

## ruwu® high-efficiency fans

Freely configurable across all sectors for all areas of application and operating conditions.

# For example special model **VH2S/RU 250 K** Soundproof high pressure blower

This radial industrial fan, a sound insulated high pressure blower with integrated special filter, ensures that even highly complex processes run as cleanly and quietly as possible.

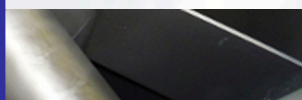

This saves resources — indoors and outdoors.

The result of desired requirements and confident mastery of the subject, is tailor made special solutions, targetedly implemented for large-scale industry.

More and more companies trust in our solution potential, rely on the "Made in Germany" quality, and want us to manufacture reliable high performance fans for them. With a great deal of expertise, a wealth of ideas and communication skills, our highly qualified specialist engineers develop the most economical solution, together with the customer's experts, which are then implemented to be a perfect fit in the product. This ensures, that the specified quality criteria and the required environmental values are bindingly adhered to.

Whether for the chemical industry, coal and steel industry, automotive industry, plastics industry, heavy industry or for example sewage treatment plants etc., no matter which branch of industry, the enormous solution capability of the ruwu® engineering team for customer specific special structures offers the right solution for even the smallest scope of application. For maximized production processes, which still conserve resources - indoors and outdoors.

... and you have the air under control
