PROGRESS

CHINOOK USED AS SKY PLATFORM

For the first time in combat, Chinooks delivered troops by ladder into Vietcong infested territory. The mission was a blocking force to intercept a possible Vietcong movement. Because dense jungle made it impossible to land any aircraft, the Chinook unit delivered 140 men by the ladder technique. Lieutenant Colonel Max A. Clark piloted the lead Chinook. First Cavalry Division officers observing the maneuver were impressed by the effectiveness of the new concept and ladders may be used frequently to deliver troops in future operations.

BRIEF LETTERS FROM READERS ON ANY PERTINENT SUBJECT ARE WELCOMED BY THIS PUBLICATION. NO ANONYMOUS LETTERS WILL BE PUBLISHED.

LAST LOOK!

Dear Editor:

The photograph below may be of interest. Shown, left to right, are William Rollnick, Contracts, Hiller Aircraft; the writer; and Stanley

Hiller, Jr.

The occasion was the "last look" at the final production OH-23G which rolled down the rapidly disappearing assembly line and was completed and delivered to the Army. Mr. Hiller, who had resigned from the Fairchild-Hiller Corp. to pursue private ventures in California, had stopped by the plant to see the last of a long line of military helicopters which carry his name.

The Palo Alto facility has since been closed with the company's transfer of its operations

to Hagerstown, Md.

Incidentally, while performing the acceptance test flight on this final aircraft for the Army, I completed my 5,000 hour of military flight time, and, boy, did it take a long time to get those last 1,00° hours!

Lt. Col. William R. Dodd Chief, Hiller Plant Div.

THE ZING!

Dear Editor:

As an old - and now retired - World War II Army Aviator, I enjoyed the issues of the magazine that you published throughout the 'fifties. They were informative, crammed with personnel and unit trivia of high interest to me, and above all, they were controversial and had some zing!

While I still subscribe - how else can I keep track of my old friends? - and wouldn't knock the product since many of these same friends are infrequent "contributors" to the present magazine, there is no question but that the old zing has gone. In glancing through a half dozen 1965 issues the other night, I couldn't find one solitary controversial thought or expression indicating a difference of opinion. I can't believe that you are now refusing to publish material that's contrary to the obvious "team play," and would rather believe that either the mass that we know as Army aviation today is a homogenized, self-satisfied lot, or the more likely explanation, the people in it today are not so contented and homogenized, but are simply too busy or too lazy to create the tiny ripples that rock big boats! Which is it?

Major Harry B. Mackel Patterson, New Jersey

(Ed. Moo-o-o!)

A "FIRST!"

Dear Editor:

Recently, you published an article from one organization showing its percentage of Master Army Aviators, which was rather high. At the time, you promised to print any Army aviation "Firsts," and solicited items on this (subject) from the field.

We believe that we were the first Army aviation unit to achieve a goal of 100 per cent

Master Army Aviators!

As at 18 September 1964, the Army Aviation Unit, G-3 Branch, U.S. Element, Joint U.S. Military Mission for Aid to Turkey (JUSMMAT) reached this goal.

At the time the unit consisted of Lt. Col. Clifford S. Athey (now at USAAVNS), Major Alfred J. Wolfe (now at Ft. Eustis), and the

writer. Can you beat this?

Maj. Thomas N. Hurst APO New York 09254

ARMY AVIATION

VOLUME 15

JANUARY 31, 1966

NUMBER 1

"ARMY AVIATION" is published monthly by Army Aviation Publications, Inc., with Editorial and Business Offices located at 1 Crestwood Road, Westport, Conn. 06880. Phone: Area Code 203 227-8266,

The views and opinions expressed in the publication are not necessarily those of the Department of the Army or of the staff of the publication. No inference should be drawn that the publication is an authorized, funded government publication.

Articles of 1,500 words or less, news items, and photographs perfinent to Army avisation are solicited and should be mailed to the Editorial Office so as to arrive on or before the 5th of the month preceding the cover date month. Preferential treatment will be given to exclusive copy and/or photographs so marked.

Copy should bear the name and address of the writer. The magazine cannot assume responsibility for the safe return of copy, photographs, etc., unless the submission is accompanied by an addressed envelope having sufficient return postage. Exclusive articles pertinent to any Army aviation subject except AAAA, industry, unit, or major command activities are reimbursible at the rate of ten cents per published line.

The editor reserves the right to quote all or part of any material that is submitted for publication, except those particular passages that the writer specifies are not for publication. Copy additions or deletions made necessary by space requirements may be made. The publisher assumes that the correspondent has not submitted any material that is classified, proprietary, or copyrighted. The use or reproduction of any of the by-lined contents of the publication, in whole or in part, without the expressed permission of the publisher is prohibited.

Subscription fees for non-AAAA members: \$3.50 per year to CONUS, APO, and U.S. Possessions; add \$1.50 per year for all other addresses. Active U.S. Army personnel are requested to vrovide a residence or quarters address for magazine distribution purposes whenever possible. Back issues cannot be held unless an advance "Hold Notice" is furnished by the subscriber together with the date on which he will report to his new malling address.

Editor & Publisher, Arthur H. Kesten; Associate Editor, William E. McGee; Editorial Assistant, Jessie R. Borek; Business Manager, Dorothy Kesten; Reader Service Mary Wallace; Circulation Assistants Phyllis Hanson, Sheila Racine.

Advertising correspondence should be directed to the Business Office. Closing date for insertions is the first day of the month preceding the cover date month. Second Class Postage Paid at Westport, Connecticut.

Secretary of the Army Stanley R. Resor (seated) is shown being briefed on the operation of the gun sight of a UH-1 helicopter by officers of the 11th Aviation Battalion, 1st Cavalry Division, at Loi, Victnam.

The commanding officer of the 11th, Lieutenant Colonel John W. Lauterbach (center background), looks on. Other officers in the picture are unidentified.

The photo was taken during Secretary Resor's recent trip to visit combat and support units in Vietnam.

The Army senior scientific advisory group has geared itself for the impact of aviation in the modern force structure. Five members and consultants of the Army Scientific Advisory Panel (ASAP) are directly concerned with aviation or aeronautical engineering while many others represent fields related to air mobility problems.

VARIED BACKGROUNDS

The members in the aviation field include Dr. Antonio Ferri, Director, Guggenheim Aerospace Laboratories, New York University; Dr. Allen E. Puckett, Executive Vice President, Hughes Aircraft Company and Mr. Eugene L. Vidal, consultant in general aviation and plastics. Among the Panel's aviation-oriented consultants are Dr. C. Stark Draper, Head of the Department of Aeronautical Engineering, Massachusetts Institute of Technology and Mr. Robert E. Hage, Vice President for Advanced Product Planning, McDonnell Aircraft Corporation.

The new chairman of the Army Scientific Advisory Panel, Dr. Finn J. Larsen, is a pilot and has maintained a keen interest in the Army's aviation development program. Dr. Larsen is Vice President of Honeywell, Incorporated and was formerly Assistant

Secretary of the Army (R&D).

SERVE BY APPOINTMENT

The Secretary of the Army appoints ASAP members and consultants from eminent members of the civilian scientific, engineering, and industrial communities. The Panel advises the Secretary of the Army, the Chief of Staff, the Assistant Secretary of the Army (R&D) and the Chief of Research and Development on specific scientific and

Rosenblum

Dewcy

AVIATION EMPHASIS IN THE ARMY SCIENTIFIC ADVISORY PANEL

By Major Donald E. Rosenblum

technical problems which concern the Army. There are now 19 Panel members and 44 consultants representing 16 scientific disciplines. The membership has affiliation with 21 colleges and universities and 16 industries.

The Panel works principally through its ad hoc groups. As an example, one Ad Hoc Group of Army Aircraft Research and Development recently completed its study and made recommendations with respect to specific V/STOL research projects. Mr. Charles H. Zimmerman, formerly with the National Aeronautics and Space Administration and now Chief Engineer of the U.S. Army Materiel Command, was chairman of the group. Other members were Lt. General James M. Gavin, USA (Ret.), Dr. C. S. Draper, Dr. C. C. Furnas and Mr. Eugene Vidal.

Mr. Willis M. Hawkins, former Vice President of Lockheed Aircraft Corporation, was a member of this group until he became Assistant Secretary of the Army (R&D) in October, 1963.

THE SECRETARIAT

The Panel Sccretariat, furnished by the Office of the Chief of Research and Development (OCRD), also reflects the current emphasis on air mobility. The Executive Secretary is Major Donald E. Rosenblum who came to the Secretariat from OCRD's

FACES IN THE NEWS

Special Warfare Division and who has served with airborne infantry units. Major Arthur E. Dewey, the Assistant Executive Secretary, is a Senior Army Aviator with a record of combat support time in Vietnam and service with the 11th Air Assault Division (Test) during its final field exercise—Air Assault II.

Secretary of the Army Stanley R. Resordiscussed the revolutionary progress of air mobility in a speech to the Army Scientific Advisory Panel at its spring meeting at For Bragg in June, 1965. He brought to the attention of the Panel as a whole the scientific challenges of these new mobility concepts, with specific reference to their applications in the newly operational 1st Cavalry Division (Airmobile).

The Panel is organized to help the Army meet these challenges, not only through its members in the aviation field, but through those in a broad spectrum of related disci-

plines as well,

MID-AIR REFUELING

Successful air-to-air refueling tests recently completed at Cherry Point, N. C.—involving both a fixed wing tanker and a helicopter—promise unlimited range for helicopters in the future.

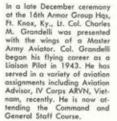

The experiments were considered important by the Air Force to pave the way for extended ferry flights and long-distance missions, Special rescue versions of the Sikorsky CH-3Cs (HH-3Es) are used by the Air

Rescue Service in Vietnam.

A Marine Corps KC-130F was used as an aerial tanker. At least 10 such connections were made without difficulty. During one, the two aircraft were linked together for five minutes (two minutes longer than necessary to refuel the helicopter). Speeds ranged from 120 to 140 MPH at an altitude of 4,000 feet.

Brigodier General Robert R. Williams, who is currently serving as the Assistant Commanding General of the 2nd Infantry Division in Korea, is scheduled to become the new Director of Army Aviotion, OACSFOR, Department of the Army, in April. He will replace Brigadier General George P. Seneff, Ir., who is being reassigned to Vietnam. (For further details, turn to the Army Aviotion Director's Newsletter on page nine.)

Brigadier General George P. Seneff, Jr., who until recently has been the Director of Army Aviation, OACSFOR, has been reassigned to Headquarters, U.S. Army, Vietnam. He had formerly served as the Commander of the 11th Aviation Group of the 11th Aviation Group of the 11th Air Assault Division, during its inception and testing. General Seneff has been an Army Aviator since 1956 and is rated in both fixed wing and rotary wing aircreft.

Major Raymond J. Kongas, the Executive Officer of the 174th Aviation Company, recently logged his 10,000th hour of flying time as a pilot. His first light was at the age of 16 in a trimotor aircraft. Major Kangas flew L-4s and L-5s during WW II. He was recolled in 1950 as a flight instructor at 1951 as a flight instructor of 15. Sall. He left for Korea in March of 1951 with the Army's first L-19 aircraft, in which he flew voried combat missions.

Captain Vincent J, Cedola, while serving as a "Dustoff" pilot with the 82nd Med.Det, in Vietnam, was presented Hannary Vietnamese Air Force Pilot Wings and a citation signed by Premier Nguyen Cao Ky for heroic acts performed in June of 1965. Capt. Cedola's UH-18 crew was responsible for locating and rescuing the crew of a downed VNAF C-47 flareship at night and under intense Viet Cong ground fire.

THINGS ARE ON THE MOVE!

By BRIGADIER GENERAL GEORGE P. SENEFF, JR.

Director of Army Aviation, OACSFOR

As some of you may have heard, not only are things on the move but so am I. I can remember noting shortly after I took over this job that "at the rate my aircraft and people are going to Vietnam they might as well move me and the Army Aviation Directorate out, too" — I didn't realize I'd be taken seriously.

Happily for you, they've left the rest of the Directorate here to continue to look after your interests. Colonel Del Bristol will run the show for a few months until Brigadier General Bob Williams can move in to

take up the cudgel."

I scrawl this, my last letter to you from this job, with regret because I've enjoyed writing them. As I pack, and in haste, I would like to touch on a few things that are moving with us all.

First, aviation training: the schools are

on the move!

The courses of instruction at both Wolters and Rucker have been changed to give earlier and better indoctrination in low level navigation, maximum load operations, tactical applications of Army aircraft, formation flying, and tactical autorotations (low level and minimum forward speed).

A young aviator will come to you qualified for instrument flight in a tactical environment — helicopter gunnery training is given all rotary wing students. Night

^{*}Brig. General Seneff departed his assignment 14 January for a 30 January arrival in USARV; Brigadier General Williams is expected to report for duty in the Aviation Directorate on 11 April.

flying has been doubled; particularly work

with tactical lighting.

The UH-1 mechanic trainee now receives a week of tactical field training consisting of field and flight duties of the crew chief, maintenance of weapons systems, and door gunnery. In short, the training in the schools from one end to the other is pointed toward producing a man tailored for the conditions under which he is going to have to operate.

Devoted People

General Tolson, Colonel Putnam, and Colonel Fleming have been the leaders in making these changes but they have been helped tremendously by devoted people all up and down the line. Particularly good emphasis has been lent by the more than 500 veterans of RVN who are now members of the faculties at the schools.

It's heartening to note also that even with the expansion we have shown no signs yet of failing to get the numbers of applicants we will need to get the job done.

The Vice Chief of Staff, General Creighton W. Abrams, after a recent visit to Fort Rucker, enthused that "this school is really trying to turn out a product that is equipped to do the job and to meet the requirements of the field."

Change in Atmosphere

I point to the schools as being typical because they do typify the whole program. In every direction I look I can conclude only that "nothing succeeds like success." By and large throughout the Army today there is a tremendous change in atmosphere and attitudes concerning aviators and the Army Aviation Program. This is attributable to only one thing — the manner in which you people have proved yourselves and have proved the concept in the field (not that we don't still have much progress to make).

There are still many things that we have not undertaken because of pressures and the problems of the times but which

are in trail and which should be to the benefit of all of us before too much longer.

We are, for example, initiating a complete new look at the Warrant Officer Program. The program as it now exists was established about fiften years ago and there is no doubt that time has caused it to lose some of the equities that were intended when it was set up, and that this has caused the program to become less attractive than it should be.

I recently received a very fine and thought provoking letter from CWO Robert L. Hamilton of Fort Rucker that typified in a very constructive fashion the gripes of some of our best Warrants. We will use this and others as a basis for overhaul.

We are starting another hard look at the enlisted program in the same way to try

to make sure that our superb career enlisted men get the breaks that they deserve. Along either of these lines the constructive thoughts of all of you are welcome. If you have ideas, send them in — My successor has broad shoulders.

Around the Clock

Things are moving in the fields of material, too. Out on the ends of the line we all beef about parts, supplies, the adequacy of our equipment and so on, and there is always reason to beef; but by the same token AMC, the project managers, and everyone in the business are working around the clock trying to make your equipment better whether it is bearings or weapons and devising better means of getting it to you faster and more effectively. It's going to be awhile before you all see it; but it's coming.

Old Newsboys from the Army Aviation Materiel Command (AVCOM), and AMC Project Manager, and Project Manager Field Offices in St. Louis helped to make the Annual Old Newsboys Day the most successful one to date. It is sponsored by the Globe-Democrat each year to raise money for children's charities. The group shown above sold more than \$800 worth of newspapers. All the money goes to charity, with the administrative costs paid by the paper. The Old Newsboys represent St. Louis civic, business, and governmental leaders. (U.S. Army Photo)

I close in thanking my staff for their superb support during the past ten months, and in offering my best wishes for a happy tour (and my bottle of aspirin tablets) to Bob Williams. He laid the foundation for much of the motion that we now see, has taught us all a great deal in the past, and I know will look out for us well in the future.

See you in Vietnam - win in Vietnam!

Fly with the world's most experienced airline

Pan Am has immediate and future openings throughout 1966 for Flight Officer Applicants to fly its international routes.

REQUIREMENTS

- Age 20 to 35 inclusive; High School graduate
- Height minimum 5'6" to maximum 6'4"
- · 20/20 uncorrected vision
- · FAA commercial and instrument ratings, single or multi-engine
- · Salary to start \$500 month
- \$884 month minimum guarantee after two years.
- Basing San Francisco or New York
- 30 days paid vacation after each year
- · Discount vacation travel for you and your family on all company routes
- One of the best retirement plans in the industry
- · Group insurance and hospital coverage for you and your family

Qualified applicants are invited to send a resume of their background to: PILOT EMPLOYMENT ROOM 121 (DEPT. AA)

DEVELOPING THE

ARMED AND ARMORED CH-47A CHINOOK

BY TRUXTON R. BALDWIN HEADQUARTERS, ARMY MATERIEL COMMAND

On 30 June 1965 the Army Materiel Command (AMC) took a decisive step in initiating development of the first heavily armed and protectively armored helicopter. Making use of funds and assets within AMC jurisdiction, a letter contract was issued to The Boeing Company's Vertol Division providing for production of an evaluation quantity of armed GH-47A helicopters.

Four Chinoohs previously on order as standard transports have now been modified to an armed and armored configuration. This article will discuss the new configuration and examine the sequence of events that will be followed in

a development program.

The armed Chinook mission is to augment the current suppressive fire capability of the armed Huey (UH-I) and by virtue of its speed advantage to provide an escort to transport Chinooks and UH-I helicopters. The value of armed helicopters, particularly the Huey, has been proven in combat operations and the armed Chinook will supplement these successes.

There are a number of reasons for employing the *Ghinook* helicopter in this critical role. Any aircraft selected should have one or more

outstanding qualifications.

The Chinook's heavy payload capability, par-ARMY AVIATION MAGAZINE 13

ticularly under hot day conditions, can carry large amounts of ordnance even when protected with armor against .50-cal. fire. This payload capability allows greater flexibility in the selection of armament, ammunion loads, and gunnery crews. Another useful tradeoff can be found in the off-loading for increased fuel with a resulting endurance.

Armament Flexibility

The armament configuration allows a wide variation in weaponry. A 360° suppressive fire capability is obtained through installing the M-5 40mm grenade launcher in the nose and employing five gunner stations; two on each side of the cargo compartment and one in the rear ramp. At these stations .50-cal. machine guns, interchangeable with 7.62 mm, have been installed.

The armed Chinook also has a long range standoff capability in that a 20mm, M-24A-1 cannon is mounted on two pylons, one on each side of the helicopter. These same pylons accommodate two other weapons: the 7.62mm minigun, or alternatively, a 2.75-inch, 19-round rocket pod. The pylon weapons are fixed and are fired forward by the pilot with the co-pilot serving as

gunner for the grenade launcher.

A basic armament package has been derived which comes to an impressive 3,595 lb. figure. [One M-5 40mm system, 500 rounds, with 2 minutes of fire, 650 lbs; two M-24 20mm cannon, 1,600 rounds, one minute of fire per gun, 1,325 lbs; five .50-cal. machine guns with 4,000 rounds, one minute of fire per gun, 1,625 lbs OR five 7,62mm machine guns, with 20,770 rounds, seven minutes of fire per gun, 1,625 lbs.]

The operating gross weight of the Chinook with this basic armament package is approximately 31,500 lbs. Further ammunition load is available by operating closer to the Chinook's

alternate gross weight of 33,000 lbs.

Another advantage accruing from the Chinook's large payload capability is that adequate weight allowance can be given to passive protection. Herctofore, scant protection could be given to defeating 30-cal, ground fire to protect the crew with no protection being afforded to the helicopter's critical dynamic components,

Crew Protection

Approximately 2,000 lbs. is allotted to protect the helicopter critical components, 500 lbs. to protecting the pilot and co-pilot, and 40 lbs. each for the five remaining crew members and gunners. The critical components requiring protection on the Chinook are mostly non-redundant parts of the flight control system. Vulnerability studies by the U.S. Army Ballistics Research Laboratory on the Chinook in both its

Truxton R. Baldwin currently serves as Technical Director of the Chinook Project Office, Hqs, Army Materiel Command in Washington-D.C.

armored and unarmored states show a relative vulnerability picture vastly improved through

adding .50-cal, protection.

The armed Chinook will have a speed advantage over present armed helicopters. A 120-knot cruise speed is calculated while carrying the described basic armament and armor packages. A definite speed differential exists for escorting heavily loaded Hueys or transport Chinooks. During the development program, a speed increase of 15 to 20 knots will be explored by raising the rotor RPM for the armed version.

Single Engine Capability

Still another desirable feature of the Chinook is its superior single engine capability in the event one engine is disabled. The power from one T-55-1-7 as installed will allow a ceiling at the basic operating weight of 4,000 feet. The Chinook has always excelled when considering hovering ceilings. The armed Chinook will hover out of ground effect at 3,000 feet and 95° F.

With full integral fuel, the Chinook has an endurance of 1.9 hours. After modification and provisioned with an auxiliary fuel system, the armed Chinooks will increase their endurance to

three hours.

In defining the program and selecting a technical approach the term development cannot be overstressed. If the true capabilities of an armed and armored helicopter are to be obtained and its evaluation to be a success, the armor and the armament must be fully integrated into the helicopter using the weapons systems approach. The alternate "hang on" method is fraught with technical shortcomings and operational difficulties. More importantly, the basic safety aspects cannot be determined without a thorough engineer-

ing and test substantiation effort.

The first step in this development program occurred on 11 June 1965 when the Chief Engineer, AMC, established a number of basic ground rules in keeping with the requirements.

The AMC complex was to start immediately to develop an integrated helicopter weapon system as soon as possible. The system need not be optimum, but must meet the basic tenets of the requirement—to deliver maximum sustained suppressive fire against soft targets and incorporate a standoff, point fire capability. Existing and available weapons were to be used to facilitate the demanding time frame. Protection against .50-cal, ground fire in lieu of .30-cal, was established. A degree of protection was specified to at least the "K" Kill level (immediate loss of control):

The second step in the development program was to define the configuration in regard to both armor and armament. On 16 June 1965, two weeks prior to contract, a configuration conference was held at AMC headquarters attended by key Army personnel from the responsible laboratories, arsenals, and other agencies. The armament arrangement previously discussed was

derived.

Type of Armor

A basic decision regarding the armor was the choice of dual properties' steel, which was not used extensively prior to this program due to questions on producibility. This material features a metallurgical bond between two alloys; one having the necessary hardness property to break up the projectile and the other having the proper hardness to contain the particles.

The merit rating or degree of protection for

a given weight of this material is an improvement over ceramics and can better sustain multiple hits. The pilot and co-pilot armor for the seats is of the same material and includes torso protection. The .30-cal, self-sealing tanks in the transport Chinook have been replaced,

Following letter contract, the development program has proceeded at an accelerated, though orderly pace. Chronologically, armor testing at Aberdeen Proving Ground and wind tunnel tests were conducted in July culminating in a full scale mockup inspection on 23 July 1965. Initial maintenance support and test planning conferences were also held during this month.

August saw some ground firing tests of the weapons completed, and the initiation of flight testing on an early 1959 test helicopter. This helicopter was ballasted to the weight of the armed Chinook configuration for the purpose of initial noise, vibration, and sighting investi-

gations.

September and October have been spent in the fabrication of four helicopters, one of which will remain in test status while the other three will be used for end item evaluation. Most of the weapons and ammunition which are government furnished by the U.S. Army Weapons and Missile Commands were delivered during this

period also.

The roll out and first flight demonstration of the Chinook was held on 10 November 1965. The in-flight armament firing tests at Aberdeen Proving Ground followed immediately thereafter and concluded in a second demonstration on 2 December. As part of the continuing development, a stress survey of the helicopter is being conducted to completely define the flight envelope, to include the increased rpm mentioned previously. The program on this aircraft will conclude with tests of the performance and flight qualities by the Army Test Activity at Edwards AFB and a service test by the Aviation Test Board at Ft. Rucker.

January Delivery

The second armed Chinook will have the latest avionics equipment installed by the New Cumberland Army Depot prior to radio frequency interference (RFI) tests to preclude inadvertent weapons firing. This aircraft and the remaining two are to be delivered to CONARC in January, 1966, for crew transition and unit training. Maintenance training on the weapons and aircraft systems peculiar to the armed Chinook will precede the assignment of the aircraft to the user.

The three armed Chinooks are to be assigned to a detachment or platoon which will be a satellite to a larger organization. The spares, repair parts, and ground support equipment peculiar to these helicopters are now being stockpiled at Boeing Vertol and will be delivered with the helicopters to the gaining unit.

The armed Chinook program involves a multiplicity of agencies and organizations. Overall direction of the program is being provided by the Chinook Project Manager, AMC1. His office is responsible for providing the using unit with the armed and armored version of the Chinooks, the responsibility to include the delivery of a safe, operational aircraft and the necessary support: peculiar spares, ground support equipment, and special services entailed with the unique armor and armament features,

The Aircraft Weaponization Project Manager, AMC2, is providing the GFAE weapons, ammunition/weapons checkout, and technical assistance in these areas to the contractor. The Director of Research and Development, AMC3, has primary cognizance of the armor configuration.

The program has a strong inter-service flavor in that the Air Force Aeronautical Systems Division is providing the flight safety release for the helicopter. The Army is assuring the safety

aspects of the weapons and avionics.

The armed Chinook helicopter program, although small in the number of aircraft involved, has most of the facets and interrelationships of a major end item program. The program is being conducted with a relatively small amount of funds and personnel, many of the latter having other primary duties.

The biggest problem which has defeated other armed and armored helicopter aspirations has been surmounted-getting started! An armed

and armored Chinook is in being,

¹Colonel Edward B. Bissell; ²Colonel Nelson L. Lindstrand; Brigadier General W. C. Gribble, Jr.

HOW THE ARMY **DECIDES** WHAT AND HOW MANY AIRCRAFT IT WILL HAVE

FRED O. WOLCOTT
Vice President - Operations
Research Analysis Corp.

THE subject of how the Army decides what and how many aircraft it needs can be separated into two parts: the "What" is the process leading to Qualitative Military Development Objectives (QMDO's) and Qualitative Military Requirements (QMR's) for an end item of equipment; the "How Many" is the numbers game, or the quantitative military requirement.

The two are interdependent, but tend to be approached with quite different degrees of precision. Elements of the choice process in both cases include technology, manufacturing, support, operations, and cost.

First Purchase

The first advertisement and specification for a heavier-than-air flying machine was issued by the Signal Office on December 23, 1907, and specified an aircraft supported entirely by dynamic reaction, having no gas bag.

It was to be packed for construction in wagons and capable of being assembled or taken apart in one hour. Payload was to be 350 pounds, range 125 miles, and speed greater than 40 mph. The Wright brothers' bid of \$25,000 was accepted, and Army Aircraft #1 was delivered in August of 1909. The Army strugged along with one aircraft and one pilot until 1911 when Congress appropriated \$125,000 for Army aviation.

Three significant lessons can be learned from this early example: First: historically, specifications describe the best capability attainable. Secondly: an Army aircraft is expected to live with the troops. Thirdly: the number that can be procured is limited by external influences. During the period 1909-1942, Army aviation progressed through the growth of the Army Air Corps, the establishment of the strategic bombing principle, and the advent of aircraft

BEECH "IMAGINUITY" IN MANNED AIRCRAFT

New "off-the-shelf" flying classroom pilots—the speedy, roomy Beechcraft

Accepted and approved by the U. S. Army as its new twin-engine instrument and transition trainer, the Beechcraft T-42A is now under contract for "off-the-shelf" delivery.

When pilots train and maintain proficiency in instrument flying in the Beechcraft T-42A instead of larger aircraft, savings in operating and maintenance costs can add up to hundreds of thousands of dollars.

Check these advantages the Beechcraft T-42A offers to training and proficiency programs:

High speed. Gets students to training areas faster. Powered by two 260 hp Continental fuel injection engines, the Beechcraft T-42A has top speed of 205 knots and cruising speed of 195 knots.

Long nonstop range of over 1,000 nautical miles with full load—even under instrument flying conditions—makes possible longer, more productive training missions.

Large cabin permits multiple student sessions. Seats up to 6 in comfort and roominess. Exceptional visibility.

Extremely stable at all speeds. Outstanding single-engine performance.

The Beechcroft T-42A has the best combination of speed, range, comfort, carrying capacity and structural strength.

Beech is proud that the famous Baron has joined the many other Beechcrafts serving the country. For more facts, write, wire or phone: Beech Aerospace Division, Beech Aircraft Corp., Wichita, Kansas 67201, U.S. A.

for U. S. Army T-42A:

Beech Aerospace Division projects include R & D on manned aircraft; missile target and reconnaissance systems; complete missile systems; space systems management; programs pertaining to liquid hydrogen propellants and cryogenic tankage systems; environmental testing of missile systems and components; and GSE.

There's plenty of room for equipment in the T-42A, including dual omni; UHF; ADF; dual RMI; glideslope and marker beacon; transponder and standby VHF transmitter. Complete dual controls, including yoke, brakes and nose steering are standard equipment. Other standard items include all-weather equipment—including deicing and anti-icing—plus oxygen and unfeathering systems.

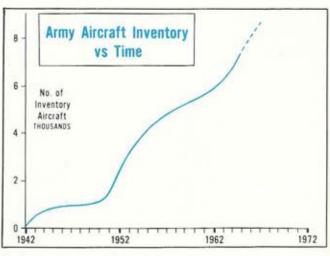

Beech Aerospace Division

BEECH AIRCRAFT CORPORATION . WICHITA, KANSAS 67201

HELPING BUSINESS GROW FASTER: Only Beechcraft offers such a complete line of planes with so much speed, range, comfort and quiet to help business multiply the moneymaking decisions that each top man can make. That's how thousands of Beechcrafts have paid for themselves. EXECUTIVES: Write today for free booklet, "Answers To The 19 Most Asked Questions About Business Flying." It could point the way to major new profits for your company. Address Beech Aircraft Corp., Marketing Services, Wichita, "Kansas 67201, U.S.A.

that flew higher and faster. It is no news to this group to state that Army aviation, as we recognize it today, re-started in 1942 with the graduation of the first class of Army (Liaison) Pilots and the establishment of units of light aircraft for artillery spotting and the liaison missions in WW II.

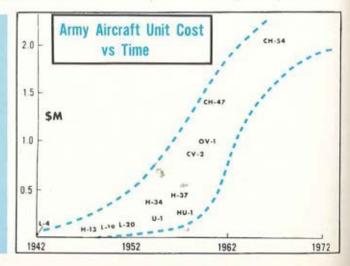

The rapid growth of the Army aircraft inventory from 1942 to the present, with projections beyond that time, are shown in Chart #1. This growth in number has been accompanied by an increase in the capability and cost of Army aircraft, Chart #2 showing the significant rise in the unit cost of Army aircraft in the period from the Korcan War to

the present.

Qualitative requirements of the past can be summed up by the phrase, "Faster, higher, more payload." Quantitative requirements were approached on the basis of, "Replacement of the current inventory on a one-for-one basis, plus so-and-so many more for the new units which we must have to exploit the increased qualitative capability."

First, let's consider evolution of the process of deciding what aircraft the Army will have. Prior to 1960, aircraft were selected in most cases from what the aircraft industry had available on the shelf, Since then the desire for significantly increased and special capabilities for

CHART 2

Army aircraft has led to major modification and new development programs with an asso-

ciated increase in cost.

Concurrently, a new management philosophy was adopted by the Department of Defense which required thorough analysis of the prospective contributions of a proposed system to the nation's military posture and which demands that performance specifications represent an optimum effectiveness relationship to the resources involved in engineering, producing, deploying, and maintaining a proposed new sys-

A new development cannot proceed without evidence that concept formulation has accom-

plished the following prerequisites:

1. Primarily engineering rather than experimental effort is required, and the technology needed is sufficiently in hand.

The mission and performance envelopes are

defined.

3. The best technical approaches have been selected.

4. A thorough trade-off analysis has been made.

5. The cost effectiveness of the proposed item has been determined to be favorable in relationship to the cost effectiveness of competing items on a DOD-wide basis.

Cost and schedule estimates are credible and

acceptable.

The method by which aircraft characteristics are actually established is subject to a great deal of difference of opinion. If you ask the Combat Development agencies, they will say that the operators establish user requirements based on field needs.

If you ask the Materiel agencies, the answer will be that they know what is technically feasible and, therefore, really establish the requirements which are then adopted by the Combat Develop-

ment agency.

If you ask industry representatives, some will claim, based on past experience, that they determine what the user really wants and then propose state-of-the-art systems, the description of which become the requirements. The true situation is, of course, somewhere between the extremes.

Group Evaluation

Who should determine the military characteristics of an aircraft system? Should it be the Combat Developments agency with its superior knowledge of what advances would be particularly valuable from a military point of view?

Should it be the Materiel Development agency with its superior knowledge of what technology can supply? Or, should it be the Comptroller with his superior knowledge of what

the Army can afford.

Clearly, all considerations are relevant and must be brought into the decision-making process. The desired solution is to work out procedures for achieving a good balance among conflicting objectives, while leaving the Materiel agency and industry sufficient latitude for technical ingenuity in meeting the requirements.

The Army combat development cycle is in-

tended to accomplish this objective.

As shown on Chart #3 (on this page), the Combat Developments Command establishes development objectives which become Qualitative Military Requirements after coordination with the Army Materiel Command as to technical feasibility. The Combat Development cycle is effective for routine developments, but has limitations for a complex aircraft system development involving interfaces, trade-offs, and over-lapping responsibilities (Chart #4). Such

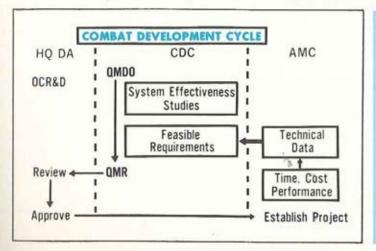

CHART 3

21

major development programs must run the entire gamut of DOD requirements through Program Change Proposal and Contract Defini-

tion Phase.

Ad hoc groups can and have been applied as a practicable in-house method for a solution to problems involving many interfaces and compromises, both technical and operational. The Army Aircraft Requirements Review Board, better known as the Rogers Board, functioned quite effectively in 1960 with the cooperation of industry to develop its best estimates of Army aircraft requirements during the 1960-70 time period. Another example is the aircraft requirements work done by the Howze Board

Industry can and should be asked to contribute solutions, as in the case of the Rogers Board, and should be given study contracts for technical aspects of a new aircraft system. Industry is, however, barred by conflict-of-interest statutes from later hardware development through direct participation in the systems concepts and operational requirements phases.

The not-for-profit systems analysis groups with their experience and capability for defense problem-solving, together with a detachment that is possible because of their relatively independent status, were created to perform unique services not amenable to in-house accomplishment. These groups can help in solving interface conflicts, coordinating parallel efforts, and conducting systems analyses, trade-offs, and cost/effectiveness comparisons needed in concept formulation.

CHART 4 PROGRAM DEVELOPMENT MILITARY NEED [QMD0] Requirements - Alternatives Trade-Offs System Concept Selection Intra-System Analysis QUALITATIVE MATERIEL REQUIREMENT (QMR) Program Change Proposal Technical Development Plan QMR DOD Contract Definition Phase Prerequisites APPROVAL Revised TDP & QMR INDUSTRY

ARMY AVIATION MAGAZINE

For example, in the case of the STAAS development, Research Analysis Corporation (RAC) has conducted a requirements analysis, systems evaluation, and military characteristics trade-off study between QMDO and QMR. In cases such as this where the Army is faced with a difficult task in choosing a particular approach to pursue to the development stage, independent judgment and a variety of disciplines are being used as an aid to decision.

Systems Analyses

Systems analyses of aircraft systems include four basic steps as shown by Chart #5. First, a functional requirements analysis is conducted in order to determine the objectives to be accomplished by alternative systems in the operational environment, Alternatives' analysis produces delineation of feasible and significant candidates for accomplishment of these objectives. Cost analysis provides estimates of the incremental cost of adopting each alternative, including all resource implications.

The comparison of alternatives is then made through some simulation of the real or expected situation involving a set of relationships among the objectives, alternatives, environment and resources. Preferred alternatives are determined in accordance with the selection criteria

used.

System analysis methods are beginning to be used for addressing the second part of my subject, namely how the Army decides how many aircraft of various types it will have. Numbers are determined to a large measure by the major force structure decisions which are made yearly as a part of the JCS and OSD planning process. Force development planning within the Army matches numbers of aircraft to the approved organizational structure of the Army.

The principal determinants of quantity are force size, force composition, total cost, total cost by type, and unit cost, including all resources. These factors are interdependent and

should be traded with one another,

Considerations

Some obvious, but sometimes overlooked, considerations should be reviewed in connection with quantitative requirements:

· Over-all contraints on "force cost" influence

numbers.

 Additional numbers of the same type tend to cost less to buy and operate and to be more reliable than new types.

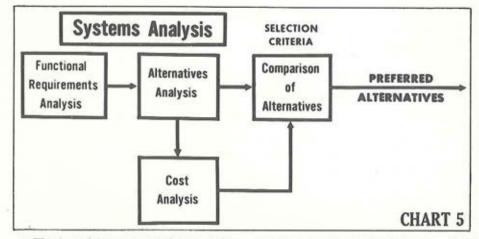

Nothing is cheaper than the "sunk cost" of

what you have in inventory.

Maintenânce man-hours require people—

they are scarce and costly.

 The ratio of support personnel to combat personnel is constrained; somebody has to fight on the ground; so the Army can have just so many aircraft mechanics.

 The Army does not man equipment as do the other services, but equips men. The airplane must, therefore, be compared with other weapons and equipment, both in type and quantity.

 It makes no sense to add up the TOE's for current aircraft and call that a requirement for a future weapon system, a mistake sometimes made by planners.

 Savings will continue to be sought by replacing many models with a fewer number, and by longer production runs of joint developments of a few basic engine/airframe combinations.

External factors strongly influence the numbers of aircraft that are in the Army aircraft inventory. Referring to Chart #1, it's been noted that the first sharp rise in numbers was in connection with the build-up during the Korcan War.

The flat part of the curve prior to 1950 reflects the cutback to austere force levels experienced under the Louis Johnson Administration. The increase in slope after 1962 reflects the policy of the incoming Kennedy Administration in building up our conventional forces. Inventory objectives have recently been affected considerably by the events in Victnam.

A systems analysis has recently been employed in determining the numbers of aircraft that the Army will have. The ARCSA Study Group, consisting of representatives of several Army staff agencies with outside consultant support, recently completed the comprehensive analysis leading to recommendations for inventory objectives between now and 1970.

Summary

In conclusion, both the type of aircraft being procured and the numbers needed have resulted in a multi-billion dollar program. This requires that lots of homework be accomplished if costly mistakes are to be avoided. Where once the statement of a user need and purchase of an off-the-shelf aircraft was sufficient, it is now necessary to conduct extensive trade-offs and to answer the following questions:

Do we need it? (Requirements) Can we afford it? (Cost)

Can we build and maintain it? (Technical Feasibility)

Can it be done better, at a reasonable cost, than other alternatives, including current systems? (Cost-Effectiveness)

The use of systems analysis methods, in-house, in-ad hoc team approaches, and thorough contractual support is helping to eliminate some of the variables and to quantify others. The Army aircraft requirements process has grown in pace with the improved performance of individual aircraft types and increased inventory totals.

ABOUT THE AUTHOR

Mr. Fred W. Wolcott received his B.S. degree in Aeronautical Engineering from the University of Michigan in 1939, He joined Douglas Aircraft Company in 1939 and held a variety of positions in engineering and test until 1959.

He was appointed Special Assistant to the Director, Defense Research and Engineering, in 1959 and appointed Assistant Director, Defense Research and Engineering for Tactical Weapons, Office of the Secretary of Defense in 1960. Mr. Wolcott joined the staff of Research Analysis Corporation in 1963 as Director of Systems Engineering, and now serves as consultant to the Director, Defense Research and Engineering, OSD.

Revolution in Tactics ...and the Hueys were there

For the first time in history, an infantry division — the U. S. 1st Cavalry (Air Mobile) — fought a sustained, weeks long battle using helicopters as its basic means of battle-field transport.

Military tacticians who followed the combat reports see this test of the airmobile concept as one of the most significant actions since World War II...a revolution in the conduct of land warfare comparable to the dispatch of German tank divisions into Poland in 1939.

Night movement of troops into night battle and close support from Huey-mounted airborne artillery is credited with turning the tide of battle against the Viet Cong. Helicopters were able to deliver decisive firepower and manpower in the most critical areas of the battlefield at the most critical time of the battle.

Bell helicopters have been in the Army inventory since Korea and have matched their improved capabilities with the advancing requirements of the nation's military effort.

LEFT: Colonel E.P. Fleming, Jr., Fort Wolters commander and Primary Helicopter School commandant, tests the latest device that can be used in training helicopter student pilots, as P.C. Jacobs (right), inventor of the training aid and vice president of the Jaycopter Corp. Ltd. of Canada, looks on. Called the Jaycopter Demonstrator-Trainer (JDT), it is a miniature captive helicopter connected to the controls by hydraulic lines. Cyclic control movements are resolved into electronic impulses which are fed into the operator's instrument panel. Present plans call for experimental use of the JDT with a limited number of helicopter students to determine its training effectiveness. BELOW: Lt Gen Robert W. Colglazier, Fourth Army CG, inspects members of the Fort Wolters honor guard during ceremonies January 11 at the Primary Helicopter School. The occasion for the visit was Gen. Colgiazier's farewell prior to his coming retirement.

ABOVE: Col Joseph W. Marks, CO, 171st Infantry Brigade, is shown receiving symbolic wings from Lt Col Jack Oliver (2nd from right), Avn Off, Yukon Command, Ft Wainwright, Alaska. The wings represented the assignment of the first aircraft to the 171st Aviation Company, activated in Sept. 65. Also shown are Lt Col G.A. Roberts (left), Deputy CO, 171st Infantry Brigade, Maj Lauren S. Davis (right), CO of the 171st Aviation Company, and unit members in the background, Col Marks commented that Army aviation has proven itself to be an essential element to any effective combined arms team and particularly under conditions of climate and terrain found in Alaska and other Arctic regions, RIGHT: Lt Floyd L. Larson is shown operating the controls of the new maneuverable cockpit of the Tactical Avionics Systems Simulator (TASS). The computer controlled TASS is operated at the Avionics Laboratory of ECOM, Fort Monmouth, N.J.

The idea first occurred to Navy Pilot James R. Conrey in 1960, while he was jockeying his plane through a tricky cross-wind landing at Lincoln, Neb. The field—like many military and small private airports—had only one runway, leaving him little choice in the direction of his approach and landing. As he struggled with the controls, Conrey longed for a landing strip that would always allow him to approach into the wind—no matter what its direction. Why not a circular runway? he asked himself.

With great singlemindedness, he polished his idea, found an ideal test site—the banked, circular General Motors test track at Mesa, Ariz. and persuaded the Navy to get G.M.'s permis-

sion for landing and takeoff tests.

In 1963, before his concept was tried, Conrey was killed in an aircraft-carrier landing accident. But now he has won post-mortem recognition. In a report on tests made at Mesa in 1964, the Navy has predicted "a definite and vital place in future aviation" for the circular runway.

Directional Stability

Because it would slope upward in a graduated bank from its inner edge to its raised outer edge —much like the inside of a shallow bowl—the circular runway would provide great directional stability to a plane landing at high speed. It would prevent the plane from veering out of control to the right or left.

Pulled outward by centrifugal force and downward by gravity, a fast-rolling plane would be confined to a circular path high against the outer, steeply sloping part of the runway. As its speed decreased, centrifugal force would lessen, and gravity would pull it in a slowly descending spiral toward the lower, more horizontal section.

Many Advantages

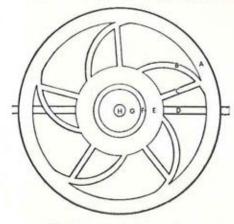

There would be other considerable advantages. Planes would never run out of landing room, as they often do at conventional airports; they could simply continue to circle until they slowed sufficiently to use a banked turn-off ramp that would lead them to a centrally located terminal, conveniently spotted for passengers or freight.

A circular runway would also be able to handle more traffic than straight runways. With a diameter of 10,500 ft.—about the length of most jet runways—it would have a circumference of more than 32,000 ft., allowing the simultaneous takeoff or landing of several planes spaced at safe distances around the circle, and directed by an elaborate ground-control system.

Little additional pilot training would be re-

THE ART OF FLYING DOWN INTO A HOLE

CIRCULAR

AIRPORT

(A) The runway, (B) high speed turnoffs, (C) straight-out taxi ways, (D) auto access roadway, (E) aircraft parking and loading ramp, (F) terminal building, (G) open auto parking area, (H) control tower.

quired. Navy pilots who landed at G.M.'s Mesa track felt at first that they were "flying down into a hole"; they were uneasy about touching down at an angle on the sloping surface on the runway. But they became oriented after only one or two landings, and reported that the runway tended to correct some of their errors in landing speed, degree of bank and point of touchdown.

The Federal Aviation Agency, which has been closely following the Navy experiments, is less enthusiastic about the new concept. Its advantages, the FAA feels, would be far outweighed by the extra cost of building the banked circular runways, burrowing under them to provide access roads to the central terminal area, and installing complex ground-control systems.

Even so, the Navy report has stirred the interest of aviation officials. It may well trigger more imaginative research into an area of aeronautics that has remained relatively unchanged since the Wright brothers used the dunes at Kitty Hawk as one of the world's first airfields.

BEAR WITH US!

The 10-page PCS Section is a result of the extensive number of address changes associated with the movement of entire units, and the companion lack of editorial space for PCS purposes in the two previous "Annual Meeting Issues." We expect to return to the normal 7-page section in March, 1966.

ASSOCIATION OF THE UNITED STATES ARMY

WHY JOIN AND SUPPORT AUSA? BECAUSE—It is the only organization that represents the ENTIRE Army—You receive each month ARMY magazine—long recognized leader among service publications—You receive periodic Newsletters and other AUSA publications to keep you abreast of AUSA activities and the latest developments in matters affecting the Army and National defense—You can become an active part of one of AUSA's 114 chapters located throughout the world which provide a strong link between the Army and the civilian community working on programs in support of AUSA objectives.

SOME OBJECTIVES FOR 1966

PERSONNEL PROGRAMS

Support policies and programs that will enhance career incentives, to include retention of traditional service benefits, and service pay which reflects cost of living indices and recognizes the responsibilities and hazards of the military profession.

Support adequate housing for all military personnel and dependents.

Support adequate medical and dental care for dependents of active duty and eligible retired personnel.

Advocate an immediate solution to the problem of enlisted insignia.

Encourage outstanding young men to seek appointment to the U.S. Military Academy.

Encourage nationwide efforts, especially at chapter level, to familiarize educators and the public with the importance of the Reserve Officers Training Corps.

To join send check or money order to: AUSA, 1529 18th St., N.W., Washington, D. C. 20036 (\$6.00 for 1 year or \$16.00 for 3 year membership, including subscription to ARMY magazine).

AUSA was a leader in the successful fight to increase air mobility in the Army.

MANPOWER AND COMBAT READINESS

Maintain all components of the Army at strengths guaranteeing the timely meeting of all commitments and contingencies,

Advocate prompt clarification of the status of individuals and units in the Army Reserve and Army National Guard.

Support all measures to maintain all components of the Army at the highest level of combat readiness, including accelerated procurement of modern weapons and equipment.

Advocate provision of adequate personnel, materiel and funds, to meet unprogrammed requirements.

Support full development of all modes of tactical mobility.

Advocate sea and air lift adequate for Army needs.

Support world-wide deployments of the Army in the interests of peace and security.

BEAR WITH US!

The 10-page PCS Section is a result of the extensive number of address changes associated with the movement of entire units, and the companion lack of editorial space for PCS purposes in the two previous "Annual Meeting Issues." We expect to return to the normal 7-page section in March, 1966.

LINDSEY H. CROW

Chief Warrant Officer Lindsey H. Crow, an Army Aviator assigned to the 54th Signal Battalion, Vietnam, sustained fatal injuries in the crash of his OH-13S helicopter. The fatal accident occurred during the conduct of a combat mission on November 18, 1965. He is survived by his mother, Mrs. Harriet Crow of 1054 Linwood Circle, Springfield, Missouri.

RONALD M. FERO

Warrant Officer Ronald M. Fero, an Army Aviator on assignment to the 220th Aviation Company, Vietnam, died as a result of injuries received in the crash of his O-1A aircraft on December 20, 1965. He is survived by his mother, Mrs. H. Q. Fero of 145 Sacandaga Road, Scotia, New York.

JAMES A. GRUEZKE

Warrant Officer James A. Gruezke, assigned to the 82nd Aviation Bn, 173rd Airborne Brigade, died as the result of hostile action in the Republic of Vietnam during the conduct of a mission on December 23, 1965. He is survived by his widow, Mrs. Lila Gruezke, 5408 Fountain Avenue, Hollywood, California.

JOSEPH R. MENDES

Chief Warrant Officer Joseph R. Mendes, on assignment with the 19th Aviation Company,

THE YOUNGEST EAGLE HAS FALLEN...

Believed to be the youngest combat pilot in the Armed Forces in the world, Warrant Officer Dana Edward Brann was killed in action in Vietnam on November 15, 1965.

Assigned to the 120th Aviation Company at Tan-Son-Nhut Air Terminal, Saigon, Brann had been in Vietnam only 39 days at the time of his death.

He had his 19th birthday on last August 8 while undergoing primary flight training at Fort Rucker coming home September 4 for a 35-day leave before reporting for further duty. On October 7 he flew to San Francisco, arriving in Vietnam several days later.

Brann had signed up for the Army Warrant Officer Flight Training Program on turning age 18, being accepted two days later on August 10, 1964. Upon completion of his basic training at Fort Jackson, S.C., Brann reported to USAPHS in early 1965, graduating from Fort Rucker in August as the youngest instrument-rated pilot in the Army.

He is survived by his parents, Mr. and Mrs. Edward M. Brann of 1600 Beacon Street, Brookline, Mass.

OBITUARIES

19th Aviation Battalion, died as a result of injuries received in the crash of his U-1A Otter. The accident occurred near Fort Richardson, Alaska, on December 10, 1965. He is survived by his widow, Mrs. Marialuise Mendes, c/o Mr. Tony Mendes, 302 Birdwell, Oakdale, California. At the request of Mrs. Mendes, all floral donations are to be placed in the AAAA Scholarship Foundation, c/o AAAA, Westport, Conn.

GEORGE W. RICE

Warrant Officer George W. Rice, an Army Aviator assigned to the 15th Medical Bn, 1st Cavalry Division, Victnam, died as the result of hostile action on December 18, 1965. He is survived by his widow, Mrs. Frankie S. Rice, P.O. Box 75, Caryville, Florida.

BARTON F. RICHARDS

Major Barton F. Richards (Retired), a Senior Army Aviator, died November 17, 1965, at St. Francis Hospital, Tulsa, Oklahoma, following a heart attack. He is survived by his widow, Mrs. Patricia Richards, two sons, Michael and James, and his daughter, Mrs. Gay Kinnard. Burial was at Chelsea, Oklahoma.

JOHN T. STICHER

Warrant Officer John T. Sticher, assigned to the 120th Aviation Company, Vietnam, died as the result of hostile action during the conduct of a mission on December 6, 1965. He is survived by his parents, Mr. and Mrs. John H. Sticher, Wildwood Park, Apt. 1033, 5550 Columbia Pike, Arlington, Virginia.

ALVAH A. WALLACE

Second Lieutenant Alvah A. Wallace, on assignment with the 82nd Aviation Bn, 82nd Airborne Division, Fort Bragg, N.C., died as a result of injuries received in the crash of his U-6 Beaver. The accident occurred on December 27, 1965. He is survived by his widow, Mrs. Margret Wallace, 102 Marion Avenue, Merrick, N. Y.

ARMY AVIATION MAGAZINE publishes each notice that it receives from the Army Aviation Directorate, OACSFOR, Department of the Army, concerning a fatality suffered in an official aviation accident. The magazine also publishes all notices of non-accidental deaths that are submitted directly for publication by individuals.

AAAA NEW

1965 NATIONAL WINNERS

Major General Austin W. Betts, Deputy Chief of Research and Development, D/A, is shown congratulating the five youngsters who won \$100 AAAA cash awards and plaques for their outstanding aviation exhibits at the early May National Science Fair-International held in St. Louis, Mo. Shown, left to right, are Joel Breger of Silver Spring, Md.; Ann Bigelow of Galion, Ohio; Gen. Betts; Jerry W. Childers of North Augusta, S.C.; John Rollins of Lawton, Okla.; and James H. Oberlin of New Haven, Ind. The winning exhibits were selected by a 5-member team of judges provided through the cooperation of Brig. Gen. Howard F. Schiltz, CG, U.S. Army Aviation Materiel Command, St. Louis, Mo.

1966 ANNUAL MEETING

Preliminary staffing of the 1966 AAAA Annual Meeting Committee has been completed with the several committee members to participate in their first planning session on Pebruary 11. The Vice President for National Functions on the AAAA's National Executive Board, Colonel John Dibble, Jr., will serve as the General Chairman of the 1966 AAAA Annual Meeting assuming responsibility for its overall direction. Colonel Dibble served as the Chairman of Programming at the 1965 AAAA Annual Meeting, a position in which Colonel John L. Klingenhagen will serve this year. The 1966 Convention will be held at the Shoreham Hotel in Washington, D.C., during the period October 12-14.

GARMISCH MEETING FEATURES AAAA REGIONAL AWARDS

The Sixth Annual Meeting of the USAREUR Region of AAAA will be held at the U.S. Army Recreation Area, Garmisch, Germany, during March 9-12. The 3-day program will be highlighted by Army and industry presentations, AAAA Awards to the "Outstanding Company-Sized Unit" in the USAREUR Region, to the "Outstanding Aviation Support Unit," to the "Aviation Soldier of the Year" within the Region, and to the "Army Aviator of the Year" (Restricted to Company Grade and Warrant Officers Only).

Some 300-400 members and their families are expected to attend the combined professional-recreational gathering. Colonel Edgar C. Wood, Operations Division, Hqs, USAREUR serves as the Regional president, The Region's "Outstanding Aviation Unit" in 1965, the 2d Armored Cavalry Aviation Company, serves as the 1966 Host Unit for the meeting with Capt. Richard V. Coulter of the 2d as Assistant Project Officer.

SCIENCE FAIR AWARDS

Well over 175 local and Regional Science Fairs will be supported by voluntary AAAA judges and Ass'n "Certificates of Achievement" during March-April. AAAA support of the National Science Fair is described in the photo at the top, left.

AAAA SEEKS SCHOLARSHIP APPLICANTS

The AAAA Scholarship Foundation announces the availability of \$3,500 in 1966 scholarship assistance funds for the sons and

daughters of members of AAAA.

Application forms for the 1966 scholarships may be obtained by writing to the AAAA Scholarship Foundation, Inc., 1 Crestwood Road, Westport, Conn. 06882. The applications, together with other supporting application data, must be returned to the Foundation on or before 27 February 1966 to receive Awards Committee consideration.

ELIGIBILITY

Eligibility requirements for the awards have been minimized. The applicant must be:

The son or daughter of a member or

deceased member of AAAA.

A high school graduate or senior who has made application to an accredited college or university for Fall, 1966 entrance as a freshman, or who has been accepted for freshman enrollment in the Fall of 1966.

Unmarried and a citizen of the United

States.

AREA INTERVIEWS

Following the receipt of the completed application form, the financial statement, and the required academic transcripts, the Foundation will notify the applicant to report to a group of interviewing officers selected from among the AAAA membership residing in the applicant's area. The "Report of Interview" serves as an important, but not mandatory part of the documentation required for awards consideration.

FINAL SELECTION

The final selection will be made by the AAAA National Awards Committee, a permanent standing committee of the National Executive Board of the AAAA that has been designated as the Foundation's judging agency. The selection will be made during the month of March, 1966 period with the winners to be notified no later than 31 March 1966.

LINDBERGH CHAPTER — Col. Delbert L. Bristol (center), Acting Director of Army Aviation, OACSFOR, D/A, chats with Brig. Gen. Howard F. Schiltz, AVCOM Commander (right), and Carl D. Stephenson, national VP for Public Affairs, prior to a recent AAAA meeting in St. Louis. Col. Bristol was principal speaker at a dinner meeting of the AAAA's most active chapter.

This is a horse. (It must be a horse. The First Cavalry rides it.)

The First Cavalry Division (AirMobile) calls its mount Chinook.

Chinook takes its riders where the action is.

A whole platoon at once. Or an entire artillery section. Complete with two howitzers, gun crews, and ammunition.

Some horse! Or, rather, some horses.

Vertol's CH-47A Chinook is 5,300 of them rolled into one. That's the combined power of its twin T55 engines. Avco Lycoming's most muscular gas turbines.

Behind the T55 stand over a million and a half operational hours of gas turbine experience. Many of them were logged in the skies over Vietnam, where Avco Lycoming powers nine out of ten whirlybirds.

Today, the T55 is adding to that record with each new assault mission in Vietnam, where it's helping the Chinook carry the First Cavalry's dragoons right into the heart of battle.

It's something like the old days, when nothing struck fear into the heart of an enemy like a cavalry charge.

Only now that charge comes thundering out of the sky, 5,300 horses strong.

LYCOMING DIVISION

STRATFORD, CONN.
