Botanical Survey of India

FOREWORD

Grasses, undoubtedly an unique group of plants occupy every conceivable habitat on earth and well known for their wide array of services provided to mankind and ecosystem. The grass family (Poaceae), occupies high pedestal in plant kingdom due to species richness. Botanical Survey of India has published several noteworthy publications on grasses. Present publication on "Grasses of Telangana" is an attractive addition in this regard. With an objective of providing a detailed taxonomic account of grasses of newly carved out Telangana state from united Andhra Pradesh in 2014, the project was carried out as in-house scientific programme of BSI from 2017-2022.

The book presents vivid taxonomic descriptions for 273 species of grasses under 95 genera. Elegantly designed 156 photo plates depicting microscopic features of spikelets facilitate easy identification of grasses otherwise known for their misidentifications owing to intricate floral morphology. The publication is intended to negate the commonly prevailing notion of difficulty in correctly identifying grasses. 1 new species and 41 new records to the state are the outcomes of the present study. Diverse stake-holder's requirements in getting first hand knowledge on the grass diversity of Telangana state are fulfilled with this publication.

I appreciate authors for fruitfully completing the task of bringing out this e-publication in widely acceptable attractive format on grasses of the Telangana state.

(A.A. MAO)

ACKNOWLEDGEMENTS

We are grateful to the following personnel for their help and support in various ways in completing the present work on Grasses of Telangana State and it's e-publication.

Cymbopogon caesius

Authors

PREFACE

Disseminating Plant taxonomy research findings in the form of popular publications is one of the key objectives of Botanical Survey of India. State wise floristic accounts on some largest families of Indian angiosperms have been published by the department. One such family of monocotyledons, the ‘Poaceae’ (Gramineae) has been accorded priority in this regard. Current publication on “Grasses of Telangana State” is an outcome of project carried out under BSI Annual Research Programme from Deccan Regional centre, Hyderabad during 2017-2022. After the formation of Telangana state in 2014, emphasis was given to fulfill the gap areas in the flora of the state.

‘Poaceae’ was chosen to document all the grass species and to prepare a profusely illustrated user friendly compendium. Thorough field surveys and critical studies have resulted in 1 new species and 41 species as new distributional records to the Telangana state. This publication contains detailed descriptions for 273 species of grasses, their distributional data, field notes and 163 photo plates attractively elucidating the vegetative and minute floral parts. It is hoped that this book will meet the needs of teachers, students, forest managers, researchers and amateurs in identifying the grasses of Telangana state and other Indian states too. Authors welcome constructive suggestions from the users of this publication.

INTRODUCTION

Human beings have used grasses for food, fodder, and shelter since time immemorial. The grass family Poaceae (Gramineae) provides the world's major grain crops (cereals and millets) such as rice (*Oryza* spp.), wheat (*Triticum* spp.), maize (*Zea mays*), barley (*Hordeum vulgare*), jowar (*Sorghum* spp.), bajra (*Pennisetum* spp.), and oats (*Avena* spp.). Livestock depends on grasses for forage. Grasslands are the most highly productive ecosystems on earth, and their depletion causes ecosystem imbalance and the extinction of many dependent species. This is because grasslands are the ideal habitats for various plants, birds, mammals, and amphibians (Burgess & al., 2007). Grasslands also play a pivotal role in the global carbon cycle (Gibson, 2009).

Grassland vegetation differs from forests because of its rejuvenation potential. Grasslands are grounds covered by vegetation dominated by grasses with little or no tree cover (Sutte & al., 2005). Grasslands and other graminoid-dominated habitats occupy about 30–40% of Earth's land surface (Blair & al., 2014). The notable feature of grasslands is that they are overwhelmed or co-dominated by graminoid vegetation, including the true grasses (members of the family Poaceae) and other grass-like species such as sedges (Cyperaceae members). However, the term grassland can also be used in a broader sense to encompass ecosystems with a significant grass cover interspersed with varying degrees of woody vegetation, including savannas and scrub (woodlands).

Grasses are highly successful from an evolutionary perspective, with about 12000 species belonging to about 779 genera (Kellogg, 2015; Soreng & al., 2017; Hodkinson, 2018; POWO, 2022). In India, 1391 species belong to 242 genera (Prasanna Pers. comm.), whereas in Southern India 732 taxa under 155 genera (Nagaraju & al., 2021). The family name, Poaceae, was coined by Jussieu (1789), and the grouping of the genera was based on several stamens and florets. Additional evidence like leaf epidermis, leaf anatomy (Prat, 1936; Brown, 1958), cytology, morphology (Avdulov, 1931), embryology (Reeder, 1957), and the inclusion of molecular data from proteins and nucleic acids revealed the evolutionary lineages of the grasses (Hamby & Zimmer, 1988; Hilu & Esen, 1988; Doebley & al., 1990; Davis & Soreng, 1993; Hsiao & al., 1994; Nadot & al., 1994; Barker & al., 1995; Clark & al., 1995; Duvall & Morton, 1996). Molecular phylogenetic studies strongly support the placement of grasses in Poales, a grouping of 14 families. The family Poaceae dominates species number/diversity under the clade 'graminoid' (APG IV, 2016; Wolowski & al., 2016).

The family Poaceae are classified at higher taxonomic ranks by Clayton & Renvoize (1986) and Watson & Dallwitz (1994), mainly based on morphology and anatomy. Kellogg (2015) and Soreng & al. (2015 & 2017) recognized 12 subfamilies but differed in identifying the genera and tribes. Kellogg (2015) recognized 698 genera, 30 tribes, and 53 subtribes, whereas Soreng et al. (2017) recognized 768, 52 tribes, and 90 subtribes. Kellogg (2015) thus chose to use fewer ranks below subfamily, avoiding all supertribe names and tribes in small or single

tribe subfamilies or subtribes in small tribes. In contrast, Soreng & al. (2015 & 2017) perpetuated tribal terms since they are integral ranks in the botanical code and have been used to classify the grasses for some 200 years (Hodkinson, 2018).

STUDY AREA

Telangana, the 29th state of the Indian Union, was carved out of united Andhra Pradesh in 2014. It is part of the phytogeographical of the Deccan Plateau in the central stretch of the eastern seaboard of the Indian Peninsula. The state lies between $15^{\circ} 50' - 19^{\circ} 55'$ North latitudes and $77^{\circ} 14' - 80^{\circ} 50'$ East longitudes, with an area of 114,840 km². The state of Maharashtra state borders towards north and north-west, Karnataka to the west, Chhattisgarh towards the north-east, and Andhra Pradesh to the south.

(Map 1)

The state is divided into 33 revenue districts viz., Adilabad, Bhadravati, Kothagudem, Hyderabad, Jagtial, Jangaon, Jayashankar Bhupalpally, Jogulamba Gadwal, Kamareddy, Karimnagar, Khammam, Kumuram Bheem, Mahabubabad, Mahabubnagar, Mancherial, Medak, Medchal, Mulugu, Nagar Kurnool, Nalgonda, Narayanpet, Nirmal, Nizamabad, Peddapalli, Rajanna Sircilla, Rangareddy, Sangareddy, Siddipet, Suryapet, Vikarabad, Wanaparthy, Warangal (Rural), Warangal (Urban) and Yadadri Bhuvanagiri.

(Map 2)

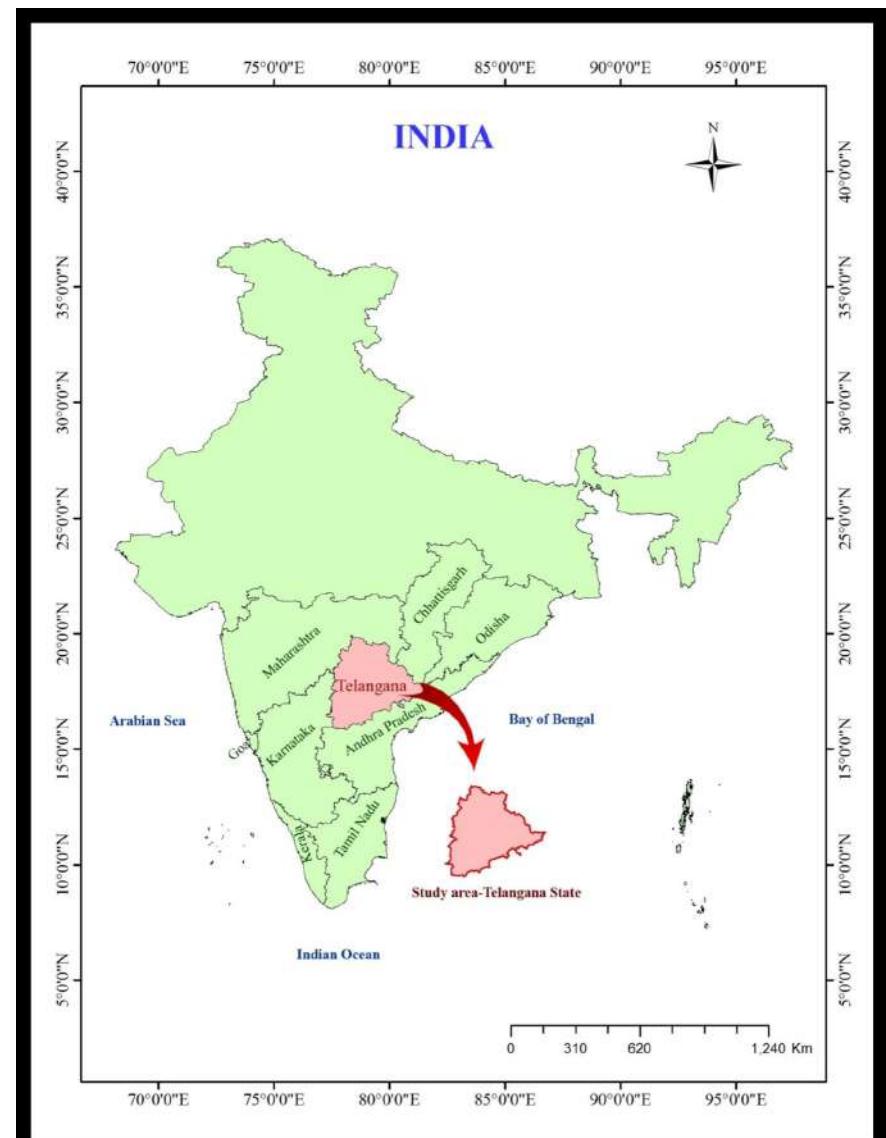

The terrain comprise mostly plains, gentle slopes, and undulating hills. Isolated peaks and rocky clusters are found all over the state. The elevation ranges between 30m to 900m. The high elevation areas of 800m to 900m are distributed in parts of the Nallamala hills of Mahabubnagar district.

(Map 3)

The region is drained by two major rivers, the Godavari and the Krishna, and several minor rivers like the Bhima, Manjira, and Musi. The state has 3 National Parks (Kasu Brahmananda Reddy, Mahavir Harina Vanasthal, and Mrugavani), 7 Wildlife Sanctuaries (Eturunagaram, Pakhal, Pranahita, Kinnerasani, Manjira, Pocharam, and Shivaram), and 2 Tiger Reserves (Kawal and Nagarjunasagar - Srisailam). The annual rainfall, mainly from the southwest monsoon, ranges from 900–1500 mm in the northern region and 700–900 mm in the southern part. The predominant soil types are chalk, red sandy soils, dubbas, deep red loamy soils, and black cotton soils. The state's climate remains primarily dry throughout the year, with a hot and dry period between April and June (summer). Between December and January (winter), the lowest temperatures are recorded. The maximum and minimum temperatures recorded are 47°C and 16°C, respectively.

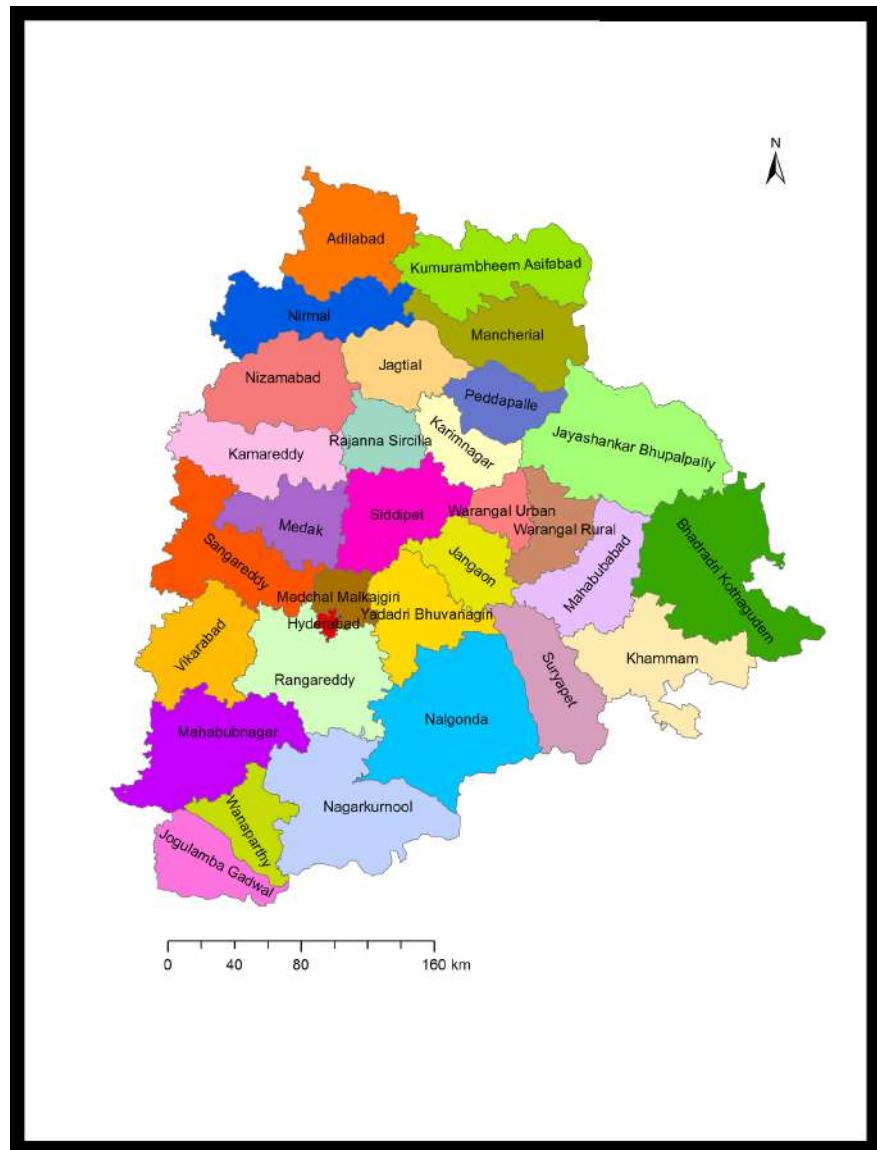

Telangana state has 6 prominent vegetation types viz., (1) Tropical moist deciduous forest, (2) Tropical dry deciduous forest, (3) Tropical thorn forest, (4) Tropical riparian fringe forest, (5) Scrub, and (6) Savannah (Reddy & Reddy, 2016). Savannah-type vegetation, dry deciduous forests, and scrub forests harbor many grassland patches.

The present study aims to assess the taxonomic status, diversity, and composition of the grasslands of Telangana state (Plate 1-7). The study results are presented by way of a user-friendly grass flora to ease the identification of grasses aided by workable keys. Brief discussions on the economic significance, endemism, and threat perception of the grasses of Telangana are also included in the introductory/general chapters.

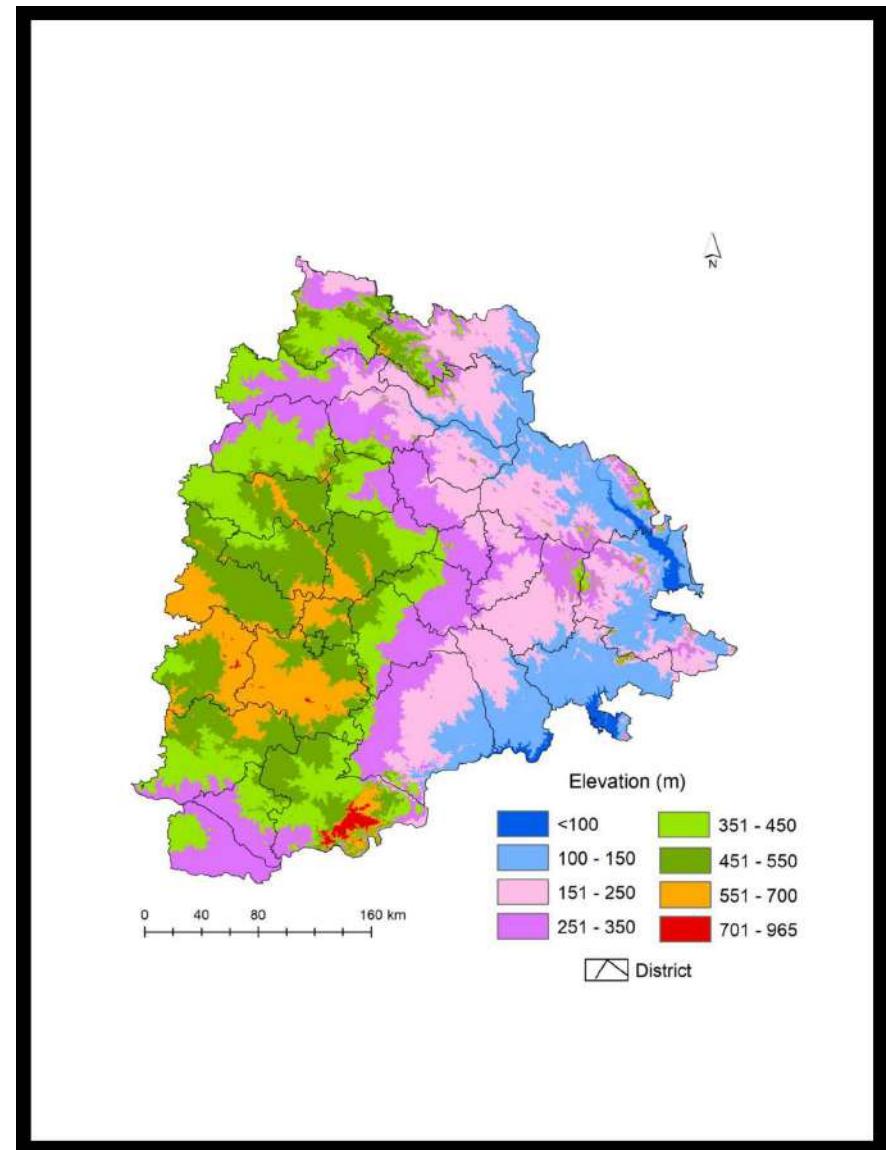

Map 1. Telangana State.

During the present study, plant exploration tours were conducted to survey the dominant grass habitats in Telangana state from April 2017 to March 2022. Exploration sites were mapped with satellite imagery before conducting the field tours. Random sampling, belt, and line transect methods were followed to collect plant specimens based on the homogeneity and heterogeneity of the habitat. During the study, altogether 430 field numbers have been collected, resulting in the identification/description of 273 taxa belonging to 95 genera under 14 tribes.

Map 2. Telangana District boundaries.

Voucher specimens of the grass species were collected to prepare the standard herbarium specimen for incorporation in the herbarium of the Deccan Regional Centre of Botanical Survey of India (Acronym: BSID). Field observations like abundance, habitat, inflorescence pattern, soil type, associated species, threat factors, etc. were recorded in the field, and data entry was made for the specimen label. GPS coordinates for each collected specimen were recorded for geo-tagging subsequently. The collected plant specimens were tagged with the field number and processed by standard herbarium techniques. Specimens were dried, mounted, labeled, and incorporated.

Map 3. District wise elevation range

Photographs of each species' habitat, habit, and inflorescence were taken with Panasonic Lumix FZ-28 and Sony Cyber-shot cameras. Garmin Montana 650 GPS was used to record the geographical coordinates and elevation. Specimens were identified with the help of standard taxonomic works on grasses like Blatter & McCam (1935), Bor (1960), Kabeer & Nair (2009), and published revisionary works on specific grass genera. Spikelets were dissected using Olympus SZ-61 stereo microscope with Magcam DC series.

Various herbaria viz., SKU (Sri Krishnadevaraya University, Ananthapuramu, A.P.), BSID (BSI, DRC, Hyderabad), CAL (Central National Herbarium, Howrah), KU

Plate 01. Grassy hills in Vikarabad district: A. Anantagiri hills; B. Damagundam Reserve Forest.

(Kakatiya University, Warangal, T.S.), HY (Osmania University, Hyderabad, T.S.) and MH (BSI, SRC, Coimbatore, T.N.) were consulted for studying the available grass specimens from Telangana State.

Present study has been carried out on a number of taxa. The correct botanical name is in boldface for each grass taxon, followed by the authority and original citation. Basionym and meaningful synonyms are cited in italics. While citing the author names, titles of the books, periodicals, journals, and standard abbreviations have been followed. The citation of the species is followed by a detailed description, phenology, distribution and field notes. Artificial keys to

Plate 02. A. Dominance of *Heteropogon contortus* (L.) P.Beauv. at Amrabad Tiger Reserve; B. Panoramic view of Vatavarlapally & Lingala (Nallamala Forest)

genera, species and infraspecific taxa, and colour photo plates for **181** plant species are provided. In the present work Clayton & Renvoize (1986) classification is followed with a few exceptions of placing certain genera as per Grass phylogeny classification (Soreng & al., 2017).

PREVIOUS WORK

Since 19th century, several botanists have significantly contributed to the grass flora of the region. Walker (1849) and Bradley (1849) discussed agricultural,

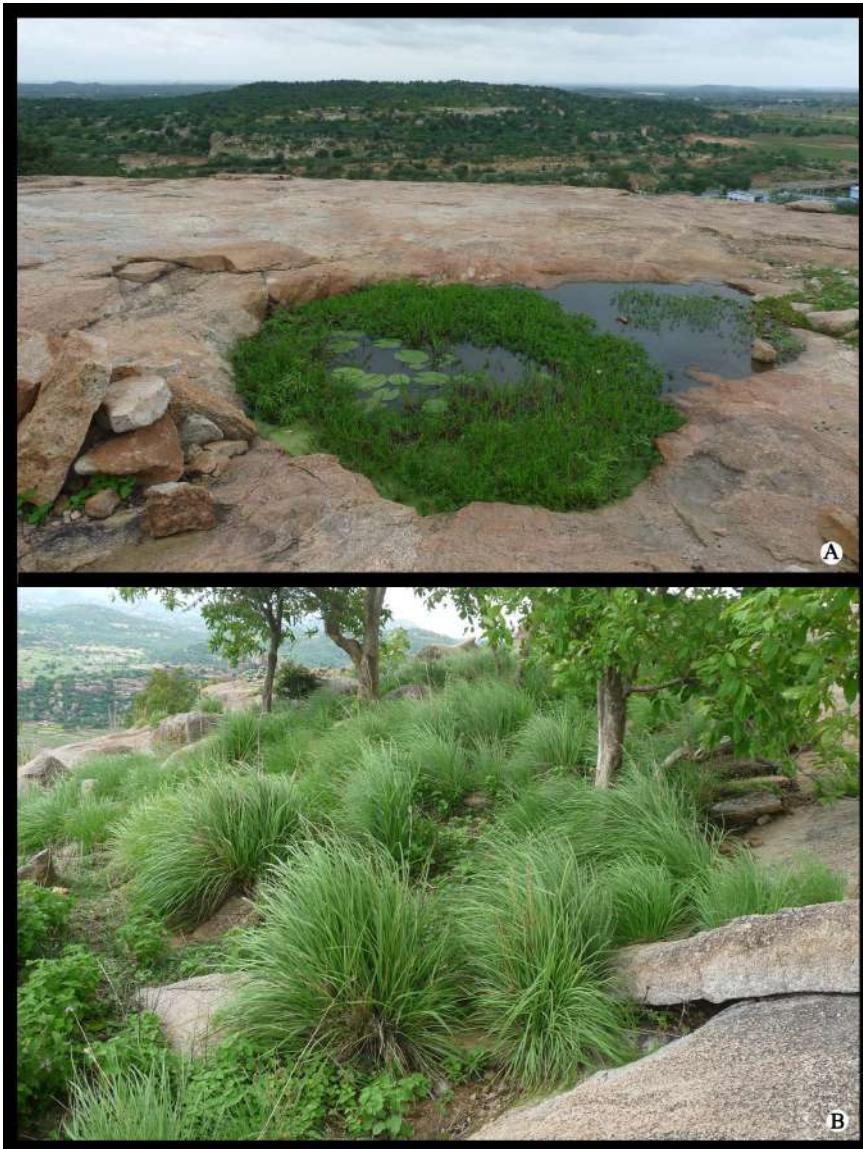

Plate 03. A. Grassy patches on hill top at Wanaparthy district; B. Manyam Konda-Devarakadra- Mahabubnagar district.

medicinal and other economically important species of Daulatabad and Warangal districts. Campbell (1898) enumerated the forest plants of the region in his *Glimpses of the Nizams Dominions*. Patridge (1911) described 450 species belonging to 69 families and provided keys to taxa, information on local names, and economic importance of the plants in his book, *Forest Flora of Hyderabad State*. Khan (1953) revised it with additional information and described 567 wild and cultivated species. Gamble and Fischer (1915–1935) explored the united Andhra Pradesh, which includes a few areas under the Eastern Ghats bordering

Plate 04. A. View of hillocks near Koilakonda project, Mahabubnagar district; B. Moosi River Project-Nalgonda district.

Andhra Pradesh presently in Telangana State and adjoining states have the plant wealth in their *Flora of the Presidency of Madras*. Suxena (1947) listed 115 grass species from Hyderabad State and documented them in the Nizam's Dominions, Hyderabad. The scientists from the Southern Regional Centre of the Botanical Survey of India have explored certain areas in the Telangana region. Sebastine & al. (1960) listed 28 grass species from Medak; Thothathri (1964) has listed 29 grass species from Nagarjunakonda valley of Nalgonda district. Sebastine & Henry (1966) have reported the 33 grass species from Pakhal and the surrounding

Plate 05. A. Dominance of *Dimeria ornithopoda* Trin. in Pakhal WLS in Warangal district; B. Bamboo forest in Warangal district.

regions of Narsampet taluk in the Warangal district. Subba Rao & Kumari (1967) listed 23 genera and 34 species of grasses from Kodimial, Manthani and Raikal of Karimnagar district.

Rajagopal (1973), has treated 108 species of Poaceae in his work, *Flora of Hyderabad: including the study of the foliar epidermal characters of species as an aid to taxonomy*. Pullaiah & al. (1992) documented 85 grass species in their book *Flora of Adilabad District*. About 60 species of Poaceae were enumerated by Pullaiah & Rao (1995) in the *Flora of Nizamabad District*. Pullaiah & al. (1998)

Plate 06. Wetlands: A Undrukonda-Suryapet district; B. Peddapalli-Karimnagar district.

listed 83 species from Medak District. Pullaiah & Mohammed (2000), reported 70 species of Poaceae in the *Flora of Rangareddy District*. Naqvi (2001), reported 100 species of Poaceae in the *Flora of Karimnagar District*. Rao & al. (2001), enumerated 44 grass species in the *Flora of Nalgonda District*. Reddy (2001) has listed 103 species of Poaceae in his work, *Floristic studies in Warangal District*. Ramana (2010) has recorded 118 species of Poaceae in his Ph.D. thesis, *Flora of Hyderabad District*, submitted to Osmania University, Hyderabad.

In recent years, the state floras such as *Flora of Telangana: The 29th State of India* (Pullaiah, 2015) and *Flora of Telangana State* (Reddy & Reddy, 2016)

Plate 07. A. Forest-Eturunagaram WLS in Mulugu district; B. Grassy hills in Nagar Kurnool district.

include 208 grass species and 198 grass species, respectively. In addition, Reddy (2018) has reported additional grasses (30 species) with additional information, with the total species of Poaceae reported being 228. Simultaneously, field surveys were carried out by scientific personnel of BSI, Hyderabad in protected areas of Telangana state for collecting and recording the plant's wealth, including grasses, of the State. Annamma (2018) enumerated 48 genera and 66 species of Poaceae from Kawal Wildlife Sanctuary (Tiger Reserve), Adilabad District, in her Ph.D. thesis. Swamy (2019) has recorded 51 genera and 83 species of Poaceae from Pocharam Wildlife Sanctuary, Medak District.

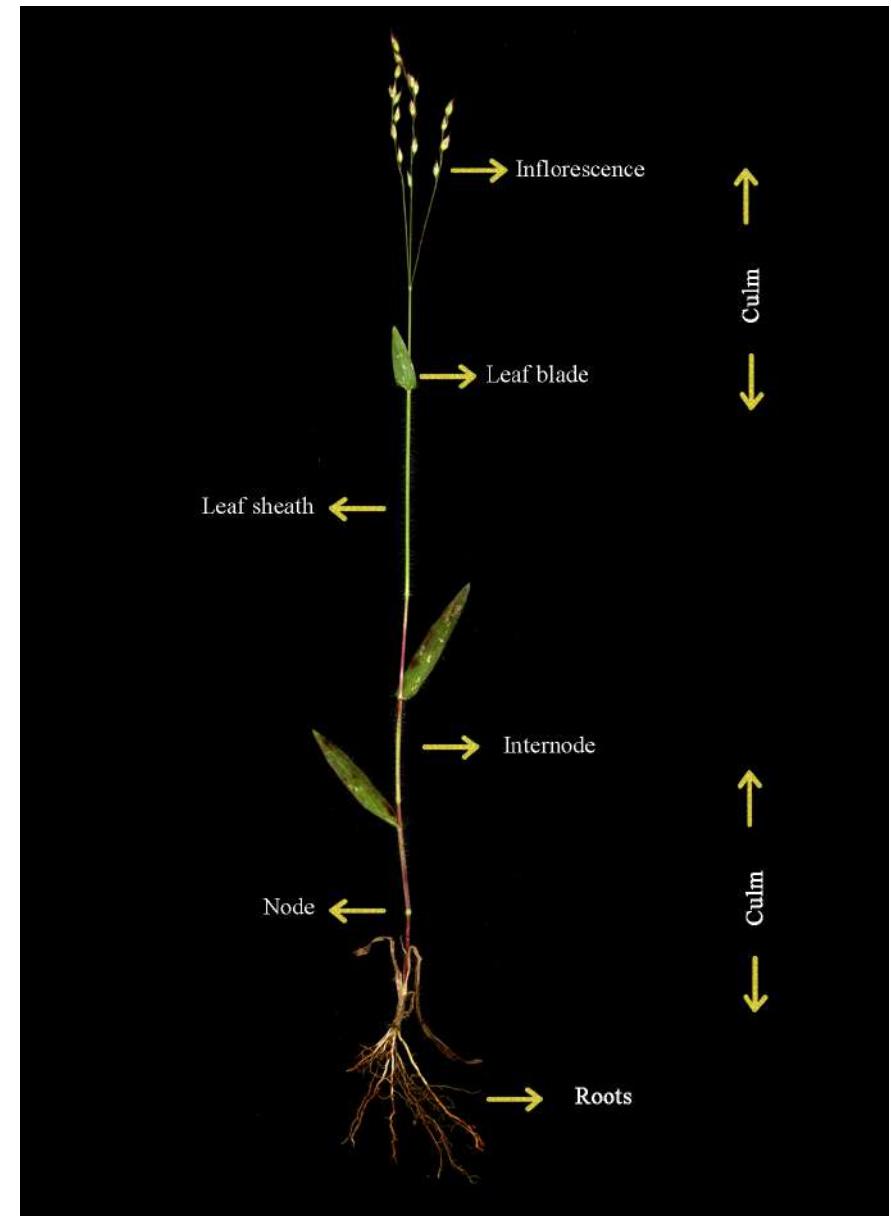

Plate 08. Grass habit: *Alloteropsis cimicina* (L.) Stapf

GRASS MORPHOLOGY

The common grass habit for most species is an upright, cylindrical, rarely compressed culm (stem) anchored to the soil by adventitious roots. The culm consists of nodes and internodes with leaves distichously arising from the nodes. The inflorescence usually comprise numerous spikelets composed of one or more florets containing the flower parts (pistil and stamens).

Grass habit Plate 08

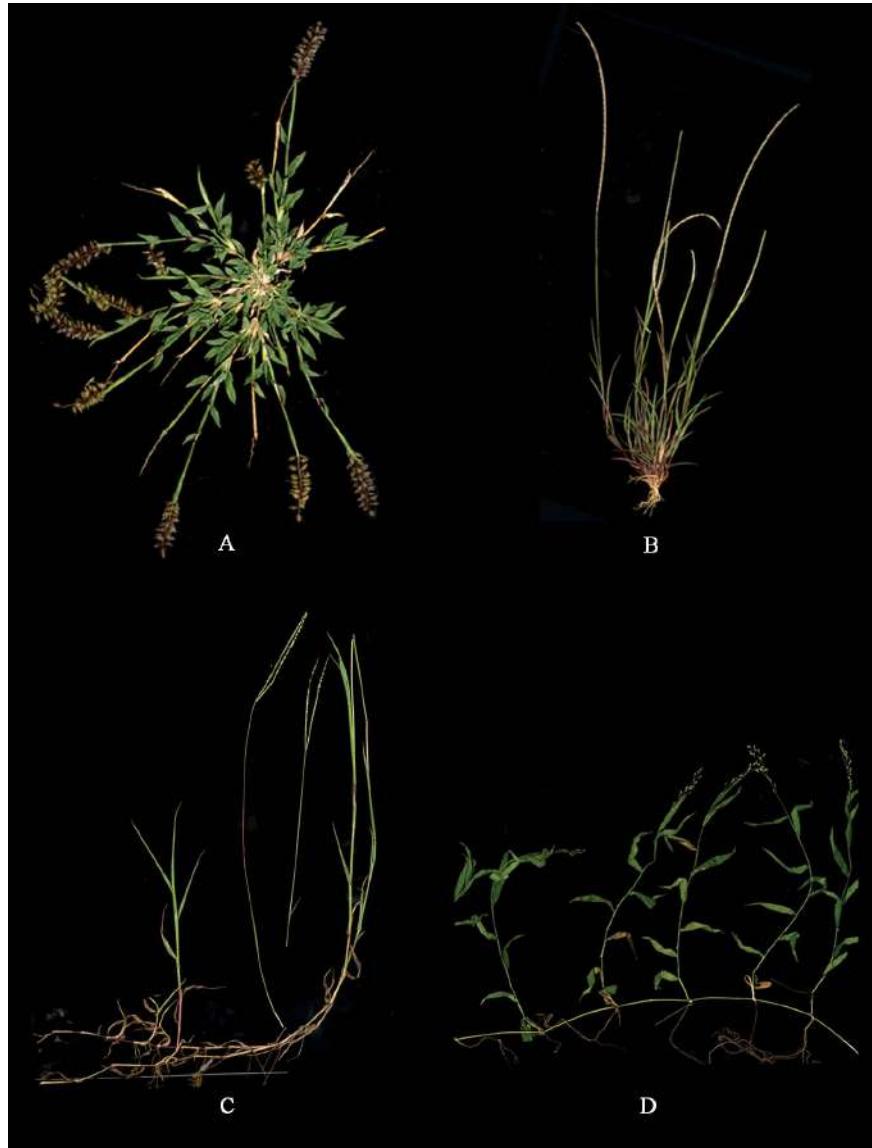

Plate 09. Different habit types: A. *Tragus mongolorum* Ohwi; B. *Microchloa indica* (L.f.) Beauv.; C. *Digitaria longiflora* (Retz.) Pers.; D. *Cyrtococcum trigonum* (Retz.) A.Camus

HABIT

Grasses are caespitose or solitary; annuals or perennials.

Plate 09

ROOT SYSTEM

The luxuriant fibrous root system anchors the growing grass plant and is composed of adventitious roots (fibrous) originating from the lower culm nodes. Additional prop roots (*Sorghum halepense*, *Polytoca gigantea*) emerge from the lower culm nodes just above ground level in some grasses. Most grasses

Plate 10. Root system: A. *Eragrostiella bifaria* (Vahl) Bor; B. *Chrysopogon zizanioides* (L.) Roberty; C. *Zea mays* L.; D. *Dendrocalamus strictus* Nees

with geniculate culms root at the lower nodes. Occasionally, they have woody rootstock, rhizomatous and stoloniferous rootstock which remains dormant in unfavorable conditions.

Plate 10

CULMS

The grass stem is referred as culm comprising series of internodes and nodes. The internodes at the base of the culm are very short, and in the upper portion of a culm, they extend to a considerable length. Internodes are usually

Plate 11. Culm nodes: A. *Polytoca gigantea* (J.Koenig) Mabb.; B. *Heteropogon triticeus* (R.Br.) Stapf ex Craib; C. *Urochloa mutica* (Forsk.) T.Q.Nguyen; D. *Dichanthium foveolatum* (Delile) Roberty

hollow but sometimes are solid as in *Saccharum* or filled with white pith as in *Sorghum*. Culms are mostly glabrous, particularly the sections are enveloped by leaf sheaths. Nodes vary and in some species, they are hairy, whereas in others they are glabrous. Branches usually occur at basal nodes or from the middle and upper nodes known as tillers.

Plate 11

FOLIAGE

A grass leaf is divided into the following parts: sheath, ligules, collar, and blade.

Plate 12

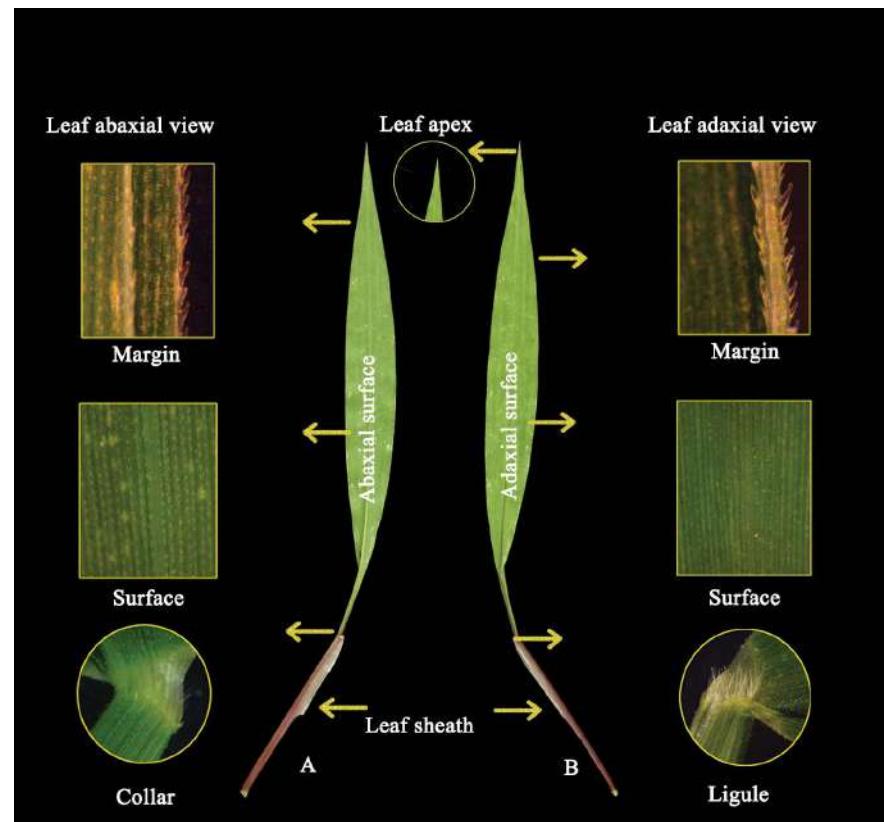

Plate 12. Grass leaf: *Setaria verticillata* (L.) P.Beaup.

Leaf-sheaths: The leaf sheath originates at the node, protects the internodes' growing zone, and structurally strengthens the culm. Sheaths are usually open, sometimes split with overlapping margins or margins fused for all or part of their length. The sheath may be compressed or round or occasionally keeled at the midrib. In some species, sheaths are longer than the blades, and in a few species, they are longer than the adjacent internodes. Usually, sheaths are of a paler shade of green than the blades and are often tinged with pink or purple at the base. They are also tinted with darker color near the blades. The tints are not consistent enough to be of much value in identification. The presence or absence of hairs on the sheath margins, surface, and the junction with the blade is an essential characteristic for identification.

Ligules: A ligule is a tissue clasping the stem or bud shoots, inside the leaf at the junction of the blade and sheath on the adaxial (adjacent) surface. Ligules are usually present, and they may be simply a fringe of hairs, membranous or hyaline, ciliolate or ciliate membrane, or absent. The length of ligules may vary within a species. The shape and margin are usually relatively constant, and they provide reliable distinguishing characteristics for identification.

Collars: The collar is also found between the blade and the sheath. It may be vertically broad or narrow, continuous, or divided by a midrib. If the collar extends diagonally, it is referred to as oblique. Collars are usually smooth but may be hairy

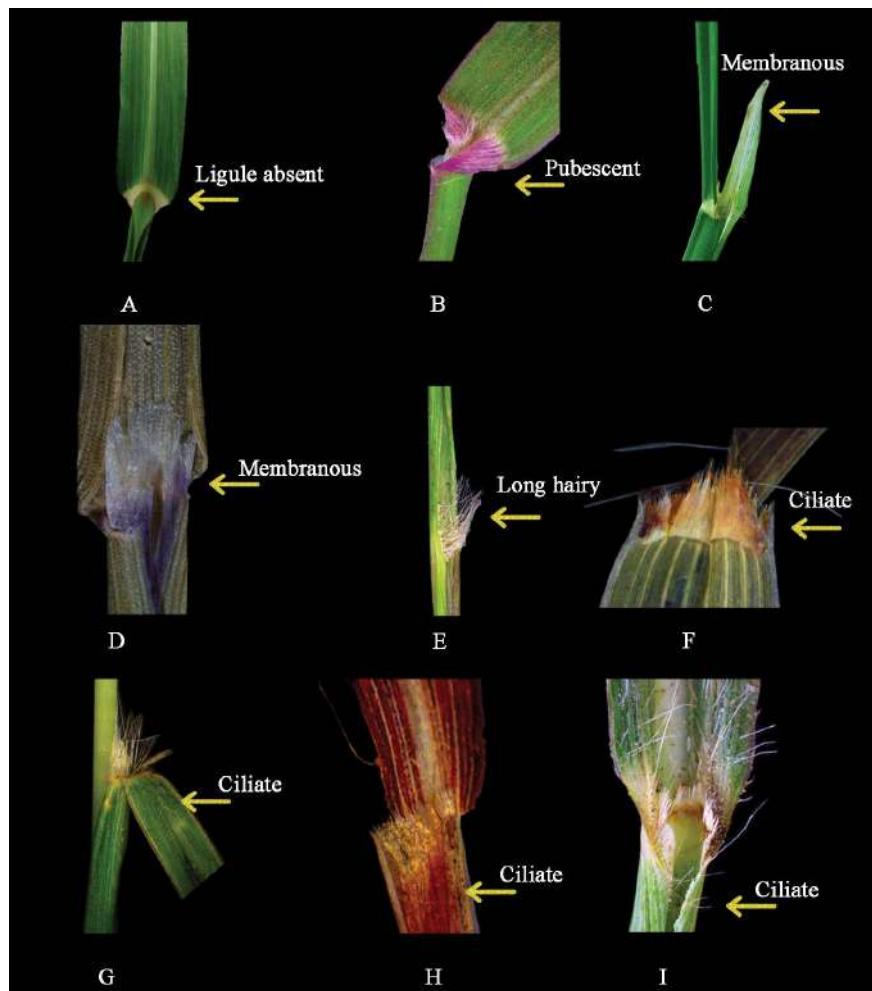

Plate 13. Ligule diversity: A. *Echinochloa colona* (L.) Link; B. *Sorghum halepense* (L.) Pers.; C. *Oryza sativa* L.; D. *Digitaria longiflora* (Retz.) Pers.; E. *Imperata cylindrica* (L.) P.Beauv.; F. *Dinebra retroflexa* (Vahl) Panz.; G. *Dichanthium foveolatum* (Delile) Roberty; H. *Dimeria connivens* Hack.; I. *Polytoca gigantea* (J.Koenig) Mabb.

over the whole surface or only on the inner and lowermost portion of the margin. Collars are generally green or yellowish-green and may be yellow or red.

Blades: The blade or lamina is the upper portion of the leaf above the collar, ligule, and auricle. There is considerable variation in the blades' length and width, and the ratio between these two characteristics is helpful for identification. Blades are usually linear to lanceolate, but blades are filiform or ovate in some species. There is a great deal of variation among species in the shape of the blade apex and base and hairiness of the upper and lower surfaces and margins. Blade venation is usually parallel, although sometimes there are prominent cross veins. Frequently, there are considerable differences between blades from the upper and lower parts of the same plant and between blades taken from different plants of the same species.

Plate 14. A. Solitary spike: *Eragrostiella bifaria* (Vahl) Bor; B. Paired spike: *Dimeria orissae* Bor; C. Unilateral spike: *Microchloa indica* (L.f.) P.Beauv.; D. Digitate spike: *Dactyloctenium aegyptium* (L.) Willd.

INFLORESCENCE

Different inflorescence types are seen in grasses. Broadly, they are spikes, racemes, and panicles.

Spikes: In a spike, the spikelets are attached directly (sessile) to the unbranched central axis without pedicels. **Plate 14**

Racemes: A raceme is an unbranched inflorescence with each spikelet borne on single pedicels directly on the axis. This type of inflorescence is rare in the grasses, but there are many species for which more than one raceme is found

Plate 15. Different forms of Racemes: A. *Digitaria abludens* (Roem. & Schult.) Veldkamp; B. *Bothriochloa pertusa* (L.) A. Camus; C. *Bothriochloa kuntzeana* (Hack.) Henrard

in the inflorescence, which is then technically referred to as a panicle. **Plate 15**

Panicles: A panicle is an inflorescence in which the central axis has several lateral, whorled or individual indeterminate branches, with each branch terminating in a pedicellate spikelet. A true panicle does not have any leaf sheaths within the inflorescence. A raceme is a compound inflorescence in the tribe Andropogoneae consisting of one to many units (branches) of one sessile and one or two pedicellate spikelets. This arrangement is typical of the Andropogoneae

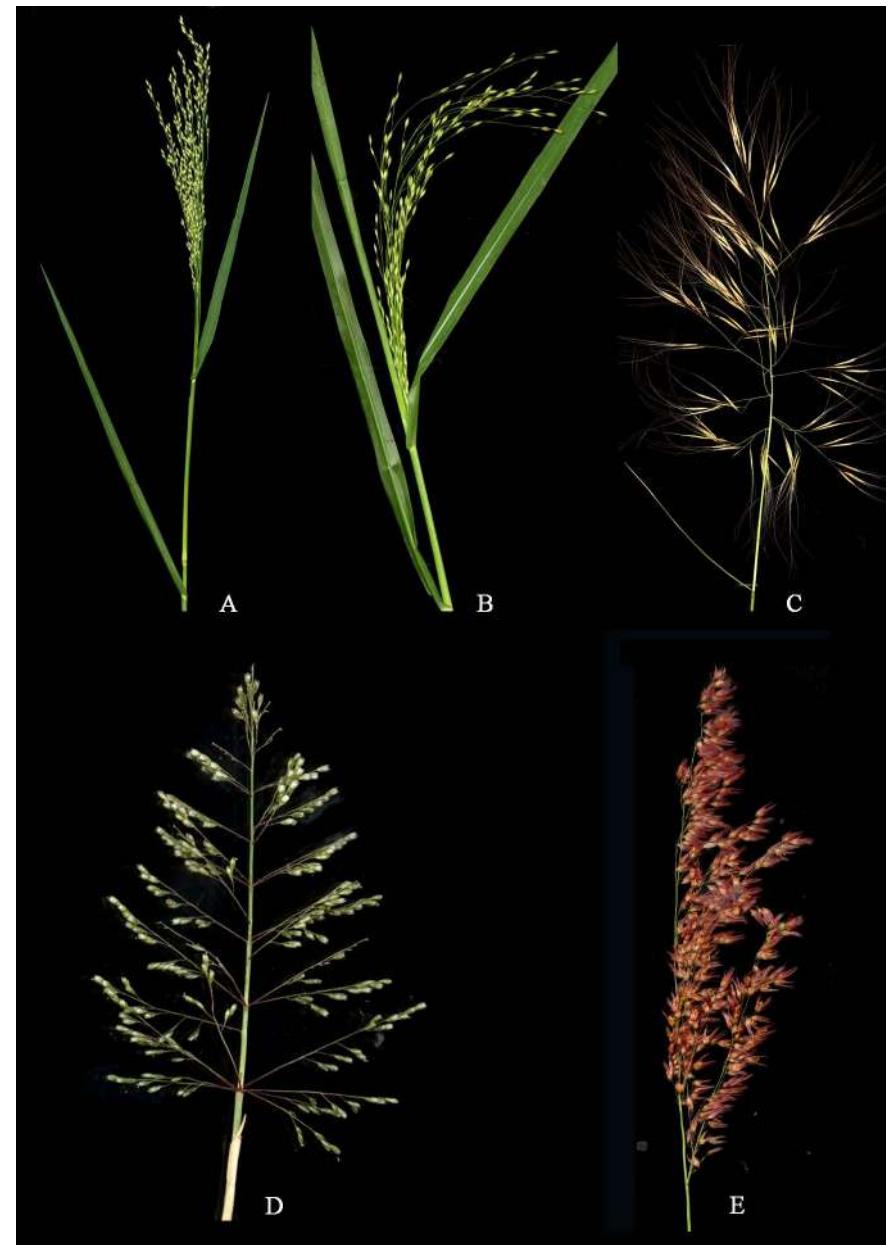

Plate 16. True panicle: A. *Panicum repens* L.; B. *Panicum paludosum* Roxb.; C. *Aristida hystrix* L.f.; D. *Sporobolus coromandelianus* (Retz.) Kunth; E. *Melinis repens* (Willd.) Zizka

and in many of the older published floras it was referred to as "racemes."

True panicle: The central axis of inflorescence bears verticillate, irregular, and alternate branches; which may be open, open, or contracted. **Plate 16**

False panicle: A group of spikelets is enclosed by a spathe like a sheath, present at the terminal ends of branches. **Plate 17**

Plate 17. False panicle: A. *Cymbopogon caesius* (Hook. & Arn.) Stapf; B. *Themeda triandra* Forssk.; C. *Iseilema anthephoroides* Hack.

SPIKELET

Spikelet is a structure of two sterile bracts (the glumes) with a minor axis and several florets (each floret consisting of the lemma, palea, and flower). **Plate 18**

Different shapes of grass spikelets depicted

Plate 19

Glumes: The glumes are the outermost pair of bracts enclosing the spikelet

Gynoecium: The female element of a flower is the pistil. Generally, this consists of a basal ovary with two styles bearing feathery stigmas in grasses. *Zea* and *Dendrocalamus*, which have a single style are an exception. Gynoecium diversity.

Plate 24 (L-U)

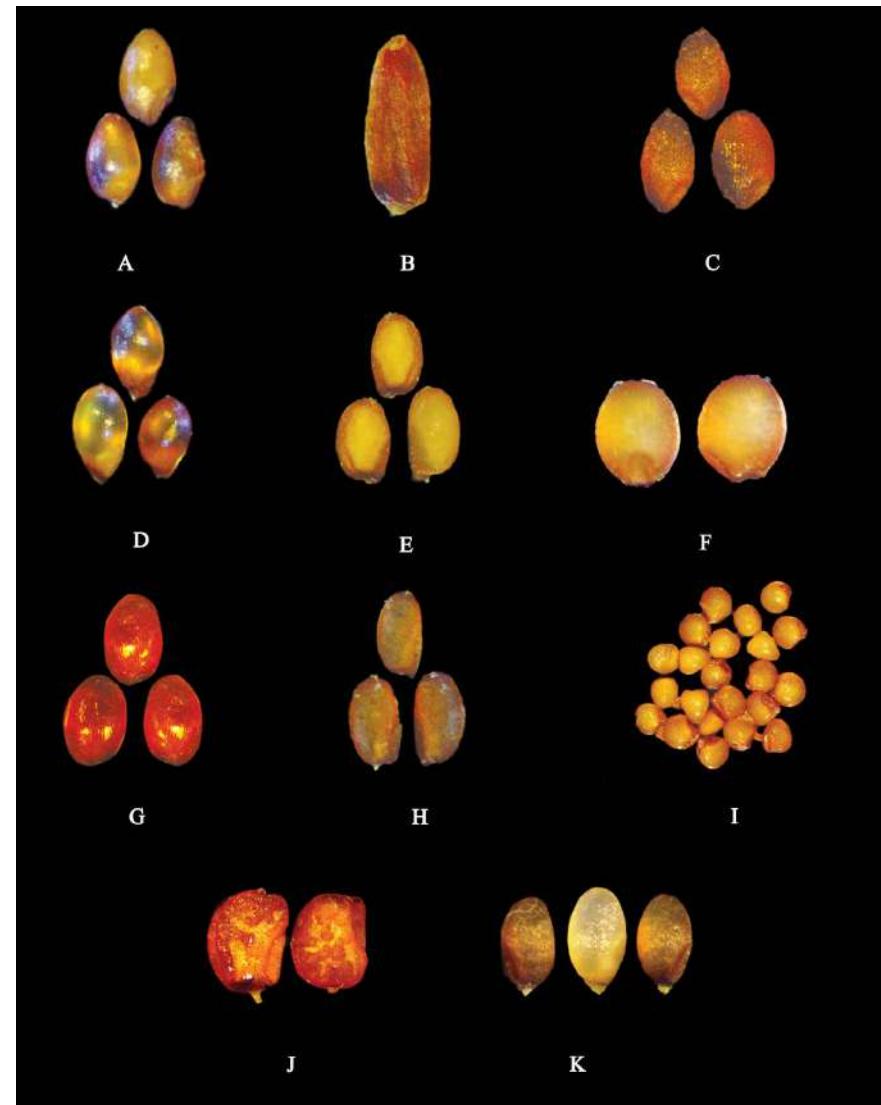

Plate 26. Caryopsis diversity in Eragrostis spp.: A. *Eragrostis amabilis* (L.) Wight & Arn.; B. *Eragrostis atrovirens* (Desf.) Trin. ex Steud.; C. *Eragrostis gangetica* (Roxb.) Steud.; D. *Eragrostis japonica* (Thunb.) Trin.; E. *Eragrostis macilenta* (A.Rich.) Steud.; F. *Eragrostis minor* Host; G. *Eragrostis nutans* (Retz.) Nees ex Steud.; H. *Eragrostis pilosa* (L.) P.Beauv.; I. *Eragrostis tenuifolia* (A.Rich.) Hochst. ex Steud.; J. *Eragrostis tremula* Hochst. ex Steud.; K. *Eragrostis unioloides* (Retz.) Nees ex Steud.

Caryopsis: In Poaceae, a small dry thin-walled fruit, with a single seed fused to the pericarp is called caryopsis or grain. The seed coat is separated from the pericarp (*Eleusine*, *Sporobolus*). It is tightly enclosed by the lemma and palea (*Aristida*, *Oryza*). Diversity of caryopsis in different species of grasses.

Plate 25 & 26

OBSERVATIONS

The project on Grasses of Telangana State was initiated with an objective to conduct critical taxonomic studies of grasses and to bring out an easily referable identification manual that will facilitate unambiguous and correct identification of Telangana grasses. The state of Telangana was carved out from the erstwhile united state of Andhra Pradesh in 2014. This newly formed state was subsequently divided into 33 revenue districts. Although several district floras are readily available, none of these have dealt exclusively with the family Poaceae. As critical studies were lacking for this significant family in Telangana, the current work has been initiated in 2017. The project was successfully completed in the year 2022. The neighboring states of Karnataka, Tamil Nadu, Andhra Pradesh, Odisha, and Maharashtra have published floras where the grasses have been treated as part of the general flora only. However, for the states of Tamil Nadu, Maharashtra and Odisha the floras have been worked out exclusively by studying grasses from a taxonomic point of view.

An analysis of grass by the flora of the neighboring states indicates that although Telangana has lesser diversity of grasses the extent of grasslands in the state is fairly good. The state-wise distribution of grass species in peninsular India is shown in **Table 1**.

Sl. No.	Name of the State	Genera	Species
1	Andhra Pradesh	129	311
2	Karnataka	124	402
3	Maharashtra	125	415
4	Odisha	100	266
5	Tamil Nadu	136	447
6	Telangana	95	273

Table 1. State-wise distribution of grasses in peninsular India

FLORISTIC ANALYSIS

This work records the occurrence of 273 taxa of grasses in the state; these include 6 infraspecific taxa (1 subspecies and 5 varieties). On analysis, it is seen that the 273 taxa of grasses in Telangana belong to 6 subfamilies, 14 tribes and 95 genera. The distribution of species in the 10 dominant tribes are shown in **Table 2**.

The comparison of the 10 dominant tribes in terms of numbers in India (Kabeer & Nair, 2009) and the present work (Nagaraju, 2022) is shown in **Table 3** and **Fig. 1** below.

Table 3. Comparison of dominant grass tribes of India and Telangana

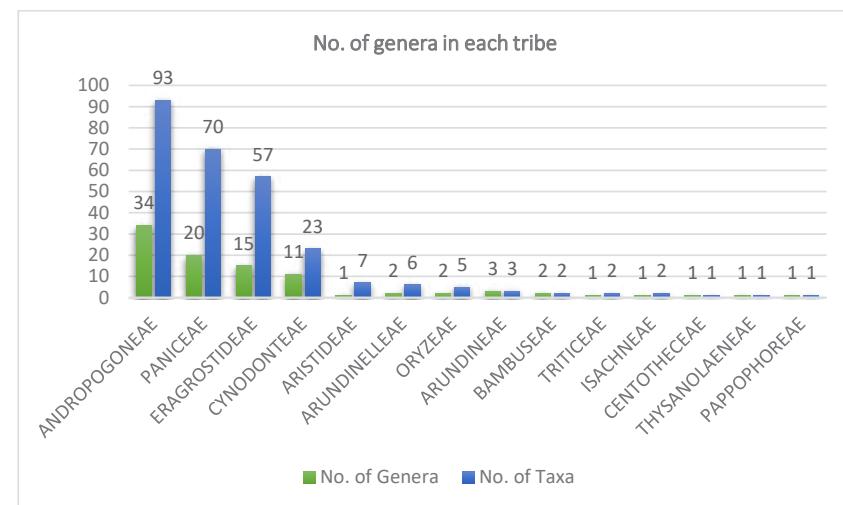

Fig. 1 Distribution of species in each tribe

An analysis at the generic level reveals the 10 most dominant genera in Telangana are: *Eragrostis*, *Urochloa*, *Chrysopogon*, *Sporobolous*, *Digitaria*, *Setaria*, *Panicum*, *Cymbopogon*, *Aristida* and *Tripogon*.

The genus *Eragrostis* is the largest genus in Telangana with 21 species. The two genera *Thysanolaena* and *Desmostachya* are monotypic and are represented in Telangana by a single species each, i.e., *Thysanolaena latifolia* (Roxb. ex Hornem.) Honda and *Desmostachya bipinnata* (L.) Stapf.

The comparison of the dominant genera in Telangana as against the top 10 genera of grasses in India is shown in Table 4.

Dominance analysis of the top 10 genera are depicted in Fig. 2 below.

Sl. No.	India	Telangana

NEW PLANT RECORDS

41 species (vide Table. 5) have been recorded for the first time as new distributional records to the state.

Sl.No. Name of the species

- 1 *Arundinella nervosa* (Roxb.) Nees ex Hook. & Arn.
- 2 *Axonopus compressus* (Sw.) P.Beauv.

- 3 *Bothriochloa insculpta* (Hochst. ex A.Rich.) A.Camus
- 4 *Bothriochloa woodrovii* (Hook.f.) A.Camus
- 5 *Chloris quinquesetica* Bhide
- 6 *Chloris telanganae* Nagaraju, Prasanna, Y.V. Rao & S.B. Padal
- 7 *Chrysopogon hamiltonii* Haines
- 8 *Chrysopogon serrulatus* Trin.
- 9 *Chrysopogon velutinus* (Hook.f.) Bor
- 10 *Cymbopogon winterianus* Jowitt ex Bor
- 11 *Desmostachya bipinnata* (L.) Stapf
- 12 *Dimeria bialata* C.E.C.Fisch.
- 13 *Dimeria connivens* Hack.
- 14 *Dimeria deccanensis* Bor
- 15 *Eragrostis macilenta* (A.Rich.) Steud.
- 16 *Eragrostis papposa* (Desf. ex Roem. & Schult.) Steud.
- 17 *Eulaliopsis binata* (Retz.) C.E.Hubb.
- 18 *Heteropogon fischerianus* Bor
- 19 *Heteropogon polystachyos* Blatt. & McCann
- 20 *Heteropogon triticeus* (R.Br.) Stapf ex Craib
- 21 *Isachne pulchella* Roth
- 22 *Ischaemum ciliare* Retz.
- 23 *Iseilema Jainiana* P. Umam. & P. Daniel
- 24 *Melanocenchrus abyssinica* (R.Br. ex Fresen.) Hochst.
- 25 *Oropetium villosulum* Stapf ex Bor
- 26 *Phalaris minor* Retz.
- 27 *Polygonatherum crinitum* (Thunb.) Kunth
- 28 *Pseudoraphis spinescens* (R.Br.) Vickery
- 29 *Sarga purpureosericea* (Hochst. ex A.Rich.) Spangler
- 30 *Schizachyrium brevifolium* (Sw.) Nees ex Buse
- 31 *Schoenefeldia gracilis* Kunth
- 32 *Sehima ischaemoides* Forssk.
- 33 *Setaria homonyma* (Steud.) Chiov.
- 34 *Sporobolus ioclados* Nees

- 35 *Sporobolus tetragonus* Bor
 36 *Stenotaphrum dimidiatum* Brongn.
 37 *Tripogon bromoides* var. *anantaswamianus* (Sreek., V.J. Nair & N.C.Nair) Sang.Dey & Prasanna
 38 *Tripogon filiformis* Nees ex Steud.
 39 *Tripogon trifidus* var. *sivarajanii* (Sunil) Sang.Dey & Prasanna
 40 *Urochloa trichopus* Stapf
 41 *Zoysia matrella* (L.) Merr.

Table 5. New distributional records of grasses in Telangana

ENDEMIC/THREATENED GRASSES IN TELANGANA

Endemic floristic elements of a country or geographical region throw light on the biogeography of the area, centres of speciation, areas of extinction, vicariance and adaptive evolution of the flora occurring in the area (Ahmedullah & Nayar, 1987). It is well known that the endemic plants of any specific phytogeographic region are of high conservation value. This study has shown that there are presently only two species, *Chloris telanganae* and *Tripogon trifidus* var. *sivarajanii* are strict endemic to the state of Telangana. About 30 endemic species that are distributed in the larger region of peninsular India are also found growing in Telangana. These are: *Arthraxon depressus*, *Arundinella nervosa*, *Arundinella tuberculata*, *Bothriochloa kuntzeana*, *Bothriochloa woodrovii*, *Capillipedium filiculme*, *Chloris bournei*, *Chloris Telangana*, *Chrysopogon asper*, *Chrysopogon hamiltonii*, *Chrysopogon velutinus*, *Chrysopogon verticillatus*, *Dichanthium mccannii*, *Dimeria kanjirapallilana*, *Dimeria bialata*, *Dimeria connivens*, *Dimeria deccanensis*, *Dimeria orissae*, *Heteropogon polystachyos*, *Heteropogon triticeus*, *Iseilema antephorooides*, *Iseilema holei*, *Iseilema jainiana*, *Lophopogon tridentatus*, *Oropetium roxburghianum*, *Oropetium villosulum*, *Spodiopogon rhizoporus*, *Tripogon bromoides* var. *anantaswamianus*, *Tripogon trifidus* var. *sivarajanii*. Most of these species, including the newly described species *Chloris telanganae* has not been assessed through the IUCN red listing process as yet. *Dichanthium mccannii*, which is mostly found restricted to the Satara (Panchagani) and Aurangabad of Maharashtra state is feared to be rare (Ahmedullah & Nayar, 1987); this species has an eastward extension of distribution in Nagarkurnool district of Telangana. However, until proper threat assessments are made in the future to confirm their conservation status, these 30 endemic species of grasses (**Table 6**) may be presumed to be threatened to some extent or near-threatened for the purpose of conservation.

According to Ahmedullah & Nayar (1987) there are 180 species and 21 infraspecific taxa endemic to peninsular India. The occurrence of the peninsular Indian endemics in Telangana is significant and lends some conservation value to the grass diversity of the state.

Sl. No.	Name of the species	Distribution
1	<i>Arthraxon depressus</i> Stapf ex C.E.C. Fisch.	Andhra Pradesh, Karnataka, Tamil Nadu and Telangana
2	<i>Arundinella nervosa</i> (Roxb.) Nees ex Hook. & Arn.	Andhra Pradesh, Goa, Himachal Pradesh, Karnataka, Kerala, Maharashtra, Meghalaya, Tamil Nadu and Telangana

27	<i>Sarga purpureosericea</i> (Hochst. ex A. Rich.) Spangler	Madhya Pradesh, Maharashtra, Rajasthan and Telangana
28	<i>Spodiopogon rhizophorus</i> (Steud.) Pilg.	Gujarat, Karnataka, Kerala, Maharashtra, Goa, Rajasthan, Tamil Nadu and Telangana
29	<i>Tripogon bromoides</i> var. <i>anantaswamianus</i> (Sreek., V.J.Nair & N.C.Nair) Sang.Dey & Prasanna	Kerala, Tamil Nadu and Telangana
30	<i>Tripogon trifidus</i> var. <i>sivarajanii</i> (Sunil) Sang.Dey & Prasanna	Kerala and Telangana

Table 6. Endemic grasses

IMPORTANCE OF GRASSES*The advent of agriculture*

With the shift from nomadic to a more sedentary and pastoral lifestyle, Man began to collect seeds of selected plants such as wheat, barley, and rice from the wild and domesticate them for regular food supply; the agriculture system began for humankind. Prominent among the potentially edible plants were grasses/cereals such as wheat, rye barley, sorghum, leguminous plants such as peas, beans, lentils, etc., and vegetable and fruit-bearing plants, were selectively bred for human consumption/ subsistence. In grasses, the selection of potentially essential traits such as the cohesiveness of the inflorescence ensuring that it does not disperse before harvesting was the key to the selection process. It is estimated that the domestication of grasses probably started about 10,000 years ago in southwestern Asia and the Middle East; cereals such as wheat and barley were derived from the wild species of *Triticum* and *Hordeum*, respectively. Subsequently, arable weeds such as rye (*Secale cereale*) and oats (*Avena sativa*) became domesticated as agricultural practices spread slowly in Asia and Europe. Over the ages, rice (*Oryza sativa*) became the major cereal in tropical Asia, followed by foxtail millet (*Setaria italica*). The agricultural practices (animal husbandry) slowly evolved ages ago towards establishing domesticated plant and animal species (such as wheat, corn, rice, poultry, and cattle) on which human existence is now wholly dependent.

Today, agriculture is the mainstay of many agrarian/rural communities and contributes much to the national economy in many countries. With grasses such as wheat and rice being significant contributors, India's food and agricultural production is very high and ranks second globally.

Economic uses

The extant agricultural practices include grasses which form the primary source of food (*Oryza sativa*, *Zea mays*, *Sorghum bicolor*, *Eleusine coracana*,

Panicum miliaceum, *Setaria italica*, *Saccharum officinarum*, etc.) and fodder (*Brachiaria ramosa*, *Dichanthium foveolatum*, *Eragrostis gangetica*, *Eleusine indica*, *Ischaemum ciliare*, *Paspalum scrobiculatum*, *Sorghum halepense*, *Urochloa mutica*, etc.). More than one-fifth of the calorific requirements of the human race are met by rice (*Oryza sativa*) and wheat (*Triticum aestivum*). Species of *Saccharum* and *Sorghum* serve as sugar crops. In peninsular India, a total of 143 grass species were recorded as edible (Gorade & Datar, 2014), with classification made on assessment of their palatability grade based on their use-value.

Grasses such as *Cymbopogon citratus*, *Chrysopogon zizanioides* (*Vetiveria zizanioides*), *Cynodon dactylon*, etc., also have medicinal uses.

Grasses such as *Arundo donax*, *Axonopus compressus*, *Cenchrus* sp., *Polygonatherum* sp., *Stenotaphrum dimidiatum*, *Zoysia matrella*, etc., are of high ornamental value. Grasses enjoy a place of pride in horticulture, being used mainly to develop lawns.

Grasses also are of much use in the aromatic oil industry. Lemongrass (*Cymbopogon* spp.) is used to distill aromatic oil with a citronella smell, used in the perfumery and soap-making industry. In India, the oil-yielding plants, including grasses, have been enumerated by Ahmedullah & Sanjappa (2008). Some commercial oil-yielding grasses are *Cymbopogon citratus*, *C. martini*, and *C. nardus*, all of which are utilized for various purposes such as deodorants, detergents, polishes, perfumery, and soap industry. *Chrysopogon zizanioides*, the roots of which yield the 'vetiver oil' is also used in perfumery/cosmetics, and sometimes for flavoring cold drinks (Ahmedullah & Sanjappa, 2008). In medicine, 'vetiver oil' is also used as a diaphoretic, stimulant, and local application to relieve joint pains, rheumatism, sprains, etc.

Grasses such as *Cynodon dactylon*, *Desmostachya bipinnata*, *Imperata cylindrica*, *Saccharum spontaneum*, etc., are used in certain religious rites. Many types of grass, such as *Aristida setacea*, *Arundinella setosa*, *Thysanolaena latifolia*, etc., which are used in small/local broom-making industries, are of socio-economic value. Grass species such as *Desmostachya bipinnata*, *Eulaliopsis binata*, *Saccharum spontaneum*, *Oryza sativa* (Hay), *Themeda* sp., *Cymbopogon* sp., etc., which are used for thatching in rural India, as well as species such as *Arundo donax*. *Phragmites karka*, used for fencing in villages, are also of high socio-economic value.

Bamboos, popularly known as 'green gold,' have a universal appeal due to their importance as a building material and in the paper-making industry. Some of the economically essential bamboos are *Bambusa* and *Phyllostachys*.

HABITATS OF GRASSES

Plate 27

Grasses are the successful colonizers of any habitat ranging from hot deserts to cold deserts. In a strict sense, there will be an overlap of habitats in the distribution of grasses. Based on the habitat specificity in the state of Telangana, the grasses have been broadly categorized variously as:

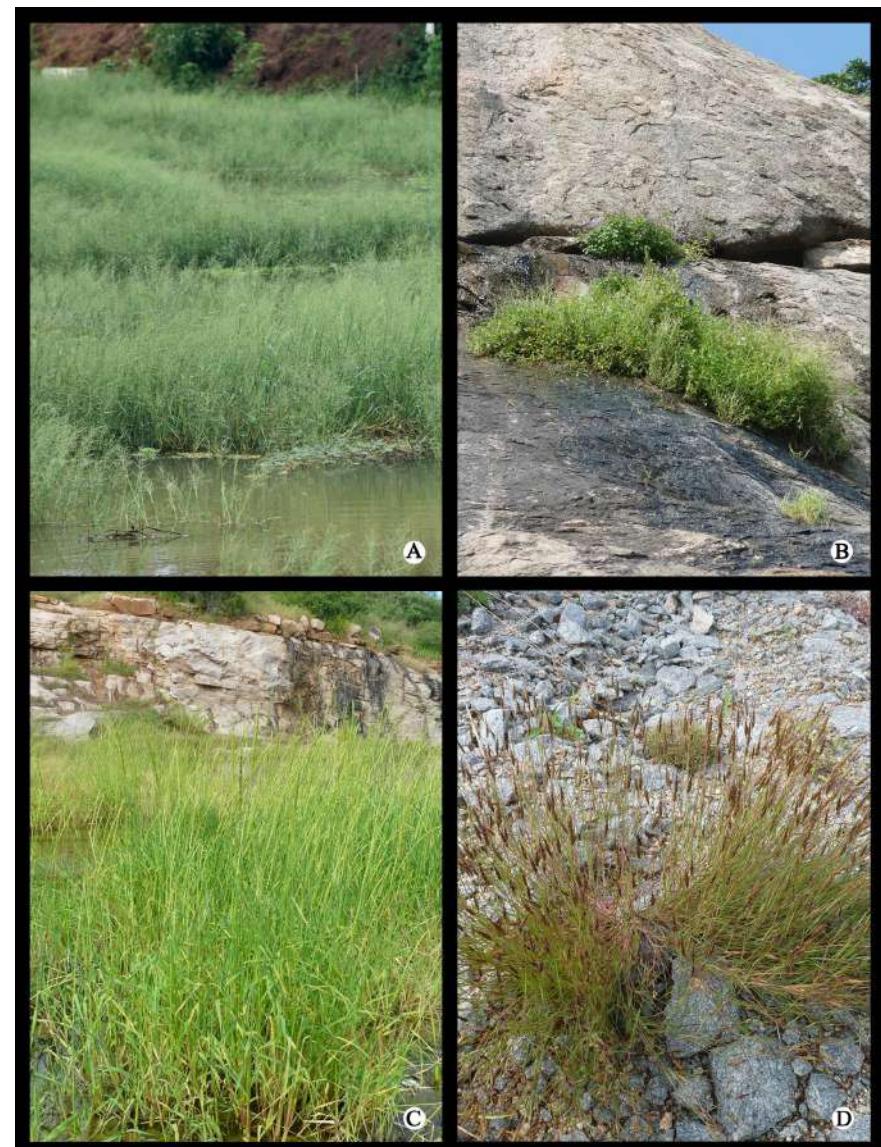

Plate 27. **Grass habitats:** A. *Pseudoraphis spinescens* (R.Br.) Vickery; B. *Arthraxon lanceolatus* (Roxb.) Hochst.; C. *Sacciolepis interrupta* (Willd.) Stapf; D. *Lophopogon tridentatus* (Roxb.) Hack.

Tall reed-like grasses: *Arundo donax*, *Heteropogon triticeus*, and *Phragmites karka*.

Wasteland grasses: *Alloteropsis cimicina*, *Arthraxon hispidus*, *Chloris quinqueseta*, *Cynodon dactylon*, *Dactyloctenium aegyptium*, *Digitaria ciliaris*, *Eleusine indica*, *Eragrostis unioloides*, *Heteropogon contortus*, *Ischaemum indicum*, *Sporobolus diander*, *Themeda triandra*, *Tragus mongolorum* etc.

Forest grasses or shade-loving grasses: *Centotheca lappacea*, *Oplisminus burmanii*, *Oplismenus compositus*, *Cyrtococcum trigonum*, etc.

Wall grasses: *Apluda mutica*, *Arthraxon lancifolius*, *Arundinella pumila*, *Garnotia tenella*, *Heteropogon contortus*, *Tripogon bromoides*, etc.

Lawn grasses: *Axonopus compressus*, *Chrysopogon aciculatus*, *Cynodon dactylon*, *Stenotaphrum dimidiatum*, *Cenchrus species*, *Rhynchelytrum repens* (*Melinis*), *Zoysia matrella*, etc.

Grasses along with watercourses: *Arthraxon lanceolatus* var. *echinatus*, *Ischaemum rugosum*, *Panicum repens*, *Sacciolepis myosuroides*, *Sacciolepis indica*, *Saccharum spontaneum*, *Setaria punctata* (*Paspalidium*), *Thelepogon elegans*, etc.

Grasses on rocky hill slopes, in crevices: *Dimeria bialata*, *Dimeria avenacea*, *Dimeria connivens*, *Dimeria kanjirapallilana*, *Dimeria orissae*, *Dimeria ornithopoda*, *Heteropogon polystachyos*, *Oropetium roxburgianum*, *Oropetium thomaeum*, *Oropetium villosulum*, *Tripogon anantaswamianus*, *Tripogon bromoides*, *Tripogon filiformis*, *Tripogon jacquemontii*, *Tripogon purpurascens*, *Tripogon wightii*, etc.

Weeds of cultivated fields: *Echinochloa colona*, *Echinochloa crus-galli*, *Eragrostis unioloides*, *Eriochloa procera*, *Leptochloa chinensis*, *Trachys muricata*, etc.

Marshy and hydrophytic grasses: *Eragrostis tenella*, *Leersia hexandra*, *Oryza rufipogon*, *Panicum repens*, *Panicum paludosum*, *Polytoca gigantea*, *Pseudoraphis spinescens*, *Sacciolepis interrupta* etc.

Bambusa Schreb.

World: c. 55 spp.; India: 29 taxa.; Telangana: 1sp.

Bambusa bambos (L.) Voss, Vilm. Blumengartn., ed. 3. 1: 1189. 1895. *Arundo bambos* L., Sp. Pl. 1: 81. 1753. *Bambusa arundinacea* (Retz.) Willd., Sp. Pl., ed. 4. 2(1): 245. 1799; Hook.f., Fl. Brit. India 7: 395. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1859. 1934; Pull., Fl. Telangana 3: 1077. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 684. 2016; Pushpa & Singh in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 300. 2020. *Bambos arundinacea* Retz., Observ. Bot. 5: 24. 1789. ‘*Mulla Veduru*’

Caespitose, woody, perennials; rhizomatous short (pachymorph), thorny. Culms 10–32 m tall, 8–16 cm across, drooping above; internodes c. 50 cm long, hollow; nodes prominent, lower nodes rooting, shoots armed at nodes with 1–3 recurved spines and with few leaves; culms sheaths 15–35 cm long, broad, triangular, coriaceous, orange-yellow when young, straight, rounded at apex, thickly ciliate with golden hairs when young; blades c. 12 cm long, triangular, densely hirsute inside, apex acuminate; ligules narrow, with white hairs. Leaves basal and caudate; petiole 0.2–0.4 cm long; sheaths ending in a thick callus with a short bristly auricle; ligules short; blades c. 20 × 2.5 cm, linear-lanceolate, glabrous or puberulous beneath, 4–6-nerved, base rounded, apex acuminate. Synflorescence bractiferous, globose clusters. Panicle very large, often occupying the whole stem; branchlets bearing loose clusters of spikelets. Spikelets 10–30 mm long, lanceolate, glabrous, apex acute; 5–7-fertile florets. Rachilla internodes distinct. Glumes persistent, empty glumes 1–2, ovate-lanceolate, many nerved, apex acute-mucronate. Fertile lemma 7–8.5 mm long, ovate, 14–15-nerved, margins ciliolate, apex acute-mucronate. Uppermost 1–3 male or neuter. Palea

oblong, 2-keeled, keels ciliate. Lodicules 3. Anthers 6. Caryopsis 4.5–7 mm long, oblong-ellipsoid, beaked.

Fl. & Fr.: Jan.–Mar.

Distrib.: Occasional in Khammam & Warangal.

Exsicc.: Warangal District: Way to Guttalogangaram from Thupakula gudem, NRR & TRS 86563 (BSID).

Dendrocalamus Nees

World: c. 73 spp.; India: 16 spp.; Telangana: 1sp.

Dendrocalamus strictus (Roxb.) Nees in Linnaea 9(4): 476. 1835; Pull., Fl. Telangana 3: 1103. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 697. 2016; Pushpa & Singh in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 304. 2020. *Bambos stricta* Roxb., Pl. Coromandel 1(4): 58. 1798. ‘*Sadanapu Veduru*’ **Plate 28**

Caespitose, woody, perennials; rhizomatous short (pachymorph). Culms 10–16 m tall, erect, branched, solid-cavity; sheaths 4–11 × 6–13 cm, triangular, hairy; nodes swollen, lower nodes rooting. Leaves caudate; petiole long; sheaths 2.5–16 cm long, glabrous, apex acuminate; ligules narrow, apex ciliate-serrulate; blades 4.5–19 × 1.5–2.5 cm, linear-lanceolate, surface and margins scabrous, apex acuminate. Synflorescence bractiferous, globose clusters. Spikelets 1–3 fertile florets, bisexual, 0.8–1.2 cm long, lanceolate, compressed laterally, spiny. Glumes persistent. Lower glume ovate, chartaceous, many nerved, apex acuminate. Upper glume ovate, chartaceous, apex acuminate. Lemmas 6–7 mm long, ovate, chartaceous, apex acuminate-spiny, awned; awn 1.5–2 mm long, pungent. Palea ovate-elliptic, chartaceous, 6–7-nerved, 2-keeled, keels ciliate, apex emarginate. Lodicules 0. Anthers 6. Caryopsis 5.5–7 mm long, ovoid-subglobose.

Fl. & Fr.: Jan.–Mar.

Distrib.: Common throughout the State.

Exsicc.: Adilabad District: Tiriyani-Range, Gundal West-Beat, APS s.n. (BSID); Khammam District: Mothagudem, CSR 1486 (KU); Rangareddy District: Central University, MSM 15172 (SKU); Warangal District: Hanumakonda, CSR 185 (KU).

Notes: Apart from above mentioned two wild bamboo species, the following bamboos are found to be in cultivation viz., *Bambusa tuldaoides* Munro and *Bambusa vulgaris* Schrad. ex J.C. Wendl.

Telangana 3: 1068. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 679. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 321. 2020. 'Pilli-biser gaddi'

Plate 34

Caespitose annuals. Culms 10–55 cm high, erect or geniculate, terete; nodes glabrous (dark). Leaves basal and caudine; sheaths open, glabrous; ligules c. 1 mm long, ciliolate membrane; blades 2–16 × 0.1–0.4 cm, linear, conduplicate, sparsely hairy, apex acuminate. Panicle c. 20 cm long, erect, axillary and terminal, lax-contracted. Spikelets 7–10 mm long (excluding awns), lanceolate. Lower glume 3–6 × 0.5–1 mm, lanceolate, 1-nerved, margins membranous. Upper glume c. 8 mm long, linear, 1-nerved; callus 2–5 mm long. Lemma c. 9 mm long, oblong-linear, chartaceous-subcoriaceous, laterally compressed, 3-nerved, keeled; convolute, 3-awned, column absent, middle awn 10–25 mm; lateral awns 7–14 mm long, serrulate. Palea c. 1.5 × 0.3 mm, oblanceolate, membranous, hyaline, apex acute. Lodicules 2. Stamens 3. Ovary elliptic-oblong. Caryopsis c. 5.5 mm long, compactly enclosed by lemma.

Fl. & Fr.: Aug.–Dec.

Distrib.: Common throughout the state in plains, hill slopes, roadsides and in crevices of old walls.

Exsicc.: Bhadradi Kothagudem District: Kinnerasani Wildlife Sanctuary, SNR 9585 (BSID)!; Mahabubnagar District: Nagarjunasagar, LR & SNR 7301 (BSID); Medak District: Nagasampally RF, RG 104200 (BSID)!; Nalgonda District: Kalvaply, BRA 001204 (BSID)!; Rangareddy District: Hyderabad-Borabanda-Hitech city, VSK & KCS 323 (BSID)!; Adilabad District: Jannaram-Range, Alinagar-Beat, APS 3995 (BSID)!; Rangareddy District: Hyderabad, MVR 02103 (HY)!; Wanaparthy District: Amadabakula-Kothakota, SNR 8631 (BSID).

Note: Identifiable by lax inflorescence.

Suppl. 117 (1819). *Thysanolaena maxima* (Roxb.) Kuntze, Revis. Gen. Pl. 2: 784. 1891; Bor, Grasses Burma, Ceylon, India & Pakistan 650. 1960; Pull., Fl. Telangana 3: 1183. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 725. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 338. 2020. *Agrostis maxima* Roxb., Fl. Ind. 1: 319. 1820.

Plate 43

Caespitose perennials; rhizomatous. Culms about 3 m high, erect, reed like. Leaves caudate; sheaths terete, pubescent, margins ciliate; ligules c. 1.5

Plate 43. *Thysanolaena latifolia* (Roxb. ex Hornem.) Honda: A. Habit; B. Inflorescence; C. Spikelet; D. Lower glume; E. Upper glume; F. Lemma; G. Palea.

mm long, membranous, truncate; blades 20–45 × 2–4 cm, lanceolate, tessellate veined, glaucous below, base subcordate-semiamplexicaul, apex acuminate. Panicle 20–60 × c. 10 cm, effuse, drooping, branched, rachis flexuous. Spikelets 1–2 mm long, paired or not, ovate-lanceolate or lanceolate. Lower glume 0.5–1 mm long, ovate, chartaceous, 1-nerved, apex acute. Upper glume c. 1 mm long, more or less similar to lower one. Florets usually 2 or 3; lower sterile, median one bisexual, upper male or sterile; rachilla prolonged beyond the base of second floret and often bearing rudimentary florets. Lower lemma 1–1.5 mm long,

lanceolate, membranous to chartaceous, 1–3-nerved, glabrous or with few setose hairs. Lower palea absent. Fertile lemma c. 1.5 mm long, lanceolate, chartaceous, 3-nerved, margins ciliate, hairs 0.5–0.8 mm long. Palea oblong-lanceolate, 0.5–1 mm long, membranous, hyaline, 2-nerved. Lodicules 2, apex truncate. Stamens 2 or 3; anthers c. 0.5 mm long. Stigma plumose, purplish. Caryopsis c. 0.5 mm long, elliptic.

Fl. & Fr.: Apr.–Dec.

Distrib.: Along forest margins and banks of streams and rivers.

Exsicc.: Adilabad District: Tiryani-Range, Chintalamadira-Beat, 19.09.2014, APS 4909 (BSID); Rangareddy District: Hyderabad, MVR 02210 (HY).

Note: Distinguishable by its reed like culms. The inflorescence is used for making brooms and leaves are of great fodder value.

SUB-FAMILY: CHLORIDOIDEAE

World: c. 9 spp.; India: 1 sp., 1 var.; Telangana: 1 sp.

Dinebra retroflexa (Vahl) Panz., Denkschr. Konigl. Akad. Wiss. Munchen 1813: 270. 12. 1814; C.E.C.Fisch. in Gamble, Fl. Madras 1841. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 491. 1960; Pull., Fl. Telangana 3: 1114. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 708. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 358. 2020. *Cynosurus retroflexus* Vahl, Symb. Bot. 2: 20. 1791. *Dinebra arabica* Jacq., Fragm. Bot. 77. 98. t. 121. f. 1. 1807; Hook.f., Fl. Brit. India 7: 297. 1896.

Plate 50

Caespitose perennials. Culms 10–80 cm high, erect, geniculate; nodes glabrous. Leaves basal and caudine; sheaths 2–9 mm long, open, margins smooth-scabrid, glandular; ligules c. 2 mm long, membranous, apex lacerate; blades 5–25 × 0.2–0.6 cm, linear-lanceolate, glandular, apex acuminate. Racemes 5–20 cm long, oblong-cuneate, spiciform, pyramidal, deflexed. Spikelets 3–4 mm long, lanceolate, 2-seriate. Lower glume 3–3.5 mm long, lanceolate, glandular on keels, base narrowly acute-truncate, apex cuspidate. Upper glume 3.5–4 mm long, similar to lower glume. Florets 2–3; uppermost reduced to lemma. Lemma 2–2.5 mm long, narrowly ovate, chartaceous, 3-nerved, keeled, apex acute-acuminate or obtuse, emarginate, mucronate. Palea c. 1.5 mm long, linear-oblong, 2-keeled, keels finely ciliolate. Stamens 3. Ovary 0.1–5 mm long, oblong-globose; stigma plumose. Caryopsis 1–1.5 mm long, ellipsoid, trigonous.

Fl. & Fr.: Sep.–Jan.

Distrib.: Very common throughout the state as a weed in cultivated fields and along roadsides.

Exsicc.: Adilabad District: Pembi - Range, Tatiguda - Beat, APS 5460 (BSID); Mahabubnagar District: Achaaryapur - Koilkonda, Goarlapaadu Beat, SRS 109766, 109085 (BSID), Vatavaripalli, KI & NVN 18732, 18731 (SKU); Medak District: Medak, RG 104130 (BSID); Nizamabad District: Moosra forest, TP & BRPR 6062 (SKU); Vikarabad District: Ananthagiri Hills, 21.09.2019, SNR 8711 (BSID); Warangal District: Regional Agricultural Research Station-Warangal, 26.03.2021, SNR 8979 (BSID).

Note: Notable by its retroflexed arranged racemes.

Diplachne P. Beauv.

World: 2 spp.; India: 1sp.; Telangana: 1 sp.

(* Previously treated under '*Leptochloa* P. Beauv.'

Diplachne fusca (L.) P. Beauv. ex Roem. & Schult. in Syst. Veg., 2: 615. 1817; Hook.f., Fl. Brit. India 7: 329. 1896; C.E.C.Fisch. in Gamble, Fl. Plate 52(A)

Caespitose annual. Culms 25–125 cm high, compressed; nodes dark and glabrous. Leaves basal and caudate; sheaths strongly keeled, bearded at mouth, compressed, keeled; ligules hairy; blades 5–60 × 0.1–1.0 cm, linear, distichous, margins serrulate, apex acuminate. Spikes 3–7; c. 10 cm long, digitate, incurved. Spikelets 5–7 mm long, ovate-oblong, second, apex acute. Lower glume 2–3 mm long, ovate-oblong, lanceolate, chartaceous, 3-nerved, 1-keeled; keel winged, scabrid. Upper glume 3–5 mm long, elliptic-ovate, 3–5-nerved, 1-keeled; keel winged, scabrid. Florets 3–6, imbricate. Lemma 2–4.5 mm long, broadly ovate-lanceolate, chartaceous, 3–5-nerved, 1-keeled, keel broadly winged, scabrid, apex acute. Palea 2–3 mm long, oblong-lanceolate, chartaceous, 2-nerved, 2-keeled, keels broadly winged, scabrid. Stamens 3. Ovary c. 0.4 mm long, obovate-ob lanceolate; stigma plumose. Caryopsis 1–2 mm long, orbicular-globose, rugulose.

Fl. & Fr.: Sep.–Mar.

Distrib.: Cultivated in Gadwal, Mahabubnagar, Nagarkarnool, Vikarabad & Wanaparthy.

Exsicc.: Warangal District: Regional Agricultural Research Station-Warangal, 28.03.2021, SNR 012025 (BSID).

Note: Noticeable by its stout and incurved spikes and globose caryopsis.

2. Eleusine indica (L.) Gaertn., Fruct. Sem. Pl. 1: 8. 1788; Hook.f., Fl. Brit. India 7: 293. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1839. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 493. 1960; Pull., Fl. Telangana 3: 1118. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 725. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 360. 2020. *Cynosurus indicus* L., Sp. Pl. 1: 72–73. 1753.

Plate 52(B-L)

Caespitose annuals. Culms about 80 cm high, erect, geniculate, subterete; nodes glabrous. Leaves mostly basal; sheaths 2–8 cm long, keeled, margins hairy; ligules 0.2–0.5 mm long, membranous, hyaline; blades 2–45 × 0.1–0.6 cm, linear-lanceolate, flat, margins serrulate, apex acute-acuminate. Spikes 1–10; 2–15 cm

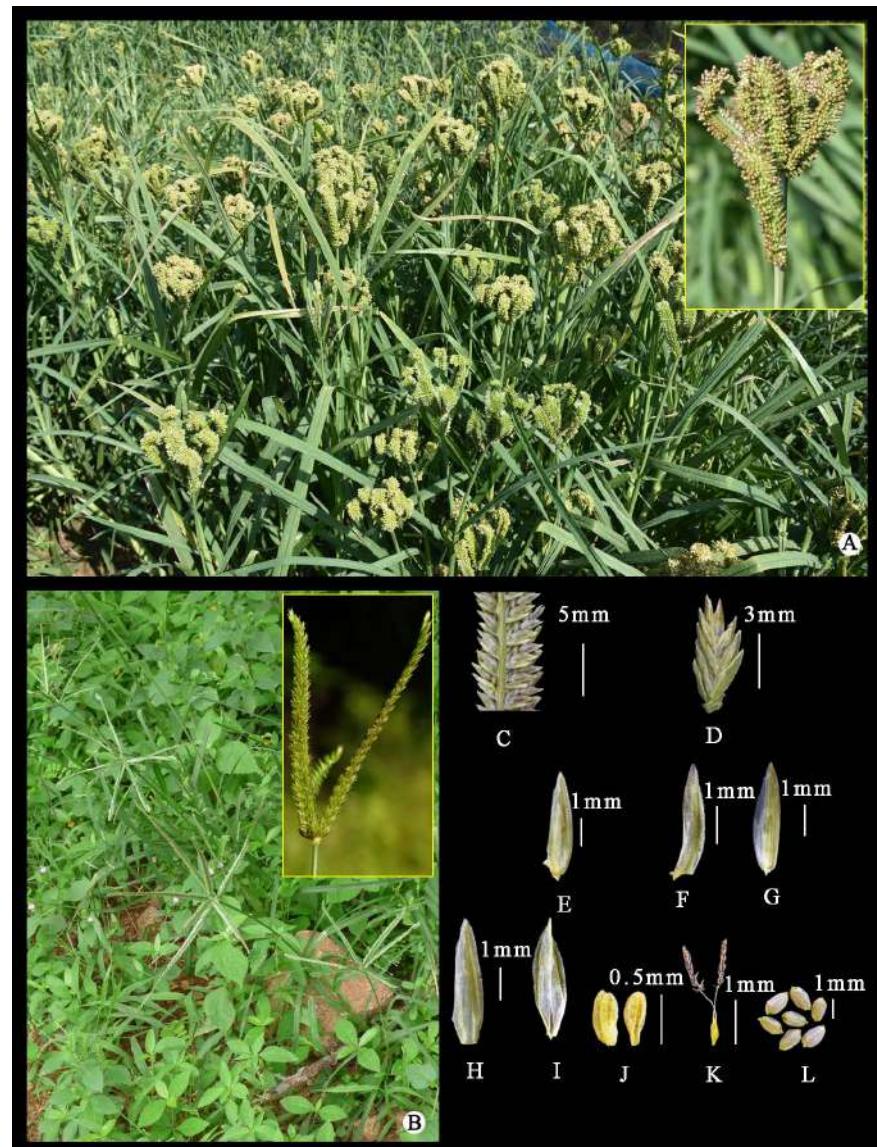

Plate 52. A. *Eleusine coracana* (L.) Gaertn. (inset: inflorescence); B-L. *Eleusine indica* (L.) Gaertn. B. Habitat (inflorescence); C. Closed view of raceme; D. Spikelet; E. Floret; F. Lower glume; G. Upper glume; H. Lemma; I. Palea; J. Stamens; K. Pistil; L. Caryopses.

long, digitate or subdigitate. Spikelets 2–4.5 mm long, ovate-oblong, sessile, secund, 2-seriate. Lower glume 1–4 × 0.2–0.6 mm, ovate-lanceolate, chartaceous, 3-nerved, 1-keeled, keel winged, scabrid, apex acute-obtuse. Upper glume 2.5–3.5 mm long, oblong or ovate-lanceolate, chartaceous, 3–5-nerved, 1-keeled, keel winged, scabrid, apex acute. Florets 3–6, bisexual. Lower lemma 2–4 mm long, ovate-oblong, 3-nerved. Palea 2–2.5 mm long, elliptic, chartaceous, hyaline, keeled, 2-nerved, 2-keeled, keel serrulate, margins infolded, base truncate, apex acute. Upper florets reduced size gradually. Lodicules 2. Stamens 3. Ovary 0.6 mm

long, stigma plumose. Caryopsis 0.5–1.5 mm long, oblong, trigonous.

Fl. & Fr.: Throughout the year.

Distrib.: Common throughout the state in wet localities, gardens and along roadsides and as a weed in cultivated fields.

Exsicc.: Adilabad District: Nirmal near tank, *MHR* 14405 (SKU), Allampalle, *PVP & TP* 4172 (SKU), Tiriyani RF, *PVP* 9812 (SKU), Along bank of the pocharam water fall, *GO & DAM* 5053 (SKU); Mahabubnagar District: Mayuri Eco-Park, 09.08.2019, *SNR* 8660 (BSID); Medak District: Ponnala, *CPB* 11367 (SKU); Nizamabad District: Moosra forest nursery, *TP & BRPR* 6081 (SKU); Rangareddy District: Lingampalli, CU, *MSM* 10732, 15186 (SKU); Rajendra Nagar-Manasa Hills, 24.08.2016, *SNR* 8511 (BSID)!; Hyderabad, *MVR* 02147 (HY); Warangal District: Seethrampuram-Parakala, 29.03.2021, *SNR* 012030 (BSID).

Note: Distinguishable by its slender, straight spikes and trigonous caryopsis.

Eragrostiella Bor

World: c. 6 spp.; India: 4 spp., 1 var.; Telangana: 2 spp.

Key to the species

- 1a. Leaf blades reduced; keel of palea narrowly winged ... 2. *E. brachyphylla*
- 1b. Leaf blades well developed; keel of palea broadly or evenly winged ... 1. *E. bifaria*

1. Eragrostiella bifaria (Vahl) Bor, Indian Forester 66: 270. 1940 & Grasses Burma, Ceylon, India & Pakistan 494. 1960; Pull., Fl. Telangana 3: 1119. 2015; K.N.Reddy & C.S.Reddy, Fl. Key to the varieties

- 1a. Culms 1 or 2-noded; leaves basal; keels of palea broadly winged ... 1.1. var. *bifaria*
- 1b. Culms 2–4-noded; leaves cauline; keels of palea narrowly winged ... 1.2. var. *walkeri*

1.1. var. *bifaria*

Plate 53(A-G)

Caespitose perennial. Culms 20–60 cm high, erect, terete; nodes 1 or 2, glabrous. Leaves mostly basal; sheaths 2–10 cm long, glabrous, compressed, keeled; ligules ciliate; blades 5–12 × 0.5–1 cm, filiform, convolute, rolled, puberulous above, apex acuminate. Spikes 10–30 cm long. Spikelets 0.5–2 cm long, elliptic; florets 5–20, laterally compressed, olive green or grey. Lower glumes 2–2.5 × 0.5–0.8 mm, ovate-elliptic, 1-nerved, 1-keeled, puberulous on keels, apex acute. Upper glumes 1.5–2.8 × 0.4–0.8 mm, ovate-elliptic, membranous, 1-nerved, 1-keeled, apex obtuse. Lemma 3–3.5 × 1–1.5 mm, broadly ovate, membranous, 3-nerved, margins puberulous, apex acuminate. Palea 1.5–2.5 × 0.6–0.8 mm, oblong, 2-keeled, keels of palea narrowly and evenly winged from base to apex, apex obtuse. Stamens 3, 0.5–0.8 mm long. Caryopsis 0.5–0.7 mm long, broadly ovoid-ellipsoid.

Fl. & Fr.: Aug.–Dec.

Distrib.: Common throughout the state in fallow lands and wet rocky surfaces.

Exsicc.: Adilabad District: Ankusapuram, GO 4335 (SKU); Bhadravati Kothagudem District: Kinnerasani Wildlife Sanctuary, 06.01.2019, SNR 9629 (BSID); Mahabubnagar District: Amadabakula-Kothakota, 07.08.2019, SNR 8633 (BSID); Appapur, AMSR 25688 (SKU); Mayur Eco-Park, 09.08.2019, SNR 8662; Medak District: Nagulabanda, CPB 11360 (SKU); Nagarkurnool District: Kollapur-Choutabetta, 08.08.2019, SNR 8648 (BSID); Nizamabad District: Arsapally, BRPR & KH 6487 (SKU)!; Rangareddy District: Hyderabad, MVR 02148 (HY); Manasahills-Rajendranagar, 24.08.2016, SNR 8552, 8537 (BSID); 8740, SNR 8740 (BSID).

Note: It can be identifiable by its basal leaves which reach up to the base of the inflorescence.

1.2. var. *walkeri* (Stapf) Lazarides, Contr. Herb. Austral. 22: 7. 1976; Pull., Fl. Telangana 3: 1120. 2015; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 364. 2020. *Eragrostis walkeri* Stapf, Fl. Ceylon 5: 298. 1900. *Eragrostiella walkeri* (Stapf) Bor, Indian Forester 66: 270. 1940 & Grasses Burma, Ceylon, India & Pakistan 495. 1960.

Caespitose perennial. Culms 35–65 cm high, erect, terete; nodes 2–4, glabrous. Leaves mostly basal; sheaths 2–10 cm long, glabrous, compressed, keeled; ligules ciliate; blades 10–35 × 0.5–1 cm, filiform, convolute, rolled, puberulous above, apex acuminate. Spikes 10–30 cm long. Spikelets 0.5–2 cm long, elliptic. Florets 5–20, laterally compressed, olive green or grey. Lower glumes 2–2.5 × 0.5–0.8 mm, ovate-elliptic, 1-nerved, 1-keeled, puberulous on keels, apex acute. Upper glumes 1.5–2.8 × 0.4–0.8 mm, ovate-elliptic, membranous, 1-nerved, 1-keeled, apex obtuse. Lemma 3–3.5 × 1–1.5 mm, broadly ovate, membranous, 3-nerved, margins puberulous, apex acuminate. Palea 1.5–2.5 × 0.6–0.8 mm, oblong, 2-keeled, keels of palea narrowly and evenly winged from base to apex, apex obtuse. Stamens 3, 0.5–0.8 mm long. Caryopsis 0.5–0.7 mm long, broadly ovoid-ellipsoid.

Fl. & Fr.: Aug.–Dec.

Distrib.: Common throughout the state.

Exsicc.: Mahabubnagar District: Amrabad, BSS & SKB 32210 (SKU); Rangareddy District: Manasa hills-Rajendranagar, 10.10.2019, SNR 8741 (BSID).

Notes: Closely allied to *Eragrostiella bifaria* but differs in basal leaves reaching up to middle or as long as inflorescence.

2. Eragrostiella brachyphylla (Stapf) Bor, Indian Forester 66: 270. 1940 & Grasses Burma, Ceylon, India & Pakistan: 494. 1960; Pull., Fl. Telangana 3: 1120. 2015; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 364. 2020. *Eragrostis brachyphylla* Stapf in Hook.f., Fl. Brit. India 7: 327. 1896; C.E.C.Fisch., in Gamble, Fl. Madras 1828. 1934.

Plate 53(H-K)

Caespitose perennial. Culms 40–55 cm high, erect, terete; nodes 1 or 2,

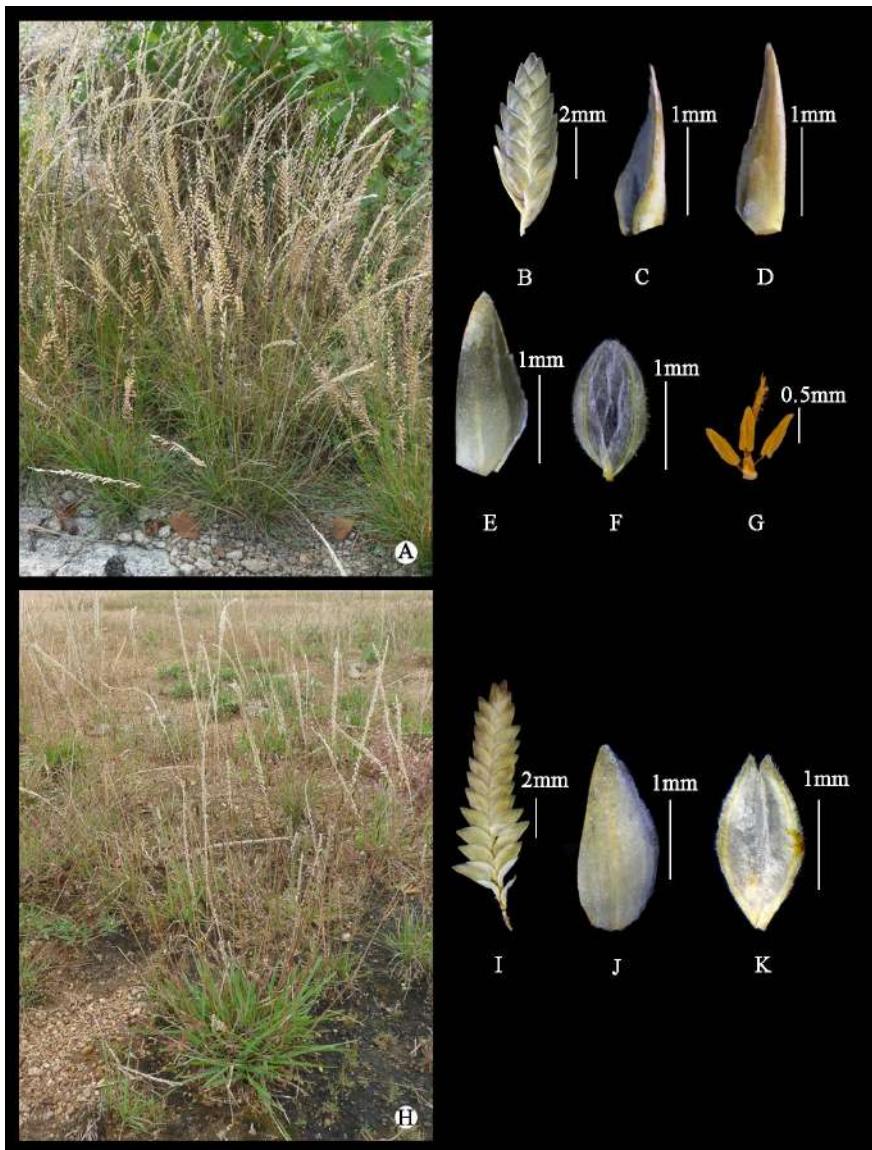

Plate 53. A–G. *Eragrostiella bifaria* (Vahl) Bor: A. Habitat; B. Spikelet; C. Lower glume; D. Upper glume; E. Lemma; F. Palea; G. Stamens with pistil; H–K. *Eragrostiella brachyphylla* (Stapf) Bor: H. Habitat; J. Lemma; K. Palea.

glabrous. Leaves mostly basal; sheaths 3–7 cm long, more or less ribbed; ligules c. 0.5 mm long, apex fimbriate; blades 2–7 × 0.1–0.2 cm, oblong-linear, flat, glabrous, incurved, apex sub-acute or obtuse. Racemes 10–25 cm long, spiciform, secund, compactly arranged, alternate-one-sided. Spikelets 3–12 mm long, linear-oblong or ovate, 2-seriate. Lower glumes 2–2.5 × 0.2–0.6 mm, ovate-lanceolate, chartaceous, 3-nerved, 1-keeled, apex acute-acuminate. Upper glumes 2–2.5 × 0.2–0.7 mm, chartaceous, 1-nerved, 1-keeled or rounded, apex acute-retuse. Lemma c. 2 mm

long, broadly ovate, chartaceous, 3-nerved, 1-keeled, margins puberulous, apex acute-retuse. Palea 1.8–2 mm long, ovate, chartaceous, hyaline, 2-nerved, 2-keeled, keels narrowly winged, margins ciliolate, apex acute-obtuse. Stamens 3. Ovary c. 0.4 mm long. Caryopsis 0.2–0.7 × 0.1–0.3 mm, globose-trigonous.

Fl. & Fr.: Aug.–Dec.

Distrib.: Common throughout the state.

Exsicc.: Adilabad District: Vemapalli, GO 4771 (SKU); Ankusapuram, GO & PVP 4335 (SKU); Nizamabad District: Kamareddy, BRPR 9279 (SKU); Rangareddy District: Ananthagiri RF, MSM 11076 (SKU); Rangareddy District: Hyderabad, MVR 02149 (HY), Manasa hills-Rajendranagar, 10.10.2019, SNR 8740 (BSID).

Note: It can be differentiated from *E. bifaria* by its reduced leaf blades and narrowly winged palea.

Eragrostis Wolf

World: 422 spp.; India: 42 spp., 5 var.; Telangana: 21 spp.

Key to the species

- 1a. Florets disarticulating from above downwards ... 2
- 1b. Florets disarticulating from below upwards ... 9

1. Eragrostis amabilis (L.) Wight & Arn., Cat. Indian Pl.: 105, no. 1777. 1834;
 Stapf in Hook.f., Fl. Brit. India 7: 315. 1896; Bor, Grasses Burma, Ceylon, India & Pakistan 513. 1960; Pull., Fl. Telangana 3: 1129. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana: 717. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 364. 2020. *Poa amabilis* L., Sp. Pl. 1: 68. 1753. *Eragrostis tenella* (L.) P. Beauv. ex Roem. & Schult., Syst. veg., (ed. 15) 2: 576. 1817. 'Chinna Garika Gaddi' **Plate 54(A-I)**

Caespitose annual. Culms 15–30 cm high, erect or geniculate; nodes dark. Leaves basal and caudine; sheaths terete, 1–5.5 cm long, glabrous, mouth bearded; ligules a line of short hairs; blades 3–8 × 0.2–0.4 cm, linear-lanceolate, ovate, glabrous, base rounded, apex acuminate. Panicle effuse. Spikelets 1.5–2.5 × 0.5–1.2 mm, broadly ovate-oblong. Lower glume 0.5–1 × 0.2–0.3, ovate, chartaceous, 1-keeled, keel scabrous, apex acute. Upper glume 1–1.5 × 0.3–0.5 mm, ovate, chartaceous, 1-nerved, 1-keeled, keel scaberulous, apex acute. Florets 3–9, bisexual, imbricate, disarticulation from above downwards. Lemma 1–1.5 × 0.4–0.5 mm, broadly obovate, chartaceous, 3-nerved, 2-keeled, keel scabrid, apex acute. Palea 0.5–1 mm long, obovate-elliptic, chartaceous, 2-nerved, 2-keeled, keel scabrid, apex rounded-obtuse. Lodicules 2. Stamens 3. Caryopsis 0.4 × 0.3 mm, elliptic.

Fl. & Fr.: Jun.–Dec.

Distrib.: Common throughout the state. Fodder grass.

Exsicc.: Rangareddy District: Hyderabad, MVR 02158 (HY); Manasahills-Rajendranagar, 24.08.2016, SNR 8542, 8535 (BSID).

2. Eragrostis aspera (Jacq.) Nees, Fl. Afr. Austr. 408. 1841; Stapf in Hook.f., Fl. Brit. India 7: 314. 1896; C.E.C.Fisch. in Gamble. Fl. Pres. Madras 1825. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 501. 1960; Pull., Fl. Telangana 3: 1121. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana: 713. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 365. 2020. *Poa aspera* Jacq., Hort. Bot. Vindob. 3: 32. 1776.

Caespitose annuals. Culms 40–100 cm high, erect, more or less ribbed, branched; nodes brownish. Leaves basal and caudine; sheaths 6–9 cm long, compressed, glabrous, margins ciliate, villous at mouth; ligules hairy; blades 10–35 × 0.4–0.7 cm, linear-lanceolate, base rounded, apex attenuate. Panicles 20–50 cm long, broadly ovate, thyrsiform, verticillate, rachis scabrid, peduncle enclosed by sheaths. Spikelets 4–10 mm long, linear-oblong. Lower glume 1–1.2 mm long, ovate-

lanceolate, chartaceous, hyaline, 1-nerved, 1-keeled, keel serrulate, apex acute-mucronulate. Upper glume 1–1.8 × 0.2–0.5 mm, ovate-lanceolate, chartaceous, hyaline, 1-nerved, 1-keeled, keel serrulate, apex acute-bifid, mucronulate. Florets 5–20, bisexual, fairly imbricate; rachilla fragile, disarticulating from above downwards. Lemma 1–1.5 × 0.2–0.5 mm, ovate-oblong chartaceous, hyaline, 3-nerved, apex emarginate-truncate. Palea 1.5 × 0.2–0.4 mm, obovate-ob lanceolate, chartaceous, hyaline, 2-nerved, 2-keeled, keel serrulate, apex rounded. Lodicules 2. Stamens 3. Caryopsis 0.2–0.5 × 0.2 mm, ovate-elliptic, brownish.

Fl. & Fr.: Almost throughout the year.

Distrib.: Gregariously growing grass in wet places and in sandy soils. Fodder grass.

Exsicc.: Rangareddy District: Hyderabad, MVR 02150 (HY).

3. Eragrostis atrovirens (Desf.) Trin. ex Steud., Nom. Bot. ed. 2. 1: 562. 1840; Bor, Grasses Burma, Ceylon, India & Pakistan 503. 1960; Pull., Fl. Telangana 3: 1122. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 713. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 365. 2020. *Poa atrovirens* Desf., Fl. Atlant. 1: 73. 1798.

Plate 54(J-R)

Caespitose perennials. Culms tufted, 30–100 cm high, terete, geniculate, more or less ribbed, glaucous, glandular; nodes brownish. Leaves basal and caudine; sheaths 5–18 cm long, slightly ribbed, keeled, mouth bearded; ligules 0.3 mm long, membranous; blades 3–25 × 0.5 cm, linear-lanceolate, convolute or flat. Panicles 8–25 × 3–8 cm, effuse, branched. Spikelets 1.5–2 mm long, linear-oblong. Lower glume 1–2 mm long, ovate-lanceolate, chartaceous, 1-nerved, keeled, apex acute. Upper glume c. 2.5 mm long, ovate-lanceolate, chartaceous, 1-nerved, keeled, apex acute. Florets 5–40, linear, grey coloured, bisexual, imbricate, disarticulating from below upwards; rachilla persistent. Lemma 1.5–2.25 mm long, broadly ovate, chartaceous, 3-nerved, 1-keeled, apex acute. Palea 1–2 mm long, elliptic, chartaceous, hyaline, 2-nerved, 2-keeled, scabrid on keels. Stamens 3. Ovary c. 0.5 mm long. Caryopsis 0.8 mm long, elliptic-oblong, ellipsoid.

Fl. & Fr.: Almost throughout the year.

Distrib.: Common throughout the state. Fodder grass and thatching.

Exsicc.: Adilabad District: Jam cheruvulu, MHR 14586 (SKU); Bhadravati Kothagudem District: Kinnerasani Wildlife Sanctuary, 09.01.2019, SNR 8581 (BSID); Medak District: Narsapur tank, TP & MSG 12011 (SKU); Mulugu District: Eturunagaram, 24.03.2021, SNR 8959 (BSID); Nizamabad District: Sivarnapally river, BRPR & GO 9077 (SKU); Rangareddy District: Hyderabad, MVR 02151 (HY), Manasa hills-Rajendranagar, 24.08.2016, SNR 8550, 8669 (BSID).

4. Eragrostis barrelieri Daveau, J. Bot. (Morot) 8: 289. 1894; Bor, Grasses Burma, Ceylon, India & Pakistan 503. 1960. *Eragrostis pooides* var. *barrelieri* (Daveau) Fiori in A.Fiori & al., Fl. Anal. Italia 1: 82. 1908. *Eragrostis vulgaris* subsp. *barrelieri* (Daveau) Douin in G.E.M.Bonnier, Fl. III. France 12: 32. 1933.

Annuals or shortly perennials. Culms 10–45 cm high, erect to ascending,

Plate 54. A–I. *Eragrostis amabilis* (L.) Wight & Arn.: A. Habit; B. Inflorescence; C. Enlarged view of inflorescence; D. Spikelet; E. Lower glume; F. Upper glume; G. Lemma; H. Palea; I. Caryopses; J–R. *Eragrostis atrovirens* (Desf.) Trin. ex Steud.: J. Habitat (Inset: Inflorescence); K. Spikelets; L. Lower glume; M. Upper glume; N. Lemma; O. Palea; P. Stamens; Q. Pistil; R. Caryopsis.

tufted, branched at the base; nodes brownish without or with ring like glandular pits below the nodes. Leaves mostly basal; sheaths glabrous, eglandular; ligule a fringe of hairs; blades $5-11 \times 1.5-3$ cm, linear-lanceolate, flat or involute, eglandular along the margin, apex acuminate. Panicle $6-22 \times 7-8$ cm, open, racemes alternate, peduncle $4-18$ cm long. Racemes $2-4$ cm long, 5–15 spikelets per raceme. Spikelets $5.5-7 \times 0.6-1.2$ mm, linear, solitary pedicelled, laterally compressed; pedicels

$1-2$ mm long, with a glandular band. Glumes dissimilar, deciduous. Lower glume $1-1.3 \times 0.2-0.4$ mm, ovate-lanceolate, chartaceous, greenish with purple tinge, 1-keeled, 1-nerved, apex acute to acuminate. Upper glume $1-1.6 \times 0.6-1$ mm, ovate-lanceolate, chartaceous, 1-keeled, serrulate on keel, apex acute. Florets up to 16, disarticulating from below upwards, closely arranged on rachilla. Lemma $1.8-2 \times 0.8-14$ mm, oblong, membranaceous, 3-nerved, mid-nerve prominent, keel scabrid above middle, apex acute to obtuse. Palea $1.3-1.8 \times 0.3-0.6$ mm, persistent, oblanceolate, prominently 2-nerved, 2-keeled; keels scabrous, apex obtuse-acute. Lodicules 2. Stamens 3. Ovary ovoid. Caryopsis $0.4-0.8 \times 0.1-0.4$ mm, ellipsoid..

Fl. & Fr.: Oct.–Dec.

Distrib.: Occasionally grows along gravelly roadsides and agriculture fields.

Exsicc.: Nirmal District: Bhainsa Mandal, near Bondrat village, 14.11.2021, VJ & JS 0435 (BSID).

Note: It is easily distinguished by its conspicuous glandular ring below the upper nodes and pedicels.

5. ***Eragrostis ciliaris* (All.) Vignolo ex Lutati, Malpighia 18: 386. 1904; C.E.C.Fisch. in Gamble, Fl. Madras 1827. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 503. 1960; Pull., Fl. Telangana 3: 1122. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 713. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 365. 2020. *Poa ciliaris* All., Fl. Pedem. 2: 246, t. 91, f. 2. 1785. *Eragrostis major* Host, Icon. Descr. Gram. Austriac. 4: 14. t. 24. 1809; Stapf in Hook.f., Fl. Brit. India 7: 320. 1896.**

Caespitose annuals. Culms about 55 cm high, erect or geniculate; nodes dark. Leaves basal and caudine; sheaths open, more or less ribbed, glandular, mouth bearded; ligules c. 0.4 mm long, rim of hairs; blades $3-19 \times 0.2-1$ cm, linear-lanceolate, flat-convolute, margins serrulate, glandular, base cordate, apex acuminate. Panicles $10-18 \times 3-5$ cm, broadly ovate, lax. Spikelets $1-2$ cm long, broadly ovate-oblong, glandular. Lower glume $1.5-2 \times 0.4-0.6$ mm, lanceolate, chartaceous, 1-nerved, 1-keeled, keel serrulate, apex acute to acuminate. Upper glume $1.5-2 \times 0.4-0.8$ mm, lanceolate-ovate, chartaceous, greenish, 3-nerved, 1-keeled, scabrid on the keel, apex acute-acuminate. Florets 4–40, bisexual, imbricate, disarticulating from below upwards, olive green-grey, often purplish tinged. Lemma $1.5-2.5 \times c. 1$ mm, broadly ovate-lanceolate, chartaceous, 3-nerved, 1-keel, glandular on keels, 3-nerved, apex acuminate-mucronate, retuse. Palea $1.5-2$ mm long, elliptic-lanceolate, chartaceous, 2-nerved, ciliate along keels, margins infolded, apex retuse-acute. Lodicules 2. Stamens 3. Ovary oblong. Caryopsis 0.4 mm long, orbicular.

Fl. & Fr.: Jan.–Sep.

Distrib.: Occasional in cultivated fields, on hill slopes and in waste lands. Fodder grass.

Exsicc.: Adilabad District: Sattennapalle, TP & PVP 4152 (SKU); Rangareddy District: Hyderabad, MVR 02152 (HY); Warangal District: Seetharampuram-Parakala, 29.03.2021, SNR 012029 (BSID).

Note: Distinguishable by its glandular nature on the margins of leaf blades and pedicels.

6. *Eragrostis ciliaris* (L.) R. Br. in Turkey, Narr. Exped. Zaire 478. 1818; Hook.f., Fl. Brit. India 7: 314. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1825. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 506. 1960; Pull., Fl. Telangana 3: 1124. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 725. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 365. 2020. *Poa ciliaris* L., Syst. Nat. ed. 10. 2: 875. 1759.

Caespitose annuals. Culms 8–55 cm high, erect, geniculate; nodes dark. Leaves generally caudine; sheaths 1–1.5 cm long, glabrous, open, compressed, ribbed, mouth bearded; ligules c. 2 mm long, ciliate; blades 3–5 × 0.1–0.4 cm, linear-lanceolate, oblong, flat-involute, margins incurved, apex acute-acuminate. Panicles 2–9 cm long, woolly, spiciform, glandular. Spikelets c. 5 mm long, oblong, glandular. Lower glume 0.2–0.4 × 0.1–0.2 mm, lanceolate-oblong, boat shaped, chartaceous, yellowish-green or purplish, 1-nerved, 1-keeled, keel scabrid, apex acute-acuminate. Upper glume 0.4–0.7 × 0.2 mm, oblong-lanceolate, boat shaped, chartaceous, yellowish-green or purplish, 1-nerved, 1-keeled, keel scabrid, apex acute-acuminate. Florets 5–12, bisexual, imbricate, greenish with pink tinge, disarticulating from above downwards. Lemma 1–1.5 mm long, lanceolate or oblong-ovate, boat shaped, chartaceous, 3-nerved, 1-keeled, keels scabrid, base with 2–3 long ciliate, apex acute-mucronate. Palea c. 1.5 mm long, elliptic-oblong, chartaceous, 2-nerved, 2-keeled, keels bulbous based ciliate, 0.4–0.8 mm long, apex acute, obtuse-retuse. Stamens 2. Ovary ovate-oblong. Caryopsis 0.5 mm long, ovoid-ellipsoid or oblong.

Fl. & Fr.: Almost throughout the year.

Distrib.: Common throughout the state in wet places and in river beds in sandy soils.

Exsicc.: Nalgonda District: Peddagattu (Peddavra), BRA 5053 (BSID).

7. *Eragrostis ciliata* (Roxb.) Nees ex Steud., Nomencl. Bot., ed. 2, 1: 562. 1840; Hook.f., Fl. Brit. India 7: 313. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1825. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 506. 1960; Pull., Fl. Telangana 3: 1124. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 714. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 365. 2020. *Poa ciliata* Roxb., Fl. Ind. 1: 336. 1820.

Caespitose perennial. Culms 20–80 cm high, erect or geniculate, nodes brown. Leaves mostly caudine; sheaths 1.5–3 cm long, keeled, mouth bearded; ligules membrane, apex fringe of cilia; blades 3–10 × 0.5 cm, linear-lanceolate, margins inrolled, serrulate, base ciliate, apex acuminate. Panicles spiciform, cylindric, densely compact, branches alternate-subwhorled, 1.5–6 × 0.75–1.5 cm, ob lanceolate-oblong. Spikelets 3.8–5 × 1.5–2.5 mm, ovate-lanceolate. Glume deciduous. Lower glume 0.8–1.5 × 0.2–0.5 mm, oblong-ovate, lanceolate, chartaceous, yellowish-green, margins ciliate, 1-nerved, keeled, scabrid along keel, apex acute-acuminate. Upper glume 0.8–1.5 × 0.2–0.5 mm, ovate-lanceolate, chartaceous, yellowish-green, margins ciliate, 1-nerved, 1-keeled, scabrid along keel, apex acute-acuminate. Florets 5–7, disarticulating from

above downwards. Lemma 1–1.8 × 0.2–0.8 mm, ovate-lanceolate, boat-shaped, chartaceous, 3-nerved, 1-keeled, keel serrulate, margins ciliate, apex acuminate. Palea 1–1.2 mm long, ovate-elliptic, 2-keeled, flap margins ciliate, stiff, bulbous based. Stamens 2. Caryopsis 0.4–0.5 × 0.2–0.3 mm, ovoid-ellipsoid, deep brown.

Fl. & Fr.: Aug.–Dec.

Distrib.: Common throughout the state.

Exsicc.: Rangareddy District: Hyderabad, MVR 02153 (HY).

8. *Eragrostis coarctata* Stapf in Hook.f., Fl. Brit. India 7: 313. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1825. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 507. 1960; Pull., Fl. Telangana 3: 1124. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 714. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 365. 2020.

Caespitose perennials. Culms 20–65 cm high, erect or geniculate, wiry; nodes glabrous. Leaves mostly caudine; sheaths 2–6 cm long, ribbed, glabrous-tuberculated based hairs, mouth bearded; ligules 0.2–0.4 mm long, apex ciliate; blades 3–18 × 0.2–0.7 cm, linear-lanceolate, convolute, base truncate-rounded, apex acuminate. Panicles compact, spiciform, branched, 5–12 × 0.5–1.5 cm. Spikelets 2–4 × 1.5–2 mm, oblong-lanceolate. Glume subequal. Lower glume 0.5–1.5 × 0.2–0.7 mm, lanceolate, chartaceous, 1-nerved, 1-keeled, keels scabrid, margins ciliate, apex acute. Upper glume 1–1.5 × 0.2–0.7 mm, lanceolate, chartaceous, 1-nerved, 1-keeled, keels scabrid, margins ciliate, apex acute. Florets 10, bisexual, imbricate, slightly compressed, disarticulating from above downwards. Lemma 1.5–2 mm long, oblong-lanceolate, boat shaped, chartaceous-membranous, 3-nerved, 1-keeled, keel scabrid, apex acute-acuminate-mucronate. Palea c. 1 mm long, oblong-elliptic, chartaceous, 2-nerved, 2-keeled, ciliate on keels, apex acute-obtuse. Stamens 3. Ovary elliptic. Caryopsis 0.5 mm long, ovoid-ellipsoid, yellowish-brown.

Fl. & Fr.: Almost throughout the year.

Distrib.: Occasionally in Khammam and Rangareddy.

Exsicc.: Bhadradri Kothagudem District: Kinnerasani Wildlife Sanctuary, 05.01.2019, SNR 9510 (BSID); Sambayyagudem-Manugur, 24.03.2021, SNR 8954 (BSID); Rangareddy District: Mohmmadabad, MSM 10550 (SKU).

9. *Eragrostis gangetica* (Roxb.) Steud., Syn. Pl. Glumac. 1: 266. 1854; C.E.C.Fisch. in Gamble, Fl. Madras 1826. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 508. 1960; Pull., Fl. Telangana 3: 1125. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 715. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 366. 2020. *Poa gangetica* Roxb., Fl. Ind. 1: 341. 1820. *Eragrostis stenophylla* Hochst. ex Miq. in Anal. Bot. Ind. 2: 27. 1851 & in Nieuwe Verh. Eerste Kl. Kon. Ned. Inst. Wetensch. Amsterdam ser. 3(4): 39. 1851; Stapf in Hook.f., Fl. Brit. India 7: 318. 1896, p.p.

Plate 55(A-E)

Caespitose annuals. Culms 20–80 cm high, erect or geniculate, more or less compressed, ribbed, glaucous; nodes brownish. Leaves basal and caudine; sheaths 2–4 cm long, compressed, keeled, more or less ribbed, glabrous, mouth

bearded; ligules fimbriate; blades 4–15 × 0.3–0.6 cm, linear-lanceolate, flat-involute, base cordate, apex acuminate. Panicles 8–20 × 1–3 cm, pyramidal branched, alternate. Spikelets 5–10 mm long, elliptic-oblong. Lower glume c. 1 mm long, ovate-lanceolate, chartaceous, 1-nerved, 1-keeled, keel serrulate, apex acuminate. Upper glume 1–1.5 mm long, ovate-oblong, chartaceous, 1-nerved, keeled, keel scabrid. Florets 5–20, bisexual, disarticulating from below upwards. Lemma 1.3–1.8 × 0.3–0.5 mm, ovate-lanceolate, chartaceous, 3-nerved, apex acute-emarginate. Palea 0.5–1 × 0.2–0.6 mm, chartaceous, 2-nerved, 2-keeled, keels scabrid, margins infolded, base truncate, apex acute. Lodicules 2. Stamens 2. Ovary oblong. Caryopsis 0.5 mm long, ovoid-ellipsoid, deep brown.

Fl. & Fr.: Jul.–Jan.; Almost throughout the year.

Distrib.: Common throughout the state. Fodder grass; brooms making.

Exsicc.: Bhadravati Kothagudem District: Kinnerasani Wildlife Sanctuary, 09.01.2019, SNR 8561 (BSID); Nizamabad District: Mudhalai RF, BRPR & CPB 7206 (SKU); Rangareddy: Hyderabad: MVR 02155 (HY), Manasa hills-Rajendranagar, 24.08.2016, SNR 8538 (BSID).

11. *Eragrostis macilenta* (A. Rich.) Steud., Syn. Pl. Glumac. 1: 268. 1854; Bor, Grasses Burma, Ceylon, India & Pakistan 509. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 366. 2020. *Poa macilenta* A.

Rich., Tent. Fl. Abyss. 2: 428. 1850.

Caespitose annuals. Culms 5–65 cm high, erect or geniculate; nodes dark. Leaves basal and cauline; sheaths terete-compressed, eglandular; ligules fringe of hairs; blades 1.5–18 × 0.2–0.4 cm, linear, margins eglandular. Panicle effuse, branched, whorled at lower nodes, eglandular, 2.5–30 cm long, elliptic-ovate. Spikelets 3–6 × 1–2 mm, solitary, oblong, eglandular. Glume deciduous. Lower glume 1–1.5 mm long, ovate, chartaceous, 1-nerved, 1-keeled, apex acuminate. Upper glume 1–1.5 mm long, ovate, chartaceous, 1-nerved, 1-keeled, apex acuminate. Florets 5–14, similar, bisexual, divergent, disarticulating from below upwards, rachilla persistent. Lemma 1.3–1.6 mm long, orbicular-ovate, membranous, dark greenish-black, 3-nerved, lateral nerves obscure, 1-keeled, keel scabrid, apex acute. Palea ovate-elliptic, 2-nerved, 2-keeled, keel scabrous, apex acute. Stamens 3; anthers 0.3–0.5 mm long. Caryopsis 0.5 mm long, oblong, dark reddish.

Fl. & Fr.: Feb.–Aug.

Distrib.: Occasionally in Mahabubnagar and Wanaparthy.

Exsicc.: Mahabubnagar District: Venkatapuram sivar, 06.08.2019, SNR 8630 (BSID).

12. *Eragrostis minor* Host, Icon. Descr. Gram. Austriac. 4: 15. 1809 (as “*minorem*”); Stapf in Hook.f., Fl. Brit. India 7: 321. 1896; Pull., Fl. Telangana 3: 1127. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 716. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 367. 2020. *Eragrostis pappiana* (Chiov.) Chiov. in Ann. Bot. (Rome) 8 (3): 371. 1980; Bor, Grasses Burma, Ceylon, India & Pakistan 512. 1960. ‘Good Bali Gad’

Plate 56(A-H)

Caespitose, annuals. Culms 5–90 cm high, erect or geniculate, subterete, ribbed. Leaves basal and cauline; sheaths compressed, ribbed, margins slightly hairy, glandular, mouth bearded; ligules 0.4 mm long, hairs; blades 5–14 × 0.2–0.5 cm, linear, flat-infolded, margin glandular, apex acuminate. Panicles 3–20 cm long, ovate-oblong, open. Pedicels with glandular bands. Spikelets 3–10 × 1–2 mm, linear-oblong, glandular. Glumes subequal, deciduous. Lower glume 1–1.5 mm long, ovate, chartaceous, glandular, 1-nerved, 1-keeled, apex acute. Upper glume 1–1.2 mm long, ovate-lanceolate, chartaceous, 1-nerved, 1-keeled, keel scabrid, apex acute. Florets 5–15, bisexual, imbricate, disarticulating from below upwards. Lemma 1.2–2.1 mm long, ovate, chartaceous, 3-nerved, 1-keeled, keel glandular, apex obtuse. Palea 1–1.5 mm long, ovate-elliptic, hyaline, 2-nerved, 2-keeled, keel scabrid. Stamens 3. Caryopsis 0.4–0.8 mm long, globose-oblong, reddish-brown.

Fl. & Fr.: Jun.–Feb.

Distrib.: Common throughout the state.

Exsicc.: Nagarkurnool District: Vattem, 08.08.2019, SNR 8645 (BSID); Rangareddy District: Hyderabad, MVR 02156 (HY).

13. *Eragrostis nilgiriensis* Vivek, G.V.S. Murthy & V.J. Nair, Nordic J. Bot.

31(6): 700. 2013; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 367. 2020.

Tufted annual. Culms 10–30 cm high, erect or geniculate, glabrous; internodes up to 6.5 cm long with a glandular band just below each node. Leaves basal and cauline; sheaths 3–5 cm long, ciliate, bearded at mouth; ligules 0.2–0.5 mm long, a fringe of cilia; blades 2.5–5.5 × 0.1–0.3.5 cm, linear to lanceolate, base rounded-subcordate, sparsely ciliate on upper surface, glabrous on lower surface, apex acuminate. Panicles 3.5–9 × 1–3.5 cm, effuse, with a glandular ring on peduncle just below panicle; peduncles 6–8 cm long; racemes 3–4 cm long, alternate with punctate glands, scabrous along angles; pedicels 1–2.5 mm long, with punctate glands. Spikelets 3.5–8 × 1–1.5 mm, narrowly oblong, linear-lanceolate, apex acute. Lower glume 0.6–1 mm long, ovate-lanceolate, membranous-chartaceous, 1-nerved, 1-keeled, apex acute. Upper glume 0.8–1.3 mm long, ovate, membranous-chartaceous, 1-nerved, 1-keeled, apex acute. Florets 3–15, closely arranged, disarticulating from below upwards; palea persistant. Lemma 1.3–1.5 × 0.4–0.7 mm, elliptic-ovate, chartaceous, 3-nerved, 1-keeled, scabrid on keel, apex acute. Palea 1–1.4 × 0.2–0.3 mm, elliptic to oblanceolate, apex obtuse to acute, membranous, 2-nerved, 2-keeled, scaberulous on keels. Stamens 3. Ovary oblong-ellipsoid. Caryopses 0.2–0.5 × 0.2–0.4 mm, ellipsoid.

Fl. & Fr.: Sep.–Nov.

Distrib.: Common along the forest fringes, roadsides and wastelands in black soils. Endemic-India (Tamil Nadu, Telangana).

Exsicc.: Kamareddy District: Tadwai, 04.10.2022, VJ & JS 0790 [Department of Botany, Telangana University, Nizamabad, Telangana (TUH)].

14. *Eragrostis nutans* (Retz.) Nees ex Steud., Nomencl. Bot., (ed.2) 1: 563. 1840; C.E.C.Fisch. in Gamble, Fl. Madras 1826. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 511. 1960; Pull., Fl. Telangana 3: 1127. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 716. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 367. 2020. *Poa nutans* Retz., Observ. Bot. 4: 19. 1786. ‘Pedda garikai’

Plate 56(I-L)

Caespitose, perennials. Culms 30–75 cm high, erect or geniculate, nodes dark. Leaves basal and cauline; sheaths terete-keeled, margin inrolled, mouth bearded; ligules 0.1–0.2 mm long, apex fimbriate; blades 4–11.5 × 0.2–0.3 cm, linear-lanceolate, flat-inrolled, base truncate-rounded, apex acuminate. Panicles spiciform, 6–13 cm long, ovate-oblong. Spikelets 2–4.5 × 1–1.5 mm, oblong-lanceolate. Lower glume 0.2–0.6 × 0.2–0.4 mm, lanceolate-oblong, chartaceous, 1-nerved, 1-keeled, keel scabrid, apex acute. Upper glume 0.8–1 × 0.2–0.4 mm, lanceolate-oblong, 1-nerved, 1-keeled, keel scabrid, apex acute. Florets 10–20, bisexual, imbricate, disarticulation from below upward. Lemma 1–1.5 × 0.3–0.76 mm, ovate, chartaceous, 3-nerved, apex acute. Palea 0.8–1.25 × 0.2–0.45 mm, obovate-elliptic, chartaceous, hyaline, 2-nerved, 2-keeled, keel scabrid, apex acute-obtuse. Lodicules 2. Stamens 3. Ovary elliptic. Caryopsis 0.4–0.6 × 0.2–0.4 mm, ovoid-globose, deep brown.

Fl. & Fr.: Aug.–Dec.

Distrib.: Occasional on the bunds of cultivated fields.

Exsicc.: Vikarabad District: Damagundam, 02.12.2019, SNR 8917 (BSID).

Note: Identified by its reduced florets towards the apex and persistent palea.

15. *Eragrostis papposa* (Roem. & Schult.) Duf. ex Steud., Nomencl. Bot., ed. 2(1): 564. 1840; Bor, Grasses Burma, Ceylon, India & Pakistan 512. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 367. 2020. *Megastachya papposa* Roem. & Schult., Syst. Veg. 2: 585. 1817, *nom. illeg.*, *pro syn.* *Poa papposa* Duf. ex Roem. & Schult., Syst. Veg. 2: 585. 1817.

Perennial. Culms 10–60 cm high, erect or ascending; nodes brownish; internodes c. 6 cm long. Leaves basal and caudine; sheaths c. 4.5 cm long, one margin ciliate; ligule a fringe of cilia; leaf blades 2–15 × 0.2–0.3 cm, linear to lanceolate, glaucous, often form a compact cushion, margins infolded. Panicles 2–25 × 6–13 cm, open, ovate; branches up to 6 cm long, alternate, scabrous along angles; pedicels up to 1 cm long, capillary, with or without glands. Spikelets 8–9.8 × 1.2–1.5 mm, 20–25 flowered. Lower glume 0.79 × 0.17 mm, elliptic, coriaceous, 1-nerved, 1-keeled, keel serrate, apex obtuse. Upper glume 1.01 × 0.25 mm, ovate, coriaceous, 1-nerved, 1-keeled, keel serrate, apex obtuse-acute. Lemma 1–1.5 × 0.3–0.6 mm, ovate-boat shaped, coriaceous, 3-nerved, apex obtuse. Palea 0.8–0.94 × 0.3–0.6 mm, elliptic-ovate, apex emarginate, 2-nerved; 2 keeled, serrulate on keels. Stamens 2, 0.2 × 0.16 mm. Ovary 0.23 × 0.22 mm, globose. Caryopsis 0.4 × 0.3 mm, oblong-ellipsoid, yellowish-brown.

Fl. & Fr.: Almost throughout the year.

Distrib.: Common throughout the state.

Exsicc.: Rangareddy District: Manasahills-Rajendranagar, 24.08.2016, SNR 8516 (BSID).

16. *Eragrostis pilosa* (L.) P. Beauv., Ess. Agrostogr. 175. 1812; Stapf in Hook.f., Fl. Brit. India 7: 323. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1827. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 512. 1960; Pull., Fl. Telangana 3: 1127. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 725. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 367. 2020. *Poa pilosa* L., Sp. Pl. 1: 68. 1753.

Plate 56(M-S)

Solitary annuals. Culms 8–80 cm high, erect or geniculate, glandular; nodes dark. Leaves basal and caudine; sheaths 1.5–5 cm long, open, glabrous, keeled, margins smooth, moth bearded; ligules 1–2 mm long, fimbriate; blades 5–25 × 0.2–0.4 cm, linear-lanceolate, flat-folded, apex acuminate. Panicles 4–25 × 2–4 cm, lax, glandular, axils pilose. Spikelets 2.5–4 × 0.7–0.9 mm, oblong-lanceolate, purplish-green or grey. Glumes unequal, deciduous. Lower glume 0.3–0.4 × 0.2 mm, lanceolate, membranous-chartaceous, hyaline, 1-nerved, keeled, apex acute. Upper glume 0.5–0.9 × 0.4–0.5 mm, ovate-lanceolate, chartaceous, hyaline-greenish, 1-nerved, 1-keeled, keel scabrid. Florets 4–6, loosely imbricate, disarticulation from below upwards. Lemma 1–1.5 × 0.3–0.4 mm, ovate-lanceolate, chartaceous, 3-nerved, 1-keeled, keel serrulate, apex acuminate-obtuse. Palea 0.8–1 × 0.2 mm, ovate-elliptic, lanceolate, 2-nerved,

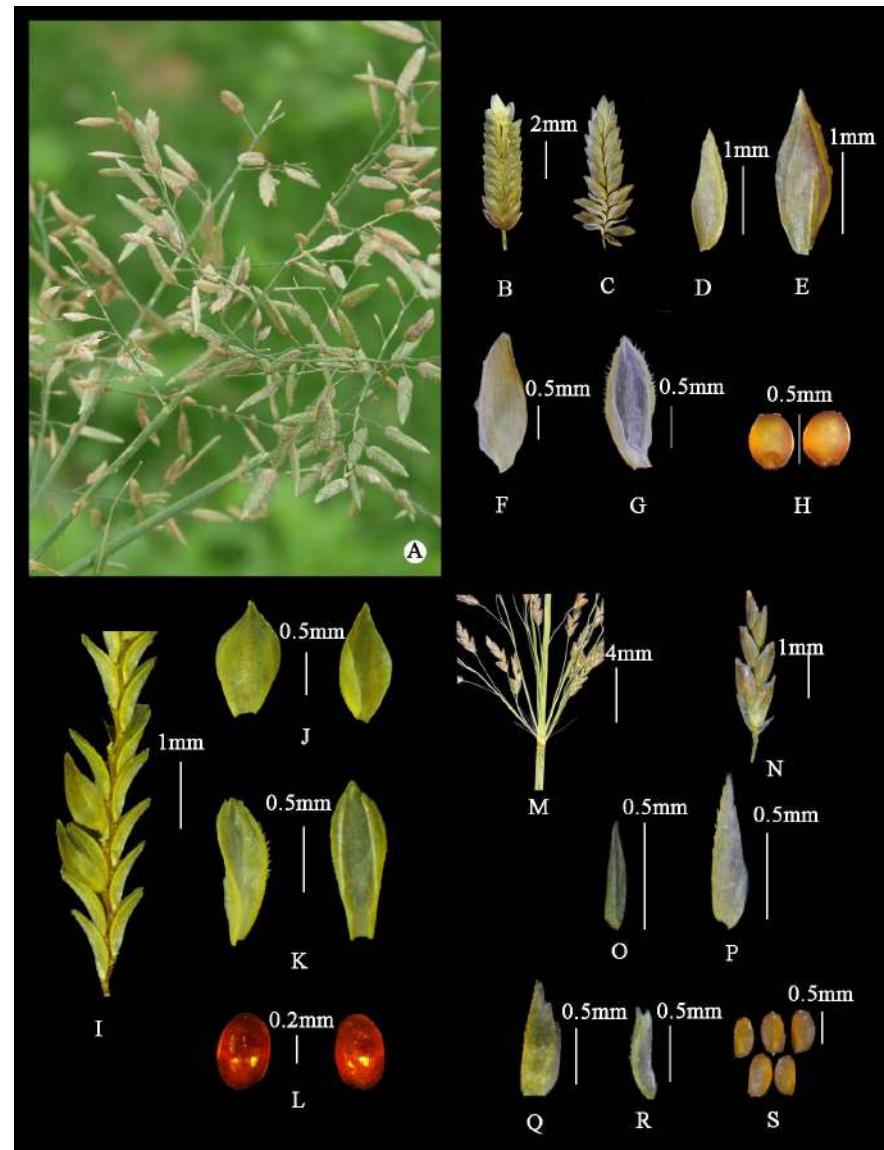

Plate 56. A–H. *Eragrostis minor* Host: A. Inflorescence; B&C. Spikelets; D. Lower glume; E. Upper glume; F. Lemma; G. Palea; H. Caryopsis; I–L. *Eragrostis nutans* (Retz.) Nees ex Steud.: I. Enlarged portion of the spikelet; J. Abaxial and adaxial view of lemma; K. Abaxial and adaxial view of palea; L. Caryopsis; M–S. *Eragrostis pilosa* (L.) P.Beauv.: M. Lower portion of the inflorescence; N. Spikelet; O. Lower glume; P. Upper glume; Q. Lemma; R. Palea; S. Caryopsis.

2-keeled, keel scabrid, apex acute-emarginate. Caryopsis 0.5 mm long, ellipsoid-oblong, base cuneate, yellowish-brown.

Fl. & Fr.: Almost throughout the year.

Distrib.: Common throughout the state.

Exsicc.: Mahabubnagar District: Koilsagar Dam, Manyamkonda, 06.08.2019, SNR 8619, 8622 (BSID); Rangareddy District: Hyderabad, MVR 02157 (HY); Manasa hills-Rajendra Nagar, 24.08.2016, SNR 8508 (BSID).

17. *Eragrostis riparia* (Willd.) Nees, Fl. Bras. Enum. Pl. 2(1): 512. 1829; C.E.C.Fisch. in Gamble, Fl. Madras 1825. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 513. 1960; Pull., Fl. Telangana 3: 1127. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 717. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 367. 2020. *Poa riparia* Willd., Ges. Naturf. Ferunde Berlin Neue Schriften 4: 185. 1803. *Eragrostis tenella* (L.) P. Beauv. ex Roem. & Schult. var. *riparia* (Willd.) Stapf in Hook.f., Fl. Brit. India 7: 315. 1896.

Caespitose perennials. Culms 5–40 cm high, erect, wiry; nodes glabrous. Leaves basal and caudine; sheaths 1.5–3.5 cm long, ribbed, keeled, glabrous, mouth bearded; ligules membranous, hairy; blades 2–10 × 0.2–0.4 cm, narrowly linear-lanceolate, inrolled, apex acuminate. Panicles spiciform, cylindric, glandular, 5–8 × 0.5–2.5 cm. Spikelets 1–3 × 1.5 mm, ovate-oblong, glandular. Glumes subequal. Lower glume 0.6–0.8 × 0.2–0.4 mm, ovate-lanceolate, chartaceous, hyaline, 1-nerved, keeled, keel scabrid, apex acute. Upper glume 0.9–1 × 0.2–0.4 mm, ovate-lanceolate, chartaceous, 1-nerved, keeled, keel scabrid, apex acute. Florets 4–11, bisexual, imbricate, disarticulating from above downwards. Lemma 1–1.5 × 0.2–0.4 mm, ovate-lanceolate, chartaceous, 3-nerved, 1-keeled, keel serrulate, apex acute-emarginate. Palea 0.7–1 × 0.2–0.4 mm, obovate-elliptic, chartaceous, hyaline, 2-nerved, 2-nerved, keels long ciliate, apex truncate. Lodicules 2. Stamens 3. Ovary ovate-elliptic. Caryopsis 0.2–0.4 × 0.2–0.3 mm, ellipsoid-ovoid, light brown.

Fl. & Fr.: Almost throughout the year.

Distrib.: Occasional in sandy soils and in dry ploughed fields.

Exsicc.: Nalgonda District: Krishna River Bank, KMS 9819 (CAL).

18. *Eragrostis tenuifolia* (A. Rich.) Hochst. ex Steud., Syn. Pl. Glumac. 1: 268. 1854; Stapf in Hook.f., Fl. Brit. India 7: 322. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1827. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 514. 1960; Pull., Fl. Telangana 3: 1129. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 718. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 368. 2020. *Poa tenuifolia* A. Rich., Tent. Fl. Abyss. 2: 425. 1850. **Plate 57(A-F)**

Caespitose perennials. Culms 10–70 cm high, geniculate, more or less ribbed; nodes brownish. Leaves basal and caudine; sheaths 5–10 cm long, keeled, more or less ribbed, margin covered with shaggy hairs; ligules a row of hairs; blades 3–20 × 0.3–0.5 cm, narrowly linear-lanceolate, margins serrulate, base truncate-rounded, apex acuminate. Panicles 5–15 × 4–5.5 cm, lax, ovate. Spikelets 4–6 mm long, linear-lanceolate. Lower glume 1–1.25 mm long, ovate-lanceolate, chartaceous, 1-nerved, apex fimbriate, lobed. Upper glume 0.5–1 × 0.2–0.6 mm, oblong-ovate, lanceolate, chartaceous, 1-nerved, keeled, keel serrulate, apex acute. Florets 5–15, imbricate, grey or black, disarticulating from below upwards.

Lemma 1.5–2.5 × 0.5–1 mm, elliptic-ovate, lanceolate, chartaceous, 3-nerved, keeled, keel scabrid, apex acute-mucronate. Palea persistent, 1–1.9 mm long, elliptic to oblanceolate, chartaceous, 2-nerved, 2-keeled, keel serrulate, apex acute-obtuse. Lodicules 2. Stamens 3. Ovary 0.2–0.4 mm long. Caryopsis 2 mm long, oblong-ellipsoid, dark reddish.

Fl. & Fr.: Mar.–Oct.

Distrib.: Common through the state; as a weed in cultivated fields and along roadsides.

Exsicc.: Medak District: Ramayampet, BRPR & CPB 11520 (SKU); Rangareddy District: Hyderabad, MVR 02159 (HY); Vikarabad District: Ananthagir Hills, 21.09.2019, SNR 8725 (BSID).

19. *Eragrostis tremula* (Lam.) Hochst. ex Steud., Syn. Pl. Glumac. 1: 269. 1854; Stapf in Hook.f., Fl. Brit. India 7: 320. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1827. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 514. 1960; Pull., Fl. Telangana 3: 1131. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 718. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 368. 2020. *Poa tremula* Lam., Tabl. Encycl. 1: 185. 1791. **Plate 57(G-N)**

Caespitose annuals. Culms 20–100 cm high, erect or geniculate. Leaves basal and caudine; sheaths open, glabrous, compressed, margin smooth, bearded at mouth; ligules 1–1.5 mm long, membrane ciliate; blades 5–20 × 0.2–0.6 cm, linear-lanceolate, sparsely hairy, base rounded, apex attenuate. Panicles 6–25 cm long, lax. Spikelets 4–25 mm long, linear. Florets 10–many, disarticulating from below upwards; pedicels eglandular. Glume subequal, persistent. Lower glume 0.5–1.5 long, ovate-lanceolate, membranous-chartaceous, 1-nerved, 1-keeled, keel scaberulous, apex acute. Upper glume 1–1.5 mm long, ovate-lanceolate, membranous-chartaceous, 1-nerved, 1-keeled. Florets 10–55, bisexual, similar. Lemma 1.5–2 mm long, broadly ovate, chartaceous, 3-nerved, 1-keeled, apex obtuse-subacute. Palea 0.8–1 mm long, elliptic, oblong-obovate, 2-nerved, 2-keeled, scabrellate on keels, apex obtuse. Lodicules 2. Stamens 2 or 3. Stigma 2. Caryopsis 0.5 mm long, globose, yellowish-brown.

Fl. & Fr.: Aug.–Dec.

Distrib.: Occasional in moist localities and as a weed in cultivated fields. Fodder grass.

Exsicc.: Bhadravati Kothagudem District: Kinnerasani Wildlife Sanctuary, 05.01.2019, SNR 9590 (BSID); Rangareddy District: Hyderabad, MVR 02160 (HY).

20. *Eragrostis unioloides* (Retz.) Nees ex Steud., Syn. Pl. Glumac. 1: 264. 1854; C.E.C.Fisch. in Gamble, Fl. Madras 1826. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 515. 1960; Pull., Fl. Plate 59(A-B)

Caespitose annuals. Culms 30–110 cm high, erect or geniculate; nodes glabrous. Leaves basal and caudine; sheaths 5–11 cm long, compressed, keeled, mouth bearded; ligules c. 1 mm long, membranous, apex acuminate-truncate; blades 10–42 × 0.2–0.5 cm, linear-lanceolate, scaberulous, margin involute, base truncate, apex acuminate. Panicles 5–40 × 5–10 cm, oblong, open. Spikelets 2–4 × 1.3 mm, oblong, apex acute. Lower glume 1–1.5 × 0.2–0.4 mm, oblong-lanceolate, 1-nerved, chartaceous, 1-nerved, 1-keeled, keel scabrid, apex acuminate. Upper glume 1–1.9 × 0.2–0.6 mm, oblong-lanceolate, chartaceous-subcoriaceous, 1-nerved, 1-keeled, keel scabrid, apex acute-acuminate. Florets 4–5, bisexual, disarticulate from glumes. Lemma 1–2 × 0.4–0.7 mm, ovate-lanceolate, chartaceous, 3-nerved, 1-keeled, keel scabrid, apex 2-lobed-emarginate. Palea 1–1.5 × 0.4 mm, elliptic-ob lanceolate, chartaceous, 2-nerved, 2 keeled, keel scabrid, base truncate, apex acute-obtuse. Lodicules 2. Stamens 3. Ovary elliptic-oblong. Caryopsis 0.5–1 × 0.5 mm, oblong-elliptic.

Fl. & Fr.: Oct.–Jan.

Distrib.: Occasional in marshy habitats and as a weed in cultivated fields. Forage grass.

Exsicc.: Adilabad District: Bijipur RF, GO & PVP 4877 (SKU); Suryapet District: Moosi River Project, 27.10.2019, SNR 8748 (BSID); Mulugu District: Eturunagaram, 24.03.2021, SNR 8961 (BSID); Rangareddy District: Hyderabad, MVR 02171 (HY).

2. *Leptochloa panicea* (Retz.) Ohwi, Bot. Mag. 55: 311. 1941; Hook.f., Fl. Brit. India 7: 299. 1896; C.E.C.Fisch. in Gamble, Fl. Plate 59(C-K)

Caespitose annuals. Culms 30–110 cm high, erect or geniculate; nodes glabrous, rooting below. Leaves basal and caudine; sheaths 4–9 cm long, flattened, open, ribbed, glabrous, mouth bearded; ligules c. 1.5 mm long, apex lacerate-ciliate; blades 4–11 × 0.2–0.4 cm, filiform, involute, apex attenuate. Panicle 10–18 cm long, branched, spiciform. Spikelets 1.5–2 mm long, lanceolate, oblong-ovate. Lower glumes 0.8–1 × 0.2–0.5 mm, linear-lanceolate, chartaceous, 1-nerved, keel scabrid, apex acute-cuspidate. Upper glume 1–1.5 mm long, linear-lanceolate, membranous-chartaceous, 1-nerved, 1-keeled, keel scabrid, apex acuminate. Florets 2–3, bisexual, disarticulates from above downwards. Lemmas 0.4–1.5 mm long, elliptic, 3-nerved, pilose, 1-keeled, apex retuse-acute. Palea 0.2–0.7 × 0.2–0.5 mm, elliptic, 2-nerved, 2-keeled, keel scabrid, apex acute. Stamens 3. Ovary lanceolate-elliptic. Caryopsis broadly elliptic.

Plate 60

Caespitose perennials. Culms 5–27 cm high. Leaves mostly basal; sheaths c. 3 cm long, compressed, glabrous; mouth bearded; ligules membranous; blades 1.5–5 cm long, linear-filiform, convolute, margin hairy, apex acuminate. Spikes 3–10 cm long, solitary. Spikelets 2–4.5 × 0.5–1 mm long, oblong, sunken in hollows of rachis, rachilla jointed. Lower glume 0.8 mm long, oblong, hyaline, lobed, 1-nerved, apex oblique-truncate. Upper glume 2.5–3 × 0.5–1.5 mm, elliptic-coriaceous, 3-nerved, margin inflexed, apex acute. Lemma 2.5–3 mm long, oblong-elliptic, membranous, 3-nerved, margin inflexed, apex 2-toothed. Palea 2–2.5 × 0.5–1 mm, elliptic, hyaline, 2-nerved, 2-keeled, margins inflexed, apex retuse-emarginate. Lodicules 2. Stamens 3. Caryopsis 1–1.5 mm long, oblong.

Fl. & Fr.: Aug.–Nov.

Distrib.: Occasionally in rocky crevices.

Exsicc.: Nagar-Kurnool District: Amaragiri-Somasila, 08.08.2019, SNR 8652, (BSID); Wanaparthy District: Amadabakula-Kothakota, 07.08.2019, SNR 8635 (BSID); Suryapet District: Nakrekal village, 27.10.2019, SNR 8746 (BSID).

Note: It is similar to *Tripogon purpurascens*, but distinguishable by its inflorescence in having sunken rachis.

2. *Oropetium thomaeum* (L. f.) Trin., Fund. Agrost. 98, t. 3. 1822; Hook.f., Fl. Brit. India 7: 366. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1830. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 474. 1960; Pull., Fl. Telangana 3: 1149. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 730. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 399. 2020. *Nardus thomaea* L. f., Suppl. Pl. 105. 1781.

Plate 61

Caespitose annuals. Culms 4–11 cm high, erect, branched; nodes glabrous. Leaves mostly basal; sheaths 5–10 mm long, keeled; ligules 1–1.3 mm long, membranous, apex truncate; blades 10–35 × 3–8 mm, filiform-linear, margin tubercle based hairs, apex acute-acuminate. Inflorescence terminal spike, solitary, 20–50 mm long, linear-oblong, straight-curved, slightly bulgy,

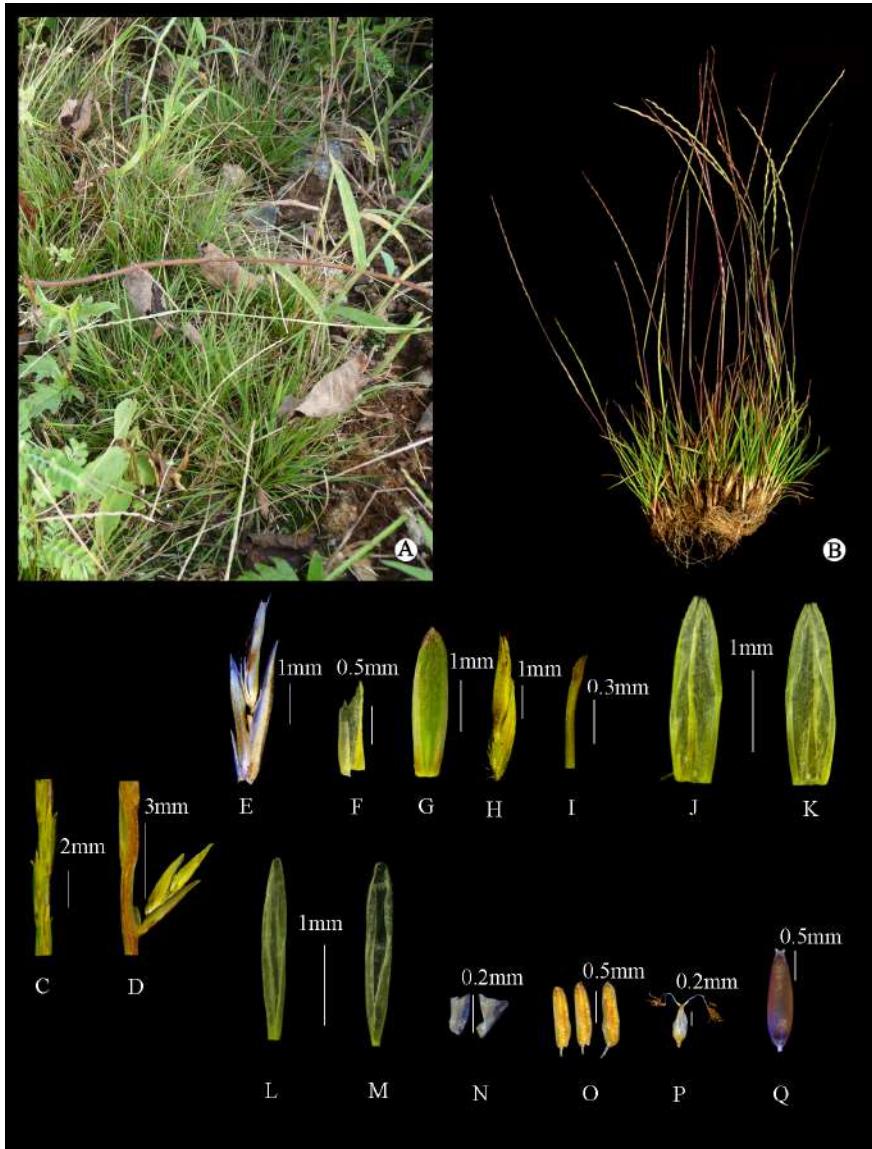

Plate 60. *Oropetium roxburghianum* (Schult.) S.M. Phillips: A. Habitat; B. Habit; C&D. Enlarged portion of the spike; E. Spikelet; F. Lower glume; G. Upper glume; H. Floret; I. Rachilla; J&K. Abaxial and adaxial view of Lemma; L&M. Abaxial and adaxial view of palea; N. Lodicules; O. Stamens; P. Pistil; Q. Caryopsis.

scaberulous. Spikelets sessile, solitary, sunken, lanceolate, as long as upper glume, embedded in the rachis along the both sides. Lower glume $0.3\text{--}0.4 \times 0.1\text{--}0.2$ mm, broadly oblong, membranous, hyaline, nerveless, apex truncate and irregularly 4–5-dentate. Upper glume $1.5\text{--}2 \times 0.3\text{--}0.4$ mm, lanceolate-oblong, chartaceous-subcoriaceous, 3-nerved, apex acute, serrulate. Floret 1, bisexual, callus present. Lemma $1.1\text{--}1.5 \times 0.5\text{--}0.6$ mm, obovate, boat-shaped, chartaceous-membranous, dorsally scaberulous at upper part, faintly 3-nerved, apex obtuse-mucronulate

Plate 61. *Oropetium thomaeum* (L.f.) Trin.: A. Habita; B. Closed view of spike; C. Lower glume; D. Upper glume; E. Floret; F. Lemma; G&H. Abaxial and adaxial view of palea; I. Stamens; J. Pistil; K. Caryopsis.

or slightly emarginate, 1-keeled, keel serrulate. Palea as long as lemma, oblong-slightly obovate, membranous, hyaline, 2-nerved, faintly keeled or not, apex slightly 3–4 dentate. Lodicules 2. Stamens 3. Caryopsis $0.8\text{--}1 \times 0.3\text{--}0.4$ mm, oblong-obovate.

Fl. & Fr.: Jul.–Nov.

Distrib.: Grows in rocky crevices, gravelly, rocky and sandy soils in plains, dry deciduous forests and on hillocks.

Exsicc.: Mahabubnagar District: Koilsagar Dam, 06.08.2019, SNR 8621 (BSID); Mahabubnagar District: Venkatapuram-Sivar, 06.08.2019, SNR 8601 (BSID); Rangareddy District: Rajendranagar, Manasahills, 24.08.2019, SNR 8532 (BSID); Hyderabad, MVR 02177 (HY); Tolichowk, Mdlines, 04.09.2019, SNR 8681 (BSID).

Note: In previous works (Bor, 1960; Yadav, 2012) the lemma was described as glabrous, but the illustration made by J.D. Hooker on the type specimen K000245052 shows the lemma as scaberulous in the upper part of the dorsal surface and during the present work also the same scaberulous lemma seen.

3. *Oropetium villosulum* Stapf ex Bor, Kew Bull. 4(4): 571. 1950 & Grasses Burma, Ceylon, India & Pakistan 474. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 399. 2020.

Plate 62

Caespitose annuals. Culms 5–15 cm high, erect or geniculate, simple-branched, slender, violet tinged at base; nodes glabrous; Leaves mostly basal; sheaths 3–9 mm long, compressed, sparsely villous; ligules 0.5–2 mm long, membranous, apex ciliolate; blades 8–30 × 4–10 mm, linear-narrow lanceolate, apex acute-shortly acuminate. Inflorescence terminal spike, solitary, straight, enclosed at the base by a subtending leaf, 10–30 mm long, narrow linear-oblong. Spikelets elliptic, sessile, solitary, sunken, as long as upper glume, arranged in 2-rows. Lower glume 0.9–1.4 × 0.2–0.4 mm, oblong-ovate, membranous, hyaline, apex obtuse and 3–4-dentate. Upper glume 2–2.7 × 0.3–0.4 mm, oblong-lanceolate, coriaceous, 3-nerved, margin inflexed, apex acute-shortly acuminate. Floret 1, bisexual; callus pubescent. Lemma 1.5–1.8 × 0.5–0.8 mm, elliptic, chartaceous, 3-nerved, dorsal and margin hairy, apex truncate-subacute. Palea 1.4–1.7 × 0.3–0.45 mm, ovate-elliptic, membranous, hyaline, dorsally villous, 2-nerved, 2-keeled, apex muticous. Lodicules 2. Stamens 3. Ovary elliptic-suborbicular, gibbous. Caryopsis 1.2–1.5 × 0.4–0.5 mm, oblong-obovate, brownish.

Fl. & Fr.: Jul.–Sept.

Distrib.: Endemic-India.

Exsicc.: Rangareddy District: Tolichowk, Mdlines, 26.08.2019, SNR 8680 (BSID); Vikarabad District: Ananthagiri hills, 21.09.2021, SNR 8704 (BSID).

Note: It can be identified by its bulged inflorescence.

Phalaris L.

World: 17 spp.; India: 05 spp., 1 var.; Telangana: 1 sp.

Phalaris minor Retz., Observ. Bot. 3: 8. 1783; Hook.f., Fl. Brit. India 7: 221. 1896; Bor, Grasses Burma, Ceylon, India & Pakistan 616. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 406. 2020. **Plate 63**

Tufted annuals. Culms 30–52 cm high, erect to geniculate; lower nodes rooting, rounded and swollen. Leaves cauline and basal; sheaths 3.5–6 cm long, fastigiate and keeled, terete, more or less ribbed, membranous-chartaceous towards ligule. blade 5–18 × c. 1.2 cm, lanceolate-linear, base rounded to semiamplexicaul, margins serrulate, apex acuminate; ligule 5–6 mm long,

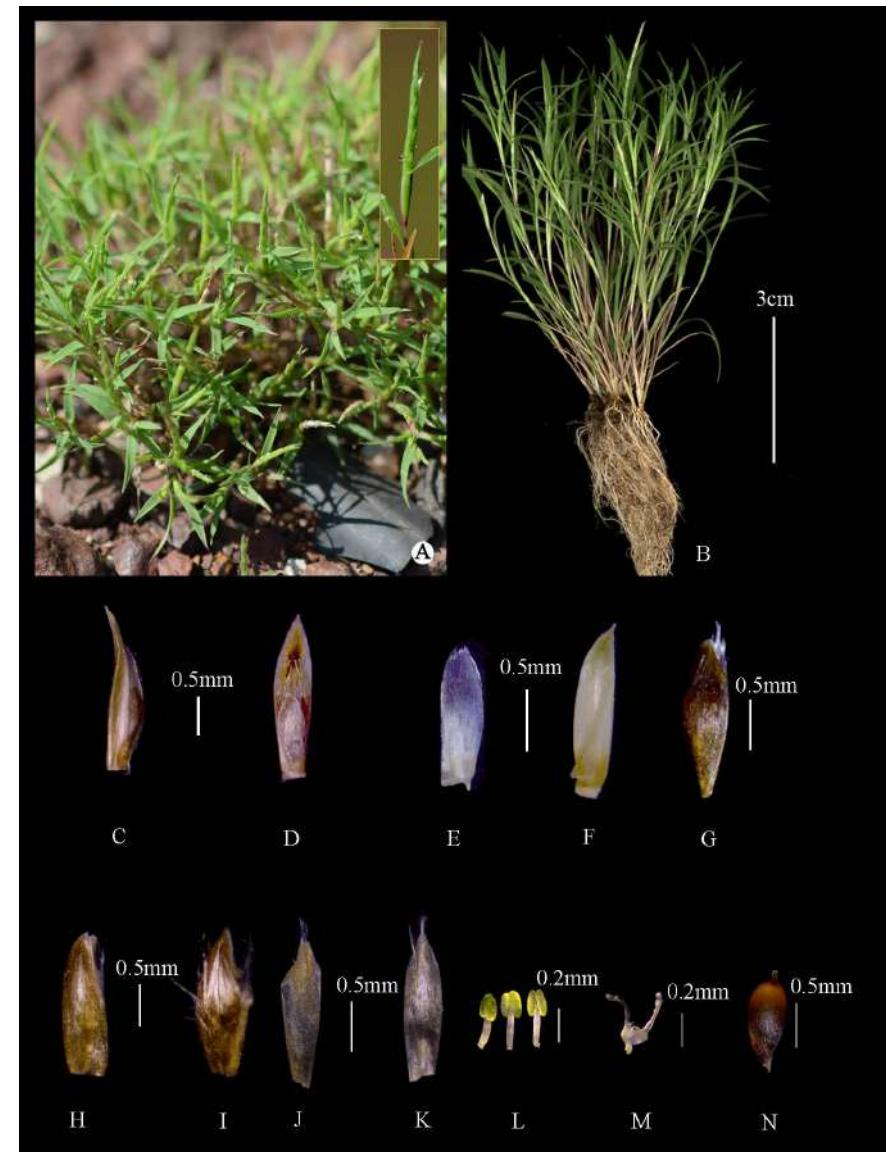

Plate 62. *Oropetium villosulum* Stapf ex Bor: A. Habitat (Inset: Inflorescence); B. Habit; C&D. Abaxial and adaxial view of spikelet; E. Lower glume; F.Upper glume; G. Floret; H&I. Abaxial and adaxial view of lemma; J&K. Abaxial and adaxial view of palea; L. Stamens; M. Pistil; N. Caryopsis.

lanceolate, membranous, acute. Panicle 2.5–5 × 1–2.5 cm, cylindrical, dense head like; peduncle 8–22 cm, ribbed. Racemes 1–1.5 cm long, up to 12 spikelets, mostly closer to axis; rachis with serrulate margins. Spikelets 4–5 × 2.8–3.2 mm (including wings), ovate-elliptic, base rounded, apex acute; pedicels 1–2.5 mm long, scabrid; disarticulating above persistent glumes. Glumes similar, winged, enclosing florets. Lower glume 4–4.5 × 1–2.3 mm, broadly ovate-elliptic, boat

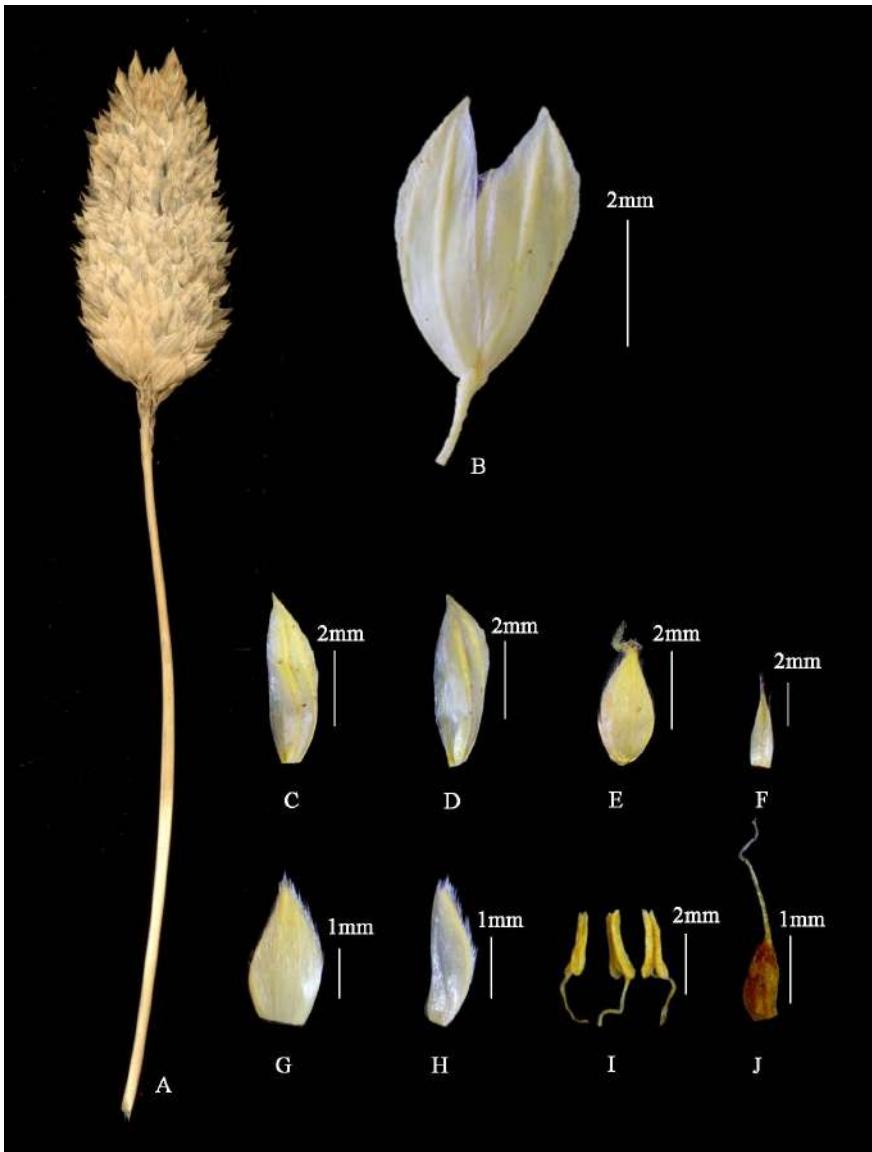

Plate 63. *Phalaris minor* Retz.: A. Inflorescence; B. Spikelet; C. Lower glume; D. Upper glume; E. Sterile and fertile florets; F. Sterile lemma; G. Fertile lemma; H. Fertile palea; I. Stamens; J. Pistil.

shaped, margins entire, apex acute, chartaceous to membranous, 3-nerved, keeled; keel broadly winged, from middle to apex, c. 3.5 mm width, margin serrulate to lobed. Upper glume 4–4.5 × 1–2 mm, broadly ovate-elliptic, boat shaped, margins entire, apex acute, chartaceous-membranous, 3-nerved, keeled; keel broadly winged, from middle to apex, c. 0.3 mm width, margin serrulate to lobed. Florets 2; lower floret reduced to minute sterile lemma, upper floret well developed, bisexual. Lower lemma 1–1.4 × c. 0.3 mm, lanceolate, totally reduced,

scale like, subulate, margins entire, apex acuminate, chartaceous, acute, ciliate dorsally and at apex. Lower palea absent. Upper lemma 2.5–3 × 1–2 mm, broadly ovate, boat shaped, margins ciliate towards apex, apex acute, chartaceous-subcoriaceous, 5-nerved, mid nerve prominent, others faint; appressed hairy on dorsal surface and glabrous towards middle. Upper palea 2–2.5 × 0.5–0.8 mm, ovate-elliptic-lanceolate, chartaceous, hyaline-greenish, prominently 2-nerved, 1-keeled towards middle, sometimes faintly 2-keeled; ciliate on keels, otherwise glabrous. Stamens 3; anthers 1–1.5 × 0.15–0.25 mm, filaments 2–2.5 mm, hyaline. Ovary oblong, 0.5–1.2 × 0.3–0.4 mm, brown; style 1–1.5 mm, hyaline; stigma plumose, 1–1.5 mm, brown. Caryopsis ovate-broadly elliptic.

Fl. & Fr.: Mar.-Apr.

Distrib.: Weed in cultivation fields.

Exsicc.: Rangareddy District: Bilal Eidgah Road, Walanthary, 01.06.2020, SNR 8933 (BSID).

Sporobolus marginatus Hochst. ex A.Rich., Tent. Fl. Abyss. 2: 397. 1850.

Tufted annuals, stoloniferous perennials. Culms 15–60 cm high, decumbent, roots thick with a layer of minute soil particles, nodes glabrous. Leaves basal and caudine; sheath 5–10 cm long, keeled and flabellate, more or less ribbed, margins hyaline, hairy on one margin; ligule 0.6–1 mm long, membranous rim of white hairs; blade 5–15 × 0.4–0.7 cm, linear-lanceolate, flat, glaucous, rounded at base, margins cartilaginous, usually bearing stiff spine like hairs, apex acuminate-sharply pungent. Panicle 10–18 × 3–6 cm, linear-oblong, pyramidal; peduncle 16–30 cm long, terete. Racemes 1–4 cm long, spreading, whorled below, alternate to subwhorled towards apex; rachis glandular patches, barren below, secondary 2–6 mm long, branches usually appressed on rachis. Spikelets 1–1.7 × c. 0.4 mm, oblong-lanceolate, pedicelled; pedicels 0.6–1 mm long, terete, smooth-glandular; entire spikelet disarticulating from pedicel apex. Lower glume 0.3–0.5 × c. 0.2 mm, oblong, chartaceous, greenish, apex obtuse-subacute. Upper glume 1.5–1.9 × 0.3–0.4 mm, oblong-lanceolate, chartaceous, greenish, prominently 1-nerved, scaberrate dorsally above middle, margins hyaline, apex acute-acuminate. Floret 1, bisexual. Lemma 1.2–1.6 × 0.2–0.4 mm, oblong-lanceolate, chartaceous, greenish, prominently 1-nerved, margins hyaline, apex acute. Palea c. 1.3 × 0.4 mm, oblong, chartaceous, greenish, faintly 2-nerved, margins incurved, apex acute-retuse. Stamens 3; anthers 0.5–0.8 mm long. Ovary c. 0.3 mm long, oblong-elliptic, style short, stigma plumose, white-yellowish. Caryopsis c. 0.6 × 0.4 mm, oblong-elliptic, wedge shaped.

Fl. & Fr.: Aug.–Dec.–

Distrib.: Occasionally in open barren and fallow lands.

Exsicc.: Mahaboobnagar District: Kollapur, 14.12.2008, BSS & SKB 32917(SKU).

4. *Sporobolus maderaspatnus* Bor in Kew Bull. 1957: 234. 1957 & Grasses Burma, Ceylon, India & Pakistan 632. 1960; Pull., Fl. Telangana 3: 1179. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 752. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 429. 2020. *Sporbolum orientalis* sensu Hook.f., Fl. Brit. India 7: 251. 1896, non Kunth, 1833; C.E.C.Fisch. in Gamble, Fl. Madras 1817. 1934.

Caespitose perennial stoloniferous. Culms 20–50 cm high, decumbent, geniculate, nodes glabrous. Leaves basal and caudine; sheaths 2–5 cm long, ribbed, scaberulous, base fastigiated; ligules 0.5–1 mm long, membranous, apex fimbriate; blades 5–28 × 0.2–0.3 cm, linear-lanceolate, flat, convolute, margin scabrous-spinulose, apex acuminate-acute. Panicle 4–11 × 0.7–3 cm, lanceolate, spiciform, branched. Spikelets 1.6–2 × 0.4–0.6 mm, lanceolate-elliptic, apex acuminate-acute. Lower glume 0.2–0.5 × 0.2–0.4 mm, ovate-oblong, chartaceous, scabrous, hyaline, base cordate, apex acute. Upper glume 1.5–2 × 0.5–0.6 mm, elliptic-lanceolate, chartaceous, 1-nerved, base rounded, apex acute. Floret 1, bisexual. Lemma 1.8–2 × 0.4–0.6 mm, oblong-elliptic, boat-shaped, membranous, 1-nerved, apex acute. Palea 1.8–2 × 0.2–0.4 mm, oblong-lanceolate, chartaceous, margins incurved, 2-nerved, 2-keeled, apex acuminate, bifid. Lodicules 2. Stamens

3. Ovary wedge-shaped. Caryopsis c. 1 mm long, elliptic-obovate, compressed, brown.

Fl. & Fr.: Jun.–Dec.

Distrib.: Occasionally in Gadwal, Mahabubnagar, Wanaparthy & Nagarkurnool.

Exsicc.: Mahabubnagar District: Kollapur, BR & BSS 32917 (SKU).

5. *Sporobolus spicatus* (Vahl) Kunth, Revis. Gramin. 1: 67. 1829; Hook.f., Fl. Brit. India 7: 250. 1896; C.E.C.Fisch. in Gamble, Fl. Telangana 725. 2016; Prasanna & al. in A.A.Mao & S.S.Dash (eds.), Fl. Pl. India Annot. Checkl. Monocot. 3: 429. 2020. *Agrostis spicata* Vahl, Symb. Bot. 1: 9. 1790.

Plate 65

Mat-forming perennials; stoloniferous. Culms 10–50 cm high, erect or geniculate, wiry; nodes glabrous, lower nodes rooting. Leaves basal and caudine; sheaths, 1.5–4.5 cm long, keeled, flat, mouth bearded; ligules 0.2–0.5 mm long, apex ciliate; blades 0.5–14 × 0.4–0.5 cm, linear-lanceolate, flat, ribbed, puberulous, abaxially velvety, margins involute, base truncate, apex acuminate-spiny pungent. Panicles 3.7–10.5 × 0.2–0.3 cm, spicate, compact, branched. Spikelets 1.5–2 × 0.3–0.5 mm, lanceolate-elliptic, disarticulating from above glume. Lower glume 0.5–0.9 × 0.2–0.3 mm, ovate-oblong, chartaceous, hyaline, base truncate, apex obtuse-acute. Upper glume 0.7–1.5 × 0.2–0.4 mm, lanceolate-oblong, membranous, hyaline, glabrous, base rounded, apex acute-minutely lobed. Lemma 0.9–1.5 × 0.2–0.5 mm, oblong-lanceolate, elliptic-boat shaped, chartaceous-membranous, glabrous, keeled, 1-nerved, apex acute. Palea 1–1.5 × 0.3–0.5 mm, oblong-lanceolate, chartaceous, hyaline, glabrous, keeled, acute obtuse. Lodicules 2. Stamens 3. Ovary lanceolate-oblong. Caryopsis 0.6–1 × 0.4–0.6 mm, oblong-ovate, purple-brown.

Fl. & Fr.: Throughout the year.

Distrib.: Occasionally in Wanaparthy.

Exsicc.: Wanaparthy District: Amadabakula, 09.08.2019, SNR 8659 (BSID); Warangal District: Battupally-Kazipet, 27.03.2021, SNR 012009 (BSID).

Note: It can be recognized in the field by its mat forming habit near water sources and in having spicate inflorescence.

6. *Sporobolus tenuissimus* (Schrank) Kuntze, Revis. Gen. Pl. 3: 369. 1893; Bor, Grasses Burma, Ceylon, India & Pakistan 633. 1960; Pull., Fl. Telangana 3: 1180. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 725. 2016; Prasanna & al. in A.A.Mao & S.S.Dash (eds.), Fl. Pl. India Annot. Checkl. Monocot. 3: 429. 2020. *Panicum tenuissimum* Schrank in Denkschr. Koenigl.-Baier. Bot. Ges. Regensburg 2: 26. 1822. *Sporobolus minutiflorus* (Trin.) Link, Hort. Berol. 1: 88. 1827; Hook.f., Fl. Brit. India 7: 248. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1817. 1934.

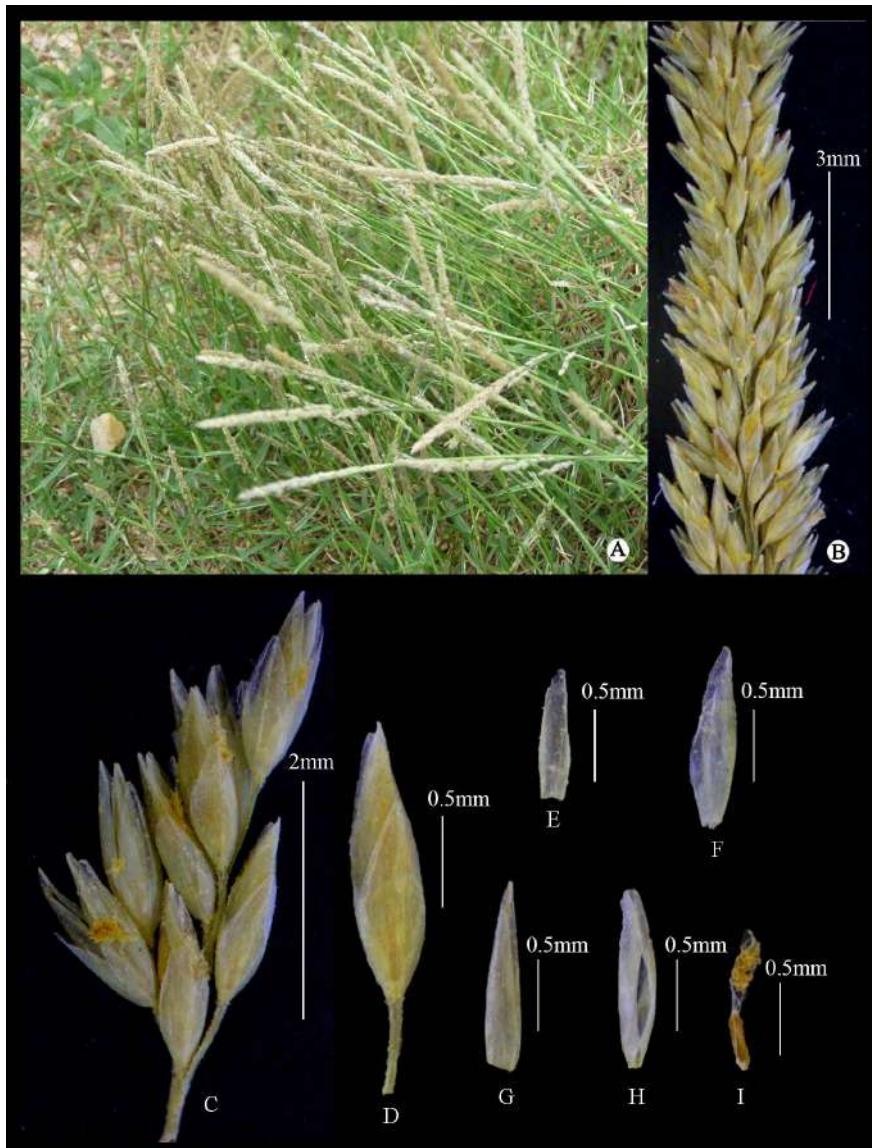

Plate 65. *Sporobolus spicatus* (Vahl) Kunth: A. Habitat; B. Enlarged view of spike; C. closed view of raceme; D. Spikelet; E. Lower glume; F. Upper glume; G. Lemma; H. Palea; I. Pistil.

Caespitose annuals. Culms 20–95 cm high; nodes glabrous. Leaves basal and caudine; sheaths 2–9 cm long, flat, ribbed, keeled, chartaceous-membranous, margin smooth; ligules c. 0.3 mm long, apex fimbriate; blades 2.5–21 × c. 0.3 cm, linear-lanceolate, flat, margin convolute, base round-obtuse, apex acute-acuminate. Panicles 10–28 × 3–4.5 cm, effuse, branched. Spikelets 0.7–1 × c. 0.2 mm, ovate-elliptic, pedicelled, apex acute. Lower glume 0.2 mm long, ovate-oblong, chartaceous, glabrous, hyaline, base rounded, apex truncate-lobed. Upper glume 0.4–0.6 × c. 0.2 mm, elliptic-oblong, membranous, glabrous, hyaline base truncate, apex acute-

fringed. Lemma 0.6–1 × c. 0.3 mm, oblong-lanceolate, elliptic, membranous, glabrous, margins slightly curved, 1-nerved, base rounded, apex lobed-acute. Palea 0.4–0.8 × c. 0.2 mm, oblong-elliptic, chartaceous, glabrous, hyaline, scabrid, 2-nerved, 2-keeled, base acute, apex acute-obtuse. Lodicules 2. Stamens 3. Ovary 0.3 mm long, obovate. Caryopsis, 0.4–0.8 × c. 0.4 mm, obovoid, brown.

Fl. & Fr.: Jul.–Dec.

Distrib.: Occasional in Mahabubnagar, Medak, & Rangareddy.

Exsicc.: Medak District: Narsapur forest nursery, TP & MSG 12019 (SKU); Rangareddy District: Hyderabad, MVR 02207 (HY).

7. *Sporobolus tetragonus* Bor, Kew Bull. 4(2): 251.1949, Grasses Burma, Ceylon, India & Pakistan 633.1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 429. 2020. *Sporobolus pulchellus* sensu Hook.f., Fl. Brit. India 7: 252. 1896, non R.Br., 1810.

Annuals. Culms 20–55 cm high, erect, nodes c. 0.20 × 1 mm, glabrous. Leaves mostly basal; sheaths 1–5.6 × 0.3–0.6 cm, glabrous; ligule c. 0.7 × 1.2 mm, fringe of hairs; blades 1.5–10 × 0.4–0.6 cm, linear-lanceolate, flaccid, surface rough on both sides, base rounded, margins scabrous with tuberculate-ciliate hairs, apex acuminate, hairy. Inflorescence 8–25 × 2.5–8 cm, open panicle, elliptic, effuse; primary branches whorled at most nodes; peduncle 5–25 cm long, terete; pedicels 1–1.5 mm long. Spikelets 1–1.5 × 0.5–0.8 mm, solitary, lanceolate, pale green. Glumes deciduous, unequal, reaching apex of the florets. Lower glume c. 1.0 × 0.3 mm, lanceolate, hyaline, rough, nerveless, apex acute, scabrous. Upper glume c. 1.5 × 0.7 mm, elliptic, membranous, rough, scabrous above, 1-nerved, keeled, apex acute. Lemma c. 1.6 × 0.5 mm, elliptic, membranous, scabrous on upper third part, 1-nerved, apex obtuse-acute. Palea 0.9–1.4 × 0.4–0.5 mm, membranous, 2-veined, apex acute. Stamens 3; anthers c. 0.3 mm long, linear. Ovary c. 0.2 mm long, elliptic; stigma c. 0.5 mm long, plumose. Caryopsis c. 0.8 × 0.45 mm, ellipsoid, brownish, quadrangular.

Fl. & Fr.: Aug.–Apr.

Distrib.: Occasionally in open areas.

Exsicc.: Bhadravati Kothagudem district: Kinnerasani Wildlife Sanctuary, Allapally, 30.09.2019, JS 009805 (BSID).

8. *Sporobolus virginicus* (L.) Kunth, Revis. Gramin. 1: 67. 1829; Hook.f., Fl. Brit. India 7: 249. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1818. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 634. 1960; Pull., Fl. Telangana 3: 1180. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 725. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 429. 2020. *Agrostis virginica* L., Sp. Pl. 1: 63. 1753.

Caespitose perennials; rhizomatous-stoloniferous. Culms 10–50 cm high, geniculate; nodes glabrous, lower nodes rooting. Leaves basal and caudine; sheaths 1–7.3 cm long, ribbed, glabrous, margin serrulate, mouth bearded; ligules c. 0.3 mm long, membranous, apex fimbriate; blades 1.2–9.3 × c. 0.3 mm, linear-lanceolate, apex acuminate-pungent. Panicle 22.5–11.5 × 0.2–0.6 cm,

spiciform. Spikelets 2–3 × 0.3–1 mm, elliptic-lanceolate, apex acute. Lower glume 1.8–2 × 0.5–0.7 mm, ovate-elliptic, chartaceous, hyaline, glabrous, base rounded, apex acute-acuminate. Upper glume 1.8–2.3 × 0.8–1 mm, elliptic-lanceolate, membranous, margins incurved, apex acute. Lemma 1.8–2.1 × 0.4–0.7 mm, ovate-lanceolate, elliptic-lanceolate, chartaceous, 3-nerved, 1-keeled, margin incurved, apex acuminate-acute. Palea 2–2.1 × c. 0.5 mm, lanceolate-oblong, chartaceous, hyaline, margins infolded, 2-nerved, 2-keeled, apex acute. Lodicules 2. Stamens 3. Ovary elliptic-oblong. Caryopsis 0.2–0.6 × c. 0.4 mm, obovate-oblong, brown.

Fl. & Fr.: Jun.–Feb.

Distrib.: Occasionally in Medak, Rangareddy & Vikarabad.

Exsicc.: Rangareddy District: Hyderabad, MVR 02208 (HY).

9. Sporobolus wallichii Munro ex Trimen in J. Bot. 27: 171. 1889; Hook.f., Fl. Brit. India 7: 248. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1817. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 634. 1960; Pull., Fl. Telangana 3: 1181. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 725. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 429. 2020.

Caespitose annuals. Culms 14–60 cm high, geniculate; nodes glabrous. Leaves basal and caudine; sheaths 2.7–15.6 cm long, keeled, flat, scabrous; ligules 0.3–0.4 mm long, membranous, apex fimbriate; blades 6.5–25 × 0.2–0.4 cm, linear-lanceolate, flat, convolute, apex acuminate. Panicles 18–30 × 1–2 cm, spreading, branched. Spikelets 1.2–2 × 0.3–0.5 mm, elliptic-oblong, apex acute. Lower glume 0.4–0.6 × c. 0.3 mm, ovate-oblong, chartaceous, hyaline, glabrous, base rounded, apex obtuse. Upper glume 0.6–1.2 × c. 0.4 mm, ovate-elliptic, membranous, scabrid, hyaline, base truncate, apex acute or lobed. Lemma 1.4–2 × c. 0.5 mm, elliptic, chartaceous-membranous, margin incurved, base rounded, apex acute. Palea 1.5–1.8 × c. 0.3 mm, lanceolate-elliptic, chartaceous, glabrous, 2-nerved, 2-keeled, margin inflexed, apex acute. Lodicules 2. Stamens 3. Ovary c. 0.5 mm long, lanceolate. Caryopsis 0.7–1 × c. 0.5, ovate-obovate, brown.

Fl. & Fr.: Jun.–Mar.

Distrib.: Occasionally in Mahabubnagar, Wanaparthi & Nagarkurnool.

Exsicc.: Mahabubnagar District: Mannanur, BSS & SKB 3060 (SKU), Farahabad, MVS & BML 38017 (SKU).

Trigonochloa P.M. Peterson & N. Snow.

World: 2 spp.; India: 1 sp.; Telangana: 1 sp.

Trigonochloa uniflora (Hochst. ex A.Rich.) P.M.Peterson & N.Snow, Ann. Bot. (Oxford) n.s., 109(7): 1328 (2012). *Leptochloa uniflora* Hochst. ex A. Rich., Tent. Fl. Abyss. 2: 409. 1850. Hook.f., Fl. Brit. India 7: 297. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1820. 1934; Bor, Grass. Burma Ceylon India Pakistan 517. 1960; Pull., Fl. Telangana 3: 1143. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 725. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 392. 2020.

Caespitose annuals. Culms 15–72 cm high, geniculate. Leaves basal

and caudine; sheaths 3–6.5 cm long, keeled, more or less ribbed; ligules c. 1.5 mm long, ovate, apex lacerate; blades 7–12 × 1.5–2 cm, elliptic-lanceolate, membranous, margins cartilaginous, apex acuminate-acute. Panicle 15–25 cm long, lax. Racemes many, alternate-sub whorled, 3–7 cm long. Spikelets subsessile, secund, 1.5–2.5 × 0.2–0.4 mm, narrowly lanceolate, apex acuminate. Lower glume 1.5–2.5 × 0.2–0.4 mm, oblong-lanceolate, chartaceous, 1-nerved, keeled, keel scabrid, margins serrulate, apex acuminate. Upper glume 2–2.5 × 0.2–0.4 mm, chartaceous, 1-nerved, keeled, keel scabrid, margins serrulate, apex acuminate. Floret 1, bisexual. Lemma 1–1.7 × 0.4–0.7 mm, oblong-ovate, chartaceous-membranous, 3-nerved, 1-keeled, margins ciliate, apex acute. Palea 1.5 × 0.4 mm, elliptic-lanceolate, membranous-chartaceous, base truncate, greenish, 2-nerved, 2-keeled, apex acute. Lodicules 2. Stamens 3. Ovary obovate-elliptic. Caryopsis c. 1 mm long, oblong-lanceolate.

Fl. & Fr.: Oct.–Feb.

Distrib.: Common throughout the state, along roadsides and other waste places.

Exsicc.: Medak District: Medak, RG 104162 (BSID).

Tripogon Roem. & Schult.

World: 35 spp.; India: 30 spp.; Telangana: 5 spp.

Key to the species

- | | | |
|-----|---|-------------------------------|
| 1a. | Lemmas cleft at the apex into 2 lobes | ... 2 |
| 1b. | Lemmas cleft at the apex into 4 lobes | ... 4 |
| 2a. | Median awn as long as or longer than the lemma | ... 5. <i>T. trifidus</i> |
| 2b. | Median awn shorter than the lemma, (at times absent) | ... 3 |
| 3a. | Perennials with wiry roots forming tufts, leaves glabrous | ... 3. <i>T. jacquemontii</i> |
| 3b. | Perennials with fibrous roots, forming a close tuft, leaves covered with matted white hairs | ... 4. <i>T. purpurascens</i> |
| 4a. | Median awn shorter than or nearly equal to the lemma | ... 1. <i>T. bromoides</i> |
| 4b. | Median awn twice as long as the lemma or more | ... 2. <i>T. filiformis</i> |

1. *Tripogon bromoides* Roem. & Schult., Syst. Veg., ed. 15. 2: 600. 1817; Hook.f., Fl. Brit. India 7: 287. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1834. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 519. 1960; Pull., Fl. Telangana 3: 1185. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 757. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 436. 2020.

Key to the varieties

- | | | |
|-----|--|-------------------------------------|
| 1a. | Two minute acute projections present on outer side of lateral awns | ... 1.1. var. <i>anataswamianus</i> |
| 1b. | Minute acute projections present on outer side of lateral awns | ... 1.2. var. <i>bromoides</i> |

1.1. var. *anataswamianus* (Sreek., V.J.Nair & N.C.Nair) Sang.Dey & Prasanna, Indian J. Forest. 43(2): 151. 2021. *Tripogon anataswamianus* Sreek., V.J. Nair & N.C. Nair, in Bull. Bot. Surv. India 25: 185. 1985; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 436. 2020. **Plate 66**

Caespitose perennials. Culms 15–45 cm high, erect; nodes glabrous. Leaves

basal and caudate; sheaths smooth, mouth bearded, base fastigiated; ligules membranous, apex fimbriate; blades 14–40 × 0.2–0.5 cm, linear-lanceolate, glaucous, flat-convolute, villous. Spike 12–18 cm long. Spikelets 7–12 mm long, oblong-lanceolate. Lower glume 3–5 mm long, ovate-lanceolate, 1-nerved, apex acuminate-aristae. Upper glume 5–8 × 0.7–1 mm, lanceolate, notched with arista from sinus; arista 0.8–1 mm long. Florets 7–10, similar, bisexual; callus bearded. Lemma 4.5–7 × 0.9–1 mm (including awns), ovate-lanceolate, boat shaped, chartaceous-subcoriaceous, apex dentate, 6-fid, lobes acute, 3-awned, barbellate, median awn from the sinus, lateral awns from the apex of lateral lobes. Palea 3–4 × 1–1.4 mm, elliptic, chartaceous, 2-nerved, 2-keeled, keels ciliate, margins infolded, apex emarginate. Stamens 3. Ovary c. 0.6 mm long, obovate. Caryopsis 1.5–2.2 × 0.3–0.4 mm, oblong-lanceolate.

Fl. & Fr.: Oct.–Feb.

Distrib.: Occasionally in forest grasslands. **Endemic-India** (Kerala, Tamil Nadu & Telangana).

Exsicc.: Suryapet District: Nakrekal village, 27.10.2019, SNR 8745 (BSID); Vikarabad District: Ananthagiri Hills, 21.09.2019, 30.11.2019, SNR 8718, 8788, 8790 (BSID); Damagundam, 02.12.2019, SNR 8908 (BSID).

Note: It can be differentiated from other *Tripogon* species by its 6-fid lemma with 3-awns.

1.2. var. *bromoides*

Caespitose perennials. Culms 20–50 cm high, erect or geniculate. Leaves basal and caudate; ram sheaths fibrous, persistent; leaf sheaths 3–10 cm long, ribbed, hairy, mouth bearded; ligules 0.2 mm long, membranous, apex ciliolate; blades 2.5–15 × c. 0.2 cm, linear-lanceolate, convolute, margins hairy, apex attenuate-acuminate. Racemes 4–25 × c. 0.5 cm, terminal. Spikelets 7–10 × c. 2.5 mm, oblong-lanceolate, alternate, imbricate, apex acute. Lower glume 1.6–4 × c. 0.8 mm, oblong-ovate, chartaceous, hyaline, 1-nerved, keeled, margin 2-lobed, apex acute and notched with mucro. Upper glume 2.4–6 × c. 0.8 mm (including arista), oblong-lanceolate, chartaceous, apex 2-lobed, acute. Florets 5–16, callus bearded. Lemma 2–4 × c. 1.2 mm, oblong-lanceolate, chartaceous, apex 3-fid, lobes acute, central lobe bidentate, 1-awned or mucronate, barbellate, median awn from sinus, c. 3 mm long. Palea 2–3 × 0.8–1 mm, elliptic-oblong-lanceolate, membranous, hyaline, 2-nerved, 2-keeled, keels narrowly winged, ciliate-scabrid, margin infolded, apex acute-emarginate. Lodicules 2. Stamens 3. Ovary obovate-elliptic. Caryopsis 1.2–1.5 × c. 0.4 mm, oblong.

Fl. & Fr.: Almost throughout the year.

Distrib.: In grasslands, slopes, forest margins and roadsides of high hills

Exsicc.: Mancherial District: Gandhari Khilla, bokkala gutta, JS 9177 (BSID); Mahabubnagar District: Appapur, 13.02.2002, MSR 24543 (SKU), Iriapenta, BRPR & BSS 32280 (BSID).

Note: Good fodder and sand binding grass.

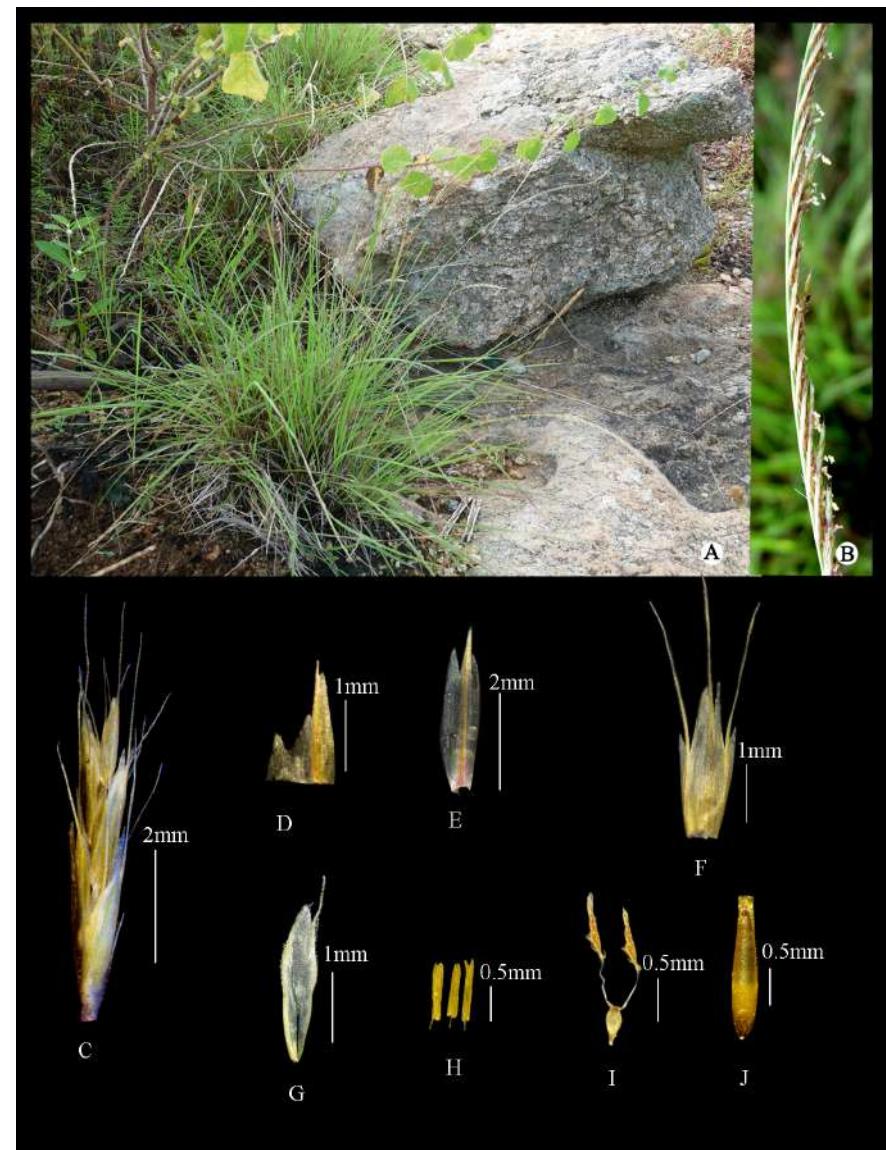

Plate 66. *Tripogon bromoides* var. *anantaswamianus* (Sreek., V.J.Nair & N.C.Nair) Sang. Dey & Prasanna: A. Habitat; B. Closed view of spike; C. Spikelet; D. Lower glume; E. Upper glume; F. Lemma; G. Palea; H. Stamens; I. Pistil; J. Caryopsis.

2. *Tripogon filiformis* Nees ex Steud., Syn. Pl. Glumac. 1: 301. 1854; Hook.f., Fl. Brit. India 7: 288. 1896; Bor, Grasses Burma, Ceylon, India & Pakistan 521. 1960; N.P. Singh et al. in Bull. Bot. Surv. India 18: 139. 1979; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 436. 2020.

Caespitose perennial. Culms 10–45 cm high, terete, slender, erect, glabrous; nodes glabrous. Leaves basal and caudate; sheaths 2–8 cm long, terete, glabrous; ligules membranous; blades 5–10 cm long, filiform, glabrous, apex

acuminate-setaceous. Racemes 5–19 cm long. Spikelets 3.5–8 mm long (including awn), linear-lanceolate. Florets 3–6. Lower glumes 1.1–2 mm long, ovate-oblong, membranous, asymmetric, 1-nerved, apex notched. Upper glume 2.1–3.2 mm long, ovate-oblong, membranous, 1-nerved, 2-toothed below the apex, shortly aristulate, 0.4 mm long. Lemma 5–7.5 × 1–1.5 mm (including awn), ovate-oblong, membranous, 3-nerved, base bearded, apex dentate, 4-fid, lobes obtuse, 3-awned, barbellate; median awn from sinus, 2.5–3 mm long; lateral awns from apex of the lateral lobes, 0.35–0.8 mm long, subequal. Palea 1.5–2.5 × 0.25–0.60 mm, elliptic-oblong, hyaline, 2-keeled, keels ciliate, apex obtuse. Stamens 3, 0.5–0.73 × 0.13–0.15 mm. Ovary c. 0.25 × 0.15 mm, oblong. Caryopsis elliptic-oblong.

Fl. & Fr.: Aug.–Dec.

Distrib.: Grows in rocky crevices.

Exsicc.: Vikarabad District: Ananthagiri hills 21.09.2019, SNR 8714, 8719 (BSID); Naskal Range-Parigi, 01.12.2019, SNR 8798 (BSID).

Note: It can be identified by its long filiform awn.

3. *Tripogon jacquemontii* Stapf in Bull. Misc. Inform. Kew 1892: 85. 1892; Hook.f., Fl. Brit. India 7: 286. 1896; C.E.C.Fisch. in Gamble, Fl. Caespitose perennials. Culms 20–30 cm high, erect; nodes glabrous. Leaves basal and caudine; sheaths, 6–11.5 cm long, terete, glabrous; ligules 0.3–0.4 mm long, membranous, truncate, apex ciliate; blades 17–37 × 0.04–0.12 cm, linear, filiform, convolute, 5–8-nerved, abaxially scabrid, adaxially glabrous, margin scabrid, apex acuminate. Racemes 15–25 cm long. Spikelets 11–17 × 2–7.5 mm (excluding awns), narrowly elliptic, laterally compressed. Lower glume 3.5–4 × c. 0.7 mm, lanceolate, membranous, 1-nerved, lobed below the middle, apex acuminate. Upper glume 4–5 × 0.6–0.7 mm, narrowly lanceolate, membranous, 1-nerved, apex acuminate. Florets 11–16. Lemma 3.5–3.6 × 1–1.7 mm (excluding awn), ovate, membranous, base glabrous, 3-nerved, 1-keeled, 2-fid, lobes acute, 1-awned, arising from sinus 3–4 mm long, geniculate, barbellate, lateral lobes unawned. Palea 2.4–2.5 × 0.8–0.9 mm, obovate-ob lanceolate, 2-keeled, keel ciliate, apex emarginate. Lodicules 2. Stamens 3. Ovary c. 0.3 × 0.1 mm, glabrous.

Fl. & Fr.: Nov.–Jan.

Distrib.: Occasionally in Forest grassland. **Endemic-Telangana**.

Exsicc.: Mahabubnagar District: Umamaheswaram, LR & JS 7396 (BSID).

5.2. var. *trifidus*

Caespitose. Culms 15–55 cm high. Leaves basal and caudine; leaf sheaths

glabrous, smooth, rarely with few hairs at the mouth, basal sheaths papery, fibrous at maturity, persistent; ligules c. 0.3 mm, membranous, finely ciliate; blades 15–25 × 0.1–0.2 mm, flat-convolute, glabrous, apex attenuate; Spikes 5–25 cm long, flexuous; rachis somewhat flattened, angular, glabrous. Spikelets 4.2–12 mm long, 2-rowed, sessile, erect-slightly divergent. Lower glumes 1.5–2.5 × 0.4–0.5 mm, asymmetrical, narrowly lanceolate, broadly lobed on one side, marginal tooth reaching halfway, apex acute. Upper glumes 3.4–3.5 × 0.4–0.5 mm, lanceolate, 2-toothed with c. 1 mm long awista at apex. Fertile florets 5–13, loosely to densely imbricate. Lemmas 2.7–4.2 × 0.9 mm, elliptic, base bearded, membranous, bifid; median awn from sinus, 5–13 mm long, flexuous, lacking hyaline teeth between median awn and those produced from lateral veins; lateral veins extended into 0.45–0.6 mm long awn. Paleas 2.5–3.8 × 0.9 mm, chartaceous, broadly oblong, obtuse-bifid at apex.

Fl. & Fr.: Nov.–Jan.

Distrib.: Occasionally in forest grassland.

Exsicc.: Vikarabad District: Anantagirihills-Gattukondapur, 01.12.2019, SNR 8800 (BSID).

Telangana 725. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 339. 2020.

Caespitose perennials; stoloniferous. Culms 20–45 cm high, geniculate; nodes glabrous, nodes below rooting. Leaves basal and caudine; sheaths 3.1–5 cm long, compressed, keeled, glabrous; ligules membranous, apex fimbriate; blades 5–15 × 0.3–0.5 cm, linear, oblong-lanceolate, glabrous-sparingly pilose, apex acuminate. Racemes 3–10, digitate, glabrous below the inflorescence. Spikelets 2.5–3 mm long, oblong or cuneate. Lower glume 1–2 mm long, oblong-lanceolate, chartaceous, 1-nerved, 1-keeled, scabrid. Upper glume 2.5–3 mm long, oblong-lanceolate, chartaceous, 1-nerved, keeled, keel scabrid. Florets 4 or 5, 1-fertile, awned; callus bearded. Fertile lemma 2–3 mm long, oblong-oblanceolate, 3-nerved,

margins ciliate, apex obtuse-emarginate, awn c. 7 mm long. Palea 2–2.5 mm long, oblong, chartaceous, hyaline, 2-nerved, 2-keeled, keel scabrid, apex acute. Lodicules 2. Stamens 3. Ovary oblong. Caryopsis 2–2.6 mm long, oblong-trigonous. Sterile lemma 1.5–2.1 mm long, elliptic, truncate, awns c. 7 mm long.

Fl. & Fr.: Sep.–Dec.

Distrib.: Occasional in Medak, Rangareddy & Vikarabad.

Exsicc.: Rangareddy District: Hyderabad, MVR 02120 (HY).

5. *Chloris quinqueseta* Bhide in J. Proc. Asiatic Soc. Bengal (N.S.) 8: 311. 1912; Bor, Grasses Burma, Ceylon, India & Pakistan 466. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 339. 2020. **Plate 69(K-T)**

Caespitose perennials. Culms about 60 cm high; erect or decumbent; nodes glabrous, rooting lower nodes. Leaves basal and caudine; sheaths terete or sub-compressed; ligules membranous; blades 2–15 × 0.3–0.5 cm, linear, ovate-lanceolate, flat, margins minutely scabrid, base truncate, apex acuminate. Racemes 2.5–5 cm long, digitate, puberulous below the inflorescence. Spikelets 2 × 0.9 mm, obovate, five awned; awns c. 6.5 mm long. Lower glume 3.49 × 0.42 mm, elliptic-lanceolate, membranous, 1-nerved, scabrid on nerves, apex mucronate. Upper glume 3.6–4 × 0.7–0.8 mm, narrowly ovate, membranous, 1-nerved, keeled, scabrid on keels, apex mucronate. Florets 5; 1-fertile; 4-neuter; awns 5. Fertile lemma c. 2.51 × 1.16 mm, elliptic-obovate, coriaceous, hairy on dorsal side, margins inflexed, ciliate, 3-nerved, apex acute; awned; awn 7–8 mm long, straight. Palea c. 2.61 × 0.80 mm, narrowly obovate-oblanceolate, margins inflexed, 2-nerved, 2-keeled, keel ciliate, slightly hairy on upper surface, apex 2-toothed. Stamens 3. Ovary c. 1.3 mm long. Caryopsis 1.79 × 0.77 mm.

Fl. & Fr.: Aug.–Dec.

Distrib.: Common throughout the state.

Exsicc.: Adilabad District: Indhanpalli-Range, Narlapur-Beat, APS 3939 (BSID); Rangareddy District: Manasa hills-Rajendranagar, 24.08.2019, SNR 8502, 8503 (BSID); 04.09.2021 SNR 8684 (BSID).

Note: It can be identified by its 5 awned spikelets.

6. *Chloris telanganae* Nagaraju, Prasanna, Y.V. Rao & S.B. Padal in Phytotaxa 434 (2): 195. 2020. **Plate 70(A-M)**

Caespitose, perennials; stoloniferous. Culms 17–60 cm high, geniculate, terete, glabrous, brown. Leaves basal and caudine; sheaths 2–6.5 cm long, keeled, glabrous; ligules 1–1.9 mm long, membranous, hairy on back; blade 1–19.5 × 0.1–0.14 cm, linear, margins serrulate, glabrous, apex acuminate. Culms puberulous below the inflorescence. Peduncle c. 20 cm long. Spikes 4–5; 3–11.5 cm long, appressed or slightly divergent. Spikelets densely imbricate, spreading widely; rachis angular and scabrid, 3–10 cm long. Spikelets 3–3.2 × 1–1.5 mm, oblanceolate. Lower glume 1.5–2 × 0.4–0.9 mm, linear-lanceolate, chartaceous, 1-nerved, keeled, keel scabrid, apex acute-finely mucronate, lacerate. Upper glume 3–3.5 × 0.4–1 mm, linear-lanceolate, 1-nerved, keeled, scabrid on keel,

apex acuminate-shortly mucronate-lacerate. Florets 4–5, lowest one fertile, others sterile; disarticulating above persistent glumes; callus at base, pungent, 0.5–0.7 mm long. Fertile lemma 3–3.2 × 1–1.2 mm, broadly elliptic, elliptic-obovate, chartaceous, 3-nerved, sparsely hairy on both sides of the mid nerve and densely hairy on lateral nerves, hairs 1–1.2 mm long; awn arise from back, 10–12.5 mm long, straight, barbellate. Fertile palea shortly stalked, 2–2.9 ×

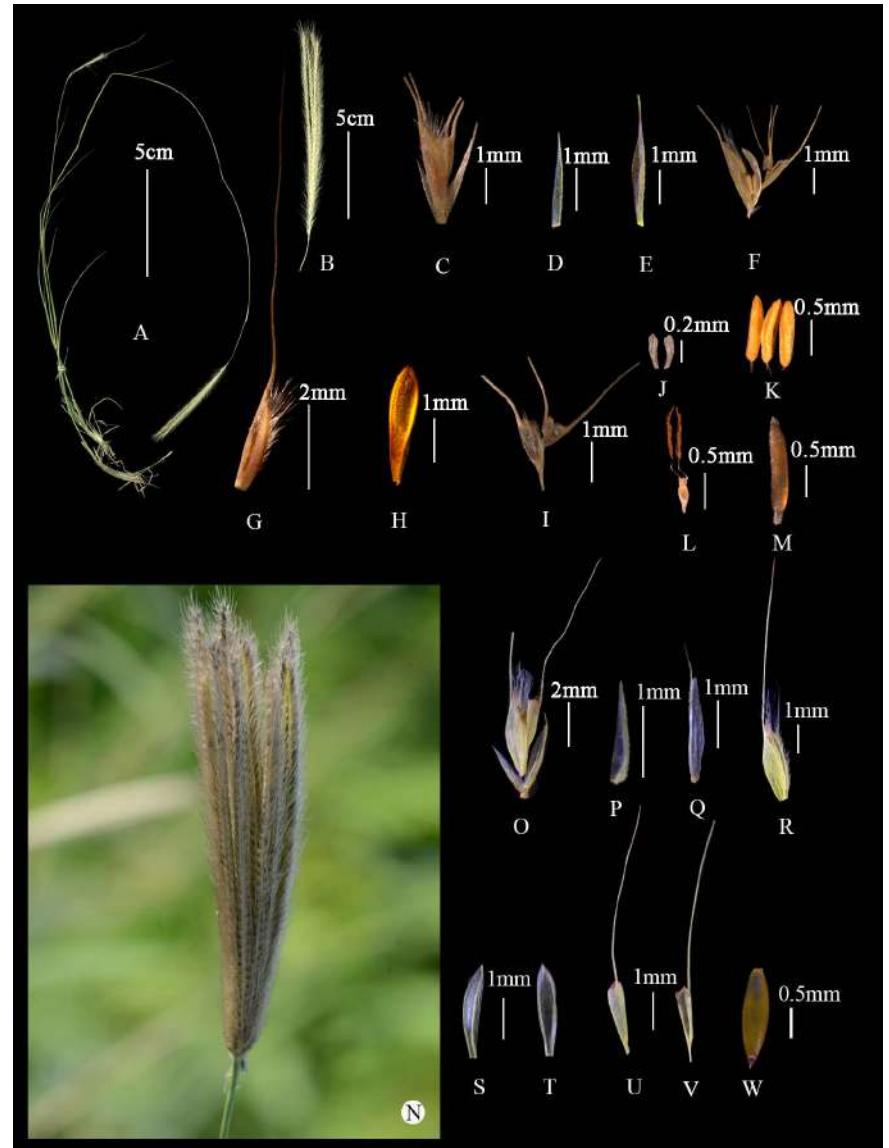

Plate 70. A–M. *Chloris telanganae* Nagaraju, Prasanna, Y.V. Rao & S.B. Padal: A. Habit; B. Inflorescence; C. Spikelet; D. Lower glume; E. Upper glume; F. Fertile and sterile florets; G. Fertile lemma; H. Palea; I. Lodicules; K. Stamens; L. Pistil; M. Caryopsis; N–W. *Chloris virgata* Sw.: N. Inflorescence; O. Spikelet; P. Lower glume; Q. Upper glume; R. Lemma; S. Abaxial and adaxial view of palea; U&V. Sterile lemma; W. Caryopsis.

1–1.5 mm, oblanceolate, emarginate at apex, 2-nerved, 2-keeled, keels scabrid, pustulose-pilose towards upper portion on back side. First sterile lemma 1–1.2 × 1 mm, obovate, chartaceous, 3-nerved, apex acute-obtuse, awn 6.5–9 mm long, scabrid. Second sterile lemma c. 1 × 1 mm, obovate to orbicular, acute-obtuse, 3-nerved, awn 7–7.2 mm long. Third sterile lemma c. 1 × 1 mm, obovate-orbicular, acute-obtuse, awn 4–4.5 mm long. Fourth sterile lemma 0.5 × 0.5 mm,

obovate-orbicular, apex acute-obtuse, awn 2–2.1 mm long. Lodicules 2. Stamens 3. Caryopsis 1–1.5 × 0.4 mm, oblong or oblong-lanceolate, strongly dorsally flattened.

Fl. & Fr.: Throughout the year.

Distrib.: Endemic - Telangana.

Exsicc.: Rangareddy District: AG college-Rajendranagar, 01.08.2018, SNR 8518 (BSID).

Plate 70(N-W)

Caespitose perennials. Culms 30–50 cm high, erect; nodes glabrous, lower nodes rooting. Leaves basal and caudine; sheaths keeled, glabrous, mouth bearded; ligules membranous; blades 5–20 × 0.25–0.6 cm, linear-lanceolate, margins scabrid, apex acute. Racemes 5–10; c. 8 cm long, digitate, crowded, puberulous the below the inflorescence. Spikelets 3–4 mm long (excluding awn), obovate. Lower glume 1–1.5 × 0.2 mm, lanceolate, chartaceous, 1-nerved, 1-kelled, keel scabrid, apex acuminate. Upper glume 2–3 mm long, lanceolate, chartaceous, 1-nerved, 1-keeled, keel barbellate, apex 2-toothed, awn 0.5–0.9 mm long. Florets 2; 1-fertile; 2-awned; callus ciliate. Fertile Lemma 2–3.9 mm long, oblong, coriaceous, 3-nerved, keeled, margin keel densely long hairy towards apex; awn 5–8 mm long. Palea 2–2.8 × 0.5 mm, obovate, hyaline, 2-nerved, 2-keeled, keel narrowly winged, scabrid, apex acute. Caryopsis 1.5–2 × 0.5 mm, trigonous. Sterile Lemma 1.5–2 mm long, lanceolate, truncate, awn 5–6 mm long.

Fl. & Fr.: Aug.–Dec.

Distrib.: Common in wastelands, sandy soils in wet habitats and along forest margins.

Exsicc.: Adilabad District: Indhanpalli-Range, Narlapur-Beat, APS 3939 (BSID); Mahabubnagar District: Borapuram, BSS & SKB 32286 (SKU); Rangareddy District: Hyderabad, MVR 02122 (HY); Vikarabad District: Ananthagiri Hills, 21.09.2019, SNR 8705, 8727 (BSID).

Cynodon Rich.

World: c. 14 spp.; India: 5 spp., 1 f.; Telangana: 3 spp.

Key to the species

- 1a. Rachis flexible, often reflexed when mature, margins winged; lower glume bent or curved ... 3. *C. radiatus*
- 1b. Rachis straight and stiff, not reflexed when mature, margins not winged; lower glume straight to slightly bent ... 2
- 2a. Upper glume subequal to slightly longer than lemma; lemma hairs clavellate ... 1. *C. barberi*
- 2b. Upper glume usually shorter than lemma; lemma hairs ciliate and not clavellate ... 2. *C. dactylon*

1. *Cynodon barberi* Rang. & Tadul. in J. Bombay Nat. Hist. Soc. 24: 846.

1916; C.E.C.Fisch. in Gamble, Fl. Madras 1836. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 469. 1960; Pull., Fl. Telangana 3: 1100. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 696. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 347. 2020. ‘Garika Gaddi’ Plate 71(A-I)

Caespitose perennials; stoloniferous. Culms 20–50 cm high; nodes glabrous, nodes rooting; ram sheaths persistent. Leaves basal and caudine; sheaths keeled, mouth sparsely bearded; ligules ciliate; blades 1–5 × 0.2–0.4 cm, sparsely hispid on upper surface, margin cartilaginous-scabrid. Spikes 4–5; c. 5 cm long. Spikelets 2–2.5 × 0.5–0.8 mm, ovate, laterally compressed, 1-flowered. Lower glume 1.8 mm long, linear, chartaceous, 1-nerved, 1-keeled, keel scabrid, apex acute. Upper glume 2–2.4 mm long, linear, chartaceous, 1-nerved, 1-keeled, keel scabrid, apex mucronate. Lemma 2–2.5 × 0.5–0.7 mm, coriaceous, keeled, keel hispid, margin inrolled, clavellate hispid, apex obtuse-acute. Palea 2–2.1 × 0.2–0.4 mm, lanceolate, chartaceous, hyaline, keel hispid, apex acute. Stamens 2. Caryopsis 1 mm long, oblong.

Fl. & Fr.: Aug.–Nov.

Distrib.: Common throughout the state in wastelands and river beds.

Exsicc.: Mahabubnagar District: Bhavanisagar, 06.08.2019, SNR 8614 (BSID); Rangareddy District: Hyderabad, MVR 02132 (HY).

2. *Cynodon dactylon* (L.) Pers., Syn. Pl. 1:85. 1805; Hook.f., Fl. Brit. India 7: 288. 1896; C.E.C.Fisch. in Gamble, Fl. Caespitose perennials; stoloniferous; rhizomatous. Culms 25–45 cm long, geniculate; nodes slightly swollen, lower nodes rooting. Leaves basal and caudine; sheaths compressed, moth sparsely bearded; ligules 0.4 mm long, membranous, apex ciliolate; blades 1.5–15 × 0.1–0.7 cm, linear-lanceolate, ovate, scabrid above and along margins. Racemes 4–8; c. 10 cm long, digitate, rachis tumid. Spikelets 1.7–2.25 mm long, elliptic, base rounded, apex acute. Lower glume 1–1.5 mm long, curved, lanceolate, 1-nerved, keeled, keel scabrid, apex acute. Upper glume c. 2 mm long, lanceolate, chartaceous, 1-nerved, 1-keeled, keel scabrid, apex acute. Lemma 2–2.25 mm long, ovate-lanceolate, chartaceous, 3-nerved, scabrid with clavellate hairs, apex acute. Palea 1.8–2 mm long, lanceolate, chartaceous, 2-keeled, margin infolded, apex acute. Stamens 3. Ovary ovate. Caryopsis c. 1 mm long, oblong.

Fl. & Fr.: Aug.–Feb.

Distrib.: Occasional in plains and hill slopes.

Exsicc.: Adilabad District: Indhanpalli-Range, 26.10.2013, APS 3904 (BSID); Narlapur-Beat, Sattenapally, TP & PVP 4098 (SKU); Rangareddy District: Hyderabad, MVR 02133 (HY).

Enteropogon Nees

World: 14 spp.; India: 4 spp.; Telangana: 2 spp.

Key to the species

- 1a. Inflorescence composed of only one spike; spikelets with two fertile florets and the upper most one sterile 2. *E. monostachyos*
- 1b. Inflorescence composed of 2–4 spikes; spikelets with one fertile floret and two rudimentary 1. *E. dolichostachyus*

1. **Enteropogon dolichostachyus** (Lag.) Keng, Clav. Gen. Sp. Gram. Prim. Sin. 197. 1957. *Chloris dolichostachya* Lag., Gen. Sp. Pl. 5. 1816; Bor, Grasses Burma, Ceylon, India & Pakistan 466. 1960; Hook.f., Fl. Brit. India 7: 466. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1838. 1934; Pull., Fl. Telangana 3: 1087. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 689. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 363. 2020. **Plate 72(A-K)**

Caespitose perennials. Culms 40–110 cm high, erect or geniculate; nodes glabrous. Leaves basal and caudine; sheaths glabrous; ligules membranous, truncate; blades 5–27 × 0.2–0.5 cm, linear-lanceolate, apex acuminate. Spikes 4–9; 11–18 cm long, digitate. Spikelets 4–5 mm long, linear-lanceolate, 2-flowered; only one fertile, other reduced; callus bearded, 1.2–1.8 mm long. Lower glume 0.8–2 × 0.2–0.4 mm, linear-lanceolate, chartaceous, 1-nerved, keeled, keel serrulate, apex acuminate. Upper glume 4–6 × 0.5–1 mm, lanceolate, chartaceous-membranous, 1-nerved, apex acuminate. Fertile lemma 4.5–5.5 × 0.5–0.9 mm, lanceolate, chartaceous, margins inflexed, awns 14–20 mm long. Palea 4.5–6 × 0.5–0.9 mm, lanceolate, coriaceous, hyaline, 2-nerved, keeled, margins inflexed, apex acute. Sterile lemma reduced to scale, awn 5–9 mm long, barbellate. Caryopsis 5–5.5 × 1–1.5 mm, oblong-lanceolate, dorsally compressed.

Fl. & Fr.: Aug.–Dec.

Distrib.: Occasional in Khammam, Mahabubnagar, Nagarkurnool, Vikarabad & Wanaparthy.

Exsicc.: Bhadravati Kothagudem District: Kinnerasani Wildlife Sanctuary, 05.01.2019, SNR 9538 (BSID).

Note: Forest grass. This species is distinguishable by wiry culms and long

inflorescence.

2. *Enteropogon monostachyos* (Vahl) Schum., Abh. Konigl. Akad. Wiss. Berlin 17. 1894; C.E.C. Fisch., in Gamble, Fl. Madras 3:1834. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 472. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 364. 2020. *Cynosurus monostachyos* Vahl, Symb. Bot. 2: 20. 1791.

Plate 72(L)

Perennials. Culms 40–60 cm high, tufted, geniculate; nodes glaucous, rooting at lower nodes. Leaves basal and caudate, sheaths 6–10 cm, keeled, terete at apex, long shaggy hairy on margins; ligule 1–2 mm, membranous with long white hairs; blades 10–35 × 0.3–0.6 cm, linear-lanceolate, attenuate, infolded-flat, margins finely serrulate. Inflorescence a spikate raceme, curved at maturity; peduncle 10–15 cm. Raceme 10–20 cm, rachis triquetrous, scabrid on margins. Spikelets 6–12 × 0.7–1 mm, oblong-lanceolate, alternate, closely imbricate. Lower glume 2.5–3 × 0.2–0.5 mm, narrowly lanceolate, membranous to chartaceous, 1-nerved, apex acuminate, mucronate to shortly awned; 1-keeled, scabellate on keel. Upper glume 3.5–5 × 0.2–0.8 mm, lanceolate, chartaceous, 2-lobed, 1-nerved, apex acuminate, shortly awned; 1-keeled, scabellate on keel. Florets 3 with extended rachilla; lower 2 bisexual, upper one male or reduced; disarticulating above persistent glumes. Lower lemma 5–6.5 × 0.8–1.3 mm, oblong to elliptic, lanceolate, deeply 2-lobed, awned in sinus, chartaceous to subcoriaceous, margins inrolled, 3-nerved, keeled, apex acuminate; awn 5–8 mm, straight, barbellate. Palea 4.5–6.5 × 0.8–1 mm, elliptic-lanceolate, chartaceous, 2-nerved, 2-lobed, 2-keeled, apex acuminate. Lodicules 2. Stamens 3. Ovary 0.3–0.6 × 0.3 mm, elliptic. Caryopsis 0.2–5 × 0.8–1 mm oblate-elliptic. Middle floret similar to lower floret, but smaller. Uppermost floret highly reduced, 1–3 × 0.2–0.3 mm long, awn 2–4 mm, barbellate.

Fl. & Fr.: Aug.–Mar.

Distrib.: In rocky areas as occasional clumps, deep forest.

Exsicc.: Nagarkurnool District: Mannanur range, Devunisari, 19.11.2017, ARK & BSS 3388 (TBGH).

Melanocenchris Nees

World: 3 spp.; India: 3 spp.; Telangana: 3 spp.

Key to the species

- 1a. Annuals; leaves usually caudate ... 2
- 1b. Perennials; leaves mostly basal ... 3. *M. rothiana*
- 2a. Clusters of spikelets including the awns, 8 mm long ... 2. *M. jacquemontii*
- 2b. Clusters of spikelets including the awns, 10 mm or more long ... 1. *M. abyssinica*

1. *Melanocenchris abyssinica* (R. Br. ex Fresen.) Hochst. in Flora 38: 274. 1855; Bor, Grasses Burma, Ceylon, India & Pakistan 473. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 394. 2020. *Eutriana abyssinica* R. Br. ex. Fresen. in Mus. Senckenberg. 2: 142. 1837. *Gracilea royleana* Hook.f. var. *plumosa* (Jaub. & Spach) Hook.f., Fl. Brit. India 7: 284. 1896. *Melanocenchris plumosa* Jaub. & Spach, Ill. Pl. Orient. 4: 37. 1851.

Caespitose, densely tufted annual. Culms 5–25 cm high. Leaves caudate

and basal; sheaths few long hairs; ligule a hairy ridge; blades 1.5–5 cm long, flat or convolute, glabrous, margins ciliate, pointed acutely. Inflorescence filiform, 1–4 cm long, flexuous, recurved, rhachis trigonus. Clusters of spikelets 5–8.5 cm long, green or purple, awns of involucral glumes longer than the glumes, awns of floral glume short.

Fl. & Fr.: Aug.–Dec.

Distrib.: Common throughout the state in fallow lands.

Exsicc.: Vikarabad District: Ananthagiri Hills, 30.11.2019, SNR 8791 (BSID).

2. *Melanocenchrис jacquemontii* Jaub. & Spach, III. Pl. Orient 4: 36. t. 325. 1851; Bor, Grasses Burma, Ceylon, India & Pakistan 473. 1960; Pull., Fl. Plate 74

Caespitose annuals. Culms 3–23 cm high, terete, erect or geniculate, glabrous, nodes glabrous. Leaves mostly basal; sheaths 1–2 cm long, keeled, ribbed; ligules 0.2 mm long; blades 1–2 cm long, oblong, sparsely hairy, margins serrulate, apex acute-abruptly pointed. Spike 2–10 cm long, linear, slender, curved. Spikelets sessile, 2–2.2 × c. 0.4 mm, elliptic-lanceolate, apex acuminate, callus bearded. Lower glume 2–2.6 × 0.2–0.4 mm, narrowly oblong-lanceolate, chartaceous, 3-nerved, margins infolded, apex acuminate. Upper glume 2–2.5 × 0.4–0.6 mm, narrowly elliptic, subcoriaceous, 1-nerved, ribbed-like band, margin infolded, apex acute. Floret 1; 2.2 × 0.52 mm, bisexual. Lemma 1–1.8 × 0.7–0.8 mm, elliptic-lanceolate, chartaceous, 3-nerved; margin ciliate, incurved; apex acuminate; arista 0.2 mm long. Palea 1–1.3 × 0.4–0.6 mm, elliptic-lanceolate, 2-nerved, 2-keeled, keel ciliate, margin infolded, apex acute. Ovary 0.4–0.6 mm long, narrowly oblong. Caryopsis 1–1.8 × 0.3–0.45 mm, ellipsoid.

Fl. & Frs.: Oct.–Mar.

Distrib.: Common throughout the state in fallow lands.

Exsicc.: Mahabubnagar District: Appapur, 13.09.2002, AMSR 25676 (SKU); Rangareddy District: Hyderabad, MVR 02175 (HY); Manasahills-Rajendranagar, 24.08.2016, SNR 8533 (BSID); 04.09.2019, SNR 8688 (BSID); 10.10.2019, SNR 8736 (BSID); Vikarabad District: Ananthagiri hills, 21.09.2019, SNR 8701 (BSID).

Note: Characterized by curved inflorescence like sickle.

Plate 74. *Microchloa indica* (L.f.) P. Beauv.: A. Habitat; B. Habit; C. Enlarged portion of the spike; D. Spikelet; E. Lower glume; F. Upper glume; G. Floret; H. Lemma; I. Palea; J. Pistil; K. Caryopsis; L. Caryopsis.

Pommereulla cornucopiae L.f., Nov. Gram. Gen. 31. 1779; Hook.f., Fl. Brit. India 7: 300. 1896; Bor, Grasses Burma, Ceylon, India & Pakistan 620. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 412. 2020.

Plate 76(A-G)

Tufted annuals or perennials. Culms 10–45 cm high, decumbent to geniculate; rooting at lower nodes. Leaves mostly basal, distichous, sheaths 2–6 cm, flabellate, keeled, margins hyaline; ligule a membranous rim; blades 2.5–5.5 × 0.2–0.4 cm, linear-lanceolate, apex obtuse to sub-acute. Inflorescence 3–8 cm long, a terminal spike; rachis triquetrous to flat. Spikelets 0.6–1.2 × 0.3–0.6 cm, obovate to oblanceolate, dorsally compressed. Lower glume 6–8 × 0.4–0.6 mm, oblanceolate to elliptic-lanceolate, broader above middle, membranous to chartaceous, 1-nerved, apex acuminate; keeled, keel scabellate. Upper glume 8–11 × 1 mm, elliptic-lanceolate, chartaceous, 3-nerved, keeled, keel and margins serrulate, apex acuminate. Florets 5; lower 2 sterile, epaleate; upper 3 bisexual, paleate and uppermost one with reduced empty lemma; rachilla 2.5–3.5 mm long; callus pungent. Sterile lemmas obovate, 6.5–7.8 × 2–2.5 mm, 4-lobed at apex, lateral 2 lobes larger and mucronate, middle two lobes with arista of 1–1.4 mm, awned from back, chartaceous to subcoriaceous, 7-nerved, dorsally long villous; awn 7–8 mm, straight, barbellate, subterminal, without column. Fertile lemmas 6–6.5 × 2 mm, similar in size and texture to sterile lemmas, but with 3-lobed apex, middle lobe formed by fusion of two lobes, bicuspidate, arista 0.8–1 mm; awn 4–6 mm long, at times uppermost fertile floret with 3 lobes. Fertile paleas 3–3.8 × 1.4 mm, ovate-lanceolate, chartaceous, 2-nerved, 2-keeled, apex acute to blunt; keels winged.

Caespitose annuals. Culms 20–90 cm high, erect or geniculate; nodes hairy. Leaves basal and cauline; sheaths densely tubercled based hairy; ligules 0.2–0.3 mm long, apex ciliate; blades 2–8 × 0.5–2 cm, ovate-narrowly or lanceolate or oblong, base amplexicaul-rounded, margin ciliate, apex acute-acuminate. Racemes 2–6; c. 15 cm long, digitate, whorled. Spikelets 3–5 × 1.5–2 mm, elliptic-ovate. Lower glume 2–2.3 × 1–1.2 mm, ovate, membranous, 3–5-nerved. Upper glume 2–4 × 1–1.6 mm, ovate, chartaceous, 5-nerved, 2-keeled, keel densely hairy, apex acuminate. Florets 2; lower male; upper bisexual. Lower lemma 2.2–2.8 × 1–1.3 mm, ovate, subcoriaceous, 5-nerved, margin inflexed, apex acute-mucronate. Lower palea 1.5–2 × 0.3–0.6 mm, ovate, chartaceous, 2-nerved, apex acuminate. Upper lemma 2.5–3 × 1–1.5 mm, elliptic, subcoriaceous, margins inflexed, 5-nerved, apex acute, aristate 2.5–3.5 mm long. Upper palea 2.5–3 × 0.5–1 mm, elliptic, coriaceous, 2-nerved, 2-keeled, dorsal verruculose (warty),

margin inflexed, apex obtuse-acute. Caryopsis $1.5-2 \times 0.5-1$ mm, oblong.

Fl. & Fr.: Throughout the year.

Distrib.: Common throughout the state in fallow lands.

Exsicc.: Mahabubnagar District: Venkatapuram-Koyalakonda, 06.08.2019, SNR 8610 (BSID); TP & BRPR 6015 (SKU); Nagar Kurnool District: Kolpur-Choutubetla, 08.08.2019, SNR 8649 (BSID); Rangareddy District: Hyderabad, MVR 02100 (HY), Manasa hills-Rajendranagar, 24.08.2016, SNR 8545 (BSID); 22.08.2019, SNR 8675 (BSID); 04.09.2019, SNR 8682 (BSID).

Note: Distinguishable by glabrous to tuberculate hairy leaf sheaths.

2. Alloteropsis semialata (R. Br.) Hitchc., Contr. U. S. Natl. Herb. 12: 210. 1909; Bor, Grasses Burma, Ceylon, India & Pakistan 276. 1960; Pull., Fl. Telangana 3: 1062. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 725. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 317. 2020. *Panicum semialatum* R. Br., Prodr. Fl. Nov. Holland 1: 92. 1810. *Axonopus semialatus* (R. Br.) Hook.f., Fl. Brit. India 7: 64. 1896.

Caespitose perennials; rhizomatous. Culms about 105 cm high, erect, ram sheaths persistent, silky pubescent; nodes thickly bearded. Leaves mostly basal; sheaths margin long ciliate, basal densely woolly, mouth bearded; ligules fimbriate; blades $10-30 \times 0.6-1$ cm, linear-lanceolate, hairy, margin flat-involute, densely hairy, base tapering, apex acuminate. Racemes 2-5; c. 14 cm long, digitate, rachis slender, hairy. Spikelets $4-6 \times 2.5$ mm, ovate-elliptic. Lower glume $2-3 \times 1-1.2$ mm, ovate, coriaceous, 3-5-nerved, margin ciliate, apex mucronate, awista c. 0.2 mm long. Upper glume 4-5 mm long, elliptic, subcoriaceous, 3-5-nerved, keel broadly winged and ciliate, apex awned; awn 1-2 mm long. Florets 2; lower floret male; upper florets bisexual. Lower lemma 4-4.5 mm long, lanceolate, coriaceous, apex mucronate. Lower palea 1-1.15 mm long, hyaline, apex notched. Upper lemma 4-6 mm long, coriaceous, awista c. 4 mm long. Upper palea c. 4 mm long, 2-nerved, 2-keeled, subcoriaceous, apex ciliate. Caryopsis 1.5 mm long, ovoid.

Fl. & Fr.: Jul.-Aug.

Distrib.: Occasional in deciduous forests and in grassy slopes.

Exsicc.: Mahabubnagar District: Appapur, BSS & SKB 32223; AMR 26802 (SKU).

Note: Densely woolly leaf sheath is the key feature to recognize this species.

Axonopus P. Beauv.

World: c. 78 spp.; India: 2 spp.; Telangana: 1 sp.

Axonopus compressus (Sw.) P. Beauv., Ess. Agrostogr.: 12, 154, 167. 1812; Bor, Grasses Burma, Ceylon, India & Pakistan 278. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 326. 2020. *Milium compressum* Sw., Prodr. 24. 1788.

Plate 81

Mat-forming; caespitose perennials; stoloniferous. Culms 10-28 cm long, terete to flat; nodes bearded, lower node rooting. Leaves mostly basal; sheaths

1. Digitaria abludens (Roem. & Schult.) Veldkamp in Blumea 21(1): 53–55. 1973; Pull., Fl. Telangana 3: 1107. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 703. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 351. 2020. *Panicum abludens* Roem. & Schult., Syst. Veg. ed. 15, 2: 457. 1817.

Plate 87(A-B)

Caespitose annuals. Culms 10–50 cm high, erect or geniculate; nodes glabrous. Leaves basal and caudine; sheaths glabrous; ligules membranous, apex fimbriate; blades 5–15 × 0.2–0.4 cm, linear-lanceolate, flat, margin cartilaginous-serrulate, sparsely hairy, apex acuminate. Racemes 3–5, each about 10 cm long, rachis triquetrous, scabrid. Spikelets 1–1.5 mm long, loosely arranged, elliptic-oblong, softly, villous. Lower glume absent or reduced. Upper glume 0.5–1.5 × 0.3–0.6 mm, elliptic, 3–5-nerved, softly pubescent, hairs club shaped, apex acute. Florets 2; lower floret neuter; upper floret bisexual. Lower lemma 1–1.5 × 0.2–0.6 mm, softly pubescent, 5-nerved, apex acute. Lower palea absent. Upper lemma c. 2 mm long, elliptic, crustaceous, apex apiculate. Upper palea 1.5 × 0.5 mm, elliptic, 2-keeled, 2-nerved, crustaceous, apex acute. Lodicules 2. Stamens 3. Ovary oblong. Caryopsis c. 1.5 mm long, ellipsoid.

Fl. & Fr.: Aug.–Dec.

Distrib.: Common throughout the state.

Exsicc.: Adilabad District: Bellampally, PVP 9459 (SKU); Ankusapuram, GO 4347 (SKU)!; Mahabubnagar District: Appapur, AMSR 25681 (SKU); Rangareddy District: Manasa hills-Rajendranagar, 22.09.2019, SNR 8670 (BSID); 04.09.2019, SNR 8693 (BSID).

Pl. 1: 83. 1833. *Paspalum sanguinale* Lam. var. *debile* Hook.f., Fl. Brit. India 7: 16. 1896.

Caespitose perennials; stoloniferous. Culms 10–55 cm high, geniculate, ribbed; lower nodes rooting. Leaves basal and caudate; sheaths 2–8 cm long, terete, keeled, mouth bearded; ligules membrane; blades 1–9 × 0.2–0.9 cm, lanceolate, base truncate, margin serrulate, apex acuminate. Racemes 2–4; 4–7 cm long, digitate, divergent, peduncle capillary, rachis winged, smooth. Spikelets binate, elliptic-lanceolate. Lower glume absent. Upper glume 1.5–2 × 0.2–0.3 mm, ovate-lanceolate, membranous, 3-nerved, apex acute. Florets 2; lower barren; upper bisexual. Lower lemma 2.4–3 × 0.5–0.7 mm, elliptic, chartaceous, 5-nerved, apex acute-acuminate. Lower palea absent. Upper lemma 2–3 × 0.4–0.7 mm, elliptic-lanceolate, coriaceous, 3-nerved, margins incurved, apex acuminate. Upper palea c. 3 × 0.6 mm, elliptic, 2-nerved, margin inflexed, apex acuminate. Lodicules 2. Stamens 3. Ovary oblong. Caryopsis c. 2 mm long, ovate.

Fl. & Fr.: Aug.–Feb.

Distrib.: Occasionally in Adilabad, Karimnagar and Peddapally.

Exsicc.: Adilabad District: Sattenapalli TP & PVP 4098 (SKU).

6. *Digitaria setigera* Roth ex Roem. & Schult., Syst. Veg., ed. 15 2: 474. 1817; Bor, Grasses Burma, Ceylon, India & Pakistan 305. 1960; Veldkamp in Blumea 21: 37. t. 5e. 1973; Mondal & Mukherjee in J. Bombay Nat. Hist. Soc. 88: 306. 1991; Pull., Fl. Telangana 3: 1111. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 725. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 354. 2020.

Caespitose annuals. Culms 20–110 cm high, geniculate; nodes glabrous. Leaves basal and caudate; sheaths keeled, margin hairy; ligules membranous, apex lacerate; blades 2–10 × 0.5–1 cm, linear-lanceolate, base cordate, apex acuminate. Racemes 3–11; c. 12 cm long, digitate. Rachis winged, flat; pedicels triquetrous, margin scabrid. Spikelets 2–2.5 mm long, elliptic-oblong, homomorphous. Lower sessile, hairy along margins, upper pedicelled. Lower glume absent. Upper glume 0.5–1 mm long, chartaceous, triangular, pubescent, 3-nerved, apex acute. Florets 2; lower floret neuter; upper floret bisexual. Lower lemma 2.5–3 × 1 mm, elliptic, pubescent, 5–7-nerved, apex acute. Lower palea absent. Upper lemma 1.8–2.5 × 0.5–1 mm, oblong-lanceolate, crustaceous, apex acuminate. Upper palea 2–2.6 × 0.4–0.8 mm, ovate, crustaceous, 2-keeled, 2-nerved, margin inflexed, apex acuminate. Lodicules 2. Stamens 3. Ovary lanceolate. Caryopsis 1.5–2 × 0.6–0.8 mm, elliptic-oblong.

Fl. & Fr.: Aug.–Dec.

Distrib.: Occasional on hills.

Exsicc.: Bhadravati Kothagudem District: Kinnerasani Wildlife Sanctuary, SNR 8600 (BSID); Mahabubnagar District: Tekulapenta, BSS & SKB 32922 (SKU), Appapur, AMSR 25680 (SKU); Medak District: Choutkoor, TP & MSG 11917 (SKU).

7. *Digitaria stricta* Roth in Roem. & Schult., Syst. Veg., ed. 15 bis 2: 474. 1817; Bor, Grasses Burma, Ceylon, India & Pakistan 305. 1960; Pull., Fl. royleana (Nees ex Hook.f.) Prain, Bengal Pl. 1182. 1903; C.E.C.Fisch. in Gamble, Fl. Madras 1765. 1934.

Plate 88(M–O)

Caespitose annuals. Culms 20–50 cm high, erect or decumbent; lower nodes rooting. Leaves basal and caudate; sheaths compressed, glabrous, mouth bearded; ligules 1–1.5 mm long, membranous, apex lacerate; blades 5–15 × 0.2–0.6 cm, linear, scabrid, apex acute. Racemes 3–16; c. 15 cm long, digitate; rachis

winged, triquetrous. Spikelets 3, 2.1–2.6 mm long, elliptic or ovate-oblong. Lower glume absent. Upper glume 0.6–0.8 mm long, elliptic, membranous, 3-nerved, hairy, apex acute. Florets 2; lower neuter; upper bisexual. Lower lemma c. 1 mm long, elliptic, membranous, 5-nerved, hairs club-shaped, apex acute-obtuse. Lower palea absent. Upper lemma c. 1.3 mm long, ovate, thinly cartilaginous-coriaceous, apex acute. Palea similar. Stamens 3. Caryopsis c. 1 mm long, elliptic.

Fl. & Fr.: Jul.–Dec.

Distrib.: Occasional as weed in cultivated fields and in waste lands.

Exsicc.: Adilabad District: Swarnaproject, MHR 14560 (SKU), Nirmal, MHR 14471 (SKU); Vikarabad District: Ananthagiri hills, 21.09.2021, SNR 8946 (BSID).

8. Digitaria ternata (A. Rich.) Stapf, Fl. Cap. 7: 376. 1898; C.E.C.Fisch. in Gamble, Fl. Madras 1765. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 306. 1960; Pull., Fl. Telangana 3: 1112. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 725. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 354. 2020. *Cynodon ternatus* A. Rich., Tent. Fl. Abyss. 2: 405. 1850. *Paspalum ternatum* (A. Rich.) Hook.f., Fl. Brit. India 7: 17. 1896.

Caespitose annuals. Culms about 80 cm high, erect; nodes glabrous. Leaves base and caudine; sheaths 1.5–12 mm long, glabrous, mouth bearded; ligules membranous, apex acute; blades 5–15 × 0.2–1 cm, linear-oblong, flat, glabrous or sparsely hairy, apex acuminate. Racemes 2–4; c. 10 cm long, digitate, glabrescent; rachis serrate, triquetrous. Spikelets 3 (ternate), 2–2.5 mm long, ovate-elliptic, pubescent. Lower glume absent. Upper glume 2 × 0.3–0.6 mm, ovate, chartaceous, 3-nerved, hairs club-shaped, apex acute. Florets 2; lower neuter; upper bisexual. Lower lemma 2–2.5 mm long, elliptic, chartaceous, 5–7-nerved, hairs club-shaped (clavate tipped), apex acute. Lower palea absent. Upper lemma 2 × 0.6–0.8 mm, oblong-ovate, chartaceous-cartilaginous, 3-nerved, apex acute. Palea c. 2 mm long, elliptic, 2-nerved, apex acute. Lodicules 2. Stamens 3. Caryopsis c. 2 mm long, elliptic.

Fl. & Fr.: Aug.–Dec.

Distrib.: Occasional on hills and in moist localities.

Exsicc.: Mahabubnagar District: Appapur, AMSR 25677 (SKU); Rampur, BSS & SKB 32921 (SKU); Rangareddy District: Manasahills-Rajendranagar, 4.09.2019, SNR 8691 (BSID).

9. Digitaria tomentosa (J. Koenig ex Willd.) Henrard in Blumea 1: 100. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 306. 1960; Pull., Fl. Telangana 3: 1112. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 706. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 354. 2020. *Milium tomentosum* J. Koenig ex Willd. in Ges. Naturf. Freunde Berlin Neue Schriften 4: 220. 1803. *Panicum subglume* Trin. in Mem. Acad. Imp. Sci. Saint-Petersbourg, Ser. 6, Sci. Math., Seconde Pt. Sci. Nat. 3: 292. 1835; Hook.f., Fl. Brit. India 7: 51. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1783. 1934.

Caespitose perennials; stoloniferous. Culms about 80 cm high, erect or geniculate; nodes bearded. Leaves basal and caudine; sheaths 4.5–5 cm long, ribbed, base woolly, margin hairy; ligules scarious; blades 10–16 × 0.5–1 cm, ovate-oblong, softly pubescent, margin serrulate, apex acuminate. Panicles c. 25 cm long, effuse, axes of branches pilose. Spikelets 1–2; 1–2 mm long, elliptic, distantly arranged, pubescent. Lower glume absent. Florets 2; lower neuter; upper bisexual. Lower lemma 2 × 0.4–0.6 mm, lanceolate, 5–7-nerved, pilose, apex acute. Lower palea absent. Upper lemma c. 2 mm long, coriaceous, glabrous, 3–5-nerved, base truncate, margin inflexed, apex apiculate. Upper palea 1.6–1.8 × 0.4–0.5 mm, lanceolate, 2-nerved, apex acute. Stamens 3. Ovary oblong. Caryopsis c. 1.5 mm long.

Fl. & Fr.: Aug.–Dec.

Distrib.: Occasional on forest hills.

Exsicc.: Mahabubnagar District: Appapur, AMSR 25683 (SKU); Warangal District: Cherial, CSR 389 (KU).

Echinochloa P. Beauv.

Eriochloa Kunth

World: c. 33 spp.; India: 2 spp.; Telangana: 2 spp.

Key to the species

- 1a. Spikelets not awned; axis and pedicels not hairy ... 2. *E. procera*
- 1b. Spikelets shortly awned; axis and pedicels hairy ... 1. *E. barbatus*

1. *Eriochloa barbatus* (Trin.) S. Yadav & M.R. Almeida, Fl. Maharashtra 6A: 145. 2014. *Helopush barbatus* Trin., Neue Entdeck. Pflanzenk. 2: 49. 1821. *Panicum fatmense* Hochst. & Steud., Unio Itin. 806. 1837. *Eriochloa fatmensis* (Hochst.

& Steud.) Clayton in Kew Bull. 30(1): 108. 1975. *Eriochloa nubica* (Steud.) Hack. & Stapf ex Thell., Vierteljahrsschr. Naturf. Ges. Zürich 64: 697. 1919. *Helopus nubicus* Steud., Syn. Pl. Glumac. 1(2): 100. 1854.

Caespitose, perennial. Culms 10–80 cm high, compressed, erect, geniculate, rooting at lower nodes, nodes 1–4, pubescent, pinkish white in color. Leaves basal and caudine; leaf sheath 1.5–11.5 cm long, compressed, keeled, glabrous; ligule 0.6–1 mm long, hairy; leaf blade 2–20 × 0.2–0.9 cm, flat, lanceolate-linear, acuminate at apex, scaberulous along margins, glabrous. Panicles branched; racemes 5–9, 2–13.5 cm long. Rachis c. 0.45 mm width, slender, triquetrous, scaberulous. Pedicels 1–1.15 mm long, curved towards rachis, scaberulous, apex with 2.5–3.5 mm long white hairs, forming a ring. Spikelets 3.5–4.5 × 1–1.3 mm, ovate, paired or rarely solitary, hispid with appressed hairs, distinctly awned. Lower glume 0.2–0.3 mm long, reduced and fused with the rachis node to form a ring at the base of spikelet. Upper glume 3–3.5 × 1–1.3 mm, ovate, membranous, margins inrolled, 5-nerved, appressed long hairy on dorsal surface; apex acuminate to shortly awned, awn 0.5–0.7 mm long. Florets 2, lower barren and epaleate; upper bisexual. Lower lemma 3–3.5 × 1–1.3 mm, ovate, membranous, apex acuminate, margins inrolled, 5-nerved, dorsally appressed hairy. Palea absent. Upper lemma 2–2.4 × 1–1.5 mm, ovate-elliptic, coriaceous, margins inflexed, rugose on dorsal surface, glabrous; arista 0.4–0.7 mm long, barbellate. Palea 2–2.3 × 1–1.4 mm, ovate-elliptic, coriaceous, apex truncate-obtuse, 2-keeled, rugose on dorsal side; margins inflexed, smooth. Lodicules 2, c. 0.2 × 0.12 mm. Stamens 3, anthers c. 1 × 0.2 mm. Caryopsis c. 2 × 1 mm, ovate-elliptic.

Fl. & Fr.: Jul.–Aug.

Exsicc.: Rangareddy District: Manasahills-Rajendranagar, 02.08.2020, SNR & KP 008998 (BSID).

Distrib.: The species mostly found in wet and waterlogged areas in open scrub forest.

2. *Eriochloa procera* (Retz.) C.E. Hubb. in Bull. Misc. Inform. Kew 1930: 256. 1930; C.E.C.Fisch. in Gamble, Fl. Madras 1767. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 312. 1960; Pull., Fl. Telangana 3: 1132. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 719. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 370. 2020. *Agrostis procera* Retz., Observ. Bot. 4: 19. 1786.

Plate 92

Caespitose perennials. Culms 30–140 cm high, erect, nodes minutely villous. Leaves basal and caudine; sheaths keeled, glabrous; ligules 0.6–0.9 mm long, membranous, hairy; blades 5–29 × 0.4–1 cm, linear-lanceolate, base rounded-truncate, apex acuminate. Inflorescence c. 25 cm long, rachis triquetrous. Spikelets 2.5–4 × 1–1.9 mm, elliptic-lanceolate, silky villous, shortly pedicellate. Lower glume reduced to a cupular ring. Upper glume 3–4 × 0.5–1 mm, ovate-lanceolate, chartaceous, 3–5-nerved, silky villous, margins incurved, apex acute. Florets 2; lower neuter; upper bisexual. Lower lemma 2.5–3.3 × 1–1.5 mm, lanceolate, soft villous, margin inflexed, apex acuminate. Lower palea absent.

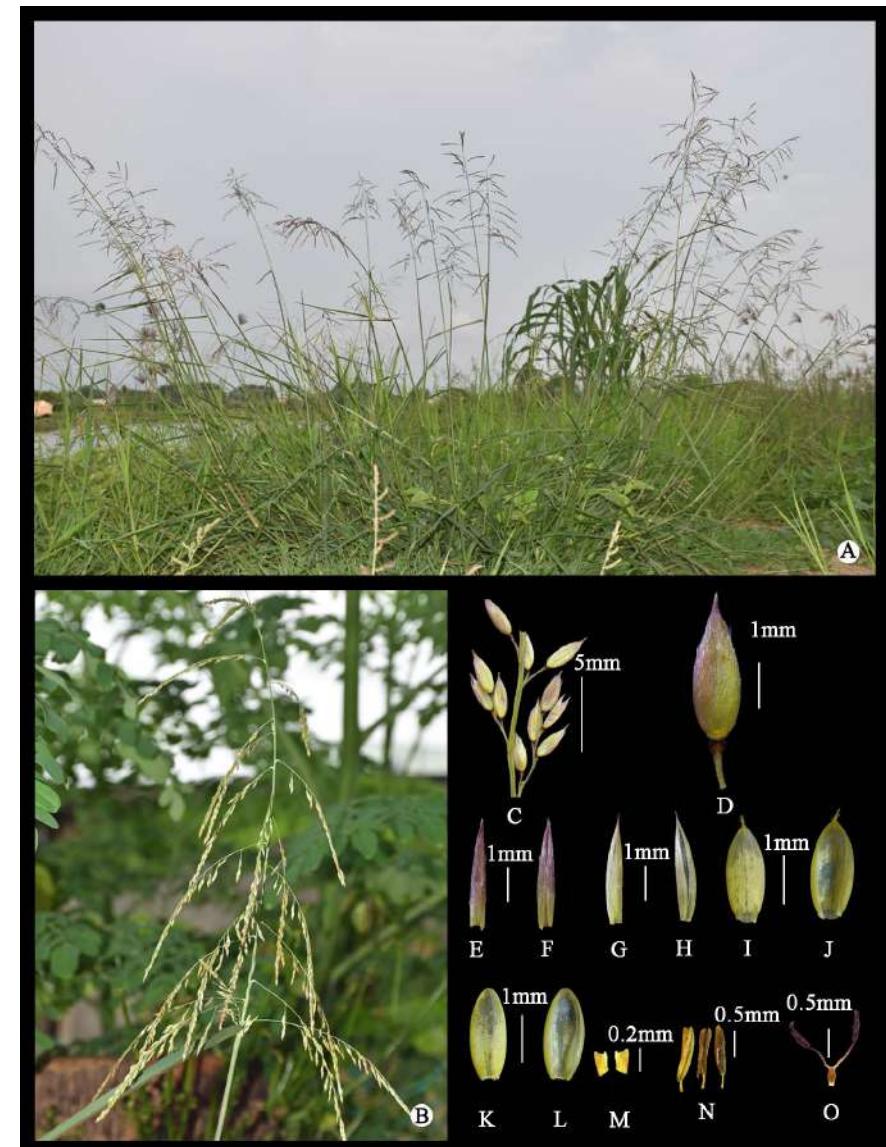

Plate 92. *Eriochloa procera* (Retz.) C.E.Hubb.:A. Habitat; B. Inflorescence; C. Enlarged view of inflorescence; D. Spikelet; E&F. Abaxial and adaxial view of upper glume; G&H. Abaxial and adaxial view of lower lemma; I&J. Abaxial and adaxial view of upper lemma; K&L. Abaxial and adaxial view of palea; M. Lodicules; N. Stamens; O. Pistil.

Upper lemma 2–2.5 × 1–1.3 mm, elliptic-oblong, crustaceous, faintly 3–5-nerved, margin inflexed, apex mucronate, barbellate. Upper palea 1.5–2.3 × 1–1.3 mm, elliptic-boat shaped, crustaceous, 2-keeled, 2-nerved, apex obtuse-emarginate. Caryopsis 0.5–1 mm long, ellipsoid-oblong.

Fl. & Fr.: Sep.–Mar.

Distrib.: Throughout the state. Fodder grass.

Exsicc.: Adilabad District: Nirmal tank, MHR 14437 (SKU); Mahabubnagar District: Venkapuram-Koyalasagar, 06.08.2019, SNR 8625 (BSID); Nagarkurnool: Bijnapalle, 08.08.2019, SNR 8647 (BSID); Peddapalle District: Peddapalle-Mugdapur, 10.11.2019, SNR 8768 (BSID); Rangareddy District: Hyderabad, MVR 02163 (HY); Manasa hills-Rajendranagar, 24.08.2016, SNR 8526 (BSID); Warangal District: Chennaraopet-Narsimpet, 30.03.2021, SNR 012045 (BSID); Regional Agricultural Research Station -Warangal, 26.03.2021, SNR 012006 (BSID).

Note: Distinguishable by having cupular ring at the base of the spikelets.

Hymenachne P. Beauv.

World: 17 spp.; India: 3 spp.; Telangana: 1 sp.

Hymenachne amplexicaulis (Rudge) Nees, Fl. Bras. Enum. Pl. 2: 276. 1829; Pull., Fl. Telangana 3: 1136. 2015; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. (* Previously treated under '*Rhynchelytrum* Hochst.)

World: 23 spp.; India: 2 spp., 1 subsp.; Telangana: 1 sp.

Melinis repens (Willd.) Zizka, Biblioth. Bot. 138: 55. 1988. *Saccharum repens* Willd., Sp. Pl., ed. 4 1 (1): 322. 1997; Pull., Fl. Telangana 3: 1142. 2015. *Rhynchelytrum repens* (Willd.) C.E. Hubb. in Bull. Misc. Inform. Kew 1934: 110. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 355. 1960; Pull., Fl. Telangana 3: 1167. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 744. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 395. 2020. **Plate 95**

Caespitose perennials. Culms 50–80 cm high; nodes glabrous-sparingly hairy; lower nodes rooting. Leaves basal and caudine; sheaths ciliate-glabrous; ligules a fringe of hairs; blades $5-24 \times 0.2-0.6$ cm, linear-lanceolate, conduplicate, margin scabrous, apex attenuate. Panicles c. 15 cm long, pyramidal, purple-silvery white, bracts capillary. Spikelets 5–10 mm long, oblong-ovate, compressed laterally, villous. Lower glume $1.5-2 \times c. 0.3$ mm, oblong, chartaceous, villous, 1-nerved, apex obtuse. Upper glume $6-8 \times c. 1.5$ mm, ovate, chartaceous, densely villous, 5-nerved, keeled, keel serrulate, apex acuminate, 2-lobed, arista c. 5 mm long. Florets 2; lower neuter or male; upper bisexual. Lower lemma $5-7 \times c. 1$ mm, ovate-lanceolate, coriaceous, 5-nerved, apex acuminate-arista, 7–8 mm long. Lower palea $4-5 \times c. 0.6$ mm, ovate-lanceolate, 2-nerved, ciliate along margins, base truncate, apex acuminate-lobed, ciliate. Upper lemma $2-4 \times c. 0.5$ mm, ovate-lanceolate, coriaceous, 5-nerved, apex emarginate. Upper palea 2–3 mm long, elliptic-lanceolate, coriaceous, apex acute-obtuse. Stamens 3. Caryopsis 4–5 mm long, elliptic-oblong.

Fl. & Fr.: Aug.–Feb.

Distrib.: Common throughout the state in open habitats.

Exsicc.: Rangareddy District: Manasa hills-Rajendranagar, 24.08.2016, SNR 8531 (BSID).

***Moorochloa* Veldkamp**

World: 3 spp.; India: 1 sp.; Telangana: 1 sp.

Moorochloa eruciformis (Sm.) Veldkamp, Reinwardtia 12(2): 139. 2004. *Brachiaria eruciformis* (Sm.) Griseb. in Ledeb., Fl. Plate 98(A)

Caespitose perennials. Culms 20–120 cm high; erect or geniculate; lower nodes rooting. Leaves basal and cauline; sheaths 5–9 cm long; ligules c. 1.5 mm

long, membranous, apex fimbriate; blades 2.5–21 × 0.4–0.7 cm, linear-lanceolate, tuberculate hairy, apex acuminate. Panicle effuse, 6–45 × 1.5–8 cm, alternate-whorled; rachis triquetrous. Spikelets 2.5–3.3 × 1–1.3 mm, oblong-lanceolate, apex acuminate. Lower glume 1.3–2.1 × c. 1 mm, ovate, chartaceous, 5–7-nerved, keel serrulate, apex acuminate. Upper glume 2–2.5 × c. 1.5 mm, ovate-lanceolate, chartaceous, base truncate, 7–9-nerved, apex acuminate-cuspidate. Florets 2; lower barren, upper bisexual. Lower lemma c. 3 mm long, elliptic, chartaceous, greenish, faintly 5–9-nerved, margin inflexed, apex acuminate. Lower palea 1–1.5 × c. 0.5 mm, ovate-lanceolate, membranous, 2-nerved, 2-keeled, margins infolded, apex acute. Upper lemma 1.4–2 × c. 1 mm, ovate, subcoriaceous, 5–7-nerved, apex acute. Upper palea 1.2–1.6 × c. 0.6 mm, ovate-elliptic, subcoriaceous, 2-nerved, apex acute-obtuse. Stamens 3. Ovary oblong. Caryopsis c. 1.3 mm long elliptic.

Fl. & Fr.: May–Feb.

Distrib.: Open grasslands. Fodder grass.

Exsicc.: Nalgonda District: Pedlipakala, Basinbavi, BRA 00504, 005143 (BSID); Rangareddy District: Hyderabad, MVR 02182 (HY); Manasa hills-Rajendranagar, 24.08.2016, SNR 8510, 8521 (BSID); 04.09.2019, SNR 8690 (BSID).

Note: This species has slender culms and hispid leaves.

2. *Panicum fischeri* Bor, Kew Bull. 257. 1956; Bor, Grasses Burma, Ceylon, India & Pakistan 324. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 401. 2020.

Plate 98(B)

Perennials with woody base. Culms 75–100 cm high, tufted, more or less ribbed with sparse bristle like hispid hairs. Leaves basal and cauline; leaf sheaths 6–7 cm, mouth hairy; ligule a rim of 0.5–1 mm long hairs; blades 20–26 cm, linear-lanceolate, base truncate, margins incurved, sparsely hispid hairy dorsally, apex acuminate. Panicle 20–26 × 5–7 cm, effuse; peduncle 8–15 cm long. Spikelets 3–5 × 1.5 mm, oblong-lanceolate, apex acuminate. Lower glume 1–2 × 1–1.4 mm, ovate-lanceolate, chartaceous, 5-nerved, apex acute to acuminate. Upper glume 3.5–4.4 × 1–1.5 mm, elliptic-lanceolate, chartaceous, 7-nerved, margins incurved, apex acuminate. Florets 2; lower barren, upper bisexual. Lower lemma 3.5–4.2 × 1–1.5 mm, oblong to elliptic-lanceolate, chartaceous, 7–9-nerved, margins incurved, apex acuminate. Lower palea 2–2.6 × 1–1.3 mm, ovate-lanceolate to elliptic-lanceolate, chartaceous, greenish, 2-nerved, 2-keeled, apex retuse; keels narrowly winged. Upper lemma 2–2.8 × 1.6 mm, oblong-elliptic, chartaceous to subcoriaceous, 5–7-nerved, margins incurved, apex obtuse. Upper palea 2.5–2.8 × 1–1.5 mm, oblong-elliptic, chartaceous, greenish yellow, 2-nerved, margins incurved, apex obtuse. Rachilla extending beyond upper floret; rachilla extension flap like, oblong, 2–2.6 mm long, membranous to chartaceous, apex acute to apiculate. Stamens 3. Ovary narrowly oblong, 0.3–0.5 mm.

Fl. & Fr.: Aug.–Oct.

Distrib.: Scarce in open forest slopes near rocky areas. **Endemic-India** (Andhra Pradesh, Kerala, Tamil Nadu, Telangana).

Plate 98. A. *Panicum curviflorum* Hornem. (Inset: spikelets and caryopses); B. *Panicum fischeri* Bor; C. *Panicum humile* Steud.

Exsicc.: Nagarkurnool District: Mallelatheertham, BSS 2136; Vatavarlapally, 14.07.2019, ARK & BSS 3840 (TBGH).

3. *Panicum humile* Nees ex Steud., Syn. Pl. Glumac. 1: 84. 1854; Hook.f., Fl. Brit. India 7: 48. 1896. *Panicum walense* Mez in Bot. Jahrb. Syst. 34: 146. 1904; Bor, Grasses Burma, Ceylon, India & Pakistan 324. 1960; Pull., Fl. Telangana 3: 1156. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 735. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 403. 2020. **Plate 98(C)**

Caespitose annuals. Culms 8–25 cm high, slender, erect or geniculate, branched; nodes glabrous. Leaves basal and cauline; sheaths c. 2 cm long, compressed, margin sparsely ciliate; ligules fimbriate; blades 2–10 × 0.2–0.4 cm, linear-lanceolate, base rounded, apex acute. Panicles c. 15 cm long, branches capillary. Spikelets 1.5–2 mm long, elliptic-ovate, apex acuminate. Lower glume 1–1.3 × 0.5 mm, broadly ovate, 3-nerved, chartaceous-membranous, apex acuminate. Upper glume 1.5–2 × 0.5 mm, ovate-lanceolate, membranous-chartaceous, 3-nerved, apex acute. Florets 2; lower neuter; upper bisexual. Lower lemma 1–1.2 × 0.5 mm, ovate, membranous, 3–5-nerved, apex obtuse-acute. Lower palea 1 × 0.5 mm, elliptic-ovate, chartaceous, hyaline, 2-keeled, apex round-obtuse. Upper lemma 0.8–1 × 0.5 mm, elliptic, chartaceous, pallid, shining, faintly 3-nerved, apex rounded-obtuse. Upper palea 1 × 0.2–0.5 mm, ovate, crustaceous, 2-keeled, apex obtuse. Lodicules 2. Stamens 3. Caryopsis c. 1 × 0.5 mm, elliptic.

Fl. & Fr.: Aug.–Dec.

Distrib.: Common throughout the state.

Exsicc.: Bhadradri Kothagudem District: Kinnerasani Wildlife Sanctuary, Punukuduchelka North, JS 10846 (BSID); Rangareddy District: Hyderabad, MRS 252 (DD).

Note: It can be easily distinguished from others species by its tiny habit and purple spikelets. Usually found associated with *Paspalum scrobiculatum* L.

4. *Panicum miliaceum* L., Sp. Pl. 1: 59. 1753; Hook.f., Fl. Brit. India 7: 45. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1783. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 327. 1960; Pull., Fl. Caespitose annuals. Culms about 100 cm high; nodes bearded, ram sheaths persistent. Leaves basal and cauline; sheaths 4–6.5 cm long, keeled, ribbed, tuberculate, mouth bearded; ligules 1–2 mm long, apex ciliate; blades 12–25 × 0.5–1.5 mm, lanceolate, sparsely hairy on both surfaces, base truncate, apex acuminate. Panicles narrowly oblong, branches filiform. Spikelets 4.5–5.1 mm long, oblong-ovate, compressed, apiculate. Lower glume 2.5–3.5 × 1.2–1.5 mm, ovate, chartaceous, apex acuminate-cuspidate. Upper glume 4.5–5 × 1–1.5 mm, ovate, chartaceous, 12-nerved, apex acuminate. Florets 2; lower barren, upper bisexual. Lower lemma 4–4.4 × 1–1.3 mm, ovate-lanceolate, apex acuminate. Lower palea 1–1.3 × c. 0.5 mm, ovate, chartaceous, 2-nerved, apex 2-lobed. Upper lemma 2–3.1 × 1–1.5 mm, elliptic, subcoriaceous, 7-nerved, apex acute. Upper palea c. 3 × 1.5 mm, elliptic, subcoriaceous, 2-nerved, apex acute. Caryopsis c. 2.5 × 1.5 mm, elliptic-ovoid.

Fl. & Fr.: Aug.–Nov.

Distrib.: Cultivated for grains and fodder.

Exsicc.: Mahabubnagar District: Kollapur, BSS & SKB 32915 (BSID).

5. *Panicum notatum* Retz., Observ. Bot. 4: 18. 1786; Bor, Grasses Burma, Ceylon, India & Pakistan 701. 1960; Pull., Fl. Telangana 3: 1154. 2015; K.N.Reddy

& C.S.Reddy, Fl. Telangana 733. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 402. 2020. *Panicum montanum* Roxb., Fl. Ind. 1: 315. 1820; Hook.f., Fl. Brit. India 7: 53. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1783. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 329. 1960.

Caespitose perennials. Culms about 120 cm high, erect or trailing; lower node rooting. Leaves basal and culine; sheaths 5–8 cm long, margin sparsely ciliate, mouth bearded; ligules 0.2–0.4 mm long, membranous, apex fimbriate; blades 8–22 × 1–3 cm, linear-lanceolate, pubescent, base broadly cordate, apex acuminate. Panicles c. 40 cm long, profusely branched; rachis scabrid. Spikelets 2–3 mm long, ellipsoid, sparsely hairy. Lower glume 1–1.5 mm long, ovate, 3-nerved, margin hairy, apex acute-acuminate. Upper glume 2–2.5 mm long, broadly ovate, margin ciliate, 5-nerved, apex acute. Florets 2, lower neuter; upper bisexual. Lower lemma 2–2.5 × 0.4–0.8 mm, ovate, 5-nerved, apex acute. Lower palea absent. Upper lemma 2–2.5 × 0.5–1 mm, elliptic, coriaceous, 5-nerved, apex acuminate. Upper palea 2–2.5 × 0.5–1 mm, elliptic, coriaceous, margin inflexed, 2-nerved. Stamens 3. Ovary 0.5 mm long, ovate. Caryopsis 1–1.5 mm long, ovate.

Fl. & Fr.: Aug.–Jan.

Distrib.: Occasionally in Khammam, Siddipet & Warangal.

Exsicc.: Warangal District: Warangal, CSR 831 (KU).

Note: Distinguishable by effuse panicles having spreading branches.

6. *Panicum paludosum* Roxb., Fl. Ind. 1: 310. 1820; C.E.C.Fisch. in Gamble, Fl. Madras 1776. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 329. 1960; Pull., Fl. Telangana 3: 1154. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 733. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 402. 2020. *Panicum proliferum* sensu Hook.f., Fl. Brit. India 7: 50. 1896, non Lam., 1797. **Plate 99**

Aquatic perennials. Culms about 100 cm high, spongy, erect or creeping; lower nodes rooting. Leaves basal and culine; sheaths loose; ligules a rim of fine hairs; blades 8–26 × 0.6–1 cm, linear, base cordate-rounded, margin scabrid, apex acuminate. Panicles c. 20 cm long, lower branches whorled, rachis scabrid. Spikelets 3–4 mm long, ovate-lanceolate. Lower glume 0.8–1 mm long, ovate, chartaceous, 5-nerved, apex acute. Upper glume 3–3.5 mm long, elliptic-lanceolate, chartaceous, 11-nerved, apex acute. Florets 2; lower neuter; upper bisexual. Lower lemma c. 3 mm long, ovate, chartaceous, 9-nerved, apex acute. Lower palea 2–2.5 mm long, elliptic, membranous, apex obtuse. Upper lemma 2–2.5 mm long, shining, coriaceous, 5-nerved, apex acute. Upper palea c. 2 mm long, elliptic, subcoriaceous, shining, margins inflexed, 2-nerved, apex acute. Caryopsis 1–1.5 mm long, oblong.

Fl. & Fr.: Sep.–Mar.

Distrib.: Common aquatic grass throughout the state.

Exsicc.: Rangareddy District: Hyderabad, Borabanda city, VSK & KCS 32 (BSID).

Note: It is identifiable by spongy culms.

7. *Panicum repens* L., Sp. Pl., ed. 2. 1: 87. 1762; Hook.f., Fl. Brit. India 7: 49. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1783. 1934; Bor, Grasses Burma,

Caespitose perennials; rhizomatous, stoloniferous. Culms about 150 cm high. Leaves basal and culine, distichous; sheaths flattened-keeled, margin bulbous based hairs; ligules 1–2 mm long, membranous, with a rim of hairs; blades 5–19 × 0.3–0.7 cm, linear-lanceolate, involute, rigid, base rounded-cordate, apex

Plate 100. *Panicum repens* L.: A. Habitat; B. Inflorescence; C. Spikelets.

acute. Panicles c. 20 cm long, contracted, rachis scabrid. Spikelets 2–2.7 mm long, ovate-lanceolate. Lower glume 1–1.5 × 1.5 mm, orbicular, chartaceous, faintly 5-nerved, apex obtuse. Upper glume 2–3.5 mm long, ovate-lanceolate, chartaceous, 5–9-nerved, apex acuminate. Florets 2; lower male; upper bisexual. Lower lemma 2–3 × 1–1.3 mm, ovate-lanceolate, chartaceous, 9-nerved, apex acute-acuminate. Lower palea 2–2.5 × 0.5–0.9 mm, elliptic, chartaceous, 2-nerved, 2-keeled, scabrid on keels, apex acuminate. Upper lemma 1.5–2 mm long, elliptic-oblong, shining, coriaceous, apex acute. Upper palea 1.5 mm long, coriaceous, 2-nerved, apex acute. Stamens 3. Ovary 0.4–0.5 × 0.2–0.3 mm, ovoid.

Fl. & Fr.: Jan.–Dec.

Distrib.: Very common throughout the state.

Exsicc.: Adilabad District: Sone, TP & PVP 4032 (SKU); Rangareddy District: Manasa hills-Rajendranagar, 24.08.2016, SNR 8543 (BSID); 04.09.2019, SNR 8694 (BSID); Hyderabad, MVR 02181 (HY), Central University, MSM 15142 (SKU); Warangal District: Regional Agricultural Research Station-Warangal, 26.03.2021, SNR 012004 (BSID).

Note: Distinguishable by tough culms, rhizomes and whitish leaf blades.

8. *Panicum sparsicomum* Nees ex Steud., Syn. Pl. Glumac. 1: 83. 1854; Hook.f., Fl. Brit. India 7: 58. 1896; Bor, Grasses Burma, Ceylon, India & Pakistan 330. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 402. 2020. *Cyrtococcum sparsicomum* (Nees ex Steud.) A. Camus in Bull. Mis. Natl. Hist. Nat. 27: 118. 1921; C.E.C.Fisch. in Gamble, Fl. Madras 1786. 1934.

Caespitose perennials; stoloniferous. Culms about 90 cm high, branched, filiform; nodes hairy; lower nodes rooting. Leaves basal and caudine; sheaths 2–5.5 cm long, terete, ribbed, margin ciliate; ligules membranous, apex fimbriate; blades 3–7.5 × c. 0.6 cm, oblong-lanceolate, apex acuminate. Inflorescence c. 8.5 × 7 cm, effuse. Racemes alternate, nodes pubescent. Spikelets 1.1–1.5 × c. 0.5 mm, obovate-gibbous. Lower glume c. 1 × 0.5 mm, ovate-lanceolate, chartaceous, 3-nerved, base truncate, apex acuminate-cuspidate. Upper glume 1.5 × c. 0.5 mm, oblong-elliptic, chartaceous, 5-nerved, apex acute. Florets 2; lower barren, upper bisexual. Lower lemma c. 1.5 × 0.5 mm, oblong, chartaceous, 5-nerved, apex acute. Lower palea 0.5–0.8 × 0.2 mm, lanceolate, reduced. Upper lemma c. 1.5 × 0.5 mm, oblong-elliptic, subcoriaceous, 3-nerved, margins inflexed, apex acute. Upper palea c. 1 × 0.5 mm, oblong-elliptic, subcoriaceous, 2-nerved, margins incurved, apex acute. Lodicules 2. Stamens 3. Ovary c. 0.4 mm long, oblong.

Fl. & Fr.: Aug.–Jan.

Distrib.: Occasionally in Adilabad.

Exsicc.: Adilabad District: Birsipet range, Rampur beat, APS 4004 (BSID).

9. *Panicum sumatrense* Roth ex Roem. & Schult., Syst. Veg., ed. 15. 2: 434. 1817; Bor, Grasses Burma, Ceylon, India & Pakistan 701. 1960; Pull., Fl. lower male or neuter; upper bisexual. Lower lemma 3–3.5 × 1–1.2 mm, ovate-lanceolate, chartaceous, 8-nerved, apex acute. Lower palea 1.5–2 mm long, oblong, 2-nerved, apex acute. Upper lemma 2–2.8 × 1–1.3 mm, ovate-oblong, coriaceous, convex, apex acute. Upper palea 2–2.5 × 1–1.3 mm, ovate-oblong, coriaceous, apex acute. Caryopsis 2–2.3 × 1–1.3 mm, ovate-elliptic.

Fl. & Fr.: Aug.–Mar.

Distrib.: Common in marshy habitats. Relished by cattles.

Exsicc.: Bhadrabri Kothagudem District: Kinnerasani Wildlife Sanctuary, 06.01.2019, SNR 9513 (BSID); 09.01.2019, SNR 9604, 9617 (BSID); Sambayyagudem-Manuguru, 24.03.2021, SNR 8951 (BSID); Medak District: Narayanapur RF, BRPR 11272 (SKU); Pocharam tank, TP & MSG 12040 (SKU); Nizamabad District: Dichpally near malkapur village, TP & BRPR 6109 (SKU); Rangareddy District: Manasa hills-Rajendranagar SNR 8695 (BSID), Ananthasagar, MSM 11002 (SKU).

Note: It can be differentiated from other species by its spongy culms and longer inflorescence.

3. Sacciolepis myosuroides (R. Br.) A. Camus, Fl. Indo-Chine 7: 460. 1922; C.E.C.Fisch. in Gamble, Fl. Madras 1787. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 358. 1960; Pull., Fl. Telangana 3: 1170. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 746. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 418. 2020. *Panicum myosuroides* R. Br., Prodr. Fl. Nov. Holland. 189. 1810; Hook.f., Fl. Brit. India 7: 42. 1896. *Hymenachne myosuroides* (R. Br.) Balansa in J. Bot. (Morot) 4: 143. 1890.

Slender annuals. Culms 10–55 cm high, erect; nodes glabrous; lower nodes rooting. Leaves basal and caudate; sheaths 5–10 cm long, sparsely hairy or glabrous; ligules membranous, truncate; blades 10–28 × 0.2–0.5 cm, linear-lanceolate, narrowly linear, sparsely pilose or glabrous. Inflorescence c. 25 cm long, spiciform, cylindric, narrow, slightly curved. Spikelets 1–2 mm long, ovate-oblong or subglobose. Lower glume 0.5–1 × 0.5 mm, ovate, chartaceous, 3-nerved, chartaceous, apex acute. Upper glume 1–2 × 0.3 mm, ovate, chartaceous, 5–9-nerved. Florets 2; lower neuter; upper bisexual. Lower lemma 1–2 × 0.3 mm, ovate, chartaceous, 5–9-nerved, apex closed. Lower palea 0.5–1 × 0.2 mm, elliptic or hyaline scale. Upper lemma 0.5–1 × 0.2 mm, ovate, coriaceous, convex, 5-nerved. Upper palea 0.5–1 × 0.2 mm, coriaceous, margins inflexed. Stamens 3. Caryopsis c. 1 mm long, elliptic.

Fl. & Fr.: Aug.–Jan.

Distrib.: Occasional in marshy localities and as a weed in paddy fields.

Exsicc.: Bhadrabri-Kothagudem District: Kinnerasani Wildlife Sanctuary, 06.01.2019, SNR 9517 (BSID).

1. Setaria flavidula (Retz.) Veldkamp in Blumea 39: 376. 1994. *Paspalidium flavidum* (Retz.) A. Camus, Fl. Indo-Chine 7: 419. 1922; C.E.C.Fisch. in Gamble, Fl. Madras 1774. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 333. 1960; Pull., Fl. Telangana 3: 1157. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 735. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 420. 2020. *Panicum flavidum* Retz., Observ. Bot. 4: 15. 1786; Hook.f., Fl. Brit. India 7: 28. 1896. ‘Ooda Gaddi’

Plate 106

Caespitose annuals. Culms 12–70 cm high, slender; nodes glabrous. Leaves basal and cauline; sheaths 2.5–8 cm long, compressed, keeled; ligules a rim of hairs; blades 5–25 × 2–0.7 cm, linear, base rounded, apex mucronulate. Inflorescence 10–30 cm long, spiciform. Racemes 1–2.5 cm long, secund, shorter than internodes. Spikelets 1–2.5 mm long, ovoid, gibbous, 2-seriate. Lower glume c. 1 mm long, ovate, 3-nerved, apex acute-obtuse. Upper glume 2–2.5 mm long, ovate, chartaceous, 7–9-nerved, apex acute. Florets 2; lower neuter; upper bisexual. Lower lemma c. 2.5 mm long, ovate, chartaceous, 5-nerved, apex acute. Lower palea 1–2 mm long, elliptic, 2-nerved, 2-keeled, apex acute-retuse. Upper lemma c. 2 mm long, crustaceous, faintly 5-nerved, convex, punctate. Upper palea 1.8–2 mm long, elliptic, coriaceous, margins involute, 2-nerved, 2-keeled, apex acute. Stamens 3. Caryopsis c. 1.5 mm long, elliptic.

Fl. & Fr.: Aug.–Feb.

Distrib.: Common throughout the state in plains along bunds of paddy fields and in wet habitats.

Exsicc.: Adilabad District: Vempalli, GO & PVP 4181 (SKU); Bhadrabri Kothagudem District: Kinnerasani Wildlife Sanctuary, 09.01.2019, SNR 9596 (BSID); Mahabubnagar District: Bhavani Sagar, 06.08.2019, SNR 8613 (BSID); Rangareddy District: Hyderabad, MVR 02183 (HY).

Note: It can be distinguished by its spikes which are shorter than internodes.

2. Setaria geminata (Forssk.) Veldkamp in Blumea 39: 377. 1994. *Paspalidium geminatum* (Forssk.) Stapf, Fl. Trop. Africa 9: 583. 1920; C.E.C.Fisch. in Gamble, Fl. Madras 1774. 1934; Burma, Ceylon, India & Pakistan 333. 1960; Pull., Fl. Telangana 3: 1157. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 736. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 420. 2020. *Panicum geminatum* Forssk., Fl. Aegypt.-Arab. 18. 1775. *Panicum paspaloides* Pers., Syn. Pl. 1: 81. 1805; Hook.f., Fl. Brit. India 7: 30. 1896.

Plate 107(A)

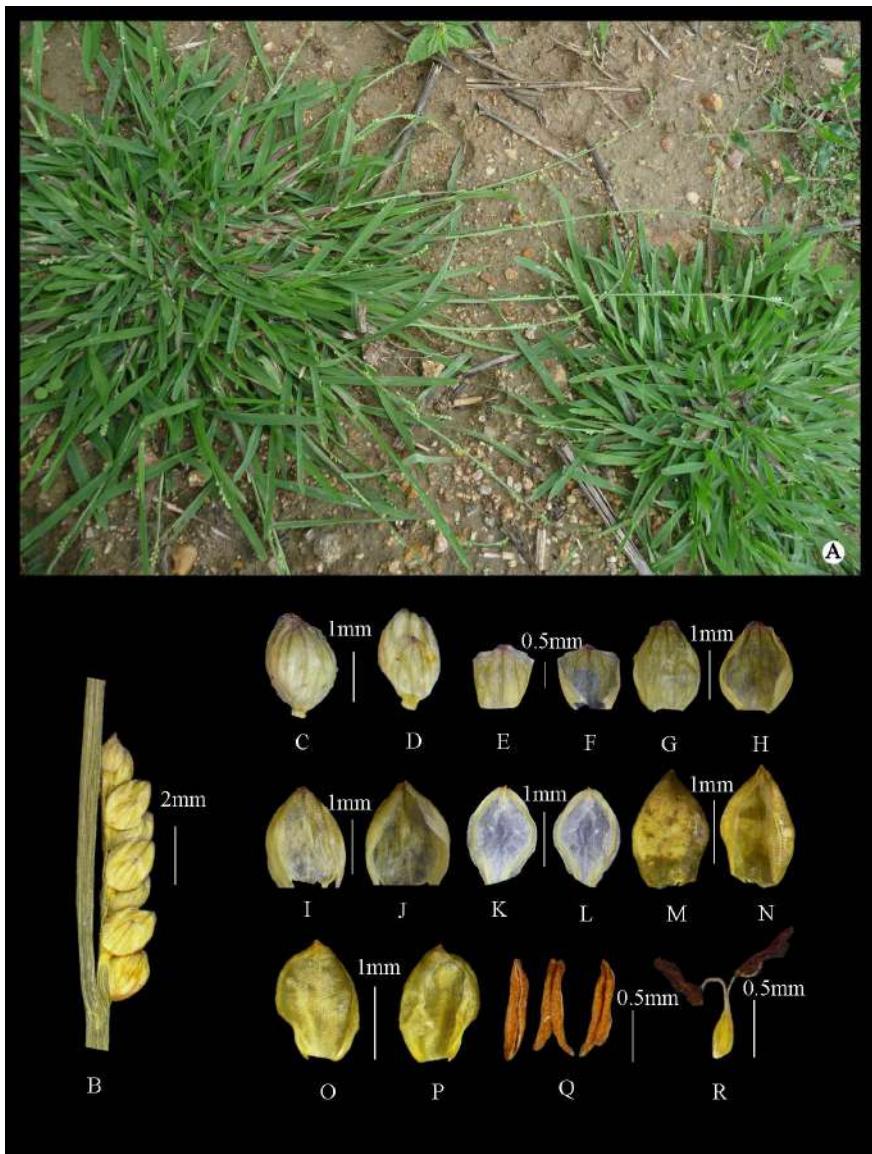

Plate 106. *Setaria flava* (Retz.) Veldkamp: A. Habitat; B. Enlarged view of raceme; C&D. Spikelets; E&F. Abaxial and adaxial view of lower glume; G&H. Abaxial and adaxial view of upper glume; I&J. Abaxial and adaxial view of lower lemma; Abaxial and adaxial view of lower palea; M&N. Abaxial and adaxial view of upper lemma; O&P. Abaxial and adaxial view of upper palea; Q. Anthers; R. Pistil.

Mat-forming perennials; rhizomatous, stoloniferous, aquatic. Culms 10–120 cm high, spongy; lower nodes rooting. Leaves basal and caudate; sheaths glabrous; ligules a rim of hairs; blades $5-20 \times 0.4-1$ cm, base narrowed, apex acuminate. Inflorescence c. 28 cm long. Racemes 1–3.5 cm long, many, crowded, longer than internodes. Spikelets 1.5–3 mm long, ovoid, biserrate. Lower glume

1.5 mm long, ovate, membranous, apex rounded-truncate. Upper glume 2–2.5 mm long, broadly ovate, chartaceous, 5-nerved, apex acute-blunt. Florets 2; lower male; upper bisexual. Lower lemma c. 3 mm long, ovate, chartaceous, 5-nerved, apex acute. Lower palea c. 2.5 mm long, margins inflexed, hyaline, 2-nerved, apex acute. Upper lemmas c. 2.5 mm long, broadly ovate, coriaceous, 5-nerved, apex acute-mucronate. Upper palea 1.8–2 mm long, elliptic, 2-nerved, membranous, margins inflexed, apex acute. Stamens 3. Caryopsis c. 1.3 mm long, elliptic.

Fl. & Fr.: Aug.–Mar.

Distrib.: Common throughout the state in marshy areas and often near water courses. Used as fodder.

Exsicc.: Adilabad District: Nirmal, MHR 14463 (SKU); Kadam dam, PVP & TP 4139 (SKU); Jayashankar Bhupalpally District: Chennapur-Regondi, 29.03.2021, SNR 012036 (BSID); Rangareddy District: Hyderabad, MVR 02184 (HY); Manasa hills-Rajendranagar, 24.08.2016, SNR 8519 (BSID); Warangal District: Gudappad-Lake, 29.03.2021, SNR 012038 (BSID); Regional Agricultural Research Station-Warangal, 26.03.2021, SNR 012005 (BSID).

Note: This species differs from *P. flavidum* by its spikes which are longer than internodes.

3. *Setaria homonyma* (Steud.) Chiov. in Nuovo Giorn. Bot. Ital. n.s. 26: 78. 1919; Bor, Grasses Burma, Ceylon, India & Pakistan 361. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 420. 2020. *Panicum homonymum* Steud., Syn. Pl. Glum. 1: 48. 1854. *Setaria rhachitricha* Cooke, Fl. Pres. Bombay 3: 435. 1958.

Plate 107(B)

Caespitose annual. Culms 20–40 cm high, terete, erect, glabrous; nodes glabrous or pubescent. Leaves basal and caudate; sheaths 3–18 cm long, compressed, glabrous or sparsely hairy, margins ciliate; ligules a row of 1–1.5 mm long hairs; blades 4–32 cm long, broadly elliptic-ovate, margins scaberulous, nerves tubercle based hairs, base narrowed, apex acuminate. Panicle 5–20 cm long, pyramidal, branched. Involucral bristles 3–13 mm long, capillary, scaberulus. Spikelets 2–2.7 \times 1–1.5 mm, elliptic, compressed. Lower glume 0.5–1 \times 0.5–0.9 mm, orbicular, hyaline, 3-nerved, apex obtuse. Upper glume c. 2.5 \times 1 mm, ovate-oblong, chartaceous-membranous, 5–7-nerved, apex acute. Florets 2; lower barren; upper bisexual. Lower lemma c. 2.5 \times 1.5 mm, membranous, ovate, 5–7-nerved, apex rounded-obtuse. Lower palea c. 2 \times 1 mm, ovate-oblong, apex subacute. Upper lemma 1.5–2 \times 1–1.3 mm, elliptic, coriaceous, 5-nerved, transversely rugose, margins incurved, apex obtuse. Upper palea 1.5–2 \times 0.8–1 mm, elliptic, coriaceous, margins inflexed, 2-keeled, transversely rugose, apex obtuse. Lodicules 2. Stamens 3. Caryopsis 0.8–1 mm long, elliptic.

Fl. & Fr.: Jul.–Sep.

Distrib.: Occasionally in shady places and on hill slopes.

Exsicc.: Adilabad District: Vempalli, GO & PVP 4181 (SKU); Rangareddy District: Hyderabad, MVR 02183 (HY).

4. Setaria intermedia Roem. & Schult., Syst. Veg., ed. 15, 2: 489. 1817; Hook.f., Fl. Brit. India 7: 79. 1896; Pull., Fl. Telangana 3: 1173. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 748. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 420. 2020. *Setaria tomentos* (Roxb.) Kunth, Rev. Gramin. 1: 47. 1829; Bor, Grasses Burma, Ceylon, India & Pakistan 365. 1960. *Pennisetum tomentosum* Roxb., Fl. Ind. 1: 303. 1820.

Caespitose annuals. Culms 15–70 cm high, erect; nodes glabrous. Leaves basal and caudine; sheaths 1–7 cm long, terete-keeled, hairy, mouth bearded; ligules ciliate; blades 5–28 × 0.5–1.0 cm, linear-lanceolate, sparsely hairy. Panicles c. 15 cm long, spiciform, interrupted; bristles 2–10 mm long, scabrid. Spikelets 1–2 mm long, elliptic-ovate. Lower glume 0.8–1 mm long, ovate, chartaceous, 3-nerved, base truncate, apex acute. Upper glume 1–1.5 mm long, ovate, chartaceous, 5–7-nerved, apex acute. Floret 2; lower neuter or male; upper bisexual. Lower lemma c. 2 mm long, broadly ovate, chartaceous, 5–7-nerved, apex apiculate. Lower palea 1.5 mm long, elliptic, membranous, 2-nerved, 2-keeled, apex acute. Upper lemma c. 2 mm long, broadly ovate, crustaceous, rugose, 5-nerved, apex apiculate. Upper palea c. 2 mm long, elliptic-ovate, crustaceous, 2-nerved, 2-keeled, apex acute. Stamens 3. Caryopsis c. 1 mm long, elliptic.

Fl. & Fr.: Aug.–Jan.

Distrib.: Common in cultivated fields and fallow lands in moist habitats.

Exsicc.: Mahabubnagar District: Amrabad, BSS & SKB 32202 (SKU); Medak District: Ramayampet, BRPR & CPB 11515 (SKU); Rangareddy District: Hyderabad, MVR 02200 (HY)!, Central University, MSM 15171 (SKU)!, Manasahills-Rajendranagar, 24.08.2016, SNR 8517 (BSID); Vikarabad District: Ananthagiri hills, 21.09.2019, SNR 8724 (BSID); Warangal District: Chennarao pet-Narasampet, 30.03.2021, SNR 012046 (BSID).

Note: Similar to *S. verticillata* but differs in involucral which are bristles antrorsely barbellate.

5. Setaria italica (L.) P. Beauv., Ess. Agrostogr. 51, 170, 178. 1812; Hook.f., Fl. Brit. India 7: 78. 1896; Bor, Grasses Burma, Ceylon, India & Pakistan 362. 1960; Pull., Fl. Telangana 3: 1173. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 748. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 420. 2020. *Panicum italicum* L., Sp. Pl. 1: 56. 1753. ‘Korralu’ **Plate 107(C)**

Solitary annuals. Culms 25–90 cm high, erect, geniculate, ribbed; nodes dark. Leaves basal and caudine; sheaths flattened, glabrous; ligules a fringe of hairs; blades linear-lanceolate, surfaces scabrid, apex attenuate. Panicles 5–25 cm long, linear-oblong, compact, spiciform interrupted-continuous. Spikelets c. 3 mm long, elliptic, compressed, subtended by 3 bristles, 10–12 mm long. Lower glume 0.5–0.7 × 0.3 mm, ovate, chartaceous, apex acute-nerves jointed. Upper

glume c. 1.5 × 1 mm, elliptic, chartaceous, 5-nerved, apex acute. Florets 2; lower barren, upper bisexual. Lower lemma c. 2 × 1 mm, ovate, chartaceous, 7-nerved, apex acute-nerves jointed. Lower palea c. 1 × 0.4 mm, oblong, membranous, apex acute, 2-lobed. Upper lemma 2 mm long, obovate, 5-nerved, rugulose, apex acute. Upper palea oblong, granulose, apex obtuse. Caryopsis c. 1.8 mm long, oblong.

Fl. & Fr.: Sep.–Mar.

Distrib.: Cultivated in Gadval, Mahabubnagar, Nagarkurool, Vikarabad & Wanaparthy.

Exsicc.: Rangareddy District: Hyderabad, MVR 02201 (HY).

6. Setaria parviflora (Poir.) Kerguelen, Lejeunia 120: 161. 1987. *Pennisetum polystachion* (L.) Schult., Mant. 2: 146. 1824; C.E.C.Fisch. in Gamble, Fl. Madras 1792. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 346. 1960; Pull., Fl. Telangana 3: 1162. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 740. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 421. 2020. *Pennisetum polystachyon* L., Syst. Nat. ed 10. 2: 870. 1759.

Caespitose perennials. Culms 100–250 cm high; nodes glabrous, lower nodes rooting. Leaves basal and caudine; sheaths terete-keeled, hairy, mouth bearded; ligules fimbriate; blades 5–35 × 0.2–1.2 cm, linear-lanceolate, surface hairy, base rounded, apex acuminate. Panicles 10–25 cm long, spiciform, rachis winged. Spikelets 3–4 mm long, lanceolate, enclosed in an involucre, involucular bristles plumose. Lower glume 1–1.5 mm long, ovate-oblong. Upper glume 3–4 mm long, ovate, chartaceous, 5-nerved, margin inflexed, apex acuminate. Florets 2; lower neuter or male; upper bisexual. Lower lemma 3–4 × 0.5–1 mm, ovate-lanceolate, chartaceous, 5-nerved, apex acuminate-lobed. Lower palea absent, if present 1–1.5 mm long, ovate, chartaceous, hyaline, 2-nerved, 2-keeled, apex acuminate. Upper lemma 2–3 × 0.4–0.5 mm, ovate-elliptic, coriaceous, faintly 5-nerved, apex obtuse-acute. Upper palea 1.5–2 × 0.2–0.3 mm, ovate, coriaceous, shiny, 2-keeled, apex obtuse-acute. Stamens 3. Caryopsis c. 1 mm long, oblong

Fl. & Fr.: Aug.–Nov.

Distrib.: Occasional in Bhadravati-Kothagudem, Rangareddy & Vikarabad.

Exsicc.: Rangareddy District: Hyderabad, MVR 02192 (HY).

Note: It can be easily identified by its winged rachis and cylindrical inflorescence.

7. Setaria pumila Roem. & Schult., Syst. Veg., ed. 15. 2: 891. 1817; Pull., Fl. Telangana 3: 1174. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 749. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 421. 2020. *Panicum pumilum* Poir., Encycl. (Lamarck) Suppl. 4: 273. 1816. *Setaria pallid-fusca* (Schumach.) Stapf & C.E. Hubb. in Bull. Misc. Inform. Kew 6: 259.

1930; C.E.C.Fisch. in Gamble, Fl. Madras 1789. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 363. 1960. *Panicum pallid-fuscum* Schumach., Beskr. Guin. Pl. 78. 1827. 'Nakkathoka Gaddi'

Plate 107(D)

Solitary annuals. Culms 10–75 cm high, erect or creeping, geniculate, ribbed; nodes glabrous. Leaves basal and caudine; sheaths 2–9 cm long, terete, glabrous; ligules membranous; blades 5–31 × 0.2–1 cm, linear-lanceolate, margins scabrid, glabrous to sparsely hairy, base rounded, apex acute. Panicles 2–15 cm long, spiciform, cylindric. Involucral bristles numerous, 1–8 mm long, yellow or reddish-brown, antrorsely barbed. Spikelets 1–2.3 × 1 mm, ovate-elliptic, gibbosus. Lower glume c. 1.5 × 1 mm, broadly ovate, 3-nerved, hyaline, apex acute. Upper glume 2 × 0.5–1 mm, ovate, hyaline, 3–5-nerved, apex obtuse. Florets 2; lower male or neuter; upper bisexual. Lower lemma 2–2.5 × 1 mm, ovate-elliptic, membranous, 5-nerved, apex acute. Lower palea 1.5–2 × 0.5–1 mm, elliptic, hyaline, 2-nerved, apex acute. Upper lemma c. 2.2 × 1 mm, broadly elliptic, curved, coriaceous, transversely rugose, faintly 5-nerved, apex apiculate. Upper palea 2 × 0.5–0.8 mm, ovate-elliptic, rugose, crustaceous, apex acute. Stamens 3. Caryopsis elliptic.

Fl. & Fr.: Jun.–Jan.

Distrib.: Common throughout the state as a weed in cultivated fields, road sides. Fodder grass.

Exsicc.: Adilabad District: Jannaram, TP & PVP 4198 (SKU), Ankusapuram, GO 4317 (SKU); Bhandrigudem Kothagudem District: Kinnerasani Wildlife Sanctuary, 09.01.2019, SNR 8599 (BSID); Mahabubnagar District: Appapur, AMSR 25691 (SKU), Venkatapuram-Koilakonda, 06.08.2019, SNR 8624 (BSID); Rangareddy District: Manasa hills-Rajendranagar, 24.08.2016, SNR 8513 (BSID); 22.08.2019, SNR 8674 (BSID); Hyderabad, MVR 02203 (HY), Mohammadabad, MSM 10592 (SKU); Rangammudem, MSM 10581 (SKU); Warangal District: Kothagadda, 25.03.0021, SNR 8975 (BSID); Regional Agricultural Research Station-Warangal, 28.03.2021, SNR 012020 (BSID).

Note: Easily identifiable by its spiciform inflorescence.

8. Setaria punctata (Burm. f.) Veldkamp in Blumea 39: 381. 1994.

Paspalidium punctatum (Burm. f.) A. Camus, fl. Indo-Chine 7: 419. 1922; C.E.C.Fisch. in Gamble, Fl. Madras 1774. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 333. 1960; Pull., fl. Telangana 3: 1158. 2015; K.N.Reddy & C.S.Reddy, fl. Telangana 736. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, fl. Pl. India Annot. Checkl. Monocot. 3: 421. 2020. *Panicum punctatum* Burm. f., fl. Ind. 26. 1768; Hook.f., fl. Brit. India 7: 29. 1896.

Aquatic perennials. Culms 60–150 cm high, trailing or floating, spongy; nodes glabrous lower nodes rooting. Leaves basal and caudine; sheaths inflated, keeled; ligules a rim of hairs; blades 5–25 × 0.2–1 cm, linear, base narrowed, apex acute-acuminate. Inflorescence c. 40 cm long, spiciform. Racemes 1–3.5 cm long, longer than internodes, appressed to the rachis. Spikelets 2–3.5 mm long, ovate-oblong, imbricate. Lower glume 1–1.2 mm long, broadly oblong-orbicular, membranous, apex slightly retuse. Upper glume c. 3 mm long, oblong-orbicular,

Plate 107. A. *Setaria geminata* (Forssk.) Veldkamp; B. *Setaria homonyma* (Steud.) Chiov. C. *Setaria italica* (L.) P.Beauv.; D. *Setaria pumila* (Poir.) Roem. & Schult.

membranous-chartaceous, 3–5-nerved, apex rounded-truncate. Florets 2; lower neuter; upper bisexual. Lower lemma 2.5–3.5 mm long, 5-nerved, apex acute-apiculate. Lower palea elliptic, chartaceous, 2-nerved, 2-keeled. Upper lemma c. 3.5 mm long, broadly elliptic, coriaceous, punctuate, 5-nerved, apex acute. Upper palea 2–2.5 mm long, elliptic, crustaceous, 2-nerved, margins inflexed, apex acute. Stamens 3. Caryopsis c. 1.5 mm long, broadly elliptic.

Fl. & Fr.: Aug.–Jan.

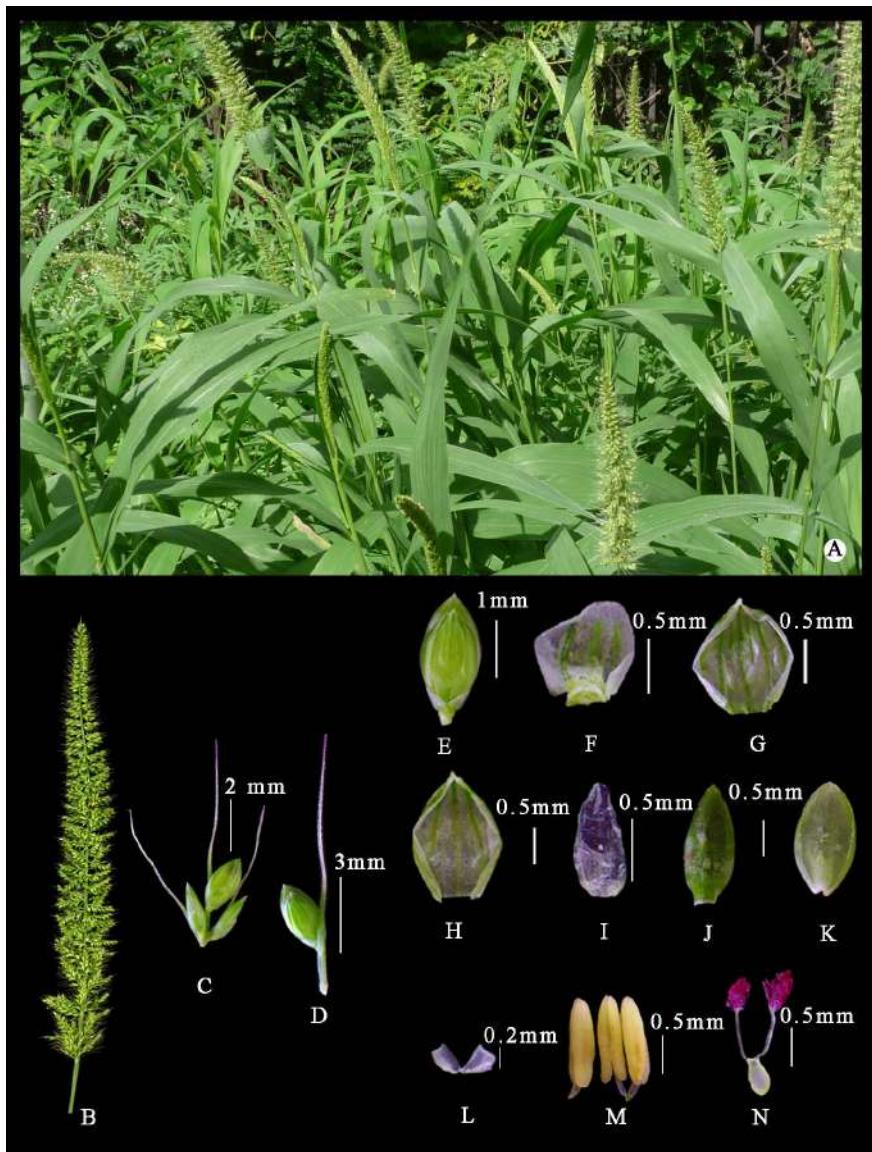

Plate 108. *Setaria verticillata* (L.) P.Beauv.: A. Habitat; B. Inflorescence; C&D. Spikelets with bristle; E. Spikelet; F. Lower glume; G. Upper glume; H. Lower lemma; I. Lower palea; J. Upper lemma; K. Upper palea; L. Lodicules; M. Stamens; N. Pistil.

Distrib.: Common throughout the state in marshy habitats.

Exsicc.: Adilabad District: Kodthala pond, GO & DAM 4139 (SKU)!; Rangareddy District: Hyderabad, MVR 02185 (HY); Warangal District: Rajupet-Mallampalli, 30.03.2021, SNR 012048 (BSID).

Note: It can be distinguished by its racemes, longer than the internodes.

9. *Setaria verticillata* (L.) P. Beauv., Ess. Agrostor. 51, 171, 178. 1812; Hook.f.,

Fl. Brit. India 7: 80. 1896; Bor, Grasses Burma, Ceylon, India & Pakistan 365. 1960; Pull., Fl. Telangana 3: 1174. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 749. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 421. 2020. *Panicum verticillatum* L., Sp. Pl., ed. 2. 1: 82. 1762.

Plate 108

Caespitose annuals. Culms 25–100 cm high, erect or geniculate, robust; nodes glabrous. Leaves basal and caudine; sheaths glabrous; ligules a fringe of hairs; blades 5–20 × 1–4 cm, linear-lanceolate, scabrid, apex acute. Panicles c. 15 cm long, spiciform, pyramidal. Involucral bristles 7–8 mm long, retroflexively barbellate. Spikelets 2–2.5 mm long, elliptic-ovate. Lower glume c. 1 mm long, broadly ovate, membranous, hyaline, 3-nerved, apex acute. Upper glume 2–2.5 mm long, ovate, membranous, 5-nerved, apex acute. Florets 2; lower neuter; upper bisexual. Lower lemma c. 2 mm long, elliptic-ovate, 5-nerved, chartaceous-membranous, compressed, apex acute. Lower palea 0.5–0.9 mm long, oblong, membranous, apex acute. Upper lemma 1.8–2.3 mm long, elliptic-oblong, faintly rugose, coriaceous, 5-nerved, apex acute. Upper palea c. 2 mm long, elliptic, coriaceous, rugulose, apex acute. Stamens 3. Caryopsis 1–1.5 mm long, ellipsoid.

Fl. & Fr.: Aug.–Jan.

Distrib.: Common in throughout the state as weed.

Exsicc.: Bhadravati Kothagudem District: Kinnerasani Wildlife Sanctuary, 09.01.2019, SNR 8557 (BSID); Nizamabad District: Kammarapally, TP & BRPR 6199 (SKU); Rangareddy District: Attapur, 22.08.2019, SNR 8677 (BSID); Rajendranagar, 24.08.2016, SNR 8514 (BSID), Hyderabad, MVR 02202 (HY), Central University, MSM 15186 (SKU); Warangal District: Regional Agricultural Research Station-Warangal, 28.03.2021, SNR 012027 (BSID).

Note: This species can be easily identified by its robust growth and viscid inflorescence. This species is similar to *S. intermedia* but differs in retrorsely barbellate bristles.

***Stenotaphrum* Trin.**

World: 7 spp.; India: 1 sp.; Telangana: 1 sp.

***Stenotaphrum dimidiatum* (L.) Brongn., Voy. Monde, Phan. 127. 1831; C.E.C.Fisch. in Gamble, Fl. Madras 1773. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 366. 1960; Prasanna & al. in A.A. Plate 109

Mat-forming, perennials; stoloniferous. Culms 10–30 cm long, creeping; nodes glabrous-sparsely hairy, lower nodes rooting. Leaves mostly confined to basal; sheaths 3–4 cm long, strongly, keeled; ligules membranous apex, fimbriate; blades 4–18 × 0.5–1.2 mm, oblong-linear, flat-infolded, base rounded, margin serrulate, apex subobtuse-acute. Raceme 2–4 × 0.5 cm, solitary, spiciform; rachis flat. Spikelets 2.5–4.5 mm long, sunken, elliptic. Lower glume c. 1.6 × 1.2 mm, ovate-orbicular, chartaceous, nerveless, apex acute with ciliate. Upper glume 3–4.2 × 1.5 mm, ovate-elliptic, chartaceous, 7-nerved, apex acute, ciliate. Florets 2, lower barren or male;

Plate 109. *Stenotaphrum dimidiatum* Brongn.: A. Habitat (Carpet); B. Inflorescence.

upper bisexual. Lower lemma $3-3.5 \times 0.8$ mm, lanceolate, cymbiform, sub coriaceous, 5-nerved, margin incurved, hairy; apex acute. Lower palea c. 3×0.8 mm, ovate-lanceolate, cymbiform, hyaline, 2-nerved, 2-keeled or not, margins infolded, apex acute. Upper lemma c. 4×0.8 mm, ovate, sub coriaceous, 5-nerved; apex obtuse-acute, ciliate. Upper palea c. 3×0.8 mm, elliptic-lanceolate, chartaceous, 2-nerved, margins inflexed, apex acute, ciliate. Lodicules 2. Stamens 3.

Fl. & Fr.: Aug.-Feb.

Distrib.: Throughout the state. Most of the research institutes maintaining

the landscapes and lawn grass.

Exsicc.: Rangareddy District: Hyderabad, Lacones, 20.01.2019, SNR 8921 (BSID).

Note: Distinguishable from other lawn grasses by its strong keeled sheaths, long inflorescence with sunken rachis.

Trachys Pers.

World: 4 spp.; India: 4 spp.; Telangana: 1 sp.

Trachys muricata (L.) Pers., Syn. Pl. 1:85, 1805 ('*mucronata*'); Hook.f., Fl. Brit. India 7: 96. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1813. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 369. 1960; Pull., Fl. Telangana 3: 1148. 2015; K.N. Reddy & C.S. Reddy, Fl. Telangana 756. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 435. 2020. *Cenhrus muricatus* L., Mant. Pl. Altera 302. 1771.

Plate 110

Caespitose annuals; stoloniferous. Culms 10–50 cm long, diffuse; nodes bearded, rooting. Leaves basal and caudine; sheaths 1–7 cm long, keeled, hairy; ligules membranous; blades $2.5-14 \times 0.3-1.4$ cm, linear-lanceolate, 1–3-nerved, villous, base rounded, apex acute. Inflorescence 4–7.5 cm long, divergent. Spikelets $4-9.5 \times 5-6.3$ mm, clustered; 2-fertile; 2-barren, both more or less similar. Lower glume $2-2.5 \times 0.3-0.5$ mm, lanceolate, subcoriaceous, 1-nerved, apex acute. Upper glume $2.5-4 \times 0.6-0.8$ mm, linear, chartaceous, margin ciliate, 3-nerved, apex acuminate. Florets 2; lower neuter; upper bisexual. Lower lemma $4-7.5 \times 3-4$ mm, broadly elliptic, 10–13-nerved, subcoriaceous, apex acuminate-cuspidate. Lower palea c. 0.8 mm long, oblong, chartaceous, apex acute. Upper lemma $4-5 \times 1-1.5$ mm, lanceolate, coriaceous, margin incurved, apex acuminate. Upper palea $3-4.5 \times 1.3$ mm, lanceolate, coriaceous, 2-nerved, apex acute. Caryopsis 2–2.5 mm long, ovate-lanceolate.

Fl. & Fr.: Sep.–Dec.

Distrib.: Throughout the state, as a weed in cultivated fields.

Exsicc.: Mahabubnagar District: Rampur, SKB, KP & PKB 32634 (SKU); Nagarkurnool District, Thegalapalli-Koderu, 07.08.2019, SNR 8643 (BSID).

Note: It can be easily identified by its clustered spikelets.

Urochloa P. Beauv.

(Previously treated under '*Brachiaria* (Trin.) Griseb.'

World: c. 87 spp.; India: 9 spp., 1 var.; Telangana: 10 spp.

Key to the species

- | | | |
|-----|---|---------------------------|
| 1a. | Lower glume turned towards the axis or spikelets adaxial | ... 2 |
| 1b. | Lower glume turned away from the axis or spikelets abaxial | ... 9 |
| 2a. | Spikelets lanceolate | ... 8. <i>U. setigera</i> |
| 2b. | Spikelets oblong-ovate, elliptic-oblong | ... 3 |

Plate 111(A-J)

Caespitose annuals. Culms 10–30 cm high, erect, ribbed; lower nodes rooting. Leaves caudate; sheaths 4–5 cm long, glabrous, terete-keeled, mouth ciliate; ligules c. 1 mm long; blades 2–10.5 × 0.2–0.4 cm, broadly linear-lanceolate, flat, base rounded-truncate, apex acute. Panicle 5–12 cm long, terminal. Racemes 1–2.5 cm long; rachis triquetrous. Spikelets 3–3.5 × 1–1.2 mm, obovate-ob lanceolate, paired. Lower glume 1–1.3 × 0.8–1.2 mm, elliptic, chartaceous, 5-nerved, apex acute. Upper glume c. 2 × 1 mm, broadly elliptic, chartaceous, 7-nerved, sparsely hirsute, apex acute. Florets 2, lower barren, upper bisexual. Lower lemma 2–2.5 × c. 1 mm, elliptic, chartaceous, 5-nerved, abaxially hairy, apex acute. Lower palea c. 2 × 0.6 mm, elliptic, membranous, 2-keeled, apex acute. Upper lemma c. 2 × 1 mm, ovate, subcoriaceous, adaxially rugose, margins inflexed, 5-nerved, apex acute. Upper palea c. 2 × 1 mm, elliptic, membranous, margin inflexed. Lodicules 2. Stamens 3. Caryopsis c. 1.4 mm long, obovate.

Fl. & Fr.: Aug.–Sept.

Distrib.: Occasionally in Nagarjunakonda valley.

Exsicc.: Mahabubnagar District: Adambakula, 09.08.2019, SNR 8654 (BSID), Nalgonda District: Nagarjunakonda valley, KJ 9680 (CAL).

Notes: It can be identified by its robust habit.

Plate 112

Caespitose perennials. Culms 25–200 cm high, erect or geniculate; nodes bearded, lower nodes rooting. Leaves mostly cauline; sheaths 6–14 cm long, compressed, hispid; ligules hairy; blades $5\text{--}30 \times 0.6\text{--}1.5$ cm, linear-lanceolate, margin scabrid, apex acute. Inflorescence 5–22 cm long. Racemes c. 8 cm long, spreading, rachis triquetrous. Spikelets 3–4 mm long, elliptic, purple tinged. Lower glume $1\text{--}1.2 \times 0.6\text{--}0.8$ mm, ovate, chartaceous, 1-nerved, apex acute. Upper glume 3–4 mm long, elliptic-lanceolate, chartaceous, 5-nerved, apex acuminate. Florets 2; lower male, upper bisexual. Lower lemma similar to upper

Plate 112. *Urochloa mutica* (Forssk.) T.Q.Nguyen: A. Habitat; B. Inflorescence; C. Enlarged view of raceme.

glume, male. Lower palea $2-2.5 \times 0.5-1$ mm, lanceolate, membranous, 2-nerved, 2-keeled, apex acute. Upper lemma $2-3 \times 0.4-0.6$ mm, elliptic, coriaceous, finely rugose, margins involute, apex obtuse. Upper palea similar to lemma. Lodicules 2. Stamens 3.

Fl. & Fr.: Aug.–Dec.

Distrib.: Introduced for cultivation, subsequently naturalized.

Exsicc.: Peddapally District: Mugdapur, 10.11.2019, SNR 8769 (BSID);

Rangareddy District: Hyderabad, MVR 02215 (HY).

Note: It can be identified by its hispid nature on leaf sheaths and blades.

5. *Urochloa panicoides* P. Beauv., Ess. Agrostogr. 52. 1812; C.E.C.Fisch. in Gamble, Fl. Madras 1775. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 372. 1960; Pull., Fl. Telangana 3: 1187. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 759. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 440. 2020.

Caespitose annuals. Culms 50–90 cm high, erect or geniculate; nodes glabrous-pubescent, lower nodes rooting. Leaves basal and caudine; sheaths 2.5–9 cm long, compressed, keeled, densely hispid; ligules hairy; blades 2–13 \times 0.5–1.5 cm, linear-lanceolate, hairy, margins undulate. Inflorescence c. 12 cm long. Racemes 2.5–7 cm long, spreading with solitary or paired spikelets. Pedicels with white spreading hairs. Spikelets 3–4.5 \times 1.5–2 mm, elliptic-oblong, biseriate, densely pubescent, apex acute. Lower glume 1–1.5 \times 1–1.3 mm, ovate, chartaceous, 5-nerved, base clasping, apex acute. Upper glume 3–4 \times 1–1.5 mm, ovate-elliptic, 7–9-nerved, densely pubescent, apex acute. Lower male or neuter; upper bisexual. Lower lemma 3.5–4 \times 1–1.5 mm, ovate-elliptic, coriaceous, abaxially long hairy, 5-nerved, margin incurved, apex acuminate. Lower palea 3–3.5 \times 1–1.5 mm, elliptic, chartaceous, 2-keeled, 2-nerved, apex acute. Upper lemma 2–2.5 \times 1–1.5 mm, elliptic, coriaceous, transversely rugose, margin incurved, apex 0.5–0.8 mm long mucronate. Upper palea 2–2.5 \times 1–1.5 mm, ovate, coriaceous, rugose, 2-keeled, margin incurved, apex obtuse. Lodicules 2. Caryopsis elliptic.

Fl. & Fr.: Jul.–Feb.

Distrib.: Common throughout the state along bunds of cultivated fields, in grasslands and in moist habitats.

Exsicc.: Nalgonda District: Ambothu thanda, BRA 001271 (BSID); Rangareddy District: Hyderabad, Borabanda-Hitech city, VSK 356 (BSID); Vikarabad District: Ananthagiri hills, 21.09.2019, SNR 8728 (BSID).

Madras 1770. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 284. 1960; Pull., Fl. Telangana 3: 1082. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 685. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 330. 2020. *Panicum ramosum* L., Mant. Pl. 1: 29. 1767; Hook.f., Fl. Brit. India 7: 36. 1896.

'Eduru Gaddi'

Caespitose annuals. Culms 10–80 cm high, decumbent, geniculate; nodes glabrous to hairy. Leaves mostly caudine; sheaths 6–10 cm long, glabrous or pubescent; ligules a rim of hairs; blades 2–18 \times 0.5–1.9 cm, linear-lanceolate, apex acuminate. Panicles 2.5–10 cm long. Racemes 3–10; 3–5 cm long, lax; rachis triquetrous, with colourless hairs, winged. Spikelets 2–3 mm long, paired, ovoid, apiculate, glabrous-pubescent. Lower glume c. 1.5 \times 0.5–1 mm, broadly ovate, membranous, softly pubescent, 5–7-nerved, apex acute-obtuse. Upper glume

2–3 × 1–1.5 mm, elliptic, membranous, softly pubescent, 5–7-nerved, apex acute. Florets 2; lower neuter; upper bisexual. Lower lemma 2–3 × 1–1.5 mm, elliptic, chartaceous 5-nerved, pubescent-glabrous, apex acute. Lower palea 1.5–2 × 0.6–1 mm, elliptic, membranous, hyaline, 2-keeled, 2-nerved, margin incurved, apex acute. Upper lemma 2–2.5 × 1–1.2 mm, elliptic, crustaceous, transversely rugose, apex mucronate. Upper palea 1.5–2 × 1 mm long, elliptic, coriaceous, 2-nerved, 2-keeled, apex obtuse. Caryopsis 1–2 × 1–1.3 mm, elliptic.

Fl. & Fr.: Jul.–Dec.

Distrib.: Common as a weed in cultivated fields and in moist localities.

Exsicc.: Adilabad District: Sirpur RF, GO & PVP 4912 (SKU); Nagarkurnool District: Thegalapalli-Koderu, 07.08.2019, SNR 8642 (BSID); Rangareddy District: Hyderabad, MVR 02216 (HY); Rajendranagar-Manasahills, 24.08.2016, SNR 8504 (BSID); Warangal District: Regional Agricultural Research Station-Warangal, 26.03.2021, SNR 8995 (BSID).

Note: Distinguishable by its long colourless hairs on the pedicel.

7. *Urochloa remota* (Retz.) Ashalatha & V.J. Nair in Bull. Bot. Surv. India 35: 29. 1993. *Brachiaria remota* (Retz.) Haines, Bot. Bihar & Orissa 1005. 1924; C.E.C.Fisch. in Gamble, Fl. Madras 1770. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 285. 1960; Pull., Fl. Telangana 3: 1082. 2015; K.N.Reddy & C.S.Reddy, Fl. India 7: 38. 1896.

Caespitose perennials; stoloniferous. Culms about 50 cm high; nodes bearded. Leaves basal and caudate; sheaths 2–3 cm long, keeled, mouth pubescent; ligules short, apex lacerate; blades 5–16 × 0.3–1 cm, narrowly linear-oblong, glabrous-sparingly hairy. Racemes c. 8 cm long, rachis capillary, triquetrous. Spikelets 1–2 mm long, elliptic-oblong, solitary or paired. Lower glume c. 1.5 mm long, ovate, membranous-chartaceous, 3–5-nerved, apex acute. Upper glume c. 1.5–2.5 mm long, elliptic, membranous, 5–7-nerved, apex acute. Florets 2. Lower floret neuter. Upper floret bisexual. Lower lemma 1.5–2.5 mm long, ovate, membranous, 5–7-nerved, apex acute. Lower palea 1.5–2 mm long, elliptic, 2-nerved, apex acute. Upper lemma c. 2 mm long, elliptic, crustaceous, rugose, apex acute. Upper palea c. 1.5 mm long, elliptic, 2-nerved, minutely rugose, apex acute. Lodicules 2. Stamens 3. Ovary oblong. Caryopsis c. 1.5 mm long, oblong.

Fl. & Fr.: Jul.–Dec.

Distrib.: Occasional in moist habitats.

Exsicc.: Rangareddy District: Hyderabad, MVR 02117 (HY).

8. *Urochloa reptans* Stapf, Fl. Trop. Afr. 9: 601. 1920. *Brachiaria reptans* (L.) C.A. Gardner & C.E. Hubb. in Hooker's Icon. Pl.: sub t. 3363. 1938; Bor, Grasses Burma, Ceylon, India & Pakistan 285. 1960; Pull., Fl. Telangana 3: 1082. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 686. 2016; Prasanna & al. in A.A.Mao &

S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 330. 2020. *Panicum reptans* L., Syst. Nat., ed 10. 2: 870. 1759. *Panicum prostratum* Lam., Tabl. Encycl. 1: 171. 1791; Hook.f., Fl. Brit. India 7: 33. 1896.

Caespitose annuals. Culms 10–50 cm long, decumbent; nodes pubescent, lower nodes rooting. Leaves mostly caudate; sheaths 2.5–3.5 cm long, glabrous, margin ciliate; ligules hairy; blades 1–5 × 0.6–1 cm, linear-lanceolate, margin scabrid, apex acuminate. Racemes 5–12; 1–4 cm long, spreading. Spikelets 2–2.25 × 0.8–1 mm, ovate-elliptic, pedicels with white bristles. Lower glume 0.5–0.8 mm long, obovate, membranous, faintly 3-nerved, apex truncate-rounded. Upper glume 1.5–2.25 × 0.6–1 mm, chartaceous, 5-nerved, margin inflexed, apex acute. Lower lemma 2–2.5 × 0.6–1 mm, ovate, membranous, 5–7-nerved, apex acute. Lower palea 1.5–2 mm long, elliptic, membranous, 2-keeled, apex acute. Upper lemma c. 1.5 × 1 mm, elliptic coriaceous, abaxially rugulose, 5-nerved, apex mucronate. Upper palea 1.5 × 0.6–0.8 mm, elliptic, coriaceous, abaxially rugose, 2-keeled, margins involute, 2-nerved, apex rounded. Lodicules 2. Stamens 3. Caryopsis 0.8–1 × 0.5–0.7 mm, elliptic.

Fl. & Fr.: May–Nov.

Distrib.: Common in marshy areas, in the shade of bushes and along the water courses.

Exsicc.: Adilabad District: Jaipur RF, GO & PVP 4959 (SKU); Mahabubnagar District: Bhavani Sagar, 06.08.2019, SNR 8626 (BSID); Suryapet District: Moosi Project, 27.10.2019, SNR 8758 (BSID); Warangal District: Regional Agricultural Research Station-Warangal, 26.03.2021, SNR 8982, 8992 (BSID); 28.03.2021, SNR 012023 (BSID).

Note: It can be identified by its compactly arranged spikelets on the spreading racemes.

9. *Urochloa setigera* (Retz.) Stapf, Fl. Trop. Africa 9: 598. 1920; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 440. 2020. *Brachiaria setigera* (Retz.) C.E. Hubb. in Hooker's Icon. Pl.: sub t. 3363. 1938; Bor, Grasses Burma, Ceylon, India & Pakistan 286. 1960. *Panicum setigerum* Retz., Observ. Bot. 4: 15. 1786; Hook.f., Fl. Brit. India 7: 36. 1896.; C.E.C.Fisch. in Gamble, Fl. Madras 1775. 1934.

Caespitose perennials; stoloniferous. Culms 40–130 cm high, trailing; nodes bearded, lower nodes rooting. Leaves basal and caudate; sheaths 6–12 cm long, ribbed, pubescent, margins ciliate; ligules membranous, apex ciliate; blades 2–8 × 0.8–1.5 cm, broadly ovate-lanceolate, base rounded. Panicle short, 4–13 cm long. Racemes 1.5–6.5 cm; rachis triquetrous, margin scabrid. Spikelets 3–3.5 × 1–1.5 mm, ovate, paired. Lower glume 0.5–0.8 × 0.4–0.6 mm, broadly ovate, chartaceous, 3-nerved, margin pubescent, apex acute. Upper glume 3–3.5 × c. 1 mm, lanceolate, chartaceous, 9-nerved, pubescent, margins hispid, apex acuminate. Florets 2; lower male, upper bisexual. Lower lemma 2.5–3.5 × c. 1.3 mm, lanceolate, chartaceous, 5-nerved, apex acute. Lower palea 2.5–3 × c. 1 mm, elliptic, membranous, 2-nerved, 2-keeled, apex acute. Upper lemma 1.5–2 × c. 1 mm, oblong, subcoriaceous, transversely rugulose, apex shortly mucronate.

Upper palea c. 2×1 mm, elliptic, margin inflexed, apex rounded. Lodicules 2. Stamens 3. Caryopsis c. 1.5×1 mm, broadly elliptic.

Fl. & Fr.: Aug.–Dec.

Distrib.: Occasionally in paddy fields; good fodder grass.

Exsicc.: Nalgonda District: Mailapuram, BRA 005072 (BSID).

Note: Distinguished from *U. panicoides* by its robust habit and longer leaves.

10. *Urochloa trichopus* Stapf, Fl. Trop. Afr. [Oliver et al.] 9(4): 589. 1920; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 440. 2020. *Brachiaria stolonifera* Gooss., Bull. Misc. Inform. Kew 1934(5): 195 (1934). *Eriochloa trichopus* Hochst. ex Benth., J. Linn. Soc., Bot. 19: 89. 1881. *Urochloa mosambicensis* (Hack.) Dandy, J. Bot. 69: 54. 1931. *Panicum trichopus* Hochst., Flora 27(1): 254. 1844.

Plate 113

Caespitose perennial. Culms 30–150 cm, high, terete, erect; nodes pubescent, lower nodes rooting; internodes 5–20 cm long, terete, pubescent. Leaves basal and caudate; leaf sheaths 10–26 × 1–2 cm, terete-keeled, hirsute, margin serrate; ligule ciliate, 1.5–2.5 mm long; leaf blades, linear-lanceolate, 5–40 × 1–1.5 cm, base amplexicaul keeled, margin ciliate and wavy at base, apex acuminate, both surface hairy, mid nerve prominent on abaxial surface. Inflorescence 10–38 cm long, terminal and axillary; exerted from sheath; racemes 6–8, 3–9 × 0.4–0.6 cm, alternate, peduncle hairy; spikelets paired; arranged on abaxial side, 2 rows; rachis triquetrous, angles serrulate; hispid and bristly; pedicels 0.2–0.5 mm long, bristly. Spikelets 4–5 × 1.5–2.3 mm, ovate-elliptic, hirsute, apex beaked. Lower glume 3–3.5 × 1–1.3 mm, elliptic-lanceolate, coriaceous, membranous, 3-nerved, prominent on abaxial surface, base hirsute, margins inrolled, apex truncate-lacerate, 1–2 stiff hairs (colour less) on the mid nerve of abaxial surface, 2–2.5 mm long. Upper glume 4.5–5 × 1.5–2.2 mm, ovate, chartaceous, 7-nerved, nerves are joined at the apex, hispid on abaxial surface, margins entire, inrolled, acuminate at apex. Florets 2; lower floret barren or male (3–4 stamens); upper floret bisexual (3 stamens) or female. Lower lemma 4–4.5 × 2–2.5 mm, ovate, chartaceous, 3-nerved, 2-keeled, densely hirsute on keels, light violet in colour, sparsely hairy on dorsal surface, margins inrolled, acuminate at apex. Lower palea 3–3.7 × 2–2.8 mm, ovate, chartaceous, hyaline, 2-nerved, 2-keeled, sparsely hairy and flat on dorsal surface, acuminate at apex. Lodicules 2; 0.1–0.2 mm long. Stamens 3–4; 2–2.5 × 0.3–0.4 mm. Upper lemma 2–2.5 × 1.3–1.5 mm, ovate, coriaceous, 3–5 nerved, 2-keeled at base and rugose on dorsal surface, margins inrolled; mucronate at apex, 0.6–0.8 mm long, antorseously barbellate. Upper palea 2–2.3 × 1–1.4 mm, ovate, coriaceous, 2-nerved, 2-keeled, flat on dorsal surface, indurate, rounded at apex. Lodicules 2, 0.2–0.3 mm long. Stamens 3, 1.5–1.8 × 0.2–0.3 mm. Ovary 0.3–0.45 × 0.2–0.3 mm, oblong; stigma 0.9–1.3 mm long, plumose.

Plate 114(A-C)

Caespitose perennials. Culms 10–60 cm high, erect, slender; nodes glabrous. Leaves basal and caudine; sheaths 1.5–7 cm long, densely ciliate; ligules rim of hairs; blades 1.5–10 × 0.2–0.9 cm, linear, hirsute, apex acuminate. Panicles 2–15 cm long, branches effuse-compact. Spikelets 1.5–2 × 1.5–2 mm, globose. Lower glume 1.5–2 × 1.3 mm, ovate, glabrous-hirsute, apex obtuse. Upper glume 2–2.5 × 1–1.2 mm, ovate, above setosely hirsute, 5-nerved, apex rounded. Florets 2. Lower lemma 2–2.4 × 1–1.3 mm, elliptic, membranous, 5–7-nerved, apex rounded. Palea c. 3 mm long, elliptic, membranous, 2-keeled, apex rounded. Upper lemma c. 2 × 1.5 mm, ovate-elliptic, coriaceous, abaxial surface pubescent, faintly 5–7-nerved, softly villous on back. Palea 1.8–2 × 1 mm, elliptic, pubescent, inflexed, apex rounded. Lodicules 2. Stamens 3. Caryopsis c. 1 mm long, orbicular.

Fl. & Fr.: Sep.-Nov.

Distrib.: Common in marshy areas, along margins of ponds, and in rice fields.

Exsicc.: Bhadravadi Kothagudem District: Sambayyagudem-Manugur, 24.03.2021, SNR 8952 (BSID).

2. Isachne pulchella Roth ex Roem. & Schult., Syst. Veg. 2: 476. 1817; Bor in Kew Bull. 1952: 321. 1952 & Grasses Burma, Ceylon, India & Pakistan. 3: 582. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 385. 2020.

Plate 114(D-S)

Solitary annual; stoloniferous. Culms 10–25 cm high, terete, erect or prostrate; lower nodes rooting. Leaves basal and caudine; sheaths 0.4–2.5 cm long, terete, glabrous, margin ciliate; ligules fimbriate; blades 2–4.2 × 0.2–1 cm, ovate-lanceolate, glabrous, base rounded, apex acuminate. Panicles 2.5–5.5 cm long, spiciform. Pedicel 0.5–3 mm long. Spikelet 1.5–1.8 × 1–1.3 mm, elliptic. Lower glume 1–1.5 × 0.4–0.6 mm, broadly elliptic, membranous, glabrous, 7-nerved, apex obtuse. Upper glume 1.2–1.6 × 0.5–1 mm, broadly obovate, membranous, glabrous, 9-nerved, apex rounded. Florets 2; lower male, upper bisexual. Lower lemma 1.3–1.6 × 0.5–0.6 mm, elliptic, subcoriaceous, margins inflexed, glabrous, 5-nerved, apex obtuse. Lower palea 1.3–1.6 × 0.5–0.6 mm, elliptic, subcoriaceous, glabrous, 2-nerved, margins inflexed, apex obtuse. Lodicules 2. Stamens 3. Upper lemma 0.5–1 × 0.5–1 mm, orbicular, coriaceous, puberulous, margins inflexed, ciliate hairy, 3–5-nerved, apex obtuse. Upper palea 0.5–1 × 0.5–0.6 mm, elliptic-orbicular, coriaceous, glabrous, margin inflexed, 2-nerved, apex

Plate 115

Caespitose annuals. Culms 25–50 cm high, terete, slender, tubercle based hairy; nodes hairy. Leaves basal and caudate; sheaths villous; ligules a rim of hairs; blades 2–9 × 0.3–0.5 cm, linear-lanceolate, base narrow, tubercled hairy, apex acuminate. Panicles 4–10 cm long, contracted. Spikelets 2–3 × 0.4–0.8 mm, lanceolate, tubercle based hairy. Lower glume 1–1.5 × 0.2–0.4 mm, ovate, 3-nerved, densely hairy, apex acuminate. Upper glume 1–1.8 × 0.2–0.4 mm, ovate, chartaceous-membranous, 5-nerved, apex acuminate. Florets 2; lower male; upper bisexual. Lower lemma 0.5–0.9 × 0.2 mm, ovate-lanceolate, coriaceous, 3-nerved, apex acute. Lower palea 1–1.5 × 0.3–0.5 mm, elliptic, chartaceous, 2-nerved, 2-keeled, apex acute. Upper lemma 0.4–0.7 × 0.3 mm, subcoriaceous, 4-nerved, awn 5–7 mm long. Upper palea 0.5–0.8 × 0.2 mm, oblong, chartaceous-subcoriaceous, 2-nerved, 2-keeled, apex acute. Lodicules 2. Stamens 3. Caryopsis 0.2–0.4 × 0.2 mm, ovate.

Fl. & Fr.: Oct.–Dec.

Distrib.: Occasionally on rocky surfaces of Vikarabad and Rangareddy districts.

Exsicc.: Vikarabad District: Damagundam, 02.12.2019, SNR & KP 8918 (BSID); Rangareddy District: Hyderabad, MVR 02109 (HY).

Note: It can be easily distinguishable by its tubercle-based hairs on leaf.

2. Arundinella nervosa (Roxb.) Nees ex Hook. & Arn., Bot. Beechey Voy. 237. 1836; Hook. f., Fl. Brit. India 7: 70. 1896; Bor, Grasses Burma, Ceylon, India & Pakistan 424. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 324. 2020. *Holcus nervosus* Roxb., Fl. Ind. 1: 320. 1820.

Plate 116(A)

Solitary annuals. Culms 10–45 cm high, branched; nodes glabrous, lower

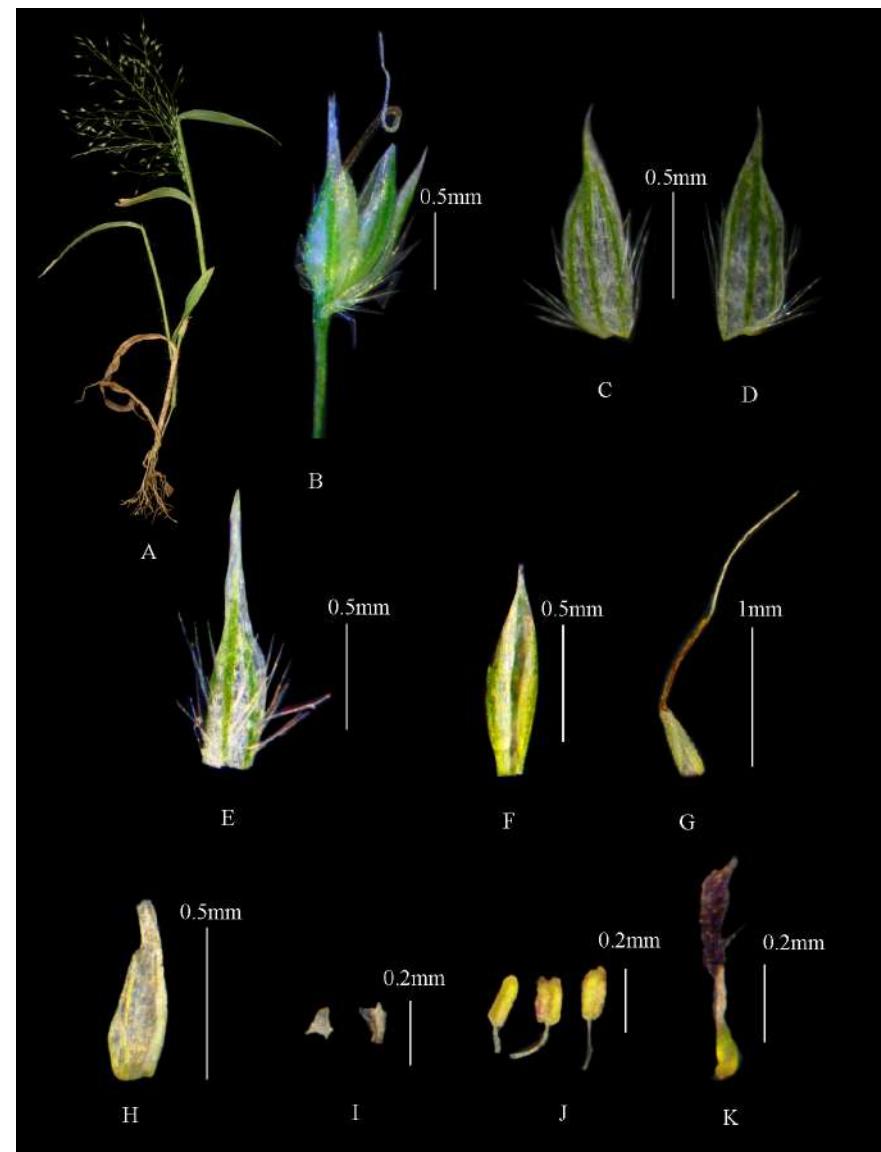

Plate 115. *Arundinella ciliata* (Roxb.) Nees ex Miq.: A. Habit; B. Spikelet; C&D. Abaxial and adaxial view of lower glume; E. Upper glume; F. Lower lemma; G. Upper lemma; H. Upper palea; I. Lodicules; J. Stamens; K. Pistil.

nodes rooting. Leaves basal and caudate; sheaths covered with bulbous based hairs; ligules membranous; blades 10–21 × 0.2–0.6 cm, surface pubescent. Panicles 10–26 cm long, branched. Spikelet 0.4–0.6 cm long, awned. Lower glume 3–3.5 mm long, membranous, 3-nerved, apex acuminate. Upper glume 4–6 mm long, elliptic, 5-nerved, apex straight beak. Florets 2; lower male, upper bisexual. Lower lemma 2–3.5 mm long, membranous, 3-nerved, apex obtuse. Lower palea 1.5–2 mm long. Upper lemma 1–1.8 mm long, elliptic-ovate, scaberulous, median

awn twisted with slender base between two setae, 4–7 mm long. Upper palea elliptic, coriaceous, 2-nerved, 2-keeled. Lodicules 2. Stamens 3.

Fl. & Fr.: Jun.–Nov.

Distrib.: Occasionally in forest hill slopes. Endemic-India (Andhra Pradesh, Goa, Himachal Pradesh, Karnataka, Kerala, Maharashtra, Meghalaya, Tamil Nadu).

Exsicc.: Nagarkurnool District: Mannanur Range, Pulliahpalli, 8.12.2020, ARK & BSS 4330 (TBGH); Vikarabad District: Anathagiri hills, 30.11.2019, SNR 8789 (BSID); 02.12.2019, SNR 8919, 8920 (BSID).

Note: Distinguishable from other species by its bulbous based hairs on leaf sheaths.

3. *Arundinella pumila* (Hochst. ex A. Rich.) Steud., Syn. Pl. Glumac. 1: 114. 1854; C.E.C.Fisch. in Gamble, Fl. Madras 1801. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 423. 1960; Pull., Fl. Telangana 3: 1175. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 725. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 324. 2020. *Acratherum pumilum* Hochst. ex A. Rich., Tent. Fl. Abyss. 2: 414. t. 100. 1851. *Arundinella tenella* Ness ex Steud., Syn. Pl. glum. 1: 115. 1854; Hook.f., Fl. Brit. India 7: 71. 1896.

Plate 116(B)

Caespitose annuals. Culms 10–55 cm high, erect, slender; nodes hairy. Leaves basal and caudine; sheaths 3–6 cm long, margin ciliate; ligules membranous, truncate; blades 2–18 × 0.5–1 cm, ovate-lanceolate, glabrous-sparingly hairy, apex acuminate. Panicles 13–20 cm long, lax, pyramidal, branches capillary. Spikelets 1.5–2 × 0.6–1 mm, ovate-lanceolate, pedicelled. Lower glume 1–1.5 × 0.4–0.6 mm, ovate, chartaceous-membranous, 3-nerved, apex acute. Upper glume 1.5–2 × 0.6 mm, chartaceous, 5-nerved, apex acuminate. Florets 2; lower male-neuter; upper bisexual. Lower lemma 1.5–2 mm long, ovate-lanceolate, chartaceous, 3-nerved, apex acute. Lower palea 1 × 0.3–0.5 mm, lanceolate, chartaceous, 2-nerved, 2-keeled, apex obtuse. Upper lemma 0.5–0.8 × 0.3 mm, ovate, coriaceous, lanceolate, awn c. 3 mm long; column slightly twisted. Upper palea 0.4–0.8 × 0.3 long, ovate, subcoriaceous, 2-nerved, 2-keeled, apex obtuse. Caryopsis 0.4–0.5 × 0.3 mm, elliptic-oblong.

Fl. & Fr.: Aug.–Dec.

Distrib.: Common throughout the state on old walls, along roadsides and hill slopes.

Exsicc.: Bhadradri Kothagudem District: Kinnerasani Wildlife Sanctuary, Jinkaladoddi, JS 9342 (BSID).

Note: It can be identified by its very slender culms, capillary branches and smaller spikelets.

4. *Arundinella setosa* Trin., Gram. Panic. 63. 1826; Hook.f., Fl. Brit. India 7: 70. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1801. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 424. 1960; Pull., Fl. Telangana 3: 1175. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 683. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 325. 2020. ‘*Pathioopa gaddi*’

Plate 116(C)

Plate 116. A. *Arundinella nervosa* (Roxb.) Nees ex Hook. & Arn.; B. *Arundinella pumila* (Hochst. ex A. Rich.) Steud.; C. *Arundinella setosa* Trin.

Caespitose perennials. Culms 15–65 cm high; nodes glabrous. Leaves basal and caudine; sheaths 3–6 mm long, tubercle based hairs, mouth pubescent; ligules fimbriate; blades 5–21 × 0.2–0.4 cm, lanceolate, hispid hairy, base rounded-truncate, apex attenuate. Panicles 8–15 cm long, branches lax. Spikelets 4–6 × 1 mm, lanceolate, glabrous. Lower glume 3–3.5 × 0.3–0.6 mm, ovate-lanceolate, chartaceous, 3-nerved, apex acuminate-aristate. Upper glume 4.5–5 × 0.5–0.6 mm, lanceolate, chartaceous, 5-nerved, apex aristate. Florets 2; lower male-neuter; upper bisexual. Lower lemma 3.5–4 × 0.5–1 mm, elliptic, chartaceous, 5-nerved, apex obtuse-emarginate. Lower palea 2.5–3 × 0.5–0.6 mm, elliptic, apex acuminate.

Upper lemma $2\text{--}3 \times 0.6\text{--}1$ mm long, ovate-lanceolate, membranous-coriaceous, granulate, 5-nerved, awn 5–10 mm long, with 2 setae. Upper palea $1.5\text{--}2 \times 0.2\text{--}0.6$ mm, oblong, membranous, 2-nerved, hyaline, apex obtuse. Lodicules 2. Stamens 3.

Fl. & Fr.: Aug.–Dec.

Distrib.: Occasional in Mahabubnagar, Rangareddy and Vikarabad Districts.

Exsicc.: Mahabubnagar District: Appapur, BSS & MSR 32229 (SKU); Rangareddy District: Hyderabad, 02110 (HY).

Note: This species is closely allied to *A. tuberculata* but can be distinguished by its glabrous and smaller spikelets.

5. Arundinella tuberculata Munro ex Lisboa in J. Bombay Nat. Hist. Soc. 5: 344. 1891; Hook.f., Fl. Brit. India 7: 69. 1896; Bor, Grasses Burma, Ceylon, India & Pakistan 425. 1960; Pull., Fl. Telangana 3: 1177. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 725. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 325. 2020. Annuals. Culms 10–50 cm high, decumbent; nodes hairy. Leaves basal and caudine; sheaths 1.5–7.5 compressed, tubercled based hairs; ligules a rim of hairs; blades 2–8.5 \times 0.3–0.6 cm, linear-lanceolate, tubercle based hairy, apex acuminate. Panicles 8–12 cm long, narrow. Spikelets 3.5–6 \times 1.5–2 mm, ovoid, hairy, awned. Lower glume 3–4 \times 1 mm, ovate, 3-nerved, densely hairy, apex acuminate. Upper glume 4–4.5 \times 1.3 mm, ovate, membranous, 5-nerved, hairy on nerves, apex acuminate (beak like). Florets 2; lower male-neuter; upper bisexual. Lower lemma 4–4.4 \times 0.5–1 mm, elliptic, coriaceous, apex obtuse-emarginate. Lower palea 3.5–4 \times 0.5–1 mm, lanceolate, 2-nerved, 2-keeled, apex acute. Upper lemma 2–2.5 \times 0.5–1 mm, lanceolate, crustaceous, abaxial surface scabrid, awn 11–14 mm long, two setae 2–2.5 mm long. Upper palea 2 \times 0.6 mm, ovate-elliptic, adaxial surface tuberculate, margin inflexed, 2-nerved, apex acute. Lodicules 2. Stamens 3. Caryopsis 1.5–2 \times 0.5 mm, ovate.

Fl. & Fr.: Nov.–Dec.

Distrib.: Occasionally in Vattavarlapally. Endemic-India (Andhra Pradesh, Goa, Gujarat, Karnataka, Kerala, Maharashtra, Telangana, Uttarakhand).

Exsicc.: Mahabubnagar District: Vattavarlapally, BSS & SKB 30573 (SKU).

Note: It is closely allied to *A. setosa* but can be distinguished by tubercle based hairy leaves and spikelets.

Garnotia Brongn.

World: c. 29 spp.; India: 12 spp., 1 var.; Telangana: 1 sp.

Garnotia tenella (Arn. ex Miq.) Janowski, Repert. Spec. Nov. Regni Veg. 17: 86. 1921; Pull., Fl. Telangana 3: 1142. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 725. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 376. 2020. *Berghausia tenella* Arn. ex Miq., Anal. Bot. Madras 1776. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 568. 1960.

Plate 117

Caespitose annuals. Culms 15–100 cm high, erect or geniculate; nodes villous. Leaves basal and caudine; sheaths 2–10 cm long, keeled, glabrous; ligules fimbriate; blades 5–22 \times 0.2–1 cm, linear-lanceolate, hispid, apex acute. Panicles

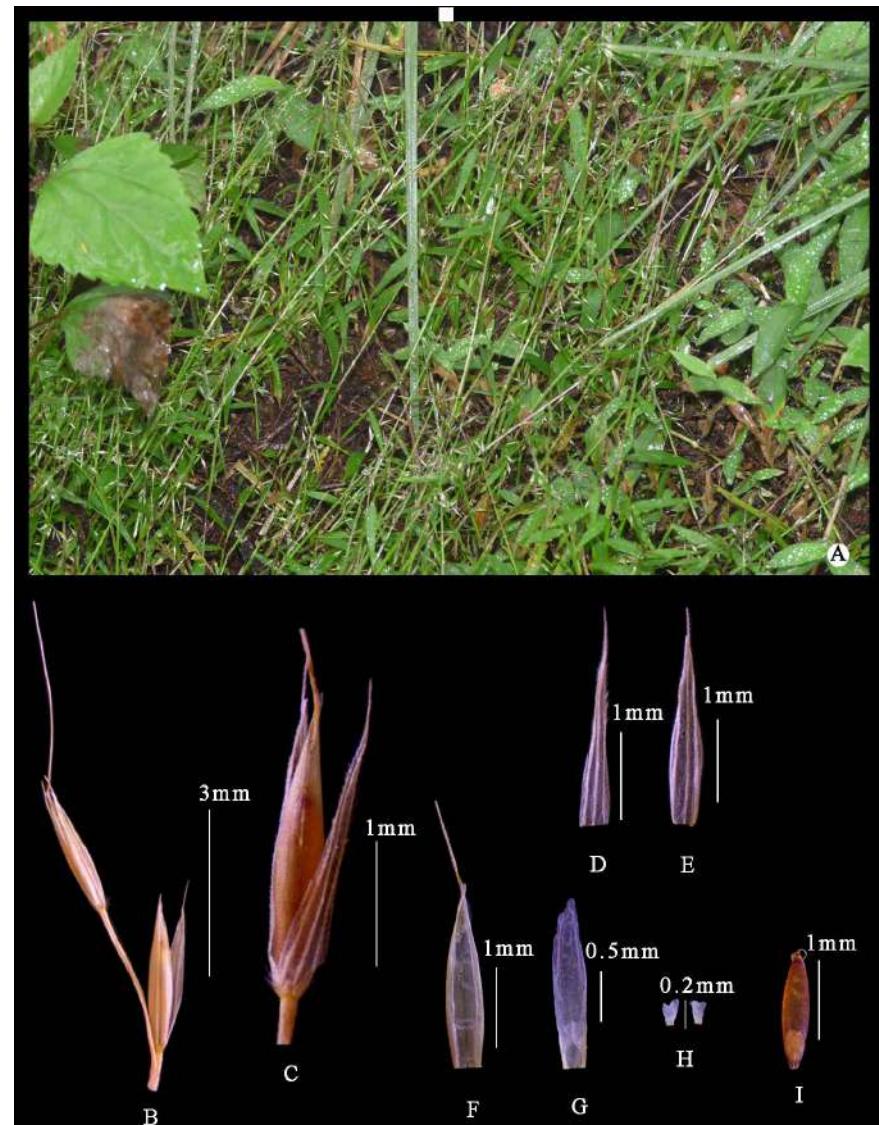

Plate 117. *Garnotia tenella* (Arn. ex Miq.) Janowski: A. Habitat; B&C. Spikelets; D. Lower glume; E. Upper glume; F. Lemma; G. Palea; H. Lodicules; I. Caryopsis.

4.5–28 cm long, lax or narrowly contracted, branches fascicled, scaberulous. Spikelets 2–3.5 \times 0.4–0.6 mm, lanceolate. Lower glume 2–3.5 \times 0.4–0.6 mm, lanceolate, membranous, 3-nerved, apex acuminate. Upper glume 2–3.5 \times 0.3–0.5 mm, lanceolate, membranous, apex acuminate. Lemma 2–3.5 \times 0.5 mm, lanceolate, 3-nerved, margin inflexed, apex notched, awn 5–15 mm long. Palea 1.5–2 \times 0.3 mm, ovate-lanceolate, chartaceous, margin inflexed, apex acute. Lodicules 2. Stamens 3. Caryopsis 1.2 \times 0.4 mm, elliptic.

Fl. & Fr.: Aug.–Dec.

Distrib.: Occasional along roadsides, in forest clearings and on old moist walls.

Exsicc.: Mahabubnagar District: Umamahewaram, 08.02.1998, SRS 109137 (BSID); 26.11.1999, SRS 111376 (BSID); Mallayalodhi, 21.10.2016, LR & JS 7383 (BSID); Warangal District: Regonda, CSR 1088 (KU).

Note: It can be distinguished by its lax or contracted panicle bearing 5–15 mm long awned narrowly ovate spikelets.

TRIBE: ANDROPOGONEAE

Key to the genera

- 1a. Spikelets unisexual ... 2
- 1b. Spikelets bisexual ... 4
- 2a. Female spikelets completely enclosed in a bead like utricle ... *Coix*
- 2b. Female spikelets not enclosed in a bead like utricle ... 3
- 3a. Female and male spikelets on separate racemes or spikes, female axillary, male terminal ... *Zea*
- 3b. Female and male spikelets on same raceme, female below and male above ... *Polytoca*
- 4a. Spikelets solitary ... 5
- 4b. Spikelets paired or triads ... 6
- 5a. Spikelets awned; rachis not fragile at nodes ... *Dimeria*
- 5b. Spikelets unawned; rachis fragile at nodes ... *Ophiuros*
- 6a. Inflorescence without an elongated central axis; racemes solitary, digitate or subdigitate ... 7
- 6b. Inflorescence with an elongated central axis, paniculate or pseudopaniculate ... 23
- 7a. Racemes solitary ... 8
- 7b. Racemes more than 2 ... 13
- 8a. Sessile spikelets globose, many pitted on dorsal surface ... *Hackelochloa*
- 8b. Spikelets not as above ... 9
- 9a. Pedicels fused to internodes, sometimes only in lower half or tip; spikelets unawned ... *Rottboellia*
- 9b. Pedicels free; spikelets awned ... 10
- 10a. Spikelets of each pair similar; joints, pedicels and callus long bearded ... *Pogonatherum*
- 10b. Spikelets of each pair dissimilar; joints, pedicels and callus not as above ... 11
- 11a. Joints and pedicels flat, clavate, three ridged on one side; groups of spikelets easily disarticulating; upper glume awned ... *Sehima*
- 11b. Joints and pedicels not as above; upper glume unawned ... *Heteropogon*
- 12a. Spikelets lower 2 to 3 pairs dissimilar, sessile, male; upper pairs similar, both pedicelled; lower glume with transverse row of hair tufts ... *Lophopogon*
- 12b. Spikelets and lower glume not as above ... 13
- 13a. Spikelets of each pair similar ... 14
- 13b. Spikelets of each pair dissimilar ... 16
- 14a. Lower glume of sessile spikelet with a median furrow on dorsal side; spikelets seldom conspicuously hairy ... *Microstegium*
- 14b. Lower glume of sessile spikelet without a median furrow on dorsal side; spikelets conspicuously villous ... 15
- 15a. Upper lemma two-toothed, awned ... *Eulaliopsis*
- 15b. Upper lemma deeply cleft, awned in the cleft ... *Eulaia*
- 16a. Pedicels and joints with a translucent median line ... *Bothriochloa*
- 16b. Pedicels and joints without a translucent median line ... 17
- 17a. Upper lemma of sessile spikelet with awn basal or sub-basal ... *Arthraxon*
- 17b. Upper lemma of sessile spikelet with awn terminal or in sinus of upper cleft ... 18

- 18a. Pedicel barren ... *Apocoris* ... 19
- 18b. Pedicel bearing a spikelet
- 19a. Lower floret of sessile spikelet male or very rarely barren, but always with a palea; lower glume of sessile spikelet with nodules or wrinkles or when smooth ... 20
- 19b. Lower floret of sessile spikelet barren and epaleate; lower glume of sessile spikelet not with nodules or wrinkles ... 21
- 20a. Pedicelled spikelet well developed; lower glume often transversely wrinkled, furrowed or with nodules on margins ... *Ischaemum*
- 20b. Pedicelled spikelet reduced to a linear curved pedicel, lower glume covered all over with transverse ridges, broken up into warts or teeth ... *Thelepogon*
- 21a. Lower glume of sessile spikelet dorsally 2-keeled at least towards apex; upper lemma of sessile spikelet well developed, cleft at apex with awn in sinus ... 22
- 21b. Lower glume of sessile spikelet dorsally rounded; upper lemma of sessile spikelet reduced to hyaline base of awn ... *Dichanthium*
- 22a. Racemes solitary, terminal, branched; pedicelled spikelet male, neuter or suppressed ... *Diectomis*
- 22b. Racemes 2-nate, digitate, usually all pairs of spikelets heterogamous and all sessile spikelets hermaphrodite ... *Andropogon*
- 23a. Racemes subtended by an involucre of 2 opposite pairs of one flowered homogamous spikelets ... 24
- 23b. Racemes not subtended by an involucre of 2 opposite pairs of one flowered homogamous spikelets ... 25
- 24a. Involucral spikelets pedicellate, deciduous; callus of bisexual spikelets not pointed ... *Iselema*
- 24b. Involucral spikelets sessile, persistent; callus of bisexual spikelets usually pointed ... *Themeda*
- 25a. Rachis joints and pedicels stout, thickening upwards ... *Apluda*
- 25b. Rachis joints and pedicels slender ... 26
- 26a. Spikelets of a pair similar; both bisexual ... 27
- 26b. Spikelets of a pair dissimilar; only one bisexual ... 29
- 27a. Spikelets awned ... *Spodiopogon*
- 27b. Spikelets unawned ... 28
- 28a. Panicle contracted and silvery white; rachis of raceme tough and not breaking up, both spikelets pedicelled ... *Imperata*
- 28b. Panicle not as above, if contracted not silvery white; rachis of raceme not tough, breaking up, one spikelet pair sessile ... *Saccharum*
- 29a. Pedicels and joints with a median translucent line, branches capillary ... *Capillipedium*
- 29b. Pedicels and joints without a median translucent line ... 30
- 30a. Panicle interrupted by spathes ... 31
- 30b. Panicle not interrupted by spathes ... 32
- 31a. Racemes solitary in upper axils forming a false panicle; pedicelled spikelets barren, reduced to glumes; glumes aristate ... *Schizachyrium*
- 31b. Racemes 2 or more together; pedicelled spikelets male, well developed; glumes not aristate ... *Cymbopogon*
- 32a. Lower glume of sessile spikelet laterally compressed; spikelets all in threes, one sessile and two pedicelled ... *Chrysopogon*
- 32b. Lower glume of sessile spikelet dorsally compressed; spikelets the upper ones in threes and rest paired, or all paired ... 33
- 33a. Spikelets paired throughout; glumes of sessile spikelets subcoriaceous ... 34
- 33b. Spikelets in threes towards apex and paired elsewhere; glumes of sessile spikelets firmly cartilaginous ... *Pseudosorghum*

- 34a. Culm nodes glabrous or pubescent; Sessile spikelet lemma awns absent or short;
Pedicelled spikelets 2-7 mm long ...**Sorghum**
 34b. Culm nodes bearded with stiff hairs; Sessile spikelet lemma awns 2-9 cm long;
Pedicelled spikelet 5-18 mm long ...**Sarga**

Andropogon L.

World: c. 127 spp.; India: 8 spp., 1 var.; Telangana: 1 sp.

Andropogon pumilus Roxb., Fl. Ind. 1: 277. 1820; Hook.f., Fl. Brit. India 7: 170. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1753. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 93. 1960; Pull., Fl. Telangana 3: 1064. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 678. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 319. 2020. 'Goudal'

Plate 118

Caespitose annuals. Culms 12-33 cm high, erect or geniculate; nodes glabrous. Leaves basal and caudine; sheaths 2-5 cm long, keeled, ribbed; ligules membranous; blades 2-14 x 0.2-0.3 cm, linear, glabrous, apex acuminate. Racemes 2; 1.5-2.5 cm long, digitate, spatheate, spathes 2-2.5 cm long. Spikelets 2, sessile and pedicelled. Sessile spikelets 3-4.45 x 0.5-0.8 mm, oblong; callus glabrous. Lower glume 3-3.5 x 0.5-1 mm, lanceolate, abaxial surface flat, 2-nerved, 2-keeled, keel scabrid, margin inflexed, apex bifid. Upper glume 4-4.5 x 0.5-0.8 mm, lanceolate, 1-keeled, keel scabrid, rugose, aristate 0.5-0.7 mm long. Florets 2; lower barren; upper bisexual. Lower lemma 2-2.8 mm long, linear-lanceolate, chartaceous, hyaline, apex acuminate. Lower palea c. 1 mm long, membranous, apex acute. Upper lemma 2-2.6 x 0.5 mm, linear, chartaceous, margin infolded, apex bifid, awn from sinus, 16-23 mm long. Pedicelled spikelet 2-3.8 mm long, lanceolate. Pedicels with ciliate margins. Lower glume c. 3.5 mm long, ovate-lanceolate, chartaceous, 1-nerved, apex acuminate. Upper glume c. 3.5 mm long, lanceolate, chartaceous, 3-nerved, apex acuminate. Lemma hyaline. Upper lemma male.

Fl. & Fr.: Aug.-Dec.

Distrib.: Common throughout the State.

Exsicc.: Adilabad District: Choutkoor, TP & MSG 11928 (SKU); Rangareddy District: Palugutta, 30.11.2019, SNR 8774 (BSID), Hyderabad, MVR 02101 (HY); Vikarabad District: Ananthagiri hills, 21.09.2019, SNR 8717 (BSID).

Apluda L.

World: 1 sp.; India: 1 sp.; Telangana: 1 sp.

1. Arthraxon castratus (Griff.) V. Naray. ex Bor, Fl. Assam 5: 376. 1940; Bor, Grasses Burma, Ceylon, India & Pakistan 99. 1960; Welzen in Blumea 27 (1): 263. 1981; Pull., Fl. Telangana 3: 1072. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 725. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 322. 2020. *Andropogon castratus* Griff., Not. Pl. Asiat. 3:89. 1851. *Arthraxon rudis* (Steud.) Hochst. in flora 39: 188. 1856; C.E.C. Fisch. in Gamble, Fl. Madras 1728. 1934.

Caespitose perennials. Culms 40–55 cm high; decumbent; nodes glabrous, lower nodes rooting. Leaves basal and caudine; sheaths 2–3.5 cm long, pilose-hirsute, tubercle based hairs, margin ciliate; ligules hairy; blades 2–8 × 0.5–1.5 cm, ovate-lanceolate, margins bulbous based hairy, sparsely pilose on surfaces, apex acuminate. Racemes 5–6.5 cm long. Spikelets paired. Sessile spikelets 5.5–6.5 × 1.5–1.7 mm, ovate, appressed pubescent; callus bearded. Lower glume 5.5–6 × 1–1.2 mm, lanceolate, subcoriaceous, rounded on back, apex acute, 7-nerved, 2-keeled; keels spinulose. Upper glume 5.5–6.2 × 1–1.2 mm, oblong-cymbiform, 3-nerved, apex erose, keeled; keels spinulose. Florets 2; lower neuter, upper bisexual. Lower lemma 4–4.5 × 0.8–1 mm, oblong, membranous, margins pilose, apex acute. Lower palea absent. Upper lemma 3–5 × 0.6–0.8 mm, lanceolate, membranous, 3-nerved, margins pilose, apex acute; awn from back near basal, 10–14 mm long, geniculate, barbellate. Palea 1.5–2 × 0.6–0.8 mm, oblong, membranous, margins pilose, apex acute. Anthers 3. Caryopsis 1.8–2 mm long. Pedicelled spikelets reduced to a stipe, 1.5–3 mm long, at times well developed.

Fl. & Fr.: Nov.–Mar.

Distrib.: Occasional on higher elevations.

Exsicc.: Vikarabad: Ananthagiri hills, 2.12.2019, SNR 12058 (BSID).

Note: It can be identified by pedicelled spikelets reduced and lower glume speculate.

2. *Arthraxon depressus* Stapf ex C.E.C.Fisch. in Bull. Misc. Inform. Kew 1933: 349. 1933 & in Gamble, Fl. Madras 3: 1728. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 99. 1960; Pull., Fl. Telangana 3: 1072. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 725. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 322. 2020.

Perennials. Culms 60–90 cm high, geniculate; nodes glabrous. Leaves caudine; sheaths 2–2.5 cm, long, terete; ligules scarious, sparsely hairy; blades 2–5 × 1–2.5 cm, ovate or oblong-lanceolate, margins tuberculate, pilose, base amplexicaul. Racemes 2–4; 4–6 cm long. Joints densely ciliate, compressed. Sessile spikelets 6.5–7 × 1.5–1.8 mm, callus bearded. Lower glume 5–6 × 1–1.3 mm, linear-lanceolate, coriaceous, 7-nerved, keeled; keels spinulose, hispid. Upper glume 5–6.1 × 1–1.5 mm, lanceolate, 3-nerved, keeled, apex acuminate. Florets 2; lower neuter, upper hermaphrodite. Lower lemma 4.5–5 × 0.4–0.5 mm, lanceolate, hyaline. Lower palea absent. Upper lemma 4–4.3 mm long, apex bifid, awned; awn from back near the base, 5–8 mm long, geniculate. Upper palea 2–3 × 0.1–0.2 mm, oblong, hyaline. Anthers 3. Caryopsis ovoid-ellipsoid. Pedicelled spikelet reduced to a stipe, 2–3 mm long, ciliate.

Fl. & Fr.: Sep.–Dec.

Distrib.: Occasionally in Karimnagar.

Exsicc.: Karimnagar District: Shanigaram, AHN 960955 (KU).

Note: It is closely similar to *A. castratus* but differs by its smooth lemma.

3. *Arthraxon hispidus* (Thunb.) Makino, Bot. Mag. (Tokyo) 26: 214. 1912; C.E.C.Fisch. in Gamble, Fl. Madras 1728. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 99. 1960; Welzen in Blumea 27 (1): 266. 1981; Pull., Fl. Telangana 3: 1072. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 681. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 322. 2020. *Phalaris hispida* Thunb., Fl. Jap. 44. 1784. *Arthraxon quartinianus* (A. Rich.) Nash, N. Amer. Fl. 17(2): 99. 1912; C.E.C.Fisch. in Gamble, Fl. Madras 1728. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 102. 1960. *Alectoridia quartinianus* A. Rich., Tent. Fl. Abyss. 2: 448. t. 102. 1851.

Plate 120

Mat-forming, annuals. Culms 10–50 cm high, erect or prostrate, slender; nodes thickened, lower nodes rooting. Leaves caudine; sheaths 1–2.5 cm long, keeled, glabrous-hispid, terete, base margins ciliate; ligules membranous, apex fimbriate; blades 1–4.5 × 0.4–0.5 cm, ovate-lanceolate, margins tubercle based hairy, glabrous or hairy, apex acute. Racemes 1.5–3 cm long, joints ciliate. Spikelets paired, 3.5–4 × 0.5–0.6 mm, solitary. Lower glume 3–4 × c. 0.5 mm, ovate, scabrid on back, 7–9-nerved, margins minutely toothed, apex acuminate. Upper glume 2.8–3 × 0.4–0.5 mm, ovate, chartaceous, hispid on back, apex acuminate, 3-nerved, 1-keeled; keels scabrid. Florets 2; lower neuter; upper hermaphrodite. Lower lemma 2–3 × 0.5–0.6 mm, lanceolate, membranous, hyaline, apex acute. Lower palea absent. Upper lemma 1.8–3 × 0.4–0.5 mm, lanceolate, chartaceous, awned; awn basifixed, 7–10 mm long, geniculate, barbellate. Upper palea absent.

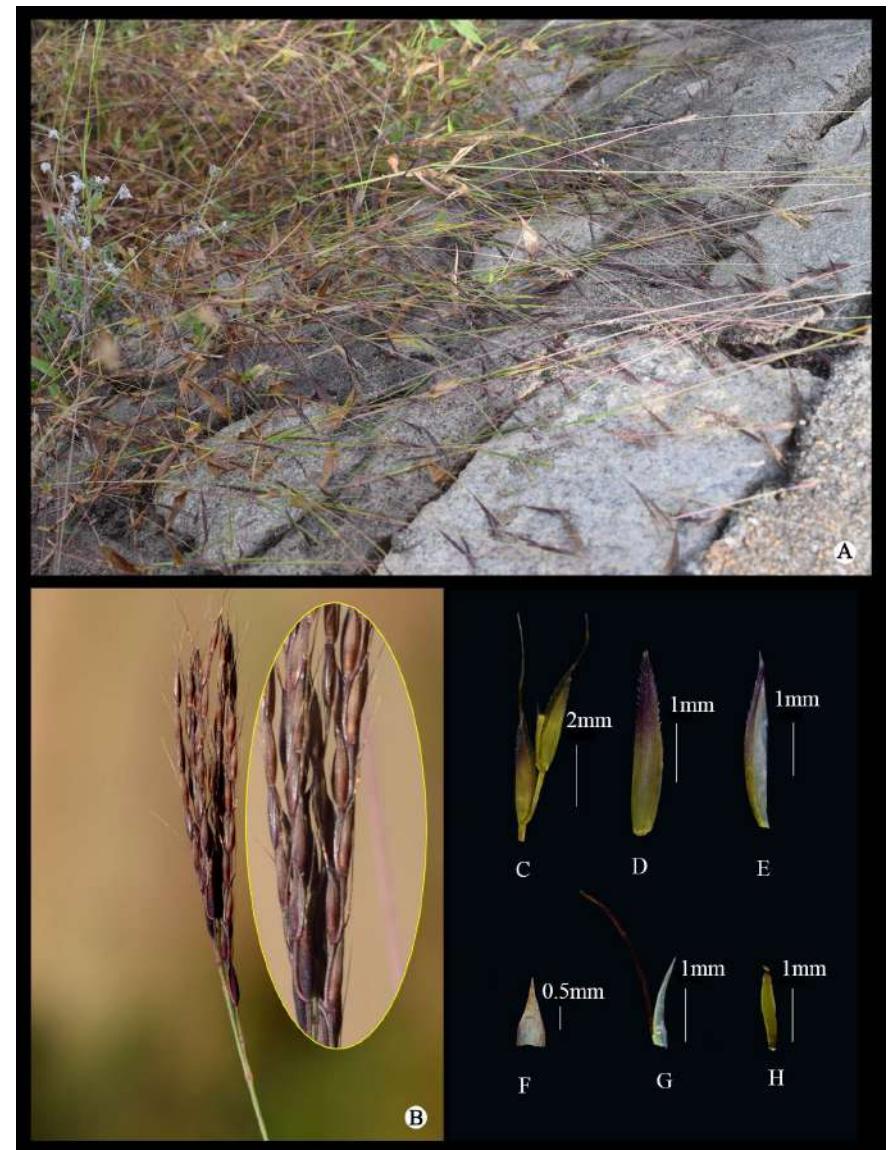

Plate 120. *Arthraxon hispidus* (Thunb.) Makino: A. Habitat; B. Inflorescence; C. Spikelets; D. Lower glume; E. Upper glume; F. Lower lemma; G. Upper lemma; H. Caryopsis.

Anthers 2. Caryopsis 1.5–2 mm long, linear-oblong, Pedicelled spikelet absent.

Fl. & Fr.: Sep.–Dec.

Distrib.: Commonly found in shady habitats in forests, fallow lands and along banks of streams.

Exsicc.: Adilabad District: Birsaipet-Range, Rampur-Beat, APS 4010 (BSID); Vikarabad District: Ananthagiri hills, 30.11.2019, SNR 8785, 8786 (BSID); Damagundam, 02.12.2019, SNR 8911 (BSID).

Note: It can be easily identified by the absence of pedicelled spikelets.

4. Arthraxon lanceolatus (Roxb.) Hochst., Flora 39: 188. 1856; Hook.f., Fl. Brit. India 7: 143. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1728. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 100. 1960; Welzen in Blumea 27 (1): 281. 1981; Pull., Fl. Telangana 3: 1073. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 683. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 322. 2020. *Andropogon lanceolatus* Roxb., Fl. Ind. 1: 262. 1820. *Arthraxon prionodes* (Steud.) Dandy, Fl. Pl. Sudan 399. 1956*.

***Note:** *Arthraxon prionodes* was treated as valid species by World Grass Data Base (2020) & POWO (2020) but, while revising the genus *Arthraxon*, Welzen (1981) treated it under the var. *lanceolatus* as synonym, present work followed the same.

Key to the varieties

- | | |
|---|---------------------------------|
| 1a. Broad based spicules on marginal and submarginal nerves | ... 4a. var. <i>lanceolatus</i> |
| 1b. Broad based spicules on all nerves | ... 4b. var. <i>echinatus</i> |

4a. var. *lanceolatus*

Plate 121

Caespitose perennials. Culms 55–70 cm high, geniculate; nodes pubescent, lower nodes rooting. Leaves cauline; sheaths 1–3.5 cm, ribbed, bulbous based hairy, margin ciliate; ligules hairy; blades 1–4.5 × 0.3–1.3 cm, ovate-lanceolate, puberulous, margins bulbous based hairy. Racemes 2.5–6 cm long, branched. Spikelets binate. Sessile spikelets 4–6 × 0.5–0.6 mm, lanceolate; callus bearded. Lower glume 4–5 × 0.5–0.6 mm, oblong-lanceolate, subcoriaceous, margins inflexed, 5–7-nerved, 2-keeled; marginal and submarginal nerves with broad based (pectinate) spicules. Upper glume 4–4.5 × 0.6–0.8 mm, elliptic, chartaceous, obscurely nerved, apex acute-obtuse. Florets 2; lower neuter, upper hermaphrodite. Lower lemma 4 × 0.4–0.6 mm, linear, chartaceous, apex acute. Lower palea absent. Upper lemma 3–3.3 × 0.5–0.6 mm, linear, membranous, apex bifid, awned; awn from just below the base, 8–12 mm long, geniculate, smooth. Upper palea absent. Anthers 3. Caryopsis 2.5–3 × 0.5 mm, oblong. Pedicelled spikelets 4.5–5 × 0.6–0.8 mm, linear-lanceolate. Lower glume 3.5–4 × 0.4–0.7 mm, oblong, chartaceous, apex acuminate. Upper glume 3–3.5 × 0.6–0.8 mm, oblong, margin ciliate, apex acute. Florets 2, lower barren, upper hermaphrodite. Lower lemma c. 4 mm long, oblong, hyaline, apex acute. Lower palea absent. Upper lemma 1.5–2 × 0.2–0.5 mm, oblong, apex acute. Upper palea absent.

Fl. & Fr.: Aug.–Dec.

Plate 123. *Arthraxon lancifolius* (Trin.) Hochst.: A&B. Basal sheath with habit; C. Inflorescence; D. Sessile and pedicelled spikelets; E. Lower glume of sessile spikelet; F. Upper glume of sessile spikelet.

Mat-forming; annuals. Culms 10–45 cm high, creeping; nodes softly villous, lower nodes rooting. Leaves cauline; sheaths 1–1.3 cm long, margin ciliate, keeled; ligules membranous; blades 0.5–3.5 × 0.2–0.8 cm, ovate-lanceolate, villous, base rounded, margins hairy, apex acuminate. Racemes 2.5–3 cm long. Joints c. 1 cm long, densely hairy. Sessile spikelets 2–2.9 × 0.4–0.5 mm, linear, apex acuminate; callus hairy. Lower glume 2–3 × 0.4–0.5 mm, lanceolate, chartaceous, back rounded, margin flat, apex shortly aristate, 5-nerved, 2-keeled; keels scabrid.

Upper glume 2–3 × 0.3–0.4 mm, lanceolate, chartaceous, 1-keeled, apex aristate. Florets 2; lower neuter, upper hermaphrodite. Lower lemma 0.6–0.8 × 0.2–0.3 mm, lanceolate, membranous, hyaline, apex acuminate. Lower palea absent. Upper lemma 1–1.3 × 0.2–0.4 mm, lanceolate, apex notched, awned; awn from just above base, 4.5–6 mm long, geniculate, barbellate. Anthers 2. Caryopsis 1–2.5 mm long, terete. Pedicelled 1.5–2.5 × 0.3–0.4 mm, lanceolate. Lower glume c. 1.5 × 0.5 mm, lanceolate-oblong, chartaceous, apex acuminate, 2-lobed. Lower palea absent. Upper glume reduced, c. 1 mm long.

Fl. & Fr.: Aug.–Dec.

Plate 124(A)

Caespitose, perennials, rhizomatous. Culms 45–200 cm high; nodes hairy. Leaves basal and caudine; sheaths glabrous; ligules membranous; blades 12–70 × 0.2–0.9 cm, linear-lanceolate, sparsely hairy, apex acute. Panicles 4.5–18 cm long, pyramidal, branched, whorled racemes; callus bearded. Sessile spikelets 4–4.5 mm long, elliptic. Lower glume 3.5–4.6 × 1–1.3 mm, ovate-lanceolate, chartaceous, hairy in the lower half, faintly 9-nerved, pitted or not. Upper glume 3–3.5 × 1.3 mm, lanceolate, 3–5-nerved. Lower florets neuter, upper bisexual.

Lower lemma 3–4 mm long, lanceolate, membranous, hyaline. Lower palea absent. Upper lemma 1–2.5 mm long, stipitate, awn 11–18 mm long. Upper palea absent. Stamens 3. Caryopsis oblong. Pedicelled spikelets 3–4 mm long, elliptic-lanceolate. Lower glume 3.5–4 mm long, elliptic-lanceolate, 9-nerved, pitted or not, margins inflexed. Upper glume 3–3.6 mm long, lanceolate, chartaceous, villous, 3–5-nerved, margins hairy. Lower florets neuter. Upper florets male or neuter similar to sessile spikelet. Upper lemma c. 2.5 mm long.

Fl. & Fr.: Aug.–Jan.

Distrib.: Occasional in river beds, roadsides and in deciduous forests.

Exsicc.: Adilabad District: Alampalli, TP & PVP 4169 (SKU); Bhadravadi Kothagudem District: Kinnerasani Wildlife Sanctuary, 09.01.2019, SNR 8573, 9593 (BSID); Mulugu District: Eturunagam, 24.03.2021, SNR 8963 (BSID); Rangareddy District: Manasahills-Rajendranagar, 24.08.2016, SNR 8523 (BSID); Suryapet District: Undrugonda, 27.10.2019, SNR 8761 (BSID); Vikarabad District: Damagundam, 02.12.2019, SNR 8904 (BSID).

2. Bothriochloa insculpta (Hochst. ex A. Rich.) A. Camus in Ann. Soc. Linn. Lyon 76: 165. 1931; Bor, Grasses Burma, Ceylon, India & Pakistan 107. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 327. 2020. *Andropogon insculptus* Hochst. ex A. Rich., Tent. Fl. Abyss. 2: 458. 1850. *Dichanthium insculptum* (Hochst. ex A. Rich.) Clayton in Kew Bull. 32: 3. 1977; Deshp., Fasc. Fl. India 15: 15. 1984.

Caespitose perennials. Culms 12–50 cm high, erect-decumbent; nodes bearded, whitish. Leaves mostly basal; sheaths 3.5–5 cm long, terete-keeled, sparsely tuberculate hairy, mouth bearded; ligules c. 1 mm long, membranous, apex fimbriate; blades 2.5–55 × c. 0.3 cm, linear-lanceolate, margins serrulate, midnerve prominent, tuberculate hairy, apex acuminate-attenuate. Inflorescence 2–6 digitate; racemes 3–7 cm long; peduncle 4.5–22 cm long, smooth. Spikelets 2; sessile, pedicelled; pedicels 1.5–2.5 mm long, solid, with median translucent furrow, margins hairy; callus bearded. Sessile spikelet 3–4 × c. 1 mm, ovate-lanceolate, acuminate, awned. Lower glume 2–3.5 × c. 1 mm, oblong-lanceolate, chartaceous, apex acute-acuminate, 9–11-nerved, 2-keeled; keels pectinate-scabrid; pit absent or 1-pitted. Upper glume 2.8–4 × c. 1 mm, ovate-lanceolate, acuminate, margins infolded and ciliate above middle, chartaceous, 3-nerved. Florets 2, both epaleate; lower barren, upper bisexual. Lower lemma 2–3 × c. 0.6 mm, oblong, membranous, apex acute. Upper lemma reduced to hyaline base of awn, 1–1.5 × c. 0.2 mm; awn geniculate; column 5–6 mm long, twisted, ciliolate, rufous; bristle 3–7 mm long, barbellate. Lodicules 0.3–0.5 mm long. Stamens 3. Ovary oblong. Caryopsis 1.5–2 × c. 0.6 mm, oblanceolate. Pedicelled spikelet 3–5 × c. 1 mm, ovate-lanceolate, apex acuminate, unawned, 2-pitted. Lower glume 3.5–5 × 1 mm, lanceolate, chartaceous, many nerved, 2-keeled, keels serrate, winged, 1–4-pitted, apex acute-acuminate. Upper glume 3–4.5 × 0.6 mm, oblong-lanceolate, chartaceous, 3–5-nerved, margins infolded, apex acuminate. Florets 2; lower male, epaleate; upper obscure. Lower lemma similar to sessile spikelet.

Fl. & Fr.: Jul.–Mar.

Distrib.: Occasionally in Khammam.

Exsicc.: Bhadravati-Kothagudem District: Kinnerasani Wildlife Sanctuary, 09.01.2019, SNR 9574 (BSID).

Note: It can be distinguishable by 2–3 pits on glumes.

3. Bothriochloa ischaemum (L.) Keng, Contr. Biol. Lab. Sci. Soc. China, Bot. Ser. 10: 201. 1936. *Andropogon ischaemum* L., Sp. Pl. 2: 1047. 1753. Bor, Grasses Burma, Ceylon, India & Pakistan 108. 1960; Pull., Fl. Telangana 3: 1078. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 701. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 327. 2020.

Caespitose, perennials. Culms 20–75 cm high, erect-geniculate. Leaves mostly basal; sheath round-compressed; ligule membranous, apex ciliate; blades 2.5–14 × 0.2–0.35 cm, glaucous, surface scaberulous, margins tuberculate-ciliate, hairy at base. Racemes 5–15; digitate; 4–6 cm long; rhachis villous on margins. Pedicels linear, flattened, with a translucent median line, villous. Spikelet 3–5 mm long, lanceolate, callus pilose, base obtuse. Glumes dissimilar. Lower glume elliptic, chartaceous, flat, without pits, pilose, hairy below, apex acute. Upper glume lanceolate, 1-keeled. Florets 2, basal floret sterile-barren, without significant palea. Lower lemma oblong; hyaline. Upper lemma linear, hyaline, apex entire, awned, geniculate, 10–14 mm long, column twisted, glabrous. Palea absent or minute. Anthers 3.

Fl. & Fr.: Aug.–Jan.

Distrib.: Occasionally in hilltops.

Exsicc.: Wanaparthy District: Thirumalayyagutta, 07.08.2019, SNR 8639 (BSID).

4. Bothriochloa kuntzeana (Hack.) Henrard in Blumea 3: 456. 1940; Bor, Grasses Burma, Ceylon, India & Pakistan 108. 1960; Pull., Fl. Telangana 3: 1078. 2015; K.N.Reddy & C.S.Reddy, Fl. Caespitose perennials. Culms 80–110 cm high, stout; nodes bearded. Leaves basal and caudine; sheaths 10–12 cm long, terete; ligules membranous; blades 5–25 × 0.3–0.6 cm, narrowly linear, margins and adaxial surface scabrid, abaxial surface spinose. Racemes 4–6, digitate, c. 10 cm long, joints and pedicels silky hairy; callus bearded. Sessile spikelets 4–5 mm long, lanceolate, callus bearded. Lower glume 4–5 mm long, keels ciliate, flat, silky hairy on back in the lower half, not pitted, 7–9-nerved, apex bidentate. Upper glume 4–5 mm

long, lanceolate, 3-nerved, keeled, apex aristate. Florets 2; lower neuter, upper bisexual. Lower glume c. 5 mm long, 7–9-nerved, keels ciliate, not pitted. Upper glume c. 5 mm long, 5–7-nerved. Lower lemma 2–3 mm long, ovate-oblong. Upper lemma absent. Caryopsis 4–5 mm long, elliptic. Pedicelled spikelets c. 4.5 mm long, linear, with translucent median line, hairy.

Fl. & Fr.: Feb.–Jun.

Distrib.: Occasional on hills and plains.

Exsicc.: Rangareddy District: Hyderabad, MRS 247 (DD).

7. Bothriochloa woodrowii (Hook.f.) A.Camus, Ann. Soc. Linn. Lyon sér. 2, 76: 165. 1931; Bor, Grasses Burma, Ceylon, India & Pakistan 110. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 328. 2020. *Andropogon woodrowii* Hook.f., Fl. Brit. India 7: 173. 1896; *Amphilophis woodrowii* (Hook.f.) A.Camus in Rev. Bot. Appl. Agric. Colon. 1: 305. 1921; Blatt. and McCann, Bombay Grasses 84. 1935. *Dichanthium woodrowii* (Hook.f.) S. K. Jain & Deshp. in Bull. Bot. Surv. India 20(1–4): 134. (1978) 1979.

Perennial, aromatic. Culm 50–140 cm high, densely tufted, solid, stout, slightly branched, terete, glabrous; nodes pubescent, internodes 10–20 cm long, glabrous, furrowed. Leaves basal and caudine; sheaths 6–14 cm long, keeled, glabrous; ligule c. 2 mm long, membranous, collar glabrous; blade 10–35 cm long, flat, rough, scaberulous margins, apex acuminate. Racemes 5–6.5 cm long, joint 1.5–3 mm long, slender, groove translucent, long silky hairs on both sides. Spikelets paired, falling entire, sessile is fertile and pedicelled is sterile; callus 0.5–1 mm long. Sessile spikelet 2–4 mm long (without awn). Lower glume 3–4 × 1 mm, lanceolate, coriaceous, 9–12 nerved, margin inflexed, ciliate, apex acute, hairy below the half; hairs c. 2 mm long. Upper glume 3.5–4 × 0.5–1 mm, lanceolate, chartaceous, 3-nerved, margin inflexed, ciliate, keeled, apex acute. Lower lemma 2.5–3.5 × 0.5 mm, oblong, hyaline, membranous, margin inflexed, ciliate, apex acute. Palea absent. Upper lemma 2.5–3 mm long, hyaline, awned, geniculate; awn 2–2.5 cm long. Lodicules 2, c. 0.2 mm long. Stamen 3, another c. 2 mm long. Ovary c. 0.4 mm long. Caryopsis 1.5–2 mm long, ovate-lanceolate, brown. Pedicelled spikelet 3–4 mm long, lanceolate; pedicel c. 3 mm long with translucent groove, hairy. Lower glume 3–4 × 1 mm, lanceolate, inflexed, margin ciliate, apex acute, coriaceous, 11–13 nerved. Upper glume 2–3 × 0.5–1 mm, lanceolate, 3-nerved, glabrous, margin inflexed, ciliate, acute at apex.

Fl. & Fr.: Jul.–Nov.

Distrib.: Gujarat, Maharashtra and Telangana.

Exsicc.: Mahabubnagar District: Amrabad Tiger Reserve, 09.10.2019, JS, PRM & YV 9302 (BSID).

Capillipedium Stapf

World: c. 20 spp.; India: 8 spp.; Telangana: 2 spp.

Key to the species

|----------------------------|----------------------------|
| 1a. Culms weak, geniculate | ... 1. <i>C. assimile</i> |
| 1b. Culms robust, erect | ... 2. <i>C. filiculme</i> |

1. *Capillipedium assimile* (Steud.) A. Camus, Fl. Indo-Chine 7: 314. 1922; Bor, Grasses Burma, Ceylon, India & Pakistan 111. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 334. 2020. *Andropogon assimilis* Steud. in Zoll., Syst. Verz. 58. 1854; Hook.f., Fl. Brit. India 7: 179. 1896. *Dichanthium assimile* (Steud.) Deshp., Fasc. Fl. India 15: 6. 1984. *Capillipedium huegelii* (Hack.) A. Camus in Rev. Bot. Appl. Agric. Colon. 1: 308. 1921; C.E.C.Fisch. in Gamble, Fl. Madras 1730. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 111. 1960.

Caespitose perennials. Culms 20–50 cm high, erect-geniculate, smooth; nodes bearded, lower nodes rooting. Leaves basal and caudate; sheaths 4–6 cm long, keeled, ribbed, collar; ligules 0.3–0.8 mm long, membranous, apex fimbriate; blades 7–16 × 0.4–0.8 cm, lanceolate-ovate, pseudo-petiolate, margins serrulate, apex acuminate. Panicle 6–14 × c. 2.5 cm, branched, capillary, whorled. Peduncle 6–18 cm long. Racemes capillary, nodes ciliate; pedicelled spikelet unawned; joints and pedicels 1.5–2 mm, translucent furrow in middle, apex cupiliform. Sessile spikelet 2.5–3 × 0.4–0.6 mm, oblong, callus bearded. Lower glume 2–2.5 × 0.6 mm, oblong, concave-flat, chartaceous, apex acute, 5–7-nerved, jointed at apex; 2-keeled, keels scabrid. Upper glume 2.5–3 × c. 0.4 mm, elliptic, chartaceous, 1–3-nerved, apex acute. Florets 2; lower barren, upper bisexual; both epaleate. Lower lemma 0.8–1 × c. 0.6 mm, broadly elliptic-ovate, flap like. Upper lemma 1–1.8 mm long, oblong, hyaline; awn 5–6 mm long, twisted, geniculate, arises from base of lemma; bristle 1.5–2 mm long, barbellate. Pedicelled spikelet c. 2.5 × 0.6 mm, ovate-elliptic, chartaceous, apex acute-acuminate. Lower glume oblong-cymbiform, chartaceous, 7–9-nerved, apex acute-acuminate. Upper glume 2–3 × 0.6 mm, ovate-oblong, chartaceous, 5-nerved, apex acuminate. Florets 2, lower male, epaleate. Lower lemma c. 2 × 0.6 mm ovate-oblong, membranous, apex acute-acuminate.

Fl. & Fr.: Oct.–Mar.

Distrib.: Occasionally in Adilabad.

Plate 125

Annuals. Culms 30–90 cm long, rambling, slender, filiform; nodes bearded, lower nodes rooting. Leaves mostly caudate; sheaths hairy at apex; ligules membranous, ciliate; blades 1.8–11 × 0.1–0.3 cm, linear-lanceolate, convolute, sparsely hairy below, apex acuminate. Panicles c. 6 cm long, open, branches filiform, joints and pedicels ciliate. Sessile spikelets 2–2.5 mm long, oblong-lanceolate; callus densely bearded. Lower glume 2–3 mm long, 5–7-nerved, villous at lower half, 2-keeled, keels ciliate. Upper glume c. 2.5 mm long, lanceolate, chartaceous, 3-nerved, 1-keeled. Florets 2; lower neuter, upper bisexual. Lower lemma 1–1.5 mm long, ovate-elliptic, hyaline. Upper lemma stipitate; awn 8–18 mm long,

Upper glume 4–5 mm long, 3-nerved, margin ciliate. apex acuminate. Lower lemma neuter, 2.5–3 mm long, lanceolate, hyaline, apex acuminate. Lower palea absent. Upper lemma c. 3 mm long, ovate-lanceolate, 3-nerved, ciliate along margins, apex obtuse. Upper palea 1.5 mm long, oblong, membranous, apex obtuse.

Fl. & Fr.: Apr.–Nov.

Distrib.: Occasionally growing along canals and on banks of water courses.

Exsicc.: Adilabad District: Sirpur water lake, GO 4417 (SKU); Vikarabad District: Ananthagiri hills, 21.09.2019, SNR 8950 (BSID).

2. Chrysopogon asper Blatt. & McCann in J. Bombay Nat. Hist. Soc. 32(3): 412. 1928; C.E.C.Fisch. in Gamble, Fl. Madras 3: 1738. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 116. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 340. 2020. *Andropogon asper* B.Heyne ex Hook.f., Fl. Brit. India 7: 189. 1896, nom. illeg., non (Thunb.) Kunth 1829.

Tufted perennials, rhizomatous. Culms 25–85 high, erect-geniculate; rooting at lower nodes. Leaves mostly basal; sheaths 2–5.5 cm long, keeled-terete, tightly enclosing culm; ligule membranous; blades 4–12 × 0.3–1 cm long, linear-lanceolate, flat-infolded, base subcordate-rounded or truncate-semiamplexicaul, apex acute-acuminate or blunt, margins tuberculate hairy at base and serrate towards apex. Panicle 5–14 cm long, 6–10 racemes, branches verticillate; peduncle c. 18 cm long. Racemes c. 3 cm, with capillary branches. Spikelets triads, one sessile, two pedicelled, callus oblique, rufous hairy. Sessile spikelet 4.5–5.5 × 0.8–1.3 mm, oblong-lanceolate, apex acuminate, hairy and scabrid towards apex, awned. Lower glume c. 4.5 × 0.5 mm, oblong-lanceolate, boat shaped, apex acute-obtuse, aristate, subcoriaceous-coriaceous, shiny to granulate, faintly 5-nerved, keeled towards apex, pectinate hispid hairy near keel and above middle, margins winged towards apex. Upper glume 4–6 × c. 0.8 mm, similar to the lower in shape and texture, apex acute, awned, ciliate-hispid dorsally, margins broadly winged and ciliate towards base; awn 10–14 mm long, finely ciliolate. Florets 2, lower male or barren, upper bisexual. Lower lemma 3.5–4 × c. 0.4 mm, oblong-ob lanceolate, acute-acuminate, membranous, hyaline, margins inrolled, ciliate. Palea absent. Upper lemma 2–4 × c. 0.6 mm, oblong, membranous, faintly 1–3-nerved; awn geniculate, column 2–3.5 cm, twisted; bristle 2.5–3.5 cm, barbellate towards apex. Lodicules 2, broadly truncate. Stamens 3. Ovary oblong. Pedicelled spikelet 8.5–10 × c. 1 mm, oblong-lanceolate, narrowly acuminate, awned, hairy dorsally and along margins; pedicels flat, 3–5 × c. 0.5 mm, thickening towards apex, rufous hairy along margins. Lower glume 8.3–10 × c. 0.8 mm, oblong-linear, elliptic-lanceolate, apex acuminate, chartaceous, awned, 5–7-nerved, 2-keeled near margins, sparsely ciliate dorsally and on keel, margins infolded, greenish yellow; awns straight-curved, 6–10 mm long, ciliate towards base and barbellate above. Upper glume 7.5–9 × c. 0.7 mm, lanceolate, membranous-chartaceous, hyaline, margins infolded, ciliate, apex acuminate-aristae. Florets 2, both epaleate; lower empty, upper male. Lower lemma 6.5–7 × 0.6–1.3 mm, narrowly elliptic, oblong-lanceolate, membranous, hyaline, margins ciliate, apex acute-acuminate. Upper lemma 3.5–4.5 × 0.4–0.6 mm, elliptic-lanceolate, membranous, hyaline, margins ciliate towards above, apex acute. Lodicules as in sessile spikelet. Stamens 3.

Fl. & Fr.: Jul.–Jan.

Distrib.: Slopes. **Endemic-India** (Andhra Pradesh, Karnataka, Kerala, Maharashtra, Tamil Nadu).

Plate 126(C-L)

Caespitose perennials. Culms about 140 cm high, erect or geniculately ascending; nodes glabrous. Leaves mostly basal; sheaths compressed, keeled, glabrous; ligules membranous; blades 4–18 × 0.3–0.5 cm, linear-oblong, margins serrulately scabrid, apex acute-blunt. Panicles 5–10 × 2.5–4 cm long, capillary branches, golden yellow-purplish coloured. Racemes c. 2.5 cm long; spikelets triads; 1-sessile, 2-pedicelled. Sessile spikelets 4–6 mm long, oblong, laterally compressed; callus densely bearded with golden brown hairs. Lower glume 5–7 mm long, 2–4-nerved, keeled, rufous hairy above. Upper glume 6–6.5 mm long, oblong, 3-nerved, coriaceous, keeled, hispidly ciliate above, awn 3–9 mm long. Florets 2; lower bisexual, upper empty. Lower lemma neuter, 3–4.5 mm long, ob lanceolate-linear, hyaline, ciliate, apex acute. Upper lemma c. 3 mm long, oblong, chartaceous, hyaline, 3-nerved, stipitate; awn 15–22 mm long, geniculate. Palea c. 2 mm long, linear. Caryopsis 2–2.5 mm long, elliptic-oblong. Pedicelled spikelets 4–7 mm long, lanceolate; pedicels densely rufous hairy, awned. Lower glume 3.5–4 mm long, lanceolate, 5–7-nerved, pubescent above, apex acuminate. Upper glume c. 4 mm long, lanceolate, 3-nerved, margins ciliate, apex mucronate. Florets 2; lower male, upper empty; both epaleate. Lower lemma c. 3.5 mm long, linear-ob lanceolate, hyaline. Upper lemma c. 3 mm long, similar to the lower lemma, awned, 3.5 mm long, hyaline, 1–3-nerved.

Plate 127(A-P)

Caespitose perennials; rhizomatous. Culms 35–200 cm high; nodes glabrous. Leaves mostly basal; sheaths 3–8 cm long, compressed, keeled; ligules a rim of hairs; blades 8–55 × 0.2–0.5 cm, linear-lanceolate, flat, margins ciliate, rigid, apex acute-blunt. Panicles c. 28 cm long, narrow, joints and pedicels hairy. Spikelets 4–6 pairs; triads, 1-sessile, 2-pedicelled. Sessile spikelets 4–5 mm long, laterally compressed, callus bearded. Lower glume 4–5 mm long, lanceolate, coriaceous, keeled, keel scabrid, tuberculate hairy on sides, dorsally granulate, apex obtuse-acute. Upper glume 4–5 mm long, lanceolate-cymbiform, subcoriaceous, apex notched, awned. Florets 2; lower barren, upper bisexual. Lower lemma 4–5 mm long, membranous, apex 2-lobed. Lower palea absent. Upper lemma 4–4.5 mm long, reduced to hyaline, awn 20–35 mm long, geniculate, barbellate. Upper palea c. 2 mm long, oblong. Caryopsis c. 1 mm long, elliptic. Pedicelled spikelets 5.5–7 mm long, linear-lanceolate. Lower glume 6.5–7.5 mm long, linear-lanceolate, chartaceous, hispidulous, apex acuminate. Upper glume 6–7.3 mm long, lanceolate-cymbiform, 3-nerved, margins ciliate, apex acuminate. Florets 2; lower barren, upper male. Lower lemma 4.5–5 mm long, elliptic, 2-nerved, margins ciliate, apex acute, male. Lower palea absent. Upper lemma c. 5 mm long, oblong, membranous, apex acute-obtuse. Upper palea c. 3 mm long oblong, apex acute.

Fl. & Fr.: Sep.–Jan.

Distrib.: Occasionally in moist habitats

Exsicc.: Nizamabad District: Ghanapur, BRPR & KH 7112 (SKU), Jalalpur RF,

BRPR & KH 9564 (SKU).

Note: It can be distinguishable by its lower glumes having tubercle based hairs on margins.

6. Chrysopogon polyphyllus Blatt. & McCann, J. Bombay Nat. Hist. Soc. 32: 416.1928. Bor, Grasses Burma, Ceylon, India & Pakistan 118. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 341. 2020. *Andropogon polyphyllus* Hack. ex Hook.f., Fl. Brit. India 7: 194. 1896.

Perennials. Culms 50–80 cm high. Leaves mostly basal, sheaths compressed; ligule a ciliolate membrane; blade 5–30 × 0.2–0.4 cm, distichous, subcoriaceous, stiff, glaucous, apex acuminate. Inflorescence open panicle. Panicle 8–15 cm long, oblong, branches whorled at most nodes. Spikelets triads; one sessile and two pedicelled; pedicels 0.5–1.5 mm long, linear, 0.3–0.4 the length of fertile spikelet, villous, long hairy at tip, hairs yellowish. Spikelets c. 4 mm long, oblong, falling entire; callus c. 1.5 mm long, cuneate, pilose, yellowish hairy below, base obtuse. Lower glume elliptic, as long as spikelet, cartilaginous, purplish green, midnerve ciliate above, apex acute. Upper glume lanceolate, apex mucronate, 1-keeled, keel ciliate. Florets 2; lower barren, upper bisexual. Lower lemma lanceolate, hyaline, 2-nerved. Upper lemma oblong, apex bifid, hyaline, awned from sinus, 3–8 mm long, awn flexuous or geniculate, column straight or twisted, pubescent. Palea absent or minute. Pedicelled spikelets c. 4.8 mm long, male, lanceolate, longer than fertile. Glumes chartaceous, 7-nerved, pilose on midnerve, apex acuminate at apex.

Caespitose annuals. Culms 30–90 cm high, erect or ascending; nodes glabrous. Leaves basal and culine; sheaths 3–12 cm long, keeled, pubescent; ligules fringed; blades 12–45 × 0.2–1.4 cm, flat, pubescent, 1-keeled, apex acuminate. Panicles 8–22 cm long. Sessile spikelet 5–6.5 × 1–1.5 mm, lanceolate-elliptic, awned, callus bearded with brown coloured hairs. Lower glume c. 6 mm long, linear-lanceolate, coriaceous, puberulous, 4-nerved, 1-keeled, apex acute. Upper glume c. 7 mm long, coriaceous, elliptic, puberulous, 3-nerved; awn straight, c. 10 mm long; 1-keeled, keel covered with dense brown coloured hairs. Lower lemma 4.5–7 mm long, linear, margins ciliate, 1-nerved, 1-keeled, apex acute. Palea absent. Upper lemma 4.5–5 mm long, hyaline to a base of awn; awn 4–5 cm long, geniculate. Palea absent. Caryopsis 5–6 mm long, compressed. Pedicel 1–1.5 mm, margins densely brown hairs. Pedicelled spikelet 5–6 mm long, ovate, unawned. Lower glume 5–6 mm long, ovate, membranous, dorsal puberulous, brown coloured hairs lower half, 5–7-nerved, apex acute. Upper glume 5–6 mm, ovate, glabrous, margins ciliate, 3–5-nerved, apex acute. Lower lemma 3–4 mm long, ovate, margins ciliate, hyaline, 2-nerved, apex acute. Palea absent. Upper lemma 3–4 mm long, linear, apex cleft-2-lobed. Palea 2–3 mm long, linear, apex acute.

Fl. & Fr.: Sep.–Nov.

Distrib.: Open rocky slopes and crevices. **Endemic-India** (Andhra Pradesh, Karnataka, Maharashtra, Telengana).

Exsicc.: Nagarkurnool District: Pilligundlu, Maddimadugu Range, 8.09.2015, BSS 2218; Nalgonda District: Mailapuram, BRA 5065 (BSID); Devarakonda Fort, 10.12.2015, ARK & BSS 2283(TBGH); Wanaparthy District: Thirumalaiah Gutta, 7.10.2012, BSS 43880 (TBGH).

Note: Distinguishable by its puberulous leaves.

9. *Chrysopogon verticillatus* (Roxb.) Trin. ex Steud., Nomencl. Bot. ed. 2. 1: 360. 1840; C.E.C.Fisch. in Gamble, Fl. Madras 1739. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 119. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 341. 2020. *Andropogon verticillatus* Roxb., Fl. Ind. 1: 267. 1820.

Plate 128(A-B)

Caespitose perennials; rhizomatous. Culms 65–110 cm high, geniculate; nodes dark. Leaves basal and culine; sheaths keeled, pubescent; ligules membranous; blades 7–10 × 0.2–0.5 cm, lanceolate-linear, pubescent, margins long haired, base rounded, apex acute. Panicle effuse, 18–25 cm long; peduncle 25–38 cm, pubescent below inflorescence. Racemes 3–4 cm long, verticillate, pedicelled, axis hairy; triads, 2-pedicelled, 1-sessile; callus 2.5–3 mm long, pointed, rufous brown hairy. Sessile spikelet 5–6.5 mm long, oblanceolate, awned, hairy at base. Lower glume 6–8 mm long, oblong-lanceolate, apex acute, 2-lobed, aristate, 3-nerved, scabrid above middle, margins broadly winged, ciliate; arista 9–13 mm

long. Upper glume 5.5–6 mm, oblong-lanceolate, cymbiform, margin winged, apex acute. Florets 2; lower empty, upper bisexual. Lower lemma 5–5.5 mm long, delicate, oblong-lanceolate, apex acute. Upper lemma 4–7 mm long, oblong-lanceolate, apex 2-lobed-emarginate; awn 2–4 cm long, straight-geniculate, barbellate. Caryopsis 4–5 mm long, oblong-elliptic. Pedicelled spikelets 8–12 mm long, oblong-lanceolate, margins rufous brown hairy, apex acute. Lower glume 7–10 mm long, lanceolate, 7-nerved, apex acute-acuminate; awn c. 7–9 mm long. Upper glume c. 9 × 1 mm, lanceolate, 3-nerved, apex acuminate. Florets 2; lower empty, upper male. Lower lemma 6–7.3 mm long, elliptic, apex acute. Upper lemma 4–4.5 mm long, elliptic, apex acute.

Fl. & Fr.: Sept.–Mar.

Distrib.: **Endemic**-India. (Andhra Pradesh, Chhattisgarh, Karnataka, Kerala, Odisha, Tamil Nadu).

Exsicc.: Rangareddy District: Rajendranagar-Manasa hills, 10.10.2019, SNR 8735 (BSID).

Note: It can be identified by its robust habit and verticillatus inflorescence.

10. *Chrysopogon zizanioides* (L.) Roberty in Bull. Inst. Franç. Afrique Noire, A. 22: 106. 1960. *Vetiveria zizanioides* (L.) Nash, Fl. S.E.U.S. 67. 1903; C.E.C.Fisch. in Gamble, Fl. Madras 1733. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan: 258. 1960; Pull., Fl. Telangana 3: 1188. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 759. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 441. 2020. *Phalaris zizanioides* L., Mant. Pl.: 183. 1771. ‘Vattiverlu’, ‘Wuttau Gaddi’

Plate 128(C-Q)

Caespitose perennials. Culms 100–210 cm high; nodes glabrous. Leaves mostly basal; sheaths glabrous, keeled; ligules membranous; blades 15–95 × 0.2–1 cm, linear-lanceolate, convolute, sparsely tubercle based hairy. Panicles 20–45 cm long, branched. Sessile spikelets 3.5–5 mm long, lanceolate-oblong; callus bearded. Lower glume 3.5–5 mm long, lanceolate-oblong, coriaceous, 3–5-nerved, dorsal muricate. Upper glume 4.5–5 mm long, lanceolate, coriaceous 3-nerved, keels spinulose. Florets 2; lower neuter; upper bisexual. Lower lemma 3.5–4 mm long, elliptic-ovate, margins ciliate, 3–5-nerved. Upper lemma 3–3.5 mm long, oblong, coriaceous, 3-nerved, apex notched, mucro 1.5–2.5 mm long. Palea 1–2 mm long, oblong, 3-nerved. Pedicelled spikelets male, 3.5–4 mm long, lanceolate. Pedicels 3.5–4 mm long, turbinate. Lower glume 3–3.5 mm long, lanceolate, sparsely spinulose. Upper glume c. 3 mm long, lanceolate, coriaceous-membranous, keels spinulose. Florets 2; lower barren, upper male. Lower lemma 3–4 mm long, lanceolate, 3-nerved, margins ciliate. Upper lemma 3–3.5 mm long, elliptic-lanceolate, coriaceous, hyaline, faintly 3-nerved. Palea 1–1.5 mm long, elliptic-oblong.

Fl. & Fr.: Aug.–Dec.

Distrib.: Occasional on field bunds and on banks of streams.

Exsicc.: Adilabad District: Sarvaipet, GO 4512 (SKU); Jayashankar

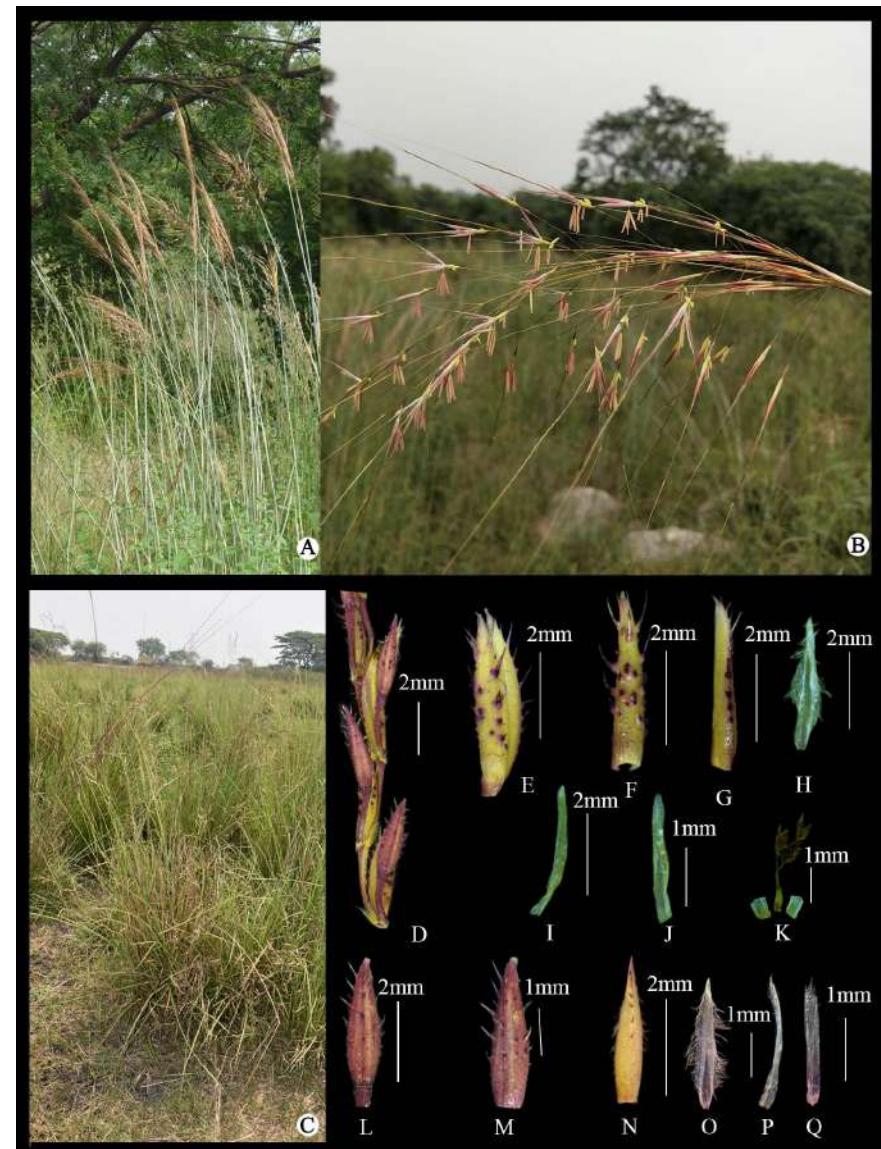

Plate 128. A–B. *Chrysopogon verticillatus* (Roxb.) Trin. ex Steud.: A. Habitat; B. Inflorescence; C–Q. *Chrysopogon zizanioides* (L.) Roberty: Habitat; D. Enlarged view of raceme; E–K. Bhupalpally District: Chennapur-Regondi, 29.03.2021, SNR 012037 (BSID); Mulugu District: Euturrunagaram, 24.03.2021, SNR 8962 (BSID); Rangareddy District: Hyderabad, MVR 02124 (HY); Suryapet District: Nayakangudem, 27.10.2019, SNR 8751 (BSID); Warangal District: Thupakulagudem, PVS & NRR 76993 (BSID).

Note: Distinguishable by its muriculate nature on lower glume.

Coix L.

World: c. 3 spp.; India: 4 spp., 2 var.; Telangana: 2 spp.

Key to the species

- 1a. Lower glume of male spikelet broadly winged ... 1. *C. aquatica*
- 1b. Lower glume of male spikelet narrowly winged ... 2. *C. lacryma-jobi*

1. Coix aquatica Roxb., Fl. Ind. 3: 571. 1832; Hook.f., Fl. Brit. India 7: 100. 1896; Bor, Grasses Burma, Ceylon, India & Pakistan 264. 1960; Pull., Fl. Telangana 3: 1093. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 691. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 343. 2020.

Caespitose perennials. Culms 55–135 cm high, smooth, spongy; nodes glabrous, lower nodes rooting. Leaves caudine; sheaths 3.5–6.5 cm long, compressed; ligules c. 1 mm long, membranous; blades 25–80 × 2–2.5 cm, linear-lanceolate, adaxial surface densely tuberculate hairy and glands below, margins hispid, apex acuminate. Synflorescence; basal female spikelets, upper male spikelets; peduncle 3.5–6 cm long. Male spikelets 1-pedicelled, 2-sessile, imbricate, apex muticous. Lower glume c. 1 cm long, lanceolate-elliptic, chartaceous, many nerved, keels broadly winged, margins inflexed, apex acute. Upper glume similar, without wings, 6–9-nerved. Florets 2. Lower lemma as long as upper glume, oblong-lanceolate, hyaline, 3–5-nerved. Lower palea similar, 2-nerved, 2-keeled. Lodicules 2. Stamens 3. Upper lemma lanceolate, chartaceous, hyaline, 3-nerved. Upper palea similar, nerveless. Female spikelet, solitary near base, ovate, whitish-yellow, completely enclosed by bract forming a bony involucre. Lower glume 6–7.5 mm long, oblong-lanceolate, apex acuminate-beak c. 2.5 mm long. Upper glume narrowly oblong, chartaceous, hyaline, keeled, margins inrolled. Florets 2; lower empty, upper female. Lower lemma 6–7.5 mm long, lanceolate-oblong, 5-nerved, apex acuminate. Palea absent. Ovary elliptic. Involucre turbinate (top-shaped), perforated, apex ciliate. Ripened involucre-beak like structure.

Fl. & Fr.: Sept.– Mar.

Distrib: Occasionally along stream banks, margins of ponds and moist places.

Exsicc.: Adilabad District: Kunthala way, MHR 13267 (SKU); Karimnagar District: Rangapur, 10.11.2019, SNR 8764 (BSID).

Note: It can be easily identifiable by spongy culms.

2. Coix lacryma-jobi L., Sp. Pl. 2: 972. 1753; Hook.f., Fl. Brit. India 7: 100. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1705. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 264. 1960; Pull., Fl. Plate 129

Annuals. Culms 150–200 cm high; nodes glabrous. Leaves basal and caudine; sheaths compressed, glabrous; ligules membranous; blades 12–60 × 1.5–5 cm, linear-lanceolate, midrib stout, sparsely tubercle based hairy. Racemes 6–12 cm long, flexuous from long peduncle. Male spikelets 7–16 mm long, lanceolate-elliptic. Lower glume 7–11 mm long, oblong-lanceolate, coriaceous, margins winged, ciliolate, apex acute. Upper glume 4.5–12 mm long, elliptic-lanceolate,

coriaceous, 6–8-nerved, apex acute. Lower lemma 5.5–11 mm long, lanceolate-oblong, coriaceous, hyaline, 5-nerved. Palea male, 15–11 mm long, elliptic-lanceolate, chartaceous, hyaline, 2-nerved. Upper lemma 4–12 mm long, elliptic-lanceolate, chartaceous-membranous, hyaline. Palea 6–7 mm long, elliptic-lanceolate, membranous-chartaceous, hyaline, 2-nerved. Female spikelets 6–16 mm long, ovoid shining. Both lower and upper glumes similar, 10–15 mm long, chartaceous. Lower lemma empty, 4–8 mm long, oblong. Upper lemma female, 5.5–12 mm long, oblong. Palea 7–10 mm long, ovate-oblong, hyaline. Caryopsis 8–10 mm long, globose or ovoid.

Fl. & Fr.: Aug.–Mar.

Distrib.: Occasional in marshy habitats, stagnant waters and paddy fields.

Exsicc.: Medak District: Gangapur Peppallevagu, TP & MSG 12087 (SKU); Sone, TP & PVP 4012 (SKU); Rangareddy District: Hyderabad, MVR 02125 (HY); Warangal District: Chennrao Pet-Narsampet, 30.03.2021, SNR 012042 (BSID).

Cymbopogon Spreng.

World: 53 spp.; India: 22 spp., 1 subsp., 2 var.; Telangana: 8 spp.

Key to the species

- 1a. Sessile spikelets without an awn or reduced ... 2
- 1b. Sessile spikelets awned ... 3
- 2a. Lower glume shallowly concave in the lower half ... 2. *C. citratus*
- 2b. Lower glume flat on the back ... 8. *C. winterianus*
- 3a. Lower glume of the sessile spikelets with a deep slot-like depression occupying most of its length ... 5. *C. girarba*
- 3b. Lower glume without a slot, either flat, convex, shallowly concave or with deep narrow slit in the lower half ... 4
- 4a. Lower glume of the sessile spikelet with narrow slit like groove in the lower half which appears as a rib on the inner surface ... 5
- 4b. Lower glume of the sessile spikelet flat, convex-concave, wrinkled, shallow depressions ... 6
- 5a. Leaves cordate and amplexicaul at base ... 6. *C. martinii*
- 5b. Leaves rounded at base ... 1. *C. caesius*
- 6a. Pedicel of the lowest pedicelled spikelet in the sessile in the sessile raceme grotesquely swollen ... 3. *C. coloratus*
- 6b. Pedicel of the lowest pedicelled spikelet in the sessile raceme not swollen ... 7
- 7a. Inflorescence very congested ... 7. *C. nardus*
- 7b. Inflorescence lax and loose ... 4. *C. flexuosus*

1. Cymbopogon caesius (Hook. & Arn.) Stapf in Bull. Misc. Inform. Kew 1906: 360 & 361. 1906; C.E.C.Fisch. in Gamble, Fl. Plate 130

Caespitose perennials, rhizomatous. Culms 100–180 cm high, erect or geniculate; nodes glabrous. Leaves basal and caudine; sheaths 4–6 cm long, glabrous; ligules membranous, apex fimbriate; blades 8–24 × 0.2–0.6 cm, linear-lanceolate, glabrous, base truncate, apex attenuate-acuminate. Panicles 11–35 cm long. Racemes 2, c. 14 mm long, sessile and pedicelled, divergent; spatheole

Plate 130. *Cymbopogon caesius* (Hook. & Arn.) Stapf: A. Habitat; B. Enlarged view of inflorescence; C. Paired spikelets; D. Lower glume of sessile spikelet; E. Upper glume of sessile spikelet.

c. 17 mm long, pedicels of lower racemes swollen. Sessile spikelets $3.5\text{--}4 \times 0.8\text{--}1$ mm, linear, callus densely villous, apex acuminate, awned. Lower glumes $3.5\text{--}4 \times 0.4\text{--}0.6$ mm, oblong, coriaceous, depression below the half, 3-5-nerved, 2-keeled, keels broadly winged, apex acuminate-notched. Upper glume $3\text{--}4 \times 0.5\text{--}0.7$ mm, lanceolate-oblong, chartaceous-coriaceous, 3-nerved, keeled, margins ciliate, apex acuminate. Florets 2, lower neuter, upper bisexual. Lower lemma $3 \times 0.3\text{--}0.5$ mm, oblong, membranous, hyaline, margins ciliate, apex acuminate. Lower palea

reduced, $1\text{--}1.3 \times 0.5$ mm, lanceolate, membranous, apex acuminate, 2-lobed. Upper lemma $1\text{--}2 \times 0.2\text{--}0.4$ mm, oblong, membranous, apex deeply bifid, lobes acuminate; awn from sinus, 11–14 mm long, geniculate, barbellate. Caryopsis $1\text{--}1.5 \times 0.3\text{--}0.5$ mm, oblong. Pedicelled spikelets $3\text{--}4 \times 0.7$ mm, margins ciliate, unawned. Lower glume $3\text{--}3.8 \times 0.7$ mm, oblong, chartaceous, margins ciliate, apex acuminate. Upper glume $3\text{--}3.7 \times 0.7$ mm, oblong, apex acuminate. Lower lemma $2.5\text{--}3.5 \times 0.6$ mm, oblong, membranous, hyaline, margins ciliate, apex acute. Lower palea c. 1 mm long, reduced.

Fl. & Fr.: Aug.–Feb.

Distrib.: Common throughout state in grasslands and forest areas.

Exsicc.: Adilabad District: Amrabaad, *BSS, SKB & BRPR* 32207 (SKU); Karimnagar District: Shanigaram, 10.11.2019, *SNR* 8765 (BSID); Nagarkurnool District: Teegalapalli Koderu, 07.08.2019, *SNR* 8641 (BSID); Rangareddy District: Hyderabad, *MVR* 02126 (HY); Vikarabad District: Ananthagiri Hills, 30.11.2019, *SNR* 8783 (BSID); Warangal District: Nadikudi-Parakala, 29.03.2021, *SNR* 012035 (BSID); Regional Agricultural Research Station, 26.03.2021, *SNR* 8981 (BSID).

Note: It can be easily recognizable by its swollen pedicels of lower racemes.

2. ***Cymbopogon citratus* (DC.) Stapf** in Bull. Misc. Inform. Kew 1906: 322, 357. 1906; C.E.C.Fisch. in Gamble, Fl. Madras 1756. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 126. 1960; Pull., Fl. Telangana 3:1096. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 693. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 345. 2020. *Andropogon citratus* DC., Cat. Pl. Horti Monsp. 78. 1813 (as ‘*citratum*’). ‘Lemon grass’, ‘Vaasana Gaddi’

Caespitose perennials, rhizomatous. Culms 150–180 cm high. Leaves basal and caudate; ligules membranous; blades 50–100 cm long, lanceolate, base narrowed, glaucous, aromatic. Panicles 35–55 cm long, compound, lax; racemes, terminal and axillary, subtended by spatheole. Racemes 2, deflexed, 1.5–2.5 cm long; rachis linear, apex cupuliform, fragile, margins villous, hairy 2–2.5 mm long. Raceme flattened, subequal. Spikelets paired, sessile and pedicelled. Sessile spikelets $5.5\text{--}6 \times 0.5$ mm, linear-lanceolate, unawned; callus bearded. Glumes unequal; exceeding apex of florets. Lower glume 5–6 mm long, lanceolate-oblong, chartaceous-coriaceous, flat-concave dorsally, 2-keeled, apex emarginate. Upper glume lanceolate, membranous, 1-keeled apex acute. Florets 2; lower neuter-barren, epaleate, upper bisexual. Lower lemma lanceolate, chartaceous, hyaline. Upper lemma lanceolate, chartaceous, hyaline, apex 2-fid. Upper palea absent or reduced. Stamens 3. Pedicelled spikelets 2, well developed. Pedicelled spikelets male, 4–5 mm long, elliptic, deciduous with sessile spikelets; pedicels linear, villous, hairs 2–3.5 mm long. Glumes chartaceous, apex acute-muticous. Lemma subtended by glumes.

Fl. & Fr.: Throughout the year.

Distrib.: Cultivated.

glabrous; ligules membranous; blades 20–80 × 1–1.5 cm, linear, scabrid, apex attenuate. Panicles 60–70 cm long, decompound, flexuous. Racemes 15–18 mm long, joints densely villous, spatheole 16–20 mm long, glabrous. Spikelets 3; 1-sessile, awned; 2-pedicelled, unawned, pedicel not swollen. Sessile spikelets 4.5–5 × 0.6–0.7 mm, lanceolate, apex acuminate. Lower glume 3–4 × 0.5–0.6

mm, elliptic-lanceolate, chartaceous, apex acuminate; 2-keeled, 3-nerved with 2–3 wrinkles-depressions or folds, narrowly winged, wings serrulate. Upper glume 4–4.5 × 0.4–0.6 mm, lanceolate, chartaceous, 3-nerved, margins inflexed and ciliate, 1-keeled, keels winged and serrulate, apex acuminate. Florets 2; lower neuter, upper florets bisexual, both epaleate. Lower lemma 3.5–4 × 0.5 mm, lanceolate, hyaline, apex acute. Upper lemma 2–3 × 0.2–0.4 mm, oblong, hyaline, apex deeply bifid; awn from sinus 6–14 mm long, geniculate, barbellate. Caryopsis c. 2 mm long, elliptic. Pedicelled spikelets 4–4.5 × 0.4–0.6 mm, narrowly lanceolate. Pedicels densely villous, abscission zone cupuliform. Lower glume 3.5–4 × 0.4–0.6 mm, ovate, chartaceous, 9-nerved, margins ciliate, apex acuminate. Upper glume 3–3.5 × 0.4–0.6 mm, lanceolate, 3-nerved, margins ciliate, apex obtuse. Florets 2; lower male, upper reduced. Lower lemma 2–2.5 × 0.2–0.4 mm, lanceolate, margin ciliate.

Fl. & Fr.: Jul.–Dec.

Distrib.: Common in all districts. This grass is used for lemon-oil extraction.

Exsicc.: Nalgonda District: Nagarjunakonda Valley, *KT* 9800 (CAL); Rangareddy District: Mekavipalli, *MSM* 11052 (SKU); Rangareddy District: Hyderabad, *MVR* 02129 (HY); Warangal District: Hanumakonda, *CSR* 425 (KU), (HYD).

Note: It can be identified by its lax and effuse inflorescence.

5. *Cymbopogon gidarba* (Buch.-Ham. ex Steud) Haines, Bot. Bihar & Orissa 1098. 1924; C.E.C.Fisch. in Gamble, Fl. Madras 1757. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 128. 1960; Pull., Fl. Telangana 3: 1098. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 694. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 345. 2020. *Andropogon gidarba* Buch.-Ham. ex Steud., Syn. Pl. Glumac. 1: 387. 1854; Hook.f., Fl. Brit. India 7: 208. 1896.

Plate 132(A-C)

Caespitose perennial, rhizomatous. Culms 60–90 cm high, slender; nodes glabrous. Leaves basal and caudine; sheaths 3–5 cm long, glabrous; ligules membranous, truncate; blades 5–18 × 0.1–0.4 cm, linear-lanceolate, lanceolate-ovate, flat, base cordate, apex acuminate. Panicles 4–25 cm long, narrow, joints and pedicels clavate, callus short. Racemes 1.5–2 cm long, lower raceme base swollen, spathes 2–2.7 cm long, narrowly lanceolate. Sessile spikelets 4–4.5 × 0.5–0.6 mm, linear-lanceolate. Lower glume 3.5–4 mm long, linear, chartaceous, back deeply concave with a bump near base, 2-keeled, margin inflexed, apex 2-toothed. Upper glume 3.5–4 mm long, ovate-cymbiform, membranous, margin inflexed, 1-nerved, apex acuminate. Lower lemma 2.5–3 mm long, lanceolate, membranous-chartaceous, 2-nerved, apex acute-obtuse. Lower palea absent. Upper lemma 2.5–3.2 mm long, narrowly lanceolate, apex bifid; awn from sinus, 10–15 mm long. Upper palea c. 1 mm long, ovate, hyaline, apex obtuse. Pedicelled spikelets male, 3.5–5 mm long, lanceolate. Lower glume 4.5–5 mm long, ovate-lanceolate, chartaceous, 7-nerved, apex acute. Upper glume 4–4.5 mm long, lanceolate, membranous, 3-nerved, apex acute. Lemma 3–3.5 mm long, ovate, 2-nerved, apex acute. Upper palea c. 1 mm long, ovate, apex obtuse.

Fl. & Fr.: Aug.–Jan.

Distrib.: Occasionally in grassy slopes.

Exsicc.: Wanaparthi District: Thirumalayagutta, 07.08.2019, *SNR* 8638 (BSID).

Note: It can be identified by its lower glume having a deep slit in lower half.

6. *Cymbopogon martinii* (Roxb.) Will. Watson, Bot. Himalayan Distr. N.W. Prov. 392. 1882 (as “*martini*”); C.E.C.Fisch. in Gamble, Fl. Madras 1756. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 129. 1960; Pull., Fl. Telangana 3: 1098. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 695. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 346. 2020. *Andropogon martinii* Roxb., Fl. Ind. 1: 280–281. 1820.

Plate 132(D-F)

Caespitose perennials, rhizomatous. Culms 100–145 cm high, erect, aromatic; nodes glabrous. Leaves basal and caudine; sheaths 2.5–12 cm long, glabrous; ligules membranous; blades 15–45 × 0.8–1.5 cm, lanceolate, base cordate-amplexicaul, margins scabrid, apex acuminate. Panicles c. 48 cm long, contracted. Racemes binate, 1–1.8 cm long, spathes 4.5–5 cm long, spatheole 1–2 cm long, joints densely villous. Lowest raceme base swollen. Sessile spikelets 3.5–4 × 1–1.3 mm, elliptic-oblong, callus bearded. Lower glume 3.5 × 1–1.3 mm, oblong, chartaceous, deeply (slit) grooved near base dorsally, narrowly winged above, apex 2-dentate-muticous. Upper glume 3–3.5 × 0.6–0.7 mm, elliptic-boat shaped, chartaceous, broadly winged, 3-nerved, apex aristate. Florets 2, lower neuter, upper bisexual. Lower lemma 2–3 × 0.4–1.5 mm, ovate-oblong, 2-nerved, 2-keeled, apex acute. Lower palea absent. Upper lemma 2–2.5 × 0.1–0.3 mm, oblong, hyaline, apex bifid; awn from sinus, 11–18 mm long, geniculate, barbellate. Upper palea c. 1 mm long, linear. Pedicelled spikelets 3.5–4 × 0.6–1 mm, lanceolate. Pedicels densely villous. Lower glume 3.8–4 × 0.6–0.8 mm, elliptic, membranous, 11-nerved, apex acute. Upper glume 3.5–4 × 0.6–0.7 mm, lanceolate, 3-nerved, margins ciliate, apex acute. Lower florets neuter. Upper florets male. Lower lemma 2.5–3 × 0.5–0.6 mm, oblong, hyaline, faintly 2-nerved, margins ciliate, apex acute. Palea absent.

Fl. & Fr.: Aug.–Dec.

Distrib.: Common throughout the state.

Exsicc.: Medak District: Choutkoor, *TP* & *MSG* 11924 (SKU); Rangareddy District: Hyderabad, *MVR* 02 130 (HY); Manasa Hills-Rajendranagar, 22.08.2019, *SNR* 8673 (BSID); Vikarabad District: Ananthagiri Hills-Damagundam, 02.12.2019, *SNR* 8905 (BSID); Warangal District: Cherial, *CSR* 389 (KU); *KMS* 15972 (MH).

7. *Cymbopogon nardus* (L.) Rendle, Cat. Afr. Pl. 2(1): 55. 1899; C.E.C.Fisch. in Gamble, Fl. Madras 1756. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 130. 1960; Pull., Fl. Telangana 3: 1099. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 695. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 346. 2020. *Andropogon nardus* L., Sp. Pl. 2: 1046. 1753.

‘*Kashay, Kacheri Gaddi*’

Plate 132. A–C. *Cymbopogon gidarba* (Steud.) A.Camus: A. Habitat; B. Inflorescence; C. Sessile and pedicelled spikelets; D–F. *Cymbopogon martini* (Roxb.) W.Watson: D. Habitat; E. Inflorescence; F. Sessile and pedicelled spikelets.

Caespitose perennials. Culms 100–260 cm long, high; nodes glabrous. Leaves basal and cauline; sheaths 11–12 cm long, ribbed, glabrous; ligules chartaceous, apex lacerate; blades 25–50 × 0.8–1.5 cm, broadly linear, abaxial and margins surface rough. Panicles 30–55 cm long, pyramidal, interrupted. Racemes 10–15 mm long, pedicels and internodes pilose, spathes 8–20 mm long, closely imbricate, pedicels not swollen. Sessile spikelets paired, 3.5–4 mm long,

elliptic-oblong. Lower glume 3–3.5 × 0.6–0.8 mm, ovate-lanceolate, chartaceous, flat-concave on back or 1–3 shallow transverse depressions below, apex 2-lobed. Upper glume 3.5–4 × 0.3–0.5 mm, oblong, chartaceous, 3-nerved, 1-keeled, apex acuminate-retuse. Florets 2; lower neuter, upper bisexual. Lower lemma 3–4 × 0.4–0.6 mm, oblong, chartaceous, 3-nerved, apex acuminate-rounded. Lower palea absent. Upper lemma c. 1.5 mm long, oblong, hyaline, apex bifid; awn from sinus, 3–5 mm long, geniculate, barbellate. Upper palea 0.4–0.5 mm long, oblong, apex acute. Caryopsis 0.5–0.6 × 0.2 mm, lanceolate, apex acute-acuminate. Pedicelled spikelets 4–5 mm long, oblong, apex acute, awned. Lower glume c. 5 mm long, lanceolate, 10–11-nerved, 2-keeled, keel winged, apex acute-retuse. Upper glume c. 4.5 mm long, oblong, 3-nerved, apex acuminate. Florets 2, lower neuter, upper bisexual; both epaleate. Lower lemma 3–4 × 0.4–0.5 mm, oblong, apex acute. Upper lemma c. 1 mm long, oblong or reduced.

Fl. & Fr.: Dec.

Distrib.: Cultivated and also found occasionally in wild state.

Exsicc.: Karimnagar District: Aklaspur, GVSR & TRK 22517 (CAL).

8. *Cymbopogon winterianus* Jowitt ex Bor in Oesterr. Bot. Z. 112(1-2): 185. 1965; Bor, Grasses Burma, Ceylon, India & Pakistan 132. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 347. 2020.

Caespitose perennials. Culms 150–200 cm high, erect, glabrous, glaucous. Leaves mostly basal and cauline; sheaths smooth, glabrous, yellow or purplish-red; blades 10–17 cm long, linear, base cordate, apex acuminate. Panicles lax, decompound, spreading, loose, 25–33 cm long, drooping; spathes 10–13 mm long, narrow, dull-reddish, margins membranous. Sessile and pedicelled spikelets 0.4–0.5 cm long.

Fl. & Fr.: Dec.–Mar.

Distrib.: Cultivated.

Exsicc.: Rangareddy District: Hyderabad, MVR 02131 (HY).

Dichanthium Willemet

World: 19 spp.; India: 10 spp., 1 var.; Telangana: 5 spp.

1. *Dichanthium annulatum* (Forssk.) Stapf, Fl. Trop. Afr. 9: 178. 1917; C.E.C.Fisch. in Gamble, Fl. Madras 1741. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 133. 1960; Pull., Fl. Telangana 3: 1104. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 698. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 350. 2020. *Andropogon annulatus* Forssk., Fl. Aegypt.-Arab. 173. 1775 (as "annulatum"); Hook.f., Fl. Brit. India 7: 196. 1896. **Plate 133(A)**

Caespitose perennials. Culms 50–110 cm high, geniculate; nodes hairy. Leaves basal and caudine; sheaths compressed, mouth bearded; ligules membranous; blades 4.5–28 × 0.2–0.5 cm, linear, sparsely hairy, margins scabrid. Racemes 2–6; 6.5–7 cm long, digitate-fascicled. Joints hairy. Sessile spikelets 3–4 mm long, elliptic; callus bearded. Lower glume 3–3.5 mm long, 7–9-nerved, cartilaginous, tubercle based hairy. Upper glume 2.5–3 mm long, lanceolate, coriaceous, ciliolate, 3-nerved. Florets 2; lower neuter, upper bisexual. Lower lemma 1.5–2.8 mm long, linear, chartaceous, hyaline. Upper lemma stipitiform, awn 15–25 mm long. Pedicelled spikelets male or barren, 3–3.5 mm long, oblong; pedicel margins long hairy. Lower glume 3.5–4 mm long, oblong, 8–10-nerved, keel bristly. Upper glume 2.5–3 mm long, softly villous, 3-nerved. Lower lemma 1.5–2 mm long, ciliate. Upper lemma rudimentary.

Fl. & Fr.: Jul.–Dec.

Distrib.: Common throughout the State.

Exsicc.: Medak District: Narsapuram RF, TP & MSG 11993 (SKU); Hanumakonda district: Seetharampuram-Parakala, 29.03.2021, SNR 012032 (BSID); Mulugu District: Medaram, 29.03.2021, SNR 012032 (BSID); Rangareddy District: Hyderabad, MVR 02137 (HY).

2. *Dichanthium aristatum* (Poir.) C.E. Hubb. in Bull. Misc. Inform. Kew 10: 654. 1940; Bor, Grasses Burma, Ceylon, India & Pakistan 134. 1960. *Andropogon aristatus* Poir., Encycl. Suppl. 1: 585. 1810. *Dichanthium nodosum* Willemet in Ann. Bot. (Usteri) 18: 11. 1796; C.E.C.Fisch. in Gamble, Fl. Madras 1741. 1934. **Plate 133(B-N)**

Caespitose perennials. Culms 15–90 cm high, erect or geniculate. Leaves basal and caudine; sheaths compressed-terete; blades 2.5–20 × 0.2–0.4 mm, linear, apex acute. Racemes 1–6, digitate, pubescent near the base of the inflorescence, base 1–6 male spikelets. Sessile spikelets 2.5–4.5 mm long, obovate-elliptic, chartaceous, convex, pilose, margins ciliate, apex obtuse; awn 8–18 mm long. Pedicelled spikelets similar to sessile spikelets.

Fl. & Fr.: Aug.–Nov.

Distrib.: Occasionally in Medak.

Exsicc.: Medak District: Choutukur fields, TP & MSG 11909 (SKU), Patanchervu, 12086 TP & MSG (SKU); Vikarabad District: Ananthagiri hills, 30.11.2019, SNR 8787 (BSID), Damagundam, 02.12.2019, SNR 8903 (BSID).

3. *Dichanthium caricosum* (L.) A. Camus in Bull. Mus. Natl. Hist. Nat. 27: 549. 1921; C.E.C.Fisch. in Gamble, Fl. Madras 1741. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 139. 1960; Pull., Fl. Telangana 3: 1105. 2015; K.N.Reddy

Nat.: 16. t. 8. f. 2. 1812; Hook.f., Fl. Brit. India 7: 168. 1896. **Plate 134(C-H)**

Caespitose perennials. Culms 40–70 cm high, erect or geniculate, slender branches terminated by solitary racemes; nodes bearded. Leaves basal and caudine; sheaths terete-compressed, mouth ciliate; ligules truncate, apex ciliate; blades 5–20 × 0.1–0.2 cm, narrowly linear, abaxial surface scabrid. Racemes 3.5–4 cm long, solitary, peduncles exserted from the spathe; joints and pedicels silvery villous. Spikelets 3–4.5 mm long, elliptic-lanceolate, binate, purple; callus bearded. Lower glume 3–4 mm long, lanceolate, chartaceous-membranous, 4-nerved, pit upper half. Upper glume 3–4.5 mm long, lanceolate-elliptic, chartaceous, faintly 3-nerved. Lower lemma 0.5–1 mm long, lanceolate, chartaceous. Upper lemma reduced to awn, 12–18 mm long. Pedicelled spikelets similar to sessile, unawned. Lower glume without or with a pit.

Fl. & Fr.: Sep.–Jan.

Distrib.: Common throughout the State.

Exsicc.: Adilabad District: Sarvaipet, GO & PVP 4821 (SKU); Bhadravadi Kothagudem District: Kinnerasani Wildlife Sanctuary, 08.01.2019, SNR 9578 (BSID); Nagarkarnool District: Kollapur-Choutabetla, 08.08.2019, SNR 8650 (BSID); Mahabubnagar District: Venkatapuram-Koyalakonda, 06.08.2019, SNR 8609 (BSID); Rangareddy District: Hyderabad, MVR 02139 (HY); Manasa hills,

Note: Distinguishable by its purplish inflorescence, each branch ends with spike and pitted glumes.

5. *Dichanthium mccannii* Blatt. in J. Bombay Nat. Hist. Soc. 32: 357. 1927; Bor, Grasses Burma, Ceylon, India & Pakistan 135. 1960; Pull., Fl. Telangana 3:

1106. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 725. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 351. 2020.

Caespitose annuals. Culms 8–40 cm high, slender, glabrous, nodes bearded. Leaves basal and cauline; sheaths terete, bulbous based hairs; ligules hairy; blades 1.5–8 × 02–0.4 mm, linear-ovate, bulbous based bristles. Racemes 1–2; 3–3.5 cm long, lower 3–4 pairs male spikelets, joints and pedicels one side ciliate hairs. Sessile spikelets 3–4 mm long, ovate-elliptic, awned, callus bearded. Lower glume 3.5–4 mm long, narrowly ovate-oblong, membranous, margins inrolled, 7-nerved, apex obtuse. Upper glume 3.5–4.5 mm long, narrowly ovate, chartaceous-membranous, apex acuminate. Lower lemma 3–3.5 mm long, narrowly oblong, coriaceous, hyaline, nerveless, apex obtuse. Palea absent. Upper lemma stipitate, awn geniculate, 25–28 mm long, 1-nerved. Palea absent. Pedicelled spikelet 4–4.5 mm long, narrowly obovate-elliptic. Lower glume 4.5–5 mm long, membranous, obovate, dorsal submarginal bulbous based bristles, 10-nerved, apex obtuse. Upper glume 4–5.5 mm long, ovate-elliptic, chartaceous-membranous, margins inflexed, ciliate, 3-nerved, apex acute. Lower lemma oblong-lanceolate, chartaceous, hyaline, margins ciliate, apex rounded. Palea narrowly ovate, membranous, hyaline, apex acute.

Fl. & Fr.: Aug.-Nov.

Distrib.: Occasionally in Nagarkurnool.

Exsicc.: Nagarkurnool District: Kollapur, 08.08.2019, SNR 8651 (BSID); Warangal District: Regional Agricultural Research Station, 26.03.2021, SNR 8993 (BSID).

Note: It can be identifiable by long bristles on glumes.

elliptic, hyaline, nerveless, obtuse. Stamens 3. Caryopsis 1–1.5 × 0.3–0.4 mm, elliptic-obovate. Pedicel 2–2.5 mm long, turbinate, compressed, margins densely ciliate. Pedicelled spikelet c. 7 mm long, ovate-lanceolate. Lower glume c. 7 mm long, lanceolate, membranous, 15-nerved, 2-keeled, keels winged, scabrid, apex bifid, median awn 5 mm long. Upper glume c. 3.5 mm long, ovate-lanceolate, membranous, 5-nerved, 1-keeled, apex 2-toothed, awned, awn c. 3 mm long.

Lemma c. 2 mm long, ovate-lanceolate, membranous. Palea absent.

Fl. & Fr.: Sep.–Nov.

Distrib.: Occasional in sandy soils and on rocky slopes.

Exsicc.: Medak District: Pocharam tank, *TP & MSG 12052 (SKU)*; Rangareddy District: Hyderabad, *MRS 246 (DD)*.

Note: It can be easily recognized by its 15-nerved lower glume of pedicelled spikelet.

Dimeria R. Br.

World: 57 spp.; India: 47 spp., 3 subsp., 4 var.; Telangana: 7 spp.

Key to the species

1a. Upper glume awned	... 1. <i>D. avenacea</i>
1b. Upper glume unawned, sometimes mucronate	... 2
2a. Upper glume winged all along or at least at the tip	... 3
2b. Upper glume not winged	... 7. <i>D. ornithopoda</i>
3a. Upper glume narrowly winged all along the keel	... 4
3b. Upper glume winged just below the tip	... 5
4a. Upper glume narrowly winged all along the keel	... 3. <i>D. connivens</i>
4b. Upper glume broadly winged on the keel	... 2. <i>D. bialata</i>
5a. Rachis margins broadly winged	... 6
5b. Rachis margins narrowly winged or wingless	... 5. <i>D. kanjirapallilana</i>
6a. Spikelets 4–4.3 mm long, tip of the upper glume pappery wing	... 6. <i>D. orissae</i>
6b. Spikelets 3.5 mm long, tip of the upper glume minute	... 4. <i>D. deccanensis</i>

1. Dimeria avenacea (Retz.) C.E.C.Fisch. in *Misc. Inform. Kew* 1932: 72. 1932 & in Gamble, *Fl. Madras* 1741. 1934; Bor, *Grasses Burma, Ceylon, India & Pakistan* 139. 1960; Pull., *Fl. Telangana* 3: 1112. 2015; K.N.Reddy & C.S.Reddy, *Fl. Telangana* 725. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, *Fl. Pl. India Annot. Checkl. Monocot.* 3: 355. 2020. *Anthoxanthum avenaceum* Retz., *Observ. Bot.* 3:8. 1783 (as "avenaceum"). *Dimeria acutipes* Bor in *Kew Bull.* 1952: 560. 953 & *Grasses Burma, Ceylon, India & Pakistan* 138. 1960.

Caespitose annuals. Culm 5–28 cm long, slender. Leaves mostly basal; sheath compressed; ligules membranous; blades 0.5–8 cm long. Racemes 1; 0.5–4.5 cm long, rachis angular. Spikelets 3.5–6 mm long, oblong, appressed, solitary. Pedicel narrow, flattened. Callus 1.5 mm long, scaberulous-pubescent. Lower glume elliptic, coriaceous-chartaceous, glabrous-pilose, 1-keeled, 3-nerved, apex acute-acuminate. Upper glume lanceolate-elliptic, chartaceous-coriaceous, 1-keeled, winged all along from base to tip, 3-nerved, apex acuminate-acute, awned; awn 1–3.5 mm long. Florets 2, lower barren, upper fertile; both epaleate. Lower lemma lanceolate. Upper lemma elliptic-lanceolate, chartaceous-coriaceous, apex bifid, awned; awn from sinus, geniculate, 8–14 mm long, column twisted, glabrous.

Fl. & Fr.: Aug.–Oct.

Distrib.: Occasionally in Rangareddy and Vikarabad.

Exsicc.: Rangareddy District: Hyderabad, *MVR 02142 (HY)*.

2. Dimeria bialata C.E.C.Fisch. in *Bull. Misc. Inform. Kew* 1933(7): 351.

1933; Bor, *Grasses Burma, Ceylon, India & Pakistan* 140. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, *Fl. Pl. India Annot. Checkl. Monocot.* 3: 355. 2020.

Caespitose annuals. Culms 10–50 cm long; nodes bearded. Leaves mostly basal; sheaths keeled, pilose, tubercle base hairs; ligules ciliate; blades 3–7.5 cm long, pilose, tubercle based hairs, margins scabrous, apex acute. Racemes 2; paired; 3–3.5 cm long, divergent. Rachis flattened, 1–1.5 mm wide, margins glabrous. Pedicels reduced. Spikelets 3–4 mm long, elliptic. Callus 0.2–0.3 mm long, base obtuse. Lower glume 3–3.5 mm long, linear-lanceolate, coriaceous, keeled, winged, apex acute-acuminate. Upper glume 3–3.6 mm long, coriaceous, 1-keeled, winged, all along, apex acute-acuminate. Florets 2; lower barren, epaleate, upper bisexual. Lower lemma oblong, margin ciliolate. Palea absent. Upper lemma 2–2.5 mm long, elliptic-lanceolate, coriaceous, 1-nerved, apex bifid, awned; awn arise from sinus, column twisted, 5–10 mm long, geniculate. Upper palea absent.

Fl. & Fr.: Aug.–Oct.

Distrib.: **Endemic**-India (Karnataka, Kerala, Telangana).

Exsicc.: Bhadravati Kothagudem District: Kinnerasani Wildlife Sanctuary, Regalla, 30.01.2020, *JS 10715 (BSID)*; Medak District: Pocharam, 12.11.1992, *TP & MSG 12024 (SKU)*.

3. Dimeria connivens Hack, *Monogr. Phan.* 6: 689. 1889; Hook.f., *Fl. Brit. India* 7: 104. 1896; Bor, *Grasses Burma, Ceylon, India & Pakistan* 140. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, *Fl. Pl. India Annot. Checkl. Monocot.* 3: 355. 2020. **Plate 136(A-K)**

Caespitose annuals. Culms 11–35 cm high, slender ascending; nodes bearded. Leaves mostly basal; sheaths 1–7 mm long, terete, glabrous; ligules apex fimbriate; blades 0.5–8 cm long, linear-ovate, margins tubercled based hairs, apex acuminate. Racemes 2; 3–3.5 cm long, erect. Spikelets 3–5 mm long, awned. Lower glume 3–4 mm long, narrowly ovate, subcoriaceous, 2-keeled, keels hairy, apex acuminate-acute. Upper glume 3–4.5 mm long, oblong, subcoriaceous, 1-keeled, keel winged, with long hairs, 1-nerved. Lower lemma 1.5–2 mm long, narrowly obovate, margins ciliate, nerveless, apex acute. Palea absent. Upper lemma membranous, elliptic, apex two toothed, awned; awn from sinus, 6–9 mm long, geniculate. Palea 0.5–1 mm long, hyaline, narrowly ovate, apex acute. Lodicules 2. Stamens 2. Caryopsis 2–2.5 mm long, ovate.

Fl. & Fr.: Aug.–Oct.

Distrib.: **Endemic**-India (Andhra Pradesh, Chhattisgarh, Jharkhand, Kerala, Maharashtra, Odisha, Rajasthan, Uttar Pradesh, West Bengal).

Exsicc.: Bhadravati Kothagudem District: Kinnerasani Wildlife Sanctuary, *SNR 9624 (BSID)*; Rangareddy District: Manasa Hills-Rajendranagar, 26.10.2019, *SNR 8698, 8944, 8945 (BSID)*.

Note: It can be identifiable by corky wings on spikelets.

4. Dimeria deccanensis Bor, *Kew Bull.* 7(4): 578. 1953; Bor, *Grasses Burma, Ceylon, India & Pakistan* 140. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, *Fl. Pl. India Annot. Checkl. Monocot.* 3: 355. 2020.

Annuals. Culms 20–65 cm high, erect or geniculate; nodes bearded. Leaves mostly basal; leaf sheath pilose with tubercle based hairs; ligule 0.3–0.7 mm long, ciliolate membrane; blade 2.5–5.5 × 0.2–0.3 cm, scabrous, pilose-sparingly tubercle based hairy, margins tuberculate hairy, apex acuminate. Racemes 3.5–6.5 cm long, paired; rachis flattened, c. 0.65 mm wide, margins ciliate. Spikelets crowded, 2-rowed, appressed, solitary; pedicelled c. 3.5 mm long, elliptic, falling entire; flattened; callus c. 0.4 mm long, bearded, base obtuse. Lower glume c. 3.2 mm long, oblong, chartaceous with thin margins, 1-keeled, keel ciliate, scabrous and rough above, pilose hairy below, apex acute. Upper glume elliptic, as long as spikelet, apex acute; subcoriaceous with hyaline margins, 1-keeled, winged all along on keel, keel ciliate, pilose dorsally. Florets 2; lower barren, upper bisexual. Lower lemma lanceolate, hyaline, margins ciliate. Upper lemma 1.5–2 mm long, elliptic, apex 2-fid, awned from sinus, hyaline, 1-nerved; awn geniculate, c. 7 mm long, twisted. Palea absent or minute. Stamens 2; anthers c. 1 mm long.

Fl. & Fr.: Oct.-Dec.

Distrib.: Open grasslands. **Endemic**-India (Karnataka, Kerala, Maharashtra, Tamil Nadu).

Exsicc.: Wanaparthy District: Thirumalayya gutta, 07.08.2019, SNR 8700 (BSID).

5. Dimeria kanjirapallilana K.C. Jacob in J. Bombay Nat. Hist. Soc. 47(1): 48. 1947; Sreek. & V.J. Nair, Fl. Kerala-Grass. 91. 1991; Manilal & Raveendr. in Rheedia 8(2): 201. 1998; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 356. 2020.

Caespitose annuals. Culms 20–40 cm high, geniculate-erect; nodes bearded. Leaves mostly basal; sheaths keeled, fastigiate; ligules c. 1 mm long, membranous, apex fimbriate; blades 3–6 cm long, linear-lanceolate, margins sparsely tuberculate hairy, base truncate, apex acuminate. Racemes 1 or 2; 3–4.5 cm long, divaricate; peduncle 12–15 cm long; rachis narrowly winged, flat dorsally, 0.5–1 mm wide, margins scabrid. Spikelets 3–3.5 mm long, oblong, apex acuminate, pedicels 0.1–0.3 mm, cup shaped, oblong, scabrid, callus bearded, hairs 0.2–0.6 mm. Lower glume 2–3.2 mm long, oblong-linear, chartaceous, brownish, 1-nerved, 1-keeled, keel and dorsal surface scabrid, apex acuminate. Upper glume 3–3.5 mm, oblong-lanceolate, cymbiform, chartaceous, keeled, narrowly winged towards apex, sparsely ciliate, apex acuminate. Florets 2, both epaleate; lower barren, upper bisexual. Lower lemma 1–1.5 mm long, oblong, membranous, faintly 1-nerved, apex ciliolate. Upper lemma 1.5–2.2 mm long, oblong, membranous, 2-lobed, awned from sinus; awn geniculate, column c. 2.5 mm long, twisted, bristle 4–5.5 mm long, barbellate. Stamens 2.

Fl. & Fr.: Oct.–Nov.

Distrib.: **Endemic**-India (Andhra Pradesh, Kerala, Tamil Nadu, Telangana).

Exsicc.: Medak District: Pocharam, TP & MSG 12024 (BSID).

6. Dimeria orissae Bor in Kew Bull. 1952: 579. 1953 & Grasses Burma, Ceylon, India & Pakistan 142. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 357. 2020.

Stamens; K. Pistil; L–V. *Dimeria orissae* Bor; L. Habitat; M. Rachis; N. Abaxial and adaxial view of spikelets; O. Enlarged view of spikelets; P. Lower glume; Q&R. Upper glume; S. Lower lemma; T. Upper lemma; U. Stamens; V. Caryopsis.

India Annot. Checkl. Monocot. 3: 357. 2020.

Plate 136(L–V)

Caespitose annuals. Culms 5–20 cm high, slender, unbranched, glabrous. Leaves mostly basal; sheaths 1.5–2.5 cm long, keeled towards apex; ligules c. 0.5 mm long, lacerate; blades 1.5–7 × 0.2–0.4 cm, lanceolate-linear, flat, scabrid, margins tuberculate hairy, apex acuminate. Racemes 2 or 3; 3–5 cm long,

divergent, rachis 0.5–1 mm wide, broadly winged, wavy, margin scabrid. Spikelets 4–4.5 mm long, oblong, compressed, awned; pedicels concealed, c. 0.7 mm long, apex truncate-cuneate; callus bearded. Glumes linear, scabrellate dorsally. Lower glume 3.8–4 mm long, chartaceous, keel scabrid, apex acute-mucronate. Upper glume c. 4 mm long, keeled almost from base to apex, keel scabrid, winged just below tip, scabrid, few long hairs back, apex mucronate. Florets 2; lower barren, upper bisexual. Lower lemma reduced, at times c. 2 mm long, oblanceolate, margins ciliate, apex acute. Palea absent. Upper lemma 2–2.5 mm long, elliptic-lanceolate, coriaceous, apex acute, 2-lobed; awn from sinus, 1–1.5 cm long, column twisted, 0.3–0.5 cm long, bristles barbellate. Stamens 2. Caryopsis 1.5–2 mm long, elliptic.

Fl. & Fr.: Oct. – Nov.

Distrib.: Endemic-India (Karnataka, Odisha, Tamil Nadu, Telangana).

Exsicc.: Adilabad District: Indanapally Range, Kawal Tiger Reserve, 26.10.2013, APS, ALC & KCM 3933 (BSID); Wanaparthy District: Thirumalayya gutta, 07.08.2019, SNR 8943 (BSID).

7. Dimeria ornithopoda Trin., Fund. Agrost. 167. t. 14. 1820; Hook.f., Fl. Brit. India 7: 104. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1713. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 142. 1960; Pull., Fl. Telangana 3: 1114. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 707. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 357. 2020. *Dimeria tenera* Trin., Mem. Acad. Imp. Sci. St.-Petersbourg, Ser. 6, Sci. Math. 2: 335. 1833. **Plate 137**

Caespitose annuals. Culms 10–35 cm high; nodes bearded. Leaves mostly basal; sheaths, 1.5–3 cm long, keeled, tuberculate; ligules 0.2–0.4 mm long, apex fimbriate; blades 3–9 × c. 0.3 cm, lanceolate, densely tuberculate hairy, apex acuminate. Racemes usually 2–4; 4–4.5 cm long, digitate, divergent; peduncle 7–20 cm long, filiform; rachis 0.3–0.4 mm wide, triquetrous-winged, margins scabrid. Spikelets 1.5–2.5 mm long, oblong, awned; pedicels oblong, margins smooth-scabrid; callus bearded, hairs 0.2–0.4 mm long. Lower glume 1.5–2 mm long, oblong-linear, subcoriaceous, apex acute, 1-nerved, 1-keeled; keel and dorsal surface scabrellate. Upper glume 1.5–2.5 mm long, oblong-lanceolate, subcoriaceous, apex acute-acuminate, 1-nerved, 1-keeled; keel and dorsal surface scabrellate and few long hispid hairs. Florets 2; lower barren, upper bisexual. Lower lemma 1–1.5 mm long, oblanceolate, delicate, hyaline, apex ciliate. Upper lemma 1–1.8 mm long, elliptic, membranous, 1-nerved, apex 2-lobed; awn from sinus, geniculate, column 1–2.5 mm long, twisted, bristle 2.5–4.5 mm long, barbellate. Stamens 2. Caryopsis 1–1.5 mm long, oblong.

Fl. & Fr.: Sep.–Jan.

Distrib.: Common in moist habitats and also on rocky substratum.

Exsicc.: Bhadradri Kothagudem District: Kinnerasani Wildlife Sanctuary, JS & SNR 9998 (BSID); Warangal District: Pakhal Wildlife Sanctuary-Ashok Nagar Beat, 30.03.2021, SNR 012049 (BSID).

Note: Distinguishable by its filiform peduncles.

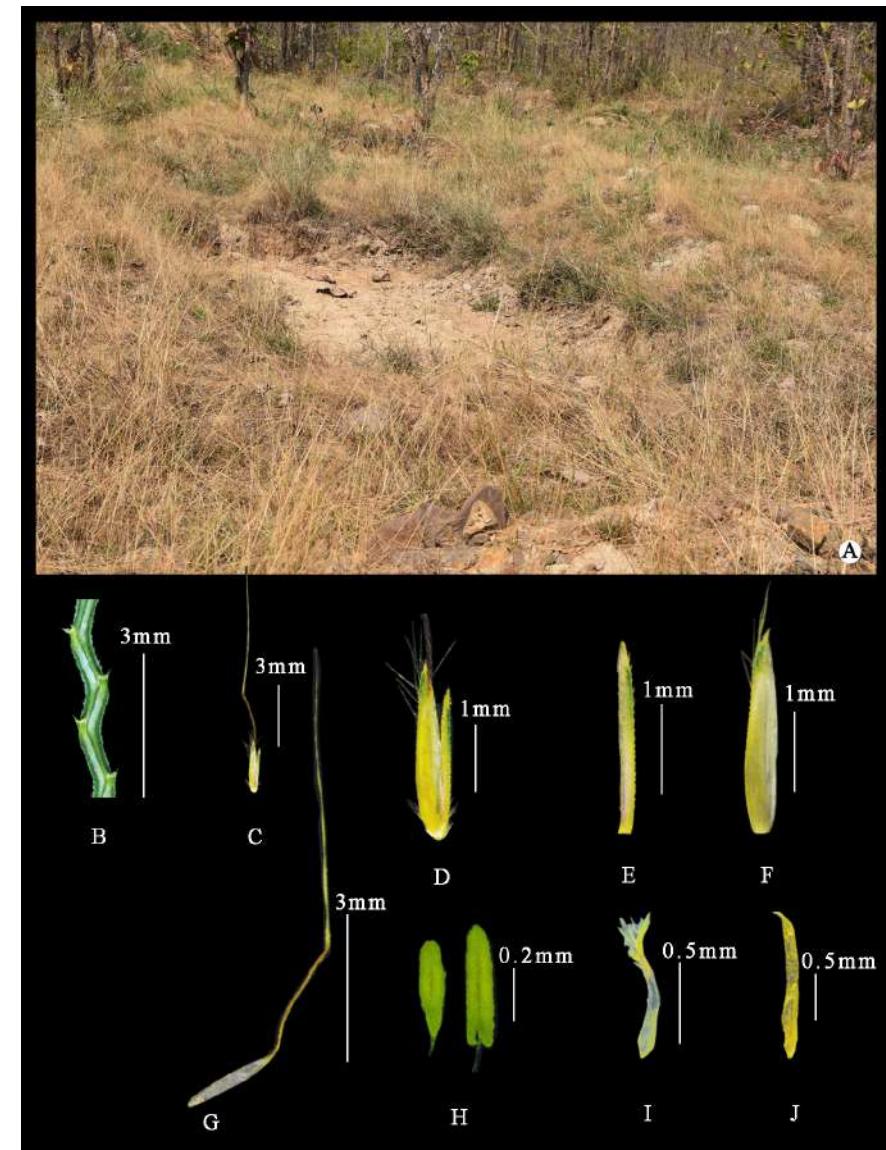

Plate 137. *Dimeria ornithopoda* Trin.: A. Habitat; B. Rachis; C. Spikelet; D. Enlarged view of spikelet; E. Lower glume; F. Upper glume; G. Stamens; H. Pistil; I. Caryopsis.

Eulalia Kunth

World: c. 31 spp.; India: 17 spp., 1 var.; Telangana: 2 spp.

Key to the species

- 1a. Dense chocolate brown woolly hairs on basal sheaths ... 1. *E. phaeothrix*
- 1b. No woolly hairs on basal sheaths ... 2. *E. trispicata*

1. *Eulalia phaeothrix* (Hack.) Kuntze, Revis. Gen. Pl. 2: 775. 1891; C.E.C.Fisch.
in Gamble, Fl. Mannanur Range, Devunisari, 3388. Madras 3:1715. 1934; Bor,
Grasses Burma, Ceylon, India & Pakistan 156. 1960. *Pollinia phaeothrix* Hack.,
Monogr. Phan. 6: 168. 1889; Hook.f., Fl. Brit. India 7: 112. 1896. **Plate 138(A-B)**

Perennials. Culms up to 2 m high, tufted, wooly at base with dark chocolate brownish hairs. Leaves mostly basal; sheaths rusty, reddish-brown; blades 8–45 × 0.5–1.7 cm, linear-lanceolate, flat-inrolled, scabrid-glabrous. Racemes 2–10, digitate. Spikelets 4–6.5 × 0.6–1mm elliptic-lanceolate, binate. Sessile spikelets lanceolate-oblong. Lower glume oblong-lanceolate. Upper glume boat-shaped, chartaceous, depressed between keels, base villous, 3-nerved, ciliate. Floret 2, lower barren and epaleate, upper hermaphrodite. Lower lemma oblong, chartaceous, 2-nerved, apex acuminate.

Upper lemma oblong-lanceolate, membranous, deeply 2-lobed, 3-nerved, awned. Upper palea ovate-lanceolate, reduced, membranous. Stamens 3. Caryopsis oblong. Pedicelled spikelets similar to sessile spikelet.

Fl. & Fr.: Sept.–Dec.

Distrib.: Scarce in forest slopes along with other grasses.

Exsicc.: Nagarkurnool District: Devunisari, Mannanur range, BK & BSS 3372 (TBGH); Peddutty, Kollapur range, 27.10.2018, ARK & BSS 3835 (TBGH).

2. *Eulalia trispicata* (Schult.) Henrard in Blumea 3: 453. 1940; Bor, Grasses Burma, Ceylon, India & Pakistan 157. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 371. 2020. *Andropogon trispicatus* Schult., Mant. 2: 452. 1824. *Eulalia tristachya* Kuntze, Revis. Gen. Pl. 2: 775. 1891; C.E.C.Fisch. in Gamble, Fl. Madras 1715. 1934. **Plate 138(C-P)**

Caespitose perennials. Culms 100–150 high; geniculate, nodes bearded. Leaves basal and caudine; sheaths 4–6 cm long, keeled towards apex, ribbed, mouth bearded; ligules membranous, apex fimbriate; blades 15–40 × 0.3–0.5 cm linear, glabrous-sparingly hairy, apex attenuate. Inflorescence of 2–6 digitate, racemes, 4–15 cm long. Racemes spikelets paired and similar; joints triquetrous, margin hairy. Spikelets 4–4.5 mm long, lanceolate, apex acute; disarticulate; callus bearded. Lower glume 3.5–4 mm long, oblong-cymbiform, subcoriaceous, 2-nerved, 2-keeled, keels scabrellate, hairs whitish, c. 3 mm long, margins incurved, apex retuse. Upper glume 3.5–4 mm, elliptic-boat shaped, subcoriaceous, sparsely white hairy or golden hairy, 1–3-nerved, 1-keeled, apex acuminate. Florets 2, lower barren, upper bisexual. Lower lemma 3.5–4 × c. 0.6 mm, oblong-lanceolate, subcoriaceous, margins and dorsal surface golden brown hairy, apex acuminate. Palea absent. Upper lemma 2.5–3 mm long, oblong, 1-nerved, apex deeply 2-lobed; awn c. 20 mm long, column twisted, c. 12 mm long, barbellate. Palea absent. Pedicelled spikelets similar to sessile spikelet.

Fl. & Fr.: Sep.–Dec.

Plate 138. A–B. *Eulalia phaeothrix* (Hack.) Kuntze: A. Habitat (Inset: Basal sheath); B. Inflorescence; C–P. *Eulalia trispicata* (Schult.) Henrard: C. Habitat (Inset: Inflorescence); D. Paired spikelets; E–K. Pedicelled spikelet; E. Spikelet; F. Lower glume; G. Upper glume; H. Lemma; I. Palea; J. Stamens; K. Pistil; L–P. Sessile spikelet; L. Spikelet; M. Lower glume; N. Upper glume; O. Lemma; P. Palea.

Distrib.: Occasional in near river banks.

Exsicc.: Badradri Kothagudem District: Kinnerasani Wildlife Sanctuary, 08.01.2019, SNR & JS 9581 (BSID); Warangal District: Cherial, CSR 381 (KU).

Eulaliopsis Honda

World: 2 spp.; India: 2 spp.; Telangana: 1 sp.

Eulaliopsis binata (Retz.) C.E. Hubb. in Hook. Icon. Pl. sub t. 3262, 1935; Bor, Grasses Burma, Ceylon, India & Pakistan 158. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 372. 2020. *Andropogon binatus* Retz., Observ. Bot. 5: 21. 1788. *Ischaemum angustifolium* (Trin.) Hack, Mongor. Phan. 6: 24. 1889; Hook.f., Fl. Brit. India 7: 129. 1896. *Pollinidium binatum* (Retz.) C.E. Hubb. in Bull. Misc. Inform. Kew 1932 (2): 72. 1932.

Plate 139

Caespitose perennials. Culms 35–130 cm high, erect; base woolly; nodes glabrous. Leaves basal and caudine; basal sheaths woolly; sheaths terete; blades 25–98 × 0.3–0.7 cm, linear, flat, apex acuminate. Racemes 2–4, axillary-terminal. Sessile spikelet 3.9–4.5 × 1.3–1.5 mm, oblong-obovate, villous. Lower glume 2.5–3.2 × 0.6–0.8 mm, narrowly ovate, membranous, margins ciliate hairy, 7–9-nerved, apex 3-toothed. Upper glume 3.5–4.0 × 0.6–0.8 mm, narrowly ovate, membranous, 5-nerved, 1-keeled, apex mucronate. Lower lemma 2.5–3.6 × 0.8–1.3 mm, ovate-elliptic, hyaline, margins, apex 3-toothed. Palea 2.8–3.35 × 0.4–0.5 mm, narrowly ovate, hyaline, margins inflexed, apex acute-acuminate. Upper lemma 2.7–3.5 × 0.3–0.4 mm, narrowly ovate, membranous, 1-nerve, margins hairy, apex awned; awn 4.5–5 mm long. Palea 1.8–2.2 × 1–1.5 mm, broadly ovate, hyaline, margins inflexed, apex three lobed. Pedicelled spikelet similar to sessile spikelet.

Fl. & Fr.: Dec.–Feb.

Distrib.: Occasionally in moist habitats of perennial streams

Exsicc.: Bhadravati-Kothagudem District: Kinnerasani Wildlife Sanctuary, 08.01.2018, SNR 9584 (BSID).

Note: It can be identified by its long linear leaves and yellowish-brown coloured hairs on spikelets.

Mnesithea Kunth

World: 7 spp.; India: 2 spp., 1 var.; Telangana: 1 sp.

Mnesithea granularis (L.) de Koning & Sosef in Blumea 31: 295. 1986; Veldkamp & al. in Blumea 58: 282. 2013. *Hackelochloa granularis* (L.) Kuntze, Revis. Gen. Lower glume; P. Upper glume; Q. Lower lemma; R. Upper lemma; S. Palea; T. Stamens.

Distrib.: Common on wet rocky habitats and along the bunds of cultivated fields.

Exsicc.: Adilabad District: Wankidi RF, PVP 9479 (SKU); Kamareddy District, BRPR & KH 7141 (SKU); Mahabubnagar District: Appapur, AMSR 25690 (SKU); Medak District: Narasapur, TP & CPB 14017 (SKU); Nizamabad District: Ghanapur, BRPR & KH 7103 (SKU), Bheemnagar, TP & BRPR 6215 (SKU); Rangareddy District:

Hyderabad, MVR 02164 (HY); Velutla RF, BRPR 9531 (SKU); Tandur, MSM & TP 12706 (SKU); Vikarabad District: Ananthagiri hills, 21.09.2019, SNR 8702, 8939 (BSID).

Note: It can be easily recognizable by globose spikelets. Veldkamp & al., (2013) treated this species under *Mnesithea granularis* (L.) de Koning & Sosef, whereas Arthan & al., (2016) based on molecular work placed as given above. The pygmy (dwarf) form of this grass is common in India (Nagaraju & Kabeer, 2021).

Hemarthria R.Br.

World: c. 12 spp.; India: 5 spp.; Telangana: 1 sp.

Hemarthria compressa (L.f.) R.Br., Prodr. Fl. Nov. Holland.: 207. 1810; C.E.C.Fisch. in Gamble, Fl. Madras 3: 1762. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 161. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 379. 2020. *Rottboellia compressa* L.f., Suppl. Pl.: 114. 1782 (1781); Hook.f., Fl. Brit. India 7: 153. 1896. *Hemarthria altissima* (Poir.) Stapf & C.E.Hubb. in Bull. Misc. Inform. Kew 1934: 109. 1934 syn. nov.; Bor, Grasses Burma, Ceylon, India & Pakistan 160. 1960. *Rottboellia altissima* Poir., Voy. Barb. 2: 105. 1789.

Plate 141

Rhizomatous perennials. Culms up to 1 m high, decumbent; lower nodes rooting. Leaf sheath c. 2 cm long, usually keeled, mouth bearded; ligule c. 0.3 mm long, membranous, ciliate; blades 3–6 × 0.2–0.4 cm, linear, infolded, margins serrulate, apex acute. Inflorescence solitary, spiciform; peduncle 1–2.5 cm long. Raceme 4.5–5 cm long; rachis tough with fused joints and pedicels; joints 2–4 × 1.2 mm, flat, clavate to 3 -angled; pedicels broadly oblong, similar to joints. Spikelets paired, one sessile, other pedicelled. Sessile spikelet 2.5–4 × 0.8–1 mm narrowly oblong-elliptic, sunk in cavity of joints. Lower glume 2.5–4 × 0.8–1 mm, oblong-elliptic, flat to boat shaped, subcoriaceous, margins narrowly inflexed, 5-nerved, 2-keeled towards apex, keels winged, apex acute to retuse. Upper glume 3.5–4 × 1–1.2 mm, oblong-elliptic, boat shaped, chartaceous to subcoriaceous, apex acute to acuminate, 1-keeled. Florets 2; lower barren, epaleate; upper bisexual, paleate. Lower lemma 3–3.5 × 0.8–1.2 mm, oblong, flat, membranous to chartaceous, 2 -nerved, apex acute. Upper lemma 3 × 0.8–1 mm, oblong-elliptic, boat shaped, membranous to chartaceous, apex acute. Upper palea 2 × 0.5 mm, narrowly oblong, flat, membranous, apex acute. Lodicules 2, truncate. Stamens 3. Ovary ovate-lanceolate, stigma plumose. Pedicelled spikelet 4–4.3 × 0.5–1 mm. Lower glume 3–4.2 × 0.8–1 mm, oblong-elliptic, apex acute to acuminate. Upper glume 3.5–4.3 × 1 mm, boat shaped, subcoriaceous, margins inflexed, 2 -keeled, apex slightly apiculate. Lower and upper florets similar to sessile spikelet.

Fl. & Fr.: July – Feb.

Distrib.: Rare, along riverbanks.

Exsicc.: Bhadradi Kothagudem District: Mupparapukotta-Yellandu, 31.03.2021, SNR 172057 (BSID).

Plate 142

Caespitose perennials; culms 30–100 cm high, erect, terete-compressed, branched, base geniculate, nodes glabrous. Leaves basal and caudine; sheaths 4–8 cm long, compressed, keeled, glabrous; ligules 0.6–0.9 mm long, rounded-truncate, apex ciliolate; blades 5–25 cm long, linear, flat, distichous, glabrous, margins cartilaginous, apex obtuse-acuminate. Racemes 2–4.5 cm long, terminal, solitary, hairy; lower 2–5 pairs of homogamous (male or barren), unawned spikelets; upper heterogamous (bisexual) spikelets. Hermaphrodite (sessile) spikelets 4.5–5.9 mm long, linear-elliptic, dressed with reddish-brown hairs, awned, callus 3–3.9 mm long, pointed. Lower glume 4–5.8 × 0.4–0.7 mm, oblong-linear, coriaceous, dark brown, dorsally terete, hispidulous, margins strongly incurved (not winged), apex rounded-truncate. Upper glume 4.5–5.8 × 0.3–0.5 mm, linear, rigidly coriaceous, dark brown hispidulous, sigmoidal incurved, apex obtuse. Lower lemma 2–3 × 0.6 mm, oblong, hyaline, apex truncate. Upper lemma flattened, hyaline, reduced to a base of awn; awn 7–8 cm long, densely hirsute. Lodicules 2. Pedicelled spikelets 8.5–9 × 1.5–2 mm, narrowly ovate, unawned. Lower glume 6–8 × 1.5–2 mm, lanceolate, margins infolded, 2-keeled, apex acute; keels narrowly winged, 0.3–0.5 mm long. Upper glume 8–10 × 1–1.5 mm, elliptic, margins ciliate towards apex, apex acute. Lower lemma 7.5–8 × 1 mm, elliptic, hyaline, margins ciliate. Palea 2–2.5 × 0.5 mm, oblong-lanceolate, hyaline, apex ciliate. Upper lemma 5.5–6.5 mm long, lanceolate, hyaline, margins ciliate, apex acute.

Fl. & Fr.: Jul.–Nov.

Distrib.: Throughout the state on hill slopes, fallow lands and grasslands.

Exsicc.: Adilabad District: Ankusapuram, GO 4351 (SKU); Sone, TP & PVP 4056 (SKU); Mahabubnagar District: Mayur Eco Park, 09.08.2019, SNR 8663, 8665 (BSID); Medak District: Ramayampet, BRPR & CPB 11541 (SKU); Rangareddy District: Hyderabad, MVR 02165 (HY); Manasa hills-Rajendranagar, 24.08.2016, SNR 8512 (BSID); 10.10.2019, SNR 8733, 8739 (BSID) Pedda kunta, MSM & KH 10571 (SKU)!; Wanaparthy District: Thirumalayyagutta, 07.08.2019, SNR 8637 (BSID) Warangal District: Seetharampuram-Parakala, 29.03.2021, SNR 012031 (BSID).

Caespitose perennials. Culms 40–120 cm high, erect, compressed, branched, glabrous; nodes glabrous. Leaves basal and caudate; sheaths 5–7.5 cm long, compressed, keeled, glabrous, distichous; ligules 0.8–1 mm long, rounded, densely ciliolate; blades 35–40 cm long, linear, distichous, glabrous, margins cartilaginous, apex acuminate. Racemes 3–5 cm long, terminal, solitary, glabrous;

lower 4–8 pairs of homogamous (male or barren) unawned spikelets; upper heterogamous (bisexual) spikelets; joints scabrous, apex thickened; sessile and pedicelled spikelets more or less similar, but lower glume of pedicelled spikelets broadly winged. Hermaphrodite (sessile) spikelets 7.5–8 mm long, elliptic, awned; callus 3.2–3.5 mm long, clothed with dark brownish hairs, pointed. Lower glume 4.5–5.5 × 0.5–0.8 mm, oblong, coriaceous, grooved dorsally, puberulous, brownish, apex truncate. Upper glume 4.5–5 × 0.5–0.7 mm, linear-oblong, coriaceous, dorsally grooved, pale, sigmoidal incurved, apex truncate-minutely 3-toothed. Lower lemma 2.8–3 × 0.5 mm, linear-lanceolate, hyaline, apex truncate. Upper lemma flattened, hyaline, reduced to a base of awn; awn 8–10 cm long, scaberulous. Upper palea 4.3–4.5 mm long, oblong, membranous, apex acute-erose. Pedicelled spikelets 7–9 × 1.5–2 mm, narrowly ovate, unawned. Lower glume 6.5–7 × 1.5–2 mm, lanceolate, margins infolded, apex acute; 2-keeled, keels narrowly winged, 0.5–0.6 mm long. Upper glume 7.5–8 × 1 mm, elliptic, margins ciliate towards tip, apex acute. Lower lemma 5.3–5.5 mm long, elliptic, hyaline, margins ciliate. Upper lemma 4.3–4.5 mm long, lanceolate, hyaline.

Fl. & Fr.: Jul.–Nov.

Distrib.: Occasionally in grasslands, plains, and rocky slopes in dry deciduous forests. **Endemic-India** (Andhra Pradesh, Karnataka, Kerala, Tamil Nadu).

Exsicc.: Vikarabad District: Damagundam-Ananthagiri hills, 02.12.2019, SNR 8912 (BSID).

Note: It can be identified by its glabrous racemes.

3. *Heteropogon polystachyos* (Roxb.) Schult., Syst. Veg. 2, Mant. 460. 1824; Bor, Grasses Burma, Ceylon, India & Pakistan 165. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Plate 143

Caespitose annuals. Culms 10–50 cm high, erect, terete-compressed, branched, glabrous; nodes glabrous, brownish in colour. Leaves basal and caudate; sheaths 2–5.5 cm long, compressed, keeled, glabrous, distichous; ligules 0.4–0.9 mm long, rounded, ciliolate; blades 5–12 cm long, linear, distichous, puberulous and sparsely long hairy, apex acuminate. Racemes terminal, solitary, 2–4 cm long (excluding awn), glabrous; lower 2–7 pairs of homogamous (male or barren) unawned spikelets. Upper heterogamous (bisexual) spikelets; joints scabrous. Hermaphrodite (sessile) spikelets, 3.5–6 mm long, elliptic, awned; callus 3–3.9 mm long, clothed with dark brownish hairs, pointed. Lower glume 3.2–5.5 × 0.4–0.7 mm, oblong, coriaceous, rounded dorsally, puberulous, brownish, apex truncate. Upper glume 4.5–5 × 0.5–0.7 mm, linear-oblong, coriaceous, dorsally grooved, pale, sigmoidal incurved, apex truncate or minutely 3-toothed. Upper lemma flattened, hyaline, reduced to a base of awn; awn 7–9 cm long, densely scaberulous. Caryopsis 3.5–5 × 0.2–0.5 mm, oblong-cylindric. Pedicelled spikelets 6–8 × 0.9–1.5 mm, narrowly ovate, unawned. Lower glume 5.5–7.5 × 1–1.8 mm, lanceolate, margins infolded, apex obtuse-truncate, 2-keeled; keels narrowly winged, 0.3–0.5

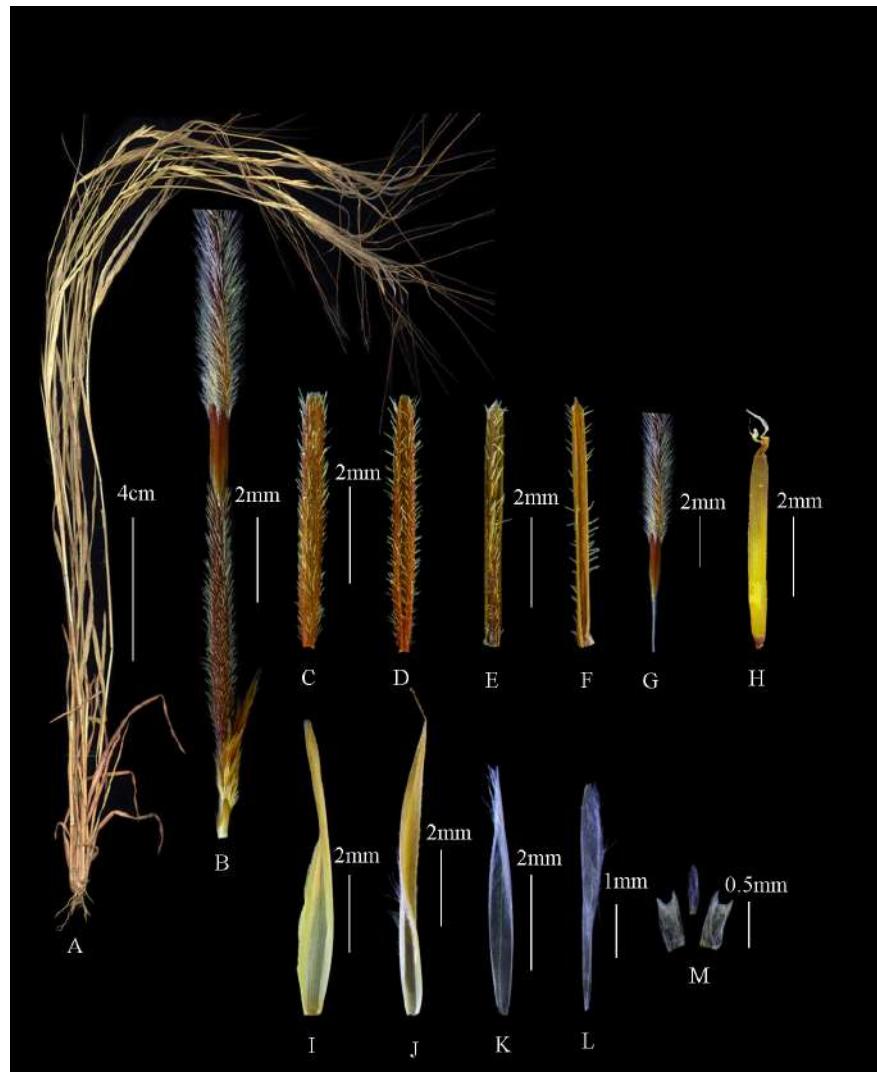

Plate 143. *Heteropogon polystachyos* Blatt. & McCann: A. Habit; B. Spikelet; C&D. Abaxial and adaxial view of lower glume; E&F. Abaxial and adaxial view of upper glume; G. Caryopsis; I–M. Pedicelled spikelet; I. Lower glume; J. Upper glume; K. Lower lemma; L. Upper lemma; M. Palea with lodicules.

mm long. Upper glume $6.5\text{--}8 \times 0.9$ mm, elliptic, margins ciliate towards above, apex acuminate. Lower lemma $5.1\text{--}5.6$ mm long, elliptic, hyaline, margins ciliate. Upper lemma $4.1\text{--}4.4$ mm long, lanceolate, hyaline. Palea $0.4\text{--}0.53 \times 0.1\text{--}0.2$ mm, elliptic-oblong, margins ciliate, apex truncate-minutely 3-toothed.

Fl. & Fr.: Jul.–Nov.

Distrib.: Occasionally grown in grasslands, plains, and rocky slopes.
Endemic-India (Andaman & Nicobar Islands, Jharkhand, Maharashtra).

Exsicc.: Bhadrabri Kothagudem District: Kinnerasani Wildlife Sanctuary,

Chatakonda, 15.11.2020, JS 10868 (BSID); Suryapet District: Undrugonda, 27.10.2019, SNR 8762 (BSID).

Note: It can be identified by its dwarf habit, glabrous and shorter racemes.

4. *Heteropogon triticeus* (R. Br.) Stapf ex Craib in Bull. Misc. Inform. Kew 1912(10): 432. 1912; Bor, Grasses Burma, Ceylon, India & Pakistan 165. 1960; Deshp. in Bull. Bot. Surv. India 30: 124. 1990; Nagaraju & al., NeBio. 11(1): 2. 2020; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 380. 2020. *Andropogon triticeus* R. Br., Prodr. Fl. Nov. Holland. 201. 1810; Hook.f., Fl. Brit. India 7: 200. 1896.

Plate 144

Caespitose perennials. Culms 100–300 cm high, terete, erect, branched, glabrous; nodes glabrous. Leaves basal and caudate; sheaths 6–20 cm long, terete or compressed, keeled, glabrous; blades $25\text{--}75 \times 1\text{--}1.8$ cm, linear, flat, glabrous or sparsely, pilose, apex acuminate; ligules 1.5–2 mm long, membranous. Racemes solitary, 10–22 cm long, terminating the culms and its branches, with lower homogamous awnless and upper awned heterogamous spikelets; joints short; hermaphrodite spikelets $8\text{--}11 \times 2.7\text{--}3$ mm, narrowly ovate-elliptic, awned; callus pungent, bearded with rufous hairy. Lower glume $8\text{--}10.5 \times 1.5\text{--}3$ mm, narrowly ovate, coriaceous, 5-nerved, hirsute on dorsal side, slit like groove from base to apex, apex truncate. Upper glume $9\text{--}10.6 \times 1.1\text{--}1.3$ mm, narrowly ovate-oblong, coriaceous, 3-nerved, margins ciliate, densely hirsute on dorsal side, apex acute. Lower lemma $3.5\text{--}3.7 \times 0.8\text{--}0.9$ mm, narrowly ovate, hyaline, nerveless, apex acute. Palea absent. Upper lemma hyaline, passing into a geniculate awn, 10–18 cm long, hairy. Palea $1.6\text{--}1.8 \times 1\text{--}1.2$ mm, ovate-oblong, hyaline, apex ciliate hairy. Lodicules 2, $2.2\text{--}2.5 \times 0.8\text{--}0.9$ mm; stamens 3; anthers $4.4\text{--}4.9 \times 0.5\text{--}0.8$ mm. Homogamous spikelets $15\text{--}18 \times 3.5\text{--}4$ mm, narrowly ovate, unawned. Lower glume $14\text{--}16 \times 3\text{--}4.5$ mm, narrowly ovate, chartaceous, glabrous, 2-keeled; keel winged on one margin, inflexed, ciliate, 1-nerved, apex acuminate. Upper glume $13\text{--}15 \times 1.4\text{--}2$ mm, linear, margins ciliate, 1-nerved, apex acuminate. Lower lemma $10\text{--}15 \times 0.9\text{--}1.8$ mm, linear, margins ciliate, 1-nerved, apex acuminate. Upper lemma $8\text{--}14 \times 0.9\text{--}1.3$ mm, linear, hyaline, margins ciliate, 1-nerved, apex acuminate. Palea $1.6\text{--}1.8 \times 0.7\text{--}0.8$ mm, narrowly ovate, hyaline, margins ciliate, apex acute. Caryopsis $2.2\text{--}2.4 \times 6\text{--}6.5$ mm, oblong-cylindric.

Fl. & Fr.: Sep.–Dec.

Distrib.: Occasionally in grassland patches of dry deciduous forests.

Exsicc.: Rangareddy District: Palgutta, 30.11.2019, SNR & ARK 8773 (BSID).

Imperata Cirillo

World: 11 spp.; India: 1 sp., 1 var.; Telangana: 1 sp.

Exsicc.: Adilabad District: Kespur, GO & PVP 4558 (SKU); Rangareddy District: Mekavaripalli, TP & MSM 11051 (SKU); Vikarabad District: Ananthagiri hills, 21.09.2019, SNR 8723 (BSID); Warangal District: Regional Agricultural Research Station, 28.03.2021, SNR 012016 (BSID).

Notes: It can be identified by its long silky white racemes.

2. *Ischaemum ciliare* Retz., Obs. Bot. 6: 36. 1791; Hook.f., Fl. Brit. India 7: 133. 1896; Bor, Grasses Burma, Ceylon, India & Pakistan 184. 1960; Pull., Fl. Telangana 3: 1139. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 723. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 386. 2020.

Plate 146(B-X)

Mat-forming perennial, stoloniferous. Culms 15–75 cm high, terete, decumbent; nodes glabrous-villous, lower nodes rooting. Leaves basal and caudine; sheaths 1–4.5 cm long, subcompressed, glabrous-sparsely hairy; ligules membranous; blades 1–6 × 0.2–0.6 cm, oblong-ovate, hirsute, base rounded, apex acute. Racemes 2, 1.5–8 cm long, appressed. Joints triquetrous-turbinate. Sessile spikelets 5–6.5 × 1.5–2.2 mm, ovate, awned, callus bearded. Lower glume 5–6 × 1–1.6 mm, ovate-elliptic, coriaceous, broadly winged upper half only, 5–7-nerved, 2-keeled, apex acuminate. Upper glume 5–6 × 1.3–1.6 mm, boat shaped, coriaceous, 3–5-nerved, keeled, winged, ciliate, apex aristate. Lower lemma 3.5–5 × 1.2–1.4 mm, narrowly ovate, 3-nerved, apex subacute. Lower palea 3.5–4 × 0.8–1 mm, elliptic, chartaceous, 2-nerved, apex acuminate. Upper lemma 3–3.3 × 0.4–0.6 mm, ovate, membranous, apex cleft into 2-lobes; awn from sinus, 10–13 mm long, geniculate, barbellate. Upper palea 3–3.6 × 0.5–0.6 mm, elliptic-ovate, membranous, apex acute. Pedicels 1.5–2 mm long, densely ciliate. Caryopsis c. 1.5 mm long, oblong. Pedicelled spikelet 4–5 × 1–1.5 mm, elliptic-ovate, awned. Lower glume 3.5–4 × 1–1.5 mm, ovate, coriaceous, apex acuminate-aristate. Upper glume florets and palea similar to the sessile spikelet.

Fl. & Fr.: Aug.–Jan.

Distrib.: Throughout the state on bunds of cultivated fields. Used as fodder grass.

Exsicc.: Adilabad District: Indhanpalli-Range, Narlapur-Beat, APS 3917 (BSID); Bhadravati Kothagudem District: Kinnerasani Wildlife Sanctuary, 09.01.2019, SNR 9511 (BSID); Warangal District: Pakhal Wildlife Sanctuary, Ashoknagar Beat, 30.03.2021, SNR 012050 (BSID).

Notes: It can be distinguished by its lower glume of the sessile spikelet winged above. Earlier *Ischaemum ciliare* Retz. is treated as synonym of *I. indicum* (Houtt.) Merr. in many workers, but now *I. indicum* is a synonym of *Polytrias indica* (Houtt.) Veldkamp.

3. *Ischaemum rugosum* Salisb., Icon. Stirp. Rar. 1, t. 1. 1791; Hook.f., Fl. Brit. India 7: 127. 1896; Bor, Grasses Burma, Ceylon, India & Pakistan 184. 1960; Pull., Fl. Telangana 3: 1139. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 723. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 388. 2020.

Plate 147

Caespitose annuals. Culms 8–70 cm high, erect or geniculate; nodes bearded. Leaves basal and caudine; sheaths 3–12 cm long, glabrous, loose; ligules membranous; blades 5–16 × 0.5–1 cm, linear-lanceolate, sparsely hairy-glabrous, margin scabrid, apex attenuate-acuminate. Racemes 2, 4–10 cm long. Joints and pedicels densely ciliate. Sessile spikelets 5–5.5 mm long, oblong-lanceolate, awned; callus bearded. Lower glume 4–5 mm long, oblong, membranous, 3–6-indurated ridges and furrows, 10-nerved, 2-keeled, winged, apex obliquely acute. Upper glume 5–6 mm long, oblong-lanceolate, boat shaped, chartaceous, keeled, winged, ciliolate, apex acute. Florets 2,

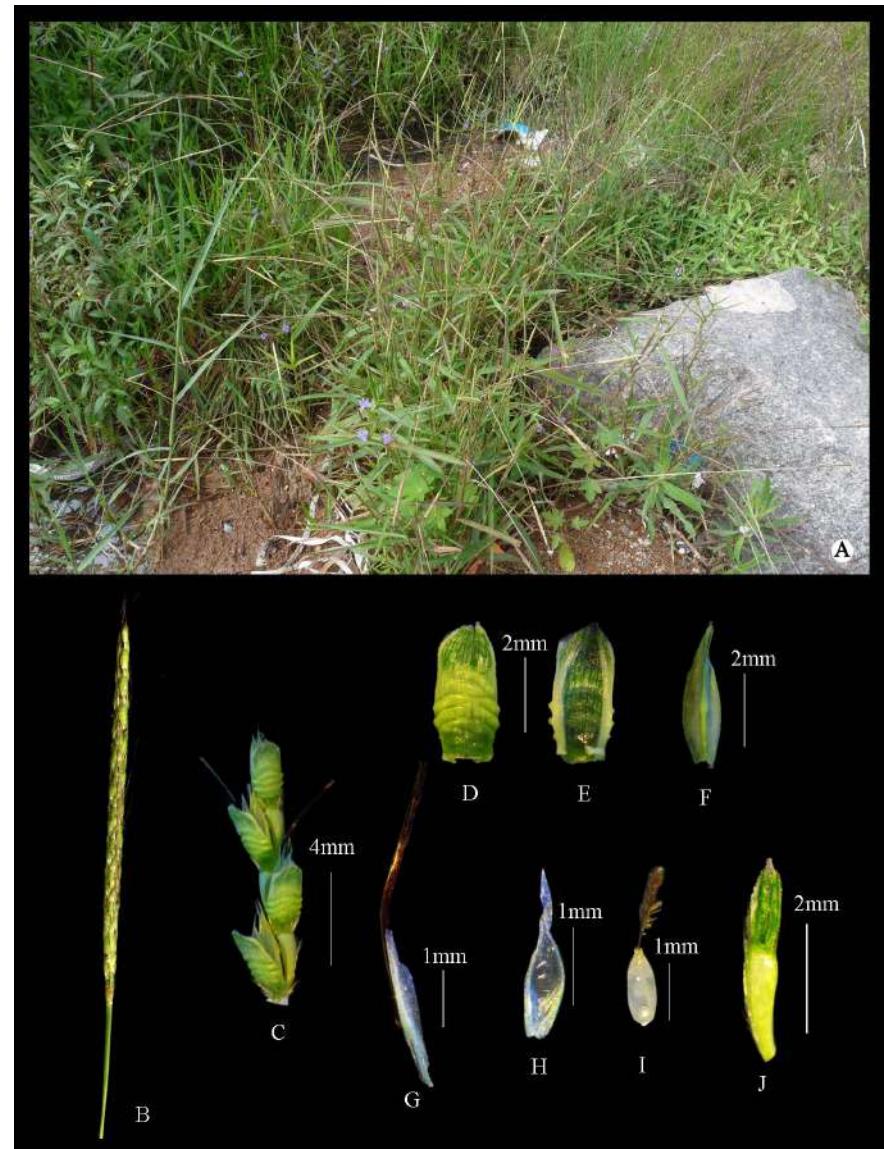

Plate 147. *Ischaemum rugosum* Salisb.: A. Habitat; B. Inflorescence; C. Enlarged view of inflorescence; D&E. Abaxial and adaxial view of lower glume; F. Upper glume; G. Lemma; H. Palea; I. Pistil; J. Pedicelled spikelet.

lower male, upper bisexual. Lower lemma 4–4.5 × 1–1.4 mm, lanceolate, chartaceous, 3-nerved, apex acute. Lower palea 4–4.4 × 0.8–1.2 mm, oblong-lanceolate, 2-nerved, apex acute. Upper lemma 3–4 × 0.8–1 mm, ovate, membranous, 3-nerved, apex cleft into 2-lobes; awn from sinus, 12–16 mm long, geniculate, barbellate. Upper palea 3–3.3 × 1–2 mm, linear-lanceolate, hyaline, 2-keeled, 2-nerved, apex acute. Caryopsis c. 2 mm long, oblong. Pedicelled spikelets 4–5 mm long, oblong, unawned. Pedicels one side ciliate. Lower glume 4–4.5 mm long, oblong, coriaceous, faint transverse ridges, 10-nerved, narrowly winged on one margin, ciliate, apex acute. Upper glume

4.5–5 mm long, oblong-lanceolate, apex acute. Lower and upper florets more or less similar to sessile spikelets.

Fl. & Fr.: Oct.–Jan.

Distrib.: Common in marshy habitats and near cultivated fields.

Exsicc.: Adilabad District: Kunthala way to Nirmal, MHR 13254 (SKU); Sarvaipet, GO 4502 (SKU); Sone, TP & PVP 4059 (SKU)!; Bhadrabri Kothagudem District: Kinnerasani Wildlife Sanctuary, 09.01.2019, SNR 8585 (BSID); Medak District: Gangapur RF, TP & MSG 12071 (SKU); Nizamabad District: Mandora village, TP & BRPR 6225 (SKU); Rangareddy District: Hyderabad, MVR 02166 (HY); Warangal District: Medaram, 24.03.2021, SNR 8968 (BSID).

Notes: It can be differentiated by its deep ridges on lower glume of sessile spikelets.

4. *Ischaemum semisagittatum* Roxb., Fl. Ind. 1: 322. 1820; Hook.f., Fl. Brit. India 7: 130. 1896; Bor, Grasses Burma, Ceylon, India & Pakistan 185. 1960; Pull., Fl. Telangana 3: 1139. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 723. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 389. 2020.

Annuals. Culms 20–60 cm high, erect or geniculate, slender, nodes glabrous-villous. Leaves basal and caudine; sheaths c. 9 mm long, glabrous, margin hairy; ligules c. 3 mm long, oblong, pilose; blades 3–14 × 0.3–1.8 cm, oblong-lanceolate, base cordate-sagittate, apex acuminate. Racemes 2, 2–5.5 cm long, villous. Joints turbinate-clavate, trigonous, villous. Sessile spikelets 4.5–6 mm long, ovate-lanceolate or oblong; callus c. 1 mm long, bearded. Lower glume 5–6 mm long, ovate, cartilaginous below, 2–4 transverse ridges, margin ciliolate, apex slightly bifid. Upper glume 4.5–6 mm long, cymbiform, coriaceous, apex acuminate. Florets 2, lower male, upper bisexual. Lower lemma 4.5–5 mm long, oblong-lanceolate, 3-nerved, apex acuminate. Lower palea 5 mm long, oblong, hyaline, 2-nerved, apex acuminate. Upper lemma 3–4.5 mm long; deeply cleft, lobes acute, glabrous; awn from the cleft, 11–18 mm long. Upper palea 3–4 mm long, linear hyaline, apex obtuse. Pedicelled spikelets 4–5 × 1.5 mm, narrowly oblong-lanceolate, closely appressed to sessile spikelets. Lower glume 4–5 × 1.5 mm, oblong, obscurely ridged, apex obtuse. Upper glume 4–4.5 × 1.2 mm, oblong, coriaceous, apex obtuse. Lower lemma 3.5–4.5 × 1 mm long, lanceolate, 3-nerved. Lower palea c. 3.5 mm long, linear-oblong, hyaline, 2-nerved. Upper lemma c. 5 mm long, narrowly oblong, apex 2-toothed; awn 10–20 mm long. Upper palea 3–4 mm long, linear-oblong.

Fl. & Fr.: Sep.–Dec.

Distrib.: Occasionally on forest hill slopes.

Exsicc.: Medak District: Rusthumpet, KMS 6797 (SKU).

Notes: It can be identified by its cordate or sagittate petioled leaves.

***Iseilema* Andersson**

World: 26 spp.; India: 8 spp.; Telangana: 4 spp.

Key to the species

- | | | |
|-----|--|---------------------------------|
| 1a. | Pedicels of involucral spikelets as broad as long | ... 1. <i>I. anthephoroides</i> |
| 1b. | Pedicels of involucral spikelets longer than broad | ... 2 |
| 2a. | Tuberculate hairs absent on spathe and involucral spikelets | ... 3. <i>I. jainiana</i> |
| 2b. | Tuberculate hairs present on spathe and involucral spikelets | ... 3 |
| 3a. | Robust grass; clusters of spikelets dense fascicles | ... 2. <i>I. holei</i> |
| 3b. | Slender grass; clusters of spikelets not dense fascicles | ... 4. <i>I. prostratum</i> |

1. *Iseilema anthephoroides* Hack., Monogr. Phan. 6: 683. 1889; Hook.f., Fl. Brit. India 7: 219. 1896; C.E.C.Fisch. in Gamble, Fl. Madras 1748. 1934; Bor, Grasses Burma, Ceylon, India & Pakistan 187. 1960; Pull., Fl. Telangana 3: 1140. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana 724. 2016; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 389. 2020.

Caespitose perennials. Culms 30–85 cm high, erect or geniculate; nodes glabrous. Leaves basal and caudine; sheaths 1.5–5 cm long, compressed, glabrous; ligules hairy; blades 4.5–9 × 0.1–0.4 cm, linear-oblong, sparsely tubercle based hairy, apex acute. Racemes cluster of spikelets, 4-male involucral, 1-hermaphrodite sessile and 2-male pedicelled; spathaceous, spathes c. 12 mm long, margins glabrous-tuberle based hairy. Involucral spikelets 4–4.5 mm long, broadly oblong; pedicelled, as long as broad. Lower glume 3.5–4 × 1–1.5 mm, oblong-elliptic, membranous, 2-nerved, 2-keeled, tubercle based hairs on keel, apex acute. Upper glume 3.5–4 × 1–1.5 mm, elliptic, 3-nerved, apex acute. Lemma absent. Hermaphrodite spikelets 3.5 × 1 mm, lanceolate, apex acuminate. Lower glume 3–3.5 mm long, ovate, coriaceous, 4-nerved, margin hairy, beak 3–3.5 mm long, apex bifid. Upper glume 3–3.5 mm long, lanceolate, 3-nerved, ciliate on keels, apex acuminate. Lower lemma 2–2.5 mm long, narrowly linear, hyaline, apex muticous. Lower palea absent. Upper lemma reduced to the base of awn, hyaline; awn 12–18 mm long, geniculate. Upper palea absent. Caryopsis c. 2.5 mm long, ellipsoid. Pedicelled spikelets reduced to a delicate 3–3.5 mm long pedicels.

Fl. & Fr.: Aug.–Jan.

Distrib.: Occasionall in moist habitats. Relished by cattles.

Exsicc.: Adilabad District: Bellampally & Tiriyani RF, PVP & TP 9466, 9499 (SKU); Khammam District: Koriguttal, RR 106034 (BSID); Mahabubnagar District: Thumukunta, BRPR & MVS 40726 (SKU); Rangareddy District: Hyderabad, MVR 02167 (HY); Warangal District: Regional Agricultural Research Station, 26.03.2021, SNR 8983 (BSID).

Notes: It can be easily identifiable by pedicels of involucral spikelets as broad as long.

2. *Iseilema holei* Haines, Bot. Bihar & Orissa 1055. 1924; Bor, Grasses Burma Ceylon, India & Pakistan 188. 1960; Pull., Fl. Telangana 3: 1140. 2015; Prasanna & al. in A.A. Mao & S.S. Dash (eds.), Fl. Pl. India Annot. Checkl. Monocot. 3: 390. 2020.

Caespitose annual. Culms 50–110 cm high, compressed; nodes glabrous-bearded. Leaves basal and cauline; sheaths 3–9 cm long; ligules membranous; blades 18–58 × 0.2–0.4 cm, linear-lanceolate, apex acute-acuminate. Racemes cluster of spikelets, 4-male involucral, 1-hermaphrodite sessile and 2-male, pedicel filiform, c. 2 mm long. Involucral spikelets c. 5 mm long, oblong-lanceolate, apex obtuse. Lower glume c. 4 mm long, oblong-elliptic, membranous, 2-nerved, 2-keeled, tubercle based hairs on keel, apex acute. Upper glume c. 4 mm long, elliptic, 3-nerved, apex acute. Lemma absent. Hermaphrodite spikelet 4–6 × c. 1 mm, elliptic, awned. Lower glume 3.5–5.5 × c. 1 mm, ovate-lanceolate, 5-nerved, 2-keeled, apex acuminate, 2-fid. Upper glume 3.5–5 × c. 1 mm, lanceolate, 3-nerved, apex mucronate. Florets 2, both epaleate. Lower lemma 1.8–2 × 0.2 mm, oblong, apex acute-obtuse. Upper lemma c. 2 × 0.2 mm, oblong, membranous; awn c. 1.5 cm long, geniculate, barbellate. Pedicelled spikelets much reduced; hermaphrodite spikelets 0.45–0.5 cm long, linear or lanceolate, apex acuminate. Caryopsis ellipsoid.

Fl. & Fr.: Oct.–Feb.

Distrib.: Occasionally in forest hills slopes.

Exsicc.: Adilabad District: Indhanpalli-Range, Jannaram- Forest Division, 26.10.2013, APS 3937 (BSID).

Notes: It can be identified by robust growth and dense fascicles.

3. *Iseilema Jainiana* P. Umam. & P. Daniel in J. Bombay Nat. Hist. Soc. 98: 425. 2001; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 390. 2020. *Iseilema Hackelii* U.B.Shrestha & Gandhi, Harvard Pap. Bot. 13(2): 296. 2008.

Caespitose perennials. Culms 20–35 cm high, geniculate, woody. Leaves basal and cauline; sheaths c. 3.5 cm long, keeled; ligules membranous, apex ciliate; blades 4.5–14 × c. 0.4 cm, lanceolate, apex acute. Racemes cluster of spikelets, 4-male involucral, 1-hermaphrodite sessile and 2-male pedicelled; spathaceous, spathes c. 15 mm long, margin glabrous-tuberle based hairy. Involucral spikelets 4.5–5.2 × c. 1 mm, oblong; pedicelled, longer than broad, margin hairy. Lower glume 4–4.5 × c. 1 mm, lanceolate, hispid, 5-nerved, 2-keeled, apex acuminate. Upper glume 3.5–4 × c. 0.6 mm, lanceolate, 3-nerved, 2-keeled, apex acuminate. Floret one, staminate, palea absent. Lemma 3–3.5 × c. 0.5 mm, oblong, apex acute-lobed. Hermaphrodite spikelet 4–6 × c. 1 mm, elliptic, awned. Lower glume, 3.5–5.5 × c. 1 mm, ovate-lanceolate, 2-nerved, 2-keeled, apex acuminate, 2-lobed. Upper glume 3.5–5 × c. 1 mm, lanceolate, 1-nerved, apex mucronate. Florets 2, both epaleate. Lower lemma 1.8–2 × c. 0.2 mm, oblong, apex acute-obtuse. Upper lemma c. 2 × 0.2 mm, oblong, base of the awn membranous; awn c. 1.5 cm long, geniculate, barbellate. Upper palea c. 2 mm long, oblong, apex obtuse-rounded. Caryopsis c. 1.5 mm long, ellipsoid. Pedicelled spikelet c. 5.5 mm long, staminate. Lower glume 5–7-nerved, 2-keeled above. Upper glume c. 4 × 0.5 mm, oblong-lanceolate. Lower lemma c. 2.5 × 0.5 mm, 2-lobed. Upper floret similar to sessile spikelet.

Fl. & Fr.: Jun.–Mar.

Distrib.: Occasionally in forest hill slopes.

Exsicc.: Adilabad District: Indhanpalli-Range, Jannaram-Forest Division, APS 3960 (BSID); Mahabubnagar District: Bhavani Sagar, 06.08.2019, SNR 8615 (BSID); Suryapeta District: Mangal Thanda-Kodada Road, 27.10.2019, SNR 8756 (BSID); Vikarabad District: Ananthagiri Hills, 21.09.2019, SNR 8703, 8707 (BSID). Warangal District: Kothagadda, 25.03.2021, SNR 8974 (BSID).

Notes: It can be identified by the absence of tubercle hairs on spathe and involucral spikelets

4. *Iseilema prostratum* (L.) Andersson, Nova Acta Regiae Soc. Sci. Upsal. 2: 250. 1856 (as "prostrate"); C.E.C.Fisch. in Gamble, Fl. Fl. & Fr.: Sep.–Feb.

Distrib.: Occasionally forest grass.

Exsicc.: Rangareddy District: Chevella, 30.11.2019, SNR 8778 (BSID); Vikarabad District: Ananthagiri Hills, 21.09.2019, SNR 8708 (BSID).

Pogonatherum P. Beauv.

World: 4 spp.; India: 4 spp.; Telangana: 2 spp.

Key to the species

- 1a. Callus hairs longer than spikelet; awns up to 25 mm long;
anthers minute c. 0.5 mm long ...1. *P. crinitum*
1b. Callus hairs definitely shorter than spikelet; awns up to 15 mm long;
anthers 1–1.5 mm long ... 2. *P. paniceum*

1. Pogonatherum crinitum (Thunb.) Kunth, Enum. Pl. 1: 478. 1833; Hook.f., Fl. Brit. India 7: 141. 1896; Bor, Grasses Burma, Ceylon, India & Pakistan 200. 1960; Prasanna & al. in A.A.Mao & S.S.Dash, Fl. Pl. India Annot. Checkl. Monocot. 3: 412. 2020. *Andropogon crinitus* Thunb., Syst. Veg. ed. 14: 903. 1784. *Pogonatherum paniceum* sensu C.E.C.Fisch. in Gmable, Fl. Madras 1714. 1934. **Plate 151**

Caespitose annuals. Culms 15–25 cm high, erect or geniculate; nodes bearded. Leaves basal and caudine; sheaths 1.5–2 cm long, ribbed, mouth bearded; ligules c. 0.3 mm long, membranous; blades 2–4 × 0.1–0.2 cm, linear-lanceolate, scabrid, apex acuminate. Raceme 1.5–2 cm long, terminal. Spikelets paired, similar, 1.16–1.22 × c. 0.6 mm, ovate-lanceolate, awned; callus 1.16–2.90 mm long, bearded. Lower glume 0.77–0.85 × c. 0.25 mm, oblong-lanceolate, chartaceous, 1–3-nerved, 1-keeled, apex acute. Upper glume 0.9–1.2 × c. 0.5 mm, ovate-oblong, lanceolate, chartaceous, yellowish, 1-nerved, 1-keeled, keel scabrid, margins ciliate, apex acute, slightly 2-lobed, apex long awned; awn 11–13 mm long, capillary, barbellate, golden brown. Florets 2; lower barren, upper bisexual. Lower lemma linear, membranous, hyaline, nerveless, apex acute. Upper lemma 0.55–0.7 × 0.3 mm, oblong-lanceolate, membranous, hyaline, 1-nerved; 2-lobed; awn from sinus, 11–13 mm long, curved-geniculate, barbellate. Palea c. 0.46 × 0.28 mm, broadly ovate, chartaceous, hyaline, apex ciliate. Stamen 1. Ovary 0.16 mm long, narrowly elliptic. Caryopsis 0.76 × 0.18 mm, elliptic-oblong, wrinkled.

Fl. & Fr.: May–Mar.

Distrib.: Occasionally in rocky crevices.

Exsicc.: Bhadravati Kothagudem District: Kinnerasani Wildlife Sanctuary, 05.01.2018, SNR & JS 9522 (BSID).

Note: It can be easily identified by its less than 2 mm long spikelets and long callus.

2. Pogonatherum paniceum Hack., Allg. Bot. Z. Syst. 12: 178. 1906; Bor, Grasses Burma, Ceylon, India & Pakistan 202. 1960; Pull., Fl. Telangana 3: 1164. 2015; K.N.Reddy & C.S.Reddy, Fl. Caespitose annuals. Culms 15–90 cm high, erect-geniculate; nodes glabrous. Leaves mostly basal; sheaths 1.5–3 cm long, terete, glabrous; ligules membranous; blades $2\text{--}13 \times 0.1\text{--}0.4$ cm, linear, base rounded-cordate, apex acute-acuminate. Inflorescence compound, terminal and axillary racemes, subtended and enclosed by spatheole or hardly extended from spatheole. Raceme 3–6 cm long, solitary; rachis fragile, 4–5 mm long, margins villous. Spikelets paired, sessile, pedicelled, disarticulating; pedicels cuneate, villous. Sessile spikelets 5–8 mm long, linear-lanceolate, falling entire; callus pilose, obtuse. Glumes dissimilar. Lower glume lanceolate, as long as spikelet, apex 2-toothed, subcoriaceous, glabrous-villous dorsally, faintly 3–5-nerved, 2-keeled. Upper glume 5–5.6 mm long, lanceolate, boat shaped, 3-nerved, 1-keeled, margins hyaline, apex acuminate-shortly aristate. Florets 2; lower barren, upper bisexual. Lower lemma oblong, hyaline, nerveless or 3-nerved, margins ciliolate. Lower palea absent. Upper lemma oblong, apex 2-lobed, lobes acuminate; awn from sinus, 7–25 mm long, geniculate, column twisted. Upper palea absent or minute, narrowly linear, 2-keeled. Lodicules 2. Stamens 2 or 3. Ovary c. 0.5 mm long, oblong. Caryopsis narrowly oblong. Pedicelled spikelets rudimentary, 1–2 mm long, lanceolate, represented by only glumes. Glumes chartaceous, brownish, one glume with 3–10 mm long awn.

Annual, tufted. Culms 8–85 cm high, terete, erect; internodes 10–15 cm long; nodes glabrous. Leaves, basal and caudate; sheath 3–5.6 cm long, terete, glabrous; ligule rim of hairs, 0.6–0.8 mm long; blade 10–32 × 0.2–0.5 cm, linear,

flat, glabrous, margins entire-serrulate, base truncate, apex acuminate (slender tail-like). Racemes 2–4.5 cm long, solitary. Joints 3–3.8 mm long, compressed, densely silvery. Sessile spikelet 5–7 × 0.7–1 mm, linear-ovate, awned, callus short, bearded. Lower glume, 5.5–7 × 0.8–1.3 mm, linear-ovate, coriaceous glabrous, 5–6-nerved, 2-keeled, margins inflexed, apex 2-toothed. Upper glume 4–5 × 0.6–0.8 mm, cymbiform, subcoriaceous, glabrous, 3-nerved, 1-keeled, keel winged, awned, slender, and straight up to 2.5 cm long. Lower lemma 3.5–4.5 × 0.4–0.6 mm, elliptic-narrowly ovate, hyaline, 2-nerved, 2-keeled, retrorsely barbed on keels, margins hairy, apex 2-toothed-lacerate. Lower palea 3.5–4 × 0.5–0.6 mm, linear-ovate, hyaline, glabrous, margins inflexed, 2-keeled, apex bifid. Upper lemma 3.5–4 × 0.6–0.8 mm, narrowly ovate, membranous, hyaline, 3-nerved, 2-toothed, awned from sinus, awn 3–3.5 cm long, geniculate, distinctly ciliate along the spiral. Upper palea 3–3.8 × 0.5–0.6 mm, lanceolate-elliptic, linear, chartaceous, hyaline, margins inflexed, 2-nerved, 2-keeled, apex lacerate. Lodicules 2, 0.2–0.5 mm long. Stamens 1–3, anthers 2–2.7 mm long. Ovary 0.5–0.8 mm long, oblong, stigma, densely plumose. Caryopsis oblong-ellipsoid. Pedicel up to 4 mm long, compressed; margins densely silvery hairy (1–1.2 mm long). Pedicelled spikelet 8–12 × 1–1.2 mm, lanceolate, unawned. Lower glume 9–13 × 0.8–1.5 mm, linear-ovate, coriaceous-membranous, glabrous, margins inflexed, 5–6-nerved, 2-keeled, keels winged and densely hairy, apex with two setaceous teeth. Upper glume 5–7.5 × 0.6–1 mm, linear-ovate, boat-shaped, coriaceous-membranous, glabrous, margins inflexed, ciliolate, 3-nerved, apex acuminate. Florets 2; both florets empty. Lower lemma 5–5.8 × 0.4–0.8 mm, linear, lanceolate-elliptic, hyaline, colorless dots below the apex on the dorsal side, glabrous towards base, margins inflexed, ciliate, 2-nerved; 2-keeled, retrorsely barbed on keel; apex lacerate. Lower palea 3.5–4.5 × 0.2–0.6 mm, linear-elliptic, chartaceous, hyaline, 2-nerved; 2-keeled, retrorsely barbed on keel; apex 2-toothed-lacerate. Upper lemma 4–5.2 × 0.3–0.4 mm, lanceolate-elliptic, chartaceous, hyaline margins inflexed, ciliate, 3-nerved, apex acute-lacerate. Upper palea 4–5.1 × 0.2–0.4 mm, lanceolate-elliptic, chartaceous, hyaline, 2-nerved, apex acute-lacerate.

Soc., Bot. 55: 240. 1955; Bor, Grasses Burma, Ceylon, India & Pakistan 223. 1960.

Tufted perennials. Culms 20–55 cm high, slender-stout; nodes glabrous to pubescent. Leaves basal and caudine; sheath 5–20 cm long; ligule a ciliolate membrane; blade 10–25 cm long, elliptic, ovate-lanceolate, narrowed at base, margins scabrid, apex acute-acuminate. Panicle 10–20 cm long, ovate-lanceolate, loose-contracted; primary panicle branches whorled, flexuous, scabellate, subdivided, pubescent in axils. Spikelets appressed in pairs, sessile and pedicelled, ovate, villous. Sessile spikelet ovate-lanceolate, oblong, dorsally compressed, apex acute, densely white strigose hairy dorsally-glabrescent. Lower glume ovate-lanceolate, subcoriaceous, whitish or yellowish pubescent dorsally. Upper glume ovate, chartaceous-subcoriaceous, apex acute, pubescent dorsally. Florets 2; lower barren or male, upper bisexual. Lower lemma ovate-lanceolate, membranous, acute, 2-nerved, margins ciliate. Upper lemma membranous, 2-toothed at apex, awned from sinus, 1-nerved, margins ciliate; awn geniculate, c. 25 mm long, column twisted. Upper palea absent or minute. Lodicules oblong, apex ciliate. Caryopsis obovate to oblong-lanceolate. Pedicelled spikelet smaller than sessile, linear-lanceolate, dorsally compressed, usually reduced to glumes; pedicels filiform, ciliate. Glumes subequal, linear to ovate-lanceolate, chartaceous, acute to muticous at apex. Lemmas reduced, barren or male.

Caespitose annuals. Culms 25–120 cm high, tufted geniculate or trailing, stilt roots; nodes glabrous. Leaves basal and caudine; sheaths 2–13 cm long, margins ciliate; ligules 4–5 mm long, membranous; blades 5–28 × 1–2 cm, oblong-lanceolate, petiolate, flat, hispid. Panicles c. 18 cm long, pyramidal, spathaceous, villous. Joints ciliate along margins. Sessile spikelets 7–10 mm long, lanceolate, densely hairy, awned. Lower glume 6–7 mm long, ovate-lanceolate, membranous, densely villous, 7-nerved, 2-keeled, apex truncate. Upper glume 5–5.5 mm long, cymbiform-lanceolate, membranous, 7–9-nerved, apex arista 2–5 mm long. Florets 2; lower male, upper bisexual. Lower lemma 3.5–4 mm long, lanceolate, 3-nerved, apex acuminate-truncate. Palea 4–5 mm long, lanceolate, 2-nerved. Upper lemma 4–5 mm long, oblong, notched, lobes acuminate; awn 10–30 mm long, geniculate. Palea 3–3.5 mm long, lanceolate, fimbriate. Pedicelled spikelets 6–6.5 mm long, linear-lanceolate, awned. Pedicels 2–2.5 mm long, ciliate along margins. Glume and lemma similar to sessile spikelets.

Fl. & Fr.: Oct.–Dec.

Distrib.: Common under the shade of trees in forests.

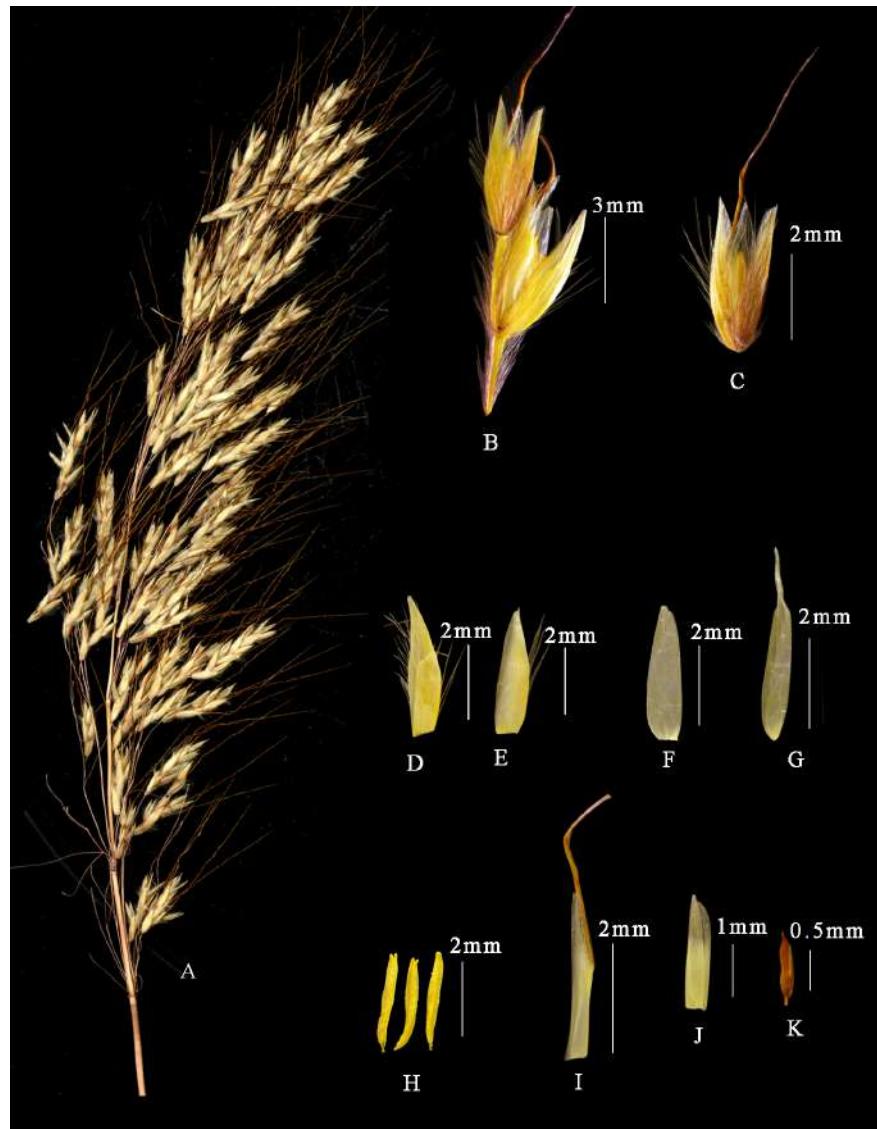

Plate 160. *Spodiopogon rhizophorus* (Steud.) Pilg.: A. Inflorescence; B. Sessile and pedicelled spikelets; C. Spikelet; D. Lower glume; E. Upper glume; F. Lower lemma; G. Palea; H. Stamens; I. Upper lemma; J. Palea; K. Caryopsis.

Exsicc.: Adilabad District: Jannaram Range, Kawal Tiger Reserve, 28.10.2013, APS, ALC & KCM 3987 (BSID).

Thelepogon Roth

World: 1 sp.; India: 1 sp.; Telangana: 1 sp.

Thelepogon elegans Roth ex Roem. & Schult., Syst. Veg. 2: 788. 1817; Hook.f., Fl. Brit. India 7: 148. 1896; Bor, Grasses Burma, Ceylon, India & Pakistan 247. 1960; Pull., Fl. Telangana 3: 1181. 2015; K.N.Reddy & C.S.Reddy, Fl. Telangana

Plate 161

Annals. Culms 25–75 cm high, erect-geniculately ascending. Leaves basal and caudine; sheaths 2.5–4.5 cm long, loose, hirsute, margins ciliate; ligules membranous; blades 5–22 × 0.5–1.5 cm, linear-lanceolate, base amplexicaul, hairy, margins undulate, apex acute. Racemes c. 13 cm long. Sessile spikelets

5–6.5 mm long, ovoid. Lower glume 4–5 mm long, ovate, coriaceous, transversely rugose, 7–9-nerved, apex 2-toothed. Upper glume c. 7.5 mm long, ovate-cymbiform, coriaceous, rugose, 1–3-nerved, apex acuminate. Lower lemma 3–4.5 mm long, lanceolate, chartaceous, 2-nerved, hyaline, apex acute. Palea 2–3 mm long, lanceolate, margins inflexed, hyaline, apex acute. Upper lemma 3–4.5 mm long, ovate-lanceolate, hyaline; awn from sinus, c. 30 mm long. Palea 3.5–4 mm long, lanceolate, apex acuminate. Caryopsis 2.5–3 mm long, elliptic-oblong. Pedicelled spikelets c. 8 mm long, linear, reduced to pedicel.

Fl. & Fr.: Aug.–Jan.

Distrib.: Occasionally in bunds of cultivated fields.

Exsicc.: Nizamabad District: Gandhari, BRPR & CPR 7231 (SKU); Vikarabad District: Anathagiri Hills, 30.11.2019, SNR 8781 (BSID), Naskal Range, Parigi RF, 01.12.2019, SNR 8792 (BSID); Damagundam, 02.12.2019, SNR 8910 (BSID).

Note: It can be easily distinguishable by transverse warty ridges on lower glume of sessile spikelets.

Themedea Forssk.

World: c. 29 spp.; India: 19 spp., 3 var.; Telangana: 3 spp.

Key to the species

- | | |
|--------------------------------------|-------------------------------|

Plate 162

Caespitose perennials. Culms 50–200 cm high, geniculate; nodes glabrous. Leaves basal and cauline; sheaths glabrous, compressed; ligules membranous; blades 5–30 × 0.1–0.4 cm, linear, margins scabrid, sparsely pilose or glabrous. Fascicled racemes terminate the upper branches. Spathes 1–3 cm long, subulate, tubercle based hairy along margins. Involucral spikelets 4–5.5 mm long, lanceolate. Lower glume 4.5–6 mm long, lanceolate, bristly. Upper glume 3.5–5.5 mm long, oblong-lanceolate, chartaceous, margins inflexed, 3-nerved, apex acute. Lemma 4–5.5 mm long, linear-lanceolate, chartaceous-membranous, hyaline, 1-nerved, epaleate. Lower glume of bisexual spikelets 3.5–4.5 mm long, lanceolate, adaxial surface bristly, obscurely nerved, apex acute. Upper glume 3.8–4 mm long, lanceolate, 3-nerved. Lower lemma 2–2.5 mm long, lanceolate, chartaceous, 1-nerved, epaleate. Upper lemma reduced to awn, 35–40 mm long. Upper palea absent. Caryopsis 1–2.3 mm long. Pedicelled spikelets 3.5–7 mm long, lanceolate. Glume and lemma similar to involucral spikelets.

Fl. & Fr.: Aug.–Dec.

Distrib.: Common throughout the state in grassy patches and near water sources.

Exsicc.: Adilabad District: Sone, *TP & PVP* 4052 (SKU); Bhadravati Kothagudem District: Kinnerasani Wildlife Sanctuary, *SNR* 9597 (BSID); Mahabubnagar District: Farahabad, *MVS & MBL* 38019 (SKU); Medak District: Narsapur, *TP & MSG* 11996 (SKU); Rangareddy District: Palgutta, 30.11.2019, *SNR* 8775 (BSID); Patancheru industrial area, *BRPR* 11315 (SKU); Vikarabad District: Ananthagiri hills, 21.09.2019, *SNR* 8716 (BSID).

Dr. Nagaraju Siddabathula has been working on systematics study on Indian grasses since last 10 years. He has vast field experience through which he could unravel the taxonomic intricacies in many species. His results are published as research papers in many National and International journals. Presently, he is working at Botanical Survey of India (BSI), Kolkata and engaged in editing of BSI publications apart from continuing his studies on Indian grasses.

Dr. P.V. Prasanna, Scientist-G (Rtd.) has been serving Botanical Survey of India since December, 1990. His prime interest is Angiosperm floristics with special focus on Indian grasses. 3 students have worked in his research supervision on grass flora and obtained Ph.D. degree. To his credit, he has publications of 9 books and 70 research articles.
