

Planning Zoning & Building Dept.

Hurricane – Landscaping Damage and Replacement

In accordance with the Board of County Commissioners "Tree 2004 Replacement Policy" notification letters and affidavit of compliance are being mailed to all property owners and property managers to ascertain that neglected, damaged and missing landscape were replaced.

It is the responsibility of the property owner to comply with this policy by January 2007. If you have complied with this policy the affidavit should be completed and returned to the address printed on the affidavit. Beginning February 2007 Palm Beach County Code Enforcement will be performing inspections and citing property owners who fail to comply with the above policy.

Attached is a copy of the Replacement Policy information brochure and Compliance affidavit. If you have any questions please contact county staff.

-Hurricane- Landscape Tree Replacement

Tree Replacement Policy

Zoning PPM ZO-0-001

The Policy shall be implemented in two phases with possible extension by the BCC:
Phase I – January 1, 2005 to January 1, 2007 – All required non-residential landscaping. All required residential buffers to be installed are as follows:

- Perimeter Buffers
- Rights-of-Way Buffers
- Rights-of-Way Median Plantings, if applicable

Phase II – January 1, 2006 to January 1, 2008 – All residential landscaping within the site to be installed.

Natural Disaster Landscape Damage Replacement Policy

AUTHORITY:

Article 7, Chapter H.1.A. and B. Temporary Suspension of Landscape Standards.

PURPOSE: To establish a policy for unincorporated Palm Beach County to address landscape replacement in case of a natural disaster. Pursuant to the Unified Land Development Code (ULDC), Article 7.H.1, “Temporary Suspension of Landscape Standards”, the Executive Director of PZ&B may temporarily suspend the Standards of Art. 7 and establish a timeframe when replacement should be complete.

BACKGROUND:

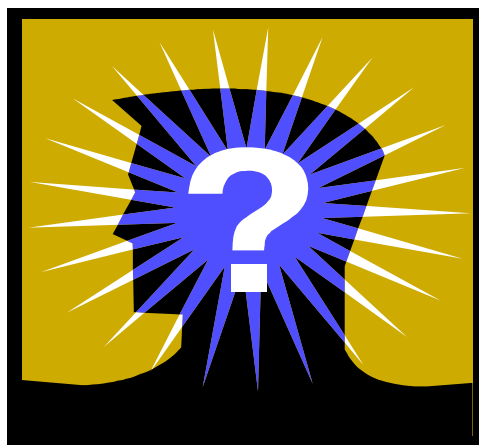

In the event of a natural disaster, timeframes and guidelines shall be established to replace destroyed or damaged landscape material. The time frames shall take into consideration the level of damage and availability of plant material both locally and statewide. The procedures shall establish clear guidelines for the public to follow in order to ensure replacement complies with the overall intent of the landscape code while recognizing unique circumstances.

PROCEDURES:

The following procedures have been established to assist County staff and the public to coordinate the replacement of landscape material:

1. PBC, PZB Executive Director shall determine the length of time for the temporary suspension.
2. Staff shall determine and document the availability of plant material both locally and state-wide by contacting nurseries and other landscape material providers.
3. Staff shall determine the impact on existing developments.
4. New Developments subject to a Certificate of Occupancy – shall comply with current landscape code requirements unless suspended by the Executive Director.
5. Existing Developments shall comply with the landscape guidelines listed below:
 - a. All tree replacements will be at 1:1 ratio regardless of species or height/diameter at time of hurricane loss.

- b. The required minimum tree height may be reduced by two feet depending on the location (perimeter trees minimum 12' vs 14', interior and foundation trees minimum 10' vs 12'). Reduced tree heights will not be allowed within line of sight or corner clip visibility areas.
 - c. Aggregated formula may be used to comply with current Code required heights. (10 trees @ 14' height = 140 total feet may be substituted by 10 trees @ 12' height plus 2 additional trees @ 10' height = 140 total feet or 14 trees at 10' height = 140 total feet). The minimum tree height allowed for this option is 10' high.
 - d. No reduction in palm heights are being proposed. However, a 3:1 option would still be available as a substitute for required trees up to an increased maximum of 35% of the overall quantity vs the current maximum of 25% overall quantity.
 - e. Tree species shall be selected from Article 7, Appendix A, Palm Beach County Preferred Species list, and planted in accordance with the latest edition of FPL's publication "Plant the Right Tree in the Right Place" guidelines.
 - f. Pruning of damaged branches and canopy reduction will be allowed on trees up to a maximum of fifty (50) percent of the tree canopy to lateral branches.
- 6.** Based upon the evaluation of further availability and/or damage, the Executive Director shall prepare and publish a memorandum to the BCC establishing and publishing an extended time frame for replacement or lifting the temporary suspension.
- 7.** The Executive Director may amend this PPM to address specific issues related to landscape replacement.

Questions/Responses

Questions and responses have been generated by PBC Zoning staff to assist the public with concerns related to Landscape Tree Replacement due to hurricane damage in unincorporated Palm Beach County.

The list of questions/answers can be found by visiting our Web Page <http://www.pbcgov.com/pzb/Zoning/LandscapeQuestionsandResponses> or contacting us at our toll free Hotline **1-866-540-2223** to request a copy. You can also E-mail us at PZBstorm@co.palm-beach.fl.us. The PBC Zoning Web Page <http://www.pbcgov.com/pzb/Zoning/zoning.htm> will be updated periodically, as new information becomes available under News Releases.

Hurricane - Landscaping Questions and Responses

The following questions/responses have been generated by PBC Zoning staff to assist the public with concerns related to landscape tree replacement due to hurricane damage in unincorporated Palm Beach County.

If you have other landscape related questions not listed below, please contact our toll free Hotline **1-866-540-2223** or forward your comments to our E-mail address at PZBstorm@co.palm-beach.fl.us. The PBC Zoning Web Page <http://www.pbcgov.com/pzb/Zoning/zoning.htm> will be updated periodically, as information becomes available.

TREES

1. Who do I call first to discuss replacement of trees that were damaged as a result of the hurricane?

Contact your Homeowners Association (HOA) or Property Manager to discuss their overall approach to dealing with your development. This will assist County staff to relay consistent information to the HOA or Property Manager who can decide how to distribute the information to all homeowners.

2. How is PBC proposing to address landscape damaged as a result of the hurricane?

The Board of County Commissioners has directed Palm Beach County staff to suspend replacement landscape until the Board adopts a "Landscape Tree Replacement Policy" which will outline time frames for compliance and guidelines for replacement. If a tree is damaged, but can be saved, prune, stake and fertilize it to help it regain its canopy. See questions under pruning for guidance.

3. Do I have to replace trees destroyed as a result of the hurricane?

Yes, You have to replace the trees within the established timeline of the "BCC Landscape Tree Replacement Policy; that will be adopted by the BCC and posted on our Web page at <http://www.pbcgov.com/pzb/Zoning/zoning.htm>. You are encouraged to install a native tree from the [County Preferred Tree List](#).

4. Can I reduce the canopy of my trees to stand them up and try to save them?

Yes, only as much as 50 percent of the canopy to lateral branches can be removed. If more than 50 percent of the canopy is removed the tree could die. Please contact a Certified Arborist to assess the tree damage and pruning that will be necessary.

5. What size trees need to be installed for replacement trees?

All replacement trees must be a minimum of 12 feet tall for perimeter trees and 10 feet tall for interior and building foundation locations. All Palm species must have a minimum 8 feet of clear trunk.

6. What is the minimum number of trees I need on my property?

The number of trees per property depends on whether it is zoned residential or non-residential. The Code requires residential to provide one tree for every 1,250 sq. ft. lot area up to maximum of 15 trees and for non-residential lots, it is one tree per 2,000 sq. ft. lot area. If you have questions related to how many trees your lot or development requires, contact your Homeowners Association (HOA) or property Manager who should have a Landscape Plan on file. Or have your HOA contact our Hotline at 1-866-540-2223.

7. If a development has excess trees on site (more than required by code) and has lost several, does the Homeowner Association (HOA) need to replace all of them?

No, however, the HOA needs to provide the PBC Landscape Section with a written Inventory of the remaining trees to ensure the minimum tree count for development is met. This will also assist staff in the future to know what was approved and changed on site.

8. What type of tree needs to be replaced?

Canopy Trees (Oaks, Mahogany, Slash Pines, Geiger, etc.) for Canopy Tree species and Palms (Sable, Royal, etc) for Palm species.

9. What type of material do I need to install to replace my trees?

Trees from Palm Beach County [Preferred Species List](#) and in accordance with FP&L's publication, "[Plant the Right Tree in the Right Place](#)". Both these publications and links are available on our Web page at <http://www.pbcgov.com/pzb/Zoning/landscape/landscape.htm>.

10. Do I need a permit to remove, relocate the damaged or downed trees?

No, however, trees that are removed must be replaced and damaged trees must be properly pruned. Any downed trees should be properly replanted and staked.

11. If underground roots may be near utility lines, can we remove the tree stump flush to the ground and replant nearby?

Yes, if in doubt, contact your local utility provider. Replacement trees should be located as close as possible to their original location. Protective Root Barriers may also be recommended.

12. When is the best time of year to replant?

The fall months are best to allow plant material to adjust in advance of spring growth.

NATIVE SPECIMEN TREE

13. If I have a Native Specimen Tree on my property that was damaged, can I remove the tree and do I have to replace it with several smaller trees?

For information on Native Specimen Trees, please contact the Department of Environmental Resource Management at 561-233-2400.

REMOVAL OF DEBRIS

14. Who do I contact to discuss when my landscape debris will be removed?

Please call the Solid Waste Authority at 561-640-4000, or your local municipality by checking your Utility bill for contact information.

15. Where is the vegetative debris to be located for pick-up?

The debris needs to be located between the street and the sidewalk.

INSTALLATION/MAINTANCE

16. Will landscape be required if I am trying to get a Certificate of Occupancy?

Yes, County staff has verified that nursery material is still available at nurseries to meet current demand and minimum size requirements. If availability at nurseries become limited, you might have to check availability sources outside of Palm Beach County. County staff will monitor nursery stock availability and assess modifications to the minimum requirements should the need arise.

18. If nursery stocks become depleted over the next couple of months, what are my options?

County staff will be coordinating with the nurseries and industry to offer several options including modification of formulas for plant material quantity and minimum standards if plant material is not available. The BCC will also provide staff direction on how to address deviation from current regulations in upcoming months.

19. For proposed new developments can I reduce the minimum tree heights?

No, you must meet current height requirements until the nursery stocks are depleted. County staff will continue to monitor availability of landscape material and may recommend future modification to the minimum requirements.

19. What if our trees or palms are leaning?

Trees and palms should be uprighted and restaked as quickly as possible but no later than February 1, 2005 to prevent any further damage to their roots or survival.

PRUNING

20. Are the County's Pruning Standards being enforced?

Yes, however, there are provisions for temporary suspension of pruning restrictions to address damage related to natural disasters. If trees have suffered damage due to the hurricane, limbs may be removed to correct the damage but it is not recommended that no more than 50 percent of the canopy be removed. Removing more than 50 percent of canopy can cause serious injury to the tree.

F.E.M.A.

21. Will FEMA cover expenses for communities?

You need to call 1-800-621-3362 with you specific questions.

Please monitor the Planning, Zoning & Building Web Site for updates and Press Releases.

Preferred Species List

The Palm Beach County Zoning Division has prepared the following list of plants to assist industry and the public with selecting the right plants for the appropriate location. The list contains trees, palms, shrubs and groundcovers.
