PROFESSIONAL WIRELESS DESKTOP FOR BEGINNERS

- Flat, wireless keyboard including cursor and number pad
- Whisper keystroke keys with wear-resistant laser key legends
- Up to 10 million keystrokes
- 4 HotKeys (calculator, e-mail, browser, sleep mode)
- Plug & Play via USB connection
- 3-button mouse, for both left-handed and right-handed operation
- Optical sensor technology (1200 dpi)
- Battery status display in keyboard and mouse
- Interference-free wireless 2.4 GHz technology (with a range of approx. 10 m)
- Operation of several desktops (multi-station capability)
- Nano USB receiver
- GS approval

TECHNICAL DATA

Dimensions	approx. 458 x 170 x 17 mm (keyboard) approx. 107 x 60 x 35 mm (mouse) approx. 16 x 11 x 3 mm (receiver)

eHEALTH ORIGINAL CHERRY.

SPECIAL KEYBOARDS AND READERS OPTIMIZED
FOR USE IN HEALTH CARE

Proven solutions are vital. CHERRY has decades of experience in the development and production of high quality speciality input devices.

Cherry is an innovator in this field. We are the only manufacturer that enables the new German health insurance cards to be read directly in a keyboard. CHERRY supplies a highly specialized range of keyboards and terminals for the health care branch.

Whatever you require for your eHealth applications, CHERRY can develop the custom solution to suit your needs.

FEEL THE KEY DIFFERENCES

KEYBOARD TECHNOLOGY

The most important properties of a computer keyboard are the actuation force and actuation path – the haptics. CHERRY has proved itself over many years as the European market leader in the field of business and professional keyboards, due to its optimum key haptics, secure contacts and high-quality keyboards.

MX technology

ML technology

CHERRY Professional

FTSC technology

NTK technology

SX technology

IN PRINCIPLE, THERE ARE THREE FUNDAMENTAL TECHNOLOGIES BEHIND CHERRY KEYBOARDS

- Keyboards with mechanical individual modules on a circuit board (MX and ML)
- Keyboards with mechanical individual keys on contact membranes (FTSC)
- Keyboards with an elastomer dome on a contact membrane (NTK, ATK, LPK, SX)

All of these technologies – regardless of whether mechanical or elastomer keys are in use – are characterized by long or extremely long service lives and guarantee reliable functionality, even in tough operating conditions. All of our CHERRY keyboards retain their key labelling, which is rich in contrast and non-wearing during their service lives.

1. TECHNOLOGY WITH MECHANICAL INDIVIDUAL KEYS

This category includes MX and ML.

In MX/ML technology, the key caps are mounted on individual modules that are located on a circuit board. They behave like small switches that close a contact on actuation. This contact is then processed by evaluation electronics. With both technologies, we use our special Gold Crosspoint contacts for high switching security and long service life.

The keys enable the installation of decoupling diodes which facilitate particularly quick key recognition times. The construction of these key modules gives the user a precise feel, with MX available in three types – linear, soft or “click”; with ML we offer a soft pressure point.

2. KEYBOARDS WITH MECHANICAL INDIVIDUAL KEYS ON CONTACT MEMBRANES

FTSC technology involves individual modules that are attached to a sturdy metal panel via a contact membrane film. The switch function is not made in the module itself, but in the membrane film. This technology ensures an extremely long service life.

3. KEYBOARDS WITH ELASTOMER DOME ON A CONTACT MEMBRANE

The key caps are integrated directly in the upper casing part (except for SX). Every time a key is pressed, the key meets a malleable elastomer dome. This creates the feeling of actuation and switches the contact membrane located below.

The key-press feeling is largely influenced by the properties of the rubber mat and the length of the key guide in the housing. The various models with this technology differ in terms of the possible height of the keys.

The flattest keyboards are produced using the SX series keys, made possible with the addition of a scissor mechanism under each key. This gives the lowest possible key height and also produces soft, whisper keystrokes with its special key guides.

LPK technology

INGENIOUSLY SIMPLE SOLUTIONS THAT MAKE YOUR KEYBOARD OR MOUSE EVEN MORE VERSATILE.

KEYM@N

KeyM@n is a very powerful and versatile software application. It enables you to freely assign additional keys and buttons on the keyboard and mouse. You can assign links, programs, system functions and even freely definable text. This means you can call up frequently used functions at the touch of a button.
