NARCISSUS — DAFFODILS — JONQUILS

The terms "Narcissus" and "Daffodils" are interchangeable; there exists a tendency to apply the name "Daffodil" to the varieties in which the trumpet or crown is as large or larger than the petals (perianth); while the name "Narcissus" is usually used for the varieties having small cups or crowns.

Jonquils are also a type of Narcissus; they usually bear their flowers in clusters and have rush-like foliage. Many of the Jonquil Hybrids have only the single flower and ordinary foliage. The name "Narcissus" is correct for any or all of the different types.

A FEW SUGGESTIONS FOR GROWING DAFFODILS

They will thrive in any well drained garden soil. Prepare the soil deeply, 12 inches or more is best. Plant at least 6 inches deep, extra large bulbs are better planted 7 or 8 inches deep. (Some varieties make larger bulbs than others.) No manure should come in contact with the bulb. If the soil needs fertility, use bone meal at the rate of one-fifth pound to the square yard. This should be thoroughly mixed with the soil under the bulb.

A mulch of straw or leaves will be beneficial in very severe climates. If the mulch is applied after the first freeze, it will prevent thawing and heaving.

DIGGING—Daffodils are best dug and separated every two or three years in the garden; when used for naturalizing in grass or wooded places they may be left undisturbed for years. Bulbs should be dug when the foliage turns yellow and lays flat on the ground, it need not be completely dry. After digging they may be planted at once, or spread out to dry in a cool ventilated place and planted any time until fall. Never dig in the fall; to do so may cause them to skip one year's bloom; should they bloom, flowers will be few and small.

INDOOR CULTURE

Pot the bulbs as soon as received in a good loam soil. Some sand and peat moss mixed with the soil will be beneficial, also a small amount of bone flour; about two pounds to a bushel of soil. Bulbs should be potted shallow, tops of bulbs being about level with the top of pot.

Old pots should be washed thoroughly, new ones should be soaked. Place a few pieces of charcoal or fragments of broken pots over drainage hole. A little ground peat in the bottom regulates drainage and retains moisture.

Bury the pots outside under six inches of soil or ashes, water well.

In 10 to 12 weeks move to the cellar, or any cool dark place for about two weeks. For a succession of bloom bring pots in at weekly intervals, bringing in the earlier varieties first.

Tops should now be several inches above the soil and buds showing. Pots may now be brought inside to a temperature of 50 to 60 degrees. Later when the flower buds are well advanced the temperature may be increased to not over 65. To put them where the heat is greater may cause the buds to come "blind". A little liquid manure once a week will hasten the blooming and improve the quality.

WASHINGTON GROWN DAFFODILS

With the ending of the war, Daffodil bulbs may again be imported from Holland. These imports are subject to inspection at the Port of Entry by the inspection service of the United States Department of Agriculture. Should the bulbs be found to contain eelworm, they must be given a hot water treatment for four hours at 110 degrees. This treatment is very injurious to the bulbs, causing the flowers to be deformed the first year. Some varieties and types will hardly survive the treatment, many failing to grow.

The eelworm (*Tylenchus dipsaci*) is a microscopic insect that destroys the bulbs; in many districts it has made Daffodil growing almost impossible except where the bulbs were treated and moved to new soils. In England some years ago this tiny pest destroyed a large percentage of the commercial plantings before a cure was discovered.

When we make importations for propagating purposes, the bulbs are treated under the close supervision of the United States Department of Agriculture and are grown at least one year before selling. During this time the bulbs are under our close observation to see that they are free of all ailments and TRUE TO NAME. They are also closely inspected during the growing period and before shipping by trained inspectors for the State of Washington. This assures our customers of receiving disease-free bulbs that are true to name and sure to grow, producing the finest of blooms.

"Washington Grown" Daffodils are now conceded to be the finest produced anywhere in the world. This fact is now recognized by leading greenhouse operators and seedsmen.

The excellency of these bulbs is due to a great many factors. Foremost among these is the most per-

fect climatic conditions for the growing and curing of hardy bulb stocks. The mild wet winters make for perfect growing conditions. The cool summers and proper atmospheric conditions are ideal for the proper curing of the bulbs.

Northwest grown bulbs, when forced, flower much earlier than the foreign product or those produced in less favorable sections. Flowers from these forced bulbs command a premium on the market, due to their earliness, size of flower and superior quality.

The abundance of rich river bottom lands in the Northwest, allows the grower to move his plantings to "new" ground often. This is very beneficial to the stocks and insures the production of bulbs free from fungus diseases and other ailments traced to the repeated growing of bulbous stocks on the same soil.

This being America's foremost bulb producing section, the State and Federal Government both maintain a highly trained force of experienced men, who are working constantly on methods of combatting disease. The many laboratories and experiment stations are ever on the alert for any new ailment that might attack or impair the quality of the crop.

The educational and scientific work done by the State and Federal departments of agriculture is far ahead of anything accomplished abroad. This is strongly emphasized in comparing foreign and Washington Grown Daffodils. We must destroy a large percentage of new importations in order to have disease-free stock for further propagation.

Northwest grown Daffodils lead the world in freedom from disease. This fact has been established many times at Quarantine hearings held in Washington, D. C., by the U. S. Department of Agriculture.

NEW LOW PRICES

Again this year we are happy to announce greatly reduced prices on most of the newer Daffodils. This will enable many Daffodil fans to add some of the finer varieties to their collection at most moderate prices. We only hope our supply at these lower prices is large enough to meet the heavy demand we antici-

pate. To be on the safe side—ORDER EARLY. Our stocks of the best sellers are quite large, but of the rarer and less known varieties our supply is limited. A list of a few alternate varieties that may be used as substitutes will greatly aid us in filling our orders to your complete satisfaction.

PLEASE READ BEFORE ORDERING

GUARANTEE—All bulbs are guaranteed true to name, free from disease or pests, and to arrive in good condition. If they do not give complete satisfaction, advise us at once and your money will be refunded upon return of the bulbs at our expense.

PREPAID—All prices quoted include delivery by prepaid parcel post or express.

SHIPMENTS are made starting late August or September 1st, continuing until December 1st. We urge you to ORDER EARLY so as not to be disappointed. Orders are filled in rotation as received, the earliest orders received are first to be filled.

SUBSTITUTIONS—We grow a great many varieties of daffodils that our stocks are now too small to catalog, due to wartime buying. Should we be out of varieties ordered, some of these may be used for substituting unless an X is marked in the space provided on the order blank.

TERMS OF PAYMENT—Remittances may be made with check or money order. Stamps accepted in payment of small orders.

C.O.D. ORDERS—We do not make C.O.D. shipments as they

take additional time for us as well as postal and express employees; they also add an unnecessary expense to the cost of your bulbs. Remitting in full at the time your order is placed greatly simplifies the keeping of our records.

KINDLY OMIT ORDERS FOR LESS THAN \$2.00.

QUANTITY PRICES, PREPAID—All bulbs listed herein may be purchased by the 100 for seven times the dozen rate, unless a rate per 100 is quoted.

25 Bulbs of a variety at the 100 rate.

6 Bulbs of a variety at the dozen rate.

BULBS THAT ARE NOT PRICED IN QUANTITIES OF LESS THAN ONE DOZEN ARE NOT SOLD IN LOTS OF LESS THAN SIX. SIX AT THE DOZEN RATE.

NOVELTY DAFFODILS. Orders for Novelty Daffodils priced at 75c each or more, should be in our hands before October 1st. When ordering these newer Daffodils at a later date, it would be well to name a substitute to be used in case your order could not be filled completely.

LA RIANTE (See page 16)

POLYANTHUS NARCISSUS

Producing clusters of fragrant flowers, not recommended for outdoor planting, except in mild climates.

Bulbs of these varieties, grown in pebbles, can be had in bloom from Christmas until Easter. Upon arrival, plant immediately, if wanted early, and put in a cool place, free from frost. When well rooted they can be taken into heat, the milder the temperature, the finer the flowers. For a succession of bloom plant at intervals of two weeks, keeping unplanted bulbs in a moderately cool temperature and dry. The water requires changing occasionally, a little powdered charcoal added to the water helps to keep it fresh.

The earlier the bulbs are planted the longer the time required for rooting; December plantings root very quickly. *Soleil d'Or* will give best results if not brought into heat until buds start to show.
