Tour Leaders:	Paul Harmes	Botanist
	Alan Notley	Botanist
	Dave "Red" Morrell	Driver

Participants:

Jane and David Crane  
Rita Hemsley  
Priscilla Nobbs  
Valerie Syrett  
Joan and David Vickers  
Dallas and Terry Wynne

## Day 1

Friday 31st August

Weather: Warm and Sunny in London. Hot (35 degrees) in Dubai.

Jane and David and Dallas and Terry met with Paul at the boarding gate, at Heathrow Terminal 3, for Emirates flight EK002 to Dubai, departing at 14-00hrs. Following a 7 hour flight we arrived in Dubai, and made our way to the boarding gate for the Emirates flight EK421 to Perth, where we met up with Rita and Priscilla, who had arrived via Gatwick.

## Day 2

Saturday 1st September

Weather: Hot in Dubai. Fine warm and dry in Perth.

The Emirates EK420 flight to Perth departed Dubai at 03-15hrs, arriving in Perth at 17-15hrs local time. After completing the immigration, customs and quarantine formalities, we met up with Red, our Australian driver for the duration of the tour. Red transported us into the city, and Miss Maud's Swedish Hotel, our base for the next two nights. After settling into our rooms, we met up, in reception, with Valerie, Joan and Dave, as well as Alan Notley and his wife, Jahannah, and we all made our way into the restaurant for dinner.

## Day 3

Sunday 2nd September

Weather: Fine Warm and Sunny.

After an early breakfast we gathered in the hotel lobby, at 08-30hrs, to meet Alan (Notley) and Red,(our local guide and Driver). Once aboard the Bus, we set off for Kings Park. This triumph of local planning comprises a formal public open space and gardens, over-looking the Swan River and the City, and it also has an extensive area of natural bush-land. Alan began by taking us through formal planted gardens, and gave us an early familiarization with the Western Australian flora and its various regions.

As we progressed, Rainbow Lorikeets, Australian Magpie and Red Wattle Birds were seen, as well as a distant Osprey. We also found *Caladenia latifolia* (Pink Fairy Orchid) and the tight buds of and *Microtis media* ssp. *media* (Common Mignonette Orchid). Completing a circle, we made our way back to the vehicle via the marginal bush-land, finding *Anigozanthos manglesii* (Mangle's Kangaroo Paw), the Western Australian floral emblem, *Diuris corymbosa* (Common Donkey Orchid), and *Sowerbaea laxiflora* (Vanilla Lily). Ring-necked Parrots were also quite abundant.

Moving on through Subiaco and on to the Grower's Market at Wembley, where we bought our lunch, we stopped at Herdsmans Lake. Here we saw Purple Swamphen, Ducky Moorhen, Glossy Ibis, Pink-eared Duck and Swamp Harrier. Welcome Swallows swooped low over the water and Willie Wagtails were evident on the ground.

After our picnic, we drove out of the city, along the Tonkin Highway, to the Ellis Brook Valley Reserve, an area of semi-wooded slopes, old quarries and natural bush. Alan led us on a circular walk up to the ridge and down the other side. Along the route we saw New Holland Honeyeaters, Black-faced Cuckoo-shrike, Silveryeye and we heard Red-capped Parrots. Plants included *Trymalium ledifolium* (Water-bush), *Hibbertia hypericoides* (Yellow Buttercups) *Isopogon formosus* (Rose Coneflower), *Hakea trifurcata* (Two-leaved Hakea), *Calathamnus rupestris* (Mouse Half-bottlebrush) and *Conospermum huegii* (Blue Smokebush). After a splendid day, we now had to make our way back into the city and back to our hotel to prepare for moving north tomorrow, and for dinner.

## Day 4

## Monday 3rd September

Weather: Fine Warm and Sunny.

After another early breakfast, we loaded our bags into the back of the bus for the start of our tour of Western Australia. Leaving the city, we headed north, on the Mitchell Highway, to the outer suburb of Joondalup, where we made a short stop at Alan's house, which is set in a couple of acres of natural bush. Here we saw a number of wonderful species including *Isotropis cuneifolia* (Granny Bonnets), *Caladenia latifolia* (Pink Fairy Orchid), *Diuris corymbosa* (Common Donkey Orchid), *Caladenia arenicola* (Carousel Spider Orchid) and, as well as normal *Hybanthus calycinus* (Native Violet), Alan showed us the highly unusual white flowered form of this species, *Hybanthus calycinus* var *alba*. His garden is also good for birds, and Kookaburra, Little Crow and Port Lincoln Parrots were all seen.

From here, we continued north, on the Brand Highway, to our morning tea stop in the Moore River National Park, passing stands of *Acacia saligna* (Golden-wreath Wattle) along the roadsides. As we neared our proposed stopping place, a flock of Straw-necked Ibis flew over. *Blancoa canescens* (Winter Bell), *Calytrix lechenaultii*, *Aganoxanthus humilis* (Cat's Paw), *Eucalyptus todtiana* – (Prickly Bark) and *Banksia laricina* (Propeller Banksia) were all seen. We made a short stop near Cataby to see *Eucalyptus macrocarpa* (Mottlecuh), in full flower, the largest flowered member of the *Eucalyptus* Genus. After refueling at Badgingara, we continued to the wonderful Hi Vallee Farm. Our hosts, Joy and Don Williams, greeted us with a welcome picnic lunch, fresh fruit and damper with golden syrup, all washed down with 'billy tea'.

The afternoon was spent with Don as our guide, walking in the natural bush-land on his property. His vast and detailed knowledge was imparted in a clear, passionate and extremely informative way. He introduced us to some of the fascinating plant families, showed us some rare and unusual local specialties and opened our eyes to the richness and diversity of this part of Australia. *Haemodorum simplex* (Bloodroot), *Eucalyptus calyphyllum* (Red Gum), *Verticordia corymbosa*, *Drosera glanduligera* and *Banksia sphaerocarpa* (Round-fruited Banksia) were among the many species present.

After thanking our hosts, we bid our farewells to Hi Vallee and a group of Western Grey Kangaroos, we saw as we were leaving, and made our way to our final stop of the day at the Nambung National Park and the Pinnacles Desert.

A single distant Wedge-tailed Eagle was spotted as well as a few Emu. We were treated to a short, but splendid, sunset, which, set against these fantastic rock formations, was rather memorable. As we left the pinnacles, Red pointed out a number of rock formations that appeared to be sculptures of recognizable animals etc. The light was now beginning to fade, so we drove the short distance to the Jurien Hotel Motel, for the night and a well earned dinner.

## Day 5

Tuesday 4th September

Weather: Warm with sunny periods and the odd early shower.

Leaving our hotel after breakfast, we made a short stop at the harbour at Jurien Bay, a centre for Crayfish and Rock-lobster fishing. From here, we made our way eastwards to the Mount Lesueur National Park, the first of the three principle, botanically rich, National Parks of Western Australia. This area had always been difficult to access in the past, requiring lots of time to walk in, or a four-wheel drive vehicle. However, a new loop road had recently been constructed, so access is now much more straightforward.

This magnificent site did not disappoint. We made three stops through the park finding *Chamaescilla corymbosa* (Blue Squill), *Baeckea grandiflora* (Large-flowered Baeckea), *Hakea ruscifolius* (Candle Hakea) and *Darwinia sanguinea*. Three particular specialties were *Verticordia grandis* (Scarlet Featherflower), some of the oldest specimens of *Macrozamia riedlei* (*Zamia*) in the region and, although not flowering, *Banksia tricuspis* (Lesueur Banksia), a rare and endangered endemic. A magnificent, low flying, pair of Wedge-tailed Eagles were seen as we admired the Banksia, and as we were leaving the park, a pair of Black-faced Cuckoo-shrikes were also spotted.

Making a short stop on the road near Greenhead, we found the unusual *Xanthosia tomentosa* (Mt. Lesueur Southern Cross). Our picnic was taken on the seafront at Dongara, close to the harbour. Crested Tern, Pacific Gull, Silver Gull and Pied Cormorant were all spotted and there were extensive stands of *Spinifex longifolius* (*Spinifex*) at the back of the shoreline.

After lunch, we continued north through Geraldton and on to Northampton, where we turned west and onto the Coastal road to Kalbarri. On the outskirts of Kalbarri, we stopped to take walk down one of the coastal gorges, called 'Natural Bridge'. Euro Kangaroos watched us as we parked the bus. *Scholtzia parviflora*, *Diplolaena grandiflora* (Tamala Rose) and *Westringia rigida* (Stiff Westringia) were all growing on the cliff top. A short walk took us to a cliff-top viewing platform, from which we could see the splendidly sculpted sandstone cliffs and also distant views of the spouts of Hump-backed Whales. Nankeen Kestrel, Welcome Swallows and Fairy Martins circled overhead. From here, it was but a short distance into the town and the Best Western Kalbarri Palm Resort, our base for the next two nights. As we drove we saw a Whistling Kite hunting. Dinner was taken at a local restaurant on the each called the Black Rock Hotel.

## Day 6

Wednesday 5 September

Weather: Fine warm and sunny.

Following breakfast at the Black Rock Hotel, we made the short journey to the entrance to the Kalbarri National Park. The special Sandstone features and the Murchison River are situated about twenty seven kilometres inland from the gates of the Park. It was in this area that the bulk of our day would be spent.

The first stop was at a lookout point, called 'The Loop', where we had good views of the Murchison River gorges and the surrounding bush. *Grevillea petrophiloides* (Pink Pokers), *Waitzia nitida*, *Allocasuarina humilis* (Dwarf Sheoak), *Jacksonia floribunda* (Holly Pea) and *Conospermum stoechadis* (Smokebush) were all seen. During the walk we visited a viewpoint called 'Natures Window'. In the river below this feature we saw a dark phase Reef Egret and a Great White Egret. Returning to the car park, we took morning tea, before moving on to our next scheduled stopping place at the 'Z Bend', where we walked down to viewing platform over the Murchison River. Plants recorded included *Trachymene ornata*, *Burchardia rosea* (Pink Milkmaids) and *Stylidium elongatum* (Tall Triggerplant). Retracing our tracks we made our way back to the vehicle for lunch.

Hunger satisfied, our next port of call was a further short stop in the bush, where we saw *Banksia prionotes* (Acorn Banksia) and *Banksia attenuata* (Slender Banksia), before moving to the 'Hawkshead' area by the river, for a stop at a lookout called 'Ross Graham', where we walked down to the river. The plants found included *Alyxia buxifolia* (Dysentry Bush), *Calothamus sanguineus* (A One-sided Bottlebrush) and *Eucalyptus camaldulensis* (River Red Gum). At a roadside stop when leaving this area, we found *Burchardia rosea* (Pink Milkmaids), *Grevillea didymobotrya*, and *Darwinia oldfieldii*.

Our final stop of the day was at the Wildflower Centre at Kalbarri. This is an area of natural bush-land that has been opened up and had paths added. Many of the plants here are labeled to assist identification, although none of the plants are obviously planted, except those in the immediate vicinity of the buildings. Here we made further progress with our identification of plant families. However, the drought of recent years had left its mark and the garden was beginning to recover from this lack of water.

## Day 7

Thursday 6th September

Weather: Cloudy with some sun and a breeze.

Leaving Kalbarri early, we made our way towards Northampton. The first of our short roadside stops produced *Banksia prionotes* (Acorn Banksia), *Geleznowia verrucosa* and *Melaleuca radula* (Graceful Honey-myrtle). The second stop added *Lysinema ciliata* (Curry Flower), *Stylidium macrocarpum* var. *planifolia* (Trigger-plant) and *Lachnostachys eriobotrya* (Lambs Wool). After a fuel stop in Northampton, which also yielded a number of European weeds, we made our way east through Nabwa and on towards Mullewa. Paul and Red spotted a Bobtail Skink making its way across the road, and we stopped to photograph it, and to admire its wonderful blue tongue.

Between the two towns we made a stop at the small McGauran Reserve, to admire the spring annuals. *Brachyscome iberidifolia* (Swan River daisy), *Cephalopetrum drummondii* (Pompom Head), *Waitzia nitida* and *Goodenia berardiana*, were seen, all growing under *Eucalyptus loxophleba* (York Gum). A short comfort stop in Mullewa allowed Alan and Paul to enquire at the tourist information centre, as to the whereabouts of any *Lechenaultia macrantha* (Wreath Lechenaultia), in the Pindar area. Armed with the information, we continued on our way to Pindar, passing purple mounds of *Keraudrenia hermanniaefolia* (Fire Bush) along the roadsides.

After our picnic stop, we found two patches of *Lechenaultia macrantha* (Wreath Lechenaultia), east of the Pindar railway crossing. Also growing here were *Thysanotus patersonii* (Fringe-lily), *Ricinocarpus velutinus*, *Solanum lasiophyllum* (Flannel Bush) and *Eremophila Clarkei* (Turpentine Bush).

Our last stop of the day was at the Coalseam Conservation Reserve. As we approached the site, Red stopped a flock of Red-tailed Black Cockatoos. At Coalseam, the ground is covered with a colourful blanket of spring annuals and everlastings. *Podotroche gnaphaloides* (Billy Buttons), *Lawrencella davenpoertii* (Sticky Everlasting), *Rhodanthe citrina* as well as *Eucalyptus loxophleba* ssp. *loxophleba* (York Gum), and *Acacia acuminata* (Jam Wattle) were all present. We were also treated to a fine show by a pair of Peregrines that were nesting on the cliff. The male was bringing food to the female, who was obviously sitting on eggs or brooding young. It was now time to make our way to Dongara to the Old Mill Motel, our accommodation for the night.

## Day 8

Friday 7th September

Weather: Fine and sunny at first, Rain later.

Setting off from Dongara, today was to be mostly a travelling day. However, we made a number of stops along the way noting the changing vegetation as we moved south. We left the town and joined the southbound Brand Highway, aiming for the town of Eneabba. We made two stops in the bush on the road margins, seeing *Banksia Hookeriana* (Hooker's Banksia), *Lasiopetalum drummondii*, *Scaevola canescens* (A Fanflower), *Petrophile divaricata*, *Stylidium crossocephalum* (Posy Triggerplant) and *Conostylis neocymosa*.

We stopped for morning tea at the Coomallo Rest Area, east of Jurien Bay. While Red was preparing tea, we spread out to explore, finding *Orthrosanthos laxus* (Morning Iris), *Caladenia vulgata* (Common Spider Orchid), *Cyanicula gemmata* (Blue china Orchid), *Caladenia flava* (Cowslip Orchid), *Hakea prostrata* (Harsh hakea) and *Scholtzia uberflora*.

After lunch, we continued a short way down the highway, before turning east onto the Marchagee Track, and ancient cart droving route. Our objective was the Watheroo National Park. We stopped here for a while finding *Eramea beaufortoides*, *Hakea orthorrhyncha* (Bird Hakea), *Elythranthera brunonis* (Purple Enamel Orchid) and *Hibbertia pungens*. Our picnic today was taken in Moora, in the shade of a splendid *Eucalyptus torquata* (Coral Gum). We continued on towards New Norcia, stopping at the small Rica Erikson Wildflower Walk Reserve, just as the rain began. *Caladenia longicauda* subsp. *eminens* (Stark White Spider Orchid), *Prasophyllum sargentii* (Leek Orchid), *Pterostylis recurva* (Jug Orchid) *Hybanthus floribundus* (Native Violet) and *Corymbia* (*Eucalyptus*) *calophylla* (Marri, Bloodwood or Red Gum) were all seen. The last part of our journey toward Northam, and the El Caballo Resort Hotel at Wooloroo, our over-night stop, was completed in heavy rain.

## Day 9

Saturday 8th September

Weather: Breezy, but bright and sunny.

The prospect of the Dryandra Woodlands had us on the road promptly this morning, but not before we had seen a pair of Splendid Fairy Wrens whilst eating breakfast, and a couple of Australian Wood Duck on the hotels golf course. Our route took us south and east through York, stopping at Avon Assent for some bird watching. Scarlet Robin, Grey Fantail, Rufus Whistler and Silvereye were all seen from the lookout.

Moving on through Beverley and Brookton, we made our way out to Boyagin Rock Reserve, for morning tea. While Red got the tea ready, Alan led us on a short walk through the woodland and out onto a granite outcrop, with scrub and wet areas.

Red-capped Parrot was heard and seen. *Caladenia falcata* (Fringed Mantis Orchid), *Caladenia saccharata* (Sugar Orchid), *Diuris aff. corymbosa* (Rosy-cheeked Donkey Orchid), *Utricularia microfida* (Pink Petticoats) and *Gastrobium spinosum* (Prickly Poison) were all abundant.

Our schedule today was quite tight, so we were soon on our way again, traveling down to the Dryandra Woodlands and our first stop at Congelin Dam. While Alan and Red prepared the lunch the rest of us explored the margins of the dam and the old railway line. It was not long before we were finding nice plants. *Caladenia hirta subsp. rosea* (Pink Candy Orchid), *Gastrobium macrocarpum* (A Poison), *Prasophyllum gracile* (Little Laughing Leek Orchid), *Pterostylis vittata* (Banded Greenhood), *Romulea rosea* (Guildford Grass), and *Pterostylis aff. nana* (Hairy-stemmed Snail Orchid) were all seen before settling down to another of Red's splendid picnics.

A short distance away, we stopped at the Old Mill Dam, for another stroll. Here we added *Cyanicula deformis* (Blue Fairy Orchid), *Lechenaultia Formosa* (Red Lechenaultia), *Hakea lissocarpha* (Honey Bush) and *Hibbetia mucronata* (Prickly Hibbertia), as well as getting some great views of Yellow-plumed Honeyeater, Dusky Wood-swallow and Silvereeye. We made our way to an area of Dryandra bush, where we stopped to photograph the magnificent *Dryandra nobilis* (Golden Dryandra). This spot had *Dryandra sessilis* (Parrot Bush), *Eucalyptus astringens* (Brown Mallet), *Eucalyptus wandoo* (Wandoo), *Hypocalymma angustifolium* (White Myrtle) and *Boronia crenulata* (Aniseed Boronia) and well as the Golden Dryandra.

It was time to make our way from the National Park into Narragin, and the Albert Facey Motor Inn, our accommodation for the night. We arrived in time for a pre-arranged early meal at 17-00hrs. This was in order that we could return to the National park to visit the Bana Mia Centre and undertake the evening marsupial spotting tour. The tour began with a short talk, by John Lawson. After this we followed our guide outside into the enclosure to visit three feeding stations where food pellets and fresh fruit were put out. This only represents 10% of the required food intake of these charming little animals. Under red touch-light, we saw four different creatures, Bilby, Boodie, Marl and Woylie. This had been a very pleasant experience, and we all agreed it was a special evening. It was now time to return to the hotel.

## Day 10

Sunday 9th September

Weather: Cloudy at first, becoming fine, sunny and warm.

Driving east from Narrogin we made an early stop at some scrubby roadside woodland near Highbury. This proved to be a botanically rich site. We found a large patch of *Thelymitra antennifera* (Lemon-scented Orchid), *Kennedia prostrata* (Running Postman), *Diuris porrifolia* (Western Wheatbelt Donkey Orchid), and *Comosperma scoparium* (Broom Milkwort). We also saw Regent Parrot, Australian Magpie and Australian Raven. Once again, today is principally a travelling day, but we did stop at a number of interesting looking places. The morning tea stop was taken in some bush, east of Wagin. The sharp eyed birders amongst us spotted Elegant Parrot and White-browed Babbler. Plants included *Caladenia polychroma* (Joseph's Spider Orchid), *Caladenia flava* (Cowslip Orchid), *Dryandra cirsioides* (Dryandra) and *Eucalyptus cornuta* (Yate).

Lunch was taken in the small town of Pingerup, which also happened to be Red's home town. Purple-crowned Lorikeet, Yellow-throated Miner, and Australian Raven, were all active in the adjacent trees. We proposed to take a route down to Bremer Bay via Jerramungup, so left Pingerup in an easterly direction. Alan new knew of a site where he thought we would find the splendid *Grevillea hookeriana* (Black Toothbrushes). He did not disappoint us.

The site also had *Pimelia cracens*, *Ptilotis spathulatus* (Mulla mulla), *Lasiopetalum rosmarinifolium* and *Grevillea superba*. From here we moved on to Bremer Bay, arriving at the Bremer Bay Resort at about 16-00hrs. After settling into our rooms, Paul led us on a local foray finding, *Caladenia decora* (King Esperance Spider Orchid), *Hibbertia cunifformis* (Cutleaf Hibbertia), *Gompholobium polymorphum*, *Caladenia splendens* (Splendid Spider Orchid), *Caladenia cairnsiana* (Zebra Orchid) and *Caladenia reptans subsp. reptans* (Little Pink Fairy Orchid) among many others. We now returned to the hotel to prepare for dinner.

## Day 11

Monday 10th September

Weather: Bright, breezy and sunny.

Our only destination today was the Fitzgerald River National Park. As we made our way into the National Park, we saw *Eucalyptus tetraptra* (Four-wiged Mallee) and *Eucalyptus tetragona* (Tallerack). Firstly we made a call into the Ranger's house to acquire some information leaflets for the group. We then made our way into the Park. Our first stop was to see the endemic *Pimelia physodes* (Qualup Bell), *Lambertia inermis* (Chittick), *Adenanthos cuneatus* (Coastal Jug Flower) and another splendid local endemic, *Hakea victoriae* (Royal Hakea). Fortunately, as the sun was shining, it was possible to fully appreciate the highlighted orange and green veining, in the bracts, perfectly.

Our second port of call was to the Qualup Homestead, an original 1850's pioneer house and campsite, in order to visit their 'wildflower walk'. Here we found *Gompholobium scabrum* (Painted Lady), *Conospermum distichum* (Smokebush), *Synaphea petiolaris*, *Xanthorrhoea platyphylla* (Grass Tree), *Pterostylis barbata* (Bird Orchid) and *Dryandra obtuse* (Shinning Honey-pot). There we also a number of spikes of the scarce *Anigozanthus rufus* (Red Kangaroo-paw).

After late morning tea, we set off in the direction of Point Anne, stopping briefly in an area previously the subject of a bush fire. Here we found *Banksia Coccinea* (Red Banksia), *Daviesia striata* (Ouch Bush) and *Melaleuca suberosa* (Cork Myrtle). At Point Anne there were several female Southern Right Whales, with calves, in the bay, and we spent some time watching these attentive mothers and the offspring. A male Splendid Blue Fairy Wren was busy hunting in the coastal scrub. Plants we found here included, *Calathamnus pinifolius* (Dense Clawflower), *Calothamnus validus* (Barrens Clawflower), *Templetonia retusa* (Cockies Tongues), *Darwinia vestita* (Pom-pom Darwinia) and *Grevillea nudiflora*. We decided to take lunch at this point in order to gain the maximum benefit from the Whales. However, it was not long before we were visited by a 'Racehorse' Goanna or Gould's Monitor Lizard, on the lookout for tip-bits.

Our final stop of the day was at West Mount Barren, another area serio usly affected by recent bush fires. A short walk in the bush here found us one or two surprises. *Nuytsia floribunda* (Christmas tree) in full flower(!), as well as *Prasophyllum giganteum* (Bronze Leek Orchid), *Prasophyllum cucullatum* (Hooded Leek Orchid), *Lobelia rhombifolia* and *Hakea pandanicarpa*. We now made our way back to the hotel in time for dinner.

## Day 12

Tuesday 11th September

Weather: Fine and sunny with a breeze.

Before leaving Bremer Bay this morning, we visited an area near the outlet of the Bremer River.

Several of the group had taken evening walks in this area, and had found some interesting plants. These included *Drakenorchis barbarossa* (Common Dragon Orchid), *Kennedia nigricans* (Black Coral Pea), *Microtis media subsp. media* (Common Mignonette Orchid) and *Caladenia latifolia* (Pink Fairies). *Melaleuca cuticularis* (Saltwater Myrtle) was seen by the waters edge, which had a pair of Chestnut Teal and flotilla of Black Swans.

Driving west we were aiming for the Two Peoples Bay Reserve to the east of Albany. Along the way we stopped to admire *Eucalyptus preissii* (Bell-fruited Mallee), *Eucalyptus tetraptrum* (Four-winged Mallee) and a single flower cluster on *Banksia baxteri* (Baxter's Banksia), before stopping at a small area of woodland at Pallinup. Here we found *Goodenia dyeri*, *Caladenia fuscolutescens* (Ochre Spider Orchid), *Acacia glaucoptera* (Clay Wattle) and *Pimelia argentea* (Silvery-leaved Pimelia). Wellstead is where we stopped for morning tea, near a splendid, planted, specimen of *Banksia speciosa* (Showy Banksia).

We continued on towards Albany, before turning off the main south coast highway, and heading down to Two Peoples Bay. This small reserve is the main site for the very rare Noisy Scrub Bird. After a quick visit to the Visitor's Centre, we walked down to the beach through *Agonis flexuosa* (Peppermint Tree), *Lepidosperma effusum* (Spreading Sword-sedge) and *Anarthia scabra* (A Rush) and took lunch in a small clearing by the sea. After eating, we spent a short time exploring the coastal strip of the reserve. Here we found *Calystachys lanceolata* (Native Willow), *Pterostylis aff. nana* (Short-eared Snail Orchid) and *Banksia littoralis* (Swamp Banksia).

A further stop on the roadside leading to Albany yielded *Agonis juniperifolia*, *Beaufortia decussata* (Gravel Bottlebrush), *Xanthosia rotundifolia* (Southern Cross), *Astroloma pallidum* (Bearded Heath) and *Caladenia macrostylis* (Leaping Spider Orchid). Soon after this we were arriving at the Ace Motor Inn in Albany, where we would be spending the next two nights. After booking in, there was just enough time to visit the city before dinner.

## Day 13

Wednesday 12th September

Weather: Cloudy at first, heavy rain later.

Our time today was to be spent in the Stirling Range, some eighty kilometres north of Albany. Leaving the City we drove north for some sixty kilometres before making a stop to explore some roadside scrub, on the southern edge of the National Park. *Elythranthera brunonis* (Purple Enamel Orchid), *Chamaexeras serra*, *Hakea prostrata* (Harsh Hakea) and *Caladenia Heberleana* (Heberle's Spider Orchid) were all recorded.

After a quick stop at the Ranger Station, we made our way up to the car park at the base of Bluff Knoll, the highest point in the Stirling Ranges. However, the wind had got up and there were squally showers around, so we made our way back down the road for a few kilometres, where we stopped for morning tea. *Hemiandra pungens* (Snakebush), *Dryandra lindleyana*, *Stylidium schoenoides* (Cow Kicks), *Hovea pungens* (Devil's Pins) and *Diuris longifolia* (Purple Pansy Orchid) were all present. A second stop in some Wandoo woodland proved very rich - *Pterostylis ciliata* (Hairy Rufous Greenhood), *Caladenia filifera* (Blood Spider Orchid) and *Diuris laxiflora* (Bee Orchid). From here we moved on to the car park at Mount Trio. While Red prepared the lunch, we set off up the path to an area where a massive lump of rock had fallen many years before. The Stirling Ranges are well known for the *Darwinia* species that occur here, at high altitudes. This fallen rock had obviously brought down a number of these plants, in particular *Darwinia oxylepes* (Gillam Bell), which was doing particularly well. There was also *Caladenia nana subsp. nana* (Little Pink Fan Orchid) and *Dryandra Formosa* (Showy Dryandra).

By now it had come on to rain quite heavily, so lunch was taken in the bus. Normally at this point, we would have taken the 'Stirling Drive'. However, as this is a dirt road, and it was raining very heavily, we elected to make our way back to Albany, and particularly to Emu Point, by the harbour. At the harbour, some of us ventured out to do some bird watching. Caspian Tern, Sooty Oystercatcher, Little Pied Cormorant and Australian Pelican were all seen.

After a coffee stop, Red took us via the 'tourist route' to see the sights of the town and harbour, ending up at the 'Brig Amity', the vessel in which the first settlers from the east arrived at Albany in.

## Day 14

## Thursday 13th September

Weather: Rain at first, becoming bright, sunny and warm with some cloud.

Leaving our hotel after breakfast, we made our way to the Torndirrup National Park, on the coast to the east of the city, where we looked at some of the geological features, including the Natural Bridge. The weather was rather squally, so we retraced our steps to stop in a slightly more sheltered spot in some scrubby heath. Here we saw *Banksia ilicifolia* (Holly-leaved Banksia), *Anthocercis viscosus* (Sticky Tailflower), *Adananthos obovatus* (Basket Flower) and *Dasyopogon bromeliifolius* (Drumsticks).

We made a second stop in Denmark in order to see the endemic *Calystemum glauca* (Albany Bottlebrush). Morning tea was taken to the west of Demark, where we found *Anigozanthos flavidus* (Evergreen Kangaroo Paw), *Banksia quercifolius* (Oak-leaved banksia) and *Podocarpus drouynianus* (Wild Plum or Kula).

The 'Valley of the Giants' was our main objective today. Here, an ariel-walkway gives a unique view of the canopy of a fine example of 'Karri' woodland. *Eucalyptus jacksonii* (Red Tingle), *Eucalyptus guilfoylei* (Yellow Tingle) and *Eucalyptus divaricata* (Karri) truly dominate this habitat, due to their enormous height. Below, *Trymalium floribunda* (Karri Hazel), *Aloecasaurina decussata* (Karri Sheoak), *Leucopogon verticillatus* (Tasselflower) and *Acacia pentandra* (Karri Wattle) were all well represented. White-breasted Robin, New Holland Honey-eater and Port Lincoln Ring-necked Parrots were all active.

Moving further down the road, we decided to have our lunch at a picnic site in Walpole. Nearby, we found the rare and endangered *Reedia spathaceae* (A giant Rush), as well as *Patersonia occidentale* (Blue Flag). To the west of Walpole lies the Norndalup National Park. Alan explained that one of the largest colonies of the rare *Cephalotus follicularis* (Albany Pitcher Plant) was known here. We had to make our way through a recently burnt area and down into the stream valley, before coming across a splendid population of this strange plant. Each plant had a number of 'pitchers', modified leaves, and presented themselves to the photographers admirably.

The last stop of the day was at Pemberton and the famous 'Gloucester Tree', an old fire-watch hut erected in the top of a Karri Eucalyptus tree. Whilst none of our number elected to make the climb, we did take time to get up close to some of the birds. Western Rosella, 'twenty-eight' Ring-necked Parrots and White Breasted Robin we all recorded and well as *Acacia urophylla* (Net-leaved Wattle). From here it was but a short drive to Manjimup, and our base for the night, the Kingsley Motel.

## Day 15

Friday 14th September

Weather: Heavy rain at first, becoming brighter later.

Our route back to Perth took us northwest from Manjimup along the road to Nannup, through Marri/Jarrah woodland. Our first stop of the day was at Borrabup Pool local reserve. Here we recorded *Eucalyptus marginata* (Jarrah), *Banksia semi-nuda*, *Banksia grandis* (Bull Banksia), *Grevillea quercifolia* (Oak-leaved Grevillea) and *Acacia alata* (Winged Wattle). Whilst taking morning tea, a rather amorous Musk Duck began to display on the Pool. However, his efforts were futile, as the female, rather disdainfully, moved off into the reeds, distinctly uninterested!

A brief stop between showers at the St, John Brook Conservation Park, enabled us to see a fine stand of *Dasyogon hookeri* (Pineapple Bush), before continuing on to Bustleton, where we took lunch in the presence of several Australian Magpies. The last of the Eucalyptus species we had yet to see, was *Eucalyptus gomphocephalus* (Tuart). This was rectified just west of Bustleton, where a good number of these trees can be seen along a road called 'Tuart Drive'.

Before making our way into Perth, we made our last stop in the bush at the Yalgarup National Park. Here we found *Caladenia longicauda* (Spider Orchid), *Hibbertia hypericoides* (Buttercups), *Stackbousia monogyna* and *Caladenia flava* (Cowslip Orchid). Just south of Mandurah, at a place called Dawesville, we left the main road and drove along the side of the Peel Inlet, before rejoining the connecting road to the Kwinana Freeway, which we took into Perth, alongside the Swan River. Before checking into Miss Maud's Swedish Hotel, it was time to say our farewells to Red, our knowledgeable and careful driver, and Alan Notley, our local botanical expert, who had both looked after us so well. Our final dinner, it was time to say our goodbyes to Valerie, Jane and David and Dallas and Terry, all of whom were continuing their Australian adventures further.

## Day 16

Saturday 15th September

Weather: Fine warm and sunny

Today is a free day when everyone chooses what they want to do. This included visits to Fremantle and the King's Park Botanical Gardens, or just shopping. We met back at Miss Maud's Hotel for the transfer to Perth Airport for our Emirates flight EK421 to Dubai, departing at 22-30hrs.

## Day 17

Sunday 16th September

Weather: Warm and humid in Dubai. Cloudy and chilly in London.

We departed on our onward connecting flights from Dubai to Heathrow and Gatwick.
