The compact, indoor antenna DIGIFLEX TT5 receives digital TV programs, that can be received via DVB-T2, in many places, even without an external antenna. In addition, the antenna is ideal for receiving DAB + radio in the best digital quality. The active amplifier antenna is easy to install and only needs to be connected to the antenna socket of your DVB-T2 receiver, TechniSat digital television or DAB + receiver.
An additional built-in LTE filter also filters out interference from cell phone signals.

The integrated signal amplifier with 26 dB power is supplied directly from the connected receiver with the required supply voltage of 5 volts (40 mA). The DIGIFLEX TT5 thus guarantees strong and stable reception.
When using with DAB + receivers, note that the antenna connection of the DAB + receiver must provide the 5 V supply voltage for the antenna! Otherwise it won't work.

383230 Ethernet WiFi Endpoint with PoE (EPE)

The Ethernet WiFi Endpoint (EPE) with dual band concurrent Wi-Fi, is used in conjunction with the Triax Ethernet over Coax Controller (EoC) and is intended to provide Wi-Fi access in rooms without Coax cables. This is often the case for rooms such as conference rooms, corridors, lobbies, bars, etc.

The PoE Access Point is powered via Ethernet (PoE) to make the installation easy and independent of a power outlet. This will require the installation of a e PoE+ compliant Ethernet switch connected to the EoC Controller.

The PoE Access Point also has a PoE output (passthrough) to supply power to other PoE devices. This could be a 2nd PoE Access Point, an IP phone, a Camera or other devices in the same room.
If the PoE output is not used, the AP can be switched to power save mode to accept a reduced PoE input power.
