

! schubi@ToGo – Eight new visual perception games

Figure-ground-perception, visual differentiation, perception of size, shape permanence, but also spatial perception and spatial relationships as well as hand-eye coordination: visual perception plays a central role in early years / preschool intervention programmes and is a prerequisite for developing literacy and numeracy skills during the first two years at school. The games series schubi ToGo offers games which target essential aspects of visual perception. Regardless of whether there are Martians and their UFOs, sail boats or colourful ocean fish: while playing exciting game variations, the children practise recognising, comparing, differentiating and correctly relating shapes, colours, figures, shadows, patterns, mirror images, positions, quantities and symbols.

Suitable for: children from 4 - 8 years, early intervention (nursery), therapy (Occupational Therapy etc.), after-school care, individual and small group (2 - 4 players) interventions.
