NEW MOTOR TECHNOLOGY AT ITS CORE

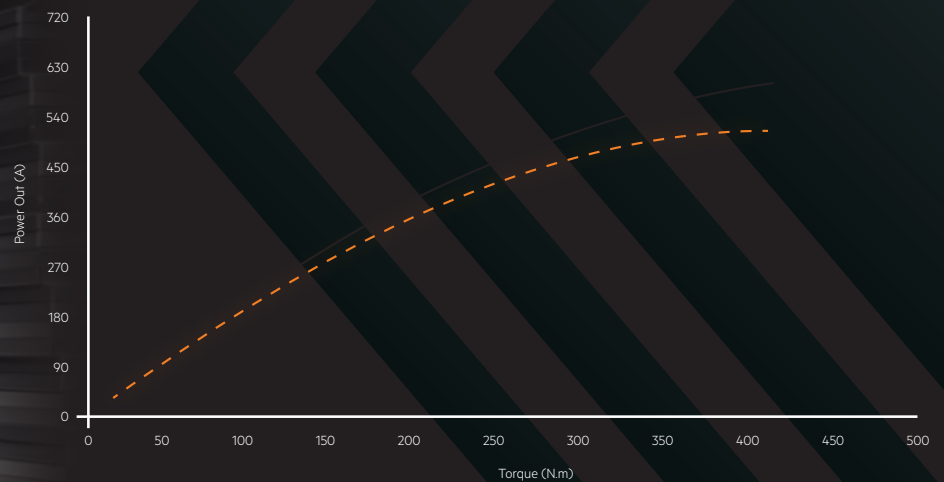

At the core of our new subcompact tools is new motor technology, allowing our tools to be smaller and more compact. We've changed the design of our motor, flipping it inside out to allow for more magnets generating more torque output. Giving us a 60% smaller motor but with 40% more magnets, creating the same power as previous 18V tools, but in a much smaller package.

POWER SET SCREWDRIVING BITS

- COLDfire® is a special hardening treatment for making metal stronger, tougher and more durable. This cryogenic process is a one-time permanent treatment affecting the entire screwdriving bit and it is not just a surface coating. The cryogenic process consists of two steps, firstly the bit is hardened by heating it up to 870° and then freezing the bit down to -148° using a dry nitrogen atmosphere. The result of this process is a bit with exceptional durability
- + 40% stronger - bit tips hold their form and will accept higher torque forces
- + 45% longer life - over the lifetime of a bit one can expect to drive 45% more screws
