

SKI CORES

ATOMIC RACE SKIS CONSIST OF ULTRA-LIGHT NOMEMX CORES. ATOMIC SPORT AND TOURING SKIS ARE ALL BASED ON LIGHT AND STABLE DENSOLITE CORES.

RACING SKIS

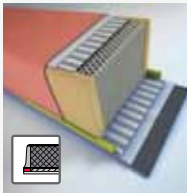

NOMEMX FEATHERLIGHT CORE

FOR ULTRA-LIGHT WORLDCUP SKATE SKIS (WC SKATE)

This core is made of Nomex and boasts outstanding warp-resistance for an ultra-light yet stable ski.

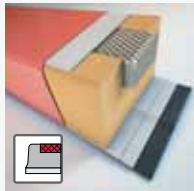

CARBON SDS FEATHERLIGHT CORE

FOR ULTRA-LIGHT WORLDCUP CLASSIC SKIS (WC CLASSIC)

The Carbon SDS core, which is based on the Nomex Featherlight core, uses a yellow ABS material in the kick zone and thin carbon laminates for excellent kick and glide.

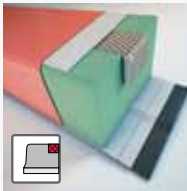

MEXCELL CORE

FOR VERY LIGHT RACE SKIS (VASA RACE SKATE/CLASSIC)

This core uses a Nomex powercell in an Ultra High Densolite core for a dynamic kick and excellent responsiveness.

POWERCELL CORE

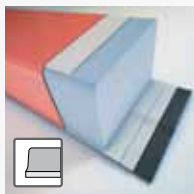

FOR LIGHT RACE SKIS (RACE SKATE/CLASSIC)

This core uses a Nomex powercell in a High Densolite core for a good kick and responsiveness.

NOMEMX is an ultra-lightweight material originally used in aerospace. It is structured like a honeycomb for strength, resilience and liveliness.

SPORT SKIS

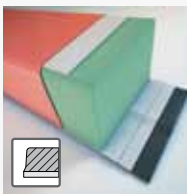

SPEEDCELL CORE

FOR VERY LIGHT SPORT SKIS (SPORT PRO SKATE/CLASSIC, WC SKATE/CLASSIC JR)

This Ultra High Densolite core with speedcell combines perfect rebound and performance with very low weight.

HIGH DENSOLITE CORE

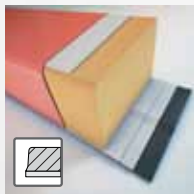

FOR LIGHT SPORT SKIS (PRO CLASSIC/SKATE ...)

This core consists of High Densolite and combines good rebound and performance with low weight.

TOURING SKIS

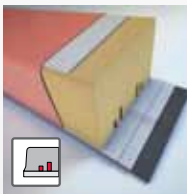

ULTRA HIGH DENSOLITE CORE

FOR LIGHT TOURING SKIS (MOVER 48, BACKCOUNTRY ...)

This Ultra High Densolite core is perfect for stable and light Touring and Backcountry skis.

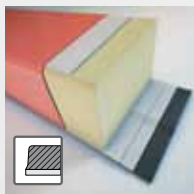

HELIUM TUBE CORE

FOR LIGHT YET STABLE XCRIUSE SKIS

The Helium Tube core is an Ultra High Densolite core with thermally-formed air ducts. This core is light and stable for easy handling of XCruise skis.

DENSOLITE CORE

FOR LIGHT AND STABLE TOURING SKIS (MOTION, XCRIUSE SKIS ...)

This Densolite core has an extremely favorable power-to-weight ratio, especially good for Touring models.

ATOMIC DENSOLITE is a core material which is very light and yet stable and tough. Densolite is produced in Atomic's own facilities and comes in 3 different variations: Densolite, premium High Densolite and supreme Ultra High Densolite. All variations are equally tough, but the premium versions are lighter and more dynamic.

SKINTEC AND OTHER GRIP TECHNOLOGIES

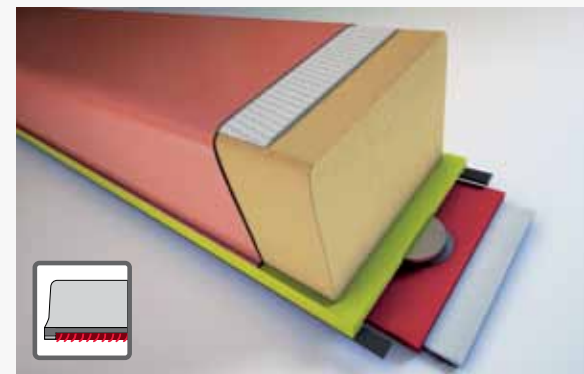

ATOMIC SKINTEC IS OUR HIGH PERFORMANCE GRIP TECHNOLOGY FOR COMPETITIVE ATHLETES. POSIGRIP 3D IS FOR ALL-ROUNDERS AND G2 SYNCRO FOR NEWCOMERS TO THE CLASSIC TRACK.

ATOMIC SKINTEC

STEP DOWN SIDEWALL CORE

FOR ATOMIC SKINTEC SKIS

The Step Down Sidewall core distributes the pressure evenly over the kick zone, which makes it easy to push down the ski during the kick. The Step Down Sidewall construction also helps to keep the kick high during the glide phase.

SKINTEC MODULES

THE FIRST HIGH PERFORMANCE GRIP TECHNOLOGY FOR COMPETITIVE ATHLETES.

- > Easy-to-use: 2 interchangeable Skintec modules in the kick zone: one for better grip, one for better glide.
- > Versatile: secure grip and exceptional glide in all snow conditions and temperatures.

OTHER GRIP TECHNOLOGIES

POSIGRIP 3D

THE GRIP TECHNOLOGY FOR ALL-ROUNDERS IN THE CLASSIC TRACK.

For perfect grip and flawless glide: three different grip patterns in the kick zone are positively embossed, forming a 3-dimensional structure for minimum friction in the glide phase while ensuring a powerful kick.

G2 SYNCRO

THE GRIP TECHNOLOGY FOR NEWCOMERS TO THE CLASSIC TRACK.

Forgiving grip with smooth glide: two different grip patterns cut into the base of the ski help the cross-country skier to improve ski control in any track conditions.
