平成5年度、及び6年度の2年間、文部省科学研究費補助金（一般研究C）の交付を受けて「日本産ヘリトリゴケ科地衣類の種類相の解明」を行った。

日本産固着地衣類は明治以来、主に国外の研究者によって多くの種が報告されてきたため、既報告種の証拠、あるいは基準標本の大半が海外の研究機関に収蔵されており、加えて、その後我が国で研究する者が少なかったために放置されたままになっていて、その実体は一部の分類群を除いて全く不明である。

日本産固着地衣類のうちで、特に筆者の専門とするヘリトリゴケ科を中心とするレキデア型の子器をもつ分類群（ヘリトリゴケ類）の資料（標本・文献）は1972年以来収集され、充分蓄積されてきたので、これらの既存資料を基に、範型・基準標本等と充分比較検討して、ヘリトリゴケ類の分類学的再検討を行った。

今回の研究において、子器内部の構造、特に果殻の菌糸組織、子嚢の構造に重点をおいて分類し、11日本新産種を含む46属189種4変種を認めた。この内、12種については属の位置を移動する見解を新たに提唱し（新組み合わせ）、5種については新たにシノニムとした。以上のように、日本産地衣類相の解明に貢献できたものと確信する。

A revised list of Japanese species of Lecideaceae sensu Zahlbruckner  
and its related taxa

Masakane INOUE

A checklist of Japanese lichens including Lecideaceae sensu Zahlbruckner was published by Sato (1965), based on literatures (Nylander 1890, Vainio 1918 & 1921, Zahlbruckner 1927 & 1921–40, etc.) and his own study. However, taxonomic knowledge of this family in a broad sense and allied taxa have been advanced in the subsequent 30 years. In the course of my work I have restudied the type and voucher specimens of the species recorded from Japan under *Lecidea* (s. lato) and its related taxa, *Bacidia*, *Blastenia*, *Bombyliospora*, *Buellia*, *Byssoloma*, *Catillaria*, *Lecanactis*, *Lopadium*, *Megalospora*, *Mycoblastus*, *Protoblastenia*, *Rhizocarpon* and *Schismatomma*.

In this paper a revised list of the known Japanese species of Lecideaceae (s. lato) is provided. More detailed treatment of those taxa will be published in separate papers.

I am particularly indebted to directors and curators of the following herbaria for sending type and authentic specimens on loan: Dr. D. H. Pfister (FH), Dr. J. Miede (G), Dr. T. Ahti and Dr. O. Vitikainen (H), Dr. J. Noguchi (KYO), Dr. H. Hertel (M), Dr. H. Kashiwadani (TNS), Dr. Lempiäinen (TUR), Dr. H. Riedl (W), Dr. Ehrendorfer (WU), Dr. R. Moberg (UPS) and Dr. R. Santesson (S).

### Summary

The total number of the Japanese lichens treated here includes 46 genera 189 species 4 varieties.

The following species were proposed as a new combination: *Biatora furfurace-lla* (Nyl.) M. Inoue, *Biatora leucosoralis* (Vain.) M. Inoue, *Biatora subrufata* (Nyl.) M. Inoue, *Lecidella elaeochroma* var. *caesitia* (Vain.) M. Inoue, *Lecidella praespersa* (Nyl.) M. Inoue, *Lecidella sendaiensis* (Zahlbr.) M. Inoue, *Lecidella subcongrua* (Nyl.) M. Inoue, *Micarea derelicta* (Nyl.) M. Inoue, *Micarea inductella* (Nyl.) M. Inoue, *Micarea synotheoides* (Nyl.) Coppins in M. Inoue, *Protoblastenia handelii* (Zahlbr.) M. Inoue and *Caloplaca euphoriza* (Nyl.) M. Inoue.

Eleven species were reported as new additions to the lichen flora of Japan: *Cecidonia umbonella*, *Lecidea promiscens*, *Lecidella carpathica*, *Lecidella lacteola*, *Lecidella subcongrua*, *Lecidella subincongrua*, *Miriquidica deusta*, *Paraporpidia leptocarpa*, *Placynthiella uliginosa*, *Psora testacea* and *Lecidea sulphurea*.

The following species were treated as synonyms (correct name in Parenthesis): *Lecidea pruni* (= *Lecidella sendaiensis*), *Lecidea tiliae* (= *Lecidella sendaiensis*), *Lecidea youmotoensis* (= *Placynthiella icmalea*), *Lecidea rosulata* (= *Lecidea decorata*), *Lecidea declinella* (= *Lecidea granifera*).
