PowerScan® 8000 Scanner Family Introduction

Overview

Datalogic Scanning is pleased to announce the release of the PowerScan 8000 family of rugged, industrial-proof scanners designed and constructed to withstand the toughest environmental conditions in demanding applications.

Once competitors, the PowerScan, Dragon™ and Lynx™ product lines are now being combined into the same family. Each product has a long history of success and each is deeply engrained in their respective industrial market sectors. These brands have equally earned their reputation and mutual respect from users and have a demonstrated history of proven performance in these demanding environments. The PowerScan 8000 series of industrial barcode readers has blended and further developed the best of PowerScan, Dragon and Lynx features to produce a brand new series of products, a revolution in the PowerScan brand.

The new PowerScan readers are versatile and easy to install, intuitive and ergonomically usable, reliable and accurate in the long-term for all industrial applications. These outstanding characteristics perfectly summarize the main benefits offered by the renewed PowerScan 8000 family of products.

The PowerScan 8000 family of products covers all requirements for industrial applications: 1D and 2D decoding capability, short distance as well as long distance reading, corded and cordless communications.

There are two divisions with the new PowerScan readers, identified with their own logo:

- **PowerScan 8300 Family:** “Laser” readers. Several models are available:
 - Standard (0-1 m / 0-40 in) and Auto Range (10 cm -10 m / 4 in to 33 ft) optics
 - Corded and Cordless (433 and 910 MHz)
 - Cordless Models: with and without display

- **PowerScan 8500 Family:** “Imaging” readers. Available optics:
 - Standard: for general purpose applications. It reads medium and low resolution bar codes from contact to over 25 cm / 9.8 in
 - High Density: to read high resolution 1D and 2D codes (2 mil and 4 mil respectively)
 - Wide Angle: for medium and low resolution codes as well as image based applications. The “wide angle” option is able to capture an image of 197 x 160 mm / 7.7 x 6.3 in at 15cm / 6 in and a full A4 page at about 25 cm / 9.8 in

Features and Benefits

Designed for Productivity. Operator comfort and productivity are essential in any scan-intensive application. This reader is facilitated by the **ergonomic handle** and the **well-balanced weight**. The successful and patented Datalogic “**Green Spot**” is a distinctive feature of the new PowerScan 8000 reader: the green spot is bright and easily visible up to 80-90 cm / 2.6-3 ft giving “good read” feedback to the user directly on the bar code. In addition, the **double “good read LED”**, a successful innovation of the previous Dragon family of readers and patented by Datalogic, is included in all PowerScan 8000 models. The built-in metal hook is useful to hang up the reader on a retractable take-up reel making it readily available.

Outstanding Performance on “real life” Bar Codes. PowerScan 8000 product users can rely on fast, accurate bar code reading. Different optics are available to allow the reading of bar codes from low to very high resolution, from close to far away distances, auto-discriminating all 1D (all models) or 2D (2D imager only) symbologies. In industrial environments, bar codes are often “ugly”, poorly printed, damaged, scratched or smudged codes. The PowerScan 8000 reader’s superior performance is enhanced in the 8300 models by the patented **Puzzle Solver Technology™** to allow fast and accurate reading of standard, poorly printed and damaged codes. Puzzle Solver Technology, a Datalogic Scanning patented software, allows the decoding of a bar code by putting together different parts of the code captured in consecutive scans.

Reliability and Accuracy in the Long Term. Datalogic’s PowerScan 8000 reader is suitable for the most demanding and toughest industrial applications, both indoors and outdoors. The rugged mechanic design of the PowerScan 8000 reader has been developed and tested to withstand **extreme shock conditions** (up to fifty drops from 2 m / 6.5 ft) as well as normal drops (thousands of 30-50 cm / 12-20 in drops), without affecting reading performance or accuracy. The enclosure is a balanced mix of co-molded plastic and rubber to protect the “internal core”. All of the relevant internal parts are further protected with a protective rubber shock absorber to reduce the transmission of unavoidable shocks. The PowerScan 8000 reader has a protection rating of **IP65** (**IP64** for the mobile models with display), meaning it is totally protected against dust and protected against water sprayed with pressure from all directions. This assures reliability and durability even in extremely harsh conditions.

Superior Radio Features (8300 models only). Operators requiring mobility in the manufacturing plant as well as in the warehouse or in the distribution center can benefit from the versatility of the mobile models. The **Datalogic STAR Cordless System™** represents the key to increased productivity and flexibility within the working area. It offers scalable solutions to solve anything from simple point-to-point applications to complex networking projects. In the simplest point-to-point applications, the operator can benefit from maximum mobility without the constraint of the interface cable, increasing efficiency and productivity. Using the network capability, a unique feature in the market, more than 100,000 m² (over 1,000,000 sq ft) can be covered with up to 16 base stations. Automatic seamless roaming allows the user to move freely from one base to another. The PowerScan M8300/D reader (versions with a **display and 3 push-button keypad**) allowing the operator to view the bar code, receive information from the host and actively interact with it. The “interaction” between the host and the operator is further enhanced by the new functionality of the “constant alert” radio that allows the receiving of messages from the host at any time.

DATALOGIC SCANNING, INC.

PRODUCT BULLETIN

Flexibility of Installation. Most of the PowerScan 8000 reader models are featured with a built-in **multi-interface** to make the installation easier and protect the investment. Just plug in the cable and select the interface. Available interfaces are RS-232, Keyboard Wedge, Wand Emulation and USB. The 8300 family includes also a dedicated model with TTL undecoded interface typically required for forklift terminal connection.

Marketing Communications Materials

This product release is supported by a broad range of marketing communication materials designed to educate the market. Some of these tools are available on the public Datalogic Scanning web site and some of the tools are reserved for our partners and published only on the Extranet site. They will be available on the Datalogic Scanning web sites February 18, 2008.

Public Sales Tools:

- PowerScan 8000 Micro-Web Site (<http://www.scanning.datalogic.com/powerscan8000/>)
- PowerScan 8000 Sales Handbook
- At A Glance (available for the 8300 and 8500 families)
- Data Sheets (available for the 8300 and 8500 families)

Reserved Sales Tools:

- Competitive Matrix (available for the 8300 and 8500 families)
- Marketing Information Guide
- PowerPoint Presentation
- Product Photography
- Application Photography

(*)**Stock:** Production is planned on a monthly basis independently by orders. Products are normally available in our factory warehouse. Shipment normally occurs within 3 days from ordering and the delivery time depends on customs management.

ATO (Assembly To Order): Sub-assembly of the products are normally available in our factory stock; the final assembly is planned after the order is received. Shipment normally occurs within 4 weeks from ordering.

Technical note: all the above models are 100% functional and electrically compatible with the old Dragon reader family models. The PowerScan M8300 scanners can communicate and be charged with the OM-30x0 cradle and vice-versa.

Datalogic Scanning is in the process of seeking regulation approval for the PowerScan M8300 scanners. Please refer to the following table for countries currently approved.

PowerScan® 8500 Reader

Critical Dates

General Availability – late March 2008

Pilot production will start in the Datalogic Scanning facility at the beginning of March. Units for testing will become available at that date in limited quantities for each model.

	Part Number	Description	Availability	Manufacturing policy
DESK	PD8530	POWERSCAN D8530	Late March, 2008	Stock

	11-0140	HEATER HOLDER 48 V	Available (**)	Stock

(*) a stock of the HLS-3000 UNIVERSAL HOLSTER used with the Dragon family of readers is still available. It is the exact same holster, therefore we will exhaust this stock before activating the new order code.

(**) These accessories are the same that are currently available for the old PowerScan family of readers and are stocked in Eugene. Standard delivery time will be about 1 week longer compared to the other products for EMEA countries.

Technical Note: all the above xxx-8000 accessories are 100% *functional* and *mechanically* compatible with the corresponding old xxx-3000 Dragon reader accessories. Existing stock of the old accessories can be used without problems.

PowerScan 8300 Reader & PowerScan 8500 Reader Common Cables

A new set of cables has been developed for the PowerScan 8000 family of readers. The new cables, specified to fulfil the rough conditions typical of the industrial applications, are tested to survive thousands bends even in a working temperatures of -30 °C / -22 °F. This new set of cables will become the standard for all Datalogic Scanning industrial products starting with the PowerScan 8000 family of readers. Current Dragon cables can still be used to cover some of the less common interfaces like the Wyse and Digital terminals as well as some of the IBM terminals. The use of the current Dragon cables is possible with the addition of a dedicated accessory, the "Powerscan cable adapter", available separately.

PRODUCT BULLETIN

Obsolete Products

As already announced in the Product Bulletin PB121007 sent on December 10, 2007, the new PowerScan 8000 family of readers will replace all existing PowerScan, PowerScan RF, Dragon D, Dragon M and Lynx D scanning models. Because of a slight delay in the Pilot Production and General Availability date, Datalogic Scanning will delay the "last time to buy" date by one month.

All incoming orders will be managed on a "first-come, first-served" basis until the available stock is gone.

In Summary:

The current PowerScan reader models (corded and cordless, all optics):

Last Time to Buy	Last Shipment	Last Service
04/30/2008	05/31/2008	05/31/2013

The current Dragon reader models (corded and cordless, all optics and related accessories):

Last Time to Buy	Last Shipment	Last Service
05/31/2008	06/30/2008	06/30/2013

All Lynx D432 and Lynx D432/E reader models:

Last Time to Buy	Last Shipment	Last Service
06/30/2008	08/31/2008	08/31/2013
