of the second or *ruh*-class: *vah*, *sah*, *mih*, *rih* or *lih*, *guh*, *ruh*, *dr̥ih*, *tr̥ih*, *br̥h*, *bañh*, *spr̥h* (?).

But *muh* forms also (not in RV.) the participle *mūḍha* and agent-noun *mūḍhár*, as well as *mugdhá* and *mugdhár*; and *druh* and *snih* are allowed by the grammarians to do likewise: such forms as *dr̥ūḍha* and *sn̥iḍha*, however, do not appear to have been met with in use.

From roots of the *ruh*-class we find also in the Veda the forms *gartárík*, nom. sing., and *pr̥āṇadh̥ík* and *dadh̥ík*; and hence *purusp̥ík* (the only occurrence) does not prove  $\sqrt{\text{spr̥h}}$  to be of the *duh*-class.

A number of other *h*-roots are not proved by their occurring forms to belong to either class; they, too, are with more or less confidence assigned to the one or the other by comparison with the related languages\*.

In derivation, before the suffix *a*, we have (216.1) *meghá* and *dirghá* from roots of the *ruh*-class. Before the *r* verb-endings, we have examples only from *duh*, with *h*: thus, *duduhre* etc.

The root *nah* comes from original *dh* instead of *gh*, and its reversion is accordingly to a dental instead of a guttural mute: thus, *natsyámi*, *naddhá*, *upānád̥bhis*, *upānad-yuga*.

224. Irregularities of combination are:

a. The vowel *r̥* is not lengthened to compensate for the loss of the *h*-element: thus, *dr̥ḍhá*, *tr̥ḍhá*, *br̥ḍhá* (the only cases; and in the Veda their first syllable has metrical value as heavy or long).

b. The roots *vah* and *sah* change their vowel to *o* instead of lengthening it: thus, *voḍhám*, *voḍhám*, *voḍhár*, *sóḍhum*. But from *sah* in the older language forms with *ā* are more frequent: thus, *sāḍhá*, *ásāḍha* (also later), *sāḍhar*. The root *tr̥ñh* changes the vowel of its class-sign *na* into *e* instead of lengthening it: thus, *tr̥ñehi*, *tr̥ñedhu*, *atr̥ñet* (the grammarians teach also *tr̥ñehmi* and *tr̥ñekṣi*: if such forms are actually in use, they must have been made by false analogy with the others).

These anomalous vowel-changes seem to stand in connection with the fact that the cases showing them are the only ones where other than an

\* See Hübschmann, as above.

alterant vowel (180) comes before the lingualised sibilant representative of the *h*. Compare *śōḍaṣa* etc.

Apparently by dissimilation, the final of *vah* in the anomalous compound *anaḍvah* is changed to *d* instead of *ḍ*: see 404.

### The lingual sibilant *ṣ*.

225. Since the lingual sibilant, in its usual and normal occurrences, is (182) the product of lingualization of *s* after certain alterant sounds, we might expect final radical *ṣ*, when (in rare cases) it comes to stand where a *ṣ* cannot maintain itself, to revert to its original, and be treated as a *s* would be treated under the same circumstances. That, however, is only true in a very few instances.

Namely, in the prefix *dus* (evidently identical with  $\sqrt{dus}$ ); in *sajūs* (adverbially used case-form from  $\sqrt{jus}$ ); in (RV.) *vivēs* and *āvives*, from  $\sqrt{viṣ}$ ; in *āīyes* (RV.), from  $\sqrt{iṣ}$ ; and in *ācīs*, from *ciṣ* as secondary form of  $\sqrt{cās}$ . All these, except the first two, are more or less open to question.

226. In general, final lingual  $\sqrt{ṣ}$  is treated in the same manner as palatal  $\sqrt{ç}$ . Thus:

a. Before *t* and *th* it remains unchanged, and the latter are assimilated: e. g. *dvīṣtas*, *dvīṣthas*, *dvēṣtum*.

This is a common and perfectly natural combination.

b. Before *dh*, *bh*, and *su*, as also in external combination (145), it becomes a lingual mute; and *dh* is made lingual after it: thus, *pinḍḍhi*, *viḍḍhi*, *vividḍhi*, *dviḍḍhvam*, *dviḍḍhis*, *dvīṣu*.

The same holds good of the altered *ṣ* of a tense-sign: thus, *āstodḍhvam* (from *astōṣ-dhvam*).

The conversion of *ṣ* to *ṭ* (or *ḍ*) as final and before *bh* and *su* is parallel with the like conversion of *ç*, and of *j* and *h* in the *mṛj* and *ruh* classes of roots, and perhaps with the occasional change of *s* to *t* (167—8). It is a very infrequent case, occurring (save as it may be assumed in the case of *ṣaṣ*) only once in RV. and once in AV. (*-dviṭ* and *-pruṭ*), although those texts have more than 40 roots with final *ṣ*; in the Brāhmaṇas, moreover, has been noticed further only *-çlit*. From *pinṣ*, RV. has the irregular form *pinak* (2d and 3d sing., for *pināṣ-s* and *pināṣ-t*).

c. Before *s* in internal combination (except *su* of loc. pl.) it becomes *k*: thus, *dvēkṣi*, *dvekṣyāmi*, *āvikṣam*.

This change is of anomalous phonetic character, and difficult of explanation. It is also practically of very rare occurrence. The only RV. examples (apart from *pinak*, above) are *vivekṣi*, from  $\sqrt{viṣ}$ , and the desid. stem *ririkṣa* from  $\sqrt{riṣ}$ ; AV. has only *dvikṣat* and *dvikṣata*, and the desid. stem *çiclikṣa* from  $\sqrt{çliṣ}$ . Other examples are quotable from  $\sqrt{krṣ}$  (ÇB. etc.), *çiṣ* (ÇB.), and *piṣ* (Khānd. Up.); and they are by the Hindu grammarians prescribed to be formed from about half-a-dozen other roots.

### Extension and Abbreviation.

**227.** As a general rule, *ch* is not allowed by the grammarians to stand in that form after a vowel, but is to be doubled, becoming *ceh* (which the MSS. sometimes write *cheh*).

The various authorities disagree with one another in detail as to this duplication. According to Pāṇini, *ch* is doubled within a word after either a long or a short vowel; and, as initial, necessarily after a short and after the particles *á* and *má*, and optionally everywhere after a long. In RV., initial *ch* is doubled after a long vowel of *á* only, and certain special cases after a short vowel are excepted. For the required usage in the other Vedic texts, see their several Prātiçākhyas. The Kāthaka writes for original *ch* (not *ch* from combination of *t* and *n* with *ç*: 203) after a vowel everywhere *çch*.

Opinions are still at variance as to how far this duplication has an etymological ground, and how far it is only an acknowledgment of the fact that *ch* makes a heavy syllable even after a short vowel (makes "position": 79).

**228.** After *r*, any consonant (save a spirant before a vowel) is by the grammarians either allowed or required to be doubled (an aspirate, by prefixing the corresponding non-aspirate: 154).

Some of the authorities include, along with *r*, also *h* or *l* or *v*, or more than one of them, in this rule.

A doubled consonant after *r* is very common in MSS. and inscriptions, as also in native text-editions and in the earlier editions prepared by European scholars — in later ones, the duplication is universally omitted.

**229.** The first consonant of a group — whether interior, or initial after a vowel of a preceding word — is by the grammarians either allowed or required to be doubled.

This duplication is allowed by Pāṇini and required by the Prātiçākhyas — in both, with mention of authorities who deny it altogether. For certain exceptions, see the Prātiçākhyas: the meaning of the whole matter is too obscure to justify the giving of details here.

**230.** Other cases of extension of consonant-groups, required by some of the grammatical authorities, are the following:

a. Between a non-nasal and a nasal mute, the insertion of so-called *yamas* ('twins'), or nasal counterparts, is taught by the Prātiçākhyas (and assumed in Pāṇini's commentary): see APr. i. 99, note.

b. Between *h* and a following nasal mute the Prātiçākhyas teach the insertion of a nasal sound called *nāsikya*: see APr. i. 100, note.

c. Between *r* and a following consonant the Prātiçākhyas teach the insertion of a *svarabhakti* or 'vowel-fragment': see APr. i. 101—2, note.

Some authorities assume this insertion only before a spirant; the others regard it as twice as long before a spirant as before any other consonant

— namely, a half or a quarter *mora* before the former, a quarter or an eighth before the latter. One (VPr.) admits it after *l* as well as *r*. It is variously described as a fragment of the vowel *a* or of *r̥* (or *l̥*).

The RPr. puts a *svarabhakti* also between a sonant consonant and a following mute or spirant; and APr. introduces an element called *sphoṭana* ('distinguisher') between a guttural and a preceding mute of another class.

For one or two other cases of yet more doubtful value, see the Prātiçākhyas.

231. After a nasal, the former of two non-nasal mutes may be dropped, whether homogeneous only with the nasal, or with both: thus, *yūndhī* for *yūṅgdhī*, *yūndhvām* for *yūṅgdhvām*, *āntām* for *āṅktām*, *chintām* for *chinttām*, *bhinhā* for *bhintthā*, *indhé* for *inddhé*.

This abbreviation, allowed by Pāṇini, is required by APr. (the other Prātiçākhyas take no notice of it). It is the usual practice of the MSS., though the full group is also often written.

232. In general, a double mute (including an aspirate which is doubled by the prefixion of a non-aspirate) in combination with any other consonant is by the manuscripts written as simple.

That is to say, the ordinary usage of the MSS. makes no difference between those groups in which a phonetic duplication is allowed by the rules given above (228, 229) and those in which the duplication is etymological. As every *tv* after a vowel may also be properly written *ttv*, so *dattvā* and *tattvā* may be, and almost invariably are, written as *datvā* and *tatvā*. As *kārtana* is also properly *kārttana*, so *kārttika* (from *kṛtti*) is written as *kārtika*. So in inflection, we have always, for example, *majñā* etc., not *majjñā*, from *majján*. Even in composition and sentence-collocation the same abbreviations are made: thus, *hr̥dyotā* for *hr̥ddyotā*; *chināty asya* for *chinātty asya*. Hence it is impossible to determine by the evidence of written usage whether we should regard *ādhvam* or *āddhvam* (from *√ās*), *ādvidhvam* or *ādviddhvam* (from *√dviṣ*) as the true form of a second person plural.

233. Among occasional omissions of an etymologically justified member of a consonant-group, is of importance enough to be here noticed that

A *s* is sometimes lost (perhaps after assimilation) between two surd mutes: thus,

a. The initial *s* of the roots *sthā* and *stabh* after the preposition *ut*: thus, *utthātum* for *utsthātum*, *ūttabhnoti* for *ūtstabhnoti*.

b. The tense-sign *s* of the *s*-aorist (chap. XI.) after a final consonant of a root before the initial consonant of an ending: thus, *achāntta* (and for this, by 231, *achānta*) for *achāntsta*, *çāpta* for *çāpsta*, *tāptam* for *tāpstam*.

c. Other instances are only sporadic: thus, the compound *ṛkthā* (*ṛc* + *sthā*: PB.); the collocations *tasmāt tute* (for *stute*) and *puroruk tuta-* (for *stuta-*: K.).

### Strengthening and Weakening Processes.

234. Under this head, we take up first the changes that affect vowels, and then those that affect consonants — adding,

for convenience's sake, in each case, a brief notice of the vowel and consonant elements that have come to bear the apparent office of connectives.

### Guṇa and Vṛddhi.

235. The so-called *guṇa* and *vṛddhi*-changes are the most regular and frequent of vowel-changes, being of constant occurrence both in inflection and in derivation.

A *guṇa*-vowel differs from the corresponding simple vowel by a prefixed *a*-element, which is combined with the other according to the usual rules; a *vṛddhi*-vowel, by the further prefixion of *a* to the *guṇa*-vowel. Thus, of  $\xi$  *i* or  $\xi$  *ī* the corresponding *guṇa* is ( $a + i =$ )  $\tau$  *e*; the corresponding *vṛddhi* is ( $a + e =$ )  $\tau$  *āi*. But in all gunating processes  $\mathfrak{A}$  *a* remains unchanged — or, as it is sometimes expressed,  $\mathfrak{A}$  *a* is its own *guṇa*;  $\mathfrak{A}$  *ā*, of course, remains unchanged for both *guṇa* and *vṛddhi*.

236. The series of corresponding degrees is then as follows:

simple vowel	<i>a ā</i>	<i>i ī</i>	<i>u ū</i>	<i>ṛ</i>	<i>ḷ</i>
Guṇa	<i>a ā</i>	<i>e</i>	<i>o</i>	<i>ar</i>	<i>al</i>
Vṛddhi	<i>ā</i>	<i>āi</i>	<i>āu</i>	<i>ār</i>	

There is nowhere any occurrence of  $\bar{r}$  in a situation to undergo either *guṇa* or *vṛddhi*-change; nor does  $\bar{l}$  (26) ever suffer change to *vṛddhi*. Theoretically,  $\bar{r}$  would have the same changes as  $\bar{r}$ ; and the *vṛddhi* of  $\bar{l}$  would be  $\bar{āl}$ .

237. The historical relations of the members of each vowel-series are still matters of some difference of opinion. From the special point of view of the Sanskrit, the simple vowels wear the aspect of being in general the original or fundamental ones, and the others of being products of their increment or strengthening, in two several degrees — so that the rules of formation direct *a*, *i*, *u*, *ṛ*, *ḷ* to be raised to *guṇa* or *vṛddhi* respectively, under specified conditions. But  $\bar{r}$  is so clearly seen to come by abbreviation or weakening from an earlier *ar* (or *ra*) that many European grammarians prefer to treat the *guṇa*-form as the original and the other as the derivative. Thus, for example: instead of assuming certain roots to be *bhr* and *vṛdh*, and making from them *bharati* and *vardhati*, and *bhṛta* and *vṛddha*, by the same rules which from *bhū* and *nī* and from *budh* and *cit* form *bhavati* and *nayati*, *bodhati* and *cetati*, *bhūta* and *nīta*, *buddha* and *citta* — they assume

*bhar* and *vardh* to be the roots, and give the rules of formation for them in reverse. Both methods have their advantages, and the question between them is one of minor consequence, which may fairly be settled by considerations of convenience. Mainly from such considerations, the *r*-form is generally assumed in this work, though not without constant recognition of the other.

**238.** The *guṇa*-increment is an Indo-European phenomenon, and is in many cases seen to occur in connection with an accent on the increased syllable. It is found:

a. In root-syllables: either in inflection, as *dvēṣṭi* from  $\sqrt{dviṣ}$ , *dóhmi* from  $\sqrt{dih}$ ; or in derivation, as *dvēṣa*, *dóhas*, *dvēṣtum*, *dógdhum*.

b. In formative elements: either conjugational class-signs, as *tanómi* from *tanu*; or suffixes of derivation, in further derivation or in inflection, as *agnáye* from *agni*, *bhāndvas* from *bhāni*, *pitáram* from *pitṛ*, *hantavyà* from *hantu*.

**239.** The *vṛddhi*-increment is specifically Indian (being unshared, save in a few doubtful cases, even by the Zend), and its occurrence is more infrequent and irregular. It is found:

a. In root and suffix-syllables, instead of *guṇa*: thus, *stāúti* from  $\sqrt{stu}$ , *sákhāyam* from *sákhī*, *ánāṣam* from  $\sqrt{nī}$ , *ákārsam* and *kāráyati* and *kāryà* from  $\sqrt{kr}$  (or *kar*), *dātāram* from *dātṛ*.

b. Especially often, in initial syllables in secondary derivation: thus, *mānasá* from *mānas*, *vāidyutá* from *vidyut*, *bhāumá* from *bhūmi*, *pārthiva* from *pṛthivī*.

But

**240.** The *guṇa*-increment does not usually take place in a heavy syllable ending with a consonant: that is to say, the rules prescribing *guṇa* in processes of derivation and inflection do not apply to a short vowel which is "long by position", nor to a long vowel unless it be final: thus, *cétati* from  $\sqrt{cit}$ , but *nīndati* from  $\sqrt{nīnd}$ ; *náyati* from  $\sqrt{nī}$ , but *jīvati* from  $\sqrt{jīv}$ .

The *vṛddhi*-increment is not liable to this restriction.

Exceptions to the rule are occasionally met with: thus, *didéva* from  $\sqrt{div}$ ; *hédas* from  $\sqrt{hid}$ ; *óhate* from  $\sqrt{uh}$ .

And a few cases occur of prolongation instead of increment: thus, *dūṣáyati* from  $\sqrt{duṣ}$ , *gūhāti* from  $\sqrt{guh}$ .

The changes of *r* (more original *ar* or *ra*) are so various as to call for further description.

**241.** The increments of *r* are sometimes *ra* and *rā*, instead of *ar* and *ār*: namely, especially, where by such reversal a difficult combination of consonants is avoided: thus, from  $\sqrt{drṣ}$ , *drakṣyāmi* and *ádrākṣam*; but also *pṛthú* and *prath*, *pṛch* and *prach*, *krpá* and *ákrapiṣṭa*.

**242.** In a number of roots (about a dozen quotable ones) ending in *r* (for more original *ar*), the *r* exchanges both with *ar*, and, more irregularly, in a part of the forms, with *ir* — or also with *ur* (especially after a labial, in *pr*, *mr*, *vr*, sporadically in others): which *ir* and *ur*, again, are liable to prolongation into *īr* and *ūr*. Thus, for example, from *tṛ* (or *tar*), we have *tarati*, *tītarī*, *taṭāra*, *atāriṣam*, by regular processes; but also *tirati*, *tīryati*, *tīrvā*, *-tīrya*, *tīrṇa*, and even (V.) *turyāma*, *tuturyāt*, *tarturāna*. The treatment of such roots has to be described in speaking of each formation.

For the purpose of artificially indicating this peculiarity of treatment, such roots are by the Hindu grammarians written with long  $\bar{r}$ , or with both  $r$  and  $\bar{r}$ : no  $\bar{r}$  actually appears anywhere among their forms.

The (quotable)  $\bar{r}$ -roots are *3kr* 'strew', *1gr* 'praise', *2gr* 'swallow', *1jr* 'wear out', *tr*, *1cr* 'crush'\*

The (quotable)  $r$  and  $\bar{r}$ -roots are  $r$ , *1dr* 'burst', *1pr* 'fill', *2mr* 'die', *2vr* 'choose', *str*, *hvr*.

**243.** In a few cases,  $r$  comes from the contraction of other syllables than *ar* and *ra*: thus, in *tṛta* and *tṛṭya* from *ri*; in *cr̥ṇu* from *ru*; in *tr̥ca*, even from *rir* (or *ryr*).

#### Vowel-lengthening.

**244.** Vowel-lengthening has regard especially to *i* and *u*, since the lengthening of *a* is in part (except where in evident analogy with that of *i* and *u*), indistinguishable from its increment, and  $r$  is made long only in certain plural cases of stems in  $r$  (or *ar*: chap. V.). Lengthening is a much more irregular and sporadic change than increment, and its cases will in general be left to be pointed out in connection with the processes of inflection and derivation: a few only will be mentioned here.

**245. a.** Final radical *i* and *u* are especially liable to prolongation before *y*: as in passive and gerund and so on.

**b.** Final radical *ir* and *ur* (from  $r$ -roots: **242**) are liable to prolongation before all consonants except those of personal endings: namely, before *y* and *tvā* and *na*: and in declension before *bh* and *s* (**392**). Radical *is* and *us* have the same prolongation in declension.

**246.** Compensatory lengthening, or absorption by a vowel of the time of a lost following consonant, is by no means common. Certain instances of it have been pointed out above (**179**, **198 b**, **199 b**, **222**). Perhaps such cases as *pitū* for *pitars* and *dhanī* for *dhanins* (chap. V.) are to be classed here.

**247.** The final vowel of a former member of a compound is often made long, especially in the Veda. Prolongations of final *a*, and before *v*, are most

\* Numbers prefixed to roots denote the order in which, there being more than one of the same form, the root intended is given in the Petersburg lexicon.

frequent; but cases are found of every variety. Examples are *devāvī*, *vayunāvōd*, *prāvṛṣṣ*, *ṛtūvasu*, *īndrūvant*, *sadanūsād*, *ṣatāmagha*, *viṣvānara*, *ékādaṣa*; *apījū*, *parīṇāh*, *vīrād*, *tuvīmaghā*, *tvīṣmant*, *ṣāktivant*; *vasūjū*, *anūrād*, *sūmāya*, *purūvasu*.

**248.** In the Veda, the final vowel of a word — generally *a*, much less often *i* and *u* — is in a large number of cases prolonged. Usually the prolongation takes place where it is favored by the metre, but sometimes even where the metre opposes the change (for details, see APr. iii. 16 note, Benfey, Abh. Gött. Ges. xix.—xxi. [1874—6], and the various Prātiçākhyas).

Words of which the finals are thus treated are:

a. Particles: namely, *āthā*, *ādihā*, *evā*, *utā*, *ghā*, *hā*, *ihā*, *ivā*, *cā*, *smā*, *aṅgā*, *kilā*, *ātrā*, *yātrā*, *tātrā*, *kātrā*, *anyātrā*, *ubhayātrā*, *adyā*, *āchā*, *āpā*, *prā*; *yādī*, *nahī*, *abhī*; *ū*, *tū*, *nū*, *sū*, *maksū*.

b. Case-forms: especially instr. sing., as *enā*, *tēnā*, *yēnā*, *svēnā*, and others; rarely gen. sing., as *asyā*, *hariṇāsyā*. Cases besides these are few: so *sfmā* (voc.); *tanvī* (loc.), and *urū* and (not rarely) *purū*.

c. Verb-forms ending in *a*, in great number and variety: thus (nearly in the order of their comparative frequency), 2d sing. impv. act., as *pibā*, *syā*, *gamayā*; — 2d pl. act. in *ta* and *tha*, as *sthā*, *attā*, *bibhṛtā*, *jayatā*, *ṣṛṇutā*, *anadatā*, *nayathā*, *jīvayathā* (and one in *tana*: *aviṣṭanā*); — 1st pl. act. in *ma*, as *vidmā*, *riṣāmā*, *ṛdhyāmā*, *ruhemā*, *vanuyāmā*, *cakṛmā*, *marṛjmā*; — 2d sing. impv. mid. in *sva*, as *yuksvā*, *īḍiṣvā*, *dadhiṣvā*, *vahasvā*; — 1st and 3d sing. perf. act., as *vedā*, *viveṣā*, *jagrabhā*; 2d sing. perf. act., *vetthā*; — 2d pl. perf. act., *anajā*, *cakrā*. Of verb-forms ending in *i*, only the 2d sing. impv. act., as *ṣrudhī*, *ṣṛṇuhī*, *dādhī*, *jahī*.

To these may be added the gerund in *ya*, as *abhigūryā*, *ācyā*.

### Vowel-lightening.

**249.** The alteration of short *a* to an *i* or *u*-vowel in the formative processes of the language, except in *r* or *ar* roots (as explained above), is a sporadic phenomenon only.

**250.** But the lightening of a long *ā* especially to an *i*-vowel (as also its loss), is a frequent process: no other vowel is so unstable.

a. Of the class-sign *nā* (of the *kṛī*-class of verbs: chap. IX.), the *ā* is in "weak" forms changed to *i*, and before vowel-endings dropped altogether. The final *ā* of one or two roots is treated in the same manner: thus *mā*, *hā*. And from some roots, *ā* and *i* or *i*-forms so interchange that it is difficult to classify them or to determine the true character of the root.

b. Radical *ā* is weakened to the semblance of the union-vowel *i* in certain verbal forms: as perfect *dadīma* from  $\sqrt{dā}$  etc.; aorist *adhithās* from  $\sqrt{dhā}$  etc.; present *jāhīmas* from  $\sqrt{hā}$  etc.

c. Radical *ā* is shortened to the semblance of stem-*a* in a number of

reduplicated forms, as *tiṣṭha*, *piba*, *dada*, etc.: see chap. IX.; also in a few aorists, as *āhvam*, *ākhyam*, etc.: see chap. XI.

d. Radical *ā* sometimes becomes *e*, especially before *y*: as, *stheyāsam*, *deya*.

251. Certain *ā*-roots, because of their peculiar exchanges with *ī* and *i*-forms, especially in forming the present stem, are given by the Hindu grammarians as roots ending in *e* or *āi* or *o*. Thus, from 2*dhā* 'suck' (*dhe*) come the present *dhāyati* and participle and gerund *dhātā*, *dhātṵ*; the other forms are made from *dhā*, as *dadhus*, *adhāt*, *dhāsyati*, *dhātave*, *dhāpayati*. From 2*gā* 'sing' (*gāi*) come the present *gāyati*, the participle and gerund *gītā* and *gītṵ*, and passive *gīyāte*, and the other forms from *gā*. From 3*dā* 'cut' (*do*) come the present *dyāti* and participle *ditā* or *dinā*, and the other forms from *dā*. The irregularities of these roots will be treated below, under the various formations.

252. By a process of abbreviation essentially akin with that of *ar* or *ra* to *r*, the *va* (usually initial) of a number of roots becomes *u*, and the *ya* of a much smaller number becomes *i*, in certain verbal forms and derivatives. Thus, from *vac* come *uvāca*, *ucyāsam*, *uktṵ*, *uktā*, *ukṭi*, *ukthā*, etc.; from *yaj* come *iyāja*, *ijyāsam*, *iṣṭṵ*, *iṣṭā*, *iṣṭi*, etc. See below, under the various formations.

To this change is generally given by European grammarians the name of *samprasāraṇa*, by adaptation of a term used in the native grammar.

253. A short *a*, of root or ending, is not infrequently lost between consonants in a weakened syllable: thus, in verb-forms, *ghnānti*, *āpaptum*, *jagmās*, *jajñās*, *ājñāta*; in noun-forms, *rājñe*, *rājñi*.

254. Union-vowels. All the simple vowels come to assume in certain cases the aspect of union-vowels, or insertions between root or stem and ending of inflection or of derivation.

That character belongs oftenest to *i*, which is very widely used: **a.** before the *s* of aorist and future and desiderative stems, as in *ājīviṣam*, *jīviṣyāmi*, *jījīviṣāmi*; **b.** in tense-inflection, especially perfect, as *jījīvimā*; occasionally also present, as *āniti*, *rōditi*; **c.** in derivation, as *jīvitā*, *khānitum*, *janitṵ*, *rocīṣṇū*, etc. etc.

Long *ī* is used sometimes instead of short: thus, *āgrahāsam*, *grahāsyāmi*; *bravīti*, *vāvadīti*; *tarīṭṵ*, *savīṭṵ*; it is also often introduced before *s* and *t* of the 2d and 3d sing. of verbs: thus, *āsīs*, *āsīt*.

For details respecting these, and the more irregular and sporadic occurrences of *u* and *a*-vowels in the same character, see below.

### Nasal Increment.

255. Both in roots and in endings, a distinction of stronger and weaker forms is very often made by the presence or absence of a nasal element, mute or *anusvāra*, before a following consonant. In general, the stronger form is doubtless the more original; but in the present condition of the language,

the nasal has come in great measure to seem, and to some extent also to be used, as an actually strengthening element, introduced under certain conditions in formative and inflective processes.

Examples are, of roots: *ac* and *añc*, *grath* and *granth*, *vid* and *vind*, *daç* and *dañç*, *sras* and *srañs*, *dṛh* and *dṛñh*: of endings, *bhárantam* and *bháratā*, *mánasī* and *mánāñsi*.

256. A final *n*, whether of stem or of root, is less stable than any other consonant, where a weaker form is called for: thus, from *rājan* we have *rājū* and *rājābhis*, and in composition *rāja*; from *dhanín*, *dhaní* and *dhanābhis* and *dhani*; from *√han* we have *hathā* and *hatā*, etc. A final radical *m* (*m* does not occur as final of a stem) is sometimes treated in the same way: thus, from *√gam*, *gahí*, *gatām*, *gatā*, *gāti*.

257. Inserted *n*. On the other hand, the nasal *n* has come to be used with great — and, in the later history of the language, with increasing — frequency as a union-consonant, inserted between vowels: thus, from *agní*, *agnínū* and *agnínām*; from *mádhū*, *mádhunas*, *mádhunī*, *mádhūni*; from *çivá*, *çivéna*, *çiváni*, *çivánām*.

258. Inserted *y*. After long *ā*, a *y* is not very infrequently found as apparently a mere union-consonant before another vowel: thus, in derivation, *yāyín*, *svadhāyín*, *dhāyus*, *sthāyuka*; in inflection, *ádhāyi*, *çāyāyati*, and perhaps *çivāyās* and *gāyati*.

### Reduplication.

259. Reduplication of a root (originating doubtless in its complete repetition) has come to be a method of radical increment or strengthening in various formative processes: namely,

- a. in present-stem formation: as *dádāmi*, *bibhármi*;
- b. in aorist-stem formation: as *ádīdharam*, *áucyavam*;
- c. in perfect-stem formation, almost universally: as *tatāna*, *dadhāu*, *cakāra*;
- d. in intensive and desiderative-stem formation, throughout: as *jāngḥanti*, *jóhavīti*, *marmṛjyáte*, *pípāsati*, *jighāñsati*;
- e. in the formation of derivative noun-stems: as *pápri*, *cárcara*, *sāsahí*, *cikítú*, *malīmlicá*.

Rules for the treatment of the reduplication in these several cases will be given in the proper connection below.

260. As, by reason of the strengthening and weakening changes indicated above, the same root or stem not seldom exhibits, in the processes of inflection and derivation, varieties of stronger and weaker form, the distinction and description of these varieties forms an important part of the subjects hereafter to be treated.

## CHAPTER IV.

## DECLENSION.

261. THE general subject of declension includes nouns, adjectives, and pronouns, all of which are inflected in essentially the same manner. But while the correspondence of nouns and adjectives is so close that they cannot well be separated in treatment, the pronouns, which exhibit many peculiarities, will be best dealt with in a separate chapter; and the words designating number, or numerals, also form a class peculiar enough to require to be presented by themselves.

262. Declensional forms show primarily case and number; but they also indicate gender — since, though the distinctions of gender are made partly in the stem itself, they also appear, to no inconsiderable extent, in the changes of inflection.

263. Gender. The genders are three, namely masculine, feminine, and neuter, as in the other older Indo-European languages; and they follow in general the same laws of distribution as, for example, in Greek and Latin.

The only words which show no sign of gender-distinction are the personal pronouns of the first and second person (along with the numerals above 'four': chap. VI.).

264. Number. The numbers are three — singular, dual, and plural.

A few words are used only in the plural: as *dārās*, 'wife', *āpas*, 'water'; the numeral *dva*, 'two', is dual only; and, as in other languages, many words are, by the nature of their use, found to occur only in the singular.

265. As to the uses of the numbers, it needs only to be remarked that the dual is found without the addition of the numeral *dva*, 'two', wherever the duality of the objects spoken of is a thing well understood: thus, *açvināu*, 'the two (horsemen) Açvins'; *indrasya hāri*, 'Indra's (two) bays'; *devadattasya hastāu*, 'Devadatta's two hands'; but *devadattasya dvāv açvāu stah*, 'Devadatta has two horses'.

**266. Case.** The cases are (including the vocative) eight: nominative, accusative, instrumental, dative, ablative, genitive, locative, and vocative.

The order in which they are here mentioned is that established for them by the Hindu grammarians, and accepted from these by Western scholars. The Hindu names of the cases are founded on this order: the nominative is called *prathamā*, 'first', the accusative *dvitīyā*, 'second', the genitive *ṣaṣṭhī*, 'sixth' (sc. *vibhakti*, 'division', i. e. 'case'), etc. The object sought in the arrangement is simply to set next to one another those cases which are to a greater or less extent, in one or another number, identical in form; and, putting the nominative first, as leading case, there is no other order by which that object could be attained. The vocative is not considered and named by the native grammarians as a case like the rest; in this work, it will be given in the singular (where alone it is ever distinguished from the nominative otherwise than by accent) at the end of the series of cases.

A brief compendious statement of the uses of the cases is given in the following paragraphs:

**267. Uses of the Nominative.** The nominative is the case of the subject of the sentence, and of any word qualifying the subject, whether attributively, in apposition, or as predicate.

**268.** As somewhat peculiar constructions may be mentioned a predicate nominative with *manye* etc., 'think one's self to be', and with *bruve* etc., 'call one's self': thus, *sómam manyate papivān* (RV.), 'he thinks he has been drinking soma'; *sā manyeta purāṇavít* (AV.), 'he may regard himself as wise in ancient things'; *índro brāhmaṇó brāvānaḥ* (TS.), 'Indra calling himself (pretending to be) a Brahman'; — and with *rūpān kṛ*: thus, *kṛṣṇó rūpān kṛtvā* (TS.), 'taking on a black form' (making shape for himself as one that is black).

**269. Uses of the Accusative.** The accusative is especially the case of the direct object of a transitive verb, and of any word qualifying that object, as attribute or appositive or objective predicate. The construction of the verb is shared, of course, by its participles and infinitives; but also, in Sanskrit, by a number of other derivatives, having a more or less participial or infinitival character, and even sometimes by nouns and adjectives. A few prepositions are accompanied by the accusative. As more indirect object, the accusative is construed especially with verbs of approach and address. It is found used yet more adverbially as adjunct of place or time or manner; and a host of adverbs are accusative cases in form. Two accusatives are often found as objects of the same verb.

**270.** The use of the accusative as direct object of a transitive verb

and of its infinitives and participles hardly needs illustration: an example or two are: *agnim̐ īde*, 'I praise Agni'; *nāmo bhārantah*, 'bringing homage'; *bhūyō dātum arhasi*, 'thou shouldst give more'. Of predicate words qualifying the object, an example is *tām ugrān̐ kṛṇomi tām brāhmāṇam* (RV.), 'him I make formidable, him a priest'.

271. Of verbal derivatives having so far a participial character that they share the construction of the verb, the variety is considerable: thus,

a. Derivatives in *u* from desiderative stems have wholly the character of present participles: thus, *damayantīm abhīpsavaḥ* (MBh.), 'desiring to win Damayanti': *rājānaḥ didṛkṣuḥ* (MBh.), 'desiring to see the king'.

b. So-called primary derivatives in *in* have the same character: thus, *mām kāmīnī* (AV.), 'loving me'; *enam abhibhāṣiṇī* (MBh.), 'addressing him'.

c. Derivatives in *aka*, in the later language: as, *bhavantam abhivādakaḥ* (MBh.), 'intending to salute you'.

d. Nouns in *tar*, very frequently in the older language, and as periphrastic future forms (chap. XII.) in the later: thus, *hāntā yō vṛtrān̐ sāmīto 'tā vājān̐ dātū maghāni* (RV.), 'who slayeth the dragon, winneth booty, bestoweth largesses'.

e. The root itself, in the older language, used with the value of a present participle at the end of a compound: thus, *yān̐ yajñām paribhārāsi* (RV.), 'what offering thou surroundest ('protectest)'.

f. The derivative in *i* from the (especially the reduplicated) root, in the older language: thus, *bahrīr̐ vājram papīḥ sōman̐ dadīr̐ gāḥ* (RV.), 'bearing the thunderbolt, drinking the soma, bestowing kine'.

g. Derivatives in *uka*, very frequently in the Brāhmaṇa language: thus, *vatsān̐ ca ghātuko vṛkaḥ* (AV.), 'and the wolf destroys his calves'; *vēduko vāso bhavati* (TS.), 'he wins a garment'.

h. Other cases are more sporadic: thus, derivatives in *a*, as *īndro dṛḍhācid ārujāḥ* (RV.), 'Indra breaks up even what is fast'; in *atnu*, as *vīḍū cid ārujatnābhīḥ* (RV.), 'with the breakers of whatever is strong'; in *ana*, as *tam̐ nivāraṇe* (MBh.), 'in restraining him'.

272. Examples of an accusative with an ordinary noun or adjective are only occasional: *anuvrata* is so used: thus, *damayantīm anuvrataḥ* (MBh.), 'devoted to Damayanti'; and *kāma*, as *mām̐ kāmēna* (AV.), 'through loving me'.

273. The direct construction of cases with prepositions is comparatively restricted in Sanskrit (see the subject of Prepositions, chap. XVI.). With the accusative is oftenest found *prati*, 'opposite to, in reference to', etc.; also *anu*, 'after, in the course of'; *antar* or *antarā*, 'between'; rarely *ati*, 'across'; *abhi*, 'against, to'; and others. Case-forms which have assumed a prepositional value are also often used with the accusative: as *antareṇa*, *uttareṇa*, *dakṣiṇeṇa*, *avareṇa*, *ūrdhvam*, *ṛte*.

274. The accusative is very often found also as object of verbs which in the related languages are not transitive.

a. It stands especially as the goal of motion, with verbs of going, bring-

ing, sending, and the like: thus, *vidarbhān agaman* (MBh.), 'they went to Vidarbhā'; *divaṁ gayuḥ* (MBh.), 'they went to heaven'; *vanagulmān dhāvantaḥ* (MBh.), 'running to woods and bushes'; *āpo dīvaṁ úd vahanti* (AV.), 'they carry up waters to the sky'; *devān yaje* (AV.), 'I make offering to the gods'.

With verbs meaning 'go', this is an extremely common construction; and the use of such a verb with an abstract noun makes peculiar phrases of 'becoming': thus, *samatām eti*, 'he goes to equality' (i. e. 'becomes equal'); *sa gached badhātām mama* (MBh.), 'he shall become liable to be slain by me'; *sa pañcutvam āgatāḥ* (H.), 'he was resolved into the five elements' (underwent dissolution, died).

b. Verbs of speaking follow the same rule: thus, *tam abravīt*, 'he said to him'; *prūkrocad uccūr nūṣadham* (MBh.), 'she cried out loudly to the Nishadhan'; *yās tvo 'vāca* (AV.), 'who spoke to thee'.

275. The cognate accusative, or accusative of the implied object, is, of course, found also in Sanskrit: as, *ṣapathaṁ ṣepe*, 'he swore an oath'.

276. As a yet more adverbial adjunct to a verb, the accusative is used to denote space traversed: as *yojanaṣataṁ gantum* (MBh.), 'to go a hundred leagues'; much more often, duration of time: as *tisrō rātrīr dikṣitāḥ syāt* (TS.), 'let him be consecrated three nights'; *sā sañvalsarām ūrdhvō 'tiṣṭhat* (AV.), 'he stood upright for a year'; *gatvā trīn ahorātrān* (MBh.), 'having travelled three complete days'. But the point of place or time also is occasionally found represented by the accusative (instead of the locative).

The same case is used adverbially to express manner or accompanying circumstance; and many adverbs have the accusative form (see Adverbs, chap. XVI.): this is especially true of compound words, even to such an extent as to form a class of adverbial compounds (below: chap. XVIII.).

277. The accusative is freely used along with other cases as objects of the same verb, wherever the sense admits. And when it is usable with a verb in two different constructions, the verb may take two accusatives, one in each construction. Thus, especially, verbs of having recourse, appealing, asking: as, *tvām vayanḥ ṣaraṇaṁ gatāḥ* (MBh.), 'we have resorted to thee for succor'; *apō yūcāmi bheṣajām* (RV.), 'I ask the waters for medicine'; — and verbs of sending, bringing, imparting, saying: as, *gurutvaṁ naraṁ nayanti* (H.), 'conduct a man to respectability'; *tām idam abravīt* (MBh.), 'she said this to her'; — other less usual cases are, for example, *tām viṣām evā 'dhok* (AV.), 'he milked from her poison'; *jītvā rājyaṁ nalam* (MBh.), 'having won the kingdom from (i. e. by beating) Nala'.

A causative verb, naturally, takes a double accusative: thus, *tām gṛham praveṣayati*, 'he makes her enter the house'.

278. Uses of the Instrumental. The instrumental is originally the 'with'-case: it denotes adjacency, accompaniment, association — passing over into the expression of means and instrument (by the same transfer of meaning which appears in our prepositions *with* and *by*).

Nearly all the uses of the case are readily deducible from this fundamental meaning, and show nothing anomalous or difficult.

**279.** The instrumental is often used to signify accompaniment: thus, *agnīr devēbhīr ā gamat* (RV.), 'may Agni come hither along with the gods'; *dvāpareṇa sahāyena kva yāsyasi* (MBh.), 'whither wilt thou go, with Dvāpara for companion?' *kathayan nūṣadhena* (MBh.), 'talking with the Nishadhan'. But the relation of simple accompaniment is more often helped to plainer expression by prepositions.

**280.** The instrumental of means or instrument or agent is yet more frequent: thus, *bhadrām kārṇebhīḥ ṛṇuyāma* (RV.), 'may we hear with our ears what is propitious'; *castrēṇa nidhanam* (MBh.), 'death by the sword'; *kecīḥ padbhīrṇ hatū gajīḥ* (MBh.), 'some were slain by the elephants with their feet'. And this passes easily over into the expression of occasion or reason (for which the ablative is more frequent): thus, *kṛpayā*, 'through pity'; *tena satyena*, 'by reason of that truth'.

**281.** Of special applications, the following may be noticed:

a. Accordance, equality, likeness, and the like: thus, *samān jyōtiḥ sūryeṇa* (AV.), 'a brightness equal with the sun'; *yeshūn na pūdarajasū tulyaḥ* (MBh.), 'to the dust of whose feet I am not equal'.

b. Price (by which obtained): thus, *daṣābhīr krīṇāti dhenūbhīḥ* (RV.), 'he buys with ten kine'; *gavām sahasreṇa vikrīṇite*, 'he sells for a thousand cattle'.

c. Medium, also space or distance or road, traversed; and hence also time passed through: thus, *udnā nā nāvam anayanta* (RV.), 'they led [him] as it were a ship through the water'; *é hā yātam pathībhīr devayānāḥ* (RV.), 'come hither by god-travelled paths'; *jagmur vihāyasū* (MBh.), 'they went off through the air': — *vidarbhān yātam ichāmy ekāhnā* (MBh.), 'I wish to go to Vidarbha in the course of one day'; *kiyatā kālēna pradhānatām labhante* (H.), 'in how long time do they obtain chief rank?' But the expression of 'within the space of', for time, is also sometimes made by the accusative or locative.

d. The part of the body on (or by) which anything is borne is usually expressed by the instrumental: as, *kukkuraḥ skandheno hyate* (H.), 'a dog is carried on the shoulder'; and this construction is extended to such cases as *talayū kṛtam* (H.), 'put on (i. e. so as to be carried by) a balance'.

**282.** The construction of a passive verb (or participle) with an instrumental of the agent is common from the earliest period, and becomes decidedly more so later, the passive participle with instrumental taking to no small extent the place of an active verb with its subject. Thus, *yamēna datīḥ* (RV.), 'given by Yama'; *īśībhīr īḍyaḥ* (RV.), 'to be praised by sages'; *vyādheṇa jālān vistīrṇam* (H.), 'by the hunter a net [was] spread'; *teno kṛtam*, 'by him [it was] said'; *mayū gantavyam* (H.), = 'I shall go'.

The second object of a causative verb is sometimes put in the instrumental instead of the accusative: as, *pakṣībhīḥ piṇḍān khādayati*, 'he causes the cakes to be eaten by the birds'.

**283.** Many instrumental constructions are such as call in translation for

other prepositions than 'with' or 'by'; yet the true instrumental relation is usually to be traced, especially if the etymological sense of the words be carefully considered.

More anomalously, however, the instrumental is used interchangeably with the ablative with words signifying separation: thus, *vatsūr vīyutāḥ* (RV.), 'separated from their calves'; *mā 'hām ātmānā vī rādhiṣi* (AV.), 'let me not be severed from the breath of life'; *sa tayā vyayujyata* (MBh.), 'he was parted from her' (compare English *parted with*).

284. The prepositions taking the instrumental are those signifying 'with' and the like: thus, *saha*, with the adverbial words containing *sa* as an element, as *sākam*, *sūrdham*, *saratham*; — and, in general, a word compounded with *sa*, *sam*, *saha* takes an instrumental as its regular and natural complement.

But also the preposition *vinā*, 'without' (along with the compounds of *vi* spoken of in the preceding paragraph), takes sometimes the instrumental.

285. Uses of the Dative. The dative is the case of the indirect object — of that toward or in the direction of or in order to or for which anything is or is done (either intransitively or to a direct object).

In more physical connections, the uses of the dative approach those of the accusative (the more proper 'to'-case), and the two are sometimes interchangeable; but the general value of the dative as the 'for'-case is almost everywhere distinctly to be traced.

286. Thus, the dative is used with

a. Words signifying give, share out, assign, and the like: thus, *yó nā dādāti sākhye* (RV.), 'who gives not to a friend'; *yāchū 'smāi śarma* (RV.), 'bestow upon him protection'.

b. Words signifying show, announce, declare, and the like: thus, *āvīr ebhyo abhavat sūryaḥ* (RV.), 'the sun was manifested to them'; *ṛtuparṇam bhīmāya pratyavedayan* (MBh.), 'they announced Rituparna to Bhima'; *tebhyaḥ pratijñāya* (MBh.), 'having promised to them'.

c. Words signifying give attention, have a regard or feeling, and the like: thus, *niveśāya mano dadhuḥ* (MBh.), 'they set their minds upon encamping'; *mātē 'va putrebhyo mṛḍa* (AV.), 'be gracious as a mother to her sons'; *kīm asmābhyarḥ hr̥ṣiṣe* (RV.), 'why art thou angry at us?'

d. Words signifying inclination, obeisance, and the like: thus, *māhayan namanām pradīṣaḥ cātasraḥ* (RV.), 'let the four quarters bow themselves to me'; *devebhyo namaskṛtya* (MBh.), 'having paid homage to the gods'.

e. Words signifying hurling or casting: as *y'na dūdāṣe āsyasi* (AV.), 'with which thou hurlest at the impious'.

In some of these constructions the genitive and locative are also used: see below.

287. In its more distinctive sense, as signifying for, for the benefit of, with reference to, and the like, the dative is used freely, and in a great variety of constructions. And this use passes over into that of the dative of

end or purpose, which is extremely common. Thus, *iṣuṁ kṛṇvānā āsanūya* (AV.), 'making an arrow for hurling'; *gṛhṇāmi te sūbhagatvōya hāstam* (RV.), 'I take thy hand in order to happiness'; *rāṣṭrāya māhyam badhyatām sa-pātnēbhyah parābhūve* (AV.), 'be it bound on in order to royalty for me, in order to destruction for my enemies'. Such a dative is much used predicatively (and oftenest with the copula omitted), in the sense of 'makes for', 'tends toward'; also 'is intended for', and so 'must'; or 'is liable to', and so 'can'. Thus, *upadeṣo mūrkhāṇām prakopāya na cāntaye* (H.), 'good counsel [tends] to the exasperation, not the conciliation, of fools'; *sa ca tasyāḥ saṁtoṣāya nā bhavat* (H.), 'and he was not to her satisfaction'; *sugopā asi nā dābhāya* (RV.), thou art a good herdsman, not one for cheating' (i. e. not to be cheated).

These uses of the dative are in the older language especially illustrated by the dative infinitives, for which see chap. XIII.

288. The dative is not used with prepositions.

289. Uses of the Ablative. The ablative is the 'from'-case, in the various senses of that preposition: it is used to express removal, separation, distinction, issue, and the like.

290. The ablative is used where expulsion, removal, distinction, release, protection, and other kindred relations are expressed: thus, *tē sedhanti pathō vṛkām* (AV.), 'they drive away the wolf from the path'; *mā prā gāma pathāḥ* (RV.), 'may we not go away from the path': *ūrē asmād astu hetīḥ* (AV.), 'far from us be your missile'; *pātām no vṛkāt* (RV.), 'save us from the wolf'.

291. The ablative is used where procedure or issue from something as from a source or starting-point is signified: thus, *ṣukrā kṛṣṇād ajanīṣṭa* (RV.), 'the bright one has been born from the black one'; *lobhāt krodhaḥ prabhavati* (MBh.), 'passion arises from greed'; *vātāt te prāṇām avidam* (AV.), 'I have won thy life-breath from the wind'; *yē prācyū diṣō abhidāsanty asmān* (AV.), 'who attack us from the eastern quarter'; *tac chrutvā sakhīyaṇ-āt* (MBh.), 'having heard that from the troop of friends'; *vāyur antarikṣād abhāṣata* (MBh.), 'the wind spoke from the sky'.

Hence also, procedure as from a cause or occasion is signified by the ablative: this is especially frequent in the later language, and in technical phraseology is a standing construction; it borders on instrumental constructions. Thus, *vājrasya cūṣṇād dadāra* (RV.), 'from (by reason of) the fury of the thunderbolt he burst asunder'; *yasya daṇḍābhayāt sarve dharmam anurudhyanti* (MBh.), 'from fear of whose rod all are constant to duty'; *akāramiçritavād ckūrasya* (Tribh.), 'because *e* contains an element of *a*'.

Perhaps by a further modification of this construction (the effect following the cause), the ablative also in technical language signifies 'after': thus, *ṣakārāt*, 'after *ṣ*'.

292. One or two special applications of the ablative construction are to be noticed:

a. The ablative with words implying fear (terrified recoil from): thus,

*tāsyā jātāyāh sārvaṃ abibhet* (AV.), 'everything was afraid of her at her birth'; *yāsmād réjanta kṛṣṭāyāh* (RV.), 'at whom mortals tremble'; *yusmād bhīyā* (RV.), 'through fear of you'.

b. The ablative of comparison (distinction from): thus, *prā ririce divā indrah pṛthivyāh* (RV.), 'Indra is greater than the heaven and the earth'. With a comparative (or other word used in a kindred way), the ablative is the regular and almost constant construction: thus, *svādōh svādīyāh* (RV.), 'sweeter than the sweet'; *kiñ tasmād duḥkhataram* (MBh.), 'what is more painful than that?' *mitrūd anyāh* (H.), 'any other than a friend'; *nāīśadhā anyam* (MBh.), 'another than the Nishadhan'; *sa matto mahān*, 'he is greater than I'; *tād anyātra tvān nī dadhmasi* (AV.), 'we set this down elsewhere (away from thee)'; *pūrvā vīcvasmād bhāvanūt* (RV.), 'earlier than all beings'.

Occasionally, a partitive genitive is used with the comparative (as with the superlative); or an instrumental (of holding together the things compared).

**293.** The ablative is used with a variety of prepositions and words sharing a prepositional character; but all these have rather an adverbial value, as strengthening or defining the 'from'-relation, than any proper governing force. Thus:

a. In the Veda, *ādhi* and *pāri* are much used as directing and strengthening adjuncts with the ablative: as, *jātō himāvatas pāri* (AV.), 'born from the Himalaya (forth)'; *samudrād ādhi jajñise* (AV.), 'thou art born from the ocean'; *cārantam pāri tusthūṣaḥ* (RV.), 'moving forth from that which stands fast'.

b. Also *purā* (and *purās*), in the sense of 'forward from', and hence 'before': as, *purā jārasaḥ* (RV.), 'before old age': and hence also, with words of protection and the like, 'from': as *ṣaṣmānāḥ purā nidāḥ* (RV.), 'setting in security from ill-will'.

c. Also *ā*, in the sense of 'hither from, all the way from': as, *ā mūtād ānu ṣusyatu* (AV.), 'let it dry completely up from the root'; *tāsmād ā nadyō nāma stha* (AV.), 'since that time ye are called rivers'. But usually, and especially in the later language, the measurement of interval implied in *ā* is reversed in direction, and the construction means 'all the way to, until': as, *ā 'syā yajñāsyo 'dīcaḥ* (VS.), 'until the end of this sacrifice'; *ā ṣoḍaṣāt* (M.), 'till the sixteenth year'; *ā pradānāt* (S.), 'until her marriage'.

d. Other prepositional constructions offer little subject for remark: *vinā* takes the ablative as well as instrumental (**284**); *ṛte* in the older language usually has the ablative, in the later the accusative.

**294.** Uses of the Genitive. The proper value of the genitive is adjectival; it belongs to and qualifies a noun, designating something relating to the latter in a manner which the nature of the case, or the connection, defines more nearly. Other genitive constructions, with adjective or verb or preposition, appear to arise out of this by a more or less distinctly traceable connection.

The use of the genitive has become much extended, espe-

cially in the later language, by attribution of a noun-character to the adjective, and by pregnant verbal construction, so that it often bears the aspect of being a substitute for other cases — as dative, instrumental, locative.

**295.** The genitive in its normal adjective construction is classifiable into the usual varieties, as: genitive of possession or appurtenance, including the complement of implied relation — this is, as elsewhere, the commonest of all; the so-called partitive genitive; the subjective and objective genitives; and so on. Genitives of appellation ('city of Rome'), material, and characteristic ('man of honor'), do not occur. Examples are: *īndrasya vājraḥ*, 'Indra's thunderbolt'; *pitū putrāṇām*, 'father of sons'; *putraḥ pituḥ*, 'son of the father'; *pituḥ kāmāḥ putrasya*, 'the father's love of the son'; *ke naḥ*, 'which of us'; *ṣaṭaḥ dāsīnām*, 'a hundred female slaves'.

The expression of possession etc. on the part of pronouns is made almost entirely by the genitive case, and not by a derived possessive adjective (516).

**296.** The genitive is dependent on an adjective:

a. In part, by a construction similar to that of verbs which take a genitive object: thus, *abhiññā rājadharmāṇām*, 'understanding the duties of a king'.

b. In great part, by a transfer of the possessive genitive from noun to adjective, the adjective being treated as if it had noun-value: thus, *tasya samāḥ* or *anurūpaḥ* or *sadṛṣaḥ*, 'resembling him' (i. e. his like); *tasya priyā*, 'dear to him' (his dear one); *tasyā 'viditam*, 'unknown to him' (his unknown thing); *hāvyaḥ carṣaṇīnām* (RV.), 'to be sacrificed to by mortals' (their object of sacrifice); *īpsito naranārīṇām* (MBh.), 'desired of men and women' (their object of desire); *yasya kasya prasūtaḥ* (II.), 'of whomsoever born' (his son).

c. The so-called partitive genitive with a superlative, or another word of similar value, is a matter of course: thus, *ṣreṣṭhaḥ vīrāṇām*, 'best of heroes'; *vīrūdhāṁ vīryavati* (AV.), 'of plants the mighty (mightiest) one'.

d. Adjectives meaning 'capable', 'worthy', 'full', and a few others, take the genitive by a more original and proper right.

**297.** The genitive as object of a verb is:

a. A possessive genitive of the recipient, by pregnant construction, with verbs signifying give, impart, communicate, and the like: thus, *varūṁ pradāyā 'sya* (MBh.), 'having bestowed gifts upon him' (made them his by bestowal); *rājñō niveditam* (II.), 'it was made known to the king' (made his by knowledge).

This construction, by which the genitive becomes substitute for a dative or locative, abounds in the later language, and is extended sometimes to problematic and difficult cases.

b. A (in most cases, probably) partitive genitive, as a less complete or less absolute object than an accusative: thus, with verbs meaning partake (eat, drink, etc.), as *pīva sutāsya* (AV.), 'drink (of) the Soma'; *mādhvaḥ pāyaya* (RV.), 'cause to drink the sweet draught'; — with verbs meaning

impart (of the thing imparted) etc., as *dādātā no amṛtasya* (RV.), 'bestow upon us immortality'; — with verbs meaning enjoy, be satisfied or filled with: as *mātsy āndhasaḥ* (RV.), 'do thou enjoy the juice'; — with verbs meaning to perceive, note, care for, regard with feelings of various kinds: as, *vásiṣṭhasya stuwatā índro aṣrot* (RV.), Indra listened to Vasishtha who was praising him'; *yáthā máma smárāt* (AV.), 'that he may think of me'; *tasya cukopa* (MBh.), 'he was angry at him'; *bíbhīmas tava* (MBh.), 'we are afraid of thee'.

c. A genitive of more doubtful character, with verbs meaning to rule or have authority, as *tvám iṣiṣe vāsūnām* (RV.), 'thou art lord of good things'; *yáthā 'hám eṣām virājāni* (AV.), 'that I may rule over them'; — with verbs meaning throw at, injure, as *yás ta ásyat* (AV.), 'whoever hurled at thee'; — and with some others.

298. A genitive in its usual possessive sense is often found as predicate, and not seldom with the copula omitted: thus, *yáthā 'so máma kēvalaḥ* (AV.), 'that thou mayest be wholly mine'; *sarvāḥ sampattayas tasya sañtustān̄ yasya mānasam* (H.), 'all good fortunes are his who has a contented mind'.

299. The prepositional constructions of the genitive are for the most part with such prepositions as are really noun-cases, and have the government of such: thus, *agre*, *arthe*, *kṛte*, and the like; also with other prepositional words which, in the general looseness of use of the genitive, have become assimilated to these. A few more real prepositions take the genitive: either usually, like *upári*, 'above', or occasionally, like *adhás*, *antár*, *áti*.

A genitive is used in the older language with certain adverbs of time: thus, *sakīd āhnaḥ* (RV.), 'once a day'; *triḥ sañvatsarasya*, 'thrice a year'; *idānīm āhnaḥ* (RV.), 'at this time of the day'.

300. The genitive is used adverbially hardly at all; a few genitives of time occur in the older language: as *aktos*, 'by night', *vastos*, 'by day'.

A genitive of accompanying circumstance, with a qualifying word, is sometimes used absolutely, instead of a locative (303 b); but this construction is unknown in the earlier language, and rare in the later. It is said by the grammarians to convey an implication of contempt: thus, *vāidarbhyaḥ preṣamāññyāḥ paṇakālam amanyata* (MBh.), 'he thought it a time for staking at play, while the Vidarbhan was looking on' (or, in spite of it); but it is found without any such implication: thus, *sarñkhyāsyāmi phalāny asya paṇyatas te* (MBh.), 'I will count its fruits while you look on'.

301. Uses of the Locative. The locative is properly the 'in'-case, the case expressing situation or location; but its sphere of use has been somewhat extended, so as to touch and overlap the boundaries of other cases, for which it seems to be a substitute.

Unimportant variations of the sense of 'in' are those of 'amid' or 'among', 'on', and 'at'. Of course, also, situation in time as well as place is indicated by the case; and it is applied

to yet less physical relations, to sphere of action and feeling and knowledge, to state of things, to accompanying circumstance; and out of this last grows the frequent use of the locative as the case absolute.

Moreover, by a pregnant construction, the locative is used to denote the place of rest or cessation of action or motion ('into' or 'on to' instead of 'in' or 'on'; German *in* with accusative instead of dative: compare English *there* for *thither*).

**302.** The locative of situation in space hardly needs illustration. An example or two are: *yé devā divī sthā* (AV.), 'which of you gods are in heaven'; *na deveṣu na yakṣeṣu tādṛk* (MBh.), 'not among gods or Yakshas is such a one'; *pārvatasya pṛṣṭhé* (RV.), 'on the ridge of the mountain'; *vidáthe santu devāḥ* (RV.), 'may the gods be at the assembly'; *daçame pade* (MBh.), 'at the tenth step'.

The locative of time indicates the point of time at which anything takes place: thus, *asyā uṣāso vyūṣṭāu* (RV.), 'at the shining forth of this dawn'; *etasminn eva kāle* (MBh.), 'at just that time'; *dvādaçe varshe* (MBh.), 'in the tenth year'. But the accusative is occasionally used in this sense, instead of the locative.

**303.** The locative of sphere or condition or circumstance is of very frequent use: thus, *māde áhim índro jaghāna* (RV.), 'in fury Indra slew the dragon'; *mitrásya sumatū syāma* (RV.), 'may we be in the favor of Mitra'; *te vacane ratam* (MBh.), 'delighted in thy words'.

a. This construction is, on the one hand, generalized into an expression for 'in the matter or case of', or 'with reference to, respecting', and takes in the later language a very wide range, touching upon genitive and dative constructions: thus, *é 'mām bhaja grāme ácveṣu gōṣu* (AV.), 'be generous to him in retainers, in horses, in cattle'; *tām ū sakhitvā imāhe* (RV.), 'him we beg for friendship'; *nyāyo 'yam mayā dṛṣṭa ānāyane tava* (MBh.), 'this means was devised by me for (with reference to) bringing thee hither'; *satīve kīraṇaṁ striyāḥ* (H.), 'the cause of (in the case of) a woman's chastity'; *na çakto 'bhavan nivāraṇe* (MBh.), 'he was not capable of preventing'.

b. On the other hand, the expression by the locative of a condition of things in which anything takes place, or of a conditioning or accompanying circumstance, passes over into a well-marked absolute construction, which is known even in the earliest stage of the language, but becomes more frequent later.

Transitional examples are: *hāve tvā sūra údite hāve madhyāndine divāḥ* (RV.), 'I call to thee at the arisen sun (when the sun has risen), I call at midtime of the day'; *aparādhe kṛte 'pi ca na me kopaḥ* (MBh.), 'and even in case of an offense committed, there is no anger on my part'.

The normal condition of the absolute construction is with a participle accompanying the noun: thus, *stīrṇé barhṣi samidhānē agnāu* (RV.), 'when the barhis is strewn and the fire kindled'; *kāle çubhe pṛāpte* (MBh.), 'a propitious time having arrived'; *avasannāyām rātrāv astūcalacūḍāvalambini can-*

*dramasi* (H.), 'the night having drawn to a close, and the moon resting on the summit of the western mountain'.

But the noun may be wanting, or may be replaced by an adverbial substitute (as *evam, tathā, iti*): thus, *asmābhiḥ samanujñāte* (MBh.), '[it] being fully assented to by us'; *evam ukte kalinā* (MBh.), 'it being thus spoken by Kali'; *tathā 'nuṣṭhite* (H.), 'it being thus accomplished'. So likewise the participle may be wanting (a copula *sati* or the like being to be supplied): thus, *dūre bhaye*, 'the cause of fear being remote'; while, on the other hand, the participle *sati* etc. is sometimes redundantly added to the other participle: thus, *tathā kṛte sati*, 'it being thus done'.

c. The locative is frequently used adverbially or prepositionally: thus, *arthe* or *kṛte*, 'in the matter of, for the sake of'.

304. The pregnant construction by which the locative comes to express the goal or object of motion or action or feeling exercised is not uncommon from the earliest time. It is by no means to be sharply distinguished from the ordinary construction; the two pass into one another, with a doubtful territory between. It occurs:

a. Especially with verbs, as of arriving, sending, placing, communicating, bestowing, and many others, in situations where an accusative or a dative (or a genitive, 297a) might be looked for, and exchangeable with them: thus, *sā id devēṣu gachati* (RV.), 'that, truly, goes to (to be among) the gods'; *imām no yajñām amṛteṣu dheti* (RV.), 'set this offering of ours among the immortals'; *yā āsiñcānti rāsam śśadhīṣu* (AV.), 'who pour in the juice into the plants' (or, the juice that is in the plants); *mā prayache 'ṣvare dhanam* (H.), 'do not offer wealth to a lord'; *papūta medinyām* (MBh.), 'he fell to (so as to be upon) the earth'; *skandhe kṛtvā* (H.), 'putting on the shoulder'; *samṣrutya pūrvam asmāsu* (MBh.), 'having before promised us'.

b. Often also with nouns and adjectives in similar constructions (the instances not always easy to separate from those of the locative meaning 'with reference to': above, 303a): thus, *dayā sarvabhūteṣu*, 'compassion toward all creatures'; *anurāgam nūṣadhe* (MBh.), 'affection for the Nishadh-an'; *rājā samyagṛtataḥ sadā tvayi* (MBh.), 'the king always behaved properly toward thee'.

305. The prepositions construed with the locative stand to it only in the relation of adverbial elements strengthening and directing its meaning.

In the Veda, such locative constructions are most frequent with *ā* and *ādhi*: thus, *martyeṣv ā*, 'among mortals'; *prthivyām ādhy śśadhīḥ*, 'the plants upon the earth'; *tējo māyi dhārayā 'dhi* (AV.), 'establish glory in me': — less often, *ūpa* and *āpi* are used in the same way. In all ages of the language, *antā*, 'within, among', is construed with the locative.

306. Declensional forms are made by the addition of endings to the stem, or base of inflection.

The stem itself, however, in many words and classes

of words, is liable to variation, especially as assuming a stronger form in some cases and a weaker in others.

And between stem and ending are sometimes inserted connecting elements (or what, in the recorded condition of the language, have the aspect of being such).

Respecting all these points, the details of treatment, as exhibited by each class of words or by single words, will be given in the following chapters. Here, however, it is desirable also to give a brief general view of them.

307. Endings: Singular. In the nominative, the usual masc. and fem. ending is *s* — which, however, is wanting in derivative  $\bar{a}$  and  $\bar{i}$ -stems; it is also euphonicly lost (150) by consonant-stems. Neuters in general have no ending, but show in this case the bare stem; *a*-stems alone add *m* (as in the accus. masc.). Among the pronouns, *am* is a frequent masc. and fem. nom. ending (and is found even in du. and pl.); and neuters show a form in *d*.

In the accusative, *m* or *am* is the masc. and fem. ending — *am* being added after a consonant and *r* and after  $\bar{i}$  and  $\bar{u}$  in the radical division, and *m* elsewhere after vowels. The neuter accusative is like the nominative.

The instrumental ending for all genders alike is  $\bar{a}$ . With final *i* and *u*-vowels, the  $\bar{a}$  is variously combined, and in the older language it is sometimes lost by contraction with them. Stems in *a* make the case end in *ena* (sometimes *enā* in V.), and those in  $\bar{a}$  make it end in *ayā*; but instances occur, in the early language, of immediate addition of  $\bar{a}$  to both *a* and  $\bar{a}$ .

The dative ending is in general *e*; and with it likewise the modes of combination of *i* and *u* final are various (and disappearance by contraction not unknown in the oldest language). The *a*-stems are quite irregular in this case, making it end in *āya* — excepted is the pronominal element *sma*, which combines (apparently) with *e* to *smāi*. In the personal pronouns is found *bhyam* (or *hyam*).

A fuller ending  $\bar{ai}$  (like gen.-abl.  $\bar{as}$  and loc.  $\bar{am}$ : see below) belongs to feminine stems only. It is taken (with interposed *y*) by the great class of those in derivative  $\bar{a}$ ; also by those in derivative  $\bar{i}$ , and (as reckoned in the later language) in derivative  $\bar{u}$ . And later it is allowed to be taken by feminine stems in radical  $\bar{i}$  and  $\bar{u}$ , and even by those in *i* and *u*: such have it in the earliest language in only rare and exceptional instances.

The ablative has a special ending, *d* (or *ī*, only in

*a*-stems, masc. and neut., the *a* being lengthened before it (except in the personal pronouns of 1st and 2d person; and these have the same ending in the pl., and even, in the old language, in the dual). Everywhere else, the ablative is identical with the genitive.

The genitive of *a*-stems (and of one pronominal *u*-stem, *amu*) adds *sya*. Elsewhere, the usual abl.-gen. ending is *as*: but its irregularities of treatment in combination with a stem-final are considerable. With *i* and *u*, it is either directly added (only in the old language), added with interposed *n*, or fused to *es* and *os* respectively. With *r* (or *ar*) it yields *us* (or *ur*: 169, end).

The fuller *ās* is taken by feminine stems precisely as *āi* is taken in the dative: see above.

The locative ending is *i* in consonant and *r* and *a*-stems (fusing with *a* to *e* in the latter). The *i* and *u*-stems (unless the final vowel is saved by an interposed *n*) make the case end in *āu*; but the Veda has some relics or traces of the older forms (*ay-i* [?] and *av-i*) out of which this appears to have sprung. Vedic locatives from *i*-stems end also in *ā* and *ī*. The pronominal element *sma* makes the locative *smīn*. Stems in *an* in the older language often lose the *i*, and use the bare stem as locative.

The ending *ām* is the locative correspondent to dat. *āi* and abl.-gen. *ās*, and is taken under the same circumstances: see above.

The vocative (unless by accent: 314) is distinguished from the nominative only in the singular, and not quite always there. In *a*-stems, it is the unaltered stem; and so also in most consonant-stems: but neuters in *an* and *in* may drop the *n*; and the oldest language has sometimes a vocative in *s* from stems in *nt* and *ns*. Stems in *r* change this to *ar*. In masc. and fem. *i* and *u*-stems, the case ends respectively in *e* and *o*; in neuters, in the same or in *i* and *u*. Stems in *ā* change *ā* to *e*; derivative *ī* and *ū* are shortened; radical stems in long vowels use the nominative form.

**308.** Dual. The dual has — except so far as the vocative is sometimes distinguished from nom. and accus. by a difference of accent: 314 — only three case-forms: one for nom., accus., and voc.; one for instr., dat., and abl.; and one for gen. and loc. (occasional confusion of the uses of the second and third is seen earlier).

But the pronouns of 1st and 2d person in the older language distinguish five dual cases: see 492.

The masc. and fem. ending for nom.-accus.-voc. is in the later language usually *āu*; but instead of this the Veda has prevalingly *ā*. Stems in *ā* make the case end in *e*. Stems in *i* and *u*, masc. and fem., lengthen those vowels; and derivative *ī* in

the Veda remains regularly unchanged, though later it adds *āu*. The neuter ending is only *ī*; with final *a* this combines to *e*.

The universal ending for the instr.-dat.-abl. is *bhyām*, before which final *a* is made long. In the Veda, it is often to be read as two syllables, *bhīām*.

The universal ending of gen.-loc. is *os*: before this, *a* and *ā* alike become *e* (*ai*).

**309.** Plural. In the nominative, the general masc. and fem. ending is *as*. The old language, however, often makes the case in *āsas* instead of *ās* from *a*-stems, and in a few examples also from *ā*-stems. From derivative *ī*-stems, *īs* instead of *yas* is the regular and usual Vedic form. Pronominal *a*-stems make the masc. nom. in *e*.

The neuter ending (which is accusative also) is in general *ī*; and before this the final of a stem is apt to be strengthened, by prolongation of a vowel, or by insertion of a nasal, or by both. But in the Veda the hence resulting forms in *āni*, *īni*, *ūni* are frequently abbreviated by loss of the *ni*, and sometimes by further shortening of the preceding vowel.

The accusative ending is also *as* in consonant-stems and in the radical division of *ī* and *ū*-stems (and in the old language even elsewhere). Stems in short vowels lengthen those vowels and add in the masculine *n* (for *ns*, of which abundant traces remain), and in the feminine *s*. In the neuter, this case is like the nominative.

In the instrumental, the case-ending is everywhere *bhis* except in *a*-stems, where in the later language the case always ends in *āis*, but in the earlier either in *āis* or the more regular *ebhis* (*ābhis* in the two personal pronouns; and the pronominal stem *a* [501] makes *ebhis* only).

The dative and ablative have in the plural the same form, with the ending *bhyas* (in Veda often *bhīas*), before which only *a* is altered, becoming *e*. But the two personal pronouns distinguish the two cases, having for the ablative the singular ending (as above pointed out), and for the dative the peculiar *bhyam* (almost never in V. *bhiam*), which they extend also into the singular.

Of the genitive, the universal ending is *ām*; which (except optionally after radical *ī* and *ū*, and in a few scattering Vedic instances) takes after final vowels an inserted consonant, *s* in the pronominal declension, *n* elsewhere; before *n*, a short vowel is lengthened; before *s*, *a* becomes *e*. In the Veda, it is very frequently to be pronounced in two syllables, as *a-am*.

The locative ending is *su*, without any exceptions, and the only change before it is that of *a* to *e*.

The vocative, as in the dual, differs from the nominative only by its accent.

310. The normal scheme of endings, as recognized by the native grammarians (and conveniently to be assumed as the basis of special descriptions), is this:

	Singular. m. f. n.	Dual. m. f. n.	Plural. m. f. n.
N.	<i>s m</i>	<i>āu ī</i>	<i>as ī</i>
A.	<i>am</i>	<i>āu ī</i>	<i>as ī</i>
I.	<i>ā</i>	<i>bhyām</i>	<i>bhis</i>
D.	<i>e</i>	<i>bhyām</i>	<i>bhyas</i>
Ab.	<i>as</i>	<i>bhyām</i>	<i>bhyas</i>
G.	<i>as</i>	<i>os</i>	<i>ām</i>
L.	<i>i</i>	<i>os</i>	<i>su</i>

It is taken in bulk by the consonantal stems, and by the radical division of *ī* and *ū*-stems; by other vowel-stems, with more or less considerable variations and modifications. The endings which have almost or quite unbroken range, through stems of all classes, are *bhyām* and *os* of the dual, and *bhis*, *bhyas*, *ām*, and *su* of the plural.

311. Variation of Stem. By far the most important matter under this head is the distinction made in large classes of words (chiefly those ending in consonants) between strong and weak stem-forms — a distinction standing in evident connection with the phenomena of accent. In the nom. and accus. sing. and du. and the nom. pl. (the five cases whose endings are never accented: 316a), the stem often has a stronger or fuller form than in the rest: thus, for example: राजानम् *rājān-am*, राजानौ *rājān-āu*, राजानस् *rājān-as*, against राज्ञा *rājñ-ā* and राज्ञिस् *rājñ-bhis*; or महान्तम् *mahānt-am* and तुदन्तम् *tudant-am* against महता *mahat-ā* and तुदता *tudat-ā*. These five, therefore, are called the cases with strong stem, or, briefly, the strong cases; and the rest are called the cases with weak stem, or the weak cases. And the weak cases, again, are in some classes of words to be distinguished into cases of weakest stem, or weakest cases, and cases of middle stem, or middle cases: the former

having endings beginning with a vowel (instr. to loc. sing., gen.-loc. du., gen. pl.); the latter, with a consonant (inst.-dat.-abl. du., instr., dat.-abl., and loc. pl.).

The class of strong cases, as above defined, belongs only to masculine and feminine stems. In neuter inflection, the only strong cases are the nom.-acc. pl.; while, in those stems that make a distinction of weakest and middle form, the nom.-acc. du. belong to the weakest class, and the same cases sing. to the middle: thus, for example, compare प्रत्याँच् *pratyāñc-i*, nom.-acc. pl. neut., and प्रत्यच्चस् *pratyāñc-as*, nom. pl. masc.; प्रतीची *pratic-ī*, nom.-acc. du. neut., and प्रतीचोस् *pratic-os*, gen.-loc. du.; प्रत्यक् *pratyak*, nom.-acc. sing. neut., and प्रत्यग्भिस् *pratyag-bhis*, instr. pl.

Even in words which exhibit no variation of stem, it is often convenient to distinguish the same groups of cases by the names strong and weak and so on.

**312.** Other variations concern chiefly the final vowel of a stem, and may be mainly left to be pointed out in detail below. Of consequence enough to mention here is only the *guṇa*-strengthening of a final *i* or *u*, which in the later language is always made before *as* of nom. pl. and *e* of dat. sing. in masc. and fem.; in the Veda, it does not always take place; nor is it forbidden in dat. sing. neut. also; and it is seen sometimes in loc. sing. Final *r* has *guṇa*-strengthening in loc. sing.

**313.** Insertions between Stem and Ending. After vowel-stems, an added *n* often makes its appearance before an ending. This appendage is of least questionable origin in nom.-acc. pl. neut., where the interchange in the old language of the forms of *a* and *i*-stems with those of *an* and *in*-stems is pretty complete; and the *u*-stems follow their analogy. Elsewhere, it is most widely and firmly established in the gen. pl., where in the great mass of cases, and from the earliest period, the ending is virtually *nām* after a vowel. In the *i* and *u*-stems of the later language, the instr. sing. of masc. and neut. is separated by its presence from the fem., and it is in the other weakest cases made a usual distinction of neuter forms from masculine; but the aspect of the matter in the Veda is very different; there the appearance of the *n* is everywhere sporadic; the neuter shows no special inclination to take it, and it is not excluded even from the feminine. In the ending *ena* from *a*-stems (later invariable, earlier predominating), its presence appears to have worked the most considerable transformation of original shape.

The place of *n* before gen. pl. *ām* is taken by *s* in pronominal *a* and *ā*-stems.

The *y* after *ā* before the endings *āi*, *ās*, and *ām* is most probably an insertion, such as is made elsewhere (258).

### Accent in Declension.

**314.** As a rule without exception, the vocative, if accented at all, is accented on the first syllable.

And in the Veda (the case is a rare one), whenever a syllable written as one is to be pronounced as two by restoration of a semivowel to vowel form, the first element only has the vocative accent, and the syllable as written is circumflex (by **84 a**): thus, *dyāus* (i. e. *dīāus*) when dissyllabic, but *dyāūs* when monosyllabic; *jyāke* when for *jīāke*.

But the vocative is accented only when it stands at the beginning of a sentence — or, in verse, at the beginning also of a metrical division or *pāda*; elsewhere it is accentless or enclitic: thus, *agne yān yajñam paribhūr asi* (RV.), 'O Agni! whatever offering thou protectest'; but *ūpa tvā 'gna é 'masi* (RV.), 'unto thee, Agni, we come'.

A word qualifying a vocative — usually an adjective, but not seldom also a noun in the genitive (very rarely in any other case) — constitutes, so far as accent is concerned, a unity with it: thus, *sākhe vaso* or *vāso sakhe*, 'excellent friend'; *sūno sahasaḥ* or *sāhasaḥ sūno*, 'oh son of might'; and *sudītī sūno sahaso didīhi* (RV.), 'with excellent brightness, son of might, shine forth'.

Two coördinate vocatives, whether noun or adjective, have usually the same accent; but the Vedic texts furnish not a few irregular exceptions to this rule.

For brevity, the vocative dual and plural will be given in the paradigms below along with the nominative, without taking the trouble to specify in each instance that, if the latter be accented elsewhere than on the first syllable, the accent of the vocative is different.

**315.** As regards the other cases, rules for change of accent in declension have to do only with monosyllables and with stems of more than one syllable which are accented on the final; for if a stem be accented on the penult, or any other syllable further back — as in *sārpant*, *vāri*, *bhāgavant*, *sumānas*, *sahasravāja* — the accent remains upon that syllable through the whole inflection (except in the vocative, as explained in the preceding paragraph).

The only exceptions are a few numeral stems: see below, chap. VI.

**316.** Stems accented on the final (including monosyllables) are subject to variation of accent in declension chiefly in virtue of the fact that some of the endings have, while others have not, or have in less degree, a tendency to draw the accent forward upon themselves. Thus:

**a.** The endings of the nominative and accusative singular and dual and of the nominative plural have no tendency to take the accent away from the stem, and are therefore only accented when a final vowel of the stem and the vowel of the ending are blended together into a single vowel or diphthong. Thus, from *dattā* come *dattāū* (= *dattā + āu*) and *dattās* (= *dattā + as*); but from *nadī* come *nadyāū* (= *nadī + āu*) and *nadyās* (= *nadī + as*).

b. All the other endings sometimes take the accent; but those beginning with a vowel do so more readily than those beginning with a consonant. Thus, from *nāús* come *nāvá* and *nāubhis*; from *mahánt*, however, come *mahatá* but *mahádbhis*.

The general rules of accent, then, may be thus stated:

**317.** In the declension of monosyllabic stems, the accent falls upon the ending in all the weak cases (without distinction of middle and weakest): thus, *nāvá*, *nāubhyám*, *nāvám*, *nāušú*; *vāci*, *vāgbhis*, *vācám*, *vākṣú*.

But some monosyllabic stems retain the accent throughout: thus, *góbhis*, *gāvám*, *gósu*. For such cases, see below, **350, 361 c, d, 375, 390, 427**.

**318.** Of polysyllables ending in consonants, only a few shift the accent to the ending, and that in the weakest (not the middle) cases. Such are:

a. Present participles in *ánt* or *át*: thus, from *tudánt*, *tudatá* and *tudatós* and *tudatám*; but *tudádbhyám* and *tudátsu*.

b. A few adjectives having the form of such participles, as *mahatá*, *bṛhatás*.

c. Bases of which the accented final loses its syllabic character by syncope of the vowel: thus, *majjñá*, *mūrdhné*, *dāmnás* (from *majján* etc.: **423**).

Other sporadic cases will be noticed under the different declensions.

Case forms used adverbially sometimes show a changed accent: see chap. XVI. (1110 ff.).

**319.** Of polysyllabic stems ending in accented short vowels, the final of the stem retains the accent if it retains its syllabic identity: thus, *datténa* and *dattāya* from *dattá*; *agninā* and *agnáye* from *agní*; and also *dattébhyaś*, *agníbhíś*, and so on. Otherwise, the accent is on the ending: and that, whether the final and the ending are combined into one, as in *dattāis*, *dhenāú*, *agnín*, *dhenús*, and so on; or whether the final is changed into a semi-vowel before the ending: thus, *dhenwá*, *pitrá*.

But *ám* of the gen. pl. from stems in *í* and *ú* and *ṛ* may, and in the older language always does, take the accent, though separated by *n* from the stem: thus, *agnínám*, *dhenúnám*, *pitṛṇám*. In RV., even derivative *ī*-stems show usually the same shift: thus, *bahvīnám*. Of stems in *á*, only numerals (chap. VI.) follow this rule: thus, *saptānám*, *daçānám*.

**320.** Root-words in *ī* and *ū* as final members of compounds retain the accent throughout, not shifting it to any of the endings. And in the older language there are polysyllabic words in long final vowels which follow in this respect as in others the analogy of the root-declension (below, **355 ff.**). Apart from these, the treatment of stems in derivative long vowels is, as regards accent, the same as of those in short vowels — save that the tone is not thrown forward upon the ending in gen. plural.

## CHAPTER V.

## NOUNS AND ADJECTIVES.

**321.** THE accordance in inflection of substantive and adjective stems is so complete that the two cannot be separated in treatment from one another.

They may be classified, for convenience of description, as follows:

I. Stems in अ *a*;

II. Stems in इ *i* and उ *u*;

III. Stems in आ *ā*, ई *ī*, and ऊ *ū*: namely, A. radical-stems (and a few others inflected like them); B. derivative stems;

IV. Stems in ऋ *r* (or अॠ *ar*);

V. Stems in consonants.

There is nothing absolute in this classification and arrangement; it is merely believed to be open to as few objections as any other. No general agreement has been reached among scholars as to the number and order of Sanskrit declensions. The stems in *a* are here treated first because of the great predominance of the class.

**322.** The division-line between substantive and adjective, always an uncertain one in early Indo-European language, is even more wavering in Sanskrit than elsewhere. There are, however, in all the declensions as divided above — unless we except the stems in *r* or *ar* — words which are distinctly adjectives; and, in general, they are inflected precisely like noun-stems of the same final: only, among consonant-stems, there are certain sub-classes of adjective bases with peculiarities of inflection to which there is among nouns nothing corresponding. But there are also two considerable classes of adjective-compounds, requiring special notice; namely:

**323.** Compound adjectives having as final member a bare verbal root, with the value of a present participle: thus, *su-dīç*, 'well-looking'; *pra-būdñ*, 'foreknowing'; *a-drūh*, 'not hating'; *veda-vid*, 'Veda-knowing'; *vṛtra-hān*, 'Vritra-slaying'; *upastha-sād*, 'sitting in the lap'. Every root is liable to be used in this

way, and such compounds are not infrequent in all ages of the language: see chapter on Compounds, below (XVIII.).

This class is originally and essentially only a special class of compound adjectives, since in the earliest Veda the simple as well as the compounded root was sometimes used adjectively. But the compounded root was from the beginning much more often so used, and the later the more exclusively, so that practically the class is a separate and important one.

**324.** Compound adjectives having a noun as final member, but obtaining an adjective sense secondarily, by having the idea of 'possession' added, and being inflected as adjectives in the three genders. Thus, *prajākāma*, 'desire of progeny', becomes an adjective meaning 'desirous (i. e. having desire) of progeny'; *sabhārya* (*sa* + *bhāryā*), 'having one's wife along'; and so on.

In a few cases, also, the final noun is syntactically object of the preceding member: thus, *atimātra*, 'immoderate' (*ati mātram*, 'beyond measure'); *yāvayāddveṣas*, 'driving away enemies'.

**325.** Hence, under each declension, we have to notice how a root or a noun-stem of that declension is inflected when final member of an adjective compound.

As to accent, it needs only to be remarked that a monosyllabic word ending a compound loses the peculiarity of monosyllabic accentuation, and does not throw the tone forward upon the ending.

## Declension I.

Stems (masculine and neuter) in *a*.

**326.** This declension contains the majority of all the declined stems of the language.

Its endings deviate more widely than any others from the normal.

**327.** Endings: Singular. The nom. masc. has the normal ending *s*.

The acc. (masc. and neut.) adds *m* (not *am*); and this form has the office also of nom. neuter.

The instr. changes *a* to *ena* uniformly in the later language; and even in the oldest Vedic this is the predominant ending (in RV., eight ninths of all cases). Its final is in Vedic verse not infrequently made long (*enā*), where favored by the metre. But the normal ending *ā* — thus, *yajñā*, *suhāvā*, *mahitvā* (for *yajñēna* etc.) — is also not rare in the Veda.

The dat. has *āya* (as if by adding *aya* to *a*), alike in all ages of the language.

The abl. has *t* (or more probably *d*: it is impossible from the evidence

of the Sanskrit to tell which is the original form of the ending), before which  $\bar{a}$  is made long: this ending is found in no other noun declension, but only in the personal pronouns (of all numbers).

The gen. has *syā* added to the final *a*; and this ending is also limited to *a*-stems (with the single exception of the pronoun *amúsyā*: chap. VII.). Its final *a* is in only three cases made long in the Veda; and its *y* is vocalized (*asia*) almost as rarely.

The loc. ends in *e* (as if by combining the normal ending *i* with the final of the stem), without exception.

The voc. is the bare stem.

**328. Dual.** The dual endings in general are the normal ones.

The nom., acc., and voc. masc. end in the later language always in  $\bar{a}u$ . In the Veda, however, the usual ending is simple  $\bar{a}$  (in RV., in seven eighths of the occurrences). The same cases in the neut. end in *e*, which appears to be the result of fusion of the stem-final with the normal ending  $\bar{i}$ .

The instr., dat., and abl. have *bhyām* (in only one or two Vedic instances resolved into *bhīām*), with the stem-final lengthened to  $\bar{a}$  before it.

The gen. and loc. have a *y* inserted after the stem-final before *os* (or as if the *a* had been changed to *e*). In one or two (doubtful) Vedic instances (as also in the pronominal forms *enos* and *yos*), *os* is substituted for the final *a*.

**329. Plural.** The nom. masc. has in the later language the normal ending *as* combined with the final *a* to  $\bar{a}s$ . But in the Veda the ending  $\bar{a}sas$  instead is frequent (one third of the occurrences in RV., but only one twenty-fifth in the peculiar parts of AV.).

The acc. masc. ends in  $\bar{a}n$  (for earlier  $\bar{a}ns$ , of which abundant traces are left in the Veda, and, under the disguise of apparent euphonic combination, even in the later language: see above, 208 ff.).

The nom. and acc. neut. have in the later language always the ending  $\bar{a}ni$  (like the *an*-stems: see 421; or else with *n* as in the gen. pl. before normal  $\bar{i}$ ). But in the Veda this ending alternates with simple  $\bar{a}$  (which in RV. is to  $\bar{a}ni$  as three to two, in point of frequency; in AV., as three to four).

The instr. ends later always in  $\bar{a}is$ ; but in the Veda is found abundantly the more normal form *ebhis* (in RV., nearly as frequent as  $\bar{a}is$ ; in AV., only one fifth as frequent).

The dat. and abl. have *bhyas* as ending, with *e* instead of the final *a* before it (as in the Vedic instr. *ebhis*, the loc. pl., the gen. loc. du. [?], and the instr. sing.). The resolution into *ebhias* is not infrequent in the Veda.

The gen. ends in  $\bar{a}nām$ , the final *a* being lengthened and having *n* inserted before the normal ending. The  $\bar{a}$  of the ending is not seldom (in less than half the instances) to be read as two syllables, *aam*: opinions are divided as to whether the resolution is historical or metrical only. A very small number (half-a-dozen) of examples of simple  $\bar{a}m$  as ending instead of  $\bar{a}nām$  occur in RV.

The loc. ends in *ṣu* — that is to say, with the normal ending, before which the stem-final is changed to *e* (with consequent change of *s* to *ṣ*: 180).

Of accent in this declension, nothing requires to be said; the syllable accented in the stem retains its own accent throughout.

330. Examples of declension. As examples of the inflection of *a*-stems may be taken काम *kāma*, m., 'love'; देव *devá*, m., 'god'; आस्य *āsyá*, n., 'mouth'.

Singular :			
N.	कामम् <i>kāmas</i>	देवम् <i>devás</i>	आस्यम् <i>āsyám</i>
A.	कामम् <i>kāmam</i>	देवम् <i>devám</i>	आस्यम् <i>āsyám</i>
I.	कामेन <i>kāmena</i>	देवेन <i>devéna</i>	आस्येन <i>āsyéna</i>
D.	कामाय <i>kāmāya</i>	देवाय <i>devāya</i>	आस्याय <i>āsyāya</i>
Ab.	कामात् <i>kāmāt</i>	देवात् <i>devāt</i>	आस्यात् <i>āsyāt</i>
G.	कामस्य <i>kāmasya</i>	देवस्य <i>devāsya</i>	आस्यस्य <i>āsyāsya</i>
L.	कामे <i>kāme</i>	देवे <i>devé</i>	आस्ये <i>āsyé</i>
V.	काम <i>kāma</i>	देव <i>deva</i>	आस्य <i>āsya</i>
Dual :			
N. A. V.	कामौ <i>kāmāu</i>	देवौ <i>devāu</i>	आस्ये <i>āsyé</i>
I. D. Ab.	कामाभ्याम् <i>kāmābhyām</i>	देवाभ्याम् <i>devābhyām</i>	आस्याभ्याम् <i>āsyābhyām</i>
G. L.	कामयोस् <i>kāmayos</i>	देवयोस् <i>devāyos</i>	आस्ययोस् <i>āsyāyos</i>
Plural :			
N. V.	कामाम् <i>kāmās</i>	देवाम् <i>devās</i>	आस्यानि <i>āsyāni</i>

A.	कामान् <i>kāmān</i>	देवान् <i>devān</i>	आस्थानि <i>āsyāni</i>
I.	कामैस् <i>kāmāis</i>	देवैस् <i>devāis</i>	आस्थैस् <i>āsyāis</i>
D. Ab.	कामेभ्यस् <i>kāmebhyas</i>	देवेभ्यस् <i>devēbhyas</i>	आस्थेभ्यस् <i>āsyēbhyas</i>
G.	कामानाम् <i>kāmānām</i>	देवानाम् <i>devānām</i>	आस्थानाम् <i>āsyānām</i>
L.	कामेषु <i>kāmeṣu</i>	देवेषु <i>devēṣu</i>	आस्थेषु <i>āsyēṣu</i>

Examples of the peculiar Vedic forms are:

Sing. : instr. *ravāthenā*, *yajñā* (such genitive forms as *āvasiā* are purely sporadic).

Du. : nom. etc. masc. *devā*; gen.-loc. *pastyūs* (stem *pastyā*).

Pl. : nom.-voc. masc. *devāsas*; neut. *yugā*; instr. *devēbhis*; gen. *carāthām*, *devānām*.

**331.** Among nouns, there are no irregularities in this declension. For irregular numeral bases in *a* (or *an*), see the next chapter. For the irregularities of pronominal stems in *a*, which are more or less fully shared also by a few adjectives of pronominal kindred, see the chapter on Pronouns.

### Adjectives.

**332.** Original adjectives in *a* are an exceedingly large class, probably the majority of all adjectives. There is, however, no such thing as a feminine stem in *a*; for the feminine, the *a* is changed to *ā* — or often, though far less often, to *ī*; and its declension is then like that of *śenā* or *devī* (365). An example of the complete declension of an adjective *a*-stem in the three genders will be given below (371).

**333.** There are no verbal roots ending in *a*. But *a* is sometimes substituted for the final *ā* of a root (and, more rarely, for final *an* or *am*), and it is then inflected like an ordinary adjective in *a* (see below, 354).

**334.** A noun ending in *a*, when occurring as final member of an adjective compound, is inflected like an original adjective in *a*, making its feminine likewise in *ā* or *ī*.

On the other hand, a feminine noun ending in derivative *ā* shortens its final to *a* to form a masculine and neuter base.

## Declension II.

Stems (of all genders) in *i* and *u*.

**335.** The stems in  $\xi i$  and  $\Xi u$  are inflected in so close accordance with one another that they cannot be divided into two separate declensions. They are of all the three genders, and tolerably numerous — those in  $\xi i$  more numerous than those in  $\Xi u$ , especially in the feminine (there are more neuters in  $\Xi u$  than in  $\xi i$ ).

The endings of this declension also differ frequently and widely from the normal, and the Vedic irregularities are numerous.

**336.** Endings: Singular. The nom. masc. and fem. adds to the stem the normal ending *s*. The nom. and acc. neut. is the bare stem, without ending. In the Veda, the final *u* of a few neuters is lengthened (248 b): thus, *urū*, *purū*.

The acc. masc. and fem. adds *m* to the stem. Vedic forms in *iam* and *uam*, and, with *n*, *inam* and *unam*, are excessively rare, and doubtful.

The instr. fem. in the later language takes the normal ending  $\bar{a}$  simply, while the masc. and neut. insert *n* before it, making *inā* and *unā*. But in the Veda, forms in  $y\bar{a}$  and  $v\bar{a}$  (or  $i\bar{a}$  and  $u\bar{a}$ ) are not infrequent in masc. and neut. also; while *inā* is found, very rarely, as a fem. ending. Moreover, fem.  $y\bar{a}$  is often (in two thirds of the occurrences) contracted to  $\bar{i}$ ; and this is even sometimes shortened to *i*. An adverbial instr. in  $uy\bar{a}$  from half-a-dozen stems in *u* occurs.

The dat. masc. and fem. gunates the final of the stem before the ending *e*, making *aye* and *ave*. These are the prevailing endings in the Veda likewise; but the more normal *ye* and *ve* also occur; and the fem. has in this case, as in the instr., sometimes the contracted form  $\bar{i}$ . In the later language, the neuter is required in this, as in all the other "weakest" cases, to insert *n* before the normal ending: but in the Veda such forms are only sporadic; and the neut. dat. has also the forms *ue*, *ave*, *aye*, like the other genders.

The abl. and gen. masc. and fem. have regularly, both earlier and later, the ending *s* with gunated vowel before it: thus, *es*, *os*; and in the Veda, the neut. forms the cases in the same way; although *unas*, required later, is also not infrequent (*inas* does not occur). But the normal forms *yas* (or *ias*) and *vas* (or *uas*) are also frequent in both masc. and neut. As masc. ending, *unas* occurs twice in RV.

The loc. masc. and fem. has for regular ending in the later language  $\bar{au}$ , replacing both finals, *i* and *u*. And this is in the Veda also the most frequent ending; but, beside it, the *i*-stems form (about half as often in RV.) their loc. in  $\bar{a}$ : thus, *agnā*; and this is found once even in the neut.

The RV. has a number of examples of masc. and neut. locatives in *avi* (the normal ending and the *u* gunated before it) from *u*-stems; and certain doubtful traces of a corresponding *ayi* from *i*-stems. Half-a-dozen locatives in *ī* (regarded by the Vedic grammarians as *pragṛhya* or uncombinable: 138 d) are made from *i*-stems. The later language requires the neuter locatives to be made *ini* and *uni*; but the former never occurs in the oldest texts, and the latter only very rarely.

The later grammar allows the dat., abl.-gen., and loc. fem. to be formed at will with the fuller fem. terminations of long-vowel stems, namely *āi*, *ās*, *ām*. Such forms are quite rare in the older language even from *i*-stems (less than 40 occurrences altogether in RV.; three times as many in AV.); and from *u*-stems they are almost unknown (five in RV. and AV.).

The .voc. gunates the final of the stem, in masc. and fem., alike in the earlier and in the later language. In the neut., it is later allowed to be of the same form or the unaltered stem: and this was probably the usage in the older time also; not instances enough are quotable to determine the question (AV. has *u* once, and VS. *o* once).

**337. Dual.** The later and earlier language agree in making the nom.-acc.-voc. masc. and fem. by lengthening the final of the stem. The same cases in the neuter (according to the rule given above) end later in *inī* and *unī*; but these endings are nearly unknown in the Veda (as, indeed, the cases are of only rare occurrence): AV. has *inī* twice (RV. perhaps once); VS. has *unī* once; RV. has *uī* from one *u*-stem, and *ī*, once shortened to *i*, from one or two *i*-stems.

The unvarying ending of instr.-dat.-abl., in all genders, is *bhyām* added to the unchanged stem.

The gen.-loc. of all ages adds *os* to the stem in masc. and fem.; in neut., the later language interposes, as elsewhere in the weakest cases, a *n*; probably in the earlier Vedic the form would be like that of the other genders; but the only occurrence noted is one *unos* in AV.

**338. Plural.** The nom.-voc. masc. and fem. adds the normal ending *as* to the gunated stem-final, making *ayas* and *avas*. The exceptions in the Veda are very few: one word (*ari*) has *ias* in both genders, and a few feminines have *īs* (like *ī*-stems); a very few *u*-stems have *uas*. The neut. nom.-acc. ends later in *inī* and *unī* (like *ānī* from *a*: 329); but the Veda has *ī* and *i* (about equally frequent) much oftener than *inī*; and *ū* and (more usually) *u*, more than half as often as *ūnī*.

The accus. masc. ends in *īn* and *ūn*, for older *īns* and *ūns*, of which plain traces remain in the Veda in nearly half the instances of occurrence, and even not infrequently in the later language, in the guise of phonetic combination (208 ff.). The accus. fem. ends in *īs* and *ūs*. But both masc. and fem. forms in *ias* and *uas* are found sparingly in the Veda.

The inst. of all genders adds *bhis* to the stem.

The dat.-abl. of all genders adds *bhyas* (in V., almost never *bhias*) to the stem.

The gen. of all genders is made alike in *īnām* and *ūnām* (of which the

*ā* is not seldom, in the Veda, to be resolved into *aam*). Stems with accented final in the later language may, and in the earlier always do, throw forward the accent upon the ending.

The loc. of all genders adds *su* (as *su*: 180) to the stem-final.

The accent is in accordance with the general rules already laid down, and there are no irregularities calling for special notice.

339. Examples of declension. As models of *i*-stems may be taken अग्नि *agnī*, m., 'fire'; गति *gātī*, f., 'gait'; वारि *vāri*, n., 'water'.

Singular :

N.	अग्निम् <i>agnis</i>	गतिम् <i>gātis</i>	वारि <i>vāri</i>
A.	अग्निम् <i>agnim</i>	गतिम् <i>gātim</i>	वारि <i>vāri</i>
I.	अग्निना <i>agninā</i>	गत्या <i>gātyā</i>	वारिणा <i>vāriṇā</i>
D.	अग्नये <i>agnāye</i>	गतये, गत्यै <i>gātaye, gātyāi</i>	वारिणे <i>vāriṇe</i>
Ab. G.	अग्नेस् <i>agnés</i>	गतेस्, गत्यास् <i>gātes, gātyās</i>	वारिणस् <i>vāriṇas</i>
L.	अग्नी <i>agnāú</i>	गतौ, गत्याम् <i>gātāu, gātyām</i>	वारिणि <i>vāriṇi</i>
V.	अग्ने <i>agne</i>	गते <i>gāte</i>	वारि, वारे <i>vāri, vāre</i>

Dual :

N. A. V.	अग्नी <i>agnī</i>	गती <i>gāti</i>	वारिणी <i>vāriṇī</i>
I. D. Ab.	अग्निभ्याम् <i>agnibhyām</i>	गतिभ्याम् <i>gātibhyām</i>	वारिभ्याम् <i>vāribhyām</i>
G. L.	अग्नयोस् <i>agnyós</i>	गतयोस् <i>gātyos</i>	वारिणोस् <i>vāriṇos</i>

Plural :

N. V.	अग्नयस् <i>agnāyas</i>	गतयस् <i>gātayus</i>	वारिणि <i>vāriṇi</i>
-------	---------------------------	-------------------------	-------------------------

A.	अग्निं <i>agnīn</i>	गतीस् <i>gātīs</i>	वारीणि <i>vārīṇi</i>
I.	अग्निभिस् <i>agnibhis</i>	गतिभिस् <i>gātibhis</i>	वारिभिस् <i>vāribhis</i>
D. Ab.	अग्निभ्यस् <i>agnibhyas</i>	गतिभ्यस् <i>gātibhyas</i>	वारिभ्यस् <i>vāribhyas</i>
G.	अग्निनाम् <i>agninām</i>	गतीनाम् <i>gātīnām</i>	वारीणाम् <i>vārīṇām</i>
L.	अग्निषु <i>agnīṣu</i>	गतिषु <i>gātīṣu</i>	वारिषु <i>vārīṣu</i>

340. In order to mark more plainly the absence in Vedic language of some of the forms which are common later, all the forms of Vedic occurrence are added below, and in the order of their frequency.

Singular. Nom. *agnīs* etc., as above.

Acc.: masc. *agnīm*, *yayītam*, *ūrmīnam*(?); fem. and neut. as above.

Instr.: masc. *agnīnā*, *rayyā* and *ūrmīā*; fem. *ācittī*, *ūtīā*, *anuvṛktī*, *dhāśinā*; neut. wanting.

Dat.: masc. *agnāye*; fem. *tujāye*, *ūtī*, *ṣṛtyāi*; neut. *śūcaye*.

Gen.-abl.: masc. *agnēs*; fem. *ādītes*, *hetyās* and *bhūmīas*; neut. *bhūres*.

Loc.: masc. *agnāū*, *agnā*, *ājāyi*(?); fem. *āgatāu*, *ūdītā*, *dhānasātayi*(?), *vēdī*, *bhūmyām*; neut. *apratā*, *saptāraçmāu*.

Voc.: as above (neut. wanting).

Dual: Nom.-acc.-voc.: masc. *hārī*; fem. *yuvatī*; neut. *śūcī*, *māhi*, *hārīṇī*(?).

Instr.-dat.-abl.: as above.

Gen.-loc.: masc. *hārīos*; fem. *yuvatīos* and *jāmiōs*; neut. wanting.

Plural. Nom.: masc. *agnāyas*; fem. *matāyas*, *bhūmīs*; neut. *śūcī*, *bhūri*, *bhūrīṇi*.

Accus.: masc. *agnīn*; fem. *kṣītīs*, *śūcayas*(?).

Instr., dat.-abl., and loc., as above.

Gen.: masc. *kavīnām*, *ṛṣīṇām* etc.

341. As models of *u*-stems may be taken शत्रु *śātru*, m., 'enemy'; धेनु *dhenū*, f., 'cow'; मधु *mādhu*, n., 'honey'.

Singular:

N.	शत्रुम् <i>śātrus</i>	धेनुम् <i>dhenūs</i>	मधु <i>mādhu</i>
A.	शत्रुम् <i>śātrum</i>	धेनुम् <i>dhenūm</i>	मधु <i>mādhu</i>
I.	शत्रुणा <i>śātrunā</i>	धेन्वा <i>dhenvā</i>	मधुना <i>mādhunā</i>

D.	शत्रवे çátrave	धेनवे, धेन्वै <i>dhenáve, dhenvāi</i>	मधुने <i>mádhune</i>
Ab. G.	शत्रोस् çátros	धेनोस्, धेन्वाम् <i>dhenós, dhenvās</i>	मधुनस् <i>mádhunas</i>
L.	शत्रौ çátrāu	धेनौ, धेन्वाम् <i>dhenāi, dhenvām</i>	मधुनि <i>mádhuni</i>
V.	शत्रो çátro	धेनो <i>dhéno</i>	मधु, मधो <i>mádhu, mádho</i>
Dual :			
N. A. V.	शत्रु çátrū	धेनु <i>dhenū</i>	मधुनी <i>mádhunī</i>
I. D. Ab.	शत्रुभ्याम् çátrubhyām	धेनुभ्याम् <i>dhenúbhyām</i>	मधुभ्याम् <i>mádhubhyām</i>
G. L.	शत्रोस् çátros	धेन्वोस् <i>dhenvós</i>	मधुनोस् <i>mádhunos</i>
Plural :			
N. V.	शत्रवस् çátravas	धेनवस् <i>dhenávas</i>	मधुनि <i>mádhuni</i>
A.	शत्रून् çátrūn	धेनून् <i>dhenūn</i>	मधुनि <i>mádhuni</i>
I.	शत्रुभिस् çátrubhis	धेनुभिस् <i>dhenúbhis</i>	मधुभिस् <i>mádhubhis</i>
D. Ab.	शत्रुभ्यास् çátrubhyas	धेनुभ्यास् <i>dhenúbhyas</i>	मधुभ्यास् <i>mádhubhyas</i>
G.	शत्रूणाम् çátrūṅām	धेनूनाम् <i>dhenūnām</i>	मधूनाम् <i>mádhūnām</i>
L.	शत्रुषु çátruṣu	धेनुषु <i>dhenúṣu</i>	मधुषु <i>mádhūṣu</i>

342. The forms of Vedic occurrence are given here for the *u*-stems in the same manner as for the *i*-stems above.

Singular. Nom.: masc. and fem. as above; neut. *urū, urī*.

Accus.: masc. *ketām, ábhīruam, sucetūnam*(?); fem. *dhenūm*.

Instr.: masc. *ketūnā, paçvā* and *krātuā*; fem. *ádhenūā* and *panvā, āçuyā*; neut. *mádhunā, mádhvā*.

Dat.: masc. *ketāve, çīçve*; fem. *çárave, iṣvāi*; neut. *urāve, mádhune*.

Abl.-gen.: masc. *manyós, pívás, sánunas*; fem. *sínhdos, iṣvās*; neut. *mádhvas* and *mádhvas, mádhos, mádhunas*.

Loc.: masc. *pūrū́, sīnāvi*; fem. *sīndhāu, rājjoām*; neut. *sānāu, sānavi, sāno, sāmuni*.

Voc.: as above.

Dual. Nom.-acc.-voc.: masc. and fem. as above; neut. *urvī, jānuni*.

Instr.-dat.-abl.: as above.

Gen.-loc.: as above (but *-vos* or *-uos*).

Plural. Nom.: masc. *ṛbhāvas, mādhuvas* and *mādhuvas*; fem. *dhenāvas, çatakratvas*; neut. *purū́ni, purū́, purū́*.

Accus.: masc. *ṛtū́n, paçvās*; fem. *īṣūs, mādhuvas*.

Instr., dat.-abl., and loc., as above; also gen. (but with the resolution *-ūnaam* in part).

**343.** Irregular declension. There are no irregular *u*-stems, and only a very few *i*-stems.

a. *Sákhi*, m., 'friend', has for the five strong cases a peculiarly strengthened base (vriddhied), namely *sákhāy*, which in the nom. sing. is reduced to *sákhā* (without ending), and in the other cases takes the normal endings. The instr. and dat. sing. have the normal endings simply, without inserted *n* or *guna*; the abl.-gen. sing. adds *us*; and the loc. sing. adds *āu*: the rest is like *agnī*. Thus:

Sing. *sákhā, sákhāyam, sákhya, sákhye, sákhyaus, sákhyaū, sákhe*; Du. *sákhāyāu, sákhībhyām, sákhyaos*; Pl. *sákhāyas, sákhīn*, etc. etc.

The Veda has usually *sákhāyā* du., and often resolves the *y* to *i*, in *sákhīū, sákhīus*, etc. The compounds are usually declined like the simple word, unless *sakha* be substituted.

b. *Pāti*, m., is declined regularly in composition, and when it has the meaning 'lord, master'; when uncompounded and meaning 'husband', it is inflected like *sákhi* in the instr., abl.-gen., and loc. sing., forming *pátyā, pátye, pátys, pátyaū*. There are occasional instances of confusion of the two classes of forms.

c. *Jāni*, f., 'wife', has the gen. sing. *jānyus* in the Veda.

d. *Arí*, 'eager, greedy, hostile', has in the Veda *aryás* in pl. nom. and accus., masc. and fem.

e. *Ví*, 'bird', has in RV. the nom. *vés* (beside *vís*).

f. The stems *ákṣi*, 'eye', *ásthi*, 'bone', *dádhi*, 'curds', and *sákthi*, 'thigh', are defective, their forms exchanging with and complementing forms from bases in *án* (*akṣán* etc.): see the bases in *an*, below (431).

g. The stem *pathí*, 'road', is used to make up part of the inflection of *pánthan*: see below, 433.

h. *Króṣtu*, m., 'jackal', lacks the strong cases, for which the corresponding forms of *kroṣtī* are substituted.

### Adjectives.

**344.** Original adjective stems in *i* are few; those in *u* are much more numerous (many derivative verb-stems forming a

participial adjective in *u*). Their inflection is like that of nouns, and has been included in the rules given above; the stem is in general the same in all the three genders. In those weak cases, however — namely, the dat., abl.-gen., and loc. sing., and the gen.-loc. dual — in which neuter nouns differ from masculines in the later language by an inserted *n* (we have seen above that this difference does not exist in the Veda), the neuter adjective is allowed to take either form.

But adjectives in *u* preceded by one consonant sometimes form a derivative feminine stem by adding *ī*: thus, *bahvī*, *urvī*, *pṛthvī*, *vibhvī*, and so on. More rarely, the *u* is prolonged to *ū* to make a feminine-stem, which is then inflected like *vadhū* (below, 365). Some adjectives form their feminine in two of these ways, or even in all the three: thus, *bibhatsū* and *bībhatsū*; *tanū*, *tanū*, and *tanvī*.

345. Roots ending in *i* or *u* (or *ṛ*: 380) regularly add a *t* when used as root-words or as root-finals of compounds; and hence there are no adjectives of the root-class in this declension.

Yet, in the Veda, a few words ending in a short radical *u* are declined as if this were suffixal: thus, *ásmṛtadhru*, *sustū*; and the AV. has *pṛtanājī* (once). Roots in *ū* sometimes also shorten *ū* to *u*: thus, *prabhū*, *vibhū*, etc. (354); *go* (361) becomes *gu* in composition; and *re* perhaps becomes *ri* (362); while roots in *ā* sometimes apparently weaken *ā* to *i* (in *-dhi* from *ṽdhū*).

346. Compound adjectives having nouns of this declension as final member are inflected like original adjectives of the same endings.

### Declension III.

Stems in long vowels: *ā*, *ī*, *ū*.

347. The stems ending in long vowels fall into two well-marked classes or divisions: A. monosyllabic stems — mostly bare roots — and their compounds, with a comparatively small number of others inflected like them; B. derivative feminine stems in  $\text{ॠ } \bar{a}$  and  $\text{ॡ } \bar{i}$ , with a small number in  $\text{ॢ } \bar{u}$  which in the later language have come to be inflected like them. The latter division is by far the larger and more important, since most feminine adjectives, and considerable classes of feminine nouns, ending in  $\text{ॠ } \bar{a}$  or  $\text{ॡ } \bar{i}$ , belong to it.

**A. Root-words, and those inflected like them.**

**348.** The inflection of these stems is by the normal endings throughout, or in the manner of consonant-stems (with  $\text{अम् } am$ , not  $\text{म् } m$ , in the accus. sing.); peculiarities like those of the other vowel-declensions are wanting. The simple words are, as nouns, with few exceptions feminine; as adjectives (rarely), and in adjective compounds, they are alike in masculine and feminine forms. They may, for convenience of description, be divided into the following sub-classes:

1. Root-words, or monosyllables having the aspect of such. Those in  $\bar{a}$  are so rare that it is hardly possible to make up a whole scheme of forms in actual use; those in  $\bar{i}$  and  $\bar{u}$  are more numerous, but still very few.

2. Compounds having such words, or other roots with long final vowels, as last member.

3. Polysyllabic words, of various origin and character, including in the Veda many which later are transferred to other declensions.

4. As an appendix to this class we may most conveniently describe the half-dozen bases, mostly of irregular inflection, ending in diphthongs.

**349. Monosyllabic stems.** Before the endings beginning with vowels, final  $\bar{i}$  is changed to  $i\bar{y}$  and  $\bar{u}$  to  $u\bar{v}$ ; while final  $\bar{a}$  is dropped altogether, except in the strong cases and in the acc. pl., which is like the nominative (according to the grammarians,  $\bar{a}$  is lost here also: no instances of the occurrence of such a form appear to be quotable). Stems in  $\bar{i}$  and  $\bar{u}$  are in the later language allowed to take optionally the fuller endings  $\bar{a}i$ ,  $\bar{a}s$ .  $\bar{a}m$  in the singular (dat., abl.-gen., loc.); but no such forms are ever met with in the Veda (except  $bhiy\bar{a}i$  [?], RV., once). Before  $\bar{a}m$  of gen. pl.,  $n$  may or may not be inserted; in the Veda it is regularly inserted, with a single exception ( $dhiy\bar{a}m$ , once). The vocative is like the nominative in the singular as well as the other numbers; but instances of its occurrence in uncompounded stems are not found in the Veda, and must be extremely rare everywhere. The earlier Vedic dual ending is  $\bar{a}$  instead of  $\bar{a}u$ .

**350.** To the  $\bar{i}$  and  $\bar{u}$ -stems, the rules for monosyllabic accent apply: the accent is thrown forward upon the endings in all the weak cases except the accus. pl., which is like the

nóm. But the  $\bar{a}$ -stems appear (the instances are extremely few) to keep the accent upon the stem throughout.

351. Examples of declension. As models of monosyllabic inflection we may take ज्ञा  $j\acute{a}$ , f., 'progeny'; धी  $dhī$ , f., 'thought'; and भू  $bhū$ , f., 'earth'.

The first of these is rather arbitrarily extended from the four cases which actually occur: of the loc. sing. and gen. etc. du., no Vedic examples of  $\bar{a}$ -stems are found.

## Singular:

N.	ज्ञाम् <i>jās</i>	धीस् <i>dhīs</i>	भूस् <i>bhūs</i>
A.	ज्ञाम् <i>jām</i>	धियाम् <i>dhiyam</i>	भुवम् <i>bhuvam</i>
I.	ज्ञा <i>jā</i>	धिया <i>dhiyā</i>	भुवा <i>bhuvā</i>
D.	ज्ञे <i>jé</i>	धिये, धियै <i>dhiyé, dhiyāi</i>	भुवे, भुवै <i>bhuvé, bhuvāi</i>
Ab. G.	ज्ञस् <i>jās</i>	धियस्, धियास् <i>dhiyās, dhiyās</i>	भुवस्, भुवास् <i>bhuvās, bhuvās</i>
L.	ज्ञि <i>ji</i>	धियि, धियाम् <i>dhiyi, dhiyām</i>	भुवि, भुवाम् <i>bhuvi, bhuvām</i>
V.	ज्ञाम् <i>jās</i>	धीस् <i>dhīs</i>	भूस् <i>bhūs</i>

## Dnal:

N. A. V.	ज्ञौ <i>jāu</i>	धियौ <i>dhiyāu</i>	भुवौ <i>bhuvāu</i>
I. D. Ab.	ज्ञभ्याम् <i>jābhryām</i>	धिभ्याम् <i>dhibhryām</i>	भुभ्याम् <i>bhubhryām</i>
G. L.	ज्ञोस् <i>jós</i>	धियोस् <i>dhiyós</i>	भुवोस् <i>bhuvós</i>

## Plural:

N.	ज्ञाम् <i>jās</i>	धियस् <i>dhiyas</i>	भुवस् <i>bhúvas</i>
A.	ज्ञाम् (ज्ञस् <sup>2</sup> ) <i>jās, jās</i>	धियस् <i>dhiyas</i>	भुवस् <i>bhúvas</i>

I.	ज्ञाभिस् <i>jābhīs</i>	धीभिस् <i>dhibhīs</i>	भूमिस् <i>bhūbhīs</i>
D. Ab.	ज्ञा-यस् <i>jābhyas</i>	धी-यस् <i>dhibhyās</i>	भू-यस् <i>bhūbhyās</i>
G.	ज्ञानाम् (ज्ञाम्?) <i>jānām, jāṃ</i>	धियाम्, धीनाम् <i>dhiyām, dhīnām</i>	भुवाम्, भूनाम् <i>bhuvām, bhūnām</i>
L.	ज्ञासु <i>jāsu</i>	धीषु <i>dhiṣu</i>	भूषु <i>bhūṣu</i>

**352.** Monosyllabic stems in composition. When the nouns above described occur as final member of a compound, or when any root in  $\bar{a}$  or  $\bar{i}$  or  $\bar{u}$  is found in a like position, the inflection of an  $\bar{a}$ -stem is as above. But  $\bar{i}$  and  $\bar{u}$ -stems follow a divided usage: the final vowel before a vowel-ending is either converted into a short vowel and semivowel (*iy* or *uv*, as above) or into a semivowel simply (*y* or *v*). The accent is nowhere thrown forward upon the endings; and therefore, when  $\bar{i}$  and  $\bar{u}$  become *y* and *v*, the resulting syllable is circumflex. Thus:

Singular:			
N. V.		-dhī́s	-bhū́s
A.	-dhī́yam	-dhiyām	-bhū́vam
I.	-dhī́yā	-dhiyā	-bhū́vā
D.	-dhī́ye	-dhiyè	-bhū́ve
Ab. G.	-dhī́yas	-dhiyās	-bhū́vas
L.	-dhī́yi	-dhiyì	-bhū́vi
Dual:			
N. A. V.	-dhī́yāu	-dhiyāu	-bhū́vāu
I. D. Ab.	-dhī́bhyām		-bhū́bhyām
G. L.	-dhī́yos	-dhiyòs	-bhū́vos
Plural:			
N. A. V.	-dhī́yas	-dhiyās	-bhū́vas
I.		-dhī́bbhis	-bhū́bbhis
D. Ab.		-dhī́bbhyas	-bhū́bbhyas
G.	{ -dhī́yām -dhī́nām	-dhiyām	{ -bhū́vām -bhū́nām
L.		-dhī́ṣu	-bhū́ṣu

As to the admissibility of the fuller endings  $\bar{ā}i$ ,  $\bar{ā}s$ , and  $\bar{ā}m$  in the singular (feminine), grammatical authorities are somewhat at variance; but they are never found in the Veda, and have been omitted from the above scheme as probably unreal.

If two consonants precede the final  $\bar{i}$  or  $\bar{u}$ , the dissyllabic forms, with *iy* and *uv*, are regularly written; after one consonant, the usage is varying. The grammarians prescribe *iy* and *uv* when the monosyllabic stem has more

the character of a noun, and *y* and *v* when it is more purely a verbal root with participial value. No such distinction, however, is to be seen in the Veda — where, moreover, the difference of the two forms is only graphic, since the *yā* and *vā* forms and the rest are always to be read as dissyllabic: *iā* or *īā* and *uā* or *ūā*, and so on.

**353.** A few further Vedic irregularities or peculiarities may be briefly noticed.

Of the *ā*-stems, the forms in *ās*, *ām*, *ā* (du.) are sometimes to be read as dissyllables, *aas*, *aam*, *aa*. The dative of the stem used as infinitive is in *āt* (as if *ā* + *e*): thus, *prakhyāt*, *pratimāt*, *parūdāt*.

Irregular transfer of the accent to the ending in compounds is seen in a case or two: thus, *avadyabhiyā* (RV.), *ādhiā* (AV.).

**354.** But compounds of the class above described are not infrequently transferred to other modes of inflection: the *ā* shortened to *a* for a masculine stem, or declined like a stem of the derivative *ā*-class (below, **365**) as feminine; the *ī* and *ū* shortened to *i* and *u*, and inflected as of the second declension.

Thus, compound stems in *-ga*, *-ja*, *-da*, *-stha*, *-bhu*, and others, are found even in the Veda, and become frequent later; and sporadic cases from yet others occur: for example, *çṛtapān*, *vayodhātis* and *ratnadhēbhis*, *dhanasūtis* (all RV.); and, from *ī* and *ū* compounds, *veçaçṛis* (TS.), *āhrayas* (RV.), *gaçaçṛibhis* (RV.), *çtanābhyas* (RV.) and *senānābhyas* (VS.) and *grāmaçṛibhis* (TB.), *supīnā* (AV.), *çitibhrāve* (TS.). Still more numerous are the feminines in *ā* which have lost their root-declension: examples are *prajā* (of which the further compounds in part have root-forms), *svadhā*, *çradhdhā*, *pratimā*, and others.

**355.** Polysyllabic Stems. Stems of this division of more than one syllable are very rare indeed in the later language, and by no means common in the earlier. The Rig-Veda, however, presents a not inconsiderable body of them; and as the class nearly dies out later, by the disuse of its stems or their transfer to other modes of declension, it may be best described on a Vedic basis.

a. Of stems in *ā*, masculines, half-a-dozen occur in the Veda: *pānthā*, *mānthā*, and *çbhukṣā* are otherwise viewed by the later grammar: see below, **433—4**; *uçānā* (nom. pr.) has the anomalous nom. sing. *uçānā* (and loc. as well as dat. *uçāne*); *mahā*, 'great', is found only in accus. sing. and abundantly in composition: *ātā*, 'frame', has only *ātāsu* not derivable from *āta*.

b. Of stems in *ī*, over seventy are found in the Veda, nearly all feminines, and all accented on the final. Half of the feminines are formed from masculines with change of accent: thus, *kalyāṇī* (m. *kalyāṇa*), *puruṣī* (m. *puruṣa*); others show no change of accent: thus, *yamī* (m. *yamā*); others still have no corresponding masculines: thus, *nadī*, *lakṣmī*, *sūrmī*. The masculines are about ten in number: for example, *rathī*, *prāvī*, *starī*, *ahī*, *āpathī*.

c. Of stems in  $\bar{u}$ , the number is smaller: these, too, are nearly all feminines, and all accented on the final. The majority of them are the feminine adjectives in  $\bar{u}$  to masculines in  $\bar{u}$  or  $u$  (above, 344): thus, *caranyū*, *carishnū*, *jighatsū*, *madhū*. A few are nouns in  $\bar{u}$ , with change of accent: thus, *agrū* (*ágru*), *pr̥dākū* (*pr̥dāku*), *svacrū* (*sváçura*); or without change, as *nṛtū*. And a few have no corresponding masculines: thus, *tanū*, *vadhū*, *camū*. The masculines are only two or three; namely, *pr̥cū*, *kṛkadāçū*. *makṣū*(?); and their forms are of the utmost rarity.

356. The mode of declension of these words may be illustrated by the following examples: *rathī*, m., 'charioteer'; *nadī*, f., 'stream'; *tanū*, f., 'body'.

No one of the selected examples occurs in all the forms: forms for which no example at all is quotable are put in brackets. No loc. sing. from any  $\bar{i}$ -stem occurs, to determine what the form would be. The stem *nadī* is selected as example partly in order to emphasize the difference between the earlier language and the later in regard to the words of this division: *nadī* is later the model of derivative inflection.

Singular:

N.	<i>rathīs</i>	<i>nadīs</i>	<i>tanūs</i>
A.	<i>rathīam</i>	<i>nadīam</i>	<i>tanūam</i>
I.	<i>rathīā</i>	<i>nadīā</i>	<i>tanūā</i>
D.	<i>rathīe</i>	<i>nadīe</i>	<i>tanūe</i>
Ab. G.	<i>rathīas</i>	<i>nadīas</i>	<i>tanūas</i>
L.	.....	.....	<i>tanūi</i>
V.	<i>rāthi</i> (?)	<i>nādi</i>	<i>tānu</i>

Dual:

N. A. V.	<i>rathīā</i>	<i>nadīā</i>	<i>tanūā</i>
I. D. Ab.	[ <i>rathībhyām</i> ]	<i>nadībhyām</i>	[ <i>tanūbhyām</i> ]
G. L.	[ <i>rathīos</i> ]	<i>nadīos</i>	<i>tanūos</i>

Plural:

N. A.	<i>rathīas</i>	<i>nadīas</i>	<i>tanūas</i>
I.	[ <i>rathībhis</i> ]	<i>nadībhis</i>	<i>tanūbhis</i>
D. Ab.	[ <i>rathībhyas</i> ]	<i>nadībhyas</i>	<i>tanūbhyas</i>
G.	<i>rathīnām</i>	<i>nadīnām</i>	<i>tanūnām</i>
L.	[ <i>rathīsu</i> ]	<i>nadīsu</i>	<i>tanūsu</i> .

The cases — *nadīam*, *tanūam*, etc. — are written above according to their true phonetic form, almost invariably belonging to them in the Veda: in the written text, of course, the stem-final is made a semivowel, and the resulting syllable is circumflexed: thus, *nadyām*, *tanvām*, etc.; only, as usual, after two consonants the resolved forms *iy* and *uv* are written instead; and also where the combination *yv* would otherwise result: thus, *cakrīyā*, [*agrāvūi*,] and *mitrāyūvas*. The RV. really reads *staryām* etc. twice, and *tanvās* etc. four times; and such contractions are more often made in the AV. The ending  $\bar{a}$  of the nom.-acc.-voc. du. is the equivalent of the later  $\bar{au}$ . The nom. sing. in *s* from  $\bar{i}$ -stems is found in the older language about sixty times, from over thirty stems.

**357.** Irregularities of form, properly so called, are very few in this division: *camū* as loc. sing. (instead of *camvī*) occurs a few times; and there is another doubtful case or two of the same kind; the final *ū* is regarded as *pragṛhya* or uncombinable (138); *tanū* is lengthened to *tanvī* in a passage or two; *-yūvas* is once or twice abbreviated to *-yūs*.

**358.** The process of transfer to the other form of *ī* and *ū*-declension (below, 363 ff.), which has nearly extinguished this category of words in the later language, has its beginnings in the Veda; but in RV. they are excessively scanty: namely, *dūtīdm*, loc. sing., once, and *ṣvaṣruām*, do., once, and *dravitnuā*, instr. sing., with two or three other doubtful cases. In the Atharvan, we find the acc. sing. *kuhūm*, *tanūm*, *vadhūm*; the instr. sing. *palālīdā* and one or two others; the dat. sing. *vadhvāt*, *ṣvaṣruāt*, *agrūvāi*; the abl.-gen. sing. *punarbhūvas*, *prḍākuās*, *ṣvaṣruās*; and the loc. sing. *tanūām* (with anomalous accent). The accusatives plural in *īs* and *ūs* are nowhere met with.

**359.** Adjective compounds from these words are very few; those which occur are declined like the simple stems: thus, *hīraṇyavūṣīs* and *sahāsrastarīs*, *ātaptatanūs* and *sūrvatanūs*, all nom. sing. masculine.

#### Stems ending in diphthongs.

**360.** There are certain monosyllabic stems ending in diphthongs, which are too few and too diverse in inflection to make a declension of, and which may be most appropriately disposed of here, in connection with the stems in *ī* and *ū*, with which they have most affinity. They are:

stems in *āu*: *nāū* and *glāū*;

stems in *āi*: *rāi*;

stems in *o*: *gō* and *dyō* (or *dyū*, *div*).

**361. a.** The stem *nāū*, f., 'ship', is entirely regular, taking the normal endings throughout, and following the rules for monosyllabic accentuation (317) — except that the accus. pl. is said (it does not appear to occur in accented texts) to be like the nom. Thus: *nāūs*, *nāvam*, *nāvā*, *nāvē*, *nāvās*, *nāvi*; *nāvāu*, *nāubhyām*, *nāvós*; *nāvas*, *nāvas*, *nāubhis*, *nāubhyās*, *nāvām*, *nāuśū*.

The stem *glāū*, m., 'ball', is apparently inflected in the same way; but few of its forms have been met with in use.

**b.** The stem *rāi*, f. (or m.), 'wealth', might be better described as *rā* with a union-consonant *y* (258) interposed before vowel endings, and is regularly inflected as such, with normal endings and monosyllabic accent. Thus: *rās*, *rāyam*, *rāyā*, *rāyé*, *rāyās*, *rāyi*; *rāyāu*, *rābhyām*, *rāyós*; *rāyas*, *rāyās*, *rābhis*, *rābhyās*, *rāyām*, *rāśū*. But in the Veda the accus. pl. is either *rāyās* or *rāyas*; for accus. sing. and pl. are also used the briefer forms *rām*

(which alone is of Vedic occurrence) and *rās*; and the gen. sing. is sometimes anomalously accented *rāyas*.

c. The stem *gó*, m. or f., 'bull' or 'cow', is much more irregular. In the strong cases, except accus. sing., it is strengthened to *gāu*, forming (like *nāú*) *gāús*, *gāvāu*, *gāvas*. In accus. sing. and pl. it has (like *rāi*) the brief forms *gām* and *gās*. The abl.-gen. sing. is *gós* (as if from *gu*). The rest is regularly made from *go*, with the normal endings, but with accent always remaining irregularly upon the stem: thus, *gāvā*, *gāve*, *gāvi*; *gāvos*; *gāvām*; *góbhyām*, *góbhis*, *góbhyas*, *gósu*. In the Veda, another form of the gen. pl. is *gónām*; the nom. etc. du. is (as in all other such cases) also *gāvā*; and *gām*, *gós*, and *gās* are not infrequently to be pronounced as dissyllables.

d. The stem *dyó*, f. (but in V. usually m.), 'sky, day', is yet more anomalous, having beside it a simpler stem *dyu*, which becomes *div* before a vowel-ending. The native grammarians treat the two as independent words, but it is more convenient to put them together. The stem *dyó* is inflected precisely like *gó*, as above described. The complete declension is as follows (with forms not actually met with in use bracketed):

	Singular.	Dual.	Plural.
N.	<i>dyāús</i>	} [ <i>dívāu</i> ] <i>dyāvāu</i>	<i>dēvas</i> <i>dyāvās</i>
A.	<i>dīvam</i> <i>dyām</i>		<i>divás</i> , <i>dyūn</i> [ <i>dyās</i> ]
I.	<i>divā</i> [ <i>dyāvā</i> ]	} [ <i>dyābhyām</i> <i>dyóbhyām</i> ]	<i>dyābhis</i> [ <i>dyóbhis</i> ]
D.	<i>divé</i> <i>dyāve</i>		} [ <i>dyābhyas</i> <i>dyóbhyas</i> ]
Ab.	<i>divás</i> <i>dyós</i>		
G.	<i>divás</i> <i>dyós</i>	} [ <i>divós</i> <i>dyāvos</i> ]	[ <i>divām</i> <i>dyāvām</i> ]
L.	<i>diví</i> <i>dyāvi</i>		[ <i>dyāṣu</i> <i>dyóṣu</i> ]

The dat. sing. *dyāve* is not found in the early language. Both *dēvas* and *divás* occur as accus. pl. in V. As nom. etc. du., *dyāvā* is, as usual, the regular Vedic form: once occurs *dyāvī* (du.), as if a neuter form; and *dyāús* is found once used as ablative. The cases *dyāús*, *dyām*, and *dyūn* (once) are read in V. sometimes as dissyllables; and the first as accented vocative then becomes *dyāús* (i. e. *dāús*: see 314).

e. Adjective compounds having diphthongal stems as final member are not numerous. For *go* we have *gu* in such a position in *águ*, *sugú*, and a few others; and, correspondingly, *rāt* seems to be reduced to *ri* in *bṛhádṛaye* and *rāhádṛayas* (RV.). In *revánt* (unless this is for *rayivant*), *rāt* becomes *ré*. In a few compounds, *dyu* or *dyo* is anomalously treated as first member: thus, *dyāúsamṛita* (AV.), *dyāurdū* (K.), *dyāurlokā* (ÇB.).

### B. Derivative stems in *ā*, *i*, *ū*.

362. To this division belong all the *ā* and *i*-stems

which have not been specified above as belonging to the other or root-word division; and also, in the later language, most of the  $\bar{i}$  and  $\bar{u}$ -stems of the other division, by transfer to a more predominant mode of inflection. Thus:

a. The great mass of derivative feminine  $\bar{a}$ -stems, substantive and adjective.

The inflection of these stems has maintained itself with little change through the whole history of the language, being almost precisely the same in the Vedas as later.

b. The great mass of derivative feminine  $\bar{i}$ -stems.

This class is without exception in the later language. In the earlier, it suffers the exception pointed out above (355 b): that feminines made with change of accent follow this mode of declension only when the accent is not on the  $\acute{i}$ : thus, *úviṣṭī*, *páruṣṇī*, *páliknī*, *róhiṇī*.

The  $\bar{i}$ -stems of this division in general are regarded as made by contraction of an earlier ending in  $y\bar{a}$ . Their inflection has become in the later language somewhat mixed with that of the other division, and so far different from the Vedic inflection: see below, 364, end.

Very few derivative stems in  $\bar{i}$  are recognized by the grammarians as declined like the root-division; the Vedic words of that class are, if retained in use, transferred to this mode of inflection.

A very small number of masculine  $\bar{i}$ -stems (half-a-dozen) are in the Veda declined as of the derivative division: they are a few rare proper names, *mátalī* etc.; and *ráṣṭrī* and *sirī* (only one case each).

c. The  $\bar{u}$ -stems are few in number, and are transfers from the other division, assimilated in inflection to the great class of derivative  $\bar{i}$ -stems (except that they retain the ending *s* of the nom. sing.).

**363. Endings.** The points of distinction between this and the other division are as follows:

In nom. sing. the usual *s*-ending is wanting: except in the  $\bar{u}$ -stems and a very few  $\bar{i}$ -stems — namely, *lakṣmī*, *tarī*, *tantrī* — which have preserved the ending of the other division.

The accus. sing. and pl. add simply *m* and *s* respectively.

The dat., abl.-gen., and loc. sing. take always the fuller endings  $\bar{a}i$ ,  $\bar{a}s$ ,  $\bar{a}m$ ; and these are separated from the final of the  $\bar{u}$ -stems by an interposed *y*.

Before the endings  $\bar{a}$  of instr. sing. and *os* of gen.-loc. du., the final of  $\bar{u}$ -stems is treated as if changed to *e*; but in the Veda, the instr. ending  $\bar{a}$  very often (in nearly half the occurrences) blends with the final to  $\bar{a}$ . The  $y\bar{a}$  of  $\bar{i}$ -stems is in a few Vedic examples contracted to  $\bar{i}$ , and even to *i*. A loc. sing. in  $\bar{i}$  occurs a few times.

In all the weakest cases above mentioned, the accent of an ī or ū-stem having acute final is thrown forward upon the ending. In the remaining case of the same class, the gen. pl., a *n* is always interposed between stem and ending, and the accent remains upon the former (in RV., however, it is usually thrown forward upon the ending, as in *i* and *u*-stems).

In voc. sing., final ā becomes *e*; final ī and ū are shortened.

In nom.-acc.-voc. du. and nom. pl. appears in ī (and ū)-stems a marked difference between the earlier and later language, the latter borrowing the forms of the other division. The du. ending *āu* is unknown in RV., and very rare in AV.; the Vedic ending is ī (a corresponding dual of ū-stems does not occur). The regular later pl. ending *as* has only a doubtful example or two in RV., and a very small number in AV.; the case there (and it is one of very frequent occurrence) adds *s* simply; and though *yas*-forms occur in the Brāhmanas, along with *īs*-forms, both are used indifferently as nom. and accus. Of ā-stems, the du. nom. etc. ends in *e*, both earlier and later; in pl., of course, *s*-forms are indistinguishable from *as*-forms. The RV. has a few examples of *āsas* for *ās*.

The remaining cases call for no remark.

364. Examples of declension. As models of the inflection of derivative stems ending in long vowels, we may take सेना *sénā*, f., 'army'; कन्या *kanyā*, f., 'girl'; देवी *devī*, f., 'goddess'; वधू *vadhū*, f., 'woman'.

Singular:

N.	सेना <i>sénā</i>	कन्या <i>kanyā</i>	देवी <i>devī</i>	वधूम् <i>vadhūm</i>
A.	सेनाम् <i>sénām</i>	कन्याम् <i>kanyām</i>	देवीम् <i>devīm</i>	वधुम् <i>vadhūm</i>
I.	सेनया <i>sénayā</i>	कन्यया <i>kanyāyā</i>	देव्या <i>devyā</i>	वध्वा <i>vadhvā</i>
D.	सेनायै <i>sénāyāi</i>	कन्यायै <i>kanyāyāi</i>	देव्यै <i>devyāi</i>	वध्वै <i>vadhvāi</i>
Ab. G.	सेनायाम् <i>sénāyās</i>	कन्यायाम् <i>kanyāyās</i>	देव्याम् <i>devyās</i>	वध्वाम् <i>vadhvās</i>
L.	सेनायाम् <i>sénāyām</i>	कन्यायाम् <i>kanyāyām</i>	देव्याम् <i>devyām</i>	वध्वाम् <i>vadhvām</i>
V.	सेने <i>séne</i>	कन्ये <i>kanye</i>	देवि <i>devi</i>	वधु <i>vādhu</i>

Dual :				
N. A. V.	सेने <i>séne</i>	कन्ये <i>kanyè</i>	देव्यौ <i>devyāu</i>	वध्वौ <i>vadhvāu</i>
I. D. Ab.	सेनाभ्याम् <i>sénābhyām</i>	कन्याभ्याम् <i>kanyābhyām</i>	देवीभ्याम् <i>devībhyām</i>	वधूभ्याम् <i>vadhūbhyām</i>
G. L.	सेनयोस् <i>sénayos</i>	कन्ययोस् <i>kanyāyos</i>	देव्योस् <i>devyós</i>	वध्वोस् <i>vadhvós</i>
Plural :				
N. V.	सेनास् <i>sénās</i>	कन्यास् <i>kanyās</i>	देव्यस् <i>devyās</i>	वध्वस् <i>vadhvās</i>
A.	सेनास् <i>sénās</i>	कन्यास् <i>kanyās</i>	देवीस् <i>devīs</i>	वधूस् <i>vadhūs</i>
I.	सेनाभिस् <i>sénābhis</i>	कन्याभिस् <i>kanyābhis</i>	देवीभिस् <i>devībhis</i>	वधूभिस् <i>vadhūbhis</i>
D. Ab.	सेनाभ्यस् <i>sénābhyas</i>	कन्याभ्यस् <i>kanyābhyas</i>	देवीभ्यस् <i>devībhyas</i>	वधूभ्यस् <i>vadhūbhyas</i>
G.	सेनानाम् <i>sénānām</i>	कन्यानाम् <i>kanyānām</i>	देवीनाम् <i>devīnām</i>	वधूनाम् <i>vadhūnām</i>
L.	सेनासु <i>sénāsu</i>	कन्यासु <i>kanyāsu</i>	देवीषु <i>devīṣu</i>	वधूषु <i>vadhūṣu</i>

In the Veda, *vadhū* is a stem belonging to the other division (like *tanū*, above, 356).

### 365. Examples of Vedic forms are :

1. *ā*-stems: instr. sing. *manīṣā* (this simpler form is especially common from stems in *tā* and *iā*); nom. pl. *vaçāśas* (about twenty examples: Lanman, p. 362); accus. pl. *araṅgamāśas* (a case or two). Half the *bhyas*-cases are to be read as *bhis*; the *ām* of gen. pl. is a few times to be resolved into *aam*; and the *ā* and *ām* of nom. and accus. sing. are, very rarely, to be treated in the same manner.

2. *ī*-stems: instr. sing. *çāmi*, *çāmi*; loc. *gaurī*; nom. etc. du. *devī*; nom. pl. *devīs*; gen. pl. *bahvīnām*. The final of the stem is to be read as a vowel (not *y*) frequently, but not in the majority of instances: thus, *deviā*, *deviās*, *deviām*, *ródasios*.

The sporadic instances of transfer between this division and the preceding have been already sufficiently noticed.

3. In the language of the Brāhmaṇas, the abl.-gen. sing. ending *ās* is almost unknown, and instead of it is used the dat. ending *āi*. The assumption of the same substitution is suggested, but not required, in a few RV.

passages; and it is necessary once in AV. (iv. 5. 6): *svāpantv asyāi jñātāyaḥ*, 'let her relatives sleep'. Brāhmaṇa examples are: *tāsyāi diçāḥ* (TS.), 'from that direction'; *striyāi payaḥ* (AB.), 'woman's milk'; *dhenvāt vā etād rétaḥ* (TB.), 'that, forsooth, is the seed of the cow';  *jyāyasī yājyāyāi* (AB.), 'superior to the *yājyā*'.

**366.** The noun *strī*, f., 'woman' (probably contracted from *sūtrī*, 'gene-ratress'), follows a mixed declension: thus, *strī*, *strīyam* or *strīm*, *striyā*, *striyāt*, *striyās*, *striyām*, *strī*; *strīyāu*, *strībhyām*, *striyós*; *strīyas*, *strīyas* or *strīs*, *strībhts*, *strībhyás*, *strīñām*, *strīśú* (but the accusatives *strīm* and *strīs* are not found in the older language, and the voc. *strī* is not quotable). The accentuation is that of a root-word; the forms (conspicuously the nom. sing.) are those of the other division.

### Adjectives.

**367. a.** The occurrence of original adjectives in long final vowels, and of compounds having as final member a stem of the first division, has been sufficiently treated above, so far as masculine and feminine forms are concerned. To form a neuter stem in composition, the rule of the later language is that the final long vowel be shortened; and the stem so made is to be inflected like an adjective in *i* or *u* (**339, 341**).

Such neuter forms are very rare, and in the older language almost unknown. Of neuters from  $\bar{i}$ -stems have been noted in the Veda only *hariçrīyam*, acc. sing. (a masc. form), and *suādhtās*, gen. sing. (same as masc. and fem.); from  $\bar{u}$ -stems, only a few examples, and from stem-forms which might be masc. and fem. also: thus, *vibhú*, *subhú*, etc. (nom.-acc. sing.: compare **354**); *supū* and *mayobhúvā*, instr. sing.; and *mayobhú*, acc. pl. (compare *purú*: **342**); from  $\bar{a}$ -stems occur only half-a-dozen examples of a nom. sing. in *ās*, like the masc. and fem. form.

**b.** Compounds having nouns of the second division as final member are common only from derivatives in  $\bar{a}$ ; and these shorten the final to *a* in both masculine and neuter: thus, from *a*, 'not', and *prajā*, 'progeny', come the masc. and neut. stem *aprajā*, fem. *aprajā*, 'childless'. Such compounds with nouns in  $\bar{i}$  and  $\bar{u}$  are said to be inflected in masc. and fem. like the simple words (only with *in* and *un* in acc. pl. masc.); but the examples given by the grammarians are fictitious. The stem *strī* is directed to be shortened to *-stri* for all genders.

**368.** It is convenient to give a complete paradigm, for all genders, of an adjective-stem in  $\bar{a}$ . We take for the purpose *पाप pāpá*, 'evil', of which the feminine is usually made in  $\bar{a}$  in the later language, but in  $\bar{i}$  in the older.

## Singular :

### Declension IV.

#### Stems in *r* (or *ar*).

369. This declension is a comparatively limited one, being almost entirely composed of derivative nouns formed with the suffix तृ *tr* (or तर् *tar*), which makes masculine *nomina agentis* (used also participially), and a few nouns of relationship.

But it includes also a few nouns of relationship not made with that suffix: namely *devr̥*, m., *svāsr̥* and *nānāndr̥*, f.; and, besides these, *nr̥*, m., *st̥r̥* (in V.), m., *usr̥* (in V.), f., *savyasthr̥*, m., and the feminine numerals *tisr̥* and *catasr̥* (for which, see chap. VI.). The feminines in *tr̥* are only *mātr̥*, *duhitr̥*, and *yātr̥*.

The inflection of these stems is quite closely analogous with that of stems in *i* and *u* (second declension); its peculiarity, as compared with them, consists mainly in the treatment of the stem itself, which has a double form, fuller in the strong cases, briefer in the weak ones.

370. Forms of the Stem. In the weak cases (excepting the loc. sing.) the stem-final is *r̥*, which in the weakest cases, or before a vowel-ending, is changed regularly to *r* (129). But as regards the strong cases, the stems of this declension fall into two classes: in one of them — which is very much the larger, containing all the *nomina agentis*, and also the nouns of relationship *nāptr̥* and *svāsr̥*, and the irregular words *st̥r̥* and *savyasthr̥* — the *r̥* is vriddhied, or becomes *ār̥*; in the other, containing most of the nouns of relationship, with *nr̥* and *usr̥*, the *r̥* is gunated, or changed to *ar*. In both classes, the loc. sing. has *ar* as stem-final.

371. Endings. These are in general the normal, but with the following exceptions:

The nom. sing. (masc. and fem.) ends always in *ā* (for original *ars*).

The voc. sing. ends in *ar*.

The accus. sing. adds *am* to the (strengthened) stem; the accus. pl. has (like *i* and *u*-stems) *n* as masc. ending and *s* as fem. ending, with the *r̥* lengthened before them.

The abl.-gen. sing. changes *r* to *ur* (or *us*: 169, end).

The gen. pl. (as in *i* and *u*-stems) inserts *n* before *ām*, and lengthens the stem-final before it. But the *r* of *nṛ* may also remain short.

The above are the rules of the later language. The older presents certain deviations from them. Thus:

The ending in nom. etc. du. is (as universally in the Veda) regularly *ā* instead of *āu* (only ten *āu*-forms in RV.).

The *i* of loc. sing. is lengthened to *ī* in a few words: thus, *kartāri*.

In the gen. pl., the RV. has once *svāsram*, without inserted *n*; and *nārām* instead of *nṛnām* is frequent.

Other irregularities of *nṛ* are the sing. dat. *nāre*, gen. *nāras*, and loc. *nāri*. The Veda writes always *nṛnām* in gen. pl., but its *r* is in a majority of cases metrically long.

The stem *usṛ*, f., 'dawn', has the voc. sing. *uṣar*, the gen. sing. *usrās*; and the accus. pl. also *usrās*, and loc. sing. *usrām* (which is metrically trisyllabic: *usṛām*), as if in analogy with *ī* and *ū*-stems. Once occurs *usrī* in loc. sing., but it is to be read as if the regular trisyllabic form, *uṣāri* (for the exchange of *s* and *ṣ*, see 181 a).

From *stṛ* come only *tāras* (apparently) and *stṛbhis*.

In the gen.-loc. du., the *r* is almost always to be read as a separate syllable, *r*, before the ending *os*: thus, *pitṛós*, etc. On the contrary, *nānāndari* is once to be read *nānāndri*.

For neuter forms, see below, 378.

372. Accent. The accentuation follows closely the rules for *i* and *u*-stems: if on the final of the stem, it continues, as acute, on the corresponding syllable throughout, except in the gen. pl., where it may be (and in the Veda always is) thrown forward upon the ending; where, in the weakest cases, *ṛ* becomes *r*, the ending has the accent. The two monosyllabic stems, *nṛ* and *stṛ*, do not show the monosyllabic accent: thus (besides the forms already given above), *nṛbhis*, *nṛṣu*.

373. Examples of declension. As models of this mode of inflection, we may take from the first class (with *आर्* *ār* in the strong forms) the stems *दात्* *dātṛ*, m., 'giver', and *स्वसृ* *svásr*, f., 'sister'; from the second class (with *अर्* *ar* in the strong forms) the stem *पितृ* *pitṛ*, m., 'father'.

Singular:

N.	दाता <i>dātā</i>	स्वसा <i>svāsā</i>	पिता <i>pitā</i>
A.	दातारम् <i>dātāram</i>	स्वसारम् <i>svāsāram</i>	पितरम् <i>pitāram</i>

I.	दात्रा <i>dātrā</i>	स्वस्रा <i>svāsrā</i>	पित्रा <i>pitrā</i>
D.	दात्रे <i>dātré</i>	स्वस्रे <i>svāstre</i>	पित्रे <i>pitré</i>
Ab. G.	दातुर <i>dātúr</i>	स्वसुर <i>svāsúr</i>	पितुर <i>pitúr</i>
L.	दातरि <i>dātári</i>	स्वसरि <i>svāsari</i>	पितरि <i>pitári</i>
V.	दातर <i>dātar</i>	स्वसर <i>svāsar</i>	पितर <i>pitár</i>

## Dual :

N. A. V.	दातारौ <i>dātārāu</i>	स्वसारौ <i>svāsārāu</i>	पितारौ <i>pitārāu</i>
I. D. Ab.	दातृभ्याम् <i>dātṛbhyām</i>	स्वसृभ्याम् <i>svāsṛbhyām</i>	पितृभ्याम् <i>pitṛbhyām</i>
G. L.	दात्रोस् <i>dātrós</i>	स्वस्रोस् <i>svāsrós</i>	पित्रोस् <i>pitros</i>

## Plural :

N. V.	दातारस् <i>dātāras</i>	स्वमारस् <i>svāsāras</i>	पितरस् <i>pitāras</i>
A.	दातृन् <i>dātṛñ</i>	स्वसृन् <i>svāsṛñ</i>	पितृन् <i>pitṛñ</i>
I.	दातृभिस् <i>dātṛbhis</i>	स्वसृभिस् <i>svāsṛbhis</i>	पितृभिस् <i>pitṛbhis</i>
D. Ab.	दातृभ्यस् <i>dātṛbhyas</i>	स्वसृभ्यस् <i>svāsṛbhyas</i>	पितृभ्यस् <i>pitṛbhyas</i>
G.	दातृणाम् <i>dātṛṇām</i>	स्वसृणाम् <i>svāsṛṇām</i>	पितृणाम् <i>pitṛṇām</i>
L.	दातृषु <i>dātṛṣu</i>	स्वसृषु <i>svāsṛṣu</i>	पितृषु <i>pitṛṣu</i>

The feminine stem मातृ *mātṛ*, 'mother', is inflected precisely like पितृ *pitṛ*, excepting that its accusative plural is मातृस् *mātṛs*.

The peculiar Vedic forms have been sufficiently instanced above; the only ones of other than sporadic occurrence being the nom. etc. du. *dātārā*, *svāsūrā*, *pitārū*, and the gen. pl. of *ṛ*, *narām*.

**374.** The stem *kroṣṭṛ*, m., 'jackal' (lit'ly 'howler'), substitutes in the middle cases the corresponding forms of *kroṣṭu*.

**375.** Neuter forms. The grammarians prescribe a complete neuter declension also for bases in *ṭṛ*, precisely accordant with that of *vāri* or *mādhu* (above, **339**, **341**). Thus, for example :

	Sing.	Du.	Plur.
N. A.	<i>dhātṛ</i>	<i>dhātṛñi</i>	<i>dhātṛṇi</i>
I.	<i>dhātṛṇā</i>	<i>dhātṛbhyām</i>	<i>dhātṛbhis</i>
G.	<i>dhātṛṇas</i>	<i>dhātṛṇos</i>	<i>dhātṛṇām</i>
V.	<i>dhātṛ</i> , <i>dhātar</i>	<i>dhātṛṇi</i>	<i>dhātṛṇi</i> .

The weakest cases, however (as of *i* and *u*-stems used adjectively: **344**), are allowed also to be formed like the corresponding masculine cases: thus, *dhātṛā* etc.

No such neuter forms chance to occur in the Veda, but they begin to appear in the Brāhmaṇas, under influence of the common tendency (compare Germ. *Retter*, *Retterin*; Fr. *menteur*, *menteuse*) to give the *nomen agentis* a more adjective character, making it correspond in gender with the noun which it (appositively) qualifies. Thus, we have in TB. *bhartṛ* and *janayitṛ*, qualifying *antārikṣam*; and *bhartṛṇi* and *janayitṛṇi*, qualifying *nākṣatrāṇi*; as, in M., *grahitṛṇi*, qualifying *indriyāṇi*.

When a feminine noun is to be qualified in like manner, the usual feminine derivative in *ī* is employed: thus, in TB., *bhartryās* and *bhartryāū*, *janayitryās* and *janayitryāū*, qualifying *āpah* and *ahorātré*; and such instances are not uncommon.

The RV. shows the same tendency very curiously once in the accus. pl. *mātṛṇ*, instead of *mātṛs*, in apposition with masculine nouns (RV. x. 35.2).

Other neuter forms in RV. are *sthātūr*, gen. sing., *dhmātūri*, loc. sing.; and for the nom. sing., instead of *-ṭṛ*, a few more or less doubtful cases, *sthātar*, *sthātūr*, *dhartūri* (Lanman, p. 422).

### Adjectives.

**376. a.** There are no original adjectives of this declension: for the quasi-adjectival character of the nouns composing it, see above (**378**). The feminine stem is made by the suffix *ī*: thus, *dātrī*, *dhātṛī*.

**b.** Roots ending in *ṛ* (like those in *i* and *u*: **345**) add a *t* to make a declinable stem, when occurring as final member of a compound: thus, *karmakṛt* ( $\sqrt{kṛ}$ ), *vajrabhṛt* ( $\sqrt{bhṛ}$ ), *balihṛt* ( $\sqrt{hṛ}$ ). From some *ṛ*-roots, also, are made stems in *ir* and *ur*: see below, **383 a, b**.

c. Nouns in *r* as finals of adjective compounds are inflected in the same manner as when simple, in the masculine and feminine; in the neuter, they would doubtless have the peculiar neuter endings in nom.-acc.-voc. of all numbers.

### Declension V.

#### Stems ending in Consonants.

377. All stems ending in consonants may properly be classed together, as forming a single comprehensive declension; since, though some of them exhibit peculiarities of inflection, these have to do almost exclusively with the stem itself, and not with the declensional endings.

378. In this declension, masculines and feminines of the same final are inflected precisely alike; and neuters are peculiar (as usually in the other declensions) only in the nom.-acc.-voc. of all numbers.

The majority of consonantal stems, however, are not inflected in the feminine, but form a special feminine derivative stem in  $\tilde{\xi} \bar{i}$  (never in  $\text{ऋ} \bar{a}$ ), by adding that ending to the weak form of the masculine.

Exceptions are in general the stems of divisions A and B — namely, the radical stems etc., and those in *as* and *is* and *us*. For special cases, see below.

379. Variations, as between stronger and weaker forms, are very general among consonantal stems: either of two degrees (strong and weak), or of three (strong, middle, and weakest): see above, 311.

The peculiar neuter forms, according to the usual rule (311), are made in the plural from the strong stem, in singular and dual from the weak — or, when the gradation is threefold, in singular from the middle stem, in dual from the weakest.

As in the case of stems ending in short vowels (*āsyāni*, *vāriṇi*, *mādūhīni*, *dātṛiṇi*, etc.), a nasal sometimes appears in the

special neuter plural cases which is found nowhere else in inflection. Thus, from the stems in *as*, *is*, *us*, the nom. etc. pl. in *-āṅsi*, *-īṅsi*, *-ūṅsi* are very common at every period. According to the grammarians, the radical stems etc. (division A) are treated in the same way; but examples of such neuters are of excessive rarity in the older language; no Vedic text offers one, and in the Brāhmanas have been noted only *-hanti* (AB. vii. 2), *-vṛnti* (PB. xvi. 2. 7 et al.), and *-bhāñji* (KB. xxvii. 7): it may be questioned whether they are not late analogical formations.

**380.** The endings are throughout those given above (310) as the "normal".

By the general law as to finals (150), the *s* of the nom. sing. masc. and fem. is always lost; and irregularities of treatment of the final of the stem in this case are not infrequent.

The gen. and abl. sing. are never distinguished in form from one another — nor are, by ending, the nom. and accus. pl.: but these sometimes differ in stem-form, or in accent, or in both.

**381.** Change in the place of the accent is limited to monosyllabic stems and the participles in *ant* (accented on the final). For details, see below, under divisions A and E.

A few of the compounds of the root *añc* or *ac* show an irregular shift of accent in the oldest language: see below, 410.

**382.** For convenience and clearness of presentation, it will be well to separate from the general mass of consonantal stems certain special classes which show kindred peculiarities of inflection, and may be best described together. Thus:

- B. Derivative stems in *as*, *is*, *us*;
- C. Derivative stems in *an* (*an*, *man*, *van*);
- D. Derivative stems in *in* (*in*, *min*, *vin*);
- E. Derivative stems in *ant* (*ant*, *mant*, *vant*);
- F. Perfect active participles in *vāñs*;
- G. Comparatives in *yas*.

There remain, then, to constitute division A, especially radical stems, or those identical in form with roots, together with a comparatively small number of others which are inflected like these.

They will be taken up in the order thus indicated.

### A. Root-stems, and those inflected like them.

383. The stems of this division may be classified as follows:

a. Root-stems, having in them no demonstrable element added to a root: thus, *īc*, 'verse'; *gīr*, 'song'; *pād*, 'foot'; *diś*, 'direction'; *māh* (V.), 'great'.

Such stems, however, are not always precisely identical in form with the root: thus, *vāc* from *√vac*, *śrāj* from *√śrj*, *mūṣ* from *√muṣ*, *vriṣ* from *√raṣc* (?), *ūś* from *√vas* 'shine'; — and from roots in final *ṛ* come stems in *ir* and *ur*: thus, *gīr*, *ā-ṛīr*, *stīr*; *jūr*, *tūr*, *dhūr*, *pūr*, *mūr*, *stūr*; and *psūr* from *√psar*.

With these may be ranked the stems with reduplicated root, as *cikīṭ*, *yaviyūdh*, *vānīvan*, *sasyād*.

Words of this division in uncompounded use are tolerably frequent in the older language: thus, in RV. are found more than a hundred of them; in AV., about sixty; but in the classical Sanskrit the power of using any root at will in this way is lost, and the examples are comparatively few. In all periods, however, the adjective use as final of a compound is very common (see below, 401).

b. Stems made by the addition of *t* to a final short vowel of a root.

No proper root-stem ends in a short vowel, although there are (above, 354) examples of transfer of such to vowel-declensions; but *i* or *u* or *ṛ* adds a *t* to make a declinable form: thus, *-jīt*, *-ṛūt*, *-kṛīt*. Roots in *r*, however, as has just been seen, also make stems in *ir* or *ur*.

As regards the frequency and use of these words, the same is true as was stated above respecting root-stems. The Veda offers examples of nearly thirty such formations, a few of them (*mīt*, *rīt*, *stūt*, *hrūt*, *vṛīt*, and *dyūt* if this is taken from *dyu*) in independent use. Of roots in *r*, *kr*, *dhṛ*, *dhvr*, *bhr*, *vṛ*, *sr*, *spr*, *hṛ*, *hvr* add the *t*. The roots *gū* (or *gam*) and *han* also make *-gūt* and *-hāt* by addition of the *t* to an abbreviated form in *a* (thus, *adhvagūt*, *dyugāt*, *navagāt*, and *sanhāt*).

As to the infinitive use of various cases of the root-noun in these two forms, see chap. XIII.

c. Monosyllabic (also apparently reduplicated) stems not certainly connectible with any verbal root in the language, but having the aspect of root-stems, as containing no traceable suffix: thus, *vāc*, 'skin'; *pāth*, 'road'; *hṛd*, 'heart'; *āp*, 'water'; *ās*, 'mouth'; *kakūbh* and *kakūd*, 'summit'.

Thirty or forty such words are found in the older language, and some of them continue in later use, while others have been transferred to other modes of declension or have become extinct.

d. Stems more or less clearly derivative, but made with suffixes of rare or even isolated occurrence. Thus:

1. derivatives (V.) from prepositions with the suffix *vat*: *arvāvát*, *āvát*, *udvát*, *nivát*, *parāvát*, *pravát*, *sarivát*;
2. derivatives (V.) in *tūt* (perhaps abbreviated from *tūti*), in a few isolated forms: thus, *uparātūt*, *devātūt*, *vṛkātūt*, *satyātūt*, *sarvātūt*;
3. other derivatives in *t*, preceded by various vowels: thus, *vehát*, *vahát*, *sravát*, *saçcát*, *vāghat*; *nāpūt*; *tađít*, *divít*, *yošt*, *rohít*, *sarít*, *harít*; *marít*; *yákrít*, *çákrít*; and the numerals for '30, 40, 50', *trinçát* etc. (475);
  - 4. stems in *ad*: thus, *dṛṣád*, *dhṛṣád*, *bhasád*, *vanád*, *çarád*;
  - 5. stems in *j*, preceded by various vowels: thus, *trṣṇáj*, *dhṛṣáj*, *sanáj*; *uçj*, *vañj*, *bhurj*, *niñj* (?); *ásrj*;
  - 6. a few stems ending in a sibilant apparently formative: thus, *jñás*, *-dās*, *bhás*, *más*, *bhít*;
  - 7. a remnant of unclassifiable cases, such as *viṣṭáp*, *vípāç*, *káprith*, *çurúdh*, *iṣṭdh*, *prkṣúdh*, *raghát* (?).

**384. Gender.** The root-stems are regularly feminine as *nomen actionis*, and masculine as *nomen agentis* (which is probably only a substantive use of their adjective value: below, 400). But the feminine noun, without changing its gender, is often also used concretely: e. g., *druh* f. ( $\sqrt{druh}$ , 'be inimical') means 'harming, enmity', and also 'harmer, hater, enemy' — thus bordering on the masculine value. And some of the feminines have a completely concrete meaning. Through the whole division, the masculines are much less numerous than the feminines, and the neuters rarest of all.

The independent neuter stems are *hṛd* (also *-hūrd*), *dám*, *vár*, *svár*, *más* 'flesh', *ás* 'mouth', *bhás*, *dós*, and the indeclinables *çám* and *yós*: also the derivatives *yákrít*, *çákrít*, *ásrj*.

**385. Strong and weak stem-forms.** The distinction of these two classes of forms is usually made either by the presence or absence of a nasal, or by a difference in the quantity of the stem-vowel, as long or short; less often, by other methods.

**386. A nasal appears in the strong cases of the following words:**

a. Compounds having as final member the root *ac* or *añc*: see below, 407 ff.; — b. The stem *yuj*, sometimes (V.): thus, nom. sing. *yún* (for *yúnk*), accus. *yúnjam*, du. *yúnjū* (but also *yújam* and *yújū*); — c. The stem *-dṛç*, as final of a compound (V.); but only in the nom. sing. masc., and not always: thus, *anyádṛñ*, *ídṛñ*, *kídṛñ*, *sadṛñ* and *pratisadṛñ*: but also *ídṛk*, *tādṛk*, *svardṛk*, etc.; — d. For *path* and *pums*, which substitute more extended stems, and for *dant*, see below, 394—6.

**387. The vowel *a* is lengthened in strong cases as follows:**

a. Of the roots *vac*, *sac*, *sap*, *nabh*, *cas*, in a few instances (V.), at the end of compounds; — b. Of the roots *vah* and *sah*, but irregularly: see below, 403—5; — c. Of *ap* 'water' (see 393); also in its compound *rītyāp*; — d. Of *pad*, 'foot': in the compounds of this word, in the later language, the same lengthening is made in the middle cases also; and in RV. and AV. the nom. sing. neut. is both *-pat* and *-pāt*, while *-pādbhis* and *-pātsu* occur in the Brāhmaṇas; — e. Of *nas*, 'nose'; — f. Sporadic cases (V.) are: *yāj* (?), voc. sing.; *pāthās* and *-rāpas*, accus. pl.; *vānīvānas*, nom. pl. The strengthened forms *bhāj* and *rāj* are constant, through all classes of cases.

388. Other modes of differentiation, by elision of *a* or contraction of the syllable containing it, appear in a few stems:

a. In *-han*: see below, 402; — b. In *kṣam* (V.), along with prolongation of *a*: thus, *kṣāmā* du., *kṣāmas* pl.; *kṣamā* instr. sing., *kṣāmi* loc. sing., *kṣmās* abl. sing.; — c. In *dvār*, contracted (V.) to *dur* in weak cases (but with some confusion of the two classes); — d. In *svār*, which becomes (RV.) *sūr* in weak cases: later it is indeclinable.

389. The endings are as stated above (380).

Respecting their combination with the final of the stem, as well as the treatment of the latter when it occurs at the end of the word, the rules of euphonic combination (chap. III.) are to be consulted; they require much more constant and various application here than anywhere else in declension.

Attention may be called to a few exceptional cases of combination (V.): *mādbhis* and *mādbhyās* from *mās* 'month'; the wholly anomalous *padbhis* (RV. and VS.: AV. has always *padbhis*) from *pād*; and *sarāt* and *sarādbhyas* corresponding to a nom. pl. *sarāghas* (instead of *sarāhas*: 222). *Dān* is apparently for *dām*, by 143, end. *Agnīdh* is abbreviated from *agni-īdh*.

According to the grammarians, neuter stems, unless they end in a nasal or a semivowel, take in nom.-acc.-voc. pl. a strengthening nasal before the final consonant. But no such cases from neuter noun-stems appear ever to have been met with in use; and as regards adjective stems ending in a root, see above, 379.

390. Monosyllabic stems have the regular accent of such, throwing the tone forward upon the endings in the weak cases.

But the accusative plural has its normal accentuation as a weak case, upon the ending, in only a minority (hardly more than a third) of the stems: namely in *datās*, *pathās*, *padās*, *nidās*, *apās*, *uśās*, *jñāsās*, *pumsās*, *māsās*, *mahās*; and sometimes in *vācās*, *srucās*, *hrutās*, *sridhās*, *kṣapās*, *vipās*, *durās*, *iśās*, *diviśās*, *druhās* (beside *vācas* etc.).

Exceptional instances, in which a weak case has the tone on the stem, occur as follows: *sādā*, *nādbhyas*, *tānā* (also *tanā*) and *tāne*, *rāne* and *rānsu*, *vānsu*, *svāni*, *vīpas*, *kṣāmi*, *sūrū* and *sūras* (but *sūrē*), *ānhas*, and *vānas* and *bīhas* (in *vānaspāti*, *bīhaspāti*). On the other hand, a strong case is accented

on the ending in *mahás*, nom. pl., and *kāsám* (AV.: perhaps a false reading). And *presá*, instr. sing., is accented as if *prés* were a simple stem, instead of *pra-s*. *Vimṛdhāḥ* is of doubtful character. For the sometimes anomalous accentuation of stems in *ac* or *añc*, see 410.

391. Examples of inflection. As an example of normal monosyllabic inflection, we may take the stem वाच् *vác*, f., 'voice' (from  $\sqrt{\text{vac}}$  *vac*, with constant prolongation); of inflection with strong and weak stem, पद् *pád*, m., 'foot'; of polysyllabic inflection, मरुत् *marút*, m., 'wind' or 'wind-god'; of a monosyllabic root-stem in composition, त्रिवृत् *trivṛt*, 'three-fold', in the neuter. Thus:

Singular:				
N. V.	वाक् <i>vák</i>	पद् <i>pád</i>	मरुत् <i>marút</i>	त्रिवृत् <i>trivṛt</i>
A.	वाचम् <i>vācam</i>	पदम् <i>pādam</i>	मरुतम् <i>marútam</i>	त्रिवृत् <i>trivṛt</i>
I.	वाचा <i>vācā</i>	पदा <i>padā</i>	मरुता <i>marútā</i>	त्रिवृता <i>trivṛtā</i>
D.	वाचे <i>vācé</i>	पदे <i>padé</i>	मरुते <i>marúte</i>	त्रिवृते <i>trivṛte</i>
Ab. G.	वाचम् <i>vācás</i>	पदम् <i>padás</i>	मरुतम् <i>marútas</i>	त्रिवृतम् <i>trivṛtas</i>
L.	वाचि <i>vāci</i>	पदि <i>padí</i>	मरुति <i>marúti</i>	त्रिवृति <i>trivṛti</i>
Dual:				
N. A. V.	वाचौ <i>vācāu</i>	पदौ <i>pādāu</i>	मरुतौ <i>marútāu</i>	त्रिवृती <i>trivṛtī</i>
I. D. Ab.	वाग्भ्याम् <i>vāgbhyām</i>	पद्भ्याम् <i>padbhyām</i>	मरुद्भ्याम् <i>marúdbhyām</i>	त्रिवृद्भ्याम् <i>trivṛdbhyām</i>
G. L.	वाचोस् <i>vācós</i>	पदोस् <i>padós</i>	मरुतोस् <i>marútos</i>	त्रिवृतोस् <i>trivṛtos</i>
Plural:				
N. V.	वाचम् <i>vācas</i>	पदम् <i>pādas</i>	मरुतम् <i>marútas</i>	त्रिवृन्ति <i>trivṛnti</i>
A.	वाचम् <i>vācás, vācas</i>	पदम् <i>padás</i>	मरुतम् <i>marútas</i>	त्रिवृन्ति <i>trivṛnti</i>

I.	वाग्भिस् <i>vāgbhīs</i>	पद्भिस् <i>padbhīs</i>	मरुद्भिस् <i>marúdbhīs</i>	त्रिवृद्भिस् <i>trivṛdbhīs</i>
D. Ab.	वाग्भ्यस् <i>vāgbhīyas</i>	पद्भ्यस् <i>padbhīyas</i>	मरुद्भ्यस् <i>marúdbhīyas</i>	त्रिवृद्भ्यस् <i>trivṛdbhīyas</i>
G.	वाचाम् <i>vācām</i>	पदाम् <i>padām</i>	मरुताम् <i>marútām</i>	त्रिवृताम् <i>trivṛtām</i>
L.	वानु <i>vākṣú</i>	पत्सु <i>patsú</i>	मरुत्सु <i>marútsu</i>	त्रिवृत्सु <i>trivṛtsu</i>

392. The stems in *ir* and *ur*, and *is* and *us*, lengthen their vowel (245 b) when their final is followed by another consonant, and also in the nom. sing. (where the following *s* is lost): thus, from *gir*, f., 'song', *gír* (*gīh*), *gíram*, *gírā* etc.; *girāu*, *gīrbhīām*, *gírós*; *gíras*, *gīrbhīs*, *gīrbhīyas*, *gírām*, *gírśú* (165); and so *púr*, *púram*, *púrbbhīs*, *púrśú*; and *āṣis*, *āṣīsam*, *āṣīśā*, *āṣīrbhīs*, *āṣīṣu*; and so on.

393. The stem *áp*, f., 'water', is inflected only in the plural, and with dissimilation of its final before *bh* to *d* (151 d): thus, *āpas*, *apás*, *adbhīs*, *adbhīyas*, *apām*, *apsú*.

But RV. has the sing. instr. *apá* and gen. *apás*. In AV. often, and in an instance or two in RV., the nom. and accus. pl. forms are confused in use, *āpas* being employed as accus., and (in an instance or two) *apás* as nominative.

394. The stem *púms*, m., 'man', is very irregular, substituting *púmāns* in the strong cases, and losing its *s* (necessarily) before initial *bh* of a case-ending, and likewise (by analogy with this, or by an abbreviation akin with that noticed at 231) in the loc. plural. The vocative is (in accordance with that of the somewhat similarly inflected perfect participles: below, 462 a) *púman* in the later language, but *púmas* in the earlier. Thus: *púmān*, *púmānsam*, *puṁśā*, *puṁśé*, *puṁśás*, *puṁśí*, *púman*; *púmānsāu*, *pumbhīām*, *puṁśós*; *púmānsas*, *puṁśás*, *pumbhīs*, *pumbhīyas*, *puṁśām*, *puṁśú*.

The accentuation of the weak forms, it will be noticed, is that of a true monosyllabic stem. The forms with *bh*-endings nowhere occur in the older language, nor do they appear to have been cited from the later. As to the retention of *s* unlingualized in the weakest cases (whence necessarily follows that in the loc. pl.), see 183.

395. The stem *path*, m., 'road', is defective in declension, forming only the weakest cases, while the strong are made from *pánthā* or *pánthan*, and the middle from *pathí*: see under *an*-stems, below, 433.

**396.** The stem *dánt*, m., 'tooth', is perhaps of participial origin, and has, like a participle, the forms *dánt* and *dát*, strong and weak: thus (V.), *dán*, *dántam*, *datá*, etc.; *datás* acc. pl. etc. But in the middle cases it has the monosyllabic and not the participial accent: thus, *dadbhis*, *dadbhyás*. In nom. pl. occurs also *-datas* instead of *-dantas*. By the grammarians, the strong cases of this word are required to be made from *dánta*.

**397.** A number of other words of this division are defective, making part of their inflection from stems of a different form.

Thus, *hṛd*, n., 'heart', *māns* or *mās*, n., 'meat', *mās*, m., 'month', *nás*, f., 'nose', *niç*, f., 'night' (not found in the older language), *pṛt*, f., 'army', are said by the grammarians to lack the nom. of all numbers and the accus. sing. and du. (the neuters, of course, the acc. pl. also), making them respectively from *hṛdaya*, *mānsá*, *māsa*, *nāsikā*, *niçā*, *pṛtanā*. But the usage in the older language is not entirely in accordance with this requirement: thus, we find *mās*, 'flesh', accus. sing.; *mās*, 'month', nom. sing.; and *nāsā*, 'nostrils', du. From *pṛt* occurs only the loc. pl. *pṛtsú* and (RV., once) the same case with double ending, *pṛtsúsu*.

**398.** On the other hand, certain stems of this division, allowed by the grammarians a full inflection, are used to fill up the deficiencies of those of another form.

Thus, *ásj*, n., 'blood', *çákr*, n., 'ordure', *yákr*, n., 'liver', *dós*, n. (also m.), 'fore-arm', have beside them defective stems in *an*: see below,

**432.** Of none of them, however, is anything but the nom.-acc. sing. found in the older language, and other cases later are but very scantily represented.

Of *ás*, n., 'mouth', and *úd*, 'water', only a case or two are found, in the older language, beside *ásán* and *ásyà*, and *udán* and *údaka* (**432**).

**399.** Some of the alternative stems mentioned above are instances of transition from the consonant to a vowel declension: thus, *dánta*, *māsa*. A number of other similar cases occur, sporadically in the older language, more commonly in the later. Such are *páda*, *-māda*, *-dāça*, *bhrājá*, *viçtápa*, *dvāra* and *dura*, *pura*, *dhura*, *-dṛça*, *nāsā*, *nidā*, *kṣṛpā*, *kaçpá*, *āçá*, and perhaps a few others.

A few irregular stems will find a more proper place under the head of Adjectives.

### Adjectives.

**400.** Original adjectives having the root-form are comparatively rare even in the oldest language.

About a dozen are quotable from the RV., for the most part only in a few scattering cases. But *mah*, 'great', is common in RV., though it dies out rapidly later. It makes a derivative feminine stem, *mahī*, which continues in use, as meaning 'earth' etc.

401. But compound adjectives, having a root as final member, with the value of a present participle, are abundant in every period of the language.

Possessive adjective compounds, also, of the same form, are not very rare: examples are *yatásruc*, 'with offered bowl'; *sūryatvac*, 'sun-skinned'; *cātuspad*, 'four-footed'; *suhārd*, 'kind-hearted, friendly'; *rītyāp* (i. e. *rīti-ap*), 'having streaming waters'; *sahāsradvār*, 'furnished with a thousand doors'.

The inflection of such compounds is like that of the simple root-stems, masculine and feminine being throughout the same, and the neuter varying only in the nom.-acc.-voc. of all numbers.

Only rarely is a derivative feminine stem in *ī* formed: in the older language, only from the compounds with *ac* or *añc* (407 ff.), those with *han* (402), and those with *pad*, as *ēkapādī*, *dvipādī*.

Irregularities of inflection appear in the following:

402. The root *han*, 'slay', as final of a compound, is inflected somewhat like a derivative noun in *an* (below, 420 ff.), becoming *hā* in the nom. sing., and losing its *n* in the middle cases and its *a* in the weakest cases (but only optionally in the loc. sing.). Further, when the vowel is lost, *h* in contract with following *n* reverts to its original *gh*. Thus:

	Singular.	Dual.	Plural.
N.	<i>vṛtrahā</i>	} <i>vṛtrahāṇāu</i>	<i>vṛtrahāṇas</i>
A.	<i>vṛtrahāṇam</i>		<i>vṛtraghñás</i>
I.	<i>vṛtraghñā</i>	} <i>vṛtrahābhyām</i>	<i>vṛtrahābhis</i>
D.	<i>vṛtraghñé</i>		} <i>vṛtrahābhyas</i>
Ab.	} <i>vṛtraghñás</i>		
G.		} <i>vṛtraghñós</i>	<i>vṛtraghñám</i>
L.	<i>vṛtraghñí, -hāṇi</i>		<i>vṛtrahásu</i>
V.	<i>vṛtrahan</i>	<i>vṛtrahaṇāu</i>	<i>vṛtrahaṇas.</i>

As to the change of *n* to *ṇ*, see 193, 195.

A feminine is made by adding *ī* to, as usual, the stem-form shown in the weakest cases: thus, *vṛtraghñī*.

An accus. pl. *-hānas* (like the nom.) also occurs. *Vṛtrahābhis* (RV., once) is the only middle case-form quotable from the older language. Transitions to the *a*-declension begin already in the Veda: thus, to *-hā* (RV., AV.), *-ghnā* (RV.), *-hana*.

403. The root *vah*, 'carry', at the end of a compound is said by the grammarians to be lengthened to *vāh* in both the strong and middle cases, and contracted in the weakest cases to *ūh*, which with a preceding *a*-vowel becomes *āu* (137 d): thus, from *havyaváh*, 'sacrifice-bearing' (epithet of Agni), *havyavāṭ*, *havyavāham*, *havyāvūhā*, etc.; *havyavāhāu*, *havyavābhyām*, *havyāvūhos*; *havyavāhas*, *havyāvūhas*, *havyavābhis*, etc. And *çvetaváh* (not quot-

able) is said to be further irregular in making the nom. sing. in *vās* and the vocative in *vas* or *vās*.

In the earlier language, only strong forms of compounds with *vah* have been found to occur: namely, *-vāt*, *-vāham*, *-vāhāu* or *-vāhū*, and *-vāhas*. TS. has the irregular nom. sing. *paṣṭhavāt*.

404. Of very irregular formation and inflection is one common compound of *vah*, namely *anaḍvāh* (*anas* + *vah*, 'burden-bearing' or 'cart-drawing': i. e. 'ox'). Its stem-form in the strong cases is *anaḍvāh*, in the weakest *anaḍúh*, and in the middle *anaḍúd* (perhaps by dissimilation from *anaḍúḍ*). Moreover, its nom. and voc. sing. are made in *vān* and *van* (as if from a *vant*-stem). Thus:

	Singular.	Dual.	Plural.	
N.	<i>anaḍvān</i>	} <i>anaḍvāhāu</i>	<i>anaḍvāhas</i>	
A.	<i>anaḍvāham</i>		<i>anaḍúhas</i>	
I.	<i>anaḍúhū</i>	} <i>anaḍúdbhīyām</i>	<i>anaḍúdbhis</i>	
D.	<i>anaḍúhe</i>		} <i>anaḍúdbhīyas</i>	
Ab.	} <i>anaḍúhas</i>			
G.			<i>anaḍúhām</i>	
L.	<i>anaḍúhi</i>	} <i>anaḍúhos</i>	<i>anaḍútsu</i>	
V.	<i>anaḍvan</i>		<i>ānaḍvāhū</i>	<i>ānaḍvāhas</i>

*Anaḍúdbhīyas* (AV., once) is the only middle case-form quotable from the older language.

The corresponding feminine stem (of very infrequent occurrence) is either *anaḍuhī* (ÇB.) or *anaḍvāhī* (K.).

405. The root *sah*, 'overcome', has in the Veda a double irregularity: its *s* is changeable to *ṣ* even after an *a*-vowel — as also in its single occurrence as an independent adjective (RV., *tvám ṣāt*) — while it sometimes remains unchanged after an *i* or *u*-vowel; and its *a* is either prolonged or remains unchanged, in both strong and weak cases. The quotable forms are: *-ṣāt*, *-ṣāham* or *-sāham* or *-sāham*, *-sāhū*, *-sāhe* or *-sāhe*, *-ṣāhas* or *-ṣāhas* or *-sāhas*; *-sāhū* (du.); *-ṣāhas* or *-sāhas*.

406. The compound *avayāj* (*vyaj*, 'make offering'), 'a certain priest' or (BR.) 'a certain sacrifice', is said to form the nom. and voc. sing. *avayās*, and to make its middle cases from *avayás*.

Its only quotable form is *avayás*, f. (RV. and AV., each once). If the stem is a derivative from *ava* + *vyaj*, 'conciliate', *avayás* is probably from *ava* + *vyā*, which has the same meaning.

407. Compounds with *añc* or *ac*. The root *ac* or *añc* makes, in combination with prepositions and other words, a considerable class of familiarly used adjectives, of quite irregular formation and inflection, in some of which it almost loses its character of root, and becomes an ending of derivation.

A part of these adjectives have only two stem-forms: a strong in *añc* (yielding *añ*, from *añks*, in nom. sing. masc.),

and a weak in *ac*; others distinguish from the middle in *ac* a weakest stem in *c*, before which the *a* is contracted with a preceding *i* or *u* into  $\bar{i}$  or  $\bar{u}$ .

The feminine is made by adding  $\bar{i}$  to the stem-form used in the weakest cases, and is accented like them.

408. As examples of inflection we may take *prāñc*, 'forward, east'; *pratyāñc*, 'backward, west'; *viṣvañc*, 'going apart'.

Singular:

N. V.	<i>prāñ</i>	<i>prāk</i>	<i>pratyāñ</i>	<i>pratyāk</i>	<i>viṣvañ</i>	<i>viṣvak</i>
A.	<i>prāñcam</i>	<i>prāk</i>	<i>pratyāñcam</i>	<i>pratyāk</i>	<i>viṣvañcam</i>	<i>viṣvak</i>
I.	<i>prācū</i>		<i>prācī</i>		<i>viṣūcū</i>	
D.	<i>prāce</i>		<i>prācē</i>		<i>viṣūce</i>	
Ab. G.	<i>prācas</i>		<i>prācās</i>		<i>viṣūcas</i>	
L.	<i>prāci</i>		<i>prācī</i>		<i>viṣūci</i>	

Dual:

N. A. V.	<i>prāñcū</i>	<i>prācī</i>	<i>pratyāñcū</i>	<i>prācī</i>	<i>viṣvañcū</i>	<i>viṣūcī</i>
I. D. Ab.	<i>prāgbhyām</i>		<i>pratyāgbhyām</i>		<i>viṣvaghbyām</i>	
G. L.	<i>prācos</i>		<i>prācōs</i>		<i>viṣūcos</i>	

Plural:

N. V.	<i>prāñcas</i>	<i>prāñci</i>	<i>pratyāñcas</i>	<i>pratyāñci</i>	<i>viṣvañcas</i>	<i>viṣvañci</i>
A.	<i>prācas</i>	<i>prāñci</i>	<i>prācās</i>	<i>pratyāñci</i>	<i>viṣūcas</i>	<i>viṣvañci</i>
I.	<i>prāgbhis</i>		<i>pratyāgbhis</i>		<i>viṣvaghbis</i>	
D. Ab.	<i>prāgbhyas</i>		<i>pratyāgbhyas</i>		<i>viṣvaghbyas</i>	
G.	<i>prācām</i>		<i>prācām</i>		<i>viṣūcām</i>	
L.	<i>prākṣu</i>		<i>pratyākṣu</i>		<i>viṣvakṣu</i>	

The feminine stems are *prācī*, *prācī*, *viṣūcī*, respectively.

No example of the middle forms excepting the nom. etc. sing. neut. (and this generally used as adverb) is found either in RV. or AV. In the same texts is lacking the nom. etc. pl. neut. in *ñci*; but of this a number of examples occur in the Brāhmaṇas: thus, *prāñci*, *pratyāñci*, *arvāñci*, *samyāñci*, *sadhryāñci*, *anvāñci*.

409. a. Like *prāñc* are inflected *āpāñc*, *āvāñc*, *pārāñc*, *arvāñc*, *adharāñc*, and others of rare occurrence.

b. Like *pratyāñc* are inflected *nyāñc* (i. e. *nāñc*), *samyāñc* (*sam* + *añc*, with irregularly inserted *i*), and *údañc* (weakest stem *údic*: *ud* + *añc*, with *i* inserted in weakest cases only), with a few other rare stems.

c. Like *viṣvañc* is inflected *anvāñc*, also three or four others of which only isolated forms occur.

d. Still more irregular is *tiryāñc*, of which the weakest stem is *tiráce* (*tírás* + *ac*: the other stems are made from *tír* + *añc* or *ac*, with the inserted *i*).

410. The accentuation of these words is irregular, as regards both the stems themselves and their inflected forms. Sometimes the one element has

the tone and sometimes the other, without any apparent reason for the difference. If the compound is accented on the final syllable, the accent is shifted in RV. to the ending in the weakest cases provided their stem shows the contraction to *ī* or *ū*: thus, *prācā*, *arvācā*, *adharḍeas*, but *praticā*, *anūcā*, *samīcī*. But AV. and later texts usually keep the accent upon the stem: thus, *praticī*, *samīcī*, *anūcī* (RV. has *praticim* once). The change of accent to the endings, and even in polysyllabic stems, is against all usual analogy.

### B. Derivative stems in *as*, *is*, *us*.

411. The stems of this division are prevailingly neuter; but there are also a few masculines, and a single feminine.

412. The stems in *अस् as* are quite numerous, and mostly made with the suffix *अस् as* (a small number also with *तस् tas* and *नस् nas*, and some are obscure); the others are few, and almost all made with the suffixes *इस् is* and *उस् us*.

413. Their inflection is almost entirely regular. But masculine and feminine stems in *अस् as* lengthen the vowel of the ending in nom. sing.; and the nom.-acc.-voc. pl. neut. make the same prolongation (of *अ a* or *इ i* or *उ u*) before the inserted nasal (*anusvāra*).

414. Examples of declension. As examples we may take *मनस् mānas*, n., 'mind'; *अङ्गिरस् āṅgiras*, m., 'Angiras'; *हविस् havis*, n., 'libation'.

Singular:

N.	मनस् <i>mānas</i>	अङ्गिरास् <i>āṅgirās</i>	हविस् <i>havis</i>
A.	मनस् <i>mānas</i>	अङ्गिरसम् <i>āṅgirasam</i>	हविस् <i>havis</i>
I.	मनसा <i>mānasā</i>	अङ्गिरसा <i>āṅgirasā</i>	हविषा <i>haviṣā</i>
D.	मनसे <i>mānase</i>	अङ्गिरसे <i>āṅgirase</i>	हविषे <i>haviṣe</i>
Ab. G.	मनमस् <i>mānasas</i>	अङ्गिरसम् <i>āṅgirasas</i>	हविषम् <i>haviṣas</i>

L.	मनसि <i>mānasi</i>	अङ्गिरसि <i>āṅgirasi</i>	हविषि <i>havīṣi</i>
V.	मनस् <i>mānas</i>	अङ्गिरस् <i>āṅgiras</i>	हविस् <i>havis</i>
Dual:			
N. A. V.	मनसौ <i>mānasī</i>	अङ्गिरसौ <i>āṅgirasāu</i>	हविषी <i>havīṣī</i>
I. D. Ab.	मनोभ्याम् <i>mānobhyām</i>	अङ्गिरोभ्याम् <i>āṅgirobhyām</i>	हविर्भ्याम् <i>havirbhyām</i>
G. L.	मनसोस् <i>mānasos</i>	अङ्गिरसोस् <i>āṅgirasos</i>	हविषोस् <i>haviṣos</i>
Plural:			
N. A. V.	मनांसि <i>mānānsi</i>	अङ्गिरसस् <i>āṅgirasas</i>	हवीषि <i>havīṣi</i>
I.	मनोभिस् <i>mānobhis</i>	अङ्गिरोभिस् <i>āṅgirobhis</i>	हविर्भिस् <i>havirbhis</i>
D. Ab.	मनोभ्यस् <i>mānobhyas</i>	अङ्गिरोभ्यस् <i>āṅgirobhyas</i>	हविर्भ्यस् <i>havirbhyas</i>
G.	मनसाम् <i>mānasām</i>	अङ्गिरसाम् <i>āṅgirasām</i>	हविषाम् <i>haviṣām</i>
L.	मनःसु <i>mānaḥsu</i>	अङ्गिरःसु <i>āṅgiraḥsu</i>	हविःसु <i>haviḥsu</i>

In like manner, चक्षुस् *cākṣus*, n., 'eye', forms चक्षुषा *cākṣuṣā*, चक्षुर्भ्याम् *cākṣurbhyām*, चक्षुषी *cākṣuṣī*, and so on.

415. Vedic irregularities. a. The masc. and fem. du. ending *ā* instead of *āu* is as usual elsewhere; — b. The fem. *uṣās*, 'dawn', often prolongs its *a* in the other strong cases (besides nom. sing.): thus, *uṣāsam*, *uṣāsā*, *uṣāsas*. In instr. pl. occurs (RV., once) *uṣād̄bhis* instead of *uṣōbhis* (only quotable example of a middle case). From *iōcās* is once found (RV.) in like manner the du. *toçāsā*; — c. *Janās* has the nom. sing. masc. *janās*, like an *as*-stem; — d. From *svāvas* and *svātavas* occur in RV. nom. sing. masc. in *vān*; — e. One or two apparently contracted forms — thus, *vedhām* for *vedhāsam*, and *surād̄hūs* for *surād̄hasas*, nom. pl. — are met with.

416. The grammarians regard *uçānas*, m., as regular stem-form of the proper name noticed above (355 a), but give it the irregular nom. *uçānā* and the voc. *uçanas* or *uçana* or *uçanan*. Forms from the *as*-stem, even nom., are sometimes met with in the later literature.

As to forms from *as*-stems to *āhan* or *āhar* and *ūdhan* or *ūdhar*, see below, 430.

### Adjectives.

417. A few neuter nouns in *as* with accent on the radical syllable have corresponding adjectives or appellatives in *ās*, with accent on the ending: thus, for example, *āpas*, 'work', *apās*, 'active'; *tāras*, 'quickness', *tarās*, 'quick'; *yāças*, 'beauty', *yaçās*, 'beauteous'. A few other similar adjectives — as *tavās*, 'mighty', *vedhās*, 'pious' — are without corresponding nouns.

Original adjectives in *is* do not occur. But in *us* are found as many adjectives as nouns (about ten of each class); and in several instances adjective and noun stand side by side, without difference of accent such as appears in the stems in *as*: e. g. *tāpus*, 'heat' and 'hot'; *vāpus*, 'wonder' and 'wonderful'.

418. Adjective compounds having nouns of this division as final member are very common: thus, *sumānas*, 'favorably minded'; *dirghāyus*, 'long-lived'; *çukrāçocis*, 'having brilliant brightness'. The stem-form is the same for all genders, and each gender is inflected in the usual manner, the stems in *as* making their nom. sing. masc. and fem. in *ās* (like *āngiras*, above). Thus, from *sumānas*, the nom. and accus. are as follows:

	singular.		dual.		plural.		
	m. f.	n.	m. f.	n.	m. f.	n.	
N.	<i>sumānās</i>	<i>-nas</i>	}	<i>sumānasāu</i>	<i>-nasī</i>	<i>sumānūsas</i>	<i>-nāñsi</i>
A.	<i>sumānasam</i>	<i>-nas</i>					

and the other cases (save the vocative) are alike in all genders.

From *dirghāyus*, in like manner:

N.	<i>dirghāyus</i>	}	<i>dirghāyusāu</i>	<i>-yusī</i>	<i>dirghāyusas</i>	<i>-yūñsi</i>
A.	<i>dirghāyusam</i>					
I.	<i>dirghāyusā</i>		<i>dirghāyurbhyām</i>		<i>dirghāyurbhis</i>	
	etc.		etc.		etc.	

419. The stem *anehās*, 'unrivalled' (defined as meaning 'time' in the later language), forms the nom. sing. masc. and fem. *anehā*.

### C. Derivative stems in *an*.

420. The stems of this division are those made by the three suffixes *अन् an*, *मन् man*, and *वन् van*, together with a few of more questionable etymology which are inflected like them. They are masculine and neuter only.

421. The stem has a triple form. In the strong cases of the masculine, the vowel of the ending is prolonged to

घ्रा  $\bar{a}$ ; in the weakest cases it is in general struck out altogether; in the middle cases, or before a case-ending beginning with a consonant, the final न्  $n$  is dropped. The न्  $n$  is also lost in the nom. sing. of both genders (leaving घ्रा  $\bar{a}$  as final in the masculine, घ्रा  $a$  in the neuter).

The peculiar cases of the neuter follow the usual analogy (311): the nom.-acc.-voc. pl. have the lengthening to घ्रा  $\bar{a}$ , as strong cases; the nom.-acc.-voc. du., as weakest cases, have the loss of घ्रा  $a$  — but this only optionally, not necessarily.

In the loc. sing. also, the  $a$  may be either rejected or retained (compare the corresponding usage with  $r$ -stems: 373). And after the  $m$  or  $v$  of *man* or *van*, when these are preceded by another consonant, the  $a$  is always retained, to avoid a too great accumulation of consonants.

422. The vocative sing. is in masculines the pure stem; in neuters, either this or like the nominative. The rest of the inflection requires no description.

423. As to accent, it needs only to be remarked that when, in the weakest cases, an acute  $\acute{a}$  of the suffix is lost, the tone is thrown forward upon the ending.

424. Examples of declension. As such may be taken राजन् *rājān*, m., 'king'; आत्मन् *ātmān*, m., 'soul, self'; नामन् *nāman*, n., 'name'. Thus:

Singular:			
N.	राजा <i>rājā</i>	आत्मा <i>ātmā</i>	नाम <i>nāma</i>
A.	राजानम् <i>rājānam</i>	आत्मानम् <i>ātmānam</i>	नाम <i>nāma</i>
I.	राज्ञा <i>rājñā</i>	आत्मना <i>ātmānā</i>	नाम्ना <i>nāmnā</i>
D.	राज्ञे <i>rājñe</i>	आत्मने <i>ātmāne</i>	नाम्ने <i>nāmnne</i>
Ab. G.	राज्ञम् <i>rājñas</i>	आत्मनम् <i>ātmānas</i>	नाम्नम् <i>nāmnas</i>

L. राज्ञि, राज्ञि  
*rājñi, rājani*      आत्मनि  
*ātmani*      नाम्नि, नामनि  
*nāmni, nāmāni*

V. राजन्  
*rājān*      आत्मन्  
*ātman*      नामन्, नाम  
*nāman, nāma*

Dual:

N. A. V. राजानौ  
*rājānāu*      आत्मानौ  
*ātmanāu*      नाम्नी, नामनी  
*nāmni, nāmāni*

I. D. Ab. राजभ्याम्  
*rājabhyaṃ*      आत्मभ्याम्  
*ātmaḥhyaṃ*      नामभ्याम्  
*nāmaḥhyaṃ*

G. L. राज्ञोस्  
*rājños*      आत्मनोस्  
*ātmanos*      नाम्नोस्  
*nāmnos*

Plural:

N. राजानम्  
*rājānas*      आत्मानम्  
*ātmanas*      नामानि  
*nāmāni*

A. राजस्  
*rājñas*      आत्मनस्  
*ātmanas*      नामानि  
*nāmāni*

I. राजभिस्  
*rājābhīḥ*      आत्मभिस्  
*ātmaḥbhīḥ*      नामभिस्  
*nāmaḥbhīḥ*

D. Ab. राजभ्यस्  
*rājābhyas*      आत्मभ्यस्  
*ātmaḥbhyas*      नामभ्यस्  
*nāmaḥbhyas*

G. राज्ञाम्  
*rājñām*      आत्मनाम्  
*ātmanām*      नाम्नाम्  
*nāmnam*

L. राजसु  
*rājāsu*      आत्मसु  
*ātmasu*      नामसु  
*nāmasu*

The weakest cases of *mūrdhān*, m., 'head', would be accented *mūrdhñā*, *mūrdhñé*, *mūrdhñós*, *mūrdhñás* (acc. pl.), *mūrdhñām*, etc.; and so in all similar cases (loc. sing., *mūrdhñi* or *mūrdhñāni*).

425. Vedic Irregularities. a. Here, as elsewhere, the ending of the nom.-acc.-voc. du. masc. is usually *ū* instead of *āu*.

b. The briefer form (with ejected *a*) of the loc. sing., and of the neut. nom. etc. du., is almost unknown to the older language. RV. writes once *ṣatadāvni*, but it is to be read *ṣatadāvani*; and a few similar cases occur in AV. In the Brāhmaṇas also, such forms as *dhūmani* and *sūmanī* are much more common than such as *ahni* and *lomni*.

c. But throughout both Veda and Brāhmaṇa, an abbreviated form of the loc. sing., with the ending *i* omitted, or identical with the stem, is common (in RV., of considerably more frequent occurrence than the regular form): thus, *mūrdhān*, *kārman*, *ādhan*, beside *mūrdhāni* etc.

d. In the nom.-acc. pl. neut., also, an abbreviated form is common, ending in *ā* or (twice as often) *a*, instead of *āni*: thus, *bráhma* and *bráhmā*, beside *bráhmāni*: compare the similar series of endings from *a*-stems, 329.

e. From a few stems in *man* is made an abbreviated inst. sing., with loss of *m* as well as of *a*: thus, *mahinā*, *prathinā*, *varinā*, *dānā*, *preñā*, *bhūnā*, for *mahimnā* etc. And *drāghmā* (RV., once) is perhaps (Grassmann) for *drāghmānā*.

f. Other of the weakest cases than the loc. sing. are sometimes found with the *a* of the suffix retained: thus, for example, *bhūmanā*, *dāmane*, *yāmanas*, *ukṣānas* (accus. pl.), etc. In the infinitive datives — *trāmaṇe*, *vidmāne*, *dāvāne*, etc. — the *a* always remains. Still more numerous are the instances in which the *a*, omitted in the written form of the text, is, as the metre shows, to be restored in reading.

g. The voc. sing. in *vas*, which is the usual Vedic form from stems in *vant* (below, 453 b), is found also from a few in *van*, perhaps by a transfer to the *vant*-declension: thus, *ṛtūvas*, *evayūvas*, *khidvas* (?), *prātaritvas*, *mātariçvas*, *vibhūvas*.

For words of which the *a* is not made long in the strong cases, see the next paragraph, b.

426. A few stems do not make the regular lengthening of *a* in the strong cases (except the nom. sing.). Thus:

a. The names of divinities, *pūṣān* and *aryamān*: thus, *pūṣā*, *pūṣāṇam*, *pūṣnā*, etc.

b. In the Veda, *ukṣān*, 'bull' (but RV. *ukṣāṇam* once); *yóṣan*, 'maiden'; *vṛṣan*, 'virile, bull' (but *vṛṣāṇam* and *vṛṣānas* are also met with); *tmān*, abbreviation of *ātman*; and two or three other scattering forms: *anarvāṇam*, *jémanā*. And in a number of additional instances, the Vedic metre seems to demand *a* where *ā* is written.

427. The stems *çvān*, m., 'dog', and *yúvan*, 'young', have in the weakest cases the contracted form *çún* and *yún* (with retention of the accent); in the strong and middle cases they are regular. Thus, *çvā*, *çvānam*, *çúnā*, *çúne*, etc., *çvābhyām*, *çvābhis*, etc.

In dual, RV. has once *yúnā* for *yuvānā*.

428. The stem *maghāvan*, 'generous' (later, almost exclusively a name of Indra), is contracted in the weakest cases to *maghón*: thus, *maghāvā*, *maghāvānam*, *maghónā*, *maghóne*, etc.

The RV. has once the weak form *maghónas* in nom. pl.

Parallel with this is found the stem *maghāvant* (division E); and from the latter alone in the older language are made the middle cases: thus, *maghāvadbhis*, *maghāvatsu*, etc. (not *maghāvabhis* etc.).

429. A number of *an*-stems are more or less defective, making a part of their forms from other stems. Thus:

**430. a.** The stem *áhan*, n., 'day', is in the later language used only in the strong and weakest cases, the middle (with the nom. sing., which usually follows their analogy) coming from *áhar* or *áhas*: namely, *áhar* nom.-acc. sing., *áhobhyām*, *áhobhis*, etc. (PB. has *aharbhīs*); but *áhnā* etc., *áhni* or *áhni*, *áhni* or *áhni*, *áhni* (and, in V., *áhā*). In composition, only *áhar* or *áhas* is used as preceding member; as final member, *áhar*, *áhas*, *áhan*, or the derivatives *aha*, *ahna*.

In the oldest language, the middle cases *áhahis*, *áhahyas*, *áhasu* also occur.

**b.** The stem *úadhan*, n., 'udder', exchanges in like manner, in the old language, with *úadhar* and *úadhas*, but has become later an *as*-stem only (except in the fem. *úadni* of adjective compounds): thus, *úadhar* or *úadhas* (so RV.: AV. only the latter), *úadnas*, *úadhan* or *úadhani*, *úadhahis*, *úadhāsu*.

**431.** The neuter stems *akṣán*, 'eye', *asthán*, 'bone', *dadhán*, 'curd', *sakthán*, 'thigh', form in the later language only the weakest cases, *akṣṇā*, *asthné*, *dadhnás*, *sakthni* or *saktháni*, and so on; the rest of the inflection is made from stems in *i*, *ákṣi* etc.: see above, **343 f.**

In the older language, other cases from the *an*-stems occur: thus, *akṣāni* and *akṣābhis*; *asthāni*, *asthābhis*, and *asthābhyas*; *sakthāni*.

**432.** The neuter stems *asán*, 'blood', *yakán*, 'liver', *ṣakán*, 'ordure', *āsán*, 'mouth', *udán*, 'water', *doṣán*, 'fore-arm', *yūśán*, 'broth', are required to make their nom.-acc.-voc. in all numbers from the parallel stems *ásrj*, *yákr̥t*, *ṣákr̥t*, *āsyà*, *údaka* (in older language *udaká*), *dós*, *yūṣa*, which are fully inflected.

Earlier occurs also the dual *doṣāni*.

**433.** The stem *pánthan*, m., 'road', is reckoned in the later language as making the complete set of strong cases, with the irregularity that the nom.-voc. sing. adds a *s*. The corresponding middle cases are made from *pathi*, and the weakest from *path*. Thus:

from *pánthan* — *pánthās*, *pánthānam*; *pánthānāu*; *pánthānas*;

from *pathi* — *pathibhyām*; *pathibhis*, *pathibhyas*, *pathiṣu*;

from *path* — *pathā*, *pathé*, *pathás*, *pathi*; *pathós*; *pathás* (accus.), *pathām*.

In the oldest language (RV.), however, the strong stem is only *pánthū*: thus, *pánthās*, nom. sing.; *pánthām*, acc. sing.; *pánthās*, nom. pl.; and even in AV., *pánthānam* and *pánthānas* are rare compared with the others. From *pathi* occur also the nom. pl. *pathāyas* and gen. pl. *patlānām*. RV. has once *pāthās*, acc. pl., with long *ā*.

**434.** The stems *mánthan*, m., 'stirring-stick', and *ṛbhukṣán*, m., an epithet of Indra, are given by the grammarians the same inflection with *pánthan*; but only a few cases have been found in use. In V. occur from

the former the acc. sing. *mānthām*, and gen. pl. *mathāndām* (like the corresponding cases from *pānthan*); from the latter, the nom. sing. *ṛbhukṣās* and voc. pl. *ṛbhukṣās*, like the corresponding Vedic forms of *pānthan*; but also the acc. sing. *ṛbhukṣāṇam* and nom. pl. *ṛbhukṣāṇas*, which are after quite another model.

### Adjectives.

435. Original adjective stems in *an* are almost exclusively those in *van*, as *yājvan*, 'sacrificing', *sūtvān*, 'pressing the soma', *jītvān*, 'conquering'. The stem is masc. and neut. only (two or three sporadic cases of its use as fem. occur in RV.); the corresponding fem. stem is made in *varī*: thus, *yājvarī*, *jītvārī*.

436. Adjective compounds having a noun in *an* as final member are inflected after the model of noun-stems; and the masculine forms are said to be allowed in use also as feminine; but usually a special feminine is made by adding *ī* to the weakest form of the masculine stem: thus, *durnāmnī*, *sómarājñī*.

437. But nouns in *an* occurring as final members of compounds often lose the *n*, or substitute a stem in *a* for that in *an*: thus, *-rāja*, *-adhva*, *-aha*; the corresponding feminine is in *ā*. And feminines in *ā*, replacing *an*, are allowed to be widely formed in the compounds of this division.

The remaining divisions of the consonantal declension are made up of adjective stems only.

### D. Derivative stems (adjective) in *in*.

438. The stems of this division are those formed with the suffixes *इन् in*, *मिन् min*, and *विन् vin*. They are masculine and neuter only; the corresponding feminine being made by adding *ई ī*.

The stems in *in* are numerous, since almost any noun in *a* in the language may form a possessive derivative adjective with this suffix: thus, *bála*, 'strength', *balin*, m. n., *balinī*, f., 'possessing strength, strong'. Stems in *vin*, however, are very few, and those in *min* still fewer.

439. Their inflection is quite regular, except that they lose their final *न् n* in the middle cases (before an initial consonant of the ending), and also in the nom. sing., where the masculine lengthens the *इ i* by way of compensation. The voc. sing. is in the masculine the bare stem; in the neuter, either this or the nominative.

In all these respects, it will be noticed, the *in*-declension agrees with the *an*-declension; it differs from the latter only in never losing the vowel of the ending.

440. Example of inflection. As such may be taken वलिन् *balin*, 'strong'. Thus:

	Singular.		Dual.		Plural.	
	m.	n.	m.	n.	m.	n.
N.	बली <i>balī</i>	बलि <i>balī</i>	} बलिनौ <i>balināu</i>	} बलिनी <i>balinī</i>	} बलिनम् <i>balinas</i>	} बलीनि <i>balīni</i>
A.	बलिनम् <i>balīnam</i>	बलि <i>balī</i>				
I.	बलिना <i>balinā</i>				बलिभिम् <i>balibhis</i>	
D.	बलिने <i>balīne</i>		} बलिभ्याम् <i>balibhyām</i>	}	} बलिभ्यम् <i>balibhyas</i>	
Ab.	} बलिनम् <i>balīnas</i>					
G.					बलिनाम् <i>balinām</i>	
L.	बलिनि <i>balīni</i>		} बलिनोम् <i>balīnos</i>	}	} बलिषु <i>balīṣu</i>	
V.	बलिन् वलिन्, बलि <i>bālīn bālīn, bālī</i>	बलिनौ <i>bālīnāu</i>				बलिनी <i>bālīnī</i>

The derived feminine stem in *inī* is inflected, of course, like any other feminine in derivative *ī* (365).

441. There are no irregularities in the inflection of *in*-stems, in either the earlier language or the later — except the usual Vedic dual ending in *ā* instead of *āu*.

#### E. Derivative stems (adjective) in *ant* (or *at*).

442. These stems fall into two sub-divisions: 1. those made by the suffix अन्त् *ant* (or अत् *at*), being, with a very few exceptions, active participles, present and future; 2. those made by the possessive suffixes मन्त् *mant* and वन्त् *vant* (or मत् *mat* and वत् *vat*). They are masculine and neuter only; the corresponding feminine is made by adding ई *ī*.

1. Participles in *ant* or *at*.

443. The stem has in general a double form, a stronger and a weaker, ending respectively in अन् *ant* and अत् *at*. The former is taken in the strong cases of the masculine, with, as usual, the nom.-acc.-voc. pl. neuter; the latter is taken by all the remaining cases.

But, in accordance with the rule for the formation of the feminine stem (below, 449), the future participles, and the present participles of verbs of the *tud*-class or accented *â*-class (752), and of verbs of the *ad*-class or root-class ending in *â*, are by the grammarians allowed to make the nom.-acc.-voc. du. from either the stronger or the weaker stem; and the present participles from all other present-stems ending in *a* are required to make the same from the strong stem.

444. Those verbs, however, which in the 3d pl. pres. active lose न् *n* of the usual ending न्ति *nti* (550) lose it also in the present participle, and have no distinction of strong and weak stem.

Such are the verbs forming their present-stem by reduplication without added *a*: namely, those of the reduplicating or *hu*-class (655) and the intensives (1012): thus, from √*hu*, present-stem *juhu*, participle-stem *júhvat*; intensive-stem *johu*, intensive participle-stem *jóhvat*. Further, the participles of roots apparently containing a contracted reduplication: namely, *cákṣat*, *dāṣat*, *dāsat*, *čāsat*, *sāṣcat*; and the aorist participle *dhákṣat*. *Vāvṛdhánt* (RV., once), which has the *n* notwithstanding its reduplication, comes, like the desiderative participles (1032), from a stem in *a*: compare *vāvṛdhánta*, *vāvṛdhāsva*.

Even these verbs are allowed by the grammarians to make the nom.-acc.-voc. pl. neut. in *anti*.

445. The inflection of these stems is quite regular. The nom. sing. masc. comes to end in अन् *an* by the regular (150) loss of the two final consonants from the etymological form अन्त् *ants*. The vocative of each gender is like the nominative.

446. Stems accented on the final syllable throw the accent forward upon the case-ending in the weakest cases (not in the middle also).

In the dual neut. (as in the feminine stem) from such participles, the accent is *anti* if the *n* is retained, *atī* if it is lost.

447. Examples of declension. As such may serve

भवत् *bhāvāt*, 'being'; अदत् *adāt*, 'eating'; जुह्वत् *jūhvat*, 'sacrificing'. Thus :

Singular :						
N.	भवन्	भवत्	अदन्	अदत्	जुह्वन्	जुह्वत्
	<i>bhāvan</i>	<i>bhāvāt</i>	<i>adān</i>	<i>adāt</i>	<i>jūhvan</i>	<i>jūhvat</i>
A.	भवन्तम्	भवत्	अदन्तम्	अदत्	जुह्वन्तम्	जुह्वत्
	<i>bhāvāntam</i>	<i>bhāvāt</i>	<i>adāntam</i>	<i>adāt</i>	<i>jūhvāntam</i>	<i>jūhvat</i>
I.		भवता		अदता		जुह्वता
		<i>bhāvātā</i>		<i>adātā</i>		<i>jūhvatā</i>
D.		भवते		अदते		जुह्वते
		<i>bhāvāte</i>		<i>adāte</i>		<i>jūhvāte</i>
Ab. G.		भवतम्		अदतम्		जुह्वतम्
		<i>bhāvātas</i>		<i>adātas</i>		<i>jūhvātas</i>
L.		भवति		अदति		जुह्वति
		<i>bhāvāti</i>		<i>adāti</i>		<i>jūhvāti</i>
V.	भवन्	भवत्	अदन्	अदत्	जुह्वन्	जुह्वत्
	<i>bhāvan</i>	<i>bhāvāt</i>	<i>adān</i>	<i>adāt</i>	<i>jūhvan</i>	<i>jūhvat</i>
Dual :						
N. A. V.	भवन्तौ	भवन्ती	अदन्तौ	अदती	जुह्वन्तौ	जुह्वती
	<i>bhāvāntāu</i>	<i>bhāvāntī</i>	<i>adāntāu</i>	<i>adātī</i>	<i>jūhvāntāu</i>	<i>jūhvātī</i>
I. D. Ab.	भवद्भ्याम्		अदद्भ्याम्		जुह्वद्भ्याम्	
	<i>bhāvadbhyām</i>		<i>adadbhyām</i>		<i>jūhvadbhyām</i>	
G. L.	भवतोम्		अदतोम्		जुह्वतोम्	
	<i>bhāvātos</i>		<i>adātos</i>		<i>jūhvātos</i>	
Plural :						
N. V.	भवन्तम्	भवन्ति	अदन्तम्	अदन्ति	जुह्वन्तम्	जुह्वन्ति
	<i>bhāvāntas</i>	<i>bhāvānti</i>	<i>adāntas</i>	<i>adānti</i>	<i>jūhvāntas</i>	<i>jūhvānti</i>
A.	भवतम्	भवन्ति	अदतम्	अदन्ति	जुह्वतम्	जुह्वन्ति
	<i>bhāvātas</i>	<i>bhāvānti</i>	<i>adātas</i>	<i>adānti</i>	<i>jūhvātas</i>	<i>jūhvānti</i>
I.	भवद्भिस्		अदद्भिस्		जुह्वद्भिस्	
	<i>bhāvadbhis</i>		<i>adadbhis</i>		<i>jūhvadbhis</i>	
D. Ab.	भवद्भ्याम्		अदद्भ्याम्		जुह्वद्भ्याम्	
	<i>bhāvadbhyas</i>		<i>adadbhyas</i>		<i>jūhvadbhyas</i>	

G.	भवताम् <i>bhāvātām</i>	अदाताम् <i>adātām</i>	जुह्वताम् <i>jūhvatām</i>
L.	भवत्सु <i>bhāvatsu</i>	अदात्सु <i>adātsu</i>	जुह्वत्सु <i>jūhvatsu</i>

The future participle *bhaviṣyānt* may form in nom. etc. dual neuter either *bhaviṣyāntī* or *bhaviṣyati*; *tudānt*, either *tudāntī* or *tudatī*; *yānt* ( $\sqrt{yā}$ ), either *yāntī* or *yāti*. And *jūhvat*, in nom. etc. plural neuter, may make also *jūhvantī* (beside *jūhvatī*, as given in the paradigm above).

But these strong forms (as well as *bhāvanti*, du., and its like from present-stems in unaccented *a*) are quite contrary to general analogy, and of somewhat doubtful character. No Vedic example of them is found; nor have they been noticed anywhere in the older language. The cases concerned, indeed, would be everywhere of rare occurrence.

448. The Vedic deviations from the model as above given are few. The dual ending *āu* is only one sixth as common as *ā*. Anomalous accent is seen in a case or two: *acodāte* and *rathirāyātām*. The only instance in V. of nom. etc. pl. neut. is *sāntī*, with lengthened *ā*: compare the forms in *-māntī* and *-vāntī*, below, 454 c.

449. The feminine participle-stem, as already stated, is made by adding  $\tilde{e}$  to either the strong or the weak stem-form of the masc.-neut. The rules as to which of the two forms shall be taken are the same with those given above respecting the nom. etc. dual neuter; namely:

a. Participles from tense-stems ending in unaccented *a* add  $\tilde{e}$  to the strong stem-form, or make their feminine in *antī*.

Such are the *bhū* or unaccented *a*-class and the *div* or *ya*-class of present-stems (chap. IX.), and the desideratives and causatives (chap. XIV.): thus, from  $\sqrt{bhū}$  (stem *bhāva*), *bhāvanti*; from  $\sqrt{div}$  (stem *dīvya*), *dīvyanti*; from *būbhūṣa* and *bhāvāya* (desid. and caus. of  $\sqrt{bhū}$ ), *būbhūṣanti* and *bhāvāyanti*.

Exceptions to this rule are rare. RV. has *tākṣati* and *jāratī*; Bopp (Gr., 530) quotes a few cases from the Nala. The AV. *jīvantī*, with irregular accent, is doubtless to be regarded as a proper name.

b. Participles from tense-stems in accented *á* may add the feminine-sign either to the strong or to the weak stem-form, or may make their feminines in *antī* or in *atī* (with accent as here noted).

Such are the present-stems of the *tud* or accented *á*-class (chap. IX.), the *s*-futures (chap. XII.), and the denominatives (chap. XIV.): thus, from  $\sqrt{tud}$  (stem *tudā*), *tudāntī* or *tudatī*; from *bhaviṣyá* (fut. of  $\sqrt{bhū}$ ), *bhaviṣyāntī* or *bhaviṣyatī*; from *devayá* (denom. of *devá*), *devayāntī* or *devayātī*.

The forms in *ánti* from this class are the prevailing ones. No future fem. participle in *atī* is quotable from the older language. From pres.-stems in *ā* are found there *ṛñjati* and *siñcati* (RV.), *tudati* and *pinvati* (AV.). From denominatives, *devayati* (RV.), *durasayati* and *ṣatrūyati* (AV.).

Verbs of the *ad* or root-class. (chap. IX.) ending in *ā* are given by the grammarians the same option as regards the feminine of the present participle: thus, from *√yā*, *yānti* or *yāti*. The older language affords no example of the former, so far as noted.

c. From other tense-stems than those already specified — that is to say, from the remaining classes of present-stems and from the intensives — the feminine is formed in *atī* (or, if the stem be otherwise accented than on the final, in *aṭi*) only.

Thus, *adati* from *√ad*; *jūhvati* from *√hu*; *yuñjati* from *√yuj*; *sunvati* from *√su*; *kurvati* from *√kr*; *krīṇati* from *√krī*; *dēdīcati* from *dēdīc* (intens. of *√dīc*).

Exceptions are occasionally met with in the later language, as *doiṣanti* (M.), *rudanti* and *kurvanti* (N.). And AV. has *yānti* once.

450. A few words are participial in form and inflection, though not in meaning. Thus:

a. *brhānt* (often written *vṛhānt* in the later language), 'great': it is inflected like a participle (with *brhatī* and *brhānti* in du. and pl. neut.).

b. *mahānt*, 'great'; inflected like a participle, but with the irregularity that the *a* of the ending is lengthened in the strong forms: thus, *mahān*, *mahāntam*; *mahāntāu* (neut. *mahatī*); *mahāntas*, *mahānti*: instr. *mahatī* etc.

c. *pṛṣant*, 'speckled', and (in Veda only) *rūcant*, 'shining'.

d. *jāgat*, 'movable, lively' (in the later language, as neuter noun, 'world'), a reduplicated formation from *√gam*, 'go'; its nom. etc. neut. pl. is allowed by the grammarians to be only *jāganti*.

e. *ṛhānt*, 'small' (only once, in RV., *ṛhatē*).

All these form their feminine in *aṭi* only: thus, *brhatī*, *mahatī*, *pṛṣatī* and *rūcatī* (contrary to the rule for participles), *jāgatī*.

For *dānt*, 'tooth', which is perhaps of participial origin, see above, 396.

451. The pronominal adjectives *iyant* and *kīyant* are inflected like adjectives in *mant* and *vant*, having (452) *iyān* and *kīyān* as nom. masc. sing., *iyatī* and *kīyatī* as nom. etc. du. neut. and as feminine stems, and *iyanti* and *kīyanti* as nom. etc. plur. neut.

But the neut. pl. *īyānti* and the loc. sing.(?) *kīyāti* are found in RV

## 2. Possessives in *mant* and *vant*.

452. The adjectives formed by these two suffixes are

inflected precisely alike, and very nearly like the participles in *अन्त*. From the latter they differ only by lengthening the *अ* in the nom. sing. masc.

The voc. sing. is in *an*, like that of the participle (in the later language, namely: for that of the oldest, see below, 454 b). The neut. nom. etc. are in the dual only *atī* (or *ātī*), and in the plural *anti* (or *ānti*).

The feminine is always made from the weak stem: thus, *matī*, *vatī* (or *mātī*, *vātī*).

The accent, however, is never (as in the participle) thrown forward upon the case-ending or the feminine ending.

◁ 453. To illustrate the inflection of such stems it will be sufficient to give a part of the forms of *पशुमन्त्* *paṣumānt*, 'possessing cattle', and *भगवन्त्* *bhāgavant*, 'fortunate, blessed'. Thus:

	Singular:			
	m.	n.	m.	n.
N.	पशुमान् <i>paṣumān</i>	पशुमन् <i>paṣumāt</i>	भगवान् <i>bhāgavān</i>	भगवत् <i>bhāgavat</i>
A.	पशुमन्तम् <i>paṣumāntam</i>	पशुमन्त् <i>paṣumāt</i>	भगवन्तम् <i>bhāgavantam</i>	भगवत् <i>bhāgavat</i>
	पशुमता <i>paṣumātā</i>		भगवता <i>bhāgavatā</i>	
	etc.		etc.	
V.	पशुमन् <i>paṣuman</i>	पशुमन्त् <i>paṣumat</i>	भगवन् <i>bhāgavan</i>	भगवत् <i>bhāgavat</i>
	Dual:			
N. A. V.	पशुमन्तौ <i>paṣumāntāu</i>	पशुमन्ती <i>paṣumāntī</i>	भगवन्तौ <i>bhāgavantāu</i>	भगवन्ती <i>bhāgavāntī</i>
	etc.		etc.	
	Plural:			
N. V.	पशुमन्तम् <i>paṣumāntas</i>	पशुमन्ति <i>paṣumānti</i>	भगवन्तम् <i>bhāgavantas</i>	भगवन्ति <i>bhāgavānti</i>
A.	पशुमन्तम् <i>paṣumāntas</i>	पशुमन्ति <i>paṣumānti</i>	भगवन्तम् <i>bhāgavatas</i>	भगवन्ति <i>bhāgavānti</i>
I.	पशुमद्भिस् <i>paṣumādbhis</i>		भगवद्भिस् <i>bhāgavadbhis</i>	
	etc.		etc.	

454. Vedic Irregularities. a. In dual masc. nom. etc., *ā* (for *āu*) is the greatly prevailing ending.

b. In voc. sing. masc., the ending in the oldest language (RV.) is almost always in *as* instead of *an* (as in the perfect participle: below, 462 a): thus, *adriyas*, *harivas*, *bhānumas*, *haviṣmas*. Such vocatives in RV. occur more than a hundred times, while not a single unquestionable instance of one in *an* is to be found. In the other Vedic texts, vocatives in *as* are extremely rare (but *bhagavas* and its contraction *bhagos* are met with, even in the later language); and in their reproduction of RV. passages the *as* is usually changed to *an*.

It was pointed out above (425 g) that the RV. makes the voc. in *as* also apparently from a few *an*-stems.

c. In RV., the nom. etc. pl. neut., in the only two instances that occur, ends in *ānti* instead of *anti*: thus, *ghṛtāvānti*, *paçumānti*. No such forms have been noted elsewhere in the older language: the SV. reads *anti* in its version of the corresponding passages, and a few examples of the same ending are quotable from the Brāhmaṇas: thus, *tāvanti*, *etāvanti*, *yāvanti*, *pravanti*, *ṛtumanti*, *yugmanti*. Compare 448, 451.

d. In a few (eight or ten) more or less doubtful cases, a confusion of strong and weak forms of stem is made: they are too purely sporadic to require reporting. The same is true of a case or two where a masculine form appears to be used with a feminine noun (see Lanman).

455. The stem *árvant*, 'running, steed', has the nom. sing. *árvā*, from *árvan*; and in the older language also the voc. *arvan* and accus. *árvānam*.

456. Besides the participle *bhávant*, there is another stem *bhávant*, frequently used in respectful address as substitute for the pronoun of the second person (but construed, of course, with a verb in the third person), which is formed with the suffix *vant*, and so declined, having in the nom. sing. *bhāvān*; and the contracted form *bhos* of its old-style vocative *bhavas* is a common exclamation of address: 'you, sir!' Its origin is variously explained; it is most probably a contraction of *bhāgavant*.

457. The pronominal adjectives *tāvant*, *etāvant*, *yāvant*, and the Vedic *tvant*, *māvant*, *tvāvant*, etc., are inflected like ordinary derivatives from nouns.

#### F. Perfect Participles in *vāñs*.

< 458. The active participles of the perfect tense-system are quite peculiar as regards the modifications of their stem. In the strong cases, including the nom.-acc.-voc. pl. neut., the form of their suffix is वान् *vāñs*, which becomes, by regular process (150), *vān* in the nom. sing., and which is

shortened to वन् *van* in the voc. sing. In the weakest cases, the suffix is contracted into उष् *uṣ*. In the middle cases, including the nom.-acc.-voc. neut. sing., it is changed to वत् *vat*.

A union-vowel *i*, if present in the strong and middle cases, disappears in the weakest, before *uṣ*.

< 459. The forms as thus described are masculine and neuter only; the corresponding feminine is made by adding ई *ī* to the weakest form of stem, ending thus in उषी *uṣī*.

< 460. The accent is always upon the suffix, whatever be its form.

< 461. Examples of inflection. To show the inflection of these participles, we may take the stems विद्वांस् *vidvāns*, 'knowing' (which has irregular loss of the usual reduplication and of the perfect meaning) from √विद् *vid*; and तस्थिवांस् *tasthivāns*, 'having stood', from √स्था *sthā*.

Singular:

	m.	n.	m.	n.
N.	विद्वान् <i>vidvān</i>	विद्वत् <i>vidvāt</i>	तस्थिवान् <i>tasthivān</i>	तस्थिवत् <i>tasthivāt</i>
A.	विद्वांसम् <i>vidvānsam</i>	विद्वत् <i>vidvāt</i>	तस्थिवांसम् <i>tasthivānsam</i>	तस्थिवत् <i>tasthivāt</i>
I.	विदुषा <i>viduṣā</i>		तस्थुषा <i>tasthūṣā</i>	
D.	विदुषे <i>viduṣe</i>		तस्थुषे <i>tasthūṣe</i>	
Ab. G.	विदुषम् <i>viduṣas</i>		तस्थुषम् <i>tasthūṣas</i>	
L.	विदुषि <i>viduṣi</i>		तस्थुषि <i>tasthūṣi</i>	
V.	विद्वन् <i>vidvan</i>	विद्वत् <i>vidvat</i>	तस्थिवन् <i>tāsthivan</i>	तस्थिवत् <i>tāsthivat</i>

Dual:

N. A. V.	विद्वांसौ <i>vidvānsāu</i>	विदुषी <i>viduṣī</i>	तस्थिवांसौ <i>tasthivānsāu</i>	तस्थुषी <i>tasthūṣī</i>
----------	-------------------------------	-------------------------	-----------------------------------	----------------------------

I. D. Ab.	विद्ब्राम् <i>vidvādbhyaṃ</i>	तस्थिवद्ब्राम् <i>tasthivādbhyaṃ</i>
G. L.	विडुषोम् <i>viduṣos</i>	तस्थुषोम् <i>tasthuṣos</i>
Plural:		
N. V.	विद्वांसम् विद्वांसि <i>vidvānsas vidvānsi</i>	तस्थिवांसम् तस्थिवांसि <i>tasthivānsas tasthivānsi</i>
A.	विडुषम् विद्वांसि <i>viduṣas vidvānsi</i>	तस्थुषम् तस्थिवांसि <i>tasthuṣas tasthivānsi</i>
I.	विद्ब्रिम् <i>vidvādbhis</i>	तस्थिवद्ब्रिम् <i>tasthivādbhis</i>
D. Ab.	विद्ब्राम् <i>vidvādbhyaṣ</i>	तस्थिवद्ब्राम् <i>tasthivādbhyaṣ</i>
G.	विडुषाम् <i>viduṣām</i>	तस्थुषाम् <i>tasthuṣām</i>
L.	विद्वत्सु <i>vidvātsu</i>	तस्थिवत्सु <i>tasthivātsu</i>

The feminine stems of these two participles are विडुषी *viduṣī* and तस्थुषी *tasthuṣī*.

Other examples of the different stems are:

- from √*kr* — *cakrvāns*, *cakrvāt*, *cakruṣ*, *cakruṣī*;
- from √*nī* — *ninivāns*, *ninivāt*, *ninyuṣ*, *ninyuṣī*;
- from √*bhū* — *babhūvāns*, *babhūvāt*, *babhūvuṣ*, *babhūvuṣī*;
- from √*tan* — *tenivāns*, *tenivāt*, *tenuṣ*, *tenuṣī*.

462. a. In the oldest language (RV.), the vocative sing. masc. (like that of *vant* and *mant*-stems: above, 454 b) has the ending *vas* instead of *van*: thus, *cikitvas* (changed to *-van* in a parallel passage of AV.), *titirvas*, *dādivas*, *mīdhvas*.

b. Forms from the middle stem, in *vat*, are extremely rare earlier: only three (*tatanvāt* and *vavrtvāt*, neut. sing., and *jāgrvādbhis*, instr. pl.), are found in RV., and not one in AV. And in the Veda the weakest stem and not the middle one, as later, is made the basis of comparison: thus, *viduṣṭara*, *mīdhūṣṭama*.

c. An example or two of the use of the weak stem-form for cases regularly made from the strong are found in RV.: they are *cakruṣam*, acc. sing., and *ābibhyuṣas*, nom. pl.; *emuṣām*, by its accent (unless an error), is rather from a derivative stem *emuṣā*: and ÇB. has *proṣuṣam*. Similar instances, especially from *vidvāns*, are now and then met with later (see BR., under *vidvāns*).

d. The AV. has once *bhaktivāṅsas*, as if a participial form from a noun; but K. and TB. give in the corresponding passage *bhaktivānas*; *cahkvāṅsam* (RV., once) is of doubtful character; *okivāṅsū* (RV., once) shows a reversion to guttural form of the final of *√uc*, elsewhere unknown.

### G. Comparatives in *yas*.

463. The comparative adjectives of primary formation (below, 467) have a double form of stem for masculine and neuter: a stronger, ending in *यांस्* *yāṅs* (usually *इयांस्* *īyāṅs*), in the strong cases, and a weaker, in *यस्* *yas* (or *इयस्* *īyas*), in the weak cases (there being no distinction of middle and weakest). The voc. sing. masc. ends in *यन्* *yan* (but for the older language see below, 465 a).

The feminine is made by adding ई *ī* to the weak masc.-neut. stem.

464. As models of inflection, it will be sufficient to give a part of the forms of *श्रेयस्* *śréyas*, 'better', and of *गरीयस्* *gáriyas*, 'heavier'. Thus :

	Singular :			
N.	श्रेयान् <i>śréyān</i>	श्रेयस् <i>śréyas</i>	गरीयान् <i>gáriyān</i>	गरीयम् <i>gáriyas</i>
A.	श्रेयांसम् <i>śréyāṅsam</i>	श्रेयस् <i>śréyas</i>	गरीयांसम् <i>gáriyāṅsam</i>	गरीयम् <i>gáriyas</i>
I.		श्रेयसा <i>śréyasā</i> etc.		गरीयसा <i>gáriyasā</i> etc.
V.	श्रेयन् <i>śréyan</i>	श्रेयस् <i>śréyas</i>	गरीयन् <i>gáriyan</i>	गरीयस् <i>gáriyas</i>
	Dual :			
N. A. V.	श्रेयांसौ <i>śréyāṅsāu</i> etc.	श्रेयसौ <i>śréyasī</i> etc.	गरीयांसौ <i>gáriyāṅsāu</i> etc.	गरीयसौ <i>gáriyasī</i> etc.
	Plural :			
N. V.	श्रेयांसम् <i>śréyāṅsas</i>	श्रेयांसि <i>śréyāṅsi</i>	गरीयांसम् <i>gáriyāṅsas</i>	गरीयांसि <i>gáriyāṅsi</i>

A.	श्रेयसम् <i>śréyasas</i>	श्रेयांसि <i>śréyānsi</i>	गरीयसम् <i>gáriyasas</i>	गरीयांसि <i>gáriyānsi</i>
I.	श्रेयोभिस् <i>śréyobhis</i> etc.		गरीयोभिस् <i>gáriyobhis</i> etc.	

The feminine stems of these adjectives are श्रेयसी *śréyasī* and गरीयसी *gáriyasī*.

465. a. The Vedic voc. masc. (as in the two preceding divisions: 454 b, 462 a) is in *yas* instead of *yan*: thus, *ojiyas*, *jyāyas* (RV.: no examples elsewhere have been noted).

b. No example of a middle case occurs in RV. or AV.

c. In the later language are found a few apparent examples of strong cases made from the weaker stem-form: thus, *kanīyasam*, acc. masc., *kanīyasāu* du. They are perhaps rather to be viewed as transition-forms to an *a*-declension.

### Comparison.

466. Derivative adjective stems having a comparative and superlative meaning — or often also (and more originally) a merely intensive value — are made either directly from roots (by primary derivation), or from other derivative or compound stems (by secondary derivation).

The subject of comparison belongs properly to the chapter of derivation; but it stands in such near relation to inflection that it is, in accordance with the usual custom in grammars, conveniently and properly enough treated briefly here.

467. The suffixes of primary derivation are ईयस् *īyas* for the comparative and इष्ठ *iṣṭha* for the superlative. The root before them is accented, and usually strengthened by gunating, if capable of it — or, in some cases, by nasalization or prolongation. They are much more frequently and freely used in the oldest language than later; in the classical Sanskrit, only a limited number of such comparatives and superlatives are accepted in use; and these attach themselves in meaning for the most part to other adjectives from the same root, which seem to be their corresponding

positives: but in part also they are artificially connected with other words, unrelated with them in derivation.

Thus, from  $\sqrt{ksip}$ , 'hurl', come *kṣépiyas* and *kṣépiṣṭha*, which belong in meaning to *kṣiprā*, 'quick'; from  $\sqrt{ur}$ , 'encompass', come *vāriyas* and *vāriṣṭha*, which belong to *urū*, 'broad'; while, for example, *kānīyas* and *kāniṣṭha* are attached by the grammarians to *yūvan*, 'young', or *ālpa*, 'small'; and *vārṣīyas* and *vārṣiṣṭha* to *vṛddhā*, 'old'.

468. From Veda and Brāhmaṇa together, rather more than a hundred instances of this primary formation in *īyas* and *iṣṭha* (in many cases only one of the pair actually occurring) are to be quoted. About half of these (in RV., the decided majority) belong, in meaning as in form, to the bare root in its adjective value, as used especially at the end of compounds, but sometimes also independently: thus, from  $\sqrt{tap}$ , 'burn', comes *tāpiṣṭha*, 'excessively burning'; from  $\sqrt{yaj}$ , 'offer', come *yājīyas* and *yājīṣṭha*, 'better and best (or very well) sacrificing'; from  $\sqrt{yudh}$ , 'fight', comes *yódhiyas*, 'fighting better'; — in a few instances, the simple root is also found used as corresponding positive: thus, *jū*, 'hasty, rapid', with *jāvīyas* and *jāvīṣṭha*. In a little class of instances (eight), the root has a preposition prefixed, which then takes the accent: thus, *āgamīṣṭha*, 'especially coming hither'; *vicayīṣṭha*, 'best clearing away'; — in a couple of cases (*ācramīṣṭha*, *āparāvapiṣṭha*, *āstheyas*), the negative particle is prefixed; — in a single word (*çāmbhaviṣṭha*), an element of another kind. The words of this formation often take an accusative object: thus, *nābhas tāriyān* (RV.), 'traversing rapidly the cloud'; *vṛtrān hāniṣṭhaḥ* (RV.), 'best slayer of Vritra'.

But even in the oldest language appears not infrequently the same attachment in meaning to a derivative adjective which (as pointed out above) is usual in the later speech. Besides the examples that occur also later, others are met with like *vāriṣṭha*, 'choicest' (*vāra*, 'choice'), *bārhiṣṭha*, 'greatest' (*bṛhānt*, 'great'), *ōṣiṣṭha*, 'quickest' (*ōṣam*, 'quickly'), and so on. Probably by analogy with these, like formations are in a few cases made from the apparently radical syllables of words which have no otherwise traceable root in the language: thus, *kradhīyas* and *kradhīṣṭha* (K.) from *krdhū*, *sthāvīyas* and *sthāvīṣṭha* from *sthūrā*, *çāçīyas* (RV.) from *çāçvant*, *ānīyas* (AV.) and *āniṣṭha* (TS.) from *anī*; and so on. And yet again, in a few exceptional cases, the suffixes *īyas* and *iṣṭha* are applied to stems which are themselves palpably derivative: thus, *āçiṣṭha* from *āçū* (RV.: only case), *tīkṣṇīyas* (AV.) from *tīkṣṇā*, *brāhmīyas* and *brāhmīṣṭha* (TS.) from *brāhman*, *dhārmīṣṭha* (TA.) from *dhārman*, *drādhīṣṭha* (TB.:

instead of *dārhiṣṭha*) from *dr̥dhá*, *rághīyas* (TS.) from *raghu*. These are beginnings, not followed up later, of the extension of the formation to unlimited use.

In *nāvīyas* or *nāvīyas* and *nāviṣṭha*, from *nāva*, 'new', and in *sānyas* from *sana*, 'old' (all RV.), we have also formations unconnected with verbal roots.

469. The stems in *iṣṭha* are inflected like ordinary adjectives in *a*, making their feminines in *ā*; those in *īyas* have a peculiar declension, which has been described above (463 ff.).

470. Of peculiarities and irregularities of formation, the following may be noticed.

The suffix *īyas* has in a few instances the briefer form *yas*, generally as alternative with the other: thus, *tāvīyas* and *tāvīyas*, *nāvīyas* and *nāvīyas*, *vāsīyas* and *vāsīyas*, *pānīyas* and *pānīyas*; and so from *rabh* and *sah*; *sānyas* occurs alone. From *bhū* come *bhūyas* and *bhūyīṣṭha*, beside which RV. has also *bhāvīyas*.

Of roots in *ā*, the final blends with the initial of the suffix to *e*: thus, *sthēyas*, *dhēṣṭha*, *yēṣṭha*; but such forms are in the Veda generally to be resolved, as *dhāiṣṭha*, *yāiṣṭha*. The root *jyū* forms *jyēṣṭha*, but *jyāyas* (like *bhūyas*).

The two roots in *ī*, *prī* and *ṣrī*, form *prēyas* and *prēṣṭha* and *ṣrēyas* and *ṣrēṣṭha*.

From the root of *ṛjū* come, without strengthening, *ṛjīyas* and *ṛjīṣṭha*; but in the older language also, more regularly, *rājīyas* and *rājīṣṭha*.

471. The suffixes of secondary derivation are *तर tara* and *तम tama*. They are of almost unrestricted application, being added to adjectives of every form, simple and compound, ending in vowels or in consonants — and this from the earliest period of the language until the latest. The accent of the primitive remains (with rare exceptions) unchanged; and that form of stem is generally taken which appears before an initial consonant of a case-ending (weak or middle form).

Examples (of older as well as later occurrence) are: from vowel-stems, *priyātara*, *vāhnitama*, *rathītara* and *rathītama* (RV.), *cārutara*, *poṭītama*; — from consonant-stems, *ṣāntama*, *ṣācvattama*, *tavāstara* and *tavāstama*, *tuviṣṭama*, *vāpuṣṭara*, *tapasvītara*, *bhāgavattara*, *hiranyavācīmatama*; — from compounds, *ratnadhātama*, *abhībhūtara*, *sukīttara*, *pūrbhittama*, *bhūridāvattara*, *ṣūcivratatama*, *strīkāmātama*.

But in the Veda the final *n* of a stem is regularly retained: thus, *madántara* and *madántama*, *vṛṣántama*; and of a perfect participle the weakest stem is taken: thus, *vidúṣṭara*, *mīdhúṣṭama*. A feminine final *ī* is shortened: thus, *devitamā* (RV.), *tejasvinītamā* (K.).

In the older language, the words of this formation are not much more frequent than those of the other: thus, in RV. the stems in *tara* and *tama* are to those in *īyas* and *iṣṭha* as three to two; in AV., only as six to five: but later the former win a great preponderance.

472. These comparatives and superlatives are inflected like ordinary adjectives in *a*, forming their feminine in *ā*.

473. That (especially in the Veda) some stems which are nouns rather than adjectives form derivatives of comparison is natural enough, considering the uncertain nature of the division-line between substantive and adjective value. Thus, we have *māṭṣṭama*, *nīṭama*, *marúttama*, and others.

The suffixes *tara* and *tama* also make forms of comparison from some of the pronominal roots, as *ka*, *ya*, *i* (see below, 520); and from certain of the prepositions, as *ut*; and the adverbial accusative (older, neuter; later, feminine) of a comparative in *tara* from a preposition is used to make a corresponding comparative to the preposition itself (below, 1111 c).

The Hindu grammarians even allow the suffixes of comparison in the adverbial accusative feminine, *tarām* and *tamām*, to be appended to conjugational forms: thus, *pacati*, 'he cooks', *pacatitarām*, 'he cooks better': but such are barbarous combinations, having no warrant in the earlier uses of the language.

The suffixes of secondary comparison are occasionally added to those of primary, forming double comparatives and superlatives: thus, *gariyastara*, *çréṣṭhatama*.

The use of *tama* as ordinal suffix is noted below (487); with this value, it is accented on the final, and makes its feminine in *ī*: thus, *çatatamā*, m. and n., *çatatamī*, f., 'hundredth'.

474. From a few words, mostly prepositions, degrees of comparison are made by the briefer suffixes *ra* and *ma*: thus, *ádharma* and *adhamá*, *ápára* and *apamá*, *ávára* and *avamá*, *úpara* and *upamá*, *ántara*, *ántama*, *paramá*, *madhyamá*, *caramá*. And *ma* is also used to make ordinals (below, 487).

## CHAPTER VI.

## NUMERALS.

475. The simple cardinal numerals for the first ten numbers (which are the foundation of the whole class), with their derivatives, the tens, and with some of the higher members of the decimal series, are as follows:

1	एक <i>éka</i>	10	दश <i>dāṣa</i>	100	शत <i>ṣatá</i>
2	द्व <i>dvá</i>	20	विंशति <i>viñçati</i>	1000	सहस्र <i>sahasra</i>
3	त्रि <i>tri</i>	30	त्रिंशत् <i>triñçát</i>	10,000	अयुत <i>ayúta</i>
4	चतुर <i>catúr</i>	40	चत्वारिंशत् <i>catvāriñçát</i>	100,000	लक्ष <i>lakṣá</i>
5	पञ्च <i>pāñca</i>	50	पञ्चाशत् <i>pañcāṣát</i>	1,000,000	प्रयुत <i>práyuta</i>
6	षष् <i>ṣáṣ</i>	60	षष्टि <i>ṣaṣṭi</i>	10,000,000	कोटि <i>kóṭi</i>
7	सप्त <i>saptá</i>	70	सप्तति <i>saptati</i>	10 <sup>8</sup>	अर्बुद <i>arbuddá</i>
8	अष्ट <i>aṣṭá</i>	80	अशीति <i>aṣṭi</i>	10 <sup>9</sup>	महार्बुद <i>mahārbuda</i>
9	नव <i>náva</i>	90	नवति <i>navati</i>	10 <sup>10</sup>	खर्व <i>kharvá</i>
10	दश <i>dāṣa</i>	100	शत <i>ṣatá</i>	10 <sup>11</sup>	निखर्व <i>nikharvá</i>

The accent *saptá* and *aṣṭá* is that belonging to these words in all accentuated texts; according to the grammarians, they are *sápta* and *áṣṭa* in the later language. See below, 483.

The series of decimal numbers may be carried still further; but there are great differences among the different authorities

with regard to their names; and there is more or less of discordance even from *ayúta* on.

Thus, in the TS., we find *ayúta*, *niyúta*, *prayúta*, *árbuda*, *nyárbuda*, *samudrá*, *mádhya*, *ánta*, *parárdhá*; K. reverses the order of *niyúta* and *prayúta*, and inserts *baḍva* after *nyarbuda* (reading *nyarbudha*): these are probably the oldest recorded series.

In modern time, the only numbers in practical use above 'thousand' are *lakṣa* ('lac' or lakh) and *koṭi* ('crore'); and an Indian sum is wont to be pointed thus: 123,45,67,890, to signify '123 crores, 45 lakhs, 67 thousands, eight hundred and ninety'.

As to the stem-forms *pañcan* etc., see below, 484. As to the form *śakṣ* instead of *śaṣ*, see above, 146 end. The stem *dva* appears in composition and derivation also as *dvā* and *dvi*; *cátur* in composition is accented *cátur*. The older form of *aṣṭa* is *aṣṭā*: see below, 483. Forms in *-cat* and *-cati* for the tens are occasionally interchanged.

The other numbers are expressed by the various composition and syntactical combination of those given above. Thus:

476. The odd numbers between the even tens are made by prefixing the (accented) unit to the ten to which its value is to be added: but with various irregularities. Thus:

*eka* in '11' becomes *ekā*, but is elsewhere unchanged;

*dva* becomes everywhere *dvā*; but in '42'—'72' and in '92' it is interchangeable with *dvi*, and in '82' *dvi* alone is used;

for *tri* is substituted its nom. pl. masc. *trāyas*; but *tri* itself is also allowed in '43'—'73' and in '93', and in '83' *tri* alone is used;

*śaṣ* becomes *ṣo* in '16', and makes the initial *d* of *daṣa* lingual (199 b); elsewhere its final undergoes the regular conversion (226 b) to *ṭ* or *ḍ* or *ṇ*; and in '96' the *n* of *navati* is assimilated to it (199 b);

*aṣṭa* becomes *aṣṭā* (483) in '18'—'38', and has either form in the succeeding combinations. Thus:

11 <i>ékādaṣa</i>	31 <i>ékatriṅcat</i>	61 <i>ékaśaṣṭi</i>	81 <i>ékāçīti</i>
12 <i>dvādaṣa</i>	32 <i>dvātriṅcat</i>	62 { <i>dvāśaṣṭi</i> <i>dvīśaṣṭi</i>	82 <i>dvyāçīti</i>
13 <i>trāyodaṣa</i>	33 <i>trāyastrīṅcat</i>	63 { <i>trāyahśaṣṭi</i> <i>trīśaṣṭi</i>	83 <i>tryāçīti</i>
14 <i>cāturdaṣa</i>	34 <i>cātustrīṅcat</i>	64 <i>cātuhśaṣṭi</i>	84 <i>cāturaçīti</i>
15 <i>pāñcadaṣa</i>	35 <i>pāñcatrīṅcat</i>	65 <i>pāñcaśaṣṭi</i>	85 <i>pāñcāçīti</i>
16 <i>ṣoḍaṣa</i>	36 <i>ṣāṭtriṅcat</i>	66 <i>ṣāṭśaṣṭi</i>	86 <i>ṣāḍaçīti</i>
17 <i>saptādaṣa</i>	37 <i>saptātriṅcat</i>	67 <i>saptāśaṣṭi</i>	87 <i>saptāçīti</i>
18 <i>aṣṭādaṣa</i>	38 <i>aṣṭātriṅcat</i>	68 { <i>aṣṭāśaṣṭi</i> <i>aṣṭīśaṣṭi</i>	88 <i>aṣṭāçīti</i>
19 <i>nāvadaṣa</i>	39 <i>nāvatriṅcat</i>	69 <i>nāvāśaṣṭi</i>	89 <i>nāvāçīti</i>

The numbers '21'—'29' are made like those for '31'—'39'; the numbers '41'—'49', '51'—'59', '71'—'79', and '91'—'99' are made like those for '61'—'69'.

The forms made with *dvā* and *trayas* are more usual than those with *dvi* and *tri*, which are hardly to be quoted from the older literature (V. and Br.). The forms made with *aṣṭā* (instead of *aṣṭa*) are alone found in the older literature (483), and are usual in the later.

477. The above are the normal expressions for the odd numbers. But equivalent substitutes for them are also variously made. Thus:

a. By use of the adjectives *ūna*, 'deficient', and *adhika*, 'redundant', in composition with lesser numbers which are to be subtracted or added, and either independently qualifying or (more usually) in composition with larger numbers which are to be increased or diminished by the others: thus, *trīṇa-ṣaṣṭi*, 'sixty deficient by three' (i. e. '57'); *aṣṭādhikanavati*, 'ninety increased by eight' (i. e. '98'); *ekādhikaṁ śatam*, 'a hundred increased by one' (i. e. '101'); *pañconam śatam*, '100 less 5' (i. e. '95'). For the nines, especially, such substitutes as *ekonaviṅcati*, '20 less 1', or '19', are not uncommon; and later the *eka*, '1', is left off, and *ūnaviṅcati* etc. have the same value.

b. A case-form of *ēka*, 'one', is connected by *nā*, 'not', with a larger number from which one is to be deducted: thus, *ekayā nā triṅśāt* (ÇB. PB. KB.), 'not thirty by one' (i. e. '29'); *ekasmān nā pañcāśāt* (in ordinal), '49' (TS.); *ekasyāi* (abl. fem.: 366.3) *nā pañcāśāt*, '49' (TS.); most often, *ekān* (i. e. *ékāt*, irregular abl. for *ékasmāt*) *nā viṅśatī*, '19'; *ékān nā śatām*, '99'. This last form is admitted also in the later language: the others are found in the Brāhmaṇas.

c. Instances of multiplication by a prefixed number are occasionally met with: thus, *triṣaptā*, 'thrice seven'; *triṇavā*, 'thrice nine'; *tridaśā*, 'thrice ten'.

d. Of course, the numbers to be added together may be expressed by independent words, with connecting 'and': thus, *nāva ca navatīc ca*, or *nāva navatīn ca*, 'ninety and nine'; *dvāū ca viṅśatīc ca*, 'two and twenty'. But the connective is also (at least, in the older language) not seldom omitted: thus, *navatīr nāva*, '99'; *triṅśātām trīn*, '33'; *aṣṭīr aṣṭāū*, '88'.

478. The same methods are also variously used for forming the odd numbers above 100. Thus:

a. The added number is prefixed to the other, and takes the accent: for example, *ekaśatam*, '101'; *aṣṭāśatam*, '108'; *triṅśāśatam*, '130'; *aṣṭā-viṅśatiśatam*, '148'; *cātuṣśahasram* (RV.: unless the accent is wrong), '1004'.

b. Or, the number to be added is compounded with *adhika*, 'redundant', and the compound is either made to qualify the other number or is further compounded with it: thus, *pañcādhikaṁ śatam* or *pañcādhikaśatam*, '105'.

Of course, *ūna*, 'deficient' (as also other words equivalent to *ūna* or *adhika*), may be used in the same way: thus, *pañconam śatam*, '95'.

c. Syntactical combinations are made at convenience: for example, *dāśa śatām ca*, '110'; *śatām ēkaṁ ca*, '101'.

479. Another usual method (beginning in the Brāhmaṇas) of forming the odd numbers above 100 is to qualify the larger

number by an adjective derived from the smaller, and identical with the briefer ordinal (below, 487): thus, *dvādaśam śatām*, '112' (lit'ly, 'a hundred of a 12-sort, or characterised by 12'); *catuṣṣatvāriṅśam śatām*, '124'; *ṣaṣṣaśtām śatām*, '166'.

480. To multiply one number by another, among the higher or the lower denominations, the simplest and least ambiguous method is to make of the multiplied number a dual or plural, qualified by the other as any ordinary noun would be; and this method is a common one in all ages of the language. For example: *pañca pañcāśtatas*, five fifties ('250'); *nāva navatāyās*, 'nine nineties' ('810'); *aṣṭībhis tisṛbhis*, 'with three eighties' ('240'); *pañca śatāni*, 'five hundreds'; *trīṇi sahasrāni*, 'three thousands'; *ṣaṣṭīm sahasrāni*, '60,000'; *daśa ca sahasrāny aṣṭāu ca śatāni*, '10,800': and, combined with addition, *trīṇi śatāni trāyastriṅśataṃ ca*, '333'; *sahasre dve pañconam śatam eva ca*, '2095'.

By a peculiar and wholly illogical construction, such a combination as *trīṇi ṣaṣṭīcatāni*, which ought to signify '480' ( $3 \times 100 + 60$ ), is frequently used in the Brāhmanas to mean '360' ( $3 \times 100 + 60$ ); so also *dve catuṣtriṅśe śatē*, '234' (not '268'); and other like cases.

481. But the two factors, multiplier and multiplied, are also, and in later usage more generally, combined into a compound (accented on the final); and this is then treated as an adjective, qualifying the numbered noun; or else its neuter or feminine (in *ī*) singular is used substantively: thus, *daśaśatās*, '1000'; *ṣaṣṭatāiḥ padātibhiḥ* (MBh.), 'with 600 foot-soldiers'; *trāyastriṅśat trīṣatāḥ ṣaṣsahasrāḥ* (AV.), '6333'; *dviśatām* or *dviśatī*, '200'; *aṣṭādaśaśatī*, '1800'.

In the usual absence of accentuation, there arises sometimes a question as to how a compound number shall be understood: whether *aṣṭaśatam*, for example, is *aṣṭāśatam*, '408', or *aṣṭaśatām*, '800', and the like.

482. Inflection. The inflection of the cardinal numerals is in many respects irregular. Gender is distinguished only by the first four.

a. *Ēka*, '1', is declined after the manner of a pronominal adjective (like *sārva*, below, 524); its plural is used in the sense of 'some, certain ones'. Its dual does not occur.

Occasional forms of the ordinary declension are met with: thus, *ēke* (loc. sing.), *ēkāt*.

In the late literature, *eka* is used in the sense of 'a certain', or even sometimes almost of 'a', as an indefinite article. Thus, *eko vyāghraḥ* (H.), 'a certain tiger'; *ekasmin dine*, 'on a certain day'; *haste dandam ekam ādāya* (H.), 'taking a stick in his hand'.

b. *Dva*, '2', is dual only, and is entirely regular: thus, N. A. V. *dvāu* (V. *dvā*), m., *dvé*, f. n.; I. D. Ab. *dvābhyām*; G. L. *dvāyos*.

c. *Tri*, '3', is in masc. and neut. nearly regular, like an ordinary stem in *i*; but their genitive is as if from *trayá* (only in the later language: the regular *trīṇām* occurs once in RV.). For the feminine it has the peculiar stem *tisṛí*, which is inflected in general like an *r*-stem; but the nom. and accus. are alike, and show no strengthening of the *r*; and the *r* is not prolonged in the gen. (excepting in the Veda). Thus:

	m.	n.	f.
N.	<i>trāyas</i>	<i>trīṇi</i>	<i>tisrās</i>
A.	<i>trīn</i>	<i>trīṇi</i>	<i>tisrās</i>
I.	<i>tribhás</i>		<i>tisṛbhis</i>
D. Ab.	<i>tribhyás</i>		<i>tisṛbhyas</i>
G.	<i>trayāṇām</i>		<i>tisṛṇām</i>
L.	<i>triṣú</i>		<i>tisṛṣu</i> .

The Veda has the abbreviated neut. nom. and accus. *trī*. The accentuation *tisṛbhás*, *tisṛbhyás*, *tisṛṇām*, and *tisṛṣú* is said to be also allowed in the later language.

The stem *tisṛ* occurs in composition in *tisṛdhanvá* (Br.), 'a bow along with three arrows'.

d. *Catúr*, '4', has *catvār* (the more original form) in the strong cases; in the fem. it substitutes the stem *cátasr*, apparently akin with *tisṛí*, and inflected like it (but with anomalous change of accent, like that in the higher numbers: see below, 483). Thus:

	m.	n.	f.
N.	<i>catváras</i>	<i>catvāri</i>	<i>cátasras</i>
A.	<i>catúras</i>	<i>catvāri</i>	<i>cátasras</i>
I.	<i>catúrbbhis</i>		<i>catasṛbhis</i>
D. Ab.	<i>catúrbbhyas</i>		<i>catasṛbhyas</i>
G.	<i>caturnām</i>		<i>catasṛṇām</i>
L.	<i>catúrṣu</i>		<i>catasṛṣu</i> .

The use of *n* before *ām* of the gen. masc. and neut. after a final consonant of the stem is (as in *śas*: below, 483) a striking irregularity. The more regular gen. fem. *catasṛṇām* also sometimes occurs. In the later language, the accentuation of the final syllable instead of the penult is allowed in inst., dat.-abl., and loc.

483. The numbers from '5' to '19' have no distinction of gender, nor any generic character. They are inflected, somewhat irregularly, as plurals, save in the nom.-acc., where they have no proper plural form, but show the bare stem instead. Of *śás* (as of *catúr*), *nām* is the gen. ending, with mutual assimilation (198 b) of stem-final and initial of the termination. *Aṣṭá* (as

accented in the older language) has an alternative fuller form, *aṣṭá*, which is almost exclusively used in the older literature (V. and Br.), both in inflection and in composition (but some compounds with *aṣṭa* are found as early as the AV.); its nom.-acc. is *aṣṭá* (usual later: found in RV. once, and in AV.), or *aṣṭá* (RV.), or *aṣṭā́* (most usual in RV.; also in AV., Br., and later).

The accent is in many respects peculiar. In all the accented texts, the stress of voice lies on the penult before the endings *bhis*, *bhyas*, and *su*, from the stems in *a*, whatever be the accent of the stem: thus, *pañcābhis* from *pañca*, *navābhyas* from *nāva*, *daśāsu* from *dāca*, *navadaśābhis* from *nāvadaśa*, *ekādaśābhyas* from *ekādaśa*, *dvādaśāsu* from *dvādaśa*; according to the grammarians, either the penult or the final is accented in these forms in the later language. In the gen. pl., the accent is on the ending (as in that of *i*, *u*, and *ṛ*-stems). The cases of *śaś*, and those made from the stem-form *aṣṭā*, have the accent throughout upon the ending.

Examples of the inflection of these words are as follows:

N. A.	<i>pañca</i>	<i>śat</i>	<i>aṣṭā́</i>	<i>aṣṭá</i>
I.	<i>pañcābhis</i>	<i>śadbhís</i>	<i>aṣṭā́bhis</i>	<i>aṣṭá́bhis</i>
D. Ab.	<i>pañcābhyas</i>	<i>śadbhyás</i>	<i>aṣṭā́bhyás</i>	<i>aṣṭá́bhyas</i>
G.	<i>pañcānām</i>	<i>śaṇṇām</i>		<i>aṣṭā́nām</i>
L.	<i>pañcāsu</i>	<i>śaśsu</i>	<i>aṣṭā́su</i>	<i>aṣṭá́su</i>

*Saptá* (in the later language *sápta*, as *áṣṭa* for *aṣṭá*) and *nāva* and *dāca*, with the compounds of *dāca* ('11'—'19'), are declined like *pañca*, and with the same shift of accent (or with alternative shift to the endings, as pointed out above).

484. The Hindu grammarians give to the stems for '5' and '7'—'19' a final *n*: thus, *pañcan*, *saptan*, *aṣṭan*, *navan*, *daśan*, and *ekādaśan* etc. This, however, has nothing to do with the demonstrably original final nasal of '7', '9', and '10' (compare *septem*, *novem*, *decem*; *seven*, *nine*, *ten*); it is only owing to the fact that, starting from such a stem-form, their inflection is made to assume a more regular aspect, the nom.-acc. having the form of a neut. sing. in *an*, and the instr., dat.-abl., and loc. that of a neut. or masc. pl. in *an*: compare *nāma*, *nāmabhis*, *nāmabhyas*, *nāmasu* — the gen. alone being like that, rather, of a *a*-stem: compare *daśānām* with *indrāṇām* and *nāmnām* or *ātmanām*. No trace whatever of a final *n* is found anywhere in the language, in inflection or derivation or composition, from any of these words.

485. The tens, *viṅcatí* and *triṅcát* etc., with their compounds, are declined regularly, as feminine stems of the same endings, and in all numbers.

*Çatá* and *sahasra* are declined regularly, as neuter (or, rarely, in the later language, as masculine) stems of the same final, in all numbers.

The like is true of the higher numbers — which have, indeed, no proper numeral character, but are ordinary nouns.

**486. Construction.** As regards their construction with the nouns enumerated by them :

a. The words for '1' to '19' are used adjectively, agreeing in case, and, if they distinguish gender, in gender also, with the nouns: thus, *daśābhir vīrāih*, 'with ten heroes'; *yé devā divy ékādaśa sthā* (AV.), 'what eleven gods of you are in heaven'; *pañcāsu jāneṣu*, 'among the five tribes'; *catasṛbhir gīrbhīh*, 'with four songs'.

b. The numerals above '19' are construed usually as nouns, either taking the numbered noun as a dependent genitive, or standing in the singular in apposition with it: thus, *śatām dāsīh* or *śatām dāsīnām*, 'a hundred slaves' or 'a hundred of slaves'; *vinśatyā hāribhis*, 'with twenty bays'; *ṣaṣṭyām śarātsu*, 'in 60 autumns'; *śatēna pāṣāih*, 'with a hundred fetters'; *śatām sahasram ayūtām nyārbudam jaghāna śakrō dāsyūnām* (AV.), 'the mighty [Indra] slew a hundred, a thousand, a myriad, a hundred million, of demons'.

Occasionally they are put in the plural, as if used more adjectively: thus, *pañcāśadbhir vāṇāih*, 'with fifty arrows'.

c. In the older language, the numerals for '5' and upward are sometimes used in the nom.-acc. form (or as if indeclinably) with other cases also: thus, *pañca kṛṣṭiṣu*, 'among the five races'; *saptā rṣiṇām*, 'of seven bards'; *sahasram ṛṣibhīh*, 'with a thousand bards'; *śatām pūrbhīh*, 'with a hundred strongholds'.

**487. Ordinals.** Of the classes of derivative words coming from the original or cardinal numerals, the ordinals are by far the most important; and the mode of their formation may best be explained here.

Some of the first ordinals are irregularly made: thus, *ēka*, '1', forms no ordinal; instead is used *prathamā* (i. e. *pra-tama*, 'foremost'); *ādi* is rare in the Brāhmaṇas, and *ādya* even in the Sūtras;

from *dvā*, '2', and *trī*, '3', come *dvitīya* and *trītiya* (secondarily, through *dvīta* and abbreviated *trīta*);

*catūr*, '4', *ṣaṣ*, '6', and *saptā*, '7', take the ending *tha*: thus, *catūrtthā*, *ṣaṣṭhā*, *saptāttha*; but for 'fourth' are used also *tūrīya* and *tūrya*, and *saptāttha* belongs to the older language only: *pañcathā*, for 'fifth', is excessively rare;

the numerals for '5' and '7' usually, and for '8', '9', '10', add *ma*, forming *pañcamā*, *saptamā*, *aṣṭamā*, *navamā*, *daśamā*;

for '11th' to '19th', the forms are *ekādaśā*, *dvādaśā*, and so on (the same with the cardinals, except change of accent);

for the tens and intervening odd numbers from '20' onward, the ordinal has a double form — one made by adding the full (superlative) ending *tamā* to the cardinal: thus, *viṅcatitamā*, *triṅcattamā*, *açhitāmā*, etc.; the other, shorter, in *a*, with abbreviation of the cardinal: thus, *viṅśā*, '20th'; *triṅśā*, '30th'; *catvāriṅśā*, '40th'; *pañcāśā*, '50th'; *ṣaṣṭā*, '60th'; *saptatā*, '70th'; *açītā*, '80th'; *navatā*, '90th'; and so likewise *ekaviṅśā*, '21st', *catvāriṅśā*, '34th'; *aṣṭācatvāriṅśā*, '48th'; *dvāpañcāśā*, '52d'; *ekaṣaṣṭā*, '61st'; and *ekānaviṅśā* and *ūnaviṅśā* and *ekonaviṅśā*, '19th'; — and so on. Of these two forms, the latter and briefer is by far the more common, the other being not quotable from the Veda, and extremely rarely from the Brāhmanas. From '50th' on, the briefer form is allowed by the grammarians only to the odd numbers, made up of tens and units; but it is sometimes met with, even in the later language, from the simple ten.

Of the higher numbers, *çatā* and *sahasra* form *çatatamā* and *sahasratamā*; but their compounds have also the simpler form: thus, *ekaçatā*, '101st'.

Of the ordinals, *prathamā* (and *ādya*), *dvitīya*, *ṭṭīya*, and *tūriya* (with *tūrya*) form their feminine in *ā*; all the rest make it in *ī*.

**488.** The ordinals, as in other languages, have other than ordinal offices to fill; and in Sanskrit especially they are general adjectives to the cardinals, with a considerable variety of meanings, as fractionals, as signifying 'composed of so many parts' or 'so-many-fold', or 'containing so many', or (as was seen above, **479**) 'having so many added'.

In a fractional sense, the grammarians direct that their accent be shifted to the first syllable: thus, *dvitīya*, 'half'; *ṭṭīya*, 'third part'; *caturtha*, 'quarter', and so on. But in accented texts only *ṭṭīya*, 'third', and *tūriya*, 'quarter', are found so treated; for 'half' occurs only *arḥā*; and *caturthā*, *pañcamā*, and so on, are accented as in their ordinal use.

**489.** Other numeral derivatives — thus, multiplicative adverbs, as *dvīs*, *tris*, *catūs*, 'twice', 'thrice', 'four times';

adverbs with the suffixes *dhā* and *ças*: for example, *ekadhā*, 'in one way', *çatadhā*, 'in a hundred ways'; *ekaças*, 'one by one', *çataças*, 'by hundreds';

collectives, as *dvitaya* or *dwayā*, 'a pair', *dāçataya* or *daçāt*, 'a decade' —

belong rather to the dictionary, or to the chapter of derivation.

## CHAPTER VII.

## PRONOUNS.

490. THE pronouns differ from the great mass of nouns and adjectives chiefly in that they come by derivation from another and a very limited set of roots, the so-called 'pronominal' or 'demonstrative' roots. But they have also many and marked peculiarities of inflection — some of which, however, find analogies also in a few adjectives; and such adjectives will accordingly be described at the end of this chapter.

## Personal Pronouns.

491. The pronouns of the first and second persons are the most irregular and peculiar of all, being made up of fragments coming from various roots and combinations of roots. They have no distinction of gender.

Their inflection in the later language is as follows:

Singular:

	1st pers.	2d pers.
N.	अहम् <i>ahám</i>	त्वम् <i>tvám</i>
A.	माम्, मा <i>mām, mā</i>	त्वाम्, त्वा <i>tvām, tvā</i>
I.	मया <i>máyā</i>	त्वया <i>tváyā</i>
D.	मह्यम्, मे <i>máhyam, me</i>	तुभ्यम्, ते <i>túbhyam, te</i>
Ab.	मत् <i>mát</i>	त्वत् <i>tvát</i>

G.	मम, मे <i>māma, me</i>	तव, ते <i>tāva, te</i>
L.	मयि <i>māyi</i>	त्वयि <i>tvāyi</i>
Dual:		
N. A. V.	आवाम् <i>āvām</i>	युवाम् <i>yuvām</i>
I. D. Ab.	आवाभ्याम् <i>āvābhyaṃ</i>	युवाभ्याम् <i>yuvābhyaṃ</i>
G. L.	आवयोस् <i>āvāyos</i>	युवयोस् <i>yuvāyos</i>
and A. D. G.	नौ <i>nāu</i>	वाम् <i>vām</i>
Plural:		
N.	वयम् <i>vayam</i>	यूयम् <i>yūyam</i>
A.	अस्मान्, नस् <i>asmān, nas</i>	युष्मान्, वस् <i>yuṣmān, vas</i>
I.	अस्माभिस् <i>asmābhis</i>	युष्माभिस् <i>yuṣmābhis</i>
D.	अस्मभ्यम्, नस् <i>asmābhyam, nas</i>	युष्मभ्यम्, वस् <i>yuṣmābhyam, vas</i>
Ab.	अस्मत् <i>asmāt</i>	युष्मत् <i>yuṣmāt</i>
G.	अस्माकम्, नस् <i>asmākam, nas</i>	युष्माकम्, वस् <i>yuṣmākam, vas</i>
L.	अस्मासु <i>asmāsu</i>	युष्मासु <i>yuṣmāsu</i>

The briefer second forms for accus., dat., and gen., in all numbers, are accentless; and hence they are not allowed to stand at the beginning of a sentence, or elsewhere where any emphasis is laid.

The ablative *mat* is accentless in one or two AV. passages (xi. 4. 26; xii. 3. 46).

492. Forms of the older language. All the forms

given above are found also in the older language; which, however, has also others that afterward disappear from use.

Thus, the Veda (RV.) has a few times the instr. sing. *tvā* (like *manīṣā* for *manīṣāyā*); further, the loc. sing. *tvé*, the dat. pl. (less often loc.) *asmé*, and the loc. pl. *yusmé*: the final *e* of these forms is uncombinable (or *pragrhya*: 138b). The datives in *bhyam* are in RV. not seldom to be read as if in *bhya*, with loss of the final nasal; *asmākam* and *yusmākam* suffer the same loss only in a rare instance or two. The usual resolutions of semivowel to vowel are made, and are especially frequent in the forms of the second person (*tuām* for *tvām*, etc.).

But the duals, above all, wear a very different aspect earlier. In Veda and Brāhmaṇa, the nominatives are *āvām* and *yuvām*, and only the accusatives *āvām* and *yuvām* (but in RV. the dual forms of 1st pers. chance not to occur, unless in *vām*?, once, for *āvām*); the instr. in RV. is either *yuvābhyām* (not elsewhere found) or *yuvābhyām*; an abl. *yuvāt* appears once in RV., and *āvāt* twice in TS.; the gen.-loc. is in RV. (only) *yuvós* instead of *yuváyos*. Thus we have here a distinction (elsewhere unknown) of five different dual cases by endings, in part accordant with those of the other two numbers.

493. Peculiar endings. The ending *am*, appearing in the nom. sing. and pl. (and Vedic du.) of these pronouns, will be found often, though only in sing., among the other pronouns. The *bhyam* (or *hyam*) of dat. sing. and pl. is met with only here; its relationship with the *bhyām*, *bhyas*, *bhis* of the ordinary declension is palpable. The *t* (or *d*) of the abl., though here preceded by a short vowel, is doubtless the same with that of the *a*-declension of nouns and adjectives. That the nom., dat., and abl. endings should be the same in sing. and pl. (and in part in the earlier du. also), only the stem to which they are added being different, is unparalleled elsewhere in the language. The element *sma* appearing in the plural forms will be found frequent in the inflection of the singular in other pronominal words: in fact, the compound stem *asma* which underlies the plural of *aham* seems to be the same that furnishes part of the singular forms of *ayam* (501), and its value of 'we' to be a specialisation of the meaning 'these persons'. The genitives singular, *māma* and *tāva*, have no analogies elsewhere; the derivation from them of the adjectives *māmaka* and *tāvaka* (below, 516) suggests the possibility of their being themselves stereotyped stems. The gen. pl., *asmākam* and *yusmākam*, are certainly of this character: namely, neuter sing. case-forms of the adjective stems *asmāka* and *yusmāka*, other cases of which are found in the Veda.

494. Stem-forms. To the Hindu grammarians, the stems of the personal pronouns are *mad* and *asmad*, and *tvad* and *yusmad*, because these are forms used to a certain extent, and allowed to be indefinitely used, in derivation and composition (like *tad*, *kad*, etc.: see below, under the other pronouns). Words are thus formed from them even in the older language

— namely, *mákr̥ta*, *mátsakhi*, *asmátsakhi*, *tvádyoni*, *mattás* (AV.), *tvátpitr̥* (TS.), *yuváddevatya* (ÇB.); but much more numerous are those that show the proper stem in *a*, or with the *a* lengthened to *ā*: thus, *māvant*; *asmatrā*, *asmadrūh*, etc.; *tvádatta*, *tvānid*, *tvāvāsu*, *tvāhata*, etc.; *yusmādatta*, *yusmēsita*, etc.; *yuvádhita*, *yuvádatta*, *yuvānita*, etc. And the later language also has a few words made in the same way, as *mādr̥ç*.

The Vedas have certain more irregular combinations, with complete forms: thus, *tvāñkāma*, *māmpacyā*, *mamasatyā*, *asméhiti*, *ahampūrvā*, *ahamuttarā*, *ahanyā*, *ahansana*.

From the stems of the grammarians come also the derivative adjectives *madhya*, *tvadya*, *asmadya*, *yusmadya*, having a possessive value: see below, 516.

For *sva* and *svayām*, see below, 513.

### Demonstrative Pronouns.

495. The simplest demonstrative, त *ta*, which answers also the purpose of a personal pronoun of the third person, may be taken as model of a mode of declension usual in so many pronouns and pronominal adjectives that it is fairly to be called the general pronominal declension.

But this root has also the special irregularity that in the nom. sing. masc. and fem. it has *sás* (for whose peculiar euphonic treatment see 176a) and *sā*, instead of *tás* and *tā* (compare Gr. ὁ, ἡ, το, and Goth. *sa*, *so*, *thata*). Thus:

Singular:

	m.	n.	f.
N.	सम् <i>sás</i>	तत् <i>tát</i>	सा <i>sā</i>
A.	तम् <i>tám</i>	तत् <i>tát</i>	ताम् <i>tām</i>
I.	तेन <i>téna</i>		तया <i>táyā</i>
D.	तस्मै <i>tásmāi</i>		तस्यै <i>tásyāi</i>
Ab.	तस्मात् <i>tásmāt</i>		तस्याम् <i>tásyāś</i>

G.	तस्य <i>tásya</i>	तस्याम् <i>tásyās</i>
L.	तस्मिन् <i>tásmin</i>	तस्याम् <i>tásyām</i>
Dual:		
N. A. V.	तौ      ते <i>tāú      té</i>	ते <i>té</i>
I. D. Ab.	ताभ्याम् <i>tābhyām</i>	ताभ्याम् <i>tābhyām</i>
G. L.	तयोस् <i>táyos</i>	तयोस् <i>táyos</i>
Plural:		
N.	ते      तानि <i>té      tāni</i>	ताम् <i>tās</i>
A.	तान्      तानि <i>tān      tāni</i>	ताम् <i>tās</i>
I.	तैस् <i>tāis</i>	ताभिस् <i>tābhis</i>
D. Ab.	तेभ्यस् <i>tēbhyas</i>	ताभ्यस् <i>tābhyas</i>
G.	तेषाम् <i>tēṣām</i>	तासाम् <i>tāsām</i>
L.	तेषु <i>tēṣu</i>	तासु <i>tāsu</i>

The Vedas show no other irregularities of inflection than those which belong to all stems in *a* and *ā*: namely, *tēnā* sometimes; usually *tā* for *tāū*, du.; often *tā* for *tāni*, pl. neut.; usually *tēbhis* for *tāis*, instr. pl.; and the ordinary resolutions. The RV. has one more case-form from the root *sa*, namely *sāsmīn* (occurring nearly half as often as *tāsmīn*).

**496.** The peculiarities of the general pronominal declension, it will be noticed, are these:

In the singular, the use of *t* (properly *d*) as ending of nom.-acc. neut.; the combination with the root of another element *sma* in masc. and neut. dat., abl., and loc., and of *sy* in fem. dat., abl.-gen., and loc.; and the masc. and neut. loc. ending *in*, which is restricted to this declension (except in the anomalous *yādīçmin*, RV., once).

The dual is precisely that of noun-stems in *a* and *ā*.

In the plural, the irregularities are limited to *té* for *tās* in nom. masc., and the insertion of *s* instead of *n* before *ām* of the gen., the stem-final being treated before it in the same manner as before *su* of the loc.

497. The stem of this pronoun is by the grammarians given as *tad*; and from that form come, in fact, the derivative adjective *tadīya*, with *tattvā*, *tadvat*, *tanmaya*; and numerous compounds, such as *tacchīla*, *tajjñā*, *tatkara*, *tadanantara*, *tanmātra*, etc. These compounds are not rare even in the Veda: so *tādanna*, *tadvid*, *tadvaçā*, etc. But derivatives from the true root *ta* are also many: especially adverbs, as *tātas*, *tātra*, *tāthā*, *tadā*; the adjectives *tāvant* and *tāti*; and the compound *tādīç* etc.

498. Though the demonstrative root *ta* is prevailingly of the third person, it is also freely used, both in the earlier language and in the later, as qualifying the pronouns of the first and second person, giving emphasis to them: thus, *sò 'hām*, 'this I', or 'I here'; *sá tvām*, 'thou there'; *te vayam*, 'we here'; and so on.

499. Two other demonstrative stems appear to contain *ta* as an element; and both, like the simple *ta*, substitute *sa* in the nom. sing. masc. and fem.

a. The one, *tyá*, is tolerably common (although only a third of its possible forms occur) in RV., but rare in AV., and almost unknown later: its nom. sing., in the three genders, is *syás*, *syā*, *tyát*, and it makes the accusatives *tyám*, *tyām*, *tyát*, and goes on through the remaining cases in the same manner as *ta*. It has in RV. the instr. fem. *tyā* (for *tyāyā*).

b. The other is the usual demonstrative of nearer position, 'this here', and is in frequent use through all periods of the language. It prefixes *e* to the simple root, forming the nominatives *eçás*, *eçā*, *etát* — and so on through the whole inflection.

The stem *tya* has neither compounds nor derivatives. But from *etu* are formed both, in the same manner as from the simple *ta*, only much less numerous: thus, *etaddā* (ÇB.), *etad-ārtha*, etc., from the so-called stem *etat*; and *etādīç* and *etāvant* from *eta*.

[ 500. There is a defective pronominal stem, *ena*, which is accentless, and hence used only in situations where no emphasis falls upon it. It does not occur elsewhere than in the accusative of all numbers, the instr. sing., and the gen.-loc. dual: thus,

	m.	n.	f.
Sing. A.	<i>enam</i>	<i>enāt</i>	<i>enām</i>
I.	<i>enena</i>		<i>enayā</i>

	Du.	A.	<i>enāu</i>	<i>ene</i>	<i>ene</i>
		G. L.	<i>enayos</i>		<i>enayos</i>
	Pl.	A.	<i>enān</i>	<i>enāni</i>	<i>enās</i>

The RV. has *enos* instead of *enayos*, and in one or two instances accents a form: thus, *enām*, *enās*(?).

This stem forms neither derivatives nor compounds.

501. Two other demonstrative declensions are so irregularly made up that they have to be given in full. The one, *अयम् ayám* etc., is used as a more indefinite demonstrative, 'this' or 'that'; the other, *असौ asāu* etc., signifies especially the remoter relation, 'yon' or 'yonder'.

They are as follows:

		Singular:						
		m.		n.	f.			
		m.	n.	f.	m.	n.	f.	
N.		अयम् <i>ayám</i>	इदम् <i>idám</i>	इयम् <i>iyám</i>	असौ <i>asāu</i>	अदस् <i>adás</i>	असौ <i>asāu</i>	
A.		इमम् <i>imám</i>	इदम् <i>idám</i>	इमाम् <i>imám</i>	अमुम् <i>amúm</i>	अदस् <i>adás</i>	अमुम् <i>amúm</i>	
I.		अनेन <i>anéna</i>		अनया <i>andýā</i>	अमुना <i>amúnā</i>		अमुया <i>amúyā</i>	
D.		अस्मै <i>asmāi</i>		अस्यै <i>asyāi</i>	अमुष्मै <i>amúšmāi</i>		अमुष्यै <i>amúšyāi</i>	
Ab.		अस्मात् <i>asmāt</i>		अस्याम् <i>asyās</i>	अमुष्मात् <i>amúšmāt</i>		अमुष्याम् <i>amúšyās</i>	
G.		अस्य <i>asyá</i>		अस्याम् <i>asyās</i>	अमुष्य <i>amúšya</i>		अमुष्याम् <i>amúšyās</i>	
L.		अस्मिन् <i>asmín</i>		अस्याम् <i>asyām</i>	अमुष्मिन् <i>amúšmín</i>		अमुष्याम् <i>amúšyām</i>	

Dual:

N. A.	इमौ <i>imāu</i>	इमे <i>imé</i>	इमे <i>imé</i>	अम् <i>amū</i>
I. D. Ab.	आभ्याम् <i>ābhyām</i>			अम्भ्याम् <i>amābhyām</i>
G. L.	अनयोस् <i>andáyos</i>			अमुयोस् <i>amúyos</i>

	Plural :				
N.	इमे इमानि <i>imé imāni</i>	इमास् <i>imās</i>	अमी अमूनि <i>amī amūni</i>	अमून् <i>amūn</i>	अमून् <i>amūn</i>
A.	इमान् इमानि <i>imān imāni</i>	इमास् <i>imās</i>	अमून् अमूनि <i>amūn amūni</i>	अमून् <i>amūn</i>	अमून् <i>amūn</i>
I.	एभिस् <i>ebhis</i>	आभिस् <i>ābhis</i>	अमीभिस् <i>amībhis</i>	अमूभिस् <i>amūbhis</i>	अमूभिस् <i>amūbhis</i>
D. Ab.	एभ्यस् <i>ebhyās</i>	आभ्यस् <i>ābhyās</i>	अमीभ्यस् <i>amībhyas</i>	अमूभ्यस् <i>amūbhyas</i>	अमूभ्यस् <i>amūbhyas</i>
G.	एषाम् <i>eṣām</i>	आसाम् <i>āsām</i>	अमीषाम् <i>amīṣām</i>	अमूषाम् <i>amūṣām</i>	अमूषाम् <i>amūṣām</i>
L.	एषु <i>eṣū</i>	आसु <i>āsū</i>	अमीषु <i>amīṣu</i>	अमूषु <i>amūṣu</i>	अमूषु <i>amūṣu</i>

The same forms are used in the older language, without variation, except that *imā* occurs for *imāū* and *imāni*, and *amū* for *amūni*; *amuyā* when used adverbially is accented on the final, *amuyā́*; *asāu* (with accent, of course, on the first, *āsāu*) is used also as vocative.

502. The former of these two pronouns, *ayām* etc., plainly shows itself to be pieced together from a number of defective stems. The majority of forms come from the root *a*, with which, as in the ordinary pronominal declension, *sma* (f. *sy*) is combined in the singular. All these forms from *a* have the peculiarity that in their substantive use they are either accented, as in the paradigm, or accentless (like *ena* and the second forms from *ahām* and *tvām*). The remaining forms are always accented. From *anā* come, with entire regularity, *anēna*, *anāyā*, *anāyos*. The strong cases in dual and plural, and in part in singular, come not less regularly from a stem *imā*. And *ayām*, *iyām*, *idām* are evidently to be referred to a simple root *i* (*idām* being apparently a double form: *id*, like *tad* etc., with ending *am*).

The Veda has from the root *a* also the instrumentals *enā* and *ayā* (used in general adverbially), and the gen. loc. du. *ayós*; from *ima*, *imāsya* occurs once in RV. The RV. has in a small number of instances the irregular accentuation *āsmāi*, *āsya*, *ābhis*.

In analogy with the other pronouns, *idām* is by the grammarians regarded as representative stem of this pronominal declension; and it is actually found so treated in a very small number of compounds (*idammāya* and *idāmrūpa* are of Brāhmana age). As regards the actual stems, *ana* furnishes nothing further; from *ima* comes only the adverb *imāthā* (RV., once; but *a* and *i* furnish a number of derivatives, mostly adverbial: thus, for example, *ātas*, *ātra*, *ātha*; *itās*, *id* (Vedic particle), *idā*, *ihā*, *itara*, *im* (Vedic particle), *idh̄ç*, perhaps *evā* and *evām*, and others.

503. The other pronoun, *asāū* etc., has *amū* for its leading stem, which in the singular takes in combination, like the *a*-stems, the element *sma* (f. *sy*), and which shifts to *amī* in part of the masc. and neut. plural. In part, too, like an adjective *u*-stem, it lengthens its final in the feminine. The gen. sing. *amūśya* is the only example in the language of the ending *śya* added to any other than an *a*-stem. The nom. pl. *amī* is unique in form; its *ī* is (like that of a dual) *praghyā*, or exempt from combination with a following vowel (138 b). *Asāū* and *adās* are also without analogies as regards their endings.

The grammarians, as usual, treat *adās* as representative stem of the declension, and it is found in this character in an extremely small number of words, as *adomūla*; *adomāya* is of Brāhmaṇa age. The ÇB. has also *asāunāman*. But most of the derivatives, as of the cases, come from *amu*: thus, *amūtas*, *amūtra*, *amūthā*, *amūrhi*, *amuvāt*, *amuka*.

In the older language occurs the root *tva* (accentless), meaning 'one, many a one'; it is oftenest found repeated, as 'one' and 'another'. It follows the ordinary pronominal declension.

Fragments of another demonstrative root or two are met with: thus, *āmas*, 'he', occurs in a formula in AV. and in Brāhmaṇas etc.; *avōs* as gen.-loc. dual is found in RV.; the particle *u* points to a root *u*.

### Interrogative Pronoun.

504. The characteristic part of the interrogative pronominal root is क् *k*; it has the three forms क *ka*, कि *ki*, कु *ku*; but the whole declensional inflection is from क *ka*, excepting the nom.-acc. sing. neut., which is from कि *ki*, and has the anomalous form किम् *kim* (not elsewhere known in the language from a neuter *i*-stem). The nom. and accus. sing., then, are as follows:

	m.	n.	f.
N.	कम् <i>kās</i>	किम् <i>kīm</i>	का <i>kā</i>
A.	कम् <i>kām</i>	किम् <i>kīm</i>	काम् <i>kām</i>

and the rest of the declension is precisely like that of त *ta* (above, 495).

The Veda has its usual variations, *kā* and *kēbhis* for *kāni* and *kāts*. It also has, along with *kīm*, the pronominally regular neuter *kād*; and *kām*

(or *kaṃ*) is a frequent particle. The masc. form *kis*, corresponding to *kim*, occurs as a stereotyped case in the combinations *nākis* and *mākis*.

505. The grammarians treat *kim* as representative stem of the interrogative pronoun; and it is in fact so used in a not large number of words, of which a few — *kimmāya*, *kimkarā*, *kimkāmyā*, *kīndevata*, and the peculiar *kimyū* — go back even to the Veda and Brāhmaṇa. In closer analogy with the other pronouns, the form *kaḍ*, a couple of times in the Veda (*kaṭpayā*, *kādartha*), and not infrequently later, is found as first member of compounds. Then, from the real roots *ka*, *ki*, *ku* are made many derivatives; and from *ki* and *ku*, especially the latter, many compounds: thus, *kāti*, *kathā*, *kathām*, *kadā*, *katarā*, *katamā*, *kārhi*; *kiyant*, *kūḍiḥ*; *kūtas*, *kūtra*, *kūha*, *kvā*, *kucarā*, *kukarman*, *ku-mantrin*, etc.

506. Various forms of this pronoun, as *kaḍ*, *kim*, and *ku* (and, rarely, *ko*), at the beginning of compounds, have passed from an interrogative meaning, through an exclamatory, to the value of prefixes signifying an unusual quality — either something admirable, or, oftener, something contemptible. This use begins in the Veda, but becomes much more common in later time.

507. The interrogative pronoun, as in other languages, turns readily in its independent use also to an exclamatory meaning. Moreover, it is by various added particles converted to an indefinite meaning: thus, by *ca*, *canā*, *cit*, *āpi*, *vā*, either alone or with the relative *ya* (below, 511) prefixed: thus, *kāḥ caṇā*, 'any one'; *nā kō 'pi*, 'not any one'; *yāni kāni cit*, 'whatsoever'. Occasionally, the interrogative by itself acquires a similar value.

### Relative Pronoun.

508. The root of the relative pronoun is *ya*, which from the earliest period of the language has lost all trace of the demonstrative meaning originally (doubtless) belonging to it, and is used as relative only.

509. It is inflected with entire regularity according to the usual pronominal declension: thus,

	Singular.			Dual.			Plural.		
	m.	n.	f.	m.	n.	f.	m.	n.	f.
N.	यम् <i>yās</i>	यत् <i>yāt</i>	या <i>yā</i>	} यौ <i>yāu</i>	} ये <i>yē</i>	} ये <i>yē</i>	ये <i>yē</i>	यानि <i>yāni</i>	याम् <i>yās</i>
A.	यम् <i>yām</i>	यत् <i>yāt</i>	याम् <i>yām</i>				यान् <i>yān</i>	यानि <i>yāni</i>	याम् <i>yās</i>

I.	येन <i>yéna</i>	यया <i>yáyā</i>	याम्याम् <i>yāmyām</i>	यैस् <i>yāis</i>	याभिस् <i>yābhis</i>
D.	यस्मै <i>yāsmāi</i> etc.	यस्यै <i>yāsyāi</i> etc.	यābhyām etc.	येभ्यस् <i>yēbhyas</i> etc.	याभ्यस् <i>yābhyas</i> etc.

The Veda shows its usual variations of these forms: *yā* for *yāu* and for *yāni*, and *yēbhis* for *yāis*; *yās* for *yāyos* also occurs once; *yēnā*, with prolonged final, is in RV. twice as common as *yéna*. Resolutions occur in *yābhis*, and *yēsaam* and *yāsaam*.

510. The use of *yāt* as representative stem begins very early: we have *yātkāma* in the Veda, and *yatkārīn*, *yaddevatyā* in the Brāhmaṇa; later it grows more general. From the proper root come also a considerable series of derivatives: *yātas*, *yāti*, *yātra*, *yāthā*, *yādā*, *yādi*, *yāvant*, *yatarā*, *yatamā*; and the compound *yādṛç*.

511. The combination of *ya* with *ka* to make an indefinite pronoun has been noticed above (507). Its own repetition — as *yād-yat* — gives it sometimes a like meaning, won through the distributive.

512. One or two marked peculiarities in the Sanskrit use of the relative may be here briefly noticed:

a. A very decided preference for putting the relative clause before that to which it relates: thus, *yāḥ sunvatāḥ sākḥā tāsmā indrāya gāyata* (RV.), 'who is the friend of the soma-presser, to that Indra sing ye'; *yām yajñām paribhūr āsi sū id devēsu gachati* (RV.), 'what offering thou protectest, that in truth goes to the gods'; *yē triṣaptāḥ pariyānti bālā tēsām dadhātu me* (AV.), 'what thrice seven go about, their strength may he assign to me'; *asāu yō adharād gṛhās tātra santv arūgyāḥ* (AV.), 'what house is yonder in the depth, there let the witches be'; *sahā yān me āsti tēna* (TB.), 'along with that which is mine'; *hañsānām vacanam yat tu tan mām dahati* (MBh.), 'but what the words of the swans were, that burns me'; *sarvasya locanam çāstram yasya nā 'sty andha eva saḥ* (II.), 'who does not possess learning, the eye of everything, blind indeed is he'. The other arrangement is comparatively unusual.

b. A frequent conversion of the subject or object of a verb by an added relative into a substantive clause: thus, *mé 'mām prā 'pat pāuruṣeyo vadhó yāḥ* (AV.), 'may there not reach him a human deadly weapon' (lit'ly, 'what is such a weapon'); *pāri ṇo pāhi yād dhānam* (AV.), 'protect of us what wealth [there is]'; *apāmārgó 'pa mārṣtu kṣetriyām çapāthaç ca yāḥ* (AV.), 'may the cleansing plant cleanse away the disease and the curse'; *puṣkareṇa hṛtan rājyaḥ yac cū 'nyad vasu kiñcana* (MBh.), 'by Pushkara was taken away the kingdom and whatever other property [there was]'.  
.

### Emphatic Pronoun.

513. The isolated and uninflected pronominal word स्वयम् *svayam* (from the root *sva*) signifies 'self, own self'. By its form it appears to be a nom. sing., and it is oftenest used as nominative, but along with words of all persons and numbers; and not seldom it represents other cases also.

*Svayam* is also used as a stem in composition: thus, *svayanijā*, *svayambhū*. But *sva* itself (usually adjective: below, 516) has the same value in composition: and even its inflected forms are (in the older language very rarely) used as reflexive pronoun.

### Nouns used pronominally.

514. The noun *ātman*, 'soul', is widely employed, in the singular, as reflexive pronoun of all three persons.

The adjective *bhavant*, f. *bhavātī*, is used (as already pointed out: 456) in respectful address as substitute for the pronoun of the second person. Its construction with the verb is in accordance with its true character, as a word of the third person.

### Pronominal Derivatives.

515. From pronominal roots and stems, as well as from the larger class of roots and from noun-stems, are formed by the ordinary suffixes of adjective derivation certain words and classes of words, which have thus the character of pronominal adjectives.

Some of the more 'important of these may be briefly noticed here.

516. Possessives. From the representative stems *mad* etc. are formed the adjectives *madīya*, *asmadīya*, *tvadīya*, *yuṣmadīya*, *tadīya*, and *yađīya*, which are used in a possessive sense: 'relating to me, mine', and so on.

Other possessives are *māmakā* (also *māmaka*, RV.) and *tūvakā*, from the genitives *mama* and *tava*.

An analogous derivative from the genitive *amūṣya* is *āmūṣyāyaṇā* (AV. etc.), 'descendant of such a one'.

It was pointed out above (493) that the "genitives" *asmākam* and *yuṣmākam* are really stereotyped cases of possessive adjectives.

Corresponding to *svayám* (513) is the possessive *sva*, meaning 'own', as relating to all persons and numbers. The RV. has once the corresponding simple possessive of the second person, *tvá*, 'thy'.

For the use of *sva* as reflexive pronoun, see above, 513, end.

All these words form their feminines in *ā*.

Other derivatives of a like value have no claim to be mentioned here. But (excepting *sva*) the possessives are so rarely used as to make but a small figure in the language, which prefers generally to indicate the possessive relation by the genitive case of the pronoun itself.

517. By the suffix *vant* are formed from the pronominal roots, with prolongation of their final vowels, the adjectives *māvant*, *tvāvant*, *yusmāvant*, *yuvāvant*, *tāvant*, *etāvant*, *yāvant*, meaning 'of my sort, like me', etc. Of these, however, only the last three are in use in the later language, in the sense of '*tantus*' and '*quantus*'. They are inflected like other adjective stems in *vant*, making their feminines in *vati* (452 ff.).

Words of similar meaning from the roots *i* and *ki* are *iyant* and *kiyant*, inflected in the same manner: see above, 451.

518. The pronominal roots show a like prolongation of vowel in combination with the root *dr̥ç*, 'see, look', and its derivatives *dr̥ça* and (quite rarely) *dr̥kṣa*: thus, *mād̥r̥ç*, *mād̥r̥ça*; *asmād̥r̥ç*: *tvād̥r̥ç* etc.; *yusmād̥r̥ç* etc.; *tād̥r̥ç* etc.; *etād̥r̥ç*, *etād̥r̥kṣa* (VS.); *yād̥r̥ç* etc.; *īd̥r̥ç* and *kīd̥r̥ç* etc. They mean 'of my sort, like or resembling me', and the like, and the last five are not uncommon, with the sense of '*talīs*' and '*qualīs*'. The forms in *dr̥ç* are unvaried for gender; those in *dr̥ça* (and *dr̥kṣa*?) have feminines in *ī*.

519. From *ta*, *ka*, *ya* come *tāti*, 'so many', *kāti*, 'how many?' *yāti*, 'as many'. They have a quasi-numeral character, and are inflected (like the numerals *pāñca* etc.: above, 483) only in the plural, and with the bare stem as nom. and accus.: thus, N. A. *tāti*; I. etc. *tātībhis*, *tātībhyas*, *tātīnām*, *tātiṣu*.

520. From *ya* (in V. and Br.) and *ka* come the comparatives and superlatives *yatará* and *yatamá*, and *katará* and *katamá*; and from *i*, the comparative *itara*. For their inflection, see below, 523.

521. Derivatives with the suffix *ka*, sometimes conveying a diminutive or a contemptuous meaning, are made from certain of the pronominal roots and stems (and may, according to the grammarians, be made from them all): thus, from *ta*, *takám*,

*takāt, takās*; from *sa, sakā*; from *ya, yakās, yakā, yaké*; from *asāū, asakāū*; from *amu, amuka*.

For the numerous and frequently used adverbs formed from pronominal roots, see Adverbs (below, chapter XVI.).

### Adjectives declined pronominally.

**522.** A number of adjectives — some of them coming from pronominal roots, others more or less analogous with pronouns in use — are inflected, in part or wholly, according to the pronominal declension (like  $\bar{t}$  *ta*, 495). Thus:

**523.** The comparatives and superlatives from pronominal roots — namely, *katarā* and *katamā*, *yatarā* and *yatamā*, and *itarā*; also *anyā*, 'other', and its comparative *anyatarā* — are declined like *ta* throughout. Their feminine stems are in  $\bar{a}$ .

But even from these words forms made according to the adjective declension are sporadically met with (e. g. *itarāyām*, K.).

**524.** Others words are so inflected except in the nom.-acc.-voc. sing. neut., where they have the ordinary adjective form *am*, instead of the pronominal *at* (*ad*). Such are *sarva*, 'all', *vīcva*, 'all, every', *ēka*, 'one'.

These, also, are not without exception, at least in the earlier language (e. g. *vīcvāya, vīcvāt*, RV.: *ēke* loc. sing., AV.).

**525.** Yet other words follow the same model usually, or in some of their significations, or optionally; but in other senses, or without known rule, lapse into the adjective inflection.

Such are the comparatives and superlatives from prepositional stems: *ādharma* and *adhamā*, *āntara* and *āntama*, *ūpara* and *apamā*, *āvāra* and *avamā*, *ūtara* and *uttamā*, *ūpara* and *upamā*. Of these, pronominal forms are decidedly more numerous from the comparatives than from the superlatives.

Further, the superlatives (without corresponding comparatives) *paramā*, *caramā*, *madhyamā*; and also *anyatama* (whose positive and comparative belong to the class first mentioned: 523).

Further, the words *pāra*, 'distant, other'; *pūrva*, 'prior, east'; *dākṣiṇa*, 'right, south'; *ubhāya* (f. *ubhāyī* or *ubhayī*), 'of both kinds or parties'; and the rare *sama* (accentless), 'any or every one', *simā*, 'each, all', *nēma*, 'the one, half'; and the possessive *svā*.

**526.** Occasional forms of the pronominal declension are met with from numeral adjectives: e. g. *prathamāsyās*, *trītyasyām*; and from other words having an indefinite numeral character: thus, *ālpa*, 'few'; *ardhā*, 'half'; *kēvala*, 'all'; *dvāya*, 'of the two kinds' — and others.

## CHAPTER VIII.

### CONJUGATION.

527. THE subject of conjugation or verbal inflection involves, as in the other languages of the family, the distinctions of voice, tense, mode, number, and person.

Then, besides the simpler or ordinary conjugation of a verbal root, there are certain more or less fully developed secondary or derivative conjugations.

528. *Voice*. There are (as in Greek) two voices, active and middle, distinguished by a difference in the personal endings. This distinction is a pervading one: there is no active personal form which does not have its corresponding middle, and *vice versa*; and it is extended also in part to the participles (but not to the infinitive).

529. An active form is called by the Hindu grammarians *parasmāi padam*, 'a word for another', and a middle form is called *ātmane padam*, 'a word for one's self': the terms might be best paraphrased by 'transitive' and 'reflexive'. And the distinction thus expressed is doubtless the original foundation of the difference of active and middle forms: in the recorded condition of the language, however, the antithesis of transitive and reflexive meaning is in no small measure blurred, or even altogether effaced.

530. Some verbs are conjugated in both voices, others in one only; sometimes a part of the tenses are inflected only in one voice, others only in the other or in both; of a verb usually inflected in one voice sporadic forms of the other occur; and sometimes the voice differs according as the verb is compounded with certain prepositions.

531. The middle forms outside the present-system (for which there is a special passive inflection: see below, 768),

and sometimes also within that system, are liable to be used likewise in a passive sense.

**532. Tense.** The tenses are as follows: 1. a present, with 2. an imperfect, closely related with it in form, having a prefixed augment; 3. a perfect, made with reduplication (to which in the Veda is added, 4. a so-called pluperfect, made from it with prefixed augment); 5. an aorist, of three different formations: a. simple; b. reduplicated; c. sibilant; 6. a future, with 7. a conditional, an augment-tense, standing to it in the relation of an imperfect to a present; and 8. a second, a periphrastic, future (not found in the Veda).

The tenses here distinguished (in accordance with prevailing usage) as imperfect, perfect, pluperfect, and aorist receive those names from their correspondence in mode of formation with tenses so called in other languages of the family, especially in Greek, and not at all from differences of time designated by them. In no period of the Sanskrit language is there any expression of imperfect or pluperfect time — nor of perfect time, except in the older language, where the "aorist" has this value; later, imperfect, perfect, and aorist (of rare use) are so many indiscriminated past tenses or preterits: see below, under the different tenses.

**533. Mode.** In respect to mode, the difference between the classical Sanskrit and the older language of the Veda — and, in a less degree, of the Brāhmaṇas — is especially great.

In the Veda, the present tense has, besides its indicative inflection, a subjunctive, of considerable variety of formation, an optative, and an imperative (in 2d and 3d persons). The same three modes are found, though of much less frequent occurrence, as belonging to the perfect; and they are made also from the aorists, being of especial frequency from the simple aorist. The future has no modes (an occasional case or two are purely exceptional).

In the classical Sanskrit, the present adds to its indicative an optative and an imperative — of which last, moreover, the first persons are a remnant of the old subjunc-

tive. And the aorist has also an optative, of somewhat peculiar inflection, usually called the precative (or benedictive).

**534.** The present, perfect, and future tenses have each of them, alike in the earlier and later language, a pair of participles, active and middle, sharing in the various peculiarities of the tense-formations; and in the Veda are found such participles belonging also to the aorist.

**535.** Tense-systems. The tenses, then, with their accompanying modes and participles, fall into certain well-marked groups or systems:

I. The present-system, composed of the present tense with its modes, its participle, and its preterit which we have called the imperfect.

II. The perfect-system, composed of the perfect tense (with, in the Veda, its modes and its preterit, the so-called pluperfect) and its participle.

III. The aorist-system, or systems, simple, reduplicated, and sibilant, composed of the aorist tense along with, in the later language, its "precative" optative (but, in the Veda, with its various modes and its participle).

IV. The future-systems: a. the old or sibilant future, with its accompanying preterit, the conditional, and its participle; and b. the new periphrastic future.

**536.** Number and Person. The verb has, of course, the same three numbers with the noun, namely singular, dual, and plural; and in each number it has the three persons, first, second, and third. All of these are made in every tense and mode — except that the first persons of the imperative numbers are supplied from the subjunctive.

**537.** Verbal adjectives and nouns: Participles. The participles belonging to the tense-systems have been already spoken of above (534). There is besides, coming directly from the root of the verb, a participle, prevailing of past and passive (or sometimes neuter) meaning. Future passive participles, or gerundives, of several different formations, are also made.

**538.** Infinitives. In the older language, a very considerable variety of derivative abstract nouns — only in a few sporadic instances having anything to do with the tense-systems — are used in an infinitive or quasi-infinitive sense; most often in the dative case, but sometimes also in the accusative, in the genitive and ablative, and (very rarely) in the locative. In the classical Sanskrit, there remains a single infinitive, of accusative case-form, having nothing to do with the tense-systems.

**539.** Gerund. A so-called gerund (or absolute) — being, like the infinitive, a stereotyped case-form of a derivative noun — is a part of the general verb-system in both the earlier and later language, being especially frequent in the latter. In the Veda it has a somewhat various form; in the later language, it has only two forms, one for simple verbs, and the other for compound. Its value is that of an indeclinable active participle, of indeterminate but prevailing past tense-character.

A second gerund, an adverbially used accusative in form, is found, but only rarely, both earlier and later.

**540.** Secondary conjugations. The secondary or derivative conjugations are as follows: **a.** the passive; **b.** the intensive; **c.** the desiderative; **d.** the causative. In these, a conjugation-stem, instead of the simple root, underlies the whole system of inflection. Yet there is clearly to be seen in them the character of a present-system, expanded

into a more or less complete conjugation; and the passive is so purely a present-system that it will be described in the chapter devoted to that part of the inflection of the verb.

Under the same general head belongs the subject of denominative conjugation, or the conversion of noun and adjective-stems into conjugation-stems. Further, that of compound conjugation, whether by the prefixion of prepositions to roots or by the addition of auxiliary verbs to noun and adjective-stems. And finally, that of periphrastic conjugation, or the looser combination of auxiliaries with verbal nouns and adjectives.

541. The characteristic of a proper (finite or personal) verb-form is its personal ending. By this alone is determined its character as regards number and person — and in part also as regards mode and tense. But the distinctions of mode and tense are mainly made by the formation of tense and mode-stems, to which, instead of to the pure root, the personal endings are appended.

In this chapter will be given a general account of the personal endings, and also of the formation of mode-stems from tense-stems, and of those elements in the formation of tense-stems — the augment and the reduplication — which are found in more than one tense-system. Then, in the following chapters, each tense-system will be taken up by itself, and the methods of formation of its stems, both tense-stems and mode-stems, and their combination with the endings, will be described in detail.

### Personal Endings.

542. The endings of verbal inflection are, as was pointed out above, different throughout in the active and middle voices. They are also, as in Greek, usually of two somewhat varying forms for the same person in the same voice: one fuller, called primary; the other briefer, called secondary. There are also less pervading differences, depending upon other conditions.

A condensed statement of all the varieties of ending for each person and number here follows.

**543.** Singular: First person. The primary ending in the active is *mī*. The subjunctive, however (later imperative), has *nī* instead; and in the oldest Veda this *nī* is sometimes wanting, and the person ends in *ā* (as if the *nī* of *ānī* were dropped). The secondary ending is *m*; and to this *m* an *a* has come to be so persistently prefixed, appearing always where the tense-stem does not itself end in *a* (*vam* for *varm* or *varam* in RV., once, is an isolated anomaly), that it is necessary to reckon *am* as ending, alternate with *m*. But the perfect tense has neither *mī* nor *m*; its ending is simply *a* (sometimes *ā*: **248 c**): or, from *ā*-roots, *āu*.

The primary middle ending, according to the analogy of the other persons, would be regularly *me*. But no tense or mode, at any period of the language, shows any relic whatever of a *m* in this person: the primary ending, present as well as perfect, from *a*-stems and others alike, is *e*; and to it corresponds *i* as secondary ending, which blends with the final of an *a*-stem to *e*. The optative has, however, *a* instead of *i*; and in the subjunctive (later imperative) appears *āi* for *e*.

**544.** Second person. In the active, the primary ending is *sī*, which is shortened to *s* as secondary: as to the loss of this *s* after a final radical consonant, see below, **555**. But the perfect and the imperative desert here entirely the analogy of the other forms. The perfect ending is invariably *tha* (or *thā*, **248 c**). The imperative is far less regular. The fullest form of its ending is *dhi*; which, however, is more often reduced to *hi*; and in the great majority of verbs (including all *a*-stems, at every period of the language) no ending is present, but the bare stem stands as personal form. In a very small class of verbs (**722**) *āna* is the ending. The Veda has also an ending *tāt*; and this is even used sporadically in other persons of the imperative (see below, **570—1**).

In the middle voice, the primary ending, both present and perfect, is *se*. The secondary stands in no apparent relation to this, being *thās*; and in the imperative is found only *sva* (or *svā*: **248 c**), which in the Veda is not seldom to be read as *sua*. In the older language, *se* is sometimes strengthened to *sāi* in the subjunctive.

**545.** Third person. The active primary ending is *tī*; the secondary, *t*: as to the loss of the latter after a final radical consonant, see below, **555**. But in the imperative appears instead the peculiar ending *tu*; and in the perfect no characteristic consonant is present, and the third person has the same ending as the first.

The primary middle ending is *te*, with *ta* as corresponding secondary. In the older language, *te* is often strengthened to *tāi* in the subjunctive. In the perfect, the middle third person has, like the active, the same ending with the first, namely *e* simply; and in the older language, the third person present also often loses the distinctive part of its termination, and comes to coincide in form with the first. To this *e* perhaps corresponds, as secondary, the *i* of the aorist 3d pers. passive (842 ff.). The imperative has *tām* (or, in the Veda, rarely *ām*) for its ending.

546. Dual: First person. Both in active and in middle, the dual first person is in all its varieties precisely like the corresponding plural, only with substitution of *v* for the *m* of the latter: thus, *vas* (no *vasi* has been found to occur), *va*, *vāhe*, *vahi*, *vahāi*. The person is, of course, of comparatively rare use, and from the Veda no form in *vas*, even, is quotable.

547. Second and Third persons. In the active, the primary ending of the second person is *thas*, and that of the third is *tas*; and this relation of *th* to *t* appears also in the perfect, and runs through the whole series of middle endings. The perfect endings are primary, but have *u* instead of *a* as vowel; and an *a* has become so persistently prefixed that their forms have to be reckoned as *athus* and *atus*. The secondary endings exhibit no definable relation to the primary in these two persons; they are *tam* and *tām*; and they are used in the imperative as well.

In the middle, a long *ā* — which, however, with the final *a* of *a*-stems becomes *e* — has become prefixed to all dual endings of the second and third persons, so as to form an inseparable part of them. The primary endings, present and perfect, are *āthe* and *āte*; the secondary (and imperative) are *āthām* and *ātām* (or, with stem-final *a*, *ethe* etc.).

The Rig-Veda has a very few forms in *āithe* and *āite*, apparently from *ethe* and *ete* with subjunctive strengthening (they are all detailed below: see 615, 701, 737, 752, 836, 1008, 1043).

548. Plural: First person. The earliest form of the active ending is *masi*, which in the oldest language is more frequent than the briefer *mas* (in RV., as five to one; in AV., however, only as three to four). In the classical Sanskrit, *mas* is the exclusive primary ending; but the secondary abbreviated *ma* belongs also to the perfect and the subjunctive (imperative). In the Veda, *ma* often becomes *mā* (248 c), especially in the perfect.

The primary middle ending is *make*. This is lightened in the secondary form to *mahi*; and, on the other hand, it is regu-

larly (in the Veda, not invariably) strengthened to *mahāi* in the subjunctive (imperative).

**549.** Second person. The active primary ending is *tha*. The secondary, also imperative, ending is *ta* (in the Veda, *tā* only once in impv.). But in the perfect any characteristic consonant is wanting, and the ending is simply *a*. In the Veda, the syllable *na*, of problematic origin, is not infrequently added to both forms of the ending, making *thana* (rarely *thanā*) and *tana*. The forms in which this occurs will be detailed below, under the different formations: the addition is very rarely made excepting to persons of the first general conjugation.

The middle primary ending is *dhve*, which belongs to the perfect as well as the present. In the subjunctive of the older language it is sometimes strengthened to *dhvāi*. The secondary (and imperative) ending is *dhvam* (in RV., once *dhva*); and *dhvāt* is once met with in the imperative (570). In the Veda, the *v* of all these endings is sometimes resolved into *u*, and the ending becomes dissyllabic.

**550.** Third person. The full primary ending is *anti* in the active, with *ante* as corresponding middle. The middle secondary ending is *anta*, to which should correspond an active *ant*; but of the *t* only altogether questionable traces are left, in the euphonic treatment of a final *n* (207); the ending is *an*. In the imperative, *antu* and *antām* take the place of *anti* and *ante*. The initial *a* of all these endings is like that of *am* in the 1st sing., disappearing after the final *a* of a tense-stem.

Moreover, *anti*, *antu*, *ante*, *antām*, *anta* are all liable to be weakened by the loss of their nasal, becoming *ati* etc. In the active, this weakening takes place only after reduplicated stems (and after a few roots which are treated as if reduplicated: 639 ff.); in the middle, it occurs after all tense-stems save those ending in *a*.

Further, for the secondary active ending *an* there is a substitute *us* (or *ur*: 169, end), which is used in the same reduplicating verbs that change *anti* to *ati* etc., and which accordingly appears as a weaker correlative of *an*. The same *us* is also used universally in the perfect, in the optative (not in the subjunctive), in those forms of the aorist whose stem does not end in *a*, and in the imperfect of roots ending in *ā*, and a few others (621).

The perfect middle has in all periods of the language the peculiar ending *re*, and the optative has the allied *ran*, in this person. In the Veda, a variety of other endings containing a *r* as distinctive consonant are met with: namely, *re* (and *ire*) and *rate* in the present; *rata* in the optative (both of present and of

aorist); *vire* in the perfect; *ranta*, *ran*, and *ram* in aorists (and in an imperfect or two); *rām* and *ratām* in the imperative. The three *rate*, *ratām*, and *rata* are found even in the later language in one or two verbs (629).

551. Below are given, for convenience, in tabular form, the schemes of endings as accepted in the classical or later language: namely, **a.** the regular primary endings, used in the present indicative and the future (and the subjunctive in part); and **b.** the regular secondary endings, used in the imperfect, the conditional, the aorist, the optative (and the subjunctive in part); and further, of special schemes, **c.** the perfect endings (chiefly primary, especially in the middle); and **d.** the imperative endings (chiefly secondary). To the so-called imperative endings of the first person is prefixed the *ā* which is practically a part of them, though really containing the mode-sign of the subjunctive from which they are derived.

552. Further, a part of the endings are marked with an accent, and a part are left unaccented. The latter are those which never, under any circumstances, receive the accent; the former are accented in considerable classes of verbs, though by no means in all. It will be noticed that, in general, the unaccented endings are those of the singular active; but the 2d sing. imperative has an accented ending; and, on the other hand, the whole series of 1st persons imperative, active and middle, have unaccented endings (this being a characteristic of the subjunctive formation which they represent).

553. The schemes of normal endings, then, are as follows:

**a. Primary Endings.**

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1	<i>mi</i>	<i>vās</i>	<i>mās</i>	<i>é</i>	<i>vāhe</i>	<i>māhe</i>
2	<i>si</i>	<i>thās</i>	<i>thā</i>	<i>sé</i>	<i>āthe</i>	<i>dhvé</i>
3	<i>ti</i>	<i>tās</i>	<i>ānti, āti</i>	<i>té</i>	<i>āte</i>	<i>ānte, āte</i>

**b. Secondary Endings.**

1	<i>am</i>	<i>vā</i>	<i>mā</i>	<i>ī, ā</i>	<i>vāhi</i>	<i>māhi</i>
2	<i>s</i>	<i>tām</i>	<i>tā</i>	<i>thās</i>	<i>āthām</i>	<i>dhvām</i>
3	<i>t</i>	<i>tām</i>	<i>ān, ūs</i>	<i>tā</i>	<i>ātām</i>	<i>ānta, āta, rān</i>

**c. Perfect Endings.**

1	<i>a</i>	<i>vā</i>	<i>mā</i>	<i>é</i>	<i>vāhe</i>	<i>māhe</i>
2	<i>tha</i>	<i>āthus</i>	<i>ā</i>	<i>sé</i>	<i>āthe</i>	<i>dhvé</i>
3	<i>a</i>	<i>ātus</i>	<i>ūs</i>	<i>é</i>	<i>āte</i>	<i>ré</i>

## d. Imperative Endings.

1	<i>āni</i>	<i>āva</i>	<i>āma</i>	<i>āi</i>	<i>āvahāi</i>	<i>āmahāi</i>
2	<i>dhī, hī, —</i>	<i>tām</i>	<i>tā</i>	<i>svā</i>	<i>āthām</i>	<i>dhvām</i>
3	<i>tu</i>	<i>tām</i>	<i>āntu, ātu</i>	<i>tām</i>	<i>ātām</i>	<i>āntām, ātām</i>

554. In general, the rule is followed that an accented ending, if dissyllabic, is accented on its first syllable — and the constant union-vowels are regarded, in this respect, as integral parts of the endings. But the 3d pl. ending *ate* of the pres. indic. middle has in RV. the accent *atē* in a number of verbs (see 613, 685, 699, 718); and an occasional instance is met with in other endings: thus, *mahē* (see 719, 735).

555. The secondary endings of the second and third persons singular, as consisting of an added consonant without vowel, should regularly (150) be lost whenever the root or stem to which they are to be added itself ends in a consonant. And this rule is in general followed; yet not without exceptions. Thus:

a. A root ending in a dental mute sometimes drops this final mute instead of the added *s* in the second person; and, on the other hand, a root or stem ending in *s* sometimes drops this *s* instead of the added *t* in the third person — in either case, establishing the ordinary relation of *s* and *t* in these persons, instead of *s* and *s*, or *t* and *t*. A similar loss of any other final consonant before the ending is exceedingly rare. For instances, see below, 692.

b. Again, a union-vowel is sometimes introduced before the ending, either *a* or *i*: see below, 621, 631, 819, 880.

In a few isolated cases in the older language, this *i* is changed to *āi*: see below, 904 b, 1068.

556. The changes of form which roots and stems undergo in their combinations with these endings will be pointed out in detail below, under the various formations. Here may be simply mentioned in advance, as by far the most important among them, a distinction of stronger and weaker form of stem in large classes of verbs, standing in relation with the accent — the stem being of stronger form when the accent falls upon it, or before an accentless ending, and of weaker form when the accent is on the ending.

Of the endings marked as accented in the scheme, the *ta* of 2d pl. is not infrequently in the Veda treated as unaccented, the tone resting on the stem, which is strengthened. Much less often, the *tam* of 2d du. is treated in the same way: other endings, only sporadically.

## Subjunctive Mode.

557. Of the subjunctive mode (as was pointed out above) only fragments are left in the later or classical language: namely, in the so-called first persons imperative, and in the use (580)

of the imperfect and aorist persons without augment after *mā* prohibitive. In the oldest period, however, it was a very frequent formation, being three or four times as common as the optative in the Rig-Veda, and nearly the same in the Atharvan; but already in the Brāhmanas it becomes comparatively rare. Its varieties of form are considerable, and sometimes perplexing.

**558.** In its most normal and regular formation, a special mode-stem is made for the subjunctive by adding to the tense-stem an *a* — which combines with a final *a* of the tense-stem to *ā*. The accent rests upon the tense-stem, which accordingly has the strong form. Thus, from the strong present-stem *dōh* ( $\sqrt{dūh}$ ) is made the subjunctive-stem *dōha*; from *juhó* ( $\sqrt{hu}$ ), *juhāva*; from *yunáj* ( $\sqrt{yuj}$ ), *yunāja*; from *bhāva* ( $\sqrt{bhū}$ ), *bhāvā*; from *tudá* ( $\sqrt{tud}$ ), *tudā*; from *ucyá* (pass.,  $\sqrt{vac}$ ), *ucyā*; and so on.

**559.** The stem thus formed is inflected in general as an *a*-stem would be inflected in the indicative, with constant accent, and *ā* for *a* before the endings of the first person (733) — but with the following peculiarities as to ending etc.:

**560.** In the active, the 1st sing. has *ni* as ending: thus, *dōhāni*, *yunājāni*, *bhāvāni*. But in the Rig-Veda sometimes *ā* simply: thus, *áyā*, *brāvā*.

In 1st du., 1st pl., and 3d pl., the endings are always the secondary: thus, *dōhāva*, *dōhāma*, *dōhan*; *bhāvāva*, *bhāvāma*, *bhāvān*.

In 2d and 3d du. and 2d pl., the endings are always primary: thus, *dōhathas*, *dōhatas*, *dōhatha*; *bhāvāthas*, *bhāvātas*, *bhāvātha*.

In 2d and 3d sing., the endings are either primary or secondary: thus, *dōhasi* or *dōhas*, *dōhati* or *dōhat*; *bhāvāsi* or *bhāvās*, *bhāvāti* or *bhāvāt*.

Occasionally, forms with double mode-sign *ā* (by assimilation to the more numerous subjunctives from tense-stems in *a*) are met with from non-*a*-stems: thus, *āsūtha* from *as*; *áyās*, *áyāt*, *áyān* from *e* ( $\sqrt{y}$ ).

**561.** In the middle, forms with secondary instead of primary endings are very rare, being found only in the 3d pl. (where they are more frequent than the primary), and in a case or two of the 3d sing.

The striking peculiarity of subjunctive middle inflection is the frequent strengthening of *e* to *āi* in the endings. This is less general in the very earliest language than later. In 1st sing., *āi* alone is found as ending, even in RV.; and in 1st du. also (of rare occurrence), only *āvahāi* is met with. In 1st pl., *āmahāi* prevails in RV. and AV. (*āmahe* is found a few times), and is alone known later. In 2d sing., *sāi* for *se* does not occur in RV., but is the only form in AV. and the Brāhmanas. In 3d sing., *tāi* for *te* occurs once in RV., and is the predominant form in AV., and the only one later. In 2d pl., *dhvāi* for *dhve* is found in one word in RV., and a few times in the Brāhmanas. In 3d pl., *ntāi* for *nte* is the Brāhmaṇa form (of far from frequent occurrence); it occurs neither in RV. nor AV. No such

dual endings as *thāi* and *tāi*, for *the* and *te*, are anywhere found; but RV. has in a few words (nine: above, 527, end) *āithe* and *āite*, which appear to be a like subjunctive strengthening of *ethe* and *ete* (although found in one indicative form, *kṛṇvāite*). Before the *āi*-endings the penultimate vowel is regularly long *ā*; but *antāi* instead of *āntāi* is two or three times met with, and once (TS.) *atāi* for *ātāi*.

562. The subjunctive endings, then, in combination with the subjunctive mode-sign, are as follows:

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1	<i>āni</i>	<i>āva</i>	<i>āma</i>	<i>āi</i>	{ <i>āvahāi</i> <i>āvāhe</i>	{ <i>āmahāi</i> <i>āmāhe</i>
2	{ <i>asi</i> <i>as</i>	<i>athas</i>	<i>atha</i>	{ <i>ase</i> <i>āsāi</i>	<i>āithe</i>	{ <i>adhve</i> <i>ādhvāi</i>
3	{ <i>ati</i> <i>at</i>	<i>atas</i>	<i>an</i>	{ <i>ate</i> <i>ātāi</i>	<i>āite</i>	{ <i>ante, anta</i> <i>āntāi</i>

And, in further combination with final *a* of a tense-stem, the initial *a* of all these endings becomes *ā*: thus, for example, in 2d pers.: *āsī* or *ās*, *āthas*, *ātha*, *āse*, *ādhve*.

563. Besides this proper subjunctive, with mode-sign, in its triple form — with primary, with strengthened primary, and with secondary endings — there is in the older language another, without mode-sign and with secondary endings, or in all respects coinciding with the forms of an augmented-tense (imperfect or aorist) save for the absence of the augment. Subjunctives of this character are frequent in RV., decidedly less common in later Vedic, and very little used in the Brāhmaṇas except after *mā* prohibitive (580) — after which they stand also in the later language.

These forms are sometimes called “imperfect subjunctive”, but the appellation is an evident misnomer: “improper subjunctive” is preferable. Since (below, 587) the forms of augmented tenses are also freely used in an indicative sense without augment in the oldest Veda, the distinction of the two classes of use is often difficult to make.

As to the uses of the subjunctive, see below, 572 ff.

### Optative Mode.

564. As has been already pointed out, the optative is of comparatively rare occurrence in the language of the Vedas; but it gains rapidly in frequency, and already in the Brāhmaṇas greatly outnumbers the subjunctive, which still later it comes almost entirely to replace.

Its mode of formation is the same in all periods of the language.

565. The optative mode-sign is in the active voice a different one, according as it is added to a tense-stem ending in *a*, or in some other final. In the latter case, it is *yā́*, accented; this *yā́* is appended to the weaker form of the tense-stem, and takes the regular series of secondary endings, with, in 3d plur., *us* instead of *an*, and loss of the *ā* before it. After an *a*-stem, it is *ī*, unaccented; this *ī* blends with the final *a* to *e* (which then is accented or not according to the accent of the *a*); and the *e* is maintained unchanged before a vowel-ending (*am*, *us*), by means of an interposed euphonic *y*.

In the middle voice, the mode-sign is *ī* throughout, and takes the secondary endings, with *a* in 1st sing., and *ran* in 3d pl. After an *a*-stem, the rules as to its combination to *e*, the accent of the latter, and its retention before a vowel-ending with interposition of a *y*, are the same as in the active. After any other final, the weaker form of stem is taken, and the accent is on the ending (except in one class of verbs, where it falls upon the tense-stem: see 645); and the *ī* (as when combined to *e*) takes an inserted *y* before a vowel-ending.

It is, of course, impossible to tell from the form whether *i* or *ī* is combined with the final of an *a*-stem to *e*; but no good reason appears to exist for assuming *i*, rather than the *ī* which shows itself in the other class of stems in middle voice.

566. The combined mode-sign and endings of the optative, then, are as follows, in their double form, for *a*-stems and for others:

a. for non- <i>a</i> -stems.					
active.			middle.		
s.	d.	p.	s.	d.	p.
1	<i>yām</i>	<i>yāva</i>	<i>yāma</i>	<i>īyā</i>	<i>īvāhi</i>
2	<i>yās</i>	<i>yātam</i>	<i>yāta</i>	<i>īyāthām</i>	<i>īdhvām</i>
3	<i>yāt</i>	<i>yātām</i>	<i>yās</i>	<i>īyātām</i>	<i>īrān</i>
b. combined with the final of <i>a</i> -stems.					
1	<i>eyam</i>	<i>eva</i>	<i>ema</i>	<i>eya</i>	<i>evahi</i>
2	<i>es</i>	<i>etam</i>	<i>eta</i>	<i>ethās</i>	<i>eyāthām</i>
3	<i>et</i>	<i>etām</i>	<i>eyus</i>	<i>eta</i>	<i>eyātām</i>

The *yā́* is in the Veda not seldom resolved into *īā́*.

The Vedic 3d pl. middle forms in *rata* will be detailed below, under the various formations.

567. Precative. Precative forms are such as have a sibilant inserted between the optative-sign and the ending. They are made almost only from the aorist stems, and, though allowed by the grammarians to be formed from every root — the active

precative from the simple aorist, the middle from the sibilant aorist — are practically of rare occurrence at every period of the language, and especially later.

The inserted *s* runs in the active through the whole series of persons; in the middle, it is allowed only in the 2d and 3d persons sing. and du., and the 2d pl., and is quotable from the older literature only for the 2d and 3d sing. In the 2d sing. act., the precative form, by reason of the necessary loss of the added *s*, is not distinguishable from the simple optative; in the 3d sing. act., the same is the case in the later language, which (above, 555) saves the personal ending *t* instead of the precative-sign *s*; but the RV. usually, and the other Vedic texts to some extent, have the proper ending *yās* (for *yāst*).

The accent is as in the simple optative.

568. The precative endings, then, accepted in the later language (including, in brackets, those which are identical with the simple optative), are as follows:

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1	<i>yāsam</i>	<i>yāsva</i>	<i>yāsma</i>	[ <i>īyá</i> ]	[ <i>īváhi</i> ]	[ <i>īmáhi</i> ]
2	[ <i>yās</i> ]	<i>yāstam</i>	<i>yāsta</i>	<i>īsthās</i>	<i>īyāsthām</i>	<i>īdhvám</i>
3	[ <i>yāt</i> ]	<i>yāstām</i>	<i>yāsus</i>	<i>īstá</i>	<i>īyāstām</i>	[ <i>īrán</i> ]

As to the uses of the optative, see below, 572 ff.

### Imperative Mode.

569. The imperative has no mode-sign; it is made by adding its own endings directly to the tense-stem, just as the other endings are added to form the indicative tenses.

Hence, in 2d and 3d du. and 2d pl., its forms are indistinguishable from those of the augment-preterit from the same stem with its augment omitted.

The rules as to the use of the different endings — especially in 2d sing., where the variety is considerable — will be given below, in connection with the various tense-systems. The ending *tāt*, however, has so much that is peculiar in its use that it calls for a little explanation here.

570. The Imperative in *tāt*. This is nowhere a frequent form, though found from the earliest period of the language, and allowed to be made in the latest; in the five leading Vedic texts it is formed from nearly fifty verbs, and has less than seventy occurrences. Its usual value is that of a second person singular; but it occurs as 1st sing. once, in AV. (*āvyaśān jāgrītād ahām*, 'let me watch till day-break'); as 3d sing., toward a dozen times (e. g. *pūnar mā "vīcatād rayāh*, TS., 'let wealth come again to me'; *ayān tyāśya rājū mūrdhānam vī pātayatāt*, ÇB., 'the king here shall make

his head fly off]); and as 2d pl. several times in TS. (e. g. *āpaḥ... devēsu naḥ sukṛto brūūt*, 'ye waters, announce us to the gods as well-doers'), and many times in a Brāhmaṇa passage (repeated in K. xvi. 21, TB. iii. 6. 1, and AB. ii. 6, 7) — in which, moreover, two authorities (K. and AB.) have once *vārayadhvāt* for *vārayatāt*: no other occurrence of *dhvāt* has been noted.

571. As regards its meaning, this form has been shown (Delbrück) to have prevailingly in the Brāhmaṇas, and traceably but much less distinctly in the Vedic texts, a specific tense-value added to its mode-value — as signifying, namely, an injunction to be carried out at a later time than the present: it is (like the Latin forms in *to* and *tote*) a posterior or future imperative.

Examples are: *ihāi 'vā mā tṣṭhantam abhyèhī 'ti brūhi tām tū na āgatām pratiprābrūūt* (ÇB.), 'say to her "come to me as I stand just here", and [afterward] announce her to us as having come'; *yād ūrdhvās tṣṭhā drāvīṇe 'hā dhattāt* (RV.), 'when thou shalt stand upright, [then] bestow riches here' (and similarly in many cases); *utkūlam udvahō bhavo 'dūhya prāti dhāvatāt* (AV.), 'be a carrier up the ascent; after having carried up, run back again'; *vānaspātir ādhi tvā sthāsyati tāsya vittāt* (TS.), 'the tree will ascend thee, take [then] note of it'.

According to the grammarians, the form in *tāt* may be used when benediction is intended.

### Uses of the Modes.

572. Of the three modes, the imperative is the one most distinct and limited in office, and most unchanged in use throughout the whole history of the language. It signifies a command or injunction — an attempt at the exercise of the speaker's will upon some one or something outside of himself.

This, however (in Sanskrit as in other languages), is by no means always of the same force; the command shades off into a demand, an exhortation, an entreaty, an expression of earnest desire. The imperative also sometimes signifies an assumption or concession; and occasionally, by pregnant construction, it becomes the expression of something conditional or contingent; but it does not acquire any regular use in dependent-clause-making.

573. The optative appears to have as its primary office the expression of wish or desire; in the oldest language, its prevailing use in independent clauses is that to which the name "optative" properly belongs.

The so-called precative forms (567) are restricted to this use, but are not otherwise distinguished from the simple optatives.

But the expression of desire, on the one hand, passes naturally over into that of request or entreaty, so that the optative becomes a softened imperative; and, on the other hand, it comes to signify what is generally desirable or proper, what should or ought to be, and so becomes the mode of prescription; or, yet again, it is weakened into signifying what may or can be, what is likely or usual, and so becomes at last a softened statement of what is.

Further, the optative in dependent clauses, with relative pronouns and conjunctions, becomes a regular means of expression of the conditional and contingent, in a wide and increasing variety of uses.

574. The subjunctive, as has been pointed out, becomes nearly extinct at an early period in the history of the language; there are left of it in classical usage only two relics; the use of its first persons in an "imperative" sense, or to signify a necessity or obligation resting on the speaker, or a peremptory intention on his part; and the use of its other persons, with the negative particle ऋ *má*, in a prohibitive or negative imperative sense.

And the general value of the subjunctive from the beginning was what these relics would seem to indicate: its fundamental meaning is perhaps that of requisition, less peremptory than the imperative, more so than the optative. But this meaning is liable to the same modifications and transitions with that of the optative; and subjunctive and optative run closely parallel with one another in the oldest language in their use in independent clauses, and are hardly distinguishable in dependent. And instead of their being (as in Greek) both maintained in use, and endowed with nicer and more distinctive values, the subjunctive gradually disappears, and the optative assumes alone the offices formerly shared by both.

575. The difference, then, between imperative and subjunctive and optative, in their fundamental and most characteristic uses, is one of degree: command, requisition, wish: and no sharp line of division exists between them; they are more or less exchangeable with one another, and combinable in coördinate clauses.

Thus, in AV., we have in impv.: *çatām jīva çarādah*, 'do thou live a hundred autumns'; *ubhāi tāi jīvatām jarādastī*, 'let them both live to attain old age'; — in subj., *adyā jīvāni*, 'let me live this day'; *çatām jīvāti çarādah*, 'he shall live a hundred autumns'; — in opt., *jīvema çarādām çatāni*, 'may we live hundreds of autumns'; *sārvam āyur jīvyāsam* (prec.), 'I would fain live out my whole term of life'. Here the modes would be interchangeable with a hardly perceptible change of meaning.

Examples, again, of different modes in coördinate construction are: *iyām agne nārī pātīm videshta . . . sūvānā putrān māhiṣī bhavāti gatvā pātīm subhāgā vi rājatu* (AV.), 'may this woman, O Agni! find a spouse; giving birth to sons she shall become a chieftainess; having attained a spouse let her rule in happiness'; *gopāyā naḥ svastāye prabūdhe naḥ pīnar dadaḥ* (TS.), 'watch over us for our welfare, grant unto us to wake again'; *syān naḥ sūnūḥ . . . sā te sumatīr bhūtv asmé* (RV.), 'may there be to us a son; let that favor of thine be ours'. It is not very seldom the case that versions of the same passage in different texts show different modes as various readings.

There is, in fact, nothing in the earliest employment of these modes to prove that they might not all be specialized uses of forms originally equivalent — having, for instance, a general future meaning.

576. As examples of the less characteristic use of subjunctive and optative in the older language, in independent clauses, may be quoted the following: *ā ghā tā gachān úttarā yugāni* (RV.), 'those later ages will doubtless come'; *yād . . . ná marā iti mānyase* (RV.), 'if thou thinkest "I shall not die"'; *nā tā naçanti ná dabhāti tās karaḥ* (RV.), 'they do not become lost; no thief can harm them'; *kāsmāi devāya havīṣā vidhema* (RV.), 'to what god shall we offer oblation?' *agninā rayim aṇavat . . . divé-dive* (RV.), 'by Agni one may gain wealth every day'; *utāi 'nām brahmāṇe dadyāt tātā syonā çivā syāt* (AV.), 'one should give her, however, to a Brahman; in that case she will be propitious and favorable'; *āhar-āhar dadyāt* (ÇB.), 'one should give every day'.

577. The uses of the optative in the later language are of the utmost variety, covering the whole field occupied jointly by the two modes in earlier time. A few examples from a single text (MBh.) will be enough to illustrate them: *uchīṣtam nāi 'va bhūñjyāmi na kuryām pādadhāvanam*, 'I will not eat of the remnant of the sacrifice, I will not perform the foot-lavation'; *jñātīn vrajet*, 'let her go to her relations'; *nāi 'vam sā karhicit kuryāt*, 'she should not act thus at any time'; *katham vidyām nalam nṛpam*, 'how can I know king Nala?' *utsarge saṁçayah syāt tu*

*vindetū 'pi sukhaṁ kvacit*, 'but in case of her abandonment there may be a chance; she may also find happiness somewhere'; *kathaṁ vāso vikarteyaṁ na ca budhyeta me priyā*, 'how can I cut off the garment and my beloved not wake?'

578. The later use of the first persons subjunctive as so-called imperative involves no change of construction from former time, but only restriction to a single kind of use: thus, *divyāva*, 'let us two play'; *kiṁ karavāṇi te*, 'what shall I do for thee?'

579. The subjunctive with *mā* is in the oldest language almost the sole form of prohibitive expression, and is very common. The kind of subjunctive employed is that which corresponds to the augmentless forms of a past tense; and in the great majority of cases (five sixths in RV., nine tenths in AV.) it is the augmentless aorist that is chosen. Thus: *prā pata mé 'há rañsthāḥ* (AV.), 'fly away; do not stay here'; *diviśāṅc ca má-hyaṁ rádhyatu mā cā 'hám diviśaté radham* (AV.), 'both let my foe be subject to me, and let me not be subject to my foe'; *urv ācyāṁ ābhayaṁ jyótir indra mā no dirghā abhi naṣan tamisrāḥ* (RV.), 'I would win broad fearless light, O Indra; let not the long darknesses come upon us'; *mā na āyuh prā moṣih* (RV.), 'do not steal away our life'; *mā bibher* (impf.) *ná marisyasi* (RV.), 'do not fear; thou wilt not die'; *mā smāi 'tānt sákhin kuruthāḥ* (AV.), 'do not make friends of them'.

Only one optative (*bhujema*) is used prohibitively with *mā* in RV., and only once (in a probably corrupted passage) an imperative; neither construction is found in AV.; and the cases in the later language are rare.

580. This very definite and peculiar construction, of an augmentless past tense with *mā*, has preserved itself in use, and is occasionally met with in the later language: thus, *samācvasihi mā śucaḥ*, 'be comforted, do not grieve'; *mā bhāih*, 'do not fear' (both MBh.).

But the use of the optative with *ná*, 'not', in a prohibitive sense appears even (very rarely) in the Veda, and becomes later the prevalent construction; thus, *ná riṣyema kadā caná* (RV.), 'may we suffer no harm at any time'; *ná cā 'tisrjén ná juhuyāt* (AV.), 'and if he do not grant permission, let him not sacrifice'; *tād u tātā ná kuryāt* (ÇB.), 'but he must not do that so'; *na divā çayita* (ÇGS.), 'let him not sleep by day'; *na tvām vidyur janāḥ* (MBh.), 'let not people know thee'. This in the later language is the correlative of the prescriptive optative, and both are extremely common; so that in a text of prescriptive character the optative forms may come to outnumber the indicative and imperative together (as is the case, for example, in Manu).

581. In all dependent constructions, it is still harder even

in the oldest language to establish a distinction between subjunctive and optative: a method of use of either is scarcely to be found to which the other does not furnish a practical equivalent — and then, in the later language, such uses are represented by the optative alone. A few examples will be sufficient to illustrate this:

a. After relative pronouns and conjunctions in general: *yá vyúchúr yáç ca nūnám vyuchán* (RV.), 'which have shone forth [hitherto], and which shall hereafter shine forth'; *yó 'to jāyātā asmākam sá éko 'sat* (TS.), 'whoever shall be born of her, let him be one of us'; *yó vāi tán vidyāt pratyakṣam sá brahmá véditā syāt* (AV.), 'whoever shall know them face to face, he may pass for a knowing priest'; *putrānām... jātānām jandyāç ca yān* (AV.), 'of sons born and whom thou mayest bear'; *yásya... átithir gṛhān āgáchet* (AV.), 'to whosoever house he may come as guest'; *yatamāthā kāmáyeta táthā kuryāt* (ÇB.), 'in whatever way he may choose, so may he do it'; *yárhi hótā yājamānasya náma gṛhnyāt tárhi brūyāt* (TS.), 'when the sacrificing priest shall name the name of the offerer, then he may speak'; *svarūpam yadā draṣṭum ichethāḥ* (MBh.), 'when thou shalt desire to see thine own form'.

b. In more distinctly conditional constructions: *yájāma devān yádi çaknāvāma* (RV.), 'we will offer to the gods if we shall be able'; *yád agne syām ahám tvám tvám vā ghā syā ahám syiç te satyā ihā 'çīçah* (RV.), 'if I were thou, Agni, or if thou wert I, thy wishes should be realized on the spot'; *yó dyām atisárpāt parástān ná sá mucyātāi váruṇasya rájñah* (AV.), 'though one steal far away beyond the sky, he shall not escape king Varuna'; *yád ánūçvān upaváset kṣódhukah syād yád aṇnyād rudró 'sya paçūn abhi manyeta* (TS.), 'if he should continue without eating, he would starve; if he should eat, Rudra would attack his cattle'; *prārthayed yadi mām kaçcid danḍyah sa me pumān bhavet* (MBh.), 'if any man soever should desire me, he should suffer punishment'. These and the like constructions, with the optative, are very common in the Brāhmanas and later.

c. In final clauses: *yáthū 'hám çatruhó 'sāni* (AV.), 'that I may be a slayer of my enemies'; *gṛñāná yáthā píḇātho ándhah* (RV.), 'that being praised with song ye may drink the draught'; *urāi yáthā táva çárman mádema* (RV.), 'in order that we rejoice in thy wide protection'; *úpa jānīta yáthe 'yām pímar āgáchet* (ÇB.), 'contrive that she come back again'; *kṛpām kuryād yathā mayi* (MBh.), 'so that he may take pity on me'. This is in the Veda one of the most frequent uses of the subjunctive; and in its correlative negative form, with *ned*, 'in order that not' or 'lest', it continues not rare in the Brāhmanas.

The indicative is also used in final clauses after *yathā*: thus, *yathā 'yañ naçyati tathā vidheyam* (H.), 'it must be so managed that he perish' (and thus usually in H.).

With the conditional use of subjunctive and optative is further to be compared that of the so-called "conditional" tense: see below, chap. XII.

582. No distinction of meaning has been established between the modes of the present-system and those (in the older language) of the perfect and aorist-systems.

### Participles.

583. Participles, active and middle, are made from all the tense-stems — except the periphrastic future, and, in the later language, the aorist (and aorist participles are rare from the beginning).

584. The general participial endings are *अन्* *ant* (weak form *अत्* *at*; fem. *अन्ती* *antī* or *अती* *atī*: see above, 449) for the active, and *आन्* *āna* (fem. *आना* *ānā*) for the middle. But:

a. After a tense-stem ending in *a*, the active participial suffix is virtually *nt*, one of the two *a*'s being lost in the combination of stem-final and suffix.

b. After a tense-stem ending in *a*, the middle participial suffix is *māna* instead of *āna*.

c. The perfect has in the active the peculiar suffix *vāns* (weakest form *uṣ*, middle form *vat*; fem. *uṣī*: see, for the inflection of this participle, above, 458 ff.).

For details, as to form of stem etc., and for special exceptions, see the following chapters.

### Augment.

585. The augment is a short *a*, prefixed to a tense-stem — and, if the latter begin with a vowel, combining with that vowel irregularly into the heavier or *vrddhi* diphthong (136 a). It is always (without any exception) the accented element in the verbal form of which it makes a part.

In the Veda, the augment is in a few forms long *ā*: thus, *ānaç*, *āvar*, *āvṛñi*, *āvṛṇak*, *āvidhyat*, *āyunak*, *āyukta*, *āriṇak*, *ārāik*.

586. The augment is a sign of past time. And an augment-preterit is made from each of the tense-stems from which

the system of conjugation is derived: namely, the imperfect, from the present-stem; the pluperfect (in the Veda only), from the perfect-stem; the conditional, from the future-stem; while in the aorist such a preterit stands without any corresponding present indicative.

587. In the older language (mainly in the Veda; the usage is a rare one in the Brāhmana) the augment is often lost, and the augmentless forms have the same value as if they were complete; or, rather more often, they are used as subjunctives (above, 563).

The accentuation of the augmentless forms is throughout accordant with that of the corresponding unaugmented tense — that is to say, where such a tense exists (which is not the case with the varieties of sibilant aorist).

### Reduplication.

588. The derivation of conjugational and declensional stems from roots by reduplication, either alone or along with other formative elements, has been already spoken of (259), and the formations in which reduplication appears have been specified: they are, in primary verb-inflection, the present (of a certain class of verbs), the perfect (of nearly all), and the aorist (of a large number); and the intensive and desiderative secondary conjugations contain in their stems the same element.

589. The general principle of reduplication is the prefixion to a root of a part of itself repeated — if it begin with consonants, the initial consonant and the vowel; if it begin with a vowel, that vowel, either alone or with a following consonant. The varieties of detail, however, are very considerable. Thus, especially as regards the vowel, which in present and perfect and desiderative is regularly shorter and lighter in the reduplication than in the root-syllable, in aorist is longer, and in intensive is strengthened. The differences as regards an initial consonant are less, and chiefly confined to the intensive; for the others, certain general rules may be here stated, all further details being

left to be given in connection with the account of the separate formations.

590. The consonant of the reduplicating syllable is in general the first consonant of the root: thus, पप्रक् *paprach* from √प्रक् *prach*; शिशिष् *çiçliṣ* from √शिष् *çliṣ*; बुबुध् *bubudh* from √बुध्. But:

a. A non-aspirate is substituted in reduplication for an aspirate: thus, दधा *dadhā* from √धा; बिभृ *bibhr* from √भृ *bhr*.

b. A palatal is substituted for a guttural or for ह *h*: thus, चकृ *cakr* from √कृ *kr*; चिचिद् *çiçhid* from √चिद् *çhid*; जग्रभ् *jagrabh* from √ग्रभ् *grabh*; जहृ *jahr* from √हृ *hr*.

The occasional reversion, on the other hand, of a palatal in the radical syllable to guttural form has been noticed above (216.9).

c. Of two initial consonants, the second, if it be a non-nasal mute preceded by a sibilant, is repeated instead of the first: thus, तस्या *tasthā* from √स्या *sthā*; चस्कन्द् *çaskand* form √स्कन्द् *skand*; पस्पृध् *pasprdh* from √स्पृध् *sprdh*: — but मस्मृ *sasmr* from √स्मृ.

### Accent of the Verb.

591. The statements which have been made above, and those which will be made below, as to the accent of verbal forms, apply to those cases in which the verb is actually accented.

But, according to the grammarians, and according to the invariable practice in accentuated texts, the verb is in the great majority of its occurrences unaccented or toneless.

That is to say, of course, the verb in its proper forms, its personal or so-called finite forms. The verbal nouns and adjectives, or the infinitives and participles, are subject to precisely the same laws of accent as other nouns and adjectives.

592. The general rule, covering most of the cases, is this: The verb in an independent clause is unaccented, unless it stand at the beginning of the clause — or also, in metrical text, at the beginning of a *pāda*.

For the accent of the verb, as well as for that of the vocative case (above, 314), the beginning of a *pāda* counts as that of a sentence, whatever be the logical connection of the *pāda* with what precedes it.

Examples of the unaccented verb are: *agnīm iḍe purōhitam*, 'I praise

Agni, the house-priest'; *sá íd devésu gachati*, 'that, truly, goes to the gods'; *ágne sūpāyanó bhava*, 'O Agni, be easy of access'; *ídám indra çṛṇuhi somapa*, 'hear this, O Indra, soma-drinker'; *námas te rudra kṛṇmas*, 'homage to thee, Rudra, we offer'; *yájamánasya paçún páhi*, 'protect the cattle of the sacrificer'.

Hence, there are two principal situations in which the verb retains its accent :

**593.** First, the verb is accented when it stands at the beginning of a clause — or, in verse, of a *pāda*.

Examples of the verb accented at the head of the sentence are, in prose, *çándhadhvān dātvāyā kármaṇe*, 'be pure for the divine ceremony'; *āpnóti mām lokām*, 'he wins this world'; — in verse, where the head of the sentence is also that of the *pāda*, *syámé 'd índrasya çármaṇi*, 'may we be in Indra's protection'; *darçāya mā yātudhānān*, 'show me the sorcerers'; *gámad vájebhir á sá naḥ*, 'may he come with good things to us'; — in verse, where the head of the clause is within the *pāda*, *léṣām páhi çrudhí hávam*, 'drink of them, hear our call'; *sástu mātá sástu pitá çvā sástu viçpátīḥ*, 'let the mother sleep, let the father sleep, let the dog sleep, let the master sleep'; *viçvakarman námas te páhy ásmān*, 'Viçvakarman, homage to thee; protect us!'; *yuvám . . rájña ūce duhitá pṛché vān narā*, 'the king's daughter said to you "I pray you, ye men"'; *vayám te váya indra viddhí su naḥ prá bharūmahe*, 'we offer thee, Indra, strengthening; take note of us'.

Examples of the verb accented at the head of the *pāda* when this is not the head of the sentence are: *áthā te ántamānān vidyāma sumatinām*, 'so may we enjoy thy most intimate favors'; *dhātú 'syá agrāvāi pátiḥ dádhātu pratikāmyām*, 'Dhātar bestow upon this girl a husband according to her wish'; *yātudhānasya somapa jahí prajām*, 'slay, O Soma-drinker, the progeny of the sorcerer'.

**594.** Certain special cases under this head are as follows:

a. As a vocative forms no syntactical part of the sentence to which it is attached, but is only an external appendage to it, a verb following an initial vocative, or more than one, is accented, as if it were itself initial in the clause or *pāda*: thus, *áçrutkarṇa çrudhí hávam*, 'O thou of listening ears, hear our call!'; *síte vāndūmahe tvā*, 'O Sītā, we reverence thee'; *vīçve devū vāsavo rákṣate 'mām*, 'all ye gods, ye Vasus, protect this man'; *utá 'gac cakrūsaḥ devū dévā jīvāyathā pūnaḥ*, 'likewise him, O gods, who has committed crime, ye gods, ye make to live again'.

b. If more than one verb follow a word or words syntactically connected with them all, only the first loses its accent, the others being treated as if they were initial verbs in separate clauses, with the same adjuncts understood: thus, *tarāṇir íj jayati kṣéti púṣyati*, 'successful he conquers, rules, thrives'; *amātrān . . pūrūca indra prá mṛṇā jahí ca*, 'our foes, Indra, drive far away and slay'; *asmábhyaḥ jeṣi yótsi ca*, 'for us conquer and fight'; *ágnīsomā havtṣaḥ prásthitasya vītīn háryataḥ vṛṣaṇā juṣéthām*, 'O Agni and Soma, of the oblation set forth partake, enjoy, ye mighty ones, take pleasure'.

c. In like manner (but much less often), an adjunct, as subject or object, standing between two verbs and logically belonging to both, is reckoned to the first alone, and the second has the initial accent: thus, *jahí prajāñ nāyava ca*, 'slay the progeny, and bring [it] hither'; *ꣳꣳótu naḥ subhāgū bódhatu tmānā*, 'may the blessed one hear us, [and may she] kindly regard [u-]'.  
 d. As to cases in which a single verb standing between two adjuncts has the initial accent perhaps as being in the division of the sentence reckoned to the second rather than the first, see below, 597.

595. Second, the verb is accented, whatever its position, in a dependent clause.

a. The dependency of a clause is in the very great majority of cases conditioned by the relative pronoun *ya*, or one of its derivatives or compounds. Thus: *yāñ yajñām paribhūr āsi*, 'what offering thou protectest'; *ó té yanti yé aparīṣu paꣳyāñ*, 'they are coming who shall behold her hereafter'; *sahā yāñ me āsti téna*, 'along with that which is mine'; *yātra naḥ pūrve pitāraḥ parēyūh*, 'whither our fathers of old departed'; *adyā muriya yādi yātudhāno āsmi*, 'let me die on the spot, if I am a sorcerer'; *yāthā 'hāny anupūrvām bhāvanti*, 'as days follow one another in order'; *yāvad idām bhūvanāñ víꣳvan āsti*, 'how great this whole creation is'; *yātkāmās te juhumāś tān no astu*, 'what desiring we sacrifice to thee, let that become ours'; *yatamās tīrṣṣāt*, 'whichever one desires to enjoy'.

The presence of a relative word in the sentence does not, of course, accent the verb, unless this is really the predicate of a dependent clause: thus, *āpa tyé tūyāvo yathā yanti*, 'they make off like thieves (as thieves do)'; *yāt sthā jāgac ca rejate*, 'whatever [is] movable and immovable trembles'; *yathā-kāmāñ nī padyate*, 'he lies down at his pleasure'.

b. The particle *ca* when it means 'if', and *céd* (*ca + id*), 'if', give an accent to the verb: thus, *brahmā céd dhāstam āgrahī*, 'if a Brahman has grasped her hand'; *tvām ca soma no váꣳo jīvātuñ nā marāmahe*, 'if thou, Soma, willest us to live, we shall not die'; *á ca gāchāñ mitráñ enū dadhāma*, 'if he will come here, we will make friends with him'.

c. There are a very few passages in which the logical dependence of a clause containing no subordinating word appears to give the verb its accent: thus, *sām āꣳvaparnṣꣳ cūranti no náro 'smākam indra rathāno jayantu*, 'when our men, horse-winged, come into conflict, let the chariot-fighters of our side, O Indra, win the victory'. Rarely, too, an imperative so following another imperative that its action may seem a consequence of the latter's is accented: thus, *tūyam á gahi kāṃveṣu sú sácā pība*, 'come hither quickly; drink along with the Kanvas' (i. e. in order to drink).

d. A few other particles give the verb an accent, in virtue of a slight subordinating force belonging to them: thus, especially *hí* (with its negation *nahí*, which in its fullest value means 'for', but shades off from that into a mere asseverative sense; the verb or verbs connected with it are always accented: thus, *ví té muñcantām vimúco hí sánti*, 'let them release him, for they are releasers'; *yác cid dhí... anāꣳastā iva smāsi*, 'if we, forsooth, are

as it were unrenowned'; — also *néd* (*ná + íd*), meaning 'lest, that not': thus, *nét tvā úpāti sūro arcīṣā*, 'that the sun may not burn thee with his beam'; *virājan̄ néd vichinādānī 'ti*, 'saying to himself, "lest I cut off the *virāj*"'; — and the interrogative *kuvīd*, 'whether?' thus, *ukthébbhiḥ kuvīd āgāmat*, 'will he come hither for our praises?'

596. But further, the verb of a prior clause is not infrequently accented in antithetical construction.

Sometimes, the relation of the two clauses is readily capable of being regarded as that of protasis and apodosis; but often, also, such a relation is very indistinct; and the cases of antithesis shade off into those of ordinary coördination, the line between them appearing to be rather arbitrarily drawn.

In the majority of cases, the antithesis is made distincter by the presence in the two clauses of correlative words, especially *anya—anya, eka—eka, vā—vā, ca—ca*: thus, *prā-prū 'nyé yānti páry anyá āsate*, 'some go on and on, others sit about' (as if it were 'while some go' etc.); *úd vā siñcádhvam úpa vā pṛṇadhvam*, 'either pour out, or fill up'; *sān ce 'dhyās vā 'gne prá ca vardhaye 'mām*, 'both do thou thyself become kindled, Agni, and do thou increase this person'. But it is also made without such help: thus, *prā 'jātūḥ prajā janáyati pári prájātu gṛhñāti*, 'the unborn progeny he generates, the born he embraces'; *úpa yuṣmád ákramān ná 'smān upāvartate*, '[though] she has gone away from you, she does not come to us'; *ná 'ndhò 'dhvaryúr bhāvati ná yajñām rákṣānsi ghnanti*, 'the priest does not become blind, the demons do not destroy the sacrifice'.

597. Where the verb would be the same in the two antithetical clauses, it is not infrequently omitted in the second: thus, beside complete expressions like *urvī cá 'si vāsvī cū 'si*, 'both thou art broad and thou art good', occur, much oftener, incomplete ones like *agnír amúṣmīn loká áśīd yamò 'smān*, 'Agni was in yonder world, Yama [was] in this'; *asthná 'nyāḥ prajāḥ pratitṣṭhanti māñśénū 'nyāḥ*, 'by bone some creatures stand firm, by flesh others'; *dvipác ca sárvañ no rákṣa cátuṣpād yáe ca naḥ svām*, 'both protect everything of ours that is biped, and also whatever that is quadruped belongs to us'.

Examples from the Brāhmaṇas like the first of those here given (with the second verb expressed), and like the third (in composition with a preposition), show that this explanation of the verbal accent is preferable to the one formerly given — namely, that the verb is to be regarded as understood in the first clause and initial in the second.

598. In a very small number of more or less doubtful cases, the verb appears to be accented for emphasis.

Thus, before *caná*, 'in any wise'; in connection with the asseverative particles *íd, áha, kīla, aṅgá, evá*, but sporadically; and so on. The detail and examination of the cases is not worth while here\*.

\* The specialities and irregularities of the RV. as regards verbal accent are discussed by A. Mayr in Sitzungsber. d. Wiener Akad. for 1871; of the AV., by W. D. Whitney in J. A. O. S., vol. v. (and Kuhn's Beiträge, vol. i.); of the TS., by A. Weber in Ind. Stud., vol. xiii.

## CHAPTER IX.

### THE PRESENT-SYSTEM.

599. THE present-system, or system of forms coming from the present-stem, is composed (as was pointed out above) of a present indicative tense, along with a subjunctive (mostly lost in the classical language), an optative, an imperative, and a participle, and also a past tense, an augment-preterit, to which we give (by analogy with the Greek) the name of imperfect.

These forms generally go in Sanskrit grammar by the name of "special tenses", while the other tense-systems are styled "general tenses" — as if the former were made from a special tense-stem or modified root, while the latter came, all alike, from the root itself. There is no reason why such a distinction and nomenclature should be retained; since, on the one hand, the "special tenses" come in one set of verbs directly from the root, and, on the other hand, the other tense-systems are mostly made from stems — and, in the case of the aorist, from stems having a variety of form comparable with that of present-stems.

600. Practically, the present-system is the most prominent and important part of the whole conjugation, since, from the earliest period of the language, its forms are very much more frequent than those of all the other systems together.

Thus, in the Veda, the occurrences of personal forms of this system are to those of all others about as three to one; in the Aitareya Brāhmaṇa, as five to one; in the Hitopadeṣa, as six to one; in the Çakuntalā, as eight to one; in Manu, as thirty to one.

601. And, as there is also great variety in the manner in which different roots form their present-stem, this, as being their most conspicuous difference, is made the basis of their principal classification; and a verb is said to be of this or of that conjugation, or class, according to the way in which its present-stem is made.

602. In a small minority of verbs, the present-stem is identical with the root. Then there are besides (excluding the passive and causative) eight more or less different ways of forming a present-stem from the root, each way being followed by a larger or smaller number of verbs. These are the "classes" or "conjugation-classes", as laid down by the native Hindu grammarians. They are arranged by the latter in a certain wholly artificial and unsystematic order (the ground of which has never been pointed out); and they are wont to be designated in European works according to this order, or else, after Hindu example, by the root standing at the head of each class in the Hindu lists. A different arrangement and nomenclature will be followed here, namely as below — the classes being divided (as is usual in European grammars) into two more general classes or conjugations, distinguished from one another by wider differences than those which separate the special classes.

603. The classes of the FIRST CONJUGATION are as follows:

I. The root-class (second class, or *ad*-class, of the Hindu grammarians); its present-stem is coincident with the root itself: thus, *अद्* *ad*, 'eat'; *इ* *i*, 'go'; *या* *yā*, 'go'; *द्विप्* *dviṣ*, 'hate'; *दुह्* *duh*, 'milk'.

II. The reduplicating class (third or *hu*-class); the root is reduplicated to form the present-stem: thus, *जुहु* *juhu* from *√हु* *hu*, 'sacrifice'; *ददा* *dadā* from *√दा*, 'give'; *बिभृ* *bibhr* from *√भृ*, 'bear'.

III. The nasal class (seventh or *rudh*-class); a nasal, extended to the syllable *न* *na* in strong forms, is inserted before the final consonant of the root: thus, *रुन्ध्* *rundh* (or *रुण्ध्* *ruṇadh*) from *√रुध्* *rudh*; *युञ्ज्* *yuñj* (or *युनञ्* *yunañ*) from *√युञ्* *yuj*.

IV. a. The *nu*-class (fifth or *su*-class); the syl-

lable नु *nu* is added to the root: thus, सुनु *sunu* from √सु; आप्नु *āpnu* from √आप् *āp*.

b. A very small number (only half-a-dozen) of roots ending already in न् *n*, and also one very common and quite irregularly inflected root not so ending (कृ *kr*, 'make'), add उ *u* alone to form the present-stem. This is the eighth or *tan*-class of the Hindu grammarians; it may be best ranked by us as a sub-class, the *u*-class: thus, तनु *tanu* from √तन् *tan*.

V. The *nā*-class (ninth or *krī*-class); the syllable ना *nā* (or, in weak forms, नी *nī*) is added to the root: thus, क्रीणा *krīṇā* (or क्रीणी *krīṇī*) from √क्री *krī*, 'buy'; स्तभा *stabhnā* (or स्तभी *stabhnī*) from √स्तम् *stabh*, 'establish'.

∟ 604. These classes have in common, as their most fundamental characteristic, a shift of accent: the tone being now upon the ending, and now upon the root or the class-sign. Along with this goes a variation in the stem itself, which has a stronger or fuller form when the accent rests upon it, and a weaker or briefer form when the accent is on the ending: these forms are to be distinguished as the strong stem and the weak stem respectively (in part, both have been given above). The classes also form their optative active, their 2d sing. imperative, and their 3d pl. middle, in a different manner from the others.

∟ 605. In the classes of the SECOND CONJUGATION, the present-stem ends in *a*, and the accent has a fixed place, remaining always upon the same syllable of the stem, and never shifted to the endings. Also, the optative, the 2d sing. impv., and the 3d pl. middle are (as just stated) unlike those of the other conjugation.

∟ 606. The classes of this conjugation are as follows:

VI. The *a*-class, or unaccented *a*-class (first

or *bhū*-class); the added class-sign is *a* simply; and the root, which has the accent, is strengthened by *guṇa* throughout: thus, भव *bháva* from √भू *bhū*, 'be'; नय *náya* from √नी *nī*, 'lead'; बोध *bódha* from √बुध् *budh*, 'wake'; वद *váda* from √वद् *vad*, 'speak'.

VII. The *á*-class, or accented *a*-class (sixth or *tud*-class); the added class-sign is *a*, as in the preceding class; but it has the accent, and the unaccented root remains unstrengthened: thus, तुद् *tudá* from √तुद्, 'thrust'; सृज् *srjá* from √सृज् *srj*, 'let loose'; सुव *svá* from √सू *sū*, 'give birth'.

VIII. The *ya*-class (fourth or *div*-class); *ya* is added to the root, which has the accent: thus, दीव्य *dívyā* from √दिव् *div* (more properly दीव् *dīv*: see 765); नह्य *náhya* from √नह् *nah*, 'bind'; क्रुध्य *krúdhya* from √क्रुध् *krudh*, 'be angry'.

IX. The passive conjugation is also properly a present-system only, having a class-sign which is not extended into the other systems; though it differs markedly from the remaining classes in having a specific meaning, and in being formable in the middle voice (only) from all transitive verbs. Its inflection may therefore best be treated next to that of the *ya*-class, with which it is most nearly connected, differing from it as the *á*-class from the *a*-class. It forms its stem, namely, by adding an accented *yá* to the root: thus, अद्य *adyá* from √अद् *ad*; रुध्य *rudhyá* from √रुध् *rudh*; बुध्य *budhyá* from √बुध् *budh*; तुद्य *tudyá* from √तुद् *tud*.

607. The Hindu grammarians reckon a tenth class or *cur*-class, having a class-sign *aya* added to a strengthened root (thus, *coráya* from √*cur*), and an inflection like that of the other *a*-stems. Since, however, this stem is not limited to the present-system, but extends also into the rest of the conjugation — while it also has to a great extent a causative value, and may

be formed in that value from a large number of roots — it will be best treated along with the derivative conjugations (chap. XIV.).

608. A small number of roots add in the present-system a *ch*, or substitute a *ch* for their final consonant, and form a stem ending in *cha* or *chá*, which is then inflected like an *a*-stem. This is historically, doubtless, a true class-sign, analogous with the rest; but the verbs showing it are so few, and in formation partly so irregular, that they are not well to be put together into a class, but may best be treated as special cases falling under the other classes.

Roots adding *ch* are *ṛ* and *yu*, which make the stems *ṛchá* and *yúcha*.

Roots substituting *ch* for their final are *īṣ*, *uṣ* (or *vas* 'shine'), *gam*, *yam*, which make the stems *ichá*, *uchá*, *gácha*, *yácha*.

Of so-called roots ending in *ch*, several are more or less clearly stems, whose use has been extended from the present to other systems of tenses.

609. Roots are not wholly limited, even in the later language, to one mode of formation of their present-stem, but are sometimes reckoned as belonging to two or more different conjugation-classes. And such variety of formation is especially frequent in the Veda, being exhibited by a considerable proportion of the roots there occurring; already in the Brāhmaṇas, however, a condition is reached nearly agreeing in this respect with the classical language. The different present-formations sometimes have differences of meaning; yet not more important ones than are often found belonging to the same formation, nor of a kind to show a difference of value as originally belonging to the separate classes of presents. If anything of this kind is to be established, it must be from the derivative conjugations, which are separated by no fixed line from the present-systems.

610. We take up now the different classes, in the order in which they have been arranged above, to describe more in detail, and with illustration, the formation of their present-systems, and to notice the irregularities belonging under each class.

### I. Root-class (second, *ad*-class).

611. In this class there is no class-sign; the root itself is also present-stem, and to it are added directly the personal endings — but combined in subjunctive and optative with the respective mode-signs, and in the imperfect taking the augment prefixed to the root.

The accented endings (552) regularly take the accent — except in the imperfect, where it falls on the augment — and before

them the root remains unchanged; before the unaccented endings, the root takes the *guṇa*-strengthening.

It is only in the first three classes that the endings come immediately in contact with a final consonant of the root, and that the rules for consonant combination have to be noted and applied.

### 1. Present Indicative.

612. The endings are the primary (with अते *āte* in 3d pl. mid.), added to the bare root. The root takes the accent, and has *guṇa*, if capable of it, in the three persons sing. act.

Examples of inflection: a. root इ *i*, 'go': strong form of root-stem, ए *é*; weak form, इ *i*.

	active.		middle.*			
	s.	d.	s.	d.	p.	
1	एमि <i>émi</i>	इवम् <i>ivám</i>	इमम् <i>imám</i>	इये <i>iyé</i>	इवहे <i>iváhe</i>	इमहे <i>imáhe</i>
2	एषि <i>éṣi</i>	इषम् <i>iṣám</i>	इष <i>iṣá</i>	इषे <i>iṣé</i>	इषाथे <i>iṣáthe</i>	इषे <i>iṣhe</i>
3	एति <i>éti</i>	इतम् <i>itám</i>	यन्ति <i>yánti</i>	इते <i>ité</i>	इयाते <i>iyáte</i>	इयते <i>iyáte</i>

b. root द्विष् *dvīṣ*, 'hate'; strong stem-form, द्वेष् *dvéṣ*; weak, द्विष् *dvīṣ*.

For rules of combination for the final *ṣ*, see 226.

1	द्वेष्मि <i>dvéṣmi</i>	द्विष्वम् <i>dvīṣvám</i>	द्विष्वम् <i>dvīṣmám</i>	द्विषे <i>dvīṣé</i>	द्विष्वहे <i>dvīṣváhe</i>	द्विष्वहे <i>dvīṣmáhe</i>
2	द्वेषि <i>dvéṣi</i>	द्विष्वम् <i>dvīṣvám</i>	द्विष्व <i>dvīṣvám</i>	द्विषे <i>dvīṣé</i>	द्विषाथे <i>dvīṣáthe</i>	द्विष्वे <i>dvīṣvhe</i>
3	द्वेषति <i>dvéṣti</i>	द्विष्वम् <i>dvīṣvám</i>	द्विषन्ति <i>dvīṣánti</i>	द्विषे <i>dvīṣé</i>	द्विषाते <i>dvīṣáte</i>	द्विषते <i>dvīṣáte</i>

c. root डूह् *duh*, 'milk': strong stem-form दोह् *dóh*; weak, डूह् *duh*.

For rules of combination for the final *h*, and for the conversion of the initial to *dh*, see 222, 155, 160.

1	दोह्मि <i>dóhmi</i>	डूह्वम् <i>duhvám</i>	डूह्वम् <i>duhmám</i>	डूहे <i>duhé</i>	डूह्वहे <i>duhváhe</i>	डूह्वहे <i>duhmáhe</i>
---	------------------------	--------------------------	--------------------------	---------------------	---------------------------	---------------------------

\* Used in the middle with the preposition *adhi*, to signify 'go over for one's self', i. e. 'repeat, learn, read'.

2	धोक्ति	डुग्धस्	डुग्ध	धुक्ते	डुक्त्रये	धुक्त्रे
	<i>dhókṣi</i>	<i>dugdhás</i>	<i>dugdhá</i>	<i>dhukṣé</i>	<i>duháthe</i>	<i>dhugdhvé</i>
3	दोग्धि	डुग्धस्	डुक्ति	डुग्धे	डुक्ते	डुक्ते
	<i>dógdhi</i>	<i>dugdhás</i>	<i>duhánti</i>	<i>dugdhé</i>	<i>duhâte</i>	<i>duhâte</i>

613. Examples of the 3d sing. mid. coincident in form with the 1st sing. are not rare in the older language (both V. and Br.): the most frequent examples are *īṣe*, *duhé*, *vidé*, *çáye*: more sporadic are *cité*, *bruve*, *huvé*. The irregular accent of the 3d pl. mid. is found in RV. in *rihaté*, *duhaté*. Examples of the same person in *re* and *rate* also occur: thus (besides those mentioned below, 629—30, 635), *vidré*, and, with auxiliary vowel, *arhire* (unless these are to be ranked, rather, as perfect forms without reduplication: 790b).

## 2. Present Subjunctive.

614. Subjunctive forms of this class are not uncommon in the older language, and nearly all those which the formation anywhere admits are quotable, from Veda or from Brāhmaṇa. A complete paradigm, accordingly, is given below, with the few forms not actually quotable for this class enclosed in brackets. We may take as models, for the active the root *i*, 'go', and for the middle the root *ās*, 'sit', of both of which numerous forms are met with (although neither for these nor for any others can the whole series be found in actual use).

The mode-stems are *áya* ( $\acute{e} + a$ ) and *ása* respectively.

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1	{ <i>áyāni</i> <i>áyā</i>	<i>áyāva</i>	<i>áyāma</i>	<i>ásūi</i>	{ <i>ásāvahāi</i> [ <i>ásāvahe</i> ]	{ <i>ásāmahāi</i> [ <i>ásāmahe</i> ]
2	{ <i>áyasi</i> <i>áyas</i>	<i>áyathas</i>	<i>áyatha</i>	{ <i>ásase</i> <i>ásāsūi</i>	[ <i>ásāithe</i> ]	{ <i>ásadhve</i> <i>ásādhvūi</i>
3	{ <i>áyati</i> <i>áyat</i>	<i>áyatas</i>	<i>áyan</i>	{ <i>ásate</i> <i>ásātūi</i>	<i>ásāite</i>	{[ <i>ásante</i> ]-nta <i>ásāntāi</i>

615. The RV. has no middle forms in *āi* except those of the first person. The 1st sing. act. in *ā* occurs only in RV., in *ayā*, *bravā*, *stāvā*. The 2d and 3d sing. act. with primary endings are very unusual in the Brāhmaṇas. Forms irregularly made with long *ā*, like those from present-stems in *a*, are not rare in AV. and Br.: thus, *ayās*, *ayāt*, *áyān*; *ásāt*, *brāvūt*; *asātha*, *bravūtha*, *hanūtha*; *ādān*, *dohān*. Of middle forms with secondary endings are found *hānanta*, 3d pl., and *īçata*, 3d sing. (after *mā* prohibitive), which is an isolated example. The only dual person in *āite* is *brāvūite*.

## 3. Present Optative.

616. The personal endings combined with the mode-signs of this mode (या *yā* in act., ई *ī* in mid.) have been

given in full above (566). The stem-form is the unaccented and unstrengthened root. The whole formation is so regular that a single example of inflection will be enough.

active.			middle.		
s.	d.	p.	s.	d.	p.
1 द्विष्याम् <i>dvīṣyām</i>	द्विष्याव <i>dvīṣyāva</i>	द्विष्याम <i>dvīṣyāma</i>	द्विषीय <i>dvīṣīyá</i>	द्विषीवहि <i>dvīṣīvāhi</i>	द्विषीमहि <i>dvīṣīmāhi</i>
2 द्विष्यास् <i>dvīṣyās</i>	द्विष्यातम् <i>dvīṣyātām</i>	द्विष्यात <i>dvīṣyāta</i>	द्विषीथास् <i>dvīṣīthās</i>	द्विषीयाथाम् <i>dvīṣīyāthām</i>	द्विषीधम् <i>dvīṣīdhvam</i>
3 द्विष्यात् <i>dvīṣyāt</i>	द्विष्याताम् <i>dvīṣyātām</i>	द्विष्युस् <i>dvīṣyús</i>	द्विषीत <i>dvīṣītá</i>	द्विषीयाताम् <i>dvīṣīyātām</i>	द्विषीरन् <i>dvīṣīrān</i>

So likewise, from  $\sqrt{i}$ , *iyām* and *iyīyá*; from  $\sqrt{duh}$ , *duhyām* and *duhīyá*; and so on.

The RV. has once *tana* in 2d pl. act. (in *syātana*).

#### 4. Present Imperative.

617. The imperative adds, in second and third persons, its own endings (with *अताम् atām* in 3d pl. mid.) directly to the root-stem. The stem is accented and strengthened in 3d sing. act.; elsewhere, the accent is on the ending and the root remains unchanged. The first persons, so called, of the later language are from the old subjunctive, and have its strengthened stem and accent; they are repeated here from where they were given above (614). In the 2d sing. act., the ending is regularly (as in the two following classes) *धि dhi* if the root end with a consonant, and *हि hi* if it end with a vowel. As examples we take some of the roots already used for the purpose.

active.			middle.		
s.	d.	p.	s.	d.	p.
1 अयानि <i>áyāni</i>	अयाव <i>áyāva</i>	अयाम <i>áyāma</i>	आसै <i>āsāi</i>	आसावहै <i>āsāvahāi</i>	आसामहै <i>āsāmahāi</i>
2 इहि <i>ihī</i>	इतम् <i>itām</i>	इत <i>itá</i>	आस्व <i>āssvá</i>	आसाथाम् <i>āsāthām</i>	आह्वम् <i>ādhvam</i>
3 एतु <i>étu</i>	इताम् <i>itām</i>	यन्तु <i>yāntu</i>	आस्ताम् <i>āstām</i>	आसाताम् <i>āsātām</i>	आसताम् <i>āsātām</i>

1	दोहानि दोहाव	दोहाम	दोहै	दोहावहै	दोहामहै
	<i>dohāni dōhāva</i>	<i>dohāma</i>	<i>dohāi</i>	<i>dohāvahai dōhāmahai</i>	
2	डुग्धि डुग्धम्	डुग्ध	धुक्त्व	डुहायाम्	धुग्धम्
	<i>dugdhi dugdhām</i>	<i>dugdhā</i>	<i>dhuksvā</i>	<i>duhātām dhugdhām</i>	
3	दोग्धु डुग्धाम्	डुहन्तु	डुग्धाम्	डुहाताम्	डुहताम्
	<i>dōgdhu dugdhām</i>	<i>duhāntu</i>	<i>dugdhām</i>	<i>duhātām duhātām</i>	

618. The 2d sing. act. ending *tūt* is found in the older language in a few verbs of this class: namely, *vittūt*, *vitūt*, *brūtūt*. In 3d sing. mid., two or three verbs have in the older language the ending *ām*: thus, *duhām* (only RV. case), *vidām*, *ṣayām*; and in 3d pl. mid. AV. has *duhrām* and *duhratām*. The use of *tana* for *ta* in 2d pl. act. is quite frequent in the Veda: thus, *itana*, *yātāna*, *hantana*, etc. And in *stota*, *ētana*, *сотana*, we have examples in the same person of a strong (and accented) stem.

### 5. Present Participle.

619. The active participle has the ending *अन्त* *ánt* (weak stem-form *अन्त* *at*) added to the unstrengthened root. Mechanically, it may be formed from the 3d pl. by dropping the final *इ*. Thus, for the verbs inflected above, the active participles are *यन्त* *yánt*, *डुहन्त* *duhánt*, *द्विषन्त* *dviṣánt*. The feminine stem ends usually in *अन्ती* *atī*: thus, *यन्ती* *yatī*, *डुहन्ती* *duhatī*, *द्विषन्ती* *dviṣatī*: but, from roots in *ā*, in *अन्ति* *ānti* or *अन्ती* *āntī* (449).

The middle participle has the ending *आना* *ānā*, added to the unstrengthened root: thus, *इयान* *iyānā*, *डुहान* *duhānā*, *द्विषाण* *dviṣānā*.

But a number of these participles in the older language have a double accent, either on the ending or on the radical syllable: thus, *duhānā* and *dihāna* (also *dūghāna*), *vidānā* and *vidāna*, *swānā* and *sivāna*, *stuvānā* and *stāvāna* — the last having also a stronger form of the root when accented. The root *ās*, 'sit', forms the unique *āsina* (along with, in the Veda, *āsānā*).

### 6. Imperfect.

620. This tense adds the secondary endings to the root as increased by prefixion of the augment. The root has the *guna*-strengthening (if capable of it) in the three persons of

the singular, although the accent is always upon the augment.

Examples of inflection are:

active.			middle.		
s.	d.	p.	s.	d.	p.
1 आयम् <i>āyam</i>	रेव <i>āva</i>	रेम <i>āma</i>	आसि <i>āsi</i>	आस्वहि <i>āsvahi</i>	आस्महि <i>āsmahi</i>
2 ऐम् <i>āis</i>	ऐतम् <i>āitam</i>	ऐत <i>āta</i>	आस्याम् <i>āsthāis</i>	आसायाम् <i>āsāthām</i>	आद्भुम् <i>ādḥvam</i>
3 ऐत् <i>āit</i>	ऐताम् <i>āitām</i>	आयन् <i>āyan</i>	आस्त <i>āsta</i>	आसाताम् <i>āsātām</i>	आसत <i>āsata</i>

and, from the root डृक् *duh*:

1 अदोहम् <i>ādoham</i>	अडुह <i>āduhva</i>	अडुह <i>āduhma</i>	अडुहि <i>āduhi</i>	अडुह्वहि <i>āduhvahi</i>	अडुह्वहि <i>āduhmahi</i>
2 अधोक् <i>ādhoḥ</i>	अडुग्धम् <i>ādugdham</i>	अडुग्ध <i>ādugdha</i>	अडुग्धास् <i>ādugdhās</i>	अडुक्तायाम् <i>āduhāthām</i>	अडुग्धम् <i>ādhugdham</i>
3 अधोक् <i>ādhoḥ</i>	अडुग्धाम् <i>ādugdhām</i>	अडुहन् <i>āduhan</i>	अडुग्ध <i>ādugdha</i>	अडुक्ताताम् <i>āduhātām</i>	अडुहन् <i>āduhata</i>

621. Roots ending in *ā* may in the later language optionally take *us* instead of *an* in 3d pl. act. (the *ā* being lost before it); and in the older they always do so: thus, *āyus* from  $\sqrt{yā}$ , *āpus* from  $\sqrt{pā}$  'protect'. The same ending is also allowed and met with in the case of a few roots ending in consonants: namely *vid*, 'know', *caḥs*, *dviḥs*, *duh*, *mṛj*.

The ending *tana*, 2d pl. act., is found in the Veda in *āyātana*, *āsastana*, *āttana*.

To save the characteristic endings in 2d and 3d sing. act., the root *ad* inserts *a*: thus, *ādas*, *ādat*; the root *as* inserts *i*: thus, *āsīs*, *āsīt* (see below, 636).

622. The use of the persons of this tense, without augment, in the older language, either in the same sense as with augment, or as subjunctives, has been noticed above (587). Augmentless imperfects of this class are rather uncommon in the Veda: thus, *hān*, *ves*, 2d sing.; *han*, *vet*, *stāut*, *dān* (?), 3d sing.; *bruvan*, *duhās*, *caḥsus*, 3d pl.; *vasta*, *sūta*, 3d sing. mid.

623. The first or root-form of aorist is identical in its formation with this imperfect: see below, 829 ff.

624. In the Veda (but almost limited to RV.) are found certain second persons singular, made by adding the ending *si* to the (accented and strengthened) root, and having an imperative value. There is some difference of view as to their formal character; but the most acceptable opinion regards them as isolated indicative persons of this class, used imperatively. They

are: *kṣéṣi* (1 *kṣi* 'rule'), *jéṣi*, *jóṣi* (for *jóṣsi*, from  $\sqrt{jus}$ ), *dársi*, *dhakṣi*, *nakṣi* (2 *naç* 'attain'), *néṣi*, *pársi* (2 *pṛ* 'set across'), *práṣi*, *bhakṣi*, *mátsi*, *māsi* (2 *mā* 'measure'), *yákṣi*, *yámṣi*, *yāsi*, *yótsi*, *rátsi*, *rāsi*, *vákṣi*, *véṣi* (1 *vī* 'strive after'), *çróṣi*, *sakṣi*, *sátsi*, *hoṣi*.

### Irregularities of the Root-class.

625. It is impossible (at least at present) to determine with accuracy how many of the actually used roots of the language are inflected in the present-system according to this class, or according to any of the other classes, because the older language especially, and the later in less degree, has sporadic forms which are either of doubtful classification or too isolated to determine the character of the root to which they belong. The root-class may be said, however, to include from seventy to ninety roots. A considerable number of them present irregularities of inflection, a brief account of which (not claiming exhaustive completeness) is given in the following paragraphs.

626. The roots of the class ending in *u* have in their strong forms the *vrddhi* instead of the *guṇa*-strengthening before an ending beginning with a consonant: thus, from  $\sqrt{stu}$ , *stā́umi*, *ástāut*, and the like: but *ástavam*, *stāvāni*, etc.

Roots found to exhibit this peculiarity in actual use are *kṣṇu*, *yu*, *sku*, *stu*, *snu* (these five in the earlier language), *nu*, *ru*, *su* 'impel', and *hnu*.

627. The root *mṛj* also has the *vrddhi*-vowel in its strong forms: thus, *mārjmi*, *ámārjam*, *ámārti*; and the same strengthening is allowed in weak forms before endings beginning with a vowel: thus, *mārjantu*, *amārjan*: but this is not found to occur in the older language.

In the other tense-systems, also, and in derivation, *mṛj* shows often the *vrddhi* instead of the *guṇa*-strengthening.

628. A number of roots accent the radical syllable throughout, both in strong and in weak forms: thus, all those beginning with a long vowel, *ās*, *īḍ*, *īr*, *īç*; and also *caḥṣ*, *takṣ*, *trā*, *nīns*, *vas* 'clothe', *çīñj*, *çī*, and *sū* 'generate'. All these, except *takṣ* and *trā* (and *trā* in the only Vedic forms), are ordinarily conjugated in middle voice only. Forms with the same irregular accent occur now and then in the Veda from other verbs: thus, *mátsva*, *çdhat*. Middle participles so accented have been noticed above (619).

629. Of the roots mentioned in the last paragraph, *çī* has the *guṇa*-strengthening throughout: thus, *çáyē*, *çéṣe*, *çáyīya*, *çáyāna*, and so on. Other irregularities in its inflection (in part already noticed) are the 3d pl. persons *çérate* (AV. etc.

have also *çéere*), *çératām*, *áçerata* (RV. has also *áçeran*), the 3d sing. pres. *çáye* (R.) and impv. *çáyām*. The isolated active form *çayat* is common in the older language.

**630.** Of the same roots, *īḍ* and *īç* insert a union-vowel *i* before endings beginning with *s*, *sv*, *th*: thus, *īçise*, *īçidhve*, *īḍiṣva* (these three being the only forms noted in the older language); but RV. has *īkṣe* beside *īçise*. The 3d pl. *īçire* (on account of its accent) is also apparently present rather than perfect.

**631.** The roots *rud* (not in Veda), *svap*, *an*, and *çvas* insert a union-vowel *i* before all the endings beginning with a consonant, except the *s* and *t* of 2d and 3d sing. impf., where they insert instead either *a* or *ī*: thus, *svápimi*, *çvásisi*, *ániti*, and *ánat* or *ánit*. And in the remaining forms, the last three are allowed to accent either root or ending: thus, *svápantu* and *çvásantu* (AV.), or *svápantu* etc.

In the older language, *√vam* makes the same insertions: thus, *vamiti*, *avamit*; and other cases occasionally occur: thus, *janīṣva*, *vasiṣva* (*√vas* 'aim'), *çnathīhi*, *stanīhi* (all RV.). On the other hand, *an* sometimes makes forms from an *a*-stem: thus, *ánati* (AV.); pple *ánant* (ÇB.); opt. *anet* (AB.).

**632.** The root *brū* (of very frequent use) takes the union-vowel *ī* after the root when strengthened, before the initial vowel of an ending: thus, *brāvīmi*, *brāvīṣi*, *brāvīti*, *ábravīs*, *ábravīt*; but *brūmās*, *brūyām*, *ábravam*, *ábruvan*, etc. Special occasional irregularities are *brūmi*, *bravihi*, *abruvam*, *abrūvan*, *bruyāt*, and sporadic forms from an *a*-stem. The subj. dual *brāvāite* has been noticed above (615).

**633.** Some of the roots in *u* are allowed to be inflected like *brū*: namely, *ku*, *tu*, *ru*, and *stu*; and an occasional instance is met with of a form so made (in V., only *tavīti* noted).

**634.** The root *am* (hardly found in the later language) takes *ī* as union-vowel: thus, *amīṣi* (RV.), *amīti* and *ámīt* and *amīṣva* (TS). From *√çam* occur *çamīṣva* (VS.: TS. *çamīṣva*) and *çamīdhvam* (TB. etc.).

**635.** The irregularities of *√duh* in the older language have been already in part noted: the 3d pl. indic. mid. *duhaté*, *duhré*, and *duhráte*; 3d sing. impv. *duhām*, pl. *duhrām* and *duhratām*; impf. act. 3d sing. *áduhat* (which is found also in the later language), 3d pl. *aduhran* (beside *áduhan* and *duhás*); the mid. pple *dúghāna*; and (quite unexampled elsewhere) the opt. forms *duhīyāt* and *duhīyān* (RV. only).

Some of the roots of this class are abbreviated or otherwise weakened in their weak forms: thus —

⟨ **636.** The root *अ॒स*, 'be', loses its vowel in weak forms (except where protected by combination with the augment).

Its 2d sing. indic. is अस्मि *ási* (instead of *assé*); its 2d sing. impv. is एधि *edhi* (irregularly from *asdhi*). The insertion of ई *i* in 2d and 3d sing. impf. has been noticed already above.

The forms of this extremely common verb are, then, as follows :

Indicative.			Optative.			
	s.	d.	p.	s.	d.	p.
1	अस्मि <i>ásmi</i>	स्वम् <i>svás</i>	स्मस् <i>smás</i>	स्याम् <i>syám</i>	स्याव <i>syáva</i>	स्याम <i>syáma</i>
2	असि <i>ási</i>	स्थस् <i>sthás</i>	स्थ <i>sthá</i>	स्यास् <i>syás</i>	स्यातम् <i>syátam</i>	स्यात् <i>syáta</i>
3	अस्ति <i>ásti</i>	स्तस् <i>stás</i>	सन्ति <i>sánti</i>	स्यात् <i>syát</i>	स्याताम् <i>syátām</i>	स्युम् <i>syús</i>
Imperative.			Imperfect.			
1	असानी <i>ásāni</i>	असाव <i>ásāva</i>	असाम <i>ásāma</i>	असाम् <i>ásam</i>	असव <i>ásva</i>	असम <i>ásma</i>
2	एधि <i>edhi</i>	स्तम् <i>stám</i>	स्त <i>stá</i>	असीम् <i>ásis</i>	अस्तम् <i>ástam</i>	अस्त <i>ásta</i>
3	अस्तु <i>ástu</i>	स्ताम् <i>stām</i>	सन्तु <i>sántu</i>	असीत् <i>ásit</i>	अस्ताम् <i>ástām</i>	असन् <i>ásan</i>

Participle सन्त् *sánt* (fem. सती *satí*).

The Vedic subjunctive forms are the usual ones, made upon the stem *ása*. They are in frequent use, and appear (*asat* especially) even in late Brāhmaṇas where the subjunctive is almost lost. The resolution *stām* etc. (opt.) is common in Vedic verse. In 2d and 3d sing. impf. is a few times met with the more normal *ās* (for *ās-s*, *ās-t*).

Middle forms from *vas* are also given by the grammarians as allowed with certain prepositions (*vi + ati*), but they do not appear to have been met with in use. A middle present indicative is compounded (in 1st and 2d persons) with the *nomen agentis* in *tṛ* (*tar*) to form the periphrastic future in the middle voice (see below, 942 ff.). The 1st sing. indic. is *he*; the rest is in the usual relation of middle to active forms (in 2d pers., *se*, *dhve*, *sva*, *dhvam*, with total loss of the root itself).

The only other tense of this verb in use is the perfect, which is entirely regular in its inflection.

637. The root *han*, 'strike, slay', is treated somewhat after the manner of noun-stems in *an* in declension (421): in weak

forms, it loses its *n* before an initial consonant (except *m* and *v*) of an ending, and its *a* before an initial vowel — and in the latter case its *h*, in contact with the *n*, is changed to *gh* (compare 402). Thus, for example:

Present Indicative.			Imperfect.		
s.	d.	p.	s.	d.	p.
1 <i>hānmi</i>	<i>hanvās</i>	<i>hanmās</i>	<i>āhanam</i>	<i>āhanva</i>	<i>āhanma</i>
2 <i>hānsi</i>	<i>hathās</i>	<i>hathā</i>	<i>āhan</i>	<i>āhatam</i>	<i>āhata</i>
3 <i>hānti</i>	<i>hatās</i>	<i>ghnānti</i>	<i>āhan</i>	<i>āhatām</i>	<i>āghnan</i>

Its participle is *ghnānt* (fem. *ghnatī*). Its 2d sing. impv. is *jahī* (by anomalous dissimilation, on the model of reduplicating forms).

Middle forms from this root are frequent in the Brāhmaṇas, and those that occur are formed according to the same rules: thus, *hate*, *hanmahe*, *ghnate*; *ahata*, *aghnātām*, *aghnata* (in AB., also *ahata*); *ghnīta* (but also *hanīta*).

638. The root *vaç*, 'wish', is in the weak forms regularly and usually contracted to *uç* (as in the perfect: see chap. X.): thus, *uçmāsi* (V.: once apparently abbreviated in RV. to *çmasī*), *uçānti*; pple *uçānt*, *uçānā*. Middle forms (except the pple) do not occur; nor do the weak forms of the imperfect, which are given as *āuçva*, *āuṣtam*, etc.

RV. has in like manner the participle *uṣāṇā* from the root *vas* 'clothe'.

639. The root *çās*, 'command', shows some of the peculiarities of a reduplicated verb, lacking (646) the *n* before *t* in all 3d perss. pl. and in the active participle. A part of its active forms — namely, the weak forms having endings beginning with consonants (including the optative) — come from a stem with weakened vowel, *çiṣ* (as do the aorist, 854, and some of the derivatives). Thus, for example:

Present Indicative.			Imperfect.		
s.	d.	p.	s.	d.	p.
1 <i>çāsmi</i>	<i>çivās</i>	<i>çismās</i>	<i>āçāsam</i>	<i>āçiṣva</i>	<i>āçiṣma</i>
2 <i>çāssi</i>	<i>çiṣthās</i>	<i>çiṣthā</i>	<i>āçās</i>	<i>āçiṣtam</i>	<i>āçiṣta</i>
3 <i>çāsti</i>	<i>çiṣthās</i>	<i>çāsati</i>	<i>āçāt</i>	<i>āçiṣtām</i>	<i>āçāsus</i>

In 2d sing. impf., *açūt* is said to be also allowed. If it is actually so used, the *t* must be the sporadic conversion of final radical *s* to *t* (167); and then it would be open to question whether the *t* of 3d sing. is radical or of the ending (according to 555). The optative is *çiṣyām* etc. The 2d sing. impv. is *çādhi* (with total loss of the *s*); and RV. has the strong 2d pl. *çāstāna* (with anomalous accent). But no *çiṣ*-forms of the present-system occur in the Veda.

The middle inflection is regular, and the accent (apparently) always upon the radical syllable (pple *çāsāna*, RV. etc.).

The root *dāç*, 'worship', has in like manner (RV.) the pple *dāçat* (not *dāçant*).

640. The double so-called root *jaks*, 'eat, laugh', is an evident reduplication of *ghas* and *has*. It has the absence of *n* in act. 3d pers. pl. and pple, and the accent on the root before vowel-endings, which belong to reduplicated verbs; and it also takes the union-vowel *i* in the manner of *rud* etc. (above, 631). A 2d pers. impv. *jagdhi* from it occurs.

641. Other obviously reduplicated verbs are treated by the native grammarians as if simple, and referred to the conjugation: such are the intensively reduplicated *jāgr*, *daridrā*, and *vevī* (chap. XIV.), *didhī* etc. (676), and *cakās* (677).

## II. Reduplicating Class (third, *hu*-class).

642. This class forms its present-stem by prefixing a reduplication to the root.

643. a. As regards the consonant of the reduplication, the general rules which have already been given above (590) are followed.

b. A long vowel is shortened in the reduplicating syllable: thus, ददा *dadā* from √दा *dā*; बिभी *bibhī* from √भी *bhī*; जुहू *juhū* from √हू *hū*. The vowel ऋ *r* never appears in the reduplication, but is replaced by इ *i*: thus, विभृ *bibhr* from √भृ *bhr*; पिपृ *piprc* from √पृ *prc*.

For verbs in which *a* and *ā* also are irregularly represented in the reduplication by *i*, see below, 660.

c. The only root of this class with initial vowel is *r* (or *ar*); it takes as reduplication *i*, which is held apart from the root by an interposed *y*: thus, *iyar* and *iyr* (the latter has not been found in actual use).

644. The present-stem of this class (as of the other classes belonging to the first conjugation) has a double form: a stronger form, with gunated root-vowel; and a weaker form, without *guna*: thus, from √हु *hu*, the two forms are जुहो *juho* and जुहु *juhu*; from √भी *bhī*, they are बिभे *bibhe* and बिभी *bibhī*. And the rule for their use is the same as in the other classes of this conjugation: the strong stem is found before the unaccented endings (552), and the weak stem before the accented.

645. According to all the analogies of the first general conjugation, we should expect to find the accent upon the root-syllable when this is strengthened. That is actually the case, however, only in a small minority of the roots composing the class: namely, in *hu*, *bhī* (no test-forms in the older language), *hrī* (not found in the older language), *mad* and *dhan* (both very rare), *jan* (no forms of this class found to occur), *ci* 'notice' (in V.), *yu* 'separate' (in older language only), and in *bhṛ* in the later language (in V. it goes with the majority: but RV. has *bībhārti* once; and this, the later accentuation, is found also in the Brāhmaṇas). In all the rest — apparently, by a recent transfer — it rests upon the reduplicating instead of upon the radical syllable. And in both classes alike, the accent is anomalously thrown back upon the reduplication in those weak forms of which the ending begins with a vowel; while in the other weak forms it is upon the ending.

Apparently (the cases with written accent are too few to determine the point satisfactorily) the middle optative endings, *īya* etc. (586), are reckoned throughout as endings with initial vowel, and throw back the accent upon the reduplication.

646. The verbs of this class lose the *n* in the 3d pl. endings in active as well as middle, and in the imperfect have *उम् us* instead of *अन् an* — and before this a final radical vowel has *guṇa*.

### 1. Present Indicative.

647. The combination of stem and endings is as in the preceding class.

Examples of inflection: a.  $\sqrt{\text{हु}}$  *hu*, 'sacrifice': strong stem-form, *बुहो juhó*; weak form, *बुहु juhu* (or *jūhu*).

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1	बुहोमि <i>juhómi</i>	बुहुवम् <i>juhuvám</i>	बुहुमम् <i>juhumám</i>	बुह्वे <i>juhve</i>	बुहुवहे <i>juhuváhe</i>	बुहुमहे <i>juhumāhe</i>
2	बुहोषि <i>juhóṣi</i>	बुहुथम् <i>juhuthám</i>	बुहुथ <i>juhuthá</i>	बुहुषे <i>juhúṣe</i>	बुहुथे <i>jūhwáthe</i>	बुहुध्वे <i>juhudhvé</i>
3	बुहोति <i>juhóti</i>	बुहुतम् <i>juhutám</i>	बुहुति <i>jūhvati</i>	बुहुते <i>juhuté</i>	बुहुते <i>jūhwáte</i>	बुहुते <i>jūhwate</i>

b. Root  $\sqrt{\text{भृ}}$  *bhṛ*, 'bear' (given with Vedic accentuation): strong stem-form, *बिभर् bibhar*; weak, *बिभृ bibhṛ* (or *bībhṛ*).

1	बिभर्मि <i>bibharmi</i>	बिभृवस् <i>bibhṛvās</i>	बिभृमस् <i>bibhṛmās</i>	बिभ्रे <i>bibhre</i>	बिभृवहे <i>bibhṛvāhe</i>	बिभृमहे <i>bibhṛmāhe</i>
2	बिभर्षि <i>bibharsi</i>	बिभृथस् <i>bibhṛthās</i>	बिभृथ <i>bibhṛthā</i>	बिभृषे <i>bibhṛṣé</i>	बिभृथे <i>bibhṛāthe</i>	बिभृध्वे <i>bibhṛdhvé</i>
3	बिभर्ति <i>bibharti</i>	बिभृतस् <i>bibhṛtās</i>	बिभृति <i>bibhṛati</i>	बिभृते <i>bibhṛté</i>	बिभृते <i>bibhṛāte</i>	बिभृते <i>bibhṛate</i>

The *u* of *hu* (like that of the class-signs *nu* and *u*: see below, 697) is said to be omissible before *v* and *m* of the endings of 1st du. and pl.: thus, *juhvās*, *juhvāhe*, etc.

## 2. Present Subjunctive.

648. It is not possible (at least, at present) to draw a distinct line between those subjunctive forms of the older language which should be reckoned as belonging to the present-system and those which should be assigned to the perfect — even, in some cases, to the reduplicated aorist and intensive. Here will be noticed only those which most clearly belong to this class; the more doubtful cases will be treated under the perfect-system. Except in first persons (which continue in use as “imperatives” down to the later language), subjunctives from roots having unmistakably a reduplicated present-system are of far from frequent occurrence.

649. The subjunctive mode-stem is formed in the usual manner, with the mode-sign *a* and *gūṃ* of the root-vowel, if this is capable of such strengthening. The evidence of the few accented forms met with indicates that the accent is laid in accordance with that of the strong indicative forms: thus, from  $\sqrt{hu}$ , the stem would be *juhāva*; from  $\sqrt{bhṛ}$ , it would be *bibhāra* (but *bibhāra* later). Before the mode-sign, final radical *ā* would be, in accordance with analogies elsewhere, dropped: thus *dāda* from  $\sqrt{dā}$ , *dādha* from  $\sqrt{dhā}$  (all the forms actually occurring would be derivable from secondary roots, as *dad* and *dadh*).

650. Instead of giving a theoretically complete scheme of inflection, it will be better to note all the examples quotable from the older language (accented when found so occurring).

Thus, of 1st persons, we have in the active *juhāvāni*, *bibhārāni*, *dadāni*, *dadhāni*, *jāhāni*; *juhāvāma*, *dādhamā*, *jāhāmā*; — in the middle, *dadhūi*, *mimāi*, *dadhāvahāi*; *juhāvāmahāi*, *dadāmahe*, *dadāmahāi*, *dadhāmahāi*.

Of other persons, we have with primary endings in the active *bibhārāsi* (with double mode-sign: 580, end), *dādhatas*, *juhāvātha* (do.) and *juhāvatha*: in the middle, *dādhasē*; *dādhatē*, *rārātē*, *dādhatāi*, *dadātāi*: — with secondary endings, *dādhas*, *vṛveṣas*, *juhavat*, *bibharat*, *yuyavat*, *dādhat*, *dadhānat*, *babhasat*; *dadhan*, *yuyavan*, *juhavan*.

## 3. Present Optative.

651. To form this mode, the optative endings given above (566), as made up of mode-sign and personal endings, are added to the unstrengthened stem. The accent is as already stated (645). The inflection is so regular that it is unnecessary to give here more than the first persons of a single verb: thus,

active.			middle.		
s.	d.	p.	s.	d.	p.
1 जुहुयाम् <i>juhuyām</i> etc.	जुहुयाव <i>juhuyāva</i> etc.	जुहुयाम <i>juhuyāma</i> etc.	जुहुयि <i>jūhvīya</i> etc.	जुहुविहि <i>jūhvīvahi</i> etc.	जुहुमिहि <i>jūhvīmahi</i> etc.

## 4. Present Imperative.

652. The endings, and the mode of their combination with the root, have been already given. In 2d sing. act., the ending is हि *hi* after a vowel, but धि *dhi* after a consonant: ऊ *hu*, however, forms जुहुधि *juhudhi* (apparently, in order to avoid the recurrence of ह *h* in two successive syllables): and other examples of धि *dhi* after a vowel are found in the Veda.

653. Example of inflection:

active.			middle.		
s.	d.	p.	s.	d.	p.
1 जुहुवामि <i>juhāvāmi</i>	जुहुवाव <i>juhāvāva</i>	जुहुवाम <i>juhāvāma</i>	जुहुवै <i>juhāvāi</i>	जुहुवावहै <i>juhāvāvahāi</i>	जुहुवामहै <i>juhāvāmahāi</i>
2 जुहुधि <i>juhudhi</i>	जुहुतम् <i>juhutām</i>	जुहुत <i>juhutā</i>	जुहुध <i>juhusvā</i>	जुहुधाम् <i>jūhvāthām</i>	जुहुधम् <i>juhudhvām</i>
3 जुहुतु <i>juhōtu</i>	जुहुताम् <i>juhutām</i>	जुहुतु <i>jūhvatu</i>	जुहुताम् <i>juhutām</i>	जुहुताम् <i>jūhvātām</i>	जुहुताम् <i>jūhvātām</i>

The other division of this class differ here, as in the indicative, in the accentuation of their strong forms only: namely, in all the first persons (borrowed subjunctives), and in the 3d sing. act.: thus (in the older language) *bibharāni* etc., *bibhartu*, *bibharāi* etc.

654. Vedic irregularities of inflection are: a. the occasional use of strong forms in 2d persons: thus, *yuyodhi*, *çiçādhi* (beside *çiçihī*); *yuyotam* (beside *yuyutām*); *īyarta*, *dādāta*, *dādihāta* and *dādihātana* (see below, 673),

*pipartana*, *juhóta* and *juhótana*, *yuyótana*; **b.** the use of *dhi* instead of *hi* after a vowel (only in the two instances just quoted); **c.** the ending *tana* in 2d pl. act. (in the instances just quoted and in others, as *manáttana*, *jigútana*, *dhattana*, etc.); **d.** the ending *tāt* in 2d sing. act., in *dattāt*, *dhattāt*, *piprāt*.

### 5. Present Participle.

655. As elsewhere, the active participle-stem may be made mechanically from the 3d pl. indic. by dropping  $\text{इ} \text{ः}$ : thus,  $\text{ब्रुह्मन् } jūhvat$ ,  $\text{विद्यन् } bibhrat$ . In inflection, it has no distinction of strong and weak forms (444). The feminine stem ends in  $\text{अती } atī$ . The middle participles are regularly made: thus,  $\text{ब्रुह्मान् } jūhvāna$ ,  $\text{विद्यान् } bibhrāna$ .

### 6. Imperfect.

656. As already pointed out, the 3d pl. act. of this class takes the ending  $\text{उम् } us$ , and a final radical vowel has *guṇa* before it. The strong forms are, as in pres. indic., the three sing. act. persons.

657. Example of inflection:

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1	अब्रुह्वम् <i>ájuhavam</i>	अब्रुह्व <i>ájuhwa</i>	अब्रुह्वम् <i>ájuhuma</i>	अब्रुह्वि <i>ájuhvi</i>	अब्रुह्वहि <i>ájuhwahi</i>	अब्रुह्वमहि <i>ájuhumahi</i>
2	अब्रुह्वोम् <i>ájuhos</i>	अब्रुह्वतम् <i>ájuhutam</i>	अब्रुह्वता <i>ájuhuta</i>	अब्रुह्वथाम् <i>ájuhuthās</i>	अब्रुह्वथाम् <i>ájuhvāthām</i>	अब्रुह्वध्वम् <i>ájuhudhvam</i>
3	अब्रुह्वोत् <i>ájuhot</i>	अब्रुह्वताम् <i>ájuhutām</i>	अब्रुह्ववुन् <i>ájuhavus</i>	अब्रुह्वता <i>ájuhuta</i>	अब्रुह्वताम् <i>ájuhvātām</i>	अब्रुह्वत <i>ájuhvata</i>

From  $\sqrt{\text{भृ}} bhṛ$ , the 2d and 3d sing. act. are  $\text{अबिभर् } abibhar$  (for *abibhar-s* and *abibhar-t*) — and so in all other cases where the strong stem ends in a consonant. The 3d pl. act. is  $\text{अबिभरन् } abibharus$ ; and from  $\sqrt{\text{भी}} bhī$ , it is  $\text{अबिभयुन् } abibhayus$ .

658. The usual Vedic irregularities in 2d pl. act. — strong forms, and the ending *tana* — occur in this tense also: thus, *ádadāta*, *ádadhāta*; *ádat-tana*, *ájagantana*, *ájahātana*. The RV. has also once *apiprata* for *apiprāta* in 3d sing. mid., and *abibhran* for *abibharus* in 3d pl. act. Examples of augmentless forms are *çīçus*, *vivés*, *jígūt*; *jñhita*, *çīçita*, *jñhata*.

## Irregularities of the Reduplicating Class.

**659.** It is still more difficult to determine the precise limits of this class than of the root-class, because of the impossibility (referred to above, under subjunctive: **648**) of always separating its forms from those of other reduplicating conjugations and parts of conjugations. In the RV., about forty roots may be confidently assigned to it; in the AV., less than thirty; many of them have irregularities (besides those in tense-inflection already pointed out).

**660.** Besides the roots in *r* or *ar* — namely, *r*, *ghr* (usually written *ghar*), *tr*, *pr*, *bhr*, *sr*, *prc* — the following roots having *a* or *ā* as radical vowel take *i* instead of *a* in the reduplicating syllable: *gā* 'go', 3 *pā* 'rise', *mā* 'measure', *mā* 'bellow', *ṣā*, *hā* 'remove' (mid.), *vac*, *sac*; *vaṣ* has both *i* and *a*; *rā* has *i* once in RV.: for *sthā*, *pā* 'drink', *ghrā*, *han*, see below (**670—4**).

**661.** Several roots of this class in final *ā* change the *ā* in weak forms to *i* (occasionally even to *i*), and then drop it altogether before endings beginning with a vowel.

This is in close analogy with the treatment of the vowel of the class-sign of the *nā*-class: below, **717**.

These roots are:

**662.** *ṣā*, act. and mid.: thus, *ṣiṣāti*, *ṣiṣmasi*, *ṣiṣihī* (also *ṣiṣādhi*: above, **654**), *ṣiṣātu*, *aṣiṣāt*, *ṣiṣīte*.

**663.** *mā* 'bellow', act., and *mā* 'measure', mid. (rarely also act.): thus, *mimāti*, *mimanti*, *mimīyāt*; *mīmīte*, *mimate*, *āmimīta*; *mimīhi*, *mīmātu*.

**664.** *hā* 'remove', mid.: thus, *jihīte*, *jihīdhve*, *jihate*; *jihīṣva*, *jihatām*; *ājihīta*, *ajihata*.

**665.** *hā* 'quit', act. (originally identical with the former), may further shorten the *i* to *i*: thus, *jahāti*, *jahīta*, *jahītāt* (AV.); *jahimas* (AV.), *jahitas* (TB.), *jahitam* (TA.), *ajahitām* (TS.). In the optative, the radical vowel is lost altogether; thus, *jahyām*, *jahyus* (AV.). The 2d sing. impv. is *jahīhi* or *jahīhi*.

Compare with this the forms in *dhi* from *√dhā* (below, **669**).

**666.** *rā* 'give', mid.: thus, *rarīdhvam*, *rarīthās* (impf. without augment); and, with *i* in reduplication, *ririhi*.

In all these verbs, the accent is constant on the reduplicating syllable.

**667.** The two roots *dā* and *dhā* (the commonest of the class) lose their radical vowel altogether in the weak forms, being shortened to *dad* and *dadh*. In 2d sing. impv. act., they form respectively *dehī* and *dhehī*. In combination with a following *t* or *th*, the final *dh* of *dadh* does not follow the special rule of combination of a final sonant aspirate (becoming *ddh* with the *t* or *th*: **160**), but — as also before *s* and *dhv* — the

more general rules of aspirate and of surd and sonant combination; and its lost aspiration is thrown back upon the initial of the root.

668. The inflection of  $\sqrt{dhā}$  is, then, as follows:

		Present Indicative.					
		active.				middle.	
		s.	d.	p.	s.	d.	p.
1	<i>dādhāmi</i>	<i>dadhvās</i>	<i>dadhmas</i>	<i>dadhē</i>	<i>dādhvāhe</i>	<i>dādhmahe</i>	
2	<i>dādhāsi</i>	<i>dhatthās</i>	<i>dhatthā</i>	<i>dhatsē</i>	<i>dadhūthe</i>	<i>dhaddhve</i>	
3	<i>dādhāti</i>	<i>dhattās</i>	<i>dādhati</i>	<i>dhattē</i>	<i>dadhāte</i>	<i>dādhatē</i>	

		Present Optative.					
		s.	d.	p.	s.	d.	p.
1	<i>dadhyaṁ</i>	<i>dadhyaṁ</i>	<i>dadhyaṁ</i>	<i>dādhyā</i>	<i>dādhivahi</i>	<i>dādhimahi</i>	
	etc.	etc.	etc.	etc.	etc.	etc.	

		Present Imperative.					
		s.	d.	p.	s.	d.	p.
1	<i>dādhāni</i>	<i>dādhāva</i>	<i>dādhamā</i>	<i>dādhi</i>	<i>dādhāvahi</i>	<i>dādhimahi</i>	
2	<i>dhehi</i>	<i>dhattām</i>	<i>dhattā</i>	<i>dhatsva</i>	<i>dadhūthām</i>	<i>dhaddhvam</i>	
3	<i>dādhātu</i>	<i>dhattām</i>	<i>dādhatu</i>	<i>dhattām</i>	<i>dadhūtām</i>	<i>dadhātām</i>	

		Imperfect.					
		s.	d.	p.	s.	d.	p.
1	<i>ādadhām</i>	<i>ādadhva</i>	<i>ādadhma</i>	<i>ādadhi</i>	<i>ādadhvahi</i>	<i>ādadmahi</i>	
2	<i>ādadhās</i>	<i>ādhattam</i>	<i>ādhatta</i>	<i>ādhattās</i>	<i>ādadhūthām</i>	<i>ādhadhvam</i>	
3	<i>ādadhāt</i>	<i>ādhattām</i>	<i>ādadhus</i>	<i>ādhatta</i>	<i>ādadhūtām</i>	<i>ādadhata</i>	

Participles: act. *dādhat*; mid. *dādhana*.

In the middle (except impf.), only those forms are here accented for which there is authority in the accentuated texts, as there is discordance between the actual accent and that which the analogies of the class would lead us to expect. RV. has once *dhātse*: *dadhē* and *dadhāte* might be perfect, so far as the form is concerned. RV. accents *dadhūtā* once (*dādhitā* thrice); TS. and TB. have *dādhiran*.

The root *dā* is inflected in precisely the same way, with change everywhere of *dh* to *d*.

669. The older language has irregularities as follows: **a.** the usual strong forms in 2d pl., *dādhitā* and *ādadhātā*, *dādāta* and *ādādātā*; **b.** the usual *tana* endings in the same person, *dhattana*, *dādātana*, etc.; **c.** the 3d sing. indic. act. *dadhē* (like 1st sing.); **d.** the 2d sing. impv. act. *daddhi* (for both *dehi* and *dhehi*); **e.** the middle forms *dadhivā*, *dadhivā*, *dadhivā* (in RV.), with vowel weakened to *i* instead of being dropped.

670. A number of roots have been transferred from this to the *a*-class (class VI., below, 749), their reduplicated root becoming a stereotyped stem inflected after the manner of *a*-stems. These roots are as follows:

671. In all periods of the language, from the roots *sthā* 'stand', *pā* 'drink', and *ghrā* 'smell', are made the presents

*tīṣṭhāmi*, *pībāmi* (with irregular sonantizing of the second *p*: later often written *pīvāmi*), and *jighrāmi* — which then are inflected not like *mīmāmi*, but like *bhāvāmi*, as if from the present-stems *tīṣṭha*, *pība*, *jighra*.

672. In the Veda, the reduplicated roots *dū* and *dhū* are also sometimes turned into the *a*-stems *dāda* and *dāḍha*, or inflected as if roots *dad* and *dadh* of class VI.; and single forms of the same character are made from other roots: thus, *mimanti* ( $\sqrt{mā}$  'bellow'), *rārate* ( $\sqrt{rā}$  'give': 3d sing. mid.).

673. In the Veda, also, a like secondary root, *jighn*, is made from  $\sqrt{han}$  (with omission of the radical vowel, and conversion, usual in this root, of *h* to *gh* when in contact with *n*); and some of the forms of *saçc*, from  $\sqrt{sac}$ , show the same conversion to an *a*-stem, *saçca*.

674. In AB. (viii. 28), a similar secondary form, *jighy*, is given to  $\sqrt{hi}$ : thus, *jighyati*, *jighyatu*.

675. A few so-called roots of the first or root-class are the products of reduplication, more or less obvious: thus, *jakṣ* (640), and probably *çās* (from  $\sqrt{ças}$ ) and *cakṣ* (from  $\sqrt{kūç}$  or a lost root *kas*, 'see'). In the Veda is found also *saçc*, from  $\sqrt{sac}$ .

676. The grammarians reckon (as already noticed, 641) several roots of the most evidently reduplicate character as simple, and belonging to the root-class. Some of these (*jūgr*, *daridrā*, *vevī*) are regular intensive stems, and will be described below under Intensives (chap. XIV.); *dīdhī*, 'shine', along with Vedic *dīdī* 'shine' and *pīpī* 'swell', are sometimes also classed as intensives; but they have not the proper reduplication of such, and may perhaps be best noticed here, as reduplicated present-stems with irregularly long reduplicating vowel.

Of pres. indic. occurs in the older language only *dīdyati*, 3d pl., with the pples *dīdyat* and *dīdhyat*, and mid. *dīdye*, *dīdhye*, *dīdhyāthām*, with the pples *dīdyāna*, *dīdhyāna*, *pīpyāna*. The subj. stems are *dīdāya*, *dīdhaya*, *pīpāya*, and from them are made forms with both primary (from *dīdāya*) and secondary endings (and the irregularly accented *dīdayat* and *dīdāyat* and *dīdhan*). No opt. occurs. In impv. we have *dīdihī* (and *didihī*) and *pīpīhī*, and *pīpyatam*, *pīpyatām*, *pīpyata*. In impf., *adīdes* and *pīpes*, *ādīdet* and *apīpet* (with augmentless forms), *apīpema* (with strong form of root), and *adīdhayus* and (irregular) *apīpyan*.

A few forms from all the three show transfer to an *a*-inflection: thus, *dīdhaya* and *pīpaya* (impv.), *āpīpayat*, etc.

Similar forms from  $\sqrt{mī}$  'bellow' are *amīmet* and *mīmayat*.

677. The stem *cakūs* (sometimes *cakūç*) is also regarded by the grammarians as a root, and supplied as such with tenses outside the present-system — which, however, hardly occur in genuine use. It is not known in the older language.

678. The root *bhas*, 'chew', loses its radical vowel in weak forms, taking the form *baps*: thus, *bābhasti*, but *bāpsati* (3 pl.), *bāpsat* (pple).

679. The root *bhī*, 'fear', is allowed by the grammarians to shorten its vowel in weak forms: thus, *bībhīmas* or *bībhīmas*, *bībhīyām* or *bībhīyām*.

680. Forms of this class from  $\sqrt{\text{jan}}$ , 'give birth', with added *i* — thus, *jajñise*, *jajñidhve* — are given by the grammarians, but do not appear to have been found in use.

681. The roots *ci* and *cit* have in the Veda reversion of *e* to *k* in the root-syllable after the reduplication: thus, *cikéši*, *cikéthe* (anomalous, for *cikyáthe*), *cikitām*, *aciket*, *cíkyat* (pple); *cikiddhi*.

682. The root *vyac* has *i* in the reduplication (from the *y*), and is contracted to *vic* in weak forms: thus, *viviktás*, *áviviktām*. So the root *hvar* (if its forms are to be reckoned here) has *u* in reduplication, and contracts to *hur*: thus, *juhūrthās*.

### III. Nasal Class (seventh, *rudh*-class).

683. The roots of this class all end in consonants. And their class-sign is a nasal preceding the final consonant: in the weak forms, a nasal simply, adapted in character to the consonant; but in the strong forms expanded to the syllable *ná*, which has the accent.

In a few of the verbs of the class, the nasal extends also into other tense-systems: they are *añj*, *bhañj*, *hñs*: see below, 694.

#### 1. Present Indicative.

684. Examples of inflection: a. the root  $\sqrt{\text{yuj}}$ , 'join': strong stem-form,  $\sqrt{\text{yuj}}$ ; weak,  $\sqrt{\text{yuj}}$ .

For the rules of combination of final *j*, see 219.

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1	युजमि <i>yujámi</i>	युज्वम् <i>yujvám</i>	युजमस् <i>yujmás</i>	युजे <i>yujé</i>	युज्वहे <i>yujváhe</i>	युजमहे <i>yujmáhe</i>
2	युजति <i>yujáti</i>	युज्यस् <i>yujyás</i>	युज्य <i>yujyá</i>	युजे <i>yujé</i>	युजाथे <i>yujáthe</i>	युग्धे <i>yugdhe</i>
3	युजति <i>yujáti</i>	युक्तम् <i>yuktmám</i>	युजति <i>yujáti</i>	युक्ते <i>yukté</i>	युजते <i>yujáte</i>	युजते <i>yujáte</i>

b. the root  $\sqrt{\text{rudh}}$ , 'obstruct'; bases  $\sqrt{\text{rudh}}$  and  $\sqrt{\text{rundh}}$ .

For rules of combination of final *dh*, see 153, 160.

1	रुधादिम् <i>rudhádimi</i>	रुध्वम् <i>rudhvám</i>	रुध्वमस् <i>rudhmás</i>	रुधे <i>rudhé</i>	रुध्वहे <i>rudhváhe</i>	रुध्वमहे <i>rudhmáhe</i>
---	------------------------------	---------------------------	----------------------------	----------------------	----------------------------	-----------------------------

2	रुणात्ति <i>runātsi</i>	रुन्द्धम् <i>runddhás</i>	रुन्द्ध <i>runddhá</i>	रुन्से <i>runtse</i>	रुन्धथि <i>rundháthe</i>	रुन्ध्वे <i>runddhvé</i>
3	रुणाद्धि <i>runāddhi</i>	रुन्द्धम् <i>runddhás</i>	रुन्धति <i>rundhánti</i>	रुन्धे <i>runddhé</i>	रुन्धति <i>rundháte</i>	रुन्धते <i>rundháte</i>

Instead of *yun̄kthas*, *yun̄gdhve*, and the like (here and in the impv. and impf.), it is allowed and more usual (231) to write *yun̄thas*, *yun̄dhve*, etc.; and, in like manner, *rundhas*, *rundhe*, for *runddhas*, *runddhe*; and so in other like cases.

685. Vedic irregularities of inflection are: a. the ordinary use of a 3d sing. mid. like the 1st sing., as *vr̄ñje*; b. the accent on *té* of 3d pl. mid. in *añjaté*, *indhaté*, *bhuñjaté*.

## 2. Present Subjunctive.

686. The stem is made, as usual, by adding *a* to the strong present-stem: thus, *yunāja*, *runādha*. Below are given as if made from  $\sqrt{yuj}$  all the forms for which examples have been noted as actually occurring in the older language.

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1	<i>yunājāni</i>	<i>yunājāva</i>	<i>yunājāma</i>	<i>yunājāi</i>		<i>yunājāmahūi</i>
2	<i>yunājās</i>					<i>yunajādhoūi</i>
3	<i>yunājat</i>	<i>yunājatas</i>	<i>yunājan</i>	<i>yunājate</i>		

687. The RV. has once *añjatas*, which is anomalous as being made from the weak tense-stem. Forms with double mode-sign are met with: thus, *tr̄ṇahūn* (AV.), *yunājān* (ÇB.); and the only quotable example of 3d du. act. (besides *añjatas*) is *hinasātas* (ÇB.). ÇB. has also *hinasāvas* as 1st du. act.: an elsewhere unexampled form.

## 3. Present Optative.

688. The optative is made, as elsewhere, by adding the compounded mode-endings to the weak form of present-stem. Thus:

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1	<i>युञ्ज्याम्</i> <i>yun̄jyām</i>	<i>युञ्ज्याव</i> <i>yun̄jyāva</i>	<i>युञ्ज्याम</i> <i>yun̄jyāma</i>	<i>युञ्जीय</i> <i>yun̄jīya</i>	<i>युञ्जीवद्भि</i> <i>yun̄jīvāhi</i>	<i>युञ्जीमद्भि</i> <i>yun̄jīmāhi</i>
	etc.	etc.	etc.	etc.	etc.	etc.

## 4. Present Imperative.

689. In this class (as the roots all end in consonants) the ending of the 2d sing. act. is always *धि dhi*.

active.			middle.		
s.	d.	p.	s.	d.	p.
1 युनञानि <i>yundjāni</i>	युनञाव <i>yundjāva</i>	युनञाम् <i>yundjāma</i>	युनञी <i>yundjāi</i>	युनञावहै <i>yundjāvahai</i>	युनञामहै <i>yundjāmahai</i>
2 युंघि <i>yuṅghī</i>	युंक्तम् <i>yuṅktaṁ</i>	युंक्त <i>yuṅkta</i>	युंक्त्व <i>yuṅktsva</i>	युञ्जायाम् <i>yuñjāthām</i>	युंघम् <i>yuṅghvam</i>
3 युनक्तु <i>yunaktu</i>	युंक्तम् <i>yuṅktaṁ</i>	युञ्जतु <i>yuñjantu</i>	युंक्तम् <i>yuṅktaṁ</i>	युञ्जाताम् <i>yuñjātām</i>	युञ्जताम् <i>yuñjātām</i>

690. There is no occurrence, so far as noted, of the ending *tāt* in verbs of this class. The Veda has, as usual, sometimes strong forms, and sometimes the ending *tana*, in the 2d pl. act.: thus, *unāta*, *yunākta*, *anaktana*, *pinastana*.

### 5. Present Participle.

691. The participles are made in this class as in the preceding ones: thus, act. युञ्जत् *yuñjant* (fem. युञ्जती *yunjatī*); mid. युञ्जान *yuñjāna* (but RV. has *indhāna*).

### 6. Imperfect.

692. The example of the regular inflection of this tense needs no introduction:

active.			middle.		
s.	d.	p.	s.	d.	p.
1 अयुनञम् <i>āyunaṁ</i>	अयुञ्च <i>āyujcha</i>	अयुञ्म <i>āyujma</i>	अयुञ्जि <i>āyujji</i>	अयुञ्चहि <i>āyujchahi</i>	अयुञ्महि <i>āyujmahi</i>
2 अयुनक् <i>āyunak</i>	अयुंक्तम् <i>āyunktaṁ</i>	अयुंक्त <i>āyunkta</i>	अयुंक्थाम् <i>āyunkthāṁ</i>	अयुञ्जायाम् <i>āyujjāthām</i>	अयुंघम् <i>āyungghvam</i>
3 अयुनक् <i>āyunak</i>	अयुंक्तम् <i>āyunktaṁ</i>	अयुञ्जन् <i>āyujjan</i>	अयुंक्त <i>āyunkta</i>	अयुञ्जाताम् <i>āyujjātām</i>	अयुञ्जत <i>āyujjata</i>

The endings *s* and *t* are necessarily lost in the nasal class throughout in 2d and 3d sing. act., unless saved (555) at the expense of the final radical consonant: which is a case of very rare occurrence: in the older language have been noted only *ahinat* (TB.), 3d sing., for *ahinas* ( $\sqrt{hins}$ ), and once in AV. *abhanas*, 2d sing., for *abhanak* ( $\sqrt{bhañj}$ ); this last is a case of the utmost rarity.

693. The Veda shows no irregularities in this tense. Occurrences of augmentless forms are found, especially in 2d and 3d sing. act., showing an accent like that of the present: for example, *bināt*, *prñāk*, *vṛñāk*, *piñāk*, *riñāk*.

### Irregularities of the Nasal Class.

694. The roots which thus expand a penultimate nasal in the strong forms of the present-system into a syllable *ná* are about twenty-five: namely, *tac*, *prc*, *ric*, *vic*, *añj*, *bhañj*, *vj*, *bhuj*, *yuj*, *kr̥t* 'spin', *chrd*, *tr̥d*, *chid*, *bhid*, *ud*, *rdh*, *idh*, *rudh*, *ubh*, *aç* (*anaçāmahāi*, once, RV.), *piç*, *çiç*, *hins*, *tr̥h*. Those here written with the nasal — namely *añj*, *bhañj*, *hins* — have that addition also in the other tense-systems. Two, *rdh* and *ubh*, make present-systems also of other classes with nasal class-signs: thus, *rdhnoti* (cl. IV.), *ubhnāti* (cl. V.). Several have *a*-stems with penultimate nasal: thus, *pr̥ncá*, *çiṅśá*, *tr̥nhá*, *umbhá*; and occasional *a*-forms, especially in the later language, are met with from others: thus, *bhuñjet*, *chindeta*, *apiṅsat*, *arundhat* (compare the nasalized roots of the *á*-class, below, 758).

695. The root *tr̥h* combines *tr̥nah* with *ti*, *tu*, etc. into *tr̥nedhi*, *tr̥nedhu*; and, according to the grammarians, has also such forms as *tr̥nehmi*: see above, 224 b.

696. The root *hins* (by origin apparently a desiderative from *ghan*) accents irregularly the root syllable in the weak forms: thus, *hínsanti*, *hínste* (but *hinásat* etc.).

### IV. *Nu* and *u*-classes (fifth and eighth, *su* and *tan*-classes).

697. A. The present-stem of the *nu*-class is made by adding to the root the syllable नु *nu*, which then in the strong forms receives the accent, and is strengthened to नो *nó*.

B. The few roots of the *u*-class (about half-a-dozen) end in न *n*, with the exception of the later irregular कृ *kr̥* (or *kar*) — for which, see below, 714. The two classes, then, are closely correspondent in form; and they are wholly accordant in inflection.

The *u* of either class-sign is allowed to be dropped before *v* and *m* of the 1st du. and 1st pl. endings, except when the root (*nu*-class) ends in a consonant; and the *u* before a vowel-ending becomes *v* or *uv*, according as it is preceded by one or by two consonants (129).

#### 1. Present Indicative.

698. Examples of inflection: A. *nu*-class; root सु *su*, 'press out': strong form of stem, सुनो *sunó*; weak form, सुनु *sunu*.

active.			middle.		
s.	d.	p.	s.	d.	p.
1 मुनोमि <i>sunómi</i>	मुनुवस् <i>sunuvás</i>	मुनुमस् <i>sunumás</i>	मुन्वे <i>sunvé</i>	मुनुवहे <i>sunuváhe</i>	मुनुमहे <i>sunumáhe</i>
2 मुनोषि <i>sunóṣi</i>	मुनुथस् <i>sunuthás</i>	मुनुथ <i>sunuthá</i>	मुनुषे <i>sunuṣé</i>	मुन्वाथे <i>sunvāthe</i>	मुनुधे <i>sunudhvé</i>
3 मुनोति <i>sunóti</i>	मुनुतस् <i>sunutás</i>	मुन्वति <i>sunvánti</i>	मुनुते <i>sunuté</i>	मुन्वाते <i>sunvāte</i>	मुन्वते <i>sunvāte</i>

The forms *sunvás*, *sumás*, *sunváhe*, *sunmáhe* are alternative with those given here for 1st du. and pl., and in practice are more common (no examples of the fuller forms have been noted from the older language). From  $\sqrt{\text{āp}}$ , however (for example), only the forms with *u* can occur: thus, *āpnuvás*, *āpnumáhe*; and also only *āpnuvánti*, *āpnuvé*, *āpnuvāte*.

B. *u*-class; root तन् *tan*, 'stretch': strong form of stem, तनो *tanó*; weak, तनु *tanu*.

1 तनोमि <i>tanómi</i>	तन्वस् <i>tanvás</i>	तन्मस् <i>tanmás</i>	तन्वे <i>tanvé</i>	तन्वहे <i>tanvāhe</i>	तन्महे <i>tanmáhe</i>
etc.	etc.	etc.	etc.	etc.	etc.

The inflection is so precisely like that given above that it is not worth writing out in full. The abbreviated forms in 1st du. and pl. are presented here, instead of the fuller, which rarely occur (as no double consonant ever precedes).

699. In the older language, no strong 2d perss. du. or pl., and no *thana*-endings, chance to occur (but they are numerous in the impv. and impf.: see below). The RV. has several cases of the irregular accent in 3d pl. mid.: thus, *tanvaté*, *manvaté*, *spr̥vaté*.

In RV. occur also several 3d pl. mid. in *ire* from present-stems of this class: thus, *invire*, *ṛṇvire*, *pinvire*, *ṣṇvire*, *sunvire*, *hinvire*. Of these, *pinvire* and *hinvire* might be perfects without reduplication from the secondary roots *pinv* and *hinv* (below, 716). The 2d sing. mid. (with passive value) *ṣṇviṣé* (RV.) is of anomalous and questionable character.

## 2. Present Subjunctive.

700. The subjunctive mode-stem is made in the usual manner, by adding *a* to the gunated and accented class-sign: thus, *sunáva*, *tanáva*. In the following scheme are given all the forms of which examples have been met with in actual use in the older language from either division of the class: some of them are quite numerous represented there.

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1	<i>sunāvāni</i>	<i>sunāvāva</i>	<i>sunāvāma</i>	<i>sunāvūi</i>	<i>sunāvāvahāi</i>	<i>sunāvāmahāi</i>
2	<i>sunāvas</i>		<i>sunāvatha</i>	<i>sunāvase</i>	<i>sunāvāithe</i>	
3	<i>sunāvāt</i>		<i>sunāvan</i>	{ <i>sunāvate</i> <i>sunāvātāi</i>		<i>sunāvanta</i>

701. Of the briefer 1st sing. act., RV. has *kṛṇavā* and *hinavā*. Forms with double mode-sign occur (not in RV.): thus, *kṛṇāvūt* and *karavūt* (AV.); *aṇavātha* (K.), *kṛṇavātha* (VS.; but *-vatha* in Kāṇva-text), *karavātha* (ÇB.). On the other hand, *aṇavatāi* is found once (in TS.). RV. has in a single passage *kṛṇvāite* (instead of *kṛṇāvāite*): the only form in *āithe* is *aṇāvāithe*.

### 3. Present Optative.

702. The combined endings (566) are added, as usual, to the weak tense-stem: thus,

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1	<i>मुनयाम्</i> <i>sunuyām</i> etc.	<i>मुनयाव</i> <i>sunuyāva</i> etc.	<i>मुनयाम</i> <i>sunuyāma</i> etc.	<i>मुन्वीय</i> <i>sunvīyā</i> etc.	<i>मुन्वीवहि</i> <i>sunvīvāhi</i> etc.	<i>मुन्वीमहि</i> <i>sunvīmāhi</i> etc.

From  $\sqrt{\text{āp}}$ , the middle optative would be *āpnvīyā* — and so in other like cases.

### 4. Present Imperative.

703. The inflection of the imperative is in general like that in the preceding classes. As regards the 2d sing. act., the rule of the later language is that the ending *हि hi* is taken whenever the root itself ends in a consonant; otherwise, the tense- (or mode-) stem stands by itself as 2d person (for the earlier usage, see below, 704). Example of inflection is:

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1	<i>मुनवानि</i> <i>sunāvāni</i>	<i>मुनवाव</i> <i>sunāvāva</i>	<i>मुनवाम</i> <i>sunāvāma</i>	<i>मुनवै</i> <i>sunāvāi</i>	<i>मुनवावहि</i> <i>sunāvāvahāi</i>	<i>मुनवामहै</i> <i>sunāvāmahāi</i>
2	<i>मुनु</i> <i>sunū</i>	<i>मुनुताम्</i> <i>sunutām</i>	<i>मुनुत</i> <i>sunutā</i>	<i>मुनुष्व</i> <i>sunuṣvā</i>	<i>मुन्वाथाम्</i> <i>sunvāthām</i>	<i>मुनुधम्</i> <i>sunudhvām</i>
3	<i>मुनोतु</i> <i>sunōtu</i>	<i>मुनुताम्</i> <i>sunutām</i>	<i>मुन्वतु</i> <i>sunvāntu</i>	<i>मुनुताम्</i> <i>sunutām</i>	<i>मुन्वाताम्</i> <i>sunvātām</i>	<i>मुन्वताम्</i> <i>sunvātām</i>

From  $\sqrt{ap}$ , the 2d sing. act. would be  $\bar{a}pnuhi$ ; from  $\sqrt{a\check{c}}$ ,  $a\check{c}nuhi$ ; from  $\sqrt{dhr\check{s}}$ ,  $dhr\check{s}nuhi$ ; and so on. From  $\sqrt{ap}$ , too, would be made  $\bar{a}pnuv\bar{a}ntu$ ,  $\bar{a}pnuv\bar{a}th\bar{a}m$ ,  $\bar{a}pnuv\bar{a}t\bar{a}m$ ,  $\bar{a}pnuv\bar{a}t\bar{a}m$ .

704. In the earliest language, the rule as to the omission of *hi* after a root with final vowel does not hold good: in RV., such forms as *inuhi*, *kṛṇuhi*, *cinuhi*, *dhūnuhi*, *çṛṇuhi*, *spṛṇuhi*, *hinuhi*, and *tanuhi*, *sanuhi*, are thrice as frequent in use as *inú*, *çṛṇu*, *sunú*, *tanu*, and their like; in AV., however, they are not more than one third as frequent; and in the Brāhmaṇas they appear only sporadically; even *çṛṇudhí* (with *dhi*) occurs several times in RV. The ending *tāt* is found in *kṛṇutāt* and *hinutāt*, and *kurutāt*. The strong stem-form is found in 2d du. act. in *hinotam*; and in 2d pl. act. in *kṛṇóta* and *kṛṇótana*, *çṛṇota* and *çṛṇotana*, *sunóta* and *sunótana*, *hinóta* and *hinotana*, and *tanota*, *karóta*. The ending *tana* occurs only in the forms just quoted.

#### 5. Present Participle.

705. The endings  $\text{अन्तं } \bar{a}nt$  and  $\text{आनं } \bar{a}n\bar{a}$  are added to the weak form of tense stem: thus, from  $\sqrt{su}$  come act.  $\text{सुन्वन्तं } sunv\bar{a}nt$  (fem.  $\text{सुन्वती } sunvat\bar{i}$ ), mid.  $\text{सुन्वानं } sunv\bar{a}n\bar{a}$ ; from  $\sqrt{tan}$ ,  $\text{तन्वन्तं } tanv\bar{a}nt$  (fem.  $\text{तन्वती } tanvat\bar{i}$ ),  $\text{तन्वानं } tanv\bar{a}n\bar{a}$ . From  $\sqrt{ap}$ , they are  $\text{आप्नुवन्तं } \bar{a}pnuv\bar{a}nt$  and  $\text{आप्नुवानं } \bar{a}pnuv\bar{a}n\bar{a}$ .

#### 6. Imperfect.

706. The combination of augmented stem and endings is according to the rules already stated: thus,

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1	$\text{असुनावम् } \bar{a}sunavam$	$\text{असुनुव } \bar{a}sunuva$	$\text{असुनुम } \bar{a}sunuma$	$\text{असुन्वि } \bar{a}sunvi$	$\text{असुनुवाहि } \bar{a}sunuvahi$	$\text{असुनुमाहि } \bar{a}sunumahi$
2	$\text{असुनोम् } \bar{a}sunos$	$\text{असुनुतम् } \bar{a}sunutam$	$\text{असुनुत } \bar{a}sunuta$	$\text{असुनुश्राम् } \bar{a}sunuth\bar{a}m$	$\text{असुन्वाथाम् } \bar{a}sunv\bar{a}th\bar{a}m$	$\text{असुनुधम् } \bar{a}sunudhvam$
3	$\text{असुनोत् } \bar{a}sunot$	$\text{असुनुताम् } \bar{a}sunut\bar{a}m$	$\text{असुन्वन् } \bar{a}sunvan$	$\text{असुनुत } \bar{a}sunuta$	$\text{असुन्वाताम् } \bar{a}sunv\bar{a}t\bar{a}m$	$\text{असुन्वत } \bar{a}sunvata$

Here, as elsewhere, the briefer forms  $\bar{a}sunva$ ,  $\bar{a}sunma$ ,  $\bar{a}sunvahi$ ,  $\bar{a}sunmahi$  are allowed, and more usual, except from roots with final consonant, as  $dhr\check{s}$ ; which makes, for example, always  $\bar{a}dhr\check{s}numa$  etc., and also  $\bar{a}dhr\check{s}nuvan$ ,  $\bar{a}dhr\check{s}nuvi$ ,  $\bar{a}dhr\check{s}nuv\bar{a}th\bar{a}m$ ,  $\bar{a}dhr\check{s}nuv\bar{a}t\bar{a}m$ ,  $\bar{a}dhr\check{s}nuvata$ .

707. Strong stem-forms and *tana*-ending are found only in RV., in  $\bar{a}kṛṇota$ ,  $\bar{a}kṛṇotana$ . Augmentless forms with accent are  $\bar{m}inv\bar{a}n$ ,  $\bar{h}inv\bar{a}n$ ,  $\bar{r}ṇut\bar{a}$ .

**Irregularities of the *nu* and *u*-classes.**

708. Less than thirty roots form their present-system in the manner set forth above, by the addition of the class-sign *nu* to the root: they are *akṣ*, *aç* 'attain', *takṣ*, *dabh*, *çak*, *sagh*, *āp*, *dāç*, *ṛ*, *kr* 'make', *vṛ* (*ūr*), *str*, *spr*, *ṛdh*, *trp*, *dhr̥ṣ*, *i* 'send' (or *in*: see below, 716), *kṣi* 'destroy', *ci*, *dhi*, *mi* 'prop', *hi*, *u*, *du*, *çru*, *su*, *sku*, *pruṣ*, *dhū*: and of these, several (as *takṣ*, *sagh*, *dāç*, *u*, *sku*) have only isolated forms of this class.

709. The root *trp*, 'enjoy', is said by the grammarians to retain the *n* of its class-sign unlingualized in the later language — where, however, forms of conjugation of this class hardly occur; while in the Veda the regular change is made: thus, *trpnu*.

710. The root *çru*, 'hear', is contracted to *çṛ* before the class-sign, forming *çṛnó* and *çṛnu* as stem. Its forms *çṛṇviṣé* and *çṛṇviré* have been noted above (699).

711. The root *dhū* in the later language shortens its vowel, making the stem-forms *dhunó* and *dhunu* (earlier *dhūnó*, *dhūnu*).

712. The so-called root *ūrnu*, treated by the native grammarians as dissyllabic and belonging to the root-class (I.), is properly a present-stem of this class, with anomalous contraction, from the root *vṛ* (or *var*). In the Veda, it has no forms which are not regularly made according to the *nu*-class; but in the Brāhmaṇa language are found sometimes such forms as *ūrṇāuti*, as if from an *u*-root of cl. I. (626); and the grammarians make for it a perfect, aorist, future, etc. Its 2d sing. impv. act. is *ūrṇu* or *ūrṇuhi*; its impf., *ūrṇos*, *ūrṇot*; its opt. mid., *ūrṇvīta* (K.) or *ūrṇvītā* (TS.).

713. The roots of the other division, or of the *u*-class, are extremely few: they are *tan*, *man*, *van*, *san*; also *kṣan* (not in V.: in ÇB., and very rarely later), and *kr* 'make' (in late Vedic and later); and BR. assume *in* of the *u*-class instead of *i* of the *nu*-class.

714. The extremely common root कृ *kr* (or *kar*), 'make', is in the later language inflected in the present-system exclusively according to the *u*-class (being the only root of that class not ending in *ṛn*). It has the irregularity that in the strong form of stem it (as well as the class-sign) has the *guṇa*-strengthening, and that in the weak form it is changed to *kur*, so that the two forms of stem are कर्ते *karó* and कुरु *kuru*. The class-sign उ *u* is always dropped before क्व *v* and क्म *m* of the 1st du. and pl., and also before क्य *y* of the opt. act. Thus:

22

1

2

1

2

.00

a  
é

such as *bhāvanta* (which are very common) are, of course, properly augmentless imperfects. The Brāhmaṇas (especially ÇB.) prefer the 2d sing. act. in *ūsi* and the 3d in *āt*. A 3d pl. in *antāi* (*variantāi*, KB.) has been noted once. RV. has an example, *arcā*, of the briefer 1st sing. act.

### 3. Present Optative.

738. The scheme of optative endings as combined with the final of an *a*-stem was given in full above (566).

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1	भवेयम् <i>bhāveyam</i>	भवेव <i>bhāveva</i>	भवेम <i>bhāvena</i>	भवेय <i>bhāveya</i>	भवेवहि <i>bhāvevahi</i>	भवेमहि <i>bhāvemahi</i>
2	भवेत् <i>bhāvet</i>	भवेतम् <i>bhāvetam</i>	भवेत <i>bhāveta</i>	भवेथाम् <i>bhāvethās</i>	भवेयाथाम् <i>bhāveyāthām</i>	भवेधम् <i>bhāvedhvam</i>
3	भवेत् <i>bhāvet</i>	भवेताम् <i>bhāvetām</i>	भवेयुम् <i>bhāveyus</i>	भवेत <i>bhāveta</i>	भवेयाताम् <i>bhāveyātām</i>	भवेरन् <i>bhāveran</i>

The RV. has once the 3d pl. mid. *bharerata* (for one other example, see 752).

### 4. Present Imperative.

739. An example of the imperative inflection is:

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1	भवानि <i>bhāvāni</i>	भावाव <i>bhāvāva</i>	भवाम <i>bhāvāma</i>	भवे <i>bhāvāi</i>	भाववैहि <i>bhāvāvahāi</i>	भवामहि <i>bhāvāmahāi</i>
2	भव <i>bhāva</i>	भवतम् <i>bhāvatam</i>	भवत <i>bhāvata</i>	भवस्व <i>bhāvasva</i>	भवेथाम् <i>bhāvethām</i>	भवधम् <i>bhāvadhvam</i>
3	भवतु <i>bhāvatu</i>	भवताम् <i>bhāvatām</i>	भवतु <i>bhāvantu</i>	भवताम् <i>bhāvatām</i>	भवेताम् <i>bhāvetām</i>	भवताम् <i>bhāvantām</i>

740. The ending *tana* in 2d pl. act. is as rare in this whole conjugation as is *thana* in the present: the V. affords only *bhajatana* in the *a*-class (and *nahyatana* in the *ya*-class: 760). The ending *tāt* of 2d sing. act., on the other hand, is not rare; the RV. has *avatāt*, *oṣatāt*, *dahatāt*, *bhavatāt*, *yachatāt*, *yācatāt*, *rāksatāt*, *vahatāt*; to which AV. adds *jinvatāt*, *dhāvatāt*; and the Brāhmaṇas bring other examples.

### 5. Present Participle.

741. The endings *अन्त* *ant* and *मान* *māna* are added to the present-stem, with loss, before the former, of the final stem-vowel: thus, act. भवन्तु *bhāvant* (fem. भवन्ती *bhāvantī*); mid. भवमान *bhāvamāna*.

## 6. Imperfect.

742. An example of the imperfect inflection is:

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1	अभवम्	अभाव	अवाम्	अभवे	अभाववहि	अवामहि
	<i>ābhavam</i>	<i>ābhavāva</i>	<i>ābhavāma</i>	<i>ābhave</i>	<i>ābhavāvahi</i>	<i>ābhavāmahī</i>
2	अभवस्	अभवतम्	अभवत	अभवथास्	अभवथाम्	अभवधम्
	<i>ābhavas</i>	<i>ābhavatam</i>	<i>ābhavata</i>	<i>ābhavathās</i>	<i>ābhavethām</i>	<i>ābhavadhvam</i>
3	अभवत्	अभवताम्	अभवन्	अभवत	अभवेताम्	अभवत्
	<i>ābhavat</i>	<i>ābhavatām</i>	<i>ābhavan</i>	<i>ābhavata</i>	<i>ābhavetām</i>	<i>ābhavanta</i>

743. No forms in *tana* are made in this tense from any *a*-class. Examples of augmentless forms (which are not uncommon) are: *cyāvam*, *āvas*, *dāhas*, *bōdhat*, *bhārat*, *cāran*, *nāṣan*; *bādhatās*, *vārdhata*, *śōcanta*. The subjunctively used forms of 2d and 3d sing. act. are more frequent than those of either of the more proper subjunctive persons.

Irregularities of the *a*-class.

744. A far larger number of roots form their present-system according to the *a*-class than according to any of the other classes: in the RV., they are about two hundred and forty (nearly two fifths of the whole body of roots); in the AV., about two hundred (nearly the same proportion); to tell precisely, or very nearly, how many they are in the later language is not possible (of the number "about a thousand", as usually stated, the greater part are fictitious: see 108a). Among them are no roots ending in long *ā* — except a few which make an *a*-stem in some anomalous way: below, 749a.

745. A few verbs have irregular vowel-changes in forming the present-stem: thus,

a. *ūh* 'notice' has *guṇa*-strengthening (against 240): thus, *śhate*.

b. *kṛp* (or *krap*), 'lament', on the contrary, remains unchanged: thus, *kṛpate*.

c. *guh*, 'hide', has prolongation instead of *guṇa*: thus, *gūhati*.

d. *kram*, 'stride', lengthens its vowel in the active, but not in the middle: thus, *krāmati*, *krāmate*; *klam*, 'tire', is said to form *klāmati* etc., but hardly occurs; *cam* with the preposition *ā*, 'rinse the mouth', forms *ācāmati*.

e. In the later language are found occasional forms of this class from *mṛj*, 'wipe'; and they show the same *vṛddhi* (instead of *guṇa*) which belongs to the root in its more proper inflection (627): thus, *mūrjasva*.

f. The grammarians give a number of roots in *urv*, which they declare to lengthen the *u* in the present-stem. Only three are found in (quite

limited) use, and they show no forms anywhere with short *u*. All appear to be of secondary formation from roots in *r* or *ar*. The root *murch* or *mūrch*, 'coagulate', has likewise only *ū* in quotable forms.

**g.** The onomatopoeitic root *ṣṭhiv*, 'spew', is written by the grammarians as *ṣṭhiv*, and declared to lengthen its vowel in the present-system.

**746.** The roots *dañç*, 'bite', *rañj*, 'color', *sañj*, 'hang', *svañj*, 'embrace', of which the nasal is in other parts of the conjugation not constant, lose it in the present-system: thus, *dāçati* etc.; *sañj* forms both *sajati* and *sajjati* (probably for *sajyati*, or for *sasjati* from *sasajati*); *math* or *manth* has *mathati* later. In general, as the present of this class is a strengthening formation, a root that has such a nasal anywhere has it here also.

**747.** The roots *gam*, 'go', and *yam*, 'furnish', make the present-stems *gácha* and *yácha*: thus, *gáchāmi* etc.: see 608.

**748.** The root *sad*, 'sit', forms *sída* (conjectured to be contracted from *sisd* for *sisad*): thus, *sídāmi* etc.

**749.** Transfers to this class from other classes are not rare, as has been already pointed out above, both throughout the present-system and in occasional forms. The most noticeable cases are the following:

**a.** The roots in *ā*, *sthā*, 'stand', *pā*, 'drink', and *ghrā*, 'smell', form the present-stems *tisṭha* (*tisṭhāmi* etc.), *pīva* or (later) *pīva* (*pīvāmi* etc.), and *jighra* (*jighrāmi* etc.); and, in the Veda, *dā*, 'give', and *dhā*, 'place', form sometimes *dāda* and *dādha*, *han*, 'slay', forms sometimes *jighna*, and *hi*, 'impel', forms *jighya* — all these by transfer from the reduplicating class: see 671—4.

**b.** Secondary root-forms like *inv*, *jinv*, *pinv*, from simpler roots of the *nu*-class, are either found alongside their originals, or have crowded these out of use: see 716.

**750.** On the other hand, the root *dham* or *dhmā*, 'blow', forms its present-stem from the more original form of the root: thus, *dhāmati* etc.

## VII. Accented *á*-class (sixth, *tud*-class).

**751.** The present-stem of this class has the accent on the class-sign ऋ *á*, and the root remains unstrengthened. In its whole inflection, it follows so closely the model of the preceding class, that to give the paradigm in full will be unnecessary (only for the subjunctive, all the forms found to occur will be instanced).

752. Example of inflection: root *विष्* *viç*, 'enter'; stem, *विश* *viçá*:

### 1. Present Indicative.

active.			middle.		
s.	d.	p.	s.	d.	p.
1 विशामि	विशावस्	विशामस्	विशे	विशावहे	विशामहे
<i>viçámi</i>	<i>viçávas</i>	<i>viçámas</i>	<i>viçé</i>	<i>viçávae</i>	<i>viçámahe</i>
etc.	etc.	etc.	etc.	etc.	etc.

### 2. Present Subjunctive.

1	<i>viçáni</i>	<i>viçáva</i>	<i>viçáma</i>	<i>viçánti</i>	<i>viçávahāi</i>	<i>viçámahāi</i>
2	{ <i>viçási</i>		<i>viçátha</i>	{ <i>viçáse</i>	<i>viçáthe</i>	
	{ <i>viçás</i>			{ <i>viçásūi</i>		
3	{ <i>viçáti</i>	<i>viçátas</i>	<i>viçánt</i>	{ <i>viçánte</i>	<i>viçánte</i>	<i>viçántāi</i>
	{ <i>viçát</i>			{ <i>viçántāi</i>		

A single example of the briefer 1st sing. act. is *mṛkṣá*. The only forms in *āithe* and *āite* are *prṇāithe* and *yuvāite*.

### 3. Present Optative.

1	विशेयम्	विशेव	विशेम	विशेय	विशेवहि	विशेमहि
	<i>viçéyam</i>	<i>viçéva</i>	<i>viçéma</i>	<i>viçéya</i>	<i>viçévahi</i>	<i>viçémahi</i>
	etc.	etc.	etc.	etc.	etc.	etc.

The RV. has the ending *tana* once in *tiretana* 2d pl. act., and *rata* in *juçerata* 3d pl. mid.

### 4. Present Imperative.

The first persons having been given above as subjunctives, the second are added here:

2	विश	विशतम्	विशत	विशस्व	विशेयाम्	विशधम्
	<i>viçá</i>	<i>viçátam</i>	<i>viçáta</i>	<i>viçásva</i>	<i>viçéthām</i>	<i>viçádhvam</i>
	etc.	etc.	etc.	etc.	etc.	etc.

The ending *tāt* is found in RV. and AV. in *mṛdatāt*, *vṛhatāt*, *suwatāt*; other examples are not infrequent in the Brāhmaṇa language: thus, *khidatāt*, *srjatāt*.

### 5. Present Participle.

The active participle is *विशन्* *viçánt*; the middle is *विशमान* *viçámāna*.

The feminine of the active participle is usually made from the strong stem-form: thus, *viçántī*; but sometimes from the weak: thus, *siñcántī* and *siñcatī* (RV. and AV.), *tudántī* and *tudatī* (AV.): see above, 449 b.

## 6. Imperfect.

1 अविशम्	अविशाव	अविशाम	अविशे	अविशावद्दि	अविशामद्दि
<i>áviṣam</i>	<i>áviṣāva</i>	<i>áviṣāma</i>	<i>áviṣe</i>	<i>áviṣāvahi</i>	<i>áviṣāmahi</i>
etc.	etc.	etc.	etc.	etc.	etc.

Examples of augmentless forms accented are *srjás*, *srját*, *tiránta*.

The *a*-aorist (846 ff.) is in general the equivalent, as regards its form, of an imperfect of this class.

Irregularities of the *á*-class.

753. It is impossible to determine closely the limits of this class, partly because of the occurrence of forms unaccented, or in unaccentuated texts, which might belong either to it or to the preceding class, partly because its modes and imperfect are accordant in form with those of the *a*-aorist (below, chap. XI.), and their separation is not always practicable, and partly for other reasons. With considerable confidence may be reckoned as belonging to it about seventy roots: namely, *kṣi*, *yu* 'join', *ru* 'roar', *su* (or *sū*) 'stir up', *dhū*, *hū*, *kr* 'strew', *gr* 'swallow', *tr*, *rikk* or *likh*, *sic*, *ich*, *vij*, *khid*, *vid* 'find', *vidh*, *kṣip*, *lip*, *riph*, *diç*, *piç*, *riç*, *viç*, *iṣ*, *tviṣ*, *miṣ*, *muc*, *uch*, *ubj*, *tuj*, *ruj*, *khud*, *tud*, *nud*, *rud*, *lup*, *ubh*, *çubh*, *gur*, *jur*, *tur*, *bhur*, *sphur*, *juṣ*, *pruṣ*, *ruṣ*, *çuṣ*, *uks*, *vṛçc* (or *vraçc*), *ṛch*, *prçh* (or *prach*), *rñj*, *srj*, *bhrj* (or *bhrāj*), *mṛd*, *prṇ*, *mṛṇ*, *krt* 'cut', *crt*, *rd*, *trp*, *mṛç*, *sprç*, *rṣ* 'push', *krṣ* 'plough', *mṛkṣ*, *vṛṣ*, *dṛh*, *vṛh* or *bṛh*. Some even of these have either only isolated or very rare occurrences of *á*-forms. The roots *ich*, *uch*, and *ṛch* are reckoned as substitutes in the present-system for *iṣ* 'wish', *vas* 'shine', and *r* 'go to' (608). *Prṇ* and *mṛṇ* have been noticed above (731) as secondary roots from present-stems of the *nā*-class (V.).

754. Certain peculiarities of this body of roots are very noticeable: it contains only one or two roots with long vowels, and none with long interior vowels; very few with final vowels; and none with *a* as radical vowel, except as this forms a combination with *r*, which is then reduced in the present-system, as in the weak forms generally, to *ṛ* or some of the usual substitutes of *r*.

755. The roots in *i* and *u* and *ū* change those vowels into *iy* and *uw* before the class-sign: thus, *kṣiyāti*, *suwāti* (*sva* instead of *swa* occurs in AV.; and the Brāhmanas have forms in *kṣya* from *kṣi*).

756. The three roots in *r* form the present-stems *kirá*, *girá*, *tirá*, and they are sometimes written as *kir* etc.; and *gur*, *jur*, *tur* are really only varieties of *gr*, *jr*, *tr*; and *bhur* and *sphur* are evidently related with other *ar* or *r* root-forms.

757. Two other roots which are used only in middle forms, and in combination with the preposition *ā* (sometimes further combined), make the present-stems *ā-driyā* and *ā-priyā*, and are reckoned as *r* or *ar* roots: *dr*, 'regard', and *pr*, 'be busy' (neither is found in V.). It is a question whether they are more properly reckoned to this class or as passives; and the same question arises as to the stems *mriyā* and *dhriyā*, from the roots *mr*, 'die', and *dhṛ*, 'hold': see below, 773.

758. Although the present-stem of this class shows in general a weak form of the root, there are nevertheless a number of roots belonging to it which are strengthened by a penultimate nasal. Thus, the stem *muñcā* is made from  $\sqrt{muc}$ , 'release'; *siñcā* from  $\sqrt{sic}$ , 'sprinkle'; *vindā* from  $\sqrt{vid}$  'find'; *kṛntā* from  $\sqrt{kṛt}$  'cut'; *piñcā* from  $\sqrt{piç}$ , 'adorn'; *tṛmpā* from  $\sqrt{tṛp}$ , 'enjoy'; *luṃpā* from  $\sqrt{luṃp}$ , 'break'; *liṃpā* from  $\sqrt{liṃp}$ , 'smear'; and occasional forms of the same character are met with from a few others, as *tundā* from  $\sqrt{tud}$ , 'thrust'; *umbhā* from  $\sqrt{ubh}$ , 'hold'; *bṛñhā* from  $\sqrt{bṛh}$  'strengthen'; *dṛñhā* (beside *dṛñha*) from  $\sqrt{dṛh}$ , 'make firm'; *çumbhā* (beside *çumbha*) from  $\sqrt{çubh}$ , 'shine'. TS. has *çṛnthati* from  $\sqrt{çrath}$  (instead of *çrathnāti*).

### VIII. Ya-class (fourth, *div*-class).

759. The present stem of this class adds *yā* to the accented but unstrengthened root. Its inflection is also precisely like that of the *a*-class, and may be presented in the same abbreviated form as that of the *a*-class.

760. Example of inflection: root नह् *nah*, 'bind'; stem नह्य *nāhya*.

#### 1. Present Indicative.

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1	नह्यामि <i>nāhyāmi</i> etc.	नह्यावस् <i>nāhyāvas</i> etc.	नह्यामस् <i>nāhyāmas</i> etc.	नह्ये <i>nāhye</i> etc.	नह्यावहे <i>nāhyāvahahe</i> etc.	नह्यामहे <i>nāhyāmahe</i> etc.

#### 2. Present Subjunctive.

1	<i>nāhyāni</i>	<i>nāhyāma</i>	<i>nāhyāi</i>	<i>nāhyāvahāi</i>	<i>nāhyāmahāi</i>
2	{ <i>nāhyāsi</i> <i>nāhyās</i>		<i>nāhyāsāi</i>		<i>nāhyādhvāi</i>
3	{ <i>nāhyāti</i> <i>nāhyāt</i>	<i>nāhyātas</i>	<i>nāhyān</i>	<i>nāhyātāi</i>	<i>nāhyāntāi</i>

A 3d pl. mid. in *antāi* (*jāyantāi*) occurs once in TS.

## 3. Present Optative.

1	नक्षेयम्	नक्षेव	नक्षेम	नक्षेय	नक्षेवहि	नक्षेमहि
	<i>nāhyeyam</i>	<i>nāhyeva</i>	<i>nāhyema</i>	<i>nāhyeya</i>	<i>nāhyevahi</i>	<i>nāhyemahi</i>
	etc.	etc.	etc.	etc.	etc.	etc.

## 4. Present Imperative.

2	नक्ष	नक्षतम्	नक्षत	नक्षस्व	नक्षेयाम्	नक्षधम्
	<i>nāhya</i>	<i>nāhyatam</i>	<i>nāhyata</i>	<i>nāhyasva</i>	<i>nāhyethām</i>	<i>nāhyadhvam</i>
	etc.	etc.	etc.	etc.	etc.	etc.

Of the ending *tana*, RV. has one example, *nahyatana*; the ending *tāt* is found in *asyatāt*, *chayatāt*.

## 5. Present Participle.

The active participle is नक्षन्त *nāhyant* (fem. नक्षन्ती *nāhyantī*); the middle is नक्षमान *nāhyamāna*.

## 6. Imperfect.

1	अनक्षम्	अनक्षाव	अनक्षाम	अनक्षे	अनक्षावहि	अनक्षामहि
	<i>ānahyam</i>	<i>ānahyāva</i>	<i>ānahyāma</i>	<i>ānahye</i>	<i>ānahyāvahi</i>	<i>ānahyāmahi</i>
	etc.	etc.	etc.	etc.	etc.	etc.

Examples of augmentless forms showing the accent belonging to the present-system are *gāyat*, *pācyat*, *pācyan*, *jāyathās*.

Irregularities of the *ya*-class.

761. The roots of the *ya*-class are more than a hundred in number. They may be grouped as follows :

a. Roots signifying a state of feeling, or a condition of mind or body. These are nearly half the whole class. They are (alphabetically) as follows : *uc*, 'be pleased'; *kup*, 'be angry'; *kṛṣ*, 'be lean'; *klam*, 'be weary'; *krudh*, 'be angry'; *kṣam*, 'be patient'; *kṣudh*, 'be hungry'; *kṣubh*, 'be agitated'; *gṛdh*, 'be greedy'; *jas*, 'be worn out'; *tam*, 'be exhausted'; *tuṣ*, 'be satisfied'; *tṛp*, 'be pleased'; *tṛṣ*, 'be thirsty'; *tras*, 'be alarmed'; *dam*, 'be submissive'; *duṣ*, 'be spoiled'; *dṛp*, 'be crazed'; *druh*, 'be hostile'; *puṣ*, 'be in good condition'; *budh*, 'be awake'; *bhram*, 'be unsteady'; *mad*, 'be excited'; *man*, 'be minded'; *muh*, 'be confused'; *mṛṣ*, 'be forgetful'; *mrit*, 'be in ill condition'; *med*, 'be fat'; *yas*, 'be ardent'; *yudh*, 'be hostile'; *raj*, 'be colored'; *radh*, 'be subject'; *ran*, 'be happy'; *rūdh*, 'be successful'; *riṣ*, 'be hurt'; *rup*, 'be in pain'; *lubh*, 'be lustful'; *ṣam*, 'be quiet'; *ṣuc*, 'be in pain'; *ṣuṣ*, 'be dry'; *ṣram*, 'be weary'; *har*, 'be gratified'; *hṛṣ*, 'be excited'; and we may perhaps add *das*, 'be deficient', and *naṣ*, 'be missing'. Some of these are of only early use, some only of later; and some have only sporadic forms of this class, made perhaps under the influence of the analogy of the others.

b. Roots which have a more or less distinctly passive sense, and which are in part evident and in part presumable transfers from the passive or *yā*-class, with change of accent, and sometimes also with assumption of active endings. It is not possible to draw precisely the limits of the division, or determine in all cases where passive form and meaning pass into intransitive; but there are a number of clear cases, where in the older language the accent wavers and changes, and the others are to be judged by their analogy. Thus, *muc* forms *mācyate* once or twice, beside usual *mucyāte*, in RV. and AV.; and in the Brāhmaṇas the former is the regular accent: and similar changes are found in other verbs: thus, *ji* or *jyā*, *kṣi* 'destroy', *hā* 'leave', *pac*, *ḍṛ* 'burst', *chid*, *bhid*. Cases closely analogous with these are *mīyate* etc. from *√mi* or *mī*, 'lessen'; *rīcyate* etc. from *√ric*, 'leave'; *vīyate* etc. from *√vī*, 'impregnate'; *śīyante* from *√śyā*, 'coagulate'; *śīsyate* etc. from *√śiṣ*, 'leave'; *dṛḥyasva* from *√dṛṣh*, 'make firm'; *pūryate* etc. from *√pṛ*, 'fill'; and *lūpyate*, *tāpyate*, *tīryate*, *klīcyate*, *śdhyate*, may be ranked along with them. Active forms are early made sporadically from some of these — thus, *dṛḥya* (RV.), *kṣiyati* and *pūryati* (TA.); and *dīryati*, *klīcyati*, and other like cases, are found later. The AV. has *jīryati*, 'grows old' (later also *jīryate*); and ÇB. has *aprusyat*, 'was sprinkled'. And from the earliest period *jāyate* etc., 'is born', is either altered passive or original *ya*-formation from *√jā*, serving as complement to *√jan*, 'give birth'.

c. A small body of roots are either transitive, or not intransitive in a way that clearly connects them with either of the above classes: thus, *as* 'throw'; *iṣ* 'send'; *trā*, 'save'; *nah*, 'bind'; *paç*, 'see'; *vyadh*, 'split'; *siv*, 'sew'; *dīv*, 'play'; *tur*, 'overcome' (RV., once); *tan*, 'thunder' (RV., once), *ṛj*, 'press on'; *nṛt*, 'dance'; *pad*, 'go'; *vāç*, 'bleat'; *dī*, 'hover'; *ṛi*, 'flow'; *sriv*, 'fail'; *çliṣ*, 'hang on'; *bhraç*, 'fall'; *sidh*, 'succeed'; *dīp*, 'shine' (and perhaps *das* and *naç* are better classed here than under a).

d. A body of roots, of various meaning, and of somewhat questionable character and relations, which are by the native grammarians reckoned as ending with diphthongs: thus,

1. Roots reckoned as ending in *āi* and belonging to the *a*-class: thus, *gāyati* from *√gāi*. As these show abundantly (and in most cases exclusively) *ā*-forms outside the present-system, there seems no reason why they should not be regarded as *ā*-roots of the *ya*-class. They are: *gā* 'sing'; *glā*, 'be wearied or disgusted'; *dhyā*, 'think'; *pyā*, 'swell'; *mā*, 'wither'; *rā*, 'bark'; *vā*, 'droop'; *çyā*, 'coagulate'; *çrā*, 'cook'; *styā*, 'be coagulated'; and, in one or two sporadic forms, *kṣā*, 'burn'; *dā* 'cleanse'; *stā*, 'be hidden'; *sphā*, 'be fat'. *Trā*, 'save', was given in the preceding division. Many of these are evident extensions of simpler roots with added *ā*. With them may be mentioned *tāy*, 'extend' (compare pass. *tāyate* from *√tan*: 772), and *cāy*, 'be shy or anxious' (which connects itself with uses of *√ci*).

2. Roots reckoned as ending in *e* and belonging to the *a*-class: thus, *dhāyati* from *√dhe*. These, too, have *ā*-forms, and sometimes *ī*-forms, outside the present-system, and must be regarded as *ā*-roots, either with *ā* weakened to *a* before the class-sign of this class, or with *ā* weakened to *ī* or *i* and

inflected according to the *a*-class. They are: *dhā*, 'suck'; *vā*, 'weave'; *vyā*, 'hide'; *hṛvā*, 'call' (one of the forms of  $\sqrt{hū}$ ); and a late example or two are found from *mā*, 'exchange'. With them may be mentioned *day*, 'share, sympathize, pity'; *vyay*, 'be wasted' (denom. of *vyaya*?); *cay*, 'visit with retribution' (probably a form of *ci*).

3. Roots artificially marked with a final *o* (108 c) and reckoned to this class, the radical vowel being declared dropped before the class-sign: thus, *dyāti* from *do*. They have, as showing an accented *yā*, no real right to be classed here at all, but seem more accordant in formation with the present-systems *sva* and *kṣya*, noticed under the preceding class (755). Outside these present-systems, they show *ā* and *i*-forms; and the *ya* in the only RV. occurrence, and in most of the AV. occurrences, is resolved into *ia* — which in the true class-sign *ya* is the case only in very rare and purely sporadic instances. They might, then, perhaps be best viewed as *ā*-roots with *ā* weakened to *i*, and inflected by the *ā*-class, but without the usual conversion of *i* to *iy* (755). They are: *dā* 'cut', *dā* 'bind'; *ṣā*, 'sharpen'; *sā*, 'bind'; *chā*, 'cut off'.

762. The *ya*-class is the only one thus far described which shows any tendency toward a restriction to a certain variety of meaning. In this tendency, as well as in the form of its sign, it appears related with the class of distinctly defined meaning which is next to be taken up — the passive, with *yā*-sign. Though very far from being as widely used as the latter beside other present-systems, it is in no very small number of cases an intransitive conjugation by the side of a transitive of some other class.

763. The roots of this class ending in *am* lengthen their vowel in forming the present-stem: they are *tam*, *dam*, *bhram* (but *bhramyāt* also occurs), *ṣam*, *ṣram*, *klam* (hardly found in use), and *kṣam* (but *kṣamyate* also): for example, *ṣāmyati*, *ṣrāmyati*.

764. The root *mad* has the same lengthening: thus, *mādyati*.

765. The roots in *iv* — namely, *div*, *siv*, *sriv* (or *ṣriv*) — are written by the grammarians with *iv*, and a similar lengthening in the present-system is prescribed for them.

They appear to be properly *dīū* etc., since their vocalized final in other forms is always *ū*: *dīv* is by this proved to have nothing to do with the assumed root *div*, 'shine', which changes to *dyu* (361 d): compare also the desiderative stem *jujyūṣa* from  $\sqrt{jiv}$  (1028 h).

766. From the roots *jr* and *tr* (also written as *jur* and *tir* or *tur*) come the stems *jīrya* and *tīrya*, and *jūrya* and *tūrya* (the last two only in RV.); from *pr* comes *pūrya*.

767. The root *vyadh* is abbreviated to *vidh*: thus, *vīdhyati*. And any root which in other forms has a penultimate nasal loses it here: thus, *dīhya* from *dīñh* or *dīh*; *bhrāçya* (also *bhṛçya*) from *bhrañç* or *bhraç*; *rajya* from *rañj* or *raj*.

### IX. Accented *yá*-class: Passive conjugation.

768. A certain form of present-stem, inflected with middle endings, is used only with a passive meaning, and is formed from all roots for which there is occasion to make a passive conjugation. Its sign is an accented य *yá* added to the root: thus, कृन् *han* from √कृन् *han*, आप्य *āpyá* from √आप् *āp*, गृह्य *gr̥hyá* from √गृह् *gr̥h* (or *grah*): and so on, without any reference to the class according to which the active and middle forms are made.

769. The form of the root to which the passive-sign is added is (since the accent is on the sign) the weak one: thus, a penultimate nasal is dropped, and any abbreviation which is made in the weak forms of the perfect (794), in the aorist optative (922b), or before *ta* of the passive participle (954), is made also in the passive present-system: thus, अय्य *ajyá* from √अञ्ज् *añj*, बध्य *badhyá* from √बन्ध् *bandh*, उच्य *ucyá* from √वच् *vac*, इय्य *ijyá* from √यज् *yaj*.

770. On the other hand, a final vowel of a root is in general liable to the same changes as in other parts of the verbal system where it is followed by *y*: thus,

a. *i* and *u* final are lengthened: thus, मिय *mīyá* from √मि *mi*; सुय *sūyá* from √सु *su*;

b. *ā* final is usually changed to *ī*: thus, दीय *dīyá* from √दा *dā*; हिय *hīyá* from √हा *hā*: but ज्ञीय *jñīyá* from √ज्ञ *jñā*, क्यीय *khyīyá* from √क्य *khyā*;

c. *ṛ* final is in general changed to *ri*: thus, क्रिय *kriyá* from √कृ *kr̥*; but if preceded by two consonants (and also, it is claimed, in the root *ṛ*), it has instead the *guna*-strengthening: thus, स्मर्य *smaryá* from √स्मृ *smṛ*, स्तर्य *staryá* from √स्त् *stṛ*; — and in those roots which show a change of *ṛ* to *ir* and *ur* (so-called *ṛ*-verbs: see 242), that change is made here also, and the vowel is lengthened: thus, चिर्य *chiryá* from √चृ *ṛ*; पुर्य *puryá* from √पृ *ṛ*.

771. The inflection of the passive-stem is precisely like that of the other *a*-stems; it differs only in accent from that of the class last given. It may be here presented, therefore, in the same abbreviated form:

Example of inflection: root कृ *kr̥*, 'make'; passive-stem क्रिय *kriyá*:

#### 1. Present Indicative.

	s.	d.	p.
1	क्रिये	क्रियावहे	क्रियामहे
	<i>kriyé</i>	<i>kriyāvahe</i>	<i>kriyāmahe</i>
	etc.	etc.	etc.

## 2. Present Subjunctive.

The forms noticed as occurring in the older language are alone here instanced:

	s.	d.	
1	<i>kriyāi</i>		p. <i>kriyāmahāi</i>
2			<i>kriyādhvāi</i>
3	{ <i>kriyāte</i> <i>kriyātāi</i> }		<i>kriyāntāi</i>

The 3d pl. ending *antāi* is found once (*ucyantāi*, K.).

## 3. Present Optative.

1	क्रियेय	क्रियेवहि	क्रियेमहि
	<i>kriyéya</i>	<i>kriyévahi</i>	<i>kriyémahī</i>
	etc.	etc.	etc.

No forms of the passive optative chance to occur in RV. or AV.; they are found, however, in the Brāhmaṇas.

## 4. Present Imperative.

2	क्रियस्व	क्रियेयाम्	क्रियधम्
	<i>kriyāsva</i>	<i>kriyéthām</i>	<i>kriyādhvam</i>
	etc.	etc.	etc.

## 5. Present Participle.

This is made with the suffix मान *māna*: thus, क्रियमाण *kriyāmāṇa*.

In use, this participle is well distinguished from the other passive participle by its distinctively present meaning: thus, *kr̥tā*, 'done'; but *kriyāmāṇa*, 'in process of doing', or 'being done'.

## 6. Imperfect.

1	अक्रिये	अक्रियावहि	अक्रियामहि
	<i>ákrīye</i>	<i>ákrīyāvahi</i>	<i>ákrīyāmahi</i>
	etc.	etc.	etc.

The passive-sign is never resolved into *ia* in the Veda.

772. The roots *tan* and *khan* usually form their passives from parallel roots in *ā*: thus, *tāyāte*, *khāyāte* (but also *tanyāte*, *khanyāte*). The corresponding form to  $\sqrt{\text{jan}}$ , namely *jāyate* (above, 761 b), is apparently a transfer to the preceding class.

773. By their form, *mriyāte*, 'he dies', and *dhriyāte*, 'he maintains himself, is steadfast', are passives from the roots *mṛ*, 'die', and *dhṛ*, 'hold'; although neither is used in a proper passive sense, and *mṛ* is not transitive except in the derivative form *mṛṇ* (above, 731). With them are to be compared the stems *ā-driyā* and *ā-priyā* (above, 757), which may possibly be

peculiar adaptations of meaning of passives from the roots *pr*, 'fill', and *dr*, 'scatter'.

774. Instances are occasionally found in the later language of an apparent assumption of active instead of middle endings by passive persons of the present-system. Probably, however, these are rather to be regarded as examples of transfer to the *ya*-class, such as were considered above (761 b).

775. As was pointed out above (607), the formation and inflection of stems in *áya* (the tenth or *cur*-class of the Hindu grammarians) will be treated under the head of secondary conjugation (chap. XIV.), along with the intensive and desiderative formations, because, in all alike, the stem is not a present-stem merely, but has been extended also into other tense-systems.

### Uses of the Present and Imperfect.

776. The uses of the mode-forms of the present-system have been already briefly treated in the preceding chapter (572 ff.). The tense-uses of the two indicative tenses, present and imperfect, call here for only a word or two of explanation.

777. The present has, besides its strictly present use, the same side-uses which belong in general to the tense: namely, the expression of habitual action, of future action, and of past in lively narration.

a. Examples of future meaning are: *abruvan hṛṣṭā gachāmo vayam api* (MBh.), 'they said with gladness, "we will go too"'; *agnir ātmabhavam prādād yatra vāñchati nāṣadhaḥ* (MBh.), 'Agni gave his own presence wherever the Nishadhan should desire'.

b. Examples of past meaning are: *úttarū sūr údharah putrá āsīd dānuḥ çaye sahāvatsū ná dhenūḥ* (RV.), 'the mother was over, the son under; there Dānu lies, like a cow with her calf'; *prahasanti ca tām kecid abhyasūyanti cā 'pare akurvata dayām kecit* (MBh.), 'some ridicule her, some revile her, some pitied her'; *tato yasya vacanāt tatrā 'valambitūs tañ sarve tiraskurvanti* (H.), 'thereupon they all fall to reproaching him by whose advice they had alighted there'.

778. In connection with certain particles, the present has rather more definitely the value of a past tense. Thus:

a. With *purā*, 'formerly': thus, *saptarṣīn u ha sma vāt purā rṁshū ít्य ácakṣate* (ÇB.), 'the seven sages, namely, are of old called the bears'; *tan-mūtram api cen mahyañ na dadāti purā bhavān* (MBh.), 'if you have never before given me even an atom'.

b. With the asseverative particle *sma*: thus, *çrámeṇa ha sma vāt tát devā jayanti yád eṣāñ jáyyam āsá rṣayaḥ ca* (ÇB.), 'for, in truth, both gods and sages were wont to win by penance what was to be won'; *āviṣṭaḥ kalinā dyūte jīyate sma nalaḥ tadū* (MBh.), 'then Nala, being possessed by Kali, was beaten in play'.

No example of this construction is found in either RV. or AV., or elsewhere in the metrical parts of the Veda. In the Brāhmaṇas, only habitual action is expressed by it (Delbrück). In all periods of the language, the use of *sma* with a verb as pure asseverative particle, with no effect on the tense-meaning, is very common; and the examples later are hardly to be distinguished from the present of lively narration — of which the whole construction is doubtless a form.

779. The imperfect has remained unchanged in value through the whole history of the language: it is the tense of narration: it expresses simple past time, without any other implication.

Compare what is said later (end of chap. X. and chap. XI.) as to the value of the other past tenses, the perfect and aorist.

---

## CHAPTER X.

---

### THE PERFECT-SYSTEM.

780. THE perfect-system in the later language, as has been seen above (535), consists only of an indicative tense and a participle — both of them in the two voices, active and middle.

In the oldest language, the perfect has also its modes and its augment-preterit, or pluperfect, or is not less full in its apparatus of forms than is the present-system.

781. The formation of the perfect is essentially alike in all verbs, differences among them being of only subordinate consequence, or having the character of irregularities. The characteristics of the formation are these:

- a. a stem made by reduplication of the root;
- b. a distinction between stronger and weaker forms of stem, the former being used (as in presents of the First conjugation) in the singular active, the latter in all other persons;
- c. endings in some respects peculiar, unlike those of the present;
- d. the frequent use, especially in the later language, of a union-vowel  $\xi$  *i* between stem and endings.

⟨ 782. Reduplication. In roots beginning with a consonant, the reduplication which forms the perfect-stem is of the same character with that which forms the present-stem of the reduplicating conjugation-class (II.: see 643) — but with this exception, that radical अ *a* and आ *ā* and ऋ *r* (or अर् *ar*) have only अ *a*, and never इ *i*, as vowel of the reduplicating syllable: thus, from √पृ *pr*, ‘fill’, comes the present-stem पिपृ *pipr*, but the perfect-stem पपृ *papr*; from √मा, ‘measure’, comes the present-stem मिमा *mimā*, but the perfect-stem ममा *mamā*; and so on.

Irregularities of roots with initial consonants will be given below, 784.

⟨ 783. For roots beginning with a vowel, the rules of reduplication are these:

a. A root with initial अ *a* before a single final consonant repeats the अ *a*, which then fuses with the radical vowel to आ *ā* (throughout the whole inflection): thus, आद् *ād* from √अद् *ad*; and in like manner आञ् *āj*, आन् *ān*, आस् *ās*, आह् *āh*.

The root ऋ *r* forms likewise throughout आर् *ār* (as if from अर् *ar*).

b. A root with इ *i* or उ *u* before a single final consonant follows the same analogy, except in the strong forms (sing. act.), where the vowel of the radical syllable has *guṇa*, becoming ए *e* or ओ *o*; before this, the reduplicating vowel maintains its independent form, and is separated from the radical syllable by its own semivowel: thus, from √इष् *iṣ* comes इष् *iṣ* in weak forms, but इषेष् *īyeṣ* in strong; from √उच् *uc*, in like manner, come उच् *ūc* and उवोच् *uvoc*.

The root इ *i*, a single vowel, falls under this rule, and forms इय् *īy* and इये *īye*.

c. Roots which begin with vowels long by nature or by position do not in general make a perfect-system, but use instead a periphrastic formation, in which the perfect tense

of an auxiliary verb is added to the accusative of a verbal noun (see below, chap. XV.: 1070 ff.).

To this rule, however,  $\sqrt{ap}$  (probably originally *ap*: 1087f) constitutes an exception, making the constant perfect-stem  $\bar{ap}$  (as if from *ap*: above, a).

For the peculiar reduplication  $\bar{an}$ , belonging to certain roots with initial vowels, see below, 788.

784. A number of roots beginning with *va* and ending with a single consonant, which in various of their verbal forms and derivatives abbreviate the *va* to *u*, do it also in the perfect, and are treated like roots with initial *u* (above, 783 b), except that they retain the full form of root in the strong persons of the singular active. Thus, from  $\sqrt{vac}$  come  $\bar{uc}$  and *uwac*; from  $\sqrt{vas}$  come  $\bar{u}\bar{s}$  and *uvas*; and so on.

The roots showing this abbreviation are *vac*, *vad*, *vap*, *vaç*, *vas*, *vah*; and  $\bar{v}\bar{a}$ , 'weave' (so-called *ve*: 761 d, 2), is said to follow the same rule.

A single root beginning with *ya*, namely *yaj*, 'offer', has the same contraction, forming the stems *iyaj* and  $\bar{ij}$ .

785. A number of roots having *ya* after a first initial consonant take *i* (from the *y*) instead of *a* in the reduplicating syllable: thus, from  $\sqrt{vyac}$  comes *vivyac*; from  $\sqrt{py\bar{a}}$  comes *pipy\bar{a}*.

These roots are *vyac*, *vyath*, *vyadh*,  $\bar{v}\bar{y}\bar{a}$ , *jy\bar{a}*, *py\bar{a}*; and, in the Veda, also *tyaj*, with *cyu* and *dyu*, which have the root-vowel *u*.

A single root with *va* is treated in the same way: namely *svap*, which forms *susvap*.

These roots are for the most part abbreviated in the weak forms: see below, 794.

786. A considerable number of roots have in the Veda a long vowel in their reduplication.

Thus, of roots reduplicating with  $\bar{a}$ : *kan*, *k\bar{p}*, *g\bar{r} 'wake', *g\bar{r}dh*, *tan*, *tr\bar{p}*, *tr\bar{s}*, *dh\bar{r}*, *dh\bar{r}\bar{s}*, *nam*, *mah*, *m\bar{r}j*, *m\bar{r}\bar{ç}*, *ran*, *radh*, *rabh*, *vak*, *van*, *vaç*, *vas* 'attack', *v\bar{r}j*, *v\bar{r}t*, *v\bar{r}dh*, *çad*, *sah*, *skambh*. Some of these occur only in isolated cases; some have also forms with short vowel. Most are Vedic only; but *d\bar{a}dh\bar{a}ra* is common also in the Br\bar{a}h\bar{m}\bar{a}ṇa language, and is even found later. For *j\bar{u}g\bar{r}*, see 1020 below.*

Of roots reduplicating with  $\bar{i}$ : the so-called roots (876) *d\bar{i}dh\bar{i} and *d\bar{i}d\bar{i}*, which make the perfect from the same stem with the present: thus, *d\bar{i}d\bar{i}tha*, *d\bar{i}d\bar{i}ya*; *d\bar{i}dh\bar{i}ma*, *d\bar{i}dh\bar{i}yus* (also *d\bar{i}dh\bar{i}yus*, *d\bar{i}d\bar{i}yus*). But *p\bar{i}p\bar{i} has *p\bar{i}p\bar{i}ye*, *p\bar{i}p\bar{i}yus*, etc., with short *i*. In AV. occurs once *j\bar{i}h\bar{i}da*.**

Of roots reduplicating with  $\bar{u}$ : *j\bar{u} and  $\bar{ç}\bar{u}$  (or  $\bar{ç}\bar{v}\bar{a}$ ).*

787. A few roots beginning with the (derivative: 42) palatal mutes and aspiration show a reversion to the more original guttural in the radical

syllable after the reduplication: thus,  $\sqrt{ci}$  forms *ciki*;  $\sqrt{cit}$  forms *cikit*;  $\sqrt{ji}$  forms *jigi*;  $\sqrt{hi}$  forms *jighi*;  $\sqrt{han}$  forms *jaghan* (and the same reversioners appear in other reduplicated forms of these roots). A root *dā*, 'protect', is said by the grammarians to form *digi*: but neither root nor perfect is quotable.

**788.** A small number of roots with initial *a* or *r* (*ar*) show the anomalous reduplication *ān* in the perfect.

Thus, in the Veda:

$\sqrt{añj}$  or *aj*, which forms the pres. *anākti* (cl. III.), has the perfect *ānājé* etc. (with *anājū* and *anājyāt*);

$\sqrt{aç}$ , 'attain' (from which comes once *anaçāmahāi*), has the weak forms *ānaçma* etc. (with opt. *ānaçyām*), and the strong forms *ānānça* and *ānāca* — along with the regular *āça* etc.;

$\sqrt{rdh}$  (from which comes once *ṛṇādhat*) has *ānr̥dhe*;

$\sqrt{rc}$  or *arc* has *ānr̥cés* and *ānr̥cé*;

$\sqrt{arh}$  has (in TS.) *ānr̥hus*;

*anāha* (RV., once) has been referred to a root *ah*, elsewhere unknown, and explained as of this formation; but with altogether doubtful propriety.

The later grammar, then, sets up the rule that roots beginning with *a* and ending with more than one consonant have *ān* as their regular reduplication; and such perfects are taught from roots like *akṣ*, *arj*, and *añc* or *ac*; but the only other quotable forms appear to be *ānarchat* (MBh.) and *ānarçat* (TA.); which are accordingly reckoned as "pluperfects".

**789.** One or two individual cases of irregularity are the following:

a. The extremely common root *bhū*, 'be', has the anomalous reduplication *ba*, forming the stem *babhū*; and, in the Veda,  $\sqrt{sū}$  forms in like manner *sasū*.

b. The root *bhr̥*, 'bear', has in the Veda the anomalous reduplication *ja* (as also in intensive: 1002 b): but RV. has once also the regular *babhre*.

c. The root *ṣṭhiv*, 'spew', forms either *tiṣṭhiv* (ÇB. et al.) or *tiṣṭh̄iv*.

d. *Vivakvān* (RV., once) is doubtless participle of  $\sqrt{vac}$ , with irregular reduplication (as in the present, 660).

**790.** Absence of reduplication is met with in the following cases:

a. The root *vid* 'know' has, from the earliest period to the latest, a perfect without reduplication, but otherwise regularly made and inflected: thus, *véda*, *véttha*, etc., pple *vidvāns*. It has the meaning of a present. The root *vid* 'find' forms the regular *vivéda*.

b. A few other apparently perfect forms lacking a reduplication are found in RV.: they are *takṣathus*, *yamátus*, *skambhāthus* and *skambhus*, *nindima* (for *ninidima*?), *dhise* and *dhire* (?  $\sqrt{dhā}$ ), and *vidré* and *arhire* (? see 613). And AV. has *cetatus*. The participial words *dāvçvāns*, *mīdhvāns*, *sāhvāns* are common in the oldest language.

c. One or two sporadic cases have been quoted from the later language: namely, *çansus* and *çansire* (MBh.).

791. For an anomalous case or two of reduplicated preposition, see below, 1087f.

792. Strong and weak stem-forms. In the three persons of the singular active, the root-syllable is accented, and exhibits usually a stronger form than in the rest of the tense-inflection. The difference is effected partly by strengthening the root in the three persons referred to, partly by weakening it in the others, partly by doing both.

793. As regards the strengthening:

a. A final vowel takes either the *guṇa* or *vṛddhi* change in 1st sing. act., *guṇa* in 2d, and *vṛddhi* in 3d: thus, from √भी *bhī*, 1st विभे *bibhé* or विभि *bibhāi*; 2d विभे *bibhé*; 3d विभि *bibhāi*; from √क्त् *kr*, 1st चकार *cakār* or चकार *cakār*, 2d चकार *cakār*, 3d चकार *cakār*.

But the *ū* of √bhū remains unchanged, and adds *v* before a vowel-ending: thus, *babhūva* etc.

b. Medial अ *a* before a single final consonant follows the analogy of a final vowel, and is lengthened or vridhdied in the 3d. sing., and optionally in the first: thus, from √तप् *tap*, 1st ततप् *tatāp* or तताप् *tatāp*, 2d ततप् *tatāp*, 3d तताप् *tatāp*.

In the Veda, however, the weaker of the two forms allowed by these rules in the first person is almost exclusively in use: thus, 1st only *bibhāya*, *tatāpa*, 3d *bibhāya*, *tatāpa*. The only exceptions noticed are *cakāra* and *jaग्रāha* (doubtful reading) in AV.

c. A medial short vowel has in all three persons alike the *guṇa*-strengthening (where this is possible: 240): thus, from √द्रुक् *druh* comes डद्रोक् *dudrōh*; from √विष् *viṣ* comes विवेष् *vivēṣ*; from √कृत् *kr̥t* comes चकर्त् *cakārt*.

d. These rules are said by the grammarians to apply to the 2d sing. always when it has simple *tha* as ending; if it has *itha* (below, 797), the accent is allowed to fall on any one of the syllables of the word, and the root-syllable if unaccented has sometimes the weak form (namely, in contracted stems with *e* for medial *a*: below, 794 e; and in certain other verbs: thus, *vivijithā*).

The earlier language, however, appears to afford no example of a 2d sing., whatever its ending, accented on any other than the radical syllable, or failing to conform to the rules of strengthening as given above (in a, b, c).

e. Sporadic instances of a strengthening in other than the singular persons are found in RV.: thus, *yuyopimā*, *viveçus*. And the roots *çr*, *pr*, and *dr* 'tear' are said by the grammarians to have the strong stem in the weak forms; and *jr* 'decay' to be allowed to do the same.

f. The root *mṛj* has (as in the present-system: 627) *vrddhi* instead of *gṛṇa* in strong forms: thus, *mamārja*; and *√guh* (also as in present: 745 c) has *ū* instead of *o*.

794. As regards the weakening in weak forms:

a. It has been seen above (783 b) that roots beginning with *i* or *u* fuse reduplicating and radical syllable together to *ī* or *ū* in the weak forms; and (784) that roots contracting *va* and *ya* to *u* or *i* in the reduplication do it also in the root in weak forms, the two elements here also coalescing to *ū* or *ī*.

b. A few roots having *ya* and *va* after a first initial consonant, and reduplicating from the semivowel (785), contract the *ya* and *va* to *i* and *u*: thus, *vivic* from *√vyac*, *vividh* from *√vyadh*, *susup* from *√svap*. The extended roots *fyā*, *pyā*, *vyā*, *çyā*, *hvā* show a similar apparent contraction, making their weak forms from the simpler roots *ji*, *pī*, *vī*, *çū*, *hū*, while *hvā* must and *çvā* may get their strong forms also from the same (and it is questionable whether from the others strong forms occur).

c. The root *grāh* or *grāh* (if it be written thus) contracts to *grh*, making the three forms of stem *jagrāh* (1st and 2d sing. act.), *jagrāh* (3d), and *jagrḥ*; but *prach* (if it be so written) remains unchanged throughout.

d. A number of roots having medial *a* between single consonants drop that vowel. These are, in the later language, *gam*, *khan*, *jan*, *han*, *ghas*: they form the weak stems *jagm*, *jakhn*, *jajñ*, *jaghn* (compare 637), *jakṣ* (compare 640): but RV. has once *jajanūs*.

In the old language are found in like manner *mamnāthe* and *mamnāte* from *√man*; *vavnē* from *√van*; *tatne*, *tatniṣe*, *tatnire* from *√tan* (beside *tatane*, and *tate*, as if from *√tā*); *paptima* and *paptūs* and *paptivāns* from *√pat* (beside *pet*-forms; below, e); *saccima* and *saccus*, *sacce* and *saccire* from *√sac*.

e. Roots in general having medial *a* before a single final consonant, and beginning also with a single consonant that is repeated unchanged in the reduplication — that is, not an aspirate, a guttural mute, or *h* — contract their root and reduplication together into one syllable, having *e* as its vowel: thus, *√sad* forms the weak stem *sed*, *√pac* forms *pec*, *√yam* forms *yem*; and so on.

Certain roots not having the form here defined are declared by the grammarians to undergo the same contraction — most of them optionally;

and examples of them all are of rare occurrence (of one only, *bhāj*, quotable from the older language). They are as follows: *rāj* (occurs in MBh.) and *rād* (*radh*?), notwithstanding their long vowel; *phaṇ*, *phal*, *bhāj* (occurs in RV. etc.), though their initial is changed in reduplication; *trap*, *tras* (occurs in MBh.), *syam*, *svan*, though they begin with more than one consonant; *dambh* (forming *debh* from the weaker *dabh*), though it ends with more than one; and *bhram* (occurs in KSS.), *bhrāj*, *granth*, *cranth*, *svañj*, in spite of more reasons than one to the contrary.

This contraction is allowed also in 2d sing. act. when the ending is *ithá*: thus, *tenitha* beside *tatantha* (but no examples are quotable from the older language).

The roots *çaç* and *dad* (from *dā*: 672) are said to reject the contraction: but no perfect forms of either appear to have been met with in use.

From  $\sqrt{tṛ}$  (or *tar*) occurs *terus* (R.); and *jerus* from  $\sqrt{jṛ}$  is authorized by the grammarians — both against the general analogy of roots in  $\sqrt{}$ .

f. Roots ending in  $\bar{a}$  lose their  $\bar{a}$  before all endings beginning with a vowel, including those that assume the union-vowel *i* (796) — unless in the latter case it be preferable to regard the *i* as a weakened form of the  $\bar{a}$ .

< 795. Endings, and their union with the stem. The general scheme of endings of the perfect indicative has been already given (553); and it has also been pointed out (543) that roots ending in  $\bar{a}$  have  $\bar{a}u$  in 1st and 3d sing. active.

< 796. Those of the endings which begin with a consonant — namely  $\theta$  *tha*,  $v$  *va*,  $m$  *ma* in active;  $se$ ,  $ve$  *vahe*,  $mahe$ ,  $dhve$ ,  $re$  in middle — are very often, and in the later language usually, joined to the base with the help of an interposed union-vowel  $\bar{i}$ .

The union-vowel *i* is found widely used also in other parts of the general verbal system: namely, in the sibilant aorist, the futures, and the verbal nouns and adjectives (as also in other classes of derivative stems). In the later language, a certain degree of correspondence is seen among the different parts of the same verb, as regards their use or non-use of the connective; but this correspondence is not so close that general rules respecting it can be given with advantage; and it will be best to treat each formation by itself.

The perfect is the tense in which the use of *i* has established itself most widely and firmly in the later language.

797. The most important rules as to the use of  $\bar{i}$  in the later language are as follows:

a. The  $\ddot{r}$  *re* of 3d pl. mid. has it always.

b. The other consonant-endings, except  $\text{ṛ}$  *tha* of 2d sing. act., take it in nearly all verbs.

But it is rejected throughout by eight verbs — namely *kr* 'make', *bhr* 'bear', *sr* 'go', *vr* 'choose', *dru* 'run', *ṣru* 'hear', *stu* 'praise', *sru* 'flow'; and it is allowably (not usually) rejected by some others, in general accordance with their usage in other formations.

c. In 2d sing. act., it is rejected not only by the eight verbs just given, but also by many others, ending in vowels or in consonants, which in other formations have no  $\ddot{r}$  *i*; but it is also taken by many verbs which reject it in other formations; — and it is optional in many verbs, including those in  $\text{ṛ}$  *ā* (of which the  $\text{ṛ}$  *ā* is lost when the ending is  $\text{ṛ}$  *itha*), and most of those in  $\ddot{r}$  *i*,  $\ddot{r}$  *ī*, and  $\text{ṛ}$  *u*.

The rules of the grammarians, especially as regards the use of *tha* or *itha*, run out into infinite detail, and are not wholly consistent with one another; and, as the forms are by no means frequent, it is not possible at present to criticise the statements made, and to tell how far they are founded on the facts of usage.

With this *i*, a final radical *i* or *ī* is not combined, but changed into *y* or *iy*. The *ū* of  $\sqrt{bhū}$  becomes *ūv* throughout before a vowel.

798. In the older language, the usage is in part quite otherwise. Thus:

a. In the RV., the union-vowel *i* is taken by roots ending in consonants provided the last syllable of the stem is a heavy one, but not otherwise: thus, *āsitha*, *uvōcitha*, *vivēditha*, but *tatāntha* and *vivyāketha*; *ūcimā*, *paptima*, *sedima*, *yuyopimā*, but *jaganma* and *yuyujma*; *ūciṣé*, *jajñiṣé*, *sasāhiṣe*, but *vivitse* and *dadrkṣé*; *bubhujmāhe* and *ṣāṣadmahe* etc. (no examples of *ivahe* or *imaha* chance to occur, nor any of either *idhve* or *dive*); *ṽjiré*, *jajñiré*, *yetiré*, *tataksiré*, but *cūklpré*, *vividré*, *dudukhré*, *pasprḍhré*, *tatasré* (and so on: twenty-two forms). The only exception in RV. is *vēttha* from  $\sqrt{vid}$ , without *i* (in Br., also *āttha* from  $\sqrt{ah}$ : below, 801 a). The other Vedic texts present nothing inconsistent with this rule, but in the Brāhmaṇas 3d pl. forms in *ire* are made after light syllables also: thus, *sasrjire*, *bubudhire*.

b. In roots ending with a vowel, the early usage is more nearly like the later. Thus: for roots in *ā* the rule is the same (except that no 2d sing. in *itha* is met with), as *dadhimā*, *dadhiṣé*, *dadhidhvé*, *dadhiré* (the only persons with *i* quotable from RV. and AV.); — roots in  $\text{ṛ}$  appear also to follow

the later rule: as *cakṛṣé*, *papṛṣe*, *vavṛṣé*, *vavṛmáhe*, but *dadhriṣe* and *jabhriṣe*, and in 3d pl. mid. both *cakriré* and *dadhrire*; —  $\sqrt{bhū}$  has both *babhūtha* (usually) and *babhūvitha*, but only *babhūvimá* (AV.). But there are found against the later rules, *suṣuma*, *cicyuṣe*, *juhuré*, and *juhūré*, without *i*: the instances are too few to found a rule upon.

799. The ending *riré* of 3d pl. mid. is found in RV. in six forms: namely, *cikitriré*, *jaḡbhviré*, *dadriré*, *bubhujriré*, *vividriré*, *sasṭjriré*; to which SV. adds *duduhrire*.

800. Examples of inflection. By way of illustration of the rules given above, may be given in full the perfect indicative inflection of the following verbs:

a. As example of the normal inflection of a root with final consonant, we take the root  $\sqrt{budh}$  *budh*, 'know': its strong form of perfect-stem is  $\sqrt{bubódh}$ ; weak form,  $\sqrt{bubudh}$ .

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1	$\sqrt{bubódh}$ <i>bubódha</i>	$\sqrt{bubudhiv}$ <i>bubudhivá</i>	$\sqrt{bubudhim}$ <i>bubudhimá</i>	$\sqrt{bubudhe}$ <i>bubudhé</i>	$\sqrt{bubudhiváhe}$ <i>bubudhiváhe</i>	$\sqrt{bubudhimáhe}$ <i>bubudhimáhe</i>
2	$\sqrt{bubódhiṭha}$ <i>bubódhiṭha</i>	$\sqrt{bubudhíthus}$ <i>bubudhíthus</i>	$\sqrt{bubudhá}$ <i>bubudhá</i>	$\sqrt{bubudhiṣe}$ <i>bubudhiṣé</i>	$\sqrt{bubudháthe}$ <i>bubudháthe</i>	$\sqrt{bubudhidhvé}$ <i>bubudhidhvé</i>
3	$\sqrt{bubódha}$ <i>bubódha</i>	$\sqrt{bubudhátus}$ <i>bubudhátus</i>	$\sqrt{bubudhús}$ <i>bubudhús</i>	$\sqrt{bubudhé}$ <i>bubudhé</i>	$\sqrt{bubudháte}$ <i>bubudháte</i>	$\sqrt{bubudhiré}$ <i>bubudhiré</i>

The asserted variety of possible accent in 2d sing. act. (above, 793d) needs to be noted both in this and in the remaining paradigms.

b. As example of the normal inflection of a root with final *i* or *u*-vowel, we may take the root  $\sqrt{ni}$  *nī*, 'lead': its forms of stem are  $\sqrt{nináy}$  or  $\sqrt{nináy}$ , and  $\sqrt{niní}$ .

1	$\sqrt{nináy}$ <i>nináya</i>	$\sqrt{nináy}$ <i>nináya</i>	$\sqrt{niníyiv}$ <i>niníyivá</i>	$\sqrt{niníyim}$ <i>niníyimá</i>	$\sqrt{niníyē}$ <i>niníyé</i>	$\sqrt{niníyiváhe}$ <i>niníyiváhe</i>	$\sqrt{niníyimáhe}$ <i>niníyimáhe</i>
2	$\sqrt{ninétha}$ <i>ninétha</i>	$\sqrt{nináyitha}$ <i>nináyitha</i>	$\sqrt{niníyíthus}$ <i>niníyíthus</i>	$\sqrt{niníyá}$ <i>niníyá</i>	$\sqrt{niníyíṣe}$ <i>niníyíṣé</i>	$\sqrt{niníyáthe}$ <i>niníyáthe</i>	$\sqrt{niníyidhvé}$ <i>niníyidhvé</i>
3	$\sqrt{nináy}$ <i>nináya</i>	$\sqrt{niníyátus}$ <i>niníyátus</i>	$\sqrt{niníyús}$ <i>niníyús</i>	$\sqrt{niníyé}$ <i>niníyé</i>	$\sqrt{niníyáte}$ <i>niníyáte</i>	$\sqrt{niníyiré}$ <i>niníyiré</i>	

The root  $\sqrt{krī}$  would make in weak forms *cikriyivá*, *cikriyátus*, *cikriyús*, etc.;  $\sqrt{bhū}$  makes *babháva*, *babhátha* (V.) or *babhūvitha*,

*babhūvā́, babhūvís; babhūvé, babhūviré, etc.*; other roots in *ū* or *u* change this to *uv* before the initial vowel of an ending.

c. As example of the inflection of a root ending in *आ*, we may take *दा* *dā*, 'give': its forms of stem are *दा* *dadā* and *दद्* *dad* (or *ददि* *dadī*): see above, 794 f.

1	ददौ <i>dadāu</i>	ददिव <i>dadivā</i>	ददिम <i>dadimā</i>	ददे <i>dadé</i>	ददिवहे <i>dadivāhe</i>	ददिमहे <i>dadimāhe</i>
2	ददाथ, ददिय <i>dadātha, dadīthā</i>	ददथुम् <i>dadāthus</i>	दद <i>dadā</i>	ददिषे <i>dadīṣé</i>	ददाथे <i>dadāthe</i>	ददिधे <i>dadīdhvé</i>
3	ददौ <i>dadāu</i>	ददतुम् <i>dadātus</i>	दडम् <i>dadūs</i>	ददे <i>dadé</i>	ददाते <i>dadāte</i>	ददिरे <i>dadīré</i>

The RV. has once *paprā* for *paprāu* (and *jahā* for *jahāu*?).

d. As example of a root with medial *अ* showing fusion of root and reduplication, resulting in medial *ए*, in the weak forms (794 e), we may take *तन्* *tan*, 'stretch': its forms of stem are *ततन्* *tatān* or *ततान्* *tatān*, and *तेन्* *ten*.

1	ततन, ततान <i>tatāna, tatāna</i>	तेनिव <i>tenivā</i>	तेनिम <i>tenimā</i>	तेने <i>tené</i>	तेनिवहे <i>tenivāhe</i>	तेनिमहे <i>tenimāhe</i>
2	ततन्थ, तेनिय <i>tatāntha, tenīthā</i>	तेनथुम् <i>tenāthus</i>	तेन <i>tenā</i>	तेनिषे <i>tenīṣé</i>	तेनाथे <i>tenāthe</i>	तेनिधे <i>tenīdhvé</i>
3	ततान <i>tatāna</i>	तेनतुम् <i>tenātus</i>	तेनुम् <i>tenūs</i>	तेने <i>tené</i>	तेनाते <i>tenāte</i>	तेनिरे <i>tenīré</i>

The root *jan*, with the others which expel medial *a* in weak forms (794 d), makes *jajāntha* or *jajānīthā*, *jajñivā*, *jajñūs*; *jajñé*, *jajñīmāhe*, *jajñīré*; and so on.

e. As example of a root with initial *व* *va* contracted to *उ* *u* in the reduplication, and contracted with the reduplication to *ऊ* *ū* in weak forms (784), we may take *वच्* *vac*, 'speak': its forms of stem are *उवच्* *uvāc* or *उवाच्* *uvāc*, and *ऊच्* *ūc*.

1	उवच, उवाच <i>uvāca, uvāca</i>	ऊचिव <i>ūcivā</i>	ऊचिम <i>ūcimā</i>	ऊचे <i>ūcé</i>	ऊचिवहे <i>ūcivāhe</i>	ऊचिमहे <i>ūcimāhe</i>
2	उवकथ, उवचिय <i>uvāktha, uvācīthā</i>	ऊचथुम् <i>ūcāthus</i>	ऊच <i>ūcā</i>	ऊचिषे <i>ūciṣé</i>	ऊचाथे <i>ūcāthe</i>	ऊचिधे <i>ūcīdhvé</i>

3 उवाच	उचतुस्	उचुस्	उचे	उचाते	उचिरे
<i>uvāca</i>	<i>ūcātus</i>	<i>ūcūs</i>	<i>ūcé</i>	<i>ūcāte</i>	<i>ūcīre</i>

In like manner,  $\sqrt{yaj}$  forms *iyāja* or *iyāja*, *iyāstha* or *iyājītha*; *ijé*, *ijisé*, and so on;  $\sqrt{uc}$  has *uvāca* and *uvācītha* in the strong forms, and all the rest like *vac*.

f. Of the four roots in ऋ  $r$  mentioned at 797b, the first persons are made as follows:

1 चकर, चकार	चकृव	चकृम	चक्रे	चकृवहे	चकृमहे
<i>cakāra, cakāra</i>	<i>cakṛvā</i>	<i>cakṛmā</i>	<i>cakṛé</i>	<i>cakṛvāhe</i>	<i>cakṛmāhe</i>

The 2d sing. act. is *cakārtha*; the 3d pl. mid. is *cakrīre*.

Of the roots in ऋ  $r$  in general, the first persons are made as follows:

1 दधर, दधार	दधिव	दधिम	दधे	दधिवहे	दधिमहे
<i>dadhāra, dadhāra</i>	<i>dadhivā</i>	<i>dadhimā</i>	<i>dadhre</i>	<i>dadhivāhe</i>	<i>dadhimāhe</i>

801. A few miscellaneous irregularities call still for notice:

a. The root *ah*, 'speak', occurs only in the perfect indicative, and only in the 3d persons of all numbers and in the 2d sing. and du., in active (and in 2d sing. the *h* is irregularly changed to *t* before the ending): thus, *āttha*, *āha*; *āhatus*, *āhātus*; *āhūs* (in V., only *āha* and *āhūs* are met with).

b. From  $\sqrt{vā}$  'weave', the 3d pl. act. *ūvus* occurs in RV., and no other perfect form appears to have been met with in use. It is allowed by the grammarians to be inflected regularly as *vā*; and also as *vay* (the present-stem is *vāya*: 761d, 2), with contraction of *va* to *u* in weak forms; and further, in the weak forms, as simple *u*.

c. The root *vyā*, 'hide', has in RV. the perfect-forms *vivyathus* and *vivyé*, and no others appear to have been met with in use; the grammarians require the strong forms to be made from *vyay*, and the weak from *vī*.

d. The root *i*, 'go', forms in RV. and AV. the 2d sing. act. *iyātha* beside the regular *iyétha*.

e. The AV. has once *vāvṛdhēte* (for *-dhāte*), and once *jaharus* (for *jahrus*): both are perhaps false readings.

f. Persons of the perfect from the *ir*-forms of roots in changeable  $r$  (242) are *tītirus* and *tistire* (both RV.); and they have corresponding participles.

g. The bastard root *ūrṇu* (712) is said by the grammarians to make the perfect-stem *ūrṇunu*.

h. The roots *majj* and *naç* are said to insert a nasal in the 2d sing.

active, when the ending is simple *tha*: thus, *mamanktha*, *nanañṣtha* (also *mamajjitha* and *neçitha*).

i. The anomalous *ajagrabhāṣan* (AB. vi. 35) seems a formation on the perfect-stem (but perhaps for *ajigrabhiṣan*, desid. ?).

#### Perfect Participle.

802. The ending of the active participle is वास् *vāns* (that is to say, in the strong forms: it is contracted to उप् *us* in the weakest, and replaced by वत् *vāt* in the middle forms: see above, 458 ff.). It is added to the weak form of the perfect stem — as shown, for example, in the dual and plural of the active inflection of the given verb; and, mechanically, the weakest participle-stem is identical with the 3d pl. active. Thus, वुबुधास् *bubudhvāns*, निनिवास् *ninivāns*, चकृवास् *cakrvāns*.

803. If the weak form of the perfect stem is monosyllabic, the ending takes the union-vowel इ *i* (which, however, disappears in the weakest cases): thus, तेनिवास् *tenivāns*, उचिवास् *ūcivāns*, जज्ञिवास् *jajñivāns*, आदिवास् *ādivāns* (from √अद् *ad*: 783a), and so on; ददिव्वास् *dadivāns* and its like, from roots in आ *ā*, is to be reckoned in the one class or the other according as we view its इ *i* as weakened root-vowel or as union-vowel (794 f.).

But participles of which the perfect-stem is monosyllabic by absence of the reduplication do not take the union-vowel: thus, विद्वāns, and, in V., दृष्वāns, मिध्वāns, सृह्वāns; and RV. has also दद्वāns (AV. *dadivāns* and once *dadāvāns*) from √दा (or *dad*: 672) and AV. has विचिवāns and *varjivāns* (in negative fem. *āvarjuṣī*).

804. Other Vedic irregularities calling for notice are few. The long vowel of the reduplication (786) appears in the participle as in the indicative: thus, ववृध्वāns, सृसृह्वāns, जृजृव्वāns. RV. and AV. have *sasavāns* from √सान् or *sā*. RV. makes the participial forms of √त्र or *tar* from different modifications of the root: thus, तिीरव्वāns, but *tatarūṣas*. Respecting the occasional exchanges of strong and weak stem in inflection, see above, 462 c.

805. From roots *gam* and *han* the Veda makes the strong stems *jaganvāns* (as to the *n*, see 212) and *jaghanvāns*; the later language allows either these or the more regular *jagmivāns* and *jaghnivāns* (the weakest stem-forms being everywhere *jagmūṣ* and *jaghnūṣ*).

806. From three roots, *vid* 'find', *viç*, and *dṛç*, the later language allows strong participle-stems to be made with the union-vowel, as well as in the regular manner without it: thus, *viviçivāns* or *viviçvāns*. PB. has once *cichidivāns*.

807. The ending of the middle participle is *āná*. It is added to the weak form of perfect-stem, as this appears in the middle inflection: thus, *बुबुधान* *bubudhāná*, *निन्यान* *ninyāná*, *दान* *dadāná*, *तेनान* *tenāná*, *ज्ञान* *jajñāná*, *उचान* *ūcāná*.

In the Veda, the long reduplicating vowel is shown by many middle participles: thus, *vāvrđhāná*, *vāvasāñá*, *dādṛhāná*, *ççuvāná*, etc. RV. has *çaçayāná* from  $\sqrt{\text{ç}}$  (with irregular *guṇa*, as in the present-system: 629); *tistirāñá* from  $\sqrt{\text{sr}}$ ; and once, with *māna*, *saçmāñá* from  $\sqrt{\text{sr}}$ .

#### Modes of the Perfect.

808. Modes of the perfect belong only to the Vedic language, and are even rarely found outside of the Rig-Veda.

To draw the line surely and distinctly between these and the mode-forms from other reduplicated tense-stems — the present-stem of class II., the reduplicated aorist, and the intensive — is not possible, since no criterion of form exists which does not in some cases fail, and since the general equivalence of modal forms from all stems (582), and the common use of the perfect as a present in the Veda (823), deprive us of a criterion of meaning. There can be no reasonable doubt, however, that a considerable body of forms are to be reckoned here: optatives like *ānaçyām* and *babhūyās* and *babhūyāt*, imperatives like *babhūtu*, subjunctives like *jabhārat*, show such distinctive characteristics of the perfect formation that by their analogy other similar words are confidently classed as belonging to the perfect.

809. The normal method of making such forms would appear to be as follows: from a reduplicated perfect-stem, as (for example) *mumuc*, an imperative would be made by simply appending, as usual, the imperative endings; the derived subjunctive mode-stem would be *mumóca* (accented after the analogy of the strong forms of the perfect indicative), and would take either primary or secondary endings; and the optative mode-stems would be *mumucyā* in the active, and *mumucī* (accent on personal endings) in the middle.

And the great majority of the forms in question (about three quarters) are made in these ways. Thus:

810. Examples of the regular subjunctive formation are:

a. with secondary endings, active: 2d sing., *paprāthas*, *māmāhas*, *piprāyas*, *bubodhas*; 3d sing., *jabhārat*, *sāsāhat*, *paspárçat*, *piprāyat*, *cikétat*;

1st pl., *tatānāma*, *çūçāvāma*; 3d pl., *tatānan*, *paprāthan* (other persons do not occur). This is the largest class of cases.

b. with primary endings, active: here seem to belong only *dadhārshati* and *vavārtati*: compare the formation with different accent below, 811 a.

c. of middle forms occur only the 3d sing. *tatāpate*, *çaçāmate*, *yuyūjate*, *jūjūgate* (SV.; RV. has *jūjūgate*); and the 3d pl. *tatānanta* (and perhaps two or three others: below, 811 b, end).

811. But not a few subjunctives of other formation occur; thus:

a. with strengthened root-syllable, as above, but with accent on the reduplication (as in the majority of present-forms of the reduplicating class: above, 645). Here the forms with primary endings, active, preponderate, and are not very rare: for example, *jūjūgasi*, *jūjūgati*, *jūjūgathas*, *jūjūgatha* (other persons do not occur). With secondary endings, *jūjūgas*, *jūjūgat*, and *jūjūgan* are the forms that belong most distinctly here (since *dādāças* and *sūśūdas* etc. are perhaps rather aorists). And there is no middle form but *jūjūgate* (RV.: see above, 810 c).

b. with unstrengthened root-syllable occur a small body of forms, which are apparently also accented on the reduplication (accented examples are found only in 3d pl. mid.): thus, active, for example, *mumucas*; *vavrtat*, *vividat*, *çūçuvat*; the only middle forms are *dadhṛṣate*, *vāvṛdhate*, 3d sing.; and *cākramanta*, *dādṛṣanta*, *rūrucanta* (with *dadabhanta*, *paprathanta*, *māmahanta*, *juhuranta*, which might also belong elsewhere: 810 c).

c. accented on the ending are *vāvṛdhānta* and *cakṛpānta* (which are rather to be called augmentless pluperfects).

As to forms with double mode-sign, or transfers to an *a*-conjugation, see below, 815.

812. Examples of the regular optative formation are:

a. in active: 1st sing., *ānaçyām*, *jagamyām*, *papreyām*, *riricyām*; 2d sing., *vavṛtyās*, *viviçyās*, *çuçṛyās*, *babhūyās*; 3d sing., *jagamyāt*, *vavṛtyāt*, *tutuyāt*, *babhūyāt*; 2d du., *jagamyātam*, *çuçṛyātam*; 1st pl., *sāsahyāma*, *vavṛtyāma*, *çūçuyāma*; 3d pl., *tatanyus*, *vavṛtyus*. The forms are quite numerous.

b. in middle, the forms are few: namely, 1st sing., *vavṛtya*; 2d sing., *vāvṛdhāthās*, *cakṣamāthās*; 3d sing., *jagrasita*, *vavṛtita*, *māmṛjita*, *çuçucita*; 1st pl., *vavṛtimahi*. And *sāsahīṣṭhās* and *ririṣiṣṭa* appear to furnish examples of precative optative forms.

There is no irregular mode of formation of perfect optatives. Individual irregularities are shown by certain forms: thus, *cakṛiyās*, *papṛiyāt*, *çuçṛyās* and *çuçṛyātam*, with treatment of the final as before the passive-sign *yā* (770); *anaçyāt* with short initial; *jakṣiyāt* is anomalous; *ririṣes* is the only form that shows a union-vowel *a*.

813. Of regular imperative forms, only a very small number are to be quoted: namely, active, *eikiddhi*, *mumugdhī*, *çuçugdhī*, and *piprihī*; *mumoktu* and *babhūtu*; *mumuktam* and *vavṛktam*; *jūjūṣṭana* and *vavṛttana* (unless we

are to add *mamaddhī*, *mamattu*, *mamāttana*); — middle, *vavṛtsva* and *vavṛdhvam*.

814. As irregular imperatives may be reckoned several which show a union-vowel *a*, or have been transferred to an *a*-conjugation. Such are, in the active, *mumócatam* and *jujoṣatam* (2d du.), and *mumócata* (2d pl.); in the middle, *pipráyasva* (only one found with accent), and *māmahasva*, *vāvṛdhasva*, *vāvṛśasva* (2d sing.), and *māmahantām* (3d pl.: probably to be accented *-āsva* and *-āntām*).

815. Such imperatives as these, taken in connection with some of the subjunctives given above (and a few of the "pluperfect" forms: below, 820), suggest as plausible the assumption of a double present-stem, with reduplication and added *a* (with which the desiderative stems would be comparable: below, chap. XIV.): for example, *jujoṣa* from  $\sqrt{juṣ}$ , from which would come *jújoṣasi* etc. and *jújoṣate* (811a) as indicative, *jújoṣas* etc. as subjunctively used augmentless imperfect, and *jujoṣatam* as imperative. Most of the forms given above as subjunctives with primary ending lack a marked and constant subjunctive character, and would pass fairly well as indicatives. And it appears tolerably certain that from one root at least, *vṛdh*, such a double stem is to be recognized; from *vāvṛdha* come readily *vāvṛdhate*, *vāvṛdhānta*, and from it alone can come regularly *vāvṛdhasva*, *vāvṛdhēte* (above, 801e), and *vāvṛdhāti* (once, RV.) — and, yet more, the participle *vavṛdhānt* (once, RV.: an isolated case): yet even here we have also *vāvṛdhūthās*, not *vāvṛdh-éthās*. To assume double present-stems, however, in all the cases would be highly implausible; it is better to recognize the formation as one begun, but not carried out.

Only one other subjunctive with double mode-sign — namely, *papṛcāsi* — is found to set beside *vāvṛdhāti*.

816. Forms of different model are not very seldom made from the same root: for example, from  $\sqrt{muc}$ , the subjunctives *mumócas*, *múmocati*, and *mumucas*; from  $\sqrt{dhr̥ṣ}$ , *dadhárṣati* and *dadhṛṣate*; from  $\sqrt{pri}$ , the imperatives *piprihí* and *pipráyasva*.

### Pluperfect.

817. Of an augment-preterit from the perfect-stem, to which the name of pluperfect is given on the ground of its formation (though not of its meaning), the Veda presents a few examples; and one or two forms of the later language (mentioned above, 788, end) have also been referred to it.

There is something of the same difficulty in distinguishing the pluperfect as the perfect-modes from kindred reduplicated formations. Between it and the aorist, however, a difference of meaning helps to make a separation.

818. The normal pluperfect should show a strong stem in the singular active, and a weak one elsewhere — thus, *mumoc* and *mumuc* — with augment prefixed and secondary endings added (*us* in 3d pl. act., *ata* in 3d pl. mid.).

Of forms made according to this model, we have, in the active: 1st sing., *ajagrabham* and *acacakṣam* (which, by its form, might be aorist: 860); 2d sing. *ājagan*; 3d sing., *ajagan* and *aciket*; 2d du., *amumuktam*; 2d pl. *ajaganta*, and *ajagantana* and *ajabhartana* (a strong form, as so often in this person: 556); 3d pl. (perhaps), *amamandus* and *amamadus*. To these may be added the augmentless *cikētam* and *cakaram*. In the middle, the 3d pl. *acakriran* and *ajagmiran* (with *iran* instead of *ata*), and the augmentless 2d sing. *jugūrthās* and *suṣupthās*, are the most regular forms to be found.

819. Several forms from roots ending in consonants save the endings in 2d and 3d sing. act. by inserting an *i* (555 b): thus, *ābubhojīs*, *aviveṣīs*; *arirecūt*, *ājagrabhūt* (*avāvarīt* and *avāvaṣītām* are rather intensives); and the augmentless *jīhīsīs* (accent?) and *dadharṣīt* belong with them.

820. A few forms show a stem ending in *a*: they are, in the active: 3d sing., *asavajat*, *acakrat*; in the middle: 3d sing., *āpiprata*; 2d du., *āpasprdhethām*; 3d pl., *atitviṣanta* (which by its form might be aorist), *ādadhanta*; and *cakradat*, *cakrṣānta*, *vāvṛdhānta*, *juhuranta*, would perhaps be best classified here as augmentless forms (compare 811, above).

### Uses of the Perfect.

821. In the later language, the perfect is simply a preterit or past tense, equivalent to the imperfect, and interchangeable with it. Except as coming from a few often used verbs (especially *āha* and *uvāca*), it is much more rarely employed than the imperfect.

822. In the Brāhmaṇa language, very nearly the same thing is true. In most Brāhmaṇas, the imperfect is the usual tense of narration, and the perfect only occasional; in the Ṣatapatha Brāhmaṇa, the perfect is much more widely used.

823. In the Veda, the case is very different. The perfect is used as past tense in narration, but only rarely; sometimes also it has a true "perfect" sense, or signifies a completed past; but oftenest it has a value not distinguishable in point of time from the present. It is thus the equivalent of imperfect, aorist, and present; and it occurs coördinated with them all.

Examples are: of perfect with present, *nā cṛāmyanti nā vī muñcanti ēte vāyo nā paptuḥ* (RV.), 'they weary not nor stop, they fly like birds'; *sē 'd u rājū kṣayati carṣaṇinām arān nā nemīḥ pāri tā bahūva* (RV.), 'he in truth rules king of men; he embraces them all, as the wheel the spokes'; — of perfect with aorist, *ūpo ruruce yuvatīr nā yōsā . . . ābhūd agnīḥ samāthe mānuṣūṇām ākar jyōtir bādhamānā tāmānsi* (RV.), 'she is come beaming like a young maiden; Agni has appeared for the kindling of mortals; she hath made light, driving away the darkness'; — of perfect with imperfect, *āhann āhim ānv apās tatarda* (RV.), 'he slew the dragon, and penetrated to the waters'. This last combination is of constant occurrence in the later language.

## CHAPTER XI.

## THE AORIST SYSTEMS.

824. UNDER the name of aorist are included (as was pointed out above, 532) three quite distinct formations, each of which has its sub-varieties: namely,

I. A SIMPLE-AORIST (equivalent to the Greek "second aorist"), analogous in all respects as to form and inflection with the imperfect. It has two varieties: 1. the root-aorist, with a tense-stem identical with the root (corresponding to an imperfect of the root-class, I.); 2. the *a*-aorist, with a tense-stem ending in ऋ *á*, or with union-vowel अ *a* before the endings (corresponding to an imperfect of the *á*-class, VII.).

II. 3. A REDUPLICATED AORIST, perhaps in origin identical with an imperfect of the reduplicating class (II.), but having come to be separated from it by marked peculiarities of form. It usually has a union-vowel अ *a* before the endings, or is inflected like an imperfect of one of the *a*-classes; but a few forms occur in the Veda without such vowel.

III. A SIBILANT-AORIST (corresponding to the Greek "first aorist"), having for its tense-sign a ण् *s* added to the root, either directly or with a preceding auxiliary ङ् *i*; its endings are usually added immediately to the tense-sign, but in a small number of roots with a union-vowel अ *a*; a very few roots also are increased by ण् *s* for its formation; and according to these differences it falls into four varieties: namely, A. without union-vowel अ *a* before endings: 4. *s*-aorist, with ण् *s* alone added to the root; 5. *iṣ*-aorist, the same with interposed ङ् *i*; 6. *siṣ*-aorist, the same as the preceding with ण् *s* added at the end of the root; B. with union-vowel अ *a*, 7. *sa*-aorist.

825. All these varieties are bound together and made into a single complex system by certain correspondences of form and meaning. Thus, in regard to form, they are all alike, in the indicative, augment-preterits to which there does not exist any corresponding present; in regard to meaning, although in the later or classical language they are simply preterits, exchangeable with imperfects and perfects, they all alike have in the older language the general value of a completed past or "perfect", translatable by 'have done' and the like.

826. The aorist-system is a formation of very infrequent occurrence in the classical Sanskrit (its forms are found, for example, only twenty-one times in the Nala, eight in the Hitopadeça, seven in Manu, six each in the Bhagavad-Gītā and Çakuntalā), and it possesses no participle, nor any modes (excepting in the prohibitive use of its augmentless forms: see 580; and the so-called precativ: see 921 ff.); in the older language, on the other hand, it is quite common, and has the whole variety of modes belonging to the present, and sometimes participles. Its description, accordingly, must be given mainly as that of a part of the older language, with due notice of its restriction in later use.

827. In the RV., nearly half the roots occurring show aorist forms, of one or another class; in the AV., rather less than one third; and in the other texts of the older language comparatively few aorists occur which are not found in these two.

More than fifty roots, in RV. and AV. together, make aorist forms of more than one class (not taking into account the reduplicated or "causative" aorist); but no law appears to underlie this variety; of any relation such as is taught by the grammarians, between active of one class and middle of another as correlative, there is no trace discoverable.

Examples are: of classes 1 and 4, *adhām* and *dhāsus* from  $\sqrt{dhā}$ , *ayuji* and *ayukṣata* from  $\sqrt{yuj}$ ; — of 1 and 5, *agrabham* and *agrabhīṣma* from  $\sqrt{grabh}$ , *mṛṣthās* and *mṛṣiṣthās* from  $\sqrt{mṛṣ}$ ; — of 1 and 2, *ārta* and *ārat* from  $\sqrt{r}$ ; — of 2 and 4, *avidam* and *avitsi* from  $\sqrt{vid}$  'find', *anijam* and *anūḷkṣit* from  $\sqrt{nij}$ ; — of 2 and 5, *sanēma* and *asāniṣam* from  $\sqrt{san}$ ; — of 2 and 7, *aruham* and *arukṣat* from  $\sqrt{ruh}$ ; — of 4 and 5, *amatsus* and *amūdiṣus* from  $\sqrt{mad}$ ; — of 4 and 6, *hāsmahi* and *hāsiṣus* from  $\sqrt{hā}$ ; — of 1 and 2 and 4, *atnata* and *atanat* and *atān* from  $\sqrt{tan}$ ; — of 1 and 4 and 5, *abudhran* and *abhutsi* and *bodhiṣat* from  $\sqrt{budh}$ , *astar* and *stṛṣya* and *astarīs* from  $\sqrt{str}$ . Often the second, or second and third, class is represented by only an isolated form or two.

### I. Simple Aorist.

828. This is, of the three principal divisions of aorist, the one least removed from the analogy of forms already explained; it is like an imperfect, of the root-class or of the *á*-class, without a corresponding present indicative, but with (more or less fragmentarily) all the other parts which go to make up a complete present-system.

#### 1. Root-aorist.

829. This formation is in the later language limited to a few roots in *आ ā* and the root *भू bhū*, and is allowed to be made in the active only, the middle using instead the *s*-aorist (4), or the *iṣ*-aorist (5).

The roots in *आ ā* take *उम् us* as 3d pl. ending, and, as usual, lose their *आ ā* before it; *भू bhū* (as in the perfect: 793 a) retains its vowel unchanged throughout, inserting *व् v* after it before the endings *अम् am* and *अन् an* of 1st sing. and 3d pl. Thus:

	s.	d.	p.	s.	d.	p.
1	अदाम् <i>ádām</i>	अदाव <i>ádāva</i>	अदाम् <i>ádāma</i>	अभवम् <i>ábhūvam</i>	अभव <i>ábhūva</i>	अभम् <i>ábhūma</i>
2	अदान् <i>ádās</i>	अदातम् <i>ádātam</i>	अदात <i>ádāta</i>	अभन् <i>ábhūs</i>	अभतम् <i>ábhūtam</i>	अभत् <i>ábhūta</i>
3	अदात् <i>ádāt</i>	अदाताम् <i>ádātām</i>	अदुन् <i>ádus</i>	अभूत् <i>ábhūt</i>	अभूताम् <i>ábhūtām</i>	अभूवन् <i>ábhūvan</i>

For the classical Sanskrit, this is the whole story.

830. In the Veda, these same roots are decidedly the most frequent and conspicuous representatives of the formation: especially the roots *गā, dā, dhā, pā* 'drink', *sthā, bhū*; while sporadic forms are made from *ज्ञā, prā, sā, hā*. As to their middle forms, see below, 834 a.

Instead of *abhūvam*, RV. has twice *abhuvam*.

831. But aorists of the same class are also made from a number of roots in *र*, and a few in *i* and *u* (short or long) — with, as required by the analogy of the tense with an imperfect of the root-class, *गुण*-strengthening in the three persons of the singular.

Thus (in the active), from *√cru*, *अक्रवाम* and *अकरोत्*; from *√cri*, *अक्रेस* and *अक्रेत्*; from *√kr* 'make', *अकाराम* and *अकरोत्* (for *अकरोत्* and *अकरोत्*); from

*vṛ* 'enclose', *āvar* (585); and so *adar*, *astar*, *aspar*. Dual and plural forms are much less frequent than singular; but for the most part they also show an irregular strengthening of the root-vowel: thus (including augmentless forms); *akarma* and *akarta*, *varitam*, *spartam*, *ahema* and *ahetana*, *bhema*, *homa*, *açravan*; regular are only *avran*, *akran*, *ahyan*, *açriyan*, and *anītām*.

832. Further, from a few roots with medial (or initial) vowel capable of *guṇa*-strengthening, and having in general that strengthening only in the singular.

Thus, *abhet* (2d and 3d sing.) from  $\sqrt{bhid}$ ; *amok* (3d sing.) from  $\sqrt{muc}$ ; *avart* from  $\sqrt{vrt}$ ; *vark* from  $\sqrt{vrj}$  (AV. has once *avrk*); *adarçam* from  $\sqrt{drç}$ ; and *adrçan*, *avrjan*, *açvitan*. But *chedma*, with *guṇa*, from  $\sqrt{chid}$ .

833. Again, from a larger number of roots with *a* as radical vowel:

Of these, *gam* (with *n* for *m* when final or followed by *m*: 143, 212) is of decidedly most frequent occurrence, and shows the greatest variety of forms: thus, *agamam*, *agan* (2d and 3d sing.), *agamma*, *aganta* (strong form), *agman*. The other cases are *akran* from  $\sqrt{kram}$ ; *atan* from  $\sqrt{tan}$ ; *askan* from  $\sqrt{skand}$ ; *ásrat* from  $\sqrt{srañs}$  (? VS.); *dhak* und *daghma* from  $\sqrt{dagh}$ ; *ānaç* (585) and *anaçtām* from  $\sqrt{naç}$  (?); *akšan* (for *agh-san*, like *agman*) from  $\sqrt{ghas}$ ; and the 3d pl. in *us*, *ákramus*, *kramus*, *ayamus*, *yamus*, *abādhus*, *dabhús*, *nṛtus* (impf.?): *mandús* and *takšus* are perhaps rather to be reckoned as perfect forms without reduplication (790 b).

834. So far only active forms have been considered. In the middle, a considerable part of the forms are such as are held by the grammarians (881) to belong to the *s*-aorist, with omission of the *s*: they doubtless belong, however, mostly or altogether, here. Thus:

a. From roots ending in vowels, we have *adhithās* and *adhita*; *adita* and *adimahi* (and *adīmahi* from  $\sqrt{dā}$  'cut'); *asthithās* and *asthita* and *ásthiran*, forms of *ā*-roots (*arādhvam* is doubtless for *arūsdhvam*); — of *ṛ*-roots, *akri*, *akṛthās*, *akṛta*, *akrūtām*, *akrata*; *avri*, *avṛthās*, *avṛta*; *ūrta* (with augmentless *arta*), *ūrata*; *mṛthās*, *amṛta*; *dhṛthās*; *dṛthās*; *astrta*; *asṛta*; *gūrta*; — of *i* and *u* roots, the only examples are *ahvi* (? AV., once) and *acidhvam*. The absence of any analogies whatever for the omission of a *s* in such forms, and the occurrence of *avri* and *akri* and *akrata*, show that their reference to the *s*-aorist is without sufficient reason.

b. As regards roots ending in consonants, the case is more questionable, since loss of *s* after a final consonant before *thās* and *ta* (and, of course, *dhvam*) would be in many cases required by euphonic rule (233). We find, however, such unmistakable middle inflection of the root-aorist as *ayuji*, *ayukthās*, *ayukta*, *ayujmahi*, *ayugdhvam*, *áyujran*; *āṣta* and *āçata*; *apadi* (1st sing.) and *apadmahi* and *apadran*; *amanmahi*; *aganmahi* and *agmata*; *atnata*; *ajani* (1st sing.) and *ajñata* (3d pl.); from  $\sqrt{gam}$  are made *agathās* and *agata*, and from  $\sqrt{man}$ , *amata*, with treatment of the final like that of *han* in present inflection (637). The ending *ran* is especially frequent in

3d pl., being taken by a number of verbs which have no other person of this aorist: thus, *agr̥bhran*, *ásr̥gran*, *adr̥cran*, *abudhran*, *úr̥tran*, *ajuśran*, *akr̥pran*, *aspr̥dhran*, *awasran*, *úv̥cran*; and *ram* is found beside *ran* in *adr̥cram*, *ábudhran*, *ásr̥gram*.

c. From roots of which the final would combine with *s* to *kṣ*, it seems more probable that aorist-forms showing *k* (instead of *ṣ*) before the ending belong to the root-aorist: such are *amukthās* (and *amugdhvam*), *aprkthās* and *aprkta*, *abhakta*, *avr̥kta*, *asakthās* and *asakta*, *rikthās*, *vikthās* and *vikta*; *áspasta*, *asr̥sta*, *m̥r̥sthās* would be the same in either case.

d. There remain, as cases of doubtful belonging: *amatta*, *arab̥dha*, *asr̥pta*, *ataphthās*, *chitthās*, *patthās*, and *nutthās*.

### Modes of the Root-aorist.

835. In subjunctive use, forms identical with the augmentless indicative of this aorist are much more frequent than the more proper subjunctives. Those to which no corresponding form with augment occurs have been given above; the others it is unnecessary to report in detail.

836. Of true subjunctives, the forms with primary endings are quite few. In the active, *gāni* is the only example of 1st sing. (as to *bhuvāni*, see below); of 3d sing. occur *sthāti*, and *dāti* and *dhāti*, which are almost indicative in use; of dual persons, *sthāthas*, *dar̥cathas*, *cr̥avathas* and *cr̥á-vatas*. In the middle, 3d sing. *idhaté* (? anomalous accent), 2d du. *dhēthe* and *dhūithe*, and 1st pl. *dhūmahe*.

Forms with secondary endings are, in the active, *dār̥cam*; *tár̥das*, *párcas*, *yámas*; *karat*, *garat*, *daghat*, *yamat*, *yodhat*, *cr̥ávat*, *spárat*, *sághat*; *dár̥can*, *garan*, *yaman*. No middle forms are classifiable with confidence here.

The series *bhuvam*, *bhúvas*, *bhúvat*, *bhúvan*, and *bhuvāni* (compare *abhuvam*: 830, end), and the isolated *cr̥ávat*, are of doubtful belongings; with a different accent, they would seem to be of the next class; here, a *guṇa*-strengthening would be more regular (but note the absence of *guṇa* in the aorist indicative and the perfect of  $\sqrt{bhū}$ ).

837. As regards the optative, we have to distinguish between pure optatives and optatives with *s* inserted before the endings, or precatives.

Pure optative forms, both active and middle, are made from a number of roots. From roots in *ā* occur in the active, with change of *ā* to *e* before the *y*, *deyām*, *dheyām* and *dheyus*, *stheyāma*, and *jñeyās* (which might also be precative); in the middle, only *śimahi* and *dhīmahi* (which might be augmentless preterit, as *adhīmahi* also occurs once, and *adhītām* once: but  $\sqrt{dhā}$  shows nowhere else conversion of its *ā* to long *ī*). From *bhū*, *bhūyās* and *bhūyāt* (possible precatives), and *bhūyāma*. From roots in *r*, the middle forms *ar̥ita*, *muriya*, *vir̥ita*. From roots ending in consonants, *açyām* and *açyāma* act., and *açīya* and *açīmāhi* mid. (this optative is especially common in the older texts); *v̥r̥jyām*; *m̥r̥dhyās*, *sahyās*, *gamyās* and *gamyāt* (possible precatives), and *sāhyāma*; *indhīya*, *gmīya*, *rucīya*, *vasīya*; *idhīmahi*, *naçīmahi*, *naçīmāhi*, *pr̥cīmahi*, *pr̥cīmāhi*, *yamīmahi*. And *rdhyām* etc. and *rdhīmāhi* belong perhaps here, instead of to a present-system (cl. I.).

**838.** Precative optative forms of this aorist active are in the later language allowed to be made from every verb (822). In RV., however, they do not occur from a single root which does not show also other aorist forms of the same class. They are, indeed, of very limited use: thus, in 3d sing. act. (ending in *-yās* for *-yāst*), we find *avyās*, *açyās*, *daghyās*, *bhūyās*, *yamyās*, *yūyās*, *vṛjyās*, *çrūyās*, *sahyās* (RV. has no 3d sing. in *-yāt*); and besides these and the 2d sing. in *yās* (given in the preceding paragraph), which might be of either formation, occur in the active only *bhūyāsam* (beside *bhūyāma*) and *kriyāsma*, each once. In the middle, RV. furnishes the three forms *grabhīṣta*, *padīṣta*, *mucīṣta*; nothing additional is found in any other text. From the AV. on, the active precative forms are more frequent than the pure optative (which are not wholly unknown, however); they are nowhere common, excepting as made from  $\sqrt{bhū}$ ; and from no other root is anything like a complete series of persons quotable (only *bhūyāsva* and *bhūyāstām* being wanting; and these persons having no representative from any root). Including the cases already given, they have been noticed as made from about twenty roots, as follows: *çrūyāsam* etc., *kriyāsam* etc., *priyāsam*, *bhriyāsam*, *saghyāsam*, *bhṛjyāsam*, *udyāsam* etc. ( $\sqrt{vad}$ ), *ṛdhyāsam* etc., *rādhyāsam* etc., *badhyāsam* etc., *ṛpyāsma*, *jīvyāsam*, *puṣyāsam* etc. AV. has once *bhūyāstha*, with primary ending, but it is doubtless a false reading (TB. has *-sta* in the corresponding passage). TS. has *didyāsam*, from the quasi-root *didī* (876).

**839.** Imperative forms of the root-aorist are not rare in the early language. In the middle, indeed, almost only the 2d sing. occurs: it is accented either regularly, on the ending, as *krṣvā*, *dhiṣvā*, *yukṣvā*, or on the root, as *mātsva*, *yāksva*, *vāṅsva*, *rāsva*, *sāksva*; *māsva* is not found with accent; the 2d pl. is represented by *krḍhvam*, *voḍhvam*. In the active, all the persons (2d and 3d) are found in use; examples are: 2d sing., *krḍhī*, *çrudhī*, *gadhi*, *yandhī*, *gahi*, *māhi*, *mogdhi*; 3d sing., *dātu*, *aṣtu*, *sōtu*; 2d du., *dātam*, *jitam*, *çrutam*, *bhūtām*, *sptām*, *gatam*, *riktām*; 3d du., only *gantām*, *voḍhām*; 2d pl., *gātā*, *bhūtā*, *çruta*, *kṛta*, *gata*, *dhātana*; 3d pl., only *dhāntu*, *çruvantu*. These are the most regular forms; but irregularities both as to accent and strengthening are not infrequent. Thus, strong forms in 2d du. and pl. are *varktam*, *vartam*; *kārtā*, *gānta*, *yanta*, *vartta*, *heta*, *çrōta*, *sōta*; and, with *tana*, *kārtana*, *gantana*, *yantana*, *sotana*. Much more irregular are *yódhi* (instead of *yuddhī*) from  $\sqrt{yudh}$ , and *bodhī* from both  $\sqrt{budh}$  and  $\sqrt{bhū}$  (instead of *buddhī* and *bhūdhī*). A single form (3d sing.) in *tāt* is found, namely *çastāt*.

As to 2d persons singular in *si* from the simple root used in an imperative sense, see above, 624.

#### Participles of the Root-aorist.

**840.** In the oldest language, of the RV., are found a number of participles which must be reckoned as belonging to this formation.

In the active, they are extremely few: namely *krānt*, *sthānt*, and *bhidānt*, and probably *ṛdhānt*.

In the middle, they are much more numerous: examples are *arāṇā*, *idhānā*, *krāṇā*, *juṣāṇā*, *ḍṛṣānā*, *pṛcānā*, *bhīyānā*, *vṛāṇā*, *spṛdhānā*, *hiyānā*.

Such formations are extremely rare in the later Veda and in the Brāhmaṇa.

841. All together, the roots exhibiting in the older language forms which are with fair probability to be reckoned to the root-aorist-system are very nearly a hundred (more than ninety); about eighty of them make such forms in the RV.

#### Passive Aorist third person singular.

842. A middle third person singular, of peculiar formation and prevaillingly passive meaning, is made from many verbs in the older language, and has become a recognized part of the passive conjugation, being, according to the grammarians, to be substituted always for the regular third person of any aorist middle that is used in a passive sense.

843. This person is formed by adding  $\xi i$  to the root, which takes also the augment, and is usually strengthened.

The ending *i* belongs elsewhere only to the first person; and this third person apparently stands in the same relation to a first in *i* as do, in the middle voice, the regular 3d sing. perfect, and the frequent Vedic 3d sing. present, which are identical in form with their respective first persons. That a fuller ending has been lost off is extremely improbable; and hence, as an aorist formation from the simple root, this is most properly treated here, in connection with the ordinary root-aorist.

844. Before the ending  $\xi i$ , a final vowel, and usually also a medial  $\Xi a$  before a single consonant, have the *vyddhi*-strengthening; other medial vowels have the *guṇa*-strengthening if capable of it (240); after final  $\Xi \bar{a}$  is added  $\bar{u} y$ .

Examples (all of them quotable from the older language) are: from roots ending in  $\bar{a}$ , *ājñāyi*, *ādihāyi*, *āpāyi*; in other vowels, *ācṛāyi*, *āstāvi*, *āhāvi*, *ākāri*, *āstāri*; — from roots with medial *i*, *u*, *r*, *aceti*, *āchedi*, *açeṣi*, *ābodhi*, *āmoçi*, *āyoji*, *ādarçi*, *asarji*, *varhi*; from roots with medial *a* strengthened, *agāmi*, *āpādi*, *ayāmi*, *avāci*, *vāpi*, *āsādi* (these are all the earlier cases): with *a* unchanged, only *ājani* (and RV. has once *jāni*), and, in heavy syllables, *āmyakṣi*, *vandī*, *çaṅsi*; with medial  $\bar{a}$ , *ābhrāji*, *ārūdhī*; — from roots with initial vowel, *ārdhi* (only case).

According to the grammarians, certain roots in *am*, and  $\sqrt{\text{badh}}$ , retain the *a* unchanged: thus, *adami*, *abadhi*; and there are noted besides, from roots sometimes showing a nasal, *arambhi*, *urandhi*, *ajambhi*, *abhañji* or *abhāji*, *alambhi* (always, with prepositions) or *alābhi*: ÇB. has *asañji*.

Augmentless forms, as in all other like cases, are met with, with either indicative or subjunctive value: examples (besides the two or three already

given) are: *dhāyi*, *grāvi*, *bhāri*, *reci*, *vēdi*, *roci*, *jāni*, *pādi*, *sādi*, *ardhi*. The accent, when present, is always on the root-syllable.

845. These forms are made in RV. from forty roots, and all the other earlier texts combined add only about fifteen to the number; in the later language they are (like all the kinds of aorist) very rare. When they come from roots of neuter meaning, like *gam*, *pad*, *sad*, *bhrāj*, *sañj*, etc., they have (like the so-called passive participle in *ta*: 952) a value equivalent to that of other middle forms; in a case or two (RV. vii. 73. 3[?]; VS. xxviii. 15) they appear even to be used transitively.

## 2. The *a*-aorist.

846. This aorist is in the later language allowed to be made from a large number of roots (near a hundred). It is made in both voices, but is rare in the middle, most of the roots forming their middle according to the *s*-class (4) or the *iṣ*-class (5).

Its closest analogy is with the imperfect of the *á*-class (VII.); its inflection is the same with that in all particulars; and it takes in general a weak form of root — save the roots in *ऋ* *r* (three or four only), which have the *guna*-strengthening.

As example of inflection may be taken the root *सिच्*, *sic*, 'pour': thus,

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1	असिचम् <i>ásicam</i>	असिचाव <i>ásicāva</i>	असिचाम <i>ásicāma</i>	असिचे, <i>ásice</i>	असिचावद्दि <i>ásicāvahi</i>	असिचामद्दि <i>ásicāmahī</i>
2	असिचस् <i>ásicas</i>	असिचतम् <i>ásicatam</i>	असिचत <i>ásicata</i>	असिचथास् <i>ásicathās</i>	असिचेथाम् <i>ásicethām</i>	असिचध्वम् <i>ásicadhvam</i>
3	असिचत् <i>ásicat</i>	असिचताम् <i>ásicatām</i>	असिचन् <i>ásican</i>	असिचत <i>ásicata</i>	असिचेताम् <i>ásicetām</i>	असिचन्त <i>ásicanta</i>

847. The *a*-aorist makes in the RV. a small figure beside the root-aorist, being represented by less than half the latter's number of roots. It becomes, however, more common later (it is the only form of aorist which is made from more verbs in AV. than in RV.); and in Veda and Brāhmaṇa together about seventy roots exhibit the formation more or less fully. Of these a large number (fully half) are of the type of the roots which make their present-system according to the *á*-class (VII.), having a vowel capable of *guna*-strengthening before a final consonant (753): thus, with *i*, *chid*, *bhid*, *nij*, *piṣ*,

*riṣ*, *vid*, 1*çiṣ* (*cās*), 2*çiṣ*, *çvit*, *sic*, *sridh*; — with *u*, *krudh*, *kṣudh*, *duṣ*, *dyut*, *druh*, *puṣ*, *budh*, *bhuḥ*, *muc*, *muṣ*, *yuḥ*, *rudh*, *muh*, *ruh*, *çuc*; — with *ṛ*, *ṛdh*, *kṛt*, *grdh*, *trp*, *trṣ*, *trh*, *drp*, *drç*, *mṛṣ*, *vṛj*, *vṛt*, *vṛdh*, *sṛp*. A small number end in vowels: thus, *ṛ*, *kṛ*, *gr*, *sṛ* (which have the *guṇa*-strengthening throughout), *hi* (? *ahyat* once in AV.), *stu* (? *stuvātām*, 3d sing. impv. mid., once in AV.); and several in *ā*, apparent transfers from the root-class by the weakening of their *ā* to *a*: thus, *khyā*, *hvā*, *vyā*, *çvā*, and (in RV. only) *dā* and *dhā*. A few have a penultimate nasal in the present and elsewhere, which in this aorist is lost: thus, *bhrañç*, *srañs*, *krand*, *manth*, *randh*. Of less classifiable character are *kram*, *gam*, *tam*, *çam*, *çram*, *tan*, *van*, *san*, *sad*, *rūdh*, *dabh*, *sap*, *āp*, *ir*, *das*, *çak*. The anomalous *āsthām* is the aorist of *as* 'throw'. The roots *pat*, *naç*, *vac* form the tense-stems *papta*, *neça*, *voca*, of which the first is palpably and the other two are probably the result of reduplication; but the language has lost the sense of their being such, and makes other reduplicated aorists (3) from the same roots (see below, 854).

848. The inflection of this aorist is in general so regular that it will be sufficient to give only examples of its Vedic forms. We may take as model *avidam*, from *√vid* 'find', of which the various persons and modes are more frequent and in fuller variety than those of any other verb. Only the forms actually quotable are instanced; those of which the examples found are from other verbs than *vid* are bracketed. Thus:

	active.		middle.		
s.	d.	p.	s.	d.	p.
1 <i>ávidam</i>	<i>ávidāva</i>	<i>ávidāma</i>	<i>ávide</i>	[ <i>ávidāvahi</i> ]	<i>ávidāmahi</i>
2 <i>ávidas</i>		[ <i>avidata</i> ]	[ <i>ávidathās</i> ]		
3 <i>ávidat</i>		<i>ávidan</i>	[ <i>avidata</i> ]	[ <i>avidetām</i> ]	<i>ávidanta</i>

The middle forms are rare in the earlier language, as in the later: we have *áhve* etc., *ákhye* etc., *ávide* (?) and *avidanta*, *avocathās* and *avocāvahi* (and *avidāmahe* GB. and *asicāmahe* KB. are doubtless to be amended to *mahi*).

Augmentless forms, with indicative or subjunctive value, are not infrequent. Examples, showing accent on the tense-sign, according to the general analogies of the formation, are *ruhām*, *sṛpas*, *bhuḥjāt*, *vidát*, *aratām*, *vocata*, *çakan*; *vidata* (3d sing.), *arāmahi*, *çişāmahi*, *vidánta*, *budhánta*, *mṛsanta* (for exceptions as regards accent, see below, 853).

#### Modes of the *a*-aorist.

849. The subjunctive forms of this aorist are few; those which occur are instanced below, in the method which was followed for the indicative:

1	[ <i>vidāva</i> ]	<i>vidāma</i>	[ <i>vidāmahe</i> ]
2	{ <i>vidāsi</i> <i>vidās</i>	<i>vidāthas</i>	<i>vidātha</i>
3	<i>vidāt</i>		[ <i>vidātāi</i> ?]

The ending *thana* is found once, in *riṣāthana*. Of middle forms occur only *çṣātāi* (AV.: but doubtless misreading for *çṣyātāi*) and *çişāmahe* (AV., for RV. *çişāmahi*).

850. The optatives are few in the oldest language, but become more frequent, and in the Brāhmaṇas are not rare. Examples are: in active, *vidéyam*, *sanéyam*; *vidés*, *games*; *gamet*, *vocet*; *gametam*; *çakéma*, *sanéma*; *vareta*; in middle, (only) *videya*; *gamemahi*, *vanemahi*.

A single middle precative form occurs, namely *videṣṭa* (AV., once); it is so isolated that how much may be inferred from it is very questionable.

851. A complete series of active imperative forms are made from  $\sqrt{\text{sad}}$  (including *sadatana*, 2d pl.), and the middle *sadantām*. Other imperatives are very rare: namely, *sāra*, *ruha*; *ruhātam*, *vidātam*; *khyāta*; and, in middle, *stuvatām* (?).

### Participles of the *a*-aorist.

852. The active participles *ṭpānt*, *rudhānt*, *vṛdhānt*, *çiṣānt*, *çucānt*, *huvānt*, *sāvānt*, and (in participial compounds, 1309) *kṛtānt*-, *guhānt*-, *vidānt*- (all RV.) are to be assigned with plausibility to this aorist.

Likewise the middle participles *vṛdhānā*, *sridhānā*, *huvānā*; and perhaps also *vipānā* and *çubhānā*, although no personal forms corresponding to them occur.

### Irregularities of the *a*-aorist.

853. A few irregularities and peculiarities may be noticed here.

The roots in  $\mathfrak{r}$ , which (847) show a strengthening like that of the present of the sixth or unaccented *a*-class, have also the accent on the radical syllable, like that class: thus, from  $\sqrt{\mathfrak{r}}$ , *āranta* (augmentless 3d pl.), *sārat* and *sāra*. The root *sad* follows the same rule: thus, *sādatam* and from  $\sqrt{\text{san}}$  are found *sānas* and *sānat* and *sānema*, beside *sanéyam* and *sanéma*. It is questionable whether these are not true analogues of the sixth-class (unaccented *a*-class) present-system. On the other hand, *rūhat* (beside *ruhām*, *ruhāva*, *ruhātam*) and *rīṣat* (only accented form) are anomalies. From  $\sqrt{\text{vac}}$ , the optative is accented *vocéyam*, *vocéma*, *vocéyus*; elsewhere the accent is on the root-syllable: thus, *vóce*, *vócat*, *vócati*, *vócantā*.

854. The stem *voc* has in Vedic use well-nigh assumed the value of a root; its forms are very various and of frequent use, in RV. especially far outnumbering in occurrences all other forms from  $\sqrt{\text{vac}}$ . Besides those already given, we find *vocū* (1st sing. impv.) and *vocūti*, *vocūvahūi*; *voces*, *voceya*, *vocemahi*; *vocatūt* (2d sing.), *vocatu*, *vocatam*, *vocata*.

Of the stem *neç* from  $\sqrt{\text{naç}}$  only *neçat* occurs.

The root *çūs* (as in some of its present forms: 639) is weakened to *çiṣ*, and makes *açīṣam*.

855. Isolated forms which have more or less completely the aspect of indicative presents are made from some roots beside the aorist-systems of the first two classes. It must be left for maturer research to determine how far they may be relics of original presents, and how far recent productions, made in the way of conversion of the aorist-stem to a root in value.

### II. (3) Reduplicated Aorist.

**856.** The reduplicated aorist is different from the other forms of aorist in that it has come to be attached in almost all cases to the derivative (causative etc.) conjugation in अय *áya*, as the aorist of that conjugation, and is therefore liable to be made from all roots which have such a conjugation, beside the aorist or aorists which belong to their primary conjugation. Since, however, the connection of the two is no formal one (the aorist being made directly from the root, and not from the causative stem), but rather a matter of established association, owing to kinship of meaning, the formation and inflection of this kind of aorist is best treated here, along with the others.

**857.** Its characteristic is a reduplication of the radical syllable, by which it is assimilated, on the one hand, to the imperfect of the reduplicating class (II.), and, on the other hand, to the so-called pluperfect. But the aorist reduplication has taken on a quite peculiar character, with few traces left even in the Veda of a different condition which may have preceded this.

**858.** As regards, indeed, the consonant of the reduplication, it follows the general rules already given (590). And the quality of the reduplicated vowel is in general as in the formations already treated: it needs only to be noted that an *a*-vowel and *r* (or *ar*) are usually (for exceptions, see below, 860) repeated by an *i*-vowel — as they are, to a considerable extent, in the reduplicated present also (660).

But in regard to quantity, this aorist aims always at establishing a diversity between the reduplicating and radical syllables, making the one heavy and the other light. And the preference is very markedly for a heavy reduplication and a light root-syllable — which relation is brought about wherever the conditions allow. Thus:

859. If the root is a light syllable (having a short vowel followed by a single consonant), the reduplication is made heavy.

And this, usually by lengthening the reduplicating vowel, with *ī* for radical *a* or *r* or *l* (in the single root containing that vowel): thus, *arīriṣam*, *adūduṣam*, *aḷiḷanam*, *avivṛdham*, *acīkīpam*. The great majority of aorists are of this form.

If, however, the root begins with two consonants, so that the reduplicating syllable will be heavy whatever the quantity of its vowel, the vowel remains short: thus, *acikṣipam*, *acukrudham*, *atitrasam*, *apispr̥ṣam*.

860. If the root is a heavy syllable (having a long vowel, or a short before two consonants), the vowel of the reduplication is short: and, in this case *अ* *a* or *आ* *ā*, and *ऋ* *r* (if it occurs), are reduplicated by *अ* *a*.

Thus *adidikṣam*, *abubhūṣam*, *adadakṣam*, *adadhāvam*, *atataṅsam*. And, in the rare cases in which a root both begins and ends with two consonants, both syllables are necessarily heavy, notwithstanding the short vowel in the former: thus, *apapraccham*, *acaskandam* (neither, apparently, found in use).

These aorists are not distinguishable in form from the so-called pluperfects (817 ff.).

861. In order, however, to bring about the favored relation of heavy reduplication and light radical syllable, a heavy root is sometimes made light: either by shortening its vowel, as in *avivaçam* from  $\sqrt{vāç}$ , *asīṣadham* from  $\sqrt{sādh}$ , *adidīpam* (K. and later: RV. has *dīdīpas*) from  $\sqrt{dīp}$ , *abibhiṣam* from  $\sqrt{bhiṣ}$ , *asū-sucam* from  $\sqrt{sūc}$ ; or by dropping a penultimate nasal, as in *acikradam* from  $\sqrt{krand}$ , *asiṣyadam* from  $\sqrt{syand}$ .

In those cases in which (1047) an aorist is formed directly from a causal stem in *āp*, the *ā* is abbreviated to *i*: thus, *atiṣṭhip-am* etc., *ajijñīpat*, *jīhipas*, *ajījīpata* (but VS. *ajījapata*); but from *çrap* comes *açīçrapāma* (ÇB.).

862. Examples of this aorist from roots with initial vowel are very rare; the older language has only *āmamat* (or *amamat*) from  $\sqrt{am}$ , and *arpipam* (augmentless) from the causative stem *arp* of  $\sqrt{r}$  — in which latter the root is excessively abbreviated. The grammarians give other similar formations, as *ārcicam* from  $\sqrt{arc}$ , *āubijam* from  $\sqrt{ubj}$ , *ārjham* from  $\sqrt{arh}$ , *ācīkṣam* from  $\sqrt{ikṣ}$ , *ārdidham* from  $\sqrt{rdh}$ . Compare the similar reduplication in desiderative stems: 1029 b.

863. Of special irregularities may be mentioned:

From  $\sqrt{dyut}$  is made *adidyutam* (taking its reduplicating vowel from the *y* instead of the *u*);  $\sqrt{plu}$  makes *apiplavam* (ÇB. etc.).

Some verbs with radical *a* or  $\ddot{r}$  are by the grammarians allowed to reduplicate with either *i* ( $\ddot{i}$ ) or *a*, or even with *a* only. Others are allowed either to retain or shorten a long root-vowel. Details are unnecessary, the whole formation being so rare, and the forms instanced having never been met with in use.

As to *apaptam*, *avocam*, and *aneçam*, see above, 847.

864. The inflection of the reduplicated aorist is like that of an imperfect of the second general conjugation: that is to say, it has the union-vowel  $\text{अ } a$  before the endings, with all the peculiarities which the presence of that vowel conditions. Thus, from  $\sqrt{\text{जन् } jan}$ , 'give birth':

active.		middle.			
s.	d.	p.	s.	d.	p.
1 $\text{अज्ञीजन्म}$ <i>ájñjanam</i>	$\text{अज्ञीजन्वाव}$ <i>ájñjanāva</i>	$\text{अज्ञीजन्मा}$ <i>ájñjanāma</i>	$\text{अज्ञीजन्ते}$ <i>ájñjante</i>	$\text{अज्ञीजन्वावहि}$ <i>ájñjanāvahi</i>	$\text{अज्ञीजन्महि}$ <i>ájñjanāmahi</i>
2 $\text{अज्ञीजन्स}$ <i>ájñjanas</i>	$\text{अज्ञीजन्तम्}$ <i>ájñjanatam</i>	$\text{अज्ञीजन्त}$ <i>ájñjanata</i>	$\text{अज्ञीजन्थाम्}$ <i>ájñjanathās</i>	$\text{अज्ञीजन्थाम्}$ <i>ájñjanethām</i>	$\text{अज्ञीजन्धम्}$ <i>ájñjanadhvam</i>
3 $\text{अज्ञीजन्तु}$ <i>ájñjanat</i>	$\text{अज्ञीजन्ताम्}$ <i>ájñjanatām</i>	$\text{अज्ञीजन्तु}$ <i>ájñjanan</i>	$\text{अज्ञीजन्त}$ <i>ájñjanata</i>	$\text{अज्ञीजन्ताम्}$ <i>ájñjanetām</i>	$\text{अज्ञीजन्त}$ <i>ájñjananta</i>

865. The middle forms are quite rare in the older language (the 3d pl. is decidedly the most common of them, being made from eleven roots; the 3d s. from seven); but all are quotable except 1st and 2d du. — and of the 1st du. no active example occurs.

*Atīlape* appears to be once used (RV.) as 3d sing., with passive sense.

866. A final  $\ddot{r}$  has the *guṇa*-strengthening before the endings: thus, *apīparam*, *atītaras*, *atīdharat*, *avīvaran*. Of similar strengthened forms from  $\ddot{i}$  and *u*-roots are found *apiprayan* (TS.), *abībhayanta* (RV.), *apiplavam* (ÇB.), *acucyavat* (K.); of unstrengthened, *açuçrivat* (GB.). Few roots ending in other vowels than  $\ddot{r}$  make this aorist: see below, 868.

867. Forms of the inflection without union-vowel are occasionally met with: namely, from roots ending in consonants, *sīçvap* (2d sing., augmentless) from  $\sqrt{svap}$ , and *açignat* from  $\sqrt{çnath}$ ; from roots in  $\ddot{r}$  or *ar*, *didhar* (2d sing.), and *açigar* (2d and 3d sing.). Of 3d pl. in *us* are found almost only a form or two from  $\ddot{i}$  and *u*-roots, with *guṇa* before the ending: thus, *açicrayus*, *acucyavus*, *açuçravus*, *asuçavus* (? AB.); but also *abībhajus* (ÇB.). And the 3d pl. mid. *avavṛtran* and *avavṛtranta* and *asavṛgram* seem to belong here rather than to the pluperfect.

868. In the later language, a few roots are said by the grammarians to make this aorist as a part of their primary conjugation: they are *çri* and *çvi*, *dru* and *sru*, *kam*, and *dhā* 'suck' (*çvi* and *dhā* optionally).

In the older language are found from  $\sqrt{\text{çri}}$  *açicret* and *açicrayas* (noticed in the preceding paragraph); from  $\sqrt{\text{dru}}$ , *adudrot* and *adudruvat* (TB.: not used as aorist); from  $\sqrt{\text{sru}}$ , *asusrot* and (augmentless) *susros* and *susrot*. Of forms analogous with these occur a number from roots in *u* or *ū*: thus, *anūnot* and *nūnot* from  $\sqrt{\text{nu}}$ ; *yūyot* from  $\sqrt{\text{yu}}$  'repel'; *dūdhot* from  $\sqrt{\text{dhū}}$ ; *apupot* from  $\sqrt{\text{pū}}$ ; *tūtos* and *tūtot* from  $\sqrt{\text{tu}}$ ; and one or two from roots in *i* or *ī*: thus, *sišet* from  $\sqrt{\text{si}}$  (or *sū*) 'bind'; *apipres* (with *apiprayan*, noticed above) from  $\sqrt{\text{pri}}$  (and the "imperfects" from *didhī* etc., 676, are of corresponding form). And from  $\sqrt{\text{cyu}}$  are made, with union-vowel *ī*, *acucyavīt* and *acucyavītana*. None of these forms possess a necessarily causative or a decidedly aoristic value, and it is very doubtful whether they should not all be assigned to the perfect-system.

#### Modes of the Reduplicated Aorist.

869. As in other preterit formations, the augmentless indicative persons of this aorist are used subjunctively, and they are very much more frequent than true subjunctives.

Of the latter are found only *rīradhā* (1st sing.); *tītapāsi*; *cīklpāti* and *sīśadhāti*, and *piṣṣṛcati* (as if corresponding to an indicative *apiṣṣrk*, like *açicnat*); and perhaps the 1st sing. mid. *çaçvacāī*.

The augmentless indicative forms are accented in general on the reduplication: thus, *dīdharas*, *nīnaças*; *jījanat*, *pīparat*; *jījanan*; also *sīśvap*; but, on the other hand, we have *çicrāthas* and *çiçnāthat*; and *dudrāvat*, *çuçrāvat*, *tuṣṭāvat* (which perhaps belong rather to the perfect: compare 810). According to the native grammarians, the accent rests either on the radical syllable or on the one that follows it.

870. Optative forms are even rarer. The least questionable case is the middle "precativ" *rīriṣīṣṭa* (*rīriṣīṣṭa* has been ranked above with *sūśahīṣṭa*, as a perfect: 812b). *Cucyuvīmahi* and *cucyavīrata* belong either here or to the perfect-system.

871. Of imperatives, we have the indubitable forms *pūpurantu* and *çicrathantu*. And *jigṛtām* and *jigṛtā*, and *dīdṛtam* and *dīdṛtā* (all RV. only), are doubtless to be referred hither, as corresponding to the indicatives (without union-vowel) *aḡgar* and *adīdhar*: their short reduplicating vowel and their accent assimilate them closely to the reduplicated imperfects (cl. II.), with which we are probably to regard this aorist as ultimately related.

872. No participle is found belonging to the reduplicated aorist.

873. The number of roots from which this aorist is met with in the earlier language is about ninety. In the classical Sanskrit it is very unusual; in the whole series of later texts mentioned above (826) it occurs only once.

### III. Sibilant-Aorist.

874. The common tense-sign of all the varieties of this aorist is a स्र् s (convertible to ष्र् ष) which is added to the root in forming the tense-stem.

This sibilant has no analogues among the class-signs of the present-system; but it is to be compared with that which appears (and likewise with or without the same union-vowel *i*) in the stems of the future tense-system (chap. XII.) and of the desiderative conjugation (chap. XIV.).

To the root thus increased the augment is prefixed and the secondary endings are added.

875. In the case of a few roots, the sibilant tense-stem (always ending in स्र् ष) is further increased by an अ *a*, and the inflection is nearly like that of an imperfect of the second general conjugation.

876. In the vast majority of cases, the sibilant is the final of the tense-stem, and the inflection is like that of an imperfect of the first general conjugation.

And these, again, fall into two nearly equal and strongly marked classes, according as the sibilant is added immediately to the final of the root, or with an auxiliary vowel इ *i*, making the tense-sign इष्र् *iṣ*. Finally, before this इष्र् *iṣ* the root is in a very small number of cases increased by a स्र् s, making the whole addition सिष्र् *siṣ*.

877. We have, then, the following classification for the varieties of sibilant-aorist:

- A. With endings added directly to the sibilant:
  4. with स्र् s simply after the root: *s*-aorist;
  5. with इ *i* before the स्र् s: *iṣ*-aorist;
  6. the same, with स्र् s at end of root: *siṣ*-aorist.
- B. With अ *a* added to the sibilant before the endings:
  7. with sibilant and अ *a*: *sa*-aorist.

As regards the distinction between the fourth and fifth forms, it may be said in a general way that those roots incline to take the auxiliary *i* in the aorist which take it also in other formations; but it is impossible to lay

down any strict rules as to this accordance, and also, considering the rarity of aorist-forms in the later language, practically quite useless to attempt the task. See below, 903.

#### 4. The *s*-aorist.

878. The tense-stem of this aorist is made by adding स् *s* to the augmented root, of which also the vowel is usually strengthened.

879. The general rules as to the strengthening of the root-vowel are these:

a. A final vowel (including ऋ *r*) has the *vrddhi*-change in the active, and (excepting ऋ *r*) *guna* in the middle: thus, from √नी, active stem अनेप् *anāis*, middle stem अनेप् *aneṣ*; from √श्रु *śru*, अश्रौप् *aśrāuṣ* and अश्रौप् *aśroṣ*; from √कृ *kr*, अकार्ष् *akārṣ* and अकृप् *akṛṣ*.

b. A medial vowel has the *vrddhi*-change in the active, and remains unaltered in the middle: thus, from √चन्द् *chand*, active stem अचान्त् *achānts*, middle stem अचान्त् *achants*; from √रिच् *ric*, अरिन्त् *arāikṣ* and अरिन्त् *ariks*; from √रुध् *rudh*, अरौत् *arāuts*, and अरुत् *aruts*; from √सृज् *srj*, असृजन्त् *asṛākṣ* and असृजन्त् *asṛkṣ*.

880. The endings are the usual secondary ones, with उस् *us* (not अन् *an*) in 3d pl. act., and अत *ata* (not अन्त *anta*) in 3d pl. mid.

But before स् *s* and त् *t* of 2d and 3d sing. act. is in the later language always inserted an ई *i*, making the endings ईस् *īs* and ईत् *īt*.

This insertion is unknown in the earliest language (of the RV.): see below, 888.

881. Before endings beginning with *t* or *th*, the tense-sign *s* is (233 b) omitted after the final consonant of a root — unless this be *r*, or *n* or *m* (converted to *anusvāra*).

The same omission is of course made before *dhvam*, after either vowel or consonant; and the ending becomes *dhvam*, provided the sibilant, if retained, would have been *s*: thus, *astodhvam* and *avṛdhvam* (beside *astoṣata* and *avṛṣata*), but *arūdhvam* (beside *arūsata*). These three are the only test-cases for the form of the ending which have been noted in the older language,

except *arḍhvam* ( $\sqrt{dr}$  'regard': ÇB., once), which is to *arṭhās* (2d sing.) as *avṛdhvam* and *avṛṣata* to *avri* and *avṛthās*.

According to the grammarians, the omission of *s* before *t* and *th* takes place also after a short vowel (the case can occur only in the 2d and 3d sing. mid.); but we have seen above (834 a) that this is to be viewed rather as a substitution in those persons of the forms of the root-aorist. Neither in the earlier nor in the later language, however, does any example occur of an aorist-form with *s* retained after a short vowel before these endings.

882. As examples of the inflection of this variety of sibilant aorist we may take the roots  $\sqrt{rudh}$ , 'obstruct', and  $\sqrt{ni}$ , 'lead'. Thus:

active.			middle.		
s.	d.	p.	s.	d.	p.
1 $\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{rudh}$ $\sqrt{rudh}$ $\sqrt{rudh}$	$\sqrt{rudh}$ $\sqrt{rudh}$ $\sqrt{rudh}$	$\sqrt{rudh}$ $\sqrt{rudh}$ $\sqrt{rudh}$
<i>ārāutsam</i>	<i>ārāutsva</i>	<i>ārāutsma</i>	<i>ārutsi</i>	<i>ārutsvahi</i>	<i>ārutsmahi</i>
2 $\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{rudh}$ $\sqrt{rudh}$ $\sqrt{rudh}$	$\sqrt{rudh}$ $\sqrt{rudh}$ $\sqrt{rudh}$	$\sqrt{rudh}$ $\sqrt{rudh}$ $\sqrt{rudh}$
<i>ārāutsis</i>	<i>ārāuttam</i>	<i>ārāutta</i>	<i>ārutthās</i>	<i>ārutsāthām</i>	<i>āruddhvam</i>
3 $\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{rudh}$ $\sqrt{rudh}$ $\sqrt{rudh}$	$\sqrt{rudh}$ $\sqrt{rudh}$ $\sqrt{rudh}$	$\sqrt{rudh}$ $\sqrt{rudh}$ $\sqrt{rudh}$
<i>ārāutsit</i>	<i>ārāuttām</i>	<i>ārāutsus</i>	<i>ārutta</i>	<i>ārutsātām</i>	<i>ārutsata</i>
1 $\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$
<i>ānāīsam</i>	<i>ānāīsva</i>	<i>ānāīśma</i>	<i>āneṣi</i>	<i>āneṣvahi</i>	<i>āneṣmahi</i>
2 $\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$
<i>ānāīṣis</i>	<i>ānāīṣtam</i>	<i>ānāīṣta</i>	<i>āneṣthās</i>	<i>āneṣāthām</i>	<i>āneṣhvam</i>
3 $\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$	$\sqrt{ni}$ $\sqrt{ni}$ $\sqrt{ni}$
<i>ānāīṣit</i>	<i>ānāīṣtām</i>	<i>ānāīṣus</i>	<i>āneṣta</i>	<i>āneṣātām</i>	<i>āneṣata</i>

883. The omission of *s* in the active forms is a case of very rare occurrence. In the older language have been noted only *achānta* (RV.; written *achānta*, by 231), *abhākta* (AB.), and the augmentless *tāptam* and *ṣāpta* (repeatedly in the Brāhmaṇas). The middle forms with omission are indistinguishable from the corresponding ones of the root-aorist; and whether, in the older language, a given form is to be assigned to the one aorist or to the other is a question difficult to settle. Above (834 b—d) were given all the older forms of belongings thus questionable.

884. Certain roots in  $\bar{a}$  weaken the  $\bar{a}$  in middle inflection to *i* (as also in the root-aorist: above, 834 a): these are said to be *sthā*, *dā* (*dā* 'give', and *dā* 'cut' and 'share'), and *dhā* (*dhā* 'put', and *dhā* 'suck'); in the older language have been noted only *ādiṣi* and *ādiṣata* (from *dā* 'give') and *asthiṣata*. TA. has *agiṣata* from  $\sqrt{gū}$  'sing'.

The middle inflection of the aorist of  $\sqrt{dā}$  would be, then,

according to the grammarians; *ádiṣi*, *ádithās*, *ádita*; *ádiṣvahi*, *ádiṣāthām*, *ádiṣātām*; *ádiṣmahi*, *ádiḍhvam*, *ádiṣata*.

885. Roots ending in changeable *r* (so-called roots in *r̄*: 242) are said by the grammarians to convert this vowel to *īr* in middle forms: thus, *astīrṣi*, *astīrṣthās*, etc. (from *ṽstr̄*): hardly any such forms, however, have been found in the older language (only *akīrṣata*, PB.; and, on the contrary, *astr̄ṣi* occurs once, AB.).

886. The *s*-aorist is made in the older language from somewhat over a hundred roots (in RV., from about seventy; in AV., from about fifty, of which fifteen are additional to those in RV.; and the other texts add about twenty more — not counting in any case those of which the forms may be from the root-aorist). It has there certain peculiarities of stem-formation and inflection, and also the full series of modes — of which the optative middle is retained also in the later language as “precative”.

887. Irregularities of stem-formation are:

a. The roots *hū*, *dhū*, and *nū* have *ū* instead of *o* in the middle: thus, *ahūṣata*, *adhūṣata*, *anūṣi* and *anūṣātām* and *anūṣata*; *ṽdhur* (or *dhūro*) makes *adhūrṣata*.

b. From *ṽmad* occurs *amatsus* (RV., once), with unstrengthened vowel.

c. From *ṽgam* occurs *agasmahi*, apparently for *agañsmahi* (compare *masīya*, below, 895).

888. The principal peculiarity of the older language in regard to inflection is the frequent absence of *ī* in the endings of 2d and 3d sing. act., and the consequent loss of the consonant-ending, and sometimes of root-finals (150). The forms without *ī* are the only ones found in RV. and K., and they outnumber the others in AV. and TS.; in the Brāhmaṇas they grow rarer (only one, *adrāk*, occurs in GB. and ÇB.: PB. has none).

889. If the root ends in a vowel, only the consonant of the ending is necessarily lost: thus, *aprās* (for both *aprās-s* and *aprās-t*) from *ṽprā*: and in like manner *ahūs* from *ṽhā*; — *ajūis* (for *ajūis-t*) from *ṽji*; and in like manner *acūis* from *ṽci*, and *nūis* (augmentless) from *ṽnī*; — and *yāus* (for *ayāus-t*) from *ṽyu*.

But (as in other like cases: 555) in 3d sing. the ending *t* is sometimes preserved at the expense of the tense-sign; and we have *ajūit* (beside *ajūis* and *ajūiṣit*) from *ṽji*; and in like manner *acūit*, *açrūit*, *ahūit*, *nūit*: no examples have been noted except from roots in *i* and *ī*.

890. If the root (in either its simple or strengthened form) ends in a consonant, the tense-sign is lost with the ending. Thus, *abhār* (for *abhārṣ-t*: beside *abhārṣam*, *abhārṣtām*) from *ṽbhr̄*; other like cases are *ahār*, and (from roots in *ar*) *akṣār*, *atsār*, *asvār*, *hvār*. Further, *ārūik* (585, end: for *ārūiks-t*) from *ṽric*; like cases are *açvūit* from *ṽçvit*, and (from roots with medial *u*) *adyāut* from *ṽdyut*, *arūit* from *ṽrudh*, and *mūuk* from *ṽmuc*. Further, from roots ending in the palatals and *h*, *aprāk* from *ṽpṛc*, *asrāk* from *ṽsrj*,

*abhāk* from  $\sqrt{bhaj}$ , *adrūk* from  $\sqrt{dṛc}$ , *adhūk* from  $\sqrt{dah}$ ; but, with a different change of the final, *ayāt* from  $\sqrt{yaj}$ , *aprāt* from  $\sqrt{pṛch}$ , and *avāt* from  $\sqrt{vah}$ ; and (above, 146) *srās* appears to stand twice in AV. for *srūs-t* from  $\sqrt{srj}$ : RV. has also twice *ayās* from  $\sqrt{yaj}$ . Further, from roots ending in a nasal, *atān* from  $\sqrt{tan}$ , *khān* from  $\sqrt{khan}$ , *ayān* and *anān* from  $\sqrt{vyam}$  and *nam* (143).

If, again, the root ends in a double consonant, the latter of the two is lost along with tense-sign and ending: thus, *achūn* (for *achānts-t*; beside *achāntta* and *achāntsus*) from  $\sqrt{chand}$ ; and other like cases are *akrān*, *askān*, and *asyān*.

A relic of this peculiarity of the older inflection has been preserved to the later language in the 2d sing. *bhāis*, from  $\sqrt{bhī}$ .

891. Irregularities of inflection do not occur further: *aveṣam* from  $\sqrt{vī}$  is too great an anomaly to be accepted.

#### Modes of the s-aorist.

892. The indicative forms without augment are used in a subjunctive sense, especially after *mā* prohibitive, and are not uncommon. Examples with accent, however, are extremely rare; there has been noted only *rānsi*, middle; judging from this, the tone would be found on the radical syllable. According to the Hindu grammarians, it may be laid on either root or ending.

893. Proper subjunctive forms are not rare in RV., but are markedly less common in the later Vedic texts, and very seldom met with in the Brāhmaṇas. They are regularly made with *guṇa*-strengthening of the radical vowel, in both active and middle, and with accent on the root.

The forms with primary endings are: in active, *stoṣūṇi*; *darṣasi*; *neṣati*, *parṣati*, *pāsati*, *matsati*, *yoṣati*, *vakṣati*, *sakṣati*; *dāsathas*, *dhāsathas*, *pārṣathas*, *vakṣathas*, *varṣathas*; *pāsatas*, *yaṁsatas*, *yakṣatas*, *vakṣatas*; *dhāsatha*, *neṣatha*, *pārṣatha*, *mātsatha*; — in middle, *maṁsūi*, *maṁsūi*; *maṁsase*; *kraṁsate*, *trāsate*, *darṣate*, *mānsate*, *yakṣate*, *rāsate*, *vaṁsate*, *sākṣate*, *hāsate*; *trāsāthe* (not *trāsūithe*, as we should rather expect); *nāṁsante*, *māṁsante*: and, with the fuller ending in 3d sing., *māsūtūi*.

The forms with secondary endings are (active only): *jéṣas*, *vákṣas*; *dárṣat*, *néṣat*, *páksat*, *yákṣat*, *yóṣat*, *vāṁsat*, *vákṣat*, *véṣat*, *sátsat*, *chāntsat*, etc. (14 others); *yakṣatām*; *stoṣāma*; *parṣan*, *yaṁsan*, *yoṣan*, *rāsan*, *vakṣan*, *céṣan*, *crósan*. Of these, *yakṣat* and *vakṣat* are found not rarely in the Brāhmaṇas; any others, hardly more than sporadically.

894. Of irregularities are to be noted the following:

a. The forms *dīkṣase* and *pṛkṣase* (2d sing. mid.) lack the *guṇa*-strengthening.

b. *Jeṣam*, *stoṣam*, and *yoṣam* (AV. *yūṣam*, with *ū* for *o* as in *anūṣata*

etc.) appear to be first persons formed under government of the analogy of the second and third — unless they are relics of a state of things anterior to the *vr̥ddhi*-strengthening: in which case *jeṣma* is to be compared with them (we should expect *jāṣma* or *jeṣāma*).

c. From roots in *ā* are made a few forms of problematic character: namely, *yeṣam* (only case in RV.), *khyeṣam*, *jñeṣam*, *geṣam* and *geṣma*, *deṣma*, *stheṣam* and *stheṣus*. Their value is optative. The analogy of *jeṣam* and *jeṣma* suggests the possibility of their derivation from *i*-forms of the *ā*-roots; or the sibilant might be of a precative character (thus, *yā-ī-s-am*). That they are to be reckoned to the *iṣ*-aorist appears highly improbable.

d. The RV. has a few difficult first persons middle in *se*, which are perhaps best noted here. They are: 1. from the simple root, *kṛse*, *hiṣe* (and *ohiṣe?*), *stuṣé*; 2. from present-stems, *arcase*, *ṛñjase*, *yajase*, *gūyīṣe*, *gr̥nīṣé* and *punīṣé*. They have the value of indicative present. Compare below, 897.

895. Optative forms of this aorist are made in the middle only, and they have in 2d and 3d sing. always the precative *s* before the endings. Those found to occur in the older language are: *diṣīya*, *dhiṣīya*, *bhaksīyā*, *maṣīya* (for *maṅṣīya*), *muṣīya*, *rāṣīya*, *sūṣīya*, *striṣīya*; *maṅṣīsthās*; *darṣīṣta*, *bhaksīṣta*, *maṅṣīṣta*, *mṛkṣīṣta*; *bhaksīmāhi*, *dhuṣīmāhi*, *maṅṣīmāhi*, *vaṅṣīmāhi*, *sakṣīmāhi*; *maṅṣīrata*. PB. has *bhuṣīṣīya*, which should belong to a *siṣ*-aorist. The RV. form *trāsīthām* (for *trāsīyāthām* or *trāsāthām*) is an isolated anomaly.

This optative makes a part of the accepted "precative" of the later language: see below, 921 ff.

896. Imperative persons from this aorist are extremely rare: we find only the 2d sing. act. *neṣa* and *parṣa* (both from *a*-stems, and showing rather, therefore, a treatment of the aorist-stem as a root), and the 3d sing. mid. *rāsatām* and pl. *rāsantām* (of which the same may be said).

#### Participles of the *s*-Aorist.

897. Active participles are *dākṣat* or *dhākṣat*, and *sākṣat* (both RV.).

If *ṛñjase* (above, 894 d) is to be reckoned as an *s*-aorist form, *ṛñjasānā* is an *s*-aorist participle; and of a kindred character, apparently, are *arṣasānā*, *óhasāna*, *ṛayasānā*, *dhiyasānā*, *mandasānā*, *yamasānā*, *rabhasānā*, *vr̥dhasānā*, *sahasānā*, *çavasānā*, all in RV.; with *namasānā*, *bhiyāsāna*, in AV.

#### 5. The *iṣ*-aorist.

898. The tense-stem of this aorist adds the general tense-sign  $\text{ṣ}$  *s* by help of a prefixed auxiliary vowel  $\text{ṣ}$  *i*, making  $\text{ṣṣ}$  *iṣ*, to the root, which is usually strengthened, and which has the augment.

899. The rules as to the strengthening of the root are as follows:

a. A final vowel has *vr̥ddhi* in the active, and *guṇa* in the middle: thus, *अपाविष्* *apāviṣ* and *अपविष्* *apaviṣ* from  $\sqrt{पू}$  *pū*; *अतारिष्* *atāriṣ*, act., from  $\sqrt{तृ}$  *tr̥*; *अशयिष्* *aśayīṣ*, mid., from  $\sqrt{शी}$  *śī*.

b. An interior vowel has *guṇa*, if capable of it, in both voices: thus, *अलेशिष्* *aleśiṣ*, act. and mid., from  $\sqrt{लिष्}$  *liṣ*; *अरोचिष्* *arociṣ* from  $\sqrt{रुच्}$  *ruc*; *अवर्षिष्* *avarṣiṣ* from  $\sqrt{वृष्}$  *vṛṣ*; but *अजीविष्* *ajīviṣ* from  $\sqrt{जीव्}$  *jīv*.

c. Medial *अ* is sometimes lengthened in the active; but it more usually remains unchanged in both voices.

The roots in the older language which show the lengthening are *kan*, *san*, *ran*, *stan*, *taṅs*, *vraj*, *vad*, *mad*, *car*, *tsar*, *hvar*, *jval*, *das*. From *svan* and *sah* occur forms of both kinds.

900. Of exceptions may be noted:  $\sqrt{मृज}$  has (as elsewhere: 627) *vr̥ddhi* instead of *guṇa*: thus, *अमृजिषाम्*;  $\sqrt{स्त्र}$  has *astariṣ*, and  $\sqrt{अरि}$  has *aśarīt* (also *aśarāit* in AV.), with *guṇa* in active.

The root *grabh* or *grah* has (as in future etc., below, 935 d, 956) long *ī* instead of *i* before the sibilant: thus, *अग्रभृषिष्मा*, *अग्रभृषिष्ठा*, *अग्रभृषिष्ता*. The roots in changeable *र* (so-called roots in *ṛ*: 242, and  $\sqrt{वृ}$  are said by the grammarians to do the same optionally; but no forms with long *ī* from such roots are found in the older language.

901. The endings are as in the preceding formation (*उत्* *us* and *अत्* *ata* in 3d pl.). But in 2d and 3d sing., the combination *iṣ-s* and *iṣ-t* are from the earliest period of the language contracted into *ईस्* *īs* and *ईत्* *īt*.

The 2d pl. mid. should end always in *iḍhvam* (or *iḍḍhvam*, from *iṣ-dhvam*: 232); and this is in fact the form in the only examples quotable from the older language, namely *अजानिḍhvam* and *अरिḍhvam* and *अइन्दिḍhvam*; but the grammarians give rules by which the lingual *ḍh* is optional only, and that after *i* preceded by *g*, *r*, *l*, *v*, *h*.

902. As examples of the inflection of the *iṣ*-aorist may be taken the roots  $\sqrt{पू}$  *pū*, 'purify', and  $\sqrt{बुध्}$  *budh*, 'awake'. Thus:

	active.		middle.			
	s.	d.	p.	s.	d.	p.
1	अपाविषम्	अपाविष	अपाविष्म	अपविषि	अपविष्वहि	अपविष्महि
	<i>āpāviṣam</i>	<i>āpāviṣa</i>	<i>āpāviṣma</i>	<i>āpaviṣi</i>	<i>āpaviṣvahi</i>	<i>āpaviṣmahī</i>

2	अपावीम् <i>ápāvis</i>	अपाविष्टम् <i>ápāviṣṭam</i>	अपाविष्ट <i>ápāviṣṭa</i>	अपाविष्टान् <i>ápaviṣṭhās</i>	अपाविष्टानाम् <i>ápaviṣṭāthām</i>	अपाविष्टवम् <i>ápaviṣṭhvam</i>
3	अपावीत् <i>ápāvit</i>	अपाविष्टाम् <i>ápāviṣṭām</i>	अपाविष्टुम् <i>ápāviṣṭus</i>	अपाविष्ट <i>ápaviṣṭa</i>	अपाविष्टानाम् <i>ápaviṣṭāthām</i>	अपाविष्टत <i>ápaviṣṭata</i>
1	अबोधिषम् <i>ábodhiṣam</i> etc.	अबोधिष्व <i>ábodhiṣva</i> etc.	अबोधिष्म <i>ábodhiṣma</i> etc.	अबोधिषि <i>ábodhiṣi</i> etc.	अबोधिष्वहि <i>ábodhiṣvahi</i> etc.	अबोधिष्महि <i>ábodhiṣmahi</i> etc.

903. The number of roots from which forms of this aorist have been noted in the older language is about a hundred and twenty (in RV., about eighty; in AV. more than thirty, of which a dozen are additional to those in RV.; in the other texts, nearly thirty more). Among these are no roots in *ā*; but otherwise they are of every variety of form (rarest in final *i* and *ī*). Active and middle persons are freely made; but very sparingly from the same root (only about fifteen roots have both active and middle forms, and of these a part only exceptionally in the one voice or the other).

No rule appears to govern the choice of usage between the *iṣ* and the *s*-aorist; and in no small number of cases (more than a fifth of all), the same root shows forms of both classes.

904. Irregularities of the older language are to be noticed as follows:

a. The contracted forms *akramim*, *agrabhim*, and *avadhim* (with augmentless *vādhim*) are found in 1st sing. act.

b. For *ācarit* occurs in AV. *ācarūit*; also (in a part of the MSS.) *ṣarūis* for *ṣaris*: *agrahūṣam* is found in AB. (also the monstrous form *ajagrabhāṣam*: see 801 i).

c. From *√vad* is found *vadiṣma* (once, AB.), with short root-vowel. AV. has *nudiṣṭhās*, without *guṇa*.

d. The forms *atūrima* (RV.) and *avādiran* (AV.), though they lack the sibilant, are perhaps to be referred to this aorist.

e. *Ajayit*, with short *i* in the ending, occurs in TS.

#### Modes of the *iṣ*-aorist.

905. As usual, augmentless indicative forms of this aorist are more common than proper subjunctives. Examples, of all the persons found to occur (and including all the accented words), are, in the active: *ṣānsiṣam*, *vādhim*; *māthiṣ*, *vādhis*, *yāvīs*, *sāvīs*; *āvī*, *jūrvī*, *māthī*, *vādhī*, *veçī*; *mardhiṣtam*, *doṣiṣtam*, *hiṁsiṣtam*; *aviṣṭām*, *jāniṣṭām*, *bādhīṣṭām*; *ṣramiṣma*, *vādīṣma*; *vadhīṣta* and *vadhīṣtana*, *mathiṣṭana*, *hiṁsiṣta*; *hvāriṣus*, *grahiṣus*; — in the middle: *rādhiṣi*; *jāniṣṭhās*, *marṣiṣṭhās*, *vyathiṣṭhās*; *krāmiṣta*, *jāmiṣta*, *paviṣta*, *prāthiṣta*, *māndiṣta*; *vyathiṣmahi*. The accent is on the root-syllable (*tāriṣūs*, AV. once, is probably an error).

906. Of subjunctive forms with primary endings occur only the 1st sing. act. *daviṣāṇi*, and the 1st pl. mid. (with unstrengthened *e*) *yāciṣāmahe* and *saniṣāmahe*.

Forms with secondary endings are almost limited to 2d and 3d sing. act. There are found: *aviṣas*, *kāniṣas*, *tāriṣas*, *rakṣiṣas*, *vādhiṣas*, *vādiṣas*, *vēṣiṣas*, *ṣāniṣas*; *kāriṣat*, *jambhiṣat*, *jōṣiṣat*, *tāriṣat*, *nāndiṣat*, *pāriṣat*, *bōdhiṣat*, *mārdhiṣat*, *yāciṣat*, *yodhiṣat*, *rakṣiṣat*, *vaniṣat*, *vyathiṣat*, *ṣāniṣat*, *sāniṣat*, *sāviṣat*. They are made, it will be noticed, with entire regularity, by adding *a* to the tense-stem in *iṣ* before the endings. The only other persons found to occur are the 3d pl. act. *saniṣan* and mid. *sāniṣanta*, which are also regular. *Bhaviṣāt* (AB. once) is a solitary example of a form with double mode+sign. The radical syllable always has the accent, and its vowel usually accords with that of the indicative: but we have *san-* in the subjunctive against *asāniṣam* (as to *cay-* and *ran-*, see below, 908).

907. The middle optative of this aorist also forms a part of the accepted "precative" of the later language. It is very rare at all periods, being made in RV. from only five roots, and in AV. from two of the same and from three additional ones (six of the eight have other *iṣ*-forms); and the remaining texts add, so far as noticed, only four other roots. All the forms found to occur are as follows: *janiṣiṣya*, *indhiṣiṣya*, *edhiṣiṣyā*, *ruciṣiṣya* and *rociṣiṣya*, *gmiṣiṣya*; *modiṣiṣthūs*; *janiṣiṣta*, *vaniṣiṣta*; *sahiṣiṣvahi*; *edhiṣimāhi*, *janiṣimahi*, *tāriṣimahi*, *mandiṣimahi*, *vandiṣimāhi*, *vardhiṣimāhi*, *sahiṣimahi* and *sūhiṣimāhi*. The accent is on the ending, and this would lead us to expect a weak form of root throughout; but the usage in this respect appears to be various, and the cases are too few to allow of setting up any rule.

908. Of imperative forms, we have from *√av* a series: namely, *aviṣdhi*, *aviṣtu*, *aviṣtām*, *avitā* (if this, as seems probable, stands anomalously for *aviṣtā*) and *aviṣtāna*: two of these are of unmistakably imperative form. Other forms occur only in 2d du. and 2d pl., and are accordingly such as might also be subjunctives used imperatively (which is further made probable for two of them by their accentuation on the root-syllable): they are *kramiṣtām*, *gamiṣtām*, *cayīṣtām* (against *acāyiṣam*), *tāriṣtām*, *yodhiṣtām*, *vadhiṣtām*, *ṣnathiṣtām*; *rāniṣtāna* (against *arāniṣus*), *ṣnathiṣtāna*.

909. No words having a participial ending after *iṣ* are found anywhere to occur.

910. This is the only aorist of which forms are made in the secondary and denominative conjugations: see below, chap. XIV. (1019, 1035, 1048, 1068).

## 6. The *siṣ*-aorist.

911. According to the grammarians, this aorist is made from roots in *श्रा* *ā* (including *मि* *mi* 'establish', *मि* *mi* 'diminish', and *ली* *lī* 'cling', which substitute forms in *ā*), and

from नम् *nam*, यम् *yam*, and रम् *ram*, and is used only in the active; the corresponding middle being of the *s*-form (4). Its inflection is precisely like that of the *iṣ*-aorist; it is unnecessary, then, to give more than its first persons, which we may form from the roots या *yā*, 'go', and नम् *nam*, 'bend'. Thus:

	s.	d.	p.	s.	d.	p.
1	अयासिषम्	अयासिष्व	अयासिष्व	अनांसिषम्	अनांसिष्व	अनांसिष्व
	<i>áyāsīṣam</i>	<i>áyāsīṣva</i>	<i>áyāsīṣma</i>	<i>ánānsīṣam</i>	<i>ánānsīṣva</i>	<i>ánānsīṣma</i>
	etc.	etc.	etc.	etc.	etc.	etc.

912. The *siṣ*-aorist is properly only a sub-form of the *iṣ*-aorist, having the tense-sign and endings of the latter added to a form of root increased by an added *s*. It is of extreme rarity in the older language, being made in RV. only from the roots *gā* and *yā*, and in AV. only from *hā*, and probably from *pyā* and *van* (see below, 914): the remaining texts add *jñā* (TB.) and *dhā* (ÇB.); the forms *adrāsīt* (K.) and *ahvāsīt* (GB.) might be either from this or from the *s*-aorist.

The participle *hāsamāna* and causative *hāsayanti* (RV.) show that *hā*s had assumed, even at a very early period, the value of a secondary root beside *hū* for other forms than the aorist.

913. The whole series of quotable indicative forms is as follows: *ayāsīṣam*, *adhāsīṣam*; *agāsīs*; *agāsīt*, *ayāsīt* (and *adrāsīt* and *ahvāsīt*?); *ayāsīṣtām*; *ajñāsīṣma*; *ajñāsīṣta*, *ayāsīṣta*; *agāsīṣus*, *ayāsīṣus* (*ākṣīṣus* is from *√akṣ*).

Forms without augment are these: *hāsīṣam*; *hāsīs*; *hāsīt*, *yāsīt*; *hāsīṣtam*; *hāsīṣtām*; *hāsīṣta*; *hāsīṣus*, *gāsīṣus*. The accent would doubtless be upon the root-syllable.

914. Of proper subjunctives are found two, *gāsīṣat* and *yāsīṣat* (both RV.).

Optatives are not less rare: namely, *yāsīṣīṣthās* and *pyāsīṣīmahi* (for which the AV. manuscripts read *pyāṣīṣīmahi*, altered in the edition to *pyāyīṣ-*); and doubtless *vanṣīṣīya* (AV., twice) is to be corrected to *vanśīṣīya*, and belongs here.

The accent of *yāsīṣtām* (like *aviṣtām*, 908) shows it to be a true imperative form; and *yāsīṣta* (RV., once) is doubtless the same, with anomalous *i* for *i*.

915. Middle forms of this aorist, it will be noticed, occur from the optative only; but, considering the great rarity of the whole formation, we are hardly justified in concluding that in the ancient language the middle persons in *-siṣi*, *-siṣīthās*, etc., were not allowable, like those in *-iṣi*, *-iṣīthās*, and the others of the *iṣ*-aorist.

#### 7. The *sa*-aorist.

916. In the later language, the roots allowed to form

this aorist end in  $\text{क्}$ ,  $\text{प्}$ , or  $\text{ह}$  — all of them sounds which in combination with the tense-sign make  $\text{क्स}$ ; and they have  $\text{इ}$   $i$ ,  $\text{उ}$   $u$ , or  $\text{ऋ}$   $r$  as radical vowel.

They are: *दिक्*, *रिक्*, *लिक्*, *विक्*, *क्लिक्*, *क्रुक्*, *रुक्*, *मृक्*, *स्पृक्*; *त्विक्*, *द्विक्*, *क्षिक्*, *विक्*, *क्षप्*; *दिह*, *मिह*, *लिह*, *गुह*, *दुह*, *रुह*, *त्थ*, *वृथ*, *स्थ* (Kielhorn). Some of them may, or with certain meanings must, take aorists of other forms. And a few are allowed to drop both tense-sign and union-vowel *a* in certain persons of the middle: that is, they may make instead forms of the root-aorist (1).

917. As the tense-stem ends in  $\text{अ}$  *a*, the inflection is in the main like that of an imperfect of the second general conjugation. But (according to the grammarians: the forms unfortunately have not been found in the older language) the 1st sing. mid. ends in  $\text{इ}$   $i$  instead of  $\text{ए}$   $e$ , and the 2d and 3d du. mid. in *अथाम्* *āthām* and *आताम्* *ātām*, as in imperfects of the other conjugation. Both active and middle inflection is admitted. The root is throughout unstrengthened.

918. As example of inflection we may take the root *दिक्* *dic*, 'point out'. Thus:

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1	अदिक्षम् <i>ādikṣam</i>	अदिक्षाव <i>ādikṣāva</i>	अदिक्षाम <i>ādikṣāma</i>	अदिक्षि <i>ādikṣi</i>	अदिक्षावहि <i>ādikṣāvahi</i>	अदिक्षामहि <i>ādikṣāmahi</i>
2	अदिक्षम् <i>ādikṣas</i>	अदिक्षतम् <i>ādikṣatam</i>	अदिक्षत <i>ādikṣata</i>	अदिक्षथाम् <i>ādikṣathās</i>	अदिक्षाथाम् <i>ādikṣāthām</i>	अदिक्षधम् <i>ādikṣadhvam</i>
3	अदिक्षत् <i>ādikṣat</i>	अदिक्षताम् <i>ādikṣatām</i>	अदिक्षन् <i>ādikṣan</i>	अदिक्षत <i>ādikṣata</i>	अदिक्षाताम् <i>ādikṣātām</i>	अदिक्षन्त <i>ādikṣanta</i>

919. In the earlier language, the forms of the *sa*-aorist are hardly more than sporadic, and are with much probability to be regarded as transfers of the *s*-aorist to an inflection after the manner of an *a*-stem. They are made in RV. from eight roots; in AV., from two of these and from two others; and the remaining texts add six more, making sixteen in all. As later, all have  $i$  or  $u$  or  $r$  as root-vowel, and a final consonant which combines with  $s$  to  $क्ष$ ; but there are in the list also two ending in  $j$  (unless the forms ascribed to *mṛj* and *vṛj* be forced under *mृक्* and *वृक्*). All the examples noted are given below.

920. In the indicative, we find, in the active: *avrṣam*; *adruckas*, *aruckas*, *aspruckas*; *adiksat*, *amiksat*, *aviksat*, *ākrukṣat*, *aghukṣat*, *adukṣat* and

*ádrukṣat, árukṣat, akrṣat, ámrṣat, ásprṣat; aghukṣatām; arukṣāma, amṣkṣāma, avṣkṣāma; ádhukṣan, apikṣan (√pis), arukṣan; — in the middle, only akrṣathās (√krṣ), ádhukṣata, and amṣkṣanta.*

Forms without augment (no true subjunctives occur) are, in the active: *drṣsam, mrṣsam; dukṣas, rukṣas, mrṣsas; dvikṣat; mrṣkṣata; dhukṣán and dukṣán; — in the middle, dvikṣata, dukṣata and dhúkṣata, dhukṣánta.*

There are no optative forms.

Imperative are: in the active, *mrṣsatam*; in the middle, *dhukṣāsva*.

The few accented forms without augment which occur have the tone on the tense-sign *sá*, in analogy with the *a*-aorist (2) and the imperfect of the *ú*-class (VII.): a single exception is *dhúkṣata*, which probably needs emendation to *dhukṣáta*.

The aspiration of initial *d* and *g*, after loss of the aspirated quality of the root-final (155), is seen in forms from the roots *duh* and *guh*, but not from *druh* (only a single case, AB.); RV., however, has also *adukṣat* and *dukṣas, dukṣán, dukṣata*.

### Precative.

921. As the so-called precative is allowed by the grammarians to be made in the later language from every root, and in an independent way, without reference to the mode of formation of the aorist from the same root, it is desirable to put together here a brief statement of the rules given for it.

922. The precative active is made by adding the active precative endings (above, 568) directly to the root. But:

a. Of final root-vowels (as before the passive-sign *yá*: 770), *i* and *u* are lengthened; *r* is usually changed to *ri*, but to *ir* and *ur* in those roots which elsewhere show *ir* and *ur* forms (so-called *r̄*-roots: 242), and to *ar* in *r* and *smr*; *ā* is changed to *e* in the roots *dā, dhā, sthā, pā* 'drink', *gā* 'sing', and a few others, in part optionally.

b. The root in general assumes its weakest form: a penultimate nasal is lost, as in *badhyāsam* from *√bandh*; the roots which are abbreviated in the weak persons of the perfect (794) have the same abbreviation here, as in *ucyāsam, iyyāsam, vidhyāsam, supyāsam, gṛhyāsam*; *√ças* forms *çisyāsam* (compare 639, 854): and so on.

In the older language also, as has been seen above (838), precative optative forms are made in the active only for the root-aorist, and in a manner accordant with that here described.

923. The precative middle is made by adding the middle precative endings (above, 568) to the root increased by *ḥs*

or इप् *iṣ* — that is, to the tense-stem of an *s*-aorist or of an *iṣ*-aorist (but without augment).

The root is strengthened according to the rules that apply in forming the middle-stem of the *s* and of the *iṣ*-aorists respectively: in general, namely, a final vowel is gunated in both formations; but a medial vowel, only before इप् *iṣ*.

Other minor rules it is unnecessary to repeat here.

In the older language, as has been pointed out in detail above, precative optative forms of the middle voice are oftenest made from the *s*-aorist (895) and the *iṣ*-aorist (907); but also from the root-aorist (838), the *a*-aorist (850), the reduplicated aorist (870), and the *siṣ*-aorist (914); and even from the perfect (812 b).

924. As example of inflection, we may take the root भू *bhū*, 'be', which is said (no middle aorist or precative is made from it in the older language) to form its middle on the *iṣ*-stem. Thus:

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1	भूयाम् <i>bhūyāsam</i>	भूयास्व <i>bhūyāsva</i>	भूयास्म <i>bhūyāsmā</i>	भविषीय <i>bhaviṣīyā</i>	भविषीवहि <i>bhaviṣīvāhi</i>	भविषीमहि <i>bhaviṣīmāhi</i>
2	भूयाम् <i>bhūyāsaḥ</i>	भूयास्तम् <i>bhūyāstam</i>	भूयास्त <i>bhūyāsta</i>	भविषीष्ठास <i>bhaviṣīṣṭhāsaḥ</i>	भविषीयास्त्याम् <i>bhaviṣīyāsthām</i>	भविषीध्वम् <i>bhaviṣīdhvam</i>
3	भूयात् <i>bhūyāt</i>	भूयास्ताम् <i>bhūyāstām</i>	भूयानुस् <i>bhūyānuḥ</i>	भविषीष्ट <i>bhaviṣīṣṭā</i>	भविषीयास्ताम् <i>bhaviṣīyāsthām</i>	भविषीरन् <i>bhaviṣīran</i>

According to the grammarians, the dental or lingual character of the initial of the middle ending *dhvam* depends upon how the aorist tense-sign is preceded: in the *s*-form, it is *dhvam* if the *si* is preceded by any other vowel than *a* or *ā*; in the *iṣ*-form, it may be optionally *dhvam* if the *iṣ* is preceded by *y*, *r*, *l*, *v*, or *h*. This seems wholly irrational: the true question is, whether the precative *s* is to be regarded as really present in 2d pl. mid., as in all other 2d persons of both voices: if so — which is altogether probable, but in the absence of quotable forms from the older language cannot be pronounced certain — the ending is necessarily and always *dhvam*.

925. The precative is a form of rare occurrence in the classical language. In each of the texts already more than once referred to (Manu, Nala, Bhagavad-Gītā, Çakuntalā, Hitopadeça)

it occurs once and no more. Its value, as already stated (573), is purely optative: thus, *sarvarāstreṣv idaṃ vaco brūyāsta* (Nala), '[I beg that you] speak these words in all kingdoms'.

### Uses of the Aorist.

926. The uses of the aorist mode-forms (as has been already pointed out: 582) appear to accord in general with those of the mode-forms of the present-system. The predilection of the earlier language, continued sparingly in the later, for the augmentless forms in prohibitive expression after *mā* was sufficiently stated and illustrated above (579).

The tense-value of the aorist indicative has also been more than once referred to, and calls only for somewhat more of detail and for illustration here.

927. The aorist of the later language is simply a preterit, equivalent to the imperfect and perfect, and frequently coördinated with them.

Thus, *tataḥ sa gardabhaṃ lagudena tādāyāmāsa; tenā 'sāu pañcatvam agamat* (H.), 'thereupon he beat the donkey with a stick; and hereof the latter died'; *tataḥ sāvīdarbhān agamat punaḥ; tūn tu bandhujanaḥ samapūjayat* (MBh.), 'thereupon she went back to Vidarbha; and her kindred paid her reverence'; *prītimān abhūt: uvāca cai 'nam* (MBh.), 'he was filled with affection, and said to him'.

928. The aorist of the older language has the value of a proper "perfect": that is, it signifies something past which is viewed as completed with reference to the present; and it requires accordingly to be rendered by our tense made with the auxiliary *have*. In general, it indicates what has just taken place; and oftenest something which the speaker has experienced.

Examples from the Veda are: *pāri 'mē gām aneṣata pāry agnīm ahr̥ṣata, devēṣv akrata cr̥vahaḥ kā imān ā dadharsati* (RV.), 'these here have led about a cow, they have carried around the fire, they have done honor to the gods — who shall venture anything against them?' *yām āic̥hāma mānasū sò 'yām ā 'gāt* (RV.), 'he whom we (formerly, impf.) sought with our mind has (now, aor.) come'; *yéné 'ndro havīṣā kṛtvī ābhavad dyumny ūttamāḥ, idām tād akri devā asapatnāḥ klā 'bhuvam* (RV.), 'that libation by which Indra, making it, became (impf.) of highest glory, I have now made, ye gods; I have become free from enemies'.

Examples from the Brāhmaṇa language are: *sā hā 'smiñ jyōg uvāsa . . . tāto ha gandharvāḥ sām ūdire: jyōg vā iyām urvācī manuṣyēṣv avātsīt* (ÇB.), 'she lived with him a long time. Then the Gandharvas said to one another, "this Urvaçī, forsooth, hath dwelt a long time among mortals"; *tasya ha dantāḥ pedire: tam ho 'vāca: apatsata vā asya dantāḥ* (AB.), 'his teeth fell

out. He said to him: "his teeth truly have fallen out"; *īndrasya vṛtrām jaghnūsa indriyām vīryām pṛthivīm ānu vy ārcat tād ōshadhayo vīrūdhō 'bhavan sā prajāpatim ūpū 'dhūvad vṛtrām me jaghnūsa indriyām vīryām pṛthivīm ānu vy ārat tād ōshadhayo vīrūdhō 'bhūvanm īti (TS.)*, 'of Indra, when he had slain Vritra, the force and might went away into the earth, and became the herbs and plants: he ran to Prajāpati, saying: "my force and might, after slaying Vritra, have gone away into the earth, and have become the herbs and plants"; *svayām enam abhyudētya brūyād vrātya kvā 'vātsīh (AV., in prose passage)*, 'going up to him in person, let him say: "Vrātya, where hast thou abode"? *yād idānīm dvāū vivādāmānāv eyātām ahām adarṣam ahām aṣrāuṣam īti yā evā brūyād ahām adarṣam īti tasmā evā ṣrādadhīyāma (ÇB.)*, 'if now two should come disputing with one another, [the one] saying "I have seen", [the other] "I have heard", we should believe the one who said "I have seen"'.

929. This distinction of the aorist from the imperfect and perfect as tenses of narration is very common in the Brāhmaṇas, and is closely observed: neglect of it is very rare, and is to be regarded as either due to corruption of text or indicative of a late origin.

In the Vedic hymns, the same distinction is prevalent, but is both less clear and less strictly maintained: many passages would admit an interpretation implying either sense; and evident aorist-forms (especially of the simple aorist: Delbrück) are sometimes used narratively, while imperfect-forms are also occasionally employed in the aorist sense.

930. The boundary between that which has just been and that which now is is occasionally overstepped, and the aorist becomes nearly the equivalent of a present. Not very rarely, in the Veda, it is convenient to render the former as if it were the latter; and in the Brāhmaṇa the same is true especially of the aorist *akar*.

---

## CHAPTER XII.

---

### THE FUTURE-SYSTEMS.

931. THE verb has two futures, of very different age and character. The one has for tense-sign a sibilant followed by *ya*, and is an inheritance from the time of Indo-European unity. The other is a periphrastic formation, made by appending an auxiliary verb to a derivative noun of

agency, and it is a recent addition to the verb-system; its beginnings only are met with in the earliest language. The former may be called the *s*-future (or the old future, or simply the future); the latter may be distinguished as the periphrastic future.

### I. The *s*-future.

932. The tense-sign of this future is the syllable *स्य* *syá*, added to the root either directly or by an auxiliary vowel *इ* *i* (in the latter case becoming *इष्य* *ishyá*). The root has the *guna*-strengthening. Thus, from  $\sqrt{\text{दा}}$  *dā* is formed the future tense-stem *दास्य* *dāsyá*; from  $\sqrt{\text{इ}}$  *i*, the stem *इष्य* *ishyá*; from  $\sqrt{\text{दुह}}$  *duh*, the stem *धोक्ष्य* *dhokshyá*; from  $\sqrt{\text{भू}}$  *bhū*, the stem *भविष्य* *bhaviṣyá*; from  $\sqrt{\text{रुध}}$  *ṛdh*, the stem *अर्धिष्य* *ardhiṣyá*; and so on.

But from  $\sqrt{\text{जि}}$  the stem is *जिष्य* *jīṣyá*, from  $\sqrt{\text{उक्ष}}$  it is *उक्षिष्य* *ukshīṣyá*, and so on (240).

933. This tense-stem is then inflected precisely like a present-stem ending in *अ* (second general conjugation). We may take *दास्य* as models of inflection the future of  $\sqrt{\text{दा}}$  *dā*, 'give', and that of  $\sqrt{\text{कृ}}$  *kr*, 'make'. Thus:

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1	दास्यामि <i>dāsyāmi</i>	दास्यावम् <i>dāsyāvās</i>	दास्यामस् <i>dāsyāmas</i>	दास्ये <i>dāsyé</i>	दास्यावहे <i>dāsyāvāhe</i>	दास्यामहे <i>dāsyāmahe</i>
2	दास्यसि <i>dāsyāsi</i>	दास्यथम् <i>dāsyāthas</i>	दास्यथ <i>dāsyātha</i>	दास्यसे <i>dāsyāse</i>	दास्येथे <i>dāsyēthe</i>	दास्यध्वे <i>dāsyādhwē</i>
3	दास्यति <i>dāsyāti</i>	दास्यतम् <i>dāsyātas</i>	दास्यन्ति <i>dāsyānti</i>	दास्यते <i>dāsyāte</i>	दास्येते <i>dāsyēte</i>	दास्यन्ते <i>dāsyānte</i>
1	करिष्यामि <i>kariṣyāmi</i>	करिष्यावम् <i>kariṣyāvās</i>	करिष्यामस् <i>kariṣyāmas</i>	करिष्ये <i>kariṣyé</i>	करिष्यावहे <i>kariṣyāvāhe</i>	करिष्यामहे <i>kariṣyāmahe</i>
	etc.	etc.	etc.	etc.	etc.	etc.

934. With regard to the use or non-use of the auxiliary vowel *i* before the sibilant, there is a degree of general accordance between this tense and the other future and the desiderative.

tive; but it is by no means absolute, nor are any definite rules to be laid down with regard to it (and so much the less, because of the infrequency of the two latter formations in actual use): between this and the aorist (*s*-aorist on the one side, or *iṣ*-aorist on the other), any correspondence is still less traceable. Practically, it is necessary to learn, as a matter of usage, how any given root makes these various parts of its conjugational system.

935. Below is added a statement of the usage, as regards the auxiliary vowel, of the roots observed to form the *s*-future in the older language (more than a hundred and fifty: the collection is believed to be tolerably complete) — for the most part, in the form of a specification of the roots which add the tense-sign directly to the root; in brackets are further mentioned the other roots which according to the grammarians also refuse the auxiliary vowel.

a. Of roots ending in vowels, the great majority (excepting those in *ṛ*) take no *i*. Thus, all in *ā* (numerous, and unnecessary to specify); all in *i* — *i*, *kṣi*, *ci*, *ji* — except *ṛi* [and *ṛvi*]; all in *ī* — *krī*, *nī*, *bhī*, *mī*, *vī* — except *ṛī* [and *ḍī*]; all in *u* — *cyu*, *dru*, *plu*, *ṛru*, *dru* — except *su* 'press', and *stu*, which follow either method, as *stoṣyāmi* and *staviṣyāmi* [and except *kṣu*, *kṣṇu*, *nu*, *yu*, *ru*, *snu*]. But all in *ṛ* (numerous, and unnecessary to specify) take *i* [and those in changeable *ṛ*, or so-called *ṛ*-roots (242) are said to take either *i* or *ī*; no *ī*-forms, however, are found in the older language]; and likewise those in *ū* — namely *bhū*, *dhū*.

b. Of roots ending in mutes, two thirds add *ṣya* directly. Thus, of roots in *k*, *ṣak*; — in *c* (all but *yāc*: namely, *muc*, *ric*, *vac*, *vraṣc*, *ṣic* [and *pac*, *vic*]; — in *ch*, *prach* (only case); — in *j* (all but *vraj*: namely, *bhaj*, *majj* (*mañkṣya*), *mṛj* (*mārṅkṣya*), *yaj*, *yuj*, *vṛj*, *ṣṛj* [also *tyaj*, *bhrajj*, *bhañj*, *rañj*, *sañj*, *svañj*, *nij*, *vij*, *ruj*, *bhuj*]; in *t*, *kṛt* and *vṛt* [*kṛt*, *ṣṛt*, *nṛt* optionally]; — in *d*, *ad*, *pad*, *ṣad*, *sad*, *skand*, *syand*, *chid*, *bhid*, *vid* 'find', *nud* [also *had*, *khid*, *svid*, *kṣud*, *tud*, and *chṛd* and *ṛd* optionally]: only observed exceptions, *vad*, and *vid* 'know'; — in *dh*, *bandh*, *rād̥h*, *budh*, *yudh*, *rudh* [also *vyadh*, *sād̥h*, *sidh*, *krudh*, *kṣudh*, *ṣudh*, *vṛdh*]: only observed exceptions, *ṛdh* and *ṣṛdh*; — in *n*, *tan* and *man* (but *man* forms sometimes *maniṣya*); — in *p*, *tap*, *vap*, *āp*, *gup*, *dṛp*, *ṣṛp*, *klp* [also *ṣap*, *kṣip*, *lip*, *lup*]: *svap* forms both *svapsya* and *svapiṣya*; — in *bh*, *yabh* and *labh* [also *rabh*]: no exceptions observed; — in *m*, *nam*, *yam*, *ram*: *kram* follows either method.

c. Of roots ending in semivowels, all (they are very few) take the auxiliary *i*. The roots *vā* or *vi* ('we') 'weave' and *hvā* or *hū* ('hve') 'call' take the forms *vay* and *hvay*, as before the *a* of their present-stem: thus, *vayīṣya*, *hvayīṣya*.

d. Of roots ending in spirants, the minority (about a third) are without the auxiliary vowel. They are: roots in *ç*, *viç*, *dṛç* (*drakṣya*), *mṛç* (*mṛakṣya*) [also *dañç*, *diç*, *riç*, *liç*, *kruç*, *ruç*, *sprç*]; — in *ṣ*, *çiṣ*, *kṛṣ* (*krakṣya*) [also *viṣ*, *doiṣ*, *piṣ*, *viṣ*, *çliṣ*, *tuṣ*, *duṣ*, *puṣ*, *çuṣ*]; — in *s*, *vas* 'dwell' (*vatsya*:

167) [also *ghas*]; — in *h, dah, vah, mih, duh, ruh* [also *nah, dih, lih*]: exceptions are *grah* (*grahīṣya*) and *muh*.

In the older language, a decided, though not a large, majority of simple roots add the *śya* without auxiliary *i*; in the classical Sanskrit, doubtless the contrary is the case, as *i* is generally taken by any root of late origin and derivative character — as it is also uniformly in secondary conjugation (chap. XIV.).

936. As the root is strengthened in forming the stem of this future, so, of a root that has a strong and a weak form, the strong form is used: thus, from  $\sqrt{naç}$  or *nañç* is made *nañksya*; from  $\sqrt{sras}$  or *srañs, srañsisya*, and the like.

Special irregularities in forming stems from certain roots have been noted in connection with those roots above (see *majj, mṛj, vay* and *hway, grah*).

The ÇB. has once the monstrosous form *açnuviṣyāmahe*, made upon the present-stem *açnu* (cl. IV.) of  $\sqrt{vaç}$ .

937. This future is comparatively rare in the oldest language — in part, apparently, because the uses of a future are to a large extent answered by subjunctive forms — but becomes more and more common later. Thus, the RV. has only seventeen occurrences of personal forms, from nine different roots (with participles from six additional roots); the AV. has fifty occurrences, from twenty-five roots (with participles from seven more); the TS. has occurrences (personal forms and participles together) from over sixty roots; and (as has been noticed above) forms from more than a hundred and fifty roots are quotable from the older texts.

#### Modes of the *s*-future.

938. Mode-forms of the future occur only sporadically. The sole Vedic example is *karīṣyās*, 2d sing. subj. act. (in RV., once or twice); GB. has *eṣyāmahāi, tañsyāmahāi, sthāsyāmahāi*, all 1st pl. subj. mid.; and *bhaviṣyadhvam, vetsyadhvam, saviṣyadhvam*, 2d pl. impv. mid., are quoted (Bopp) from MBh.

#### Participles of the *s*-future.

939. Participles are made from the future-stem precisely as from a present-stem in ऋ *a*: namely, by adding in the active the ending  $\text{न्त}$  *nt*, in the middle the ending  $\text{मान}$  *māna*; the accent remains upon the stem. Thus, from the verbs instanced above,  $\text{दास्यन्त}$  *dāsyānt* and  $\text{दास्यमान}$  *dāsyāmāna*,  $\text{करिष्यन्त}$  *karīṣyānt* and  $\text{करिष्यमाण}$  *karīṣyāmāna*.

According to the grammarians, the feminine of the active participle is made either in  $\text{न्ति}$  *ntī* or in  $\text{न्ति}$  *ntī*; but only the former has been noted as occur-

ring in the older language, and the latter, if met with at all, is very rare: see above, 449.

In RV. occurs once *sūśyanti*, from  $\sqrt{sū}$ , with anomalous accentuation.

### Preterit of the *s*-future: Conditional.

940. From the future-stem is made an augment-preterit, by prefixing the augment and adding the secondary endings, in precisely the same manner as an imperfect from a present-stem in  $\text{अ}$ . This preterit is called the conditional.

It stands related to the future, in form and meaning, as the French conditional *aurais* to the future *aurai*, or as the English *would have* to *will have* — nearly as the German *würde haben* to *werde haben*.

Thus, from the roots already instanced:

	active.		middle.			
	s.	d.	p.	s.	d.	p.
1	अदास्यम् <i>ádāsyaṃ</i>	अदास्याव <i>ádāsyaṃvā</i>	अदास्याम <i>ádāsyaṃā</i>	अदास्ये <i>ádāsye</i>	अदास्यावहि <i>ádāsyaṃvahi</i>	अदास्यामहि <i>ádāsyaṃmahi</i>
2	अदास्यस् <i>ádāsyaś</i>	अदास्यतम् <i>ádāsyaṃtām</i>	अदास्यत <i>ádāsyaṃt</i>	अदास्यथाम् <i>ádāsyaṃthām</i>	अदास्येथाम् <i>ádāsyaṃethām</i>	अदास्यध्वम् <i>ádāsyaṃdhvam</i>
3	अदास्यत् <i>ádāsyaṃt</i>	अदास्यताम् <i>ádāsyaṃtām</i>	अदास्यन् <i>ádāsyaṃn</i>	अदास्यत <i>ádāsyaṃt</i>	अदास्येताम् <i>ádāsyaṃetām</i>	अदास्यन्त <i>ádāsyaṃnt</i>
1	अकरिष्यम् <i>ákarīṣyaṃ</i>	अकरिष्याव <i>ákarīṣyaṃvā</i>	अकरिष्याम <i>ákarīṣyaṃā</i>	अकरिष्ये <i>ákarīṣye</i>	अकरिष्यावहि <i>ákarīṣyaṃvahi</i>	अकरिष्यामहि <i>ákarīṣyaṃmahi</i>
	etc.	etc.	etc.	etc.	etc.	etc.

941. The conditional is the rarest of all the forms of the Sanskrit verb. The RV. has but a single example, *ábhariṣyat*, 'was going to carry off', and none of the Vedic texts furnishes another. In the Brāhmanas it is hardly more common (fifteen occurrences, of which several are in repetitions of the same passage) — except in ÇB., where it is met with more than fifty times. Nor does it, like the future, become more frequent later: not an example occurs in Nala, Bhagavad-Gītā, or Hitopadeṣa; only one in Manu; and two in Çakuntalā.

## II. The Periphrastic Future.

942. This formation contains only a single indicative tense, active and middle, without modes, or participle, or preterit.

Its consists in a derivative *nomen agentis*, having the

value of a future active participle, and used, either with or without an accompanying auxiliary, in the office of a verbal tense with future meaning.

०43. The noun is formed by the suffix तृ *tr* (or तर् *tar*); and this (as in its other than verbal uses: see chap. XVII.) is added to the root either directly or with a preceding auxiliary vowel इ *i*, the root itself being strengthened by *guna*, but the accent resting on the suffix: thus, दातृ *dātṛ* from √दा *dā*; कर्तृ *kartṛ* from √कृ *kr*; भवितृ *bhavitṛ* from √भू *bhū*.

As regards the presence or absence of the vowel *i*, the usage is said by the grammarians to be generally the same as in the *s*-future from the same root (above, ०35). The most important exception is that the roots in *r* take no *i*: thus, कर्तृ (against *karṣya*); roots *han* and *gam* show the same difference; while *vr̥t*, *vr̥dh*, and *syand* have *i* here, though not in the *s*-future. The few forms which occur in the older language agree with these statements.

०44. In the third persons of both voices, the nom. masc. of the noun, in the three numbers respectively (373), is used without auxiliary: thus, भविता *bhavitā*, 'he or she or it will be'; भवितारौ *bhavitārau*, 'both will be'; भवितारम् *bhavitāras*, 'they will be'. In the other persons, the first and second persons present of √अस् *as* 'be' (636) are used as auxiliary; and they are combined, in all numbers, with the singular nom. masc. of the noun. As an independent verb, अस् *as* has no middle forms; but for this auxiliary use middle persons have been made by analogy, हे *he* being used in 1st sing.

Thus, from √दा *dā*, 'give':

	s.	active. d.	p.	s.	middle. d.	p.
1	दातास्मि <i>dātāsmi</i>	दातास्वम् <i>dātāsvas</i>	दातास्मम् <i>dātāsmas</i>	दाताहे <i>dātāhe</i>	दातास्वहे <i>dātāsvahe</i>	दातास्महे <i>dātāsmāhe</i>
2	दातामि <i>dātāmi</i>	दातास्यम् <i>dātāsthas</i>	दातास्य <i>dātāstha</i>	दातामे <i>dātāme</i>	दातामाथे <i>dātāsthāthe</i>	दाताथे <i>dātādhe</i>
3	दाता <i>dātā</i>	दातारौ <i>dātārau</i>	दातारम् <i>dātāras</i>	दाता <i>dātā</i>	दातारौ <i>dātārau</i>	दातारम् <i>dātāras</i>

Very rarely, other persons than the third are used without the auxiliary verb: thus, *aham draṣṭā*, 'I shall see' (MBh.); *tvam bhavitā* (MBh. Megh.), 'thou shalt be'; and examples are not unknown of the auxiliary in the 3d person: thus, *vaktā 'sti* (MBh.), 'he will speak'; and of the use in dual and plural of the proper number-form with the auxiliary: thus, *kartārāu svah* (MBh.), 'we two shall do'.

945. The accent in these combinations, as in all the ordinary cases of collocation of a verb with a preceding predicate noun or adjective (592), is on the noun itself; and, unlike all the true verbal forms, the combination retains its accent everywhere even in an independent clause: thus, *tārhi vā atināṣṭrō bhavitāsmi* (ÇB.), 'then I shall be out of danger' (where *bhaviṣyāmi*, if used, would be accentless). Whether in a dependent clause the auxiliary verb would take an accent (595), and whether, if so, at the expense of the accent of the noun (as in the case of a preposition compounded with a verb-form: 1083), we are without the means of determining.

946. In the Veda, the *nomina agentis* in *tr* or *tar*, like various other derivative nouns (271), but with especial frequency, are used in participial construction, governing the accusative if they come from roots whose verbal forms do so. Often, also, they are used predicatively, with or without accompanying copula; yet without any implication of time; they are not the beginnings, but only the forerunners, of a new tense-formation. The tense-use begins, but rather sparingly, in the Brāhmaṇas (from which over thirty occurrences are quotable), and grows more common later, though the periphrastic future is nowhere so frequent as the *s*-future.

947. Middle forms are extremely few in the older language. TS. has once *prayoktāse*, which seems to be 1st sing. (the usual ending *e* added to the abbreviated root 's); but TA. (i. 11) has once the later form *yaṣṭāhe*; *ṣayitāse* in ÇB. is clearly 2d sing.; TB. has once *yaṣṭāsmāhe*, 1st pl.

#### Uses of the Futures and Conditional.

948. As the *s*-future is the commoner, so also it is the one more indefinitely used. It expresses in general what is going to take place at some time to come — but often, as in other languages, adding on the one hand an implication of will or intention, or on the other hand that of promise or threatening.

A few examples are: *varṣiṣyāty āiṣamah parjanya vṛṣṭimān bhaviṣyati* (ÇB.), 'it is going to rain; Parjanya is going to be rich in rain this year'; *yās tān nā veda kīm rca kariṣyati* (RV.), 'whoever does not know that, what will he do with verse?' *ā vāt vayām agnī dhāsyāmaha ātha yūyām kām kariṣyatha* (ÇB.), 'we are going to build the two fires; then what will you do?' *tām indro bhyaḍudrāva haṁsiyām* (ÇB.), 'him Indra ran at, intending to slay'; *yādya evā kariṣyātha sākām devāir yajñtyāso bhaviṣyatha* (RV.), 'if

ye will do thus, ye shall be worthy of the sacrifice along with the gods; *dāntās te cātsyanti* (AV.), 'thy teeth will fall out; *nā mariṣyasi mā bibheḥ* (AV.), 'thou shalt not die; be not afraid'; *brūhi kva yāsyasi* (MBh.), 'tell us; where are you going to go?' *yadi mām pratyākhyāsyasi viṣam āsthāsyē* (MBh.), 'if you shall reject me, I will resort to poison'. As in other languages, the tense is also sometimes used for the expression of a conjecture: thus: *ko 'yañ devo gandharvo vā bhaviṣyati* (MBh.), 'who is this? he is doubtless a god, or a Gandharva'.

949. The periphrastic future is defined by the grammarians as expressing something to be done at a definite time to come. And this, though but faintly traceable in later use, is a distinct characteristic of the formation in the language where it first makes its appearance (Delbrück). It is especially often used along with *çvās*, 'tomorrow'.

A few examples are: *yatarān vā ime çvaḥ kamitāras te jetāras* (K.), 'whichever of the two parties these shall choose tomorrow, they will conquer'; *prātār yaṣtāsmāhe* (TB.), 'we shall sacrifice tomorrow morning'; *ityahē vaḥ paktāsmi* (ÇB.), 'on such and such a day I will cook for you'; *tām ma ēkāñ rātrīm ānte çayitāse jātā u te 'yañ tārhi putrō bhavitā* (ÇB.), 'then you shall lie with me one night, and at that time this son of yours will be born'. In other cases, this definiteness of time is wanting, but an emphasis, as of special certainty, seems perhaps to belong to the form; thus, *bibhrīt mā pārayiṣyāmi tvē 'ti: kāmān mā pārayiṣyastī 'ty āughā imāḥ sāvāḥ prajā nirvoḍhā, tātas tvā pārayitāsmī 'ti* (ÇB.), 'support me and I will save you, said it. From what will you save me? said he. A flood is going to carry off all these creatures; from that I will save you, said it'; *paridevayāñ cakrīre mahac chokabhayam prāptāsmas* (GB.), 'they set up a lamentation: "we are going to meet with great pain and dread"'; *yaje 'yakṣi yaṣtāhe ca* (TA.), 'I sacrifice, I have sacrificed, and I shall sacrifice'. In yet other cases, in the older language even, and yet more in the later, this future appears to be equivalent to the other: thus, *prajāyām enaḥ vijñātāsmo yadi vidvān vā juhoty avidvān vā* (AB.), 'we shall know him in his children whether he is one that sacrifices with knowledge or without knowledge'; *vaktāsmo vā idaḥ devebhyāḥ* (AB.), 'we shall tell this to the gods'; *yadi svārtho mamā 'pi bhavitā tata evaḥ svārtham kariṣyāmi* (MBh.), 'if later my own affair shall come up, then I will attend to my own affair'; *katham tu bhavitāsy eka iti tvām nṛpa çoçmi* (MBh.), 'but how will you get along alone? that, O king, is the cause of my grief about you'.

950. The conditional would seem to be most originally and properly used to signify that something 'was going to' be done. And this value it has in its only Vedic occurrence, and occasionally elsewhere. But usually it has the sense ordinarily called "conditional"; and in the great majority of its occurrences it is found (like the subjunctive and the optative, when used with the same value) in both clauses of a conditional sentence.

Thus, *yó vrtráya śnam átrá 'bharīṣyat prá tán jānītrī vidūṣa uvāca* (RV.), 'him, who was going here to carry off Vritra's wealth, his mother proclaimed to the knowing one'; *ṣatāyurñ gām akariṣyam* (AB.), 'I was going to make (should have made) the cow live a hundred years' (in other versions of the same story is added the other clause, in which the conditional has a value more removed from its original: thus, in GB., 'if you, villain, had not stopped [*prāgrahīṣyaḥ*] my mouth'); *tāta evā 'śya bhayām vi 'yāya kāmād dhy ābheṣyad dvitīyād vāi bhayām bhavati* (ÇB.), 'thereupon his fear departed; for of whom was he to be afraid? occasion of fear arises from a second person'; *útpapāta cirāñ tán mene yād vāsaḥ paryādhāsyata* (ÇB.), 'he leaped up; he thought it long that he should put on a garment'; *sā tād evā nā 'vindat prajāpatir yātrā 'hoṣyat* (MS.), 'Prajāpati, verily, did not then find where he was to (should) sacrifice'; *evañ cen nā 'vakṣyo mūrdhā te vyapatiṣyat* (GB.), 'if you should not speak thus, your head would fly off'; *sā yād dhūi 'tāvad evā 'bhaviṣyad yāvatyō hai 'vā 'gre prajāñ sṛṣṭās tāvatyō hūi 'vā 'bhaviṣyan nā prá 'janiṣyanta* (ÇB.), 'if he had been only so much, there would have been only so many living creatures as were created at first; they would have had no progeny'; *kihñ vā 'bhaviṣyad aruṇas tamasāñ vibhettā tañ cet sahasrakiraṇo dhuri nā 'kariṣyat* (Çak.), 'would the Dawn, forsooth, be the scatterer of the darkness, if the thousand-rayed one did not set her on the front of his chariot?'

## CHAPTER XIII.

### VERBAL ADJECTIVES AND NOUNS: PARTICIPLES, INFINITIVES, GERUNDS.

951. THOSE verbal adjectives, or participles, which are made from tense-stems, and so constitute a part of the various tense-systems, have been already treated. It remains to describe certain others, which, being made directly from the root itself, belong to the verbal system as a whole, and not to any particular part of it.

The infinitive (with a few sporadic exceptions in the older language) also comes in all cases from the root directly, and not from any of the derived tense-stems.

The same is true of the so-called gerunds, or indeclinable participles.

#### Passive Participle in *tá* or *ná*.

952. By the accented suffix ढ *tá* — or, in a comparatively small number of verbs, ढ *ná* — is formed a verbal

adjective which, when coming from transitive verbs, qualifies anything as having endured the action expressed by the verb: thus, दत्त *dattá*, 'given'; उक्त *uktá*, 'spoken'. Hence it is usually called the passive participle; or, to distinguish it from the participle belonging to the passive present-system (771), the past passive participle.

When made from an intransitive or neuter verb, the same participle, as in other languages, has no passive but only an indefinite past sense: thus, गत *gatá*, 'gone'; भूत *bhūtá*, 'been'; पतित *patitá*, 'fallen'.

953. In general, this participle is made by adding त *tá* to the bare verbal root, with observation of the ordinary rules of euphonic combination.

Some roots, however, require the prefixion of the auxiliary vowel *i* to the suffix. For these, and for the verbs that add *ná* instead of *tá*, see below, 956, 957.

As to the accent when the root is preceded by a preposition, see 1085 a.

954. The root before त *tá* has usually its weakest form, if there is anywhere in the verbal system a distinction of weak and strong forms. Thus:

a. A penultimate nasal is dropped: e. g. अक्त *aktá* from √ *añj*, बद्ध *baddhá* from √ *bandh*, श्रस्त *srastá* from √ *srañs* or *sras*.

b. Roots which in the weak forms of the perfect are abbreviated (794) suffer the same abbreviation here: thus, उक्त *uktá* from √ *vac*, उद्ध *ūdhá* from √ *vah*, इष्ट *iṣṭá* from √ *yaj*, सुप्त *suptá* from √ *svap*, विद्ध *viddhá* from √ *vyadh*, प्रष्ट *prṣṭá* from √ *prach*.

c. Final *ā* is weakened to *ī* in गीत *gītá* from √ *gā* 'sing', पीत *pītá* from √ *pā* 'drink', धीत *dhītá* from √ *dhā* 'suck', शीत *śhītá*, वीत *vītá* from √ *vyā*, जीत *jītá* from √ *jyā*, चित *çitá* from √ *çyā*; — and it is weakened to *i* in शीत *shītá*, हित *hitá* from √ *dhā* 'put' (with *dh* also changed to *h*: but *dhītá* is found also in compounds in V.), दित *ditá* from √ *dā* 'cut' and √ *dā* 'bind'; सित *sitá*, मित *mitá* from √ *mā* 'measure', चित *çitá* (or *çātá*), चित *çitá* (or *chātá*).

d. A final *m* or *n* is lost after *a* in गत *gatá*, नत *natá*, यत *yatá*, रत *ratá* (from √ *gam* etc.); हत *hatá*, मत *matá*, कृत *kṣatá*, तत *tatá*, वत *vatá* (from √ *han* etc.).

e. More isolated cases are: उत *ūtá* from √ *av*, उत *utá* from √ *vā* 'weave', चित *çitá* from √ *çās*, मृत *mūrtá* referred to √ *mūrch*, शृत *śhūtá* from √ *śiv*, दृत *dyūtá* from √ *dīv* 'play', मृत *mūtá* from √ *miv*, धृत *dhūtá* from √ *dhāv* 'cleanse' (RV. has also *dhūtá*).

955. Of more irregular character are the following:

a. A number of roots ending in *am* retain the nasal and lengthen the radical vowel (as in others of their verbal forms): thus, *kāntā*, *krāntā*, *tāntā*, *ḡāntā*, *ḡrāntā*, from  $\sqrt{kram}$  etc.;  $\sqrt{dhvan}$  'be covered' forms in like manner *dhvāntā*.

b. Three roots in *an* make the participle from parallel roots in  $\bar{a}$ : thus, *jātā*, *khātā*, *sātā*, from  $\sqrt{jan}$  etc.

c. The root *dā* 'give' forms *dattā* (from the derivative form *dad*), but *dāta* also is found in composition in V. The contracted *tta* (as if for *dāta*, with the radical vowel lost) is widely found in composition, especially with prepositions (1087 e), but also with other elements: thus, *devātta* (RV.); *punaratta* (PB. vi. 5. 12); and, according to the grammarians, *sūtta*. The root *jakṣ* (derivative of *ghas*: 675) forms *jagdhā*, as if from *jagh* (once apparently abbreviated in composition to *gdha* in TS.: thus, *agdhād*);  $\sqrt{svad}$  makes in Veda *svāttā* (beside *svaditā*).

956. The suffix with  $\bar{z}$  *i*, or in the form  $\bar{z}$  *itā*, is regularly used with the derivative verb-stems in secondary conjugation (chap. XIV.), also often with roots of a derivative character (as  $\bar{z}$  *inv*,  $\bar{z}$  *hins*), and not infrequently with original roots (as  $\bar{z}$  *pat*,  $\bar{z}$  *car*,  $\bar{z}$  *manth*,  $\bar{z}$  *ḡi*).

In RV. and AV., the participles in *itā* from simple roots are more than a sixth of the whole number. Among them, *uditā* ( $\sqrt{vad}$ ) is the only case of abbreviation of *va* to *u*. From  $\sqrt{grath}$  comes *ḡrthita* (once). *Jahitā* from  $\sqrt{hā}$  (by substitution of the present-stem as shown in *jahāmi*) is an isolated irregularity. *ḡayita* shows the same strengthening which appears in the present-system (629).

A few roots form the participle either with or without the auxiliary *i*: thus, *guptā* and *gupitā*, *drptā* and *drpitā*, *dhṛṣṭā* and *dhṛṣitā*, *matā* and *maditā*, *vittā* (also *vinnā*) and *viditā*.

The root *grabh* or *grah* has, as elsewhere, long  $\bar{i}$ : thus, *ḡrbhūtā*, *ḡrhitā*.

957. The suffix  $\bar{n}$  *nā* (always without auxiliary  $\bar{z}$  *i*) is taken instead of  $\bar{n}$  *tā* by a number of roots. Thus:

a. Certain roots in  $\bar{a}$ , and in *i* and *u*-vowels: namely, *ḡyānā* or *ḡinā* from  $\sqrt{ḡyā}$ , *ḡrānā* from  $\sqrt{ḡrā}$ , *jīnā* (beside *jītā*) from  $\sqrt{jyā}$  or *jī*, *ḡnā* from  $\sqrt{ḡvā}$  or *ḡvi*, *hānā* and *hīnā* from  $\sqrt{hā}$ , *dīnā* from  $\sqrt{dā}$  'bind' and 'cut', *kṣīnā* (beside *kṣitā*) from  $\sqrt{kṣi}$  'destroy', *pīnā* from  $\sqrt{pyā}$  or *pī*, *vīnā* from  $\sqrt{vī}$ , *ūnā* from  $\sqrt{ū}$ , *dūnā* from  $\sqrt{du}$ , *dyūnā* from  $\sqrt{div}$  or *dev* 'lament', *lūnā* from  $\sqrt{lū}$  — and some others.

b. The roots in variable  $\bar{r}$  (so-called  $\bar{r}$ -roots: 242), which before the suffix becomes  $\bar{r}$  or  $\bar{ur}$ : thus, *kīrṇā*, *ḡirṇā*, *jīrṇā*, *tīrṇā*, *dīrṇā*, *ḡīrṇā*, *stīrṇā* (beside *stītā*); *pūrṇā*, *mūrṇā*; and *jūrṇā*.

A few participial forms in *tā* from such roots are met with in the older language: thus, *gūrtā*, *pūrtā*, *çirtā*.

c. A few roots ending in *j* (which becomes *g* before the suffix: 216. 4): thus, *bhagnā* from  $\sqrt{bhaj}$ , *bhugnā* from  $\sqrt{bhuj}$ , *magnā* from  $\sqrt{majj}$ , *rugnā* from  $\sqrt{ruj}$ . Also, one or two others that show a guttural before the *na*: thus, *lagnā* from  $\sqrt{lag}$ , *vṛkṇā* from  $\sqrt{vraçc}$ , *aknā* from  $\sqrt{ac}$ .

d. A number of roots, some of them very common ones, in *d* (which becomes *n* before the suffix: 161, end): thus, *channā*, *chinnā*, *bhinnā*, *vinnā* (beside *vittā* and *viditā*), *skannā*, *syannā*, *svinnā*, *tunnā*, *pannā*, *sannā* (beside *sattā*, which alone is found in V.); and *hlannā* (according to the grammarians) from  $\sqrt{hlād}$ ; also *tṛnnā* from  $\sqrt{tṛd}$  and *chrṇṇā* from  $\sqrt{chṛd}$ , which show an irregular lingualization of the nasal; and others.

958. The grammarians reckon as participles of this formation a few miscellaneous derivative adjectives, coming from roots which do not make a regular participle: such are *kṣāma*, 'burnt', *kṛçā*, 'emaciated', *pakvā*, 'ripe', *phullā*, 'expanded', *çuṣka*, 'dry'.

#### Past Active Participle in *tavant*.

959. From the past passive participle is made, by adding the possessive suffix *वत्* *vant*, a secondary derivative having the meaning and construction of a perfect active participle: for example, *तत् कृतवान्* *tāt kṛtāvān*, 'having done that'. Its inflection is like that of other derivatives made with this suffix (452 ff.); its feminine ends in *वती* *vatī*; its accent remains on the participle.

960. Derivative words of this formation are found in RV., but without anything like a participial value. The AV. has a single example, with participial meaning: *açitāvaty ātithāu*, 'one's guest having eaten' (loc. abs.). In the Brāhmanas also it is extremely rare. In the later language, however, it comes to be quite common. And there it is almost always used predicatively, and generally without copula expressed, or with the value of a personal verb-form in the perfect tense (like the derivative in *tā* in the future: 942 ff.). For example: *mān na kaçcid ḍṛṣṭavām*, 'no one has seen me'; *sa nakulaṁ vyāpāditavān*, 'he destroyed the ichneumon'; or, with copula, *mahat kṛçhram prāptavaty asi*, 'thou hast fallen upon great misery'. Although originally and properly made only from transitive verbs (with an object, to which the participle in *ta* stands in the relation of an objective or factitive predicate), it is finally found also from intransitives: thus, *cūtena saṁçṛitavati* (Çak.), 'has become united with the mango-tree'; *gatavati* (ib.), 'she has gone'.

#### Future Passive Participles: Gerundives.

961. Certain derivative adjectives (for the most part

more or less clearly secondary derivatives) have acquired in the language a value as qualifying something which is to, or which ought to, suffer the action expressed by the root from which they come; and they are allowed to be made from every verb. Hence they are, like more proper participles, usually treated as a part of the general verbal system, and called future passive participles, or gerundives (like the Latin forms in *ndus*, to which they correspond in meaning).

962. The suffixes by which such gerundives are regularly and ordinarily made are three: namely *या ya*, *तव्य ta-*  
*vya*, and *अनीय anīya*.

Derivatives in *ya* having this value are made in all periods of the language, from the earliest down; the other two are of more modern origin, being entirely wanting in the oldest Veda (RV.), and hardly known in the later. Other derivatives of a similar character, which afterward disappear from use, are found in the Veda.

963. The suffix *ya* in its gerundive use has nothing to distinguish it from the same suffix as employed to make adjectives and nouns of other character (see below, chap. XVIII.: 1213). And it exhibits also the same variety in the treatment of the root.

The original value of the suffix is *ia*, and as such it has to be read in the very great majority of its Vedic occurrences. Hence the conversion of *e* and *o* to *ay* and *av* before it (see below).

Thus: **a.** Final *ā* becomes *e* before the suffix: *dēya*, *khyēya*, *mēya* (probably *dā-ia* etc., with euphonic *y* interposed): but RV. has once *-ñāya*. — **b.** The other vowels either remain unchanged, or have the *guṇa* or the *vṛddhi* strengthening; and *e* usually and *o* always are treated before the *ya* as they would be before a vowel: thus, *jāyya*, *bhāyya*, *tāyya*; *nāvya*, *bhāvya*, *hāvya*, *bhāvya*; *vārya*: and, in the later language, *nīya*, *jēya*, *dhūya* (such cases are wanting earlier). In a few instances, a short vowel adds *t* before the suffix: thus, *itya*, *mitya*, *ṣṛitya*, *stitya*, *kṛtya* (the only Vedic examples). — **c.** Medial *a* remains unchanged or is lengthened: thus, *dābhya*, *vāndya*, *sādyā*; *mādyā*, *vādyā*. — **d.** Medial *i*, *u*, and *r*-vowels are unchanged or have the *guṇa*-strengthening: thus, *īdyā*, *gūhya*, *dhṛsya*; *dvēsya*, *yōdhya*, *mārjya*.

The RV. has about forty examples of this gerundive, and the AV. adds half as many more. Except in *bhāvīā* (once), the accent in RV. is always

on the root; AV. has several cases of accent on the *i* of the suffix (hence written *ādyā*, *ācyā*, *-vyādhyā*, *-dharsyā*). According to the grammarians, the accent is on the root or else the ending is circumflexed: always the former, if the *ya* follow a vowel.

— 964. The suffix *tavya* is a secondary adjective derivative from the infinitival noun in *tu* (below, 972), made by adding the suffix *ya* (properly *ia*, whence the accent *yā*), before which the final *u*, as usual, has *guṇa*-strengthening, and is resolved into *av*.

Hence, both as regards the form taken by the root and the use or omission of an auxiliary vowel *i* before the *tavya*, the rules are the same as for the formation of the infinitive (below, 968).

No example of this formation is found in RV., and in AV. occur only two, *janitavyā* and *hīṣitavyā*. In the Brāhmaṇa language it begins to be not rare, and is made both from the simple root and the derived conjugational stems (next chapter); in the classical language it is still more frequent. According to the grammarians, the accent of the word is either circumflex on the final or acute on the penult: thus, *kartavyā* or *kartāvya*; in the accentuated texts, it is always the former.

As to the impersonal use of this gerundive, see below, under Passive (999).

965. The suffix *anīya* is in like manner the product of secondary derivation, made by adding the adjective suffix *īya* (1215) to a *nomen actionis* formed by the common suffix *ana*.

It follows, then, as regards its mode of formation, the rules for the suffix *ana* (below, chap. XVIII.: 1150).

This derivative also is unknown in RV., and in AV. is found only in *upajīvanīya* and *āmantranīya* (in both of which, moreover, its distinct gerundive value admits of question). In the Brāhmaṇas (where less than a dozen examples of it have been noted), and in the later language, it is much less common than the gerundive in *tavya*. Its accent, as in all the derivatives with the suffix *īya*, is on the penult: thus, *karānīya*.

966. Other formations of kindred value are found in the Veda as follows:

a. Gerundives in *tua* or *tva*, apparently made from the infinitival noun in *tu* with the added suffix *a* (1209). They are *kārtua* (in two occurrences *kārtva*), *jāntua*, *jētua*, *nāntua*, *vāktua*, *sōtua*, *snātua*, *hāntua*, *hētua*; and, with auxiliary *i* (or *ī*), *jānitva*, *sānitva*, *bhāvitva*.

b. Gerundives in *enia* or *enya* (compare 1217): they are *īḍēnia*, *carēnia*, *ḍṛṣṣēnia*, *bhūṣēnia*, *yudhēnia*, *vāreṇia*; with one example from an apparent aorist-stem, *yaṁsēnia*, and three or four from secondary verb-stems (see below, 1038).

c. Gerundives in *āyia* (once *āyya*: compare 1218): they are *dakṣāyia*, *panāyia*, *vidāyia*, *cravāyia*, *hnavāyia*; with a few from causative secondary conjugation-stems (below, chap. XIV.): and *stuṣēyia* is of close kindred with them.

d. A few adjectives in *elima*, as *sacelima*, *bhidelima* (apparently not found in use) are reckoned as gerundives by the grammarians.

967. The division-line between participial and ordinary adjectives is less strictly drawn in Sanskrit than in the other Indo-European languages. Thus, adjectives in *u*, as will be seen later (chap. XVII.: 1178), from secondary conjugational stems, have participial value; and in the Brāhmanas (with an example or two in AV.) is found widely and commonly used a participial adjective formed with the suffix *uka* (ibid., 1180).

### Infinitives.

968. The later language has a single infinitive, which is the accusative case of a verbal noun formed by the suffix *tu*, added to the root usually directly, but often also with aid of the preceding auxiliary vowel *इ i*. The form of the infinitive ending, therefore, is *तुम् tum* or *इतुम् itum*. The root has the *guṇa*-strengthening, and is accented. Thus, for example, *एतुम् étum* from  $\sqrt{\text{इ}} i$ ; *कर्तुम् kártum* from  $\sqrt{\text{क}} k$ ; *चरितुम् carítum* from  $\sqrt{\text{च}} car$ ; *भवितुम् bhávitum* from  $\sqrt{\text{भ}} bhū$ .

The rules as to the use or omission of the auxiliary *i* are the same as those that apply to the formation of the periphrastic future-noun in *tr* or *tar* (943).

The same form, in a like use, is found also in the older language, back to its earliest recorded period; but it is there only one of a whole body of related formations, an account of which is in brief as follows:

969. In the Veda and Brāhmana, a number of verbal nouns, *nomina actionis*, in various of their cases, are used in constructions which assimilate them to the infinitive of other languages — although, were it not for these other later and more developed and pronounced infinitives, the constructions in question might pass as ordinary case-constructions of a somewhat peculiar kind.

970. The nouns thus used infinitively are the following:

a. The root-noun, without derivative suffix, is so used in its accusative in *am*, its dative in *e* or (from *ā*-roots) *āi*, its genitive and ablative in *as*, and its locative in *i*.

b. The verbal noun in *tu* is so used in its accusative in *tum*, its dative in *tave* or *tavāi*, and its ablative and genitive in *tos*.

Of other nouns, only single cases, generally datives, are reckoned as used with infinitive value; thus:

c. From the verbal noun in *as*, the dative in *ase*; and also, in an extremely small number of instances, a dative in *se* (or *še*), from a noun formed with *s* simply.

d. From nouns in *man* and *van*, datives in *mane* and *vane*.

e. From nouns in *ti*, datives in *taye*, or (from one or two verbs) in *tyāi*.

f. From nouns in *i*, datives in *āye*.

g. From nouns in *dhi* and *ṣi*, datives in *dhyāi* and *ṣyāi*.

h. A few infinitives in *ṣaṇi* are perhaps locatives from nouns in *an* added to a root increased by *s*.

i. From a single root, *dhr*, are made infinitively used forms in *tāri*, of which the grammatical character is questionable.

Among all these, the forms which have best right to special treatment as infinitives, on account of being of peculiar formation, or from suffixes not found in other uses, or both, are those in *še*, *ṣaṇi*, *tari*, *dhyāi*, and *tavāi*.

Except the various cases of the derivative in *tu*, and of the root-noun, these infinitives are almost wholly unknown outside the Rig-Veda.

Other suffixes and forms than those noticed above might be added; for it is impossible to draw any fixed line between the uses classed as infinitive and the ordinary case-uses; and the so-called infinitives are found coördinated in the same sentence with common nouns, and even with compound nouns.

More special rules as to the various formations are as follows:

971. The root-noun used as infinitive has the same form, and the same accent, both when simple and when combined with prepositions, as in its other uses. In the very great majority of instances, it is made from roots ending in a consonant; but also from a few in *ā* (*khyā*, *dā*, *dhā*, *pā?*, *mā*, *yā*), from two or three in *i* and *u*-vowels (*hi*, *mī*, *bhū*), and from one or two in changeable *r*, which takes the *ir*-form (*tir*, *stir*).

The roots in *ā* form the accus. in *ām* (*pratidhām*, AV.), the dat. in *āi*, the abl. in *ās* (understanding *avasā* before *ā* as for *avasās* and not *avasāt* in RV. iii. 53. 20), and the locative in *e* (only two examples, of which one is better understood as dative).

972. The infinitive noun in *tu* is made freely from roots of every form. The root takes the *guṇa*-strengthening, if capable of it, and often adds the auxiliary vowel *i* before the suffix (according to the rule already stated, 968). The root is accented, unless the noun be combined with a preposition, in which case the latter has the accent instead: thus, *kārtum*, *étave*, *hāntos*, but *nīkartum*, *nīretave*, *nīrhantos*.

The dative in *tavāi* is in two respects anomalous: in having the heavy feminine ending *āi* along with a strengthened *u*; and in taking a double accent, one on the root or on the prefixed preposition, and the other on the ending *āi*: thus, *étavāi*, *hāntavāi*, *ātyetavāi*, *āpabhartavāi*.

The root *grāh* makes (as in other kindred formations) *grāhītu*; and long *ī* is shown also by *śāritu*, *stārītu*, *hāvītu* (and compare *bhāvītuva*, 966 a).

973. The infinitive in *ase* is made in RV. from about twenty-five roots; in AV. and later there have been noted no other examples of it. In near three quarters of the cases, the accent is on the suffix: thus, *ṛñjāse*, *jīvāse*, *bhijāse*, *tujāse*; the exceptions are *cākṣase*; *dhāyase* (with *y* inserted before the suffix); and *āyase*, *bhārase*, *spārase*, *hārase* (with *guṇa*-strengthening of the root). Strengthening of the root is also shown by *javāse*, *dohāse*, *bhojāse*, *çobhāse*. In *puṣyāse* is seen, apparently, the present-stem instead of the root.

The ending *se* is extremely rare, being found only in *jiṣé* and perhaps *stuṣé*, and one or two still more doubtful cases.

974. Infinitives in *mane* are made from only five roots: thus, *trāmaṇe*, *dāmaṇe*, *dhārmaṇe*, *bhārmaṇe*, and (with different accent) *vidmāne*. From  $\sqrt{dā}$  comes *dāvāne*; *turvāne* may come directly from  $\sqrt{tr}$ , or through the secondary root *turv*; *dhārvāne* is rather from  $\sqrt{dhūrv}$  than from  $\sqrt{dhvṛ}$ .

975. The infinitives in *taye* are *iṣṭāye* ( $\sqrt{iṣ}$ ), *pītāye* ( $\sqrt{pā}$  'drink'), *vitāye*, *sātāye*. In *tyāi*, the only examples noted are *ityāt* (RV.) and *sādhyāi* (AB.).

With *aye* are formed *tujāye*, *drçāye*, *mahāye*, *yudhāye*, *sanāye*.

976. The ending *dhyāi* is, more than any other, irregular and various in its treatment. It has always an *a* before it; and in the majority of cases it is accented upon this *a*, and added to a weak form of root: thus, *çucādhyāi*, *prñādhyāi*, *dhiyādhyāi*, *huvādhyāi*. But the form of root is the strong one in a few cases: namely, *çayādhyāi*, *stavādhyāi*, *tarādhyāi*, *jarādhyāi*, *mandādhyāi*, *vandādhyāi*. In half-a-dozen forms, again, the root has the accent: namely, *kṣāradyāi*, *gāmadhyāi*, *yājadyāi* (but once or twice also *yajādhyāi*), *vāhadhyāi*, *sāhadhyāi*, *bhāradhyāi*. In a single instance, *pībadhyāi*, the suffix is added distinctly to a present-stem; and in one, *vāvṛdhādhyāi*, to a perfect stem. Finally, in a number of instances (ten), this infinitive is made from a causative stem in *ay*: thus, *mādayādhyāi*, *riṣayādhyāi*, etc.

This infinitive is by no means rare in RV., being made in thirty-five different forms (with seventy-two occurrences). But it is hardly known outside of the RV.; the AV. has it but once (in a passage found also in RV.); and in the branches of the Yajur-Veda but two or three examples have been noticed (one of them TS. falsely reads *gāmadhye*); in the Brāhmaṇa language it appears to be entirely wanting.

977. An example or two are met with of an infinitive in *syāi*: thus, *rōhiṣyāi* (TS.), *avyathisyāi* (K.).

978. The infinitives in *ṣāni* are: *-bhūṣāni* from  $\sqrt{bhū}$ ; *çūṣāni* from  $\sqrt{çū}$  or *çvā*; *neṣāni* from  $\sqrt{nī}$ ; *sakṣāni* from  $\sqrt{sah}$ ; *parṣāni* from  $\sqrt{pr}$ , *tariṣāni* from  $\sqrt{tr}$ ; and *grñṣāni* and *-strñṣāni* from  $\sqrt{gr}$  and *str* — the last containing evident present tense-signs (compare the 1st sing. *grñṣé*, 894 d).

979. The only infinitive in *tari* is *dhartāri* (with its compound *vidhartāri*), from  $\sqrt{dhr}$ .

#### Uses of the Infinitives.

980. The uses of the so-called infinitives are for the most part closely accordant with those of the corresponding cases from other abstract nouns. Thus:

981. The accusative, which is made only from the root-noun and the noun in *tu*, is used as object of a verb.

Especially, of forms from the roots *çak*, 'be able', and *arh*, 'be worthy, have the right or the power'. Thus, *çakéma tvā samīdham* (RV.), 'may we accomplish thy kindling'; *mā çakan pratidhām īsum* (AV.), 'may they not be able to fit the arrow to the string'; *māno vā imān sadyāḥ pāryūptum arhati mānaḥ pāribhavitum* (TS.), 'the mind, forsooth, can at once attain and surpass her'; *kō hy itāsya 'rhati gūhyaṁ nāma grāhītum* (ÇB.), 'for who is worthy to take his secret name?' In the Veda, the construction with these verbs is only one among others; in the Brāhmaṇa, it becomes the greatly prevalent one (three quarters or more of all the cases).

Further, of verbs of motion (next most frequent case): thus, *dākṣiṇāni hōtum eti* (TS.), 'he goes to sacrifice things pertaining to sacrificial gifts'; *īndram pratīram emy āyuh* (RV.), 'I go to Indra for (i. e. beseech of him) the lengthening out of life'; — of *√dhr*, 'persist in, undertake': as, *sā idān jātāḥ sāvram evā dāgdhum dadhre* (ÇB.), 'he, as soon as born, began to burn this universe'; — of verbs meaning 'desire, hope, notice, know', and the like: as, *pāçān vicītam vettha sāvān* (AV.), 'thou knowest how to loosen all bonds'; *tāsmād agnīm nā 'driyeta pārihantum* (ÇB.), 'therefore one should not be careful to smother the fire'; — and of others.

982. Of the infinitive datives, the fundamental and usual sense is that expressed by 'for, in order to, for the purpose of'.

Examples are: *vīçvaṁ jīvān carāse bodhāyantī* (RV.), 'awakening every living creature to motion'; *tān ūpa yāta pībadhyāi* (RV.), 'come to drink them'; *nāt 'tām te devā adadur āttave* (AV.), 'the gods did not give her to thee for eating'; *prāt 'd yudhāye dāsyum īndraḥ* (RV.), 'Indra went forward to fight the demon'; *cākṣur no dhehi vikhyāt* (RV.), 'give us sight for looking abroad'.

Some peculiar constructions, however, grow out of this use of the infinitive dative. Thus:

a. The noun which is logically the subject or the object of the action expressed by the infinitive is frequently put beside it in the dative (by a construction which is in part a perfectly simple one, but which is stretched beyond its natural boundaries by a kind of attraction): thus, *çakāra sūryāya pānīhām ānvetavā u* (RV.), 'he made a track for the sun to follow (made for the sun a track for his following)'; *çīçīte çīṅge rākṣobhyo vintkṣe* (RV.), 'he whets his horns to pierce the demons'; *rudrāya dhānur ā tanomi brahmadviṣe çārave hāntavā u* (RV.), 'I stretch the bow for Rudra, that with his arrow he may slay the brahma-hater'; *asmābhyaṁ dṛçāye sūryāya pūnar dātām āsum*, 'may they grant life again, that we may see the sun'.

b. An infinitive with *√kr*, 'make', is used nearly in the sense of a causative verb: thus, *prā 'ndhām çronām cākṣasa étave kṛthaḥ* (RV.), 'ye make the blind and lame to see and go'; *agnīm samīdhe çakārtha* (RV.), 'thou hast made the fire to be kindled'. Of similar character is an occasional

construction with another verb: as, *yád im ucmási kártave kárat tát* (RV.), 'what we wish to be done, may he do that'.

c. A dative infinitive is not seldom used as a predicate, sometimes with, but more usually without, a copula expressed: thus, *agnír iva ná pratidhṣe bhavati* (TS.), 'like fire, he is not to be resisted'; *mahimá te anyéna ná samnáḍe* (VS.), 'thy greatness is not to be attained by another'; *nákim índro níkartave ná çakráh páricaktave* (RV.), 'Indra is not to be put down, the mighty one is not to be overpowered'.

d. Sometimes an infinitive so used without a copula has pretty clearly the value of an imperative: thus, *tyá me yaçásā... āuçijó huvádhyāi [asti]* (RV.), 'these glorious ones shall the son of Uçij invoke for me'; *súktébhír vah... índrū nv āgní ávase huvádhyāi [stah]* (RV.), 'with your hymns shall ye call now on Indra and Agni for aid'; *vandádhyā agnínám námobhīh [asmí]* (RV.), 'let me greet Agni with homage'; *asmákāsaç ca sūrāyo víçvā áças tarišāni* (RV.), 'and let our sacrificers cross all regions'. The infinitives in *dhyāi* and *ṣani* (which latter is in all its uses accordant with datives) are those in which the imperative value is most distinctly to be recognized.

e. In the ÇB. (with only a sporadic case or two elsewhere) the dative in *tavāi* is frequently used with a verb signifying 'speak' (*brū, vac, ah*), to express the ordering of anything to be done: thus, *tásmūd ósadhínám evá mūlāny áçchettavāt brūyāt*, 'therefore let him direct the roots of the plants to be cut up (speak in order to cutting up)'.

983. The ablative infinitive — which, like the accusative, is made only from the root-noun and that in *tu* — is found especially with the prepositions *á*, 'until', and *purá*, 'before'.

Thus, *á támitos* (TS. etc.), 'until exhaustion'; *purá vacāh právaditos* (TS.), 'before utterance of the voice'. In the Brāhmaṇa language, this is the well-nigh exclusive construction of the ablative; in the Veda, the latter is used also after *ṛté*, 'without', and after several verbs, as *trū* and *pā, yu, bhī*.

In two or three instances, by an attraction similar to that illustrated above for the dative (982a), a noun dependent on this infinitive is put in the ablative beside it: thus, *purá vāgbyah sampravadītoḥ* (PB.), 'before the utterance together of the voices'; *trádhvam kartíd avapádaḥ* (RV.), 'save us from falling down into the pit'.

984. The genitive infinitive (having the same form as the ablative) is in common use in the Brāhmaṇa language as dependent on *icvará*, 'lord, master', employed adjectively in the sense of 'capable' or 'likely' or 'exposed to'.

Examples are: *tá [devátāḥ] icvará enam pradāhaḥ* (TS.), 'they are likely to burn him up'; *átha ha vá icvaró 'gnín citvá kñicid dāuritám ápattoḥ ví vā hválitoh* (ÇB.), 'so in truth he is liable, after piling the fire, to meet with some mishap or other, or to stagger'; *icvaram vái rathantaram udgātuç cakṣuḥ pramathitoh* (PB.), 'the rathantara is liable to knock out the eye of the chanter'.

The dative is once used in ÇB. instead of the genitive (in *īçvarāū jā-nayitavāt*); and, in the later language, sometimes the accusative in *tum*. Occasionally the masc. sing. nom. *īçvaraḥ* is used, without regard to the gender or number of the word which it qualifies: thus, *tāsye "çvarāḥ prajā pāpīyasi bhāvitoḥ* (ÇB.), 'his progeny is liable to deteriorate'. And in a few instances the word *īçvara* is omitted, and the genitive has the same value without it: thus, *dve madhyandinam abhi pratyetos* (AB.), 'two may be added to the noon libation'; *tāto dikṣitāḥ pāmanó bhāvitoḥ* (ÇB.), 'then the consecrated is liable to get the itch'.

This construction with *īçvara*, which is the only one for the genitive infinitive in the Brāhmana, is unknown in the Veda, where the genitive is found in a very small number of examples with *madhyā*, and with the root *īç*: thus, *madhyā kārtoḥ* (RV.), 'in the midst of action'; *īçe rāyo dāttoḥ* (RV.), 'he is master of the giving of wealth'.

985. Unless the infinitives in *ṣaṇi* and *tari* are locative in form (their uses are those of datives), the locative infinitive is so rare, and has so little that is peculiar in its use, that it is hardly worth making any account of. An example is *uṣāso budhē* (RV.), 'at the awakening of the dawn'.

986. In the Veda, the dative infinitive forms are very much more numerous than the accusative (in RV., their occurrences are twelve times as many; in AV., more than three times); and the accusative in *tum* is rare (only four forms in RV., only eight in AV.). In the Brāhmanas, the accusative has risen to much greater comparative frequency (its forms are nearly twice as many as those of the dative); but the ablative-genitive, which is rare in the Veda, has also come to full equality with it. The complete disappearance in the classical language of all excepting the accusative in *tum* is a matter for no small surprise.

987. The later infinitive in *tum* is oftenest used in constructions corresponding to those of the earlier accusative: thus, *na vāspam açakat soḍhum*, 'he could not restrain his tears'; *taṁ draṣṭum arhasi*, 'thou oughtest to see it'; *prāptum ichanti*, 'they desire to obtain'; *saṁkhyātum ārabdham*, 'having begun to count'. But also, not infrequently, in those of the other cases. So, especially, of the dative: thus, *avasthātum sthānāntaram cintaya*, 'devise another place to stay in'; *tvām anveṣṭum ihā "gataḥ*, 'he has come hither to seek for thee'; — but likewise of the genitive: thus, *samartho gantum*, 'capable of going'; *saṁdhātum īçvaraḥ*, 'able to mend'. Even a construction as nominative is not unknown: thus, *yuktam tasya mayā samāçvāsyañitum bhāryām* (MBh.), 'it is proper for me to comfort his wife'; *na naptāram svayam nyāyām çaptum evam* (R.), 'it is not suitable thus to curse one's own grandson'.

988. In the later language, as in the earlier, the infinitive in certain connections has what we look upon as a passive value. Thus, *kartum ārabdhaḥ*,

'begun to be made': *çrotuṁ na yujyate*, 'it is not fit to be heard (for hearing)'. This is especially frequent along with the passive forms of  $\sqrt{\text{çak}}$ : thus, *tyaktuṁ na çakyate*, 'it cannot be abandoned'; *çakyāv ihā "netum*, 'they two can be brought hither'; *na ca vibhūtayaḥ çakyam avāptum ūrjitāḥ*, 'nor are mighty successes a thing capable of being attained'.

### Gerunds.

989. The so-called gerund is a stereotyped case (doubtless instrumental) of a verbal noun, used generally, but in the later language not exclusively, as logical adjunct to the subject of a clause, denoting an accompanying or (usually) a preceding action to that signified by the verb of the clause. It has thus the virtual value of an indeclinable participle, present or past, qualifying the actor whose action it describes:

Thus, for example: *çrutvāi 'va cā 'bruvan*, 'and hearing (or having heard) they spoke'; *tebhyaḥ pratijñāyā 'thāi 'tān pariṣapraçha*, 'having given them his promise, he then questioned them'.

990. The gerund is made in the later language by one of the two suffixes  $\overline{\text{त्वā}}$  and  $\overline{\text{या}}$ , the former being used with a simple root, the latter with one that is compounded with a prepositional prefix — or, rarely, with an element of another kind, as adverb or noun.

Exceptions to this distribution of uses between the two suffixes are very rare: examples of simple roots with *ya* are *arcya*, *gṛhya*, *uṣya* ( $\sqrt{\text{vas}}$  'dwell'); of compounded roots with *tvā* are *anudhyātvā*, *apatyaktvā*, *pratyarpayitvā* (AV.: only case noticed in the Veda: TA. has *-rocayitvā*). The gerund in *tvā*, however, may have the negative particle prefixed to it: thus, *akṛtvā*, *anīrayitvā*.

Of compounds of the gerund in *ya* with other elements than the usual verbal prefixes, RV. has *punardāya*, *karnagṛhya*, *pādagṛhya*, *hastagṛhya*, *arankṛtya*, *akḥhalikṛtya*, *mithasṛdhya*; AV. has further *namaskṛtya*.

991. The suffix  $\overline{\text{त्वā}}$  has the accent. It is usually added directly to the root, but sometimes with interposition of the auxiliary vowel  $\text{३ } i$  — with regard to which, as well as to the form of the root before it, this formation closely agrees with that of the participle in  $\overline{\text{ता}}$  (above, 952 ff.).

When *i* is used, the disposition to take a weak form of root is less marked. Roots which have *na* instead of *ta* as participial suffix usually reject the *i*.

992. The suffix य *ya* is added directly to the root, which is accented, but has its weak form. A root ending in a short vowel takes त्य *tya* instead of य *ya*: thus, क्षित्य *-jitya*, कृत्य *-kritya*.

Roots in *am* and *an* whose passive participle ends in *ata* (954 d) form this gerund also in *atya*: thus, *-gatyā*, *-hatyā*. But such *am*-roots are allowed in the later language to preserve their nasal in the gerund: thus, *-gamya* (no such form occurs in the Veda). Final changeable *r* becomes *īr* or *ūr*: thus, *-gīryā*, *-pūryā*. Final *ā* remains unaltered: thus, *-gāyā*, *-sthāyā*; and *mi* 'establish' and *mi* 'diminish' take the form *mā*; *ū* 'cling' is allowed to do the same.

993. The older language has the same two gerund formations, having the same distinction, and used in the same way.

a. In RV., however, the final of *ya* is in the great majority of instances (fully two thirds) long (as if the instrumental ending of a derivative noun in *i* or *tī*). In AV., long *ā* appears only once, in a RV. passage.

b. Instead of *tvā* alone, the Veda has three forms of the suffix, namely *tvā*, *tvāyā*, and *tvī*. Of these three, *tvī* is decidedly the commonest in RV. (thirty-five occurrences, against twenty-one of *tvā*); but it is unknown in AV., and very rare elsewhere in the older language; *tvāyā* is found nine times in RV. (only once outside the tenth Book), twice in AV., and but few times elsewhere. The historical relation of the three forms is obscure.

c. Two other gerund suffixes, *tvānam* and *tvīnam*, are mentioned by the grammarians as of Vedic use, but they have nowhere been found actually to occur.

994. The use of this gerund, through not changing in its character, becomes much more frequent, and even excessive, in the later language.

Thus, in the Nala and Bhagavad-Gītā, which have only one tenth as many verb-forms as RV., there are more than three times as many examples of the gerund as in the latter.

Early examples are: *vājreṇa hatvā nīr apāḥ sasarja* (RV.), 'striking with his thunderbolt, he poured forth the waters'; *strīyam dṛṣṭvāyā kitavām tatāpa* (RV.), 'the gambler is distressed when he sees a woman'; *pītvī sōmasya vāvrdhe* (RV.), 'having drunk of the soma, he waxed strong'. In the older language almost without exception, and in the later usually, it expresses an action or condition belonging to the subject of the sentence; but it is in some texts more loosely construed: thus, *tataḥ çabdād abhijñāya sa vyāghreṇa hataḥ* (H.), 'thereupon he was slain by the tiger, the latter having recognized him by his noise'; *kim nu me syād idam kṛtvā* (MBh.), 'what, I wonder,

would happen to me, having done this?' *sucintya co 'ktañ suvicārya yat kṛtam* (H.), 'what is said after mature thought, and done after full deliberation'.

#### Adverbial Gerund in *am*.

995. The accusative of a derivative *nomen actionis* in *a*, used adverbially, assumes sometimes a value and construction so accordant with that of the usual gerund that it cannot well be called by a different name.

No example of a peculiar gerundial construction with such a form occurs either in RV. or AV., although a few adverbial accusatives are probably to be classed as representing this formation: thus, *abhyākṛāmam, pratāñkam, prañódam, nilāyam, abhiskādam*. The gerund is found especially in the Brāhmaṇas (much oftenest in ÇB.), and sparingly later. In the classical language it is quite rare.

A final vowel has *ṛddhi*-strengthening before the suffix; final *ā* adds *y*; a medial vowel has *guṇa*; but medial *a* is usually lengthened. The accent is on the radical syllable.

Examples are: *kāmañ vā imāny āñgāni vyatyāsam çete* (ÇB.), 'he lies changing the position of these limbs at pleasure'; *uttarām-uttarām çākhāñ samālāmbhañ rōhet* (ÇB.), 'he would climb, taking hold of a higher and ever a higher limb'; *aparīṣu mahānāgām ivā 'bhisamśārañ didṛkṣitāraḥ* (ÇB.), 'hereafter, running together as it were about a great snake, they will wish to see him'; *nāmāny āsām etāni nāmagrāham* (ÇB.), 'with separate naming of these their names'; *yó viparyāsam avagūhati* (ÇB.), 'whoever buries it upside down'. As in these examples, the form is almost always a compound one. In the later language, it is said to be used most often repeated: thus, *pāyam-pāyañ vrajati*, 'he goes after drinking repeatedly'; *prathamam bhojañ vrajati*, 'having first eaten, he goes'; *bāhūtkṣepañ kranditum pravṛtā* (Çak.), 'she proceeded to cry, throwing up her arms (with arm-tossing)'.

## CHAPTER XIV.

### DERIVATIVE OR SECONDARY CONJUGATION.

996. SECONDARY conjugations are those in which a whole system of forms, like that already described as made from the simple root, is made, with greater or less completeness, from a derivative conjugation-stem; and is also usually connected with a certain definite modification of the original radical sense.

We have seen, indeed, that the tense-systems are also for the most part made from derivative-stems; and even that, in some cases, such stems assume the appearance and value of roots, and are made the basis of a complete conjugational system. Nor is there any distinct division-line to be drawn between tense-systems and derivative conjugations — the latter are present-systems which have been expanded into conjugations by the addition of other tenses, and of participles, infinitives, and so on. In the earliest language, their forms outside of the present-system are still quite rare, hardly more than sporadic; and even later they are — with the exception of one or two formations which attain a comparative frequency — much less common than the corresponding forms of primary conjugation.

997. The secondary conjugations are: I. Passive; II. Intensive; III. Desiderative; IV. Causative; V. Denominative.

The passive is classed here rather as a matter of convenience and of general usage than because it is of the same kind with the others.

### I. Passive.

998. The passive conjugation has been already in the main described. Thus, we have seen that:

a. It has a special present-system, the stem of which is present only, and not made the basis of any of the remaining forms: this stem is formed with the accented class-sign  $\bar{u}$  *yá*, and it takes the middle endings. It is treated above, 768 ff.

b. In the other tenses, the middle forms are used also in a passive sense. But:

c. There is a special passive 3d sing. of the aorist, ending in  $\bar{\xi}$  *i*: it is treated above, 842 ff. And:

d. According to the grammarians, there may be formed from some verbs, for passive use, a special stem for the aorist and the two future systems, coinciding in form with the peculiar 3d sing. aorist.

Thus: from  $\gamma\bar{d}\bar{a}$  (aor. 3d sing. *adāyi*), beside *ádāsi*, *dāsyé*, *dātāhe*, also *ádāyisi*, *dāyisyé*, *dāyitāhe*. The permission to make this double formation extends to all roots ending in vowels, and to *grah*, *dṛç*, and *han*. The duplicate forms have not been noticed in the older language, and they are, at the best, extremely rare in the later.

As to the prescribed passive inflection of the periphrastic perfect, see below, 1072.

e. Besides the participle from the present tense-stem (771. 5), the passive has a past participle in ण *ta* (952), or ण *na* (957), and future participles, or gerundives, of various formation (961 ff.), made directly from the root.

999. The passive construction, with the logical subject in the instrumental case, is a frequent and favorite one, especially in the later language: thus, *evam uktvā tena sarveṣām bandhanāni chittāni* (H.), 'thus saying, he cut the bonds of them all'. And, extremely frequently, an impersonal passive in the third person is used; and it may (as in other languages) be formed from intransitive as well as transitive verbs: thus, *çrūyatām*, 'let it be heard' (i. e. hear ye!), *ihā "gamyatām*, 'come hither'; *sarvair jālam ādāyo 'dḍīyatām* (H.), 'let all fly up, taking the net with them'; *tac chrutvā jaradgaveno 'ktam*, 'hearing that, Jaradgava said'; *katham jīvitavyam*, 'how is one to live?'; *yāvad anena muninā sthātavyam* (H.), 'as long as that sage shall exist'. The predicate to the instrumental subject of such a construction is, of course, also in the instrumental: thus, *adhunā tavā 'nucareṇa mayā sarvathā bhavitavyam* (H.), 'henceforth I shall always be thy companion'; *tena tvayā yāvajjīvaṃ sukhinā bhavitavyam* (H.), 'with that thou shalt be happy as long as thou livest'. The gerundive is common in this construction, and not seldom it has a purely future sense.

## II. Intensive.

➤ 1000. The intensive (sometimes also called frequentative) is that one of the secondary conjugations which is least removed from the analogy of formations already described. It is, like the present-system of the second conjugation-class (642 ff.), the inflection of a reduplicated stem, but of one that is peculiar in having a strengthened reduplication. It is decidedly less extended beyond the limits of a present-system than any other of the derivative conjugations.

The intensive conjugation signifies the repetition or intensification of the action expressed by the primary conjugation of a root.

➤ 1001. According to the grammarians, the intensive conjugation may be formed from nearly all the roots in the language — the exceptions being: roots of more than one

syllable, those conjugated only causatively (below, 1056), and in general those beginning with a vowel.

In fact, however, intensives in the later language are extremely rare, so rare that it is hard to tell precisely what value is to be given to the rules of the native grammar respecting them. Nor are they at all common earlier, except (comparatively) in the RV., which contains about six sevenths of the whole number (rather over a hundred) quotable from Veda and Brāhmaṇa-texts (AV. has less than half as many as RV., and many of these in RV. passages).

Hence, in the description to be given below, the actual aspect of the formation, as exhibited in the older language, will be had primarily and especially in view; and the examples will be of forms found there in use.

1002. The strong intensive reduplication is made in three different ways:

a. The reduplicating syllable is, as elsewhere, composed of a single consonant with following vowel, and, so far as the consonant is concerned, follows the rules for present and perfect reduplication (590); but the vowel is a heavy one, radical *a* and *r* (or *ar*) being reduplicated with *ā*, an *i*-vowel by *e*, and an *u*-vowel by *o*.

Examples are: *vāvad*, *bābadh*, *çāçvas*, *rārāndh*; *dādṛ*, *dādṛṣ*; *cekī*, *tetiḥ*, *nevī*, *vevī*; *çoçuc*, *popruth*, *çoçku*, *johū*.

b. The reduplicating syllable has a final consonant, taken from the end of the root. With an exception or two, this consonant is either *r* (or its substitute *ḷ*) or a nasal.

Examples are: *carcar*, *calcal*, *sarsṛ*, *marmṛj*, *jarhṛṣ*; *cañkram*, *jañghan*, *tañstan*, *dandaç* (*√dañç* or *daç*), *jañjabh* (*√jambh* or *jabh*), *tantas* (*√tañs* or *tas*), *nannam* (*√nam*).

Only roots having *a* or *r* as vowel make this form of reduplication, but with such roots it is more common than either of the other forms.

Irregular formations of this class are: with a final other than *r* or *n* in the reduplication, *badbadh*; with a final nasal in the reduplication which is not found in the root, *jañgah* (RV.), *jañjap* (ṢB.: and the later language has *dandah*); with an anomalous initial consonant in reduplication, *jarbhur* from *√bhṛ* (compare the Vedic perfect *jabhāra*, 789 b); with various treatment of an *r* or *ar*-element, *dardar* and *dardir*, *carkar* and *carkir*, *tartar* and *tartur*, *carcar* and *carcur*, *jargur* and *jalgul* and *galgul*.

The root *r* is the only one with vowel initial forming an intensive stem in the older language: it makes the irregular *alar* or *alṛ*.

c. The reduplication is dissyllabic, an *i*-vowel being added after a final consonant of the reduplicating syllable. This *i*-vowel is in the older language short before a double consonant, and long before a single.

Examples are: *ganīyam* (but *gānigmatam*), *varivṛt*, *vanivāh*, *caniṣked*,

*saniṣvan*; *navīnu*, *dauidyut* (and the participles *dāvidhvāt* but *tāvītuat*). A single exception as to the quantity of the *i* is *dauidhāva*.

This method of reduplication is followed in the older language by over twenty roots. Thus, of roots having final or penultimate *n* (once *m*), and *n* in the reduplicating syllable, *pan*, *phan*, *san*, *svan*, *han*; *gam*; *krand*, *ṣcand*, *skand*, *syand*; of roots having final or medial *r*, and *r* in the reduplicating syllable, *kr* 'make', *tr*, *bhr*, *vr*, *mṛd*, *vṛj*, *vṛt*; — further, of roots assuming in the reduplication a *n* not found in the root, only *vah* (ÇB.: the grammarians allow also *kas*, *pat*, *pad*); finally, of roots having *u* or *ū* as radical vowel, with *av* before the *i*-vowel, *tu*, *dhū*, *nu*, *dyut*.

In this class, the general rules as to the form of the reduplicating consonant (590) are violated in the case of *ghanighan* and *bharībhṛ*, and of *ganīgam*, *karīkr* (but the regular *carīkr* also occurs), *kanīkrand*, and *kaniṣkand* (but also *canīskand* occurs).

The reversion to more original guttural form after the reduplication in *cekit*, and *janighan* and *ghanighan*, is in accordance with what takes place elsewhere (216.9).

1003. The same root is allowed to form its intensive stem in more than one way.

Thus, in the older language, *dādṛ* and *dardṛ*; *dādhṛ* and *dardhṛ*; *cācal* and *carcar* (and *carcur*); *tartar* (and *tartur*) and *tarīṭṛ*; *janighan* and *ghanighan*; *varvṛt* and *varīvṛt*; *jarbhur* and *bharībhṛ*; *dodhū* and *dauidhū*; *nonu* and *navīnu*; *bābadh* and *badbadh*.

1004. The model of normal intensive inflection is the present-system of the reduplicating conjugation-class (II.); and this is indeed to a considerable extent followed, in respect to endings, strengthening of stem, and accent. But deviations from the model are not rare; and the forms are in general of too infrequent occurrence to allow of satisfactory classification and explanation.

The most marked irregularity is the frequent insertion of an  $\xi \bar{i}$  between the stem and ending. According to the grammarians, this is allowed in all the strong forms before an ending beginning with a consonant; and before the  $\xi \bar{i}$  a final vowel has *guṇa*-strengthening, but a medial one remains unchanged.

#### Present System.

1005. We will take up the parts of the present-system in their order, giving first what is recognized as regular in the

later language, and then showing how the formation appears in the earlier texts. As most grammarians do not allow a middle inflection, and middle forms are few even in the Veda, no attempt will be made to set up a paradigm for the middle voice.

→ 1006. As example of inflection may be taken the root विद् *vid*, of which the intensive stem is वेविद् *vevid*, or, in strong forms, वेवेद् *vēved*.

Neither from this nor any other root are more than a few scattering forms actually quotable.

### 1. Present Indicative.

	s.	d.	p.
1	वेवेद्मि, वेविद्मि <i>vēvedmi, vēvidmi</i>	वेविद्मस् <i>vevidvās</i>	वेविद्मस् <i>vevidmās</i>
2	वेवेत्सि, वेविद्मिषि <i>vēvetsi, vēvidṣi</i>	वेवित्थस् <i>vevitthās</i>	वेवित्थ <i>vevitthā</i>
3	वेवेत्ति, वेविद्मिषि <i>vēveti, vēvidiṣi</i>	वेवित्थस् <i>vevittās</i>	वेविद्मि <i>vēvidati</i>

From  $\sqrt{\text{हृ}} \text{ hū}$ , the singular forms with auxiliary vowel would be ज्ञोह्वीमि *jōhavīmi*, ज्ञोह्वीषि *jōhavīṣi*, ज्ञोह्वीति *jōhavīti*.

1007. The forms found in the older language agree in general with the paradigm. Examples are: 1st sing., *carkarmi, veveṣmi*; 2d sing., *alarṣi, dārdarṣi*; 3d sing., *ālati, veveti, nenekti, jañghanti, kánikrantti, ganīganti*; 3d du., *jarbhṛtās*; 1st pl., *nonumas*; 3d pl., *nānadati, bhariḥhrati, vāroṛtati, dávidyutati, nénijati*; and, with the auxiliary vowel, *jōhavīmi, cākaṣmi; cākaṣi, nōnavīti, dardarīti, jarbhurīti*. No stem with dissyllabic reduplication takes the auxiliary *i* in any of its forms. AV. has *jāgrāti*, with irregular accent.

A single dual form with *i* and strong stem occurs: namely, *tartaṛthas*.

The middle forms found to occur are: 1st sing., *jōgwe, nenije*; 3d sing., *nenikṭe, sarsṛte*; and, with irregular accent, *tetikte, dēdiṣte*; with irregular union-vowel, *nānnate*; with ending *e* instead of *te*, *jāñgahe, jōgwe, yoyuwe, bābadhe*, and (with irregular accent) *badbadhé*; 3d du., *sarsṛte*; 3d pl., *dēdicāte*.

### 2. Present Subjunctive.

1008. Subjunctive forms with primary endings are extremely rare: there have been noticed only *jañghānāni, jāgarāsi* (AV.); and, in the middle, *tantasāte* (3d du.).

Forms with secondary endings are more frequent: thus, 2d sing., *jañ-*

*ghanas, jalgulas*; 3d sing., *jāgarat, cārḥṣat, jāñghanat, bārḥṣat, mārṃṣat, mārṃṣat, parpharat, dardīrat, canīṣkadat, davidyutat, saniṣvanat*; 1st du., *jañghanāva*; 1st pl., *carkirāma, vevidāma*; 3d pl., *pāpatan, ṣōcucan, carkiran*; and, with double mode-sign, *cākaṣān* (AV.). Besides these, *rārāṣas* and *rūrāṣat, cākānas* and *cākānat* and *cākānāma*, which their accent assimilates rather to perfect mode-forms with long reduplication, like *māmāhas* and *sāsāhat* etc. (810a). Of the middle are found only 3d persons plural: thus, *jāñghananta, jarḥṣanta, marmṣanta, nonuvanta, ṣocucanta*; and *cākānanta* (and *cakananta* once).

### 3. Present Optative.

1009. This mode would show the unstrengthened stem, with the usual endings (566), accented. Thus:

s.	d.	p.
1 वेविद्याम् <i>vevidyām</i> etc.	वेविद्याव <i>vevidyāva</i> etc.	वेविद्याम <i>vevidyāma</i> etc.

The optative is represented by only an example or two in the older language: thus, active, *veviṣyāt* (AV.), *jāgr̥yāt* (AB.); RV. has only *cākanyāt* (pft. ?); middle, *nenijāta* (K.).

### 4. Present Imperative.

1010. The regular forms of the imperative, including the usual subjunctive first persons, would be as follows:

s.	d.	p.
1 वेविदानि <i>vevidāni</i>	वेविदाव <i>vevidāva</i>	वेविदाम <i>vevidāma</i>
2 वेविद्धि <i>veviddhi</i>	वेवित्तम् <i>vevittam</i>	वेवित्त <i>vevitta</i>
3 वेवेत्तु, वेविदीतु <i>vevettu, vevidītu</i>	वेवित्ताम् <i>vevittām</i>	वेविदत्तु <i>vevidattu</i>

1011. Older imperative forms are less rare than optative. The first persons have been given above (*jañghānāni*, the only accented example, does not correspond with the model, but is in conformity with the subjunctive of the reduplicating present); the proper imperatives are: 2d sing., *dādṛḥī, dardṛḥi, carḥṛdhi, jāgr̥ḥi, nenigdhi, and rūranddhī, rūrandhī, cākandhi, vāvandhī*; the ending *tūt* is found in *carkṛtūt* and *jāgr̥tūt*; and the latter (as was pointed out above, 570) is used in AV. as first person sing.; *barḥṛhi* shows an elsewhere unparalleled loss of *h* before the ending *hi*; 3d sing., *veveṣṭu, dardartu, marmarttu, and rārantu*; 2d du., *jāgr̥tam*; 3d du., *jāgr̥tām*; 2d pl., *jāgr̥tā, and rāranta*; *caṅkramata* (RV., once) has an anomalous union-vowel; 3d pl., only the anomalous *cākantu* (RV., once), apparently for *cākanatu*. In the middle voice is found only *nenikṣva* (ÇB.).

Of imperative forms with auxiliary *ī*, RV. has none; AV. has *vāvadītu* and *johavitu*, and such are sometimes found in the Brāhmanas; AV. has also, against rule, *taṅstanihi* and *jaṅghanīhi*.

### 5. Present Participle.

1012. The intensive participles, both active and middle, are comparatively common in the older language. They are formed and inflected like those of the reduplicating present, and have the accent on the reduplicating syllable.

Examples are: active, *cākaçat*, *nānadat*, *cēkitat*, *mēmyat*, *ççucacat*, *rōruvat*, *dārdrat*, *mārmṛjat*, *jāṅghanat*, *nānnamat*, *pānīphanat*, *kānikradat*, *dāvidyutat*; — middle, *bābadhāna*, *mēmyāna*, *cēkitāna*, *yōyuvāna*, *rōrucāna*, *jārbhurāna*, *sārstrāna*, *nānnamāna*, *dāndaçūna*. No middle participle shows the dissyllabic reduplication.

1013. On account of their accent, *rārahānā*, *rūraksānā*, and *jāhṛṣānā* (beside *jārhrṣāna*) are probably to be regarded as perfect participles, although no other perfect forms with heavy reduplication from the same roots occur. The inference is, however, rendered uncertain by the unmistakably intensive *badbadhānā* and *marmṛjānā* (beside *mārmṛjāna*).

The RV. has once *jāṅghnatas*, gen. sing., with root-vowel cast out; *kānikrat* appears to be used once for *kānikradat*; if *cākāt* is to be referred to  $\sqrt{kā}$  (Grassmann), it is the only example of an intensive from a root in *ā*, and its accent is anomalous. *Marmṛçantas* (AB.) is probably a false reading.

### 6. Imperfect.

1014. The imperfect is regularly inflected as follows:

	s.	d.	p.
1	अवेदिद्म् <i>āveidam</i>	अवेदिद् <i>āveidva</i>	अवेदिन्म् <i>āveidma</i>
2	अवेवेत्, अवेविदीम् <i>āvevet, āvevidis</i>	अवेवित्तम् <i>āvevittam</i>	अवेवित <i>āvevitta</i>
3	अवेवेत्, अवेविदीत् <i>āvevet, āvevidit</i>	अवेवित्ताम् <i>āvevittām</i>	अवेविडुम् <i>āvevidus</i>

1015. The imperfect forms found in the earlier texts are not numerous. They are, including those from which the augment is omitted, as follows: in active, 1st sing., *acākaçam*, *dediçam*; 2d sing., *ajāgar*, *adardar*, *dārdar*, *cākān*; 3d sing., *adardar*, *adardhar*, *avarīvar*, *dardar*, *kāniçkan*, *dāvidyot*, *nāvīnot*, and *cākān* and *rārān*; 2d du., *adardṛtam*; 1st pl., *marmṛjmad*; 3d pl., *arāraṇus*, *anannamus*, *adardirus*, *acarkṣus*, *ājohavus*, *anonavus*; and, with auxiliary *ī*, in 3d sing., *āvāvaçit*, *āvāvarit*, *āyoyavit*, *āroravit*, *ājohavit*; and, irregularly, in 3d du., *avāvaçitām*. The middle forms are

extremely few: namely, 3d sing., *ādediṣṭa*, *ānannata* (with loss of the final radical in a weak form of root); 3d pl. *marmṛjata*, and *avāvaçanta* (which, if it belongs here, shows a transfer to an *a*-stem).

**1016. Derivative Middle Inflection.** From every intensive stem, as above described, may be formed in the present-system a further derivative conjugation which is formally identical with a passive, being made by the accented sign  $\bar{U}$  *yá*, along with middle endings only. It has not, however, a passive value, but is in meaning and use indistinguishable from the simpler conjugation.

A final vowel before this *ya* is treated as before the passive-sign *ya* (770).

The inflection is precisely like that of any other stem ending in *a* in the middle voice: thus, from  $\sqrt{mṛj}$ , intensive stem *marmṛj*, is made the present indicative *marmṛjyé*, *marmṛjyáse*, *marmṛjyáte*, etc.; optative *marmṛjyéya*, *marmṛjyéthās*, *marmṛjyéta*, etc.; imperative *marmṛjyāsva*, *marmṛjyātām*, etc.; participle *marmṛjyámāna*; imperfect *āmarmṛjye*, *āmarmṛjyathās*, *āmarmṛjyata*, etc.; subjunctive forms do not occur.

**1017.** This kind of intensive inflection is said to be much more usual than the other in the later language; in the earlier, it is comparatively rare.

In RV., *yá*-forms are made from eight roots, five of which have also forms of the simpler conjugation; the AV. adds one more; the other earlier texts (so far as observed) only twelve more, and half of them have likewise forms of the simpler conjugation. Thus: from  $\sqrt{mṛj}$ , *marmṛjyáte* etc., and *marīmṛjyeta*; from  $\sqrt{tr}$ , *tartūryante*; from  $\sqrt{car}$ , *carcūryámāṇa*; from  $\sqrt{nī}$ , *nenīyēran* etc.; from  $\sqrt{vī}$ , *vevīyate*; from  $\sqrt{rih}$ , *rerihyáte* etc.; from  $\sqrt{vij}$ , *vevijyáte*; from  $\sqrt{sku}$ , *coṣkūyáse* etc.; from  $\sqrt{dic}$ , *dediçyate*; from  $\sqrt{kāç}$ , *cākaçyáte*; from  $\sqrt{vad}$ , *vāvādyámāna*; from  $\sqrt{nam}$ , *nannamyadhvam*; from  $\sqrt{vah}$ , *vanīvāhyéta* etc. (with lengthened root-vowel, elsewhere unknown); from  $\sqrt{krand}$ , *kanikradyámāna*; from  $\sqrt{vrt}$ , *varīvartyámāna* (ÇB.: should be *varīvṛty-*); from  $\sqrt{mṛç}$ , *amarīmṛçyanta* (ÇB.? the text reads *amarīmṛtsyanta*); from  $\sqrt{yup}$ , *yoyupyānte* etc.; from  $\sqrt{nud}$ , *anonudyanta*; from  $\sqrt{vli}$ , *avevliyanta*; from  $\sqrt{jabh}$ , *jañjabhyáte* etc.; from  $\sqrt{jap}$ , *jañjapyámāna*.

#### Perfect.

**1018.** The grammarians are at variance as to whether a perfect may be formed directly from the intensive stem,

or whether only a periphrastic perfect (below, 1070 ff.) is to be admitted.

In the older language, no example of an intensive periphrastic perfect has come to light. A few unmistakable perfect forms are made from the intensively reduplicated root in RV.: namely, *avidhāva* and *nōnāva*, 3d sing., and *nonuvus*, 3d pl., and TS. has once *doḍrāva*. To these may be added *jāgara* 1st sing. and *jāgrā* 3d sing.: but as to these, see below, 1020.

#### Aorist, Future, etc.

1019. As to the remaining parts of a full verbal conjugation, also, the grammarians are not agreed (occurrences of such forms, apparently, being too rare to afford even them any basis for rules); in general, it is allowed to treat the intensive stem further as a root in filling up the scheme of forms, using always the auxiliary vowel  $\xi$  *i* where it is ever used in the simple conjugation.

Thus, from  $\sqrt{\text{vid}}$ , intensive stem *vevid*, would be made the aorist *avevidiṣam* with precativ *vevidyāsam*, the futures *vevidiṣyāmi* and *veviditāsmi*, the participles *vevidita*, *veviditavya*, etc., the infinitive *veviditum*, and the gerunds *veviditvā* and *-vevidya*. And, where the intensive conjugation is the derivative middle one, the aorist and futures would take the corresponding middle form.

Of all this, in the ancient language, there is hardly a trace. The RV. has *cārkrṣe*, 3d sing. mid., of a formation like *hiṣe* and *stuṣe* (894 d), and the gerundives *vitantasāyya*, and *marmrjēnya* and *vāvṛdhēnya*; and ÇB. has the participle *vanivāhitā*, and the infinitive *dédīyitavāt*. As to *jāgarisyānt* and *jāgaritā*, see the next paragraph.

1020. There are systems of inflection of certain roots, the intensive character of which is questioned or questionable. Thus:

The root *gr* (or *gar*) 'wake' has from the first no present-system save one with intensive reduplication; and its intensive stem, *jāgr*, begins early to assume the value of a root, and form a completer conjugation; while by the grammarians this stem is reckoned as if simple and belonging to the root-class (I.), and is inflected throughout accordingly. Those of its forms which occur in the older language have been given along with the other intensives above. They are, for the present-system, the same with those acknowledged as regular later. The older perfect is like the other intensive perfects found in RV.: namely, *jāgara* etc., with the participle *jāgrvāns*; and a future, *jāgarisyānt*, and a passive participle *jāgaritā* are met with in the Brāhmanas. The old aorist (RV.) is the usual reduplicated or so-called causative aorist: thus, *ājagar*. The grammarians give it in the later language a perfect with

additional reduplication, *jajāgāra* etc., an *iṣ*-aorist, *ajāgariṣam*, with precative *jāgariyāsam*, and everything else that is needed to make up a complete conjugation.

1021. The stem *irajya* (active only), 'regulate', from which a number of forms are made in RV., has been viewed as an intensive from  $\sqrt{raj}$  or *rj*. It lacks, however, any analogy with the intensive formation. The same is true of *iradh*, 'propitiate' (only *iradhanta* and *irādhyāi*, apparently for *iradhādhyaī*).

The middle stem *īya*, not infrequent in the oldest language, is usually called an intensive of  $\sqrt{i}$  'go', but with very doubtful propriety, as it has no analogy of form with any intensives. The isolated 1st pl. *īmahe*, common in RV., is also of questionable character.

1022. The root *lī* 'totter', with constant intensive reduplication, *leī*, is quite irregular in inflection and accent: thus, pres., *lelāyati* and *lelāyate* pples *lelāyāntī* and *lelāyatas* (gen. sing.) and *lelāyamāna*, impf. *alelāyat*, *alelet* and *alelāyata*.

1023. The RV. anomalous form *dart* (or *dard*), 2d and 3d sing. from  $\sqrt{dar}$  or *dar*, is 'doubtfully referred to the intensive, as if abbreviated from *dardar*. RV. has once *avarivus* (or *-vur*) where the sense requires a form from  $\sqrt{vrt}$ , as *avarivrtus*. The form *rarāṇātū* (RV., once) seems corrupt.

1024. A marked intensive or frequentative meaning is not always easily to be traced in the forms classed as intensive; and in some of them it is quite effaced. Thus, the roots *cit*, *nij*, *viṣ* use their intensive present-system as if it were an ordinary conjugation-class; nor is it otherwise with *randh*, *ran*, *kan* (of which, as noticed above, the forms admit of being referred to the perfect-system), and with *gr* (*jāgr*). The grammarians reckon the inflection of *nij* and *viṣ* as belonging to the reduplicating present-system (II.), with irregularly strengthened reduplication; and they treat in the same way *vic* and *vij*; *jāgr*, as we have seen, they account a simple root.

Also *daridrā*, intensive of  $\sqrt{drā}$  'run', is made by the grammarians a simple root, and furnished with a complete set of conjugational forms: as *dadaridrū*; *adaridrāsīt*, etc. etc. It does not occur in the older language. The so-called root *vevī* 'flutter' is a pure intensive.

1025. It is allowed by the grammarians to make from the intensive stem also a passive, desiderative, causative, and so on: thus, from *vevid*, pass. *vevidyē*; desid. *vēvidiṣāmi*; caus. *vevidāyāmi*; desid. of causative, *vēvidayīṣāmi*. But such formations are not found in the older language, and, if they occur at all, are excessively rare in the later.

### III. Desiderative.

1026. By the desiderative conjugation is signified a desire for the action or condition denoted by the simple root:

thus, पिबामि *piḅāmi*, 'I drink', desid. पियासामि *piḅāsāmi*, 'I wish to drink'; जीवामि *jīvāmi*, 'I live', desid. जिजीविषामि *jijīviṣāmi*, 'I desire to live'. Such a conjugation is allowed to be formed from any simple root in the language, and also from any causative stem.

The desiderative conjugation, although its forms outside the present-system are extremely rare in the oldest language, is earlier and more fully expanded into a whole verbal system than the intensive. Its forms are also of increasing frequency: much fewer than the intensives in RV., more numerous in the Brāhmaṇas and later; not one third of the whole number of roots (about ninety) noted as having a desiderative conjugation in Veda and Brāhmaṇa have such in RV.

1027. The desiderative stem is formed from the simple root by the addition of two characteristics: a. a reduplication, which always has the accent; b. an appended स *sa* — which, however (like the tense-signs of aorist and future), sometimes takes before it the auxiliary vowel इ *i*, becoming इष *iṣa*.

1028. The root in general remains unchanged; but with the following exceptions:

a. A final *i* or *u* is lengthened before *sa*: thus, *cikṣāsa*, *cikṣāsa*, *jigīṣa*; *ṣuṣrūsa*, *juhūsa*.

b. A final *r* becomes *īr* or *ūr* before *sa*: thus, *cikīrṣa*, *sisīrṣa*, *jihīrṣa*; *bubhūrṣa*, *tustūrṣa* (the only examples noted from the older texts).

c. Before *iṣa*, the same finals necessarily, and a penultimate *i* or *u* or *r* optionally, have the *guṇa*-strengthening (no examples are quotable from the older texts).

More special exceptions are:

d. A few roots in *ā* weaken this vowel to *ī* or even *i*: thus, *pipīṣa* (beside *pipāsa*) from *ḅpā* 'drink', *jihīṣa* (AV.) from *ḅhā* 'remove' (*jihīte*: 664); *didhīsa* (beside *dhīsa*) from *ḅdhā*.

e. A few roots in *an* or *am* lengthen the vowel: thus, *jigāṅsa* (beside *jigamiṣa*) from *ḅgam*; *jighāṅsa* from *ḅhan*; *mimāṅsa* from *ḅman*; and *ḅtan* is said to make *tītāṅsa*.

f. Reversion to guttural form of an initial after the reduplication is seen in *cikīṣa* from *ḅci*, *cikīṣa* from *ḅcit*, *jigīṣa* from *ḅji*, *jighāṅsa* from *ḅhan*; and *ḅhi* is said to make *jighīṣa*.

g. The roots *van* and *san* make *vivāsa* and *siṣāsa*, from the root-forms *vā* and *sā*.

h. The root *jīv* forms *jujyūsa* (ÇB.: *jijīviṣa*, VS.); and the other roots in *iv* (or *iv*: 765) are required to make the same change before *sa*, and to have *guṇa* before *īsa*: thus, *susyūsa* or *siseviṣa*. *Scap* forms *susūpsa*. *Dhūrv* forms *dudhūrṣa*.

i. Initial *s* is usually left unchanged to *ṣ* after the reduplication when the desiderative sign has *ṣ* (184 c): thus, *sisāñkṣa* (ÇB.: *ṣsañj*), and *susyūsa* and *sisaniṣa*, according to the grammarians.

k. Further may be mentioned as prescribed by the grammarians: *ninañkṣa* (or *ninaçīṣa*) from *ṣnaç*, 'perish'; *mimañkṣa* from *ṣmajj*; *mimārjīsa* (or *mimṛkṣa*) from *ṣmṛj*.

1029. The consonant of the reduplication follows the general rules (590); the vowel is  $\xi$  *i* if the root has an *a*-vowel, or  $\text{ऋ}$  *r*, or an *i*-vowel; it is  $\text{उ}$  *u* if the root has an *u*-vowel. But:

a. A few roots have a long vowel in the reduplicating syllable: thus, *bībhatsa* from *ṣbadh* or *bādih*; *mīmāñsa* from *ṣman*; and *tūtūrṣa* (RV.) from *ṣtur*.

b. From *ṣaç* is made (in ÇB). *açīçīṣa* (with a mode of reduplication like that followed sometimes in the reduplicating aorist: 862). The grammarians give other cases of the same kind: thus, *arjihīsa* from *ṣarh*, *çikṣīṣa* from *ṣikṣ*, *undidiṣa* from *ṣund*, *ardidhīsa* from *ṣrdh*. In the older language, *aç* is the only root with initial vowel which forms a desiderative stem, except *āp* and *ṣdh*, which have abbreviated stems: see the next paragraph.

c. RV. has the stems *īnakṣa* and *īyakṣa*, regarded as desideratives from *ṣṣnaç* 'attain' and *ṣyaj*, with mutilated reduplication.

1030. A number of roots, including some of very common use, form an abbreviated stem apparently by a contraction of reduplication and root together into one syllable: thus,  $\text{इप्स}$  *īpsa* from *ṣचाप्* *āp*;  $\text{दित्स}$  *ditsa* from *ṣदा* *dā*.

Such abbreviated stems are found in the older language as follows: *dhitsa* (beside *didhīsa*) from *ṣdhā*; *ditsa* (beside *didāsa*) from *ṣdā*; *dīpsa* from *ṣdabh*; *çikṣa* from *ṣçak*; *çikṣa* from *ṣsah*: these are found in RV.; in AV. are added *īpsa* from *ṣāp* (RV. has *apsa* once), and *īrtsa* from *ṣrdh*: the other texts furnish *lipsa* (ÇB.) or *līpsa* (TB.) from *ṣlabh*, *ripsa* (GB.) from *ṣrabh*, *pītsa* (ÇB.) from *ṣpad*, and *dhikṣa* (ÇB.) from *ṣdih* (or, rather, *dah*). The grammarians prescribe *dhīpsa* or *dhīpsa* from *ṣdabh*, instead of *dīpsa*; they form *pītsa* from *ṣpat* as well as *pad*; and they add *ritsa* from *ṣradh*, *jñīpsa* (beside *jijñāpayīsa*) from the causative quasi-root *jñāp* (below, 1042 e), and *mitsa* from *ṣmā* and *mī* and *mi*: this last could be only an anomalous

formation, made after the analogy of the others. Also *mokṣa* is reckoned as a desiderative stem from  $\sqrt{muc}$  (it is denominative, rather).

1031. The use of the auxiliary vowel  $\xi$  *i* is quite rare in the early language, but more common later; and it is allowed or prescribed by the grammarians in many stems which have not yet been found in actual use.

It is declared to follow in general, (though not without exceptions, necessary or optional, the analogy of the futures (934, 943).

No example of the use of *i* is found in RV., and only one each in AV. (*pipatiṣa*), VS. (*jijivīṣa*), and TS. (*jigemiṣa*). The other examples noted in the early texts are *açiṣa*, *cikramiṣa*, *jigrahīṣa* (with  $\bar{i}$  for *i*, as elsewhere in this root), *cicariṣa*, *jijaniṣa*, *didikṣiṣa*, *bibādhiṣa*, *rirādhiṣa*, *vividiṣa*, *jihīṣiṣa*: most of them are found only in ÇB. Stems also without the auxiliary vowel are made from roots *gam*, *jīv*, *bādh*, *vid*.

1032. Inflection: Present-System. The desiderative stem is conjugated in the present-system with perfect regularity, like other *a*-stems, in both voices, in all the modes (including, in the older language, the subjunctive), and with participles and imperfect. It will be sufficient to give here the first persons only. We may take as active model  $\sqrt{प्सा}$  *īpsa*, 'seek to obtain', from  $\sqrt{प्राप्}$  *āp*; as middle  $\sqrt{तिक्श}$  *titikṣa*, 'endure', from  $\sqrt{तिञ्ज}$  *tij*, 'be sharp' (see below, 1040).

### 1. Present Indicative.

	active.				middle.	
	s.	d.	p.	s.	d.	p.
1	$\sqrt{प्सामि}$ <i>īpsāmi</i> etc.	$\sqrt{प्सावस्}$ <i>īpsāvas</i> etc.	$\sqrt{प्सामस्}$ <i>īpsāmas</i> etc.	$\sqrt{तितिक्षे}$ <i>titikṣe</i> etc.	$\sqrt{तितिक्षावहे}$ <i>titikṣāvāhe</i> etc.	$\sqrt{तितिक्षामहे}$ <i>titikṣāmahe</i> etc.

### 2. Present Subjunctive.

2	$\sqrt{प्सानि}$ <i>īpsāni</i> etc.	$\sqrt{प्साव}$ <i>īpsāva</i> etc.	$\sqrt{प्साम}$ <i>īpsāma</i> etc.	$\sqrt{तितिक्षै}$ <i>titikṣāi</i> etc.	$\sqrt{तितिक्षावाहै}$ <i>titikṣāvāhāi</i> etc.	$\sqrt{तितिक्षामहै}$ <i>titikṣāmāhāi</i> etc.
---	--	---	---	--	--	---

### 3. Present Optative.

1	$\sqrt{प्सेयम्}$ <i>īpseyam</i> etc.	$\sqrt{प्सेव}$ <i>īpseva</i> etc.	$\sqrt{प्सेम}$ <i>īpsema</i> etc.	$\sqrt{तितिक्षेय}$ <i>titikṣeya</i> etc.	$\sqrt{तितिक्षेवाहि}$ <i>titikṣevāhi</i> etc.	$\sqrt{तितिक्षेमहि}$ <i>titikṣemāhi</i> etc.
---	--	---	---	--	---	--

## 4. Present Imperative.

इप्स 2 <i>īpsa</i> etc.	इप्सतम् <i>īpsatam</i> etc.	इप्सत <i>īpsata</i> etc.	तितित्तस्व <i>tītikṣasva</i> etc.	तितित्तयाम् <i>tītikṣethām</i> etc.	तितित्तधम् <i>tītikṣadhvam</i> etc.
-------------------------------	-----------------------------------	--------------------------------	---	---	---

## 5. Present Participle.

इप्सन्त् *īpsant* (f. इप्सन्ती *īpsantī*) तितित्तमाण *tītikṣamāṇa*.

## 6. Imperfect.

ऐप्सम् 1 <i>āipsam</i> etc.	ऐप्साव <i>āipsāva</i> etc.	ऐप्साम <i>āipsāma</i> etc.	अतितित्ते <i>ātītikṣe</i> etc.	अतितित्तावद् <i>ātītikṣāvahi</i> etc.	अतितित्तामद् <i>ātītikṣāmahi</i> etc.
-----------------------------------	----------------------------------	----------------------------------	--------------------------------------	---	---

There are almost no irregularities of inflection to be reported from the older language. No 1st pl. in *masi*, or 2d pl. in *thana* or *tana*, or impv. in *tāt*, is met with. The quotable subjunctive forms are those in *sūni*, *sūt* and *sat*, *sān*, and *santa*.

But the fem. pple *siṣāsati* (instead of *siṣāsanti*) occurs once or twice in the older texts.

1033. Desiderative forms outside the present-system are extremely rare in the oldest language. The RV. has only perfect forms from a stem *mimikṣ* — thus, *mimikṣāthus*, *mimikṣātus*, *mimikṣūs*; *mimikṣe*, *mimikṣire* — along with the present forms *mimikṣati*, *mimikṣa* etc., *mimikṣant* (pple): they show that *mimikṣ* or *mikṣ* has taken on the character of an independent root. In AV. are found two aorist forms, *irtsis* and *acikitsis*, and a participle or two from *mimāṅsa* (see below, 1037, 1039) — all of them from stems which have lost their distinct desiderative meaning, and come to bear an independent value. The forms noted from the other earlier texts will be given in full below.

In the later language, the complete system of verbal forms is allowed to be made in the desiderative conjugation, the desiderative stem, less its final vowel, being treated as a root. Thus:

1034. Perfect. The desiderative perfect is the periphrastic (1070 ff.).

Thus, *īpsām cakāra* etc.; *tītikṣām cakre* etc. Such forms are made in ÇB. from  $\sqrt{\text{V}}$  *kram*, *dhūrv*, *bādḥ*, *ruh*.

Apparent perfect forms of the ordinary kind made from *mimikṣ* in RV. have been noticed in the preceding paragraph. And AB. (viii. 21) has once *didāsitha*, 'thou hast desired to give'.

1035. Aorist. The aorist is of the *iṣ*-form (5): thus, ऐप्सिषम् *āipsiṣam*, अतितित्तिषि *ātītikṣiṣi*.

The AV. has *acikitsīs*, and *īrtsīs* (augmentless, with *mā* prohibitive: 579). TB. has *āipsūt*; and ÇB. *ūrtsūt*, *ācīkīrsīs* and *ajighānsīs*, and *amīmānsīṣṭhās*.

A precativè is also allowed — thus, *īpsyāsam*, *titikṣīṣya*, but it probably never occurs.

1036. Futures. The futures are made with the auxiliary vowel  $\text{इ } i$ : thus,  $\text{इप्सिष्यामि } \textit{īpsisyāmi}$  and  $\text{इप्सितास्मि } \textit{īpsitāsmi}$ ;  $\text{तितिक्षिये } \textit{titikṣiyé}$  and  $\text{तितिक्षिताहे } \textit{titikṣitāhe}$ .

The ÇB. has *titikṣiyate* and *didṛkṣitāras*.

1037. Verbal Nouns and Adjectives. These too are made with the auxiliary vowel  $\text{इ } i$ , in all cases where that vowel is ever taken.

In the older language have been noted: participle in *ta*, *mīmānsitā* (AV., GB.), *jijyūsita* (AB.), *çuçrūṣitā* and *dhīkṣitā* (ÇB.); — gerundive in *tavya*, *īpsitavya* (AB.), *didhyāsītavyā* (ÇB.); — gerund in *tvā*, *mīmānsitvā* (K.).

1038. A desiderative adjective in *u* — for example, *dipsū*, *bībhatsū*, *siṣāsū* — is of frequent occurrence, and has the meaning and construction of a present participle. An abstract noun in *ā* — for example, *jigīṣā* — is also a usual appendage to the desiderative conjugation. Adjectives in *enya* (having a gerundive character: 966 b) are occasionally met with from the earliest time: thus, *didṛkṣēnya* (RV.), *çuçrūṣēnya* (TS.), *niṣēnya* (PB.); also, with irregular reduplication (apparently) *papṛkṣēnya* (RV.). RV. has also *didhiṣāyya* (966 c).

1039. Derivative or Tertiary Conjugations. A passive is allowed to be made, by adding the passive-sign  $\text{य } yā$  to the desiderative root (or stem without final *a*): thus,  $\text{इप्स्यते } \textit{īpsyāte}$ , 'it is desired to be obtained'; — and a causative by adding in like manner the causative-sign  $\text{अय } āya$  (1041): thus,  $\text{इप्सयामि } \textit{īpsāyāmi}$ , 'I cause to desire obtainment'.

The only trace of such formations noticed in the older language is the participle *mīmānsyāmāna* (apparently to be read instead of *mīmānsāmāna*, AV. ix. 6. 24).

For the desiderative conjugation formed on causative stems, which is found as early as the Brāhmanas, see below, 1052 b.

1040. Some stems which are desiderative in form have lost the peculiarity of desiderative meaning, and assumed the value of independent roots: examples are *cikits*, 'cure', *jugups*, 'despise', *titikṣ*, 'endure', *bībhats*, 'abhor', *mīmāns*, 'ponder'. Doubtless

some of the apparent roots in the language with sibilant final are akin with the desideratives in origin.

#### IV. Causative.

1041. In the later language is allowed to be made from every root a complete causative conjugation. The basis of this is a causative stem, formed by appending the causative-sign  $\text{अय } \dot{a}ya$  to the, usually strengthened, root.

But by no means all conjugation-stems formed by the sign  $\text{अय } \dot{a}ya$  are of causative value; and the grammarians regard them as a conjugation-class, the tenth or *cur*-class, according to which roots may be inflected as according to the other classes, and either alone or along with others.

In RV., the proportion without causative value is fully one third. The formation is a more obviously denominative one than any of the other conjugation-classes, an intermediate between them and the proper denominatives. A causative meaning has established itself in connection with the formation, and become predominant, though not exclusive. A number of roots of late appearance and probably derivative character are included in the class, and some palpable denominatives, which lack only the usual denominative accent (below, 1055).

The causative formation is of much more frequent use, and more decidedly expanded into a full conjugation, than either the intensive or the desiderative. It is made from more than two hundred and fifty roots in the early language (in RV., from about one hundred and fifty); but in the oldest, its forms outside the present-system are (apart from the attached reduplicated aorist: 1046) exceedingly few.

1042. The treatment of the root before the causative-sign  $\text{अय } \dot{a}ya$  is as follows:

a. Medial or initial *i*, *u*, *r*, *l* have the *guna*-strengthening (if capable of it): thus, *vedaya* from  $\sqrt{\text{vid}}$ , *codaya* from  $\sqrt{\text{cud}}$ , *tarpaya* from  $\sqrt{\text{trp}}$ ; and *kalpaya* from  $\sqrt{\text{klp}}$  (only example).

But a few roots lack the strengthening: these are, in the older language, *cit* (*citaya* and *cetaya*), *vip* (*vipaya* and *vepaya*), *iṣ*, *iḷ* and *il*, *riṣ* (*riṣaya* and *reṣaya*), *tuj*, *tur*, *dyut* (*dyutaya* and *dyotaya*), *mṛḍ*, *sprḥ*; and *grabh* makes in RV. *grbhaya*. *Duṣ* and *guh* lengthen the vowel instead. *Mṛj* sometimes has *vṛddhi*, as in other forms: thus, *mārjaya* (beside *marjaya*).

b. A final vowel has the *vṛddhi*-strengthening: thus, *cyāvaya*, *bhāvaya*, *dhāraya*, *sāraya*.

But no root in *i* or *ī* has *vr̥ddhi* in the older language (unless *pāyaya* [d, below] comes from *pī* rather than *pū*) — as, indeed, regular causatives from such roots are hardly quotable: only RV. has *kṣayaya* from  $\sqrt{kṣi}$  'dwell'; for a few alternatively permitted forms, see below, e.

A few roots have (generally in the older language only) a form also with *guṇa*-strengthening: thus, *dru*, *yu* 'ward off', *ṣru*, *pū*, *ḥr̥* 'decay', *dr̥* 'burst', *ṣr̥*, *hr̥*; *vr̥* 'choose' makes *varaya* later (it is not found in V. or Br.).

c. A medial or initial *a* in a light syllable is sometimes lengthened, and sometimes remains unchanged: thus, *bhājaya*, *svāpaya*, *ādaya*; *janaya*, *ṣrathaya*, *anaya*.

The roots in the older language which keep their short *a* are *an*, *jan*, *pan*, *svan*, *dhan*, *ran*, *stan*, *dhvan*, *gam* (*gāmaya* once in RV.), *tam*, *dam*, *nam*, *prath*, *ṣrath*, *ṣnath*, *vyath*, *svad*, *nad*, *das*, *dhvas*, *mah*, *nabh*, *tvar*, *svar*. Some have both forms: namely, *pat*, *chad*, *mad*, *ram*, *ṣam*; *raj* has *rajaya* (AV., once) and *rañjaya*. The roots which lengthen the vowel are decidedly the more numerous. If a nasal is taken in any of the strong forms of a root, it usually appears in the causative stem: thus, *randhaya*, *lambhaya*, *rambhaya*, *skandaya*.

d. Most roots in final *ā*, and the root *ṛ*, add *p* before the conjugation-sign: thus, *dāpaya*, *dhāpaya*, *sthāpaya*; *arpaya*.

Such stems are made in the older language from the roots *khyā*, *glā*, *ghrū*, *jñā*, *dā* 'give', *drū* 'run', *dhū* 'put' and *dhū* 'suck', *mā* 'measure', *mā*, *vā* 'blow', and *vā* 'tire', *sthā*, *snā*, *hā* 'remove' and *hā* 'leave'. From *jñā* and *snā* are found in AV. and later the shortened forms *jñapaya* and *snapaya*, and from *ṣrā* only *ṣrapaya* (not in RV.). Also *glā* forms in the later language *glapaya*.

Stems from *ā*-roots showing no *p* are, earlier, *pāyaya* from  $\sqrt{pā}$  'drink' (or *pī*), *pyāyaya* from  $\sqrt{pyā}$  or *pyāy*; *sāyaya* from  $\sqrt{sā}$  (or *sī*); also, later, *ṣāyaya* from  $\sqrt{ṣā}$ , *hvāyaya* from  $\sqrt{hvā}$ ; — and further, from roots *chā*, *vā* 'weave', and *vyā*, according to the grammarians.

e. The same *p* is taken also by a few *i* and *ī*-roots, with various accompanying irregularities: thus, *kṣepaya* from  $\sqrt{kṣi}$  'dwell' (RV., beside *kṣayaya*); *kṣāpaya* (AV.) and *kṣapaya* and *kṣayaya* from  $\sqrt{kṣi}$  'destroy'; *jāpaya* (VS. and later) from  $\sqrt{ji}$ ; *lāpaya* (TB. and later) from  $\sqrt{li}$ ; *adhya-paya* from *adhi* +  $\sqrt{i}$ ; *smāpaya* (beside *smāyaya*, which does not occur) from  $\sqrt{smi}$ ; *hrepaya* from  $\sqrt{hrī}$ ; — and, according to the grammarians, *repaya* from  $\sqrt{rī}$ , *vlepaya* from  $\sqrt{vlī}$ , *krāpaya* from  $\sqrt{krī}$ , *bhāpaya* (beside *bhāyaya* and *bhīṣaya*) from  $\sqrt{bhī}$ , and *cāpaya* (beside *cāyaya*) from  $\sqrt{ci}$ . Moreover,  $\sqrt{ruh}$  forms later *ropaya* (earlier *rohaya*), and  $\sqrt{knū}$  or *knūy* is said to form *knopaya*.

f. More anomalous cases, in which the so-called causative is palpably the denominative of a derived noun, are: *pālaya* from  $\sqrt{pā}$  'protect'; *prīṇaya* from  $\sqrt{prī}$ ; *līnaya* (according to grammarians) from  $\sqrt{li}$ ; *dhūnaya* (not causative in sense) from  $\sqrt{dhū}$ ; *bhīṣaya* from  $\sqrt{bhī}$ ; *ghātaya* from  $\sqrt{ghan}$ ; *sphāvaya* (according to grammarians) from  $\sqrt{sphā}$  or *sphāy*.

1043. Inflection: Present-System. The causative stem is inflected in the present-system precisely like other stems in  $\text{अ}$ : it will be sufficient to give here in general the first persons of the different formations, taking as model the stem धारय *dhāráya*, from  $\sqrt{\text{धृ}}$  *dhṛ*. Thus:

### 1. Present Indicative.

	active.			middle.		
	s.	d.	p.	s.	d.	p.
1 धारयामि धारयावस् धारयामस् धारये धारयावहे धारयामहे						
<i>dhāráyāmi dhāráyāvas dhāráyāmas dhāráye dhāráyāvaha dhāráyāmahe</i>						
etc. etc. etc. etc. etc. etc.						

The 1st pl. act. in *masi* greatly outnumber (as 10 to 1) those in *mas* in both RV. and AV. No example occurs of 2d pl. act. in *thana*, nor of 3d sing. mid. in *e* for *ate*.

### 2. Present Subjunctive.

For the subjunctive may be instanced all the forms noted as occurring in the older language:

1 <i>dhāráyāṇi dhāráyāva dhāráyāma dhāráyāi dhāráyāvahāi</i>	
2 { <i>dhāráyāsi dhāráyāthas dhāráyātha dhāráyāse</i> }	{ <i>dhāráyādhve dhāráyādhvūi</i> }
3 { <i>dhāráyāti dhāráyātas dhāráyān</i> }	{ <i>dhāráyāte dhāráyāite</i> }

Only one dual mid. form in *āite* occurs: *mādāyāite* (RV.). The only RV. mid. form in *āi*, except in 1st du., is *mādāyādhvūi*. The primary endings in 2d and 3d sing. act. are more common than the secondary.

### 3. Present Optative.

1 धारयेयम् धारयेव धारयेम धारयेय धारयेवहि धारयेमहि	
<i>dhāráyeyam dhāráyeva dhāráyema dhāráyeya dhāráyevahi dhāráyemahi</i>	
etc. etc. etc. etc. etc. etc.	

Optative forms are very rare in the oldest language (four in RV., two in AV.); they become more common in the Brāhmaṇas. AB. has once *kūmayīta*.

### 4. Present Imperative.

2 धारय धारयतम् धारयत धारयस्व धारयेयाम् धारयध्वम्	
<i>dhāráya dhāráyatam dhāráyata dhāráyasva dhāráyethām dhāráyadhvam</i>	
etc. etc. etc. etc. etc. etc.	

Imperative persons with the ending *tāt* occur: *dhārayatāt* (AV.) is 2d sing.; *gamayatāt* and *cyāvayatāt* (K. etc.), and *vārayatāt* (TB.) are used as 2d pl.; *vārayadhvūt* (K. etc.) is 2d pl., and the only noted example (see above, 570).

## 5. Present Participle.

धारयन् *dhārayant* (f. यन्ती *-yanti*) धारयमाण *dhārayamāna*.

## 6. Imperfect.

1 अधारयम् अधारयाव अधारयाम अधारये अधारयावहि अधारयामहि  
*ādharayam ādharayāva ādharayāma ādharaye ādharayāvahi ādharayāmahi*  
 etc. etc. etc. etc. etc. etc.

For a few forms in *īs* and *īt* which perhaps belong to the imperfect, see below.

1044. As was above pointed out, the formations from the causative stem in *aya* outside the present-system are in the oldest language very limited. In RV. are found two forms of the future in *syāmi*, and ten infinitives in *dhyāi*; also one or two derivative nouns in *tr* (*bodhayitr*, *codayitri*), five in *iṣṇu*, seven in *itnu*, and a few in *a* (*atipārayā*, *nidhārayā*, *vācamānkhayā*, *viçvamejaya*). In AV., also two s-future forms and four gerunds in *twū*; and a few derivative noun-stems, from one of which is made a periphrastic perfect (*gamayām cakāra*). In the Brāhmaṇas, verbal derivative forms become more numerous and various, as will be noted in detail below.

1045. Perfect. The accepted causative perfect is the periphrastic (1070), the derivative noun in *क्रा* *á*, in accusative form, to which the auxiliary is added, being formed from the causative stem: thus,

धारयां चकार *dhārayām cakāra* धारयां चक्रे *dhārayām cakre*.

Of this perfect no example occurs in RV. or SV. or VS., only one — *gamayām cakāra* — in AV., and but two or three in all the various texts of the Black Yajur-Veda, and these not in the *mantra*-parts of the text. They are also by no means frequent in the Brāhmaṇas, except in ÇB. (where they abound: chiefly, perhaps, for the reason that this work uses in considerable part the perfect instead of imperfect as its narrative tense).

1046. Aorist. The aorist of the causative conjugation is the reduplicated, which in general has nothing to do with the causative stem, but is made directly from the root.

It has been already fully described (above, 856 ff.).

Its association with the causative is doubtless founded on an original intensive character belonging to it as a reduplicated form, and is a matter of gradual growth: in the Veda it is made from a considerable number of roots (in RV., more than a third of its instances; in AV., about a fifth) which have no causative stem in *aya*.

The causative aorist of  $\sqrt{\text{धृ}}$  *dhṛ*, then, is as follows:

1 अदीधरम्	अदीधराव	अदीधराम	अदीधरे	अदीधरावहि	अदीधरामहि
<i>ādīdharam</i>	<i>ādīdharāva</i>	<i>ādīdharāma</i>	<i>ādīdhare</i>	<i>ādīdharāvahi</i>	<i>ādīdharāmahi</i>
etc.	etc.	etc.	etc.	etc.	etc.

1047. In a few cases, where the root has assumed a peculiar form before the causative sign — as by the addition of a *p* or *ṣ* (above, 1042 d ff.) — the reduplicated aorist is made from this form instead of from the simple root: thus, *atiṣṭhīpam* from *sthāp* (stem *sthāpaya*) for  $\sqrt{\text{sthā}}$ . Aorist-forms of this character from quasi-roots in *āp* are made from *sthāp*, *jñāp*, *hāp*, *jāp*, and *ṣrap* (above, 861); the only other example from the older language is *bībhīṣas* etc. from *bhīṣ* for  $\sqrt{\text{bhī}}$ .

1048. A small number of Vedic forms having *īs* and *īt* after *y* of the causal stem are apparently sporadic attempts at making an *iṣ*-aorist: thus, *vyathayīs* (AV.), *dhvanayīt* (RV.; TS. has instead the anomalous *dhvanayit*), and *ālayīt* (AV.). The two former are augmentless forms, used with *mā* prohibitive (compare the denom. *ūnayīs*, RV., also with *mā*).

1049. A precative is of course allowed by the grammarians to be made for the causative conjugation: in the middle, from the causative stem with the auxiliary  $\text{इ} i$  substituted for its final  $\text{अ} a$ ; in the active, from the form of the root as strengthened in the causative stem, but without the causative sign: thus,

धार्यासम् *dhāryāsam* etc. धारयिषीय *dhārayiṣīya* etc.

This formation is doubtless to be regarded as purely fictitious.

1050. Futures. Both futures, with the conditional, are made from the causative stem, with the auxiliary  $\text{इ} i$ , which takes the place of its final  $\text{अ} a$ . Thus:

#### S-Future.

धारयिष्यामि *dhārayiṣyāmi* etc. धारयिष्ये *dhārayiṣyē* etc.

#### Conditional.

अधारयिष्यम् *ādharayiṣyam* etc. अधारयिष्ये *ādharayiṣyē* etc.

#### Periphrastic Future.

धारयितास्मि *dhārayitāsmi* etc. धारयिताहे *dhārayitāhe* etc.

The *s*-future participles are made regularly: thus, *dhārayiṣyānt* (fem. *-yāntī* or *-yatī*), *dhārayiṣyāmāṇa*.

It has been mentioned above that RV. and AV. contain only two examples each of the *s*-future, and none of the periphrastic. The former begin to appear in the Brāhmaṇas more numerously, but still sparingly, with participles, and conditional (only *adhārayiṣyat*, ÇB.); of the latter, ÇB. affords two examples (*pārayitāsmi* and *janayitāsi*).

**1051. Verbal Nouns and Adjectives.** These are in part formed from the causative stem in the same manner as the futures; in part — namely, the passive participle in ण *ta* and the gerundive and gerund in ण *ya* (and the root-infinitive) — from the causatively strengthened root-form. The auxiliary ङ *i* is taken in every formation which ever admits that vowel.

Thus, of formations permitted in the later language (but the examples taken from the earlier):

- participle in *ta*: *iritā*, *vāsītā*, *çrāvītā*;
- gerundive in *tavya*: *tarpayitavyā*, *kalpayitavya*, *gamayitavya*, *bhakṣayitavya*;
- gerundive in *ya*: *sthāpya*, *yājya*;
- infinitive in *tum*: *jōṣayitum*, *dhārayitum*, *janayitum*, *pārayitum*;
- gerund in *tā*: *kalpayitvā*, *sādayitvā*, *-arpayitvā* (AV.: see 990), *-rocayitvā* (TA.), *çrapayitvā* (AB.);
- gerund in *ya*: *-ghārya*, *-pādya*, *-vāsya*, *-sādyā*, *-sthāpya*;
- gerund in *am*: *-sthāpam* (ÇB.).

Further, of formations found only in the older language:

- root-infinitive, accusative: *-sthāpam* (PB.);
- infinitive in *tavāi*: *jānāyitavāi*, *tārpāyitavāi*, *pāyāyitavāi*, *-kalpāyitavāi*, *-çcotāyitavāi* (all ÇB.);
- infinitive in *dhyāi*: *iṣayādhyāi*, *īrayādhyāi*, *taṅsayādhyāi*, *nāçayādhyāi*, *mandayādhyāi*, *mādayādhyāi*, *riṣayādhyāi*, *vartayādhyāi*, *vājayādhyāi*, *syandayādhyāi* (all RV.);
- gerundive in *āyya*: *panayāyya*, *spṛhayāyya*, *trayayāyya* (√*trū*: ?).

All these, it will be noticed, follow the same rule as to accent with the similar formations from the simple root, showing no trace of the special accent of the causative stem.

**1052. Derivative or Tertiary Conjugations.** From the causative stem may be made a passive and a desiderative conjugation. Thus:

a. The passive-stem is formed by adding the usual passive-sign ण *yā* to the causatively strengthened root, the causative-sign being dropped: thus, धारयन्ते *dhāryāte*.

Such passives are not found in the Veda, but they are met with here and there throughout the Brāhmaṇa language: examples are *jñapyā-* (TS.), *sādyā-* (K.), *pādyā-* (AB.), *vādyā-* (TB.), *sthāpyā-* (GB.), and so on.

b. The desiderative stem is made by reduplication and addition of the sign  $\overline{\text{इ}}\text{प}$  *iṣa*, of which the initial vowel replaces the final of the causative stem: thus,  $\overline{\text{दि}}\text{हार्घिषति}$  *didhāryiṣati*.

These, too, are found here and there in the Brāhmaṇas and later: examples are *pipāyayīṣa* (K.), *bībhāvayīṣa* and *cīkalpayīṣa* and *lulobhayīṣa* (AB.), *didrūpayīṣa* and *rīrādhayīṣa* and *āpipayīṣa* (ÇB.), and so on.

As to causatives made from the desiderative stem, see above, 1039.

## V. Denominative.

1053. A denominative conjugation is one that has for its basis a noun-stem.

It is a view now prevailing held that most of the present-systems of the Sanskrit verb, along with other formations analogous with a present-system, are in their ultimate origin denominative; and that many apparent roots are of the same character. The denominatives which are so called differ from these only in that their origin is recent and undisguised.

1054. The grammarians teach that any noun-stem in the language may be converted, without other addition than that of an  $\text{अ}$  *a* (as union-vowel enabling it to be inflected according to the second general conjugation) into a present-stem, and conjugated as such.

As examples of what is allowed in this way, are given *kṛṣṇati*, 'acts like Krishna'; *mālāti*, 'is like a garland (*mālā*)'; *kavayati*, 'plays the poet (*kavi*)'; *bhavati*, 'is like the earth (*bhū*)'; *ṣrayati*, 'resembles  $\text{ऋ}$  (*goddess*)'; *pitarati*, 'acts the father'; *rājānati*, 'is kingly'. But such formations are at the best of extreme rarity in actual use. The RV. has a few isolated and doubtful examples, the clearest of which is *bhiṣakti*, 'he heals', from *bhiṣḍj*, 'physician'; it is made like a form of the root-class; *abhiṣṇak* seems to be its imperfect according to the nasal class. And *pātyate*, 'he rules', appears to be a denominative of *pāti*, 'master'. Other possible cases are (Delbrück) *iṣaṇas* etc., *kṛpānanta*, *taruṣema* etc., *vanuṣanta*, *bhuraṣanta*, *vānanavati*. None of the other Veda or Brāhmaṇa texts has anything additional of the same character.

1055. In general, the base of denominative conjugation

is made from the noun-stem by means of the conjugation-sign  $\bar{u}$  *yá*, which has the accent.

The identity of this *ya* with the *ya* of the so-called causative conjugation, as making with the final *a* of the noun-stem the causative-sign *aya*, is altogether probable. What relation it sustains to the *ya* of the *ya*-class (VIII.), of the passive, and of the derivative intensive stem, is more open to question.

**1056.** Intermediate between the denominative and causative conjugations stands a class of verbs, plainly denominative in origin, but having the causative accent. Examples, beginning to appear at the earliest period of the language, are *mantráyate* (from *mantra*,  $\sqrt{\text{man}} + \text{tra}$ ) and *kīrtáyati* (from *kīrti*,  $\sqrt{\text{kr}}$  'praise'). These, along with like forms from roots which have no other present-system (though they may make scattering forms outside that system from the root directly), or which have this beside other present-systems without causative meaning, are reckoned by the grammarians as a separate conjugation-class (above, 607).

**1057.** Denominatives are formed at every period in the history of the language, from the earliest down.

They are most frequent in RV., which contains over a hundred, of all varieties; AV. has only half as many (and personal forms from hardly a third as many: from the rest, present participles, or derivative nouns); AB., less than twenty; ÇB., hardly more than a dozen; and so on. In the later language in general, they are far from numerous; and most of those which occur are "*cur*-class" verbs.

**1058.** The denominative meaning is, as in other languages, of the greatest variety; some of the most frequent forms of it are: 'be like, act as, play the part of', 'regard or treat as', 'cause to be, make into', 'use, make application of', 'desire, wish for, crave' — that which is signified by the noun-stem.

The modes of treatment of the stem-final are also various; and the grammarians make a certain more or less definite assignment of the varieties of meaning to the varieties of form; but this allotment finds only a dubious support in the usages of the words as met with even in the later language, and still less in the earlier. Hence the formal classification, according to the final of the noun-stem, and the way in which this is treated before the denominative sign *yá*, will be the best one to follow.

1059. From stems in *a*. **a.** The final *a* of a noun-stem oftenest remains unchanged: thus, *amitrāyāti*, 'plays the enemy, is hostile'; *devayāti*, 'cultivates the gods, is pious'.

**b.** Final *a* is lengthened: thus, *aghāyāti*, 'plans mischief'; *priyāyāte*, 'holds dear'; *açvāyāti*, 'seeks for horses'; *açanāyāti*, 'desires food'.

In the Veda, forms of the same verb with short and long *ā* before *ya* sometimes exchange with one another.

**c.** It is changed to *ī*, or rarely *i*; thus, *adhvarīyāti*, 'performs the sacrifice'; *taviṣīyāti*, 'is mighty'; *putrīyāti* or *putriyāti*, 'desires a son'; *māṁsīyāti*, 'craves flesh'.

Denominatives of this form show a special proclivity toward the meaning 'desire'.

**d.** It is dropped (after *n* or *r*): thus, *turānyāti*, 'is rapid'; *adhvaryāti*, 'performs the sacrifice'.

**e.** Other modes of treatment are sporadic: thus, the addition of *s*, as in *stanasyati*, 'seeks the breast'; the change of *a* to *e*, as in *vareyāti*, 'plays the wooer'.

1060. From stems in *ā*. Final *ā* usually remains, as in *gopāyāti*, 'plays the herdsman, protects'; *ṛtanāyāti*, 'fights'; but it is sometimes treated in the other methods of an *a*-stem: thus, *ṛtanyāti*, 'fights'.

1061. From stems in *i*, *ī*, and *u*, *ū*. Such stems are (especially those in *u*, *ū*) much less common. They show regularly *ī* and *ū* before *ya*: thus, *arātīyāti* (also *-tiy-*), 'plots injury'; *janīyāti* (also *-niy-*), 'seeks a wife'; *sakhīyāti*, 'desires friendship'; — *çatrūyāti*, 'acts the foe'; *ṛjūyāti*, 'is straight'; *vasūyāti*, 'desires wealth'; *asūyāti*, 'grumbles, is discontent': with short *u*, *gātuyāti*, 'sets in motion'.

More rarely, *i* is treated as *a* (or else is gunated, with loss of a *y*): thus, *dhunayāti*, 'comes snorting'. Sometimes, as to *a* (above, **e**), a sibilant is added: thus, *aviṣyāti*, 'is vehement'; *urusyāti*, 'saves'. From *dhi*, RV. makes *dhiyāyāte*.

1062. From other vowel-stems. **ā.** Final *r* is said to be changed to *rī*: thus, *pitrīyāti*, 'is fatherly': no example in use has been noted.

**b.** The diphthongs, in the few cases that occur, have their final element changed to a semivowel: thus, *gavyāti*, 'seeks cattle, goes a-raiding'.

1063. From consonant-stems. A final consonant usually remains before *ya*: thus, *bhiṣajyāti*, 'plays the physician, cures'; *ukṣanyāti*, 'acts like a bull'; *apasyāti*, 'is active'; *namasyāti*, 'pays reverence'; *sumanasyāte*, 'is favorably disposed'; *tarusyāti*, 'fights'.

But a final *n* is said to be sometimes dropped, and the preceding vowel treated as a final: thus, *rājyāte* or *rājyāti*, 'is kingly', from *rājan*: *vṛṣyāte* from *vṛṣan* is the only example quotable from the older language. Sporadic cases occur of other final consonants similarly treated: thus, *ojyāte* from *ojas*; — while, on the other hand, an *a*-vowel is occasionally added to such a consonant before *ya*: thus, *iṣyāti* from *iṣ*, *satvanāyati* from *satvan*.

**1064.** By far the largest class of consonantal stems are those showing a *s* before the *ya*; and, as has been seen above, a sibilant is sometimes, by analogy, added to a final vowel, making the denominative-sign virtually *śya* — or even, with *a* also added after an *i* or *u*-vowel, *asya*; and this comes to be recognised in the later language as an independent sign, forming denominatives that express desire: thus, *madhusyati* or *madhusasyati*, 'longs for honey'; *kṣīrasyati*, 'craves milk'.

**1065.** The grammarians reckon as a special class of denominatives in *kāmya* what are really only ordinary ones made from a compound noun-stem having *kāma* as its final member: thus, *rathakāmyati*, 'longs for the chariot' (K.: only example noted from the older language); *putrakāmyati*, 'desires a son' — coming from the possessive compounds *rathakāma*, *putrakāma*. And *satyāpayati*, 'declares true' (from *satya*), is an example of yet another formation declared to occur.

**1066. a.** A number of denominative stems occur in the Veda for which no corresponding noun-stems are found, although for all or nearly all of them related words appear: thus, *añkūya*, *stabhūya*, *iṣudhya*; *dhiṣanya*, *riṣanya*, *ruvanya*, *huvanya*, *iṣanya*; *ratharya*, *ṣratharya*, *saparya*; *irasya*, *daṣasya*, *makhasya*, *panasya*, *sacasya*. Those in *anya*, especially, look like the beginnings of a new conjugation-class.

**b.** Having still more that aspect, however, are a Vedic group of stems in *āya*, which in general have allied themselves to present-systems of the *nā*-class (V.), and are found alongside the forms of that class: thus, *gṛbhāyati* beside *gṛbhñāti*. Of such, RV. has *gṛbhāya*, *mathāya*, *pruṣāya*, *muṣāya*, *ṣrathāya*, *skabhāya*, *stabhāya*. A few others have no *nā*-class companions: thus, *damāya*, *ṣamāya*, *tudāya* (AV.); and *panāya*, *naṣāya*, *vṛṣāya* (√*vṛṣ* 'rain'), *vasāya* (√*vas* 'clothe'), and perhaps *aṣāya* (√*aṣ* 'attain').

**1067.** The denominative stems in RV. and AV. with causative accentuation are: RV. *añkhāya*, *arthāya*, *iṣāya* (also *iṣāyā*), *ūrjāya*, *ṛtāya*, *kṛpāya*, *mantrāya*, *mṛgāya*, *vavrāya*, *vājāya* (also *vājāyā*), *vilāya*, *susvāya* (also *susvāyā*); AV. adds *kīrtāya*, *dhūpāya*, *pālāya*, *virāya*, *sabhāgāya*.

The accent of *ānni*ya and *hāstaya* (RV.) is wholly anomalous.

**1068. Inflection.** The denominative stems are inflected with regularity like the other stems ending in *ā* throughout the present-system. Forms outside of that sys-

tem — except from the stems which are reckoned to the causative or *cur*-class, and which follow in all respects the rules for that class — are of the utmost rarity.

In RV. occurs no form not belonging to the present-system, unless (as seems most likely) *ūnayis* (with *mā* prohibitive) is to be regarded as 2d sing. of the *iṣ*-aorist. Unquestionable examples of this aorist are *āsūyīt* (ÇB.), *pāpayiṣṭa* (TS. iii. 2. 8<sup>3</sup>: pl., with *mā* prohibitive) and *avṛṣūyiṣṭa* (VS.). The form *āsaparyūt* (AV. xiv. 2. 20), with *āi* for *ī* (555 b), might be aorist; but, as the metre shows, is probably a corrupt reading; *amanasyūt*, certainly imperfect, appears to occur in TB. (ii. 3. 83). ÇB. has the future *gopūyīṣyati*, and TS. the participles *kaṇḍūyīṣyānt* and *kaṇḍūyitā*. From roots assimilated to the causatives occur in the older language *mantrayām āsa* (AB., GB.), *mantrayām cakratus* and *cakre* (ÇB.), *mantritā* (ÇB., TA.), *-mantrya* (TB.), and one or two other like forms. The gerundival adjectives *saparyēṇya* and *atasūya* also are met with.

## CHAPTER XV.

### PERIPHRASTIC AND COMPOUND CONJUGATION.

1069. ONE periphrastic formation, the periphrastic future, has been already described (942 ff.), since it has become in the later language a necessary part of every verbal conjugation, and since, though still remaining essentially periphrastic, it has been so fused in its parts and altered in construction as to assume in considerable measure the semblance of an integral tense-formation.

By far the most important other formation of the class is

#### The Periphrastic Perfect.

1070. This (though almost unknown in the Veda, and coming only gradually into use in the Brāhmaṇas) is a tense widely made and frequently used in the classical Sanskrit.

It is made by prefixing the accusative of a derivative noun-stem in *आ* *ā* (accented) to the perfect tense of an auxiliary verb: namely, of  $\sqrt{\text{कृ}} kr$  'make', more often of  $\sqrt{\text{अस्}} as$  'be', and very rarely of  $\sqrt{\text{भू}} bhū$ , 'be'.

In the older language, as is pointed out below, *kr* is used as auxiliary almost alone, and *bhū* not at all. Even in MBh., *bhū* hardly ever occurs (Holtzmann).

1071. The periphrastic perfect occurs as follows:

a. It is the perfect of the derivative conjugations: intensive, desiderative, causative, and denominative; the noun in *आ* *ā* being made from the present-stem which is the general basis of each conjugation: thus, from  $\sqrt{\text{बुद्}} budh$ , intensive *बोबुधाम् bobudhām*, desiderative *बुभुत्साम् bubhutsām*, causative *बोधयाम् bodhayām*; denominative *मन्त्रयाम् mantrayām*.

The formation from causative stems, and from those denominatives which are assimilated to causatives, is by far the most frequent.

b. Most roots beginning with a vowel in a heavy syllable (long by nature or long by position) make this perfect only, and not the simple one: thus, *आसाम् āsām* from  $\sqrt{\text{आस्}} ās$ , *ईत्साम् īkṣām* from  $\sqrt{\text{ईक्ष्}} īkṣ$ ; *उब्जाम् ubjām* from  $\sqrt{\text{उब्ज्}} ubj$ .

Excepted are the roots *āp* and *āñch*, and those beginning with *a* before two consonants (and taking *ān* as reduplication: 788).

c. The roots (that is, stems reckoned by the grammarians as roots) of more than one syllable have their perfect of this formation: thus, *चक्रासाम् cakāśām*.

But *ūrṇu* (712) is said to form *ūrṇonāva* only, and *jāgr* and *daridrā* (1020, 1024) to have a perfect of either formation.

d. A few other scattering roots: namely, *ay*, *day*, and *kās*, and optionally *vid* and *uṣ*, and a few roots of the reduplicating class, *bhī*, *bhr*, *hu*, and *hrī*. All these make the derivative noun from their present-stem: thus, *dayām*, *vidām*, *oṣām*, *bībhayām*, *jūbhavām*, *bībharām*, *jīhrayām* (these with *guṇa* of the final vowel before the *ā*).

An occasional example is met with from other roots: thus, *nayām* from *nī* (pres.-stem *naya*); *hvayām* from  $\sqrt{\text{ह्व}} hvā$  (pres.-stem *hvaya*).

1072. The periphrastic perfect of the middle voice is

made only with the middle inflection of  $\sqrt{\text{कृ}} kr$ ; that of the active, with any one of the three auxiliaries. For passive use, the auxiliaries  $\text{अस् } as$  and  $\text{भू } bhū$  are also allowed to take a middle inflection.

It is unnecessary to give a paradigm of this formation, as the inflection of the auxiliaries is the same as in their independent use (for that of  $\sqrt{\text{कृ}} kr$ , see 800 f); of  $\sqrt{\text{भू}} bhū$ , see 800 b; of  $\sqrt{\text{अस्}} as$ , see 636).

The connection of the noun and auxiliary is not so close that other words are not sometimes allowed to come between them: thus, *tām pātayām prathamam āsa*, 'him he first made to fall'; *prabhrāñçayāñ yo naghuşāñ cakāra*, 'who made Naghusa fall headlong' (both Raghuvançā).

**1073.** The above is an account of the periphrastic formation with a derivative noun in *ām* as it appears in the later language; earlier, its aspect is quite different: namely, as that of a more general, but quite infrequent, combination of such a noun with various forms of the root *kr*. Thus:

a. Of forms with the perfect of the auxiliary occurs only a single example in the whole body of Vedic texts (metrical): namely, *gamayām cakāra* (AV. xviii.). In the *brāhmaṇa* parts of the Black Yajus texts are found *vidām cakāra* (TS., K., MS.) and *vidām cakṛma* (K.), and *yājayām cakāra* (K.). In the Brāhmaṇas, examples from causative etc. stems in *aya* begin to prevail over others, and in ÇB. they are rather frequent. Examples from desiderative stems have been noted only from ÇB.: they are *cikramiṣām*, *ruruḱṣām*, *dudhūrṣām*, *bībhatsām*. From simple roots having the same formation in the later language, occur *vidām* (TB., ÇB., GB.), *āsām* (ÇB., GB.), *īkṣām* (ÇB., GB.), *edhām* (ÇB.), *juhavām* (AB., TB., ÇB.), *bībhayām* (ÇB.); and also *layām* (*nīlayām*) from  $\sqrt{\text{लि}} li$  (ÇB.).

b. Forms with the aorist of the auxiliary are in the oldest Brāhmaṇas as numerous as those with the perfect. Thus, with *akar* occur *ramayām* (K.), *janayām* and *sādayām* and *svadayām* and *sthāpayām* (MS.); and with *akran*, *vidām* (TS., MS., TB.). With the aorist optative or precativum has been noted only *pāvayām kriyāt* (MS.).

c. Like combinations with other tenses are excessively rare, but not entirely unknown: so, *juhavām karoti* (Çāñkh. Çr. Sū.).

d. With any other auxiliary than  $\sqrt{\text{कृ}} kr$  appears only *mantrayām āsa* (AB., GB.; in ÇB. the same noun is combined with  $\sqrt{\text{कृ}} kr$  in *mantrayām cakratus* and *mantrayām cakre*).

As the examples show, the noun (*as* in the case of the periphrastic future: 945) has its independent accent.

### Participial Periphrastic Phrases.

**1074.** Combinations of participles with auxiliary verbs, of condition or motion, forming phrases which have an office

analogous with that of verb-tenses, are not unknown in any period of the language.

They occur even in the Veda, but are far more common and conspicuous in the Brāhmanas, and become again of little account in the later language.

1075. Examples of the various formations are as follows :

a. A (usually present) participle with the tenses of the verb *i*, 'go'. This is the combination, on the whole, of widest and most frequent occurrence. Thus: *yathā śūcyā vāsaḥ saṁdadhad iyād evam evāi 'ūbhir yajñasya chidraṁ saṁdadhad eti* (AB.), 'just as one would mend [habitually] a garment with a needle, so with these one mends any defect of the sacrifice'; *agnir vā idam vāicvānaro dahann ūt* (PB.), 'Agni Vaiṣvanara kept burning this creation'; *tē 'surāḥ pārājītā yānto dyāvāpṛthivī ūpācrayan* (TB.), 'those Asuras, getting beaten, took refuge with heaven and earth'; *tē 'sya gṛhāḥ paçāva upamūryāmāṇā īyuh* (ÇB.), 'the animals, his family, would be continually destroyed'.

b. The same with the verb *car*, 'go (continually or habitually)', signifying still more distinctly than the preceding a continued or habitual action. Thus: *agnāv agniç carati prāvīṣṭaḥ* (AV.), 'Agni is constantly present in the fire'; *adaṇḍyam daṇḍena ghnantiç caranti* (PB.), 'they make a practice of beating with a rod what is undeserving of punishment'.

c. The same with the verbs *ās*, 'sit', and *sthā*, 'stand', with a like meaning. Thus, *juhvata āsate* (K.), 'they continue sacrificing'; *te 'pakramya prativāvadato 'tiṣṭhan* (AB.), 'they, having gone off, kept vehemently refusing'.

In the later language, *sthā* is the verb oftenest used, with predicates of various kind, to make a verbal phrase of continuance.

d. A participle with *as* and *bhū*, 'be'. The participle is oftenest a future one; *as* only is used in the optative, *bhū* usually in other forms. Thus: *yaḥ pūrvam anījānaḥ syāt* (AB.), 'whoever may not have made sacrifice before'; *samāvad eva yajñe kurvāṇā āsan* (GB.), 'they did the same thing at the sacrifice'; *parikrīdanta āsan* (MS.), 'they were playing about'; *itarā me kena devatā upūptā bhaviṣyanti* (AB.), 'wherewith shall the other deities be won by me?'; *yātra suptvā pūnar nā 'vadrūsyān bhāvati* (ÇB.), 'when, after sleeping, he is not going to fall asleep again'; *havyam hi vakṣyan bhavati* (AB.), 'for he is intending to carry the sacrifice'; *dāsyant syāt* (K.), 'may be going to give'; *yāna vāhanena syantsyānti syāt* (ÇB.), 'with what vehicle he may be about to drive'.

### Composition with Prepositional Prefixes.

1076. All the forms, personal and other, of verbal conjugation — of both primary and secondary conjugation, and even to some extent of denominative (so far as the

denominative stems have become assimilated in value to simple roots) — occur very frequently in combination with certain words of direction, elements of an adverbial character (see the next chapter), the so-called prepositions, according to the original use of that term, or the verbal prefixes.

Practically, in the later language, it is as if a compounded root were formed, out of root and prefix, from which then the whole conjugation (with many derivatives: below, chap. XVII.) is made, just as from the simple root. Yet, even there (and still more in the older language: 1081), the combination is so loose, and the members retain so much of their independent value, that in most dictionaries (that of Monier Williams is an exception) the conjugation of each root with prefixes is treated under the simple root, and not in the alphabetic order of the prefix. Derivative words, however, are by universal agreement given in their independent alphabetic place, like simple words.

1077. Those verbal prefixes which have value as such throughout the whole history of the language are given below, in alphabetic order, with their fundamental meanings:

अति *āti*, 'across, beyond, past, over, to excess';

अधि *ādhi*, 'above, over, on, on to';

अनु *ānu*, 'after, along, toward';

अन्तर *antár*, 'between, among, within';

अप *āpa*, 'away, forth, off';

अपि *āpi*, 'unto, close upon or on';

अभि *abhi*, 'to, unto, against' (often with implied violence);

अव *āva*, 'down, off';

आ *ā*, 'to, unto, at';

उद् *ūd*, 'up, up forth or out';

उप *ūpa*, 'to, unto, toward';

नि *nī*, 'down; in, into';

निस् *nis*, 'out, forth';

परा *pārā*, 'to a distance, away, forth';

परि *pāri*, 'round about, around';

प्र *prá*, 'forward, onward, forth, fore';

प्रति *prāti*, 'in reversed direction, back to or against, against, in return';

वि *vi*, 'apart, asunder, away, out';

सम् *sám*, 'along, with, together'.

a. Some of these, of course, are used much more widely and frequently than others. In order of frequency in the older language (as estimated by the number of roots with which they are found used in RV. and AV.), they stand as follows: *pra*, *ā*, *vi*, *sam*, *abhi*, *ni*, *ud*, *pari*, *anu*, *upa*, *prati*, *ava*, *nis*, *ati*, *apa*, *parā*, *adhi*, *api*, *antar*. *Api* is of very limited use as prefix in the later language, having become a conjunction, 'too, also'.

b. The meanings given are only the leading ones. In combination with the roots they undergo much modification, both literal and figurative — yet seldom in such a way that the steps of transition from the fundamental sense are not easy to trace. Sometimes, indeed, the value of a root is hardly perceptibly modified by the addition of the prefix. An intensive force is not infrequently given by *pari*, *vi*, and *sam*.

1078. Prefixes essentially akin with the above, but more distinctly adverbial, and of more restricted use, are these:

*ācha* (or *āchā*), 'to, unto': tolerably frequent in RV. (used with over twenty roots), but already very rare in AV. (only two roots), and entirely lost in the later language;

*āvis*, 'forth to sight, in view': used only with the roots *bhū*, *as*, and *kr*;

*tirās*, 'through, crossways; out of sight': hardly used except with *kr*, *dhā*, *bhū* (in RV., with three or four others);

*purās*, 'in front, forward': used with only half-a-dozen roots, especially *kr*, *dhā*, *i*;

*prādūs*, 'forth to view': only with *bhū*, *as*, *kr*.

A few others, as *bahis*, 'outside', *vinā*, 'without', *sūksāt*, 'in view', are still less removed from ordinary adverbs.

1079. Of still more limited use, and of noun rather than adverb-value are:

*ṣrad* (or *ṣrath*?), only with *dhā* (in RV., once also with *kr*): *ṣraddhā*, 'believe, credit';

*hiñ*, only with *kr* (and obsolete in the classical language): *hiñkr*, 'make the sound *hiṅ*, low, murmur'.

And beside these stand yet more fortuitous combinations: see below, 1091.

1080. More than one prefix may be set before the same root. Combinations of two are quite usual; of three, much less common; of more than three, rare. Their order is in general determined only by the requirements of the meaning,

each added prefix bringing a further modification to the combination before which it is set. But ऋ *ā* is never allowed in the later language, and only extremely rarely in the older, to be put in front of any of the others.

1081. In classical Sanskrit, the prefix always stands immediately before the verbal form.

In the older language, however, of both Veda and Brāhmaṇa, its position is quite free: it may be separated from the verb by another word or words, and may even (much less often) come after the form to which it belongs; it may also stand alone, qualifying a verb that is understood, or conjointly with another prefix one that is expressed.

Thus, *sā devān ē 'hā vakṣyati* (RV.), 'he shall bring the gods hither'; *prā na āyūnṣi tūriṣat* (AV.), 'may he lengthen out our lives'; *tā ā yātam ūpa dravāt* (RV.), 'do ye two come hither quickly'; *gāmad vājebhir ā sā naḥ* (RV.), 'may he come with gifts hither to us'; *pāri mām pāri me prajām pāri naḥ pāhi yād dhānam* (AV.), 'protect me, my progeny, and what wealth we own'; *yātaḥ sadyā ā ca pāra ca yānti* (AV.), 'from whence every day they advance and retire'; *vy dhātīn sārveṇa pūpmānū [avṛtam] vī yāksmeṇa sām āyusā* (AV.), 'I have separated from all ill-luck, from disease, [I have joined myself] with life'.

The separation of the prefix from a verbal noun or adjective is very much more difficult, and of quite rare occurrence.

1082. As regards the accent of verb-forms compounded with prefixes, only the case needs to be considered in which the prefix stands (as always in the later language) immediately before the verb; otherwise, verb and prefix are treated as two entirely independent words.

1083. A personal verbal form, as has been seen above (592), is ordinarily unaccented: before such a form, the prefix has its own accent; or, if two or more precede the same form, the one nearest the latter is so accented, and the others lose their accent.

If, however, the verb-form is accented, the prefix or prefixes lose their accent.

That is, in every case, the verb along with its normally situated prefix or prefixes so far constitutes a unity that the whole combination is allowed to take but a single accent.

Examples are: *pāre 'hi nāri pūnar ē 'hi kṣiprām* (AV.), 'go away, woman; come again quickly'; *āthā 'stam vipāretana* (RV.), 'then scatter ye away to your home'; *samācinuṣvā 'nusamprāyāhi* (AV.), 'gather together, go forth together after'; *yād gḥān upodāṭti* (AV.), when he goes up to the

house'; *evā ca tvām sarama ājagāntha* (RV.), 'now that you, Sarāmā, have thus come hither'; *yénā "viṣṭitah pravivēcithā 'pāh* (RV.), 'enveloped in which thou didst enter the waters'.

**1084.** A prefix, however, not seldom has a more independent value, as a general adverb of direction, or as a preposition (in the usual modern sense of that term), belonging to and governing a noun; in such case, it is not drawn in to form part of a verbal compound, but has its own accent. The two kinds of use shade into one another, and are not divisible by any distinct and fixed line.

**1085.** In combination with the non-personal parts of the verb-system, with participles, infinitives, and gerunds, the general rule is that the prefix loses its accent, 'in favor of the other member of the compound. But the prefix instead has sometimes the accent: namely, when combined —

a. with the passive participle in *ta* or *na*: thus, *pāreta*, 'gone forth'; *antārḥita*, 'concealed'; *āvapanna*, 'fallen'; *sāmpūrṇa*, 'complete'.

b. with the infinitive in *tu* (972), in all its cases: thus, *sāmhartum*, 'collect'; *āpidhātave*, 'to cover up'; *āvagantos*, 'of descending'; the doubly accented dative in *tavāi* retains its final accent, but throws the other back upon the prefix: thus, *ānvetavāi*, 'for following'; *āpabhartavāi*, 'for carrying off'.

**1086.** The closeness of combination between the root and the prefix is indicated not only by their unity of accent, but also by the euphonic rules (e. g. 185, 192), which allow the mutual adaptations of the two to be made to some extent as if they were parts of a unitary word.

**1087.** A few special irregularities call for notice:

a. In the later language, *api*, *adhi*, and *ava*, in connection with certain roots, sometimes lose their initial vowel: namely, *api* with *nah* and *dhā*, *adhi* with *sthā*, *ava* with *gāh*. In the Veda, on the other hand, *i* is in a few cases found instead of *nis* with  $\sqrt{kr}$ .

b. The final vowel of a prefix, especially an *i*, is (oftenest in the older language) sometimes lengthened, especially in derivative words: thus, *pratīkāra*, *nīvr̥t*, *parīhāra*, *vīrād̥h*, *adhīvāsā*, *āpīvr̥ta*, *abhīvartā*; *anūrād̥h*; *prāv̥t̥s*, *ūpāvasu*.

In the Veda, the initial of *anu* is sometimes lengthened after negative *an*: thus, *anānudā*.

c. In combination with  $\sqrt{i}$  'go', the prefixes *parā*, *pari*, and *pra* sometimes change their *r* to *l*.

In this way is formed a kind of derivative stem *palāy*, 'flee', inflected according to the *a*-class, in middle voice, which is not uncommon from the Brāhmaṇas down, and has so lost the consciousness of its origin that it takes

the augment prefixed: thus, *apalāyīṣṭhās*; it makes the periphrastic perfect *palāyūrñ cakre*. The stem *palyay*, similarly inflected, seems to occur only in QB.; and *plūy* has been found nowhere except in MS.

d. The root *kr* 'make' sometimes assumes (or retains from a more original condition) an initial *s* after the prefixes *sam*, *pari*, and *upa*: thus, *saṁskurute*, *samaskurvan*, *saṁskṛta*, *parīskṛvanti*, *parīskṛta*, *upaskṛta*. And  $\sqrt{kr}$  'scatter' is said by the grammarians to add *s* in the same manner, under certain circumstances, after *upa* and *prati*.

e. The passive participle of the roots *dā* 'give' and *dā* 'cut' has often the abbreviated form *ta* after a prefix — of which the final vowel, if *i*, is lengthened (compare the similar contraction with other elements, above, 955 e, and that of the derivative in *ti*, below, chap. XVII.). Thus, in AV. are found from *dā* 'give', *vyāta*, *pārīta*, *āpratīta*: in Brāhmaṇas, from the same, *ātta*, *pratta*, *apāta*; from *dā* 'cut', *āvatta*, *nirāvatta*, *saṁāvatta*.

f. The AB. has once *niniyoja* (instead of *nī-yuyoja*) from *ni* +  $\sqrt{yuj}$ , and *udaprapatat*; and in MBh. are found a few cases like *vivyāsa* from *vi* +  $\sqrt{as}$  (where, however, an intentional play on the word may be assumed: Delbrück); and *anvasaṁharat* (instead of *anusamacarat*). Such unifications of prefix and root, with treatment of the result after the manner of a simple root, are extremely rare.

Some hold, however, that certain of the apparent roots of the language are results of this unification: thus, *āp* from *ā* + *ap*, *vyac* from *vi* + *ac*, *tyaj* from *ati* + *aj*, etc. (see Weber, Ind. Stud., xiii. 61).

g. The loss of the initial *s* of *sthā* and *stambh* after the prefix *ud* has been noticed above (233 a).

Also (137 a, b), certain peculiarities of combination of a prefix with the initial vowel of a root.

1088. As to the more general adverbial uses of the prefixes, and their prepositional uses, see the next chapter.

1089. The adverbial prefixes *su*, 'well', and *dus*, 'ill', are said to be sometimes combined with verbal forms; but no examples of such combination are quotable from accentuated texts.

As to the addition of the comparative and superlative suffixes *tarām* and *tamām* to verbs, see above, 473.

#### Other Verbal Compounds.

1090. It has been seen above that some of the prepositional prefixes are employed in combination with only very small classes of roots, namely those whose meaning makes them best fitted for auxiliary and periphrastic uses — such as *kr*, 'make', *bhū* and *as*, 'be', *dhā*, 'put', *i*, 'go' — and that the first three of these are widely used in combination with a derivative in *ām* to make a periphrastic conjugation. Such roots have also been, from the earliest period of the language, but with increasing frequency, used in somewhat analogous combinations with

other elements, substantive and adjective as well as adverbial; and this has become, in part, developed finally into a regular and indefinitely extensible method of increasing the resources of verbal expression.

1091. Most analogous with *hiñ + √kr* (1079) are a few other onomatopoeic compounds in the Veda: *akkhalikṛtya* (RV.), 'making a crackling sound', *jañjanābhāvant* (RV.), 'flimmering', and *alalābhāvant* (RV.), 'making merry'; and (in AB.) *bababūkurvan*, 'crackling'. And AV. has *masmasā* with *√kr* (TS. and VS., *masmasā*), 'crush'.

Further, combinations of *√kr* with terms used at the sacrifice, as *vāṣaṭ*, *svāhā*, *svadhā*, *svagā*: at first phrases only, and noun-compounds, but becoming verbal combinations in which the prefixed word is treated like a prepositional prefix: thus, *svagūkarōti* (ÇB.: but *svadhā karōti*, TA.); and other prefixes are set before them, as *anuvaṣaṭkuryāt*.

1092. a. The noun *namas*, 'obeisance, homage', in a still more purely noun-value, becomes combined with *√kr*: in the Veda, only with the gerund, in *namaskṛtya* (beside *hastagṛhya* and *karnagṛhya*: above, 990.).

b. A solitary combination with *√i*, 'go', is shown by the accusative *āstam*, 'home'; which, appearing only in ordinary phrases in RV., is in AV. compounded with the participles — in *astamīyānt*, *astameṣyānt*, *āstamita* (with accent like that of ordinary compounds with a prefix) — and in the Brāhmanas and the later language is treated quite like a prefix: thus, *astamēti* (ÇB.).

c. Other ordinary accusative forms of adjectives in combination with verbal derivatives of *kr* and *bhū* are found here and there in the older language: thus, *çṛtamkṛtya* and *nagnamkṛtya* (TS.); *nagnambhāvuka*, *pāmanambhāvuka*, etc. (TS. et al.).

1093. In the early but not in the earliest language, a noun-stem thus compounded with *kr* or *bhū*, in verbal nouns and ordinary derivatives, and then also in verbal forms, begins to assume a constant ending *ī* (of doubtful origin).

There is no instance of this in RV., unless the *ī* of *akkhalikṛtya* (above, 1091) is to be so explained. In AV., besides the obscure *vūtikṛta* and *vūtikārā*, is found only *phalīkārāṇa*. In the Brāhmaṇa language, examples begin to occur occasionally — *çyetī* and *mithunī* in TS.; these and *phalī*, *krūrī*, *udvāsī* in TB.; the first three, with *suphalī*, *ekī*, *svī*, *brāhmaṇī*, and *daridrī* in ÇB.; and so on. The accent of the combination is in general accordance with the accent of compounds with the usual prefixes; and if the prefixed stem takes the tone, this rests upon the final *ī*. Sometimes a mere collocation takes place: thus, *mithunī bhāvantis* (TS.), *phalī kriyāmāṇānām* (TB.), *vajrī bhutvā* (TA.). The *ī* is variously treated: now as an uncombinable final, as in *çyetī akuruta* and *mithunī abhavan* (TS.); now as liable to the ordinary conversions, as in *mithunī ṇayā syām* and *svyākurvata* (ÇB.).

The examples in accentuated texts, and especially those in which the

verb is entitled to the tone, are too few to furnish more than a fragmentary illustration of the formation.

Out of such beginnings has grown in the later language the following rule:

1094. Any noun or adjective stem is liable to be compounded with verbal forms or derivatives of the roots  $\sqrt{\text{क्}}$  *kr* and  $\sqrt{\text{भू}}$  *bhū* (and, it is said, of  $\sqrt{\text{अस्}}$  *as* also; but such cases, if they occur, are at least extremely rare), in the manner of a verbal prefix. If the final of the stem be an *a* or *i*-vowel, it is changed to  $\text{ऌ}$  *ī*; if an *u*-vowel, it is changed to  $\text{ड}$  *ū*.

It is prescribed also that a final *r* become *rī*, and that *as* and *an* be changed to *ī*; but no genuine examples appear to be quotable.

Examples are: *stambhībhavati*, 'becomes a post'; *ekacittībhūya*, 'becoming of one mind'; *upahārikaroṣi*, 'thou makest an offering'; *nakhaprahārajarjarīkṛta*, 'torn to pieces with blows of the claws'; *ṣīthilībhavanti*, 'become loose'; *kundalīkṛta*, 'ring-shaped.'

1095. Of all the forms which constitute or are attached to the verbal system, the passive participle is the one most closely assimilated in its treatment as a combinable element to an ordinary adjective. Next to it come the gerund and the gerundives. Combinations of the kind here treated of are especially common with passive participles and gerunds.

---

## CHAPTER XVI.

---

### INDECLINABLES.

1096. THE indeclinable words are less distinctly divided into separate parts of speech in Sanskrit than is usual elsewhere in Indo-European language — especially owing to the fact that the class of prepositions hardly has a real existence, but is represented by certain adverbial words which are to a greater or less extent used prepositionally. They will, however, be briefly described here under the usual heads.

## Adverbs.

**1097.** Adverbs by Suffix. Classes of adverbs, sometimes of considerable extent, are formed by the addition of adverb-making suffixes especially to pronominal roots or stems, but also to noun and adjective stems.

There is no ultimate difference between these suffixes and the case-endings in declension; and the adverbs of this division sometimes are used in the manner of cases.

**1098.** With the suffix *tas* are made adverbs having an ablative sense, and not rarely also an ablative construction. Such are made:

a. From pronominal roots, in *átas*, *itás*, *tátas*, *yátas*, *kútas*, *amátas*, *svatas* (not found earlier); and from the pronominal stems in *t* or *d* (**494**) of the personal pronouns: thus, *mattás* (only example in V.), *tvattas*, *asmattas*, *yusmattas*.

b. From noun and adjective stems of every class, since the earliest period, but more freely later: thus, *mukhatás*, *agratás*, *ṛbhatás*, *ḥṛttás*, *ṣṛsatás*, *nastás*, *yajustás*, *pārátas*, *anyátas*, *sarvátas*, *dakṣiṇátas*, *abhīpatás* (once, in RV., from a case-form: *patsutás*).

c. From a few prepositions: thus, *abhātas*, *parītas*, *ántitas*.

Examples of ablative construction are: *tátaḥ śaṣṭhāt* (AV.), 'from that sixth'; *táto jyáyān* (AV.), 'older than they'; *kutaḥ cid deçāḍ āgatya* (H.), 'arriving from some region or other'.

But the distinctive ablative meaning is not infrequently effaced, and the adverb has a more locative value: thus, *agratás*, 'in front'; *asmatsamīpatas*, 'in our presence'; *dharmatas*, 'in accordance with duty'; *chāgatas* (H.), 'with reference to the goat'.

**1099.** With the suffix *tra* (in V. often *trā*) are made adverbs having a locative sense, and occasionally also a locative construction.

These adverbs are formed from pronominal roots, namely *átra*, *tátra*, *yátra*, *kútra*, *amátra*, *asmatrā*, *satrā*; and also from noun and adjective stems, as *anyátra*, *viçvátra*, *samānátra*, *martyatrā*, *dakṣiṇatrā*, *devatrā*, *purutrā*, *bahutrā*.

The words in (accented) *trā* are Vedic only, except *satrā*, 'altogether' (of which *satram* is also given as an alternative form).

Examples of quasi-locative or locative construction are: *hāsta á dakṣiṇatrā* (RV.), 'in the right hand'; *tatrā 'ntare* (H.), 'in that interval'; *prabhutvaṁ tatra yujyate* (H.), 'sovereignty is suited to him'; *ekatra puruṣe* (MBh.), 'in a single man'.

As the locative case is used also to express the goal of motion (**304**), so the adverbs in *tra* have sometimes an accusative as well as a locative value: thus, *tatra gacha*, 'go there or thither'; *pathó devatrā yānān* (RV.), 'roads that go to the gods'.

1100. One or two other suffixes of locality are :

a. *ha*, in *ihá*, 'here', *kúha*, 'where?' and the Vedic *viçváha* (also *viçváhā*, *viçváhā*), 'always' (compare below, 1104, end).

b. *tāt*, which is added to words having already a local or directive value: thus, to adverbial accusatives, as *práktāt*, *údaktāt*; to adverbial ablatives, as *úrāttāt*, *uttarāttāt*, *parākāttāt*; and to prepositional adverbs, as *adhástāt*, *avástāt*, *parástāt*, *purástāt*, *bahíṣtāt*. Apparently by analogy with these last, the suffix has occasionally the form *stāt*: thus, *upáristāt*.

c. *hi*, in *uttaráhi* (ÇB.) and *dakṣiṇāhi* (no occurrence).

1101. By the suffix *thā* are made adverbs of manner, especially from pronominal roots or stems.

Thus, *tāthā*, *yāthā*; *kathā* and *itthā* (by the side of which stand *kathām* and *itthām*); and the rare *imāthā* and *amāthā*. And *ātha* (V. often *āthā*), 'so then', doubtless belongs with them. Further, from a few adjective and noun stems: as, *viçváthā*, *sarvāthā*, *anyāthā*, *ubhayāthā*, *itarāthā*, *yatamāthā*, *úrdhvāthā*, *ṛthā*, *nāmāthā* (once, AV.).

*Yathā* becomes usually toneless in V., when used in the sense of *iva* after a noun forming the subject of comparison: thus, *tāyāvo yathā* (RV.), 'like thieves'.

1102. One or two other suffixes of manner are:

a. *ti*, in *ítí*, 'thus', very commonly used, from the earliest period, as particle of quotation, following the words quoted.

Examples are: *brahmajāyē yām íti céd ávocan* (RV.), 'if they have said "this is a Brahman's wife"'; *tām devá abruvan vrátya kñín nú tiṣṭhasí 'ti* (AV.), 'the gods said to him: "Vratya, why do you stand?"' Often, the *iti* is used more pregnantly: thus, *yāḥ çraddādhāti sánti devá 'ti* (AV.), 'whoever has faith that the gods exist'; *tañ vyāghram munir mūṣiko 'yam iti paçyati* (H.), 'the sage looks upon that tiger as being really a mouse'; *yūyam kim iti sídatha* (H.), 'why (lit'ly, alleging what reason) do you sit?' Or the *iti* marks an onomatopœia, or indicates a gesture: thus, *bahíṣ te astu bāl 'ti* (AV.), 'let it come out of you with a "splash"'; *íty ágre kṛṣaty áthé 'ti* (ÇB.), 'he ploughs first this way, then this way'. A word made by *iti* logically predicate to an object is usually nominative: thus, *svargó loká 'ti yān vādanti* (AV.), 'what they call "the heavenly world"'; *vidarbharājatanayām damayanti 'ti viddhi mām* (MBh.), 'know me for the Vidarbha-king's daughter, Damayanti by name'; but *ajñam bālam ity āhuḥ* (M.), 'they call an ignorant man a child'.

With the suffix of *íti* is to be compared that of *táti* etc. 519.

b. *va* in *iva* (toneless), 'like, as', and *evá* (in V. often *evá*), earlier 'thus', later a particle emphasizing the preceding word; for 'thus' is used later the related *evám*, which hardly occurs in RV., and in AV. only with *vid*: as, *evám vidvān*, 'knowing thus'.

In later Vedic (AV. etc.) *iva* more often counts for only a single syllable.

1103. a. By the suffix *dā* are made adverbs of time, but almost only from pronominal roots.

Thus, *tadā*, *yadā*, *kadā*, *idā* (only in V.); and *sādā*, beside which is found earlier *sādam*. Besides these, in the older language, only *sarvadā*; later a few others, as *anyadā*, *ekadā*, *nityadā*.

b. By the perhaps related *dānīm* are made *idānīm*, *tadānīm*, *viçvadānīm*.

c. With *rhi* are made, from pronominal roots, *tārhi*, *etārhi*, *yārhi*, *kārhi*, *amārhi*.

d. The suffix *di*, found only in *yādi*, 'if', is perhaps related with *dā*, in form as in meaning.

1104. By the suffix *dhā* are formed adverbs especially from numerals, signifying '-fold, times, ways', etc.

Thus, *ekadhā*, *dvidhā* (also *dvīdhā* and *dveddhā*), *trīdhā* (in the old language usually *tredhā*), *ṣaḍdhā* (also *ṣoḍhā* and *ṣaḍdhā*), *dvādaçadhā*, *sahasradhā*, and so on. Also, naturally, from words having a quasi-numeral character: thus, *tatidhā*, *bahudhā*, *purudhā*, *viçvādhā*, *çaçvadhā*, *etūvaddhā*. In a very few cases, also from general noun and adjective stems: thus, *mitradhā* (AV.), *priyadhā* (TS.), *ṛjudhā* (TB.), *pariṣṭubdhā* (PB.).

The particle *ādha* or *ādhā*, a Vedic equivalent of *atha*, probably belongs here (*purudhā* and *viçvādha*, with shortened final, occur a few times in RV.); also *addhā*, 'in truth'; and perhaps *sahā*, 'with', which has an equivalent *sadha-* in several Vedic compounds. And the other adverbs in *ha* (1100 a) may be of like origin.

1105. From a few numerals are made multiplicative adverbs with *s*: namely, *dvīs*, *trīs*, and *catūr* (probably, for *catūrs*).

The corresponding word for 'once', *sakṛt*, is a compound rather than a derivative; and the same character belongs still more evidently to *pañcakṛtvas*, *navakṛtvas*, *aparimitakṛtvas*, etc., though *kṛt* and *kṛtvas* are regarded by the native grammarians as suffixes (AV. has *dāça kṛtvas* and *saptā kṛtvas*).

1106. By the suffix *çās* are made, especially from numeral or quantitative stems, adverbs of quantity or measure or manner, generally used distributively.

Thus, *ekaçās*, 'one by one', *çatuçās*, 'by hundreds', *ṛtuçās*, 'season by season', *pacçhas*, 'foot by foot', *akṣaraçās*, 'syllable by syllable', *gaṇaçās*, 'in crowds', *stambaçās*, 'by bunches', *paruççās*, 'limb by limb', *tūvaççās*, 'in such and such number or quantity': and, in a more general way, *sarvaçās*, 'wholly', *mukhyaçās*, 'principally', *kṛçhraçās*, 'stingily'.

1107. By the suffix *vāt* are made with great freedom, in every period of the language, adverbs signifying 'after the manner of, like', etc.

Thus, *aṅgirasvāt*, 'like Angiras', *manuṣvāt* (RV.), 'as Manu did', *jamad-agnivāt*, 'after the manner of Jamadagni'; *pūrvavāt* or *pratnavāt* or *purūṇavāt*, 'as of old', *kūkatālīyavat*, 'after the fashion of the crow and the palm-fruit'.

This is really the adverbially used accusative (with adverbial shift of accent: below, 1111 e) of the suffix *vant* (next chapter), which in the Veda makes certain adjective compounds of a similar meaning: thus, *tvāvant*, 'like thee', *māvant*, 'of my sort', etc.

1108. By the suffix *sāt* are made adverbs signifying 'into the condition of', which are used along with verbs of becoming and of making.

Thus, *agnisāt + √kr̥*, 'reduce to fire, burn up'; *bhasmasāt + √bhū*, 'turn to ashes'; *ātmasātkr̥ta*, 'made one's own'.

These derivatives are unknown in the earlier language, and not common in the later. The *s* of *sāt* is not liable to conversion into *ṣ*. The connection with the following verb is not so close as to require the use of the gerund in *ya*: thus, *bhasmasātkr̥tvā* (not *-kr̥tya*: above, 990).

1109. Suffixes, not of noun-derivation or inflection, may be traced with more or less plausibility in a few other adverbs. Thus, for example, in *prātār*, 'early', and *sanutār*, 'away'; in *dakṣiṇāt*, 'with right hand', and *cikivṛt*, 'with consideration'; in *nūnām*, 'now', and *nānānām*, 'variously'. But the cases are in the main too rare and doubtful to be worth notice here.

The adverbs of this division are almost never used prepositionally. Those of the next division, however, are in many instances so used.

1110. Case-forms used as Adverbs. A large number of adverbs are more or less evidently cases in form, made from stems which are not otherwise in use. Also many cases of known stems, pronominal or noun or adjective, are used with an adverbial value, being distinguished from proper cases by some difference of application, which is sometimes accompanied by an irregularity of form.

1111. The accusative is the case most frequently and widely used adverbially. Thus:

a. Of pronominal stems: as, *yād*, 'if, when, that', etc.; *tād*, 'then' etc.; *kīm*, 'why, whether', etc.; *idām*, 'now, here'; *adās*, 'yonder'; and so on. Of like value, apparently, are the (mostly Vedic) particles *kād*, *kām* and *kam*(?), *ūd*, *cid* (common at every period), *smād* and *sumād*, *īm* and *sīm* (by some regarded as still possessing pronoun-value), *-kīm*.

Compounds with *ūd* are *ēd*, 'if', *nēd*, 'lest', *svīd*, *kuvīd*; with *cid*, *kūcid*; with *-kīm*, *nākīm* and *mākīm*, and *ākīm*.

b. Of noun-stems: as, *nāma*, 'by name'; *sūkham*, 'happily'; *kāmam*, 'at will, if you please'; *nāktam*, 'by night'; *rāhas*, 'secretly'; *ośām*, 'quickly' (V.); and so on.

c. Of adjective stems, in great numbers: as, *satyām*, 'truly'; *civām*, 'long'; *nātyam*, 'constantly'; *bhūyas*, 'more, again'; and so on.

1. The neuter singular is the case commonly employed in this way; and it is formed and used adverbially from a large class of compound stems which do not occur in adjective use (the so-called *avyayībhāva*-compounds: below, chap. XVIII.).

2. But the feminine singular also is sometimes used; especially in the so-called adverbial endings of comparison, *tarām* and *tamām*, which are attached to particles, and even, as it is claimed (473), to verb-forms: thus, *pratarām*, *pratamām*, *uccūistarām*, *ṣanūistarām*, *jyoktamām*.

In the oldest language (RV. and AV.), the neuter instead of the feminine form of these suffixes is almost alone in use: see 1119.

d. Many adverbs of obscure form or connection are to be explained with probability as accusatives of obsolete noun or adjective stems: examples are *tūṣṇīm*, 'in silence'; *sāyām*, 'at evening'; *ūlakam*, 'vainly'; *sākām*, 'together, with (prep.)'; *āram* or *ūlam*, 'sufficient' (in the later language used with  $\sqrt{k}$  in the manner of a prefix); *prāyas*, 'usually'; *iṣāt*, 'somewhat'; *amnās*, 'unexpectedly'; *bahās*, 'outside'; *mīthu* and *mīthās*, *māhu* and *māhus*, *jātu*, and so on. *Madrīk* etc., and *niṅīk* (in RV.), are perhaps contracted forms of adjectives having  $\sqrt{ac}$  or  $\sqrt{ñc}$  as their final (407 ff.); and *viṣunāk* and *vṛthak*, with *pṛthak* and *ṛdhak*, may be of the same character. The presence of other roots as final members is also probable for *uṣādhak*, *ānuṣāk* and *āyusāk*, *anuṣṭhū* and *suṣṭhū*, *yugapāt*, etc. Compare also the forms in *am* beside those in *ā*, above, 1099, 1101, 1103 a.

e. In (Vedic) *dravāt*, 'quickly', is to be seen a change of accent for the adverbial use (ppl. *drāvant*, 'running'); and *drahyāt*, 'stoutly' (RV., once), may be another example. The comparative and superlative suffixes (above, c) show a like change; and it is also to be recognized in the derivatives with *vāt* (1107).

1112. The instrumental is also very often used with adverbial value: generally in the singular, but sometimes also in the plural. Thus:

a. Of pronominal stems: as, *enā* and *ayā*, *kāyā*, *anā*, *sānū*, *amā*, *amuyā*.

b. Of noun-stems: as, *kṣaṇena*, 'instantly'; *aṣeṣeṇa*, 'completely'; *viṣeṣeṇa*, 'especially'; *dīvā*, 'by day'; *diṣṭiyā*, 'fortunately'; *sāhasā*, 'suddenly'; *aktubhis*, 'by night'; and so on.

c. Of adjectives, both neuter (not distinguishable from masculine) and feminine: as, *dākṣiṇena*, 'to the south'; *ūttareṇa*, 'to the north'; *āntareṇa*, 'within'; *cirēṇa*, 'long'; — *śānūs* and *śānakūis*, 'slowly'; *uccāis*, 'on high'; *parūcāis*, 'afar'; *tāvisībhis*, 'mightily'; and so on.

d. More doubtful cases, mostly from the older language, may be instanced as follows: *tiraṣcātā*, *devātā*, *bāhūtā*, and *sasvārtā* (all RV.), homonymous instrumentals from nouns in *tā*; *dvitā*, *tādītīnā*, *īrmā*, *mṛṣā*, *vṛthā*, *sācū*, *asthā*(?), *mudhā* (not V.), *adhunā* (Br. and later).

e. Adverbially used instrumentals are (in the older language), oftener than any other case, distinguished from normal instrumentals by differences of form: thus, especially, by an irregular accent: as, *amā* and *dīvā* (given above); perhaps *gūhā*; *apākā*, *āsayā*, *kuhayā*(?); *naktayā*, *svapnayā*, *samanā*; *adatrayā*, *ṛtayā*, *ubhayā*, *sumnayā*(?); *dakṣiṇā*, *madhyā*; *nīcā*, *prācā*, *uccā*, *paṣcā*, *tiraṣcā*; — in a few *u*-stems, by a *y* inserted before the ending,

which is accented: thus, *amuyá* (given above), *ācuyá*, *sādhuyá*, *raghuyá*, *dhṛṣṇuyá*, *anuṣṭhuyá*, *mithuyá*; — and *urviyá* (for *urvyá*) and *vīcṣyā* (properly *vīcṣayā*) are more slightly irregular.

1113. The dative has only very seldom an adverbial use.

Examples are (from the later language only): *cirāya*, 'long'; *arthāya*, 'for the sake of'; *ahnāya*, 'presently'.

1114. The ablative is not infrequently used adverbially. Thus:

a. Of pronominal stems: as, *kāsmāt*, 'why?' *akasmāt*, 'casually, unexpectedly'; *āt*, *tāt*, *yāt* (V.: normal forms, instead of the pronominal *asmāt* etc.).

b. Of noun-stems: as, *āsāt*, 'near'; *ārāt*, 'afar'; *balāt*, 'forcibly'; *kutūhalāt*, 'emulously'; *sakūcāt*, 'on the part of'.

c. Oftenest, of adjective stems: as, *dūrāt*, 'afar'; *nīcāt*, 'below'; *paścāt*, 'behind'; *sāksāt*, 'plainly, actually'; *samantāt*, 'completely'; *acīrāt*, 'not long'.

d. In a few instances, adverbially used ablatives likewise show a changed accent in the early language: thus, *apākāt*, 'from afar'; *amāt*, 'from near by'; *sanāt*, 'from of old' (but instr. *sānā*); *uttarāt*, 'from the north'; *adharāt*, 'below'.

1115. The genitive is almost never used adverbially.

In the older language occur *aktós*, 'by night', and *vástos*, 'by day'; later, *cirasya*, 'long'.

1116. The locative is sometimes used with adverbial value. Thus:

From noun and adjective stems: *āké*, 'near'; *āré* and *dūré*, 'afar'; *abhisvaré*, 'behind'; *astamiké*, 'at home'; *ṛt*, 'without' (prep.); *āgre*, 'in front'; *sthāne*, 'suitably'; *sapadi*, 'immediately'; *-arthe* and *-kṛte* (common in composition), 'for the sake of'; *aparīṣu*, 'in after time'.

1117. Even a nominative form appears to be stereotyped into an adverbial value in (Vedic) *kīś*, interrogative particle, and its compounds *nākis* and *mākis*, negative particles.

1118. Verbal Prefixes and kindred words. The verbal prefixes, described in the preceding chapter (1076 ff.), are properly adverbs, having a special office and mode of use in connection with verbal roots and their more immediate derivatives.

Their occasional looser connection with the verb has been noticed above (1084). In the value of general adverbs, however, they only very rarely occur (except as *āpi* has mainly changed its office from prefix to adverb or conjunction in the later language); but their prepositional uses are much more frequent and important: see below, 1125.

In composition with nouns, they (like other adverbial elements) not infrequently have an adjective value: see below, chap. XVIII.

1119. Several of the prefixes (as noticed above, 473—4) form comparative and superlative adjectives, by the suffixes *tara* and *tama*, or *ra* and *ma*: thus, *úttara* and *uttamá*; *ádvara* and *adhamá*, *ápara* and *apamá*, *ávava* and *avamá*, *úpara* and *upamá*; and *prathamá* is doubtless of the same character; also, *ántara* and *ántama*. And accusatives of such derivative adjectives (for the most part not otherwise found in use) have the value of comparatives, and rarely superlatives, to the prefixes themselves: thus, *sámñçitanáñ cit samtarámám sámñ çicádhi* (AV.), 'whatever is quickened, do thou still further quicken'; *vitaramám ví kramasva* (RV.), 'stride out yet more widely'; *prá tám naya pratarámám vásyo ácha* (RV.), 'lead him forward still further toward advantage'; *úd enam úttaramám naya* (AV.), 'lead him up still higher'.

Besides those instanced, are found also *nitarám*, *avatarám*, *parátarám*, *parastarám*. In the Bráhmaṇas and later (above, 1111 c), the feminine accusative is used instead: thus, *pratitarámám*, *samtarámám*, *nitarámám*, *úttarámám*, *pratarámám* and *pratamámám* (and *samtarámám*, RV., once).

1120. Kindred in origin and character with the verbal prefixes, and used like them except in composition with verbs, are a few other adverbs: thus, *avás*, 'down'; *adhás*, 'below'; *parás*, 'far off'; *purá*, 'before'; *antará* (apparently, *antár + á*), 'among'; *ánti*, 'near'; *upári*, 'above': and *sahá* (already mentioned, 1104), 'along, with', and *sácā*, 'together, with', may be noticed with them. *Viná*, 'without', and *viṣu-*, 'apart', appear to be related with *vi*.

1121. Inseparable Prefixes. A small number of adverbial prefixes are found only in combination with other elements. Thus:

a. The negative prefix *a* or *an* — *an* before vowels, *a* before consonants.

It is combined especially with innumerable nouns and adjectives; much more rarely, with adverbs, as *akútra* and *ápunar* (RV.), *ánadhas* (TB.), *akasmát*, *asakrt*; and, according to the grammarians, sometimes also with pronouns (*asas*, *aneśas*), and with verbs (*apacati*, 'does not cook'), but no such combinations appear to be quotable.

The independent negative adverbs, *ná* and *má*, are only in rare and exceptional instances used in composition: see below, 1122 b.

b. The comitative prefix *sa*, used instead of the preposition *sám*, and exchangeably with *sahá*, before nouns and adjectives.

c. The prefix of dispraise *dus*, 'ill, badly' (identical with  $\sqrt{dus}$ : 225).

It is combined in the same manner as *a* or *an*. Of combinations with a verbal form, at least a single example appears to be quotable: *duṣcarati* (R.), 'behaves ill' (BR.).

d. The corresponding laudatory prefix *su*, 'well', is in general so closely accordant in its use with the preceding that it is best mentioned here, through it occurs not rarely as an independent particle in the oldest language (in RV., more than two hundred times; in the peculiar parts of AV., only fourteen times), and even occasionally later.

No combination of *su* with a verbal form appears to be quotable from any accentuated text (though the worthless *pada*-text of AV. xix. reads *su-āpāyati* at 49.10). K. has *na su vijñāyete* and *na vāi su viduḥ* (or *su-vijñāyete*?).

e. The exclamatory and usually depreciative prefixed forms of the interrogative pronoun (506) are most analogous with the inseparable prefixes.

1122. Miscellaneous Adverbs. Other words of adverbial character and office, not clearly referable to any of the classes hitherto treated, may be mentioned as follows:

a. Asseverative particles (in part, Vedic only): thus, *aṅgá*, *hánta*, *kíla*, *khálu*, *tú* (rare in older language), *vā́t*, *vāvá* (in Brāhmaṇa language only), *hí*, *híná*, *u*, *áha*, *ha*, *gha*, *samaha*, *sma*, *bhala*.

Of these, *hánta* is a word of assent; *hí* has won also an illative meaning, and accents the verb with which it stands in connection (595 d); *sma* sometimes gives a past meaning to a present tense (778 b); *u* is often combined with the final *a* of other particles: thus, *átho*, *nó*, *mó*, *utó*, *úpo*, *pró*; but also with that of verb-forms, as *dattó*, *vidmó*. The final *o* thus produced is *pragr̥hya* or uncombinable (138 c).

Particles of kindred value, already mentioned above, are *íd*, *kám* or *kam*, *cid*, *jātu*, *evá*.

Some of the asseverative particles are much used in the later artificial poetry with a purely expletive value, as devices to help make out the metre (*pādapūraṇa*, 'verse-fillers'); so especially *ha*, *hi*, *tu*, *sma*.

b. Negative particles are: *ná*, signifying simple negation; *má*, signifying prohibition.

As to the construction of the verb with *má*, see above, 579—80.

In the Veda, *nú* (or *nú*: 248 a) has also sometimes a negative meaning. For the Vedic *ná* of comparison, see below, d.

In *nahí*, *ná* is combined with *hí*, both elements retaining their full meaning; also with *íd* in *néd*, 'lest'. It is perhaps present in *nanú* and *caná*, but not in *hiná* (RV., once). In general, neither *ná* nor *má* is used in composition to make negative compounds, but, instead, the inseparable negative prefix *a* or *an* (1121 a): exceptions are the Vedic particles *nákis* and *mákis*, *nákim* and *mákim*; also *naciram* and *māciram*, and a few others.

c. Interrogative particles are only those already given: *kád*, *kim*, *kwid*, *svíd*, *nanú*, of which the last introduces an objection or expostulation.

d. Of particles of comparison have been mentioned the toneless *iva*, and *yathā* (also toneless when used in the same way). Of frequent occurrence in the oldest language is also *nā*, having (without loss of accent) the same position and value as the preceding.

Examples are: *ṛṣidviṣa iṣun nā sṛjata dvīṣam* (RV.), 'let loose your enmity like an arrow at the enemy of the singer'; *vāyo nā vṛkṣām* (AV.), 'as birds to the tree'; *gāurō nā tṛṣitāḥ pība* (RV.), 'drink like a thirsty buffalo'. This use is generally explained as being a modification or adaptation of the negative one: thus, '[although, to be sure] not [precisely] a thirsty buffalo'; and so on.

e. Of particles of place, besides those already mentioned, may be noticed *kvā* (in V., always to be read *kūa*).

f. Particles of time are: *nū*, 'now' (also *nū*: *nūnām* was mentioned above, 1109) *adyā* and *sadyās* and *sadvas* (RV., once), 'today, at once' (all held to contain the element *div* or *dyu*), *hyās*, 'yesterday', *ṣvās*, 'tomorrow', *jyók* (also related with *dyu*), 'long'; *pūnar*, 'again'.

g. Of particles of manner, besides those already mentioned, may be noticed *nānā*, 'variously' (for *nānānām*, its derivative, see 1109); *sasvār* (RV.), 'secretly'.

In the above classifications are included all the Vedic adverbial words, and most of those of the later language: for the rest, see the dictionaries.

### Prepositions.

1123. There is, as already stated, no proper class of prepositions (in the modern sense of that term), no body of words having for their exclusive office the "government" of nouns. But many of the adverbial words indicated above are used with nouns in a way which approximates them to the more fully developed prepositions of other languages.

If one and another of such words — as *vinā*, *ṛte* — occurs almost solely in prepositional use, this is merely fortuitous, and of no consequence.

1124. Words are used prepositionally along with all the noun-cases excepting the dative. But in general their office is directive only, determining more definitely, or strengthening, the proper case-use of the noun. Sometimes, however, the case-use is not easy to trace, and the noun then seems to be more immediately "governed" by the preposition — that is, to have its case-form more arbitrarily determined by its association with the latter. This is oftenest true of the accusative; and of the

genitive, which has, here as elsewhere (294), suffered an extension of its normal sphere of use.

1125. The adverbs by derivative form (1097 ff.) have least of a prepositional value (exceptions are especially a few made with the suffix *tas*: 1098).

Most of the verbal prefixes (exceptions are *ud*, *ni*, *parā*, *pra*: and *ava* and *ni* are almost such) have their prepositional or quasi-prepositional uses with cases; but much more widely in the older time than in the later: in the classical language the usage is mainly restricted to *prati*, *anu*, and *ā*.

Most of the directive words akin with the more proper prefixes are used prepositionally: some of them — as *saha*, *vinā*, *upari*, *antarā*, *purā* — freely, earlier and later.

The case-forms used adverbially are in many instances used prepositionally also: oftenest, as was to be expected, with the genitive; but frequently, and from an early time, with the accusative; more rarely with other cases.

We will take up now the cases for a brief exposition, beginning with those that are least freely used.

1126. The Locative. This case is least of all used with words that can claim the name of preposition. Of directives, *antar* and its later derivative *antarā*, meaning 'within, in', are oftenest added to it, and in the classical language as well as earlier. Of frequent Vedic use with it are *ā* and *adhi* (illustrated above, 305); — *api* and *upa* are much rarer: thus, *yā apām āpi vratē [sānti]* (RV.), 'who are in the domain of the waters'; *amūr yā ūpa sūrye [sānti]* (RV.), 'who are up yonder in the sun'; — *sacā*, 'along with', is not rare in RV., but almost entirely unknown later: thus, *pitroh sacā satī*, 'staying with her parents'.

1127. The Instrumental. The directives used with this case are almost only those which contain the associative pronominal root *sa*: as *saha* (most frequent), *sākam*, *sūrdham*, *samam*, *samayā*, *suratham*; and, in the Veda, the prefix *sam*: as, *te sumatībhiḥ sām pātnībhir nā vṛṣaṇo nasīmahi* (RV.), 'may we be united with thy favors as men with their spouses'. By substitution of the instrumental for the ablative of separation (283, *vinā*, 'without' (not Vedic), takes sometimes the instrumental; and so, in the Veda, *avas*, 'down', and *paras*, 'beyond', with which the ablative is also, and much more normally, construed. And *adhi*, in RV., is used with the instrumentals *snūnā* and *snūbhis*, where the locative would be expected.

1128. The Ablative. In the prepositional constructions of the ablative (as was pointed out and partly illustrated above, 293), the ablative value of the case, and the merely directive value of the added particle, are for the most part clearly to be traced. Many of the verbal prefixes are more or less frequently joined in the older language with this case: oftenest, *adhi* and *pari*; more sporadically, *anu*, *apa*, *ava*, *prati*, and the separatives *nis* and *vi*. The change of meaning of the ablative with *ā*, 'hither', by which

it comes to fill the office of its opposite, the accusative, was sufficiently explained above (293 c). Of directive words akin with the prefixes, many — as *bahis*, *puras*, *avas*, *adhas*, *paras*, *purā*, *vinā*, and *tiras*, 'out of knowledge of' — accompany this case by a perfectly regular construction. Also the case-forms *arvāk*, *prāk*, *paścāt*, *ūrdhvam*, *pūrvam*, *param*, *pareṇa*, *prabhṛti*; and *ṛte*, 'without', of which the natural construction with an ablative is predominant earlier. *Antikam*, 'near', is said to take the ablative as well as its more normal companion the genitive.

1129. The Accusative. Many of the verbal prefixes and related words take an accompanying accusative. Most naturally (since the accusative is essentially the 'to'-case), those that express a motion or action toward anything: as *abhi*, *prati*, *anu*, *upa*, *ā*, *ati* and *adhi* in the sense of 'over on to' or 'across, beyond', *tiras*, 'through', *antar* and *antarā* when meaning 'between', *pari*, 'around'. Examples are: *yāḥ pradīṣo abhī sūryo vicāṣte* (AV.), 'what quarters the sun looks abroad unto'; *ābodhy agnīḥ prāty āyatīm uṣāsam* (RV.), 'Agni has been awakened to meet the advancing dawn'; *gached kadūcit svajanam prati* (MBh.), 'she might go somewhither to her own people'; *imam prakṣyāmi nṛpatim prati* (MBh.), 'him I will ask with reference to the king'; *māma cittām ānu cittēbhir é 'ta* (AV.), 'follow after my mind with your minds'; *é 'hy ā naḥ* (AV.), 'come hither to us'; *ūpa na é 'hy arvān* (RV.), 'come hither unto us'; *yó devó mārtyān āti* (AV.), 'the god who is beyond mortals'; *adhīṣṭhāya vārcasā 'dhy anyān* (AV.), 'excelling above others in glory'. Also *abhītas* and *parītas*, which have a like value with the simple *abhi* and *pari*; and *upari*, 'above' (oftener with genitive). Less accordant with ordinary accusative constructions is the use of this case with *adhas*, *paras*, *puras*, *vinā*, beside other cases which seem more suited to the meaning of those particles. And the same may be said of most of the adverbial case-forms with which the accusative is used. Thus, a number of instrumentals of situation or direction: as *yé 'vareṇā 'dityām*, *yé páreṇā 'dityām* (TB.), 'those who are below the sun, those who are beyond the sun'; *āntareṇa yōnim* (ÇB.), 'within the womb'; *te hī 'dam antareṇa sarvam* (AB.), 'for all this universe is between them'; *ūttareṇa gārhapatyam* (ÇB.), 'to the north of the householder's fire'; *dākṣiṇena vēdim* (ÇB.), 'to the south of the sacrificial hearth'; *dakṣiṇena vṛkṣavāṭikām* (Çak.), 'to the right of the orchard'; *nikāṣā*, 'near to'. Similarly, *ūrdhvam* and *pūrvam* have an accusative object as well as an ablative; and the same is true later of *ṛte*. *Abhimukham*, 'toward', has a more natural right to construction with this case; and *samāyū* (later *samayā*), 'through between', is analogous with *antarā* and *tiras*.

1130. The Genitive. The words which are accompanied by the genitive are mostly case-forms of nouns, or of adjectives used substantively, retaining enough of the noun-character to take this case as their natural adjunct. Such are the locatives *agre*, 'in front of', *abhyāṣe*, 'near', *arthe* and *kṛte*, 'for the sake of', *nimitte* and *hetāu*, 'by reason of', *madhye*, 'in the midst of'; and other cases, as *artham* and *arthāya*, *antikam* and *abhimukham* (which have also other constructions), *kāraṇāt*, *sakāṣāt*, *hetos*. And really, although

less directly and obviously, of the same character are other adjective cases (some of them showing other constructions, already noticed): as *adhareṇa*, *uttareṇa* and *uttarāt*, *dakṣiṇena* and *dakṣiṇāt*, *paçcāt*, *ūrdhvam*, *anantaram*, *samakṣam*, *sākṣāt*. More questionable, and illustrations rather of the general looseness of use of the genitive, are its constructions (almost wholly unknown in the oldest language) with more proper words of direction: thus, with the derivative *paritas*, *paratas*, and *antitas*, and *parastāt* and *purastāt* (these found in the Brāhmaṇa language: as, *sahvatsarasya parastāt*, 'after a year'; *sūktasya purastāt*, 'before the hymn' [A.B.]); with *anti*, *adhas*, *avas*, *puras*; with *upari*, 'above' (common later); and with *antar*.

### Conjunctions.

1131. The conjunctions, also, as a distinct class of words, are almost wanting.

The combination of clauses is in Sanskrit in general of a very simple character; much of what in other Indo-European languages is effected by subordinating conjunctions is here managed by means of composition of words, by the use of the gerunds (994), and of *itī* (1102 a), and so on.

1132. The relative derivative adverbs, already given (1098 ff.), may properly be regarded as conjunctions; and a few other particles of kindred value, as *ced* and *ned* (1111 a).

1133. Purely of conjunctive value are च *ca*, 'and', and वा *vā*, 'or' (both toneless, and never having the first place in a sentence or clause).

Of copulative value, along with *ca*, is in the older language especially *utā* (later it becomes a particle of more indefinite use); and *api*, *tatas*, *tathā*, *kim ca*, with other particles and combinations of particles, are used often as connectives of clauses.

Adversative is *tū*, 'but' (rare in the older language); also, less strongly, *u* (toneless).

Of illative value is *hi*, 'for' (originally, and in great part at every period, asseverative only): compare above, 1122 a.

To *ca* (as well as to its compound *ced*) belongs occasionally the meaning 'if'.

It is needless to enter into detail with regard to those uses which may be not less properly, or more properly, called conjunctive than adverbial, of the particles already given, under the head of Adverbs.

### Interjections.

1134. The utterances which may be classed as interjections are, as in other languages, in part voice-gestures,

in part onomatopœias, and in part mutilations and corruptions of other parts of speech.

**1135. a.** Of the class of voice-gestures are, for example: *ā*, *hā*, *hāhā*, *ahaha*, *he*, *hāi* (AV.), *ayi*, *aye*, *hayé* (RV.), *aho*, *bāt* (RV.), *bata* (RV.) or *vata*, and (probably) *hīruk* and *hurūk* (RV.).

**b.** Onomatopoeic or imitative utterances are, for example (in the older language); *ciçcā*, 'whiz' (of an arrow: RV.); *kikirā* (palpitation: RV.); *bāl* and *phāt* (*phās*?) or *phāl*, 'splash' (AV.); *bhūk*, 'bow-wow' (AV.); *çāl*, 'pat' (AV.); *ās*, *hīs*, *as*, and *has* (PB.); and see the words already quoted in composition with the roots *kr* and *bhū*, above, 1091.

**c.** Nouns and adjectives which have assumed an interjectional character are, for example: *bhos* (for the vocative *bhavas*, 450); *are* or *re* (voc. of *ari*, 'enemy'); *dhik*, 'alas!' (may be mere voice-gesture, but perhaps related with  $\sqrt{dih}$ ); *kaṣṭam*, 'woe is me!' *diṣṭyā*, 'thank heaven!' *svasti*, 'hail!' *suṣṭhu*, *sādhu*, 'good, excellent!' None of these are Vedic in interjectional use.

## CHAPTER XVII.

### DERIVATION OF DECLINABLE STEMS.

**1136.** THE formation from roots of conjugable stems — namely, tense-stems, mode-stems, and stems of secondary conjugation (not essentially different from one another, nor, it is believed, ultimately from the formation of declined stems) — was most conveniently treated above, in the chapters devoted to the verb. Likewise the formation of adverbs by derivation (not essentially different from case-formation), in the chapter devoted to particles. And the formation of those declinable stems — namely, of comparison, and of infinitives and participles — which attach themselves most closely to the systems of inflection, has also been more or less fully exhibited. But the extensive and intricate subject of the formation of the great body of declinable stems was best reserved for a special chapter.

Of course, only a brief and compendious exhibition of the subject can be attempted within the here necessary limits: no exhaustive tracing out of the formative elements of every period; still less, a complete statement of the varied uses of each element; least of all, a discussion of origins; but enough to help the student in that analysis of words which must form a part

of his labor from the outset, giving a general outline of the field, and preparing for more penetrating investigation.

The material from accented texts, and especially the Vedic material, will be had especially in view (nothing that is Vedic being intentionally left unconsidered); and the examples given will be, so far as is possible, words found in such texts with their accent marked. No word not thus vouched for will be accented unless the fact is specifically pointed out.

**1137.** The roots themselves, both verbal and pronominal, are used in their bare form, or without any added suffix, as declinable stems.

As to this use of verbal roots, see below, **1147**.

The pronominal roots, so-called, are essentially declinable; and hence, in their further treatment in derivation, they are in accordance with other declinable stems, and not with verbal roots.

**1138.** Apart from this, every such stem is made by a suffix. And these suffixes fall into two general classes:

A. Primary suffixes, or those which are added directly to roots;

B. Secondary suffixes, or those which are added to derivative stems (also to pronominal roots, as just pointed out, and sometimes to particles).

The division of primary suffixes nearly corresponds to the *kṛt* (more regular) and *uṇādi* (less regular) suffixes of the Hindu grammarians; the secondary, to their *taddhita*-suffixes.

**1139.** But this distinction, though one of high value, theoretically and practically, is not absolute. Thus:

a. Suffixes come to have the aspect and the use of primary which really contain a secondary element — that is to say, the earliest words exhibiting them were made by addition of secondary suffixes to words already derivative.

Sundry examples of this will be pointed out below: thus, the gerundival suffixes, *tavya*, *anīya*, etc., the suffixes *uka* and *aka*, *tra*, and others. This origin is probable for more cases than admit of demonstration; and it is possible for others which show no distinct signs of composition.

b. Less often, a suffix of primary use passes over in part into secondary, through the medium of use with denominative "roots" or otherwise: examples are *yu*, *iman*, *īyas* and *iṣṭha*.

**1140.** Moreover, primary suffixes are added not only

to original roots, but, generally with equal freedom, to elements which have come to wear in the language the aspect of such, by being made the basis of primary conjugation — and even, to a certain extent, to the bases of secondary conjugation, the conjugation-stems, and the bases of tense-inflection, the tense-stems.

a. The most conspicuous examples of this are the participles, present and future and perfect, which are made alike from tense and conjugation-stems of every form. The infinitives (968 ff.) attach themselves only in sporadic instances to tense-stems, and even from conjugation-stems are made but sparingly earlier; and the same is true of the gerundives.

b. General adjectives and nouns are somewhat widely made from conjugation-stems, especially from the base of causative conjugation: see below the suffixes *a*, *ā*, *as*, *ani*, *u*, *ti*, *tṛ*, *tnu*, *snu*.

c. From tense-stems, the examples are far fewer, but not unknown: thus, from present-stems, occasional derivatives in *a* (1148.3b), *ā* (1149), *u* (1178 e, g, h), *ta* (1176 e), *tu* (1161 c), *tra* (1185 d), *ru* (1192), *vin* (or *in*: 1232, end); from stems in *s* apparently of aoristic character (besides infinitives and gerundives), occasional derivatives in *a* (1148.3b), *ana* (1150.2b), *ani* (1159b), *an* (1160 a), *āna* (1175), *as* (1151.1 b), *iṣṭha* (1184), *u* (1178 e), *us* (1154), *tṛ* (1182 c), *in* (1183).

1141. The primary suffixes are added also to roots as compounded with the verbal prefixes.

Whatever, namely, may have been originally and strictly the mode of production of the derivatives with prefixes, it is throughout the recorded life of the language as if the root and its prefix or prefixes constituted a unity, from which a derivative is formed in the same manner as from the simple root, with that modification of the radical meaning which appears also in the proper verbal forms as compounded with the same prefixes.

Not derivatives of every kind are thus made; but, in the main, those classes which have most of the verbal force, or which are most akin in value with infinitives and participles.

The occurrence of such derivatives with prefixes, and their accent, will be noted under each suffix below. They are chiefly (in nearly the order of their comparative frequency), besides root-stems, those in *a*, in *ana*, in *ti*, in *tar* and *tra*, and in *in*, *ya*, *van* and *man*, *i* and *u*, *as*, and a few others.

1142. The suffixes of both classes are sometimes joined to their primitives by a preceding union-vowel — that is to say, by one which wears that aspect, and, in our uncertainty as to its real origin, may most conveniently and safely be called by that name. The line between these vowels and such as de-

serve to be ranked as of organic suffixal character cannot be sharply drawn.

Each of the two great classes will now be taken up by itself, for more particular consideration.

### A. Primary Derivatives.

1143. Form of root. The form of root to which a primary suffix is added is liable to more or less variation. Thus:

a. By far the most frequent is a strengthening change, by *guṇa* or *vrddhi*-increment. The former may occur under all circumstances (except, of course, where *guṇa*-change is in general forbidden: 235, 240): thus, *véda* from  $\sqrt{\text{vid}}$ , *móda* from  $\sqrt{\text{mud}}$ , *várdha* from  $\sqrt{\text{vr̥dh}}$ : *áyana* from  $\sqrt{\text{i}}$ , *sávana* from  $\sqrt{\text{su}}$ , *sáraṇa* from  $\sqrt{\text{sr}}$ ; and so on. But the latter is only allowed under such circumstances as leave long *ā* as the resulting vowel: that is, with non-final *a*, and with a final *i* or *u*-vowel and *r*, before a vowel: thus, *nādā* from  $\sqrt{\text{nad}}$ , *grūbhā* from  $\sqrt{\text{gr̥bh}}$  or *grabh*, *vāhā* from  $\sqrt{\text{vah}}$ , *nāyā* from  $\sqrt{\text{nī}}$ , *bhāvā* from  $\sqrt{\text{bhū}}$ , *kārā* from  $\sqrt{\text{kṛ}}$ ; such strengthening as would make *vāida* and *māuda* is entirely unknown in primary derivation.

No general rules can be given as to the occurrence of strengthening in derivation: it must be left to be pointed out for each suffix.

b. Other vowel changes are more sporadic, and will be noticed in detail below: thus, occasional abbreviation of a root, as in *ukti* from  $\sqrt{\text{vac}}$ ; change of final *r̥* to *ir* and *ur*; the loss of final *ā*, or its conversion to an *i*-vowel; and so on.

c. The reversion of a final palatal or *h* to a guttural has been already noticed (216). A final *n* or *m* is occasionally lost, as in formations already considered.

d. After a short final vowel is sometimes added a *t*: namely, where a root is used as stem without suffix (1147), and before a following *y* or *v* of *van* (1169), *vara* and *varī* (1171), *yu* once (1165a), and *ya* (1213).

The presence of *t* before these suffixes indicates an original secondary derivation from derivatives in *ti* and *tu*.

e. The root is sometimes reduplicated: rarely in the use without suffix: oftenest before *i*, *a*, *u*; in only a few cases each, also before other suffixes (*ana*, *vana*, *van* and *varī*, *vani*, *vi*, *vit*, *ani*, *in*, *atu*, *tnu*, *ta*, *ti*, *tr̥*, *tra*, *ūka* and *ika*, *ma*, *ya*).

1144. Accent. No general laws governing the place of the accent are to be recognized; each suffix must in this respect be considered by itself.

In connection with a very few suffixes is to be recognized a certain

degree of tendency to accent the root in case of a *nomen actionis* or infinitival derivative, and the ending in the case of a *nomen agentis* or participial derivative: see the suffixes *a*, *ana*, *as*, *an*, and *man*, below, where the examples are considered. Differences of accent in words made by the same suffix are also occasionally connected with differences of gender: see the suffixes *as* and *man*.

**1145. Meaning.** As regards their signification, the primary derivatives fall into two great classes, the one indicating the action expressed by the verbal root, the other the person or thing in which the action appears, the agent or actor — the latter, either substantively or adjectively. The one class is abstract, infinitival; the other is concrete, participial. All other meanings may be viewed as modifications or specializations of these two.

Even the words indicating recipience of action, the passive participles, are, as their use also as neuter or reflexive shows, only notably modified words of agency. The gerundives are, as was pointed out above (961), secondary derivatives, originally indicating only 'concerned with the action'.

**1146.** But these two classes, in the processes of formation, are not held sharply apart. There is hardly a suffix by which action-nouns are formed which does not also make agent-nouns or adjectives; although there are not a few by which are made only the latter. In treating them in detail below, we will first take up the suffixes by which derivatives of both classes are made, and then those forming only agent-nouns.

To follow an alphabetical arrangement, although in some respects more practically convenient, seems too artificial, and destructive of all natural connection. The Index will give what help is needed toward finding any particular suffix which is sought.

**1147. Stems without suffix: Root-words.** These words and their uses have been already pretty fully considered above (323, 348 ff., 383 ff., 400, 401).

**a.** They are used especially (in the later language, almost solely) as finals of compounds, and have both fundamental values, as action-nouns (frequently as infinitives: 971), and as agent-nouns and adjectives (often governing an accusative: 271e). As action-nouns, they are chiefly feminines (384: in many instances, however, they do not occur in situations that determine the gender).

**b.** In a small number of words, mostly of rare occurrence, the reduplicated root is used without suffix.

The Vedic cases are: with simple reduplication, *sasyád*, *cikít*, *sasrút* (irregular, for *susrút*), *didyú* and *didyút*, *juhú*, and perhaps *ççu*; with in-

tensive reduplication, *-není*, *jogú*, *yavīyúdh*, *vānivan* (with the intensive instead of the usual radical accent). In *dāridra* is seen a transfer to the *a*-declension. *Asūsú* is probably to be understood as a compound, *asū-sú*.

c. If the root end in a short vowel, a *t* is regularly and usually added (383b).

Examples, and the exceptions found to occur, have been given at the place just quoted.

d. Words of this form in combination with verbal prefixes are very numerous. The accent rests (as in combination of the same with other preceding elements) on the root-stem.

e. In a single instance, *çrútkarṇa* (RV.), 'of listening ears', a stem of this class occurs as prior member of a compound.

1148. ऋ *a*. With the suffix ऋ *a* is made a very large and heterogeneous body of derivatives, of various meaning and showing various treatment of the root: *guṇa*-strengthening, *vṛddhi*-strengthening, retention unchanged, and reduplication.

In good part, they are classifiable under the two usual general heads; but in part they have been individualized into more special senses.

1. With *guṇa*-strengthening of the root (where that is possible: 235, 240). These are the great majority, being more than twice as numerous as all others together.

a. Many *nomina actionis*: as, *çráma*, 'weariness', *gráha*, 'seizure', *áya*, 'movement', *véda*, 'knowledge', *háva*, 'call', *kródha*, 'wrath', *jósa*, 'enjoyment', *tára*, 'crossing', *sárga*, 'emission'.

b. Many *nomina agentis*: as, *kṣamá*, 'patient', *svajá*, 'constrictor', *hinvá*, 'impelling', *jívá*, 'living', *meghá*, 'cloud', *codá*, 'inciting', *plavá*, 'boat', *sará*, 'brook', *sarpá*, 'serpent', *arcá*, 'radiant'.

c. Of the examples here given, those under *a* accent the radical syllable, and those under *b* the ending. And this is in a majority of cases the fact as regards the two classes of derivatives; so that, taken in connection with kindred facts as to other suffixes, it indicates such a difference of accent as a general tendency of the language. A few sporadic instances are met with of the same form having the one or the other value according to its accent: thus, *ésa*, 'haste', *esá*, 'hasting'; *çása*, 'order', *çásá*, 'orderer' (other examples are *kāma*, *çāka*, *çoka*): compare a similar difference with other derivatives as, *ana*, *an*, *man*). But exceptions are numerous — thus, for example, *jayá*, *javá*, *smará*, action-nouns; *çráva*, *mógha*, *hín̄sa*, agent-nouns — and the subject calls for a much wider and deeper investigation than it has yet received, before the accentuation referred to can be set up as a law of the language in derivation.

2. With *vṛddhi*-strengthening of the root — but only where

*ā* is the resulting radical vowel: that is, of medial *a*, and of final *r* (most often), *u* or *ū*, *i* or *ī* (rare).

a. Examples of action-nouns are: *kāma*, 'love', *bhāgā*, 'share', *nādā*, 'noise', *dāvā*, 'fire', *tārā*, 'crossing'. Hardly any forms of clear derivation and meaning are quotable with accent on the root-syllable.

b. Examples of agent-nouns are: *grābhā*, 'seizing', *vāhā*, 'carrying', *nāyā*, 'leading', *jārā*, 'lover'.

3. With unstrengthened root, the examples are quite few: thus, *kṛçā*, 'lean', *yugā*, 'yoke', *sruvā*, 'spoon', *priyā*, 'dear', *vrā*, 'troop', *çucā*, 'bright'.

a. A number of words of this class, especially as occurring in composition, are probably results of the transfer of root-stems to the *a*-declension: thus, *-ruja*, *-ghuṣa*, *-sphura*.

b. A few Vedic examples are made from conjugational stems: thus, from the causative stem, *kūpaya* and *tānaya* and *mṛgaya* (?), *-īñkhaya*, *-ejaya*. *-dhūrayā*, *-pūrayā*; from present-stems of the *nu*-class (IV.), or secondary roots made from them (716), *hinvá*, *-invá*, *-jinvá*, *-pivá*, *-sinvá*, *-sunvá*; from others, *-pṛṇá*, *-mṛṇá*, *-paçyá*, *-manya*, *-dasya*, *-jurya*, *-kṣudhya*, *-tṛṣya*, *-jighrá*, *-piba*; from aorist-stems (?), *jeṣá*, *neṣa* (in *neṣatama*, RV., once).

4. With reduplicated root, the derivatives in the older language are a class of some extent. They are made in a few instances with the simple reduplication: thus, *cacarā*, 'movable' (?), *çiçayā*, 'inciting', *sasrá*, 'flowing', *vavrá*, 'hiding'; much more often, with the intensive reduplication: thus, *rerihā*, 'licking', *vevijā*, 'hasting', *-roruda*, 'weeping', *-cañkrama*, 'striding', *carūcarā* and *calācalā*, 'movable', *kanikradā*, 'noisy', *pañiṣpadā*, 'quivering', *varīvr̥tā*, 'rolling'.

Only a single example of an action-noun has been noticed, namely *çiçnātha*, 'attack', with accent on the root. Other examples of accent elsewhere than on the suffix are only the stems (of doubtful meaning or derivation) *cārcara* and *gārgara*.

5. Derivatives with this suffix from roots as compounded with the verbal prefixes are quite common, in all the modes of formation (in each, in proportion to the frequency of independent words): constituting, in fact, considerably the largest body of derivative stems with prefixes. They are of both classes as to meaning. The accent is, with few exceptions, on the ending — and that, without any reference to the value of the stem as action-noun or agent-noun.

Examples are: *saṅgamā*, 'assembly', *nimeṣā*, 'wink', *abhidrohā*, 'enmity', *anukarā*, 'assistance', *udānā*, 'inspiration', *pratyāçr̥vā*, 'response'; — *paricarā*, 'wandering', *sañjayā*, 'victorious', *vibodhā*, 'wakeful', *atijājā*, 'over-pious', *udārā*, 'inciting, elevated', *uttudā*, 'rousing', *saṅgirā*, 'swallowing', *ādardirā*, 'crushing', *adhicañkrāmā*, 'climbing'.

The only definable class of exceptions in regard to accent appears to be that of the adverbial gerunds in *am* (above, 995), which are accented on the root-syllable. A very few other stems have the same tone: for ex-

ample, *utpāta*, 'portent'; *ācrēṣa*, 'plague'. A few others, mostly agent-nouns, have the accent on the prefix: for example, *vyḥṣa* (i. e. *vf-ṣa*), 'burning', *prātiveṣa*, 'neighbor', *ābhaga*, 'sharing'; but also *sāmkūṣa*, 'appearance'.

For the remaining compounds of these derivatives, with the inseparable prefixes and with other elements, see the next chapter. It may be merely mentioned here that such compounds are numerous, and that the *a*-derivative has often an active participial value, and is frequently preceded by a case-form, oftenest the accusative.

Many words in the language appear to end with a suffix *a*, while yet they are referable to no root which can be otherwise demonstrated as such.

1149. ञ *ā*. This suffix has, for the most part, the subordinate office of making corresponding feminines (especially adjective) to masculines in ञ *a* — in which use, of course, it might be open to question whether we should not regard it rather as an element of secondary character. It is comparatively little employed independently.

There are, however, a considerable number of feminine nouns in *ā* in the language to which no corresponding masculines exist; and many of them are distinctly traceable to roots. The latter are especially action-nouns, accented on the suffix: and such derivatives in *ā* form a distinct class, being made sometimes from simple roots, but especially, and at will, from conjugational stems, desiderative, causative, and denominative.

Examples from simple roots are: *iṣā*, 'lordship', *ḥriḍā*, 'play', *jarā*, 'old age', *nindā*, 'reproach'.

Examples from desiderative stems are very few in the oldest language, but common later: thus, *jigīṣā* and *bhikṣā* (RV.); the latter and *vīrtsā* (AV.); *bībhatsā* (VS.); in Brāhmaṇa language, *pipūsā*, *bubhukṣā*, *mīmāṅsā*, *ṣikṣā* or *ṣikṣā*, etc.

From causative stems, the only Vedic example is *gamayā* (compare the derivatives in *-aya*, above, 1148. 3 b); but the formation becomes common later, in the making-up of the periphrastic perfect (above, 1070 ff.). The derivatives from present-stems — thus, *vidā*, *edhā*, *juhavā*, etc. — made for a similar office, have been mentioned in connection with this perfect (1073).

From denominative stems, the older instances are more numerous: for example, *aṣvayā*, *sukratūyā*, *apasayā*, *urusyā*, *asūyā*, *aṣanayā*, *jīvanasyā*. Their *y* is not resolved into *i*.

1150. ञ *ana*. With this suffix (as with ञ *a*) are formed many derivatives, of both the principal classes of meaning, and with not infrequent specializations. The root has

usually *guṇa*-strengthening, but sometimes *vṛddhi* instead; and in a few cases it remains unstrengthened. Derivatives of this formation are frequent from roots with prefixes, and also in composition with other elements.

The normal and greatly prevalent accent is upon the root-syllable, without regard to the difference of meaning: but cases occur of accented final, and a few of accented penult (which last are possibly to be referred to another suffix of the same form but of a different origin).

The action-nouns are in general of the neuter gender. The feminine of adjectives is made either in *ā* or in *ī* (for details, see below). And a few feminine action-nouns in *anā* and *anī* occur, which are to be ranked as belonging to this suffix.

1. With strengthened and accented root-syllable. Under this head fall, as above indicated, the great mass of forms.

a. With *guṇa*-strengthening: examples of action-nouns are *sādana*, 'seat', *rākṣaṇa*, 'protection', *dāna*, 'giving', *cāyana*, 'collection', *védana*, 'property', *hāvana*, 'call', *bhōjana*, 'enjoyment', *kāraṇa*, 'deed', *vārdhana*, 'increase'; — of agent-nouns, *tāpana*, 'burning', *cētana*, 'visible', *cōdana*, 'impelling'.

The derivatives *dūṣaṇa* and *-mārjana* have the same irregular strengthening which appears in their present-systems (627, 1042 a), and other formations from the same roots.

b. With *vṛddhi*-strengthening (only in such circumstances that *ā* remains as vowel of the radical syllable): examples (all that have been noted in the older language) are *-cātana*, *nāçana*, *mādana*, *-vāçana*, *-vāsana*, *-vāhana*, *sād-ana*, *-spāçana*, *svādana*, *-āyana*, *-yāvana*, *-srāvana*, *-pāraṇa*, *vāraṇa*.

c. From roots with prefixes, the derivatives of this formation are very numerous, being exceeded in frequency only by those made with the suffix *a* (above, 1148. 5).! A few examples are: *ākrāmaṇa*, 'striding on', *udyāna*, 'upgoing', *nidhāna*, 'receptacle', *prāṇana*, 'expiration', *vimōcana*, 'release' and 'releasing', *saṃgrāmaṇa*, 'assembly' and 'assembler', *adhivikārtana*, 'cutting off', *avaprabhrāṇana*, 'falling away down'.

For other compounds of these derivatives, showing the same accent (and the same feminine stem), see the next chapter (below, 1272).

A few exceptions occur: *vicakṣaṇā*, *upariçayanā*, and the feminines *pramandanī* and *nirdahanī*.

d. The adjectives of this formation, simple or compound, make their feminine usually in *ī*: thus, *cōdanī*, *pēçanī*, *spāraṇī*, *jāmbhanī*; *prajñānī*, *prōkṣaṇī*, *saṃgrāhaṇī*, *abhiçāvaṇī*, *vidhāraṇī* (*cetanī* is of doubtful meaning: below, 2 a).

An adjective compound, however, having a noun in *ana* as final member, makes its feminine in *ā*: thus, *sūpasarpaṇā*, 'of easy approach', *sāḍvidhānā*, 'of sextuple order', *anapavācanā*, 'not to be ordered away'.

2. The more irregular formations may be classed as follows:

a. With accent on the final: a small number of agent-nouns and adjectives, as *karaṇá*, 'active' (against *kāraṇa*, 'act'), *tvaraṇá*, 'hasting', *rocaná*, 'shining', *kroṣaṇá*, 'yelling', *svaṣṇá*, 'sleepy', *kṣayaṇá*, 'habitable'.

These, unlike the more regular class, make their feminines in *ā*: thus, *tvaraṇā*, *spandanā*, etc. And a very few feminine action-nouns have the same form: *jarāṇā*, *dyotanā* (? RV. i. 123. 4), *ṣvetanā* (and compare *kapanā*, *raṣanā*).

Beside these may be mentioned a few feminines in *anī*, of more or less doubtful character: *arṣaṇī*, *cetanī* (to *cétana*), *tapaṇī* (to *tāpana*), *vrjāṇī* (with *vrjāna*), *hāyaṇī* (with *hāyanā*), *rajanī*, *tedanī*.

b. With accent on the penult: a very small number of adjectives: as *dohāna*, 'milking', *manāna*, 'considerate', *mandāna*, 'rejoicing', *sakṣāna*, 'overcoming', and perhaps *vakṣāṇā*, 'carrying' (with aoristic *s*); and a still smaller number of neuter action-nouns: *daṅsāna*, 'great deed', *vrjāna*, 'enclosure, town', *kṛpāna*, 'misery' (against *kṛpaṇá*, 'miserable'), with the masculine *kirāna*, 'dust'.

The only noticed example of a feminine is in *ā*: *turāṇā*. And a few feminine nouns have the same form: as *jarāṇā*, *bhandānā*, *kanyānā*, *vakṣāṇā*, etc. (and compare the anomalous masc. name *uṣānā*: 355 a).

c. Without strengthening of the root are made a very small number of derivatives: namely (besides those already noted, *kṛpāna* and *kṛpaṇá*, *vrjāna* and *vrjāṇī*, *kirāna*, *turāṇā*, *bhurāna*, *-sūvana* and *bhūvana* (compare the perfects of the same roots, *śasūva* and *babhūva*, without the usual strengthening: 789 a): *kṛcāna*, *pṛcāna*, *vṛcāna* are doubtful.

d. A few isolated cases may be here mentioned: *jāgaraṇā* and *pālpūlana* from reduplicated root-forms; *sāmana* apparently from the prefix *sa-*; *aṅhūraṇā* apparently from *aṅhurā*; *yóṣaṇā*, 'woman' (beside *yóṣan*, *yóṣā*, etc.), and *pṛtānā*, 'fight', are the only feminines with accented root-syllable.

1151. *अस्* *as*. By this suffix are made (usually with *guna*-strengthening of the root-vowel) especially a large class of neuter nouns, mostly abstract (action-nouns), but sometimes assuming a concrete value; and also, in the older language, a few agent-nouns and adjectives, and a considerable number of infinitives.

The accent in words of the first class is on the root, and in the second on the ending; and in a few instances words of the two classes having the same form are distinguished by their accent; the infinitives have for the most part the accent on the suffix.

1. a. Examples of the first and principal class are: *āvas*, 'aid, favor', *tāpas*, 'warmth', *prāyas*, 'pleasure', *téjas*, 'splendor', *grāvas*, 'fame', *dóhas*, 'milking', *kāras*, 'deed', *prāthas*, 'breadth', *cétas* and *mānas*, 'mind', *cákṣas*, 'eye', *sáras*, 'pond', *vācas*, 'speech'.

b. A few words of this class are of irregular formation: thus, without

strengthening of the root, *jávas*, 'quickness' (beside *jávas*), *úras*, 'breast', *má'dhas*, 'contempt'; and *ś́ras*, 'head', is to be compared; — with *vr̥ddhi*-strengthening, *-v̄cas*, *v̄śas*, *v̄áhas*, *-sv̄údas*, *-h̄ayas*; — perhaps with an aoristic *s*, *h̄éas*, 'missile'.

**c.** After final *ā* of a root is usually inserted *y* before the suffix (258): thus, *dh̄ayas*, *ḡāyas*.

But there are in the oldest language apparent remains of a formation in which *as* was added directly to radical *ā*: thus, *bh̄ās* and *-d̄ās* (often to be pronounced as two syllables), *jñ̄ās*, *m̄ās*; and *-jas* and *-dhas* and *-das*, from the roots *jā* and *dhā* and *dā* (Benfey, Abh. Gött. Ges. xxiii., 1878).

**2. a.** The instances in which an agent-noun is differentiated by its accent from an action-noun are: *ápas*, 'work', and *apás*, 'active'; *yáças*, 'beauty', and *yaçás*, 'beauteous'; *táras*, 'quickness', and *tarás* (SV., once), 'quick'; *dúvas*, 'worship', and *duvás*, 'lively'(?); *máhas*, 'greatness', and *mahás*, 'great'; between *rákšas*, n., and *rakšás*, m., both meaning 'demon', and between *tyájas*, n., 'abandonment'(?), and *tyajás*, m., 'descendant'(?), the antithesis is much less clear.

**b.** Adjectives in *ás* without corresponding abstracts are: *tavás*, 'strong', *vedhás*, 'pious', probably *úhanás*, 'heady'; and a few other words of isolated occurrence, as *veçás*, *dhvarás*. From a denominative stem is made *mṛgayás*, 'wild animal' (RV., once).

**c.** But there are also a very few cases of abstract nouns, not neuter, accented on the ending: thus, *jarás*, 'old age', *bh̄iyás*, 'fear'; and doubtless also *havás*, 'call', and *tvešás*, 'impulse'. The feminine *uṣás*, 'dawn', might belong either here or under the last preceding head.

**d.** Apparently containing a suffix *as* are the noun *upás*, 'lap', and certain proper names: *āṅgiras*, *nodhás*, *bhalūnás*, *arcanānás*. The feminine *apsarás*, 'nymph', is of doubtful derivation.

The irregular formation of some of the words of this division will be noticed, without special remark.

**3.** The infinitives made by the suffix *as* have been explained above (973): they show various treatment of the root, and various accent (which last may perhaps mark a difference of gender, like that between *sáhas* and *jarás*).

**4.** The formation of derivatives in *as* from roots compounded with pre-fixes is very restricted — if, indeed, it is to be admitted at all. No infinitive in *as* occurs with a prefix; nor any action-noun; and the adjective combinations are in some instances evidently, and in most others apparently, possessive compounds of the noun with the prefix used adjectively: the most probable exceptions are *-nyòkas* and *v̄śpardhas*. As in these examples, the accent is always on the prefix.

In connection with this, the most common and important suffix ending in *s*, may be best treated the others, kindred in office and possibly also in origin, which end in the same sibilant.

1152. तस् *tas*, नस् *nas*, सस् *sas*. With these suffixes are made an extremely small number of action-nouns. Thus:

a. With *tas* are made *rétas*, 'seed', and *srótas*, 'stream'.

b. With *nas* are made *ápnas*, 'acquisition', *árñas*, 'wave', *-bharnas*, 'offering', *rékñas*, 'riches'; and in *dráviñas*, 'wealth', and *páriñas*, 'fulness', is apparently to be seen the same suffix, with prefixed elements having the present value of union-vowels. Probably the same is true of *dámūnas*, 'house-friend'.

c. With *sas* is perhaps made *vápsas*, 'beauty'(?); and *túrūsas* may be mentioned with it (rather *tarus-a*?).

1153. इस् *is*. With the suffix *is* is formed a small number (about a dozen) of nouns.

They are in part nouns of action, but most are used concretely. The radical syllable has the *guṇa*-strengthening, and the accent is on the suffix (except in *iyótiś*, 'light', *vyáthiś* (?), and *ámis*, 'raw meat'). Examples are: *arctis*, *roctis*, and *çoctis*, 'light', *havis*, 'oblation', *vartis*, 'track'.

The forms *tuvis-* and *surabhis-* appear inorganically for *tuvi* and *surabhi* in a few compounds or derivatives.

1154. उस् *us*. With this suffix are made a few words, of various meaning, root-form, and accent.

They are words signifying both action and agent. A few have both meanings, without difference of accent: thus, *tápus*, 'heat' and 'hot'; *árus*, 'wound' and 'sore'; *cákṣus*, 'brightness' and 'seeing, eye'; *vápus*, 'wonderful' and 'wonder'. The nouns are mostly neuter, and accented on the root-syllable; exceptions are: in regard to accent, *janús*, 'birth'; in regard to gender, *mánus*, 'man', and *náhus*, proper name. Of adjectives, are accented on the ending *jayús*, *vanús*, *vidús* (which alone shows an unstrengthened root), and *dakṣús*, 'burning' (which appears to attach itself to the aorist-stem).

1155. इस् *i*. With this suffix are formed a considerable body of derivatives, of all genders: adjectives and masculine agent-nouns, feminine abstracts, and a few neuters. They show a various form of the root: strong, weak, and reduplicated. Their accent is also various.

Many words in *i* have meanings much specialized; and many (including most of the neuters) are hardly to be connected with any root elsewhere demonstrable.

1. The feminine action-nouns are of very various form: thus, with weak root-form, *rúci*, 'brightness', *tvṛsi*, 'sheen'; *kṛṣi*, 'ploughing', *nṛti*,

'dance', *yudhī*, 'fighting'; — with *guṇa*-strengthening (where possible), *rōpi*, 'pain', *rāndhi*, 'subjection', *ṣocī*, 'heat', *vanī* and *sanī*, 'gain'; — with *ṽddhi*-strengthening, *grāhi*, 'seizure', *dhrāji*, 'course', *ājī*, 'race'; from *√dus* comes *dūsi* (compare *dūṣayati*, 1042 a). The variety of accent, which seems reducible to no rule, is illustrated by the examples given.

The few infinitively used words of this formation (above, 975) have a weak root-form, with accent on the ending.

2. The adjectives and masculine agent-nouns exhibit the same variety. Thus:

a. With unstrengthened root: *śūci*, 'bright', *bhīmi*, 'lively' (*√bhram*), *gābhi*, 'container'.

b. With strengthened root (or root incapable of *guṇa*-change): *āri*, 'enemy', *māhi*, 'great', *arct*, 'beam', *granthī*, 'knot', *krīdī*, 'playing'; and some words, of obscure connections, show an apparent *ṽddhi*-increment: thus, *drāpī*, 'mantle', *rācī*, 'heap', *pānī*, 'hand', etc.

c. With reduplicated root. This is in the older language a considerable class, of quite various form. Thus: with weak or abbreviated root, *cākri*, *jāghri* (*√ghar*), *pāpri*, *sāsri*, *-mamri*, *babhri*, *vavri*, *jāgmi*, *jāghni*, *sāsni*, *sūsvi*, *-ṣiṣvi*; and, with displacement of final *ā* (or its weakening to the semblance of the suffix), *dadī*, *papī*, *yayī* (with a case or two from *yayī*), *-jajñi*, *dādhi*; — from the *ur*-form of roots in changeable *r*, *jāguri*, *tāturi*, *pāpuri*; — with simple reduplication, *yūyudhi*, *vīvici*; — with strengthened reduplication, *-cācali*, *tātrpi*, *dādhrīsi*, *vāvahi*, *sāsahi*, *tūtūji* and *tūtūjī*, *yūyuvī*, *yūyudhi*; and *jarbhāri*. And *karkarī*, 'lute', and *dundubhī*, 'drum', have the aspect of belonging to the same class, but are probably onomatopoeitic. The accent, it will be noticed, is most often on the reduplication, but not seldom elsewhere (only once on the root).

It was noticed above (271 f) that these reduplicated derivatives in *i* especially often take an object in the accusative, like a present participle.

d. Formations in *i* from the root compounded with prefixes are not at all numerous. They are accented usually on the suffix. Examples are: *abhidrohī*, *āyajī*, *vyānaṣī*, *nijaghni*, *parādadī*, *viśāsahī*; but also *ājāni*, *āmūri*, *vīvavri*.

As compounded with other preceding words, the adjectives or agent-nouns in *i* are not rare, and are regularly accented on the root: see the next chapter, 1276.

e. From *√dhā* comes a derivative *-dhi*, forming many masculine compounds, with the value both of an abstract and a concrete: thus, with prefixes, *antardhī*, *uddhī*, *nidhī*, *paridhī*, etc. Opinions are divided as to whether it is to be regarded as formed with the suffix *i*, displacing the radical *ā*, or with weakening of *ā* to *i*.

3. Neuter nouns in *i* are few, and of obscure derivation: examples are *ākṣi*, 'eye', *āsthi*, 'bone', *dādhi*, 'curds', etc.

1156.  $\tilde{\text{ḷ}}$  ī. The suffix  $\tilde{\text{ḷ}}$  ī, like  $\tilde{\text{ḷ}}$  ā (above, 1149), has in general the office of making a feminine from a masculine stem. Thus:

Especially, from consonant-stems in general; — from stems in *r* (or *ar*): **376 a**; — from some stems in *u*: **344**; — from many stems in (for details, see the various suffixes ending in *a*): — stems in *i* very rarely have corresponding feminines in *ī*: an example is *kṛmī* (masc. *kṛmi*).

In the oldest language, a few masculines also are made in final *ī*: they have been noticed, and their inflection described, above (**355 ff.**).

**1157.** ति *tī*. This suffix forms a large class of frequently used feminine nouns of action; and also a few agent-nouns (masculine) and adjectives. The root has in general the same form as before the suffix ण *ta* of the passive participle (**952 ff.**) — that is to say, a weak, and often a weakened or abbreviated, form.

The accent ought, in analogy with that of the participle, to rest always upon the suffix; and it does so in the (small) majority of words quotable from accented texts; but the exceptions are numerous. In the few words used as infinitives (**975**), the accent is on the suffix only.

1. a. Examples of the normal formation are: *rātī*, 'gift', *itī*, 'progress', *rītī*, 'flow', *stutī*, 'praise', *bhūtī*, 'prosperity', *bhṛtī*, 'bearing', *śaktī*, 'power', *kīrtī*, 'fame', *pūrtī*, 'bestowal', *matī*, 'thought', *pītī*, 'drink' (*√pā*; pple *pīta*), *dhātī*, 'stream' (*√dhāv*; pple *dhāuta*); — and, with accented root, *gātī*, 'motion', *śāntī*, 'repose', *dātī*, 'division' (*√dā*; pple *dātā*), *tīptī*, 'satisfaction', *īṣṭī*, 'offering' (*√yaj*; pple *īṣṭā*), *-ukti*, 'speech' (*√vac*: pple *uktā*), *vṛddhī*, 'increase'.

b. The roots which form their participle in *ita* (**956**) do not have the *i* also before *tī*: thus, only *gūptī*, *-dṛptī* (but AV. has once *ūditi*, beside *uditā*, from *√vad*). A few roots having their participle in *na* instead of *ta* (**957**), form the abstract noun also in *nī* (below, **1158**). And from the roots *tan* and *ran* occur *tāntī* and *rāntī*, beside the more regular *tati* and *rāti*; also *āhanti* (once, VS.) beside *āhati*. From roots having the form *dā*, the derivative in composition is sometimes *-tī* (for *dātī* with loss of radical vowel: compare the participle-form *-tta*, above, **955 c**): thus, *niravattī* (K.), *vāsutti*, *bhāyattī*, *maghāttī* (all RV.).

c. A few derivatives are made from reduplicated roots; their accent is various: thus, *carkṛtī*, *dīdhiti* and *-dīditi*, *jīgarti*, and perhaps the proper name *yayāttī*.

d. Derivatives from roots with prefixes are numerous, and have (as in the case of the participles in *ta*, and the action-nouns in *tu*) the accent on the prefix: examples are *ānumatī*, *abhīti*, *āhuti*, *nārṭī*, *vyāptī*, *sāṅgatī*. The only exceptions noticed are *āsaktī* and *āsutī*.

In other combinations than with prefixes, the accentuation is in general the same: see the next chapter.

2. The adjectives and agent-nouns — which, as masculines, are to be

connected with these instead of with the feminine abstracts — are very few: thus, *púti*, 'putrid', *vásti*, 'eager', *dhāti*, 'shaker', *jñāti*, 'relative', *pattí*, 'footman'; and a few others, of more or less dubious character. The accent is various, as in the other class.

3. A few words show the same suffix *ti* preceded by a vowel, in which no organic character seems recognizable, and which may therefore pass for a "union-vowel". One, *úditi*, has been quoted above; another with *i* is *sániti* (RV., once); and *sníhiti* and *snéhili*, notwithstanding their long final, may be mentioned with them. With *ati* are made a few, variously accented: thus, the action-nouns *anhatí*, *drçatí*, *vasatí* 'nest', *ramáti*, *vratáti*, *amáti* and *ámáti*, *-dhrájeti*; and the agent-words *aratí*, *khalatí*, *vṛkátí*, *rámáti*. With *iti*, *ṛjiti* and *dábhūti*. In the Brāhmaṇas appear occasional derivatives from conjugational stems, like *jānayati* (TS.) and *āgamayiti* (K. xxviii. 6). The feminine *yuvatí*, 'young (adj.), maiden', is of isolated character.

4. In some of the words instanced in the last paragraph, *ti* is perhaps applied as a secondary suffix. A kindred character belongs to it in the numeral derivatives from pronominal roots, *kāti*, *tāti*, *yāti*, and from numerals, as *viñçatí*, *ṣaṣṭí*, etc.; with *pañçatí* (from *pāñca*); and in *addhātí*, from the particle *addhā*.

1158. णि *ni*. This suffix agrees in general in its uses and in the form of its derivatives with the preceding; but it makes a much smaller number of words, among which the feminine abstracts are a minority.

1. As was noticed above (1157.1b), a few verbs (ending in vowels) making their passive participle in *na* instead of *ta* make their action-noun in *ni* instead of *ti*. From the Veda are quotable only *-jyāni*, 'injury', and *jūrñtí*, 'heat'; later occur *glāni*, *jīrñi*, and others. Certain other feminine nouns of concrete meaning occur: thus, *jāni*, 'woman', etc.

2. Examples of words of the other class are: *vāhni*, 'carrying', *tūrñi*, 'hasty', *bhūrñi*, 'excited', *preñtí*, 'loving', *vṛṣñtí* and *vṛṣñi*, 'virile'.

In *preñtí*, *yóni*, *mení*, *cróni*, *cróni* is seen a strengthening of the root, such as does not appear among the derivatives in *ti*.

Derivatives in *ni* from roots with prefixes do not appear to occur.

In the words ending in *ani*, the *a* has probably the same value with that of *ati* (above, 1157.3); but *ani* has gained a more independent status, and may be best treated as a separate suffix.

1159. अणि *ani*. The words made by this suffix have the same double value with those made by the preceding ones. Their accent is various. Thus:

a. Feminine action-nouns, sometimes with concreted meaning: as, *iṣāni*, 'impulse', *çarāni*, 'injury', *dyotaní*, 'brightness', *ksipañtí*, 'blow', *açāni*, 'missile', *vartaní*, 'track', *ājani* (*ā-ājani*: the only example with prefix), 'goad'.

b. Adjectives and other agent-words are such as *carāṇi*, 'movable', *cakṣāṇi*, 'enlightener', *vakṣāṇi*, 'strengtheners'. From a reduplicated root-form comes *-paptani*. From desiderative stems are made *ruruḥṣāṇi*, *siṣāsāṇi*, and (with prefix) *ā-ṣucukṣāṇi*. And a small number of words appear to attach themselves to an *s*-aorist stem: thus, *parṣāṇi*, *sakṣāṇi*, *carṣāṇi*.

3. It is questionable whether the infinitives in *ṣāṇi* (978) are to be put here, as accusatives of a formation in *ani*, or under the next suffix, as locatives of a formation in *an*, from roots and stems increased by an aoristic *s*.

1160. ञ् *an*. Not many words appear to be made with a suffix of this form, and of these still fewer are plainly to be connected with roots. Certain rare neuters (along with the doubtful infinitives) are nouns of action; the rest are masculine and neuter agent-nouns. The accent is various.

a. The infinitives which admit of being referred to this suffix, as locative cases, are those in *ṣāṇi*, of which the sibilant appears to be the final of a tense-stem. They are all given above (978).

b. The other action-nouns in *an* are *mahān*, 'greatness', *manhān* (?), 'liberality', *rājān*, 'authority' (RV., once: compare *rājan*; the accent-relation is the reverse of the usual one), and *gāmbhan*, 'depth' (VS., once).

c. Examples of agent-nouns are: masc. *tākṣan*, 'carpenter', *rājan*, 'king', *vṛṣan*, 'virile, bull', *ukṣān*, 'ox'; neut. *udān*, 'water', *cākṣan*, 'eye': — with prefixes, *pratidīvan*, 'antagonist at play' (*ātidīvan*, AV., is perhaps a bad reading), *vibhvān*, 'superior'.

d. A few stems in *an*, running parallel with those in other suffixes and filling out their declension, were mentioned above (429 ff.).

1161. ण *tu*. The great mass of the words of this formation are the infinitives — accusatives in the later language, in the earlier likewise datives and ablative-genitives: see above, 970 b, 972. But a few are also used independently, as action-nouns or with concreted meaning; and an extremely small number, of somewhat questionable character, appear to have the value of agent-words. They are of all genders, but chiefly masculine. The root has the *guṇa*-strengthening.

The infinitive words are accented on the radical syllable when simple, and most of the others have the same accent; but a few have the tone on the ending.

a. Examples are: of the regular formation, masc., *gāntu*, 'way', *dhātu*, 'element', *māntu*, 'counsel'; fem. *vāstu*, 'morning'; neut. *vāstu*, 'abode'; —

with accent on the ending, *janá*, 'being', *gā́ta*, 'way' and 'song', *hetá*, 'cause', *ketá*, 'banner' (all masc.); — with unstrengthened root, *ṛtá*, 'season', *pitá*, 'drink', *sūtu*, 'birth'; with *vṛddhi*-strengthening, *vā́stu* (above).

b. The infinitives in *tu* have (972) often the union-vowel *i* before the suffix, and this in a few cases is lengthened to *ī*. In other use occur also *-ī́rītu* and *-dhā́rītu* (both with *du*); *turphā́rītu* seems of the same formation, but is obscure.

The infinitives, when made from roots with prefixes, have (as was pointed out above, 972) the accent on the prefix. But the same words, when used (not infinitivally) in further combination (with *su* and *du*), retain the radical accent which belongs to the simple word: thus, *duratyētu*, *durniyā́ntu*, *duṣparihā́ntu*, *suprā́ntu*.

c. In a few instances, the suffix *tu* appears to be added to a tense- or conjugation-stem in *a*: thus, *edhatá* and *vahatá*; *tanyatá* and *tapyatá*; and *siṣāsátu*. The accent of the last is paralleled only by that of *jīvātú*, 'life', which is further exceptional in showing a long *ā*; it is used sometimes in the manner of an infinitive.

1162. ङ *nu*. This suffix forms a comparatively small body of words, generally masculine, and having both the abstract and the concrete value.

The accent is usually on the ending, and the root unstrengthened.

Examples are: *bhā́nā*, 'light' (later 'sun'), *vagnú*, 'sound', *sūnā*, 'son', *dā́nu* (with irregular accent), m. 'demon', n. 'drop, dew'; *dhená*, f., 'cow'; — *grdhnū*, 'hasty', *dhṛṣṇā*, 'bold'.

This also (like *tú*), appears sometimes with a prefixed *a*: thus, *krandaná* and *nadaná*, 'roaring', *nabhaná* (and *-nā*, f.), 'fountain', *vibhañjaná* (only instance with prefix), 'breaking to pieces'; and perhaps *kṛṣā́nu* belongs here.

1163. ठ *tha*. The words made with this suffix are almost without exception action-nouns (though some have assumed a concrete value). They are of all genders. The root is of a weak (or even weakened) form, and the accent usually on the suffix.

a. Examples are: masc. *bhṛthá*, 'offering', *-kṛtha*, 'making', *-itha*, 'going'; neut. *ukthá*, 'saying', *nīthá*, 'song', *tīrthá*, 'ford'; fem. (with *ā*) *gāthā*, 'song', *nīthā*, 'way'. Radical *ā* is weakened to *ī* in *-gīthā* and *-pīthā*. Final *m* or *n* is lost in *-gāthā* and *hātha* (as sometimes in the verbal inflection of the same roots: 637, 834 b).

A few examples of combination with prefixes occur, with accent on the final: thus, *nirṛthá*, 'destruction', *saṁgathá*, 'union', etc.

b. Still more common in the older language is a form of this suffix to which has become prefixed an *ā*, which is probably of thematic origin, though

become a union-vowel. Thus: masc. *carátha*, 'mobility', *yajátha*, 'offering', *ravátha*, 'cry', *çapátha*, 'curse', *stavátha*, 'praise'; neut. *ucátha*, 'speech', *vidátha*, 'ordering'. Before this, a root has sometimes *guṇa*: thus, *çayátha*, 'couch', *veçátha*, 'vehemence'. With a prefix, the accent is thrown forward upon the final: thus, *āvasathá*, 'abode', *pravasathá*, 'absence'; *prāṇátha*, 'breath', is treated as if *prān* were an integral root.

c. Isolated combinations of *tha* with other preceding vowels occur: thus, *vārútha*, 'protection', with another doubtful case or two; and *matútha* ( $\sqrt{\text{man}}$ ?).

1164.  $\text{तृ } \underline{\text{thu}}$ . This suffix has an  $\text{अ } \acute{a}$  attached to it (like  $\text{तृ } \underline{\text{tha}}$ , above), and, in the very few derivatives which it makes, appears only as  $\text{अतृ } \underline{\text{áthu}}$ .

The only Vedic examples are *ejáthu*, 'quaking', *vepáthu*, 'trembling', *stanáthu*, 'roaring'. Later cases are *nandáthu* (TS.), *vamathu*, *çvayathu*, etc.

1165.  $\text{तृ } \underline{\text{yu}}$ . With this suffix are made a very few nouns, both of agent and of action, with unstrengthened root and various accent. Thus:

a. Abstracts (masc.) are *manyú*, 'wrath', *mṛtyú*, 'death' (with *t* added to the short final of the root).

b. Adjectives etc. are *bhujyú*, 'pliable', *çundhyú*, 'pure'; *yájyu*, 'pious', *sáhyu*, 'strong', *dásyu*, 'enemy', and one or two more.

For other derivatives ending in *yu*, see the suffix *u*, below, 1178 g, h.

1166.  $\text{म } \underline{\text{ma}}$ . The action-nouns made by this suffix are almost all masculine; and they are of various root-form and accent, as are also the agent-nouns and adjectives.

a. Examples of the former class are: *ajmá*, 'course', *gharmá*, 'heat'; *éma*, 'progress', *bhāma*, 'brightness', *sárma*, 'flow', *stóma*, 'song of praise'.

b. Examples of the latter class are: *tigmá*, 'sharp', *bhīmá*, 'terrible', *çagmá*, 'mighty'; *idhmá*, 'fuel', *yudhmá*, 'warrior'. A single instance from a reduplicated root is *tūtumā*, 'powerful'.

1167.  $\text{मि } \underline{\text{mi}}$ . A very small number of nouns, masculine and feminine, formed with *mi*, may be conveniently noticed here.

Thus, from  $\text{ṛ}$ -roots, *ūrmí*, 'wave', *-kūrmi*, 'action', *sūrmí*, f., 'tube'; from others, *jūmí* (?), 'relation', *bhūmi* or *bhūmī*, f., 'earth', *lakṣmī*, 'sign'; also probably *raçmí*, 'line, ray'.

1168.  $\text{मन् } \underline{\text{man}}$ . The derivatives made with this suffix are almost only action-nouns. The great majority of them are neuter, and accented on the root-syllable; a much smaller number are masculine, and accented on the suffix. The few agent-words are, if nouns, masculine, and have the

latter accent: in several instances, a neuter and a masculine, of the one and the other value and accent, stand side by side. The root has in general the *guṇa*-strengthening.

1. a. Examples of regularly formed neuters are: *kárman*, 'action', *jánman*, 'birth', *náman*, 'name', *vártman*, 'track', *véçman*, 'dwelling', *hóman*, 'sacrifice', *-dyótman*, 'splendor'.

b. Examples of masculine abstracts are: *ojmán*, 'strength', *jemán*, 'conquest', *svādmán*, 'sweetness'.

c. Corresponding neuter action-nouns and masculine agent-nouns are: *bráhmaṇ*, 'worship', and *brahmán*, 'priest'; *dáman*, 'gift', and *dāmán*, 'giver'; *dhárman*, 'rule', and *dharmán*, 'orderer'; *sádmán*, 'seat', and *sadmán*, 'sitter'. Very few other agent-nouns occur; and all, except *brahmán*, are of rare occurrence.

On the other hand, *varṣman* and *svādman* (and *variman*) have the difference of gender and accent without a corresponding difference of meaning.

The noun *ácman*, 'stone', though masculine, is accented on the radical syllable; and two or three other questionable cases of the same kind occur.

The derivatives in *man* used as infinitives (974) have for the most part the accent of neuters: the only exception is *vidmáne*.

d. A few words, of either class, have an irregular root-form: thus, *bhúman* 'earth', *syúman*; *bhūmán* 'abundance', *sīmán*, *bhujmán*, *vidmán*; and *kārṣman*, *bhárman*, *çákman*.

e. Derivatives in *man* from roots with prefixes are not numerous. They are usually accented on the prefix, whether action-nouns or adjectives: thus, *prábharmán*, 'forthbringing', *práyāman*, 'departure'; *ánuvartmán*, 'following after': the exceptions, *viçámán*, *prativartmán*, *visarmán*, are perhaps of possessive formation.

2. The same suffix, though only with its abstract-making value, has in a number of cases before it a union-vowel, *i* or *ī*; and *imán* comes to be used as a secondary suffix, forming abstract nouns (masculine) from a certain number of adjectives.

a. The neuters in *iman* and *īman* are all primary formations, belonging to the older language: thus, *jániman* and *váriman* (beside *varimán*, as noticed above); and *dárīman*, *dhárīman*, *párīman* (and *páreman*, SV., once), *bhárīman*, *várīman*, *sárīman*, *stárīman*, *sávīman*, and *hávīman*. Those in *īman* are hardly met with outside the Rig-Veda.

b. The masculines in *imán* are in the oldest language less frequent than the neuters just described: they are *jarimán*, *prathimán*, *mahimán*, *varimán* (beside the equivalent *váriman* and *vārīman*), *varṣimán* (beside the equivalent *varṣman* and *varṣmán*), *harimán*, and *drāghimán* (VS.) beside *drūghmán* (RV.). Some of these, as well as of the derivatives in simple *man*, attach themselves in meaning, or in form also, to adjectives, to which they seem the accompanying abstracts: compare the similar treatment of the primary comparatives and superlatives (above, 468): such are *pāpmán* (to *pāpá*,

*pāpīyas*, etc.); *drāghmān* etc. (to *dīrghā*, *drāghīyas*, etc.); *vāriman* etc. (to *urū*, *vāriyas*, etc.); *prāthiman* (to *prthā*, *prāthiṣṭha*); *harimān* (to *hāri* or *hārita*); *vārsman* etc. (to *vārsīyas* etc.); *svādman* etc. (to *svādū*, *svādīyas*, etc.). Then in the Brāhmaṇa language are found further examples: thus, *dhūmri-mān* (TS., K.), *draḥhiman* (K.: to *dṛḥhā*, *drāḥhīyas*, etc.), *taruṇiman* (K.), *lohīman* (KB.); and still later such as *laghiman*; while *kṣepiman* (to *kṣiprā*, *kṣēpīyas*, etc.) and *kṛṣṇiman*, and so on, are allowed by the grammarians.

1169. वन् *van*. By this suffix are made almost only agent-words, adjectives and nouns, the latter mostly masculines. The root is unstrengthened, and to a short final vowel is added a न् *t* before the suffix. The accent is almost always on the root, both in the simple words and in their compounds.

The insertion of *t* is an indication that the words of this form are originally made by the addition of *an* to derivatives in *u* and *tu*; yet *van* has the present value of an integral suffix in the language, and must be treated as such.

1. a. Examples of the usual formation are: masc. *yājvan*, 'offering', *drāhvan*, 'harming', *śākvan*, 'capable', *-rīkvan*, 'leaving', *-jīvan*, 'conquering', *sātvan*, 'pressing', *kṛtvan*, 'active', *-gātvan* (like *-gat*, *-gatyā*), 'going', *sātvan* (*√san*), 'warrior', *ārvan* (only example with strengthened root), 'courser'; — neut. *pārvan*, 'joint', *dhānvan*, 'bow'.

b. Examples from roots with prefixes (which are not rare) are: *atīvan*, 'excelling', *upahāsvan*, 'reviler', *sambhṛtvan*, 'collecting'; and probably *vivāsvan*, 'shining': *abhāsvan* is a compound with governing preposition (1310).

For the compounds with other elements, which, except in special cases, have the same accent, see below, 1277.

c. The stem *muṣivān*, 'robber' (RV., once), is the only one with a union-vowel, and is perhaps better regarded as a secondary derivative — of which a few are made with this suffix: see below, 1234.

d. From a reduplicated root are made *rārāvan* and *cikītvān* (and possibly *vivāsvan*).

2. The number of action-nouns made with the suffix *van* is extremely small: namely, *dāvān*, 'giving', and *turvān*, 'overcoming', both used as infinitives (974), and *bhurvān*, 'unrest' (?); likewise *dhārvan*, 'injury', also used as infinitive (unless this is rather *dhārv-an*).

The feminines corresponding to adjectives in *van* are not made (apparently) directly from this suffix, but from *vara*, and end in *varī*; see below, 1171 b.

1170. वन *vana*, वनि *vani*, वनु *vanu*. The very few words made with these suffixes may best be noticed here, in con-

nection with वन् *van* (of which the others are probably secondary extensions).

a. With *vana* are made *vagvaná*, 'talkative', *satvaná*, 'warrior' (beside *sátvan*, above); and, from a reduplicated root, *çuçukvaná*, 'shining'.

b. With *vani* are made from simple roots *turváni*, 'excelling', and *bhurváni*, 'restless' (compare *turván* and *bhurván*, just above); and, from reduplicated roots, *çuçukváni*, 'shining', *dadhṣváni*, 'daring', *tuturváni*, 'striving after', and *jugurváni*, 'praising': *arhativáni* is obscure.

c. With *vanu* is made only *vagvaná*, 'tone, noise'.

1171. वर *vara*. With this suffix are made a few derivatives, of all genders, having for the most part the value of agent-nouns and adjectives.

Much more common are the feminine stems in वरी *varī*, which, from the earliest period, serve as the corresponding feminines to the masculine stems in वन् *van*.

a. A few masculine adjectives in *vará* occur, formally accordant (except in accent) with the feminines: thus, *itvará*, 'going', *-advará*, 'eating', *-sadvará*, 'sitting', *īcvará*, 'ruler, lord'; and with them doubtless belongs *vidvalá*, 'knowing' (with *l* for *r*).

b. The feminines in *varī* accord in treatment of the root and in accent with the masculines in *van* to which they correspond: thus, *yājvarī*, *-jītvarī*, *sītvarī*, *-çivari*, *-yāvarī*, and so on (about twenty-five such formations in RV.); from a reduplicated root, *-çivari*.

c. A very small number of neuters occur, with accent on the root: thus, *kārvara*, 'deed', *gāhvara*, 'thicket'; and a feminine or two, with accent on the penult: *urvārā*, 'field', and *urvārī*, 'tow' (both of doubtful etymology).

We take up now the suffixes by which are made only stems having the value of agent-nouns and adjectives; beginning with a brief mention of the participial endings, which in general have been already sufficiently treated.

1172. अन् *ant* (or अत् *at*). The office of this suffix, in making present and future participles active, has been fully explained above, in connection with the various tense-stems and conjugation-stems (chaps. VIII.—XIV.), in combination with which alone it is employed (not directly with the root, unless this is also used as tense-stem).

With the same or a formally identical suffix are made from pronominal roots *hyant* and *klyant* (517). And *advayant*, 'not double-tongued' (RV., once), appears to contain a similar form-

ation from the numeral *dvi* — unless we are to assume a denominative verb-stem as intermediate.

Here may also be best mentioned the words made with the so-called suffix *anta* (fem. *antā* or *antī*), being evident transfers (Prakritic) of stems in *ant* to the *a*-declension.

Extremely few such words occur in the oldest language: namely, *pānta*, 'draught' (RV.), *vasantā*, 'spring' (RV.: beside it also *hemantā*, 'winter'); *veçantā* or *veçantī*, 'tank' (AV.; ÇB. *večāntā*); *jīvantī*, a certain healing plant (RV.); and probably the proper name *tarantā* (RV.). A few others are instanced as admitted later: thus, *nandanta* and *nandayanta*, *gadayanta*, *jayanta*, *jaranta*, *prāñanta*, etc.: all are said to be accented on the final.

A different extension of the same suffix is exhibited in the proper names *dhvasānti* and *çucantī* (RV.), with which may be mentioned *puruśānti*.

1173. वाम् *vāñs* (or वस् *vas*). For the (perfect active) participles made with this suffix, see above, chaps. X. and XIV., and 458 ff.

A few words of irregular and questionable formation were noticed at 402, above. Also, apparent transfers to a form *us* or *uśa*.

The oldest language (RV.) has a very few words in *vas*, of doubtful relations: *ṛbhvas*, 'seizing', and *çikvas*, 'skilful' (beside words in *va* and *van*), and perhaps *khīdvas* (*ṣkhūd*). The neuter abstract *vāriyas*, 'breadth, room' (belonging to *urū*, 'broad', in the same manner with *vāriyas* and *varimān*), is quite isolated.

The unique *tatanūṣṭi* (RV., once) is possibly to be divided *tatanūṣ-ṭi*, and connected with this suffix.

1174. मान *māna*. The participles having this ending are, as has been seen, present and future only, and have the middle, or the derived passive, value belonging in general to the stems to which the suffix is attached.

1175. ग्रान *āna*. The participles ending in ग्रान *āna* are of middle and passive value, like those just noticed, and either present, perfect, or (partly with the form मान *sāna*: above, 897) aorist.

A few other words ending in the same manner in the old language may be mentioned here. The RV. has the adjectives *vāsavāna*, 'well-endowed', and *ūrđhvasānā*, 'uplifted', evidently made on the model of participial stems. Also the proper names *āpnāvāna*, *pr̥thavāna*, and *cyāvāna* and *cyāvatāna*. *Pārçāna*, 'abyss', is doubtful.

1176. त *ta*. The use of this suffix in forming participles directly from the root, or from a conjugational (not

a tense) stem, was explained above, chap. XIII. The participles thus made are in part intransitive, but in great part passive in value (like those made by the two preceding suffixes, but in much larger measure, and more decidedly).

For the frequent use of the connecting vowel *i* with the suffix, making its form *ita*, see also chap. XIII.

a. A few general adjectives, or nouns with concrete meaning, are adaptations of this participle. Examples are: *ṛṣṭá*, 'rough', *ṣítá*, 'cold', *dṛḍhá* (for *dṛḍhá*: 224 a), 'firm'; *dūtá*, 'messenger', *sūtá*, 'charioteer'; *ṛtá*, 'right', *ghṛtá*, 'ghee', *jūtá*, 'kind', *dyūtá*, 'gambling', *ṛṛtá*, 'dance', *jīvítá*, 'life', *carítá*, 'behavior'. The adjective *tigítá* (RV.), 'sharp', shows anomalous reversion of palatal to guttural before the *i* (216). *Vūvátá*, 'dear', is a single example from a reduplicated root.

b. Doubtless after the example and model of participles from denominative stems (of which, however, no instances are quotable from the Veda), derivatives in *ita* are in the later language made directly from noun and adjective-stems, having the meaning of 'endowed with, affected by, made to be', and the like (compare the similar English formation in *ed*, as *horned*, *barefooted*, *bluecoated*). Examples are *rathita*, 'furnished with a chariot', etc.

c. A few words ending in *ta* are accented on the radical syllable, and their relation to the participial derivatives is very doubtful: such are *ásta*, 'home', *márta*, 'mortal', *vátá*, 'wind'; and with them may be mentioned *gárta* (?), *nákta*, 'night', *hástá*, 'hand'.

d. Several adjectives denoting color end in *ita*, but are hardly connectible with roots of kindred meaning: thus, *palítá*, 'gray', *ásita*, 'black', *róhita* and *lóhita*, 'red', *hárta*, 'green'; akin with them are *éta*, 'variegated', *çyetá*, 'white'.

The feminines of these stems are in part irregular: thus, *énī* and *çyénī*; *róhinī* and *lóhinī*, and *hárinī* (but the corresponding masc. *hárina* also occurs); and *ásiknī*, *páliknī*, and *háriknī*.

e. A small number of adjectives in the older language ending in *ita* are not to be separated from the participial words in *ta*, although their specific meaning is in part gerundive. They are: *pacatá*, 'cooked', *darçatá* and *paçyata*, 'seen, to be seen, worth seeing'; and so *yajatá*, *haryatá*, *bharatá*. The *y* of *paçyata* and *haryatá* indicates pretty plainly that the *a* also is that of a present tense-stem. *Rajatá*, 'silvery', is of more obscure relation to  $\sqrt{\text{raj}}$  'color'.

1177. न *na* (and इन *ina*, उन *una*). The use of the suffix न *na* in forming from certain roots participles equivalent to those in त *ta*, either alongside the latter or instead of them, was explained above, chap. XIII. (957).

a. With the same suffix are made a number of general adjectives, and

of nouns of various gender (fem. in *nā*). The accent is on the suffix or on the root. A few examples are: *uṣṇā*, 'hot', *ṣunā*, 'fortunate', *āṣṇa*, 'ravenous', *ṣvītna*, 'white'; masc. *praṇā*, 'question', *yajñā*, 'offering', *ghṛṇā*, 'heat', *vārṇa*, 'color', *svāpna*, 'sleep'; neut. *parṇā*, 'wing', *rātna*, 'jewel' (?); fem. *tṛṣṇā*, 'thirst', *yācñā*, 'supplication'. But many of the stems ending in *na* are not readily connectible with roots. An antithesis of accent is seen in *kārṇa*, 'ear', and *karṇā*, 'eared'.

b. The very few words ending in *ina* are perhaps related with these (perhaps rather with those in *ana*): thus, *aminā*, 'violent', *vṛjinā*, 'crooked', *dāksina*, 'right', and one or two others of questionable etymology.

c. Of the words in *una*, few are clearly referable to roots: thus, *karūna*, 'action', *dharūna*, 'bearing', *-cetūna*, 'showing'; *ārjuna*, 'white', *tāruṇa*, 'young', *vāruṇa*, 'Varuna'. In meaning and in accent they vary like the derivatives in *ana*.

These are all the proper participial endings of the language. The gerundives, later and earlier, are in so great part evident secondary formations, that they will be noticed farther on, under the head of secondary derivation.

We will take up now the other suffixes forming agent-nouns and adjectives, beginning with those which have more or less a participial value.

1178.  $\Xi$  *u*. With this suffix are made a considerable body of derivatives, of very various character — adjectives, and agent-nouns of all genders, with different treatment of the root, and with different accent. It is especially used with certain conjugational stems, desiderative (particularly later) and denominative (mainly earlier), making adjectives with the value of present participles; and in such use it wins in part the aspect of a secondary suffix.

The root has oftenest a weak (or weakened) form; but it is sometimes vriddhied; least often (when capable of *guṇa*), it has the *guṇa*-strengthening — all without any apparent connection with either accent or meaning or gender. After final radical *ā* is usually added *y* (258) before the suffix. A few derivatives are made from the reduplicated root.

Many words ending in *u* are not readily, or not at all, connectible with roots; examples will be given only of those that have an obvious etymology.

a. Examples of ordinary adjectives are: *urū*, 'wide', *ṛjū*, 'straight', *prthū*, 'broad', *mṛdū*, 'soft', *sādhu*, 'good', *svādū*, 'sweet', *tāpu*, 'hot', *vāsu*, 'good'; *jāyū*, 'conquering', *dārū*, 'bursting'; *ṣayū*, 'lying', *rekū*, 'empty'; *dhāyū*, 'thirsty', *pāyū*, 'protecting'. Final *ā* appears to be lost before the suffix in *-sthu* (*suṣṭhū*, *anuṣṭhū*).

b. Examples of nouns are: masc. *añcú*, 'ray', *ripú*, 'deceiver', *vāyú*, 'wind-god', *ánu*, 'life', *mānu*, 'man, Manu'; fem. *śu* (also masc.), 'arrow', *śndhu* (also masc.), 'river'; *tanú*, 'body'.

c. Derivatives from reduplicated roots are: *cikitú*, *jigyú*, *śiśnu*, *-tatnu* (unless this is made with *nu* or *tnu*), *yáyu* or *yayú* and *yíyu* (with final *ā* lost), *pípru* (proper name), *-dīdhayu*; and *bābhru*, *-raru* (*arāru*), *malimlú* (?) have the aspect of being similar formations.

d. A few derivatives are made from roots with prefixes, with various accentuation: for example, *upáyú*, 'on-coming', *pramayú*, 'going to destruction', *viklīndu*, a certain disease, *abhīcū*, 'rein (directer)', *sāmvasu*, 'dwelling together'.

e. From tense-stems, apparently, are made *tanyú*, 'thundering', and (with aoristic *s*) *dákṣu* and *dhákṣu* (all RV.).

f. Participial adjectives in *ú* from desiderative "roots" (stems with loss of their final *a*) are sufficiently numerous in the ancient language (RV. has more than a dozen of them, AV. not quite so many) to show that the formation was already a regular one, extensible at will; and later such adjectives may be made from every desiderative. Examples (older) are: *dīstú*, *dīpsú*, *cikitsú*, *titikṣú*, *pīpīśú*, *mumuksú*, *ṣiṣlikṣú*; and, with prefix, *abhidīpsú*.

These adjectives, both earlier and later, may take an object in the accusative (271a).

g. A few similar adjectives are made in the older language from causatives: thus, *dhārayú* ('persistent'), *bhājayú*, *bhāvayú*, *mañhayú*, *mandayú*, *ṣramayú*; and *mṛgayú* from the caus.-denom. *mṛgāya*.

h. Much more numerous, however, are such formations from the more proper denominatives, especially in the oldest language (RV. has toward eighty of them; AV. only a quarter as many, including six or eight which are not found in RV.; and they are still rarer in the Brāhmaṇas). In a majority of cases, personal verbal forms from the same denominative stem are in use: thus, for example, to *aghāyú*, *arātīyú*, *ṛjūyú*, *carāṇyú*, *manasyú*, *sanīśyú*, *uruśyú*, *saparyú*; in others, only the present participle in *yánt*, or the abstract noun in *yá* (1149), or nothing at all. A few are made upon denominative stems from pronouns: thus, *tvāyú* (beside *tvāyánt* and *tvāyá*), *yuvayú* or *yuvāyú*, *asmayú*, *svayú*, and the more anomalous *ahañyú* and *kiñyú*. Especially where no other denominative forms accompany the adjective, this has often the aspect of being made directly from the noun with the suffix *yu*, either with a meaning of 'seeking or desiring', or with a more general adjective sense: thus, *yavayú*, 'seeking grain', *varāhayú*, 'boar-hunting', *stanasyú*, 'desiring the breast'; *ūrñāyú*, 'woolen', *yuvanāyú*, 'youthful', *bhīmayú*, 'terrible'. And so the "secondary suffix *yu*" wins a degree of standing and application as one forming derivative adjectives (as in *ahañyú* and *kiñyú*, above, and doubtless some others, even of the RV. words). In three RV. cases, the final *as* of a noun-stem is even changed to *o* before it: namely, *añhoṃyú*, *duvoṃyú* (and *duvoṃyá*; beside *duvasyú*), *áskṛdhoṃyú*.

None of the words in *yu* show in the Veda resolution into *iu*.

1179. उ *ū*. The long *ū* is a vastly rarer suffix than the other long simple vowels, already described (1149, 1155). It makes a small number of feminines corresponding to masculines in *u*, a very few independent feminines, and two or three very rare masculines: as to all which, see above, 355 c.

1180. उक् *uka*. With this suffix are made derivatives having the meaning and construction (271 g) of a present participle. The root is strengthened, and has the accent.

The derivatives in *uka* are hardly known in the Veda; but they become frequent in the Brāhmaṇas, of whose language they are a marked characteristic; and they are found occasionally in the later language. In all probability, they are originally and properly obtained by adding the secondary suffix *ka* (1222) to a derivative in *u*; but they have gained fully the character of primary formations, and in only an instance or two is there found in actual use an *u*-word from which they should be made.

The root is only so far strengthened that the radical syllable is a heavy (79) one; and it has the accent, whether the derivative is made from a simple root or from one with prefix.

a. Examples, from the Brāhmaṇa language, are: *vāduka*, *nāçuka*, *upakrāmuka*, *prapāduka*, *upasthāyuka* (258), *vyāyuka*, *vēduka*, *bhāvuka*, *kṣōdhuka*, *hāruka*, *vārsuka*, *samārdhuka*, *dāñçuka*, *ālambuka*, *çikṣuka* (GB.: RV. has *çikṣú*), *pramāyuka* (SB. has *pramāyu*).

b. Exceptions as regards root-form are: *nirmārguka* (with *vṛddhi*-strengthening, as is usual with this root: 627), *-kasuka*. AV. accents *sāñkasuka* (ÇB. has *samkāsuka*) and *vīkasuka*: RV. has *sānukā* (which is its only example of the formation, if it be one; AV. has also *ghātuka* from *ghan*, and *āpramāyuka*); *vasukā* (TS. et al.) is probably of another character. *Açanāyuka* (PB. et al.) is the only example noticed from a conjugation-stem.

c. A formation in *ūka* (a suffix of like origin, perhaps, with *uka*) may be mentioned here: namely, from reduplicated roots, *jāgarūka*, 'wakeful', *dandaçūka*, 'biting', *yāyajūka*, 'sacrificing much', *vāvadūka* (later), 'talkative'; *salatūka* is questionable.

1181. अक् *aka*. Here, as in the preceding case, we seem to have a suffix made by secondary addition of क *ka* to a derivative in अ *a*; but it has, for the same reason as the other, a right to be mentioned here. Its free use in the manner of a primary suffix is of still later date than that of *uka*; it has very few examples in the older language.

a. In RV. is found (besides *pāvakā*, which has a different accent, and which, as the metre shows, is usually to be pronounced *pavāka* only *sāyaka*, 'missile'; AV. adds *pīyaka* and *vādḥaka*, and VS. *abhikrōçaka*. But in the later language such derivatives are common, usually with raising of the root-syllable by strengthening to heavy quantity: thus, *nāyaka*, *dāyaka* (258), *pāçaka*, *grāhaka*, *drāvaka*, *bodhaka*; but also *janaka*, *khanaka*. They are declared by the grammarians to have the accent on the radical syllable. They often occur in copulative composition with gerundives of the same root: thus, *bhakṣyabhakṣaka*, 'eatable and eater', *vācyavāçaka*, 'designated and designation', and so on.

That the derivatives in *aka* sometimes take an accusative object was pointed out above (271c).

The corresponding feminine is made sometimes in *akā* or in *akī*, but more usually in *ikā*: thus, *nāyikā* (with *nāyakā*), *pāçikā*, *bodhikā*, *drāvikā*; compare secondary *aka*, below, 1222 d.

b. Derivatives in *āka* are said to be made from a few roots: thus, *jalpāka*, *bhikṣāka*; but they are not found in the Veda (unless in "*pāvaka*": see above), and appear to be very rare at every period. With *āku* is made in RV. *mṛḍayāku*, from the causative stem: *pṛdāku* and the proper name *tkṣvāku* are of obscure connection.

Derivatives in *ika* and *īka* will be treated below, in connection with those in *ka* (1186).

1182.  $\bar{t}$  *tr* (or  $\bar{t}$  *tar*). The derivatives made by this suffix, as regards both their mode of formation and their uses, have been the subject of remark more than once above (see 369 ff., 942 ff.). Agent-nouns are formed with it at every period of the language; these in the oldest language are very frequently used participially, governing an object in the accusative (271 d); later they enter into combination with an auxiliary verb, and, assuming a future meaning, make a periphrastic future tense (942).

Their corresponding feminine is in *trī*.

a. The root has uniformly the *guṇa*-strengthening. A union-vowel *i* (very rarely, one of another character) is often taken: as regards its presence or absence in the periphrastic future forms, see above (943).

Without *guṇa*-change is only *uṣṭr̥*, 'plough-ox' (no proper agent-noun: apparently *ukṣ-tr̥*: compare the nouns of relationship further on). The root *grah* has, as usual, *i* — thus, *-grahitr̥*; and the same appears in *-taritr̥* and *-maritr̥*. An *u*-vowel is taken instead by *tārutr̥* and *tarutr̥*, *dhānutr̥*, and *sānutr̥*; long in *varūtr̥*; strengthened to *o* in *manōtr̥* and *manot̥*. From a re-duplicated root comes *vāvāt̥*.

b. The accent, in the older language, is sometimes on the suffix and sometimes on the root; or, from roots combined with prefixes, sometimes on the suffix and sometimes on the prefix.

In general, the accent on the root or prefix accompanies the participial use of the word; but there are exceptions to this: in a very few instances (four), a word with accented suffix has an accusative object; very much more often, accent on the root appears along with ordinary noun value. The accent, as well as the form, of *manótr* is an isolated irregularity.

Examples are: *jétū dhānāni*, 'winning treasures'; *yūyām mārtaṁ ṛśótāraḥ*, 'ye listen to a mortal'; but, on the other hand, *yañtā vāsūni vidhaté*, 'bestowing good things on the pious'; and *jétū jānānām*, 'conqueror of peoples'.

c. The formation of these nouns in *tr* from conjugation-stems, regular and frequent in the later language, and not very rare in the Brāhmaṇas, is met with but once or twice in the Veda (*bodhayitrí* and *codayitrí*, RV.). In *néśtr*, a certain priest (RV. and later), is apparently seen the aoristic *s*.

d. The words of relationship which, in whatever way, have gained the aspect of derivatives in *tr*, are *pitṛ*, *mātṛ*, *bhrātṛ*, *yātṛ*, *duhitṛ*, *náptṛ*, *jámātṛ*. Of these, only *mātṛ* and *yātṛ* are in accordance with the ordinary rules of the formation in *tr*.

e. Instead of *tr* is found *tur* in one or two RV. examples: *yañtúr*, *sthātúr*.

f. Apparently formed by a suffix *r* (or *ar*) are *usṛ*, *savyaśṭr*, *nānāndr*, *devṛ*, the last two being words of relationship. For other words ending in *r*, see 369.

1183. *in*. This is another suffix which has assumed a primary aspect and use, while yet evidently identical in real character with the frequent secondary suffix of the same form denoting possession (below, 1230).

How far it had gained a primary value in the early language, is not easy to determine. Most of the words in *in* occurring in RV. and AV. are explainable as possessives; in many the other value is possible, and in a few it is distinctly suggested: thus, *kevalādín*, *bhadraṇvādín*, *nitodín*, *āçarāśín*, *ánūmin*, *vivyādín*; with aoristic *s*, *sakśín*; and, with reduplication, *niyayín*. As the examples indicate, composition, both with prefixes and with other elements, is frequent; and, in all cases alike, the accent is on the suffix.

Later, the primary employment is unquestionable, and examples of it, chiefly in composition, are frequent. The radical syllable is usually strengthened, a medial *a* being sometimes lengthened and sometimes remaining unchanged. Thus, *satyaṇvādín*, 'truth-speaking', *abhibhāśín*, 'addressing', *manohārin*, 'soul-winning'. In *bhāvin* has established itself a prevaillingly future meaning: 'about to be'.

The use of an accusative object with words in *in* was noticed above (271 b).

1184. इयन् *iyas* and इष्ठ *iṣṭha*. These, which, from forming intensive adjectives corresponding to the adjective of root-form, have come to be used, within somewhat narrow limits, as suffixes of adjective comparison, have been already sufficiently treated above, under the head of comparison (466—470).

It may be further noticed that *jyēṣṭha* has in the older language (only two or three times in RV.) the accent also on the final, *jyēṣṭhā*; and that *pārṣiṣṭha* is made from a secondary form of root, with aoristic *s* added.

When the comparative suffix has the abbreviated form *yas* (470), its *y* is never to be read in the Veda as *i*.

No other suffixes make derivatives having participial value otherwise than in rare and sporadic cases; those that remain, therefore, will be taken up mainly in the order of their frequency and importance.

1185. त्र *tra*. With this suffix are formed a very few adjectives, and a considerable number of nouns, mostly neuter, and often having a specialized meaning, as signifying the means or instrument of the action expressed by the root. The latter has usually the *guṇa*-strengthening, but sometimes remains unchanged. The accent is various, but more often on the radical syllable.

Here, as in certain other cases above, we have probably a suffix originally secondary, made by adding *a* to the primary *tr* or *tar* (1182); but its use is like that of a primary suffix.

a. Examples of neuter nouns are: *gātra*, 'limb', *pāttra*, 'wing', *pātra*, 'cup', *yóktra*, 'bond', *vāstra*, 'garment', *śróttra*, 'ear'; *astrá*, 'missile', *stotrá*, 'song of praise', *potrá*, 'vessel'; of more general meaning, *dāttra*, 'gift', *kṣétra*, 'field', *mūtra*, 'urine', *hotrá*, 'sacrifice'. The words accented on the final have often an abstract meaning: thus, *kṣatrá*, 'authority', *rāṣṭrá*, 'kingdom', *śāstrá*, 'doctrine', *sattrá*, 'sacrificial session' (also *jñūtrá*, 'knowledge').

b. Masculines are: *dānṣṭra*, 'tusk', *māntra*, 'prayer', *atrá* (or *atrá*: 232), 'devourer', *úṣtra*, 'buffalo, camel', and a few of questionable etymology, as *mitrá*, 'friend', *putrá*, 'son', *vṛtrá*, 'foe'. *Mitrá* and *vṛtrá* are sometimes neuters even in the Veda, and *mitra* comes later to be regularly of that gender.

c. Feminines (in *trā*) are: *áṣṭrā*, 'goad', *mātrā*, 'measure', *hótrā*, 'sacrifice' (beside *hotrá*), *dañṣṭrā* (later, for *dānṣṭra*); *nāṣṭrā*, 'destroyer'.

d. Not seldom, a "union-vowel" appears before the suffix; but this is not usually the equivalent of the union-vowel used with *tr* (above, 1182 a).

For the words in *itra* have the accent on *i*: thus, *aritra*, 'impelling, oar', *khanitra*, 'shovel', *pavitra*, 'sieve'; *janitra*, 'birth-place', *sanitra*, 'gift', etc.: the combination *itra* has almost won the character of an independent suffix. The preceding vowel is also sometimes *a* (sometimes apparently of the present-stem): thus, *yājatra*, 'venerable', *ḥṣṇīātra*, 'shred', *gāyatrā* (f. *-trī*), 'song', *pātatra*, 'wing'; but also *āmatra*, 'violent', *-kṛiatrā*, 'cutting-place', *vādhatra*, 'deadly weapon', and *varatrā*, 'strap'. *Tārutra*, 'overcoming', corresponds to *tarutṛ*.

The words still used as adjectives in *tra* are mostly such as have union-vowels before the suffix. A single example from a reduplicated root is *johūtra*, 'crying out'.

e. A word or two in *tri* and *tru* may be added here, as perhaps of kindred formation with those in *tra*: thus, *āttri*, 'devouring', *arcātri*, 'beaming'; *çātru* (*çāttru*: 232), 'enemy'.

1186. ऋ *ka*. The suffix ऋ *ka* is of very common use in secondary derivation (below, 1222); whether it is directly added to roots is almost questionable: at any rate, extremely few primary derivatives are made with it.

The words which have most distinctly the aspect of being made from roots are *çūṣka*, 'dry', *çlōka* (*√çru*, 'hear'), 'noise, report', etc., and *-sphāka*, 'teeming'; and *stūkā*, 'flake', and *stokā*, 'drop', seem to belong together to a root *stu*. Other words in *ka* are of obscure connections, for the most part.

But *ka* enters, in its value as secondary, into the composition of certain suffixes reckoned as primary: see *aka* and *uka* (above, 1180, 1181).

A few words in which *ika* and *ika* seem added to a root, though they are really of a kindred formation with the preceding, may be most conveniently noticed here: thus, *vīçcika* (*√vraçc*), 'scorpion'; *ānīka* (?), 'face', *dīçcika*, 'aspect', *mṛdīkā*, 'grace', *vṛdhīkā*, 'increaser', *āçarika* and *vīçarika*, 'gripes', *-rjīka*, 'beaming'; and, from reduplicated root, *parpharīka*, 'scattering' (?). Compare secondary suffix *ka* (below, 1222).

1187. ॠ *ya*. It is altogether probable that a part of the derivatives made with this suffix are not less entitled to be ranked as primary than many of those which are above so reckoned. Such, however, are with so much doubt and difficulty to be separated from the great mass of secondary derivatives made with the same suffix that it is preferred to treat them all together under the head of secondary formation (below, 1210—13).

1188. ॡ *ra*. With this suffix are made a considerable number of adjectives, almost always with weak root-form, and usually with accent on the suffix. Also, a few words used as nouns, of various gender.

In some cases, the suffix is found with a preceding vowel, having the aspect of a union-vowel.

a. Examples of adjectives in *ra* of obvious derivation are: *kṣiprā*, 'quick', *chidrā*, 'split', *turā*, 'strong', *bhadrā*, 'pleasing', *çakrā*, 'mighty', *çukrā*, 'bright', *hiṅsrā*, 'injurious'; — with accent on the root, *gṛdhra*, 'greedy', *dhīra*, 'wise' (secondary?), *vīpra*, 'inspired'.

b. From roots with prefixes come only an example or two: thus, *nicirā*, 'attentive', *nīmṅra*, 'joining on'.

c. Nouns in *ra* are, for example: masc. *vīrā*, 'man', *vājra*, 'thunderbolt', *çūra*, 'hero'; neut. *kṣīrā*, 'milk', *riprā*, 'defilement'; fem. *dhārā*, 'stream', *sārā*, 'intoxicating drink'.

The forms of this suffix with preceding vowel may best be considered here, although some of them have nearly gained the value of independent endings. Thus:

d. With *ara* are made a few rare words: the adjectives *dravarā*, 'running', *patarā*, 'flying', (with prefix) *nyocarā*, 'suiting'; and the neuters *gambhāra*, 'depth', *tāsara*, 'shuttle', *sānara*, 'gain': *bhārvarā* and *vāsarā* are doubtless of secondary formation; and the same thing may be plausibly conjectured of others.

e. With *ira* are made a few words, some of which are in common use: thus, *ajirā*, 'quick', *iṣirā*, 'lively', *madirā*, 'pleasing', *dhvasirā*, 'stirring up', *badhirā*, 'deaf'; perhaps *sthāvira*, 'firm'; and *sthirā*, 'hard', and *sphirā*, 'fat', with displacement of final radical *ā*; also *sarirā*, 'wave' (usually *salilā*), and one or two other words of obscure derivation.

With *ira* are made *gabhīrā* or *gambhīrā*, 'profound', and *çāvira*, 'mighty'; and perhaps *çārira*, 'body'.

f. With *ura* are made a few words, of which the secondary character is still more probable: thus, *aṅhurā* (*aṅhu-ra*?), 'narrow', *āsura* (*āsu-ra*?), 'living', *vithurā*, 'tottering', *yādura*, 'embracing'.

With *ūra*, apparently, is made *sthūrā*, 'stout' (compare *sthāvira*).

1189. ळ *la*. This suffix is only another form of the preceding, exchanging with it in certain words, in others prevalently or solely used from their first appearance.

Conspicuous examples of the interchange are *çuklā*, *sthūlā*, *-miçla*, *çithilā*, *salilā*.

Examples of the more independent use are: *pālā*, 'protecting', *ānilā* (or *anīla*), 'wind', *trpāla*, 'joyous'; later *capala* and *tarala* (said to be accented on the final), and *harṣula* (the same). Many words ending in *la* are of obscure etymology.

1190. ळ *va*. Very few words of clear derivation are made with this suffix — too few to be worth classifying. They are of various meaning and accent, and generally show a weak root-form.

Examples are: *ṛkvá*, 'praising', *pakvá*, 'ripe', *çikvá*, 'artful', *raṇvá*, 'joyful', *ūrdhvá*, 'lofty'; *vákvá*, 'twisting'; *úrvá*, 'stall', *sruvá*, 'spoon'; *éva*, 'quick, course', *áçva*, 'horse'.

The words in *va* exhibit only in sporadic cases resolution of the ending into *ua*.

1191. **रि** *ri*. With this suffix are formed, directly or with preceding *u*, a small number of derivatives.

Thus, for example: *çubhṛi*, 'beautiful', *bhūri*, 'abundant'; and, with *uri*, *jásuri*, 'exhausted', *dāçuri*, 'pious', *sāhuri*, 'mighty'; *aṅgūri* (or *aṅgūli*), 'finger'.

1192. **रु** *ru*. This suffix makes a few adjectives and neuter nouns, either directly or with a preceding vowel.

Thus: *dhārú*, 'sucking', *bhīrú*, 'timid', *cārú*, 'pleasant'; — with preceding *a*-vowel: *patāru*, 'flying', *vandāru*, 'praising', *pīyāru*, 'scoffing', and (from causative stem, with *l* for *r*) *patayālú*, 'flying', *spṛhayālú*, 'desiring' (late); — with preceding *e*, *maderú*, 'rejoicing', *sanéru*, 'obtaining', and *péru* (of doubtful meaning).

1193. **वि** *vi*. By this suffix are made:

Two or three derivatives from reduplicated roots: *jāgrvi*, 'awake', *dādhrvi*, 'sustaining', *dīdivi*, 'shining'; and a very few other words; *ghṛṣvi*, 'lively', *dhruvi*, 'firm' (and perhaps *jivri*, 'worn out', for *jivri*: BR.).

Here may be mentioned *cikivti* (RV., once), apparently made with a suffix *vit* from a reduplicated root-form.

1194. **स्नु** *snu*. With this suffix, with or without a union-vowel, are made a few adjective derivatives from roots, but still more from causative stems.

a. From simple roots: direct, *jīṣṇú*, 'victorious', *dañkṣṇú*, 'biting', *bhūṣṇu*, 'thriving', *ni-ṣatsnú*, 'sitting down', *sthāṣnu*, 'fixed'; with union-vowel *i*, *carīṣṇú*, 'wandering', *rocīṣṇú*, 'shining', *gamīṣṇú* (TB.), 'going', *-marīṣṇu*, 'mortal', *pra-janīṣṇú*, 'generating'.

b. From causative stems: for example, *çyāvayīṣṇú* (AV.), 'setting in motion', *pārāyīṣṇú*, 'rescuing', *poçayīṣṇú*, 'causing to thrive', *abhi-çocayīṣṇú* 'attacking with heat', *pra-janayīṣṇu* (K.), 'generating'.

c. It seems not unlikely that the *s* of this suffix is originally that of a stem, to which *nu* is added. Such a character is still apparent in *kraviṣṇú* 'craving raw flesh (*kravis*)'; and also in *vadhasnu*, 'murderous', and *vṛdh-asmú* (?), 'thriving'.

1195. **स्ना** *sna*. Extremely few words have this ending.

It is seen in *tīkṣṇá*, 'sharp', and perhaps in *çlakṣṇá*, and *-rūkṣṇa*; and in *deṣṇá* (usually trisyllabic: *dāṣṇa*), 'gift'. Unless in the last, it is not found preceded by *i*; but it has (like *snu*, above) *a* before it in *vadhasná*, 'deadly weapon', *karāśna*, 'fore-arm'.

**1196.** तु *tnu*. This suffix is used nearly in the same way with स्नु *snu* (above, 1194).

a. As used with simple roots, the *t* is generally capable of being considered the adscititious *t* after a short root-final, to which *nu* is then added: thus, *kṛtnú*, 'active', *hatnú*, 'deadly', *-latnu*, 'stretching'; and, from reduplicated roots, *jigatnú*, 'hasting', and *jighatnú*, 'harming'; but also *dartnú*, 'bursting'. Also, with union-vowel, *dravitnú*, 'running'.

b. With causative stems: for example, *drāvayitnú*, 'hasting', *mādayitnú*, 'intoxicating', *stanayitnú*, 'thunder', *-āmāyitnú*, 'sickening'.

c. With preceding *a*, in *pīyatnú*, 'scoffing', *ā-rujatnú*, 'breaking into'; and *kavatnú*, 'miserly' (obscure derivation).

**1197.** स *sa*. The words ending in suffixal स *sa*, with or without preceding union-vowel, are a heterogeneous group, and in considerable part of obscure derivation. A few examples are:

a. With *sa* simply: *jeṣá*, 'winning' (aoristic *s*?), *ruksá*, 'shining'; *útsa*, n., 'fountain'; *bhīṣá*, f., 'fear' (rather from the secondary root *bhīṣ*).

b. With preceding *i*-vowel: *taviṣá* (f. *tāviṣī*), 'strong', *mahiṣá* (f. *māhiṣī*), 'mighty', *bhariṣá* (?), 'seeking booty'; *manīṣá*, f., 'devotion'.

c. With preceding *u*-vowel: *aruṣá* (f. *āruṣī*), 'red', *açúṣa*, 'ravenous', *tāruṣa*, 'overcomer', *pūruṣa* and *mānuṣa* (*-us-a*?), 'man'; *piyúṣa*, 'biestings'.

**1198.** अस्मि *asi*. A few words in the oldest language are made with a suffix having this form (perhaps made by the addition of *i* to *as*).

Thus, *ataśi*, 'vagabond', *dharmāśi*, 'firm', *sānaśi*, 'winning'; and *dhāśi*, m., 'drink', f., 'station'.

**1199.** अभ् *abha*. A few names of animals, for the most part of obscure derivation, show this ending.

Thus, *vṛṣabhá* and *ṛṣabhá*, 'bull', *ṣarabhá*, a certain fabulous animal, *ṣarabha*, a certain snake, *gardabhá* and *rāsabhá*, 'ass'. AV. has the adjective *sthūlabhá*, equivalent to *sthūlá*.

**1200.** a. अत् *at*, इत् *it*, उत् *ut*, ऋत् *ṛt*. All the words with these endings were mentioned above (383 d). They have traceable root-connection only in part: those in *at* are probably related to the participles in *ant*.

b. अद् *ad*. The words in *ad* are also given above (ibid.).

c. अज् *aj*, इज् *ij*, उज् *uj*. The words with these endings were given at the same place (to be added is *bhiṣáj*, 'healer', of which the etymology is disputed): *trṣṇáj* appears to be a secondary derivative, from *tṛṣṇā*, 'thirst'.

**1201.** A number of other primary suffixes are either set up by the grammarians and supported with examples of questionable value, or doubtfully deducible from isolated words traceable to known roots, or from words of obscure connection.

A few such may be mentioned here: *aṅḍa* in *karāṅḍa* and *vāraṅḍa* and certain unquotable words (prakritized *a*-forms from the present participle); *era* and *ora* in unquotable words, and *elima* (above, 966d: perhaps a further derivative with secondary *ima* from *era*); *mara* (*ma* or *man* with secondary *ra* added) in *ghasmara* etc.; — *sara* in *matsarā*, *kara* in *pūškara* and other obscure words, *pa* in *pūṣpa* and a number of other obscure words; and so on.

## B. Secondary Derivatives.

1202. Words of secondary derivation are made by the addition of further suffixes to stems already ending in evident suffixes.

But also, as pointed out above (1137—8), to pronominal roots, and to verbal prefixes and a few other indeclinable words.

1203. Changes of the stem. The stem to which the suffix is added is liable to certain changes of form.

a. Before a suffix beginning with a vowel or with *y* (which in this respect is treated as if it were *i*), final *a* and *i*-vowels are regularly lost altogether, while a final *u*-vowel has the *guṇa*-strengthening and becomes *av*; *r* and *o* and *āu* (all of rare occurrence) are treated in accordance with usual euphonic rule.

An *u*-vowel also sometimes remains unstrengthened.

b. A final *n* is variously treated, being sometimes retained and sometimes lost, even along with a preceding *a*; and sometimes an *a* is lost, while the *n* remains: thus, *vṛṣanvant*, *vṛṣana*, *vṛṣa*, *vṛṣatva*, *vṛṣnya*, from *vṛṣan*. Of a stem ending in *ant*, the weak form, in *at*, is regularly taken: thus, *vāivasvata* (*vivasvant*).

Other alterations of a final are sporadic only.

1204. The most frequent change in secondary derivation is the *vṛddhi*-strengthening of an initial syllable of the stem to which a suffix is added.

The strengthened syllable may be of any character: radical, of a prefix, or of the first member of a compound: thus, *ācvinā* (*açvín*), *sāumyā* (*sóma*), *pārthiva* (*pṛthivī*), *āmītrā* (*amíttra*), *sāmṛājya* (*samrāj*), *sāukṛtya* (*sukṛtā*), *māitrāvaruṅā* (*mitrāvāruṅā*), *āuccāihṛavasā* (*uccāihṛavas*). As to the accompanying accent, see the next paragraph.

a. If a stem begins with a consonant followed by *y* or *v*, the semi-vowel is usually *vṛddhi*ed, as if it were *i* or *u*, and the resulting *āi* or *āu* has *y* or *v* further added before the succeeding vowel.

This is most frequent where the *y* or *v* belongs to a prefix — as *nī*, *vi*, *su* — altered before a following initial vowel: thus, *nāiyāyika* from

*nyāya* (as if *niyāya*), *vāiyaçvā* from *vyaçva* (as if *vīyaçva*), *sāuvaçvya* from *svāçva* (as if *suvaçva*); but it occurs also in other cases, as *sūvarā* from *svāra*, *çāwa* from *çvan*, against *svāyambhuva* (*svayambhū*), and so on.

AV. has irregularly *kāverakā* from *kūvera* (as if from *kuëra*, without the euphonic *y* inserted).

b. This strengthening takes place especially, and very often, before the suffixes *a* and *ya*; also regularly before *i*, *āyana* (with *āyani* and *kāyani*), *eya* (with *ineya*), and later *īya*; before the compound *aka* and *ika*, and later *aki*; and, in single sporadic examples, before *na*, *ena*, *īna*, *ra*, and *tva* (?): see these various suffixes below.

c. In a few exceptional cases, both members of a compound word have the initial *vr̥ddhi*-strengthening: thus, for example, *sāmāpāuṣṇā* (VS.: *somāpūṣān*), *kārupāñcāla* (ÇB., GB.: *kurupañcāla*), *cāturvāidya* (*caturveda*), *āihalāukika* (*ihaloka*). Again, the second member of a compound instead of the first is occasionally thus strengthened: for example, *çatāçārada* (RV., AV.), *pañcaçārādīya* (TB. etc.), *‘somārāudra* (TS.), *trisūhasrī*, *daçasāhasra*, *pūrva-vārṣika* (not quotable), *caturādhyāya*, *gurulāghava*.

The *guṇa*-strengthening (except of a final *u*-vowel: above, 1203 a) is nowhere an accompaniment of secondary derivation: for an apparent exception or two, see 1209 h, i.

1205. Accent. The derivatives with initial *vr̥ddhi*-strengthening always have their accent on either the first or the last syllable. And usually, it is laid, as between these two situations, in such a way as to be further removed from the accent of the primitive; yet, not rarely, it is merely drawn down upon the suffix from the final of the latter; much less often, it remains upon an initial syllable without change. Only in the case of one or two suffixes is the distinction between initial and final accent connected with any difference in the meaning and use of the derivatives (see below, suffix *eya*: 1216).

No other general rules as to accent can be given. Usually the suffix takes the tone, or else this remains where it was in the primitive; quite rarely, it is thrown back to the initial syllable (as in derivation with initial *vr̥ddhi*); and in a single case (*tā*: 1237), it is drawn down to the syllable preceding the suffix.

1206. Meaning. The great mass of secondary suffixes are adjective-making: they form from nouns adjectives indicating appurtenance or relation, of the most indefinite and varied character. But, as a matter of course, this indefiniteness often undergoes specialization: so, particularly, into designation of procedure or descent, so that distinctive patronymic and metronymic and gentile words are the result; or, again, into the designation of possession. Moreover, while the masculines and feminines of such adjectives are employed as appellatives, the neuter is also widely used as an abstract, denoting the quality

expressed attributively by the adjective; and neuter abstracts are with the same suffixes made from adjectives. There are also special suffixes (very few) by which abstracts are made directly, from adjective or noun.

A few suffixes make no change in the part of speech of the primitive, but either change its degree (diminution and comparison), or make other modifications, or leave its meaning not sensibly altered.

1207. The suffixes will be taken up below in the following order. First, the general adjective-making suffixes, beginning with those of most frequent use (*a*, *ya* and its connections, *i*, *ka*); then, those of specific possessive value (*in*, *vant* and *mant*, and their connections); then, the abstract-making ones (*tā* and *tva*, and their connections); then, the suffixes of comparison etc.; and finally, those by which derivatives are made only or almost only from particles.

1208. ऋ *a*. With this suffix are made a very large class of derivatives, from nouns or from adjectives having a noun-value. Such derivatives are primarily and especially adjectives, denoting 'having a relation or connection (of the most various kind) with' that denoted by the more primitive word. But they are also freely used substantively; the masculine and feminine as appellatives, the neuter, especially and frequently, as abstract. Often they have a patronymic or gentile value.

The regular and greatly prevailing formation is that which is accompanied with *vrddhi*-strengthening of the first syllable of the primitive word, simple or compound. Examples of this formation are:

a. From primitives ending in consonants: with the usual shift of accent, *āyasā*, 'of metal' (*āyas*), *mānasā*, 'relating to the mind' (*mānas*), *sāumanasā*, 'friendliness' (*sumānas*), *brāhmaṇā*, 'priest' (*brāhman*), *hāimavatā*, 'from the Himalaya' (*himāvant*), *āṅgirasā*, 'of the Angiras family' (*āṅgiras*); *hāstina*, 'elephantine' (*hastin*), *māruta*, 'pertaining to the Maruts' (*marūt*); — with accent thrown forward from the final upon the suffix, *çāradā*, 'autumnal', *vāirājā*, 'relating to the *virāj*', *pāuṣṇā*, 'belonging to Pushān'; *gairikṣitā*, 'son of Girikṣhīt'; — with accent unchanged, *mānuṣa*, 'descendant of Mānus'.

The suffix is added (as above instanced) to the middle stem-form of stems in *vant*; it is added to the weakest in *māghona* and *vārtraghna*; the ending *in* remains unchanged; *an* usually does the same, but sometimes loses

its *a*, as in *pāuṣṇā*, *trāivṛṣṇā*, *dācarājñā*; and sometimes its *n*, as in *brāhmā*, *aukṣā*, *bārhatśāma*.

b. From primitives in *ṛ*: *jāitra*, 'victorious' (*jet'* or *jétr*, 'conqueror'), *tvāṣṭrá*, 'relating to Tvāṣhtar', *sāvitrá*, 'descendant of the sun' (*savit'*).

c. From primitives in *u*: usually with *guṇa*-strengthening of the *u*, as *vāsavá*, 'relating to the Vāsus', *ārtavá*, 'concerning the seasons' (*ṛtu*), *dānavá*, 'child of Danu' (*dānu*), *sāindhavá*, 'from the Indus' (*sīndhu*); — but sometimes without, as *mādhva*, 'full of sweets' (*mādhv*), *pārṣvā*, 'side' (*pārṣu*, 'rib'), *pāidvā*, 'belonging to Pedú', *tānva*, 'of the body' (*tanú*).

d. From primitives in *i* and *ī*, which vowels are supplanted by the added suffix: *pārthiva*, 'earthly' (*pṛthivī*), *śārasvatá*, 'of the Śārasvatī', *āindrāgná*, 'belonging to Indra and Agni' (*indrāgnī*); *pāñkta*, 'five-fold' (*pāñktī*), *nāirṛtá*, 'belonging to Nīrṛti': — but *āvayá*, 'barrenness' (if from *avī*).

e. From primitives in *ā*, which in like manner disappears: *yāmuná*, 'of the Yamunā', *sāraghá*, 'honey' etc. (*sarāghā*, 'bee'), *kānīnā*, 'natural child' (*kanīnā*, 'girl').

f. A large number (nearly as many as all the rest together) from primitives in *a*, of which the final is replaced by the suffix: for example, with the usual shift of accent, *āmītrá*, 'inimical' (*amītra*, 'enemy'), *vāruṇá*, 'of Vāruṇa', *vāiṣvadevá*, 'belonging to all the gods' (*viṣvadeva*), *nāirhastá*, 'handlessness' (*nīrhasta*), *vāiyāsvá*, 'descendant of Vyāsva'; *gārdabha*, 'asinine' (*gardabhā*), *dātvá*, 'divine' (*devā*), *mādhyaṇḍina*, 'meridional' (*madhyāṇḍina*), *pāūtra*, 'grandchild' (*putrá*, 'son'), *sāūbhaga*, 'good fortune' (*subhāga*), *vādhyra-āsva*, 'of Vadhryaśvā's race'; — with unchanged accent (comparatively few), *vāsantá*, 'vernal' (*vasantā*, 'spring'), *māitrá*, 'Mitrā's', *ātithigvá*, 'of Atithigvā's race', *dātvodāsa*, 'Dīvodasa's'.

The derivatives of this form are sometimes regarded as made by internal change, without added suffix. Considering, however, that other final vowels are supplanted by this suffix, that *a* disappears as stem-final also before various other suffixes of secondary derivation, and that no examples of derivation without suffix are quotable from primitives of any other final than *a*, it seems far too violent to assume here a deviation from the whole course of Indo-European word-making.

1209. The derivatives made by adding *ḥ* *a* without *vrddhi*-change of the initial syllable are not numerous, and are in considerable part, doubtless, of inorganic make, results of the transfer to an *a*-declension of words of other finals.

a. A number of examples of stems in *a* made by transfer were noticed above (399). The cases of such transition occur most frequently in composition: thus, further, *apa-* (for *ap* or *āp*, 'water'), *-ṛca*, *-nara*, *-patha*, *-gava*, *-diva*; from stems in *an*, *-adhva*, *-astha*, *-aha*, *-vṛṣa*, but also *-ahna* and *-vṛṣna* and *vṛṣana*; from stems in *i*, *-aṅgula* and *-rātra*; from the weakest forms of *añc*-stems (407) *uccá*, *nicá*, *parācá*.

b. Also occurring especially in composition, yet likewise as simple words

often enough to have an independent aspect, are derivatives in *a* from nouns in *as* (rarely *is*, *us*): thus, for example, *tamasá*, *rajasá*, *payasá*, *brahmavar-casá*, *sarvavedasá*, *devāinasá*, *parusá*, *tryāyusá*.

c. Similar derivatives from adjectives in *in* are reckoned by the grammarians as made with the suffix *ina*: thus, *malina*, 'polluted', *ṣṛṅgīna*, 'horned' (not quotable). The only Vedic instance noted is *parameṣṭhīna* (AV.).

d. From *añc*-stems (407) are made a few nouns in *ka*: thus, *ánūka*, *ápūka*, *upāka*, *prātūka*, *parākā*, etc.

e. From stems in *ṛ*, *neṣṭrá*, *potrá*, *praçāstrá*, from titles of priests.

f. Other scattering cases are: *savidyutá*, *āvryusá*, *vīrudha*, *kākuda*, *kakubhá*.

g. The Vedic gerundives in *tva* (*tua*) have been already (966 a) pointed out as made by addition of *a* to abstract noun-stems in *tu*.

h. *Trayá* and *dvayá* come with *guṇa*-strengthening from numeral stems; *náva*, 'new', perhaps in like manner from *ná*, 'now'; and *ántara* from *antár* (?).

i. *Bheṣajá*, 'medicine', is from *bhiṣáj*, 'healer', with *guṇa*-change; and perhaps *devá*, 'heavenly, divine, god', in like manner from *div* (compare *āvayá*, above, 1208 d).

One or two cases have been noticed above, in which the addition of *a* to another suffix has made a seemingly independent suffix.

1210.  $\bar{a}$  *ya*. With this suffix are made a very large class of words, both in the old language and later.

The derivatives in *ya* exhibit a great and perplexing variety of form, connection, and application; and the relations of the suffix to others containing a *ya*-element — *īya*, *īya*, *eya*, *āyya*, *eyya*, *enya* — are also in part obscure and difficult. In the great majority of instances in the oldest language, the *ya* when it follows a consonant is dissyllabic in metrical value, or is to be read as *ia*. Thus, in RV., 266 words (excluding compounds) have *ia*, and only 75 have *ya* always; 46 are to be read now with *ia* and now with *ya*, but many of these have *ya* only in isolated cases. As might be expected, the value *ia* is more frequent after a heavy syllable: thus, in RV., there are 188 examples of *ia* and 27 of *ya* after such a syllable, and 78 of *ia* and 96 of *ya* after a light syllable (the circumflexed *yā* — that is to say, *īa* — being, as will be pointed out below, more liable to the resolution than *ya* or *yā*). It must be left for further researches to decide whether in the *ya* are not included more than one suffix, with different accent, and different quantity of the *i*-element; or with an *a* added to a final *i* of the primitive. It is also matter for question whether there is a primary as well as a secondary suffix *ya*; the suffix at least comes to be used as if primary, in the formation of gerundives: but it is quite impossible to separate the derivatives into two such classes, and it has seemed preferable therefore to treat them all together here.

The derivatives made with *ya* may be first divided into those which do and those which do not show an accompanying *vṛddhi*-increment of the initial syllable.

1211. Derivatives in  $\bar{y}a$  with initial *vrddhi*-strengthening follow quite closely, in form and meaning, the analogy of those in  $\bar{a}$  (above, 1208). They are, however, decidedly less common than the latter (in Veda, about three fifths as many).

Examples are: with the usual shift of accent, *dātvyā*, 'divine' (*devā*), *pālityā*, 'grayness' (*palitā*), *grāvya*, 'cervical' (*grīvā*), *ārtvijya*, 'priestly office' (*ṛtvī*), *gārhapatya*, 'householder's' (*gṛhāpati*), *jānarājya*, 'kingship' (*janarāj*), *sāmgrāmajitya*, 'victory in battle' (*samgrāmajā*), *sāvya*, 'wealth in horses' (*svācva*), *āupadraṣṭrya*, 'witness' (*upadraṣṭṛ*); *ādityā*, 'Aditya' (*āditi*), *sāumyā*, 'relating to *sōma*', *ātithyā*, 'hospitality' (*ātithi*), *prājāpatyā*, 'belonging to Prajāpati', *vāimanasyā*, 'mindlessness' (*vīmanas*), *sāhadevya*, 'descendant of Sahadeva'; — with accent thrown forward from the final upon the ending, *lāukyā*, 'of the world' (*lokā*), *kāvya*, 'of the Kāvī-race', *ārtvyā*, 'descendant of Rītā', *vāyavyā*, 'belonging to the wind' (*vāyū*), *rāvatyā*, 'wealth' (*revānt*): — with unchanged accent (very few), *ādhipatya*, 'lordship' (*ādhipati*), *ṣrāṣṭhya*, 'excellence' (*ṣrēṣṭha*), *vācīya*, 'belonging to the third class' (*vāc*, 'people'), *pāūmsya*, 'manliness' (*pūms*).

The AV. has once *nāirbādhyā*, with circumflexed final; if not an error, it is doubtless made through *nāirbādha*; *vāiṣṇavyāu* (VS. i. 12) appears to be dual fem. of *vāiṣṇavī*.

1212. Derivatives in  $\bar{y}a$  without initial *vrddhi*-strengthening are usually adjectives, much less often (neuter, or, in  $\bar{y}ā$ , feminine) abstract nouns. They are made from every variety of primitive, and are very numerous (in Veda, three or four times as many as the preceding class).

The general mass of these words may be best divided according to their accent, into: **a.** Words retaining the accent of the primitive; **b.** Words with retracted accent; **c.** Words with acute *yā* (*īā*); **d.** Words with circumflexed *yā* (*īā*). Finally may be considered the words, gerundives and action-nouns, which have the aspect of primary derivatives.

**a.** Examples of derivatives in *ya* retaining the accent of their primitives are: *ācva*, 'equine' (*ācva*), *āṅgya*, 'of the limbs' (*āṅga*), *mākhyā*, 'foremost' (*mūkha*, 'mouth'), *āvya*, 'ovine' (*āvi*), *gāvya*, 'bovine' (*gō*), *vīcya*, 'of the people' (*vīc*), *dūrya*, 'of the door' (*dūr*), *nārya*, 'manly' (*nī*), *vīṣṇya*, 'virile' (*vīṣan*), *svarājya*, 'autocracy' (*svarāj*), *suvirya*, 'wealth in retainers' (*suvirā*), *viṣvādevya*, 'of all the gods' (*viṣvādeva*), *mayūraṣeṣya*, 'peacock-tailed'.

In the last word, and in a few others, the *ya* appears to be used (like *ka*, 1222 c, 2; *yā*, 1212 d, 5) as a suffix simply helping to make a possessive compound: so *suhāstyā* (beside the equivalent *suhāsta*), *mādhuḥastyā*, *dācamāsyā*, *micrādhānyā*.

b. Examples with retraction of the accent to the first syllable (as in derivation with *vṛddhi*-increment) are: *kāṅṭhya*, 'guttural' (*kaṅṭhā*), *skāndhya*, 'humeral' (*skandhā*), *vrātya*, 'of a ceremony' (*vratā*), *mēghya*, 'in the clouds' (*meghā*), *pītrya*, 'of the Fathers' (*pitṛ*), *prātijanya*, 'adverse' (*pratijānā*). *Hiraṇyāya*, 'of gold' (*hiraṇya*), is anomalous both in drawing the accent forward, and in retaining the final *a* of the primitive.

c. Examples with acute accent on the suffix are: *divyā*, 'heavenly' (*div*), *satyā*, 'true' (*sānt*), *vyāghryā*, 'tigrine' (*vyāghrā*), *kavyā*, 'wise' (*kavī*); *grāmyā*, 'of the village' (*grāma*), *somyā*, 'relating to the *sōma*', *bhūmyā*, 'earthly' (*bhūmi*), *sakhya*, 'friendship' (*sākhi*), *jāspatyā*, 'headship of a family' (*jāspati*).

d. Of derivatives ending in circumflexed *yā* (which in the Veda are considerably more numerous than all the three preceding classes together), examples are as follows:

1. From consonant-stems: *viçyā*, 'of the clan' (RV.: *viç*), *hṛdyā*, 'of the heart' (*hṛd*), *vidyutyā*, 'of the lightning' (*vidyūt*), *rājanyā*, 'of the royal class' (*rājan*), *doṣanyā*, 'of the arm' (*doṣān*), *çīrṣanyā*, 'of the head' (*çīrṣān*), *karmanya*, 'active' (*kārman*), *dhanvanyā*, 'of the plain' (*dhānvan*), *namasyā*, 'reverend' (*nāmas*), *tvacasyā*, 'cuticular' (*tvācas*), *barhiṣyā*, 'of barhts', *āyusyā*, 'giving life' (*āyus*), *bhasadyā*, 'of the buttocks' (*bhasād*), *prācyā*, 'eastern' (*prāñc*), etc. Of exceptional formation is *aryamyā* 'intimate' (*aryamān*).

2. From *u*-stems: *hanavyā*, 'of the jaws' (*hānu*), *vāyavyā*, 'belonging to Vāyú', *paçavyā*, 'relating to cattle' (*paçú*), *iṣavyā*, 'relating to arrows' (*iṣu*); *çaravyā*, f., 'arrow' (*çāru*, do.); and there may be added *nāvya*, 'navigable' (especially in fem., *nāvya*, 'navigable stream': *nāu*, 'boat').

Under this head belong, as was pointed out above (chap. XIV., 964), the so-called gerundives in *tavyā* (later *tāvya*), as made by the addition of *yā* to the infinitive noun in *tu*. They are wholly wanting in the oldest language, and hardly found in later Vedic, although still later *tavya* wins the value of a primary suffix, and makes numerous derivatives. The RV. has *prāçavyā*, 'to be partaken of' (*pra + vaç*), without any corresponding noun *prāçu*; and also *ūrjavyā*, 'rich in nourishment' (*ūrj*), without any intermediate *ūrju*.

3. From *i* and *ī*-stems hardly any examples to be quoted. VS. has *dundubhyā* from *dundubhī*.

4. From *a*-stems: *svargyā*, 'heavenly' (*svargā*), *devatyā*, 'relating to a deity' (*devātā*), *prapathyā*, 'guiding' (*prapathā*), *budhnyā*, 'fundamental' (*budhnā*), *jaghanyā*, 'hindmost' (*jaghāna*), *varunyā*, 'Váruna's', *vīryā*, 'might' (*vīrā*), *udaryā*, 'abdominal' (*udāra*), *utsyā*, 'of the fountain' (*ātsa*); and from *ā*-stems, *urvaryā*, 'of cultivated land' (*urvārā*), *svāhyā*, 'relating to the exclamation *svāhā*'.

The circumflexed *yā* is more generally resolved (into *īa*) than the other forms of the suffix: thus, in RV. it is never to be read as *ya* after a heavy syllable ending with a consonant; and even after a light one it becomes *īa* in more than three quarters of the examples.

5. There are a few cases in which *yā* appears to be used to help make

a compound with governing preposition (next chapter, 1310): thus, *apikakṣyà*, 'about the arm-pit', *upapakṣyà*, 'upon the sides', *udāpyà*, 'up stream'; and perhaps *upatṛṇyà*, 'lying in the grass' (occurs only in voc.). But, with other accent, *ānvānṛya*, 'through the entrails', *ūpamāśya*, 'on each month'; *abhinabhya*, 'up to the clouds', *ādhiḡartya*, 'on the chariot floor'.

1213. The derivatives in *ṭya* as to which it may be questioned whether they are not, a least in part, primary derivatives from the beginning, are especially the gerundives, together with action-nouns coincident with these in form; in the later language, the gerundive-formation (above, 963) comes to be practically a primary one.

a. In RV. occur about 40 instances of gerundives in *ya*, of tolerably accordant form: the root usually unstrengthened (but *cṛtya*, *bhāvya*, *-hāvya*, *mārjya*, *yódhya*; also *-mādyā*, *-vādyā*, *bhāvya*); the accent on the radical syllable when the word is simple, or compounded with prepositions: thus, *praśāśya*, *upasādyā*, *vihāvya* (but usually on the final after the negative prefix: thus, *anāpyā*, *anapavrjyā*) — exceptions are only *bhāvya* and the doubtful *ākāyyà*; the *ya* resolved into *ia* in the very great majority of occurrences; a final short vowel followed by *t* (in *-ṭya*, *-kṛtya*, *-cṛtya*, *-stūtya*, and the reduplicated *carḡkṛtya*, beside *carḡkti*: not in *nāvya* and *-hāvya*), and *ā* changed to *e* (in *-deya* only). If regarded as secondary, they might be made with *ya*, in accordance with other formations by this suffix, in part from the root-noun, as *anukṛt-ya*, in part from derivatives in *a*, as *bhāvya* (from *bhāva*).

b. The AV. has a somewhat smaller number (about 25) of words of a like formation; but also a considerable group (fifteen) of derivatives in *yā* with the same value: thus, for example, *ādyā*, 'eatable', *kāryā*, 'to be done', *samāpyā*, 'to be obtained', *atitāryā*, 'to be overpassed', *nīvibhāryā*, 'to be carried in the apron', *prathamāvāśyā*, 'to be first worn'. These seem more markedly of secondary origin: and especially such forms as *parivargyā*, 'to be avoided', *avimokya*, 'not to be gotten rid of', where the guttural reversion clearly indicates primitives in *ga* and *ka* (216. 6).

c. Throughout the older language are of common occurrence neuter abstract nouns of the same make with the former of these classes. They are rarely found except in composition (in AV., only *cṛtya* and *stēya* as simple), and are often used in the dative, after the manner of a dative infinitive. Examples are: *brahmayjēya*, *vasudēya*, *bhāḡadhēya*, *pūrvaḡpēya*, *śatasēya*, *abhībḡhūya*, *devahūya*, *mantraḡcṛtya*, *karmakṛtya*, *vṛtrātūrya*, *hotṛvūrya*, *ahihātya*, *sattrasādyā*, *ḡrṣabhūdyā*, *brahmacārya*, *nṛśāhya*. Of exceptional form are *ṛtōdyā* ( $\sqrt{vad}$ ) and *sahaḡēyya* ( $\sqrt{ṛi}$ ); of exceptional accent, *sadhāstutyā*. And AV. has one example, *raṇyā*, with circumflexed final.

d. Closely akin with these, in meaning and use, is a small class of feminines in *yā*: thus, *kṛtyā*, *vidyā*, *ityā*, *mustihatyā*, *devayajyā*, and a few others.

e. There remain, of course, a considerable number of less classifiable words, both nouns and adjectives, of which a few from the older language may be mentioned, without discussion of their relations: thus, *sūrya* (with fem. *sūryā*), *ājya*, *pūṣya*, *nābhya*; *yājya*, *gṛdhya*, *īrya*, *aryā* and *ārya*, *mārya*, *mādhyā*.

The suffixes apparently most nearly akin with *ya* may best be next taken up.

1214.  $\overline{\text{य}} ya$ . This suffix is virtually identical with the preceding, being but another written form of the same thing. It is used only after two consonants, where the direct addition of *ya* would create a combination of difficult utterance.

It has the same variety of accent with *ya*. Thus:

a. With accent *īya* (= *īa* or *yā*): for example, *abhṛīya*, 'from the clouds' (*abhṛā*), *kṣatrīya*, 'having authority' (*kṣatrā*), *yajñīya*, 'reverend' (*yajñā*), *ho-trīya*, 'libational' (*hōtrā*).

b. With accent *iya* (= *yā*): for example, *agriyā*, 'foremost' (*āgra*), *indriyā*, 'Indra's' (later, 'sense': *indra*), *kṣetriyā*, 'of the field' (*kṣētra*).

c. With accent on the primitive: *śrōtrīya*, 'learned' (*śrōtra*).

1215.  $\overline{\text{इ}} ya$ . This suffix also is apparently by origin a *ya* (*īa*) of which the first element has maintained its long quantity by the interposition of a euphonic *y*. It is accented always on the *ī*.

a. In RV. occur, of general adjectives, only *ārjikiya* and *gṛhamedhīya*, and examples in the later Vedic are very few: e. g. *parvatīya*, 'mountainous' (AV., beside RV. *parvatyā*). In the Brāhmaṇas, a number of adjectives from phrases (first words of verses and the like) are made in *īya*: thus, *kayācubhīya*, *svāduskhīya*, *āpohiṣṭhīya*, etc.

b. It was pointed out above (965) that derivative adjectives in *īya* from action-nouns in *ana* begin in later Veda and in Brāhmaṇa to be used gerundivally, and are a recognized formation as gerundives in the classical language.

c. Derivatives in *īya* with initial *vṛddhi* are sometimes made in the later language: e. g. *svāsīya*, *pūrvatīya*.

d. The pronominal possessives *madiya* etc. (516) do not occur either in Veda or Brāhmaṇa; but the ordinals *dvitīya* etc. (487: with fractionals *tṛtīya* and *tūrīya*: 488), are found from the earliest period.

1216.  $\overline{\text{ए}} ya$ . With this suffix, along with *vṛddhi*-increment of an initial syllable, are made adjectives, often having a patronymic or metronymic value. Their neuter is sometimes used as abstract noun.

The accent rests usually on the final in adjectives of descent, and on the first syllable in others.

a. Thus, *ūrṣeyā*, 'descendant of a sage' (*ṛṣi*), *sūrameyā*, 'of Sarāmā's race', *ṣātavaneyā*, 'Ṣatavani's descendant', *rāthajiteyā*, 'son of Rathajit', *āsneya*, 'of the blood' (*asān*), *vāsteya*, 'of the bladder' (*vastī*), *pūāruṣeya*, 'coming from man' (*pūruṣa*), etc.

A more than usual proportion of derivatives in *eya* come from primitives in *i*; and possibly the suffix first gained its form by addition of *ya* to a gunated *i*, though afterward used independently.

The gerundive etc. derivatives in *ya* (above, 1213) from *ā*-roots end in *eya*; and, besides such, RV. etc. have *sabhēya* from *sabhā*, and *didṛkṣeya*, 'worth seeing', apparently from the desiderative noun *didṛkṣā*, after their analogy.

b. Derivatives in the so-called suffix *ineyā* — as *sāubhāgineyā*, *kālyāṇineyā* (neither quotable) — are doubtless made upon proximate derivatives in *-inī* (fem.).

c. In *eyya* (i. e. *eyia*) end, besides the neuter abstract *sahaçeyya* (above, 1213 c), the adjective of gerundival meaning *stuṣeyya* (with aoristic *s* added to the root), and *ṣapatheyya*, 'curse-bringing' (or 'accursed'), from *ṣapātha*.

1217. एया *enya*. This suffix is doubtless secondary in origin, made by the addition of *ya* to derivatives in a *na*-suffix; but, like others of like origin, it is applied in some measure independently, chiefly in the older language, where it has nearly the value of the later *anīya* (above, 1215 b), as making gerundival adjectives.

The *y* of this suffix is almost always to be read as vowel, and the accent is (except in *vāreṇya*) on the *e*: thus, *-énia*.

The gerundives have been all given above, under the different conjugations to which they attach themselves (1019, 1038, 1068); except *idēnya*, 'praiseworthy', and *vāreṇya*, 'desirable', they are of only isolated occurrence (once or twice each). The RV. has also two non-gerundival adjectives, *vīreṇya*, 'manly' (*vīrá*), and *kīrtēnya*, 'famous' (*kīrtī*), and TS. has *anabhiçastenyā* (*abhīçasti*); *vijēnyā* (RV.) is a word of doubtful connections.

1218. एया *āyya*. With this suffix are made gerundival adjectives, almost only in RV. They have been noticed above (966 c). The ending is everywhere to be read as *āyia*.

A few adjectives without gerundival value, and neuter abstracts, also occur: thus, *bahupāyya*, 'protecting many', *nṛpāyya*, 'men-guarding'; *kunḍapāyya* and *purumāyya*, proper names; *pūrvapāyya*, 'first drink', *mahayāyya*, 'enjoyment'; — and *rasāyya*, 'nervous', and *uttamāyya*, 'summit', contain no verbal root. *Alāyya* is doubtful; also *ākāyyā*, which its accent refers to a different formation, along with *prahāyyā* (AV.: *√hi*, 'messenger', and *pravāyyā* (AV.), of doubtful value.

1219. **आयन** *āyana*. In the Brāhmaṇas and later, patronymics made by this suffix are not rare. They come from stems in **अ** *a*, and have *vr̥ddhi*-strengthening of the first syllable, and accent on the final.

In RV., the only example of this formation is *kāṇvāyana* (voc.: *kāṇva*); AV. has in metrical parts *dākṣāyana* and the fem. *rāmāyaṇī*; and *āmuṣyāyana*, 'son of so-and-so' (516), in its prose. The RV. name *ukṣanyāyana* is of a different make, elsewhere unknown.

1220. **आयि** *āyī*. Only one or two words are made with this suffix, namely *agnāyī* (*agni*), 'Agni's wife', and *vr̥ṣākāpāyī*, 'wife of Vr̥ṣhākapi'.

They seem to be feminines of a derivative in *a* made with *vr̥ddhi*-increment of the final *i* of the primitive.

1221. **इ** *i*. Derivatives made with this suffix are patronymics from nouns in *a*. The accent rests on the initial syllable, which has the *vr̥ddhi*-strengthening.

a. In RV. are found half-a-dozen patronymics in *i*: for example, *āgniveṣi*, *pāurukutsi*, *prātardani*, *sāmvarāṇi*; AV. has but one, *prāhrādi*; in the Brāhmaṇas they are more common: thus, in AB., *sāuyavasi*, *jānamtapi*, *āruṇi*, *jānaki*, etc. A single word of other value — *sārathi*, 'charioteer' (*sarātham*) — is found from RV. down.

b. The words made with the so-called suffix *aki* — as *vāiyāsaki*, 'descendant of Vyāsa', are doubtless properly derivatives in *i* from others in *ka* or *aka*.

That the secondary suffix *ika* is probably made by addition of *ka* to a derivative in *i* is pointed out below (1222 e).

c. RV. has *tāpuṣi*, apparently from *tāpus* with a secondary *i* added.

1222. **क** *ka*. This is doubtless originally one of the class of suffixes forming adjectives of appurtenance. And that value it still has in actual use; yet only in a small minority of occurrences. It has been, on the one hand, specialized into an element forming diminutives; and, on the other hand, and much more widely, attenuated into an element without definable value, added to a great many nouns and adjectives to make others of the same meaning — this last is, even in the Veda, and still more in the later language, its chief office.

Hence, *ka* easily associates itself with the finals of deriv-

atives to which it is attached, and comes to seem along with them an integral suffix, and is further used as such. Of this origin are doubtless, as was seen above (1180, 1181), the so-called primary suffixes *uka* and *aka*; and likewise the secondary suffix *ika* (below, e).

The accent of derivatives in *ka* varies — apparently without rule, save that the words most plainly of diminutive character have the tone usually on the suffix.

a. Examples (from the older language) of words in which the suffix has an adjective-making value are: *ántaka* (*ánta*), 'end-making', *bálhika* (*bálhi*), 'of Balkh', *āṇḍīka* (*āṇḍá*), 'egg-bearing', *sūcīka* (*sūcī*), 'stinging', *urvāruká*, 'fruit of the gourd' (*urvārú*), *paryāyiká* (*paryāyá*), 'strophic'; from numerals, *ekaká*, *dvaká*, *triká*, *áṣṭaka*; *tṛtīyaka*, 'of the third day'; from pronoun-stems, *asmāka*, 'ours', *yusmāka*, 'yours', *māmaka*, 'mine' (516); from prepositions, *ántika*, 'near', *ánuka*, 'following' (later, *ádhika*, *átka*, *ávaká*); and, with accent retracted to the initial syllable (besides *áṣṭaka* and *tṛtīyaka*, already given), *rūpaka* (*rūpá*), 'with form', *bábhruka* (*bábhru*, 'brown'), a certain lizard.

b. Of words in which a diminutive meaning is more or less probable: *açvaká*, 'nag', *kanínaka* and *kumāraká*, 'boy', *kanīnaká* or *kanīniká*, 'girl', *pādaká*, 'little foot', *putraká*, 'little son', *rājaká*, 'princeling', *çakuntaká*, 'birdling'. Sometimes a contemptuous meaning is conveyed by such a diminutive: for formations with this value from pronominal stems, see above, 521; another example is *anyaká* (RV.).

The diminutives in *ka* have the gender of their primitives.

c. The derivatives in *ka* with unchanged meaning are made from primitives of every variety of form, simple and compound, and have the same variety of accent as the adjective derivatives (with which they are at bottom identical). Thus:

1. From simple nouns and adjectives: *ástaka*, 'home', *násiká*, 'nostril', *máksīkū*, 'fly', *aviká*, 'ewe', *iṣuká*, 'arrow', *dūraká*, 'distant', *sarvaká*, 'all', *dhénukū* (*dhenú*), 'cow', *nāgnaka* (*nagná*), 'naked', *báddhaka* (*baddhá*), 'captive', *vamraká*, 'ant', *arbhaká*, 'small', *çīçuká*, 'young', *añīyaska*, 'finer', *ejatká*, 'trembling', *patayīṣṇuká*, 'flying'.

Such derivatives in the later language are innumerable: from almost any given noun or adjective may be made an equivalent, ending in *ka* or *kū* (according to the gender).

2. From compound primitives: *svalpaká*, 'very small', *vīmanyuka*, 'removing wrath', *vikṣīṇatká*, 'destroying', *pravartamānaká*, 'moving forward', *vikṣīṇaká*, 'destroyed'.

In the Brāhmaṇas and later, *ka* is often added to a possessive adjective compound (1307), sometimes redundantly, but usually in order to obtain a more manageable stem for inflection: thus, *anakṣīka*, 'eyeless', *atvákka*, 'skinless', *aretáska*, 'without seed', *vyasthaka*, 'boneless', *saçiraska*, 'along with the head', *ekagāyatrīka*, 'containing a single *gāyatrī*-verse', *grhītávasatīvarīka*, 'one who has taken yesterday's water', *sapatníka*, 'with his spouse', *abhinavayaska*, 'of youthful age', *aṅguṣṭhamātraka*, 'of thumb size'.

d. The vowel by which the *ka* is preceded has often an irregular character; and especially, a feminine in *ikā* is common beside a masculine in *aka* (as is the case with the so-called primary *aka*: above, 1181).

In RV. are found beside one another only *iyattakā* and *iyattikā*; but AV. has several examples, and they become much more numerous later.

e. Two suffixes made up of *ka* and a preceding vowel — namely, *aka* and *ika* — are given by the grammarians as independent secondary suffixes, requiring initial *vr̥ddhi*-strengthening of the primitive. Both of them are doubtless in reality made by addition of *ka* to a final *i* or *a*, though coming to be used independently.

1. Of *vr̥ddhi*-derivatives in *aka* no examples have been noted from the older language (unless *māmakā*, 'mine', is to be so regarded); and they are not common in the later: thus, *āumaka* (not quotable), 'flaxen', *mānojñaka* (not quotable), 'attractiveness', *rāmanāyaka*, 'delightfulness'.

2. Of *vr̥ddhi*-derivatives in *ika*, the Veda furnishes a very few cases: *vāsantika*, 'vernal', *vārṣika*, 'of the rainy season', *hāimantika*, 'wintry' (none of them in RV.); AV. has *kairātikā*, 'of the Kirātas', apparent fem. to a masc. *kairātaka*, which is not found till later. Examples from a more recent period (when they become abundant) are: *vāidika*, 'relating to the Vedas', *dhārmika*, 'religious', *āhnika*, 'daily', *vāinayika*, 'well-behaved', *dāvārika*, 'doorkeeper', *nāiyāyika*, 'versed in the Nyāya'.

1223. Several suffixes, mostly of rare occurrence and questionable character, contain a  $\bar{r}n$  as consonantal element, and may be grouped together here.

a. With *āna* are made, apparently, a pair of derivatives in RV. from primitives in *u*: thus, *bhṛgavāna*, *vāsavāna*.

b. With *ānī* (which is perhaps the corresponding feminine) are made a number of wife-names: thus, *indrānī*, *varuṇānī* (these, with *uṣṇārānī*, *purukūtsānī*, *mudgalānī*, are found in RV.), *rudrānī*, *mātulānī*, 'maternal uncle's wife', *ksatriyānī*, 'wife of a *ksatriya*' (not quotable).

c. The feminines in *nī* and *knī* from masculine stems in *ta* have been already noticed above (1176 d.). From *pāti*, 'master, husband', the feminine is *pātnī*, both as independent word, 'spouse', and as final of an adjective compound: thus, *devāpatnī*, 'having a god for husband', *sīndhupatnī*, 'having the Indus as master'. And the feminine of *parusā*, 'rough', is in the older language sometimes *pāruṣṇī*.

d. With *īna* are made a full series of adjective derivatives from the words with final *añc* (407 ff.); they are accented usually upon the penult, but sometimes on the final; and the same word has sometimes both accents: for example, *apācīna*, *nīcīna*, *prācīna*, *arvācīna* and *arvācīnā*, *praticīna* and *praticīnā*, *samīcīnā*. Besides these, a number of other adjectives, earlier and later: examples are *samvatsarīna*, 'yearly', *prāvṛṣṣīna*, 'of the rainy season', *viçvajānīna*, 'of all people', *jñātakulīna*, 'of known family', *adhvanīna*, 'traveller' (*adhvan*, 'way'), *āçvīna*, 'day's journey on horseback' (*āçva*, 'horse').

e. With *ena* is made *sāmīdhenā*, from *samīdh*, with initial strengthening.

f. A few words in *ina*, having possessive meaning — as *malina*, *çṛṅgina*, (said to be accented on the final) — are doubtless transfers of adjectives in *in* (1230) to the *a*-declension; compare 1209 c.

g. The adjectives made with simple *na* fall under another head (below, 1245 d), except the almost isolated *strūṇa*, 'woman's', from *strī*, with initial strengthening (its correlative, *pāuṣṇa*, occurs late).

1224. Certain suffixes containing a  $\bar{m}$  may be similarly grouped.

a. With *ima* are made a small number of adjectives from nouns in *tra*: thus, *khanītrima*, 'made by digging', *krītrīma*, 'artificial', *pūtrīma*, 'purified'. Also *agrimā*, 'foremost', (RV.: the *ma* having perhaps an ordinal value).

b. The uses of simple *ma* in forming superlatives (474) and ordinals (487) have been already noticed, and the words thus made specified; *ādimā* is further given by the grammarians, but is not quotable until a very recent period.

c. A few neuter abstracts end in *mna*: thus, *dyumnā*, 'brightness', *nṛmā*, 'manliness'; and, from particles, *nimnā*, 'depth', and *sumnā*, 'welfare'. The suffix comes perhaps from *man* with an added *a*.

d. For the words showing a final *min*, see below, 1231.

1225.  $\bar{m}a$  *mayā*. With this suffix are formed adjectives signifying 'made or composed or consisting of'.

The accent is always on the penult. Before the *m*, the final of the primitive is in general treated as in external combination: thus, *mṛnmāya*, 'made of earth' (*mṛd*), *vāñmāya*, 'consisting of utterance' (*vāc*), *tejomāya*, 'made up of brightness', *adomāya*, 'of the nature of what is yonder' (ÇB.); but in the Veda are found *manasmāya* and *nabhasmāya*, with *ayasmāya*, which is allowed in the later language alongside *ayomāya*. RV. has *sūmāya*, 'of good make' (*sū*, 'well'), and *kimmāya*, 'made of what?'

The suffix *mayā* is perhaps by origin a derivative noun ( $\sqrt{mā}$ ) in composition, but it has at any rate the full value of a suffix from the earliest period of the language.

1226.  $\bar{r}a$  *ra*. A few derivative adjectives are made with this suffix. Accent and treatment of the primitive are various.

a. With simple addition of *ra* are made, for example: *pāṅsurā*, 'dusty', *-çṛīra* (also *-çlīla*) in *açṛīrā*, 'ugly', *dhūmrā*, 'dusky' (*dhūmā*, 'smoke'), *madhura* (late), 'sweet'.

In an example or two, there appears to be accompanying initial strengthening: thus, *āgnīdhra*, 'of the fire-kindler' (*agnīdh*), *çāñkurā*, 'stake-like' (*çāñkū*).

b. With an inorganic vowel before the ending are made, for example, *mēdhira*, 'wise', *rathīrā*, 'in a chariot'; *karmāra*, 'smith'; *dantura* (late), 'tusked'; and others of obscure connections.

c. The use of *ra* in forming a few words of comparative meaning was noticed above (474), and the words so made were given.

1227. ल *la*. This and the preceding suffix are really but two forms of the same. In some words they exchange with one another, and ल *la* is usually, but not always, the later form in use.

Examples are: *bahulá*, 'abundant', *madhulá* (later *madhura*) and *madhūla*, 'sweet', *bhīmala*, 'fearful', *jīvalá*, 'lively', *açlīlá* (and *açrīrá*), 'wretched; with *ā*, *vācāla*, 'talkative' (late); with *i*, *phenīla*, 'foamy' (late: *phēna*); with *u*, *vātula* and *vātūla*, 'windy' (late: *vāta*); and *mātula*, 'maternal uncle', is a somewhat irregular formation from *mātrī*, 'mother'.

The later language has a few adjectives in *lu*, as *kṛpālu* and *dayālu*, 'compassionate'.

1228. व *va*. A small number of adjectives have this ending (accented, added to an unaltered primitive).

a. Thus, *aṛṇavá*, 'bilowy', *keçavá*, 'hairy'; *rāsnāvá*, 'girded'; *añjivá*, 'slippery', *çantivá*, 'tranquillizing', *çraddhivá*, 'credible'.

b. There are a very few adjectives in *vala* and *vaya* which may be noticed here: thus, *kṛṣīvalá*, 'peasant' (*kṛṣi*, 'ploughing'), *çikhāvala* and *dan-tāvala* (late); *druvāya*, 'wooden dish'.

c. With *bya* are made two or three words from names of relationship: thus, *pātrvya*, 'paternal uncle', *bhrātrvya*, 'nephew, enemy'.

1229. ष *ça*. A very few adjectives appear to be made by an added ending of this form.

Thus, *romaçá* or *lomaçá*, 'hairy', *étaça*, 'hasting', *babhluçá* or *babhruçá*, 'brownish', *yuvaçá*, 'youthful'.

Many of the adjective derivatives already treated have sometimes a possessive value, the general meaning of 'being concerned with, having relation to' being specialized into that of 'being in possession of'. But there are also a few distinctively possessive suffixes; and some of these, on account of the unlimited freedom of forming them and the frequency of their occurrence, are very conspicuous parts of the general system of derivation. These will be next considered.

1230. इन् *in*. Possessive adjectives of this ending may be formed almost unlimitedly from stems in इ *a* or ए *ā*, and are sometimes (but very rarely) made from stems with other finals.

A final vowel disappears before the suffix. The accent is

always *in*. As to the inflection of these adjectives see above, 438 ff. They are to be counted by hundreds in the older language, and are equally or more numerous in the later.

a. Examples from *a*-stems are: *açvîn*, 'possessing horses', *dhanîn*, 'wealthy', *pakṣîn*, 'winged', *balîn*, 'strong', *bhagîn*, 'fortunate', *vajrîn*, 'wielding the thunderbolt', *çikhandîn*, 'crested', *hastîn*, 'possessing hands', *ṣoḍaçîn*, 'of sixteen', *gardabhanādîn*, 'having an ass's voice', *brahmavarcasîn*, 'of eminent sanctity', *sādhudevîn*, 'having luck at play', *kūcidarthîn*, 'having errands everywhither'; — from *ū*-stems, *manīṣîn*, 'wise', *çikhîn*, 'crested', *ṛtāyîn*, 'pious'.

b. The examples from other stems are only sporadic: thus, from *i*-stems, *abhimātîn*, 'plotting against', *arcîn*, 'gleaming', *ūrmîn*, 'billowy', *khādîn*, 'spangled', and perhaps *atithîn*, 'wandering'; in *surabhîntara*, the nasal is rather a euphonic insertion, to break the succession of light syllables; — from stems in *an*, *varmîn*, 'cuirassed'; — from stems in *as*. *retîn*, 'rich in seed', probably *varcîn*, n. pr.: and *çavasîn* and *sahasîn* (unless these come through stem-forms in *-sa*).

c. It was noticed above (1183) that derivatives of this form often have a value equivalent to that of present participles; and that the suffix is used, both earlier and later, in the manner of a primary suffix, making words of such value directly from roots. The originally secondary character of the whole formation is shown, on the one hand, by the frequent use in the same manner of words bearing an unmistakably secondary form, as *praçîn*, *garbhîn*, *jūrîn*, *dhūmîn*, *paripanthîn*, *pravēpanîn*, *matsarîn*; and, on the other hand, by the occurrence of reverted palatals (216) before the *in*, which could only be as *in* replaced *a*: thus, *arkîn*, *-bhaṅgîn*, *-saṅgîn*, and *-rokîn*.

d. In three or four sporadic cases, a *y*, preceded by *ū*, appears before *in*: thus, *svadhāyîn* (VS.: TB. *-vîn*; the *y* is here evidently an insertion: 258, *ṣṛkāyîn*, *dhanvāyîn*, and *ātātāyîn* (VS.: TS. *-vîn*), which is found also in the later language. RV. has only *marāyîn* (value?) and *ṛtāyîn* (apparently through a *ṛtāyā* [1149] from the denominative *ṛtāy*). To assume for these a suffix *yin* is quite needless.

1231. *मिन् min*. With this suffix are made an extremely small number of possessive adjectives.

In the old language, the words in *min* have the aspect of derivatives in *in* from nouns in *ma*, although in two or three cases — *iṣmîn*, *ṛgmîn*, *kṛudhmîn* in RV., *vāgmîn* in ÇB. — no such nouns are found in actual use beside them. In the later language, *min* is used as independent element in a very few words: thus, *gomîn*, 'possessing cattle', *svāmin* (Sūtras and later), 'master, lord' (*sva*, 'own').

1232. *विन् vîn*. The adjectives made with this suffix are also not at all numerous. They have the same meanings with those in *इन् in*.

The RV. has ten adjectives in *vîn* (*ayudhvîn*, so-called, is doubtless a

gerund in *tvī*: *a-yudh-tvī*); they become rather more common later. Though for them may be suspected a similar origin to those in *vin* and *min* (above), signs of it are much less clearly traceable.

The majority have *vin* added after *as*: thus, *namasvīn*, 'reverential', *tapasvīn*, 'heated', *tejasvīn*, 'brilliant', *yaçasvīn*, 'beautiful'; and *çatasvīn*, 'possessing hundreds' (RV.), has an inserted *s*, by analogy with them. Others have *ā* (sometimes, by lengthening): thus, *medhāvīn*, *māyāvīn*, *aṣṭrāvīn*, 'obedient to the goad', *dvaivīn*, 'double-minded', *ubhayāvīn*, 'possessing of both kinds'. More rarely, *vīn* is added after another consonant than *s*; thus, *vāgvīn*, *dhr̥ṣadvīn*. The doubtful word *vyāçnuvīn* (VS., once: TB. *vyāçniya*) appears to add the ending (or *in*, with euphonic *v*) to a present tense-stem.

1233. वत् *vant*. Very numerous possessive adjectives are made by this suffix, from noun-stems of every form, both in the earlier language and in the later.

The accent generally remains upon the primitive, without change; but an accent resting on a stem-final, if this be anything but *á* or *ā*, is in the majority of cases thrown forward upon the suffix.

A final vowel — oftenest *a*, very rarely *u* — is in many words lengthened in the older language (247) before this ending, as in composition. Nouns in *an* retain the *n*.

a. Examples of the normal formation are: with unchanged accent, *kéçavant*, 'hairy', *putrávant*, 'having a son', *prajánanavant*, 'procreative', *punḍárikavant*, 'rich in lotuses', *hāraṇyavant*, 'rich in gold', *apūpavant*, 'having cakes'; *prajāvant*, 'having progeny', *úrṇāvant*, 'wooly', *dákṣiṇāvant*, 'rich in sacrificial gifts'; *sákhivant*, 'having friends', *saptarṣivant*, 'accompanied by the seven sages'; *çácivant*, 'powerful', *táviṣivant*, 'vehement', *pátnivant*, 'with spouse', *dhīvant*, 'devoted', *dyāvāprthivīvant* (94), 'with heaven and earth'; *vīṣṇuvant*, 'accompanied by Vishnu'; *āvṛtvant*, 'hither turned', *āçīrvant*, 'mixed with milk', *svārvant*, 'splendid', *çarádavant*, 'full of years', *pāyasvant*, 'rich', *támasvant*, 'dark', *bráhmaṇvant*, 'accompanied with worship', *rómaṇvant*, 'hairy'; but also *lómavant* and *vṛtrahavant* (PB.); — with accent on the suffix, *agnívánt*, 'having fire', *rayívánt*, 'wealthy', *nr̥vánt*, 'manly', *padvánt*, 'having feet', *navánt*, 'with nose', *āsanvánt*, 'having a mouth', *çīrṣaṇvánt*, 'headed'.

b. With final stem-vowel lengthened: for example, *āçvāvant* (beside *āçvant*), 'possessing horses', *sutāvāvant*, 'having soma expressed', *vīṣṇyāvāvant*, 'of virile force' (about thirty such cases occur in V.); *çáktīvāvant*, 'mighty', *svādhitīvāvant*, 'having axes', *ghṛṇīvāvant*, 'hot'; *viṣūvāvant*, 'dividing' (*vīṣu*, 'apart').

c. A few special irregularities are: *índrasvant*, with *s* added to the primitive; *kṛçānāvāvant*, with anomalous accent (if from *kṛçana*, 'pearl'); and, from particles, *antárvant*, 'pregnant', and *viṣūvánt* (just quoted).

d. By the same suffix are made from pronominal roots and stems adjectives in which is shown another specialized meaning, that of 'like to, resembling'. They were given above (517: to be added are *ívant* and *kívant*).

And derivatives from nouns in the older language are perhaps occasionally to be understood in the same way: e. g. *īndrasvant*, 'like Indra'.

It has also been pointed out (1107) that the adverb of comparison in *vāt* is doubtless to be understood as accusative neuter of a derivative of this class.

e. In *vivāsvant* or *vīvasvant*, 'shining' (also proper name), is seen a side-formation to *vivāsvan* (1169), having the aspect of a primary derivative.

f. For the derivatives in *vat* from prepositions, which appear to have nothing to do with this suffix, see below, 1245 f.

None of the suffixes beginning with *v* show in the Veda resolution of *v* to *u*.

1234. वन् *van*. The secondary derivatives in this suffix belong to the older language, and are a small number, of which extremely few have more than an occurrence or two.

They have the aspect of being produced under the joint influence of primary *van* and secondary *vant*. A final short vowel is usually lengthened before the suffix. The accent is various, but oftenest on the penult of the stem. The feminine (like that of the derivatives in primary *van*: 1169, end) is in *varī*.

The Vedic examples are: from *a*-stems, *ṛṇāvān* or *ṛṇavān*, *ṛtāvān* (and f. *-varī*), *ṛghāvan*, *dhitāvan*, *satyāvan*, *summāvārī*, and *maghāvan*; from *ū*-stems, *sūnītāvārī*, *svadhāvan* (and f. *-varī*); from *i*-stems, *amatīvān*, *arātīvān*, *ṛṣṭīvān*, *muṣīvān*, and *kṛṣīvan* (only in the further derivative *kārṣīvaṇa*); from consonant-stems, *ātharvan*, *samādvan*, *sāhovan* (bad AV. variant to RV. *sahāvan*). Somewhat anomalous are *sahāvan* and *sahasūvan*, *īndhanvan* (for *īndhanavan*?), and *sanītvan* (for *sānītvan*?). The only words of more than sporadic occurrence are *ṛtāvān*, *maghāvan*, *ātharvan*.

1235. मन् *mant*. This is a twin-suffix to वन् *vant* (above, 1233); their derivatives have the same value, and are to some extent exchangeable with one another. But possessives in मन् *mant* are much less frequent (in the older language, about a third as many), and are only very rarely made from *a*-stems.

If the accent of the primitive word is on the final, it is in the great majority of instances (three quarters) thrown forward upon the added suffix; otherwise, it maintains its place unchanged. A final vowel before the suffix is in only a few cases made long. Examples are:

a. With the accent of the primitive unchanged: *kāṇvamant*, and *yāvamant*, 'rich in barley' (these alone from *a*-stems, and the former only occurring once), *āvimant*, 'possessing sheep', *aśānimant*, 'bearing the thunder-bolt', *śādhimant*, 'rich in herbs', *vāśimant*, 'carrying an axe', *vāsumant*,

'possessing good things', *mādhumant*, 'rich in sweets', *tvāṣṭṛmant*, 'accompanied by Tvashtar', *hótyrant*, 'provided with priests', *dyuṣmant*, 'long-lived',  *jyótiṣmant*, 'full of brightness'; — *ulkuṣimant*, 'accompanied with meteors', *pīlāmant* (?), *prasūmant*, 'having young shoots', *gómant*, 'rich in kine', *ka-kúdmant*, 'humped', *vidyánmant* (with irregular assimilation of *t*: VS. has also *kakánmant*), 'gleaming', *virúkmant*, 'shining', *havīṣmant*, 'with libations'.

b. With the accent thrown forward upon the ending: *agnimánt*, 'having fire', *iṣudhímánt*, 'with a quiver', *paçumánt*, 'possessing cattle', *vāyumánt*, 'with wind', *pitṛmánt* (AV. *pitṛmant*), 'accompanied by the Fathers', *mātrmánt*, 'having a mother'; no long final vowels are found before the suffix in this division, and only once a consonant, in *dasmát* (RV., once).

c. Protraction of a final vowel is seen in *tvīṣimant*, *dhṛáḥimant*, *hṛīmant*; in *jyótiṣimant* is irregularly inserted an *ī* (after the analogy of *táviṣimant*).

1236. It has been seen above (especially in connection with the suffixes *a* and *ya*) that the neuter of a derivative adjective is frequently used as an abstract noun. There are, however, two suffixes which have in the later language the specific office of making abstract nouns from adjectives and nouns; and these are found also, more sparingly used, in the oldest language, each having there one or two other evidently related suffixes beside it.

For derivatives of the same value made with the suffix *iman*, see above, 1168. 2.

1237. ता *tā*. With this suffix are made feminine abstract nouns, denoting 'the quality of being so and so', from both adjectives and nouns.

The form of the primitive is unchanged, and the accent is uniformly on the syllable preceding the suffix.

Examples (from the older language) are: *devátā*, 'divinity', *vīrātā*, 'manliness', *puruṣātā*, 'human nature', *bandhātā*, 'relationship', *vasūtā*, 'wealth'; *nagnātā*, 'nakedness', *suvirātā*, 'wealth in retainers', *anapatyātā*, 'lack of descendants', *agótā*, 'poverty in cattle', *abrahmātā*, 'lack of devotion', *aprajástā*, 'absence of progeny'; also doubtless *sūnṛtā* (from *sūnāra*), although the word is a few times used as an adjective (like *çamṛtāti* and *satyatāti*: see next paragraph). In RV. is found *avīrātā*, with exceptional accent.

1238. तानि *tāti*, तात् *tāt*. These suffixes are Vedic only, and the latter is limited to RV. Their relationship to the preceding is evident, but opinions are at variance as to its nature. The accent is as in the derivatives with *tā*.

The quotable examples in *tāti* are: *arishṭātāti*, 'uninjuredness', *ayakṣmātāti*, 'freedom from disease', *grbhātātāti*, 'the being seized', *jyeshṭhātāti*, 'supremacy', *devātāti*, 'divinity', *vasūtāti*, 'wealth', *çamṛtāti*, 'good-fortune',

*sarvātūti*, 'completeness'; and, with exceptional accent, *āstatūti*, 'home', and *dākṣatūti*, 'cleverness'. Two words in *tūti* are used adjectively (inorganically, by apposition?): *śāntitūti* (RV., twice; and AV. xix. 44. 1, in MSS.), and *satyatūti* (RV., once: voc.).

The words in *tūt* (apparently made by abbreviation from *tūti*) occur only in a case or two: they were all mentioned above (383 d. 2).

1239. त्वा *tva*. With this suffix are made neuter nouns, of the same value as the feminines in ता *tā* (above, 1237).

The neuter abstracts in *tva* are in the older language considerably more common than the feminines in *tā*, although themselves also not very numerous. The accent is without exception on the suffix.

Examples (from the older language) are: *amṛtatvā*, 'immortality', *devatvā*, 'divinity', *subhagatvā*, 'good-fortune', *ahamuttaratvā*, 'struggle for precedency', *ṣucitvā*, 'purity', *patitvā*, 'husbandship', *taraṇitvā*, 'energy', *dīrghāyutvā*, 'long life', *ṣatrutvā*, 'enmity', *bhṛātṛtvā*, 'brotherhood', *vṛṣatvā*, 'virility', *sūmatvā*, 'soulfulness', *maghavattvā*, 'liberality', *rakṣastvā*, 'sorcery'. In *anūgāstvā* and *aprajāstvā*, there is a lengthening of the final syllable of the primitive; and in *sāuprajāstvā* (AV., once) this appears to be accompanied by initial *vṛddhi* (*sāubhagatvā* is doubtless from *sāūbhaga*, not *subhāga*). In *vasatīvaritvā* (TS.) there is shortening of final feminine *ī* before the suffix.

In *iṣitatvātū* (RV., once), 'incitedness', and *puruṣatvātū* (RV., twice), 'human quality', appears to be a combination of the two equivalent suffixes *tva* and *tā*.

The *v* of *tva* is to be read in Veda as *u* only once (*rakṣastuā*).

1240. त्वाना *tvana*. The derivatives made with this suffix are, like those in *tva*, neuter abstracts. They occur only in RV., and, except in a single instance (*martiatvanā*), have beside them equivalent derivatives in *tva*. The accent is on the final, and the *tva* is never resolved into *tua*.

The words are: *kavitvanā*, *janitvanā*, *patitvanā*, *martiatvanā*, *mahitvanā*, *vasutvanā*, *vṛṣatvanā*, *sakhitvanā*.

1241. A few suffixes make no change in the character as part of speech of the primitive to which they are added, but either are merely formal appendages, leaving the value of the word what it was before, or make a change of degree, or introduce some other modification of meaning.

1242. The suffixes of comparison and ordinal suffixes have for the most part been treated already, and need only a reference here.

a. तरा *tara* and तमा *tama* are the usual secondary suffixes of adjective comparison: respecting their use as such, see above,

471—3; respecting the use of *tama* as ordinal etc. suffix, see 487; respecting that of their accusatives as adverbial suffixes to prepositions etc., see 1111 c.

In *vṛtrātara* (RV., once: perhaps an error) the accent is anomalous; in *mṛdayātama*, it is drawn forward to the final of the participle, as often in composition (1309); *çaṇvattamā* (RV.) has the ordinal accent; *sānvatsara-tamā* (ÇB.) is an ordinal; *dīvātara* (RV., once: an error?) is an ordinary adjective, 'of the day'; in *açvatarā*, 'mule', and *dhenustarī*, 'cow losing her milk', the application of the suffix is peculiar and obscure; in *rathamtara*, name of a certain *sāman*, it is the same.

b. ढ *ra* and ढ *ma*, like *tara* and *tama*, have a comparative and superlative value; and the latter of them forms ordinals: see above, 474, 487.

c. ढ *tha*, like *tama* and *ma*, forms ordinals from a few numerals: see 487.

d. ढ *titha* forms words of an ordinal character from *bahu* (*bahutitha*, 'many-eth') and *tāvant* (with loss of a *t* in the combination: *tāvātitha*, 'so-many-eth'); and, it is said, from other words meaning 'a number or collection' (*gaṇa*, *pūga*, *saṅgha*).

1243. Of diminutive suffixes there are none in Sanskrit with clearly developed meaning and use. The occasional employment of *ka*, in a somewhat indistinct way, to make diminutives, has been noticed above (1222).

1244. Of the ordinary adjective-making suffixes, given above, some occasionally make adjectives from adjectives, with slight or imperceptible modification of value. The only one used to any considerable extent in this way is *ka*: as to which, see 1222.

1245. A few suffixes are used to make derivatives from certain limited and special classes of words, as numerals and particles. Thus:

a. ढ *taya* makes a few adjectives, meaning 'of so many divisions or kinds' (used in the neuter as collectives), from numerals: thus, *dvitaya*, *tritaya*, *cātusṭaya* (AV.), *saptātaya* (ÇB.), *aṣṭātaya* (AB.), *dāçataya* (RV.).

b. ढ *tya* makes a few adjectives from particles: thus, *nitya*, 'own', *niṣṭya*, 'strange', *amātya*, 'companion', *āpatya* (as neut. noun), 'descendants', *āviṣṭya*, 'evident', *sānūtya*, 'distant', *tatratya* (late), 'belonging there'; and, according to the grammarians, *īhatya* and *kvātya*.

The *y* of *tya* is in RV. always to be read as *i* after a heavy syllable.

c. ढ *ta* forms *dvitā* and *tritā*, also *muhūrtā*, 'moment', and apparently *avatā*, 'well (for water)'.

d. With न *na* are made *purāṇá*, 'ancient', *viśuṇa*, 'various', and perhaps *samāṇá*, 'like'.

e. With तन *tana* or त्ना *tna* are made adjectives from adverbs, especially of time: thus, *pratná*, 'ancient', *nūtana* or *nūtna*, 'present', *sanātāna* or *sanātna*, 'lasting', *prātastāna*, 'early', *divātana* (late), 'of the day', *ṣvastana* (late), 'of the morrow'; PB. has also *tvattana*, 'belonging to thee'. In the late language the suffix is used sometimes with an adjective of time: thus, *ciratna*.

f. वत् *vat* makes from particles of direction the feminine nouns mentioned above (383 d. 1).

g. कट *kaṭa*, properly a noun in composition, is reckoned by the grammarians as a suffix in *utkaṭa*, *nikaṭa*, *prakṭa*, *vikaṭa* (RV., once, voc.), and *saṃkaṭa* (all said to be accented on the final).

h. Occasional derivatives made with the ordinary suffixes of primary and secondary derivation from numerals and particles have been noted above: thus, see *ana* (1150. 2d), *ti* (1157. 4), *ant* (1172), *u* (1178h), *āyya* (1218), *ka* (1222a), *mna* (1224), *mayā* (1225), *vant* (1233 c).

---

## CHAPTER XVIII.

---

### FORMATION OF COMPOUND STEMS.

1246. THE frequent combination of declinable stems with one another to form compounds which then are treated as if simple, in respect to accent, inflection, and construction, is a conspicuous feature of the language, from its earliest period.

There is, however, a marked difference between the earlier and the later language as regards the length and intricacy of the combinations allowed. In Veda and Brāhmaṇa, it is quite rare that more than two stems are compounded together — except that to some much used and familiar compound, as to an integral word, a further element is sometimes added. But the later the period, and, especially, the more elaborate the style, the more a cumbrous and difficult aggregate of elements, abnegat-

ing the advantages of an inflective language, takes the place of the due syntactical union of formed words into sentences.

1247. Sanskrit compounds fall into three principal classes:

I. Copulative or aggregative compounds, of which the members are syntactically coördinate: a joining together into one of words which in an uncompounded condition would be connected by the conjunction 'and'.

Examples are: *indrāvāruṇāu*, 'Indra and Varuna', *satyāṃṛté*, 'truth and falsehood', *kṛtākṛtām*, 'done and undone', *devagan-dharvamānuṣoragaraksāsās*, 'gods and Gandharvas and men and serpents and demons'.

The members of such a compound may obviously be of any number, two or more than two. No compound of any other class can contain more than two members — of which, however, either or both may be compound, or decompound (below, 1248).

II. Determinative compounds, of which the former member is syntactically dependent on the latter, as its determining or qualifying adjunct: being either, 1. a noun limiting it in a case-relation, or, 2. an adjective or adverb describing it. And, according as it is the one or the other, may be distinguished the two sub-classes: A. Dependent compounds; and B. Descriptive compounds; their difference is not an absolute one.

Examples are: of dependent compounds, *amitrasenā*, 'army of enemies', *pādodaka*, 'water for the feet', *āyuridā*, 'life-giving', *hastakṛta*, 'made with the hands'; of descriptive compounds, *maharṣi*, 'great sage', *priyasakhī*, 'dear friend', *amitra*, 'enemy', *sūkṛta*, 'well done'.

These two classes are of primary value; they have undergone no unifying modification in the process of composition; their character as parts of speech is determined by their final member, and they are capable of being resolved into equivalent phrases by giving the proper independent form and formal means of connection to each member. That is not the case with the remaining class, which accordingly is more fundamentally distinct from them than they are from one another.

III. Secondary adjective compounds, the value of

which is not given by a simple resolution into their component parts, but which, though having as final member a noun, are themselves adjectives. These, again, are of two sub-classes: **A.** Possessive compounds, which are noun-compounds of the preceding class, with the idea of 'possessing' added, turning them from nouns into adjectives; **B.** Compounds in which the second member is a noun syntactically dependent on the first: namely, 1. Prepositional compounds, of a governing preposition and following noun; 2. Participial compounds (only Vedic), of a present participle and its following object.

The sub-class **B.** is comparatively quite small, and its second division (participial compounds) is hardly met with even in the later Vedic.

Examples are: *vīrasena*, 'possessing a hero-army', *prajākāma*, 'having desire of progeny', *tiṅmāçṛṅga*, 'sharphorned', *hāritasraj*, 'wearing green garlands'; *atimātrā*, 'excessive'; *yāvayāddveṣas*, 'driving away enemies'.

The adjective compounds are, like simple adjectives, liable to be used, especially in the neuter, as abstract and collective nouns, and in the accusative as adverbs; and out of these uses have grown apparent special classes of compounds, reckoned and named as such by the Hindu grammarians. The relation in detail of the classification given above to that presented in the native grammar, and widely adopted from the latter by the European grammars, will be made clear as we go on to treat the classes in detail.

1248. A compound may, like a single word, become a member in another compound, and this in yet another — and so on, without definite limit. The analysis of any compound, of whatever length (unless it be a copulative), must be made by a succession of bisections.

Thus, the dependent compound *pūrvajanmakṛta*, 'done in a previous existence', is first divisible into *kṛta* and the descriptive *pūrvajanman*, then this into its elements; the dependent *sakalanītiçāstratattvajña*, 'knowing the essence of all books of behavior', has first the root-stem *jña* (for  $\sqrt{jñā}$ ), 'knowing', separated from the rest, which is again dependent; then this is divided into *tattva*, 'essence', and the remainder, which is descriptive; this, again, divides into *sakala*, 'all', and *nītiçāstra*, 'books of behavior', of which the latter is a dependent compound and the former a possessive (*sa* and *kalā*, 'having its parts together').

1249. The final of a stem is combined with the initial of another stem in composition according to the general rules for external combination: they have been given, with their exceptions, in chap. III., above.

a. If a stem has a distinction of strong and weak forms, it regularly enters into composition as prior member in its weak form; or, if it has a triple distinction (311), in its middle form.

That is, especially, stems in *r* or *ar*, *at* or *ant*, *ac* or *añc*, etc., show in composition the forms in *r*, *at*, *ac*, etc.; while those in *an* and *in* usually lose their final *n*, and are combined as if *a* and *i* were their proper finals.

b. Occasionally, a stem is used as prior member of a compound, which does not appear, or not in that form, as an independent word: examples are *mahā*, 'great' (apparently used independently in V. in accusative), *tuvi*, 'mighty' (V.), *dvi*, 'two'.

c. Not infrequently, the final member of a compound assumes a special form: see below, 1315.

1250. But a case-form in the prior member of a compound is by no means rare, from the earliest period of the language. Thus:

a. Quite often, an accusative, especially before a root-stem, or a derivative in *a* of equivalent meaning: for example, *patarṅgá*, 'going by flight', *dhanamjayá*, 'winning wealth', *abhayanṅkará*, 'causing absence of danger', *puṣṭimbhará*, 'bringing prosperity', *vācamāñkhayá*, 'inciting the voice'; but also sometimes before words of other form, as *hṛdamśāni*, 'heart-winning', *ācvaṁiṣṭi*, 'horse-desiring', *śubhamāyāvan*, 'going in splendor', *subhāyanṅkārāṇa*, 'making happy'.

b. Much more rarely, an instrumental: for example, *girāvṛdh*, 'increasing by praise', *vācāstena*, 'stealing by incantation', *krátvāmagha*, 'gladly bestowing', *bhāsāketu*, 'bright with light', *vidmanāpas*, 'active with wisdom'.

c. Not seldom, a locative; and this also especially with a root-stem or *a*-derivative: for example, *agregá*, 'going at the head', *divikṣīt*, 'dwelling in the sky', *vaneśáh*, 'prevailing in the wood', *añgeṣṭhá*, 'existing in the limbs', *proṣṭheçayá*, 'lying on a couch', *sutékara*, 'active with the soma', *diviteara*, 'moving in the sky'; *ārçatru*, 'having enemies far removed', *sumnāpi*, 'near in favor', *māderaghu*, 'hasting in excitement'; *apsujá*, 'born in the waters', *hṛtsvās*, 'hurling at hearts'.

d. Least often, a genitive: thus, *rāyāskāma*, 'desirous of wealth'. But the older language has a few examples of the putting together of a genitive with its governing noun, both members of the combination keeping their own accent: see below, 1267d.

e. Excepting occasionally, where case-forms are used, there is no designation of plural meaning by plural form; but a feminine word, where clearness requires it, sometimes keeps its distinctive feminine form.

1251. The accent of compounds is very various, and liable to considerable irregularity even within the limits of the same

formation; and it must be left to be pointed out in detail below. All possible varieties are found to occur. Thus:

a. Each member of the compound retains its own separate accent. This is the most anomalous and infrequent method. It appears in certain Vedic copulative compounds chiefly composed of the names of divinities (so-called *devatā-dvandvas*: 1255 ff.), and in a small number of aggregations partly containing a genitive case-form as prior member (1267 d).

b. The accent of the compound is that of its prior member. This is especially the case in the great class of possessive compounds; but also in determinatives having the participle in *ta* or *na* as final member, in those beginning with the negative *a* or *an*, and in other less numerous and important classes.

c. The accent of the compound is that of the final member. This is not on so large a scale the case as the preceding; but it is nevertheless quite common, being found in many compounds having a verbal noun or adjective as final member, in compounds beginning with the numerals *dvi* and *tri* or the prefixes *su* and *dus*, and elsewhere in not infrequent exceptions.

d. The compound takes an accent of its own, independent of that of either of its constituents, on its final syllable (not always, of course, to be distinguished from the preceding case). This method is largely followed: especially, by the regular copulatives, and by the great mass of dependent and descriptive noun-compounds, by those having a root-stem as final, by most possessives beginning with the negative prefix; and by others.

e. The compound has an accent which is altered from that of one of its members. This is everywhere an exceptional and sporadically occurring case, and the instances of it, noted below under each formation, do not require to be assembled here. Examples are: *medhāsūti* (*médha*), *tīlāmīçra* (*tīla*), *khādīhasta* (*khādī*), *yāvayāddveṣas* (*yāváyant*); *çakadhūma* (*dhūmā*), *amṛta* (*mṛtā*), *suvíra* (*vīrā*), *tuvigrīva* (*grīvā*). A few words — as *vīçva*, *pūrva*, and sometimes *sārva* — take usually a changed accent as prior members of compounds.

## I. Copulative Compounds.

1252. Two or more nouns — much less often adjectives, and, in an instance or two, adverbs — having a coördinate construction, as if connected by ‘and’, are sometimes combined into compounds.

This is the class to which the Hindu grammarians give the name of *dvandva*, ‘pair, couple’; a *dvandva* of adjectives, however, is not recognized by them.

1253. The noun-copulatives fall, as regards their inflective form, into two classes:

a. The compound has the gender and declension of its final member, and is in number a dual or a plural, according to its logical value, as denoting two or more than two individual things.

Examples are: *prāṇāpānāū*, 'inspiration and expiration', *vrihiyavāū*, 'rice and barley', *ṛksāmé*, 'verse and chant', *kapotólūkāū*, 'dove and owl', *candrādityāū*, 'moon and sun', *hastyaçvāu*, 'the elephant and horse'; *ajāvāyas*, 'goats and sheep', *devāsuras*, 'the gods and demons', *atharvāṅgirāsas*, 'the Atharvans and Angirases', *sambādhatandryās*, 'anxieties and fatigues', *hastyaçvās*, 'elephants and horses'; of more than two members (no examples quotable from the older language), *çayāsanaabhogās*, 'lying, sitting, and eating', *brāhmaṇakṣatriyaṣūdrās*, 'a Brahman, Kshatriya, Vaiçya, and Çūdra', *rogaçokaparitāpabandhanavyasanāni*, 'disease, pain, grief, captivity, and misfortune'.

b. The compound, without regard to the number denoted, or to the gender of its constituents, becomes a neuter singular collective.

Examples are: *iṣṭāpūrtām*, 'what is offered and bestowed', *ahorātrām*, 'a day and night', *kṛtākṛtām*, 'the done and undone', *bhūtabhavyām*, 'past and future', *keçaçmaçrū*, 'hair and beard', *ahinakulam*, 'snake and ichneumon', *yūkāmakṣikamatkuṇam*, 'lice, flies, and bugs'.

1254. a. A stem in *ṛ* as prior member sometimes takes its nominative form, in *ā*: thus, *pitūputrāu*, 'father and son', *hotāpotārāu*, 'the invoker and purifier (priests)'.

b. A consonant-stem as final member sometimes adds an *a* to make a neuter collective: thus, *çattropānaham*, 'an umbrella and a shoe'.

c. The grammarians give rules as to the order of the elements composing a copulative compound: thus, that a more important, a briefer, a vowel-initial member should stand first; and that one ending in *a* should be placed last. Violations of them all, however, occur.

1255. In the oldest language (RV.), copulative compounds such as appear later are quite rare, the class being chiefly represented by dual combinations of the names of divinities and other personages, and of personified natural objects.

a. In these combinations, each name has regularly and usually the dual form, and its own accent; but, in the very rare instances (only 3 occurrences out of more than 300) in which other cases than the nom.-acc.-voc. are formed, the final member only is inflected.

Examples are: *indrāsómā*, *indrāvīṣṇū*, *indrābḥaspāti*, *agnīśómāu*, *turvācāyādū*, *dyāvāprthivī*, *uśāsānāktū*, *sūryāmāsā*. The only plural is *indrāmarutas* (voc.). The cases of other than nominative form are *mitrāvāruṇābhyām* and *mitrāvāruṇayos*, and *indrāvāruṇayos* (each once only).

From *dyāvāprthivī* is made the very peculiar genitive *divāsprthivyós* (4 times: AV. has *dyāvāprthivībhyām* and *dyāvāprthivyós*).

b. In one compound, *parjanyaavātā*, the first member does not have the dual ending along with the double accent (*indranāsatyā*, voc., is doubtful as to accent). In several, the double accent is wanting, while yet the double designation of number is present; thus, *indrāpūṣṇós* (beside *indrāpūṣṇā*), *somāpūṣṇābhyām* (*somāpūṣṇā* occurs only as voc.), *vātāparjanya*, *sūryacāndramāsā*, and *indrāgnī* (with *indrāgnībhyām* and *indrāgnivyós*): *somārudrā* is accented only in ÇB. And in one, *indravāyū*, form and accent are both accordant with the usages of the later language.

c. Of other copulatives, like those made later, the RV. has the plural *ajāvāyas*, the duals *ṛksūmé*, *satyāṇṛté*, *sūcānācāné*; also the neuter collective *iṣṭāpūrtām*, and the substantively used neuter of a copulative adjective, *nīlālohitām*. Further, the neuter plurals *ahorātrāṇi*, 'nycthemera', and *ukthārkā*, 'praises and songs', of which the final members as independent words are not neuter. No one of these words has more than a single occurrence.

1256. In the later Vedic (AV.), the usage is much more nearly accordant with that of the classical language, save that the class of neuter singular collectives is almost wanting.

a. The words with double dual form are only a small minority (a quarter, instead of three quarters, as in RV.); and half of them have only a single accent, on the final: thus, besides those in RV., *bhavārudrā*, *bhavācarvā*; *agnāvīṣṇū*, voc., is of anomalous form. The whole number of copulatives is more than double that in RV.

b. The only proper neuter collectives, composed of two nouns, are *keçaṃagrū*, 'hair and beard', *āñjanābhyāñjanām*, 'salve and ointment', and *kaṣīpūpabarhaṇām*, 'mat and covering', unified because of the virtual unity of the two objects specified. Neuter singulars, used in a similar collective way, of adjective compounds, are (besides those in RV.): *kṛtākṛtām*, 'what is done and undone' (instead of 'what is done and what is undone'), *cittākūtām*, 'thought and desire', *bhadrapāpām*, 'good and evil', *bhūtabhavyām*, 'past and future'.

1257. Copulative compounds composed of adjectives which retain their adjective character are made in the same manner, but are in comparison very rare.

Examples are: *çuklakṛṣṇa*, 'light and dark', *sthalajāudaka*, 'terrestrial and aquatic', used distributively; and *vṛttapīna*, 'round and plump', *çāntānikūla*, 'tranquil and propitious', *hr̥ṣitasragrajohina*, 'wearing fresh garlands and free from dust', *niṣekādi-*

*çmaçānānta*, 'beginning with conception and ending with burial', used cumulatively.

In the Veda, the only examples noted are the cumulative *nīlatohitā* and *iṣṭāpūrtā* etc., used in the neut. sing. as collectives (as pointed out above), with *tāmradhūmrā*, 'dark tawny'; and the distributive *dakṣiṇasavyā*, 'right and left', *saptamāṣṭamā*, 'seventh and eighth', and *bhadrapūpā*, 'good and bad' (beside the corresponding neut. collective). Such combinations as *sat-yānrté*, 'truth and falsehood', *priyāpriyāṇi*, 'things agreeable and disagreeable', where each component is used substantively, are, of course, not to be separated from the ordinary noun-compounds.

1258. In accentuated texts, the copulative compounds have uniformly the accent (acute) on the final of the stem.

Exceptions are only a case or two in AV., where doubtless the reading is false: thus, *vātāparjanya* (once: beside *-nyāyos*), *devamanuṣyās* (once), *brahmarūjanyābhyaṃ* (once: part of the MSS.).

1259. An example or two are met with of adverbial copulatives: thus, *āhardivi*, 'day by day', *sāyāmprātar*, 'at evening and in the morning'. They have the accent of their prior member.

1260. Repeated words. In all ages of the language, nouns and adjectives and particles are not infrequently repeated, to give an intensive, or a distributive, or a repetitional meaning.

Though these are not properly copulative compounds, there is no better connection in which to notice them than here. They are, as the older language shows, a sort of compound, of which the prior member has its own independent accent, and the other is without accent. Thus: *jahy eṣāṃ vāraṃ-varam*, 'slay of them each best man'; *divé-dive* or *dyāvi-dyavi*, 'from day to day'; *prā-pra yajñāpatim tira*, 'make the master of the sacrifice live on and on'; *bhūyo-bhūyaḥ cvāḥ-cvaḥ*, 'further and further, tomorrow and again tomorrow'; *ekayāi-kayā*, 'with in each case one'.

Such combinations are called by the native grammarians *āmrēḍita*, 'repeated'.

1261. Finally may be noticed in passing the compound numerals, *ekā-daça*, '11', *dvāvīṅcati*, '22', *trīçata*, '103', *cātuhśahasram*, '1004', and so on (476 ff.), as a special and primitive class of copulatives. They are accented on the prior member.

## II. Determinative Compounds.

1262. A noun or adjective is often combined into a compound with a preceding determining or qualifying word — a noun, or adjective, or adverb. Such a compound is conveniently called determinative.

1263. This is the class of compounds which is of most general and frequent occurrence in all branches of Indo-European language. Its two principal divisions have been already pointed out: thus, **A.** Dependent compounds, in which the prior member is a substantive word (noun or pronoun or substantively used adjective), standing to the other member in the relation of a case dependent on it; and **B.** Descriptive compounds, in which the prior member is an adjective, or other word having the value of an adjective, qualifying a noun; or else an adverb or its equivalent, qualifying an adjective. Each of these divisions then falls into two sub-divisions, according as the final member, and therefore the whole compound, is a noun or an adjective.

The whole class of determinatives is called by the Hindu grammarians *tatpuruṣa* (the term is a specimen of the class, meaning 'his man'); and the second division, the descriptives, has the special name of *karmadhāraya* (of obscure application: the literal sense is something like 'office-bearing'). After their example, the two divisions are in European usage generally known by these two names respectively.

#### A. Dependent Compounds.

1264. Dependent Noun-compounds. In this division, the case-relation of the prior member to the other may be of any kind; but, in accordance with the usual relations of one noun to another, it is oftenest genitive, and least often accusative.

Examples are: of genitive relation, *devasenā*, 'army of gods', *yamadūtā*, 'Yama's messenger', *jīvalokā*, 'the world of the living', *indrādhanūs*, 'Indra's bow', *brahmagavi*, 'the Brahman's cow', *viṣagiri*, 'poison-mount', *mītralābha*, 'acquisition of friends', *mūr-khaṣatāni*, 'hundreds of fools', *vīrasenasuta*, 'Vīrasena's son', *rājendra*, 'chief of kings', *asmatputrās*, 'our sons', *tadvacas*, 'his words'; — of dative, *pādodaka*, 'water for the feet', *māsanīcāya*, 'accumulation for a month'; — of instrumental, *ātmasādṛṣya*, 'likeness with self', *dhānyārtha*, 'wealth acquired by grain', *dharma-patnī*, 'lawful spouse', *pitṛbandhū*, 'paternal relation'; — of ablative, *apsaraḥsambhava*, 'descent from a nymph', *madvīyoga*, 'separation

from me', *cāurabhaya*, 'fear of a thief': — of locative, *jalakriḍā*, 'sport in the water', *grānavāsa*, 'abode in the village'; — of accusative, *nagaragamana*, 'going to the city'.

**1265.** **Dependent Adjective-compounds.** In this division, only a very small proportion of the compounds have an ordinary adjective as final member; but usually a participle or a derivative of agency with the value of a participle. The prior member stands in any case-relation which is possible in the independent construction of such words.

Examples are: of locative relation, *sthātipakva*, 'cooked in a pot', *açvakovida*, 'knowing in horses', *vayahsama*, 'alike in age', *yudhiṣṭhira*, 'steadfast in battle', *tanūçubhra*, 'beautiful in body'; — of instrumental, *māṭrsadrça*, 'like his mother'; — of dative, *gohita*, 'good for cattle'; — of ablative, *bhavadanya*, 'other than you', *ta-rāṅgacañcalatara*, 'more mobile than the waves'; — of genitive, *bharataçreṣṭha*, 'best of the Bharatas', *dvijottama*, 'foremost of Brahmins': — with participial words, in accusative relation, *vedavid*, 'Veda-knowing', *annāda*, 'food-eating', *tanūpāna*, 'body-protecting', *satyavādin*, 'truth-speaking', *patragata*, 'committed to paper' (lit'ly 'gone to a leaf'); — in instrumental, *madhupū*, 'cleansing with honey', *svayāṅkṛta*, 'self-made', *indragupta*, 'protected by Indra', *vidyāhina*, 'deserted by (= destitute of) knowledge'; — in locative, *hṛdayāvīdh*, 'piercing in the heart', *ṛtvij*, 'sacrificing in due season', *divicara*, 'moving in the sky'; — in ablative, *rājya-bhraṣṭa*, 'fallen from the kingdom', *vṛkabhīta*, 'afraid of a wolf'; — in dative, *çaraṅāgata*, 'come for refuge'.

**1266.** We take up now some of the principal groups of compounds falling under these two heads, in order to notice their specialities of formation and use, their relative frequency, their accentuation, and so on.

**1267.** Compounds having as final member ordinary nouns (such, namely, as do not distinctly exhibit the character of verbal nouns, of action or agency) are quite common. They are regularly and usually accented on the final syllable, without reference to the accent of either constituent. Examples were given above (1264).

a. A principal exception with regard to accent is *pāti*, 'master, lord', compounds with which usually retain the accent of the prior member: thus, *prajāpati*, *vāsupati*, *ātithipati*, *gōpati* (compare the verbal nouns in *ti*, below, 1274). But in a few words *pāti* retains its own accent: thus, *viçpāti*, *paçupāti*, etc.; and the more general rule is followed in *apsarūpatī* and *vrājapatī* (in AV.).

b. Other exceptions are sporadic only: for example, *janarājan*, *devavārman*, *hiraṇyatējas*, *pṛtanāhāva*, *ṣakadhūma* (but *dhūmā*); *vācāstena*.

c. The appearance of a case-form in such compounds is rare: examples are *vācāstena*, *uccāhṛcravas*, *uccārgḥoṣa*, *dūrēbhās* (the three last in possessive application).

d. A number of compounds are accented on both members: thus, *ṣācipāti*, *sādaspāti*, *bḥaspāti*, *vānaspāti*, *rāthaspāti*, *jāspāti* (also *jāspati*), *nārāṣṇasa*, *tānūnāpūt* (*tanū* as independent word), *ṣūnaḥṣepa*.

**1268.** The compounds having an ordinary adjective as final member are (as already noticed) comparatively few.

So far as can be gathered from the scanty examples occurring in the older language, they retain the accent of the prior member: thus, *gāviṣṭhira* (AV. *gaviṣṭhira*), *māderaghu*, *yajñādhira*, *sāmavipra*, *tilāmiṣra* (but *tīla*); but *kṛṣṭapacyā*, 'ripening in cultivated soil'.

**1269.** The adjective dependent compounds having as final member the bare root — or, if it end in a short vowel, generally with an added *t* — are very numerous in all periods of the language, as has been already repeatedly noticed (thus, **383 ff.**, **1147**). They are accented on the root.

a. In a very few instances, the accent of words having apparently this origin is otherwise laid: thus, *ānsatra*, *ānarviṣ*, *svāvṛj*.

b. Before a final root-stem appears not very seldom a case-form: for example, *patamgā*, *girāvādh*, *dhivyājūr*, *akṣṇayādruh*, *hṛdispṛṣ*, *divispṛṣ*, *vanesāh*, *diviśād*, *aṅgeṣṭhā*, *hṛtsvās*, *pṛtsutūr*, *apsujā*.

c. The root-stem has sometimes a middle or passive value: for example, *manoyūj*, 'yoked (yoking themselves) by the will', *hṛdayāvīdh*, 'pierced to the heart'.

**1270.** Compounds made with verbal derivatives in *a*, both of action and of agency, are numerous, and take the accent usually on their final syllable (as in the case of compounds with verbal prefixes: **1148. 5**).

Examples are: *hastagrābhā*, 'hand-grasping', *devavandā*, 'god-praising', *haviradā*, 'devouring the offering', *bhuvanacyavā*, 'shaking the world', *vrātyabruvā*, 'calling one's self a *vrātya*'; *akṣaparājayā*, 'failure at play', *vaṣātkūrā*, 'utterance of *vashaṭ*', *gopoṣā*, 'prosperity in cattle', *aṅgajvarā*, 'pain in the limbs'.

a. In a few instances, the accent is (as in compounds with ordinary adjectives: above, **1268**) that of the prior member: thus, *marūdvr̥dha*, *sutēkara* (and other more questionable words). And *dūgha*, 'milking, yielding', is so accented as final: thus, *madhudūgha*, *kūmadūgha*.

b. Case-forms are especially frequent in the prior members of compounds with adjective derivatives in *a*, showing *guṇa*-strengthening of the root: thus, for example, *abhayaṃkarā*, *yudhīṅgamā*, *dhananījayā*, *purāṃdarā*, *viṣvambharā*, *divākarā*, *talpeṣayā*, *diviṣṭambhā*.

1271. Compounds with verbal nouns and adjectives in *ana* are very numerous, and have the accent always on the radical syllable (as in the case of compounds with verbal prefixes: 1150. 1 c).

Examples are: *keçavārdhana*, 'hair-increasing', *āyuspratāraṇa*, 'life-lengthening', *tanūpāna*, 'body-protecting', *devahēḍana*, 'hatred of the gods', *puṁśūvana*, 'giving birth to males'.

a. A very few apparent exceptions as regards accent are really cases where the derivative has lost its verbal character: thus, *yamaśādanā*, 'Yama's realm', *ūchādvidhāna*, 'means of protection'.

b. An accusative-form is sometimes found before a derivative in *ana*: thus, *sarūpaṅkārāṇa*, *ayaḥkṣmaṅkārāṇa*, *subhūgaṅkārāṇa*, *vanāṅkārāṇa*.

1272. a. The action-nouns in *ya* (1213) are not infrequent in composition as final member, and retain their own proper accent (as in combination with prefixes).

Sufficient examples were given above (1213).

b. The same is true of the equivalent feminines in *yā*: see above, 1213 d.

c. The gerundives in *ya* (1213) hardly occur in the older language in combination with other elements than prefixes. The two *nīvibhūryā* and *prathamavāsyā* (the latter a descriptive) have the accent of the independent words of the same form; *balavijñāyā* and *āçvabudhya* (?) are inconsistent with these and with one another.

1273. Compounds made with the passive participle in *ta* or *na* have the accent of their prior member (as do the combinations of the same words with prefixes: 1085 a).

Examples are: *hāstakṛta*, 'made with the hand', *vīrājāta*, 'born of a hero', *ghōṣabuddha*, 'awakened by noise', *prajāpatiśṛṣṭa*, 'created by Prajapati'; and, of participles combined with prefixes, *īndraprasūta*, 'incited by Indra', *bḥaśpātīpraṇutta*, 'driven away by Brihaspati', *ulkābhīhata*, 'struck by a thunderbolt'.

a. AV. has the anomalous *apsūsaṅçita*.

b. A number of exceptions occur, in which the final syllable of the compound has the accent: for example, *agnitaptā*, *īndrotā*, *pitṛvittā*, *rathakṛtā*, *kavipraçastā*.

c. One or two special usages may be noticed. The participle *gata*, 'gone to', as final of a compound, is used in a loose way in the later language to express relation of various kinds: thus, *jagatīgata*, 'existing in the world', *tvadgata*, 'belonging to thee', *sakhīgata*, 'relating to a friend', etc. The participle *bhūta*, 'been, become', is used in composition with a noun as hardly more than a grammatical device to give it an adjective form: thus, *idam tamobhūtam*, 'this creation, being darkness (existing in the condition of darkness)'; *tām ratnabhūtām lokasya*, 'her, being the pearl of the world'; and so on.

The other participles do not occur as finals of compounds except in rare and sporadic cases: thus, *gāutamabruvāṇā*, 'calling himself Gautama'.

1274. Compounds with derivatives in *ti* have (like combinations with the prefixes: 1157.1d) the accent of the prior member.

Examples are: *dhānasāti*, 'winning of wealth', *sōmapīti*, 'soma-drinking', *devāhūti*, 'invocation of the gods', *nāmaūkti*, 'utterance of homage', *havyādāti*, 'presentation of offerings'.

In *nemādḥiti*, *medhāsāti*, *vanādḥiti* (all RV.), the accent of the prior member is changed from penult to final.

Where the verbal character of the derivative is lost, the general rule of final accent (1267) is followed: thus, *devahēti*, 'weapon of the gods', *deva-sumatī*, 'favor of the gods'.

In *sarvajyāntī*, 'loss of everything', the accent is that of compounds with ordinary nouns.

1275. Compounds with a derivative in *in* as final member have (as in all other cases) the accent on the *in*.

Thus, *ukthaçānsīn*, 'psalm-singing', *vratacārīn*, 'vow-performing', *ṛṣabhadāyīn*, 'bullock-giving', *satyavādīn*, 'truth-speaking', *çronipratodīn*, 'thigh-pounding'.

1276. There is a group of compounds with derivatives in *i*, having the accent on the penult or radical syllable.

Thus, *pathirākṣi*, 'road-protecting', *havirmāthi*, 'sacrifice-disturbing', *ātmadūṣi*, 'soul-harming', *pathiṣādi*, 'sitting in the path', *sahobhāri*, 'strength-bearing', *vasuvāni*, 'winning good things', *dhanasāni*, 'gaining wealth'; and, from reduplicated root, *urucākri*, 'making room'.

Compounds with *-sāni* and *-vāni* are especially frequent in Veda and Brāhmaṇa. As independent words, nouns, these are accented *sanī* and *vanī*. Combinations with prefixes do not occur in sufficient numbers to establish a distinct rule, but they appear to be oftenest accented on the suffix (1155.2d).

From  $\gamma$ han are made in composition *-ghni* and *-ghnī*, with accent on the ending: thus, *sahasraghnī*, *ahighnī*, *çvaghnī*; *-dhi* from  $\gamma$ dḥā (1155.2e) has the accent in its numerous compounds: thus, *iṣudhī*, *garbhadhī*, *pūçhadhī*: *ṣadhi* and *pūramdhi* are probably of other derivation.

1277. Compounds with derivatives in *van* have (like combinations with prefixes: 1169.1b) the accent of the final member — namely, on the radical syllable.

Thus, *somapāvan*, 'soma-drinking', *baladāvan*, 'strength-giving', *pāpa-kṛtvan*, 'evil-doing', *bahusūvan*, 'much-yielding', *talpaçīvan*, 'lying on a couch', *drusādvan*, 'sitting on a tree', *agrētvarī*, f., 'going at the head'.

a. The accent of the (somewhat obscure) words *mātārçvan* and *mātarbhvan* is anomalous.

b. The few compounds with final *man* appear to follow the same rule

as those with *van*: thus, *svāduḥśādman*, 'sharing out sweets', *ācuhēman*, 'steed-impelling'.

1278. Compounds with other derivatives, of rare or sporadic occurrence, may be briefly noticed: thus, in *u*, *rūṣṭradīpsū*, *devapīyū*, *govindū*, *vanargū* (?): compare 1178 d; — in *nu* or *tnu*, *lokakṛtnū*, *surūpakṛtnū*: compare 1196; — in *tr*, *nṛpātī*, *mandhātī*, *haskartī* (*vasudhātara*s, AV., is doubtless a false reading). The derivatives in *as* are of infrequent occurrence in composition (as in combination with prefixes: above, 1151.4), and appear to be treated as ordinary nouns: thus, *yajñavacās* (but *hiranyatējas*, AV.).

### B. Descriptive Compounds.

1279. In this division of the class of determinatives, the prior member stands to the other in no distinct case-relation, but qualifies it adjectively or adverbially, according as it (the final member) is noun or adjective.

Examples are: *nīlotpala*, 'blue lotus', *sarvagūṇa*, 'all good quality', *priyasakha*, 'dear friend', *mahaṛṣṭ*, 'great sage', *rajatāpātrā*, 'silver cup'; *ājñāta*, 'unknown', *sūkṛta*, 'well done', *duṣkṛt*, 'ill-doing', *puruṣtutā*, 'much praised', *pūnarnava*, 'renewed'.

a. The prior member is not always an adjective before a noun, and an adverb before an adjective; other parts of speech are sometimes used adjectively and adverbially in that position.

b. The boundary between descriptive and dependent compounds is not an absolute one; in certain cases it is open to question, for instance, whether a prior noun, or adjective with noun-value, is used more in a case-relation, or adverbially.

c. Moreover, where the final member is a derivative having both noun and adjective value, it is not seldom doubtful whether an adjective compound is to be regarded as descriptive, made with final adjective, or possessive, made with final noun. Sometimes the accent of the word determines its character in this respect, but not always.

A satisfactorily simple and perspicuous classification of the descriptive compounds is not practicable; we cannot hold apart throughout the compounds of noun and of adjective value, but may better group both together, as they appear with prefixed elements of various kinds.

1280. The simplest case is that in which a noun as final member is preceded by a qualifying adjective as prior member.

In this combination, both noun and adjective may be of any kind. The accent is (as in the corresponding class of dependent noun-compounds: 1267) on the final syllable.

Thus, *ajñātayaḥśmā*, 'unknown disease', *mahādhanā*, 'great

wealth', *kṛṣṇaḥakuni*, 'black bird', *dakṣiṇāgni*, 'southern fire', *uruksitī*, 'wide abode', *adharaḥanū*, 'lower jaw', *itarajānā*, 'other souls', *sarvātmān*, 'whole soul', *ekavīrā*, 'sole hero', *saptarṣi*, 'seven sages', *ekonaviṅṣattī*, 'a score diminished by one', *jāgrat-svapnā*, 'waking sleep', *yāvayatsakhā*, 'defending friend'.

a. There are some exceptions as regards accent. Especially, compounds with *viṣva* (in composition, accented *viṣvā*), which itself retains the accent: thus, *viṣvādevās*, 'all the gods', *viṣvāmānuṣa*, 'every man'. For words in *ti*, see below, 1287 d. Sporadic cases are *madhyāndina*, *vṛṣākapi*, both of which show an irregular shift of tone in the prior member; and a few others.

b. Instead of an adjective, the prior member is in a few cases a noun used appositionally, or with a quasi-adjective value. Thus, *rājayakṣmā*, 'king-disease', *brahmarṣi*, 'priest-sage', *rājārṣi*, 'king-sage', *rājadanta*, 'king-tooth', *devajana*, 'god-folk', *duhitṛjana*, 'daughter-person', *ṣamīlatā*, 'creeper named *ṣamī*', *jayaṣabda*, 'the word "conquer"', *ujjhītaṣabda*, 'the word "deserted"'.

This group is of consequence, inasmuch as in possessive application it is greatly extended, and forms a numerous class of appositional compounds: see below, 1302.

c. This whole subdivision, of nouns with preceding qualifying adjectives, is not uncommon; but it is greatly (in AV., for example, more than five times) exceeded in frequency by the sub-class of possessives of the same form: see below, 1298.

1281. The adverbial words which are most freely and commonly used as prior members of compounds, qualifying the final member, are the verbal prefixes and the words of direction related with them, and the inseparable prefixes, *a* or *an*, *su*, *du*, etc. (1121). These are combined not only with adjectives, but also, in quasi-adjectival value, with nouns; and the two classes of combinations will best be treated together.

1282. Verbal adjectives and nouns with preceding adverbs. As the largest and most important class under this head might properly enough be regarded the derivatives with preceding verbal prefixes. These, however, have been here reckoned rather as derivatives from roots combined with prefixes (1141), and have been treated under the head of derivation, in the preceding chapter. In taking up the others, we will begin with the participles.

1283. The participles belonging to the tense-systems — those in *ant* (or *at*), *māna*, *āna*, *vāns* — are only very rarely

compounded with any other adverbial element than the negative *a* or *an*, which then takes the accent.

Examples are: *ánadant*, *ádadat*, *ánaçnant*, *ásvavant*, *álubhyant*, *ádāsyant*, *ádítsant*, *ádevayant*; *ámanyamāna*, *áhiṅsāna*, *áchidyamāna*; *ádadivāns*, *ábi-bhāvāns*; and, with verbal prefixes, *ánapasphurant*, *ánāgamiṣyant*, *ávirādhyant*, *ávicācalat*, *ápratimanyūyamāna*.

a. Exceptions in regard to accent are very few: *arundhatī*, *ajárantī*, *acodánt* (RV., once: doubtless a false reading; the simple participle is *códant*); AV. has *anipádyamāna* for RV. *ánipadyamāna* (and the published text has *asamyánt*, with a part of the MSS.).

b. Of other compounds than with the negative prefix have been noted in the Veda *-punarđiyamāna* (in *ápunard-*) and *sávidvāns*. In *alalābhāvant* and *jañjanābhāvant* (RV.), as in *astamhyánt* and *astameṣyánt* (AV.), we have participles of a compound conjugation (1091), in which, as has been pointed out, the accent is as in combinations with the verbal prefixes.

1284. The passive (or past) participle in *ta* or *na* is much more variously compounded, and in general (as in the case of the verbal prefixes: 1085 a) the preceding adverbial element has the accent.

Thus, with the negative *a* or *an* (by far the most common case): *ákṛta*, *ádabdha*, *áriṣṭa*, *ánādhrṣṭa*, *áparájita*, *ásamkhyāta*, *ánabhyārūḍha*; — with *su*, *sájāta*, *sáhuta*, *súsamçita*, *svāramkṛta*; — with *dus*, *dúçcarita*, *dúrdhita* and *dúrhita*; — with other adverbial words, *dānsujūta*, *nāvajāto*, *sánaçruta*, *svayámkṛta*, *trípratiṣṭhita*: *áramkṛta* and *kakajákṛta* are rather participles of a compound conjugation.

a. Exceptions in regard to accent are: with *a* or *an*, *anūçastá*, *apraçastá*, and, with the accent of the participle retracted to the root, *amṛta*, *adṛṣṭa*, *acūta*, *ayūta* 'myriad', *atúrta* (beside *átúrta*), *asúrta* (? beside *súrta*); — with *su* (nearly half as numerous as the regular cases), *subhūtá*, *sūktá*, *supraçastá*, *svákta*, *sukṛtá* and *sujātá* (beside *súkrta* and *sújāta*), and a few others; with *dus* (quite as numerous as the regular cases), *duritá*, *duruktá*, *duṣkṛtá*, *durbhūtá*; with *sa*, *sajātá*; with other adverbs, *amotá*, *ariṣṭutá*, *twijātá*, *prāçinopavūtá*, and the compounds with *puru*, *purujātá*, *puruprajātá*, *purupraçastá*, *puruṣṭutá*, etc. The proper name *aṣāḍhá* stands beside *áṣāḍha*; and AV. has *abhinná* for RV. *ábhinna*.

1285. The gerundives occur almost only in combination with the negative prefix, and have usually the accent on the final syllable.

Examples are: *anāpyá*, *anindyá*, *asahyá*, *ayodhyá*, *amokyá*; *adviṣenyá*; *ahnāvāyýá*; and, along with verbal prefixes, the cases are *asamkhyeyá*, *apramṣyá*, *anapavṛjyá*, *anatyudyá*, *anādhrṣyá*, *avimokyá*, *anūnukṛtyá* (the accent of the simple word being *samkhyéya* etc.).

a. Exceptions in regard to accent are: *ánedya*, *ádābhya*, *ágohya*, *ájogyá*, *áyabhya*. The two *anavadharsyá* and *amativyādhyá* (both AV.) belong to the

*yā*-division (1213 b) of gerundives, and have retained the accent of the simple word. And *āghnya* and *aghnyā* occur together.

b. The only compounds of these words with other adverbial elements in V. are *śūyabhya* (accented like its twin *śūyabhya*) and *prathamavāsya* (which retains the final circumflex), and perhaps *ekavādyā*.

c. The neuter nouns of the same form (1213 c: except *sadhāstutya*) retain their own accent after an adverbial prior member: thus, *purvapāyāya*, *pūrvapāyāya*, *amutrabhūya*; and *sahaçēyya*. And the negated gerundives instanced above are capable of being viewed as possessive compounds with such nouns.

Some of the other verbal derivatives which have rules of their own as to accent etc. may be next noticed.

1286. The root-stem (pure root, or with *t* added after a short final vowel: 1147) is very often combined with a preceding adverbial word, of various kinds; and in the combination it retains the accent.

Examples are: with inseparable prefixes, *adrūh*, 'not harming', *asū*, 'not giving birth', *arāc*, 'not shining'; *sukṛt*, 'well-doing', *suçrāt*, 'hearing well'; *dusṛt*, 'ill-doing', *dūdāç* (199 b), 'impious'; *sayāj*, 'joining together', *samād*, 'conflict'; *sahajā*, 'born together', *sahavāh*, 'carrying together'; — with other adverbs, *amājār*, 'growing old at home', *upariçpṛç*, 'touching upward', *punarbhū*, 'appearing again', *prātaryūj*, 'harnessed early', *sadyaḥkrṛt*, 'bought the same day', *sākaṁvādh*, 'growing up together', *sadamndt*, 'ever-binding', *viçūvṛt*, 'turning to both sides', *vṛthāsāh*, 'easily overcoming'; — with adjectives used adverbially, *uruvyāc*, 'wide-spreading', *prathamajā*, 'first-born', *raghuṣyād*, 'swift-moving', *navasū*, 'newly giving birth', *ekajā*, 'only born', *çukrapṛç*, 'brightly adorned', *dvijā*, 'twice born', *trivṛt*, 'triple', *svarāj*, 'self-ruling'; — with nouns used adverbially, *çambhū*, 'beneficent', *sūryaçvlt*, 'shining like the sun', *içānakṛt*, 'acting as lord', *svayambhū*, 'self-existent'; and, with accusative case-form, *paṭaṅgā*, 'going by flight'.

a. When, however, a root-stem is already in composition, whether with a verbal prefix or an element of other character, the further added negative itself takes the accent (as in case of an ordinary adjective: below, 1288 a): thus, for example, *ānāvṛt*, 'not turning back', *āvidviṣ*, 'not showing hostility', *ādusṛt*, 'not ill-doing', *ānaçvadā*, 'not giving a horse', *āpaçuḥan*, 'not slaying cattle' (*anāgās* would be an exception, if it contained  $\gamma\bar{g}\bar{a}$ : which is very unlikely). Similar combinations with *su* seem to retain the radical accent: thus, *supratār*, *svābhū*, *svāyūj*: *svāvṛj* is an unsupported exception.

b. A few other exceptions occur, mostly of doubtful character, as *sadhāstha*, *ādhrigu*, and the words having *añc* as final member (407 ff.: if this element is not, after all, a suffix).

1287. Other verbal derivatives, requiring to be treated apart from the general body of adjectives, are few and of minor importance. Thus:

a. The derivatives in *a* are in great part of doubtful character, because of the possibility of their being used with substantive value to make a possessive compound. The least ambiguous, probably, are the derivatives from present-stems (1148. 3 b), which have the accent on the suffix: thus, *asunvā*, *apaçyā*, *akṣudhyā*, *avidasyā*, *anāmṛṇā*, *sadāpṛṇā*, *punarmanyā*; and with them belong such cases as *atṛpā*, *avṛdhā*, *araṅgamā*, *urukramā*, *evāvadā*, *satṛāsahā*, *punaḥsarā*, *puraḥsarā*; and the nouns *sāyambhavā*, *sahacārā*, *prātaḥsāvā*, *mithoyodhā*. Differently accented, on the other hand, although apparently of the same formation, are such as *ānapasphura*, *ānavahvara* (compare the compounds noticed at 1286 a), *sadāvṛdha*, *sūbharva*, *nyagrōdha*, *purodāça*, *sadhamaḍa*, and others. Words like *adābha*, *durhāṇa*, *sukāra*, are probably possessives.

b. The derivatives in *van* keep in general the accent of the final member, on the root (compare 1169. 1 b, 1277): thus, *āçupātvan*, 'swift-flying', *puroyāvan*, 'going in front', *sukṛtvan*, 'well-doing'; and *sutārman* and *suwāhman* are probably to be classed with them. But the negative prefix has the accent even before these: thus, *āyajvan*, *ārāvan*, *āprayutvan*; and *satyāmadvan* (if it be not possessive) has the accent of its prior member.

c. A few words in *i* seem to have (as in dependent compounds: 1276) the accent on the radical syllable: thus, *durgbhi*, *ṛjuvāni*, *tuviṣvāṇi*.

d. The derivatives in *ti* are variously treated: the negative prefix has always the accent before them: as *ācitti*, *ābhūti*, *ānāhūti*; with *su* and *dus*, the compound is accented now on the prefix and now on the final, and in some words on both (*sūnīti* and *sunīti*, *dūṣṭuti* and *dusṭuti*); with other elements, the accent of the prefix prevails: thus, *sāhuti*, *sadhāstuti*, *purōhīti*, *pūrvāpīti*, *pūrvyāstuti*.

e. The derivatives in *in* have, as in general, the accent on the suffix: thus, *pūrvāsīn*, *bahucārīn*, *sādhudevīn*, *savāsīn*, *kevalādīn*. But, with the negative prefix, *ānāmin*, *āvitārin*.

f. Other combinations are too various in treatment, or are represented by too few examples in accentuated texts, to justify the setting up of rules respecting them.

1288. Of the remaining combinations, those made with the inseparable prefixes form in some measure a class by themselves.

a. The negative prefix *a* or *an*, when it directly negatives the word to which it is added, has a very decided tendency to take the accent.

We have seen above (1283) that it does so even in the case of present and perfect and future participles, although these in combination with a verbal prefix retain their own accent (1085); and also in the case of a root-stem, if this be already compounded with another element (1286 a). And the same is true of its other combinations.

Thus, with various adjective words: *ātandra*, *ādabhra*, *ādūçuri*, *ānṛju*, *ādevayu*, *ātṛṣṇaj*, *ātavyāns*, *ānāmin*, *ādwayāvin*, *āpracetas*, *ānapatyavant*, *ānupadasvant*, *āpramāyuka*, *āmamri*, *āprajajñi*, *āvididhayu*, *āagnidagdha*,

*ākūmakarçana*, *āpaçcūddaghvan*. Further, with nouns, *āpati*, *ākumāra*, *ābrāhmaṇa*, *āvidyā*, *āçraddhā*, *āvṛtāya*.

But there are a number of exceptions, in which the accent is on the final syllable, without regard to the original accentuation of the final member: thus, for example, *acitrā*, *açrīrā*, *aviprā*, *ayajñiyā*, *anāsmākā*, *asthūrī*, *anāçā*, *ajarayā*, *anāmayitnū*; and in *amitra*, 'enemy', and *avīra*, 'unmanly', there is a retraction of the accent from the final syllable of the final member to its penult.

b. The prefixes *su* and *dus* have this tendency in a much less degree, and their compounds are very variously accented, now on the prefix, now on the final syllable, now on the accented syllable of the final member.

Thus, for example, *sūbhadra*, *sūvipra*, *sūpakva*, *sūbrāhmaṇa*, *sūbhiçaj*; *sutīrthā*, *suvasanā*, *suçārathī*, *supāçā*, *sucitrā*; *suçeva*, *suhōtṛ*: *suṽira* is like *avīra*; — *durmitrā*, *duçvāpnaya*; and *duçhānū* (168), with irregular retraction of accent (*çunā*).

c. The compounds with *sa* are too few to furnish occasion for separate mention; and those with the interrogative prefix in its various forms are also extremely rare in the Veda: examples are *kucarā*, *katpayā*, *kābandha*, *kumanamā*, *kumārā*, *kūyava*, *kuçāva*.

1289. The verbal prefixes are sometimes used in a general adverbial way, qualifying a following adjective or noun.

a. Examples of such combinations are not numerous in the Veda. Their accentuation is various, though the tone rests oftenest on the preposition. Thus, *ādhipati*, 'over-lord', *āparūpa*, 'mis-form', *prātiçatru*, 'opposing foe', *prāpada*, 'fore part of foot', *prānapūt*, 'great-grandchild', *vçpakva*, 'quite done', *sāmpriya*, 'mutually dear'; *upajñvikū*, 'side tongue' (with retraction of the accent of *jñvā*); *antardeçā*, 'intermediate direction', *pradv*, 'forward heaven', *prapitūmahā* (also *prāpitūmaha*), 'great-grandfather', *pratijanā*, 'opponent', *vyadhvā*, 'midway'. These compounds are more frequent with possessive value (below, 1305).

b. This use of the verbal prefixes is more common later, and some of them have a regular value in such compounds. Thus, *ati* denotes excess, as in *atidūra*, 'very far', *atibhaya*, 'exceeding fear', *ātipūruça* (ÇB.), 'chief man'; *adhi*, superiority, as in *adhidanta*, 'upper tooth', *adhistrī*, 'chief woman'; *ā* signifies 'somewhat', as in *ākuçtila*, 'somewhat crooked', *ānīla*, 'bluish'; *upa* denotes something accessory or secondary, as in *upapurāna*, 'additional Purāna'; *pari*, excess, as in *paridurbala*, 'very weak'; *prati*, opposition, as in *pratipakça*, 'opposing side', *pratipustaka*, 'copy'; *vi*, variation or excess, as in *vidūra*, 'very far', *vipāṇḍu*, 'greyish', *vikçudra*, 'respectively small'; *sam*, completeness, as in *sampakva*, 'quite ripe'.

1290. Other compounds with adverbial prior members are quite irregularly accented.

Thus, the compounds with *puru*, on the final (compare the participles

with *puru*, 1284 a); as, *purudasmá*, *purupriyá*, *puruścandrá*; those with *pánar*, on the prior member, as *pánarṇava*, *pánarvasu*; those with *satás*, *satíná*, *satyá*, the same, as *satómahant*, *satínámanyu*, *satyámugra*; a few combinations of nouns in *ṭ* and *ana* with adverbs akin with the prefixes, on the final syllable, as *puraēṭṭ*, *puraṣṭhātṭ*, *upariçayaná*, *prūtaṣavaná*; and miscellaneous cases are *mithóāvadyapa*, *háriçandra*, *álpaçayu*, *sādhvaryá*, and *yāchreṣṭhá* and *yāvāchreṣṭhá*.

1291. The adjective *pūrva* is in the later language frequently used as final member of a compound in which its logical value is that of an adverb qualifying the other member (which is said to retain its own accent). Thus, *dr̥ṣṭapūrva*, 'previously seen', *pariñītapūrva*, 'already married', *somapītapūrva*, 'having formerly drunk soma', *strīpūrva*, 'formerly a woman'.

### III. Secondary Adjective Compounds.

1292. A compound having a noun as its final member very often wins secondarily the value of an adjective, being inflected in the three genders to agree with the noun which it qualifies, and used in all the constructions of an adjective.

This class of compounds, as was pointed out above (1247.III.), falls into the two divisions of A. Possessives, having their adjective character given them by addition of the idea of 'possessing'; and B. those in which the final member is syntactically dependent on or governed by the prior member.

#### A. Possessive Compounds.

1293. The possessives are noun-compounds of the preceding class, determinatives, of all its various subdivisions, to which is given an adjective inflection, and which take on an adjective meaning of a kind which is most conveniently and accurately defined by adding 'having' or 'possessing' to the meaning of the determinative.

Thus: the dependent *sūryatejás*, 'sun's brightness', becomes the possessive *sūryatejas*, 'possessing the brightness of the sun'; *yajñakāmá*, 'desire of sacrifice', becomes *yajñákāma*, 'having desire of sacrifice'; the descriptive *bṛhadratha*, 'great chariot', be-

comes the possessive *bṛhādratha*, 'having great chariots', *āhastā*, 'not hand', becomes *āhastā*, 'handless', *durgandhi*, 'ill savor', becomes *durgāndhi*, 'of ill savor'; and so on.

a. Compounds of the copulative class do not appear to assume a possessive value — unless (as has been suggested with some plausibility) we are to regard those of singular collective form as neuters of secondary adjectives.

b. The name given by the native grammarians to the possessive compounds is *bahuvrīhi*: the word is an example of the class, meaning 'possessing much rice'.

c. The name "relative", instead of possessive, sometimes applied to this class, is evidently not to be approved; since, though the meaning of such a compound (as of any attributive word) is easily cast into a relative form, its essential character lies in the possessive verb which has nevertheless to be added, or in the possessive case of the relative which must be used: thus, *bṛhādratha*, 'who has a great chariot', or 'whose is a great chariot'.

1294. That a noun, simple or compound, should be added to another noun, in an appositive way, with a value virtually attributive, and that such nouns should occasionally gain by frequent association and application an adjective form also, is natural enough, and common in many languages; the peculiarity of the Sanskrit formation lies in two things. First, that such use should have become a perfectly regular and indefinitely extensible one in the case of compounded words, so that any compound with noun-final may be turned without alteration into an adjective, while to a simple noun must be added an adjective-making suffix in order to adapt it to adjective use: for example, that while *hastā* must become *hastin* and *bāhu* must become *bāhumant*, *hiranyahastā* and *mahābāhu* change from noun to adjective value with no added ending. And second, that the relation of the qualified noun to the compound should have come to be so generally that of possession, not of likeness, nor of appurtenance, nor of any other relation which is as naturally involved in such a construction: that we may only say, for example, *mahābāhuḥ puruṣaḥ*, 'man with great arms', and not also *mahābāhur maṇiḥ*, 'jewel for a great arm', or *mahābāhavaḥ śākhāḥ*, 'branches like great arms'.

There is, however, in the older language a little group of derivative adjectives involving the relation of appurtenance rather than of possession: thus, *viśvānara*, 'of or for all men, belonging to all'; and so *viśvākṛṣṭi*, *viśvācārṣaṇi*; also *viśvāśārada*, 'of every autumn', *vipathā*, 'for bad roads', *dvirājā*, '[battle] of two kings'. And some of the so-called *dvigu*-compounds, as *dvigu* itself in the adjective sense 'worth two cows', *dvinaū*, 'bought for two ships' (1312), may be compared with them (compare also the words in *ana*, 1296, end). It is at least open to question whether these are not survivals of an application independent of the possessive, and originally of an equal rank with it, rather than instances of a possessive modified to its opposite.

1295. The possessive compound is distinguished from its substrate, the determinative, generally by a difference of accent.

This difference is not of the same nature in all the divisions of the class; but oftenest, the possessive has as a compound the natural accent of its prior member (as in most of the examples given above).

1296. Possessively used dependent compounds, or possessive dependents, are very much less common than those corresponding to the other division of determinatives.

Further examples are: *mayûraroman*, 'having the plumes of peacocks', *agnîtejas*, 'having the brightness of fire', *jñātimukha*, 'wearing the aspect of relatives', *pātikāma*, 'desiring a husband', *hastipāda*, 'having an elephant's feet'.

The accent is, as in the examples given, regularly that of the prior member, and exceptions are few and of doubtful character. A few compounds with derivatives in *ana* have the accent of the final member: thus, *indrapāna*, 'serving as drink for Indra', *devasādana*, 'serving as seat for the gods', *rayisthāna*, 'being source of wealth'; but they contain no implication of possession, and are perhaps in character, as in accent (1271), dependent. Also a few in *as*, as *nṛcākṣas*, 'men-beholding', *nṛvāhas*, 'men-bearing', *kṣetrasādhas*, 'field-prospering', are probably to be judged in the same way.

1297. Possessively used descriptive compounds, or possessive descriptives, are extremely numerous and of every variety of character; and some kinds of combination which are rare in proper descriptive use are very common as possessives.

They will be taken up below in order, according to the character of the prior member — whether the noun-final be preceded by a qualifying adjective, or noun, or adverb.

1298. Possessive compounds in which a noun is preceded by a qualifying ordinary adjective are (as pointed out above, 1280 c) very much more common than descriptives of the same form.

a. They regularly and usually have the accent of their prior member: thus, *anyādrūpa*, 'of other form', *ugrābāhu*, 'having powerful arms', *jīvāputra*, 'having living sons', *dirghācmaṣru*, 'long-bearded', *brhāchravas*, 'of great renown', *bhūrimūla*, 'many-rooted', *mahāvadha*, 'bearing a great weapon', *viçvārūpa*, 'having all forms', *çukrāvārna*, 'of bright color', *çivābhimarçana*, 'of propitious touch', *satyāsandha*, 'of true promises', *sārvāṅga*, 'whole-limbed', *svāyaças*, 'having own glory', *hāritasraj*, 'wearing yellow garlands'.

b. Exceptions, however, in regard to accent are not rare (a seventh or eighth of the whole number, perhaps). Thus, the accent is sometimes that

of the final member; especially with derivatives in *as*, as *tuvirādhas*, *purupéças*, *prthupáśas*, and others in which (as above, 1296, end) a determinative character may be suspected: thus, *urujráyas* beside *urujrí*, *uruvyácas* beside *uruvyác*, and so on; but also with those of other final, as *ṛjuhásta*, *çitikákṣa*, *kṛṣṇakárṇa*, *citradṛçika*/*tuviçúṣma*, *ṛjukrátu*, *prthupárçu*, *puruvártman*, *raghuyáman*, *viḍupátman*. In a very few cases, the accent is retracted from the final to the first syllable of the second member: thus, *anhubhédá*, *tuviçrívá*, *puruvíra*, *pururúpa*, *çitibáhu* (also *çitibáhú*). The largest class is that of compounds which take the accent upon their final syllable (in part, of course, not distinguishable from that of those which retain the accent of the final member): for example, *bahvanná*, *nīlanakhá*, *puruputrá*, *viçvāngá*, *svapatí*, *tuvipratí*, *prçniparné* f., *darçataçrítí*, *pūtirajjú*, *asitajñá*, *prthugmán*, *bahuprajás*.

c. The adjective *viçva*, 'all', as prior member of a compound (and also in derivation), changes its accent regularly to *viçvá*; *sárva*, 'whole, all', does the same in a few cases.

1299. Possessive compounds with a participle preceding and qualifying the final noun-member are numerous, although such a compound with simple descriptive value is almost unknown.

The accent is, with few exceptions, that of the prior member.

a. The participle is oftenest the passive one, in *ta* or *na*. Thus, *chinnápakṣa*, 'with severed wing', *dhrítárāṣṭra*, 'of firmly held royalty', *hatámātṛ*, 'whose mother is slain', *iddhāgni*, 'whose fire is kindled', *uttānāhastá*, 'with outstretched hand', *práyatadakṣiṇa*, 'having presented sacrificial gifts'; and, with prefixed negative, *āriṣṭavira*, 'whose men are unharmed', *ātaptatanu*, 'of unburned substance', *ānabhímlūtavarṇa*, 'of untarnished color'.

Exceptions in regard to accent are very few: there have been noticed only *paryastūkṣá*, *vyastakeçí* f., *achinnaparná*.

b. A few examples occur of a present participle in the same situation. In about half the instances, it gives its own accent to the compound: thus, *dyutádyāman*, *dhrṣádvarṇa* etc., *çucádratha*, *rūçadvatsa* etc., *bhrájjanman* etc., *sahyádvira*, *stanáyadama*, *sádhadīṣṭi*; in the others, the accent is drawn forward to the final syllable of the participle (as in the compounds with governing participle: below, 1309): thus, *dravátpāni* etc. (*dravát* also occurs as adverb), *rapçádūdhan*, *svanádratha*, *arcáddhūma*, *bhandádiṣṭi*, *krandádiṣṭi*. With these last agrees in form *jarádaṣṭi*, 'attaining old age, long-lived'; but its make-up, in view of its meaning, is anomalous.

c. The RV. has two compounds with the perfect middle participle as prior member: thus, *yuyujánásapti*, 'with harnessed coursers' (perhaps rather 'having harnessed their coursers'), and *dadrçánápavi* (with regular accent, instead of *dádrçána*, as elsewhere irregularly in this participle), 'with conspicuous wheel-rims'.

d. Of a nearly participial character is the prior element in *çrútkarṇa* (RV.), 'of listening ear'; and with this are perhaps accordant *dīdyagni* and *sthāraçman* (RV., each once).

1300. Possessive compounds having a numeral as prior member are very common, and for the most part follow the same rule of accent which is followed by compounds with other adjectives: excepted are in general those beginning with *dvi* and *tri*, which accent the final member.

a. Examples with other numerals than *dvi* and *tri* are: *ékacakra*, *ékaçīrṣan*, *ékapad*, *cáturaṅga*, *cátuṣpakṣa*, *pāñcānguri*, *pāñcāudana*, *ṣaḍaḍva*, *ṣaṭpad*, *saptáñhva*, *saptámātṛ*, *aṣṭápad*, *aṣṭáputra*, *návapad*, *návadvāra*, *dāçaçākha*, *dāçaçīrṣan*, *dvádaçāra*, *triñçádara*, *çatáparvan*, *çatádant*, *sahásrañāman*, *sahásramūla*.

b. Exceptions in regard to accent are but few, and have the tone on the final syllable, whatever may be that belonging originally to the final member; they are mostly stems in final *a*, used by substitution for others in *an*, *i*, or a consonant: thus, *caturakṣá* etc. (*akṣán* or *ákṣi*: 431), *ṣaḍahá* etc. (*áhan* or *áhar*: 430 a), *daçavṛṣá* etc. (*vṛṣan*), *ekarātrá* etc. (*rātri* or *rātrī*), *ekareá* etc. (*é*); but also a few others, as *ṣadyogá*, *aṣṭáyogá*, *çatūrghá*, *sahasrārghá*, *ekapará* (?).

c. The compounds with *dvi* and *tri* for the most part have the accent of their final member: thus, for example, *dvijánman*, *dvidhāra*, *dvibāndhu*, *dvivartan*, *dvipád*, *tritāntu*, *trinābhi*, *triçóka*, *trivárūtha*, *tricakrá*, *triçīrṣán*, *tripád*. A number of words, however, follow the general analogy, and accent the numeral: thus, for example, *dvīpakṣa*, *dvīçavas*, *dvyāṣya*, *trīçandhi*, *tryāra*, *tryāçir*, and sometimes *dvīpad* and *trīpad* in AV. As in the other numeral compounds, a substituted stem in *a* is apt to take the accent on the final: thus, *dvivṛṣá* and *trivṛṣá*, *dvirājá*, *dvirātrá*, *tryāyusá*, *tridivá*; and a few of other character with *tri* follow the same rule: thus, *trikaçá*, *trināká*, *tribandhú*, *tryudhán*, *tribarhás*, etc.

d. The neuter, or also the feminine, of numeral compounds is often used substantively, with a collective or abstract value, and the accent is then regularly on the final syllable: see below, 1312.

1301. Possessive compounds having as prior member a noun which has a quasi-adjective value in qualifying the final member are very frequent, and show certain specialities of usage.

Least peculiar is a noun of material as prior member (hardly to be reckoned as regular possessive dependents, because the relation of material is not expressed by a case): thus, *hīraṇyahasta*, 'gold-handed', *hīraṇyasraj*, 'with golden garlands', *áyahsthūṇa*, 'having brazen supports', *rajatánābhi*, 'of silver navel'.

1302. Especially common is the use of a noun as prior member to qualify the other appositionally, or by way of equivalence (the occasional occurrence of determinatives of this character has been noticed above, 1280 b). These may conveniently be called appositional possessives. Their accent is that of the prior member, like the ordinary possessive descriptives.

a. Examples are: *áçvaparna*, 'horse-winged', or 'having horses as wings'

(said of a chariot), *bhūmigṛha*, 'having the earth as house', *īndrasakhi*, 'having Indra for friend', *agnīhoṭṛ*, 'having Agni as priest', *gandharvāpatnī*, 'having a Gandharva for spouse', *śūrāputra*, 'having hero-sons', *jarāmṛtyu*, 'having old age as mode of death, living till old age', *agnīvāsas*, 'fire-clad', *tadanta*, 'ending with that', *cācakakṣus*, 'using sples for eyes', *viṣṇuṣarmanāman*, 'named Viṣṇuṣarman'; and, with pronoun instead of noun, *tvādūta*, 'having thee as messenger', *tādapas*, 'having this for work'.

Exceptions in regard to accent occur here, as in the more regular descriptive formation: thus, *agnijīhvā*, *vṛṣaṇaṣvā*, *dhūmacikhā*, *pavīnāsā*, etc.

b. Not infrequently, a substantively used adjective is the final member in such a compound: thus, *īndrajyeṣṭha*, 'having Indra as chief', *mānaḥsaṣṭha*, 'having the mind as sixth', *somaḥreṣṭha*, 'of which soma is best', *ekaparā*, 'of which the ace is highest' (?), *āsthībhūyas*, 'having bone as the larger part, chiefly of bone', *abhirūpabhūyiṣṭha*, 'chiefly composed of worthy persons', *daṣṭvāra*, 'having ten as the lowest number', *cintāpara*, 'having meditation as highest object or occupation, devoted to meditation', *niḥśvāsaparama*, 'much addicted to sighing'.

c. Certain words are of especial frequency in the compounds here described, and have in part won a peculiar application.

1. Thus, with *ādi* or *ādika* or *ādya*, 'first', are made compounds signifying the person or thing designated along with others, such a person or thing *et cetera*. For example, *devā indrādayaḥ*, 'the gods having Indra as first', that is, 'the gods Indra etc.', *maricyādīn munīn*, 'Marici and the other sages', *svāyambhuvādyāḥ sapṭai* 'te manavaḥ', 'those seven Manus, Svayambhuva etc.', *agnīṣṭomādhikān makhān*, 'the sacrifices Agnishtoma and so on'. Or the qualified noun is omitted, as in *annapānendhanādīni*, 'food, drink, fuel, etc.', *dānadharmādikaṅ caratu bhavān*, 'let your honor practise liberality, religious rites, and the like'. The particles *evam* and *iti* are also sometimes used by substitution as prior members: thus, *evamādi vacanam*, 'words to this and the like effect'; *ato* 'ham *bravīmi kartavyaḥ saṁcayo nityam ityādi*, 'hence I say "accumulation is ever to be made" etc.'

Used in much the same way, but less often, is *prabhṛti*, 'beginning': thus, *viṣvāsuprabhṛtibhir gandharvāiḥ*, 'with the Gandharvas Viṣvāvasu etc.>'; especially adverbially, in measurements of space and time, as *tatprabhṛti*, 'thenceforward'.

2. Words like *pūrva*, *pūrvaka*, *puraḥsara*, *purogama*, meaning 'foregoer, predecessor', are employed in a similar manner, and especially adverbially, to denote accompaniment.

3. The noun *mātrā*, 'measure', stands as final of a compound which is used adjectively or in the substantive neuter to signify a limit that is not exceeded, and obtains thus the virtual value of 'mere, only': thus, *jalamātreṇa vartayan*, 'living by water only' (lit'ly, 'by that which has water for its measure or limit'), *garbhacyutimātreṇa*, 'by merely issuing from the womb', *prāṇayātrikamātraḥ syāt*, 'let him be one possessing what does not exceed the preservation of life'; *uktamātre tu vacane*, 'but the words being merely uttered'.

4. The noun *artha*, 'object, purpose', is used at the end of a compound, oftenest in the substantive neuter, to signify 'for the sake of' or the like: thus, *yajñasiddhyartham*, 'in order to the accomplishment of the sacrifice', *damayantiartham*, 'for Damayanti's sake'.

5. Other examples are *ābhā*, *kalpa*, in the sense of 'like, approaching': thus, *hemābha*, 'gold-like', *ṛṣṭakalpa*, 'nearly dead', *pratipannakalpa*, 'almost accomplished'; — *vidhā*, in the sense of 'kind, sort': thus, *tvadvidha*, 'of thy sort', *pūruṣavidha*, 'of human kind'; — *prāya*, in the sense of 'mostly, often', and the like: thus, *duḥkhaprāya*, 'full of pain', *ṛṇaprāya*, 'abounding in grass', *nirgamanaprāya*, 'often going out'; — *antara* (in substantive neuter), in the sense of 'other': thus, *deçāntara*, 'another region' (litly, 'that which has a difference of region'), *janmāntarāṇi*, 'other existences', *çākhāntare*, 'in another text'.

1303. In positional possessive compounds, the second member, if it designates a part of the body, sometimes logically signifies that part to which what is designated by the prior member belongs, that on or in which it is.

Thus, *ghṛtāpṛṣṭha*, 'butter-backed', *mādhujihva*, 'honey-tongued', *niṣkāgrīva* and *maṇigrīva*, 'necklace-necked', *pātrahasta*, 'vessel-handed', *vājrabāhu*, 'lightning-armed', *āsrṇmukha*, 'blood-faced', *kūlōdhan*, 'mead-uddered', *vājajathara*, 'sacrifice-bellied'; with irregular accent, *dhumāksī* f., 'smoke-eyed', *açrumukhī* f., 'tear-faced'; and *khādīhasta*, 'ring-handed' (*khādī*). In the later language, such compounds are not infrequent with words meaning 'hand': thus, *çastrapāṇi*, 'having a sword in the hand', *laguḍahasta*, 'carrying a staff'.

1304. Of possessive compounds having an adverbial element as prior member, the most numerous by far are those made with the inseparable prefixes. Their accent is various. Thus:

a. In compounds with the negative prefix *a* or *an* (in which the latter logically negatives the imported idea of possession, the accent is prevailingly on the final syllable, without regard to the original accent of the final member. For example: *onantā*, 'having no end', *abalā*, 'not possessing strength', *arathā*, 'without chariot', *açradhlā*, 'faithless', *amaṇī*, 'without ornament', *açatṛū*, 'without a foe', *avarmān*, 'not cuirassed', *adānti*, 'toothless', *apād*, 'footless', *atejās*, 'without brightness', *anūrambhaṇā*, 'not to be gotten hold of', *apratimānā*, 'incomparable', *aduchunā*, 'bringing no harm'.

But a number of examples (few in proportion to those already instanced) have the prefix accented (like the simple descriptives: 1288 a): thus, *ākṣīti*, 'indestructible', *āgu*, 'kineless', *āyopā*, 'without shepherd', *ājīvana*, 'lifeless', *ānūpi*, 'without friends', *āçīçvī* f., 'without young', *āmṛtyu*, 'deathless', *ābrahman*, 'without priest', *āvyaças*, 'without extension', *āhavis*, 'without oblation', and a few others: AV. has *āprajas*, but ÇB. *aprajās*. A very few have the accent on the penult: namely, *açēças*, *ajāni*, and *avīra* (with retraction, from *vīrā*); and AV. has *abhrātṛ*, but RV. *abhrātī*.

b. In compounds with the prefixes of praise and dispraise, *su* and *dus*,

the accent is in the great majority of cases that of the final member: thus, *sukálpa*, 'of easy make', *subhága*, 'well portioned', *sunákṣatra*, 'of propitious star', *suputrá*, 'having excellent sons', *sugopá*, 'well-shepherded', *sukirtí*, 'of good fame', *sugándhi*, 'fragrant', *subāhú*, 'well-armed', *suyámtu*, 'of easy control', *sukrátu*, 'of good capacity', *suhárd*, 'good-hearted', *susráj*, 'well-garlanded', *suvárman*, 'well-cuirassed', *suváśas*, 'well-clad', *supráñiti*, 'well guiding'; *durbhága*, 'ill-portioned', *durd'ṣṭika*, 'of evil aspect', *durdhára*, 'hard to restrain', *durgándhi*, 'ill-savored', *durādhi*, 'of evil designs', *durdhártu*, 'hard to restrain', *duṣtárítu*, 'hard to excel', *duratyétu*, 'hard to cross', *durdhár*, 'ill-yoked', *durnáman*, 'ill-named', *durváśas*, 'ill-clad'.

There are, however, a not inconsiderable number of instances in which the accent of these compounds is upon the final syllable: thus, *suçiprá*, 'well-lipped', *svapatyá*, 'of good progeny', *susañkāçá*, 'of good aspect', *svaṅgurl*, 'well-fingered', *sviṣú*, 'having good arrows', *supivás*, 'well fattened'; and compounds with derivatives in *ana*, as *suviñānā*, 'of easy discernment', *sūpa-sarpañá*, 'of easy approach', *duçcyavaná*, 'hard to shake'; and AV. has *suphalá* and *subandhú* against RV. *suphála* and *subāndhu*. Like *avíra*, *suvíra* shows retraction of accent. Only *dúrūçir* has the tone on the prefix.

On the whole, the distinction by accent of possessive from determinative is less clearly shown in the words made with *su* and *du* than in any other body of compounds.

c. The associative prefix *sa* or (less often) *sahá* is treated like an adjective element, and itself takes the accent in a possessive compound: thus; *sákratu*, 'of joint will', *sánāman*, 'of like name', *sárūpa*, 'of similar form', *sáyoni*, 'having a common origin', *sāvācas*, 'of assenting words', *sátoka*, 'having progeny along, with one's progeny', *sábrāhmaṇa*, 'along with the Brahmans', *sámūla*, 'with the root', *sāntardeça*, 'with the intermediate directions'; *sahágopa*, 'with the shepherd', *sahávatsa*, 'accompanied by one's young', *sahápatnī*, 'having her husband with her', *sahápuruṣa*, 'along with our men'.

In RV. (save in a doubtful case or two), only *saha* in such compounds gives the meaning of 'having along with one, accompanied by'; and, since *saha* governs the instrumental, the words beginning with it might be of the prepositional class (below, 1310). But in AV. both *sa* and *saha* have this value (as illustrated by examples given above); and in the later language, the combinations with *sa* are much the more numerous.

There are a few exceptions, in which the accent is that of the final member: thus, *sajósa*, *sajóśas*, *sad'ṣṭa*, *sapráthas*, *sabádhas*; and AV. shows the accent on the final syllable in *sāñgá* (ÇB. *sāñga*) and the substantivized (1312) *savidyutá*.

d. Possessive compounds with the exclamatory prefixes *ka* etc. are too few in the older language to furnish ground for any rule as to accent: *ká-bandha* is perhaps an example of such.

1305. Possessive compounds in which a verbal prefix is used as prior member with adjective value, qualifying a noun as final member, are found even in the oldest language, and

are rather more common later (compare the descriptive compounds, above, 1289; and the prepositional, below, 1310). They usually have the accent of the prefix.

Most common are those made with *pra*, *vi*, and *sam*: thus, for example, *prāmahas*, 'having exceeding might', *prācravas*, 'widely famed'; *vīgrīva*, 'of wry neck', *vyāṅga*, 'having limbs away or gone, limbless', *vījūni*, 'wifeless', *vīparva* and *vīparus*, 'jointless', *vyādhvan*, 'of wide ways', *vīmanas*, both 'of wide mind' and 'mindless', *vīvūcas*, 'of discordant speech'; *sāmpatnī*, 'having one's husband along', *sāmmanas*, 'of accordant mind', *sāmsahasra*, 'accompanied by a thousand', *sāmokas*, 'of joint abode'. Examples of others are: *ātyūrmi*, 'surging over', *ādhiwastra*, 'having a garment on', *ādhyardha*, 'with a half over', *ādhyakṣa*, 'overseer', *āpodaka*, 'without water', *abhīrūpa*, 'of adapted character', *āvatoka*, 'that has aborted', *āmanas*, 'of favorable mind', *ādojas*, 'of exalted power', *nīnanyu*, 'of assuaged fury', *nīrmāya*, 'free from guile', *nīrhasta*, 'handless'.

In a comparatively small number of cases, the accent is otherwise; and generally on the final: thus, *avakecā*, *upamanyū*, *viçaphā*, *viçikhā* (AV. *vīçikha*), *vīkarpā*, *sammātī*, etc.; in an instance or two, that of the final member; thus, *samçivari*, 'having a common young'.

**1306.** Possessive compounds with an ordinary adverb as prior member are also found in every period of the language. They usually have the accent which belongs to the adverb as independent word.

Examples are: *āntyūti*, 'bringing near help', *avódeva*, 'calling down the gods', *itāūti*, 'helping on this side', *ihācitta*, 'with mind directed hither', *dakṣiṇātāskaparda*, 'wearing the braid on the right side', *nānādharman*, 'of various character', *purudhāpratīka*, 'of manifold aspect', *viçvātomukha*, 'with faces on all sides', *sadyāūti*, 'of immediate aid', *vīçurūpa*, 'of various form', *smādūdhan*, 'with udder'.

An instance or two of irregular accent are met with: thus, *purorathā*, 'whose chariot is foremost'.

**1307.** It was pointed out in the preceding chapter (1222 c. 2) that the indifferent suffix *ka* is often added to a pure possessive compound, to help the conversion of the compounded stem into an adjective; especially, where the final of the stem is less usual or manageable in adjective inflection.

Also, the compound possessive stem occasionally takes further a possessive-making suffix, *in* (1230).

The frequent changes which are undergone by the final of a stem occurring at the end of a compound will be noticed further on (1315).

**1308.** The possessive compounds are not always used in the later language with the simple value of qualifying adjective; often they have a pregnant sense, and become the equivalents of dependent clauses; or the 'having' which is implied in

them obtains virtually the value of our 'having' as sign of past time.

Thus, for example, *prāptayāuvana*, 'possessing attained adolescence', i. e. 'having arrived at adolescence'; *anadhigatacāstra*, 'with unstudied books', i. e. 'who has neglected study'; *kṛtaprayatna*, 'possessing performed effort', i. e. 'on whom effort is expended'; *aṅgulīyacakadarcanāvasāna*, 'having the sight of the ring as termination', i. e. 'destined to end on sight of the ring'; *uddhṛtavīṣādaçalyaḥ*, 'having an extracted despair-arrow', i. e. 'when I shall have extracted the barb of despair'; *çrutavistāraḥ kriyatām*, 'let him be made with heard details', i. e. 'let him be informed of the details'.

### B. Compounds with Governed Final Member.

1309. Participial Compounds. This group of compounds, in which the prior member is a present participle and the final member its object, is a small one (toward thirty examples), and exclusively Vedic — indeed, almost limited to the oldest Vedic (of the Rig-Veda).

The accent is on the final syllable of the participle, whatever may have been the latter's accent as an independent word.

Examples are: *vidādvasu*, 'winning good things', *ksayādvīra*, 'governing (*ksāyant*) heroes', *tarāddveṣas*, 'overcoming (*tārant*) foes', *ābharādvasu*, 'bringing good things', *codayānmati*, 'inciting (*codāyant*) devotion', *mandayātsakha*, 'rejoicing friends', *dhārayātkavi*, 'sustaining sages', *manhayaḍrayi*, 'bestowing wealth'.

In *sādādyoni*, 'sitting in the lap' (*sūdat* quite anomalously for *sīdat* or *śadat*), and *spṛhayādvārṇa*, 'emulous of color', the case-relation of the final member is other than accusative. In *patayān mandayātsakham* (RV. i. 4. 7), *patayāt*, with accent changed accordingly, represents *patayātsakham*, the final member being understood from the following word. *Vidādaçva* is to be inferred from its derivative *vātdadaçvi*. Of this formation appear to be *jam-ādagni*, *pratādvasu* (*prathād?*), and *trasādasyu* (for *trasāddasyu?*). It was noticed above (1299 c) that *yuyujānāsapti* is capable of being understood as a unique compound of like character, with a perfect instead of present participle; *sādhadīṣti*, on account of its accent, is probably possessive.

1310. Prepositional Compounds. By this name may be conveniently called those combinations in which the prior member is a particle having true prepositional value, and the final member is a noun governed by it.

Such combinations, though few in number as compared with other classes of compounds, are not rare, either in the earlier language or the later.

Their accent is so various that no rule can be set up respecting it.

a. Examples are: *átyavi*, 'passing through the wool', *atirātrá*, 'overnight', *atimātrá*, 'exceeding measure'; *ádhiratha*, 'lying on the chariot', *adhigavá*, 'belonging to the cow'; *adhaspadá*, 'under the feet', *adhoakṣá*, 'below the axle'; *ánupatha*, 'following the road', *ánuvrata*, 'according to direction' (but perhaps possessive?), *anupūrvá*, 'following the one preceding, one after another', *anuṣatyá*, 'in accordance with truth', *anukúla*, 'down stream', etc.; *ántaspatha* (with anomalously changed accent of *antár*), 'within the way', *antardāvá*, 'within the flame' (?), *antarhastá*, 'in the hand'; *ántigrha*, 'near the house'; *ápavrata*, 'out of due course' (possessive?); *apiprāṇa*, 'accompanying the breath', *ápivrata*, 'concerned with the ceremony', *apiṣarvará*, 'bordering on the night', *apikarṇá*, 'next the ear'; *abhijñá*, 'reaching to the knee', *abhívira* and *abhísatvan*, 'overcoming heroes'; *ápathi*, 'on the road', *ádeva*, 'going to the gods', *ājarasá*, 'reaching old age', *ádvādaśá*, 'up to twelve'; *upakakṣá*, 'reaching to the arm-pits', *upottamá*, next to last, penultimate; *upáribudhna*, 'above the bottom', *upárimartya*, 'rising above mortals'; *tirojaná*, 'beyond people'; *niḥsālá*, 'out of the house'; *paripád*, ('about the feet') 'snare', *parihastá*, 'about the hand, bracelet'; *parókṣa*, 'out of sight', *parómātra*, beyond measure', *parogavyúti*, 'beyond the fields', *paraḥsahasrá* (*pāraḥsahasra*, ÇB.), 'above a thousand'; *pratidoṣá*, 'toward evening', *pratilomá*, 'against the grain', *pratikúla*, 'up stream', *pratyákṣa*, 'before the eyes'; *bahihparidhi*, 'outside the enclosure'; *vípathi*, 'outside the road'; *samakṣá*, 'close to the eyes, in sight'.

b. Compounds of this character are in the later language especially common with *adhi*: thus, *adhýtma*, 'relating to the soul or self', *adhiyajña*, 'relating to the sacrifice', etc.

c. A suffixal *a* is sometimes added to a final consonant, as in *upānasá*, 'on the wagon', *ávvyusá*, 'until daybreak'. In a few instances, the suffix *ya* is taken (see above, 1212 d. 5); and in one word the suffix *in*: thus, *paripanthán*, 'besetting the path'.

d. The prepositional compounds are especially liable to adverbial use: see below, 1313 a.

### Adjective Compounds as Nouns and as Adverbs.

1311. Compound adjectives, like simple ones, are freely used substantively as abstracts and collectives, especially in the neuter, less often in the feminine; and they are also much used adverbially, especially in the accusative neuter.

The matter is entitled to special notice only because certain forms of combination have become of special frequency in these uses, and because the Hindu grammarians have made out of them distinct classes of compounds, with separate names. There is nothing in the Veda which by itself would call for particular remark under this head.

1312. The substantively used compounds having a numeral as prior member, along with, in part, the adjective compounds

themselves, are treated by the Hindus as a separate class, called *dvigu*.

The name is a sample of the class, and means 'of two cows', said to be used in the sense of 'worth two cows'; as also *pañcagu*, 'bought for five cows', *dvinaū*, 'worth two ships', *pāñcakapāla*, 'made in five cups', and so on.

Vedic examples of numeral abstracts and collectives are: *divirājā*, '[combat] of two kings', *triyugā*, 'three ages', *triyojanā*, 'space of three leagues', *tridivā*, 'the triple heaven', *pañcayojanā*, 'space of five leagues', *ṣaḍahā*, 'six days' time', *daṣāṅgulā*, 'ten fingers' breadth'; and, with suffix *ya*, *sahasrāhnyā*, 'thousand days' journey'. Others, not numeral, but essentially of the same character, are, for example: *anamitrā*, 'freedom from enemies', *nikilbiṣā*, 'freedom from guilt', *savidyutā*, 'thunderstorm', *vṛhdaya*, 'heartlessness', and *sāhṛdaya*, 'heartiness', *sudivā*, 'prosperity by day', *sumṛgā* and *suçakunā*, 'prosperity with beasts and birds'. Feminines of like use are not quotable from RV. or AV.; later occur such as *triçatī*, 'three hundred' (481), *trilokī*, 'the three worlds', *pañcamūlī*, 'aggregate of five roots'.

As the examples show, the accent of words thus used is various; but it is more prevailingly on the final syllable than in the adjective compounds in their ordinary use.

**1313.** Those adverbially used accusatives of secondary adjective compounds which have an indeclinable or particle as prior member are reckoned by the Hindu grammarians as a separate class of compounds, and called by the name *avyayibhāva*.

This term is a derivative from the compound verb (1094) made up of *avyaya*, 'uninflected', and *√bhū*, and means 'conversion to an indeclinable'.

a. The prepositional compounds (1310) are especially frequent in this use: thus, for example, *anuṣvadhām*, 'by one's own will', *abhīpūrvām*, 'in succession', *ūdvādaçām*, 'up to twelve', *pratidoçām*, 'at evening', *samakṣām*, 'in sight'. Instances given by the grammarians are: *adhihari*, 'upon Hari', *uparūjam*, 'under the king', *upanadam* or *upanadi*, 'near the river', *pratyagni*, 'toward the fire', *pratiniçam*, 'every night', *nirmakṣikam*, 'free from flies'.

b. A large and important class is made up of words having a relative adverb, especially *yathā*, as prior member. Thus, for example, *yathāvacaçām*, 'as one chooses' (*vāça*, 'will'), *yathākṛtām*, 'as done [before], according to custom', *yathānāmā*, 'by name', *yathābhūgā*, 'according to several portion', *yathāṅgā* and *yathāparū*, 'limb by limb', *yatrakāmam*, 'whither one will', *yāvanmātrām*, 'in some measure', *yāvajjīvā*, 'as long as one lives', *yāvat-sābandhu*, 'according to the number of relations'.

These compounds are not common in the old language; RV. has with *yathā* only four of them, AV. only ten; and no such compound is used adjectively except *yāchreṣṭhā* RV., *yāvachreṣṭhā* AV., 'as good as possible'. ÇB. has *yathākārīn*, *yathācārīn*, *yāthākūma*, *yāthākratu* as adjectives (followed in each case by a correlative *tāthā*). The adjective use in the later language also is quite rare as compared with the adverbial.

Other cases than the accusative occasionally occur: thus, instrumental,

as *yathāsainkhyena*, *yathācaktyā*, *yathepsayā*, *yathāpratiguṇāis*; and ablative, as *yathāucityāt*.

c. Other adverbial compounds of equivalent character occur earlier, and are common later: for example, *ṛtekarmām*, 'according to sacrificial use', *nānārathām*, 'on different chariots', '*ubhayadyās*, 'two days in succession'; *citrapadakramam*, 'with wonderful progress', *pradānapūrvam*, 'with accompaniment of a gift'; etc.

### Anomalous Compounds.

1314. As in every language, compounds are now and then met with which are of anomalous character, as exhibiting combinations of elements not usually put together, or not after such a method, or for such a purpose. Some of these, especially of those occurring in the old language, may well be noticed here.

a. Compounds having a particle as final member: as, *apratī*, 'having no equal', *tuvipratī*, 'mightily opposing', *ātathā*, 'refusing', *vitatha*, 'false', *yathātathā*, 'as it really is', *sūsaha*, 'prosperity in companionship', etc.

b. Agglomerations of two or more elements out of phrases: thus, *aham-pūrvā*, 'eager to be first', *ahamuttarā*, 'contest for preëminence', *mamasatyā*, 'contest for possession', *itihāsā*, 'legend' (*iti hā* "sa, 'thus, indeed, it was'), *naghamārā* and *naghūriṣā*, 'not, surely, dying or coming to harm', *kuvīṣa*, 'some unknown person', *tadīdartha*, 'having just that as aim', *kūcidarthn*, 'having errands in every direction', *kācitkarā*, 'doing all sorts of things', *kuhacidvā*, 'wherever found', *yadbhaviṣya*, 'What-will-be', etc.

c. Agglomerations in which the prior member retains a syntactic form: as, *anyonya* and *paraspara*, 'one another'.

d. Aggregations with the natural order inverted: as, *pītamahā* and *tatāmahā*, 'grandfather'.

e. Aggregations of particles were pointed out above (1111a); also (1122b) cases in which *nū* and *mā* are used in composition.

f. In the later language, a preposition is occasionally preceded in composition by a case dependent on it: thus, *dantāntah*, 'between the teeth', *tadbahis*, 'outside of it', *satyavinā*, 'without truth'.

### Stem-finals altered in Composition.

1315. In all classes of compounds, certain changes of final are liable to appear in the concluding member; generally, they have the effect of transferring the compound to the *a*-declension. Thus:

a. A stem in *an* often drops its final consonant: examples are *akṣa*, *adhva*, *arva*, *astha*, *aha*, *takṣa*, *brahma*, *mūrdha*, *rāja*, *loma*, *vṛṣa*, *ṣva*, *saktha*, *sūma*.

b. An *i* or *ī* is changed to *a*: examples are *aṅgula*, *aṅjala*, *aṣra*, *kukṣa*, *khūra*, *nada*, *nābha*, *bhūma*, *rātra*, *sakha*, *hala*.

c. An *a* is added after a final consonant, and sometimes after an *u*-vowel or a diphthong: examples are *ṛea*, *tvaca*; *uda*, *pada*, *ṣarada*; *apa*; *dhura*, *pura*; *ahna*, *aṣmana*, *ūdhna*, *rājña*; *anasa*, *ayasa*, *āyusa*, *urasa*, *enasa*, *tamasa*, *manasa*, *yajuṣa*, *rajasā*, *rahasa*, *varcasa*, *vedasa*, *ṣreyasa*, *sarasa*; *bhruva*, *dīva*, *gava*, *gāva*, *nāva*.

### Irregular Construction with Compounds.

1316. In the looseness of unlimited and fortuitous combination, in the later language, it is not rare that a word in composition has an independent word in the sentence depending upon it alone, rather than upon the compound of which it forms a part.

A few examples are: *cittapramāthini bālā devānām api* (MBh.), 'a girl disturbing the minds even of the gods'; *jyotiṣām madhyacārī* (H.), 'moving in the midst of the stars'; *bhagavatū kṛtasanskāre 'smiṇ* (Ç.), 'in him, whose sacraments have been performed by the blessed one'; *syandane dattadṛṣṭiḥ* (Ç.), 'with his eye fixed on the chariot'.

Similar evidences of the looseness of composition are: *na dṛṣṭapūrvū 'thavā ṣrutā*, 'not seen nor heard of before'; *dārupātraṁ ca mṛṇmayam*, 'a wooden and an earthen vessel'.

## APPENDIX.

A. The following text is given (as promised above, 3) in order to illustrate by an example the variety of Sanskrit type in use. It is given twice over, and a transliteration into European letters follows. The text is a fable extracted from the first book of the Hitopadeṣa.

The Hunter, Deer, Boar, and Jackal.

B. The following text is given in order to illustrate by a sufficient example the usual method of marking accent, as described above (87, 90). In the MSS., the accent-signs are almost invariably added in red ink. The text is a hymn extracted from the tenth or last book of the Rig-Veda; it is regarded by the tradition as uttered by *Vāc*, 'voice' (i. e. the Word or Logos).

Hymn X. 125) from the Rig-Veda.

## SANSKRIT INDEX.

The references in both Indexes are to paragraphs. In this one, many abbreviations are used; but it is believed that they will be found self-explaining. For example, "pron." is pronunciation; "euph." points out anything relating to phonetic form or euphonic combination; "pres.," to present-system; "int." is intensive; "des." is desiderative; and so on. A prefixed hyphen denotes a suffix; one appended, a prefix.

- a*, pron. etc., 19—22; combination with following vowel, 126—7; loss of initial after *e* and *o*, 135, 175 a; resulting accent, 135; not liable to *guna*, 235; lightened to *i* or *u*, 249; lost in weakened syllable, 253.
- a*, prmy, 1148; scdry, 1208—9; — *a*-stems, decln, 326—34; from rdcl *ā*-st., 333, 354; in compsn, 1270, 1283 ff., 1287 a.
- a-* or *an-*, negative, 1121 a; in compsn, 1288 a, 1304 a.
- aka*, prmy, 1181; scdry, 1222 e.
- aki*, see 1221 b.
- √*aks*, 108 g; pres., 708; pf., 788.
- aksara*, 8.
- aksān*, *āksi*, 343 f, 431.
- aghosa*, 34.
- √*ac* or *añc*, pf., 788; pple, 957 c; stems ending with, 407—10.
- aj*, 219, 383 d.5, 1200 c.
- √*añc*, see *ac*.
- √*añj* or *aj*, euph., 219; pres., 694, 687; pf., 788.
- anda*, 1201.
- at*, 383 d.3, 1200 a — and see *-ant*.
- ata*, see 1176 e.
- ati*, see 1157.3.
- atu*, see 1161 c.
- atnu*, see 1196 c.
- atra*, see 1185 d.

## GENERAL INDEX.

- a*-aorist (simple aorist, 2), 846—54; in the later language, 846; roots forming it in the older language, 847; inflection, 848; modes, 849—51; participles, 852; irregularities, 853—4.
- a*-class (first, *bhū*-class) of verbs, 734—50; formation of stem, 734; inflection, 735—43; roots of the class, 744; irregularities, 745—50.
- ā*-class or accented *a*-class (sixth, *tud*-class) of verbs, 751—8; formation of stem, 751; inflection, 752; roots of the class, 753—4; irregularities, 755—8.
- ablative case, uses of, 289—93; ablative of comparison, 292b; with prepositions, 293, 1128; used adverbially, 1114; abl. infinitive, 983; abl. use of adverbs in *tas*, 1098.
- absolute use of genitive, 300; of locative, 303b.
- abstract nouns, secondary derivation of, 1206, 1236—40.
- accent, general, 80—97: its varieties, 80—6; modes of designating, 87—9; illustration of RV. method, p. 459; over-refinements of Hindu theory, 90; modern delivery of ancient accented texts, 91; no sentence accent, 92; accentless words, 93; words doubly accented, 94, 1255—6, 1267d; freedom of place of accent 95; — changes of accent in vowel combination, 128, 130, 135; — accent in declension, 314—20; of vocative, 314; change of accent in monosyllabic etc. declension, 316—8; in numeral, 482—3; of fractionals, 488; of case-forms used as adverbs, 1111e, 1112e, 1114d; different accent of action-nouns and agent-nouns, 1144; of determinative and possessive compounds, 1295; — accent of personal endings, 552—4; of personal verb-forms in the sentence, 591—8; of periphrastic formations, 945, 1073; of compounded verb-forms, 1082—5; — accent in primary derivation, 1144; in secondary, 1205; in composition, 1251.
- accusative case, uses of, 269—77: with verbs, 270—4; with nouns and adjectives, 271—2; with prepositions, 273, 1129; cognate, 275; adverbial, 276, 1111; double, 277; accus. infinitive, 981, 986—8; gerund, 995; accus. as prior member of compound, 1250a.
- action-nouns and agent-nouns, chief classes of primary derivatives, 1145—6.
- active voice, in verbs, 528—9.
- acute (*udātta*) accent, 81.
- ad*-class of verbs — see root-class.
- adjective, its distinction from noun, 322; formation of compound adj., 323—5, 1292 ff.; inflection of adj., 321—465; comparison, 466—74; adj. pronominally inflected, 522—6.
- adjective compounds, secondary, 1247, 1292—1310; of other than possessive value, 1294; adj. copulative compounds, 1257.
- adverbs, 1097—1122: adv. by derivation, 1097—1109; case-forms used as adv., 1110—17; adverbial compounds, 1313; verbal prefixes etc. as adv., 1118—20; inseparable prefixes, 1121; other miscellaneous adv., 1122; adv. used prepositionally, 1123 ff.; adv. copulative compounds, 1259.
- agent-nouns — see action-nouns.
- aggregative compounds — see copulative compounds.
- alphabets used for writing Sanskrit, 1; older Indian, 2; the Devanā-

- garī alph., 1—17; characters and transliteration, 5; arrangement, 7; theory of use, 8—9; vowel-writing, 10; consonant combinations, 12—15; other signs, 11, 16; numeral figures, 17; names of characters, 18; signs and transliteration of *anusvāra*, 73.
- alphabet, spoken — see system of sounds.
- alterant vowels, changing following *s* to *ṣ*, 180.
- analysis of language into its elements, 98—106; anal. of compound words, 1248.
- antithetical construction, its influence on accent of verb, 596—7.
- anusvāra*, its pronunciation etc., 70—2; signs and transliteration, 73: see also *ñ*, *m̐*.
- aorist tense, 532; its uses, 926—30; in prohibitive expression, 579—80; — aor. system, 535, 824—930: classification of forms of aor., 824; character and occurrence, 825—7; simple aor., 824, 828: 1. root-aor., 829—41; passive aor. 3d sing., 842—5; 2. *a*-aor., 846—54; 3. reduplicated or causative aor., 856—73; sibilant-aor., 874—920: 4. *ṣ*-aor., 878—97; 5. *iṣ*-aor., 898—910; 6. *siṣ*-aor., 911—15; 7. *sa*-aor., 916—20; aor. optative or precative of later language, 921—5; aor. in secondary conjugation, 1019, 1035, 1046, 1068; periphrastic aor., 1073 b; — aor. stem in derivation, 1140c.
- appositional possessive compounds, 1302.
- ar* or *r* in root and stem forms, 108 d, 237.
- article, indefinite, represented later by *eka*, 482a.
- aspirate mutes, phonetic character etc. of, 37—8; their deaspiration, 114, 153—5; restoration of lost aspiration to, 141, 147, 155; derivation of *h* from, 66; sonant aspirate with following *t*, *th*, 160: — and see the different letters.
- aspiration (*h*), its pronunciation etc., 59, 65—6: — and see *h*.
- asseverative particles, 1122a.
- assimilation in euphonic combination, 115—20; with or without change of articulate position, 116; surd and sonant, 117, 156—64; nasal, 117e, 198b, 199b; *l*, 117e, 206; dental to lingual and palatal, 118; other cases, 118—20.
- augment, 585—7; its omission, 587; uses of augmentless preterit persons, 563, 587; with *mā* prohibitive, 579—80.
- avyayībhāva* compounds, 1313.
- bahuvrīhi* compounds — see possessive compounds.
- benedictive — see precative.
- bhū*-class of verbs — see *a*-class.
- cardinal numerals, 475; their combinations, 476—81; inflection, 482—5; construction, 486; derivatives, 487—9.
- case-endings — see endings of declension.
- case-forms used as adverbs, 1110—17; change of accent in such, 1111e, 1112e, 1114d; their prepositional uses, 1125; case-forms in composition, 1250.
- cases, 266; their order of arrangement, 266; uses, 267—305: — and see the different cases.
- causative conjugation, 540, 607, 775, 856 ff., 1041—52; relation to so-called tenth or *cur*-class, 607, 1041; to denominative, 1041, 1056; formation of stem, 1041—2; inflection, present-system, 1043; perfect, 1045; attached reduplicated aorist, 1046—7, 856 ff.; other aorist forms, 1048—9; future etc., 1050; verbal nouns and adjectives, 1051; derivative or tertiary conjugations from caus. stem, 1052; declinable stems from do., 1140b.
- cerebral mutes — see lingual.
- circumflex (*svārīta*) accent, 81—6, 90b; independent, 81—4; its varieties, 84; enclitic, 85; their difference, 86; designation, 87—90; occurrence from vowel combinations, 128c, 130, 135.
- clauses, simplicity of combination of, 1131; dependent clauses, mode in, 581, 950; accent of verb in, 595.
- collective singular form of copulative compounds, 1253 b; in Veda, 1255c, 1256b.
- combination of elements, 102—4;

- euphonic rules for, 109—260; distinction of internal and external, 109—12; general arrangement of rules, 124.
- comparison of adjectives etc., 466—74; **primary**, in *īyas* and *īṣṭha*, 467—70, 1184; **secondary**, in *tara* and *tama*, 471—3, 1242; in *ra* and *ma*, 474; inflection of comparatives in *yas*, 463—5; comp. of nouns, pronouns, prepositions, 473—4, 520, 1119; of verbs, 473, 1111c.2; particles of comp., 1101, 1102b, 1107, 1122d.
- compensatory vowel-lengthening, 246.
- composition of stems — see compound stems.
- compound conjugation, 540, 1076—95: roots with verbal prefixes and like elements, 1076—89; accent of comp. forms, 1082—6; irregularities, 1087; roots with inseparable prefixes, 1089, 1121; with noun and adjective stems, 1090—5.
- compound stems, formation of, 103, 1246—1316: difference of earlier and later language as to composition, 1246: classification of compounds, 1247; their analysis, 1248; rules of phonetic combination, 1249; case-forms as prior member, 1250; accent, 1251; copulative comp., 1252—61; determinative: dependent, 1262—78; descriptive, 1279—91; secondary adjective: possessive, 1292—1308; participial, 1309; prepositional, 1310; adjective comp. as nouns and as adverbs, 1311—3; anomalous comp., 1314; stem-final altered in comp., 1315; irregular construction of comp., 1316.
- conditional tense, 532, 940—1; its uses, 950; conditional uses of optative and subjunctive, 581 b.
- conjugation, verbal inflection, 527—1095; general, 527—98: voice, 528—31; tenses and their uses, 532, 776—9, 821—3, 926—30, 948—50; modes and their uses, 533, 557—82, 921—5; tense-systems, 535; present-system, 599—779; perfect-system, 780—823; aorist-systems, 824—930; future-systems, 931—50; number and person, 536; personal endings, 541—56; verbal adjectives and nouns, 537—9, 951—95; secondary conjugations, 540, 996—1068; periphrastic and compound conjugation, 540, 1069—95.
- conjunctions, 1131—3.
- consonants, pronunciation etc., 31—75: mutes, 32—50; semivowels, 51—8; spirants, 59—66; *visarga* and *anusvāra* etc., 67—73; quantity, 76; cons. allowed as finals, 122, 139 ff.; occurring at end of stems and endings, 139: — and see the different classes and letters.
- consonant combinations, extension and abbreviation of, 121, 227—33.
- consonant-groups, how written in *devanāgarī*, 9, 12—5.
- consonantal stems, declension of, 377—465; their classification, 382.
- contemptuous prefix, 506, 1121e; do. suffix, 521, 1222 b.
- copulative compounds, 1247, 1252—61; of nouns, 1253—6; adjectives, 1257; adverbs, 1259; numerals, 1261; copulatives in later language, 1253—4; in Rig-Veda, 1255; in Atharva-Veda, 1256; accent, 1258; question of possessives from cop., 1293 a.
- cur-class of verbs, 607, 1041, 1056: — and see causative conjugation.
- dative case, uses of, 285—8; dat. infinitive, 982, 986; dat. used adverbially, 1113.
- deaspiration of aspirate mutes, 114, 153—5; consequent re-aspiration of initial, 141, 147, 155.
- declension, in general, 261—320: gender, 263; number, 264—5; case, 266; uses of the cases, 267—305; endings of decl., 306—10; variation of stem and insertions, 311—3; accent, 314—20; — decl. of nouns and adjectives, 321—465: I. *a*-stems, 326—34; II. *i* and *u*-stems, 335—46; III. *ā*, *ī*, and *ū* (and diphthongal) stems, 347—68; IV. *r*-stems, 369—76; V. consonant-stems, 377—465: A. root-stems etc., 383—410; B. derivative stems in *as*, *is*, *us*, 411—9; C. in *an*, 420—37; D. in *in*, 438—41; E. in *ant*, 442—57; F. in *vāns*, 458—62; G. in *yas*, 463—5; — decl. of numerals, 482—5; of

- pronouns, 491—521; of adjectives inflected pronominally, 522—6.
- declinable stems, derivation of — see derivation.
- decompound compounds and their analysis, 1248.
- demonstrative pronouns, 495—503.
- denominative conjugation, 540, 1053—63: formation without sign, 1054; with sign *ya*, from stems of various final, 1055—63; relation to causative, 1056, 1067; with signs *sya*, *kāmya*, 1064—5; with *āya*, beside *nā*-class verbs etc., 1066; inflection, 1068; declinable stems from denom. stem, 1149, 1178 h, 1180 b.
- dental series of mutes (*t*, *th*, *d*, *dh*, *n*), pronunciation etc., 47—8; dent. character of *l*, 25; of *l*, 51, 53; of *s*, 60; assimilation of dent. to palatals and linguals. 118, 196—203, 205; dent. sibilant and nasal converted to lingual, 180—95: — and see the different letters.
- dependent clause, accent of verb in, 595.
- dependent compounds, 1247, 1263, 1264—78; noun, 1264; adjective, 1265; their varieties, 1266—78: with ordinary noun or adjective as final member, 1267—8; with root-noun, 1269; derivative in *a*, 1270; *ana*, 1271; *ya*, 1272; participle in *ta* or *na*, 1273; *ti*, 1274; *in*, 1275; *i*, 1276; *van*, *man*, etc., 1277—8; dep. comp. in possessive use, 1296.
- derivation of adverbs, 1097—1109; of declinable stems, 1136—1245: in general, 1136—42; primary, 1143—1201; secondary, 1202—45.
- descent, adjectives and nouns indicating, 1206.
- descriptive compounds, 1247, 1263, 1279—91; of ordinary adjective with noun, 1280; of appositional noun with noun, 1280 b; with participle as final member, 1283—4; with gerundive, 1285; with root-stem, 1286; with other verbal derivatives, 1287; with inseparable prefix as prior member, 1288; with verbal prefix etc., 1289; with other adverbial words, 1290; with *pūrva* in reversed position, 1291; descr. comp. in possessive use, 1297 ff.
- desiderative conjugation, 540, 1026—40; meaning, 1026, 1040; formation of stem, 1027—9; abbreviated stems, 1030; use of union-vowel *i*, 1031; inflection, present-system, 1032; other forms, 1033—7; derivative or tertiary conjugations from desid. stem, 1039; desid. from causative stem, 1052 b; declinable stems from desid. stem, 1140 b, 1149, 1159 b, 1161 c, 1178 f.
- determinative compounds, 1247, 1262—91; dependent, 1264—78; descriptive, 1279—91; in possessive adjective use, 1293 ff.
- devalā-dvandva* compounds, 1251 a, 1255.
- diminutives, secondary derivation of, 1206, 1222, 1243.
- diphthongs (*e*, *āi*, *o*, *āu*), pronunciation etc., 27—30; protraction of, 78; euphonic combination as finals, 131—5: — and see the different letters.
- diphthongal stems, declension of. 360—1.
- div*-class of verbs — see *ya*-class.
- double stems, present, 815; aorist, 894 d, 897.
- doubling of aspirate mutes, 154; of a final nasal, 210; of *ch*, 227; of first consonant of a group, 229; of a consonant after *r* (and *h*, *l*, *v*), 228.
- dual number, its use, 265; its forms, 308; in personal pronoun, 492.
- dual finals *e*, *i*, *ū* uncombining, 138 a.
- dvandva* compounds — see copulative.
- dvigu* compounds, 1312.
- eighth class of verbs — see *u*-class.
- emphasis, accent of verb for, 598.
- emphatic pronoun, 513.
- endings, of inflection and derivation, 99, 100; of declension, 306—10; of singular, 307; dual, 308; plural, 309; normal scheme, 310; end. of *a*-stems, 327—9; of *i* and *u*-stems, 336—8; of radical *ā*, *i*, *ū*-stems, 349; of derivative do., 363; of *r*-stems, 371; of personal pronouns, 492—3; of general pronominal declension, 496; — end. of conjugation. 541 ff.: of 1st sing., 543; 2d, 544; 3d, 545; of 1st du., 546; 2d and 3d, 547; of 1st pl., 548; 2d, 549; 3d, 550; normal schemes,

- 553; accent, 552—4; irregularities, 553; end. of subjunctive combined with mode-sign, 560—2; of optative, 566; of precativ, 568; *tāt* of imperative, 570—1; — end. of derivation — see suffixes.
- euphonic combination of elements, 102—4; rules respecting it, 109—226.
- exclamatory prefix from interrogative pronoun, 506, 1121 e.
- fifth class of verbs — see *nu*-class.
- finals, permitted, 122, 139—52; final consonants of stems and endings, 139.
- final clauses, modes used in, 581 c.
- first class of verbs — see *a*-class.
- first general conjugation of verbs, its characteristics, 604.
- forms, stronger and weaker, of roots and stems, 107—8: — and see variation of stem.
- fourth class of verbs — see *ya*-class.
- fractional use of ordinals, 488.
- frequentative conjugation — see intensive.
- future passive participles — see gerundives.
- future tenses, 532; their uses, 948—9; fut. systems, 535, 931—50; *s*-future and conditional, 932—41; periphrastic future, 942—7.
- gender in declension, 262—3.
- general and special tenses, 599.
- genitive case, uses of, 294—300: with prepositions, 299, 1130; gen. absolute, 300; loss of accent of gen. with vocative, 314; gen. infinitive, 984; gen. used adverbially, 1115; as prior member of compound, 1250 d.
- gerunds, 539, 989—95; their use, 989, 994; ger. in *tvā*, 990, 991, 993; in *ya* (or *yā*), 990, 992—3; in *tvāya* and *tvī*, 993 b; in *tvānam* and *tvīnam*, 993 c; in *am*, 995.
- gerundives, or future passive participles, 961—6, 1212—8; ger. in *ya*, 962—3, 1213; in *tavya*, 962, 964, 1212 d. 2; in *anīya*, 962, 965, 1215 b; in *tva*, 966 a, 1209 g; in *enya*, 966 b, 1217; in *āyya*, 966 c, 1218; in *elima*, 966 d, 1201; ger. in composition, 1285.
- grave (*anudātta*) accent, 81.
- gūṇa*-strengthening, character and occurrence of, 235—43, and *passim*; in primary derivation, 1143 a; in secondary, 1203 a, 1204 end.
- guttural series of mutes (*kh*, *gh*, *g*, *gh*, *m*), pronunciation etc., 39—41; asserted gutt. character of *a*, 20; of *h*, 65; palatals from original gutt., 41—3; *ç* and *h* do., 64, 66; reversion of palatals etc. to gutt. form, 43, 64, 142, 145, 147, 214 ff.: — and see the different letters.
- heavy and light syllables, 79.
- hiatus, avoidance of, 113, 125—38; not avoided in Veda, 113, 125; its occurrence as result of euphonic processes, 132—4, 175 b, 177.
- hu*-class of verbs — see reduplicating class.
- imperative mode, 533, 569, 572 ff.; scheme of its endings, 553; its 1st persons old subjunctive, 533, 574, 578; impv. form in *tāt* and its uses, 570—1; Vedic 2d sing. in *si*, 624; impv. use of infinitives, 982 d.
- imperfect tense, 532; its use, 779.
- imperfect time, no designation of, 532.
- increment and decrement of elements, 123, 234 ff.
- indeclinables, 98, 1096—1135: adverbs, 1097—1122; prepositions, 1123—30; conjunctions, 1131—3; interjections, 1134—5; derivative stems from indeclinables, 1138, 1245.
- indefinite use of interrogative and relative pronouns, 507, 511.
- infinitives, 538, 968—88; later, 968; earlier, 969—79; uses, 980—8.
- inseparable prefixes, 1121; in descriptive composition, 1283 ff., 1288; in possessive, 1304.
- insertions between stem and ending in declension, 313.
- instrumental case, uses of, 278—84; of separation, 283; with prepositions, 284, 1127; gerundial, 989; used adverbially, 1112; as prior member of compound, 1250 b.
- intensive (or frequentative) conjugation, 540, 1000—25; character and occurrence, 1000—1; reduplication, 1002—3; inflection, present-system, 1004—17; derivative middle inflection, 1016—7; forms outside present-system, 1018—9, 1025;

- doubtful intens. formations, 1020—4; derivative or tertiary conjugations from intens. stem, 1025.
- interjections, 1134—5; their final vowel uncombinable, 133f.
- internal and external combination, distinction of, 109—12.
- internal change, question of derivation by, 1208 end.
- interrogative particles, 1122c.
- interrogative pronoun, 504—7; its indefinite use, 507; exclamatory prefix from it, 506, 1121e.
- īṣ-aorist, 898—910: formation of stem, 898—900; inflection, 901—2; roots making it, 903; irregularities, 904; modes, 905—8; from secondary conjugations, 1019, 1035, 1048, 1068.
- jihvāmūliya*-spirant, 69, 170d.
- karmadhāraya* compounds — see descriptive compounds.
- krī*-class of verbs — see *nā*-class.
- labial series of mutes (*p*, *ph*, *b*, *bh*, *m*), pronunciation etc., 49—50; lab. character of *u*, *ū*, 20; of *v*, 51, 57—58: — and see the different letters.
- lengthening of vowels in formation and inflection, 244—6; of final vowel in composition, 247; in the sentence in Veda, 248.
- light and heavy syllables, 79.
- lightening of *a* or *ā* to an *i* or *u*-vowel, 249ff.
- lingual series of mutes (*t*, *th*, *d*, *dh*, *ṇ*), pronunciation etc., 45—6; non-originality, 46; ling. character of *r*, 25; of *r*, 51—2; ling. *l*, 5 end, 54; ling. character of *ṣ*, 61; assimilation of dentals to ling., 118, 196ff.; lingualization of *s* and *n*, 180—95: — and see the different letters.
- locative case, uses of, 301—5; loc. absolute, 303; of goal of action, 304; with prepositions, 305, 1126; used adverbially, 1116; loc. infinitive, 985; loc. use of adverbs in *tra*, 1099; loc. as prior member of compound, 1250c.
- long and short quantity, 76—9.
- manner, particles of, 1101—2, 1122g.
- middle stem-form in declension, 311.
- middle voice, 528—30; its use as passive, 531.
- mode in verbal inflection, 533; subjunctive, 557—63; optative, 564—8; imperative, 569—71; uses of the modes, 572—82.
- multiplicative numeral adverbs, 489, 1104—6.
- mutes, series of, their pronunciation etc., 32—50: classification, 32—8; guttural series, 39—41; palatal, 42—4; lingual, 45—6; dental, 47—8; labial, 49—50; mutes permitted as finals, 141—3; anomalous conversions from one series to another, 151: — and see the different series.
- nā*-class (ninth, *krī*-class) of verbs, 717—32: formation of stem, 717; inflection, 718—26; roots of the class, 727; irregularities, 728—32; accompanying denominative in *āya*, 732, 1066b.
- nasal assimilation, 117, 161, 198b, 199b.
- nasal class (seventh, *rudh*-class) of verbs, 683—96: formation of stem, 683; inflection, 684—93; roots of the class, 694; irregularities, 695—6.
- nasal increment in strong forms, 255.
- nasal mutes (*n̄*, *n̄*, *ṇ*, *n*, *m*), 34, 36; their occurrence as finals, 143; duplication, 210; assimilation of preceding mute, 161, 198b, 199b; — nasal spirant or *anusvāra*, 70—3; — nasal semivowels, 71, 206, 213c; — nasal vowels, 71.
- negative particles, 1122b; neg. prefix, 1121a.
- ninth class of verbs — see *nā*-class.
- nominative case, uses of, 267; nom. use of infinitive, 987; nom. form as particle, 1117.
- noun and adjective, distinction of, 322; inflection of nouns — see declension.
- nu*-class (6fth, *su*-class) of verbs, 697—716: formation of stem, 697; inflection, 698—707; roots of the class, 708; irregularities, 709—12, 716.
- number in declension, 264—5; in conjugation, 536.
- numerals, 475—89: simple cardinals, 475; their combinations for odd

- numbers, 476—81; inflection, 482—5; construction, 486; ordinals, 487—8; other num. derivatives, 489; num. figures, 17; possessive compounds with num., 1300; num. or *dvigu* compounds, 1312.
- omission, sign indicating, 16.
- onomatopoeic words, 1091, 1135b.
- optative mode, 533, 564—8; its formation, 564—5; scheme of endings combined with mode-sign, 566; precativè, 567, 921—5; scheme of prec. endings, 568; uses of opt., 573—82.
- ordinal numeral adjectives, 487—8.
- pada*-endings in declension, 111.
- palatal series of mutes (*c*, *ch*, *j*, *jh*, *ñ*), pronunciation etc., 42—4; derived from original gutturals, 42; reversion to guttural form, 214 ff.; euphonic combinations, 118—9, 214—20; treatment as finals, 142; pal. character of *i*, *ī*, 20; of *y*, 51, 56; of *ç*, 63—4: — and see the different letters.
- participial compounds, 1247, 1309.
- participles, 534, 537, 583—4, 1172—7; of present-systems, 619 etc. etc.; of perfect, 802—7; of aorist, 840, 852, 872, 897, 909; of future, 939; passive part., 952—8, 1176—7; active, in *tavant*, 959—60; future passive, 961—7; of secondary conjugations, 1012—3, 1019, 1032, 1037, 1043, 1050—1, 1068; part. in possessive composition, 1299; — inflection of part. in *ant*, 443—9; in *vāns*, 458—62; — part-phrases, periphrastic, 1074—5.
- passive conjugation, 531, 540, 998; present-system (*yā*-class), 768—74; aorist 3d sing., 842—5; periphrastic perfect, 1072; participle in *ta* or *na*, 952—7, 1176—7; future participles, 961—6 (and see gerundives); pass. use of infinitive, 988; pass. of secondary conjugations, 1025, 1039, 1052a; pass. constructions, 282, 999.
- perfect tense, 532; scheme of its endings, 553; uses, 821—3; — perf.-system, 535, 780—823; formation of stem, 781—94; reduplication, 782—91; strong and weak stem-forms, 792—4; endings and their combination with stem, 795 ff.; union-vowel *i*, 796—8; inflection, 800; irregularities, 801; participle, 802—7; its inflection, 458—62; modes, 808—16; pluperfect, 817—20; — periphrastic perf., 1070—73.
- perfect time, expressed by so-called aorist, 532, 928.
- periphrastic conjugation, 1069—75; future, 931, 942—7; its uses, 949; perfect, 1070—3, 1018, 1034, 1045, 1068; aorist and precativè, 1073b; present, 1073c; periph. participial phrases, 1074—5.
- person in verbal inflection, 536.
- personal endings — see endings of conjugation.
- personal pronouns, 491—4; nouns used as such, 514.
- place, particles of, 1099, 1100, 1122e.
- pluperfect tense, 532, 817—20; plup. time, no designation of, 532.
- position, length of syllable by, 79.
- possessive adjectives, 1206, 1230—35; pronominal, 516.
- possessive compounds, 1247, 1293—1308; poss. dependents, 1296; poss. descriptives, 1297 ff.; with ordinary adjective as prior member, 1298; with participle, 1299; with numeral, 1300; with appositive noun, 1301—3; with adverb, 1304—6; added suffixes, 1307; pregnant use, 1308.
- precativè optative, 533; its formation, 567; scheme of endings, 568; prec. in later language, 921—5; use, 573.
- prepositions, 1123—30; words used as such, 1123—5; cases construed with them, 1126—30; — prep. in composition with roots — see verbal prefixes.
- prepositional compounds, 1247, 1310.
- present tense, 532; its uses, 777—8; — pres.-system, 535, 599—779; prominence as part of verb-system, 600; varieties of form and their classification, 601 ff.; conjugations and conjugation-classes, 602—10; first conjugation: I. root-class, 611—41; II. reduplicating class, 642—82; III. nasal class, 683—96; IV. *nu* and *u*-class, 697—716; V. *nā*-class, 717—32; second conjugation: VI. *a*-class, 734—50;

- VII. accented *ā*-class, 751—8; VIII. *ya*-class, 759—67; IX. *yā*-class, or passive conjugation, 768—74; uses of tenses, 776—9; of modes, 572—81; — pres. stems, derivatives from, 1140 c.
- primary and secondary personal endings, 542 ff.; normal schemes, 553.
- primary derivation, 1138—1201: relation to secondary, 1139; from what made, 1140—1; union-vowels, 1142; form of root, 1143; accent, 1144; meaning, 1145—6; prim. suffixes and the derivatives made with them, 1143—1201.
- prohibitive expression, 574, 579—80.
- pronominal roots, 490; their character, in inflection and derivation, 1137—8; adverbs from them, 1097 ff.
- pronouns, 490—521: personal, 491—4; demonstrative, 495—503; interrogative, 504—7; relative, 508—12; emphatic, 513; nouns used pronominally, 514; pron. derivative adjectives, 515—21; adjectives declined pronominally, 522—6.
- pronunciation — see system of sounds.
- protracted (*pluta*) quantity, 78; protr. final vowel uncombinable, 138 e.
- punctuation, signs of, in *devanāgarī*, 16.
- quantity of consonants and vowels, 76—8; of syllables, 79.
- radical stems — see root-stems.
- reduplicated (or causative) aorist, 824, 856—73, 1046; formation of stem, 857—63; inflection, 864—7; use in primary conjugation, 868; in causative, 1046; modes, 869—71.
- reduplicating class (third, *hu*-class) of verbs, 642—82; reduplication and accent, 642—6; inflection, 647—58; irregularities, 659—82.
- reduplication, occurrence of, 259; general rules for forming, 588—90; present red., 643, 660 ff.; perfect, 782—91; aorist, 857—63; intensive, 1002; desiderative, 1029; in derivation, 1143 e; anomalous, 1087 f.
- relationship, nouns of, in *r*, 369 ff., 1182 d.
- relative clauses, peculiarities of, 512.
- relative compounds (possessive), 1293 c.
- relative pronoun, 508—12.
- repeated words, 1260.
- resolution, in Veda, of semivowels into vowels, and of vowels into two syllables, 113.
- reversion of palatal mutes and sibilant, and of *h*, to guttural form, 43, 64, 142, 145, 147, 214 ff., 1176 a.
- roots of a language, 100—1, 106; forms of root, 107; roots and root-forms according to the native grammarians, 108.
- root-aorist, 829—45: in later language, 829; in older, 830 ff.; modes, 835—9; participles, 840; passive aor. 3d sing., 842—5.
- root-class (second, *ad*-class) of verbs, 611—41; inflection, 612—23; irregularities, 625—41.
- root-stems, their occurrence and use, 323, 383, 1137, 1147; as infinitives, 970 a, 971; in dependent composition, 1269; in descriptive, 1286; inflection of such stems in *ā*, *ī*, *ū*, 349 ff.; in consonants, 383 ff.
- rudh*-class of verbs — see nasal class.
- s*-aorist, 878—97: formation of stem, 878—9; endings and combination with stem, 880—1; question of loss of *s* in certain forms, 834, 881; inflection, 882—3; irregularities, 884—91; absence of *ī* in 2d and 3d sing. in older language, 888—90; modes, 892—6; participles, 897; — *s*-aor. stem in derivation, 1140 c.
- s*-futre, 931—9: formation of stem, 932, 936; use of union-vowel *i*, 934—5; occurrence, 937; modes, 938; participles, 939; its preterit, the conditional, 940—1; uses, 948.
- sa*-aorist, 916—20: roots allowed later to make it, 916; occurrence in older language, 919—20; formation of stem, 917; inflection, 918.
- second class of verbs — see root-class.
- second general conjugation of verbs, its characteristics, 605, 733.
- secondary adjective compounds, 1247, 1292 ff.
- secondary conjugations, 540, 996—1068: passive, 998—9; intensive, 1000—1025; desiderative, 1026—40; causative, 1041—52; denominative, 1053—68.
- secondary derivation, 1138—9, 1202—45; relation to primary, 1139 ff.;

- forms of stem, 1203—4; accent, 1205; meaning, 1206; sec. suffixes and the derivatives made with them, 1208—45.
- secondary personal endings, 542 ff.; normal scheme, 553.
- semivowels (*y*, *r*, *l*, *v*), pronunciation etc., 51—8; nasal semiv., 71, 206, 213 c: — and see the different letters.
- sentence, rules of euphonic combination in, 103.
- seventh class of verbs — see nasal class.
- sh*-sounds (*ś* and *ç*), 61, 63.
- short and long quantity, 76—9.
- sibilants (*ç*, *ś*, *ṣ*), pronunciation etc., 60—4: — and see the different letters.
- sibilant-aorist, 824, 874—920: formation and classification, 874—7; 4. *s*-aorist, 878—97; 5. *iś*-aorist, 898—910; 6. *siś*-aorist, 911—5; 7. *sa*-aorist, 916—20; its stem in derivation, 1140 c.
- simple aorist, 824, 828—55: 1. root-aorist, 829—41; passive aor. 3d sing., 842—5; 2. *a*-aorist, 846—55.
- siś*-aorist, 911—5; formation of stem, 911; inflection, 911; forms in older language, 912—13; modes, 914; middle forms, 915.
- sixth class of verbs — see *ā*-class.
- sonant and surd sounds, 34; mutes, 34—5; aspirates, 37—8; question as to character of *h*, 65; of final mute, 141 end; euphonic assimilation of the two classes, 117, 156—78.
- special and general tenses, 599.
- spirants, 59 ff.: sibilants, 59—64; aspiration, 65; other breathings, 67—9.
- stems, inflectible, 99—100, 105; their derivation — see derivation.
- strengthening and weakening processes, 234—60.
- strong and weak, or strong, middle, and weakest, forms of stems in declension, 311; of roots and stems in general, 107—8.
- su*-class of verbs — see *nu*-class.
- subjunctive mode, 533; formation and endings, 557—62; its first persons used later as imperative, 533, 574, 578; subj. use of augmentless preterit forms, 563, 587; uses of subj. mode, 574—82.
- suffixes forming adverbs, 1097—1109; do. declinable stems — see derivation.
- surd and sonant sounds — see sonant syllables, quantity of, 79.
- system of sounds, 19—75: vowels and diphthongs, 19—30; consonants, 31 ff.; mutes, 32—50; semivowels, 51—8; sibilants, 59—64; aspiration, 65—6; *visarga* and other breathings, 68—9; *anusvāra*, 70—3; unwritten sounds defined by Hindu grammarians, 230; scheme of spoken alphabet, with notice of comparative frequency of the sounds, 75; quantity, 76—9; accent and its designation, 80—97.
- tan*-class of verbs — see *u*-class.
- tatpuruṣa*-compounds — see determinatives.
- tense in verbal inflection, 532; tense-systems, 535; present-system, 599—779; perfect-system, 780—823; aorist-systems, 824—930; future-systems, 931—950.
- tenth class of verbs — see causative conjugation.
- third class of verbs — see reduplicating class.
- time, particles of, 1103, 1122 f.
- transliteration, general method of, 5; of sign of elision, 16, 135; of combined final and initial vowels, 126; of *anusvāra*, 73; of accent, 83, 89.
- tud*-class of verbs — see *ā*-class.
- u*-class (eighth, *tan*-class) of verbs, 697—716; formation of stem, 697; inflection, 698—707; roots of the class, 713; irregular root *kr* or *kar*, 714—5; other irregularities, 716.
- uncombinable (*pragrhya*) final vowels, 138.
- uninflected words — see indeclinables.
- union-vowels, 254; *i* in present inflection, 630—1, 640; in perfect, 796—8, 803; in aorist, 876—7; in *s*-future, 934—5; in periphrastic future, 943; in desiderative, 1031; in passive participle, 956; in infinitive and gerund, 968, 991; in derivation, 1142; — *ī* in present inflection, 632—4; in 2d and 3d

sing., 555 b; in intensive, 1004 ff.;  
 ī for i, 900; āi for ī, 555 b.  
*upadhmanīya*-spirant, 69, 170 d.

variation of stem-form in declension,  
 311—2; in *r*-stems, 370; in con-  
 sonantal stems, 379, 385—8, 421,  
 443—4, 458, 463; — in conju-  
 gation, 556; in present-stem, 604;  
 in perfect, 792—4; in aorist, 831 ff.,  
 879, 899; in intensive, 1004; in pri-  
 mary derivation, 1143; in secondary,  
 1203—4; in composition, 1249.

verb — see conjugation.

verb-forms, accentuation of, in the  
 sentence, 591—8.

verbal prefixes, 1076—7; kindred  
 words, 1078—9, 1120; composition  
 with roots, 1076—87, 137a, b; accent,  
 1082—5; their more independent  
 use, 1084, 1118; prepositional uses,  
 1125; forms of comparison, 1119; de-  
 clinable stems from roots compounded  
 with them, 1141, 1282; use in des-  
 criptive composition, 1289; in pos-  
 sessive, 1305; in prepositional, 1310.  
*visarga* (or *visarjanīya*), 67—9; quan-  
 titative value, 79; occurrence, 144  
 —5, 170—2.

vocative case, form of, 307 end; Vedic,  
 in *as*, 425 g, 454 b, 462 a; accent  
 (along with qualifying word), 314;  
 verb accented after, 594.

voice in verbal inflection, 528—31.  
 vowels, how written in *devanāgarī*,  
 10; sign of absence of, 11; —  
 their pronunciation etc., 19—29;  
 a, i, u-vowels, 19—22; r, l-vowels,  
 23—6; diphthongs, 27—9; quan-  
 tity, 77—8; accent, 80 ff.; nasal  
 vowels, 71; rules of vowel-com-  
 bination, 125—38; resulting accent,  
 128, 130, 135; exceptional cases,  
 136—8.

*vrddhi*-strengthening, character and  
 occurrence of, 235—43, and *passim*;  
 in primary derivation, 1143 a; in  
 secondary, 1204.

w-sound, belonging to *v*, 57.

weak, or weakest, form of stem in  
 declension, 311.

weakening and strengthening pro-  
 cesses, 234—60.

*ya*-class (fourth, *div*-class) of verbs,  
 759—67: formation of stem, 759;  
 inflection, 760; roots of the class  
 and their classification, 761—2;  
 irregularities, 763—7.

*yā*-class of verbs, or passive present-  
 system, 768—74; formation of  
 stem, 768—70; inflection, 771;  
 irregularities, 772—4; *yā*-formation  
 from intensive stem, 1016—7.

## ERRATA.

The remark at the end of **721** belongs instead under **688**.

At **612 a**, last line of paradigm, restore the lost *i* of *itās*; and, at **1156**, l. 5, the lost *a* at end of line.

Read *l̥* at **65**, last line but one; *vāvā* at **94 e**; *eṣas* and *eṣa* at **176**, ll. 2, 3, *ṣvit* at **188**, l. 5; *gorātsu* at **221**, l. 8; *brāvāṇaḥ* at **268**, l. 5; *tīryate* at **761 b**, l. 15; *dyut* at **785**, l. 5; *āmoci* at **844**, l. 8; *arūṇiṣus* at **908**, l. 8; *tanyū* at **1178 e**, l. 1; *dāṅṅuka* at **1180 a**, l. 3; *ṛj* (for *uj*) at **1200 c**, l. 1.

References to the paragraphs **361—76** are (owing to an unfortunately necessary renumbering) in several instances wrong by a difference of one to five. Also other references as follows; read **454** at **425 g**, l. 2; **547** at **561**, l. 5 from end; **672** at **654**, l. 3; **1042 d** at **1030**, l. 13; and **1271** at **1150 c**, l. 8.
