CORALS

No standard references have been adopted for the coral species listed in the CITES Appendices. Two main references have been used as a basis for the taxonomy of Scleractinia spp., Milleporidae spp. and Stylasteridae spp.: Cairns *et al.* (1999), supplemented by Veron (2000). Antipatharia spp. have never been the subject of a complete taxonomic revision, although Opresko (1974) provided an incomplete summary. An ongoing revision of the Order by Opresko currently has five parts published (2001-2006), covering the families Aphanipathidae (22 spp.), Cladopathidae (16 spp.), Myriopathidae (32 spp.), Schizopathidae (37 spp.) and Stylopathidae (8 spp.), leaving the Antipathidae (approx. 122 spp.) and the Leiopathidae (6 spp.) to be dealt with. The accepted species of Leiopathidae in the UNEP-WCMC database and most of the accepted species of Antipathidae accord with those accepted by Bisby *et al.* (2007).

A number of species that were not included in the 2005 checklist have been added to the 2008 Checklist. These include species described since 2005; species described before 2005 that were overlooked when producing the 2005 checklist; and species that are now considered to be accepted because of recent taxonomic revisions (Table 1). Others are newly added synonyms (Table 2).

A number of other names included in the 2005 checklist have been subsequently modified. Some of these were valid names in the 2005 checklist, but are now considered to be synonyms following recent revisions (Table 3). Others were synonyms in the 2005 checklist, but are now linked to different species, or have been removed from the checklist because they are now considered to be 'tentative' (i.e. indeterminate) names. Others involve the correction of typographical errors (Table 4).

One species does not fall within any of the categories covered by Tables 1-4:

- *Acropora appressa:* deleted from the 2008 Checklist because it was not accepted by either of the two main references used for the Scleractinia.

Table 1. Species described since 2005; species described before 2005 that were overlooked in the 2005 Checklist; and species now accepted because of recent taxonomic revisions.
