Email: matthew.baker@tmag.tas.gov.au

Flora and fauna surveys were conducted at the Musselroe Wind Farm property in 2018 and 2019 as part of the Tasmanian Museum and Art Gallery's ongoing research, collection-building and nature-discovery program. The property was found to have significant ecological and nature conservation values and this survey program increases the number of vouchered taxa known for the area to 1336 primarily from the targeted groups of vascular plants, bryophytes, lichens, butterflies, moths, beetles, freshwater invertebrates, snails and slugs. Many threatened taxa were recorded and several of the taxa, chiefly lichens and invertebrates, are new to science or new records for Tasmania. This survey significantly expands our knowledge of the flora and fauna of the Cape Portland area and serves as a baseline for a property with a mix of farming and environmental conservation management.

**Key Words:** Species discovery, biodiversity, multidisciplinary survey, Cape Portland, wind farm, threatened species.

### INTRODUCTION

The Tasmanian Museum and Art Gallery's (TMAG) expedition to the Musselroe Wind Farm was the second in a series of multidisciplinary biological surveys conducted by the museum under the banner of its Expeditions of Discovery. The aims and rationale for the surveys, as discussed by Baker *et al.* (2019), are to: build TMAG's collections of flora and fauna from under- and poorly sampled parts of Tasmania; document the species of plants and animals present; discover new or hitherto overlooked species; and highlight the role that baseline species-discovery research plays in understanding and managing Tasmania's biota. The first expedition, conducted at the *Wind Song* property at Little Swanport in 2017, recorded 885 taxa, including several new to science or new records for Tasmania (McCarthy & Kantvilas 2018, Baker *et al.* 2019, Elix *et al.* 2019, Elix & Kantvilas 2020).

The Musselroe Wind Farm was chosen as it contains a diverse range of habitats, it has a limited number of vouchered collections held in museums and herbaria, and the project had the enthusiastic support of the land managers, Woolnorth Wind Farm Holding Pty Ltd. The survey focused on vascular plants, bryophytes, lichens, butterflies, moths, beetles, freshwater invertebrates, snails and slugs, with other taxonomic groups recorded opportunistically. Here we present an inventory and discussion of the plants, lichens and animals identified and offer an insight into a biodiverse corner of Tasmania. These results serve as a benchmark for future studies in

other parts of Tasmania and to guide natural resource management on the property.

### MATERIALS AND METHODS

#### The property

The Musselroe Wind Farm is situated in Tasmania's far northeast (fig. 1), approximately 20 km north of Gladstone. It is a mixed-use enterprise, managed primarily to produce renewable energy via 56 wind turbines, and with a secondary use of cattle grazing. The property covers about 5500 ha and is bordered by approximately 30 km of reserved coastline. A large proportion has been cleared for grazing and converted into improved pasture, and this area is also the footprint for most of the wind farm. The Cape Portland Wildlife Sanctuary (CPWS) (844 ha), a private reserve managed by the Musselroe Wind Farm, is located on the western side of the property. The location of the property relative to adjacent reserved areas is shown in figure 1.

The property has a diverse range of natural wetlands, six of which are listed in the Directory of Important Wetlands for supporting native plant or animal taxa or communities considered threatened at the national level (Environment Australia 2001). The survey area is dominated by low rounded hills formed from Jurassic dolerite interspersed with poorly drained flats of Quaternary sands of aeolian, marine and lacustrine origin (Jennings & Sutherland 1969). There are scattered Cenozoic basalt flows in the

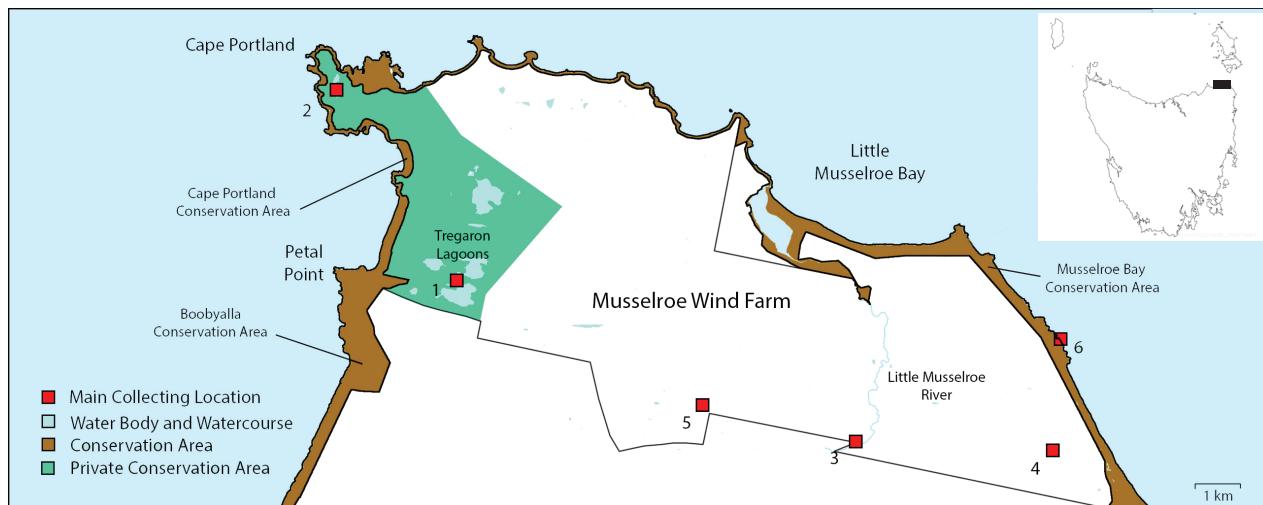

FIGURE 1 – Location of Musselroe Wind Farm: showing main collecting locations and reserve boundaries. 1: Tregaron Lagoons; 2 The Salties; 3: The Bullseye; 4: The Prairie; 5: Xanthorrhoea Ridge; 6: Abalone Rocks.

western half, as well as small exposures of the Cape Portland Complex, a Cretaceous intrusive porphyry, mostly west of Cape Portland Road. A small outcrop of Triassic sandstone is exposed just west of the original homestead. The easternmost extremity of the property is underlain by Devonian granite (McClenaghan 2005), which is exposed at the coast.

The climate of northeastern Tasmania corresponds to the Köppen classification of Cfb (temperate, warm summer, without dry season (Peel *et al.* 2007)). The nearest Tasmanian mainland weather station to Cape Portland is at larapuna/Eddystone Point, where average temperatures fluctuate from 6.9–13°C in winter to 13.9–21.1°C in summer. Modelling by LandTasmania, following methods prescribed in Webb *et al.* (2015), suggests average minimum temperatures of 4.5–6.5°C for July and 12.1–12.9°C for January, with average maximum temperatures of 13.1–13.5°C in July and 21.5–22.5°C in January (LIST 2020). Rainfall has a distinct peak during the winter months and is lowest during January and February, with an annual average of 754 mm (BOM 2020). Although there is a closer weather station at nearby Swan Island, its temperatures are strongly influenced by its small island location, and less likely to accurately reflect those at the study site.

Most of the Cape Portland property is farmland or land previously cleared for agriculture and now managed for conservation. The western two-thirds of the property (west of the Little Musselroe River) is improved pasture actively managed for cattle grazing. In comparison, the eastern third of the property consists of a mosaic of unimproved pasture, formerly managed for grazing but now managed for conservation as it supports areas of native vegetation. Significant areas of native *Poa* grassland occur in the area north of Tregaron Lagoons, between Charmouth Hill and Cape Portland. Native saline-tolerant vegetation is widespread in the Tregaron Lagoons area, along the northern coastal fringe south of Lanoma Point and along the shores of the Little Musselroe estuary.

A large area of coastal heathland containing a significant proportion of shrub and scrubland with a closed canopy occupies the eastern third of the property, in a triangle bounded approximately by the coast to the northeast, the Little Musselroe River and estuary to the west, and the southern boundary. Small but significant areas of *Melaleuca ericifolia* swamp forest occur along the course of the Little Musselroe River and at Tregaron Lagoons, while patches of *Allocasuarina verticillata* forest occupy higher well-drained ground along dune tops and ridges.

Over a period of about five years to 2018, substantial infestations of the declared weed species Gorse *Ulex europaeus* and African Boxthorn *Lycium ferocissimum* were controlled using Australian Government funding through NRM North. The works were undertaken in areas of high-priority native vegetation where livestock have been excluded. These sites continue to be managed for conservation. The farmland areas are maintained according to a weed management plan with weed infestations of Gorse, Horehound *Marrubium vulgare* and various species of thistle managed to minimise their spread into high conservation areas.

The area has been visited by biologists numerous times, particularly to undertake surveys prior to the establishment of the wind farm. Whilst extensive in their coverage, the results of those studies are not publicly available and have generated relatively few herbarium/museum voucher specimens which add value to data included in platforms such as the *Australasian Virtual Herbarium* AVH or *Atlas of Living Australia* ALA. Prior to this survey only 220 vascular plant taxa and about 165 animal taxa were formally listed for the area (ALA 2020, AVH 2020).

### Expertise and timing

The survey involved four botanists and four zoologists from TMAG staff, as well as two honorary zoologist researchers. The property was surveyed during 5–9 November 2018, with follow-up invertebrate sampling and trap-sample

collection on 16 December 2018 and 16 January 2019, and additional flora, lichen and invertebrate sampling from 9–11 September 2019.

### Sampling methods

Sampling was based on a strategic selection of survey sites that represented the major vegetation types and was confined mostly to de-stocked and regenerating areas (fig. 1). The major survey sites were allocated a local name for ease of identification (table 1) and each site was surveyed in detail to cover relevant habitats for target taxa.

Specimens of vascular plants, bryophytes and lichens were collected and lodged in the Tasmanian Herbarium, with limited duplicates distributed to other herbaria nationally and internationally under TMAG's formal specimen exchange program. Several vascular plant taxa were recorded only by observation due to sampling difficulties (e.g., tall eucalypt trees) or lack of fertile material. All possible substrata for lichen and bryophytes, including rocks, soil, bark, wood and charcoal, were examined.

Moths were collected mainly by ultraviolet light-traps. White sheets and bucket traps were used, but some were also collected from malaise traps set for general insect sampling. Beetles, other insects and other arthropods were sampled through a mix of direct observation, hand collection, including the use of hand nets and a beating tray, and trapping using malaise traps and yellow pan traps. These taxonomic groups were also collected from light-traps set for sampling moths. Molluscs were recorded through hand-searching and collection. Other invertebrates and vertebrates were recorded incidentally. Specimens were lodged in the TMAG Zoology collections, with some mollusc specimens retained by specialists until identifications were completed.

Information from all survey material curated and accessioned into the TMAG collection will be made available on the *Australasian Virtual Herbarium* and/or the *Atlas of Living Australia*.

### Specimen identification

Specimens were identified utilising standard equipment and techniques, with comparison to TMAG's reference collections when necessary. Lichens were identified in the

TABLE 1 — Main collecting sites at Musselroe Wind Farm

Site	Latitude	Longitude
Tregaron Lagoons	40°46'19"S	147°58'24"N
The Salties, Cape Portland	40°44'43"S	147°56'35"N
The Bullseye, Little Musselroe River	40°48'12"S	148°03'28"N
The Prairie	40°48'31"S	148°06'21"N
Xanthorrhoea Ridge	40°46'19"S	148°00'58"N
Abalone Rocks	40°47'14"S	148°06'01"N

laboratory using low-power and high-power microscopy of hand-cut sections of the thallus (vegetative tissue) and apothecia (reproductive structures), mounted in water, 10% KOH, 50% HNO<sub>3</sub>, lactophenol cotton blue, ammoniacal erythrosin and Lugol's iodine. Routine chemical analyses using thin-layer chromatography followed standard methods (Orange *et al.* 2010). Some moth specimens were identified using the reference collections of the Australian National Insect Collection (ANIC) (CSIRO, Canberra) and the Biosecurity Tasmania Insect Collection at the New Town Research Laboratories of the Department of Primary Industries, Parks, Water and Environment.

### Nomenclature and distribution

Vascular plant nomenclature follows de Salas and Baker (2021) and common names follow Wapstra *et al.* (2005). Nomenclature for mosses and liverworts is in accordance with the *Australian Moss Name Index* (ABRS 2018a), the *Checklist of Australian Liverworts and Hornworts* (McCarthy 2006) and *Tropicos* (Tropicos.org. 2018). Lichen nomenclature mainly follows McCarthy (2020). Nomenclature for land snails follows Stanisic *et al.* (2017). For all other vertebrate and invertebrate taxa identified to species, nomenclature follows the *Australian Faunal Directory* (ABRS 2018b).

Undescribed, partially identified or new species of insect are annotated with a unique epithet based on the registration number of an exemplar specimen from the TMAG collections, such as '*Euryglossa* sp. TMAG\_F96120'. In cases where specimens can be associated with previously collected material, existing epithets are adopted. Insect specimens that could only be identified to a higher taxonomic rank than species are annotated with 'unplaced'. Moth distributions and rarity were determined, in part, by referring to specimens in ANIC.

## RESULTS

### Diversity

A total of 1417 taxa was recorded (table 2). This comprises 244 vascular plants, plus a further 119 collected in the past but not recorded in this survey (appendix 1.1); 33 mosses and seven liverworts (appendix 1.2); 206 lichens (appendix 1.3); and 735 invertebrates (714 insects, 5 spiders, 4 crustaceans and 12 gastropod molluscs) (appendix 1.4). In addition, five species of reptile, six species of mammal and 62 species of bird were observed or their presence detected (appendix 1.5).

Vegetation types observed were largely consistent with TASVEG 4.0 mapping (DPIPWE 2020). Smaller-scale unmapped features of interest include a dune, vegetated with an almost-perfect monoculture of Southern Grasstree *Xanthorrhoea australis* at Xanthorrhoea Ridge, and unmapped areas of *Melaleuca ericifolia* swamp forest along the western margin of the Musselroe Bay estuary. Skeletal sandy soils on granitic outcrops at the far eastern end of the property supported a heathland community distinct from other heathland areas. For vascular plants, the most species-

diverse sites were The Salties (57 taxa) (pl. 1), The Bullseye (40 taxa) (pl. 2) and Abalone Rocks (31 taxa) (pl. 3), with the main families represented being the Asteraceae (35 taxa), Poaceae (32 taxa), Fabaceae (29 taxa) and Cyperaceae (25 taxa). A low-rainfall bryophyte flora is dominated by mosses over liverworts, with the best-represented families being the Pottiaceae (9 species) and Bryaceae (5 species), both adapted to dry conditions. The most species-diverse sites for bryophytes are The Salties, with all 15 taxa recorded growing on soil and Abalone Rocks, where four epiphytes were found in dense scrubbery behind the beach and nine on rocks or soil. The property supports a diverse array of lowland, coastal, low-rainfall lichens, including many novelties (see below). The richest habitats for lichens are coastal rocks, with granite and dolerite supporting subtly different species assemblages; dry woodlands dominated by *Allocasuarina verticillata*, where lichens colonise wood, bark, rocks and consolidated soil; isolated large granite outcrops in scrubby heathland; and *Melaleuca ericifolia*-dominated swampy woodland, where the papery bark of the oldest trees supports a highly specialised suite of epiphytes (see below). Artificial habitats, including fence posts, treated pine rails and mortar, are also well-colonised.

The sites with the highest diversity in insect taxa lie in the eastern heathlands at The Prairie (181 taxa) (pl. 4); the Tregaron

Lagoons environs (172 taxa) (pl. 5); and the landward portion of the Cape Portland headland beyond the enclosed paddocks (141 taxa). The most taxon-rich insect groups were the beetles (with 265 taxa), flies (147 taxa) then moths (136 taxa). A high diversity of moths was found in The Bullseye lagoon area, including several rare species and new records (see below). A number of characteristic or noteworthy invertebrates found during this survey are illustrated in plate 6 and plate 7.

## Novelties

### Flora

Botanical novelties were limited to the lichens and mosses. Twenty lichen taxa were recorded for Tasmania for the first time and are reported elsewhere (Kantvilas *et al.* 2020). These include: *Lecanora strobilina* and *Ramonia absconsa*, first records for the Southern Hemisphere, with the latter previously known only from the type collection from South Carolina; *Arthothelium endoaurantiacum*, *Collema crispum* and *Gyalecta pellucida*, first records for Australia; and *Austroparmelina corrugativa*, *Amandinea conranensis*, *Bacidia laurocerasi*, *Buellia extenuatella*, *Catinaria atropurpurea*, *Diploschistes euganeus*, *D. gyrophoricus*, *Endocarpon crassisporum*, *Lecanora pseudogangaleoides* subsp. *pseudogangaleoides*, *Opegrapha niveoatra*, *O. spodopelia*,

PLATE 1 – Succulent saline herbfield at The Salties (Cape Portland), dominated by *Sarcocornia blackiana* and *S. quinqueflora*.

PLATE 2 – The Bullseye, a freshwater lagoon flanked by *Melaleuca ericifolia* on the Little Musselroe River.

*O. varia*, *Physcia austrostellaris*, *Trapelia concentrica* and *Xanthoparmelia xerica*, all known previously from mainland Australia, with the last-mentioned otherwise known only from its type collection from South Australia. Whilst some of these novelties were recorded only during the survey, most were found to be already represented by unidentified existing herbarium specimens from other Tasmanian localities.

Taxonomic work will continue on some as yet unidentified collections. The unidentified species of *Ramboldia* and *Trapelia* may well be new to science.

Several mosses represent significant range extensions in Tasmania, including *Brachymenium preissianum*, recorded from exposed lime mortar at the ruins of an old homestead at Home Beach within the CPWS, and previously known

PLATE 3 – Granite outcrops on the east coast of the property. These support a rich lichen flora with the reddish *Caloplaca gallowayi* often dominant.

PLATE 4 – Coastal heathland at The Prairie. The sparsely vegetated area in the foreground provides habitat for the threatened plant species *Stylidium beagleholei*.

PLATE 5 – Lagoon habitat of the aquatic plant species *Myriophyllum muelleri* and *Stuckenia pectinata* in the southern part of the Tregaron Lagoons.

only from Hobart, and *Campylium polygamum*, previously reported only from Chimney Pot Hill (near Hobart) and Lake St Clair, and found on boggy ground at The Bullseye. The Australian endemic moss, *Archidium stellatum*, a species of dry areas, and previously reported for South Australia and Victoria, is a new record for Tasmania, recorded

from exposed soil in windswept tussock sedgeland with outcropping dolerite at The Salties near Cape Portland.

#### Fauna

Many invertebrate specimens remain unidentified or only partially identified (e.g., to family or genus level) and upon further research may well prove to be undescribed species or species newly recorded from Tasmania: these species are annotated with a '+' in appendix 1.4. Seven taxa are new to science: the fly *Axinia* sp. TMAG\_F5984 and the beetle *Idiophyes* sp. TMAG\_F98611 (both from the Tregaron Lagoons area); the moths *Limnaecia* sp. TMAG\_F107740 (found at The Prairie) (pl. 7D), *Batrachedra* sp. TMAG\_F99720, *Edosa* sp. TMAG\_F99719 and *Peraglyphis* sp. TMAG\_F99734 (all from The Bullseye lagoon area); and the snail *Scelidoropa* sp. 'Little Musselroe' (also from The Bullseye lagoon area). Four species were previously known only from the Australian mainland and are newly recorded for Tasmania: the beetle *Liparochrus* (not yet assigned to species) (Cape Portland headland trackway and Little Musselroe River crossing), and the moths *Scythrophanes stenoptera* (The Bullseye lagoon area), *Thallarcha phalarota* (Xanthorrhoea Ridge), and *Taxeotis intermixtaria* (eastern heathlands). Significant rediscoveries in a Tasmanian context include the fly *Acridophagus paganus* (pl. 7B; found in the eastern heathlands and on Xanthorrhoea Ridge) and the moths *Eutorna intonsa* (found at the Little Musselroe River crossing), *Araeostoma* ANIC sp.01 (Cape Portland trackway and eastern heathlands), *Philenora* sp. TMAG\_F108002 (The Bullseye lagoon area), *Paramsacta marginata* (The Prairie and Little Musselroe River crossing) (pl. 7C), *Barea atmophora* and *B. exarcha* (both The Bullseye lagoon area), and *Bida radiosella* (eastern heathlands). Two further significant rediscoveries are also threatened species and are discussed further below.

#### Threatened species

#### Flora

The Musselroe Wind Farm is known for supporting populations of threatened species, some of which, for example *Thelymitra antennifera*, have been monitored by the Tasmanian Department of Primary Industries, Water and Environment. In the present survey 12 vascular plant species listed as rare and two species listed as vulnerable under Tasmania's *Threatened Species Protection Act 1995* were recorded (appendix 1.1). Scarlet Sundew *Drosera glanduligera* (rare) is a new record for the area and was found growing in the southeasternmost corner of the property on poorly drained, moss-covered granite rock plates in shrubby heathland (pl. 8A) and in open heathland at Xanthorrhoea Ridge. Neither population is within reserves on the property. The parasitic herb Golden Dodder *Cuscuta tasmanica* (rare) was observed as large populations at two wetlands within the CPWS (pl. 8B), parasitising a range of species including Running Marshflower *Ornduffia reniformis*, Creeping Buttons *Leptinella reptans* and Prickfoot *Eryngium vesiculosum*. Roundleaf Wilsonia *Wilsonia rotundifolia* (rare) (pl. 8C) was recorded at Tregaron Lagoons as a common component of

Salt-lake Slater *Haloniscus searlei*, a scyphacid isopod of saline lagoons listed as Endangered in Tasmania (photographed specimen is from Tunbridge Lagoon). D. The largely dune-dwelling Peacock-spider *Maratus tasmanicus*.

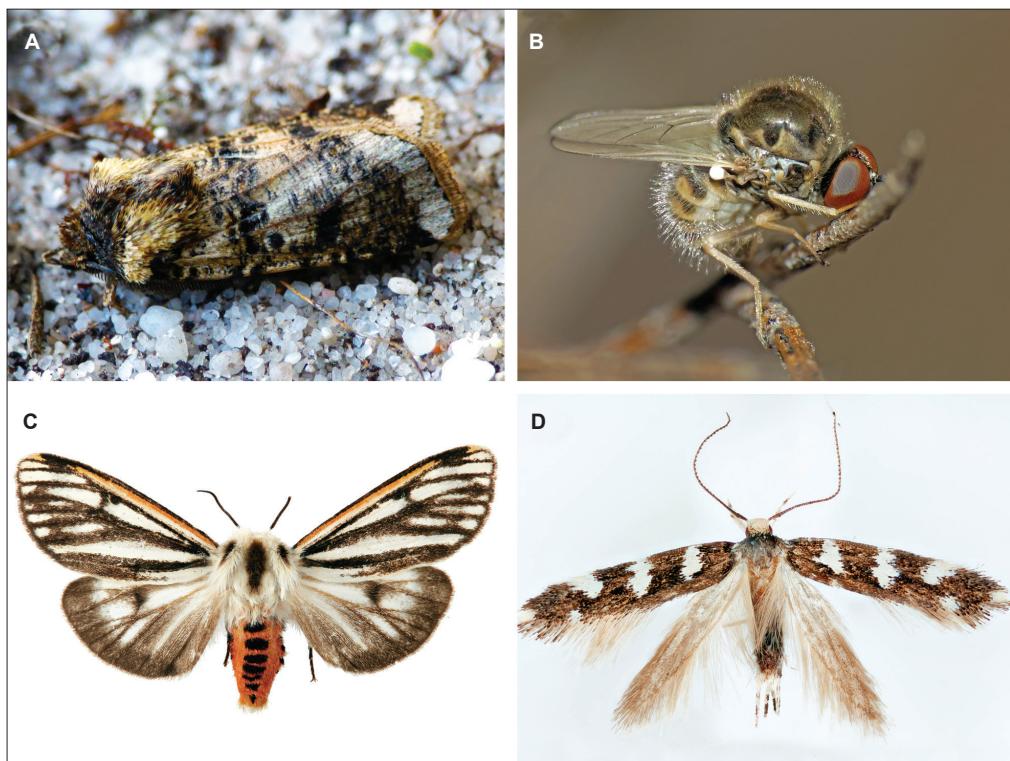

PLATE 7 – A. Male Variable Cutworm *Agrotis porphyricollis*. B. Mythicomyiine bee-fly *Acridophagus paganicus*. C. Male *Paramsacta marginata*. D. *Limnaecia* sp. TMAG\_F107740.

PLATE 8 – Threatened flora recorded from Musselroe Wind Farm. **A.** Scarlet Sundew *Drosera glanduligera*. **B.** Golden Dodder *Cuscuta tasmanica*. **C.** Roundleaf Wilsonia *Wilsonia rotundifolia*. **D.** Silky Wilsonia *Wilsonia humilis*.

PLATE 9 – Introduced species recorded from Musselroe Wind Farm. **A.** Annual Beardgrass *Polypogon monspeliensis*. **B.** Prickly Sowthistle *Sonchus asper*. **C.** Water Buttons *Cotula coronopifolia*. **D.** Coast Barbgrass *Parapholis incurva*.

the dry lagoon margin flora, and outside of the CPWS at a dried-up wetland south of Lanoma Point. Silky Wilsonia *Wilsonia humilis* (rare) was recorded at The Salties, within the CPWS, but restricted to a few small patches amongst dolerite rocks on the margin of the saltmarsh (pl. 8D).

Juniper Wattle *Acacia ulicifolia* (rare) was recorded approximately 1 km east of the Little Musselroe River, close to the southern boundary of the property. Slender Velvetbush *Lasiopetalum baueri* (rare) grew as heavily wind-pruned shrubs at the rocky margin of the saltlake at The Salties. Helicopter Bush *Spyridium vexilliferum* var. *vexilliferum* (rare) was recorded at Xanthorrhoea Ridge. A small but locally common population of Sand Grasstree *Xanthorrhoea arenaria*, listed as vulnerable on the Tasmanian *Threatened Species Protection Act 1995* and the Commonwealth *Environment Protection and Biodiversity Conservation Act 1999*, was found south of the Little Musselroe estuary. This appears to be the first record of the species from the Musselroe Wind Farm property. Shining Dogwood *Pomaderris paniculosa* subsp. *paralia* (rare) was recorded from The Salties and at The Prairie.

Two threatened species of the aquatic genus *Myriophyllum* were recorded. Tiny Watermilfoil *Myriophyllum integrifolium*, a first record for the area and listed as vulnerable, was found adjacent to Xanthorrhoea Ridge. Hooded Watermilfoil *Myriophyllum muelleri*, listed as rare, was recorded in the southern part of the Tregaron Lagoons (pl. 5), with locally abundant Fennel Pondweed *Stuckenia pectinata*. The tiny ephemeral triggerplant, Blushing Triggerplant *Stylium beagleholei* (rare) was recorded at The Prairie where it is locally abundant (pl. 4). Tiny Arrowgrass *Triglochin minutissima* (rare) was recorded occasionally in soil accumulated in damp crevices amongst granite rocks on the coast of Great Musselroe Bay.

Sixteen further species of threatened vascular flora have been previously recorded from the area (ALA 2020) but were not observed during this survey (appendix 1.1).

No listed threatened species of bryophytes and lichens were recorded, although many non-vascular plants are considered uncommon and may well qualify for listing. For example, lichens include the naturally rare Tasmanian endemics *Bactropsora paludicola*, *Eugeniella farinosa* (only the second record) and *Porina meridionalis*, and the equally rare (in Tasmania) *Caloplaca pulcherrima*, *Ocellomma rediuntum*, *Ramonia absconsa* and *Gyalecta pellucida*, all restricted to *Melaleuca ericifolia*-dominated swamps, which are themselves a vegetation type of very high conservation value, especially for cryptogams. Other uncommon, noteworthy species recorded included *Arthothelium endoauranticaum* (from coastal scrub), *Endocarpon crassisporum* (from coastal grassland), and *Xanthoparmelia xerica* and the endemic *Lepra dactylinella* (from granite outcrops in heathland).

#### Fauna

A single adult male of the Schayer's Grasshopper *Schayera baiulus* (Driessen *et al.* 2020), listed as endangered on the Tasmanian *Threatened Species Protection Act 1995*, was collected (9 November 2018) from the dunes behind Lemons Beach. Its identification is provisional, because no other

specimens of an adult male of this species are known from collections. The species was last recorded in 1988, when single specimens were found at Rushy Lagoon in the northeast, and Woolnorth in the northwest (Key 1991). Prior to that it was only known from the specimens associated with its original description (Erichson 1842, Key 1990).

Saline lagoons on the Cape Portland headland and towards the northern coastline hosted the salt-lake slater *Haloniscus searlei*. This isopod, an aquatic member of an otherwise terrestrial lineage, is associated with inland saline lagoons across southern Australia but is very rare in Tasmania, where it is listed as endangered and only known from two inland saline lagoons in the Midlands (Threatened Species Section 2021). Its presence in near-coastal lagoons at Cape Portland/Musselroe Bay is surprising and significantly enhances our understanding of the habitat requirements of this species.

Four threatened bird species and one threatened mammal species were observed. Hooded Plover *Thinornis cucullatus* (nationally vulnerable) were seen on all visited stretches of sandy shore, as well as on exposed windblown sand in the vicinity of the saltpans inland from the northern coastline. Fairy Tern *Sternula nereis* (vulnerable) were observed feeding just offshore along the northern coastline. Wedge-tailed Eagle *Aquila audax fleayi* (endangered) and White-Bellied Sea-eagle *Haliaeetus leucogaster* (vulnerable) were observed at various places on the property but no nests of either species were located. Tasmanian Devil *Sarcophilus harrisii* (endangered) scats were observed along many of the tracks walked and are known to occur in the general area.

#### Exotic and pest species

Forty-nine species of introduced vascular plants were recorded (appendix 1.1). Common agricultural weeds include Winged Slender Thistle *Carduus tenuiflorus*, Variegated Thistle *Silybum marianum*, Capeweed *Arctotheca calendula*, Horehound *Marrubium vulgare*, Great Brome *Bromus diandrus* and Sweet Vernalgrass *Anthoxanthum odoratum*. Two shrubs that have become dominant components in parts of the landscape are Gorse *Ulex europaeus* and African Boxthorn *Lycium ferocissimum*. At the ruins of the old homestead at Home Beach, several species of garden origin have become naturalised including Century Plant *Agave americana*, Bearded Iris *Iris x germanica* and Caper Spurge *Euphorbia lathyris*. This area also hosted many species of introduced grasses and herbs. Common introduced species in wetland habitats include: Annual Beardgrass *Polypogon monspeliensis* (pl. 9A), Prickly Sowthistle *Sonchus asper* (pl. 9B), Water Buttons *Cotula coronopifolia* (pl. 9C), Buckshorn Plantain *Plantago coronopus* and Coast Barbgrass *Parapholis incurva* (pl. 9D). Drier coastal habitats included: Sweet Melilot *Melilotus indicus*, Winged Slender Thistle, African Boxthorn, Gorse, Scarlet Pimpernel *Lysimachia arvensis* and Fourleaf Allseed *Polycarpon tetraphyllum*. Coastal beach and foreshore supported Searocket *Cakile maritima*, Marram Grass *Ammophila arenaria*, African Boxthorn, Sea Spurge *Euphorbia paralias* and Buckshorn Plantain. Largely weed-free areas include the main eastern part of the property east of the Little Musselroe River (The Prairie) and other areas

of intact heathland. Four species, Winged Slender Thistle, African Boxthorn, Gorse and Horehound are declared weeds under the Tasmanian *Weed Management Act 1999*. The invasive South African Weed Orchid *Disa bracteata* Sw., a significant weed on mainland Australia but in the early stages of invasion in Tasmania, was recorded in the area in 2013 (Wapstra *et al.* 2020), but not seen during this survey.

Sixteen further species of introduced flora were previously recorded from the area (ALA 2020) but not observed during this survey (appendix 1.1). Only one species of introduced moss, *Eurhynchium praelongum*, was found growing in a disturbed site at Xanthorrhoea Ridge.

Remarkably few introduced insect species were collected (appendix 1.4). The list comprises Honeybee *Apis mellifera*, Eleven-spotted Ladybird *Coccinella undecimpunctata*, Sea-rocket Flea-beetle *Psylliodes marcida* and the cow-dung-feeding Dor-beetle *Geotrupes spiniger* and *Aphodius lividus*, all of European origin; the first two are now widespread across the state; the third is a new record for Tasmania and Australia but has since been discovered at several other localities on the Tasmanian north and east coast in association with its non-native foodplant *Cakile* species; while the fourth and fifth are found primarily in the east and northeast. Two more beetle species, *Attagenus pellio* and *Necrobia rufipes*, both associated with carrion, are cosmopolitan although it is possible that in Australia and Tasmania they represent early European introductions (the former is associated with pelts and the latter with cured meats). Both are rarely recorded in Tasmania.

Four introduced gastropods, all widespread species of European origin, were found (appendix 1.4): Small Pointed Snail *Priocella barbara*, Garden Snail *Cornu aspersum*, Hedgehog Slug *Arion intermedius* and Striped Field-slug *Lehmannia nyctelias*. A fifth European species, Garlic Snail *Oxylilus alliarius*, was found at Little Musselroe and is highly likely to occur on the property.

Nine native moth species considered to be agricultural pests were collected. Most were noctuid moths: Bogong Moth *Agrotis infusa*, Brown Cutworm *Agrotis munda*, Variable Cutworm *Agrotis porphyricollis* (pl. 7A), Sugarcane Stem Borer *Bathytricha truncata*, Native Budworm *Helicoverpa punctigera* and Southern Armyworm *Persectania ewinggi*. Two pest moth species from other families were the Small Tabby *Etiella behrii*, a pyralid which feeds on legumes, and the tortricid *Acropolitis rudisana*, which can be a pest on grapes. The only introduced lepidopteran recorded was the Cabbage White Butterfly *Pieris rapae*, another known pest species.

## DISCUSSION

Although a significant proportion of the Cape Portland property has been converted to improved pasture for cattle grazing, it retains pockets of high-quality undisturbed native habitat, such as The Salties, The Prairie and Xanthorrhoea Ridge (table 1).

Open treeless areas show evidence of intense grazing pressure from the high density of macropods and Wombats

*Vombatus ursinus*, particularly along the eastern side of the property, with grasses closely cropped to ground level. A significant proportion of open ground in the eastern heathlands is dominated by less-than-palatable spiny shrubs, including Prickly Moses *Acacia verticillata* and Ploughshare Wattle *A. gunnii*, as well as tougher sedges (especially *Gahnia* species) and Sagg *Lomandra longifolia*. In contrast, more palatable seasonal herbs were conspicuously rare or absent. The greatest diversity of insects was found in the eastern heathlands, including many habitat specialists. The seasonal moth fauna was largely typical of that which can be found during spring in coastal heathlands, and in vegetation dominated by *Allocasuarina*, *Acacia* and native and introduced grasses, apart from the notable absence of eucalypt feeders due to the almost total absence of *Eucalyptus* on the property. This collection included around 13% of the Lepidoptera in Tasmania. No Tasmanian endemic species were recorded, probably because vegetation types were typical of the more general southern Australian autochthonous flora. The eastern heathlands proved to be the most diverse site for Lepidoptera, with almost 60 taxa recorded. The fauna here was dominated by geometrid species that feed on *Acacia*, *Kunzea*, *Allocasuarina*, *Leptospermum* and low-growing shrubs such as *Epacris*. The noctuid fauna was also relatively diverse with 15 species; those with the highest abundance were grass-feeders such as the Variable Cutworm and agricultural pests such as Bogong Moth and Southern Armyworm.

The area surrounding the saline lagoons around The Salties and extending inland as far as the paddock fences is species-rich for plants and animals, perhaps due to the diverse mosaic of habitat types present in a relatively small area, including coastal grassland, saline and freshwater shallow lagoons, rocky marsupial lawn, rocky headland and foreshore, dunes, and seasonally wet grassland and heathland. In addition to The Salties, a pocket of high species richness in and around a shallow but permanent freshwater habitat supported *Melaleuca ericifolia* closed forest and regenerating grassland and heathland known as The Bullseye. Permanent bodies of fresh (rather than brackish or saline) water are generally rare on the property, and mostly associated with the course of the Little Musselroe River and areas of low elevation to the east.

Given the history of the Cape Portland property and its current land use, the relatively high number (65 taxa) of naturalised, exotic vascular plants is not surprising. Large tracts of the property consist of improved pasture and, consequently, contain many species of agricultural weeds. Most of these taxa are annual and perennial herbs and grasses, and were recorded in pastures, along roadsides and fence lines within the property and around areas of habitation. Many of the species of introduced plants are likely to have originated from past agricultural activities and the relatively high number of lepidopteran pests is likely a result of the modified agricultural environment prevalent in the area. Recent efforts to control invasive exotic plants have had a positive effect, with control of African Boxthorn being particularly successful. Many of the introduced plants recorded during the survey can

form widespread and intractable populations, including species such as Annual Beardgrass, Prickly Sowthistle, Water Buttons, Buckhorn Plantain and Coast Barbgrass. Small-scale infestations of Century Plant, Bearded Iris and Caper Spurge have most likely persisted at the site of the old homestead at the northern end of Home Beach since it was inhabited and have spread to a small extent to the immediate surrounding area.

Previous surveys of the property have recorded 16 species of threatened flora that were not identified during this survey. This could be at least partly due to this survey not coinciding with the flowering time of these species (particularly orchids), or the species having been recorded from areas or habitats not sampled in this survey.

The property has outstanding ecological and nature conservation values, although these are not evenly distributed: areas of enclosed pasture tend to have little value whereas the established reserves within the property have the highest. Notably, several threatened species occur outside of reserves.

The property contains large areas of vegetation that is highly susceptible to *Phytophthora cinnamomi* root rot, particularly high-density populations of Southern Grasstree *Xanthorrhoea australis*, small populations of Sand Grasstree *X. arenaria*, and large areas of damp heathland. The mosaic of heathland and scrub northeast of The Prairie has developed at least partly as a response to fire history, and future fire management will play a role on the proportions of these two habitat types.

Threatened beach-nesting shorebirds such as Fairy Tern, Hooded Plover and Sooty Oystercatcher *Haematopus fuliginosus* are very sensitive to disturbance from humans, dogs, trail-bikes and four-wheel-drives; the relative lack of such disturbance at Musselroe (other than at Lemons Beach) affords them an increasingly rare degree of protection. These same environments are also well-known foraging refugia for a large number of international migratory waders, including summer and winter visitors such as Double-banded Plover *Charadrius bicinctus* that are declining globally.

The high density of native grazing marsupials has had a significant impact in shaping the habitats and species richness of the property. For instance, high species richness among threatened species is concentrated particularly in the non-wooded but still naturally vegetated parts of the surveyed area, including marsupial lawns and the edges of lagoons and runnels, and this may be due at least partly to grazing pressure that keeps shading by perennial shrubs to a minimum. However, areas of the property east of the Little Musselroe River exhibit extremely high grazing pressure (from native marsupials), and a reduced diversity of herbaceous plants.

In conclusion, the Cape Portland property hosts a number of vascular plant, animal and lichen species that, while common or at least present on mainland Australia, in Tasmania are restricted to the northeasternmost corner of the island. Despite its long history of management for grazing, the property retains significant natural values, including high-quality patches of unusual vegetation (e.g., the almost pure stand of Southern Grasstree at *Xanthorrhoea*

Ridge), and a high proportion of threatened plant and animal species.

## ACKNOWLEDGEMENTS

The Tasmanian Museum and Art Gallery's 2018 Expedition of Discovery would not have been possible without the generous support of Woolnorth Wind Farm Holding Pty Ltd and The Friends of the Tasmanian Museum and Art Gallery Incorporated. We thank the staff of the wind farm, in particular Robert Barbour and Tony Saunders, for their welcoming and helpful approach and for arranging site access and accommodation, and Aunty Patsy Cameron is thanked for her Welcome to Country and for sharing her insights regarding the Story of the area. We also thank Greg Stewart for his companionship and for sharing his knowledge of the landscape and diverse habitats that occur on the property and Eric Cave who kept the team well-fed and watered during the survey. Thanks, must also go to our colleagues at TMAG, especially Kim Hill, Dalia Howe and Maria MacDermott and the many volunteers, for their work behind the scenes and for the preparation and databasing of specimens. Dr N. Evenhuis (Hawaii) is thanked for identifying specimens of *Acridophagus paganicus*. Drs Brian Coppins, Jack Elix and Patrick McCarthy assisted with selected lichen identifications. Specimens were collected under the following permits issued by the Department of Primary Industries, Parks Water and Environment: TFL 18181, TFL19127, FA 17360 and FA 18279.

## APPENDIX 1

## Flora and fauna of the Musselroe Wind Farm

Taxa marked with \* were observed during the survey but not collected; # were taxa recorded prior to the survey but not recorded during the survey; - were recorded prior to the survey and during the survey; i are introduced taxa in Tasmania; r, x, e and v are considered rare, extinct, endangered and vulnerable under Tasmania's Threatened Species Protection Act 1995; + are new records for Tasmania; ? are taxa that have an uncertain status, i.e., uncertain whether they are introduced to Tasmania or native.

## Appendix 1.1: Vascular Plants of Musselroe Wind Farm

## EUDICOTS

## Aizoaceae

- \* *Carpobrotus rossii* (Haw.) Schwantes
- # *Disphyma crassifolium* (L.) L.Bolus subsp. *clavellatum* (Haw.) Chinnock
- *Tetragonia implexicoma* (Miq.) Hook.f.

## Amaranthaceae

- *Hemichroa pentandra* R.Br.
- *Rhagodia candolleana* Moq. subsp. *candolleana*

## Apiaceae

- *Apium prostratum* Labill. ex Vent. subsp. *prostratum* var. *filiforme* (A.Rich.) Kirk
- Apium prostratum* Labill. ex Vent. subsp. *prostratum* var. *prostratum*
- # *Daucus glochidiatus* (Labill.) Fisch., C.A.Mey. & Ave-Lall.
- Eryngium vesiculosum* Labill.
- Xanthosia tasmanica* Domin

## Apocynaceae

- # *Alyxia buxifolia* R.Br.

## Araliaceae

- # *Hydrocotyle callicarpa* Bunge
- Hydrocotyle capillaris* F.Muell. ex Klatt
- # *Hydrocotyle foveolata* H.Eichler
- # *Hydrocotyle muscosa* R.Br. ex A.Rich.
- Hydrocotyle sibthorpioides* Lam.

## Asteraceae

- Actites megalocarpus* (Hook.f.) Lander
- *Angianthus preissianus* (Steetz) Benth.
- i- *Arctotheca calendula* (L.) K.Lewin
- Brachyscome aculeata* (Labill.) Less.
- # *Brachyscome graminea* (Labill.) F. Muell.
- *Brachyscome parvula* Hook.f.
- r# *Calocephalus lacteus* Less.
- i *Carduus tenuiflorus* Curtis
- Cassinia aculeata* (Labill.) R.Br. subsp. *aculeata*
- e# *Cassinia rugata* N.G.Walsh
- *Chrysocephalum apiculatum* (Labill.) Steetz subsp. *apiculatum*
- *Coronidium scorpioides* (Labill.) Paul G.Wilson
- # *Cotula australis* (Sieber ex Spreng.) Hook.f.
- i- *Cotula coronopifolia* L.

- r# *Cotula vulgaris* var. *australisica* J.H.Willis
- # *Craspedia glauca* (Labill.) Spreng.
- # *Craspedia rosulata* Rozefelds & A.M.Buchanan
- # *Cymbonotus preissianus* Steetz
- # *Gnaphalium indutum* Hook.f. subsp. *indutum*
- i# *Hypochoeris glabra* L.
- i *Hypochoeris radicata* L.
- Lagenophora stipitata* (Labill.) Druce
- *Leptinella longipes* Hook.f.
- Leptinella reptans* (Benth.) D.G.Lloyd & C.J.Webb
- Leptorhynchus squamatus* (Labill.) Less. subsp. *squamatus*
- *Leucophyta brownii* Cass.
- # *Millotia tenuifolia* Cass. var. *tenuifolia*
- *Olearia lepidophylla* (Pers.) Benth.
- # *Ozothamnus turbinatus* DC.
- Senecio glomeratus* Desf. ex Poir.
- r# *Siloxerus multiflorus* (Nees) P.S.Short
- i *Silybum marianum* (L.) Gaertn.
- i *Sonchus asper* (L.) Hill
- i- *Sonchus oleraceus* L.
- i *Vellereophyton dealbatum* (Thunb.) Hilliard & B.L.Burtt
- Boraginaceae**
- # *Cynoglossum australe* R.Br.
- Hackelia suaveolens* (R.Br.) Dimon & M.A.M.Renner
- Brassicaceae**
- i *Brassica tournefortii* Gouan
- i- *Cakile maritima* Scop. subsp. *maritima*
- i *Capsella bursa-pastoris* (L.) Medik.
- Campanulaceae**
- i *Lobelia anceps* L.f.
- *Lobelia irrigua* R.Br.
- Lobelia pedunculata* R.Br.
- # *Wahlenbergia gracilenta* Lothian
- Wahlenbergia gymnoclada* Lothian
- Caryophyllaceae**
- i- *Cerastium glomeratum* Thuill.
- i# *Cerastium semidecandrum* L.
- Colobanthus apetalus* (Labill.) Druce var. *apetalus*
- i *Polycarpon tetraphyllum* (L.) L.
- i# *Sagina maritima* Don
- i# *Silene nocturna* L.
- *Spergularia tasmanica* (Kindb.) L.G.Adams
- Stellaria angustifolia* Hook. subsp. *tenella* (Benth.) C.H.Mill. & J.G.West
- Stellaria pallida* (Dumort.) Crép.
- Casuarinaceae**
- Allocasuarina littoralis* (Salisb.) L.A.S.Johnson
- *Allocasuarina monilifera* (L.A.S.Johnson)
- L.A.S.Johnson
- Allocasuarina paludosa* (Sieber ex Spreng.) L.A.S.Johnson
- Allocasuarina verticillata* (Lam.) L.A.S.Johnson
- Celastraceae**
- Stackhousia monogyna* Labill.
- Chenopodiaceae**
- \* *Sarcocornia blackiana* (Ulbr.) A.J.Scott

- \*# *Sarcocornia quinqueflora* (Bunge ex Ung.-Sternb.) A.J.Scott

## Appendix 1.2: Bryophytes of Musselroe Wind Farm

### MOSSES

- Amblystegiaceae**
- Campylium polygamum* (Schimp.) C.E.O.Jensen
- Archidiaceae**
- Archidium stellatum* I.G.Stone
- Brachytheciaceae**
- Eurhynchium praelongum* (Hedw.) Bruch & Schimp.  
*Rhynchostegium tenuifolium* (Hedw.) Reichardt
- Bryaceae**
- i *Brachymenium preissianum* (Hampe) A.Jaeger  
*Bryum dichotomum* Hedw.  
*Bryum* sp.  
*Orthodontium lineare* Schwägr.  
*Rosulabryum capillare* (Hedw.) J.R.Spence  
*Rosulabryum subtomentosum* (Hampe) J.R.Spence
- Dicranaceae**
- Campylopus bicolor* (Müll.Hal.) Wilson

### LIVERWORTS

- Acrobolbaceae**
- Lethocolea pansa* (Taylor) G.A.M.Scott & K.G.Beckm.
- Aytoniaceae**
- Asterella drummondii* (Hook.f. & Taylor) R.M.Schust. ex D.G.Long
- Frullaniaceae**
- Frullania falciloba* Taylor ex Lehm.
- Geocalycaceae**
- Chiloscyphus semiteres* (Lehm.) Lehm. & Lindenb.
- Lejeuneaceae**
- Siphonolejeunea nudipes* (Hook.f. & Taylor) Herzog
- Marchantiaceae**
- Marchantia berteroana* Lehm. & Lindenb.
- Metzgeriaceae**
- Metzgeria furcata* (L.) Dumort

### Appendix 1.3: Lichens of Musselroe Wind Farm

- Amandinea australasica* Blaha, H.Mayrhofer & Elix  
*Amandinea coniops* (Wahlenb.) M.Choisy ex Scheid. & H.Mayrhofer
- + *Amandinea conranensis* Elix & P.M.McCarthy
  - Amandinea decedens* (Nyl.) Blaha & H.Mayrhofer
  - Amandinea punctata* (Hoffm.) Coppins & Scheid.
  - Anisomeridium disjunctum* P.M.McCarthy & Kantvilas
  - Anisomeridium polypori* (Ellis & Everh.) M.E.Barr
  - + *Arthothelium endoaurantiacum* Makhija & Patw.
  - Arthothelium ampliatum* (C.Knight & Mitt.) Müll. Arg.
  - Austroparmelina conlabrosa* (Hale) A.Crespo, Divakar & Elix
  - + *Austroparmelina corrugativa* (Kurok. & Filson) Elix & Kantvilas
  - Austroparmelina pseudorelicina* (Jatta) A.Crespo, Divakar & Elix
  - + *Bacidia laurocerasi* (Delise ex Duby) Zahlbr.
  - Bacidia septosior* (Nyl.) Zahlbr.
  - Bacidia stenospora* C.Knight
  - Bacidia wellingtonii* (Stirt.) D.J.Galloway
  - Bactrospora paludicola* Kantvilas
  - Buellia aeruginosa* A.Nordin, Owe-Larsson & Elix
  - Buellia amandineaformis* Elix & Kantvilas
  - Buellia dissia* (Stirt.) Zahlbr.
  - + *Buellia extenuatella* Elix & Kantvilas
  - Buellia halonioides* Elix
  - Buellia homophylia* (C.Knight) Zahlbr.
  - Buellia schaeferi* De Not.
  - Buellia stellulata* (Taylor) Mudd var. *stellulata*
  - Buellia stellulata* (Taylor) Mudd var. *tasmanica* Elix & Kantvilas
  - Buellia Suttonensis* Elix & A.Knight
  - Caloplaca bartlettii* S.Y.Kondr. & Kärnefelt
  - Caloplaca beauleholei* S.Y.Kondr. & Kärnefelt
  - Caloplaca bermaguiana* S.Y.Kondr. & Kärnefelt
  - Caloplaca cf. chrysodeta* (Vain. ex Räsänen) Dombr.
  - Caloplaca cinnabarina* (Ach.) Zahlbr.
  - Caloplaca cranfieldii* S.Y.Kondr. & Kärnefelt
  - Caloplaca eos* S.Y.Kondr. & Kärnefelt
  - Caloplaca ferdinandmuelleri* S.Y.Kondr. & Kärnefelt
  - Caloplaca gallowayi* S.Y.Kondr., Kärnefelt & Filson
  - Caloplaca holocarpa* (Hoffm.) A.E.Wade aggr.
  - Caloplaca cf. irribescens* (Nyl.) Zahlbr.
  - Caloplaca jackelixii* S.Y.Kondr., Karnefelt & A.Thell
  - Caloplaca kilcundaensis* S.Y.Kondr. & Karnefelt
  - Caloplaca lateritia* (Taylor) Zahlbr.
  - Caloplaca maccarthyi* S.Y.Kondr., Karnefelt & Elix
  - Caloplaca pulcherrima* (Müll.Arg.) S.Y.Kondr. & Karnefelt
  - Caloplaca sublobulata* (Nyl.) Zahlbr.
  - Caloplaca tomareeana* S.Y.Kondr. & Karnefelt
  - Candelariella vitellina* (Hoffm.) Müll.Arg.
  - Candelariella xanthostigmoides* (Müll.Arg.) R.W.Rogers

- Catillaria austrolittoralis* Kantvilas & van den Boom
- + *Catinaria atropurpurea* (Schaer.) Vezda & Poelt
  - Chrysothrix xanthina* (Vain.) Kalb
  - Cladonia aggregata* (Sw.) Nyl.
  - Cladonia inflata* (F.Wilson) D.J.Galloway
  - Cladonia retipora* (Labill.) Nyl.
  - Cladonia sullivanii* (Müll.Arg.) W.Martin
  - Cladonia capitellata* (Hook.f. & Taylor) C.Bab. var. *squamatica* A.W.Archer
  - Cladonia humilis* (With.) J.R.Laundon var. *humilis*
  - Cladonia krempelhuberi* (Vain.) Zahlbr.
  - Cladonia merochlorophaea* Asahina
  - Cladonia neozelandica* Vain. var. *striata* (A.W.Archer) Kantvilas
  - Cladonia ochrochlora* Flörke
  - Cladonia praetermissa* A.W.Archer var. *praetermissa*
  - Cliostomum griffithii* (Sm.) Coppins
  - Coenogonium luteum* (Dicks.) Kalb & Lücking
  - + *Collema crispum* (Huds.) Weber ex F.H.Wigg.
  - Collema glaucophthalmum* Nyl. var. *glaucophthalmum*
  - Collema glaucophthalmum* Nyl. var. *implicatum* (Nyl.) Degel.
  - Diploicia canescens* (Dicks.) A.Massal. subsp. *canescens*
  - + *Diploschistes euganeus* (A.Massal.) J.Steiner
  - + *Diploschistes gyrophoricus* Lumbsch & Elix
  - + *Endocarpon crassisporum* P.M.McCarthy & Filson
  - Eugeniella farinosa* P.M.McCarthy & Elix
  - Flavoparmelia haysomii* (C.W.Dodge) Hale
  - Flavoparmelia rutidota* (Hook.f. & Taylor) Hale
  - Flavoparmelia soreadians* (Nyl.) Hale
  - + *Gyalecta pellucida* (Coppins & Malcolm) Baloch & Lücking
  - Halecania subsquamosa* (Müll.Arg.) van den Boom & H.Mayrhofer
  - Halegrapha mucronata* (Stirt.) Lücking
  - Hertelidea pseudobotryosa* R.C.Harris, Ladd & Printzen
  - Heterodea muelleri* (Hampe) Nyl.
  - Heterodermia obscurata* (Nyl.) Trevis.
  - Heterodermia tremulans* (Müll.Arg.) W.L.Culb.
  - Hyperphyscia adglutinata* (Flörke) H.Mayrhofer & Poelt
  - Hypotrachyna revoluta* (Flörke) Hale
  - Japewiella pruinosa* (Müll.Arg.) Kantvilas
  - Lecanora casuarinophila* Lumbsch
  - Lecanora dispersa* (Pers.) Sommerf.
  - Lecanora aff. farinacea* Fée
  - Lecanora farinacea* Fée
  - Lecanora flavopallida* Stirt.
  - Lecanora galactiniza* Nyl.
  - Lecanora mobergiana* Lumbsch & Elix
  - + *Lecanora pseudogangaleoides* Lumbsch subsp. *pseudogangaleoides*
  - Lecanora saligna* (Schrad.) Zahlbr.
  - + *Lecanora strobilina* (Spreng.) Kieff.
  - Lecanora subcoarctata* (C.Knight) Hertel
  - Lecanora subtecta* (Stirt.) Kantvilas & LaGreca
  - Lecanora symmicta* (Ach.) Ach.
  - Lecanora wilsonii* Müll.Arg. subsp. *wilsonii*

- Lecidella granulosula* (Nyl.) Knoph & Leuckert var.  
  *granulosula*
- Lecidella leptolomoides* (Müll.Arg.) Elix
- Lecidella sublapicida* (C.Knight) Hertel
- Lecidella xylogena* (Müll.Arg.) Kantvilas & Elix
- Leimonis erratica* (Körb.) R.C.Harris & Lendemer
- Lepra dactylinella* (Kantvilas & Elix) A.W.Archer &  
  Elix
- Leptogium crispatum* Nyl.
- Lichina intermedia* (C.Bab.) M.Schultz
- Maronea constans* (Nyl.) Hepp
- Megalaria laureri* (Hepp ex Th.Fr.) Hafellner
- Megalaria melaloma* (C.Knight) Kantvilas
- Megalaria melanotropa* (Nyl.) D.J.Galloway
- Menegazzia caesiopruinosa* P.James
- Menegazzia subpertusa* P.James & D.J.Galloway
- Micarea almbornii* Coppins
- Micarea byssacea* (Th.Fr.) Czarnota, Guzow-Krzem. &  
  Coppins
- Micarea melaenida* (Nyl.) Coppins
- Monerolechia badia* (Fr.) Kalb
- Notoparmelia signifera* (Nyl.) A.Crespo, Ferencova &  
  Divakar
- Ocellomma rediuntum* (Hasse) Kantvilas & Gueidan
- Ochrolechia africana* Vain.
- Ochrolechia apiculata* Verseghe
- Ochrolechia gyrophorica* (A.W.Archer) A.W.Archer &  
  Lumbsch
- Opegrapha* sp. (GK 285/18; HO 595582)
- Opegrapha atra* Pers.
- + *Opegrapha niveoatra* (Borrer) J.R.Laundon
- + *Opegrapha spodopolia* Nyl.
- + *Opegrapha varia* Pers.
- Pannaria elixii* P.M.Jørg. & D.J.Galloway
- Paraporpidea aff. glauca* (Taylor) Rambold
- Paraporpidea leptocarpa* (C.Bab. & Mitt.) Rambold &  
  Hertel
- Parmotrema neopustulatum* Kurok.
- Parmotrema ochrocrinitum* Elix & J.Johnst.
- Parmotrema perlatum* (Huds.) M.Choisy
- Parmotrema reticulatum* (Taylor) M.Choisy
- Pertusaria crassilabra* Müll.Arg.
- Pertusaria lophocarpa* Körb.
- Pertusaria perractata* Stirt.
- Physcia albata* (F.Wilson) Hale
- Physcia austrocaesia* Elix
- + *Physcia austrostellaris* Elix
- Physcia neonubila* Elix
- Physcia poncinsii* Hue
- Placidium squamulosum* (Ach.) Breuss
- Porina corrugata* Müll.Arg.
- Porina elegantula* Müll.Arg.
- Porina meridionalis* P.M.McCarthy
- Porina raphidiophora* (Nyl.) Müll.Arg.
- Porina subargillacea* Müll.Arg.
- Porpidia crustulata* (Ach.) Hertel & Knoph
- Punctelia borreri* (Sm.) Krog
- Punctelia pseudocoralloidea* (Gyeln.) Elix & Kantvilas
- Ramalina caespitella* G.N.Stevens
- Ramalina canariensis* J.Steiner
- Ramalina celastri* (Spreng.) Krog & Swinscow
- Ramalina fissa* (Müll.Arg.) Vain.
- Ramalina inflata* (Hook.f. & Taylor) Hook.f. &  
  Taylor
- Ramboldia* sp. (GK 242/19)
- Ramboldia blastidiata* Kantvilas & Elix
- Ramboldia laeta* (Stirt.) Kalb, Lumbsch & Elix
- Ramboldia petraeoides* (Nyl. ex C.Bab. & Mitt.)  
  Kantvilas & Elix
- Ramboldia stuartii* (Hampe) Kantvilas & Elix
- + *Ramonia absconsa* (Tuck.) Vezda
- Rhizocarpon geographicum* (L.) DC.
- Rhizocarpon reductum* Th.Fr.
- Rinodina asperata* (Shirley) Kantvilas
- Rinodina australiensis* Müll.Arg.
- Rinodina blastidiata* Matzer & H.Mayrhofer
- Rinodina oleae* Bagl.
- Rinodinella fertilis* (Körb.) Elix var. *fertilis*
- Schismatomma occultum* (C.Knight & Mitt.) Zahlbr.
- Teloschistes chrysophthalmus* (L.) Th.Fr.
- Teloschistes spinosus* (Hook.f. & Taylor) J.S.Murray
- Teloschistes velifer* F.Wilson
- Tephromela alectoronica* Kalb
- Tephromela atra* (Huds.) Hafellner
- Thelenella tasmanica* H.Mayrhofer & P.M.McCarthy
- Toninia aromatica* (Sm.) A.Massal.
- Trapelia* sp. (GK 226/19)
- + *Trapelia concentrica* Elix & P.M.McCarthy
- Tylothallia verrucosa* (Müll.Arg.) Kantvilas
- Usnea cornuta* Körb.
- Usnea rubrotincta* Stirt.
- Usnea torulosa* (Müll.Arg.) Zahlbr.
- Verrucaria muralis* Ach.
- Xanthoparmelia australasica* D.J.Galloway
- Xanthoparmelia bungendorensis* (Elix) Elix & J.Johnst.
- Xanthoparmelia conranensis* (Elix) Elix
- Xanthoparmelia digitiformis* (Elix & P.M.Armstr.) Filson
- Xanthoparmelia elixii* Filson
- Xanthoparmelia filsonii* Elix & J.Johnst.
- Xanthoparmelia flavescentireagens* (Gyeln.)  
  D.J.Galloway
- Xanthoparmelia microcephala* Elix & Kantvilas
- Xanthoparmelia microphyllizans* Elix
- Xanthoparmelia mougeotina* (Nyl.) D.J.Galloway
- Xanthoparmelia neotinctina* (Elix) Elix & J.Johnst.
- Xanthoparmelia streimannii* (Elix & P.M.Armstr.) Elix  
  & J.Johnst.
- Xanthoparmelia subprolixa* (Nyl. ex Kremp.) O.Blanco  
  et al.
- Xanthoparmelia tasmanica* (Hook.f. & Taylor) Hale
- Xanthoparmelia verisidiosa* (Essl.) O.Blanco et al.
- Xanthoparmelia xanthomelaena* (Müll.Arg.) Hale
- + *Xanthoparmelia xerica* (Elix) Elix
- Xanthoria* sp. (GK 394/18)
- Xanthoria angustata* S.Y.Kondr. & Karnefelt
- Xanthoria coomae* S.Y.Kondr. & Karnefelt
- Xanthoria elixii* S.Y.Kondr. & Karnefelt
- Xanthoria ligulata* (Körb.) P.James

### Appendix 1.4: Invertebrate taxa of Musselroe Wind Farm

#### ARTHROPODS

##### ARCHAEOGNATHA

###### Meinertellidae

*Machiloides hickmani* Womersley, 1939

##### BLATTODEA

###### Blaberidae

*Calolampra irrorata* (Fabricius, 1775)

###### Blattidae

- + Blattidae unplaced sp. TMAG\_F95715
- Drymaplaneta cf. communis* Tepper, 1893
- Platyzosteria biglumis* (Saussure, 1864)

##### COLEOPTERA

###### Anamorphidae

- + *Idiophyes* sp. TMAG\_F98611

###### Anthicidae

- Anthicidae unplaced sp. TMAG\_F95636
- Anthicidae unplaced sp. TMAG\_F98784
- Anthicidae unplaced sp. TMAG\_F98926
- Lagrioida australis* Champion, 1895
- Mecynotarsus leai* Pic, 1942
- Trichananca victoriensis* Blackburn, 1891

###### Anthribidae

- Anthribidae unplaced TFIC sp. 04
- Aracerus palmaris* (Pascoe, 1882)

###### Bethylidae

- Pachyura australis* Hope, 1834
- Rhinotia bidentata* (Donovan, 1805)
- Stenobelus tibialis* (Blackburn, 1893)

###### Buprestidae

- Germarica lilliputana* (Thomson, 1879)
- Melobasis innocua* Thomson, 1879
- Melobasis nervosa* (Boisduval, 1835)

###### Cantharidae

- Chauliognathus lugubris* (Fabricius, 1801)
- Chauliognathus tricolor* (Castelnau, 1840)
- Heteromastix unplaced

###### Carabidae

- Amblytelus brevis* Blackburn, 1892
- Bembidion proprium* Blackburn, 1888
- Carabidae unplaced sp. TMAG\_F95840
- Carabidae unplaced sp. TMAG\_F97712
- Carabidae unplaced sp. TMAG\_F1148372
- Civina vagans* Putzeys, 1866
- Civina vittata* Sloane, 1896
- Demetrida sp. TMAG\_F98712
- Hypbarpax peronii* (Castelnau, 1867)
- Loxandrus* sp. TMAG\_F95857
- Notonomus politulus* (Chaudoir, 1865)
- Philophlaeus simsoni* Sloane, 1920
- Prosopogmus chalybeipennis* (Chaudoir, 1843)
- Pseudoceneus sollicitus* (Erichson, 1842)
- Sarothrocrepis integra* Baehr, 2018
- Scaraphites rotundipennis* (Dejean, 1825)
- Scopodes* sp. TMAG\_F96081

###### Cerambycidae

- Ancita crocogaster* (Boisduval, 1835)

*Ancita marginicollis* (Boisduval, 1835)

*Bethelium diversicornе* (White, 1846)

Callidiopini unplaced sp. TMAG\_F100860

Callidiopini unplaced sp. TMAG\_F33390

Cerambycinae unplaced sp. TMAG\_F96396

*Enchopelta apicalis* Saunders, 1850

*Hesthesis cingulatus* (Kirby, 1818)

*Neissa inconspicua* Pascoe, 1866

*Nenenia* sp. TMAG\_F98558

*Stenoderus suturalis* (Olivier, 1795)

*Uracanthus* sp. TMAG\_F95575

###### Chrysomelidae

*Agetinus subcostata* (Chapuis, 1874)

*Aporocera viridipennis* (Saunders, 1842)

*Arsipoda* sp. TMAG\_F98512

*Chaetocnema* sp. TMAG\_F95720

*Ditropidus* unplaced

*Eurispes albipennis* (Germar, 1848)

*Geloptera jugularis* (Erichson, 1842)

*Geloptera* sp. TMAG\_F41254

*Monolepta* unplaced

*Paropsis charybdis* Stål, 1860

*Paropsis porosa* Erichson, 1842

*Paropsisterna nobilitata* (Erichson, 1842)

*Paropsisterna oblitterata* (Erichson, 1842)

*Peltoschema* unplaced

+i *Psylliodes marcida* (Illiger, 1807)

###### Cleridae

*Blackburniella intricata* (Blackburn, 1891)

*Eleale simplex* (Newman, 1840)

*Eunatalis porcata* (Fabricius, 1787)

*Lemidia cicatricosa* Lea, 1907

*Lemidia* sp. TMAG\_F98680

*Lemidia subaenea* Gorham, 1877

i? *Necrobia rufipes* (DeGeer, 1775)

*Neoscrobiger* sp. TMAG\_F95985

###### Coccinellidae

*Cleobora mellyi* (Mulsant, 1850)

*Coccinella transversalis* Fabricius, 1781

i *Coccinella undecimpunctata* Linnaeus, 1758

Coccinellidae unplaced sp. TMAG\_F98853

Coccinellidae unplaced TFIC sp. 22

*Harmonia conformis* (Boisduval, 1835)

*Micraspis frenata* (Erichson, 1842)

*Rhyzobius hirtellus* Crotch, 1874

*Rhyzobius* sp. TMAG\_F98708

*Rhyzobius pelion* Tomaszewska, 2010

*Rhyzobius* TFIC sp. 05

*Rhyzobius* TFIC sp. 15

*Rhyzobius* TFIC sp. 35

*Rhyzobius ventralis* (Erichson, 1842)

###### Corylophidae

*Holopsis* unplaced

*Sericoderus* TFIC sp. 05

###### Curculionidae

*Aades cultratus* (Fabricius, 1775)

*Aoplcnemis* unplaced

*Aphela algarum* Pascoe, 1870

*Aphela helopoides* Pascoe, 1865

- Cnestus pseudosolidus* (Schedl, 1936)  
*Cryptorhynchini* unplaced sp. TMAG\_F95457  
*Cryptorhynchini* unplaced sp. TMAG\_F95499  
*Curculionidae* unplaced sp. TMAG\_F58817  
*Curculionidae* unplaced sp. TMAG\_F95604  
*Curculionidae* unplaced sp. TMAG\_F96050  
*Curculionidae* unplaced sp. TMAG\_F98766  
*Curculionidae* unplaced sp. TMAG\_F98811  
*Epamoebus ziczac* Lea, 1909  
*Ethemaia sellata* Pascoe, 1865  
*Gerynassa picticornis* Blackburn, 1893  
*Gonipterus* unplaced  
*Haplonyx casuarinae* (Lea, 1909)  
*Leptopiini* unplaced sp. TMAG\_F41329  
*Leptopiini* unplaced sp. TMAG\_F95510  
*Leptopiini* unplaced sp. TMAG\_F95890  
*Leptopiini* unplaced sp. TMAG\_F96210  
*Leptopiini* unplaced sp. TMAG\_F98700  
*Leptopius duponti* (Boisduval, 1835)  
*Mandalotus* TFIC sp. 14  
*Melanterius acaciae* Lea, 1899  
*Merimnetes oblongus* (Blanchard, 1853)  
*Meriphus* sp. TMAG\_F96628  
*Neolaemosaccus narinus* (Pascoe, 1872)  
*Neolaemosaccus* sp. TMAG\_F96154  
*Orthorhinus klugii* Boheman, 1835  
*Orthorhinus* TFIC sp. 02  
*Pelororhinus margaritaceus* Erichson, 1842  
*Pelororhinus* TFIC sp. 01  
*Pentamimus australis* (Erichson, 1842)  
*Pseudotimareta subterranea* (Lea, 1908)  
*Rhamphus acaciae* Lea, 1895  
*Sclerorinus bubalus* (Olivier, 1807)  
*Scotasmus litoralis* (Lea, 1911)  
*Storeus albosignatus* (Blackburn, 1890)  
*Storeus* sp. TMAG\_F98972  
*Tychiini* unplaced TFIC sp. 18
- Dermestidae**  
?+*Attagenus pellio* (Linnaeus, 1758)  
*Trogoderma* TFIC sp. 01
- Dytiscidae**  
*Antiporus* sp. TMAG\_F97815  
*Chostonectes* unplaced  
*Exocelina australiae* (Clark, 1863)  
*Lancetes lanceolatus* (Clark, 1863)  
*Limbodessus gemellus* (Clark, 1862)  
*Megaporus* unplaced  
*Necterosoma penicillatum* (Clark, 1862)  
*Onychohydrus scutellaris* (Germar, 1848)  
*Platynectes* unplaced  
*Rhantus suturalis* (Macleay, 1825)  
*Sternopriscus tasmanicus* Sharp, 1882  
*Sternopriscus* sp. TMAG\_F97431
- Elateridae**  
*Agrypnus impressicollis* (Elston, 1924)  
*Agrypnus pictipennis* (Candèze, 1857)  
*Agrypnus* TFIC sp. 01  
*Conoderus erubescens* (Candèze, 1859)  
*Conoderus fabrilis* (Erichson, 1842)
- Conoderus* TFIC sp. 03  
*Conoderus* TFIC sp. 11  
*Conoderus* TFIC sp. 12  
*Elateridae* unplaced sp. TMAG\_F95495  
*Elateridae* unplaced sp. TMAG\_F98582  
*Elateridae* unplaced sp. TMAG\_F98981  
*Elateridae* unplaced TFIC sp. 10  
*Elateridae* unplaced TFIC sp. 32  
*Enischneiater specularis* (Candèze, 1889)  
*Paracardiophorus* sp. TMAG\_F95158  
*Paracardiophorus* sp. TMAG\_F95439
- Geotrupidae**  
i *Geotrupes spiniger* Marsham, 1802
- Histeridae**  
*Saprinus laetus* Erichson, 1834  
*Teretrius sorellensis* Blackburn, 1903
- Hybosoridae**  
+ *Liparochrus* sp. TMAG\_F95801
- Hydraenidae**  
+ *Gymnochthebius* sp. TMAG\_F96374
- Hydrophilidae**  
*Berosus* unplaced  
*Cercyon* sp. TMAG\_F96383  
*Enochrus* sp. TMAG\_F94420  
*Hydrophilus latipalpus* Castelnau, 1840  
*Limnoxenus zealandicus* (Broun, 1880)  
*Paracymus* unplaced
- Hygrobiidae**  
*Hygrobia australasiae* (Clark, 1862)
- Latridiidae**  
*Cortinicara* TFIC sp. 02
- Leiodidae**  
*Choleva* TFIC sp. 01  
*Eublackburniella* sp. TMAG\_F41310  
*Leiodidae* unplaced sp. TMAG\_F41346  
*Zeadolopus* unplaced
- Lucanidae**  
*Syndesus cornutus* (Fabricius, 1801)
- Lycidae**  
*Xylobanus simplicicornis* (Lea, 1909)
- Meloidae**  
*Palaestra cyanipennis* (Pascoe, 1860)
- Melyridae**  
*Dicranolaius cinctus* (Redtenbacher, 1867)  
*Hypattalus exilis* Lea, 1909  
*Melyridae* unplaced sp. TMAG\_F98714  
*Melyridae* unplaced sp. TMAG\_F98715
- Mordellidae**  
*Glipostenoda* TFIC sp. 09  
*Mordella promiscua* Erichson, 1842  
*Mordellidae* unplaced sp. TMAG\_F98627
- Nitidulidae**  
*Epuraea meyricki* (Blackburn, 1891)
- Phalacridae**  
*Austroporus melas* (Lea, 1932)  
*Phalacridae* unplaced sp. TMAG\_F44443
- Phycosecidae**  
*Phycosecis litoralis* Pascoe, 1875

- Ptinidae**
- Deltocryptus* sp. TMAG\_F98780
  - Ptinidae unplaced sp. TMAG\_F98630
  - Ptinidae unplaced sp. TMAG\_F98874
  - Ptinus exulans* Erichson, 1842
- Rhipiceridae**
- Rhipicera femorata* Kirby, 1818
- Salpingidae**
- Orphanotrophium* TFIC sp. 01
- Scarabaeidae**
- Adoryphorus coulonii* (Burmeister, 1847)
  - i *Aphodius lividus* (Olivier, 1789)
  - Aploopsis evexa* (Britton, 1957)
  - Atenius brouni* (Sharp, 1876)
  - Automolius depressus* (Blanchard, 1850)
  - Cheiropatrys latipes* (Guérin-Méneville, 1831)
  - Diphucephala colaspoides* (Gyllenhal, 1817)
  - Diphucephala smaragdula* Boisduval, 1835
  - Heteronyx cervina* (Boisduval, 1835)
  - Heteronyx pilosellus* Blanchard, 1850
  - Heteronyx tasmanicus* Blackburn, 1909
  - Liparetrus discipennis* Guérin-Méneville, 1831
  - Liparetrus sericeus* Macleay, 1871
  - Melolonthinae unplaced sp. TMAG\_F95945
  - Melolonthinae unplaced sp. TMAG\_F98770
  - Onthophagus fuliginosus* Erichson, 1842
  - Onthophagus posticus* Erichson, 1842
  - Onthophagus pronus* Erichson, 1842
  - Onthophagus* sp. TMAG\_F97557
  - Phylloctonus macleayi* Fischer, 1823
  - Phylloctonus rufipennis* (Boisduval, 1835)
  - Sericesthis nigrolineata* Boisduval, 1835
- Scirtidae**
- Spilotocyphon spilotus* (Blackburn, 1892)
- Scaptiidae**
- Scaptia laticollis* Champion, 1895
- Silphidae**
- Ptomaphila lacrymosa* (Schreibers, 1802)
- Staphylinidae**
- Aleochara blackburni* Bernhauer & Scheerpeltz, 1926
  - Aleocharinae unplaced sp. TMAG\_F41202
  - Bledius aterrimus* Fauvel, 1877
  - Cafius australis* (L. Redtenbacher, 1868)
  - Cafius sabulosus* Fauvel, 1877
  - Cafius seriatus* Fauvel, 1877
  - Creophilus erythrocephalus* (Fabricius, 1775)
  - Paederus cruenticollis* Germar, 1848
  - Quedius* sp. TMAG\_F98639
  - Staphylininae unplaced sp. TMAG\_F96390
- Tenebrionidae**
- Adelium brevicorne* Blessig, 1861
  - Adelium tenebroides* Erichson, 1842
  - Atoichus bicolor* (Blackburn, 1893)
  - Bassianus colydioides* (Erichson, 1842)
  - Ecnolagria rufescens* (Boisduval, 1835)
  - Edylius canescens* Champion, 1894
  - Hyocis bakewelli* Pascoe, 1866
  - Isopteronaversum* (Pascoe, 1869)
  - Isopteron triviale* (Erichson, 1842)
- Meneristidae**
- Meneristes australis* (Boisduval, 1835)
  - Nocar depressiusculus* (Macleay, 1872)
  - Pachycoelia sulcicollis* Boisduval, 1835
  - Pemanoa tasmanica* (Carter, 1915)
  - Pterohelaeus peltatus* (Erichson, 1842)
  - Saragus costatus* (Solier, 1848)
  - Sphargeris physodes* Pascoe, 1860
- Tenebrionidae**
- Tenebrionidae unplaced sp. TMAG\_F95884
  - Tetragonomenes ruficornis* (Champion, 1894)
  - Titaena columbina* Erichson, 1842
- Throscidae**
- + Throscidae unplaced sp. TMAG\_F98854
- Trogidae**
- Omorgus australasiae* (Erichson, 1842)
- Trogossitidae**
- Leperina decorata* (Erichson, 1842)
- DERMAPTERA**
- Anisolabididae**
- Euborellia brunneri* (Dohrn, 1864)
  - Gonolabis* unplaced
- Labiduridae**
- Labidura riparia* (Pallas, 1773)
- DIPTERA**
- Acroceridae**
- + *Ogcodes* sp. TMAG\_F95695
- Asilidae**
- Bathypogon nigrinus* Ricardo, 1912
  - Cerdistus caliginosus* (White, 1914)
  - Cerdistus flavicinctus* (White, 1914)
  - Cerdistus vittipes* (Macquart, 1847)
  - Leptogaster* sp. TMAG\_F98958
  - Neoaratus hercules* (Wiedemann, 1828)
  - Neoscleropogon* unplaced
- Australimyzidae**
- Australimyza mcalpinei* Brake & Mathis, 2007
- Bibionidae**
- Dilophus* unplaced
- Bombyliidae**
- Acridophagus paganicus* (White, 1916)
  - Aleucosia atherix* (Newman, 1841)
  - Aleucosia calophthalma* (Thomson, 1869)
  - Comptosia ocellata* (Newman, 1841)
  - Exechohypopion nigricostatum* (Macquart, 1850)
  - Exechohypopion velox* (White, 1916)
  - Meomyia fasciculata* (Macquart, 1840)
  - Villa fuscicostata* (Macquart, 1846)
- Calliphoridae**
- Calliphora hilli* Patton, 1925
  - Calliphora stygia* (Fabricius, 1782)
  - Calliphoridae unplaced sp. TMAG\_F97634
  - Calliphorinae unplaced sp. TMAG\_F99027
  - Onesia* sp. TMAG\_F98547
- Canacidae**
- Canacidae unplaced sp. TMAG\_F41340
  - Canacidae unplaced sp. TMAG\_F41341
- Chamaemyiidae**
- Chamaemyiidae unplaced sp. TMAG\_F96118
- Chironomidae**
- Chironomidae unplaced sp. TMAG\_F41374

- Chironomidae unplaced sp. TMAG\_F95551  
 Chironomidae unplaced sp. TMAG\_F96041  
 Chironomidae unplaced sp. TMAG\_F96042
- Chloropidae**  
*Apotropina ornatipennis* (Malloch, 1923)  
 Chloropidae unplaced sp. TMAG\_F96424  
 Chloropidae unplaced sp. TMAG\_F98232  
*Pemphigonotus* sp. TMAG\_F97691
- Coelopidae**  
*Amma blancheae* McAlpine, 1991  
*Chaetocoelopa sydneyensis* (Schiner, 1868)  
*Gluma musgravei* McAlpine, 1991  
*Gluma nitida* McAlpine, 1991  
*Rhis whitleyi* McAlpine, 1991
- Dolichopodidae**  
 Dolichopodidae unplaced sp. TMAG\_F41283  
 Dolichopodidae unplaced sp. TMAG\_F41365  
 Dolichopodidae unplaced sp. TMAG\_F115776  
 Dolichopodidae unplaced sp. TMAG\_F97581  
*Heteropsilopus cingulipes* (Walker, 1835)  
 Hydrophorinae unplaced sp. TMAG\_F57575  
 Sciapodinae unplaced sp. TMAG\_F97453
- Empididae**  
 Empididae unplaced sp. TMAG\_F40378  
 Empididae unplaced sp. TMAG\_F41210  
 Empididae unplaced sp. TMAG\_F41274  
 Empididae unplaced sp. TMAG\_F41359  
 Empididae unplaced sp. TMAG\_F41360
- Ephydriidae**  
*Ephydrella* unplaced  
 + Ephydriidae unplaced sp. TMAG\_F95706  
 Ephydriidae unplaced sp. TMAG\_F98245  
*Hydrellia tritici* Coquillett, 1903  
*Scatella* sp. TMAG\_F59706
- Heteromyzidae**  
*Diplogeomysa wirthi* McAlpine, 1967
- Hybotidae**  
 Hybotidae unplaced sp. TMAG\_F96039
- Lauxaniidae**  
 Lauxaniidae unplaced sp. TMAG\_F41248  
 Lauxaniidae unplaced sp. TMAG\_F96423  
*Paranomina unicolor* Hendel, 1907  
*Sapromyza mallochiana* Evenhuis & Okadome, 1989
- Limoniidae**  
*Gynoplistia* sp. TMAG\_F95911  
 Limoniidae unplaced sp. TMAG\_F96199
- Lonchaeidae**  
 Lonchaeidae unplaced sp. TMAG\_F6351
- Muscidae**  
*Coenosia* sp. TMAG\_F47332  
*Helina* sp. TMAG\_F12791  
*Lispe cana* (Walker, 1849)  
 Muscidae unplaced sp. TMAG\_F41290  
 Muscidae unplaced sp. TMAG\_F41370  
 Muscidae unplaced sp. TMAG\_F99028
- Mycetophilidae**  
 Mycetophilidae unplaced sp. TMAG\_F41206
- Nemestrinidae**  
*Trichophthalma punctata* (Macquart, 1846)
- Piophilidae**  
 Piophilidae unplaced sp. TMAG\_F41358
- Platystomatidae**  
*Duomyia decora* (Macquart, 1846)  
*Lamprogaster laeta* (Macquart, 1835)  
*Rivellia* unplaced
- Pyrgotidae**  
*Cardiacera* cf. *anthonyi* (Paramonov, 1958)  
*Cardiacera* sp. TMAG\_F95804
- Rhinophoridae**  
 + *Axinia* unplaced sp. TMAG\_F5984
- Sarcophagidae**  
*Oxysarcodexia varia* (Walker, 1836)  
*Protomiltogramma laticeps* Malloch, 1930  
*Sarcophaga* sp. TMAG\_F72915  
 Sarcophaginae unplaced sp. TMAG\_F96711
- Sciariidae**  
 Sciaridae unplaced sp. TMAG\_F41293

*Scelidoropa officeri* (Legrand, 1871)  
+ *Scelidoropa* sp. "Little Musselroe"  
*Scelidoropa* sp. "Pioneer"

<b>Helicidae</b>	* <i>Calidris ruficollis</i> (Pallas, 1776)
*i <i>Cornu aspersum</i> (Muller, 1774)	* <i>Calyptorhynchus funereus</i> (Shaw, 1794)
<b>Hygromiidae</b>	*i <i>Carduelis carduelis</i> (Linnaeus, 1758)
*i <i>Priotelocella barbara</i> (Linneaus, 1758)	* <i>Cereopsis novaehollandiae</i> Latham, 1801
<b>Imacidae</b>	* <i>Charadrius ruficapillus</i> Temminck, 1822
*i <i>Lehmannia nyctelia</i> (Bourguignat, 1861)	* <i>Chroicocephalus novaehollandiae</i> (Stephens, 1826)
<b>Punctidae</b>	* <i>Chrysococcyx basalis</i> (Horsfield, 1821)
<i>Paralaoma hobarti</i> (Cox, 1868)	* <i>Chrysococcyx lucidus</i> (Gmelin, 1788)
<i>Laomavix collisi</i> (Brazier, 1877)	* <i>Circus approximans</i> Peale, 1848
<i>Magilaoma</i> sp. "Tasmania"	* <i>Colluricinclla harmonica</i> (Latham, 1801)
<b>Succineidae</b>	* <i>Coracina novaehollandiae</i> Gmelin, 1789
<i>Austrosuccinea australis</i> (Férussac, 1821)	* <i>Corvus tasmanicus</i> Mathews, 1912
<b>Tomichiidae</b>	* <i>Coturnix ypsilonphora</i> Bosc, 1792
<i>Coxiella straita</i> (Reeve, 1842)	* <i>Cracticus torquatus</i> (Latham, 1801)
	* <i>Cygnus atratus</i> (Latham, 1790)
	*i <i>Dacelo novaeguineae</i> (Hermann, 1783)
	* <i>Egretta novaehollandiae</i> (Latham, 1790)
	* <i>Epthianura albifrons</i> (Jardine & Selby, 1828)
	* <i>Falco berigora</i> Vigors & Horsfield, 1827
	* <i>Fulica atra</i> Linnaeus, 1758
	* <i>Gymnorhina tibicen</i> (Latham, 1801)
	* <i>Haematopus fuliginosus</i> Gould, 1845
	* <i>Haematopus longirostris</i> Vieillot, 1817
	*v <i>Haliaeetus leucogaster</i> Gmelin, 1788
	* <i>Hirundo neoxena</i> (Gould, 1842)
	* <i>Hydroprogne caspia</i> (Pallas, 1770)
	* <i>Larus pacificus</i> Latham, 1801
	* <i>Malurus cyaneus</i> (Ellis, 1782)
	* <i>Pachycephala pectoralis</i> (Latham, 1801)
	* <i>Pelecanus conspicillatus</i> Temminck, 1824
	* <i>Petroica boodang</i> (Lesson 1838)
	* <i>Phalacrocorax carbo</i> (Linnaeus, 1758)
	* <i>Phylidonyris novaehollandiae</i> (Latham, 1790)
	* <i>Rhipidura albiscapa</i> Gould, 1840
	* <i>Sericornis humilis</i> Gould, 1838
	* <i>Stagonopleura bella</i> (Latham, 1801)
	*v <i>Sternula nereis</i> (Gould, 1843)
	* <i>Strepera fuliginosa</i> (Gould, 1837)
	* <i>Strepera versicolor</i> (Latham, 1801)
	*i <i>Sturnus vulgaris</i> Linnaeus, 1758
	* <i>Tadorna tadornoides</i> (Jardine & Selby, 1828)
	* <i>Thalasseus bergii</i> (Lichtenstein, 1823)
	*v <i>Thinornis cucullatus</i> (Vieillot, 1818)
	* <i>Tribonyx mortierii</i> du Bus de Gisignies, 1840
	*i <i>Turdus merula</i> Linnaeus, 1758
	* <i>Vanellus miles</i> (Boddaert, 1783)
	* <i>Vanellus tricolor</i> (Vieillot, 1818)
	* <i>Zosterops lateralis</i> (Latham, 1801)

### Appendix 1.5: Vertebrate taxa of Musselroe Wind Farm

#### REPTILES

- \* *Tiliqua nigrolutea* (Quoy & Gaimard, 1824)
- \* *Cyclodomorphus casuarinae* (Duménil and Bibron, 1839)
- \* *Rankinia diemensis* Gray, 1841
- \* *Astrelaps superbus* (Günther, 1858)
- \* *Notechis scutatus* Peters, 1861

#### MAMMALS

- \* *Macropus rufogriseus* (Desmarest, 1817)
- \* *Macropus giganteus* Shaw, 1790
- \* *Thylogale billardierii* (Desmarest, 1822)
- \* *Vombatus ursinus* (Shaw, 1800)
- \*e *Sarcophilus harrisii* (Boitard, 1841)
- \*i *Oryctolagus cuniculus* (Linnaeus, 1758)
- BIRDS**
- \* *Acanthiza chrysorrhoa* (Quoy & Gaimard, 1830)
- \* *Acanthiza pusilla* (Shaw, 1790)
- \* *Acanthorhynchus tenuirostris* (Latham, 1801)
- \*i *Alauda arvensis* Linnaeus, 1758
- \* *Anas castanea* (Eyton, 1838)
- \* *Anas superciliosa* Gmelin, 1789
- \* *Anthochaera chrysoptera* (Latham, 1801)
- \* *Anthochaera paradoxa* (Daudin, 1800)
- \* *Anthus australis* (Gmelin, 1789)
- \*e *Aquila audax fleayi* Condon & Amadon, 1954
- \* *Arenaria interpres* (Linnaeus, 1758)
- \* *Artamus cyanopterus* (Latham, 1801)
- \* *Cacomantis flabelliformis* Latham, 1801
- \* *Cacomantis pallidus* (Latham, 1801)
