Day 1

Tour Participants: Paul Harmes & Jessica Turner (leaders) with 13 Naturetrek clients

Saturday 4th July

Fly Heathrow to Oslo – Transfer to Kamben

Nine group members met with Paul and Jessica at Heathrow Terminal 5 for the British Airways flight BA762 to Oslo Gardermoen. Upon arrival in Norway, we soon completed immigration formalities and collected our luggage, before we made our way out into the arrivals area where we met up with Judy, Megan and Christine, who had all arrived on separate flights, while Gill joined us later. We located our bus driver, Lars, and quickly loaded our luggage into the vehicle and made our way out of the airport and onto the E16, the main Bergen road. As we went we recorded Barn Swallow and Hooded Crow, together with *Geranium sylvaticum* (Wood Crane's-bill) and *Aconitum septentrionale* (Northern Wolf's-bane). Our route took us north-west from the capital, passing through Jevnaker, the outskirts of Hønefoss and along the east side of Sperillen fjord.

After a little more than an hour, we made a stop for lunch at the Verkroa Kafe just outside Nes i Ådal. Swift and House Martin were seen, and a small rough area yielded *Linaria vulgaris* (Common Toadflax), *Rumex longifolia* (Northern Dock), *Vicia cracca* (Tufted Vetch) and *Potentilla norvegica* (Norwegian Cinquefoil).

We now continued our journey on to Aurdal, where we turned southwest through Mønin and up towards the Gol Plateau, and on up to Golsfjellet and the Kamben Høyfjellshotell, our base for the week. Along the way we saw Kestrel and Common Swift and several road verges with *Trollius europaeus* (Globeflower). Upon our arrival at our hotel, we were met and made welcome by Elin the co-proprietor.

After we settled into our rooms, some of us made a short excursion around the hotel to make ourselves familiar with some of the species of the area, whilst others chose to take a walk up towards Storefiell. Plants found included *Aconitum septentrionale* (Northern Wolf's-bane), *Arabidopsis arenosa* (Tall Rock-cress), *Viola canina* (Heath Dog Violet), *Geranium sylvaticum* (Wood Crane's-bill) and *Geum rivale* (Water Avens). After this, we returned to the hotel to prepare for dinner. Just before we ate, Jessica and Paul outlined some of the plans for the next few days.

### Day 2 Sunday 5th July

Hanningan - Skutuset - Brautemo

Our first full day of the tour was spent exploring the boreal forests of the Gol Plateau. Leaving the hotel at 9am, we were driven down to Hanningan by Martin. As we went, we saw a group of seven Common Cranes grazing a field. We began by taking the path towards the settlement of Skutuset. Early finds were *Geranium sylvaticum* (Wood Crane's-bill), *Melampyrum sylvaticum* (Wood Cow-wheat), *Moneses uniflora* (One-flowered Wintergreen), *Trientalis europaea* (Chickweed Wintergreen) and two good stands of *Neottia cordata* (Lesser Twayblade). Many sedges and rushes were evident in the very wet flushes and *Lycopodium clavatum* (Stag's-horn Clubmoss) and *Equisetum sylvaticum* (Wood Horsetail) were added. In an open bog we recorded *Vaccinium oxycoccos* (Cranberry), *Andromeda polifolia* (Bog Rosemary), *Menyanthes trifoliata* (Bogbean), a good colony of *Rubus chamaemorus* (Cloudberry) and *Dactylorhiza incarnata* subsp. *pulchella* (an Early Marsh Orchid). Further along the path we saw Bog Fritillary and Pearl-bordered Fritillary butterflies, before we stopped for our picnic lunch.

Moving on after eating, we added Sedum villosum (Hairy Stonecrop), Cardamine amara (Large Bitter-cress), Saxifraga stellaris (Starry Saxifrage), Dactylorhiza viridis (Frog Orchid) and Gymnadenia conopsea subsp. densiflora (Fragrant Orchid). Bird life was rather quiet, with only Robin, Coal Tit, and Chaffinch all heard. The path we were following took us to the small hamlet of Skutuset. The roadside wood yielded Pohygonatum verticillatum (Whorled Solomon's-seal), and we added Red Admiral and Small Tortoiseshell butterflies. From Skutuset we turned south towards the village of Brautemo, passing through more boreal forest littered with lichen covered rocky outcrops interspersed with more wet flushes, mires and streams. As we were walking through the forest we disturbed a female Capercaillie, which took to the air. Descending the last one and a half kilometres, we came out onto the main road where Martin, the hotel proprietor, was to meet us to take us back to the hotel for dinner. Whilst we were waiting, we explored a small, open wet area, finding Ranunculus reptans (Creeping Spearwort), Veronica scutellata (Marsh Speedwell) and Alopecurus aequalis (Orange Foxtail). Willow Warbler and Chiffchaff were also heard.

When we got back to Kamben, we had time to freshen up before our evening meal. During the meal a solitary male Hen Harrier was seen hunting in the field below the hotel and, later, a pair of Cranes.

# Day 3 Solseter to Gol

**Monday 6th July** 

Today, in heavy rain, Martin dropped us off at the village of Solseter, half way between our hotel and Gol. Here we took the path, which crosses the road in several places, down to the town of Gol. The early part of the route was through more semi-open, wet forest. Here we found *Populus tremula* (Aspen), *Melampyrum pratense* (Common Cow-wheat) and the leaves of *Comarum palustris* (Marsh Cinquefoil). As we moved lower, the rain eased off and the habitat changed to a series of meadows and track verges with species such as *Galeopsis tetrahit* (Common Hemp-nettle), *Pimpinella saxifraga* (Lesser Burnet-saxifrage), *Carum carvi* (Caraway) and *Sedum telephium* (Orpine). An area of tree felling proved rather good for birds, with Tree Pipit, Fieldfare, Mistle Thrush, Chaffinch and a family of Great Spotted Woodpeckers. The highlight was a very good sighting of Woodcock. Lunch was taken by a track, among a number of stumps and boulders. As we ate, Willow Warbler was heard and Gill found a pair of Siberian Jays, another avian highlight, being mobbed by a pair of Spotted Flycatchers, no doubt trying to protect their nest from predation.

Continuing on, we also came across some nice patches of *Vicia sylvatica* (Wood Vetch) below *Pinus sylvestris* (Scots Pine) and *Picea abies* (Norway Spruce). This area held such goodies as *Arctostaphylos uva-ursi* (Bearberry), *Vaccinium vitis-idaea* (Cowberry), *Phegopteris connectilis* (Beech Fern), *Pyrola norvegica* (Norwegian Wintergreen), *Anthyllis filix-femina* (Lady Fern), and some nice spikes of *Platanthera bifolia* (Lesser Butterfly Orchid). As it was an overcast day, the insects were not very active. However, we did see Northern Wall Brown and Small Heath butterflies, Common Heath, Latticed Heath and Common White Wave moths and a Rose Chafer and Soldier Beetles. The path emerged from the woodland next to an electricity substation, and on a pile of adjacent rocks we found *Polypodium vulgare* (Common Polypody), before re-entering the woodland. The path emerged on the outskirts of Gol, where the heavy rain returned. However, we all took some time to look around and do a little shopping, as well as enjoy some refreshments and visit the information centre.

At 4pm, we met up with Martin for the return journey to Kamben.

#### Day 4

#### **Tuesday 7th July**

'Norway in a Nutshell': Gol – Myrdal – Flåm – Gudvangen

Today we went on the 'Norway in a nutshell' excursion. After breakfast at 7.30am, we boarded the minibus for Martin to drive us to the railway station at Gol. Here we boarded the 9.25am train to Myrdal. There was a 15 minute stop at Haugastøl station and we left the train, briefly, to explore. Here we found several spikes of *Papaver* nudicaule (Iceland Poppy) and a solitary, and distant, Long-tailed Duck. As we approached Finse, the highest station on the Oslo to Bergen route at 1222m, there were some distant views of the Hardanger Glacier, and a large quantity of remaining snow. Here, the train waited just long enough for some of the group to disembark to take photos. At Myrdal, we transferred to the spectacular Flam Railway. Completed in 1940, this unique railway took twenty years to build, and drops 864m in 20km to Flåm on the side of the Aurlandsfjorden (Aurlands Fjord). The journey, down the Flåm valley, took us through some magnificent scenery; not least of which was the scheduled stop to view the thundering power of the mighty Kjosfossen Waterfall. As we descended, we recorded Saxifraga cotyledon (Pyramidal Saxifrage), Sedum roseum (Roseroot), Phyllodoce caerulea (Blue Mountain Heath), Oxyria digyna (Mountain Sorrel) and Digitalis purpurea (Foxglove). Upon our arrival in Flåm we transferred to the steamer, 'Skagastol Fjord' for the two hour journey to Gudvangen. As we sailed down this stunning fjord, we had an attendant flock of Mew (Common) Gulls, waiting to join us for lunch! We also saw a pair of Goldeneye, several Red-breasted Mergansers, Black Guillemot, Oystercatcher and a single sighting of Harbour Porpoise. Tiny picturesque villages and fabulous scenery made this trip truly memorable. In addition, many of the waterfalls along the fjord were at their roaring best, due to recent rain and snow-melt.

When we arrived in Gudvagen we met with Knut, our driver for the return journey to Kamben. By the bus park, a moss-covered rocky wall produced three species of fern, *Phegopteris connectilis* (Beech Fern), *Athyrium filix-femina* (Lady-fern) and *Dryopteris filix-mas* (Male-fern). We now boarded the bus for drive back, passing though a network of new road tunnels, including one of 23km, the longest road tunnel in the world. We made a scheduled stop at Borgund to visit its magnificent stave-church, dedicated to St. Andrew. Built in about 1180, it is one of the most complete remaining examples of these medieval buildings. We were shown around by our guide, Anders, who gave us a detailed explanation of the features and construction of the church. The walls surrounding the church had some fine clumps of *Sedum acre* (Biting Stonecrop) and an adjacent field had *Campanula rotundifolia* (Harebell) and *Viola tricolor* agg. (Heartsease)

Leaving Borgund, we joined the E16 Bergen to Oslo highway for our homeward journey, turning off in a south-easterly direction towards Hemsedal and Gol, and arriving back at the hotel at 7.40pm, for dinner.

#### Day 5

## Wednesday 8th July

Skutuset - Syningen - Storefjell - Kamben

Today we were dropped off, in light drizzle and low cloud, in the small hamlet of Skutuset, only this time, we set off in a different direction. As we made this short journey from Kamben, we saw a pair of Cranes feeding in a field. Before we set off on the walk, we found some very good candidates for the Birch hybrid between Betula pubescens (Downy Birch) and Betula nana (Dwarf Birch). The track took us north through open woodland, where we soon found Vaccinium uliginosum (Bog Whortleberry) and Alchemilla alpina (Alpine Lady's-mantle). Our first objective was a small hill called Syningen (1031m), which we reached in good time. Among the rocks at the base

of Syningen, we found *Botrychium lunaria* (Moonwort), *Woodsia ilvensis* (Oblong Woodsia), *Silene rupestris* (Rock Catchfly) and *Juncus trifidus* (Three-leaved Rush), before making an ascent. On the summit we added *Arctous alpina* (Alpine Bearberry), *Athyrium alpestre* (Alpine Lady-fern) *Carex panicea* (Carnation Sedge) and *Carex atrata* (Black Alpine Sedge). As we were making our way down, Graeme spotted a colony of *Saxifraga cespitosa* (Tufted Saxifrage) growing in an area of loose 'slate' scree.

Moving on, we began to make our way through open, wet Juniper and Spruce forest. Along the way we added *Pinus uncinata* (Mountain Pine), *Stellaria alsine* (Bog Stitchwort), *Gnaphalium supinum* (Dwarf Cudweed), *Gnaphalium sylvaticum* (Heath Cudweed) and *Cardamine amara* (Greater Bitter-cress), before stopping to have lunch. By now the drizzle had all but stopped, and it had become noticeably warmer. During the meal, a distant Cuckoo was heard and Willow Warbler seen. Continuing onwards, we made our way along an access track, which joined the main road to the Storefjell Resort Hotel. Here we added *Astragalus alpinus* (Alpine Milk-vetch), *Erigeron humilis* (Snow Fleabane), *Parnassia palustris* (Grass-of-Parnassus), *Erigeron uniflora* (One-flowered Fleabane), and one or two flowers of *Veronica fruticans* (Rock Speedwell). Just before the hotel, we turned right along a cycle track back towards our hotel, adding *Pyrola norvegica* (Norwegian Wintergreen) and *Dactylorhiza viridis* (Frog Orchid), as we went.

Having indulged in tea and coffee at Kamben, we went out again from the hotel, taking the path towards Storefjell. Hooded Crows and Fieldfares were seen, and also Yellowhammer. The footpath had *Phyllodoce caerulea* (Blue Mountain Heath) and more *Botrychium lunaria* (Moonwort) and the adjacent wet areas produced *Vaccinium oxycoccos* (Cranberry) and *Triglochin palustris* (Marsh Arrowgrass). We now returned to the hotel in time to freshen up for dinner.

#### Day 6

### **Thursday 9th July**

#### Skogshorn

We awoke today to a much cleared and brighter day and, after breakfast, we joined the minibus for the journey to the car park at the base of the Skogshorn, which at 1728m is the fifth highest mountain in the municipality of Hemwedal. After about 45 minutes, and having passed through Solseter and Eikregardane, we found ourselves at the start point for our walk up the mountain. The path climbs steadily northwards from the road, before turning west, where it begins to get steeper. It then bears south-west and up the steepest section to the summit.

As we set out we immediately found Campanula rotundifolia (Harebell), with particularly large flowers, beside the path and Salix lapponum (Downy Willow) showing its red anthers. Harebells in Norway show a complex pattern of polyploidy (multiple copies of genetic material) resulting in some very robust plants. Angela also spotted a Bluethroat, and Willow Warbler and Chiffchaffs were also active. The route, as it rose, took us through Betula pubescens (Downy Birch) woodland and into a shrub layer of Salix lapponum (Downy Willow), Salix arbuscula (Mountain Willow), Betula nana (Dwarf Birch), the under-storey of which had Potentilla erecta (Tormentil), Gymnocarpium dryopteris (Oak Fern), Phegopteris connectilis (Beech Fern) and Geranium sylvaticum (Wood Crane's-bill). This habitat gave way to an upper area of rough gravel paths and boulder-strewn hillsides, which still had a quantity of snow lying. Here the path began to rise more steeply, as we began to find a number of the smaller and prostrate shrub species. These included Phyllodoce caerulea (Blue Mountain Heath), Arctous alpina (Alpine Bearberry), Empetrum nigrum (Crowberry), Kalmia procumbens (Trailing Azalea), Vaccinium vitis-idaea (Cowberry) and

the diminutive *Harrimanella hypnoides* (Cassiope). We took our lunch using a hollow and some large boulder to shelter from the chilly wind.

After eating, we continued to explore, adding Ranunculus glacialis (Glacier Crowfoot) and Cardamine bellidifolia (Alpine Bitter-cress), before it was time to begin our descent. Along the way we found a number of boggy areas containing Andromeda polifolia (Bog Rosemary), Eriophorum angustifolium (Common Cotton-grass), Dactylorhiza fuchsii (Common Spotted Orchid) and Eriophorum scheuchzeri (Scheuchzer's Cotton-grass) and, in the slightly dryer areas, yellow spikes of Pedicularis lapponica (Lapland Lousewort).

We all returned to the car park in time to meet our transport back to the hotel. The return journey took us along the northern shore of Tisleifjorden lake and down to Oset and on to Kamben.

Day 7 Friday 10th July

Grønlie - Krististølen - Gomobu - Vasetstølen

Today we travelled out to Grønlie, the farthest of any of our local, daily excursions. Leaving the hotel, we traveled north to the village of Oset, before crossing the dam at the eastern end of the Tisleifjorden. From here, we turned north-west and followed the northern shore of the fjord through Langestølen, Nøser and then northeast to Rensenn. Another kilometer or so further on, we stopped at the small remote car park at Grønlie. From here we set off in a easterly direction towards the hamlet of Krististølen. On the way we had views of Meadow Pipits and a solitary Twite. As we left Krististølen, we passed a small outcrop of rocks. *Athyrium alpestre* (Alpine Lady-fern), *Phegopteris connectilis* (Beech Fern), *Rubus chamaemorus* (Cloudberry) and *Veronica alpina* (Alpine Speedwell) were all recorded. The path we were on took us past a large lake, where we saw Tufted Duck, and out across the splendid sub-arctic heath. Here we added a pair of Cranes. *Betula nana* (Dwarf Birch), *Salix lanata* (Woolly Willow), *Salix lapponum* (Downy Birch) and *Salix arbuscula* (Mountain Willow) were all present as well as good numbers of *Eriophorum angustifolium* (Common Cotton-grass), *Eriophorum vaginatum* (Hare's-tail Cotton-grass) and a few spikes of *Pedicularis lapponicum* (Lapland Lousewort). We took lunch in the sunshine by a lake with magnificent views in all directions.

We now continued on to Gomobu, from where we made our way down to Vaset, via Vasetvasnet Lake. Along the wooded path we saw *Potentilla crantzii* (Alpine Cinquefoil), *Saxifraga cernua* (Drooping Saxifrage) and *Corallorhiza trifida* (Coralroot Orchid), as well as hearing Yellowhammer. When we arrived in Vaset, we stopped at a lakeside cafe for refreshments, whilst waiting to be collected by our bus. The lake shore had the emerging spikes of *Pedicularis sceptrum-carolinum* (Moor King), *Rorippa amphibia* (Greater Yellow-cress) and *Spergularia rubra* (Sand Spurrey). On our way back to the hotel, we stopped to visit the replica of a tenth century Stave Church at Oset. The original was moved to a museum in Oslo early in the twentieth century. From hear we returned back to Kamben.

Day 8

Saturday 11th July

Kamben to Oslo - Fly London Heathrow

Our last morning saw us leaving Kamben at 10am, having completed any outstanding photo requirements and saying goodbye to Elin and the staff at the hotel. Martin was our driver for the journey back to Oslo airport.

Before leaving we recorded five Cranes in the field below the hotel and a good number of Siskins and Redpolls in surrounding trees. Our route took us south-eastwards, making a short stop for lunch in Kroderen. We arrived at our destination at 1.45pm. Here, we said goodbye to Megan, Judy and Christine, who catching different flights, to Gill, who was staying on in Oslo, and Gael and Graeme who were travelling on to Sweden. The rest of the party, with Jessica and Paul checked in for our British Airways flight, BA 767, to London Heathrow.

Paul and Jessica would like to thank all the group members for their various contributions to the week, and especially Ken for providing the extensive list of Lichen species seen during the trip.
