Schönberger, I.; Wilton, A.D.; Brownsey, P.J.; Perrie, L.R.; Boardman, K.F.; Breitwieser, I.; de Pauw, B.; Ford, K.A.; Gibb, E.S.; Glenny, D.S.; Greer, P.A.; Heenan, P.B.; Korver, M.A.; Novis, P.M.; Prebble, J.M.; Redmond, D.N.; Smissen, R.D.; Tawiri, K. (2020) Checklist of the New Zealand Flora – Ferns and Lycophytes. Lincoln, Manaaki Whenua-Landcare Research. <http://dx.doi.org/10.26065/6s30-ex64>

This report is generated using an automated system and is therefore authored by the staff at the Allan Herbarium and collaborators who currently contribute directly to the development and maintenance of the New Zealand Plant Names Database (PND). Authors are listed alphabetically after the fourth author. Authors have contributed as follows:

**Leadership:** Wilton, Breitwieser

**Database editors:** Wilton, Schönberger, Gibb

**Taxonomic and nomenclature research and review for the PND:** Schönberger, Wilton, Brownsey, Perrie, Gibb, Breitwieser, Ford, Glenny, Greer, Heenan, Novis, Prebble, Redmond, Smissen

**Information System development:** Wilton, De Pauw

**Technical support:** Boardman, Greer, Korver, Redmond, Tawiri

## Introduction

The scientific names of plants “provide a means of reference to facilitate communication about those organisms” (Turland 2013). Established over 300 years ago, the process of naming plants is today governed by the International Code of Nomenclature, with the names themselves anchored by a type specimen. In this electronic age the names remain a vital means of accessing and sharing information. As a result of new scientific research our understanding of plant species is constantly evolving, with old hypotheses being tested and new hypotheses of relationship being inferred as our knowledge improves. This expansion of our knowledge frequently leads to changes in the application of names and the publication of new names. A comprehensive list of names, including accepted names and their synonyms, and the relationship between names and their application, is important for anyone wanting to access and manage biological information.

At the Allan Herbarium (CHR), Manaaki Whenua – Landcare Research, the New Zealand Plant Names Database (PND) provides a contemporary account of the names of New Zealand indigenous and naturalised plants. The PND lists approximately 50,000 scientific names, primarily for hornworts, lichens, liverworts, mosses, ferns and seed plants in New Zealand, as well as some information for freshwater algae and our cultivated flora. The PND indicates which of the names are preferred for use at the Allan Herbarium, and provides information on the authorship and biostatus of the taxa. In addition to the scientific names, the PND is also used to record taxonomic concepts and associated literature, vernacular, and Māori names.

The data in the PND are continuously curated and updated. The updated data are published twice weekly to Ngā Tipu o Aotearoa – New Zealand Plants website (<http://nzflora.landcareresearch.co.nz>). The changes in the data are also summarised in quarterly reports that are published to the Manaaki Whenua – Landcare Research Datastore (<http://datastore.landcareresearch.co.nz/organization/plant-names-database-reports>).

The names for the ferns and lycophytes in the PND are largely the result of work that has been ongoing for the *Flora of New Zealand – Ferns and Lycophytes* series, which is being published in downloadable PDF format on <http://www.nzflora.info/>. Fascicles 1 to 27 have so far been published since 2014.

## Structure and Content of the Checklist

The data for this Checklist of New Zealand ferns and lycophytes are extracted from the PND. Taxa listed are those that are present in the wild flora in the New Zealand political region, including exotic cultivars. Hybrids are included only if one of the parental taxa is missing from the wild flora, or the hybrid is recorded as naturalised. Misapplications and tag names are excluded from the Checklist.

### Classification

In the PND the genera of ferns and lycophytes are classified into families according to the following classifications:

Christenhusz, M.J.M.; Zhang, X.-C.; Schneider, H. 2011: A linear sequence of extant families and genera of lycophytes and ferns. *Phytotaxa* 19: 7–54.

Kramer, K.U.; Green, P.S. 1990: *Pteridophytes and gymnosperms*. Kubitzki, K. (ed.) *The Families and Genera of Vascular Plants*. Vol. 1. Springer-Verlag, Berlin.

Mabberley, D.J. 2008: *Mabberley's plant book, a portable dictionary of plants, their classification and uses*. Edition 3. Cambridge University Press.

PPG 1 2016: A community-derived classification for extant lycophytes. *Journal of Systematics and Evolution* 54(6): 563–603.

Ruggiero, M.A.; Gordon, D.P.; Orrell, T.M.; Bailly, N.; Bourgoin, T.; Brusca, R.C.; Cavalier-Smith, T.; Guiry, M.D.; Kirk, P.M. 2015: A higher level classification of all living organisms. *PLOS ONE* 10(4): 1–60.

Smith, A.R.; Pryer, K.M.; Schuettpelz, E.; Korall, P.; Schneider, H.; Wolf, P.G. 2006: A classification for extant ferns. *Taxon* 55(3): 705–731.

## Authorities

The authors of scientific names are abbreviated following the International Plant Names Index (IPNI) standard for author abbreviations. Authorities are available for most, but not all, listed names – the consistent addition of authors is part of the ongoing work in the PND.

## Publications

Publication information for taxonomic names is not presented in this version of the Checklist because it has not been recorded consistently for all names in the PND, particularly synonyms of taxa that have not been treated recently. The addition of full publication information for each name is part of the ongoing work in the PND. Publication information that has been entered is accessible via the Ngā Tipu o Aotearoa – New Zealand Plants website. We envisage that future versions of the Checklist will also contain publication information.

## Biostatus Information

Biostatus information for each taxon is provided for the New Zealand political region. The biostatus information in the PND is primarily derived from published literature, but also includes status information based on herbarium records we have been able to verify (at the current time these are mainly specimens at the Allan Herbarium and Auckland War Memorial Museum Herbarium). The biostatus information is presented in two parts – occurrence and origin, which are subdivided into categories as follows:

Occurrence records the presence of the taxon in the NZ political region. Occurrence categories are:

**Present:** the taxon occurs in the NZ political region. Two subcategories are used:

**Present in wild:** the taxon has self-maintaining populations in the wild. Exotic taxa in this category are termed *fully naturalised*.

**Sometimes present in wild:** the taxon occurs only occasionally in the wild flora, or has been collected infrequently from the wild, or persists in the wild only for a short period, or only in the vicinity of cultivated/captive parents. Exotic taxa in this category are termed *casual*. Indigenous taxa in this category are sometimes termed *vagrant*.

**Absent:** the taxon is absent from the NZ political region. Only taxa in a single subcategory of absent are included in this checklist.

**Extinct:** the taxon is now presumed to be extinct in the NZ political region.

Origin records whether a taxon is indigenous or exotic in the NZ political region. It has the categories:

**Indigenous:** the taxon occurs naturally in the region. Two subcategories are used:

**Endemic:** the indigenous taxon only occurs naturally in the region.

**Non-endemic:** the indigenous taxon occurs naturally in this and other regions

**Exotic:** the taxon that has been accidentally or deliberately introduced into the region.

**Uncertain:** a taxon for which the biostatus has not yet been determined or coded.

## Status of data

The PND is actively developed and improved by the staff at the Allan Herbarium and collaborators. Since the introduction of a highly structured taxonomic data-model, internal data inconsistencies can be more readily identified and corrected, but this process is ongoing. We would appreciate feedback on errors in the data. These can be sent to [plantinfo@landcareresearch.co.nz](mailto:plantinfo@landcareresearch.co.nz).

New nomenclatural information based on scientific research is applied to the PND following the data quality standards that are provided in the About pages of Ngā Tipu o Aoteroa – New Zealand Plants website. Prior to being applied to the PND, the publications are reviewed for nomenclatural and scientific errors by the systematists within Manaaki Whenua – Landcare Research in collaboration with researchers throughout New Zealand and elsewhere. All taxonomic treatments are applied without prejudice unless there are serious scientific or nomenclatural errors or there are omissions that make the application of the treatment problematic. This approach does not require a consensus decision making process and therefore enables rapid adoption of new taxonomic work, but may result in the PND and Checklist not reflecting the taxonomic opinion of all contributors.

The data for this report was extracted from the PND on 1 September 2020.

## Acknowledgements

We would like to acknowledge those who have contributed to the development of the PND or its predecessors including: Michelle Breach, John Burley, Mike Cochrane, Jerry Cooper, Jane Cruickshank, Murray Dawson, Peter de Lange, Christina Flann, Phil J. Garnock-Jones, Helen Greenep, Warrick Harris, Bryony Macmillan, Brian Molloy, Euan Nicol, Murray Parsons, Kevin Richards, Bill Sykes, Colin Webb, Ingrid Willis, and Mike Wilson.

We would also like to thank those who have highlighted omissions or errors in the data, including Matt Buys, Peter de Lange, Meredith McKay, Jeremy Rolfe, John Steele, and Susan Wiser.

Funds for the development of this resource were provided by Strategic Science Investment Fund funding for Crown Research Institutes from the Ministry of Business, Innovation and Employment's Science and Innovation Group; the NZ Terrestrial and Freshwater Biodiversity Information System programme (TFBIS).

# Statistics

The following tables provide summary statistics for the taxa included in this Checklist.

Table 1 provides a count of the number of taxa in the NZ fern and lycophyte flora at each taxonomic rank from class to cultivar. Species that contain subspecific taxa are counted once at species rank and each of the subspecific levels (e.g., *Blechnum penna-marina* subsp. *alpina* T.C.Chambers & P.A.Farrant will be counted as *Blechnum penna-marina* at species rank and *Blechnum penna-marina* subsp. *alpina* at subspecies rank). By contrast, Table 2 includes only the counts of taxa at the rank of species and lower, and provides a count at only the lowest ranking taxa when there are subspecific taxa within a species (e.g., *Blechnum penna-marina* subsp. *alpina* T.C.Chambers & P.A.Farrant will only be counted at subspecies rank).

Tables 3 to 5 provide summaries based on the number of species in the New Zealand fern and lycophyte flora. Table 3 summarises the number of species by origin and occurrence categories, whilst Tables 4 and 5 list the most species rich families (Table 4) and genera (Table 5) overall and for three origin categories.

**Table 1:** Number of taxa in the New Zealand indigenous and naturalised flora at each taxonomic rank.

Taxonomic rank	Number of taxa
Subphylum	2
Class	2
Order	14
Family	31
Genus	73
Species	259
Subspecies	18
Variety	1
Cultivar	1

**Table 2:** Number of distinct taxa at or below the rank of species for the indigenous and naturalised flora. Taxa with subspecific divisions are counted only at the lowest taxonomic rank.

Taxonomic rank	Number
Species	246
Subspecies	18
Variety	1
Forma	
Cultivar	1

**Table 3:** Number of species in the New Zealand indigenous and naturalised flora by origin and occurrence categories.

Origin	Wild	Sometimes present	Total
Endemic	90		<b>90</b>
Non-endemic	111		<b>111</b>
Exotic	25	33	<b>58</b>
<b>Total</b>	<b>226</b>	<b>33</b>	<b>259</b>

**Table 4:** The ten largest families in the New Zealand fern and lycophyte flora by the number of species.

# Biostatus Checklist

## Genera

### Endemic

*Leptolepia* Mett. ex Prantl  
*Loxsoma* R.Br. ex Hook.

### Non-endemic

*Adiantum* L.  
*Anogramma* Link  
*Arachniodes* Blume  
*Arthropteris* J.Sm. ex Hook.f.  
*Asplenium* L.  
*Azolla* Lam.  
*Blechnum* L.  
*Botrychium* Sw.  
*Cheilanthes* Sw.  
*Christella* H.Lév.  
*Cyathea* Sm.  
*Cyclosorus* Link  
*Cystopteris* Bernh.  
*Davallia* Sm.  
*Deparia* Hook. & Grev.  
*Dicksonia* L'Hér.  
*Dicranopteris* Bernh.  
*Diplazium* Sw.  
*Gleichenia* Sm.  
*Histiopteris* (J.Agardh) J.Sm.  
*Hiya* H.Shang  
*Huperzia* Bernh.  
*Hymenophyllum* Sm.  
*Hypolepis* Bernh.  
*Isoetes* L.  
*Lastreopsis* Ching  
*Leptopteris* C.Presl  
*Lindsaea* Dryand. ex Sm.  
*Loxogramme* (Blume) C.Presl  
*Lycopodiella* Holub  
*Lycopodium* L.  
*Lygodium* Sw.  
*Macrothelypteris* (H.Ito) Ching  
*Micrororum* Link  
*Nephrolepis* Schott

## Species and subspecific taxa

### Endemic

*Adiantum cunninghamii* Hook.  
*Adiantum fulvum* Raoul  
*Asplenium appendiculatum* subsp. *maritimum*  
    (Brownsey) Brownsey  
*Asplenium bulbiferum* G.Forst.  
*Asplenium chathamense* Brownsey  
*Asplenium cimmeriorum* Brownsey & de Lange  
*Asplenium flaccidum* subsp. *haurakiense* Brownsey  
*Asplenium lamprophyllum* Carse  
*Asplenium lepidotum* Perrie & Brownsey  
*Asplenium lyallii* (Hook.f.) T.Moore  
*Asplenium oblongifolium* Colenso  
*Asplenium pauperequitum* Brownsey & P.J.Jacks.  
*Asplenium richardii* Hook.f.  
*Asplenium scleroprium* Hombr.  
*Blechnum colensoi* (Hook.f.) N.A.Wakef.  
*Blechnum discolor* (G.Forst.) Keyserl.

*Notogrammitis* Parris

*Ophioglossum* L.

*Paesia* A.St.-Hil.

*Pellaea* Link

*Phlegmariurus* Holub

*Phylloglossum* Kunze

*Pilularia* L.

*Pneumatopteris* Nakai

*Polystichum* Roth

*Psilotum* Sw.

*Pteridium* Gled. ex Scop.

*Pteris* L.

*Ptisana* Murdock

*Pyrrosia* Mirb.

*Rumohra* Raddi

*Schizaea* Sm.

*Sticherus* C.Presl

*Thelypteris* Schmidel

*Tmesipteris* Bernh.

*Todea* Willd. ex Bernh.

*Trichomanes* L.

### Naturalised

*Athyrium* Roth

*Cyrtomium* C.Presl

*Dryopteris* Adans.

*Equisetum* L.

*Marsilea* L.

*Osmunda* L.

*Polypodium* L.

*Salvinia* Ség.

*Selaginella* P.Beauv.

### Casual

*Dennstaedtia* Bernh.

*Microlepia* C.Presl

*Niphidium* J.Sm.

*Odontosoria* Fée

*Onoclea* L.

*Platycerium* Desv.

*Blechnum durum* (T.Moore) C.Chr.

*Blechnum filiforme* (A.Cunn.) Ettingsh.

*Blechnum kermadecense* Perrie & Brownsey

*Blechnum membranaceum* (Colenso ex Hook.)

    Mett. ex Diels

*Blechnum molle* (Parris) Christenh.

*Blechnum montanum* T.C.Chambers & P.A.Farrant
