| Description | The loopback status of the OAM entity. This status is determined by a combination of the local parser and multiplexer states, the remote parser and multiplexer states, as well as by the actions of the local OAM client. When operating in normal mode with no loopback in progress, the status reads noLoopback(1). The values initiatingLoopback(2) and terminatingLoopback(4) can be read or written. The other values can only be read - they can never be written. Writing initiatingLoopback causes the local OAM entity to start the loopback process with its peer. This value can only be written when the status is noLoopback(1). Writing the value initiatingLoopback(2) in any other state has no effect. When in remoteLoopback(3), writing terminatingLoopback(4) causes the local OAM entity to initiate the termination of the loopback state. Writing terminatingLoopback(4) in any other state has no effect. If the OAM client initiates a loopback and has sent an Loopback OAMPDU and is waiting for a response, where the local parser and multiplexer states are DISCARD (see [802.3ah, 57.2.11.1]), the status is 'initiatingLoopback'. In this case, the local OAM entity has yet to receive any acknowledgement that the remote OAM entity has received its loopback command request. If the local OAM client knows that the remote OAM entity is in loopback mode (via the remote state information as described in [802.3ah, 57.2.11.1, 30.3.6.1.15]), the status is remoteLoopback(3). If the local OAM client is in the process of terminating the remote loopback [802.3ah, 57.2.11.3, 30.3.6.1.14], with its local multiplexer and parser states in DISCARD, the status is terminatingLoopback(4). If the remote OAM client has put the local OAM entity in loopback mode as indicated by its local parser state, the status is localLoopback(5). The unknown(6) status indicates the parser and multiplexer combination is unexpected. This status may be returned if the OAM loopback is in a transition state but should not persist. |

| Type | BOOL |

SF Threshold**Table 3-1394 SF Threshold**

| Name | Value |
|-----------------------|--|
| Default | yes:1 |
| Description | The number of frame errors that must occur for this event to be triggered. The default value is one frame error. If the threshold value is zero, then an Event Notification OAMPDU is sent periodically (at the end of every window). This can be used as an asynchronous notification to the peer OAM entity of the statistics related to this threshold crossing alarm. If dot3OamErrFramePeriodThreshold frame errors occur within a window of dot3OamErrFramePeriodWindow frames, an Event Notification OAMPDU should be generated with an Errored Frame Period Event TLV indicating that the threshold has been crossed in this window. |
| Displayed name | SF Threshold |
| Mandatory on creation | no |

| Type | LONG |
| Units | frames |

SF Threshold**Table 3-1395 SF Threshold**

| Name | Value |
|-----------------------|---|
| Default | yes:1 |
| Description | The number of errored frame seconds that must occur for this event to be triggered. The default value is one errored frame second. If the threshold value is zero, then an Event Notification OAMPDU is sent periodically (at the end of every window). This can be used as an asynchronous notification to the peer OAM entity of the statistics related to this threshold crossing alarm. If dot3OamErrFrameSecsSummaryThreshold frame errors occur within a window of dot3OamErrFrameSecsSummaryWindow (in tenths of seconds), an Event Notification OAMPDU should be generated with an Errored Frame Seconds Summary Event TLV indicating that the threshold has been crossed in this window. |
| Displayed name | SF Threshold |

SF Threshold

Table 3-1397 SF Threshold

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | The two objects dot3OamErrSymPeriodThresholdHi and dot3OamErrSymPeriodThresholdLo together form an unsigned 64-bit integer representing the number of symbol errors that must occur within a given window to cause this event. This is defined as $\text{dot3OamErrSymPeriodThreshold} = ((2^{32}) * \text{dot3OamErrSymPeriodThresholdHi}) + \text{dot3OamErrSymPeriodThresholdLo}$. If dot3OamErrSymPeriodThreshold symbol errors occur within a window of dot3OamErrSymPeriodWindow symbols, an Event Notification OAMPDU should be generated with an Errored Symbol Period Event TLV indicating that the threshold has been crossed in this window. The default value for dot3OamErrSymPeriodThreshold is one symbol errors. If the threshold value is zero, then an Event Notification OAMPDU is sent periodically (at the end of every window). This can be used as an asynchronous notification to the peer OAM entity of the statistics related to this threshold crossing alarm. |
| Displayed name | SF Threshold |
| Maximum | 1000000 |
| Minimum | 0 |

| Enumerated types: | |
| Default | |
| Reset | |

Transmit Interval
Table 3-1400 Transmit Interval

| Name | Value |
|-----------------------|--|
| Default | yes:10 |
| Description | The value of this property indicates the number of 100ms time intervals between each periodic OAMPDU transmit and receive. A lower value implies that OAMPDUs will be transmitted more frequently to the peer, and OAMPDUs must be received more frequently from the peer. The default is set to 10, meaning 1 second between transmits and receives |
| Displayed name | Transmit Interval |

| Type | INT |
| Units | x100ms |

Tunneling**Table 3-1401 Tunneling**

| Name | Value |
|-----------------------|---|
| Default | yes:false |
| Description | The value of this property indicates if OAMPDUs should be passed transparently through the OAM entity for processing by another OAM entity across the network, or if OAMPDUs should be terminated and processed at the local OAM entity. This object can only be set to 'true' if dot3OamAdminState is set to 'disabled'. Likewise, dot3OamAdminState can only be set to 'enabled' if this object is set to 'false'. It is not valid to try and enable both OAMPDU processing and OAMPDU tunneling on the same OAM entity." |
| Displayed name | Tunneling |
| Mandatory on creation | no |

| Type | POINTER |

Egress Mark QinQ Top Bits Only**Table 3-1524 Egress Mark QinQ Top Bits Only**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | This property only applies to ports with an encapsulation type of QinQ and specifies whether only top bits should be marked (true), or both top and bottom bits should be marked (false). |
| Displayed name | Egress Mark QinQ Top Bits Only |
| OSS name | egressQinqMarkTopBitsOnly |
| Read-only | no |
| Tab Panel | QoS General |
| Type | BOOL |

Egress Policy**Table 3-1525 Egress Policy**

| Name | Value |
|----------------|---------------------------|
| Default | yes:Access Egress:1 |
| Displayed name | Egress Policy |
| OSS name | egressPolicyObjectPointer |
| Read-only | no |
| Tab Panel | QoS General |
| Type | POINTER |

Egress Queue Group Template Policy**Table 3-1526 Egress Queue Group Template Policy**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Specifies the egress access port queue-group policy pointer for this SAP. |
| Displayed name | Egress Queue Group Template Policy |
| OSS name | egressPortQueueGroupPointer |
| Read-only | no |
| Tab Panel | QoS General Port Redirect |
| Type | POINTER |

Egress Scheduler

Table 3-1527 Egress Scheduler

| Name | Value |
|----------------|------------------------------|
| Default | yes: |
| Displayed name | Egress Scheduler |
| OSS name | egressSchedulerObjectPointer |
| Read-only | no |
| Tab Panel | Schedulers Egress Scheduler |
| Type | POINTER |

Enable Aggregate Rate Limit

Table 3-1528 Enable Aggregate Rate Limit

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether Aggregate Rate Limit is enabled on this site. |
| Displayed name | Enable Aggregate Rate Limit |
| OSS name | egressAggRateLimitEnabled |
| Read-only | no |
| Tab Panel | Schedulers Egress Aggregate Rate Limit CIR PIR |
| Type | BOOL |

Enable Egress Forwarding

Table 3-1529 Enable Egress Forwarding

| Name | Value |
|----------------|--------------------------|
| Default | yes:false |
| Displayed name | Enable Egress Forwarding |
| OSS name | sapEgressStatsEnable |
| Read-only | no |
| Tab Panel | Accounting 7210 Specific |
| Type | BOOL |

Enable Egress Packets Forwarding**Table 3-1530 Enable Egress Packets Forwarding**

| Name | Value |
|----------------|----------------------------------|
| Default | yes:false |
| Displayed name | Enable Egress Packets Forwarding |
| OSS name | sapEgressStatsPktsMode |
| Read-only | no |
| Tab Panel | Accounting 7210 Specific |
| Type | BOOL |

Enable Ingress Forwarding**Table 3-1531 Enable Ingress Forwarding**

| Name | Value |
|----------------|---------------------------|
| Default | yes:false |
| Displayed name | Enable Ingress Forwarding |
| OSS name | sapIngressStatsEnable |
| Read-only | no |
| Tab Panel | Accounting 7210 Specific |
| Type | BOOL |

Enable Port Redundancy**Table 3-1532 Enable Port Redundancy**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Indicates whether to enable the backup port configuration for manual switching. Currently it is only applicable to Epipe and Cpipe on 7x50/7710/7705 node. |
| Displayed name | Enable Port Redundancy |
| OSS name | enablePortRedundancy |
| Read-only | no |
| Tab Panel | Port Port Redundancy |
| Type | BOOL |

Encapsulation Type

Table 3-1533 Encapsulation Type

| Name | Value |
|----------------|-------------------------|
| Default | yes:unspecified |
| Displayed name | Encapsulation Type |
| OSS name | encapType |
| Read-only | no |
| Tab Panel | Port General |
| Type | equipment.PortEncapType |

Endpoint

Table 3-1534 Endpoint

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | The name of the endpoint which this SAP is associated to. |
| Displayed name | Endpoint |
| Maximum | 32 |
| Minimum | 0 |
| OSS name | endpointName |
| Read-only | no |
| Tab Panel | General Redundancy |
| Type | STRING |

Ethernet CFM Monitor Flags

Table 3-1535 Ethernet CFM Monitor Flags

| Name | Value |
|----------------|----------------------------|
| Default | yes:0 |
| Displayed name | Ethernet CFM Monitor Flags |
| OSS name | cpmProtEthCfmMonitorFlags |
| Read-only | no |
| Tab Panel | Security General |
| Type | EthCfmMonitorFlagsType |

Frame-Based Accounting
Table 3-1536 Frame-Based Accounting

| Name | Value |
|----------------|--|
| Default | yes:false |
| Displayed name | Frame-Based Accounting |
| OSS name | egressFrameBaseAccounting |
| Read-only | no |
| Tab Panel | Schedulers Egress Aggregate Rate Limit |
| Type | BOOL |

Ingress Aggregate Shaper Rate**Table 3-1537 Ingress Aggregate Shaper Rate**

| Name | Value |
|----------------|-------------------------------|
| Default | yes:-1 |
| Displayed name | Ingress Aggregate Shaper Rate |
| Maximum | 3000000 |
| Minimum | -1 |
| OSS name | sapIngressAggregateShaperRate |
| Read-only | no |
| Tab Panel | QoS Aggregate Rate Limit |
| Type | INT |
| Units | kbps |

Ingress Counter Mode**Table 3-1538 Ingress Counter Mode**

| Name | Value |
|----------------|--------------------------|
| Default | yes:packet |
| Displayed name | Ingress Counter Mode |
| OSS name | sapIngressCounterMode |
| Read-only | no |
| Tab Panel | Accounting 7210 Specific |
| Type | SapIngressCounterMode |

Ingress Counter Type

Table 3-1539 Ingress Counter Type

|-------|-------|
| Units | kbps |

Ingress Policy

Table 3-1545 Ingress Policy

| Name | Value |
|----------------|--|
| Default | yes:Access Ingress:1 |
| Description | Specifies the SAP-Ingress QoS for the SAP. For L3 when changing the port the SAP will retain the originalSAP-Ingress QoS selected unless explicitly changed. |
| Displayed name | Ingress Policy |
| OSS name | ingressPolicyObjectPointer |
| Read-only | no |
| Tab Panel | QoS General |
| Type | POINTER |

Ingress Queue Group Template Policy

Table 3-1546 Ingress Queue Group Template Policy

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Specifies the forwarding-plane queue group instance for this SAP. For L3 when changing the port the SAP will retain the original forwarding-plane queue group instance selected unless explicitly changed. |
| Displayed name | Ingress Queue Group Template Policy |
| OSS name | ingressQueueGroupName |
| Read-only | no |
| Tab Panel | QoS General Forwarding Plane Redirect |
| Type | STRING |

Ingress Scheduler

Table 3-1547 Ingress Scheduler

| Name | Value |
|---------|-------|
| Default | yes: |

Table 3-1547 Ingress Scheduler (continued)

| Name | Value |
|----------------|-------------------------------|
| Displayed name | Ingress Scheduler |
| OSS name | ingressSchedulerObjectPointer |
| Read-only | no |
| Tab Panel | Schedulers Ingress Scheduler |
| Type | POINTER |

Inner Encapsulation Value

Table 3-1548 Inner Encapsulation Value

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Provisioned inner encap value. This value is propagated into: terminatedPortInnerEncapValue. |
| Displayed name | Inner Encapsulation Value |
| Maximum | 65535 |
| Minimum | 0 |
| OSS name | innerEncapValue |
| Read-only | no |
| Tab Panel | Port General |
| Type | INT |

Instance ID

Table 3-1549 Instance ID

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Specifies the instance id of the forwarding-plane queue group instance for this SAP. For L3 when changing the port the SAP will retain the original instance id selected unless explicitly changed. |
| Displayed name | Instance ID |
| Maximum | 65535 |
| Minimum | 0 |
| OSS name | ingressInstanceId |
| Read-only | no |

Table 3-1549 Instance ID (continued)

| Name | Value |

|----------------|--------------------------|
| Default | yes: |
| Displayed name | IPv6 Ingress Filter |
| OSS name | ingressIpv6FilterPointer |
| Read-only | no |
| Tab Panel | ACL IPv6 Filter |
| Type | POINTER |

Limit Unused Bandwidth**Table 3-1552 Limit Unused Bandwidth**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether to limit the unused bandwidth and allow a tighter control in allocation of bandwidth by HQos. |
| Displayed name | Limit Unused Bandwidth |

Table 3-1552 Limit Unused Bandwidth (continued)

| Name | Value |
|-------------|--|
| OSS name | egressAggRateLUB |
| Read-only | no |
| Tab Panel | Schedulers Egress Aggregate Rate Limit |
| Type | BOOL |

MAC Monitoring**Table 3-1553 MAC Monitoring**

| Name | Value |
|----------------|------------------|
| Default | yes:false |
| Displayed name | MAC Monitoring |
| OSS name | macMonitoring |
| Read-only | no |
| Tab Panel | Security General |
| Type | BOOL |

Manual Switch Backup State**Table 3-1554 Manual Switch Backup State**

| Name | Value |
|----------------|---|
| Default | yes:none |
| Description | Indicates the redundant state of this L2 Access Interface for manual switching. |
| Displayed name | Manual Switch Backup State |
| OSS name | redundantSwitchState |
| Read-only | yes |
| Tab Panel | Port Port Redundancy |
| Type | ManualSwitchBackupState |

MAX**Table 3-1555 MAX**

Available Bandwidth for Mandatory Channels

Table 3-1594 Available Bandwidth for Mandatory Channels

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | The available bandwidth on the interface for mandatory channels |
| Displayed name | Available Bandwidth for Mandatory Channels |
| OSS name | availableMandatoryBw |
| Read-only | yes |
| Tab Panel | General Multicast CAC |
| Type | LONG |
| Units | kbps |

Available Bandwidth for Optional Channels

Table 3-1595 Available Bandwidth for Optional Channels

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | The available bandwidth on the interface for optional channels |
| Displayed name | Available Bandwidth for Optional Channels |
| OSS name | availableOptionalBw |
| Read-only | yes |
| Tab Panel | General Multicast CAC |
| Type | LONG |
| Units | kbps |

Bandwidth Values in Transit

Table 3-1596 Bandwidth Values in Transit

| Name | Value |
|---------|-----------|
| Default | yes:false |

Table 3-1596 Bandwidth Values in Transit (continued)

| Name | Value |
|----------------|---|
| Description | Indicates that the operational (available and in-use mandatory/optional) value for the following objects are in transition due to configuration change: inUseMandatoryBw inUseOptionalBw availableMandatoryBw availableOptionalBw When Multicast CAC Policy is applied on the interface for the join of the next channel, the operational values will be recalculated and applied to the above objects and the value for bwValuesInTransit will be set to 'false'. If the value of bwValuesInTransit is 'true' then the values are in transition. |
| Displayed name | Bandwidth Values in Transit |
| OSS name | bwValuesInTransit |
| Read-only | yes |
| Tab Panel | General Multicast CAC |
| Type | BOOL |

Constraint Administration State

Table 3-1597 Constraint Administration State

| Name | Value |
|----------------|---|
| Default | yes:tmnxInService |
| Description | The administrative state of the multicast CAC policy's constraints. |
| Displayed name | Constraint Administration State |
| OSS name | mCacConstAdminState |
| Read-only | no |
| Tab Panel | General Multicast CAC |
| Type | netw.AdministrativeState |

Disable Router Alert Check

Table 3-1598 Disable Router Alert Check

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | It is used to enable/disable router alert checking for IGMP messages received on this interface. If this flag is set to 'true', checking is disabled. |
| Displayed name | Disable Router Alert Check |
| OSS name | disRtrAlertChk |
| Read-only | no |
| Tab Panel | General General |

In Use Bandwidth by Optional Channels**Table 3-1604 In Use Bandwidth by Optional Channels**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | The bandwidth already taken on the interface by optional channels |
| Displayed name | In Use Bandwidth by Optional Channels |
| OSS name | inUseOptionalBw |
| Read-only | yes |
| Tab Panel | General Multicast CAC |
| Type | LONG |
| Units | kbps |

Last Member Query Interval**Table 3-1605 Last Member Query Interval**

| Name | Value |
|----------------|----------------------------|
| Default | yes:10 |
| Displayed name | Last Member Query Interval |
| Maximum | 50 |
| Minimum | 1 |
| OSS name | lastMemberInterval |
| Read-only | no |
| Tab Panel | General Groups |
| Type | INT |
| Units | tenths of seconds |

Mandatory Bandwidth
Table 3-1606 Mandatory Bandwidth

| Name | Value |
|----------------|--|
| Default | yes:-1 |
| Description | The value of preRsvdMandatoryBandwidth specifies the bandwidth pre-reserved for all the mandatory channels on a given interface in kilo-bits per second(kbps). If the value of unconstrainedBandwidth is '0', no mandatory channels are allowed. If the value of unconstrainedBandwidth is '-1', then all mandatory and optional channels are allowed. If the value of preRsvdMandatoryBandwidth is equal to the value of unconstrainedBandwidth, then all the unconstrained bandwidth on a given interface is allocated to mandatory channels configured through multicast cac policy on that interface and no optional groups (channels) are allowed. The value of preRsvdMandatoryBandwidth should be set to the same as unconstrainedBandwidth if the latter is set to either '-1' or '0'. The value of preRsvdMandatoryBandwidth should always be less than or equal to that of unconstrainedBandwidth. |
| Displayed name | Mandatory Bandwidth |
| Maximum | 2147483647 |
| Minimum | -1 |
| OSS name | preRsvdMandatoryBandwidth |
| Read-only | no |
| Tab Panel | General Multicast CAC |

Combiner**Table 3-1712 Combiner**

| Name | Value |
|----------------|---|
| Default | yes:disable |
| Description | Enable/Disable Combiner(SD)function on MPT. |
| Displayed name | Combiner |
| OSS name | mptCombiner |
| Read-only | no |
| Tab Panel | General Port Usage |
| Type | LONG |

Configured Address**Table 3-1713 Configured Address**

| Name | Value |
|----------------|-----------------------|
| Default | yes:00-00-00-00-00-00 |
| Displayed name | Configured Address |
| OSS name | macAddress |
| Read-only | no |
| Tab Panel | General General |
| Type | MACADDR |

Configured Speed
Table 3-1714 Configured Speed

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | This property specifies the total configured speed of the LAG. This is calculated from the "speed" property of the Ports which are LAG Members. As the "speed" is an ENUM, it can have a speed value which is an integer (X Gbps, Y Mbps, etc.) or it can have a String value (Line Rate, Auto Speed, etc.), hence this property is defined as a STRING to take care of both the cases. We try to get the integer value first and add it to come up with the total value, in case we don't have an integer value and have an ENUM, we set the value of this property to ENUM itself. |
| Displayed name | Configured Speed |
| Maximum | 25 |
| OSS name | lagConfiguredSpeed |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

Containing Equipment Status**Table 3-1715 Containing Equipment Status**

| Read-only | no |
| Tab Panel | General Service Access Info |
| Type | STRING |

Disable Soft Reset Extension

Table 3-1718 Disable Soft Reset Extension

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | This property specifies if the extension of BFD timers during soft reset is disabled. |
| Displayed name | Disable Soft Reset Extension |
| OSS name | lagBfdDisableSoftReset |
| Read-only | no |
| Tab Panel | General BFD |
| Type | BOOL |

Dynamic Cost
Table 3-1719 Dynamic Cost

| Name | Value |
|----------------|--------------------------------|
| Default | yes:false |
| Displayed name | Dynamic Cost |
| OSS name | dynamicCosting |
| Read-only | no |
| Tab Panel | Link Aggregation Group General |
| Type | BOOL |

Egress Available Bandwidth**Table 3-1720 Egress Available Bandwidth**

| Name | Value |
|----------------|---|
| Description | Indicate the remaining Egress Bandwidth of the LAG. |
| Displayed name | Egress Available Bandwidth |
| OSS name | lagEgressAvailBandwidth |
| Read-only | yes |
| Tab Panel | Link Aggregation Group Bandwidth Attributes |
| Type | LONG |
| Units | Mbps |

Enable DEI**Table 3-1721 Enable DEI**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies whether or not the LAG is enabled for color-aware policing using DEI bits. |
| Displayed name | Enable DEI |
| OSS name | enableDei |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Enable LAG Access Including Egress Hash Config
Table 3-1722 Enable LAG Access Including Egress Hash Config

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | LagIncludeEgrHashCfg value specifies whether explicitly configured hashing should factor into the egress buffering and rate distribution (LagAccessAdaptQos). When the value of LagIncludeEgrHashCfg is set to true, all SAPs on this LAG which have explicit hashing configured, the egress HQos and HPol (including queues, policers, schedulers and arbiters) will receive 100% of the configured bandwidth (essentially operating in adapt-qos link mode). For any Multi-Service-Sites assigned to such a LAG, bandwidth will continue to be divided according to adapt-qos distribute mode. An 'inconsistentValue' error is returned if LagIncludeEgrHashCfg is set to true and LagAccessAdaptQos is set to link mode. |
| Displayed name | Enable LAG Access Including Egress Hash Config |
| OSS name | includeEgrHashCfg |
| Read-only | no |
| Tab Panel | Access Adapt Qos |
| Type | BOOL |

Enable Per Forwarding Path Egress Queue**Table 3-1723 Enable Per Forwarding Path Egress Queue**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | The value of LagPerFpEgrQueuing specifies whether a more efficient method of queue allocation for LAG SAPs should be utilized. An 'inconsistentValue' error is returned if this object is set to a different value when there are existing port members in the LAG |
| Displayed name | Enable Per Forwarding Path Egress Queue |
| OSS name | perFpEgrQueuing |
| Read-only | no |
| Tab Panel | Access General |
| Type | BOOL |

Enable Per Forwarding Path Ingress Queue**Table 3-1724 Enable Per Forwarding Path Ingress Queue**

| Name | Value |
|---------|-----------|
| Default | yes:false |

Table 3-1724 Enable Per Forwarding Path Ingress Queue (continued)

| Name | Value |
|----------------|---|
| Description | LagPerFpIngQueuing value specifies whether a more efficient method of queue allocation for LAG SAPs should be utilized. An 'inconsistentValue' error is returned if this object is set to a different value when there are existing port members in the LAG |
| Displayed name | Enable Per Forwarding Path Ingress Queue |
| OSS name | perFpIngQueuing |
| Read-only | no |
| Tab Panel | Access General |
| Type | BOOL |

Enable SAP Per Flex Path**Table 3-1725 Enable SAP Per Flex Path**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | The value of perFpSapInstance specifies whether a more efficient method of SAP allocation for LAG SAP's should be utilized. This object may only be set to true, if both tLagPerFpIngQueuing and tLagPerFpEgrQueuing are set to true. An 'inconsistentValue' error is returned if this object is set to false, when there are existing port members in the LAG. |
| Displayed name | Enable SAP Per Flex Path |
| OSS name | perFpSapInstance |
| Read-only | no |
| Tab Panel | Access General |
| Type | BOOL |

Encap Type**Table 3-1726 Encap Type**

| Read-only | yes |
| Tab Panel | Policies.General Network Queue |
| Type | STRING |

Number of Attached Ports**Table 3-1763 Number of Attached Ports**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | The number of ports attached at the moment. This property is specific to the Alcatel OmniSwitch family of products. This property is also applicable to MPR 9500 family. |
| Displayed name | Number of Attached Ports |
| OSS name | lagAttachedPorts |
| Read-only | yes |
| Tab Panel | Link Aggregation Group General |
| Type | INT |

Number of Selected Ports**Table 3-1764 Number of Selected Ports**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | The number of ports selected at the moment. This property is specific to the Alcatel OmniSwitch family of products. |
| Displayed name | Number of Selected Ports |
| OSS name | lagSelectedPorts |
| Read-only | yes |
| Tab Panel | Link Aggregation Group General |
| Type | INT |

Operational Speed
Table 3-1765 Operational Speed

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | This property specifies the total operational speed of the LAG. This is calculated from the "actualSpeed" property of the Ports which are LAG Members. The "actualSpeed" value can be 0 (zero) when the Port is not operating. The Lag Member is first checked for its resource state and if its "OK" then we add this value to the LAG value otherwise we ignore it. So only operational and active LAG Member values are added to show the correct operational LAG speed. |
| Displayed name | Operational Speed |
| OSS name | lagOperationalSpeed |
| Read-only | yes |
| Tab Panel | General General |
| Type | LONG |
| Units | kbps |

Operational State**Table 3-1766 Operational State**

Part Number**Table 3-1768 Part Number**

| Name | Value |
|----------------|------------------------------|
| Default | yes: |
| Displayed name | Part Number |
| Maximum | 252 |
| OSS name | manufacturerBoardNumber |
| Read-only | yes |
| Tab Panel | General Manufacturer Details |
| Type | STRING |

Per-Link Hashing**Table 3-1769 Per-Link Hashing**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Per-link hashing. When enabled sends SAP/interface traffic over a single link of a LAG auto-rebalancing as links are added/removed from a LAG |
| Displayed name | Per-Link Hashing |
| OSS name | perLinkHashing |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Port Scheduler Policy**Table 3-1770 Port Scheduler Policy**

| Name | Value |
|-------------|---|
| Default | yes: |
| Description | Specifies the port scheduler policy used by this port |

Table 3-1770 Port Scheduler Policy (continued)

| Default | no |
| Displayed name | User label |
| Maximum | 15 |
| OSS name | userLabel |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Vlan Xlation Mode**Table 3-1805 Vlan Xlation Mode**

| Name | Value |
|----------------|---|
| Default | yes:2 |
| Description | This property is specific to AOS family |
| Displayed name | Vlan Xlation Mode |
| OSS name | portVlanXlation |
| Read-only | no |
| Tab Panel | General Service Access Info |
| Type | INT |

VPLS Mode**Table 3-1806 VPLS Mode**

| Name | Value |
|----------------|--|
| Default | yes:none |
| Description | Applicable to Omni Fuji2 nodes. The mode of the VPLS service being configured on the Ethernet Access Port. |
| Displayed name | VPLS Mode |
| OSS name | vplsMode |
| Read-only | no |
| Tab Panel | General VPLS Service |
| Type | netw.VplsMode |

Wait to Restore
Table 3-1807 Wait to Restore

| Name | Value |
|----------------|--|
| Default | yes:1000 |
| Description | This property specifies the amount of time, in step of 100 milliseconds, to wait after a fault clears before restoring a traffic interface in the Link Aggregation Group This property is specific to 9500 MPR family. |
| Displayed name | Wait to Restore |
| Maximum | 8000 |
| Minimum | 100 |
| OSS name | lagWTR |
| Read-only | no |
| Step | 100 |
| Tab Panel | Link Aggregation Group General |
| Type | LONG |
| Units | ms |

Weight Threshold**Table 3-1808 Weight Threshold**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | The value of Weight Threshold specifies a threshold for the action specified by Weight Threshold Action. The value is a weight, and the unit depends on the value of Port Weight Speed |
| Displayed name | Weight Threshold |
| Maximum | 63 |
| Minimum | 0 |
| OSS name | weightThreshold |
| Read-only | no |
| Tab Panel | Link Aggregation Group General |
| Type | INT |

Weight Threshold Action**Table 3-1809 Weight Threshold Action**

| Name | Value |
|----------------|---|
| Default | yes:down |
| Description | The value specifies the action to take when the weight of the physical ports that are operational (link up) is less than the value of Weight Threshold. |
| Displayed name | Weight Threshold Action |
| OSS name | weightThresholdAction |
| Read-only | no |
| Tab Panel | Link Aggregation Group General |
| Type | INT |

Weighted**Table 3-1810 Weighted**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether there is a class and weight based balanced distribution of traffic egressing on the objects |
| Displayed name | Weighted |
| OSS name | perLinkHashWeighted |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Linear Power Adjustment parameters**Add Direction LD****Table 3-1811 Add Direction LD**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | The pointer to the LD in the add position of Anydirection A/D block. |
| Displayed name | Add Direction LD |
| OSS name | addDirectionLd |

Table 3-1811 Add Direction LD (continued)

| Name | Value |
|-------------|--------------------------|
| Read-only | no |

Gain Adjustment Calculation Offset**Table 3-1818 Gain Adjustment Calculation Offset**

| Name | Value |
|----------------|---|
| Default | yes:0.0 |
| Description | Value added to result of gain adjustment calculation. |
| Displayed name | Gain Adjustment Calculation Offset |
| Maximum | 3 |
| Minimum | -3 |
| OSS name | gainSetOffset |
| Read-only | no |
| Tab Panel | General Power Attributes |

Table 3-1818 Gain Adjustment Calculation Offset (continued)

| Name | Value |
|-------|-------|
| Type | FLOAT |
| Units | dB |

Gain at Commissioning Complete**Table 3-1819 Gain at Commissioning Complete**

| Name | Value |
|----------------|---|
| Default | yes:-99.0 |
| Description | Gain value set while commissioning flag is false. |
| Displayed name | Gain at Commissioning Complete |
| OSS name | commissionedGain |
| Read-only | no |
| Tab Panel | General Power Attributes |
| Type | FLOAT |
| Units | dB |

Result**Table 3-1820 Result**

| Name | Value |
|----------------|---|
| Description | The result of the last executed power adjustment operation. |
| Displayed name | Result |
| OSS name | powerAdjustResult |
| Read-only | no |
| Tab Panel | General Power Adjustment |
| Type | STRING |

Site ID**Table 3-1821 Site ID**

| Name | Value |
|----------------|----------------------|
| Description | The site identifier. |

Inner Encap Value

Table 3-1896 Inner Encap Value

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Specifies the SAP Inner encapsulation of the destination for this filter entry. A value of 0 indicates that either 1) the sap encapsulation value is not specified when 'fwdSapCtpPointer' and 'fwdServiceId' have valid values; or 2) that there is no SAP destination. A value different from 0 can only be specified if the value of the 'action' property of this entry is 'forwardSap'. In addition a non-zero value can only be given if the properties 'fwdSdpBindVcId' and 'fwdSdpBindPathId' have a zero value. |
| Displayed name | Inner Encap Value |
| OSS name | fwdSapInnerEncapValue |
| Read-only | no |
| Tab Panel | Forwarding Destination SAP |
| Type | INT |

Inner Tag Value

Table 3-1897 Inner Tag Value

| Name | Value |
|----------------|--|
| Default | yes:-1 |
| Description | Specifies the value to match against the VID of the second VLAN tag in the packet that is carried transparently through the service (the second vlan tag after the service delimiting tags). This object can only be set to a non-default value if macFilterType is set to 'vid(3)'. The (default) value of '-1' indicates no inner VLAN tag matching will be performed. |
| Displayed name | Inner Tag Value |
| Maximum | 4095 |
| Minimum | -1 |
| OSS name | innerTagValue |
| Read-only | no |
| Tab Panel | Filter Properties Match Criteria VID |
| Type | INT |

Inner Tag VID Mask

Table 3-1898 Inner Tag VID Mask

| Name | Value |
|----------------|--|
| Default | yes:4095 |
| Description | It is applied as a mask to VID of the inner VLAN tag of the packet prior to comparing it with innerTagValue. This object can only be set to a non-default value if macFilterType is set to 'vid(3) |
| Displayed name | Inner Tag VID Mask |
| Maximum | 4095 |
| Minimum | 1 |

| Tab Panel | Filter Properties Match Criteria |
| Type | acl.Dot1pPriority |

Outer Encap Value**Table 3-1906 Outer Encap Value**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Specifies the SAP Outer encapsulation of the destination for this filter entry. A value of 0 indicates that either 1) the sap encapsulation value is not specified when 'fwdSapCtpPointer' and 'fwdServiceId' have valid values; or 2) that there is no SAP destination. A value different from 0 can only be specified if the value of the 'action' property of this entry is 'forwardSap'. In addition a non-zero value can only be given if the properties 'fwdSdpBindVcId' and 'fwdSdpBindPathId' have a zero value. |
| Displayed name | Outer Encap Value |
| OSS name | fwdSapOuterEncapValue |
| Read-only | no |
| Tab Panel | Forwarding Destination SAP |
| Type | INT |

Outer Tag Value
Table 3-1907 Outer Tag Value

| Name | Value |
|----------------|--|
| Default | yes:-1 |
| Description | Specifies the value to match against the VID of the first VLAN tag in the packet that is carried transparently through the service (the first vlan tag after the service delimiting tags). This object can only be set to a non-default value if macFilterType is set to 'vid(3)'. The (default) value of '-1' indicates no outer VLAN tag matching will be performed. |

| Type | qos.Dot1pPriority |

Inner Tag Value

Table 3-1948 Inner Tag Value

| Name | Value |
|----------------|--|
| Default | yes:-1 |
| Description | Specifies the value to match against the VID of the second VLAN tag in the packet that is carried transparently through the service (the second vlan tag after the service delimiting tags). This object can only be set to a non-default value if macCritType on the policy is set to 'vid(3)'. The (default) value of '-1' indicates no inner VLAN tag matching will be performed. |
| Displayed name | Inner Tag Value |
| Maximum | 4095 |
| Minimum | -1 |
| OSS name | innerTagValue |
| Read-only | no |
| Tab Panel | General Match Criteria VID |
| Type | INT |

Inner Tag VID Mask

Table 3-1949 Inner Tag VID Mask

| Name | Value |
|----------------|---|
| Default | yes:4095 |
| Description | It is applied as a mask to VID of the inner VLAN tag of the packet prior to comparing it with innerTagValue. This object can only be set to a non-default value if macCritType on the policy is set to 'vid(3)' |
| Displayed name | Inner Tag VID Mask |
| Maximum | 4095 |
| Minimum | 1 |

Discovery State

Table 3-1967 Discovery State

| Name | Value |
|----------------|--|
| Default | yes:notApplicable |
| Description | Only applicable to the global policy. Set to "inProgress" if the global policy is created as part of the specific NE resync during the full node resync or node discovery. At the end of full node resync, if the resync is successful, the global policy is completely updated from first discovered local policy and its discoveryState is set to "completed". Otherwise, the global policy is not updated and its discoveryState is set to "failed". For "failed" global policy, it will be updated by next successful full node resync or synchronized from the specific local policy. Set to "initialized" if the global policy is created by SNMP trap notification. User may need to synchronize the global policy manually with the specific local policy. Set to "N/A" if the global policy is created or modified by a SAM user. |
| Displayed name | Discovery State |
| OSS name | discoveryState |
| Read-only | yes |
| Tab Panel | General Policy Configuration |
| Type | DiscoveryState |

Distribution Mode

| Tab Panel | General Policy Configuration |
| Type | DistributionMode |

Last Sync From
Table 3-1969 Last Sync From

| Name | Value |
|----------------|--|
| Default | yes:N/A |
| Description | Only applicable to the global policy. Set to the siteld if the policy is created as the part of the specific NE resync or by SNMP notification. Set to user name if the policy is created by a SAM user. |
| Displayed name | Last Sync From |
| Maximum | 50 |
| OSS name | origin |
| Read-only | yes |
| Tab Panel | General Policy Configuration |
| Type | STRING |

Last Sync Time**Table 3-1970 Last Sync Time**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Only applicable to the global policy. Specifies the time at which latest sync occurred. |
| Displayed name | Last Sync Time |
| OSS name | lastSyncTime |
| Read-only | yes |
| Tab Panel | General Policy Configuration |
| Type | DATE |

Level**Table 3-1971 Level**

| Name | Value |
|-----------------------|--------------------------------|
| Default | yes:0 |
| Description | Specifies the MD level 0 to 7. |
| Displayed name | Level |
| Mandatory on creation | yes |
| Maximum | 7 |

Table 3-1971 Level (continued)

| Name | Value |
|-------------|------------------|

| Tab Panel | General General |
| Type | INT |

Maintenance Domain ID**Table 3-1972 Maintenance Domain ID**

| Name | Value |
|-----------------------|--|
| Default | yes:0 |
| Description | The identifier for the MaintenanceDomain ID. If global maintDomainId is 0, SAM will attempt to use the "id" as the value for this; if this value is not available, SAM will use the first available id for "maintDomainId". If global maintDomainId is non-0, SAM will enforce the maintDomainId on the Maintenance Domain local distribution; if this value is not available, SAM will fail distribution. This is not supported on AOS nodes. |
| Displayed name | Maintenance Domain ID |
| Mandatory on creation | yes |
| Maximum | 4294967295 |
| Minimum | 1 |
| OSS name | maintDomainId |
| Read-only | no |

| Type | STRING |

MC LAG Configuration parameters

Administrative State

Table 3-2046 Administrative State

| Name | Value |
|----------------|--|
| Default | yes:tmnxOutOfService |
| Description | Indicates the administrative state of the MC-LAG with the indicated peer. Turning the administrative state down will bring down all operational MC-LAG's in the indicated peer |
| Displayed name | Administrative State |
| OSS name | administrativeState |
| Read-only | no |
| Tab Panel | General States |
| Type | netw.AdministrativeState |

Keep-Alive Interval

Table 3-2047 Keep-Alive Interval

| Name | Value |
|----------------|--|
| Default | yes:10 |
| Description | Indicates the MC-LAG keepalive timer value in units of 0.1 sec. This defines the interval at which keep-alive messages are exchanged between two systems participating in MC-LAG. These keep-alive messages are used to determine remote-node failure. |
| Displayed name | Keep-Alive Interval |
| Maximum | 500 |
| Minimum | 5 |
| OSS name | keepAliveInterval |
| Read-only | no |
| Tab Panel | General Intervals |
| Type | LONG |
| Units | deciseconds |

Last Operational State Change

Table 3-2048 Last Operational State Change

| Name | Value |
|---------|-------|
| Default | yes:0 |

Table 3-2048 Last Operational State Change (continued)

| Name | Value |
|----------------|--|
| Description | Indicates the sysUpTime at the time of the last operational state change for this MC-LAG peer. |
| Displayed name | Last Operational State Change |
| OSS name | lastOperationalStateChange |
| Read-only | yes |
| Tab Panel | General States |
| Type | DATE |

Lost Connection Wait Interval**Table 3-2049 Lost Connection Wait Interval**

| Name | Value |
|----------------|--|
| Default | yes:3 |
| Description | Indicates how many keepAliveInterval intervals the standby node will wait for packets from the active node before assuming a redundant-neighbor node failure. This delay in switch-over operation is required to accommodate for different factors influencing node failure detection rate, such as IGP convergence, or HA switch-over times and to prevent the standby node from taking actions prematurely." |
| Displayed name | Lost Connection Wait Interval |
| Maximum | 25 |
| Minimum | 2 |
| OSS name | holdOnNeighborFailure |
| Read-only | no |
| Tab Panel | General Intervals |
| Type | LONG |

Operational State**Table 3-2050 Operational State**

| Name | Value |
|----------------|---|
| Default | yes:outOfService |
| Description | Indicates the operational status of this MC-LAG peer. |
| Displayed name | Operational State |
| OSS name | operationalState |
| Read-only | yes |

Table 3-2050 Operational State (continued)

MC LAG parameters

Config Mismatch**Table 3-2054 Config Mismatch**

| Name | Value |
|----------------|---|
| Description | Printable character string which contains information about the multi-chassis configuration mismatch. |
| Displayed name | Config Mismatch |
| OSS name | configMismatch |
| Read-only | yes |
| Tab Panel | States General |
| Type | STRING |

Config Mismatches**Table 3-2055 Config Mismatches**

| Name | Value |
|----------------|--|
| Default | yes:unspecified |
| Description | Indicates the operational status of the multi-chassis configuration. |
| Displayed name | Config Mismatches |
| OSS name | configMismatches |
| Read-only | yes |
| Tab Panel | States General |
| Type | LONG |

Flush Ethernet Ring Enabled

Table 3-2056 Flush Ethernet Ring Enabled

| Name | Value |
|----------------|---|
| Default | yes:disabled |
| Description | This specifies whether or not to flush the ethernet rings (ERP) to which the services that the LAG is part of are attached. |
| Displayed name | Flush Ethernet Ring Enabled |
| OSS name | flushEthRingOnActive |
| Read-only | no |
| Tab Panel | General General |
| Type | optical.AluWdmEnabledDisabled |

Is Active

Table 3-2057 Is Active

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Indicates if this MC-LAG member is active or standby. |
| Displayed name | Is Active |
| OSS name | isActive |
| Read-only | yes |
| Tab Panel | States General |
| Type | BOOL |

Is Advertised

Table 3-2058 Is Advertised

| Name | Value |
|----------------|--|
| Description | Indicates if the MC-LAG identifier values (i.e. systemId, systemPriority and lacpKey) are advertised to the LACP peer. |
| Displayed name | Is Advertised |
| OSS name | isAdvertised |
| Read-only | yes |
| Tab Panel | States General |
| Type | BOOL |

Is Using Extended TimeOut

Table 3-2059 Is Using Extended TimeOut

| Name | Value |
|----------------|---|
| Description | Indicates whether or not the system is using the value of holdOnNeighborFailure. If true, the system is temporarily using a larger value than the value configured in holdOnNeighborFailure." |
| Displayed name | Is Using Extended TimeOut |
| OSS name | isUsingExtendedTimeOut |
| Read-only | yes |
| Tab Panel | States General |
| Type | BOOL |

LACP Key

Table 3-2060 LACP Key

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Identifier for MC-LAG which is a 16 bit key that needs to be configured in the same manner on both sides of the MC-LAG in order for the MC-LAG to come up. The value of this attribute has to be unique with in the context of the peer. |
| Displayed name | LACP Key |
| Maximum | 65535 |
| Minimum | 0 |
| OSS name | lacpKey |
| Read-only | no |
| Tab Panel | General MC LAG Identifiers |
| Type | LONG |

lagInterfacePointer

Table 3-2061 lagInterfacePointer

| Name | Value |
|-----------------------|--|
| Default | yes: |
| Description | The FDN of the LAG in this router that is being protected. |
| Mandatory on creation | yes |
| OSS name | lagInterfacePointer |

Table 3-2061 lagInterfacePointer (continued)

| Name | Value |
|-------------|-------------|
| Read-only | no |
| Tab Panel | General LAG |
| Type | POINTER |

MAC LSB**Table 3-2062 MAC LSB**

| Name | Value |
|----------------|--|
| Default | yes:00-00 |
| Description | The value of srcBMacLSB specifies the value of last 16-bits of the MAC address used for all the traffic ingressing the MC-Lag links. Possible values are: 00-00..FF-FF (0..65535) and FF-FF-FF-FF (4294967295). FF-FF-FF-FF indicates the use of the LACP-Key as source backbone MAC address LSB. If set to 'FF-FF-FF-FF', the value of 'srcBMacLsbUseLacp-Key' property is set to true. |
| Displayed name | MAC LSB |
| Maximum | 11 |
| Minimum | 5 |
| OSS name | srcBMacLSB |
| Read-only | no |
| Tab Panel | General PBB Source Backbone MAC LSB |
| Type | STRING |
| Units | hex |

mcLagPointer**Table 3-2063 mcLagPointer**

| Name | Value |
|-------------|----------------------|
| Default | yes: |
| OSS name | mcLagPointer |
| Read-only | yes |
| Tab Panel | General MC LAG Group |
| Type | POINTER |

Operational MAC LSB
Table 3-2064 Operational MAC LSB

| Name | Value |
|----------------|---|
| Description | The value of operationalSrcBMacLSB indicates the operational value of last 16-bits of the MAC address used for all the traffic ingressing the MC-Lag. |
| Displayed name | Operational MAC LSB |
| OSS name | operationalSrcBMacLSB |
| Read-only | yes |
| Tab Panel | General PBB Source Backbone MAC LSB |
| Type | STRING |

Peer Address**Table 3-2065 Peer Address**

| Name | Value |
|----------------|--|
| Default | yes:0.0.0.0 |
| Description | The IP address on peer router to send multi-chassis communication. |
| Displayed name | Peer Address |
| OSS name | peerIpAddress |
| Read-only | yes |
| Tab Panel | General Site |
| Type | INETADDR |

Peer Site Pointer**Table 3-2066 Peer Site Pointer**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Corresponds to the matching Peer Should be thought as if it were called matchingPeerSite-Pointer |
| Displayed name | Peer Site Pointer |
| OSS name | peerSitePointer |
| Read-only | yes |
| Tab Panel | General Peer |
| Type | POINTER |

Remote LAG ID
Table 3-2067 Remote LAG ID

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | The Id of the LAG in the peer router that is protecting the LAG in this router. |
| Displayed name | Remote LAG ID |
| Maximum | 200 |
| Minimum | 1 |
| OSS name | remoteLagId |
| Read-only | no |
| Tab Panel | General Remote LAG |
| Type | INT |

remoteLagInterfacePointer**Table 3-2068 remoteLagInterfacePointer**

| Name | Value |
|-------------|---------------------------|
| Default | yes: |
| OSS name | remoteLagInterfacePointer |
| Read-only | yes |
| Tab Panel | General Remote LAG |
| Type | POINTER |

Selection Logic**Table 3-2069 Selection Logic**

| Name | Value |
|----------------|---|
| Description | Printable character string containing information about the multi-chassis selection logic |
| Displayed name | Selection Logic |
| OSS name | selectionLogic |
| Read-only | yes |
| Tab Panel | States General |
| Type | STRING |

Site Pointer
Table 3-2070 Site Pointer

| Name | Value |
|----------------|--------------|
| Default | yes: |
| Displayed name | Site Pointer |
| OSS name | sitePointer |
| Read-only | yes |
| Tab Panel | General Site |
| Type | POINTER |

System ID**Table 3-2071 System ID**

| Name | Value |
|----------------|---|
| Default | yes:00-00-00-00-00-00 |
| Description | Identifier for MC-LAG which is an address that needs to be configured in the same manner on both sides of the MC-LAG in order for the MC-LAG to come up. The value of this attribute has to be unique in the context of the peer. |
| Displayed name | System ID |
| OSS name | systemId |
| Read-only | no |
| Tab Panel | General MC LAG Identifiers |
| Type | MACADDR |

System Priority**Table 3-2072 System Priority**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Identifier for MC-LAG which is a value that needs to be configured in the same manner on both sides of the MC-LAG in order for the MC-LAG to come up. A low numeric value specifies a high system priority. |
| Displayed name | System Priority |
| Maximum | 65535 |
| Minimum | 0 |
| OSS name | systemPriority |

| Tab Panel | General MC LAG Identifiers |
| Type | LONG |

Use LACP Key**Table 3-2073 Use LACP Key**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Indicates the use of the lacp-key as source backbone MAC address LSB. If set to 'true', the value of 'srcBMacLSB' property is set to FF-FF-FF-FF. |
| Displayed name | Use LACP Key |
| OSS name | srcBMacLsbUseLacpKey |
| Read-only | no |
| Tab Panel | General PBB Source Backbone MAC LSB |
| Type | BOOL |

MC PSS LAG Group parameters**Asymmetrical Config Detected****Table 3-2074 Asymmetrical Config Detected**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | A true values means there is a mismatch of one or more of the MC LAG Identifiers (LACP Key, System Id and System Priority) between the MC-LAG configurations in the two peer routers. |
| Displayed name | Asymmetrical Config Detected |
| OSS name | asymmetricalConfigDetected |
| Read-only | yes |
| Tab Panel | General General |
| Type | BOOL |

Card Slot**Table 3-2075 Card Slot**

| Name | Value |
|-----------------------|----------------------|
| Default | yes: |
| Displayed name | Card Slot |

| Name | Value |
|------|--------|
| Type | STRING |

firstMcLagMemberPointer**Table 3-2078 firstMcLagMemberPointer**

| Name | Value |
|-------------|-------------------------------------|
| Default | yes: |
| Description | The FDN to the first MC-LAG member. |
| OSS name | firstMcLagMemberPointer |
| Read-only | yes |
| Tab Panel | General First Site |
| Type | POINTER |

LACP Key**Table 3-2079 LACP Key**

| Name | Value |
|-----------------------|--|
| Default | yes:0 |
| Description | Identifier for MC-LAG which is a 16 bit key that needs to be configured in the same manner on both sides of the MC-LAG in order for the MC-LAG to come up. The value of this attribute has to be unique with in the context of the peer. |
| Displayed name | LACP Key |
| Mandatory on creation | yes |
| Maximum | 65535 |
| Minimum | 0 |
| OSS name | lACPKey |
| Read-only | no |
| Tab Panel | General MC LAG Identifiers |
| Type | LONG |

LAG

Table 3-2080 LAG

| Name | Value |
|-----------------------|--|
| Default | yes: |
| Description | The FDN of the LAG on the first site. The value specified for this property may get swapped with value of secondLagInterfacePointer during creation. Refer description of firstIpAddress property for details. |
| Displayed name | LAG |
| Mandatory on creation | yes |
| OSS name | firstLagInterfacePointer |
| Read-only | no |
| Tab Panel | General First Site |
| Type | POINTER |

LAG

Table 3-2081 LAG

| Name | Value |
|-----------------------|---|
| Default | yes: |
| Description | The FDN of the LAG on the second site. The value specified for this property may get swapped with value of firstLagInterfacePointer during creation. Refer description of secondIpAddress property for details. |
| Displayed name | LAG |
| Mandatory on creation | yes |
| OSS name | secondLagInterfacePointer |
| Read-only | no |
| Tab Panel | General Second Site |
| Type | POINTER |

LAG ID

Table 3-2082 LAG ID

| Name | Value |
|-------------|--|
| Default | yes:0 |
| Description | The LAG Id on the first site. The value specified for this property may get swapped with value of secondLagId during creation. Refer description of firstIpAddress property for details. |

Table 3-2082 LAG ID (continued)

| Name | Value |
|-----------------------|--------------------|

| Default | yes:false |
| Displayed name | Synchronize IGMP-Snooping |
| OSS name | igmpSnooping |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Synchronize IPoE Subscriber Management

Table 3-2108 Synchronize IPoE Subscriber Management

| Name | Value |
|----------------|--|
| Default | yes:false |
| Displayed name | Synchronize IPoE Subscriber Management |
| OSS name | subscriberManagement |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Synchronize Local DHCP Server

Table 3-2109 Synchronize Local DHCP Server

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether DHCP Server information should be synchronized with the multi-chassis peer. |
| Displayed name | Synchronize Local DHCP Server |
| OSS name | dhcpServer |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Synchronize MC IPsec

Table 3-2110 Synchronize MC IPsec

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies whether ipsec information is synchronized on this multi-chassis peer |
| Displayed name | Synchronize MC IPsec |
| OSS name | mcIPSec |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Synchronize MC Ring

Table 3-2111 Synchronize MC Ring

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies whether multi chassis ring information should be synchronized with the multi-chassis peer. |
| Displayed name | Synchronize MC Ring |
| OSS name | mcRing |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Synchronize MLD

Table 3-2112 Synchronize MLD

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether MLD information should be synchronized with the multi-chassis peer. |
| Displayed name | Synchronize MLD |
| OSS name | mld |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Synchronize MLD Snooping

Table 3-2113 Synchronize MLD Snooping

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies whether MLD-snooping information should be synchronized with the multi-chassis peer. |
| Displayed name | Synchronize MLD Snooping |
| OSS name | mldSnooping |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Synchronize PPPoE Subscriber Management

Table 3-2114 Synchronize PPPoE Subscriber Management

| Name | Value |
|----------------|---|
| Default | yes:false |
| Displayed name | Synchronize PPPoE Subscriber Management |
| OSS name | subscriberManagementPPPoE |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Synchronize Python

Table 3-2115 Synchronize Python

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether Python cache data should be synchronized with the multi-chassis peer. |
| Displayed name | Synchronize Python |
| OSS name | python |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Synchronize SRRP

Table 3-2116 Synchronize SRRP

| Name | Value |
|----------------|------------------|
| Default | yes:false |
| Displayed name | Synchronize SRRP |
| OSS name | srrp |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Synchronize Subscriber Host Tracking

Table 3-2117 Synchronize Subscriber Host Tracking

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies whether subscriber host tracking information should be synchronized with the multi-chassis peer. |
| Displayed name | Synchronize Subscriber Host Tracking |
| OSS name | subscriberHostTracking |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Media Adaptor parameters

Acronym Code

Table 3-2118 Acronym Code

| Name | Value |
|----------------|-----------------------|
| Default | yes: |
| Description | XFP/SFP acronym code. |
| Displayed name | Acronym Code |

| Default | yes: |
| Displayed name | Site Name |
| Maximum | 252 |
| OSS name | siteName |
| Read-only | yes |
| Tab Panel | General Equipment |
| Type | STRING |

Software Part Number**Table 3-2158 Software Part Number**

| Name | Value |
|-------------|-------------------------------|
| Default | yes:N/A |
| Description | XFP/SFP software part number. |

Table 3-2158 Software Part Number (continued)

| Name | Value |
|----------------|----------------------|
| Displayed name | Software Part Number |
| Maximum | 255 |
| OSS name | swPartNum |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Supported Media

Table 3-2159 Supported Media

| Name | Value |
|--------------------------|-------------------|
| Default | yes:notApplicable |
| Displayed name | Supported Media |
| OSS name | supportedMedia |
| Read-only | yes |
| Tab Panel | General General |
| Type | SupportedMedia |
| Enumerated types: | |
| Ethernet | |
| N/A | |
| SONET/SDH | |

Transceiver Type

Table 3-2160 Transceiver Type

| Name | Value |
|--------------------------|------------------|
| Default | yes:unknownMedia |
| Displayed name | Transceiver Type |
| OSS name | specificType |
| Read-only | yes |
| Tab Panel | General General |
| Type | MediaAdaptorType |
| Enumerated types: | |

Table 3-2160 Transceiver Type (continued)

| Name | Value |
|-----------------------|-------|
| CFP Transceiver | |
| CFP2 Transceiver | |
| CXP Transceiver | |
| DWDM SFP Transceiver | |
| Fixed Adaptor | |
| GBIC | |
| MSA-100GLH | |

| QSFP Transceiver | |
| SFP Transceiver | |
| Standard SFP | |
| Unknown | |
| User SFP | |
| X2 Transceiver | |
| XBI Transceiver | |
| XENPAK Transceiver | |
| XFF Transceiver | |
| XFP Transceiver | |
| XFPE Transceiver | |
| XPAK Transceiver | |

Tx Disable**Table 3-2161 Tx Disable**

| Name | Value |
|----------------|--------------------------------------|
| Default | yes:false |
| Description | XFP/SFP module transmission disable. |
| Displayed name | Tx Disable |
| OSS name | txDisable |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Vendor OUI
Table 3-2162 Vendor OUI

| Name | Value |
|----------------|-----------------|
| Default | yes:00-00-00 |
| Displayed name | Vendor OUI |
| Maximum | 16 |
| Minimum | 0 |
| OSS name | vendorOUI |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

MEG Service parameters

ID-Permission
Table 3-2163 ID-Permission

| Name | Value |
|--------------------------|---|
| Default | yes:sendIdDefer |
| Description | Enumerated value indicating what, if anything, is to be included in the Sender ID TLV (21.5.3) transmitted by MPS configured in this MEG. Applicable to AOS nodes only (6.4.3 onwards). |
| Displayed name | ID-Permission |
| Mandatory on creation | no |
| OSS name | idPermission |
| Read-only | no |
| Tab Panel | General general |
| Type | Dot1agCfmIdPermissionEnum |
| Enumerated types: | |
| chassis | |
| chassisManage | |
| defer | |
| manage | |
| none | |

MHF-Creation**Table 3-2164 MHF-Creation**

| Name | Value |
|--------------------------|--|
| Default | yes:none |
| Description | The MHF creation for this MEG. Currently, value "default" is only applicable to OMNI switch. |
| Displayed name | MHF-Creation |
| Mandatory on creation | no |
| OSS name | mhfCreation |
| Read-only | no |
| Tab Panel | General general |
| Type | MhfCreationEnum |
| Enumerated types: | |
| | default |
| | defer |
| | explicit |
| | none |
| | static |

MIP LTR Priority**Table 3-2165 MIP LTR Priority**

| Name | Value |
|-----------------------|--|
| Default | yes:7 |
| Description | The value of mipLtrPriority specifies at what priority the link-trace response frames should be transmitted for a MIP request. |
| Displayed name | MIP LTR Priority |
| Mandatory on creation | no |
| Maximum | 7 |
| Minimum | 0 |
| OSS name | mipLtrPriority |
| Read-only | no |
| Tab Panel | General general |
| Type | INT |

Service ID
Table 3-2166 Service ID

| Name | Value |
|-----------------------|-------------------------|
| Default | yes:0 |
| Description | Service Id of MEG site. |
| Displayed name | Service ID |
| Mandatory on creation | yes |
| Maximum | 4294967295 |
| Minimum | 1 |
| OSS name | serviceId |
| Read-only | no |
| Tab Panel | General general |
| Type | LONG |

VLAN ID**Table 3-2167 VLAN ID**

| Name | Value |
|-----------------------|-------------------------------------|
| Default | yes:0 |
| Description | VLAN ID of the VLAN Element object. |
| Displayed name | VLAN ID |
| Mandatory on creation | no |
| Maximum | 4094 |
| Minimum | 0 |
| OSS name | vlanId |
| Read-only | no |
| Tab Panel | General general |
| Type | INT |

Mep Alarm Category parameters

Category

Table 3-2168 Category

| Type | ethernetoam.AdministrativeState |

AIS Enabled

Table 3-2175 AIS Enabled

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether AIS frames are generated from the Maintenance Entity Group (MEG). |
| Displayed name | AIS Enabled |
| OSS name | aisEnable |
| Read-only | no |
| Tab Panel | aisL3 General |
| Type | BOOL |

AIS Enabled

Table 3-2176 AIS Enabled

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether AIS frames are generated from the Maintenance Entity Group (MEG). |
| Displayed name | AIS Enabled |
| OSS name | aisEnable |
| Read-only | no |
| Tab Panel | ais General |
| Type | BOOL |

AIS Frames Transmitted
Table 3-2177 AIS Frames Transmitted

| Name | Value |
|----------------|--|
| Description | Specifies number of AIS frames transmitted on the MEP (read only). |
| Displayed name | AIS Frames Transmitted |
| OSS name | aisTxCount |
| Read-only | yes |
| Tab Panel | ais General |
| Type | INT |

AIS Interface Support Enable**Table 3-2178 AIS Interface Support Enable**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies whether or not the MEP will generate AIS PDUs when the endpoint associated to this MEP is down regardless of CCM failures. |
| Displayed name | AIS Interface Support Enable |
| OSS name | aisInterfaceEnable |
| Read-only | no |
| Tab Panel | ais General |
| Type | BOOL |

AIS Interval**Table 3-2179 AIS Interval**

| Name | Value |
|----------------|---|
| Default | yes:val1 |
| Description | Specifies at what intervals to transmit AIS frames. |
| Displayed name | AIS Interval |
| OSS name | aisInterval |
| Read-only | no |
| Tab Panel | ais General |
| Type | INT |
| Units | seconds |

AIS Last Interval Received
Table 3-2180 AIS Last Interval Received

| Name | Value |
|----------------|--|
| Description | Specifies the AIS Interval received in the last AIS Frame (read only). |
| Displayed name | AIS Last Interval Received |
| OSS name | rxAisInterval |
| Read-only | yes |
| Tab Panel | aisL3 General |
| Type | INT |

AIS Last Interval Received**Table 3-2181 AIS Last Interval Received**

| Name | Value |
|----------------|--|
| Description | Specifies the AIS Interval received in the last AIS Frame (read only). |
| Displayed name | AIS Last Interval Received |
| OSS name | rxAisInterval |
| Read-only | yes |
| Tab Panel | ais General |
| Type | INT |

AIS LowPriority Defect**Table 3-2182 AIS LowPriority Defect**

| Name | Value |
|--------------------------|--|
| Default | yes:allDef |
| Description | Specifies the lowest priority defect that is allowed to generate an AIS frame. |
| Displayed name | AIS LowPriority Defect |
| OSS name | aisLowPriorityDefect |
| Read-only | no |
| Tab Panel | ais General |
| Type | AisLowPriorityDefectType |
| Enumerated types: | |
| | allDef |
| | macRemErrXcon |

AIS Meg Level
Table 3-2183 AIS Meg Level

| Name | Value |
|----------------|---|
| Default | yes:none |
| Description | Specifies the levels that should be notified to suppress alarms resulting from defect conditions detected by the MEP. |
| Displayed name | AIS Meg Level |
| OSS name | aisMegLevel |
| Read-only | no |
| Tab Panel | ais General |
| Type | ethernetoam.AISMegLevelBitType |

AIS Priority**Table 3-2184 AIS Priority**

| Name | Value |
|----------------|--|
| Default | yes:7 |
| Description | Specifies at what priority the AIS frames should be transmitted. |
| Displayed name | AIS Priority |
| Maximum | 7 |
| Minimum | 0 |
| OSS name | aisPriority |
| Read-only | no |
| Tab Panel | ais General |
| Type | INT |

AIS Received (AisRx)**Table 3-2185 AIS Received (AisRx)**

| Name | Value |
|----------------|---|
| Description | Specifies if the MEP is receiving AIS test frames from one or more of its sub-layer MEPs (read only). |
| Displayed name | AIS Received (AisRx) |
| OSS name | rxAis |
| Read-only | yes |

Table 3-2185 AIS Received (AisRx) (continued)

| Name | Value |
|-------------|---------------|
| Tab Panel | aisL3 General |
| Type | BOOL |

AIS Received (AisRx)**Table 3-2186 AIS Received (AisRx)**

| Name | Value |
|----------------|---|
| Description | Specifies if the MEP is receiving AIS test frames from one or more of its sub-layer MEPS (read only). |
| Displayed name | AIS Received (AisRx) |
| OSS name | rxAis |
| Read-only | yes |
| Tab Panel | ais General |
| Type | BOOL |

AIS Received (AisRx)**Table 3-2187 AIS Received (AisRx)**

| Name | Value |
|----------------|---|
| Description | Specifies if the MEP is receiving AIS test frames from one or more of its sub-layer MEPS (read only). |
| Displayed name | AIS Received (AisRx) |
| OSS name | rxAis |
| Read-only | yes |
| Tab Panel | General ccm |
| Type | BOOL |

Alarm Clearing Threshold**Table 3-2188 Alarm Clearing Threshold**

| Name | Value |
|-------------|--|
| Default | yes:0 |
| Description | Specifies the loss threshold, in hundredths of a percent, at which an alarm is cleared for Y1731 Dual-Ended Loss Test. |

Table 3-2188 Alarm Clearing Threshold (continued)

| Name | Value |
|----------------|-----------------------------|
| Displayed name | Alarm Clearing Threshold |
| Maximum | 100 |
| Minimum | 0 |
| OSS name | dualEndedLossClearThreshold |
| Read-only | no |
| Tab Panel | test dualEndedLoss |
| Type | FLOAT |
| Units | % |

Alarm Threshold

Table 3-2189 Alarm Threshold

| Name | Value |
|----------------|---|
| Default | yes:0.25 |
| Description | Specifies the loss threshold, in hundredths of a percent, at which an alarm is raised for Y1731 Dual-Ended Loss Test. |
| Displayed name | Alarm Threshold |
| Maximum | 100 |
| Minimum | 0 |
| OSS name | dualEndedLossRaiseThreshold |
| Read-only | no |
| Tab Panel | test dualEndedLoss |
| Type | FLOAT |
| Units | % |

CCM Enabled

Table 3-2190 CCM Enabled

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies if CC messaging will be run on this MEP. |
| Displayed name | CCM Enabled |
| OSS name | ccEnable |

Table 3-2190 CCM Enabled (continued)

| Name | Value |
|-------------|-------------|
| Read-only | no |
| Tab Panel | General ccm |
| Type | BOOL |

CCM Interval

Table 3-2191 CCM Interval

| Name | Value |
|--------------------------|--|
| Default | yes:CCM10 |
| Description | Specifies the ccm-interval for this MEP, read-only this is configured of the MEG object. |
| Displayed name | CCM Interval |
| OSS name | ccmInterval |
| Read-only | yes |
| Tab Panel | General ccm |
| Type | CCMIntervalNameType |
| Enumerated types: | |
| 1 s | |
| 10 ms | |
| 10 s | |
| 100 ms | |
| 3.33 ms | |
| 60 s | |
| 600 s | |

CCM OUT

Table 3-2192 CCM OUT

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Total number of Continuity Check messages transmitted. |
| Displayed name | CCM OUT |
| OSS name | mepCcmOut |
| Read-only | no |

Table 3-2192 CCM OUT (continued)

| Name | Value |
|-------------|-------------|
| Tab Panel | General mep |
| Type | LONG |

CCM Padding Packet Size (Bytes)**Table 3-2193 CCM Padding Packet Size (Bytes)**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | The value of <code>tmnxDot1agCfmMepCcmPaddingSize</code> specifies the number of additional octets inserted into the CCM PDU for the Data TLV padding. If <code>tmnxDot1agCfmMepCcmPaddingSize</code> is set to zero (0), no Data TLV will be added to the CCM PDUs. |
| Displayed name | CCM Padding Packet Size (Bytes) |
| Maximum | 1500 |
| Minimum | 0 |
| OSS name | <code>ccmPaddingSize</code> |
| Read-only | no |
| Tab Panel | General ccm |
| Type | LONG |

CCM Sequence Errors**Table 3-2194 CCM Sequence Errors**

| Name | Value |
|----------------|---|
| Description | The total number of out-of-sequence CCMs received from all remote MEPs. |
| Displayed name | CCM Sequence Errors |
| OSS name | <code>ccmSeqErrs</code> |
| Read-only | no |
| Tab Panel | General ccm |
| Type | INT |

CCM TLV Ignore
Table 3-2195 CCM TLV Ignore

| Name | Value |
|----------------|---|
| Default | yes:none |
| Description | specifies the set of TLVs that are received in a CCM PDU for the Remote MEP state machine of the MEP that will be validated for format correctness but their values will be ignored and marked 'Absent' by ETH-CFM. |
| Displayed name | CCM TLV Ignore |
| OSS name | ccmTlvIgnore |
| Read-only | no |
| Tab Panel | General ccm |
| Type | ethernetoam.CcmTlvIgnoreType |

Continuously Running Tests**Table 3-2196 Continuously Running Tests**

| Name | Value |
|----------------|------------------------------|
| Default | yes:0 |
| Displayed name | Continuously Running Tests |
| OSS name | totalNumberOfContinuousTests |
| Read-only | yes |
| Tab Panel | General mep |
| Type | INT |

Control MEP**Table 3-2197 Control MEP**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies if this is to be a control MEP or not. Only applicable to Ethernet Tunnel Path Endpoint MEPs. |
| Displayed name | Control MEP |
| OSS name | controlMep |
| Read-only | no |
| Tab Panel | General ccm |
| Type | BOOL |

Control Sap Tag
Table 3-2198 Control Sap Tag

| Name | Value |
|----------------|--------------------------------|
| Default | yes:0 |
| Description | Specifies the Control SAP tag. |
| Displayed name | Control Sap Tag |
| Maximum | 768 |
| Minimum | 0 |
| OSS name | controlSapTag |
| Read-only | no |
| Tab Panel | General ccm |
| Type | INT |

Create Redundant MEP**Table 3-2199 Create Redundant MEP**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Used to automatically create a redundant version of this MEP on a MC-LAG, this will copy the MEP Id and MacAddress from this MEP to the new Redundant MEP. |
| Displayed name | Create Redundant MEP |
| OSS name | createRedundantMep |
| Read-only | no |
| Tab Panel | General redundantMep |
| Type | BOOL |

CSF Direction**Table 3-2200 CSF Direction**

| Name | Value |
|----------------|---------------|
| Default | yes:disable |
| Displayed name | CSF Direction |
| OSS name | csfDirection |
| Read-only | no |
| Tab Panel | General csf |

Table 3-2200 CSF Direction (continued)

| Name | Value |
|--------------------------|------------------|
| Type | CSFDirectionType |
| Enumerated types: | |
| Bidirectional | |
| Disable | |
| Unidirectional | |

CSF Interval

Table 3-2201 CSF Interval

| Name | Value |
|--------------------------|---------------------|
| Default | yes:CCM60 |
| Displayed name | CSF Interval |
| OSS name | csfInterval |
| Read-only | no |
| Tab Panel | General csf |
| Type | CCMIntervalNameType |
| Enumerated types: | |
| 1 s | |
| 10 ms | |
| 10 s | |
| 100 ms | |
| 3.33 ms | |
| 60 s | |
| 600 s | |

CSF Priority

Table 3-2202 CSF Priority

| Name | Value |
|----------------|--------------|
| Default | yes:7 |
| Displayed name | CSF Priority |
| Maximum | 7 |
| Minimum | 0 |

Table 3-2202 CSF Priority (continued)

| Name | Value |
|-------------|-------------|
| OSS name | csfPriority |
| Read-only | no |
| Tab Panel | General csf |
| Type | INT |

CSF Rx Count**Table 3-2203 CSF Rx Count**

| Name | Value |
|----------------|--|
| Description | Specifies the number of CSF frames received on the MEP since the time CSF was enabled (read only). |
| Displayed name | CSF Rx Count |
| OSS name | csfRxCount |
| Read-only | yes |
| Tab Panel | eth_csf csf_fault |
| Type | INT |

CSF Rx Frame State**Table 3-2204 CSF Rx Frame State**

| Name | Value |
|----------------|---|
| Default | yes:dci |
| Description | Indicates the state of the received CSF frames for the MEP (read only). |
| Displayed name | CSF Rx Frame State |
| OSS name | csfRxState |
| Read-only | yes |
| Tab Panel | eth_csf csf_fault |
| Type | ethernetoam.ClientSignalFaultType |

CSF Rx Interval
Table 3-2205 CSF Rx Interval

| Name | Value |
|----------------|---|
| Description | Indicates the CSF Interval received in the most recent CSF frame (read only). |
| Displayed name | CSF Rx Interval |
| OSS name | csfRxInterval |
| Read-only | yes |
| Tab Panel | eth_csf csf_fault |
| Type | INT |

CSF Rx Multiplier**Table 3-2206 CSF Rx Multiplier**

| Name | Value |
|----------------|--|
| Default | yes:3.5 |
| Description | Specifies the receive period multiplier used for timing out CSF, in increments of 5. |
| Displayed name | CSF Rx Multiplier |
| Maximum | 30 |
| Minimum | 0 |
| OSS name | csfRxMultiplier |
| Read-only | no |
| Tab Panel | eth_csf csf_fault |
| Type | FLOAT |

Daughter Card For Incoming LBM Without TLV**Table 3-2207 Daughter Card For Incoming LBM Without TLV**

| Name | Value |
|----------------|--|
| Description | Specifies MDA that handles the incoming LBM with no TLV (read only). |
| Displayed name | Daughter Card For Incoming LBM Without TLV |
| OSS name | lbmNoTLVMdaNum |
| Read-only | yes |
| Tab Panel | General loopback |
| Type | INT |

Defect Flags

Table 3-2208 Defect Flags

| Name | Value |
|----------------|-------------------------------------|
| Default | yes:none |
| Description | Specifies the defects for this MEP. |
| Displayed name | Defect Flags |
| OSS name | mepDefects |
| Read-only | yes |
| Tab Panel | General ccm |
| Type | ethernetoam.MepDefects |

Description

Table 3-2209 Description

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | The value of <code>tmnxDot1agCfmMepFacilityVlanId</code> specifies, along with <code>tmnxDot1agCfmMepFacilityIfIndex</code> and <code>tmnxDot1agCfmMepFacilityType</code> , the encapsulation value of the port or interface associated with this MEP. |
| Displayed name | Description |
| Maximum | 80 |
| OSS name | description |
| Read-only | no |
| Tab Panel | General mep |
| Type | STRING |

Direction

Table 3-2210 Direction

| Name | Value |
|-----------------------|---|
| Default | yes:down |
| Description | Specifies the direction up or down for the MEP. Virtual MEP can only have UP direction. |
| Displayed name | Direction |
| Mandatory on creation | yes |
| OSS name | direction |

Table 3-2210 Direction (continued)

| Name | Value |
|-------------|-----------------------|
| Read-only | no |
| Tab Panel | General mep |
| Type | ethernetoam.Direction |

DMR Frames Transmitted**Table 3-2211 DMR Frames Transmitted**

| Name | Value |
|----------------|--|
| Description | Specifies number of DMR frames transmitted on the MEP (read only). |
| Displayed name | DMR Frames Transmitted |
| OSS name | dmrTxCount |
| Read-only | yes |
| Tab Panel | test General |
| Type | INT |

Enable Client Signal Fault**Table 3-2212 Enable Client Signal Fault**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies whether received CSF (Client Signal Fault) frames are processed by the Maintenance Entity Group (MEG). |
| Displayed name | Enable Client Signal Fault |
| OSS name | csfEnable |
| Read-only | no |
| Tab Panel | eth_csf csf_fault |
| Type | BOOL |

Enable LMM Session Stats Collection**Table 3-2213 Enable LMM Session Stats Collection**

| Name | Value |
|---------|-----------|
| Default | yes:false |

Table 3-2213 Enable LMM Session Stats Collection (continued)

| Name | Value |
|----------------|---|
| Description | The value of ImmCollectStats specifies whether or not to compute the Y.1731 Ethernet Loss Measurement (ETH-LM) 'RxFCL' and 'TxFCI' service frame counters for the specified MEP. The 'RxFCL' and 'TxFCI' counters are used by ETH-LM tests. |
| Displayed name | Enable LMM Session Stats Collection |
| OSS name | ImmCollectStats |
| Read-only | no |
| Tab Panel | General mep |
| Type | BOOL |

Enable Test**Table 3-2214 Enable Test**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether Y1731 Dual-Ended Loss Test is enabled when CC messages are enabled. |
| Displayed name | Enable Test |
| OSS name | dualEndedLossEnable |
| Read-only | no |
| Tab Panel | test dualEndedLoss |
| Type | BOOL |

Eth Test Enabled**Table 3-2215 Eth Test Enabled**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies whether ETH Test frames are generated from the Maintenance Entity Group (MEG). |
| Displayed name | Eth Test Enabled |
| OSS name | ethTestEnable |
| Read-only | no |
| Tab Panel | test General |
| Type | BOOL |

Eth Test Pattern

Table 3-2216 Eth Test Pattern

| Name | Value |
|--------------------------|--|
| Default | yes:allZerosNoCrc |
| Description | Specifies the data-content of the AIS test frames. |
| Displayed name | Eth Test Pattern |
| OSS name | ethTestPattern |
| Read-only | no |
| Tab Panel | test General |
| Type | MepEthTestPatternType |
| Enumerated types: | |
| | AllOnesCrc |
| | AllOnesNoCrc |
| | AllZerosCrc |
| | AllZerosNoCrc |

Eth Test Threshold

Table 3-2217 Eth Test Threshold

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Specifies when a tmnxDot1agCfmMepEthTestComplete notification is sent. If tmnxDot1agCfmMepEthTestThreshold is set to zero (0), a notification is sent on the completion of any test for this MEP. |
| Displayed name | Eth Test Threshold |
| Maximum | 11840 |
| Minimum | 0 |
| OSS name | ethTestThreshold |
| Read-only | no |
| Tab Panel | test General |
| Type | INT |
| Units | number of bit-errors |

Ethernet Ring Path Endpoint

Table 3-2218 Ethernet Ring Path Endpoint

| Name | Value |
|-----------------------|---|
| Default | yes: |
| Description | Specifies the Ethernet Tunnel Path Endpoint pointer that this regular MEP is associated with. |
| Displayed name | Ethernet Ring Path Endpoint |
| Mandatory on creation | yes |
| OSS name | ethRingPathEndptPointer |
| Read-only | no |
| Tab Panel | General from_ethRing |
| Type | STRING |

Ethernet Tunnel Path Endpoint

Table 3-2219 Ethernet Tunnel Path Endpoint

| Name | Value |
|-----------------------|---|
| Default | yes: |
| Description | Specifies the Ethernet Tunnel Path Endpoint pointer that this regular MEP is associated with. |
| Displayed name | Ethernet Tunnel Path Endpoint |
| Mandatory on creation | yes |
| OSS name | ethTunnelPathEndptPointer |
| Read-only | no |
| Tab Panel | General from_ethTunnel |
| Type | POINTER |

Facility Fault Notify

Table 3-2220 Facility Fault Notify

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | The value of FcltyFaultNotify specifies whether or not a fault detected on this Facility MEP will notify the SAPs and Facility MEPs associated to this MEP. This object pertains to Facility MEPs only (Port and LAG). |
| Displayed name | Facility Fault Notify |
| OSS name | fcltyFaultNotify |

Table 3-2220 Facility Fault Notify (continued)

| Name | Value |
|-------------|---------------------|
| Read-only | no |
| Tab Panel | General facilityMep |
| Type | BOOL |

Facility Type

Table 3-2221 Facility Type

| Name | Value |
|----------------|--|
| Default | yes:nonFacilityType |
| Description | The value of <code>tmnxDot1agCfmMepFacilityType</code> specifies, along with <code>tmnxDot1agCfmMepFacilityIfIndex</code> and <code>tmnxDot1agCfmMepFacilityVlanId</code> , whether the port or interface is associated with this MEP. |
| Displayed name | Facility Type |
| OSS name | facilityType |
| Read-only | yes |
| Tab Panel | General facilityMep |
| Type | ethernetoam.FacilityType |

Facility VLAN ID

Table 3-2222 Facility VLAN ID

| Name | Value |
|-----------------------|--|
| Default | yes:0 |
| Description | The value of <code>FacilityVlanId</code> specifies the encapsulation value of the LAG MEP. When VLAN ID is set, then the LAG MEP will be a Tunnel MEP. And a logical tunnel is created with the same VLAN ID. Tunnel Mep is associated with Service SAPs, if the SAPs Outer Encap Value is the same value of the VLAN ID. Thus the Oper State of these SAPs will be affected by the Tunnel Facility Mep, if the Facility Fault Notify is set on the Tunnel Mep, and Site/SAP tunnel fault will be set to accept. |
| Displayed name | Facility VLAN ID |
| Mandatory on creation | yes |
| Maximum | 4094 |
| Minimum | 0 |
| OSS name | facilityVlanId |
| Read-only | no |
| Tab Panel | General facilityMep |

Table 3-2222 Facility VLAN ID (continued)

| Name | Value |
|------|-------|
| Type | INT |

Failed AIS Frame Transmits**Table 3-2223 Failed AIS Frame Transmits**

| Name | Value |
|----------------|---|
| Description | The value of <code>tmnxDot1agCfmMepEthAisTxFail</code> indicates the number of AIS frames the MEP failed to transmit due to resource limitations (read only). |
| Displayed name | Failed AIS Frame Transmits |
| OSS name | aisTxFail |
| Read-only | yes |
| Tab Panel | ais General |
| Type | INT |

Fault Alarm Time**Table 3-2224 Fault Alarm Time**

| Name | Value |
|----------------|---|
| Default | yes:250 |
| Description | The time that defects must be present before a Fault Alarm is issued. |
| Displayed name | Fault Alarm Time |
| Maximum | 1000 |
| Minimum | 250 |
| OSS name | mepFngAlarmTime |
| Read-only | no |
| Step | 10 |
| Tab Panel | General fault |
| Type | INT |
| Units | Centiseconds |

Fault Propagation
Table 3-2225 Fault Propagation

| Name | Value |
|--------------------------|--|
| Default | yes:disabled |
| Description | The value of <code>tmnxDot1agCfmMepFaultPropagation</code> specifies what action should be taken by the MEP if a fault is detected in the service containing the MEP. When this object is set to 'disabled (0)', no additional fault propagation will occur. When this object is set to 'useIfStatusTLV (1)', the MEP will send an interface status TLV in the next CCM indicating fault when fault is detected, even if the MEP itself has not detected a fault. When this object is set to 'suspendCCM (2)', faults will be propagated by stopping the regular CCM transmissions entirely. Once the fault is cleared, the regular CCM transmissions will resume. |
| Displayed name | Fault Propagation |
| OSS name | faultPropagation |
| Read-only | no |
| Tab Panel | General ccm |
| Type | FaultPropagationEnum |
| Enumerated types: | |
| Disabled | |
| SuspendCCM | |
| UseIfStatusTLV | |

Fault Reset Time**Table 3-2226 Fault Reset Time**

| Name | Value |
|----------------|--|
| Default | yes:1000 |
| Description | The time that defects must be absent before resetting a Fault Alarm. |
| Displayed name | Fault Reset Time |
| Maximum | 1000 |
| Minimum | 250 |
| OSS name | mepFngResetTime |
| Read-only | no |
| Step | 10 |
| Tab Panel | General fault |
| Type | INT |
| Units | Centiseconds |

Generate AIS Frames

Table 3-2227 Generate AIS Frames

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether AIS frames are generated for client MEP-s immediately when port down is detected on a SAP where server MEP resides. |
| Displayed name | Generate AIS Frames |
| OSS name | txAisOnPortDown |
| Read-only | no |
| Tab Panel | ais General |
| Type | BOOL |

High-Priority Defect

Table 3-2228 High-Priority Defect

| Name | Value |
|----------------|--|
| Default | yes:none |
| Description | Specifies highest priority defect for this MEP (read only) |
| Displayed name | High-Priority Defect |
| OSS name | mepHighestPrDefect |
| Read-only | yes |
| Tab Panel | General ccm |
| Type | ethernetoam.HighPriorityDefectType |

ID

Table 3-2229 ID

| Name | Value |
|-----------------------|------------------------|
| Default | yes:0 |
| Description | The identifier for MP. |
| Displayed name | ID |
| Mandatory on creation | yes |
| Maximum | 8191 |
| Minimum | 1 |
| OSS name | id |

| Read-only | no |
| Tab Panel | General from_nwInterface |
| Type | POINTER |

One-way-delay Test Threshold

Table 3-2250 One-way-delay Test Threshold

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Specifies when a tmnxDot1agCfmMepDMTestComplete notification is sent for a one-way-delay test. If tmnxDot1agCfmMepOWDTThreshold is set to zero (0), a notification is sent on the completion of any one-way-delay-test for this MEP. |
| Displayed name | One-way-delay Test Threshold |
| Maximum | 600 |
| Minimum | 0 |
| OSS name | owdtThreshold |
| Read-only | no |
| Tab Panel | test General |
| Type | INT |
| Units | seconds |

Operational Mac Address
Table 3-2251 Operational Mac Address

| Name | Value |
|----------------|--|
| Description | Specifies the actual MAC address used by the MP (read only). |
| Displayed name | Operational Mac Address |
| OSS name | operationalMacAddress |
| Read-only | yes |
| Tab Panel | General mep |
| Type | MACADDR |

Port**Table 3-2252 Port**

| Name | Value |
|-----------------------|---|
| Default | yes: |
| Description | Specifies the Port pointer that this Facility MEP is associated with. |
| Displayed name | Port |
| Mandatory on creation | yes |
| OSS name | portPointer |
| Read-only | no |
| Tab Panel | General from_port |
| Type | POINTER |

Primary VLAN Enable**Table 3-2253 Primary VLAN Enable**

| Name | Value |
|-----------------------|---|
| Default | yes:false |
| Description | Specifies whether MEP is using a Primary VLAN ID. |
| Displayed name | Primary VLAN Enable |
| Mandatory on creation | yes |
| OSS name | primaryVlanEnable |
| Read-only | no |
| Tab Panel | General mep |
| Type | BOOL |

Primary VLAN ID
Table 3-2254 Primary VLAN ID

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Specifies the Primary VLAN Id associated with the MEP. |
| Displayed name | Primary VLAN ID |
| OSS name | primaryVlanId |
| Read-only | yes |
| Tab Panel | General mep |
| Type | LONG |

Priority Level for CCM**Table 3-2255 Priority Level for CCM**

| Name | Value |
|----------------|---|
| Default | yes:7 |
| Description | Specifies the ccm-interval for the MEP. |
| Displayed name | Priority Level for CCM |
| Maximum | 7 |
| Minimum | 0 |
| OSS name | ccmLtmPriority |
| Read-only | no |
| Tab Panel | General ccm |
| Type | INT |

Redundant MEP**Table 3-2256 Redundant MEP**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Specifies a MEP pointer to the Active/Standby LAG Facility MEP. |
| Displayed name | Redundant MEP |
| OSS name | redundantMepPointer |
| Read-only | yes |
| Tab Panel | General redundantMep |

Table 3-2256 Redundant MEP (continued)

| Name | Value |

RMD**Table 3-2257 RMD**

| Name | Value |
|-----------------------|---|
| Default | yes: |
| Description | Specifies the Remote Managed Device that this MEP is associated with. |
| Displayed name | RMD |
| Mandatory on creation | yes |
| OSS name | rmdPointer |
| Read-only | no |
| Tab Panel | General from_rmd |
| Type | POINTER |

Role**Table 3-2258 Role**

| Name | Value |
|--------------------------|---|
| Default | yes:hub |
| Description | Specifies if Test Suite Generation should use this MEP as a Hub or Spoke (Hubs target Hubs and Spokes, Spoke can only target Hubs). |
| Displayed name | Role |
| OSS name | testRole |
| Read-only | no |
| Tab Panel | General testOptions |
| Type | MepRole |
| Enumerated types: | |
| Hub | |
| Spoke | |

SAP

Table 3-2259 SAP

| Name | Value |
|-----------------------|--|
| Default | yes: |
| Description | Specifies the SAP pointer associated with this regular MEP. Pointer to the service interface for this MEP. |
| Displayed name | SAP |
| Mandatory on creation | yes |
| OSS name | sapPointer |
| Read-only | no |
| Tab Panel | General from_sap |
| Type | POINTER |

SDP Binding

Table 3-2260 SDP Binding

| Name | Value |
|-----------------------|---|
| Default | yes: |
| Description | Specifies the sdpBindingPointer that this regular MEP is associated with. |
| Displayed name | SDP Binding |
| Mandatory on creation | yes |
| OSS name | sdpBindingPointer |
| Read-only | no |
| Tab Panel | General from_core |
| Type | POINTER |

Service Site Pointer

Table 3-2261 Service Site Pointer

| Name | Value |
|-----------------------|--|
| Default | yes: |
| Description | Specifies the serviceSitePointer that this virtual MEP is associated with. For SR 7.0, the MEP can only be associated with a B-VPLS Site. For SR 9.0 R4 and above the vMEP can be associated with any VPLS Site. |
| Displayed name | Service Site Pointer |
| Mandatory on creation | yes |

| Default | yes:ipBased |
| Displayed name | Type |
| OSS name | type |
| Read-only | yes |
| Tab Panel | General General |
| Type | MFibEntryType |
| Enumerated types: | |
| IP Based | |
| MAC Based | |

MIP parameters

Associated SAP/SdpBinding

Table 3-2291 Associated SAP/SdpBinding

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Specifies what the MIP is associated with SAP or SdpBinding. |
| Displayed name | Associated SAP/SdpBinding |
| OSS name | association |
| Read-only | yes |
| Tab Panel | General mip |
| Type | STRING |

Direction

Table 3-2292 Direction

| Name | Value |
|-----------------------|---|
| Default | yes:up |
| Description | Specifies the direction up or down for the MIP. |
| Displayed name | Direction |
| Mandatory on creation | yes |
| OSS name | direction |
| Read-only | no |
| Tab Panel | General mip |
| Type | ethernetoam.Direction |

Mac Address

Table 3-2293 Mac Address

| Name | Value |
|----------------|--|
| Description | Specifies the actual MAC address used by the MP (read only). |
| Displayed name | Mac Address |
| OSS name | operationalMacAddress |
| Read-only | yes |
| Tab Panel | General General |

Table 3-2293 Mac Address (continued)

| Tab Panel | General General |

Table 3-2341 Monitor Access Interface Operational State (continued)

| Name | Value |
|------|-------|
| Type | BOOL |

Name**Table 3-2342 Name**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Specifies the Name of the Service Site. It cannot be set to only spaces. Setting to "", "N/A", or "n/a" after creation, will clear Site Name from the node and SAM GUI will display "N/A". |
| Displayed name | Name |
| Maximum | 64 |
| Minimum | 0 |
| OSS name | displayName |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Number of SAPs**Table 3-2343 Number of SAPs**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | The number of access interfaces directly connected to this site. |
| Displayed name | Number of SAPs |
| OSS name | numberOfAccessInterfaces |
| Read-only | yes |
| Tab Panel | General General |
| Type | LONG |

Operational State

Table 3-2344 Operational State

| Name | Value |
|----------------|--|
| Default | yes:unknown |
| Description | The operational status of this service site. |
| Displayed name | Operational State |
| OSS name | operationalState |
| Read-only | yes |
| Tab Panel | General General |
| Type | netw.OperationalState |

Profile

Table 3-2345 Profile

| Name | Value |
|----------------|--|
| Default | yes:out |
| Description | Specifies whether packets in a given forwarding class are considered in-profile or out-of-profile. In-profile packets have a higher transmission priority than out-of-profile packets. |
| Displayed name | Profile |
| OSS name | fcProfile |
| Read-only | no |
| Tab Panel | Mirroring Configuration General |
| Type | qos.Profile |

Remote Source Capable

Table 3-2346 Remote Source Capable

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies whether the sources of the mirrored packets can be on remote sites. If you set this parameter to false, remote source access is not allowed to the mirror destination. |
| Displayed name | Remote Source Capable |
| OSS name | remoteSourceCapable |
| Read-only | no |

MPO Port Position Info parameters

Connected Port Pointer

Table 3-2357 Connected Port Pointer

| Name | Value |
|----------------|--|
| Description | The pointer to the far end port that is connected to/from the underlying logical port. |
| Displayed name | Connected Port Pointer |
| OSS name | connectedPortPointer |
| Read-only | no |
| Tab Panel | General General |
| Type | POINTER |

Connected To/From

Table 3-2358 Connected To/From

| Name | Value |
|----------------|--|
| Description | The far end port name of the port that is connected to/from the underlying logical port. If underlyingPortUsage=used(1), displays the connected to/from port name, else "N/A". |
| Displayed name | Connected To/From |
| OSS name | connectedPortName |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Direction
Table 3-2359 Direction

| Name | Value |
|--------------------------|--|
| Description | The direction (in/out) of the logical pack port underlying at the position given in underlyingPortName. in: Signal direction is into the port. out: Signal direction is from the port. notApplicable: The port is not used, or there is no underlying logical port for this multi-fiber connector. |
| Displayed name | Direction |
| OSS name | underlyingPortDirection |
| Read-only | no |
| Tab Panel | General General |
| Type | Direction |
| Enumerated types: | |
| In | |
| N/A | |
| Out | |

Port**Table 3-2360 Port**

| Name | Value |
|----------------|---|
| Description | The logical pack port name underlying at the position given in underlyingPortPointer. If underlyingPortUsage=used(1), displays the underlying port name, else "Not Used". |
| Displayed name | Port |
| OSS name | underlyingPortName |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Port Pointer**Table 3-2361 Port Pointer**

| Name | Value |
|----------------|--|
| Description | The logical pack port underlying at the position given in INDEX. |
| Displayed name | Port Pointer |
| OSS name | underlyingPortPointer |

| A1Z1 | |
| A1Z2 | |
| A2Z1 | |
| A2Z2 | |
| Protection | |
| Unprotected | |
| Working | |

Administrative State**Table 3-2367 Administrative State**

| Name | Value |
|----------------|---|
| Default | yes:up |
| Description | The administrative state of the service . |
| Displayed name | Administrative State |
| OSS name | administrativeState |
| Read-only | no |
| Tab Panel | General General |
| Type | ServiceState |

Administrative State**Table 3-2368 Administrative State**

| Name | Value |
|----------------|---|
| Default | yes:up |
| Description | The administrative state of the service . |
| Displayed name | Administrative State |
| OSS name | administrativeState |
| Read-only | no |
| Tab Panel | General States |
| Type | ServiceState |

Aggregated Service Site Operational State**Table 3-2369 Aggregated Service Site Operational State**

| Name | Value |
|----------------|--|
| Default | yes:up |
| Description | The operational status of this service site. |
| Displayed name | Aggregated Service Site Operational State |
| OSS name | aggrOperationalState |
| Read-only | yes |
| Tab Panel | General General |
| Type | AggrOperState |

APS Direction
Table 3-2370 APS Direction

| Name | Value |
|--------------------------|--|
| Default | yes:unspecified |
| Description | Indicates the protection direction of the APS Group to be provisioned as part of the ESNCP-protected service |
| Displayed name | APS Direction |
| OSS name | apsDirection |
| Read-only | no |
| Tab Panel | General APS Group |
| Type | ApsDirection |
| Enumerated types: | |
| Bidirectional | |
| Unidirectional | |

APS Direction**Table 3-2371 APS Direction**

| Name | Value |
|--------------------------|---|
| Default | yes:unidirectional |
| Description | Duplicated from ApsGroup. Applicable only for y-cable protected service in creation mode. |
| Displayed name | APS Direction |
| OSS name | apsDirection |
| Read-only | no |
| Tab Panel | General YCable APS Group |
| Type | ApsDirection |
| Enumerated types: | |
| Bidirectional | |
| Unidirectional | |

Ason Domain**Table 3-2372 Ason Domain**

| Name | Value |
|---------|-------|
| Default | yes: |

Table 3-2372 Ason Domain (continued)

| Name | Value |
|-----------------------|--|
| Description | Applies to the control plane segment only. |
| Displayed name | Ason Domain |
| Mandatory on creation | yes |
| OSS name | asonDomainPointer |
| Read-only | no |
| Tab Panel | General Control Plane |
| Type | POINTER |

CE-VLANID**Table 3-2373 CE-VLANID**

| Name | Value |
|----------------|---|
| Description | Represents the CE VLANID of the vts map |
| Displayed name | CE-VLANID |
| OSS name | vtsMapCEVLANID |
| Read-only | no |
| Tab Panel | General VLAN Configuration Details |
| Type | STRING |

CE-VLANID - AZ**Table 3-2374 CE-VLANID - AZ**

| Name | Value |
|----------------|---|
| Description | Represents the ingress CE VLANID of the vts map |
| Displayed name | CE-VLANID - AZ |
| OSS name | vtsMapIngressCEVLANID |
| Read-only | no |
| Tab Panel | General VLAN Configuration Details |
| Type | STRING |

CE-VLANID - ZA
Table 3-2375 CE-VLANID - ZA

| Name | Value |
|----------------|--|
| Description | Represents the egress CE VLANID of the vts map |
| Displayed name | CE-VLANID - ZA |
| OSS name | vtsMapEgressCEVLANID |
| Read-only | no |
| Tab Panel | General VLAN Configuration Details |
| Type | STRING |

Committed Burst Size - AZ (Kbytes)**Table 3-2376 Committed Burst Size - AZ (Kbytes)**

| Name | Value |
|--------------------------|---|
| Default | yes:256 |
| Description | Represents the minimum committed burst rate that the service supports on the AZ direction |
| Displayed name | Committed Burst Size - AZ (Kbytes) |
| OSS name | vtsCommittedBurstRate |
| Read-only | no |
| Tab Panel | General VLAN Configuration Details |
| Type | CbsAndEbsRate |
| Enumerated types: | |
| 1024 | |
| 128 | |
| 16 | |
| 16384 | |
| 2048 | |
| 256 | |
| 32 | |

| Type | EthernetOAMFaultMode |
| Enumerated types: | |
| | IEEE |
| | ITU |

Grace Period TX

Table 3-2441 Grace Period TX

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | The value of tmnxDot1agCfmGracePeriod indicates whether or not some portion of the locally configured ETH-CFM MEPs are transmitting grace period notifications to their peers. A value of 'true' indicates that a grace period is being transmitted, a value of 'false' indicates no grace period information is being sent. Only admin up and ccm-enabled local MEPs in an association with a ccm-interval of 1 second or faster are eligible to transmit grace period information in the CCM PDUs. Grace period information is also transmitted in AIS PDUs if they have a 1 second period. |
| Displayed name | Grace Period TX |
| OSS name | gracePeriodTx |
| Read-only | yes |
| Tab Panel | General GracePeriod |
| Type | BOOL |

Grace Period TX Enabled
Table 3-2442 Grace Period TX Enabled

| Name | Value |
|----------------|---|
| Default | yes:true |
| Description | The value of <code>tmnxDot1agCfmGraceTxEnable</code> specifies whether or not grace period notifications will be sent to the ETH-CFM remote MEP peers. The value 'true' enables grace period notifications, and the value 'false' suppresses the notifications. During an outage, the modification of this object from 'true' to 'false' will cause an immediate clear of all grace period notifications, after which no further notifications will be sent. A modification of this object from 'false' to 'true' will not enable the transmission of grace period for any outages currently in progress but will take effect for subsequent outages. |
| Displayed name | Grace Period TX Enabled |
| OSS name | graceTxEnable |
| Read-only | no |
| Tab Panel | General GracePeriod |
| Type | BOOL |

MC LAG Prop Hold Time**Table 3-2443 MC LAG Prop Hold Time**

| Name | Value |
|----------------|--|
| Default | yes:1 |
| Description | The value of <code>tmnxDot1agCfmMcLagPropHoldTime</code> specifies the duration, in seconds, of a timer that is activated when an MC-LAG port or protocol changes state. While the timer is active, no fault set or clear is propagated to the MC-LAG SAP's CFM MEP. The outstanding hold time can be monitored by polling the value of <code>sapEthCfmMcLagPropHoldTimeRemain</code> for a particular SAP. When set to the value zero (0), no delay in response to a port or protocol change will be observed. This object is meaningful only when <code>tmnxDot1agCfmMcLagStdbbyInactive</code> is set to the value 'enabled (1)', otherwise an SNMP Set operation will result in an <code>inconsistentValue</code> error and the result of an SNMP Get operation will be undefined. |
| Displayed name | MC LAG Prop Hold Time |
| Maximum | 60 |
| Minimum | 0 |
| OSS name | mcLagPropHoldTime |
| Read-only | no |
| Tab Panel | General mclag |
| Type | LONG |
| Units | seconds |

MC LAG Standby Inactive
Table 3-2444 MC LAG Standby Inactive

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | The value of McLagStdbyInactive specifies whether or not ETH-CFM MEPs configured on Multi-Chassis LAG ports are aware of MC-LAG port active/standby states. When this object is 'true (1)', MEPs configured on a Multi-Chassis LAG port will act as if they are administratively shutdown if running on a standby port, and will only be operational on an active MC-LAG port. When this object is 'false (2)', MEPs configured on a Multi-Chassis LAG port will operate regardless of the MC-LAG port active and standby states. |
| Displayed name | MC LAG Standby Inactive |
| OSS name | mcLagStdbyInactive |
| Read-only | no |
| Tab Panel | General mlag |
| Type | BOOL |

MEP ID**Table 3-2445 MEP ID**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | The MEP Id will be used when auto MEP Id generation is used. The user will be able to choose a unique starting MEP Id for each NE managed by SAM, that supports MEPs. When a MEP is created on an NE with Mep Id configured, then the configured MEP Id will be used. If that MEP Id is already used by the NE, then the next available MEP Id will be used. |
| Displayed name | MEP ID |
| Maximum | 8191 |
| Minimum | 0 |
| OSS name | id |
| Read-only | no |
| Tab Panel | General General |
| Type | LONG |

Sender ID Name**Table 3-2446 Sender ID Name**

| Name | Value |
|---------|-------|
| Default | yes: |

Table 3-2446 Sender ID Name (continued)

| Name | Value |
|----------------|---|
| Description | The value of <code>tmnxDot1agCfmSenderIdName</code> specifies the locally defined sender-id name that is inserted in all CFM transmitted PDUs. The value of this object is only meaningful if the value of <code>tmnxDot1agCfmSenderIdType</code> is set to the value 'local (2)'. Otherwise the value of this object MUST be the empty string. The value of this object MUST be set to a non-empty string in the same SNMP PDU as the modification of <code>tmnxDot1agCfmSenderIdType</code> when the type is assigned to the value 'local (2)'. Modification of the type away from 'local (2)' will automatically reset the value to its default value. |
| Displayed name | Sender ID Name |
| Maximum | 45 |
| OSS name | <code>senderIdName</code> |
| Read-only | no |
| Tab Panel | General SenderId |
| Type | STRING |

Sender ID Type**Table 3-2447 Sender ID Type**

| Name | Value |
|--------------------------|--|
| Default | <code>yes:senderIdSystem</code> |
| Description | The value of <code>tmnxDot1agCfmSenderIdType</code> specifies the type of sender identification that is transmitted in CFM PDUs generated from this system. The value of 'none (0)' indicates that there is no sender-id information transmitted in the PDUs. 'system (1)' indicates that the system's name (TIMETRA-CHASSIS-MIB:: <code>tmnxChassisName</code>) is inserted in transmitted PDUs, while 'local (2)' indicates that the value as defined in <code>tmnxDot1agCfmSenderIdName</code> is transmitted. |
| Displayed name | Sender ID Type |
| OSS name | <code>senderIdType</code> |
| Read-only | no |
| Tab Panel | General SenderId |
| Type | <code>Dot1agCfmSenderIdTypeEnum</code> |
| Enumerated types: | |
| Local | |
| System | |

SLM Inactivity Timer
Table 3-2448 SLM Inactivity Timer

| Name | Value |
|----------------|---|
| Default | yes:100 |
| Description | The value of inactivityTimer specifies the duration, in seconds, that the system will maintain Synthetic Loss Measurement (SLM) reply (SLR) data for individual two-way tests in the absence of receiving SLM frames. The system may be blocked in responding to new two-way SLM tests due to an excessive inactive timer duration. In this case, reducing this object's value, thus reducing the retention time for existing latent SLR test data, will help free test resources allowing the system to respond to new two-way SLM tests." |
| Displayed name | SLM Inactivity Timer |
| Maximum | 100 |
| Minimum | 10 |
| OSS name | inactivityTimer |
| Read-only | no |
| Tab Panel | General General |
| Type | LONG |
| Units | seconds |

NE Maintenance Entity Group parameters

Card Subtype
Table 3-2449 Card Subtype

| Name | Value |
|----------------|---|
| Description | The type of the card provisioned on the applicable nodes. |
| Displayed name | Card Subtype |
| OSS name | assignedCardSubType |
| Read-only | yes |
| Tab Panel | General general |
| Type | equipment.CardSubType |

Card/RMD**Table 3-2450 Card/RMD**

| Name | Value |
|-----------------------|---|
| Default | yes: |
| Description | The name of this property is misleading. It can either be referencing a Cardslot or an CFM capable remotely managed device (RMD). |
| Displayed name | Card/RMD |
| Mandatory on creation | yes |
| OSS name | ethernetSwitchCardPointer |
| Read-only | no |
| Tab Panel | General general |
| Type | POINTER |

CCM Interval**Table 3-2451 CCM Interval**

| Name | Value |
|--------------------------|--|
| Default | yes:CCM10 |
| Description | Specifies the ccm-interval for this MEG. |
| Displayed name | CCM Interval |
| OSS name | ccmInterval |
| Read-only | no |
| Tab Panel | General general |
| Type | CCMIntervalNameType |
| Enumerated types: | |
| 1 s | |
| 10 ms | |
| 10 s | |
| 100 ms | |
| 3.33 ms | |
| 60 s | |
| 600 s | |

CFM Hold Down Timer
Table 3-2452 CFM Hold Down Timer

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Specifies the time, in centiseconds, that a MEP in the association will delay declaring a fault. |
| Displayed name | CFM Hold Down Timer |
| Maximum | 1000 |
| Minimum | 0 |
| OSS name | cfmHoldDownTimer |
| Read-only | no |
| Tab Panel | General general |
| Type | INT |
| Units | Centiseconds |

Enable Auto Remote MEP Discovery**Table 3-2453 Enable Auto Remote MEP Discovery**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | The value of autoRemoteMepDiscover specifies if remote MEP automatic discovery is enabled in the association. |
| Displayed name | Enable Auto Remote MEP Discovery |
| OSS name | autoRemoteMepDiscover |
| Read-only | no |
| Tab Panel | General general |
| Type | BOOL |

Facility ID-Permission**Table 3-2454 Facility ID-Permission**

| Name | Value |
|----------------|---|
| Default | yes:sendIdNone |
| Description | Enumerated value indicating what, if anything, is to be included in the Sender ID TLV (21.5.3) transmitted by MPS configured in this MEG. This object is configurable on MA entries that do not consist of component entries. |
| Displayed name | Facility ID-Permission |

Table 3-2454 Facility ID-Permission (continued)

| Name | Value |

Unicast Hub MEP**Table 3-2465 Unicast Hub MEP**

| Name | Value |
|----------------|------------------------------|
| Default | yes: |
| Description | Specifies a Hub MEP pointer. |
| Displayed name | Unicast Hub MEP |
| OSS name | hubMepPointer |
| Read-only | no |
| Tab Panel | General general |
| Type | POINTER |

VLAN ID**Table 3-2466 VLAN ID**

| Name | Value |
|-----------------------|-------------------------------------|
| Default | yes:1 |
| Description | VLAN ID of the VLAN Element object. |
| Displayed name | VLAN ID |
| Mandatory on creation | yes |
| Maximum | 4094 |
| Minimum | 1 |
| OSS name | vlanId |
| Read-only | no |
| Tab Panel | General general |
| Type | INT |

NE Schedulable Test parameters

Accounting Policy ID

Table 3-2467 Accounting Policy ID

| Name | Value |
|----------------|-------------------------------|
| Default | yes: |
| Displayed name | Accounting Policy ID |
| OSS name | accountingPolicyObjectPointer |
| Read-only | no |
| Tab Panel | Accounting Accounting Policy |
| Type | POINTER |

Administrative State

Table 3-2468 Administrative State

| Name | Value |
|----------------|---|
| Default | yes:enabled |
| Description | The administrative state of the NE schedulable test. The associated ping/trace tests cannot be executed if this administrative state is disabled. |
| Displayed name | Administrative State |
| OSS name | administrativeState |
| Read-only | no |
| Tab Panel | General General |
| Type | sas.TestAdminState |

Card TCA Profile

Table 3-2469 Card TCA Profile

| Name | Value |
|----------------|------------------------------|
| Default | yes: |
| Displayed name | Card TCA Profile |
| OSS name | cardStatsTCAProfilePointer |
| Read-only | no |
| Tab Panel | Accounting Accounting Policy |
| Type | POINTER |

Deployed Test

Table 3-2470 Deployed Test

| Name | Value |
|----------------|--|
| Description | Points to the {{sas.DeployedTest}} which is schedulable on the node. |
| Displayed name | Deployed Test |
| OSS name | deployedTest |
| Read-only | yes |
| Tab Panel | General General |
| Type | POINTER |

Description

Table 3-2471 Description

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | The description of the NE schedulable test. Not interpreted by SAM. |
| Displayed name | Description |
| Maximum | 80 |
| Minimum | 0 |
| OSS name | description |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Failures

Table 3-2472 Failures

| Name | Value |

SNMP Source

Table 3-2533 SNMP Source

| Name | Value |
|--------------------------|--|
| Description | false - SNMP requests can be made using any of the NEs interface IP addresses or Loopback IP address. The source IP address in SNMP trap/reply messages shall be the interface IP address on which the packet leaves the NE. Hence it is the SNMP clients responsibility to be able to associate an NE with multiple IP addresses. true - SNMP requests can be made using ONLY the NEs Loopback IP address. The source IP address in SNMP trap/reply messages shall be fixed as the Loopback IP. Extended Temperature Range for PSS-1. |

Discovery State
Table 3-2551 Discovery State

| Name | Value |
|----------------|--|
| Default | yes:notApplicable |
| Description | Only applicable to the global policy. Set to "inProgress" if the global policy is created as part of the specific NE resync during the full node resync or node discovery. At the end of full node resync, if the resync is successful, the global policy is completely updated from first discovered local policy and its discoveryState is set to "completed". Otherwise, the global policy is not updated and its discoveryState is set to "failed". For "failed" global policy, it will be updated by next successful full node resync or synchronized from the specific local policy. Set to "initialized" if the global policy is created by SNMP trap notification. User may need to synchronize the global policy manually with the specific local policy. Set to "N/A" if the global policy is created or modified by a SAM user. |
| Displayed name | Discovery State |

| Tab Panel | General General |
| Type | STRING |

Discovery State**Table 3-2587 Discovery State**

| Name | Value |
|----------------|--|
| Default | yes:notApplicable |
| Description | Only applicable to the global policy. Set to "InProgress" if the global policy is created as part of the specific NE resync during the full node resync or node discovery. At the end of full node resync, if the resync is successful, the global policy is completely updated from first discovered local policy and its discoveryState is set to "completed". Otherwise, the global policy is not updated and its discoveryState is set to "failed". For "failed" global policy, it will be updated by next successful full node resync or synchronized from the specific local policy. Set to "initialized" if the global policy is created by SNMP trap notification. User may need to synchronize the global policy manually with the specific local policy. Set to "N/A" if the global policy is created or modified by a SAM user. |
| Displayed name | Discovery State |
| OSS name | discoveryState |
| Read-only | yes |
| Tab Panel | General Policy Configuration |
| Type | DiscoveryState |

Distribution Mode

Active Management IP

Table 3-2614 Active Management IP

| Name | Value |
|--------------------------|--|
| Default | yes:outband |
| Displayed name | Active Management IP |
| OSS name | activeManagementIp |
| Read-only | no |
| Tab Panel | Polling.Management Management Preference |
| Type | PollingMode |
| Enumerated types: | |
| In Band | |
| Out Of Band | |
| Primary | |
| Secondary | |

Active Management IP

Table 3-2615 Active Management IP

| Name | Value |
|----------------|--|
| Default | yes:0.0.0.0 |
| Description | Starting in 8.0R1 the initial value for this attribute is always the discovery address which is considered to be the initial management address. If the node's active management IP will change this attribute will be populated with the new management IP. The following scenarios are applicable: - changing the management IP from Out Of Band to Inband and vice-versa - changing the IP address for the active management IP |
| Displayed name | Active Management IP |

Table 3-2615 Active Management IP (continued)

| Name | Value |
|-----------------------|-----------------|
| Mandatory on creation | yes |
| OSS name | ipAddress |
| Read-only | no |
| Tab Panel | General General |
| Type | INETADDR |

Advertise Message**Table 3-2616 Advertise Message**

| Name | Value |
|--------------------------|---|
| Default | no |
| Description | The value of dhcp6AdvertiseMessage specifies the composition of DHCPv6 Advertise Messages in case a DHCP6 application in this system will not assign any addresses to any Identity Association (IA) in a subsequent Request from the client. DHCP6 applications in this system are Relay, Server, Enhanced Subscriber Management (ESM) Proxy and ESM Relay. By default, a DHCP6 application in this system will send an Advertise message to the client that includes the IA containing a Status Code option with status code 'NoAddrsAvail', as specified in Errata 2472. If the bit corresponding to a DHCP6 application is set, that application will send an Advertise message to the client that includes only a Status Code option with code 'NoAddrsAvail'. This system will refuse bit combinations that are not supported: the 'esmRelay' and 'server' bits must be toggled together, and the 'esmProxy' and 'relay' bits are read-only. |
| Displayed name | Advertise Message |
| OSS name | dhcp6AdvertiseMessage |
| Read-only | no |
| Tab Panel | Globals.Subscriber Management DHCPv6 |
| Type | Dhcp6AdvertiseMessage |
| Enumerated types: | |
| ESM Proxy | |
| ESM Relay | |
| Relay | |
| Server | |

Aggregate Rate**Table 3-2617 Aggregate Rate**

| Name | Value |
|----------------|--|
| Default | yes:500000 |
| Description | System-wide aggregate rate to be applied to Access Ingress of every MDA. aluSystemAccessIngAggrRate is only supported on Alcatel-lucent SAR-M. It is set to 0 on other platforms, indicating it's not applicable, and it's not changeable. |
| Displayed name | Aggregate Rate |
| Maximum | 2500000 |

Custom Property 1**Table 3-2635 Custom Property 1**

| Name | Value |
|---------|---------|
| Default | yes:N/A |

Table 3-2635 Custom Property 1 (continued)

| Name | Value |
|----------------|---|
| Description | The label for the network element Custom Property 1 can be modified using the System Preferences form on the 5620 SAM GUI. If you use XML, always use the attribute name "customProperty1". |
| Displayed name | Custom Property 1 |
| Maximum | 80 |
| OSS name | customProperty1 |
| Read-only | no |
| Tab Panel | General Custom Properties |
| Type | STRING |

Custom Property 2**Table 3-2636 Custom Property 2**

| Name | Value |
|----------------|---|
| Default | yes:N/A |
| Description | The label for the network element Custom Property 2 can be modified using the System Preferences form on the 5620 SAM GUI. If you use XML, always use the attribute name "customProperty2". |
| Displayed name | Custom Property 2 |
| Maximum | 80 |
| OSS name | customProperty2 |
| Read-only | no |
| Tab Panel | General Custom Properties |
| Type | STRING |

Custom Property 3**Table 3-2637 Custom Property 3**

| Name | Value |
|----------------|---|
| Default | yes:N/A |
| Description | The label for the network element Custom Property 3 can be modified using the System Preferences form on the 5620 SAM GUI. If you use XML, always use the attribute name "customProperty3". |
| Displayed name | Custom Property 3 |
| Maximum | 80 |

Table 3-2637 Custom Property 3 (continued)

| Name | Value |
|-------------|---------------------------|
| OSS name | customProperty3 |
| Read-only | no |
| Tab Panel | General Custom Properties |
| Type | STRING |

Descriptor Version**Table 3-2638 Descriptor Version**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Indicate the descriptor version (nodal communication + feature availability + capability) used by this Network Element. |
| Displayed name | Descriptor Version |
| Maximum | 255 |
| OSS name | descriptorVersion |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

DNS Domain**Table 3-2639 DNS Domain**

| Name | Value |
|----------------|-----------------------------------|
| Displayed name | DNS Domain |
| Maximum | 252 |
| OSS name | sbiDnsDomain |
| Read-only | no |
| Tab Panel | Polling.General Bof Configuration |
| Type | STRING |

Element Management URL
Table 3-2640 Element Management URL

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | It is used to specify the URL for the NE for element management. The IP address can be identified as a tag in the URL with %IP%. |
| Displayed name | Element Management URL |
| Maximum | 500 |
| OSS name | elementManagerUrl |
| Read-only | no |
| Tab Panel | General Generic NE |
| Type | STRING |

Enable Auto Route Distinguisher**Table 3-2641 Enable Auto Route Distinguisher**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether BGP Auto RD is enabled in the system. |
| Displayed name | Enable Auto Route Distinguisher |
| OSS name | svcBgpAutoRDEnabled |
| Read-only | no |
| Tab Panel | Globals.Service.BGP.General General |
| Type | BOOL |

Enable L3 Management Interface**Table 3-2642 Enable L3 Management Interface**

| Name | Value |
|----------------|--------------------------------|
| Default | yes:false |
| Displayed name | Enable L3 Management Interface |
| OSS name | isL3MgmtItfEnabled |
| Read-only | no |
| Tab Panel | Polling.Management In Band |
| Type | BOOL |

Enable Q in Q Untagged Sap**Table 3-2643 Enable Q in Q Untagged Sap**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | The value of qinqUntaggedSap controls the forwarding of packets on a QinQ X.0 access SAP. When qinqUntaggedSap is set to true, the SAP will only accept: - frames with a single tag matching the SAP's outer tag or, - frames with double tag where the outer tag matches the SAP's outer tag and inner tag is set to 0. When qinqUntaggedSap is set to false, forwarding of packets remains unchanged. |
| Displayed name | Enable Q in Q Untagged Sap |
| OSS name | qinqUntaggedSap |
| Read-only | no |
| Tab Panel | Globals.Ethernet General |
| Type | BOOL |

Enable SNMP Streaming**Table 3-2644 Enable SNMP Streaming**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Displayed name | Enable SNMP Streaming |
| OSS name | snmpStreamEnable |
| Read-only | no |
| Tab Panel | Polling.Management Management Preference |
| Type | BOOL |

End**Table 3-2645 End**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Specifies the end of the the BGP route-distinguisher community value range. Value of svcBgpAutoRDType1CommValEnd must be same or larger of the value of svcBgpAutoRDType1CommValStart |
| Displayed name | End |
| Maximum | 65535 |
| Minimum | 0 |

Table 3-2645 End (continued)

| Name | Value |

|-------|-------|
| Type | LONG |
| Units | % |

Id-Permission**Table 3-2651 Id-Permission**

| Name | Value |
|----------------|--|
| Default | yes:sendIdNone |
| Description | Enumerated value indicating what, if anything, is to be included in the Sender ID TLV (21.5.3) transmitted by MHFs created by the Default Maintenance Domain, for each dot1agCfmDefaultMdEntry whose dot1agCfmDefaultMdIdPermission object contains the value sendIdDefer. Since, in this variable, there is no encompassing Maintenance Domain, the value sendIdDefer is not allowed. After this initialization, this object needs to be persistent upon reboot or restart of a device. |
| Displayed name | Id-Permission |
| OSS name | mhfIdPermission |
| Read-only | no |
| Tab Panel | Globals.CFM Default Maintenance Domain |
| Type | ethernetoam.Dot1agCfmIdPermissionEnum |

IP Address**Table 3-2652 IP Address**

| Name | Value |
|----------------|--|
| Default | yes:0.0.0.0 |
| Description | Indicates IP address to be used for selecting route-distinguisher value in the system. |
| Displayed name | IP Address |
| OSS name | svcBgpAutoRDType1IpAddr |
| Read-only | no |
| Tab Panel | Globals.Service.BGP.General Auto Route Distinguisher |
| Type | INETADDR |

IP Load Balancing
Table 3-2653 IP Load Balancing

| Name | Value |
|--------------------------|---|
| Default | yes:standard |
| Description | The value of <code>tmnxIpLoadBalancing</code> specifies whether or not this node's system IP address is used in the final stage of the load balancing (hashing) algorithm used to choose the LAG member or ECMP route for an outbound packet. If 'systemIp' is selected, this node's system IP address (i.e. <code>TIMETRA-VRTR-MIB::vRiaIpAddress.1.1.1</code>) is used in the final stage of the LAG and ECMP load balancing algorithm. 'systemIp' is supported on <code>iom3-xp</code> IOMs, equivalent IMM, and newer IOM and IMM types. When older IOMs/IMMs are present in a system which has 'systemIp' configured, the older IOMs operate in 'standard' mode. If 'standard' is selected, this node's system IP address is not used in the final stage of the LAG and ECMP load balancing algorithm. 'standard' is supported on all IOM and IMM types. The earlier stages of the load balancing algorithm are controlled by <code>tmnxL4LoadBalancing</code> and <code>tmnxLsrIpLoadBalancing</code> (when applicable). |
| Displayed name | IP Load Balancing |
| OSS name | <code>ipLoadBalancing</code> |
| Read-only | no |
| Tab Panel | Globals.Load Balancing General |

LSR IP Load Balancing**Table 3-2670 LSR IP Load Balancing**

| Name | Value |
|----------------|--|
| Default | yes:label_only |
| Description | The value of lsrIpLoadBalancing specifies whether the IP Header is used in the LAG and ECMP LSR hashing algorithm. This is the global system setting that all ports will inherit. When set to 'label_only' only the label is used in the hashing algorithm. When set to 'label_ip', the IP Header is included in the hashing algorithm. When set to 'ip_only' the IP Header is used exclusively in the hashing Algorithm. When set to 'ethEncapIP' the IP SA/DA fields is used in the hashing Algorithm. |
| Displayed name | LSR IP Load Balancing |
| OSS name | lsrIpLoadBalancing |
| Read-only | no |
| Tab Panel | Globals.Load Balancing General |
| Type | LsrIpLoadBalancing |

| Name | Value |
|--------------------------|-------|
| Enumerated types: | |
| Ethernet Encapsulated IP | |
| IP Only | |
| Label IP | |
| Label Only | |

MAC Notification Count**Table 3-2671 MAC Notification Count**

| Name | Value |
|----------------|--|
| Default | yes:3 |
| Description | The value of macNotifCount specifies number of MAC notification messages to be sent. |
| Displayed name | MAC Notification Count |
| Maximum | 10 |
| Minimum | 1 |
| OSS name | macNotifCount |
| Read-only | no |
| Tab Panel | Globals.Service.General General |
| Type | INT |
| Units | deciseconds |

MAC Notification Interval**Table 3-2672 MAC Notification Interval**

| Name | Value |
|----------------|---|
| Default | yes:1 |
| Description | The value of macNotifInterval specifies time-interval between subsequent MAC notification messages. |
| Displayed name | MAC Notification Interval |
| Maximum | 100 |
| Minimum | 1 |
| OSS name | macNotifInterval |
| Read-only | no |

Table 3-2672 MAC Notification Interval (continued)

| Name | Value |
|-------------|---------------------------------|
| Tab Panel | Globals.Service.General General |
| Type | INT |
| Units | deciseconds |

MAC-Swap Port**Table 3-2673 MAC-Swap Port**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | The port to be used for loopback and hence cannot be used as a SAP. |
| Displayed name | MAC-Swap Port |
| OSS name | noServicePort |
| Read-only | no |
| Tab Panel | Globals.Service.General Loopback No Service Ports |
| Type | POINTER |

Management IP Address**Table 3-2674 Management IP Address**

| Name | Value |
|-----------------------|---|
| Default | yes:0.0.0.0 |
| Description | This represents the NE's management port address. |
| Displayed name | Management IP Address |
| Mandatory on creation | yes |
| Maximum | 50 |
| OSS name | outOfBandAddress |
| Read-only | no |
| Tab Panel | Polling.Management Out Of Band |
| Type | STRING |

Management IP Selection
Table 3-2675 Management IP Selection

| Name | Value |
|--------------------------|--|
| Default | yes:outbandOnly |
| Displayed name | Management IP Selection |
| OSS name | mgmtIpRule |
| Read-only | no |
| Tab Panel | Polling.Management Management Preference |
| Type | PollingRule |
| Enumerated types: | |
| In Band Only | |
| In Band Preferred | |
| Out Of Band Only | |
| Out Of Band Preferred | |
| Primary Only | |
| Primary Preferred | |
| Secondary Only | |
| Secondary Preferred | |

Maximum Cleared Alarms**Table 3-2676 Maximum Cleared Alarms**

| Name | Value |
|----------------|--|
| Default | yes:500 |
| Description | This attribute specifies the maximum number of cleared alarms to store in the alarmClearTable. When this number is reached, the cleared alarms with the earliest clear time will be removed from the table |
| Displayed name | Maximum Cleared Alarms |
| Maximum | 500 |
| Minimum | 0 |
| OSS name | maxClearedAlarms |
| Read-only | no |
| Tab Panel | Globals.Alarm Management General |
| Type | INT |

MHF-Creation**Table 3-2677 MHF-Creation**

| Name | Value |
|----------------|--|
| Default | yes:none |
| Description | A value indicating if the Management entity can create MHFs (MIP Half Function) for the VID, for each dot1agCfmDefaultMdEntry whose dot1agCfmDefaultMdMhfCreation object contains the value defMHFdefer. Since, in this variable, there is no encompassing Maintenance Domain, the value defMHFdefer is not allowed. After this initialization, this object needs to be persistent upon reboot or restart of a device. |
| Displayed name | MHF-Creation |
| OSS name | mhfCreation |
| Read-only | no |
| Tab Panel | Globals.CFM Default Maintenance Domain |
| Type | ethernetoam.MhfCreationEnum |

Mirror Port**Table 3-2678 Mirror Port**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | This port is used for dot1Q mirroring. |
| Displayed name | Mirror Port |
| OSS name | mirrorPort |
| Read-only | no |
| Tab Panel | Globals.Service.General Loopback No Service Ports |
| Type | POINTER |

Multicast Enhanced Load Balancing**Table 3-2679 Multicast Enhanced Load Balancing**

| Default | yes:2 |
| Displayed name | Number of Tries For Up State |
| Maximum | 10 |
| Minimum | 0 |
| OSS name | atmOamRetryUp |
| Read-only | no |
| Tab Panel | ATM ATM OAM |
| Type | INT |

Operational State Transition Interval**Table 3-2684 Operational State Transition Interval**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Specifies the system-wide interval (in seconds) for which a BFD session on an interface transitions from Up to Down and back to Up. A BFD Session Flapped alarm will be raised. This value can be overridden on a per-interface basis. |
| Displayed name | Operational State Transition Interval |
| Maximum | 30 |
| Minimum | 0 |
| OSS name | sysBfdFlapInterval |
| Read-only | no |
| Tab Panel | Globals.BFD General |
| Type | INT |
| Units | seconds |

PBB Source Backbone MAC Address
Table 3-2685 PBB Source Backbone MAC Address

| Name | Value |
|----------------|---|
| Default | yes:00-00-00-00-00-00 |
| Description | The value of svcPbbSrcBVplsMacAddr specifies the source Backbone MAC-Address to be used for Provider Backbone Bridging (PBB) packets. Value of default for this object indicates that chassis MAC address will be used for PBB packets. |
| Displayed name | PBB Source Backbone MAC Address |
| OSS name | pbbSrcBVplsMacAddr |
| Read-only | no |
| Tab Panel | Globals.Service.General General |
| Type | MACADDR |

Persistent Index Status**Table 3-2686 Persistent Index Status**

| Name | Value |
|----------------|---|
| Default | yes:unspecified |
| Displayed name | Persistent Index Status |
| OSS name | persistentIndexStatus |
| Read-only | yes |
| Tab Panel | Polling.General Boot Configuration Status |
| Type | INT |

Persistent SNMP Indices**Table 3-2687 Persistent SNMP Indices**

| Name | Value |

| Not Operational | |
| Up | |

Primary DNS

Table 3-2691 Primary DNS

| Name | Value |
|----------------|-----------------------------------|
| Default | yes:0.0.0.0 |
| Displayed name | Primary DNS |
| OSS name | sbiPrimaryDns |
| Read-only | no |
| Tab Panel | Polling.General Bof Configuration |
| Type | INETADDR |

Primary Route Preference

Table 3-2692 Primary Route Preference

| Name | Value |
|----------------|--|
| Default | yes:outband |
| Description | The value of <code>tmnxEventPrimaryRoutePref</code> specifies the primary routing preference for traffic generated for SNMP notifications and syslog messages. A value of 'inband' specifies that the Logging utility will attempt to use the Base routing context to send SNMP notifications and syslog messages to remote destinations. A value of 'outband' specifies that the Logging utility will attempt to use the management routing context to send SNMP notifications and syslog messages to remote destinations. If the remote destination, as specified by <code>tmnxStdDestAddr</code> or <code>tmnxSyslogTargetAddr</code> , is not reachable via the routing context specified by <code>tmnxEventPrimaryRoutePref</code> , the secondary routing preference as specified by <code>tmnxEventSecondaryRoutePref</code> will be attempted. |
| Displayed name | Primary Route Preference |

| Default | yes:0.0.0.0 |
| Displayed name | Secondary DNS |
| OSS name | sbiSecondaryDns |
| Read-only | no |
| Tab Panel | Polling.General Bof Configuration |
| Type | INETADDR |

Secondary Route Preference

Table 3-2706 Secondary Route Preference

| Name | Value |
|----------------|--|
| Default | yes:inband |
| Description | The value of <code>tmnxEventSecondaryRoutePref</code> specifies the secondary routing preference for traffic generated for SNMP notifications and syslog messages. The routing context specified by the <code>tmnxEventSecondaryRoutePref</code> will be attempted if the remote destination was not reachable by the primary routing preference, specified by <code>tmnxEventPrimaryRoutePref</code> . The value specified for <code>tmnxEventSecondaryRoutePref</code> must be distinct from the value for <code>tmnxEventPrimaryRoutePref</code> . A value of 'inband' specifies that the Logging utility will attempt to use the Base routing context to send SNMP notifications and syslog messages to remote destinations. A value of 'outband' specifies that the Logging utility will attempt to use the management routing context to send SNMP notifications and syslog messages to remote destinations. A value of 'none' specifies that no attempt will be made to send SNMP notifications and syslog messages to remote destinations. If the remote destination, as specified by <code>tmnxStdDestAddr</code> or <code>tmnxSyslogTargetAddr</code> , is not reachable via the routing contexts specified by <code>tmnxEventPrimaryRoutePref</code> and <code>tmnxEventSecondaryRoutePref</code> , the Log utility will fail to send SNMP notifications and syslog messages to the remote destination. |
| Displayed name | Secondary Route Preference |

Separate LI Administration

Table 3-2707 Separate LI Administration

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Admin value of li-separate. Specifies whether or not a non-LI user has access to Lawful Intercept (LI) information. When the value is 'true', a user who does not have the TMETRA-SECURITY-MIB::tmnxUserAccess 'li' bit set will not be allowed to access CLI or SNMP objects in the 'li' context. A change to the value of this object does not take affect until the system is rebooted. |
| Displayed name | Separate LI Administration |
| OSS name | liSeparateAdmin |
| Read-only | no |
| Tab Panel | Polling.General Bof Configuration |
| Type | generic.TruthValue |

Service ID Lag Hashing

Table 3-2708 Service ID Lag Hashing

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | The value specifies how the node distributes LAG link traffic in a VLL service when both ECMP and LAG load balancing are performed. The default value, 'false (1)', preserves the behaviour prior to the introduction of this object: the ingress IOM will select one ECMP interface and one LAG link for all packets on the VLL service based on a modulo of the service ID. The value of 'true (2)' introduces an enhanced distribution which hashes the service-id prior to the LAG link modulo operation. |
| Displayed name | Service ID Lag Hashing |
| OSS name | svcIdLagHashing |
| Read-only | no |
| Tab Panel | Globals.Load Balancing General |

| Type | POINTER |

Total PBB MAC Address Indices in Use
Table 3-2726 Total PBB MAC Address Indices in Use

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Indicates the number of system wide Backbone MAC address indices in use of service this router. |
| Displayed name | Total PBB MAC Address Indices in Use |
| OSS name | svcTotalFdbMimDestEntries |
| Read-only | yes |
| Tab Panel | Globals.Service.General General |
| Type | LONG |

Use Virtual MAC-Swap Port**Table 3-2727 Use Virtual MAC-Swap Port**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether or not a virtual port is assigned as the loopback port. |
| Displayed name | Use Virtual MAC-Swap Port |
| OSS name | isVirtualNoServicePort |
| Read-only | no |
| Tab Panel | Globals.Service.General Loopback No Service Ports |
| Type | BOOL |

Use Virtual Mirror Port**Table 3-2728 Use Virtual Mirror Port**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether or not a virtual port is assigned as the loopback port. |
| Displayed name | Use Virtual Mirror Port |
| OSS name | isVirtualMirrorPort |
| Read-only | no |
| Tab Panel | Globals.Service.General Loopback No Service Ports |
| Type | BOOL |

Use Virtual TestHead Port

Table 3-2729 Use Virtual TestHead Port

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether or not a virtual port is assigned as the loopback port. |
| Displayed name | Use Virtual TestHead Port |
| OSS name | isVirtualTestHeadPort |
| Read-only | no |
| Tab Panel | Globals.Service.General Loopback No Service Ports |
| Type | BOOL |

Use WRED Slopes

Table 3-2730 Use WRED Slopes

| Name | Value |
|--------------------------|---|
| Default | yes:tcp_non_tcp |
| Description | Specifies whether a WRED profile uses both TCP and non-TCP slopes, or if only TCP slopes (high-priority and low-priority) are used. |
| Displayed name | Use WRED Slopes |
| OSS name | useWredSlopes |
| Read-only | no |
| Tab Panel | QoS Quality of Service |
| Type | WredSlopes |
| Enumerated types: | |
| High-Low | |
| TCP-Non-TCP | |

Vendor-Specific ICMP Extensions

Table 3-2731 Vendor-Specific ICMP Extensions

| Name | Value |
|----------------|---------------------------------|
| Default | yes:disabled |
| Displayed name | Vendor-Specific ICMP Extensions |
| OSS name | vendorSpecificIcmpExtensions |
| Read-only | no |

Table 3-2731 Vendor-Specific ICMP Extensions (continued)

| Name | Value |
|-------------|-------------------------|
| Tab Panel | ICMP ICMP Extensions |
| Type | generic.EnabledDisabled |

Virtual MAC-Swap Port**Table 3-2732 Virtual MAC-Swap Port**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | The port to be used for loopback and hence cannot be used as a SAP. |
| Displayed name | Virtual MAC-Swap Port |
| OSS name | virtualNoServicePort |
| Read-only | no |
| Tab Panel | Globals.Service.General Loopback No Service Ports |
| Type | POINTER |

Virtual Mirror Port**Table 3-2733 Virtual Mirror Port**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | This port is used for dot1Q mirroring. |
| Displayed name | Virtual Mirror Port |
| OSS name | virtualMirrorPort |
| Read-only | no |
| Tab Panel | Globals.Service.General Loopback No Service Ports |
| Type | POINTER |

Virtual TestHead Port**Table 3-2734 Virtual TestHead Port**

| Name | Value |
|-------------|---|
| Default | yes: |
| Description | This port is to be assigned to used Y.1564 test head feature. |

Table 3-2734 Virtual TestHead Port (continued)

| Name | Value |
|----------------|---|
| Displayed name | Virtual TestHead Port |
| OSS name | virtualTestHeadPort |
| Read-only | no |
| Tab Panel | Globals.Service.General Loopback No Service Ports |
| Type | POINTER |

Vnode**Table 3-2735 Vnode**

| Name | Value |
|----------------|----------------------|
| Default | yes: |
| Displayed name | Vnode |
| OSS name | virtualNodePointer |
| Read-only | yes |
| Tab Panel | General Virtual Node |
| Type | POINTER |

VPLS Mode**Table 3-2736 VPLS Mode**

| Name | Value |
|--------------------------|--|
| Default | yes:disabled |
| Description | Property used to specify the VPLS mode set on the Network Element. If the node is used for VLAN services, set it to 'disabled'; for VPLS service, set it to 'enabled' for 3.0.R4 and above, or 'qualified' or 'unqualified' for pre 3.0.R4 load. |
| Displayed name | VPLS Mode |
| OSS name | vplsServiceMode |
| Read-only | no |
| Tab Panel | General VPLS Service |
| Type | VplsMode |
| Enumerated types: | |
| Disabled | |
| Enabled | |
| None | |

Table 3-2736 VPLS Mode (continued)

| Name | Value |
|-------------|-------|
| Qualified | |
| Unqualified | |

Zone Count**Table 3-2737 Zone Count**

| Name | Value |
|----------------|------------------|
| Displayed name | Zone Count |
| OSS name | secZoneCount |
| Read-only | no |
| Tab Panel | Security General |
| Type | LONG |

Network Ingress Dot1p parameters**Dot1p****Table 3-2738 Dot1p**

| Name | Value |
|-----------------------|-----------------------------|
| Default | yes:value_0 |
| Displayed name | Dot1p |
| Mandatory on creation | yes |
| OSS name | dot1p |
| Read-only | no |
| Tab Panel | General General |
| Type | qos.Dot1pValueNoDefaultEnum |

Forwarding Class**Table 3-2739 Forwarding Class**

| Name | Value |
|----------------|------------------|
| Default | yes:be |
| Displayed name | Forwarding Class |

Table 3-2739 Forwarding Class (continued)

| Name | Value |
|-------------|-----------------|
| OSS name | forwardingClass |
| Read-only | no |
| Tab Panel | General General |
| Type | qos.FcEnum |

Profile**Table 3-2740 Profile**

| Name | Value |
|----------------|-----------------|
| Default | yes:in |
| Displayed name | Profile |
| OSS name | profile |
| Read-only | no |
| Tab Panel | General General |
| Type | qos.Profile |

Network Interface (NetworkInterface, optical) parameters**Adjacency State****Table 3-2741 Adjacency State**

| Name | Value |
|--------------------------|-----------------------|
| Description | OSPF Adj state. |
| Displayed name | Adjacency State |
| OSS name | tnNetIfCnLinkAdjState |
| Read-only | no |
| Tab Panel | OSPF OSPF |
| Type | OspfAdjacencyState |
| Enumerated types: | |
| 2Way | |
| Down | |
| Exchange | |
| ExchangeStart | |

Table 3-2741 Adjacency State (continued)

| Name | Value |

alarmProfilePointer**Table 3-2742 alarmProfilePointer**

| Name | Value |
|-------------|---------------------|
| OSS name | alarmProfilePointer |
| Read-only | no |
| Tab Panel | General Interface |
| Type | POINTER |

Cost Metric**Table 3-2743 Cost Metric**

| Name | Value |
|----------------|-------------------------------------|
| Description | The Traffic eng metric of the link. |
| Displayed name | Cost Metric |
| Maximum | 65535 |
| Minimum | 1 |
| OSS name | tnNetIfMetric |
| Read-only | no |
| Tab Panel | OSPF OSPF |
| Type | LONG |

Dead Interval**Table 3-2744 Dead Interval**

| Name | Value |
|----------------|--|
| Default | yes:40 |
| Description | The router dead interval of the link. For 1830, the range is (1..'FFFF'h). This value must be greater than or equal to hello interval value. |
| Displayed name | Dead Interval |

Table 3-2744 Dead Interval (continued)

| Name | Value |
|-------------|------------------------|
| Maximum | 65535 |
| Minimum | 1 |
| OSS name | tnNetIfRtrDeadInterval |
| Read-only | no |
| Tab Panel | OSPF OSPF |
| Type | LONG |
| Units | seconds |

Hello Interval**Table 3-2745 Hello Interval**

| Name | Value |
|----------------|---------------------------------|
| Default | yes:10 |
| Description | The hello interval of the link. |
| Displayed name | Hello Interval |
| Maximum | 65535 |
| Minimum | 1 |
| OSS name | tnNetIfHelloInterval |
| Read-only | no |
| Tab Panel | OSPF OSPF |
| Type | LONG |
| Units | seconds |

Interface ID**Table 3-2746 Interface ID**

| Name | Value |
|-----------------------|--|
| Default | yes:autoId |
| Description | The Access identifier for the Network Interface. |
| Displayed name | Interface ID |
| Mandatory on creation | yes |
| Maximum | 512 |
| Minimum | 1 |

Table 3-2746 Interface ID (continued)

| Name | Value |
|-------------|-------------------|
| OSS name | ifIndex |
| Read-only | no |
| Tab Panel | General Interface |
| Type | LONG |

Interface Name**Table 3-2747 Interface Name**

| Name | Value |
|----------------|-------------------|
| Displayed name | Interface Name |
| Maximum | 32 |
| OSS name | interfaceName |
| Read-only | no |
| Tab Panel | General Interface |
| Type | STRING |

Interface Status**Table 3-2748 Interface Status**

| Name | Value |
|--------------------------|--|
| Default | yes:disabled |
| Description | The administrative state of the Network Interface. |
| Displayed name | Interface Status |
| OSS name | gccPortStatus |
| Read-only | no |
| Tab Panel | General Interface |
| Type | DisabledEnabled |
| Enumerated types: | |
| Disabled | |
| Enabled | |

L2 Interface Status

Table 3-2749 L2 Interface Status

| Name | Value |
|----------------|-----------------------|
| Displayed name | L2 Interface Status |
| OSS name | l2Status |
| Read-only | no |
| Tab Panel | General Interface |
| Type | netw.OperationalState |

MD5 Authentication Enabled

Table 3-2750 MD5 Authentication Enabled

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies OSPF authentication on the interface - only none and MD5 are currently supported. |
| Displayed name | MD5 Authentication Enabled |
| OSS name | tnNetIfOspfAuthentType |
| Read-only | no |
| Tab Panel | OSPF OSPF |
| Type | BOOL |

MD5 Key

Table 3-2751 MD5 Key

| Name | Value |
|----------------|--------------------------|
| Default | yes: |
| Description | Link OSPF Authentic Key. |
| Displayed name | MD5 Key |
| Maximum | 16 |
| Minimum | 0 |
| OSS name | tnNetIfOspfAuthKey |
| Read-only | no |
| Tab Panel | OSPF OSPF |
| Type | STRING |

MD5 Key ID**Table 3-2752 MD5 Key ID**

| Name | Value |
|----------------|-----------------------------|
| Default | yes:1 |
| Description | Link OSPF Authentic Key Id. |
| Displayed name | MD5 Key ID |
| Maximum | 255 |
| Minimum | 1 |
| OSS name | tnNetIfOspfAuthKeyId |
| Read-only | no |
| Tab Panel | OSPF OSPF |
| Type | LONG |

MTU Size**Table 3-2753 MTU Size**

| Name | Value |
|----------------|--|
| Default | yes:1500 |
| Description | The MTU size for the configured Network Interface. The intent is to allow for interworking/standardization across multiple products. The MTU size is allowed to be changed only when the provisioned packet type is set to std. If the packet type is changed from std to nonStd then the MTU size will automatically be changed by the software back to the pack's default value. |
| Displayed name | MTU Size |
| Maximum | 1500 |
| Minimum | 576 |
| OSS name | gccMtuSize |
| Read-only | no |
| Tab Panel | General Interface |
| Type | INT |

OSPF Area ID**Table 3-2754 OSPF Area ID**

| Name | Value |
|---------|-------------|
| Default | yes:0.0.0.0 |

Table 3-2754 OSPF Area ID (continued)

| Name | Value |
|----------------|--|
| Description | For all OSC/GCC interfaces, it will use the OSPF area provisioned on the node. |
| Displayed name | OSPF Area ID |
| OSS name | ospfAreaId |
| Read-only | no |
| Tab Panel | OSPF OSPF Area |
| Type | INETADDR |

OSPF Area Index

Table 3-2755 OSPF Area Index

| Name | Value |
|----------------|------------------------|
| Description | OSPF Area Topology Id. |
| Displayed name | OSPF Area Index |
| OSS name | ospfTopologyId |
| Read-only | no |
| Tab Panel | OSPF OSPF Area |
| Type | INT |

Packet Type

Table 3-2756 Packet Type

| Name | Value |
|--------------------------|---|
| Default | yes:std |
| Description | The GCC packet type. Indicates if the Network Interface packet type is standard or non-standard. Only provisionable for 4DPA4, 11DPE12, 11STAR1 and 11STMM10 pack related network interfaces. The default value is std for all packs. If packet type is non-std, MTU size is always 1473 and cannot be changed. |
| Displayed name | Packet Type |
| OSS name | gccPacketType |
| Read-only | no |
| Tab Panel | General Interface |
| Type | GccPacketType |
| Enumerated types: | |
| Non-standard | |

Table 3-2756 Packet Type (continued)

| Name | Value |
|----------|-------|
| Standard | |

Site ID**Table 3-2757 Site ID**

| Name | Value |
|----------------|--------------|
| Default | yes:0.0.0.0 |
| Displayed name | Site ID |
| Maximum | 50 |
| OSS name | siteId |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

Site Name**Table 3-2758 Site Name**

| Name | Value |
|----------------|--------------|
| Default | yes: |
| Displayed name | Site Name |
| Maximum | 252 |
| OSS name | siteName |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

Network Interface (NetworkInterface, rtr) parameters

Actual Maximum Frame Size

Table 3-2759 Actual Maximum Frame Size

| Name | Value |
|----------------|---------------------------|
| Default | yes:1500 |
| Displayed name | Actual Maximum Frame Size |
| OSS name | actualMtu |
| Read-only | yes |
| Tab Panel | Port General |
| Type | INT |
| Units | bytes |

Actual Primary Status

Table 3-2760 Actual Primary Status

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Actual primary interface status for this interface. |
| Displayed name | Actual Primary Status |
| OSS name | actualPrimaryStatus |
| Read-only | no |
| Tab Panel | General General |
| Type | generic.TruthValue |

Admin Link Local Address

Table 3-2761 Admin Link Local Address

| Name | Value |
|----------------|---------------------------------|
| Default | yes: |
| Displayed name | Admin Link Local Address |
| OSS name | adminLinkLocalAddrWithZoneIndex |
| Read-only | no |
| Tab Panel | General General |
| Type | INETADDR |

Admin Link Local Address**Table 3-2762 Admin Link Local Address**

| Name | Value |
|----------------|--------------------------|
| Default | yes:0:0:0:0:0:0:0 |
| Displayed name | Admin Link Local Address |
| OSS name | adminLinkLocalAddr |
| Read-only | no |
| Tab Panel | General General |
| Type | INETADDR |

Admin Link Local Address Preferred**Table 3-2763 Admin Link Local Address Preferred**

| Name | Value |
|----------------|------------------------------------|
| Default | yes:false |
| Displayed name | Admin Link Local Address Preferred |
| OSS name | adminLinkLclAddrPreferred |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Administrative State**Table 3-2764 Administrative State**

| Name | Value |
|--------------------------|----------------------|
| Default | yes:unspecified |
| Displayed name | Administrative State |
| OSS name | administrativeState |
| Read-only | no |
| Tab Panel | General General |
| Type | AdministrativeState |
| Enumerated types: | |
| Down | |
| Up | |

Aggregate CIR**Table 3-2765 Aggregate CIR**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Specifies the CIR of all egress queues for this Network Interface. |
| Displayed name | Aggregate CIR |
| Maximum | 10000000 |
| Minimum | -1 |
| OSS name | egressAggCIR |
| Read-only | no |
| Tab Panel | QoS General |
| Type | INT |
| Units | kbps |

Aggregate Rate Limit**Table 3-2766 Aggregate Rate Limit**

| Name | Value |
|----------------|--|
| Default | yes:-1 |
| Description | Specifies the maximum total rate of all egress queues for this Network Interface. The value -1 means that there is no limit. |
| Displayed name | Aggregate Rate Limit |
| Maximum | 10000000 |
| Minimum | -1 |
| OSS name | egressAggRateLimit |
| Read-only | no |
| Tab Panel | QoS General |
| Type | INT |
| Units | kbps |

Allow Directed Broadcasts**Table 3-2767 Allow Directed Broadcasts**

| Name | Value |
|---------|-----------|
| Default | yes:false |

Table 3-2767 Allow Directed Broadcasts (continued)

| Name | Value |
|----------------|---------------------------|
| Displayed name | Allow Directed Broadcasts |
| OSS name | directedBroadcast |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Assign Aggregate CIR**Table 3-2768 Assign Aggregate CIR**

| Name | Value |
|----------------|---------------------------|
| Displayed name | Assign Aggregate CIR |
| OSS name | valueManager:egressAggCIR |
| Read-only | no |
| Tab Panel | QoS General |

Assign Aggregate Rate Limit**Table 3-2769 Assign Aggregate Rate Limit**

| Name | Value |

| Displayed name | Assign Aggregate Rate Limit |
| OSS name | valueManager:egressAggRateLimit |
| Read-only | no |
| Tab Panel | QoS General |

BFD Configured**Table 3-2770 BFD Configured**

| Name | Value |
|----------------|---|
| Description | Specifies if BFD is configured on this interface. |
| Displayed name | BFD Configured |
| OSS name | bfdConfigured |
| Read-only | no |
| Tab Panel | General BFD Configured |

Table 3-2770 BFD Configured (continued)

| Name | Value |
|------|-------|
| Type | BOOL |

Broadcast**Table 3-2771 Broadcast**

| Name | Value |
|----------------|-------------|
| Displayed name | Broadcast |
| OSS name | broadcast |
| Read-only | no |
| Tab Panel | General NTP |

Broadcast Address**Table 3-2772 Broadcast Address**

| Name | Value |
|----------------|-------------------|
| Default | yes:0.0.0.0 |
| Displayed name | Broadcast Address |
| Maximum | 50 |
| OSS name | bcastAddress |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

ByPass Zone Config**Table 3-2773 ByPass Zone Config**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | The value of securityPolicyBypass indicates whether traffic on this interface bypasses the security check. |
| Displayed name | ByPass Zone Config |
| OSS name | securityPolicyBypass |
| Read-only | no |

Table 3-2773 ByPass Zone Config (continued)

| Name | Value |
|-------------|--------------|
| Tab Panel | Zone General |
| Type | BOOL |

Cflowd Type

Table 3-2774 Cflowd Type

| Name | Value |
|----------------|---|
| Default | yes:1 |
| Description | This attribute is deprecated for 7750/7450/7950 13.0 and above nodes. Please use {{cflowd.CflowdSampling}} instead. |
| Displayed name | Cflowd Type |
| OSS name | cflowdType |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Class

Table 3-2775 Class

| Name | Value |
|--------------------------|-------------------|
| Default | yes:numbered |
| Displayed name | Class |
| OSS name | interfaceClass |
| Read-only | no |
| Tab Panel | General General |
| Type | RtrInterfaceClass |
| Enumerated types: | |
| Management | |
| Numbered | |
| System | |
| Unnumbered | |
| Unspecified | |

Client Status

Table 3-2776 Client Status

| Name | Value |
|--------------------------|--|
| Description | DHCP status of the DHCP Client IP interface. |
| Displayed name | Client Status |
| OSS name | ifDhcpStatus |
| Read-only | yes |
| Tab Panel | DHCP-CLIENT Parameter General |
| Type | InterfaceDhcpStatus |
| Enumerated types: | |
| Active | |
| Discovery | |
| Timeout | |

Configured Primary Status

Table 3-2777 Configured Primary Status

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Primary interface configuration status for this interface. If set to true, this interface will be used as the default interface for the VLAN on which it resides when possible. |
| Displayed name | Configured Primary Status |
| OSS name | configPrimaryStatus |
| Read-only | no |
| Tab Panel | General General |
| Type | generic.TruthValue |

Description

Table 3-2778 Description

| Name | Value |
|----------------|-------------|
| Default | yes: |
| Displayed name | Description |
| Maximum | 80 |
| Minimum | 0 |

| Tab Panel | General General |
| Type | STRING |

DHCP Option-60**Table 3-2779 DHCP Option-60**

| Name | Value |
|----------------|---|
| Default | yes:OmniSwitch |
| Description | The value of option-60 filed that should be inserted in DHCP discover/request packet if configured. |
| Displayed name | DHCP Option-60 |
| Maximum | 64 |
| Minimum | 1 |
| OSS name | ifDhcpOption60 |
| Read-only | no |
| Tab Panel | DHCP-CLIENT Parameter General |
| Type | STRING |

Domain**Table 3-2780 Domain**

| Name | Value |
|-----------------------|--|
| Default | yes:network |
| Description | This property will distinguish between a regular network interface and an mpls-tp interface. |
| Displayed name | Domain |
| Mandatory on creation | yes |
| OSS name | ifType |
| Read-only | no |
| Tab Panel | General General |
| Type | rtr.RtrInterfaceType |

Duplicate Address Detection Disabled

Table 3-2781 Duplicate Address Detection Disabled

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | The value of dadDisable specifies if the Duplicate Address Detection (DAD) is disabled for this interface. |
| Displayed name | Duplicate Address Detection Disabled |
| OSS name | dadDisable |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Egress IP ACL

Table 3-2782 Egress IP ACL

| Name | Value |
|----------------|-------------------------|
| Default | yes: |
| Displayed name | Egress IP ACL |
| OSS name | egressFilterPointer |
| Read-only | no |
| Tab Panel | Policies.General IP ACL |
| Type | POINTER |

Egress IP Load Balancing

Table 3-2783 Egress IP Load Balancing

| Name | Value |
|----------------|---|
| Default | yes:both |
| Description | Specifies whether to include source address or destination address or both in LAG/ECMP hash on IP interfaces. |
| Displayed name | Egress IP Load Balancing |
| OSS name | egrIpLoadBalancing |
| Read-only | no |
| Tab Panel | General Load Balancing |
| Type | EgrIpLoadBalancing |

Table 3-2783 Egress IP Load Balancing (continued)

| Name | Value |

| Enumerated types: | |
| Both | |
| Destination | |
| Source | |

Egress IPv6 ACL**Table 3-2784 Egress IPv6 ACL**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Pointer to the instance of the ACL IPv6 filter. |
| Displayed name | Egress IPv6 ACL |
| OSS name | egressIPv6FilterPointer |
| Read-only | no |
| Tab Panel | Policies.General IPv6 ACL |
| Type | POINTER |

Egress Network Queue Policy**Table 3-2785 Egress Network Queue Policy**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Pointer to the instance of Network Queue Policy |
| Displayed name | Egress Network Queue Policy |
| OSS name | egressNqueuePolicyObjectPointer |
| Read-only | no |
| Tab Panel | QoS General |
| Type | POINTER |

Enable**Table 3-2786 Enable**

| Name | Value |
|----------------|-----------------------------------|
| Displayed name | Enable |
| OSS name | valueManager:IdpSyncTimerEnabled |
| Read-only | no |
| Tab Panel | General LDP Synchronization Timer |

Enable Forwarding**Table 3-2787 Enable Forwarding**

| Name | Value |
|----------------|--------------------|
| Default | yes:false |
| Displayed name | Enable Forwarding |
| OSS name | enableForwarding |
| Read-only | no |
| Tab Panel | General General |
| Type | generic.TruthValue |

Enable Ingress FlowSpec IPv4**Table 3-2788 Enable Ingress FlowSpec IPv4**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies if ingress flowspec IPv4 is enabled for this interface. |
| Displayed name | Enable Ingress FlowSpec IPv4 |
| OSS name | ingressFlowspec |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Enable Ingress FlowSpec IPv6**Table 3-2789 Enable Ingress FlowSpec IPv6**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies if ingress flowspec IPv6 is enabled for this interface. |
| Displayed name | Enable Ingress FlowSpec IPv6 |
| OSS name | ingressIPv6Flowspec |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Enable Ingress Stats**Table 3-2790 Enable Ingress Stats**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies if ingress statistics gathering is enabled for this interface. |
| Displayed name | Enable Ingress Stats |
| OSS name | enableIngressStats |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Enable MAC Accounting Stats**Table 3-2791 Enable MAC Accounting Stats**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies if MAC accounting statistics gathering is enabled for this interface. |
| Displayed name | Enable MAC Accounting Stats |
| OSS name | enableMacAccountingStats |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Encapsulation Type

Table 3-2792 Encapsulation Type

| Name | Value |
|----------------|-------------------------|
| Default | yes:unspecified |
| Displayed name | Encapsulation Type |
| OSS name | encapType |
| Read-only | no |
| Tab Panel | Port General |
| Type | equipment.PortEncapType |

GNE

Table 3-2793 GNE

| Name | Value |
|----------------|---------------------------------------|
| Default | yes:false |
| Description | Is this a network interface on a GNE? |
| Displayed name | GNE |
| OSS name | isGne |
| Read-only | yes |
| Tab Panel | General GNE |
| Type | BOOL |

Groups Included

Table 3-2794 Groups Included

| Name | Value |
|----------------|------------------------------|
| Default | yes:0 |
| Displayed name | Groups Included |
| OSS name | adminGroupInclude |
| Read-only | no |
| Tab Panel | General Administrative Group |
| Type | LONG |
| Units | bitmap |

High Threshold

Table 3-2795 High Threshold

| Name | Value |
|----------------|------------------------------|
| Default | yes:1000 |
| Displayed name | High Threshold |
| Minimum | 0 |
| OSS name | monitorMcRedirectHighThresh |
| Read-only | no |
| Tab Panel | McRedirect Threshold Packets |
| Type | INT |

Ingress IP ACL

Table 3-2796 Ingress IP ACL

| Name | Value |
|----------------|-------------------------|
| Default | yes: |
| Displayed name | Ingress IP ACL |
| OSS name | ingressFilterPointer |
| Read-only | no |
| Tab Panel | Policies.General IP ACL |
| Type | POINTER |

Ingress IPv6 ACL

Table 3-2797 Ingress IPv6 ACL

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Pointer to the instance of the ACL IPv6 filter. |
| Displayed name | Ingress IPv6 ACL |
| OSS name | ingressIpv6FilterPointer |
| Read-only | no |
| Tab Panel | Policies.General IPv6 ACL |
| Type | POINTER |

Inner Encapsulation Value

Table 3-2798 Inner Encapsulation Value

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Provisioned inner encap value. This value is propagated into: terminatedPortInnerEncapValue. |
| Displayed name | Inner Encapsulation Value |
| OSS name | innerEncapValue |
| Read-only | no |
| Tab Panel | Port General |
| Type | INT |

Interface Encap Type

Table 3-2799 Interface Encap Type

| Name | Value |
|--------------------------|---|
| Default | yes:ethernet2 |
| Description | This is the encapsulation type of the IP Interface. Only applicable for AOS Node types. |
| Displayed name | Interface Encap Type |
| OSS name | encapsulationType |
| Read-only | no |
| Tab Panel | General General |
| Type | EncapType |
| Enumerated types: | |
| Ethernet2 | |
| SNAP | |

Interface ID

Table 3-2800 Interface ID

| Name | Value |
|-----------------------|--------------|
| Default | yes:0 |
| Displayed name | Interface ID |
| Mandatory on creation | yes |
| Maximum | 5119 |

Table 3-2800 Interface ID (continued)

| Name | Value |
|-------------|-----------------|
| Minimum | 1 |
| OSS name | id |
| Read-only | no |
| Tab Panel | General General |
| Type | LONG |

IPv6 Allowed**Table 3-2801 IPv6 Allowed**

| Name | Value |
|----------------|-----------------|
| Default | yes:false |
| Displayed name | IPv6 Allowed |
| OSS name | ipv6Allowed |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

IPv6 Operational State**Table 3-2802 IPv6 Operational State**

| Name | Value |
|----------------|------------------------|
| Default | yes:vRtrIfUnknown |
| Displayed name | IPv6 Operational State |
| OSS name | ipv6OperationalState |
| Read-only | yes |
| Tab Panel | General General |
| Type | netw.OperationalState |

L4 Load Balance**Table 3-2803 L4 Load Balance**

| Name | Value |
|---------|------------|
| Default | yes:system |

Table 3-2803 L4 Load Balance (continued)

| Name | Value |
|--------------------------|--|
| Description | aluVrtrIfL4LoadBalancing specifies the load balancing algorithm to be used on this interface. When the value is 'includeL4', the src and dst port are used in the hashing algorithm. When it's 'excludeL4', they are not included. When the value is 'system', the port inherits the global settings in {netw.NetworkElement.l4LoadBalancing}. |
| Displayed name | L4 Load Balance |
| OSS name | aluIfL4LoadBalancing |
| Read-only | no |
| Tab Panel | General General |
| Type | AluIfL4LoadBalancing |
| Enumerated types: | |
| Exclude L4 | |
| Include L4 | |
| System | |

LAG Link Map Profile**Table 3-2804 LAG Link Map Profile**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Pointer to the LAG Link Mapping Profile |
| Displayed name | LAG Link Map Profile |
| OSS name | lagLinkMapProfilePointer |
| Read-only | no |
| Tab Panel | Port General |
| Type | POINTER |

Last Operational State Change**Table 3-2805 Last Operational State Change**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Indicates the sysUpTime when the operational state of this interface last changed. |
| Displayed name | Last Operational State Change |
| OSS name | lastOperStateChange |

Table 3-2805 Last Operational State Change (continued)

| Name | Value |
|-------------|-----------------|
| Read-only | yes |
| Tab Panel | General General |
| Type | DATE |

LDP Synchronization Timer**Table 3-2806 LDP Synchronization Timer**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Specifies a time interval used for IGP-LDP synchronization. |
| Displayed name | LDP Synchronization Timer |
| Maximum | 1800 |
| Minimum | 0 |
| OSS name | ldpSyncTimer |
| Read-only | no |
| Tab Panel | General LDP Synchronization Timer |
| Type | INT |
| Units | seconds |

Link Local Address**Table 3-2807 Link Local Address**

| Name | Value |
|----------------|--------------------|
| Default | yes:0.0.0.0 |
| Displayed name | Link Local Address |
| OSS name | linkLocalAddress |
| Read-only | yes |
| Tab Panel | General General |
| Type | INETADDR |

Link Local Address State
Table 3-2808 Link Local Address State

| Name | Value |
|--------------------------|--------------------------|
| Default | yes:unknown |
| Displayed name | Link Local Address State |
| OSS name | linkLocalAddressState |
| Read-only | yes |
| Tab Panel | General General |
| Type | IPv6AddressState |
| Enumerated types: | |
| | deprecated |
| | duplicated |
| | inaccessible |
| | preferred |
| | tentative |
| | unknown |

Local DHCP Server**Table 3-2809 Local DHCP Server**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Pointer to the instance of local DHCP server. |
| Displayed name | Local DHCP Server |
| OSS name | localDhcpServerPointer |
| Read-only | no |
| Tab Panel | Local DHCP General |
| Type | POINTER |

Local DHCPv6 Server**Table 3-2810 Local DHCPv6 Server**

| Name | Value |
|-------------|-----------------------------------|
| Default | yes: |
| Description | Pointer to a Local DHCPv6 server. |

Table 3-2810 Local DHCPv6 Server (continued)

| Name | Value |
|----------------|-------------------------|
| Displayed name | Local DHCPv6 Server |
| OSS name | localDhcp6ServerPointer |
| Read-only | no |
| Tab Panel | Local DHCP General |
| Type | POINTER |

Loopback Enabled**Table 3-2811 Loopback Enabled**

| Name | Value |
|----------------|------------------|
| Default | yes:false |
| Displayed name | Loopback Enabled |
| OSS name | loopbackEnabled |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Low Threshold**Table 3-2812 Low Threshold**

| Name | Value |
|----------------|------------------------------|
| Default | yes:500 |
| Displayed name | Low Threshold |
| Minimum | 0 |
| OSS name | monitorMcRedirectLowThresh |
| Read-only | no |
| Tab Panel | McRedirect Threshold Packets |
| Type | INT |

LSR IP Load Balancing
Table 3-2813 LSR IP Load Balancing

| Name | Value |
|--------------------------|--|
| Default | yes:system |
| Description | The value of ifLsrIpLoadBalancing specifies whether the IP Header is used in the LAG and ECMP LSR hashing algorithm. This is the per interface setting. When set to 'label-only (1)' only the label is used in the hashing algorithm. When set to 'label-ip (2)', the IP Header is included in the hashing algorithm. When set to 'ip-only (3)' the IP Header is used exclusively in the hashing Algorithm. When set to 'system (0)', the hashing algorithm is inherited from the setting of 'lsrIpLoadBalancing' under the NetworkElement object. |
| Displayed name | LSR IP Load Balancing |
| OSS name | ifLsrIpLoadBalancing |
| Read-only | no |
| Tab Panel | General Load Balancing |
| Type | IfLsrIpLoadBalancing |
| Enumerated types: | |
| | Ethernet Encapsulated IP |
| | IP Only |
| | Label IP |
| | Label Only |
| | System |

MAC Address**Table 3-2814 MAC Address**

| Name | Value |
|----------------|-----------------------|
| Default | yes:00-00-00-00-00-00 |
| Displayed name | MAC Address |
| OSS name | physicalAddress |
| Read-only | no |
| Tab Panel | General General |
| Type | MACADDR |

Maximum Frame Size Mismatch**Table 3-2815 Maximum Frame Size Mismatch**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | The value is set to 'true' when the provisioned MTU value is greater than the actual MTU value (provisionedMtu > actualMtu). |
| Displayed name | Maximum Frame Size Mismatch |
| OSS name | mtuMismatch |
| Read-only | yes |
| Tab Panel | Port General |
| Type | BOOL |

Monitor McRedirect**Table 3-2816 Monitor McRedirect**

| Name | Value |
|----------------|--------------------|
| Default | yes:false |
| Displayed name | Monitor McRedirect |
| OSS name | monitorMcRedirect |
| Read-only | no |
| Tab Panel | McRedirect General |
| Type | BOOL |

Name**Table 3-2817 Name**

| Name | Value |
|-----------------------|-----------------|
| Default | yes: |
| Displayed name | Name |
| Mandatory on creation | yes |
| Maximum | 40 |
| Minimum | 0 |
| OSS name | displayName |
| Read-only | no |
| Tab Panel | General General |

Table 3-2817 Name (continued)

| Name | Value |
|------|--------|
| Type | STRING |

NE DDoS Protection Policy**Table 3-2818 NE DDoS Protection Policy**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Associates Distributed CPU Protection Policy with a Base Router Interface. |
| Displayed name | NE DDoS Protection Policy |
| OSS name | dCpuProtectionPolicyPointer |
| Read-only | no |
| Tab Panel | Security NE Protection |
| Type | POINTER |

NE DoS Protection**Table 3-2819 NE DoS Protection**

| Name | Value |
|----------------|---|
| Default | yes:NE DoS Protection:255 |
| Description | Pointer specifies the DoS Protection Policy that is applicable to this interface. |
| Displayed name | NE DoS Protection |
| OSS name | dosProtection |
| Read-only | no |
| Tab Panel | Security NE Protection |
| Type | POINTER |

Network Policy**Table 3-2820 Network Policy**

| Name | Value |
|----------------|----------------------------|
| Default | yes:Network:1 |
| Displayed name | Network Policy |
| OSS name | networkPolicyObjectPointer |

Table 3-2820 Network Policy (continued)

| Name | Value |
|-------------|--------------------------|
| Read-only | no |
| Tab Panel | Policies.General Network |
| Type | POINTER |

Operational State**Table 3-2821 Operational State**

| Name | Value |
|----------------|-------------------|
| Default | yes:unknown |
| Displayed name | Operational State |
| OSS name | operationalState |
| Read-only | yes |
| Tab Panel | General General |
| Type | OperationalState |

Operational State Reason**Table 3-2822 Operational State Reason**

| Name | Value |
|--------------------------|--------------------------|
| Displayed name | Operational State Reason |
| OSS name | operStateReason |
| Read-only | yes |
| Tab Panel | General General |
| Type | OperStateReason |
| Enumerated types: | |
| Admin Down | |
| Device Down | |
| Interface Up | |
| No Router MAC | |
| No Such Device | |
| Tunnel Dest Unreachable | |
| Tunnel Src Invalid | |
| Unbound | |

Outer Encapsulation Value

Table 3-2823 Outer Encapsulation Value

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Provisioned outer encap value. This value is propagated into: terminatedPortOuterEncapValue. |
| Displayed name | Outer Encapsulation Value |
| Maximum | 4094 |
| Minimum | 0 |
| OSS name | outerEncapValue |
| Read-only | no |
| Tab Panel | Port General |
| Type | INT |

PIM RP Delayed Up Period

Table 3-2824 PIM RP Delayed Up Period

| Name | Value |
|----------------|--------------------------|
| Default | yes:0 |
| Displayed name | PIM RP Delayed Up Period |
| Maximum | 1200 |
| Minimum | 0 |
| OSS name | pimRPDelayedUpPeriod |
| Read-only | no |
| Tab Panel | General General |
| Type | LONG |

PIM RP Delayed Up Timer

Table 3-2825 PIM RP Delayed Up Timer

| Name | Value |
|----------------|-------------------------|
| Default | yes:-1 |
| Displayed name | PIM RP Delayed Up Timer |
| Maximum | 300 |
| Minimum | -1 |

Table 3-2825 PIM RP Delayed Up Timer (continued)

| Name | Value |
|-------------|---------------------|
| OSS name | pimRPDelayedUpTimer |
| Read-only | yes |
| Tab Panel | General General |
| Type | INT |

Policy Accounting Template

Table 3-2826 Policy Accounting Template

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | The value points to the policy accounting template created under Routing policies. |
| Displayed name | Policy Accounting Template |
| OSS name | policyAccountingTemplatePointer |
| Read-only | no |
| Tab Panel | Policies.General Routing Ingress Accounting Template |
| Type | POINTER |

Port

Table 3-2827 Port

| Name | Value |
|----------------|--------------|
| Default | yes: |
| Displayed name | Port |
| Maximum | 252 |
| OSS name | portName |
| Read-only | yes |
| Tab Panel | Port General |
| Type | STRING |

Port ID**Table 3-2828 Port ID**

| Name | Value |
|----------------|--------------|
| Default | yes:0 |
| Displayed name | Port ID |
| OSS name | portId |
| Read-only | yes |
| Tab Panel | Port General |
| Type | LONG |

Provisioned Maximum Frame Size**Table 3-2829 Provisioned Maximum Frame Size**

| Name | Value |
|----------------|--------------------------------|
| Default | yes:1500 |
| Displayed name | Provisioned Maximum Frame Size |
| OSS name | provisionedMtu |
| Read-only | yes |
| Tab Panel | Port General |
| Type | INT |
| Units | bytes |

PTP HW Assist**Table 3-2830 PTP HW Assist**

| Name | Value |
|----------------|---------------------|
| Displayed name | PTP HW Assist |
| OSS name | ptpVrtrIfAdminState |
| Read-only | no |
| Tab Panel | General PTP HW |

PTP Interface
Table 3-2831 PTP Interface

| Name | Value |
|----------------|-----------------|
| Default | yes:false |
| Displayed name | PTP Interface |
| OSS name | isPtpInterface |
| Read-only | yes |
| Tab Panel | General General |
| Type | BOOL |

QoS Route Lookup IPv4**Table 3-2832 QoS Route Lookup IPv4**

| Name | Value |
|--------------------------|---|
| Default | yes:none |
| Description | QoS classification of the ingress IPv4 packets on an interface based on the QoS information associated with routes in the forwarding table. |
| Displayed name | QoS Route Lookup IPv4 |
| OSS name | qosRouteLookupIpv4 |
| Read-only | no |
| Tab Panel | General General |
| Type | QosLookup |
| Enumerated types: | |
| Destination | |
| None | |
| Source | |

QoS Route Lookup IPv6**Table 3-2833 QoS Route Lookup IPv6**

| Name | Value |
|----------------|---|
| Default | yes:none |
| Description | QoS classification of the ingress IPv6 packets on an interface based on the QoS information associated with routes in the forwarding table. |
| Displayed name | QoS Route Lookup IPv6 |

Table 3-2833 QoS Route Lookup IPv6 (continued)

| Name | Value |
|--------------------------|--------------------|
| OSS name | qosRouteLookupIpv6 |
| Read-only | no |
| Tab Panel | General General |
| Type | QosLookup |
| Enumerated types: | |
| Destination | |
| None | |
| Source | |

Queue Group Instance ID**Table 3-2834 Queue Group Instance ID**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Specifies the instance of the egress queue group for this interface. |
| Displayed name | Queue Group Instance ID |
| Maximum | 65535 |
| Minimum | 0 |
| OSS name | qosEgrQGrpInstanceId |
| Read-only | no |
| Tab Panel | Policies.General Network Egress Port Redirect |
| Type | LONG |

Queue Group Instance ID**Table 3-2835 Queue Group Instance ID**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Specifies the instance of the forwarding-plane ingress queue group for this interface |
| Displayed name | Queue Group Instance ID |
| Maximum | 65535 |
| Minimum | 0 |
| OSS name | qosIngQGrpInstanceId |

Table 3-2835 Queue Group Instance ID (continued)

| Name | Value |
|-------------|--|
| Read-only | no |
| Tab Panel | Policies.General Network Ingress Forwarding Plane Redirect |
| Type | LONG |

Queue Group Template Policy**Table 3-2836 Queue Group Template Policy**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Specifies the forwarding-plane queue group policy for this interface. |
| Displayed name | Queue Group Template Policy |
| OSS name | qosIngFpRedirectQGrpPointer |
| Read-only | no |
| Tab Panel | Policies.General Network Ingress Forwarding Plane Redirect |
| Type | POINTER |

Queue Group Template Policy**Table 3-2837 Queue Group Template Policy**

| Name | Value |
|----------------|---|
| Default | yes: |
| Displayed name | Queue Group Template Policy |
| OSS name | redirectQueueGroupPointer |
| Read-only | no |
| Tab Panel | Policies.General Network Egress Port Redirect |
| Type | POINTER |

RADIUS Proxy Server**Table 3-2838 RADIUS Proxy Server**

| Name | Value |
|---------|-------|
| Default | yes: |

Table 3-2838 RADIUS Proxy Server (continued)

| Name | Value |
|----------------|--|
| Description | Pointer to a RADIUS Proxy Server. Setting this pointer binds the interface to a particular RADIUS Proxy Server and creates an instance of aaa.RadiusProxyInterface. Clearing this pointer deletes the associated RADIUS Proxy Interface. |
| Displayed name | RADIUS Proxy Server |
| OSS name | radiusProxyServerPointer |
| Read-only | no |
| Tab Panel | RADIUS Proxy Server General |
| Type | POINTER |

Routing Instance ID**Table 3-2839 Routing Instance ID**

| Name | Value |
|----------------|--------------------------|
| Default | yes:1 |
| Displayed name | Routing Instance ID |
| Maximum | 10240 |
| Minimum | 1 |
| OSS name | routerId |
| Read-only | yes |
| Tab Panel | General Routing Instance |
| Type | INT |

Routing Instance Name**Table 3-2840 Routing Instance Name**

| Name | Value |
|----------------|--------------------------|
| Default | yes: |
| Displayed name | Routing Instance Name |
| Maximum | 32 |
| Minimum | 0 |
| OSS name | routerName |
| Read-only | yes |
| Tab Panel | General Routing Instance |
| Type | STRING |

Show Link In IGP Topology
Table 3-2841 Show Link In IGP Topology

| Name | Value |
|--------------------------------------|---|
| Default | yes:policy |
| Description | Indicates the link associated with this interface should be showed on the IGP topology map. |
| Displayed name | Show Link In IGP Topology |
| OSS name | showLinkInIgpTopology |
| Read-only | no |
| Tab Panel | General General |
| Type | IgpTopologyType |
| Enumerated types: | |
| Derive from Non-Routed Edge policies | |
| No | |
| Yes | |

Site ID**Table 3-2842 Site ID**

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Site ID |
| Maximum | 50 |
| OSS name | nodeId |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

Site ID**Table 3-2843 Site ID**

| Name | Value |
|----------------|---------|
| Default | yes: |
| Displayed name | Site ID |
| Maximum | 50 |
| OSS name | nodeId |

Table 3-2843 Site ID (continued)

| Name | Value |
|-------------|--------------|
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

Site Name**Table 3-2844 Site Name**

| Name | Value |
|----------------|--------------|
| Default | yes: |
| Displayed name | Site Name |
| Maximum | 252 |
| OSS name | nodeName |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

SPI Load Balancing**Table 3-2845 SPI Load Balancing**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether SPI use in hashing is enabled on the configured router interface. |
| Displayed name | SPI Load Balancing |
| OSS name | spiLoadBalancing |
| Read-only | no |
| Tab Panel | General Load Balancing |
| Type | BOOL |

State Qualifier**Table 3-2846 State Qualifier**

| Name | Value |
|---------|--------|
| Default | yes:OK |

Table 3-2846 State Qualifier (continued)

| Name | Value |
|----------------|---|
| Description | This value is derived from underlyingResourceState and/or resourceState attributes. If the underlyingResourceState is not 'OK' and is not 'unspecified' the value of compositeState will be set to the same value as underlyingResourceState. Otherwise the value of compositeState will be set to the same value as resourceState. |
| Displayed name | State Qualifier |
| OSS name | compositeState |
| Read-only | yes |
| Tab Panel | General General |
| Type | ResourceCompositeState |

Strip Label

Table 3-2847 Strip Label

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | The value of stripLabel specifies whether a packet received on the interface will have its MPLS labels stripped from the packet (true) or not (false). |
| Displayed name | Strip Label |
| OSS name | stripLabel |
| Read-only | no |
| Tab Panel | General General |
| Type | generic.TruthValue |

TCP-MSS IPv4

Table 3-2848 TCP-MSS IPv4

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | This property specifies the TCP maximum segment size(MSS) for TCP connections originated from the associated IP interface. The valid range is [0, 480-9158]. |
| Displayed name | TCP-MSS IPv4 |
| Maximum | 9158 |
| Minimum | 0 |
| OSS name | tcpMss |
| Read-only | no |

Table 3-2848 TCP-MSS IPv4 (continued)

| Name | Value |
|-------------|-----------------|
| Tab Panel | General General |
| Type | INT |

TCP-MSS IPv6**Table 3-2849 TCP-MSS IPv6**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | This property specifies the TCP maximum segment size(MSS) for TCP connections originated from the associated IPv6 interface. The valid range is [0, 1220-9138]. |
| Displayed name | TCP-MSS IPv6 |
| Maximum | 9138 |
| Minimum | 0 |
| OSS name | tcpMssIpv6 |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

TEID Load Balancing**Table 3-2850 TEID Load Balancing**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether TEID load balancing is enabled for GTP-U/GTP-C tunnels on all configured Router interfaces. |
| Displayed name | TEID Load Balancing |
| OSS name | ifTeIdLoadBalancing |
| Read-only | no |
| Tab Panel | General Load Balancing |
| Type | BOOL |

Trusted**Table 3-2851 Trusted**

| Name | Value |
|----------------|--------------------|
| Default | yes:true |
| Displayed name | Trusted |
| OSS name | isTrusted |
| Read-only | no |
| Tab Panel | General General |
| Type | generic.TruthValue |

Type**Table 3-2852 Type**

| Name | Value |
|----------------|-----------------|
| Default | yes:unspecified |
| Displayed name | Type |
| OSS name | domain |
| Read-only | yes |
| Tab Panel | General General |
| Type | DomainType |

Underlying Port State**Table 3-2853 Underlying Port State**

| Name | Value |
|----------------|---|
| Default | yes:noAssociation |
| Description | State of the underlying resource. (An underlying resource is for example a netw.ConnectionTerminationPoint) |
| Displayed name | Underlying Port State |
| OSS name | underlyingResourceState |
| Read-only | yes |
| Tab Panel | Port General |
| Type | UnderlyingResourceState |

Unnumbered Reference

Table 3-2854 Unnumbered Reference

| Name | Value |
|----------------|----------------------|
| Default | yes: |
| Displayed name | Unnumbered Reference |
| Maximum | 32 |
| Minimum | 0 |
| OSS name | unnumberedReference |
| Read-only | no |
| Tab Panel | General Unnumbered |
| Type | STRING |

Unnumbered Type

Table 3-2855 Unnumbered Type

| Name | Value |
|--------------------------|-------------------------|
| Default | yes:system |
| Displayed name | Unnumbered Type |
| OSS name | unnumberedReferenceType |
| Read-only | no |
| Tab Panel | General Unnumbered |
| Type | UnnumberedReferenceType |
| Enumerated types: | |
| IP Address | |
| Name | |
| System | |

URPF Check Mode IPv4

Table 3-2856 URPF Check Mode IPv4

| Name | Value |
|----------------|--|
| Default | yes:strict |
| Description | Specifies the mode of unicast RPF check for IPv4. It is applicable only when uRPFCheckState is set to 'enabled'. |
| Displayed name | URPF Check Mode IPv4 |

Table 3-2856 URPF Check Mode IPv4 (continued)

| Name | Value |
|--------------------------|---------------------|
| OSS name | uRPFCheckMode |
| Read-only | no |
| Tab Panel | General Unicast RPF |
| Type | URPFCheckMode |
| Enumerated types: | |
| Loose | |
| Strict | |
| Strict-No-Ecmp | |

URPF Check Mode IPv6**Table 3-2857 URPF Check Mode IPv6**

| Name | Value |
|--------------------------|--|
| Default | yes:strict |
| Description | Specifies the mode of unicast RPF check for IPv6. It is applicable only when uRPFCheckStateIpv6 is set to 'enabled'. |
| Displayed name | URPF Check Mode IPv6 |
| OSS name | uRPFCheckModeIpv6 |
| Read-only | no |
| Tab Panel | General Unicast RPF |
| Type | URPFCheckMode |
| Enumerated types: | |
| Loose | |
| Strict | |
| Strict-No-Ecmp | |

URPF Check State IPv4**Table 3-2858 URPF Check State IPv4**

| Name | Value |
|----------------|--|
| Default | yes:disabled |
| Description | Specifies whether unicast RPF (uRPF) Check is enabled for IPv4 on the interface. |
| Displayed name | URPF Check State IPv4 |

Table 3-2858 URPF Check State IPv4 (continued)

| Name | Value |
|-------------|-------------------------|
| OSS name | uRPFCheckState |
| Read-only | no |
| Tab Panel | General Unicast RPF |
| Type | generic.EnabledDisabled |

URPF Check State IPv6**Table 3-2859 URPF Check State IPv6**

| Name | Value |
|----------------|--|
| Default | yes:disabled |
| Description | Specifies whether unicast RPF (uRPF) Check is enabled for IPv6 on the interface. |
| Displayed name | URPF Check State IPv6 |
| OSS name | uRPFCheckStateIpv6 |
| Read-only | no |
| Tab Panel | General Unicast RPF |
| Type | generic.EnabledDisabled |

URPF Ignore Default IPv4**Table 3-2860 URPF Ignore Default IPv4**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies if the default route is to be disregarded while performing the uRPF check for IPv4 on the interface. |
| Displayed name | URPF Ignore Default IPv4 |
| OSS name | uRPFIgnoreDefault |
| Read-only | no |
| Tab Panel | General Unicast RPF |
| Type | BOOL |

URPF Ignore Default IPv6**Table 3-2861 URPF Ignore Default IPv6**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies if the default route is to be disregarded while performing the uRPF check for IPv6 on the interface. |
| Displayed name | URPF Ignore Default IPv6 |
| OSS name | uRPFIgnoreDefaultIpv6 |
| Read-only | no |
| Tab Panel | General Unicast RPF |
| Type | BOOL |

VLAN**Table 3-2862 VLAN**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Pointer to the instance of local DHCP server. |
| Displayed name | VLAN |
| OSS name | vlanPointer |
| Read-only | no |
| Tab Panel | VLAN VLAN |
| Type | POINTER |

Zone Id**Table 3-2863 Zone Id**

| Name | Value |
|----------------|--------------|
| Default | yes: |
| Displayed name | Zone Id |
| OSS name | zonePointer |
| Read-only | no |
| Tab Panel | Zone General |
| Type | POINTER |

Network Interface Facility Binding parameters

Channel Type

Table 3-2864 Channel Type

| Name | Value |
|--------------------------|---|
| Description | The ECC type of the referred ECC Channel. |
| Displayed name | Channel Type |
| OSS name | gccChannelType |
| Read-only | no |
| Tab Panel | General General |
| Type | GccChannelType |
| Enumerated types: | |
| GCC0 | |
| GCC1 | |
| GCC2 | |

Facility Name

Table 3-2865 Facility Name

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Facility Name |
| Maximum | 252 |
| OSS name | ifFacilityName |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

no

Table 3-2866 no

| Name | Value |
|-----------------------|-------|
| Default | yes: |
| Displayed name | no |
| Mandatory on creation | yes |

|--------------------------|-------------------------|
| Displayed name | Protection Status |
| OSS name | protectionStatus |
| Read-only | no |
| Tab Panel | General General |
| Type | NetworkIfProtectionType |
| Enumerated types: | |
| Disabled | |
| FLT | |
| Standby | |
| Working | |

yes**Table 3-2868 yes**

| Name | Value |
|-----------------------|--------------------------|
| Default | yes:clientTransparentOdu |
| Displayed name | yes |
| Mandatory on creation | yes |
| OSS name | ifFacilityContainerType |
| Read-only | no |
| Tab Panel | General General |
| Type | oth.OduContainerType |

Network Time Protocol Authentication parameters

Authentication Key

Table 3-2869 Authentication Key

| Name | Value |
|----------------|---|
| Default | no |
| Description | Specifies the input string that is used to generate the Authentication Key value. The length of the string depends upon the type of encryption used |
| Displayed name | Authentication Key |
| Maximum | 40 |
| OSS name | ntpAuthKey |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Authentication Key Id

Table 3-2870 Authentication Key Id

| Name | Value |
|-----------------------|---|
| Default | no |
| Description | Specifies a unique ID that is used for referencing a particular Authentication Key for NTP server or NTP peer authentication. |
| Displayed name | Authentication Key Id |
| Mandatory on creation | yes |
| Maximum | 255 |
| Minimum | 1 |
| OSS name | ntpAuthKeyId |
| Read-only | no |
| Tab Panel | General General |
| Type | LONG |

Authentication Key Type
Table 3-2871 Authentication Key Type

| Name | Value |
|--------------------------|---|
| Default | yes:1 |
| Description | Specifies the encryption type for the Authentication Key, which can be of type Message Digest (MD5) or DES. Message Digest encryption supports an Authentication Key string of 1 to 32 characters. DES encryption supports an Authentication Key string of 1 to 8 characters. |
| Displayed name | Authentication Key Type |
| OSS name | ntpAuthKeyType |
| Read-only | no |
| Tab Panel | General General |
| Type | NtpAuthKeyTypes |
| Enumerated types: | |
| DES | |
| MD5 | |
| SHA1 | |

NetworkEgressForwardingClass parameters

Dot1p In Profile

| Type | BOOL |

NTP Clock Mode

Table 3-2928 NTP Clock Mode

| Name | Value |
|--------------------------|----------------|
| Displayed name | NTP Clock Mode |
| OSS name | clockMode |
| Read-only | no |
| Tab Panel | General NTP |
| Type | NtpClockMode |
| Enumerated types: | |
| FreeRunning | |
| Holdover | |
| NtpSync | |
| NtpSyncRedundant | |

NTP Enabled**Table 3-2929 NTP Enabled**

| Name | Value |
|----------------|-------------|
| Displayed name | NTP Enabled |
| OSS name | ntpEnable |
| Read-only | no |
| Tab Panel | General NTP |
| Type | BOOL |

NTP Scale**Table 3-2930 NTP Scale**

| Name | Value |
|----------------|-------------|
| Default | yes:10 |
| Displayed name | NTP Scale |
| OSS name | ntpScale |
| Read-only | no |
| Tab Panel | General NTP |
| Type | INT |

NTP Server**Table 3-2931 NTP Server**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | This specifies whether or not the NTP configuration is acting as a NTP server or not. |
| Displayed name | NTP Server |
| OSS name | ntpConfigServer |
| Read-only | no |
| Tab Panel | General NTP Attributes |
| Type | BOOL |

NTP State

Table 3-2932 NTP State

| Name | Value |
|--------------------------|---|
| Default | yes:delete |
| Description | This specifies whether or not NTP is configured to execute in the system. |
| Displayed name | NTP State |
| OSS name | ntpStatus |
| Read-only | no |
| Tab Panel | General General |
| Type | NtpStatus |
| Enumerated types: | |
| Disabled | |
| Enabled | |

NTP Synched

Table 3-2933 NTP Synched

| Name | Value |
|----------------|-------------|
| Displayed name | NTP Synched |
| OSS name | ntpSynched |
| Read-only | no |
| Tab Panel | General NTP |
| Type | BOOL |

Operational State

Table 3-2934 Operational State

| Name | Value |
|----------------|--|
| Default | no |
| Description | This indicates the current operational state for NTP |
| Displayed name | Operational State |
| OSS name | ntpOperState |
| Read-only | no |
| Tab Panel | General NTP Attributes |
| Type | NtpAdminState |

Table 3-2934 Operational State (continued)

| Name | Value |
|-----------------------------|-------|
| Enumerated types: | |
| All Servers Reachable | |
| Down | |
| No Server Reachable | |
| Noop | |
| Only Main Server Reachable | |
| Only Spare Server Reachable | |
| Up | |

Server Authenticate**Table 3-2935 Server Authenticate**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | This specifies whether or not to require authentication of NTP PDUs when acting as a server. When ntpConfigServerAuthenticate has a value of 'true', NTP PDUs are authenticated upon receipt. |
| Displayed name | Server Authenticate |
| OSS name | ntpConfigServerAuthenticate |
| Read-only | no |
| Tab Panel | General NTP Attributes |
| Type | BOOL |

Site ID**Table 3-2936 Site ID**

| Name | Value |
|----------------|--------------|
| Default | yes:0.0.0.0 |
| Displayed name | Site ID |
| Maximum | 64 |
| OSS name | siteId |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

Site Name
Table 3-2937 Site Name

| Name | Value |
|----------------|--------------|
| Default | yes: |
| Displayed name | Site Name |
| Maximum | 252 |
| OSS name | siteName |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

Stratum**Table 3-2938 Stratum**

| Name | Value |
|----------------|------------------------|
| Default | no |
| Displayed name | Stratum |
| OSS name | ntpSysStratum |
| Read-only | no |
| Tab Panel | General NTP Attributes |
| Type | STRING |

Time Offset Hours**Table 3-2939 Time Offset Hours**

| Name | Value |
|----------------|-------------------|
| Default | yes:0 |
| Displayed name | Time Offset Hours |
| Maximum | 12 |
| Minimum | -12 |
| OSS name | timeOffsetHours |
| Read-only | no |
| Tab Panel | General NTP |
| Type | INT |

Time Offset Mins
Table 3-2940 Time Offset Mins

| Name | Value |
|----------------|------------------|
| Default | yes:0 |
| Displayed name | Time Offset Mins |
| Maximum | 59 |
| Minimum | 0 |
| OSS name | timeOffsetMins |
| Read-only | no |
| Tab Panel | General NTP |
| Type | INT |

Time Offset Seconds**Table 3-2941 Time Offset Seconds**

| Name | Value |
|----------------|---------------------|
| Default | yes:0 |
| Displayed name | Time Offset Seconds |
| OSS name | timeOffsetSeconds |
| Read-only | no |
| Tab Panel | General NTP |
| Type | STRING |

Timezone**Table 3-2942 Timezone**

| Name | Value |
|----------------|-------------|
| Default | yes: |
| Displayed name | Timezone |
| Maximum | 128 |
| Minimum | 0 |
| OSS name | timezone |
| Read-only | no |
| Tab Panel | General NTP |
| Type | STRING |

NTP Server parameters

Address Type

Table 3-2943 Address Type

| Name | Value |
|----------------|-----------------------|
| Default | yes:ipv4 |
| Displayed name | Address Type |
| OSS name | ntpServersAddressType |
| Read-only | no |
| Tab Panel | General General |
| Type | rtr.InetAddressType |

Authentication Key Id

Table 3-2944 Authentication Key Id

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | This specifies the key-id of the authentication key and its authentication type used by this node to receive and transmit NTP packets to and from an NTP node. |
| Displayed name | Authentication Key Id |
| Maximum | 255 |
| Minimum | 0 |
| OSS name | ntpServerAuthKeyId |
| Read-only | no |
| Tab Panel | General General |
| Type | LONG |

ClockType

Table 3-2945 ClockType

| Name | Value |
|----------------|-----------|
| Default | yes: |
| Displayed name | ClockType |
| OSS name | clockType |
| Read-only | no |

Table 3-2945 ClockType (continued)

| Name | Value |
|-------------|-----------------|
| Tab Panel | General General |
| Type | STRING |

Delay**Table 3-2946 Delay**

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Delay |
| OSS name | delay |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Index**Table 3-2947 Index**

| Name | Value |
|----------------|-----------------|
| Displayed name | Index |
| Maximum | 3 |
| Minimum | 1 |
| OSS name | index |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

IP Address**Table 3-2948 IP Address**

| Name | Value |
|-------------|--|
| Default | yes: |
| Description | This specifies the ip address that uniquely identifies a node that will provide time to the NTP client of this system. |

Table 3-2948 IP Address (continued)

| Name | Value |
|-----------------------|-----------------|
| Displayed name | IP Address |
| Mandatory on creation | yes |
| OSS name | ipAddress |
| Read-only | no |
| Tab Panel | General General |
| Type | INETADDR |

Is Active**Table 3-2949 Is Active**

| Name | Value |
|----------------|-----------------|
| Default | yes:false |
| Displayed name | Is Active |
| OSS name | isActive |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Jitter**Table 3-2950 Jitter**

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Jitter |
| OSS name | jitter |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Key Index
Table 3-2951 Key Index

| Name | Value |
|----------------|-----------------|
| Default | no |
| Displayed name | Key Index |
| OSS name | keyIndex |
| Read-only | no |
| Tab Panel | General General |
| Type | LONG |

NTP Version**Table 3-2952 NTP Version**

| Name | Value |
|--------------------------|--|
| Default | yes:4 |
| Description | This specifies the NTP version number generated or accepted by this node in NTP packets. |
| Displayed name | NTP Version |
| OSS name | ntpServerVersion |
| Read-only | no |
| Tab Panel | General General |
| Type | NTPVersion |
| Enumerated types: | |
| | version-2 |
| | version-3 |
| | version-4 |

Offset**Table 3-2953 Offset**

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Offset |
| OSS name | offset |
| Read-only | no |
| Tab Panel | General General |

Table 3-2953 Offset (continued)

| Name | Value |
|------|--------|
| Type | STRING |

PollingInterval**Table 3-2954 PollingInterval**

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | PollingInterval |
| OSS name | pollingInterval |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Preferred Server**Table 3-2955 Preferred Server**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | This specifies whether or not this is the preferred NTP server to receive time from. |
| Displayed name | Preferred Server |
| OSS name | ntpServerPrefer |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Primary State**Table 3-2956 Primary State**

| Name | Value |
|----------------|-----------------|
| Default | yes:unspecified |
| Displayed name | Primary State |
| OSS name | primaryState |
| Read-only | no |

Table 3-2956 Primary State (continued)

| Name | Value |
|-------------|--------------------------|
| Tab Panel | General General |
| Type | optical.PrimaryStateType |

PTP Server**Table 3-2957 PTP Server**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Ptp is a special value of ntp server that is equal to ipv4 address 127.127.1.0 |
| Displayed name | PTP Server |
| OSS name | ntpPtpServer |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Reach**Table 3-2958 Reach**

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Reach |
| OSS name | reach |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

ReferenceID**Table 3-2959 ReferenceID**

| Name | Value |
|----------------|-------------|
| Default | yes: |
| Displayed name | ReferenceID |
| OSS name | referenceID |

Table 3-2959 ReferenceID (continued)

| Name | Value |
|-------------|-----------------|
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Secondary State**Table 3-2960 Secondary State**

| Name | Value |
|----------------|----------------------------|
| Default | yes:unspecified |
| Displayed name | Secondary State |
| OSS name | secondaryState |
| Read-only | no |
| Tab Panel | General General |
| Type | optical.SecondaryStateType |

Site ID**Table 3-2961 Site ID**

| Name | Value |
|----------------|--------------|
| Default | yes:0.0.0.0 |
| Displayed name | Site ID |
| Maximum | 64 |
| OSS name | siteId |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

Site Name**Table 3-2962 Site Name**

| Name | Value |
|----------------|-----------|
| Default | yes: |
| Displayed name | Site Name |

Table 3-2962 Site Name (continued)

| Name | Value |
|-------------|--------------|
| Maximum | 252 |
| OSS name | siteName |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

Status**Table 3-2963 Status**

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Status |
| OSS name | status |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Stratum**Table 3-2964 Stratum**

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Stratum |
| OSS name | stratum |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

OCH Cross Connect Group parameters

A-Z Rekey

Table 3-2965 A-Z Rekey

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Setting rekeyAZ to true allows the user to request a rekey in the A-Z direction. |
| Displayed name | A-Z Rekey |
| OSS name | rekeyAZ |
| Read-only | no |
| Tab Panel | General ReKey |
| Type | BOOL |

Administrative State

Table 3-2966 Administrative State

| Name | Value |
|--------------------------|---|
| Default | yes:up |
| Description | The administrative state of the connection. |
| Displayed name | Administrative State |
| Mandatory on creation | yes |
| OSS name | administrativeState |
| Read-only | no |
| Tab Panel | General States |
| Type | ConnectionAdminState |
| Enumerated types: | |
| Automatic In-Service | |
| Blocking | |
| Down | |
| Maintenance | |
| Partially Down | |
| Standby/Backup | |
| Unknown | |
| Up | |

Bidirectional**Table 3-2967 Bidirectional**

| Name | Value |
|----------------|---|
| Default | yes:true |
| Description | Indicates if this connection is a unidirectional or bidirectional connection. |
| Displayed name | Bidirectional |
| OSS name | biDirectional |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Bit Rate / Encoding AZ**Table 3-2968 Bit Rate / Encoding AZ**

| Name | Value |
|----------------|---|
| Description | Pointer to a user provisioned system-wide technology type (Bit-Rate + Encoding) in the AZ direction |
| Displayed name | Bit Rate / Encoding AZ |
| OSS name | technologyTypeAZ |
| Read-only | no |
| Tab Panel | General User Technology AZ |
| Type | POINTER |

Bit Rate / Encoding ZA**Table 3-2969 Bit Rate / Encoding ZA**

| Name | Value |
|----------------|---|
| Description | Pointer to a user provisioned system-wide technology type (Bit-Rate + Encoding) in the ZA direction |
| Displayed name | Bit Rate / Encoding ZA |
| OSS name | technologyTypeZA |
| Read-only | no |
| Tab Panel | General User Technology ZA |
| Type | POINTER |

Bit Rate AZ**Table 3-2970 Bit Rate AZ**

| Name | Value |
|----------------|-----------------------------------|
| Description | Received Bit Rate AZ description. |
| Displayed name | Bit Rate AZ |
| OSS name | bitRateTextAZ |
| Read-only | no |
| Tab Panel | General Received Technology |
| Type | STRING |

Bit Rate ZA**Table 3-2971 Bit Rate ZA**

| Name | Value |
|----------------|-----------------------------------|
| Description | Received Bit Rate ZA description. |
| Displayed name | Bit Rate ZA |
| OSS name | bitRateTextZA |
| Read-only | no |
| Tab Panel | General Received Technology |
| Type | STRING |

Connection Type**Table 3-2972 Connection Type**

| Name | Value |
|--------------------------|---|
| Description | The type of OCH cross connect connection. |
| Displayed name | Connection Type |
| OSS name | xcType |
| Read-only | no |
| Tab Panel | General General |
| Type | XcType |
| Enumerated types: | |
| Add | |
| Add Drop | |
| Continue | |

Table 3-2972 Connection Type (continued)

| Name | Value |
|------|-------|
| Drop | |
| Thru | |

Destination**Table 3-2973 Destination**

| Name | Value |
|----------------|---|
| Description | Name of the endpoint Z, used for display. |
| Displayed name | Destination |
| OSS name | endpointZName |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

Encoding AZ**Table 3-2974 Encoding AZ**

| Name | Value |
|----------------|-----------------------------------|
| Description | Received encoding AZ description. |
| Displayed name | Encoding AZ |
| OSS name | encodingTextAZ |
| Read-only | no |
| Tab Panel | General Received Technology |
| Type | STRING |

Encoding ZA**Table 3-2975 Encoding ZA**

| Name | Value |
|----------------|-----------------------------------|
| Description | Received encoding ZA description. |
| Displayed name | Encoding ZA |

| None | |
| Not Applicable | |

Z-A Encoder Domain**Table 3-3046 Z-A Encoder Domain**

| Name | Value |
|----------------|--|
| Default | yes:Not Received |
| Description | Displays originating domain number of encoder for ZA direction. -1 indicates not yet received via LSA. |
| Displayed name | Z-A Encoder Domain |
| OSS name | zaEncoderDomain |
| Read-only | no |
| Tab Panel | General Wave Key |
| Type | STRING |

Z-A Protection Encoder Domain**Table 3-3047 Z-A Protection Encoder Domain**

| Name | Value |
|----------------|---|
| Default | yes:Not Received |
| Description | Displays originating domain number of encoder for ZA direction for protection XC of OPS protected source. -1 indicates not yet received via LSA |
| Displayed name | Z-A Protection Encoder Domain |
| OSS name | zaProtEncoderDomain |
| Read-only | no |
| Tab Panel | General Wave Key |
| Type | STRING |

Z-A Protection Wave Key Reuse Unlocked
Table 3-3048 Z-A Protection Wave Key Reuse Unlocked

| Name | Value |
|--------------------------|--|
| Default | yes:notReceived |
| Description | Displays whether WT key pair re-use is unlocked for this OCh frequency in ZA direction. notReceived(1) indicates not yet received via LSA. |
| Displayed name | Z-A Protection Wave Key Reuse Unlocked |
| OSS name | zaProtWaveKeyReuseUnlocked |
| Read-only | no |
| Tab Panel | General Wave Key |
| Type | WaveKeyReuseUnlockType |
| Enumerated types: | |
| | no |
| | Not Received |
| | Yes |

Z-A Rekey**Table 3-3049 Z-A Rekey**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Setting rekeyZA to true allows the user to request a rekey in the Z-A direction. |
| Displayed name | Z-A Rekey |
| OSS name | rekeyZA |
| Read-only | no |
| Tab Panel | General ReKey |
| Type | BOOL |

Z-A Wave Key Reuse Unlocked**Table 3-3050 Z-A Wave Key Reuse Unlocked**

| Name | Value |
|-------------|--|
| Default | yes:notReceived |
| Description | Displays whether WT key pair re-use is unlocked for this OCh frequency in ZA direction. notReceived(1) indicates not yet received via LSA. |

Table 3-3050 Z-A Wave Key Reuse Unlocked (continued)

| Tab Panel | General General |
| Type | STRING |

TTI Comparison**Table 3-3124 TTI Comparison**

| Name | Value |
|----------------|---|
| Default | yes:off |
| Description | Indicates the mode of the Trace Identifier Mismatch (TIM) Detection function. |
| Displayed name | TTI Comparison |
| OSS name | timDetMode |
| Read-only | no |
| Tab Panel | General Path Overhead Monitoring TTI |
| Type | optical.TimDetectionMode |

TTI Mismatch Response**Table 3-3125 TTI Mismatch Response**

| Name | Value |
|----------------|--|
| Description | Indicates whether the Trace Identifier Mismatch (TIM) Consequent Action function is enabled. |
| Displayed name | TTI Mismatch Response |
| OSS name | timActEnabled |
| Read-only | no |
| Tab Panel | General Path Overhead Monitoring TTI |
| Type | BOOL |

TTI Status
Table 3-3126 TTI Status

| Name | Value |
|----------------|--------------------------------------|
| Description | TTI status. |
| Displayed name | TTI Status |
| OSS name | tTiStatus |
| Read-only | yes |
| Tab Panel | General Path Overhead Monitoring TTI |
| Type | optical.AluWdmTtiStatus |

ODU Path Termination parameters

Administrative State**Table 3-3127 Administrative State**

| Name | Value |
|----------------|---|
| Default | yes:unknown |
| Description | Administrative state of the interface. It may be used to suppress the alarms or disable consequent actions on the entity. |
| Displayed name | Administrative State |
| OSS name | administrativeState |
| Read-only | no |
| Tab Panel | States General |
| Type | optical.XcState |

AINS Countdown**Table 3-3128 AINS Countdown**

| Name | Value |
|----------------|---------------------------|
| Displayed name | AINS Countdown |
| OSS name | ainsDebounceTimeRemaining |
| Read-only | yes |
| Tab Panel | States AINS |
| Type | STRING |
| Units | HH:MM |

AINS State
Table 3-3129 AINS State

| Name | Value |
|----------------|------------------------------|
| Default | yes:false |
| Description | AINS state of the interface. |
| Displayed name | AINS State |
| OSS name | ainsState |
| Read-only | no |
| Tab Panel | States AINS |
| Type | BOOL |

AINS Timer**Table 3-3130 AINS Timer**

| Name | Value |
|----------------|------------------|
| Displayed name | AINS Timer |
| OSS name | ainsDebounceTime |
| Read-only | no |
| Tab Panel | States AINS |
| Type | STRING |
| Units | HH:MM |

Alarm Profile**Table 3-3131 Alarm Profile**

| Name | Value |
|----------------|---------------------|
| Displayed name | Alarm Profile |
| OSS name | alarmProfilePointer |
| Read-only | no |
| Tab Panel | General General |
| Type | POINTER |

APS Enabled
Table 3-3132 APS Enabled

| Name | Value |
|----------------|---|
| Description | Enable or disable the proprietary APS bytes insertion in the ODU2 overhead. |
| Displayed name | APS Enabled |
| OSS name | apsEnabled |
| Read-only | no |
| Tab Panel | General General |
| Type | optical.APSSConfigType |

Assigned Rate**Table 3-3133 Assigned Rate**

| Name | Value |
|----------------|--|
| Description | The assigned rate - OTU1, GigE, OC3... |
| Displayed name | Assigned Rate |
| OSS name | assignedRate |
| Read-only | no |
| Tab Panel | General General |
| Type | optical.AssignedRate |

Clear All Bins**Table 3-3134 Clear All Bins**

| Name | Value |
|----------------|---|
| Default | yes:noCmd |
| Description | Clear all ODURx and ODUTx PMs in both current 15 minute bin and the current 1 day interval. |
| Displayed name | Clear All Bins |
| OSS name | clearAllBins |
| Read-only | no |
| Tab Panel | General Stats Control |
| Type | optical.PerformCommand |

Client Payload Type
Table 3-3135 Client Payload Type

| Name | Value |
|--------------------------|---|
| Description | Type of client signal fail format. Indicates the kind of format of signal carrying client signal fail indication. The signal is generated by the addressed ODU to the far end. LCS - Loss of Client signal. GFP frame reporting CSF indication has UPI equal to 1, that means Loss of Client signal, this value is not recommended by Standard ITU-T G.7041. LCCS - Loss of client character Synchronization. GFP frame reporting CSF indication has UPI equal to 2, that means Loss of client character Synchronization, this value is recommended by Standard ITU-T G.7041. |
| Displayed name | Client Payload Type |
| OSS name | payloadType |
| Read-only | no |
| Tab Panel | General ODU Payload |
| Type | CSPayloadType |
| Enumerated types: | |
| 1000BaseX | |
| AMCC | |
| ASCBR | |
| BSCBR | |
| CAMCC | |
| GBENTTT | |
| GFP | |
| ODUM | |
| ODUMPT21 | |
| OLDAMCC | |
| STM1OC3 | |
| STM4OC12 | |

Connection Monitoring End Point Mode**Table 3-3136 Connection Monitoring End Point Mode**

| Name | Value |
|----------------|--------------------------------------|
| Default | yes:bypass |
| Description | Connection monitoring End Point Mode |
| Displayed name | Connection Monitoring End Point Mode |
| OSS name | connectionMonitoringEndPointMode |

Table 3-3136 Connection Monitoring End Point Mode (continued)

| Name | Value |
|--------------------------|--------------------------------------|
| Read-only | no |
| Tab Panel | General Delay Measurement Attributes |
| Type | CMEPMode |
| Enumerated types: | |
| Bypass | |
| Destination | |
| Source | |

CSF Format**Table 3-3137 CSF Format**

| Name | Value |
|--------------------------|---|
| Description | Type of client signal fail format. Indicates the kind of format of signal carrying client signal fail indication. The signal is generated by the addressed ODU to the far end. LCS - Loss of Client signal. GFP frame reporting CSF indication has UPI equal to 1, that means Loss of Client signal, this value is not recommended by Standard ITU-T G.7041. LCCS - Loss of client character Synchronization. GFP frame reporting CSF indication has UPI equal to 2, that means Loss of client character Synchronization, this value is recommended by Standard ITU-T G.7041. |
| Displayed name | CSF Format |
| OSS name | csfType |
| Read-only | no |
| Tab Panel | General General |
| Type | CSFType |
| Enumerated types: | |
| LCCS | |
| LCS | |

CSF Propagation
Table 3-3138 CSF Propagation

| Name | Value |
|--------------------------|--|
| Description | Propagation of Client Signal Fail indication. Displays modalities of the propagation of Client Signal Fail indication. The signal is generated by the addressed ODU to the far end. FWD - Forward CSF Propagation. Failure on the interface at client side will be propagated forward by the addressed ODU as Client Signal Fail indication to the far end. FWDBWD - Forward and Backward CSF Propagation. Failure on the interface at client side will be propagated forward by the addressed ODU as Client Signal Fail indication to the far end. Server Signal Fail alarm detected by the addressed ODU will be propagated in the backward direction as the Client Signal Fail to the far end. NONE - No CSF Propagation. |
| Displayed name | CSF Propagation |
| OSS name | csfPropogationMode |
| Read-only | no |
| Tab Panel | General General |
| Type | CSFPropogationMode |
| Enumerated types: | |
| FWD | |
| FWDBWD | |
| FWDGFPENH | |
| NONE | |

Ctp ID**Table 3-3139 Ctp ID**

| Name | Value |
|-----------------------|-----------------------------|
| Default | yes:1 |
| Description | The identifier for the Ctp. |
| Displayed name | Ctp ID |
| Mandatory on creation | yes |
| Minimum | 1 |
| OSS name | ctpId |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Data Bearer Details
Table 3-3140 Data Bearer Details

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Pointer to gmpls.Databearer instance discovered through the CORBA interface. Applicable if the virtual ODU PTF is being used in a databearer. |
| Displayed name | Data Bearer Details |
| OSS name | dataBearerPointer |
| Read-only | yes |
| Tab Panel | General ASON Control Plane - Data Bearer |
| Type | POINTER |

DM Current Status**Table 3-3141 DM Current Status**

| Name | Value |
|--------------------------|--------------------------------------|
| Default | yes:none |
| Description | Delay measurement - current status |
| Displayed name | DM Current Status |
| OSS name | delayMeasurementCurrentStatus |
| Read-only | yes |
| Tab Panel | General Delay Measurement Attributes |
| Type | DMCurrentStatus |
| Enumerated types: | |
| | |
| Invalid | |
| N/A | |
| Valid | |

DM Current Value**Table 3-3142 DM Current Value**

| Name | Value |
|----------------|-----------------------------------|
| Description | Delay measurement - current value |
| Displayed name | DM Current Value |

Table 3-3142 DM Current Value (continued)

| Name | Value |
|-------------|--------------------------------------|
| OSS name | delayMeasurementCurrentValue |
| Read-only | yes |
| Tab Panel | General Delay Measurement Attributes |
| Type | FLOAT |

Expected DAPI**Table 3-3143 Expected DAPI**

| Name | Value |
|----------------|--|
| Description | The DAPI expected by the receiver. This object has no effect when timDetMode has the value off(1) or dapi(2).{BR} DAPI: Destination Access Point Identifier. |
| Displayed name | Expected DAPI |
| Maximum | 31 |
| Minimum | 0 |
| OSS name | expectedDapi |
| Read-only | no |
| Tab Panel | General TTI |
| Type | STRING |

Expected TTI**Table 3-3144 Expected TTI**

| Name | Value |
|----------------|--|
| Description | The SAPI expected by the receiver. This object has no effect when timDetMode has the value off(1).{BR} SAPI: Source Access Point Identifier. |
| Displayed name | Expected TTI |
| Maximum | 31 |
| Minimum | 0 |
| OSS name | expectedSapi |
| Read-only | no |
| Tab Panel | General TTI |
| Type | STRING |

Incoming Backward FTFL Operator ID**Table 3-3145 Incoming Backward FTFL Operator ID**

| Name | Value |
|----------------|---|
| Description | This is for ODUk Backward FTFL Oper Id. |
| Displayed name | Incoming Backward FTFL Operator ID |
| OSS name | oduBkwrFTFLOperId |
| Read-only | yes |
| Tab Panel | General ODU Overhead Attributes |
| Type | STRING |

Incoming Backward FTFL Type ID**Table 3-3146 Incoming Backward FTFL Type ID**

| Name | Value |
|----------------|---|
| Description | This is for ODUk Backward FTFL Type Id. |
| Displayed name | Incoming Backward FTFL Type ID |
| OSS name | oduBkwrFTFLTypeId |
| Read-only | yes |
| Tab Panel | General ODU Overhead Attributes |
| Type | STRING |

Incoming DAPI**Table 3-3147 Incoming DAPI**

| Name | Value |
|----------------|--|
| Description | The second 16 octets (TTI[16]-TTI[31]) of acceptedTti. |
| Displayed name | Incoming DAPI |
| OSS name | rxDapi |
| Read-only | yes |
| Tab Panel | General TTI |
| Type | STRING |

Incoming EXP**Table 3-3148 Incoming EXP**

| Name | Value |
|----------------|---|
| Description | This is for OduK Backward Incoming EXP. |
| Displayed name | Incoming EXP |
| OSS name | odukIncFtlExp |
| Read-only | yes |
| Tab Panel | General ODU Overhead Attributes |
| Type | STRING |

Incoming Forward FTFL Operator ID**Table 3-3149 Incoming Forward FTFL Operator ID**

| Name | Value |
|----------------|--|
| Description | This is for ODUK Forward FTFL Oper Id. |
| Displayed name | Incoming Forward FTFL Operator ID |
| OSS name | oduFwrFTFLOperId |
| Read-only | yes |
| Tab Panel | General ODU Overhead Attributes |
| Type | STRING |

Incoming Forward FTFL Type ID**Table 3-3150 Incoming Forward FTFL Type ID**

| Name | Value |
|----------------|--|
| Description | This is for ODUK Forward FTFL Type Id. |
| Displayed name | Incoming Forward FTFL Type ID |
| OSS name | oduFwrFTFLTypeId |
| Read-only | yes |
| Tab Panel | General ODU Overhead Attributes |
| Type | STRING |

Incoming OS**Table 3-3151 Incoming OS**

| Name | Value |
|----------------|--|
| Description | The last 32 octets (TTI[32]-TTI[63]) of acceptedTti. |
| Displayed name | Incoming OS |
| OSS name | rxOs |
| Read-only | yes |
| Tab Panel | General TTI |
| Type | STRING |

Incoming TTI**Table 3-3152 Incoming TTI**

| Name | Value |
|----------------|---|
| Description | The fist 16 octets (TTI[0]-TTI[15]) of acceptedTti. |
| Displayed name | Incoming TTI |
| OSS name | rxSapi |
| Read-only | yes |
| Tab Panel | General TTI |
| Type | STRING |

Incoming TTI Status**Table 3-3153 Incoming TTI Status**

| Name | Value |
|----------------|---------------------|
| Displayed name | Incoming TTI Status |
| OSS name | incTtiStatus |
| Read-only | yes |
| Tab Panel | General TTI |
| Type | STRING |

Layer Type
Table 3-3154 Layer Type

| Name | Value |
|----------------|---|
| Description | The layer type - OCH, OTU, ODU, Electrical... |
| Displayed name | Layer Type |
| OSS name | layerType |
| Read-only | no |
| Tab Panel | General General |
| Type | optical.LayerType |

Management Access Domain**Table 3-3155 Management Access Domain**

| Name | Value |
|--------------------------|---|
| Default | yes:unknown |
| Description | Management Access Domain determines how the facility is managed (i.e. to which manager assigned). |
| Displayed name | Management Access Domain |
| OSS name | mgmtAccessDomain |
| Read-only | yes |
| Tab Panel | General General |
| Type | MgmtAccessDomains |
| Enumerated types: | |
| Control Plane | |
| Management Plane | |
| Mixed Plane | |
| None | |

Name**Table 3-3156 Name**

| Name | Value |
|----------------|-------|
| Default | yes: |
| Displayed name | Name |
| Maximum | 252 |

Table 3-3156 Name (continued)

| Name | Value |
|-------------|-----------------|
| Minimum | 0 |
| OSS name | displayName |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

ODU Rx PM Enabled**Table 3-3157 ODU Rx PM Enabled**

| Name | Value |
|----------------|----------------------------------|
| Description | Enable and disable the ODURx PM. |
| Displayed name | ODU Rx PM Enabled |
| OSS name | statsRxEnable |
| Read-only | no |
| Tab Panel | General Stats Control |
| Type | BOOL |

Operational Capability**Table 3-3158 Operational Capability**

| Name | Value |
|----------------|-------------------------------|
| Default | yes:disabled |
| Displayed name | Operational Capability |
| OSS name | operationalCapability |
| Read-only | yes |
| Tab Panel | States General |
| Type | optical.OperationalCapability |

Operational State**Table 3-3159 Operational State**

| Name | Value |
|---------|-------------|
| Default | yes:unknown |

Table 3-3159 Operational State (continued)

| Name | Value |
|----------------|-------------------------------------|
| Description | Operational state of the interface. |
| Displayed name | Operational State |
| OSS name | operationalState |
| Read-only | yes |
| Tab Panel | States General |
| Type | optical.XcState |

Payload Type

Table 3-3160 Payload Type

| Name | Value |
|----------------|---|
| Description | The ODUk payload type value provisioned on the transmitting direction. This is applicable only to an ODU adaptation function. |
| Displayed name | Payload Type |
| Maximum | 255 |
| Minimum | 0 |
| OSS name | txPayloadType |
| Read-only | no |
| Tab Panel | General ODU Payload |
| Type | INT |

Payload Type Mismatch Response

Table 3-3161 Payload Type Mismatch Response

| Name | Value |
|----------------|---|
| Description | Payload Type Mismatch (PLM) consequence action. |
| Displayed name | Payload Type Mismatch Response |
| OSS name | plmConsequenceAction |
| Read-only | no |
| Tab Panel | General ODU Payload |
| Type | BOOL |

Primary State
Table 3-3162 Primary State

| Name | Value |
|----------------|--------------------------|
| Default | yes:unspecified |
| Displayed name | Primary State |
| OSS name | primaryState |
| Read-only | no |
| Tab Panel | States General |
| Type | optical.PrimaryStateType |

Rate**Table 3-3163 Rate**

| Name | Value |
|-----------------------|-----------------|
| Default | yes:null |
| Displayed name | Rate |
| Mandatory on creation | yes |
| OSS name | rate |
| Read-only | no |
| Tab Panel | General General |
| Type | oth.OduRate |

Received Payload Structure**Table 3-3164 Received Payload Structure**

| Name | Value |
|----------------|--|
| Description | The received ODU payload structure value. It is retrieved from the received ODU MSI bytes. |
| Displayed name | Received Payload Structure |
| OSS name | rxOduStruct |
| Read-only | yes |
| Tab Panel | General ODU Payload Structure |
| Type | STRING |

Secondary State
Table 3-3165 Secondary State

| Name | Value |
|----------------|----------------------------|
| Default | yes:unspecified |
| Displayed name | Secondary State |
| OSS name | secondaryState |
| Read-only | no |
| Tab Panel | States General |
| Type | optical.SecondaryStateType |

Signal Degrade Burst Interval**Table 3-3166 Signal Degrade Burst Interval**

| Name | Value |
|----------------|---|
| Description | Burst Interval specifies the number of consecutive bad seconds (see parameter BRSTTH) to be detected before {BR} declaring a signal degrade defect (SDBER) on the ODU path layer. The defect is cleared if BRSTINTVL consecutive {BR} good seconds (see parameter BRSTTH) are detected. |
| Displayed name | Signal Degrade Burst Interval |
| Maximum | 10 |
| Minimum | 2 |
| OSS name | signalDegradeBurstInterval |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Signal Degrade Burst Threshold**Table 3-3167 Signal Degrade Burst Threshold**

| Name | Value |
|----------------|---|
| Description | Burst Threshold specifies a number of errored blocks on the ODU path layer. A second is declared as good {BR} if the number of detected errored blocks within one second is less than BRSTTH; otherwise the second is declared as bad second. |
| Displayed name | Signal Degrade Burst Threshold |
| Maximum | 856388 |
| Minimum | 1 |
| OSS name | signalDegradeBurstThreshold |

Table 3-3167 Signal Degrade Burst Threshold (continued)

| Name | Value |
|-------------|-----------------|
| Read-only | no |

| OSS name | txDapi |
| Read-only | no |
| Tab Panel | General TTI |
| Type | STRING |

Transmit OS**Table 3-3176 Transmit OS**

| Name | Value |
|----------------|---|
| Description | Transmitted Trail Trace Identifier (TTI), Transmit Source Access Point Identifier |
| Displayed name | Transmit OS |
| Maximum | 65 |
| Minimum | 0 |
| OSS name | txOs |
| Read-only | no |
| Tab Panel | General TTI |
| Type | STRING |

Transmitted Payload Structure**Table 3-3177 Transmitted Payload Structure**

| Name | Value |
|----------------|---|
| Description | The transmitted ODU payload structure value. It is programmed into the transmitted ODU MSI bytes. |
| Displayed name | Transmitted Payload Structure |
| OSS name | txOduStruct |
| Read-only | yes |
| Tab Panel | General ODU Payload Structure |
| Type | STRING |

Transmitted TTI**Table 3-3178 Transmitted TTI**

| Name | Value |
|----------------|--|
| Description | Transmitted Trail Trace Identifier (TTI), Transmit Source Access Point Identifier. |
| Displayed name | Transmitted TTI |
| Maximum | 31 |
| Minimum | 0 |
| OSS name | txSapi |
| Read-only | no |
| Tab Panel | General TTI |
| Type | STRING |

TTI Comparison**Table 3-3179 TTI Comparison**

| Name | Value |
|----------------|---|
| Description | Indicates the mode of the Trace Identifier Mismatch (TIM) Detection function. |
| Displayed name | TTI Comparison |
| OSS name | timDetMode |
| Read-only | no |
| Tab Panel | General TTI |
| Type | optical.TimDetectionMode |

TTI Mismatch Response**Table 3-3180 TTI Mismatch Response**

| Name | Value |
|----------------|--|
| Description | Indicates whether the Trace Identifier Mismatch (TIM) Consequent Action function is enabled. |
| Displayed name | TTI Mismatch Response |
| OSS name | timActEnabled |
| Read-only | no |
| Tab Panel | General TTI |
| Type | BOOL |

TTI Status
Table 3-3181 TTI Status

| Name | Value |
|----------------|-------------------------|
| Description | TTI status. |
| Displayed name | TTI Status |
| OSS name | ttiStatus |
| Read-only | yes |
| Tab Panel | General TTI |
| Type | optical.AluWdmTtiStatus |

Use System AINS Timer**Table 3-3182 Use System AINS Timer**

| Unknown | |
| Up | |

Asymmetric Interworking**Table 3-3189 Asymmetric Interworking**

| Name | Value |
|-------------|--|
| Default | yes:false |
| Description | Indicates if this trail is interworking between OTH and non-OTH endpoints. |

Table 3-3189 Asymmetric Interworking (continued)

| Name | Value |
|----------------|-------------------------|
| Displayed name | Asymmetric Interworking |
| OSS name | interworking |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Bidirectional**Table 3-3190 Bidirectional**

| Name | Value |
|----------------|---|
| Default | yes:true |
| Description | Indicates if this connection is a unidirectional or bidirectional connection. |
| Displayed name | Bidirectional |
| OSS name | biDirectional |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Connection Type**Table 3-3191 Connection Type**

| Name | Value |
|--------------------------|---------------------|
| Default | yes:unspecified |
| Description | Type of connection. |
| Displayed name | Connection Type |
| Mandatory on creation | yes |
| OSS name | connectionType |
| Read-only | no |
| Tab Panel | General General |
| Type | ConnectionType |
| Enumerated types: | |
| Multipoint Service Path | |
| OCH CrossConnect | |

Table 3-3191 Connection Type (continued)

| Default | yes: |
| Displayed name | Customer Name |
| Maximum | 32 |
| Minimum | 0 |
| OSS name | subscriberName |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

DM Current Status**Table 3-3195 DM Current Status**

| Name | Value |
|-------------|------------------------------------|
| Default | yes:none |
| Description | Delay measurement - current status |

Table 3-3195 DM Current Status (continued)

| Name | Value |
|----------------|-------------------------------|
| Displayed name | DM Current Status |
| OSS name | delayMeasurementCurrentStatus |
| Read-only | yes |
| Tab Panel | General Delay Measurement |
| Type | oth.DMCurrentStatus |

DM Current Value**Table 3-3196 DM Current Value**

| Name | Value |
|----------------|-----------------------------------|
| Description | Delay measurement - current value |
| Displayed name | DM Current Value |
| OSS name | delayMeasurementCurrentValue |
| Read-only | yes |
| Tab Panel | General Delay Measurement |
| Type | FLOAT |
| Units | us |

Force Create OCh XC**Table 3-3197 Force Create OCh XC**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Indicates whether the OCH XC should be created by force when power commissioning provisioning state is "InProgress". |
| Displayed name | Force Create OCh XC |
| OSS name | forceXcCreate |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Inconsistency

Table 3-3198 Inconsistency

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Description of discrepancy if there is discrepancy in the Trail. |
| Displayed name | Inconsistency |
| OSS name | discrepancy |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Inconsistent

Table 3-3199 Inconsistent

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Flag that indicates if there is any discrepancy in the Trail. Example - when APS Protection Mode parameters for the APS Groups in the trail do not match, then this flag will be enabled. |
| Displayed name | Inconsistent |
| OSS name | discrepancyFlag |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Operational State

Table 3-3200 Operational State

| Name | Value |
|--------------------------|--|
| Description | The operational state of the connection. |
| Displayed name | Operational State |
| OSS name | operationalState |
| Read-only | no |
| Tab Panel | General States |
| Type | ConnectionOperState |
| Enumerated types: | |

Table 3-3200 Operational State (continued)

| Name | Value |
|----------------|-------|
| Degraded | |
| Disabled | |
| Down | |
| Enabled | |
| Partially Down | |
| Unknown | |
| Up | |

Path Preference

Table 3-3201 Path Preference

| Name | Value |
|-------------------------------------|---|
| Default | yes:working |
| Description | Indicates whether the working path or the protection path needs to be retained when Trail protection is modified to unprotected |
| Displayed name | Path Preference |
| OSS name | modifyProtectionPreference |
| Read-only | no |
| Tab Panel | General General |
| Type | ModifyProtectionPreference |
| Enumerated types: | |
| None | |
| Retain Path A1Z1 | |
| Retain Path A1Z2 | |
| Retain Path A2Z1 | |
| Retain Path A2Z2 | |
| Retain Protection Path | |
| Retain Termination Points A1 and Z1 | |
| Retain Termination Points A1 and Z2 | |
| Retain Termination Points A2 and Z1 | |
| Retain Termination Points A2 and Z2 | |
| Retain Working Path | |

Path Search Option

Table 3-3202 Path Search Option

| Name | Value |
|--------------------------|---|
| Default | yes:system |
| Description | Specifies if routing path should be Auto-picked or User Defined. In case of User Defined, complete route needs to be defined by User via constraints. |
| Displayed name | Path Search Option |
| OSS name | pathSearchOption |
| Read-only | no |
| Tab Panel | General General |
| Type | PathSearchType |
| Enumerated types: | |
| GMRE Defined | |
| Interactive Mode | |
| System Defined | |
| User Defined | |

Payload Type

Table 3-3203 Payload Type

| Name | Value |
|----------------|-------------------------|
| Default | yes:N/A |
| Description | ODU Payload Type. |
| Displayed name | Payload Type |
| Maximum | 3 |
| Minimum | 0 |
| OSS name | txPayloadType |
| Read-only | no |
| Tab Panel | General ODUk Attributes |
| Type | STRING |

Payload Type Mismatch Response

Table 3-3204 Payload Type Mismatch Response

| Name | Value |
|--------------------------|---|
| Default | yes:notApplicable |
| Description | Payload Type Mismatch Response Enabled. |
| Displayed name | Payload Type Mismatch Response |
| OSS name | plmConsequenceAction |
| Read-only | no |
| Tab Panel | General ODUk Attributes |
| Type | TimActEnabled |
| Enumerated types: | |
| Disabled | |
| Enabled | |
| Unknown | |

Plane Type

Table 3-3205 Plane Type

| Name | Value |
|-----------------------|---|
| Default | yes:MP |
| Description | - Management plane, control plane or mixed. |
| Displayed name | Plane Type |
| Mandatory on creation | yes |
| OSS name | managementDomains |
| Read-only | no |
| Tab Panel | General General |
| Type | oth.MgmtAccessDomains |

Protection Level

Table 3-3206 Protection Level

| Name | Value |
|----------------|---|
| Default | yes:unprotected |
| Description | The calculated level of protection based on the underlying server OTN layers. |
| Displayed name | Protection Level |

Table 3-3206 Protection Level (continued)

| Name | Value |
|--------------------------|-----------------|
| Mandatory on creation | yes |
| OSS name | protectionLevel |
| Read-only | no |
| Tab Panel | General General |
| Type | ProtectionLevel |
| Enumerated types: | |
| Protected | |
| Segment Protected | |
| Unprotected | |

Protection Type**Table 3-3207 Protection Type**

| Name | Value |
|--------------------------|-------------------------------|
| Default | yes:unprotected |
| Description | Protection type of the trail. |
| Displayed name | Protection Type |
| OSS name | protection |
| Read-only | no |
| Tab Panel | General General |
| Type | TrailProtectionType |
| Enumerated types: | |
| Diverse Route | |
| OPS Protected | |
| Segment Protected | |
| SNCI Protected | |
| SNCN Protected | |
| SNCNC Protected | |
| Unprotected | |
| Y-Cable Protected | |

Rate
Table 3-3208 Rate

| Name | Value |
|--------------------------|----------------------------------|
| Description | Indicates the rate of the trail. |
| Displayed name | Rate |
| Mandatory on creation | yes |
| OSS name | rate |
| Read-only | no |
| Tab Panel | General General |
| Type | AssignedRate |
| Enumerated types: | |
| 100GbE LAN | |
| 10GbE LAN | |
| 1GbE | |
| 3GSDI | |
| 40GbE LAN | |
| 40GbE MLD LAN | |

| Default | yes: |
| Description | Displayed name of the Connection. |
| Displayed name | Trail Name |
| Maximum | 256 |
| Minimum | 0 |
| OSS name | displayName |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

TTI Comparison
Table 3-3212 TTI Comparison

| Name | Value |
|--------------------------|---|
| Default | yes:unknown |
| Description | Indicates the mode of the Trace Identifier Mismatch (TIM) Detection function. |
| Displayed name | TTI Comparison |
| OSS name | timDetMode |
| Read-only | no |
| Tab Panel | General TTI Attributes |
| Type | TimDetectionMode |
| Enumerated types: | |
| DAPI | |
| Disabled | |
| Enabled | |
| SAPI | |
| SAPIDAPI | |
| Unknown | |

TTI Mismatch Response**Table 3-3213 TTI Mismatch Response**

| Name | Value |
|--------------------------|--|
| Default | yes:notApplicable |
| Description | Indicates whether the Trace Identifier Mismatch (TIM) Consequent Action function is enabled. |
| Displayed name | TTI Mismatch Response |
| OSS name | timActEnabled |
| Read-only | no |
| Tab Panel | General TTI Attributes |
| Type | TimActEnabled |
| Enumerated types: | |
| Disabled | |
| Enabled | |
| Unknown | |

TTI Preference
Table 3-3214 TTI Preference

| Name | Value |
|--------------------------|---|
| Default | yes:ascii |
| Description | The OCh OTU FEC mode. Depending on the port rate this can be OTU1 FEC Mode/OTU2 FEC Mode/OTU3 FEC Mode/OTU4 FEC Mode. |
| Displayed name | TTI Preference |
| OSS name | ttiPreference |
| Read-only | no |
| Tab Panel | General TTI Attributes |
| Type | TTIPreference |
| Enumerated types: | |
| ASCII | |
| HEX | |

Wave Key Assign Mode**Table 3-3215 Wave Key Assign Mode**

| Name | Value |
|--------------------------|--------------------------|
| Default | yes:auto |
| Description | Wavekey generation mode. |
| Displayed name | Wave Key Assign Mode |
| Mandatory on creation | yes |
| OSS name | wavekeyAssignMode |
| Read-only | no |
| Tab Panel | General OTU/OCH Details |
| Type | WavekeySelect |
| Enumerated types: | |
| Auto Keying (NE) | |
| Auto Keying (NMS) | |
| Unkeyed | |

Z to A

Table 3-3216 Z to A

| Name | Value |
|--------------------------|---|
| Description | Indicates which trail path is the active one in the ZA direction. |
| Displayed name | Z to A |
| OSS name | activePathZA |
| Read-only | no |
| Tab Panel | General Active Path |
| Type | ProtectionState |
| Enumerated types: | |
| A1Z1 | |
| A1Z2 | |
| A2Z1 | |
| A2Z2 | |
| Protection | |
| Unprotected | |
| Working | |

Z-A Expected TTI

Table 3-3217 Z-A Expected TTI

| Name | Value |
|----------------|--|
| Default | yes:N/A |
| Description | ODU expected Trail Trace Identifier at A End of Trail (Z-A direction). For 1830PSS nodes, valid range is [0..15] bytes. For other nodes, valid range is [0..64] bytes. |
| Displayed name | Z-A Expected TTI |
| Maximum | 64 |
| Minimum | 0 |
| OSS name | expectedSapiAZ |
| Read-only | no |
| Tab Panel | General TTI Attributes |
| Type | STRING |

Z-A Transmitted OS
Table 3-3218 Z-A Transmitted OS

| Name | Value |
|----------------|---|
| Default | yes:N/A |
| Description | Transmitted Trail Trace Identifier (TTI), Transmit Source Access Point Identifier |
| Displayed name | Z-A Transmitted OS |
| Maximum | 65 |
| Minimum | 0 |
| OSS name | txOsZa |
| Read-only | no |
| Tab Panel | General TTI Attributes |
| Type | STRING |

Z-A Transmitted TTI**Table 3-3219 Z-A Transmitted TTI**

| Name | Value |
|----------------|---|
| Default | yes:N/A |
| Description | ODU transmitted Trail Trace Identifier at Z End of Trail (Z-A direction). For 1830PSS nodes, valid range is [0..15] bytes. For other nodes, valid range is [0..64] bytes. |
| Displayed name | Z-A Transmitted TTI |
| Maximum | 64 |
| Minimum | 0 |
| OSS name | txSapiZA |
| Read-only | no |
| Tab Panel | General TTI Attributes |

Clear Bins

Table 3-3383 Clear Bins

| Name | Value |
|--------------------------|---|
| Default | yes:1 |
| Description | This attribute is used to clear all the bins in an interval on a particular card and group. |
| Displayed name | Clear Bins |
| OSS name | clearBins |
| Read-only | no |
| Tab Panel | General General |
| Type | PerformCommand |
| Enumerated types: | |
| | Execute |
| | Execute with Force |
| | No Cmd |

Interval

Table 3-3384 Interval

| Name | Value |
|-----------------------|--------------------------|
| Default | yes:0 |
| Description | The collection interval. |
| Displayed name | Interval |
| Mandatory on creation | yes |
| OSS name | interval |
| Read-only | no |
| Tab Panel | General General |
| Type | IntervalType |

Table 3-3384 Interval (continued)

| Name | Value |
|--------------------------|-------|
| Enumerated types: | |
| 15 min Interval | |
| 24 hour Interval | |
| All | |
| Continuous | |
| Not Applicable | |

Number of Bins**Table 3-3385 Number of Bins**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | The number of collection bins in the interval. |
| Displayed name | Number of Bins |
| Maximum | 33 |
| Minimum | 1 |
| OSS name | noOfBins |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Profile Type**Table 3-3386 Profile Type**

| Name | Value |
|-----------------------|-----------------------|
| Default | yes:0 |
| Description | The group identifier. |
| Displayed name | Profile Type |
| Mandatory on creation | yes |
| OSS name | groupId |
| Read-only | no |
| Tab Panel | General General |
| Type | netca.TCAPProfileType |

TCA Profile

Table 3-3387 TCA Profile

| Name | Value |
|----------------|------------------------|
| Default | yes: |
| Description | TCA Profile. |

| Type | POINTER |

Assigned Rate**Table 3-3390 Assigned Rate**

| Name | Value |
|----------------|--|
| Description | The assigned rate - OTU1, GigE, OC3... |
| Displayed name | Assigned Rate |
| OSS name | assignedRate |
| Read-only | no |
| Tab Panel | General General |
| Type | optical.AssignedRate |

Ctp ID**Table 3-3391 Ctp ID**

| Name | Value |
|-----------------------|-----------------------------|
| Default | yes:1 |
| Description | The identifier for the Ctp. |
| Displayed name | Ctp ID |
| Mandatory on creation | yes |
| Minimum | 1 |
| OSS name | ctpId |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Down Link Facility**Table 3-3392 Down Link Facility**

| Name | Value |
|----------------|--------------------|
| Default | yes: |
| Displayed name | Down Link Facility |
| OSS name | downLinkFacility |
| Read-only | no |
| Tab Panel | General General |
| Type | POINTER |

Layer Type
Table 3-3393 Layer Type

| Name | Value |
|----------------|---|
| Description | The layer type - OCH, OTU, ODU, Electrical... |
| Displayed name | Layer Type |
| OSS name | layerType |
| Read-only | no |
| Tab Panel | General General |
| Type | optical.LayerType |

Name**Table 3-3394 Name**

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Name |

| Type | POINTER |

HSMDA Egress Scheduler Policy
Table 3-3448 HSMDA Egress Scheduler Policy

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Specifies the hsmda scheduler policy used by this port |
| Displayed name | HSMDA Egress Scheduler Policy |
| OSS name | portEgrHsmdaSchedulerPolicy |
| Read-only | no |
| Tab Panel | Policies.General HSMDA Scheduler |
| Type | POINTER |

Interface ID**Table 3-3449 Interface ID**

| Name | Value |
|----------------|-----------------|
| Default | yes:0 |
| Displayed name | Interface ID |
| OSS name | snmpPortId |
| Read-only | yes |
| Tab Panel | General General |
| Type | LONG |

L2 Profile**Table 3-3450 L2 Profile**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Pointer to the L2 Profile Policy object. |
| Displayed name | L2 Profile |
| OSS name | l2ProfilePointer |
| Read-only | no |
| Tab Panel | Policies.General L2 Profile |
| Type | POINTER |

L2Uplink**Table 3-3451 L2Uplink**

| Name | Value |
|----------------|-----------------|
| Default | yes:false |
| Displayed name | L2Uplink |
| OSS name | isl2UplinkMode |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Link Trap**Table 3-3452 Link Trap**

| Name | Value |
|----------------|-----------------|
| Default | yes:disable |
| Displayed name | Link Trap |
| OSS name | linkTrap |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Link Up**Table 3-3453 Link Up**

| Name | Value |
|----------------|----------------|
| Default | yes:false |
| Displayed name | Link Up |
| OSS name | isLinkUp |
| Read-only | yes |
| Tab Panel | States General |
| Type | BOOL |

Load Balance Algorithm

Table 3-3454 Load Balance Algorithm

| Name | Value |
|----------------|---|
| Default | yes:notApplicable |
| Description | Specifies the load balancing algorithm to be used on this port. |
| Displayed name | Load Balance Algorithm |
| OSS name | loadBalanceAlgorithm |
| Read-only | no |
| Tab Panel | General General |
| Type | equipment.PortLoadBalanceAlgorithm |

Local Channel ID

Table 3-3455 Local Channel ID

| Name | Value |
|-----------------------|--|
| Default | yes: |
| Description | This attribute will be ignored on creation of a APS Common Configuration Sonet Channel (sts3) Since the box will pick one as it very own, based on the portId of the physical port bound to the working circuit. This attribute will not be ignored on creation of a APS Common Configuration Sonet Channel when deep channels are supported (currently only on ASAP MDA). |
| Displayed name | Local Channel ID |
| Mandatory on creation | yes |
| Maximum | 100 |
| OSS name | displayedLocalChannelId |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Manufacture Date

Table 3-3456 Manufacture Date

| Name | Value |
|----------------|------------------|
| Default | yes: |
| Displayed name | Manufacture Date |
| Maximum | 252 |

Table 3-3456 Manufacture Date (continued)

| Name | Value |
|-------------|------------------------------|

| External | |
| Inter-Compound | |
| Internal | |

Unmanaged NE Identifier**Table 3-3516 Unmanaged NE Identifier**

| Name | Value |
|----------------|--------------------------------------|
| Description | Endpoint of NE which is not managed. |
| Displayed name | Unmanaged NE Identifier |
| OSS name | unManagedNEEndPoint |
| Read-only | no |
| Tab Panel | General Endpoint A - Unmanaged NE |
| Type | STRING |

Unmanaged NE Identifier**Table 3-3517 Unmanaged NE Identifier**

| Name | Value |
|----------------|--------------------------------------|
| Description | Endpoint of NE which is not managed. |
| Displayed name | Unmanaged NE Identifier |
| OSS name | unManagedNEEndPoint |
| Read-only | no |
| Tab Panel | General Endpoint B - Unmanaged NE |
| Type | STRING |

Optical Path Constraint parameters

Constraint Element

Table 3-3518 Constraint Element

| Name | Value |
|--------------------------|--|
| Default | yes:port |
| Description | Type of constraint element, e.g. port, site, oduTrail. |
| Displayed name | Constraint Element |
| OSS name | constraintElement |
| Read-only | no |
| Tab Panel | General General |
| Type | ConstraintElementType |
| Enumerated types: | |
| ODUk TimeSlot | |
| Optical Link | |
| OPTSG TimeSlot | |
| Port | |
| Site | |
| Subnetwork Connections | |
| TE Link | |
| Traffic Engineering | |
| Trail | |

Constraint Name

Table 3-3519 Constraint Name

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Type of constraint element, e.g. port, site, oduTrail. |
| Displayed name | Constraint Name |
| OSS name | constraintName |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Constraint Type**Table 3-3520 Constraint Type**

| Name | Value |
|--------------------------|--|
| Default | yes:exclusion |
| Description | Type of constraint, e.g. inclusion, exclusion. |
| Displayed name | Constraint Type |
| Mandatory on creation | yes |
| OSS name | constraintType |
| Read-only | no |
| Tab Panel | General General |
| Type | ConstraintType |
| Enumerated types: | |
| Exclusion | |
| Inclusion | |

Exclude Colors**Table 3-3521 Exclude Colors**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Applies to the control plane segment only. |
| Displayed name | Exclude Colors |
| OSS name | excludeAnyColor |
| Read-only | no |
| Tab Panel | General Traffic Engineering Constraints |
| Type | LONG |
| Units | bitmap |

Excluded Colors**Table 3-3522 Excluded Colors**

| Name | Value |
|-------------|--|
| Default | yes: |
| Description | User-friendly presentation of colors as comma separated list of numbers. For display use only. |

Table 3-3522 Excluded Colors (continued)

| Name | Value |
|----------------|---|
| Displayed name | Excluded Colors |
| OSS name | excludedColorList |
| Read-only | yes |
| Tab Panel | General Traffic Engineering Constraints |
| Type | STRING |

Include Colors**Table 3-3523 Include Colors**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Applies to the control plane segment only. |
| Displayed name | Include Colors |
| OSS name | includeAnyColor |
| Read-only | no |
| Tab Panel | General Traffic Engineering Constraints |
| Type | LONG |
| Units | bitmap |

Included Colors**Table 3-3524 Included Colors**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | User-friendly presentation of colors as comma separated list of numbers. For display use only. |
| Displayed name | Included Colors |
| OSS name | includedColorList |
| Read-only | yes |
| Tab Panel | General Traffic Engineering Constraints |
| Type | STRING |

Latency Offset At Termination Points

Table 3-3525 Latency Offset At Termination Points

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Applies to the control plane segment only. Latency offset at drop data bearers. |
| Displayed name | Latency Offset At Termination Points |
| Maximum | 4294967295 |
| Minimum | 0 |
| OSS name | accessLinkLatency |
| Read-only | no |
| Tab Panel | General Traffic Engineering Constraints |
| Type | LONG |
| Units | microsecs |

Maximum Hop Count

Table 3-3526 Maximum Hop Count

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Applies to the control plane segment only. |
| Displayed name | Maximum Hop Count |
| OSS name | maxHopCount |
| Read-only | no |
| Tab Panel | General Traffic Engineering Constraints |
| Type | INT |

Maximum Latency Allowed

Table 3-3527 Maximum Latency Allowed

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Applies to the control plane segment only. Latency metric; 0 means no latency. |
| Displayed name | Maximum Latency Allowed |
| Maximum | 4294967295 |
| Minimum | 0 |

Table 3-3527 Maximum Latency Allowed (continued)

Path Preference

Table 3-3637 Path Preference

| Name | Value |
|-------------------------------------|---|
| Default | yes:working |
| Description | Indicates whether the working path or the protection path needs to be retained when Service protection is modified to unprotected |
| Displayed name | Path Preference |
| OSS name | modifyProtectionPreference |
| Read-only | no |
| Tab Panel | General General |
| Type | ModifyProtectionPreference |
| Enumerated types: | |
| None | |
| Retain Path A1Z1 | |
| Retain Path A1Z2 | |
| Retain Path A2Z1 | |
| Retain Path A2Z2 | |
| Retain Protection Path | |
| Retain Termination Points A1 and Z1 | |
| Retain Termination Points A1 and Z2 | |
| Retain Termination Points A2 and Z1 | |
| Retain Termination Points A2 and Z2 | |
| Retain Working Path | |

Path Search Option

Table 3-3638 Path Search Option

| Name | Value |
|-------------|---|
| Default | yes:system |
| Description | Specifies if routing path should be Auto-picked or User Defined. In case of User Defined, complete route needs to be defined by User via constraints. |

Table 3-3638 Path Search Option (continued)

| Name | Value |
|--------------------------|--------------------|
| Displayed name | Path Search Option |

| Tab Panel | General Control Plane |
| Type | gmpls.ReversionType |

Revert Mode**Table 3-3652 Revert Mode**

| Name | Value |
|--------------------------|---|
| Default | yes:unspecified |
| Description | Indicates whether revertive or non-revertive APS Group is to be provisioned as part of the ESNCP-protected service. |
| Displayed name | Revert Mode |
| OSS name | revertMode |
| Read-only | no |
| Tab Panel | General APS Group |
| Type | ApsRevertMode |
| Enumerated types: | |
| Non Revertive | |
| Revertive | |

Revert Mode**Table 3-3653 Revert Mode**

| Name | Value |
|--------------------------|--|
| Default | yes:nonrevertive |
| Description | Duplicated from ApsGroup. Applicable only for y-cable protected service in creation mode. Specifies the Reversion mode of the Transport Service. |
| Displayed name | Revert Mode |
| OSS name | revertMode |
| Read-only | no |
| Tab Panel | General YCable APS Group |
| Type | ApsRevertMode |
| Enumerated types: | |
| Non Revertive | |
| Revertive | |

Service Deployment Mode
Table 3-3654 Service Deployment Mode

| Name | Value |
|--------------------------|---|
| Default | yes:deploy |
| Description | Indicates if the TransportService is created in Preview (or) Deploy Mode. |
| Displayed name | Service Deployment Mode |
| OSS name | connectionMode |
| Read-only | no |
| Tab Panel | General General |
| Type | ConnectionMode |
| Enumerated types: | |
| Deploy | |
| Failed | |
| Preview | |
| Unknown | |

Service ID**Table 3-3655 Service ID**

| Name | Value |
|-----------------------|-----------------|
| Default | yes:0 |
| Displayed name | Service ID |
| Mandatory on creation | yes |
| Maximum | 2147483647 |
| Minimum | 1 |
| OSS name | serviceId |
| Read-only | no |
| Tab Panel | General General |
| Type | LONG |

Service Name**Table 3-3656 Service Name**

| Name | Value |
|---------|-------|
| Default | yes: |

Table 3-3656 Service Name (continued)

| Name | Value |
|----------------|-----------------|
| Displayed name | Service Name |
| Maximum | 64 |
| Minimum | 0 |
| OSS name | displayName |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Service Priority**Table 3-3657 Service Priority**

| Name | Value |
|----------------|------------------------------|
| Default | yes:low |
| Description | The priority of the service. |
| Displayed name | Service Priority |
| OSS name | svcPriority |
| Read-only | no |
| Tab Panel | General General |
| Type | security.PriorityType |

Service Tier**Table 3-3658 Service Tier**

| Name | Value |
|----------------|-----------------|
| Default | yes:1 |
| Displayed name | Service Tier |
| Maximum | 10 |
| Minimum | 1 |
| OSS name | tier |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Service Type
Table 3-3659 Service Type

| Name | Value |
|----------------|-----------------|
| Displayed name | Service Type |
| OSS name | className |
| Read-only | no |
| Tab Panel | General General |

Setup Priority**Table 3-3660 Setup Priority**

| Name | Value |
|----------------|---|
| Default | yes:5 |
| Description | Applies to the control plane segment only. Setup priority determines whether this ODU connection might preempt existing connections during setup. |
| Displayed name | Setup Priority |
| Maximum | 5 |
| Minimum | 1 |
| OSS name | setupPriority |
| Read-only | no |
| Tab Panel | General Control Plane |
| Type | INT |

Stack-VLANID - AZ**Table 3-3661 Stack-VLANID - AZ**

| Name | Value |
|----------------|--|
| Default | yes:10 |
| Description | Represents the egress S VLANID of the vts map in qinq mode |
| Displayed name | Stack-VLANID - AZ |
| Maximum | 4095 |
| Minimum | 1 |
| OSS name | vtsMapEgressSVLANID |
| Read-only | no |
| Tab Panel | General VLAN Configuration Details |

Table 3-3661 Stack-VLANID - AZ (continued)

| Name | Value |
|------|-------|
| Type | LONG |

Stack-VLANID - ZA**Table 3-3662 Stack-VLANID - ZA**

| Name | Value |
|----------------|---|
| Default | yes:10 |
| Description | Represents the ingress S VLANID of the vts map in qinq mode |
| Displayed name | Stack-VLANID - ZA |
| Maximum | 4095 |
| Minimum | 1 |
| OSS name | vtsMapIngressSVLANID |
| Read-only | no |
| Tab Panel | General VLAN Configuration Details |
| Type | LONG |

State Cause**Table 3-3663 State Cause**

| Name | Value |
|----------------|--|
| Description | Specifies all the conditions that affect the operating status of this service. |
| Displayed name | State Cause |
| OSS name | operationalFlags |
| Read-only | yes |
| Tab Panel | General General |
| Type | OperFlags |

SVC Mgr Service ID**Table 3-3664 SVC Mgr Service ID**

| Name | Value |
|----------------|--------------------|
| Default | yes:0 |
| Displayed name | SVC Mgr Service ID |

Table 3-3664 SVC Mgr Service ID (continued)

| Name | Value |
|-----------------------|-----------------|
| Mandatory on creation | yes |
| Maximum | 1000000999999 |
| Minimum | 1 |
| OSS name | id |
| Read-only | no |
| Tab Panel | General General |
| Type | LONG |

Template**Table 3-3665 Template**

| Name | Value |
|-----------------------|-----------------|
| Default | yes: |
| Displayed name | Template |
| Mandatory on creation | yes |
| OSS name | templatePointer |
| Read-only | no |
| Tab Panel | General General |
| Type | POINTER |

Test Suite Count**Table 3-3666 Test Suite Count**

| Name | Value |
|----------------|-------------------|
| Default | yes:0 |
| Displayed name | Test Suite Count |
| Minimum | 0 |
| OSS name | sasTestSuiteCount |
| Read-only | yes |
| Tab Panel | General General |
| Type | INT |

Use Existing Unprotected Services

Table 3-3667 Use Existing Unprotected Services

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Set to 'true', while creating a diverse routed service, using two existing unprotected services. |
| Displayed name | Use Existing Unprotected Services |
| OSS name | isCreateDiverseFromExisting |
| Read-only | no |
| Tab Panel | General Diverse Route Details |
| Type | BOOL |

Wait For Server Restoration

Table 3-3668 Wait For Server Restoration

| Name | Value |
|----------------|-----------------------------|
| Default | yes:true |
| Displayed name | Wait For Server Restoration |
| OSS name | waitForServerRestoration |
| Read-only | no |
| Tab Panel | General Control Plane |
| Type | BOOL |

Wait To Restore

Table 3-3669 Wait To Restore

| Name | Value |
|----------------|--|
| Default | yes:5 |
| Description | Duplicated from ApsGroup. Applicable only for y-cable protected service in creation/edit mode. |
| Displayed name | Wait To Restore |
| Maximum | 20 |
| Minimum | 1 |
| OSS name | waitToRestore |
| Read-only | no |
| Tab Panel | General YCable APS Group |

Table 3-3669 Wait To Restore (continued)

| Name | Value |
|-------|---------|
| Type | INT |
| Units | minutes |

Wave Key Assign Mode**Table 3-3670 Wave Key Assign Mode**

| Name | Value |
|--------------------------|--|
| Default | yes:auto |
| Description | Indicates the wavekey generation mode for the service. |
| Displayed name | Wave Key Assign Mode |
| OSS name | wavekeyAssignMode |
| Read-only | no |
| Tab Panel | General General |
| Type | WavekeySelect |
| Enumerated types: | |
| Auto Keying (NE) | |
| Auto Keying (NMS) | |
| Unkeyed | |

Working Path Service**Table 3-3671 Working Path Service**

| Name | Value |
|-----------------------|---|
| Default | yes: |
| Description | Needs to be set , while creating a diverse routed service, using two existing unprotected services. |
| Displayed name | Working Path Service |
| Mandatory on creation | yes |
| OSS name | diverseWorkingService |
| Read-only | no |
| Tab Panel | General Diverse Route Details |
| Type | POINTER |

Z to A**Table 3-3672 Z to A**

| Name | Value |
|--------------------------|---|
| Description | Indicates which service path is the active one in the ZA direction. |
| Displayed name | Z to A |
| OSS name | activePathZA |
| Read-only | no |
| Tab Panel | General Active Path |
| Type | TransportServiceMode |
| Enumerated types: | |
| A1Z1 | |
| A1Z2 | |
| A2Z1 | |
| A2Z2 | |
| Protection | |
| Unprotected | |
| Working | |

OpticalPortCtp parameters**Assigned Rate****Table 3-3673 Assigned Rate**

| Name | Value |
|----------------|--|
| Description | The assigned rate - OTU1, GigE, OC3... |
| Displayed name | Assigned Rate |
| OSS name | assignedRate |
| Read-only | no |
| Tab Panel | General General |
| Type | optical.AssignedRate |

Ctp ID**Table 3-3674 Ctp ID**

| Name | Value |
|-----------------------|-----------------------------|
| Default | yes:1 |
| Description | The identifier for the Ctp. |
| Displayed name | Ctp ID |
| Mandatory on creation | yes |
| Minimum | 1 |
| OSS name | ctpId |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Layer Type**Table 3-3675 Layer Type**

| Name | Value |
|----------------|---|
| Description | The layer type - OCH, OTU, ODU, Electrical... |
| Displayed name | Layer Type |
| OSS name | layerType |
| Read-only | no |
| Tab Panel | General General |
| Type | optical.LayerType |

Name**Table 3-3676 Name**

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Name |
| Maximum | 252 |
| OSS name | displayName |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

Site ID**Table 3-3677 Site ID**

| Name | Value |
|----------------|--------------|
| Default | yes: |
| Displayed name | Site ID |
| Maximum | 50 |
| OSS name | nodeId |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

Site Name**Table 3-3678 Site Name**

| Name | Value |
|----------------|--------------|
| Default | yes: |
| Displayed name | Site Name |
| Maximum | 252 |
| OSS name | nodeName |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

OPTSG Cross Connect parameters

Bidirectional**Table 3-3679 Bidirectional**

| Name | Value |
|-----------------------|---|
| Default | yes:true |
| Description | Indicates if this connection is a unidirectional or bidirectional connection. |
| Displayed name | Bidirectional |
| Mandatory on creation | yes |
| OSS name | biDirectional |

Table 3-3679 Bidirectional (continued)

| Name | Value |
|-------------|-----------------|
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Destination**Table 3-3680 Destination**

| Name | Value |
|----------------|---|
| Description | Name of the endpoint Z, used for display. |
| Displayed name | Destination |
| OSS name | endpointZName |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

ID**Table 3-3681 ID**

| Name | Value |
|-----------------------|-----------------------------------|
| Default | yes:0 |
| Description | SAM generated XC id used for FDN. |
| Displayed name | ID |
| Mandatory on creation | yes |
| Minimum | 1 |
| OSS name | xcId |
| Read-only | no |
| Tab Panel | General General |
| Type | LONG |

Name

Table 3-3682 Name

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Can be deployed on NE for OCh cross-connect, or connection group. For OCH XC/XC group the max length is 80, so we keep this for OT XCs too. This is the OCHTrail name for OCH XCs or OCH XC groups. |
| Displayed name | Name |
| Maximum | 80 |
| Minimum | 0 |
| OSS name | xcName |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Protection State

Table 3-3683 Protection State

| Name | Value |
|--------------------------|---|
| Default | yes:none |
| Description | The protection state of the connection. |
| Displayed name | Protection State |
| Mandatory on creation | yes |
| OSS name | protectionState |
| Read-only | no |
| Tab Panel | General General |
| Type | ProtectionState |
| Enumerated types: | |
| A1Z1 | |
| A1Z2 | |
| A2Z1 | |
| A2Z2 | |
| Protection | |
| Unprotected | |
| Working | |

Rate
Table 3-3684 Rate

| Name | Value |
|--------------------------|------------------------------|
| Description | The Oduk cross connect Rate. |
| Displayed name | Rate |
| Mandatory on creation | yes |
| OSS name | odukXcRate |
| Read-only | no |
| Tab Panel | General General |
| Type | OdukXcRate |
| Enumerated types: | |
| Null | |
| ODU0 | |
| ODU1 | |
| ODU1e | |
| ODU1f | |
| ODU2 | |

| Read-only | no |
| Tab Panel | Authentication General |
| Type | AuthenticationType |
| Enumerated types: | |
| MD5-based Authentication | |
| No Authentication | |
| Simple Password | |

Backup Designated Router ID

Table 3-3711 Backup Designated Router ID

| Name | Value |
|----------------|-----------------------------|
| Default | yes:0.0.0.0 |
| Displayed name | Backup Designated Router ID |
| Maximum | 50 |
| OSS name | backupDesignatedRouterId |
| Read-only | yes |
| Tab Panel | General Designated Router |

Table 3-3711 Backup Designated Router ID (continued)

| Name | Value |
|------|--------|
| Type | STRING |

Backup Designated Router IP Address**Table 3-3712 Backup Designated Router IP Address**

| Name | Value |
|----------------|-------------------------------------|
| Default | yes:0.0.0.0 |
| Displayed name | Backup Designated Router IP Address |
| OSS name | backupDesignatedRouterAddress |
| Read-only | yes |
| Tab Panel | General Designated Router |
| Type | INETADDR |

BFD DRs-Only**Table 3-3713 BFD DRs-Only**

| Name | Value |
|----------------|--|
| Default | yes:allNbrs |
| Description | "Enables/Disables Drs Only option for a BFD interface" Applicable to AOS nodes |
| Displayed name | BFD DRs-Only |
| OSS name | bfdDRsOnly |
| Read-only | no |
| Tab Panel | Protocol Properties General |
| Type | INT |

BFD Enabled**Table 3-3714 BFD Enabled**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | specifies whether Bi-directional Forwarding Detection is enabled in this interface. When the value is 'true', this interface can establish BFD sessions and use BFD as a signalling mechanism. When it is 'false', it cannot use BFD. |
| Displayed name | BFD Enabled |

Table 3-3714 BFD Enabled (continued)

| Name | Value |
|-------------|-----------------------------|
| OSS name | bfdEnabled |
| Read-only | no |
| Tab Panel | Protocol Properties General |
| Type | BOOL |

Configured Interface/Port MTU**Table 3-3715 Configured Interface/Port MTU**

| Name | Value |
|----------------|--------------------------------|
| Default | yes:1500 |
| Displayed name | Configured Interface/Port MTU |
| OSS name | provisionedMtu |
| Read-only | yes |
| Tab Panel | General Frame Size Constraints |
| Type | INT |
| Units | bytes |

Configured MTU**Table 3-3716 Configured MTU**

| Name | Value |
|----------------|--------------------------------|
| Default | yes:0 |
| Displayed name | Configured MTU |
| Maximum | 9198 |
| Minimum | 0 |
| OSS name | mtu |
| Read-only | no |
| Tab Panel | General Frame Size Constraints |
| Type | INT |
| Units | bytes |

Description**Table 3-3717 Description**

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Description |
| Maximum | 80 |
| Minimum | 0 |
| OSS name | description |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Designated Router ID**Table 3-3718 Designated Router ID**

| Name | Value |
|----------------|---------------------------|
| Default | yes:0.0.0.0 |
| Displayed name | Designated Router ID |
| Maximum | 50 |
| OSS name | designatedRouterId |
| Read-only | yes |
| Tab Panel | General Designated Router |
| Type | STRING |

Designated Router IP Address**Table 3-3719 Designated Router IP Address**

| Name | Value |
|----------------|------------------------------|
| Default | yes:0.0.0.0 |
| Displayed name | Designated Router IP Address |
| OSS name | designatedRouterAddress |
| Read-only | yes |
| Tab Panel | General Designated Router |
| Type | INETADDR |

Enable Advertise Router Capability

Table 3-3720 Enable Advertise Router Capability

| Name | Value |
|----------------|--|
| Default | yes:true |
| Description | The value of ospfNgIfAdvRtrCapability specifies whether or not advertise-router-capabilities are enabled at interface level. |
| Displayed name | Enable Advertise Router Capability |
| OSS name | ospfNgIfAdvRtrCapability |
| Read-only | no |
| Tab Panel | Protocol Properties General |
| Type | BOOL |

Encapsulation Type

Table 3-3721 Encapsulation Type

| Name | Value |
|----------------|-------------------------|
| Default | yes:unspecified |
| Displayed name | Encapsulation Type |
| OSS name | encapType |
| Read-only | no |
| Tab Panel | General Interface |
| Type | equipment.PortEncapType |

Hello Interval

Table 3-3722 Hello Interval

| Name | Value |
|----------------|-------------------------------|
| Default | yes:10 |
| Displayed name | Hello Interval |
| Maximum | 65535 |
| Minimum | 1 |
| OSS name | helloInterval |
| Read-only | no |
| Tab Panel | Protocol Properties Intervals |
| Type | INT |

Table 3-3722 Hello Interval (continued)

| Name | Value |
|-------|---------|
| Units | seconds |

Inner Encapsulation Value**Table 3-3723 Inner Encapsulation Value**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | combined with terminatedPortOuterEncapValue to produce terminatedPortCombinedEncapValue |
| Displayed name | Inner Encapsulation Value |
| OSS name | terminatedPortInnerEncapValue |
| Read-only | yes |
| Tab Panel | General Interface |
| Type | INT |

Instance ID**Table 3-3724 Instance ID**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Identifies a specific instance of a version of the OSPF protocol running in the router instance specified by the routerId. |
| Displayed name | Instance ID |
| OSS name | instanceIndex |
| Read-only | yes |
| Tab Panel | General Routing Instance |
| Type | LONG |

Interface Class**Table 3-3725 Interface Class**

| Name | Value |
|----------------|-----------------|
| Default | yes:unspecified |
| Displayed name | Interface Class |

Table 3-3725 Interface Class (continued)

| Name | Value |
|-------------|-----------------------|
| OSS name | interfaceClass |
| Read-only | yes |
| Tab Panel | General Interface |
| Type | rtr.RtrInterfaceClass |

Interface ID**Table 3-3726 Interface ID**

| Name | Value |
|-----------------------|-------------------|
| Default | yes:0 |
| Displayed name | Interface ID |
| Mandatory on creation | yes |
| OSS name | interfaceId |
| Read-only | no |
| Tab Panel | General Interface |
| Type | INT |

Interface ID**Table 3-3727 Interface ID**

| Name | Value |
|----------------|--------------------|
| Default | yes:0 |
| Displayed name | Interface ID |
| OSS name | terminatedObjectId |
| Read-only | yes |
| Tab Panel | General Interface |
| Type | LONG |

Interface Name**Table 3-3728 Interface Name**

| Name | Value |
|---------|-------|
| Default | yes: |

Table 3-3728 Interface Name (continued)

| Name | Value |
|----------------|----------------------|
| Displayed name | Interface Name |
| Maximum | 252 |
| OSS name | terminatedObjectName |
| Read-only | yes |
| Tab Panel | General Interface |
| Type | STRING |

IPsec In Static Security Association**Table 3-3729 IPsec In Static Security Association**

| Name | Value |
|----------------|--------------------------------------|
| Default | yes: |
| Displayed name | IPsec In Static Security Association |
| OSS name | ospfIfInboundSASNamePointer |
| Read-only | no |
| Tab Panel | IPsec Static SA General |
| Type | POINTER |

IPsec Out Static Security Association**Table 3-3730 IPsec Out Static Security Association**

| Name | Value |
|----------------|---------------------------------------|
| Default | yes: |
| Displayed name | IPsec Out Static Security Association |
| OSS name | ospfIfOutboundSASNamePointer |
| Read-only | no |
| Tab Panel | IPsec Static SA General |
| Type | POINTER |

IPsec Security Association Name

Table 3-3731 IPsec Security Association Name

| Name | Value |
|--------------------------|---------------------------------|
| Default | yes:none |
| Displayed name | IPsec Security Association Name |
| OSS name | ipsestaticSASName |
| Read-only | no |
| Tab Panel | IPsec Static SA General |
| Type | IPsecStaticSAAuthType |
| Enumerated types: | |
| | Bi-directional |
| | None |
| | Uni-directional |

LDP Synchronization State

Table 3-3732 LDP Synchronization State

| Name | Value |
|----------------|--|
| Description | Indicates if IGP-LDP synchronization is enabled on this interface. |
| Displayed name | LDP Synchronization State |
| OSS name | ldpSyncState |
| Read-only | yes |
| Tab Panel | Protocol Properties LDP Synchronization |
| Type | INT |

Loop-free Alternate Exclude

Table 3-3733 Loop-free Alternate Exclude

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | The value of loopfreeAlternateExclude specifies whether or not the OSPF interface should be excluded during LFA calculations. |
| Displayed name | Loop-free Alternate Exclude |
| OSS name | loopfreeAlternateExclude |
| Read-only | no |

Table 3-3733 Loop-free Alternate Exclude (continued)

| Name | Value |
|-------------|-----------------------------|
| Tab Panel | Protocol Properties General |
| Type | BOOL |

LSA Checksum Sum**Table 3-3734 LSA Checksum Sum**

| Name | Value |
|----------------|------------------------------|
| Default | yes:0 |
| Displayed name | LSA Checksum Sum |
| OSS name | lsaChecksumSum |
| Read-only | yes |
| Tab Panel | Protocol Properties Counters |
| Type | LONG |

LSA Count**Table 3-3735 LSA Count**

| Name | Value |
|----------------|------------------------------|
| Default | yes:0 |
| Displayed name | LSA Count |
| OSS name | lsaCount |
| Read-only | yes |
| Tab Panel | Protocol Properties Counters |
| Type | LONG |

LSA Filter Out**Table 3-3736 LSA Filter Out**

| Name | Value |
|----------------|---|
| Default | yes:none |
| Description | The value of ospfNgIfLsaFilterOut specifies whether or not flooded LSA's should be sent to any adjacent neighbor on the OSPF interface. |
| Displayed name | LSA Filter Out |

Table 3-3736 LSA Filter Out (continued)

| Name | Value |
|----------------------------|-----------------------------|
| OSS name | ospfNgIfLsaFilterOut |
| Read-only | no |
| Tab Panel | Protocol Properties General |
| Type | OspfLsaFilterOutTc |
| Enumerated types: | |
| All | |
| ExceptOwnRtrLsa | |
| ExceptOwnRtrLsaAndDefaults | |
| None | |

Metric**Table 3-3737 Metric**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | specifies the desired metric value assigned to this interface. The default value '0' causes the value of the metric to be calculated as (Reference Bandwidth / ifSpeed). |
| Displayed name | Metric |
| Maximum | 65535 |
| Minimum | 0 |
| OSS name | metric |
| Read-only | no |
| Tab Panel | Protocol Properties General |
| Type | INT |

Neighbor Count**Table 3-3738 Neighbor Count**

| Name | Value |
|----------------|----------------|
| Default | yes:0 |
| Displayed name | Neighbor Count |
| OSS name | neighborCount |
| Read-only | yes |

Table 3-3738 Neighbor Count (continued)

| Name | Value |
|-------------|------------------------------|
| Tab Panel | Protocol Properties Counters |
| Type | LONG |

Network Type**Table 3-3739 Network Type**

| Name | Value |
|----------------|-----------------------------|
| Default | yes:transit |
| Displayed name | Network Type |
| OSS name | networkType |
| Read-only | yes |
| Tab Panel | Protocol Properties General |
| Type | INT |

Operational Interface/Port MTU**Table 3-3740 Operational Interface/Port MTU**

| Name | Value |
|----------------|--------------------------------|
| Default | yes:1500 |
| Displayed name | Operational Interface/Port MTU |
| OSS name | actualMtu |
| Read-only | yes |
| Tab Panel | General Frame Size Constraints |
| Type | INT |
| Units | bytes |

Operational Metric**Table 3-3741 Operational Metric**

| Name | Value |
|-------------|--|
| Default | yes:0 |
| Description | The value indicates the metric value this interface is using. The default value of the Metric is (Reference Bandwidth / ifSpeed). The value of the reference bandwidth is configured by the tmnxOspfReferenceBandwidth object (ifBaseRefCost on the Site). |

Table 3-3741 Operational Metric (continued)

| Name | Value |
|----------------|-----------------------------|
| Displayed name | Operational Metric |
| Maximum | 65535 |
| Minimum | 0 |
| OSS name | operMetric |
| Read-only | yes |
| Tab Panel | Protocol Properties General |
| Type | INT |

Operational MTU**Table 3-3742 Operational MTU**

| Name | Value |
|----------------|--------------------------------|
| Default | yes:0 |
| Displayed name | Operational MTU |
| OSS name | operationalMtu |
| Read-only | yes |
| Tab Panel | General Frame Size Constraints |
| Type | INT |
| Units | bytes |

Operational State**Table 3-3743 Operational State**

| Name | Value |
|----------------|-------------------|
| Default | yes:unknown |
| Displayed name | Operational State |
| OSS name | operationalState |
| Read-only | yes |
| Tab Panel | General States |
| Type | OperationalState |

Outer Encapsulation Value
Table 3-3744 Outer Encapsulation Value

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | combined with terminatedPortInnerEncapValue to produce terminatedPortCombinedEncapValue |
| Displayed name | Outer Encapsulation Value |
| OSS name | terminatedPortOuterEncapValue |
| Read-only | yes |
| Tab Panel | General Interface |
| Type | INT |

Passive**Table 3-3745 Passive**

| Name | Value |
|----------------|-----------------------------|
| Default | yes:false |
| Displayed name | Passive |
| OSS name | isPassive |
| Read-only | no |
| Tab Panel | Protocol Properties General |
| Type | BOOL |

Password**Table 3-3746 Password**

| Name | Value |
|----------------|------------------------|
| Default | yes: |
| Displayed name | Password |
| Maximum | 8 |
| Minimum | 0 |
| OSS name | authenticationKey |
| Read-only | no |
| Tab Panel | Authentication General |
| Type | STRING |

Poll Interval**Table 3-3747 Poll Interval**

| Name | Value |
|----------------|-------------------------------|
| Default | yes:120 |
| Displayed name | Poll Interval |
| Maximum | 2147483647 |
| Minimum | 0 |
| OSS name | pollInterval |
| Read-only | no |
| Tab Panel | Protocol Properties Intervals |
| Type | INT |

Protocol**Table 3-3750 Protocol**

| Name | Value |
|----------------|-----------------|
| Default | yes:unknown |
| Displayed name | Protocol |
| OSS name | application |
| Read-only | yes |
| Tab Panel | General General |
| Type | ApplicationType |

Retransmission Interval**Table 3-3751 Retransmission Interval**

| Name | Value |
|----------------|-------------------------------|
| Default | yes:5 |
| Displayed name | Retransmission Interval |
| Maximum | 1800 |
| Minimum | 1 |
| OSS name | retransmissionInterval |
| Read-only | no |
| Tab Panel | Protocol Properties Intervals |
| Type | INT |
| Units | seconds |

Route Next-Hop Policy**Table 3-3752 Route Next-Hop Policy**

| Name | Value |
|---------|-------|
| Default | yes: |

Table 3-3752 Route Next-Hop Policy (continued)

| Name | Value |
|----------------|---|
| Description | The value specifies the next-hop template that must be applied to the prefixes which primary next-hop uses this interface name. |
| Displayed name | Route Next-Hop Policy |
| OSS name | routeNextHopPointer |
| Read-only | no |
| Tab Panel | Policies LFA - Route Next-Hop Policy Template |
| Type | POINTER |

Router Dead Interval**Table 3-3753 Router Dead Interval**

| Name | Value |
|----------------|-------------------------------|
| Default | yes:40 |
| Displayed name | Router Dead Interval |
| Maximum | 2147483647 |
| Minimum | 0 |
| OSS name | routerDeadInterval |
| Read-only | no |
| Tab Panel | Protocol Properties Intervals |
| Type | INT |
| Units | seconds |

Routing Instance ID**Table 3-3754 Routing Instance ID**

| Name | Value |
|----------------|--------------------------|
| Default | yes:1 |
| Displayed name | Routing Instance ID |
| Maximum | 10240 |
| Minimum | 1 |
| OSS name | routerId |
| Read-only | yes |
| Tab Panel | General Routing Instance |

Table 3-3754 Routing Instance ID (continued)

| Name | Value |

| OSS name | nodeName |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

State Qualifier

Table 3-3758 State Qualifier

| Name | Value |
|----------------|---|
| Default | yes:OK |
| Description | This value is derived from underlyingResourceState and/or resourceState attributes. If the underlyingResourceState is not 'OK' and is not 'unspecified' the value of compositeState will be set to the same value as underlyingResourceState. Otherwise the value of compositeState will be set to the same value as resourceState. |
| Displayed name | State Qualifier |
| OSS name | compositeState |
| Read-only | yes |
| Tab Panel | General States |
| Type | ResourceCompositeState |

TE Metric

Table 3-3759 TE Metric

| Name | Value |
|----------------|---|
| Description | Indicates the MPLS TE metric configured for this interface. |
| Displayed name | TE Metric |
| Maximum | 16777215 |
| Minimum | 0 |
| OSS name | teMetric |
| Read-only | yes |
| Tab Panel | Protocol Properties General |
| Type | LONG |

Transit Delay**Table 3-3760 Transit Delay**

| Name | Value |
|----------------|-------------------------------|
| Default | yes:1 |
| Displayed name | Transit Delay |
| Maximum | 1800 |
| Minimum | 1 |
| OSS name | transitDelay |
| Read-only | no |
| Tab Panel | Protocol Properties Intervals |
| Type | INT |
| Units | seconds |

Type**Table 3-3761 Type**

| Name | Value |
|----------------|--------------------------------|
| Default | yes:broadcast |
| Displayed name | Type |
| OSS name | interfaceType |
| Read-only | no |
| Tab Panel | Protocol Properties General |
| Type | RouterTerminatingInterfaceType |

Version**Table 3-3762 Version**

| Name | Value |
|----------------|--------------------------|
| Default | yes:2 |
| Displayed name | Version |
| OSS name | version |
| Read-only | yes |
| Tab Panel | General Routing Instance |
| Type | INT |

OSPF Site parameters

Administrative State

Table 3-3763 Administrative State

| Name | Value |
|----------------|----------------------|
| Default | yes:unknown |
| Displayed name | Administrative State |
| OSS name | administrativeState |
| Read-only | no |
| Tab Panel | General State |
| Type | AdministrativeState |

Advertise Router Capabilities

Table 3-3764 Advertise Router Capabilities

| Name | Value |
|--------------------------|---|
| Default | yes:disable |
| Description | The value of ospfAdvRtrCapability specifies the OSPF advertise router capabilities. |
| Displayed name | Advertise Router Capabilities |
| OSS name | ospfAdvRtrCapability |
| Read-only | no |
| Tab Panel | Behavior General |
| Type | OspfAdvRtrCapabTypes |
| Enumerated types: | |
| Area | |
| As | |
| Disable | |
| Link | |

Advertise Tunnel Links Enabled

Table 3-3765 Advertise Tunnel Links Enabled

| Name | Value |
|---------|-----------|
| Default | yes:false |

Table 3-3765 Advertise Tunnel Links Enabled (continued)

| Name | Value |
|----------------|--|
| Description | The value of <code>tmnxOspfAdvertiseTunnelLink</code> indicates whether advertisement of LSP shortcuts into IGP has been enabled or disabled for OSPF. When the value of <code>tmnxOspfAdvertiseTunnelLink</code> is set to true LSP shortcut advertisement into IGP is enabled and when <code>tmnxOspfAdvertiseTunnelLink</code> is set to false LSP shortcut advertisement into IGP is disabled. |
| Displayed name | Advertise Tunnel Links Enabled |
| OSS name | <code>advertiseTunnelLink</code> |
| Read-only | no |
| Tab Panel | Behavior OSPFv2 |
| Type | BOOL |

Area Border Router**Table 3-3766 Area Border Router**

| Name | Value |
|----------------|---------------------------------|
| Default | yes:false |
| Displayed name | Area Border Router |
| OSS name | <code>isAreaBorderRouter</code> |
| Read-only | yes |
| Tab Panel | General Type |
| Type | BOOL |

AS-Scope Checksum Sum**Table 3-3767 AS-Scope Checksum Sum**

| Name | Value |
|----------------|------------------------------------|
| Default | yes:0 |
| Displayed name | AS-Scope Checksum Sum |
| OSS name | <code>asScopeLsaChecksumSum</code> |
| Read-only | yes |
| Tab Panel | Behavior Link State Advertisements |
| Type | LONG |

AS-Scope Count
Table 3-3768 AS-Scope Count

| Name | Value |
|----------------|------------------------------------|
| Default | yes:0 |
| Displayed name | AS-Scope Count |
| OSS name | asScopeLsaCount |
| Read-only | yes |
| Tab Panel | Behavior Link State Advertisements |
| Type | LONG |

Autonomous System Border Router**Table 3-3769 Autonomous System Border Router**

| Name | Value |
|----------------|---------------------------------|
| Default | yes:false |
| Displayed name | Autonomous System Border Router |
| OSS name | isAutonomousSystemBorderRouter |
| Read-only | no |
| Tab Panel | General Type |
| Type | BOOL |

Average Run Time**Table 3-3770 Average Run Time**

| Name | Value |
|----------------|---------------------|
| Default | yes:0 |
| Displayed name | Average Run Time |
| Maximum | 2147483647 |
| Minimum | 0 |
| OSS name | averageSpfRunTime |
| Read-only | yes |
| Tab Panel | Dijkstra Statistics |
| Type | INT |
| Units | 1/100 s |

Backbone Router**Table 3-3771 Backbone Router**

| Name | Value |

| Default | yes:false |
| Displayed name | Backbone Router |
| OSS name | isBackBoneRouter |
| Read-only | yes |
| Tab Panel | General Type |
| Type | BOOL |

Boot Overload Enabled**Table 3-3772 Boot Overload Enabled**

| Name | Value |
|----------------|---------------------------------|
| Default | yes:disabled |
| Displayed name | Boot Overload Enabled |
| OSS name | bootOverloadAdministrativeState |
| Read-only | no |
| Tab Panel | Overload General |
| Type | INT |

Boot Overload Interval**Table 3-3773 Boot Overload Interval**

| Name | Value |
|----------------|------------------------|
| Default | yes:0 |
| Displayed name | Boot Overload Interval |
| Maximum | 1800 |
| Minimum | 0 |
| OSS name | bootOverloadInterval |
| Read-only | no |
| Tab Panel | Overload General |
| Type | INT |
| Units | seconds |

Domain ID
Table 3-3774 Domain ID

| Name | Value |
|----------------|---|
| Default | yes:-1 |
| Description | specifies the domain-id associated with this instance of OSPF on the router. If no value is specified for tmnxOspfAsbrDomainId, it is set to -1 |
| Displayed name | Domain ID |
| Maximum | 31 |
| Minimum | -1 |
| OSS name | domainId |
| Read-only | no |
| Tab Panel | General Autonomous System Border Router |
| Type | INT |

Enable LDP Synchronization**Table 3-3775 Enable LDP Synchronization**

| Name | Value |
|----------------|---|
| Default | yes:true |
| Description | specifies whether the IGP-LDP synchronization feature is enabled or disabled on all interfaces participating in the OSPF routing protocol |
| Displayed name | Enable LDP Synchronization |
| OSS name | enableLdpSync |
| Read-only | no |
| Tab Panel | Behavior General |
| Type | BOOL |

Exit Overflow Interval**Table 3-3776 Exit Overflow Interval**

| Name | Value |
|----------------|------------------------|
| Default | yes:0 |
| Displayed name | Exit Overflow Interval |
| Maximum | 2147483647 |
| Minimum | 0 |

Table 3-3776 Exit Overflow Interval (continued)

| Name | Value |
|-------------|---------------------------|

| Read-only | no |
| Tab Panel | Behavior Overflow Control |
| Type | INT |

Export Limit**Table 3-3777 Export Limit**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | The value of <code>tmnxOspfExportLimit</code> specifies the maximum number of routes or prefixes that can be exported into OSPF or OSPF3 from the route table. A value of 0 indicates that the export limit for routes or prefixes has been disabled. |
| Displayed name | Export Limit |
| Maximum | 4294967295 |
| Minimum | 0 |
| OSS name | exportLimit |
| Read-only | no |
| Tab Panel | Behavior General |
| Type | LONG |

Export Limit Log Percent**Table 3-3778 Export Limit Log Percent**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | The value of <code>tmnxOspfExportLimitLogPercent</code> specifies the percentage of the export-limit, at which a warning log message and SNMP notification would be sent. This would only be a warning and additional routes will be learned up to 100% of <code>tmnxOspfExportLimit</code> . A value of 0 indicates that <code>tmnxOspfExportLimitLogPercent</code> is disabled and no log message or SNMP notification would be sent. |
| Displayed name | Export Limit Log Percent |
| Maximum | 100 |
| Minimum | 0 |
| OSS name | exportLimitLogPercent |

| Default | yes:false |
| Displayed name | Helper Mode |
| OSS name | grHelperMode |
| Read-only | no |
| Tab Panel | Graceful Restart General |
| Type | generic.TruthValue |

Ignore DN Bit

Table 3-3785 Ignore DN Bit

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether to ignore the DN bit for OSPF LSA packets for this instance of OSPF on the router. When ignoreDNBit has a value of 'true' the DN bit for OSPF LSA packets will be ignored. When it has a value of 'false' the DN bit will not be ignored for OSPF LSA packets." |
| Displayed name | Ignore DN Bit |
| OSS name | ignoreDNBit |
| Read-only | no |
| Tab Panel | Behavior General |
| Type | BOOL |

Incremental External Run Count

Table 3-3786 Incremental External Run Count

| Tab Panel | Dijkstra Statistics |
| Type | DATE |

LDP Over RSVP Include**Table 3-3802 LDP Over RSVP Include**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | The value of <code>tmnxOspfLdpOverRsvp</code> specifies whether LDP-over-RSVP feature is enabled or disabled for a specific OSPF instance. When enabled, OSPF will select the endpoint that is closest to the destination for further selection of LDP-over-RSVP tunnels to that endpoint. |
| Displayed name | LDP Over RSVP Include |
| OSS name | ldpOverRsvp |
| Read-only | no |
| Tab Panel | Behavior OSPFv2 |
| Type | BOOL |

Loop-free Alternate**Table 3-3803 Loop-free Alternate**

| Name | Value |
|---------|-----------|
| Default | yes:false |

Table 3-3803 Loop-free Alternate (continued)

| Name | Value |
|----------------|---|
| Description | The value of loopfreeAlternate specifies whether to enable or disable IP fast re-route capability for OSPF. |
| Displayed name | Loop-free Alternate |
| OSS name | loopfreeAlternate |
| Read-only | no |
| Tab Panel | Behavior General |
| Type | BOOL |

LSA Accumulate**Table 3-3804 LSA Accumulate**

| Name | Value |
|----------------|---|
| Default | yes:1000 |
| Description | The value of lsaAccumulate defines the accumulation delay for multiple LSA's. |
| Displayed name | LSA Accumulate |
| Maximum | 1000 |
| Minimum | 0 |
| OSS name | lsaAccumulate |
| Read-only | no |
| Tab Panel | Dijkstra Configuration |
| Type | INT |
| Units | milliseconds |

LSA Arrival Wait**Table 3-3805 LSA Arrival Wait**

| Name | Value |
|----------------|------------------|
| Default | yes:1000 |
| Displayed name | LSA Arrival Wait |
| Maximum | 600000 |
| Minimum | 0 |

| Name | Value |
|----------------|-------------------|
| Default | yes:unknown |
| Displayed name | Operational State |
| OSS name | operationalState |
| Read-only | yes |
| Tab Panel | General State |
| Type | OperationalState |

OSPF Operational Router ID
Table 3-3819 OSPF Operational Router ID

| Name | Value |
|----------------|---|
| Default | yes:0.0.0.0 |
| Description | identifies uniquely the router in the Autonomous System. The default OSPF instance will use the value specified by <code>tmnxOspfRouterId</code> or as one of the router's IPv4 host addresses. For the non-default instances of OSPF, this is the same value as <code>tmnxOspfRouterId</code> (where the default is invalid), which must be specified before the OSPF instance can become operational. |
| Displayed name | OSPF Operational Router ID |
| Maximum | 50 |
| OSS name | <code>ospfOperRouterId</code> |
| Read-only | yes |
| Tab Panel | General OSPF Instance |
| Type | STRING |

OSPF Router ID**Table 3-3820 OSPF Router ID**

| Name | Value |
|----------------|---|
| Default | yes:0.0.0.0 |
| Description | identifies uniquely the router in the Autonomous System. By default it assumes the value of one of the router's IPv4 host addresses, if IPv4 is configured on the router. |
| Displayed name | OSPF Router ID |
| OSS name | <code>ospfRouterId</code> |
| Read-only | no |
| Tab Panel | General OSPF Instance |
| Type | INETADDR |

Overload Enabled**Table 3-3821 Overload Enabled**

Super-Backbone**Table 3-3837 Super-Backbone**

| Name | Value |
|---------|-----------|
| Default | yes:false |

Table 3-3837 Super-Backbone (continued)

| Name | Value |
|----------------|---|
| Description | The value of <code>tmnxOspfSuperBackBone</code> specifies whether CE-PE functionality is required or not. <code>tmnxOspfSuperBackBone</code> indicates the type of the LSA generated as a result of routes redistributed into OSPF. When the value is set to 'true' the redistributed routes are injected as summary, external or NSSA LSAs. When the value is set to 'false' the redistributed routes are injected as either external or NSSA LSAs only. |
| Displayed name | Super-Backbone |
| OSS name | <code>superBackBone</code> |
| Read-only | no |
| Tab Panel | OSPF Super-Backbone General |
| Type | <code>generic.TruthValue</code> |

Suppress DN Bit

Table 3-3838 Suppress DN Bit

| Name | Value |
|----------------|--|
| Default | <code>yes:false</code> |
| Description | specifies whether to suppress the setting of the DN bit for OSPF LSA packets generated by this instance of OSPF on the router. When <code>suppressDNBit</code> has a value of 'true' the DN bit for OSPF LSA packets generated by this instance of the OSPF router will not be set. When it has a value of 'false' this instance of the OSPF router will follow the normal procedure to determine whether to set the DN bit. |
| Displayed name | Suppress DN Bit |
| OSS name | <code>suppressDNBit</code> |
| Read-only | no |
| Tab Panel | Behavior General |
| Type | BOOL |

Time Entered

| Type | ospf.ProtocolVersionEnum |

VPN Domain ID**Table 3-3847 VPN Domain ID**

| Name | Value |
|----------------|--|
| Default | yes:0000.0000.0000 |
| Description | The value of <code>tmnxOspfVpnDomainId</code> specifies the OSPF VPN Domain. This is exchanged using BGP in the extended community attribute associated with a prefix. This object applies to VPRN instances of OSPF only. An attempt to modify the value of this object will result in an 'inconsistentValue' error when the <code>vRtrID</code> index for this row entry is not a VPRN instance. |
| Displayed name | VPN Domain ID |
| Maximum | 14 |
| Minimum | 0 |
| OSS name | <code>vpnDomainId</code> |
| Read-only | no |
| Tab Panel | OSPF Super-Backbone General |
| Type | STRING |
| Units | hex |

VPN Domain Type
Table 3-3848 VPN Domain Type

| Name | Value |
|--------------------------|---|
| Default | yes:type0000 |
| Description | The value of <code>tmnxOspfVpnDomainType</code> specifies type of the extended community attribute exchanged using BGP to carry the OSPF VPN Domain ID. This object applies to VPRN instances of OSPF only. An attempt to modify the value of this object will result in an 'inconsistentValue' error when the <code>vRtrID</code> index for this row entry is not a VPRN instance. |
| Displayed name | VPN Domain Type |
| OSS name | <code>vpnDomainType</code> |
| Read-only | no |
| Tab Panel | OSPF Super-Backbone General |

| | 0205 |
| | 8005 |
| | None |

VPN Tag**Table 3-3849 VPN Tag**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | The value of <code>tmnxOspfVpnTag</code> specifies the route tag for an OSPF VPN on a PE router. This field is set in the tag field of the OSPF external LSAs generated by the PE. This is mainly used to prevent routing loops. This object applies to VPRN instances of OSPF only. An attempt to modify the value of this object will result in an 'inconsistentValue' error when the <code>vRtrID</code> index for this row entry is not a VPRN instance |
| Displayed name | VPN Tag |
| Maximum | 4294967295 |
| Minimum | 0 |
| OSS name | <code>vpnTag</code> |
| Read-only | no |

| Name | Value |
|----------------|--|
| Default | yes:N/A |
| Description | OTU Transmitted TTI in the ZA direction. |
| Displayed name | Z-A OTU Transmitted TTI |
| Maximum | 64 |
| Minimum | 0 |
| OSS name | otuTxTtiZa |
| Read-only | no |
| Tab Panel | General TTI Attributes |
| Type | STRING |

OtuCtp parameters**Administrative State****Table 3-3933 Administrative State**

| Name | Value |
|----------------|---|
| Default | yes:unknown |
| Description | Administrative state of the interface. It may be used to suppress the alarms or disable consequent actions on the entity. |
| Displayed name | Administrative State |
| OSS name | administrativeState |
| Read-only | no |
| Tab Panel | General States |
| Type | optical.XcState |

Async Mapping

Table 3-3934 Async Mapping

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies whether or not the Asynchronous mapping mode of transporting the OTU client is enabled. When this value is set to false, the OTU client is mapped Synchronously. |
| Displayed name | Async Mapping |
| OSS name | asyncMapping |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Expected Rx Mode

Table 3-3935 Expected Rx Mode

| Name | Value |
|----------------|--|
| Default | yes:auto |
| Description | Specifies the type of expected Trail Trace Identifier (TTI) for the Section Monitoring (SM) in the OTU overhead. |
| Displayed name | Expected Rx Mode |
| OSS name | exTtiMode |
| Read-only | no |
| Tab Panel | General TTI |
| Type | ethernetequipment.OTUTtiMode |

Expected Rx String

Table 3-3936 Expected Rx String

| Name | Value |
|----------------|--------------------|
| Default | yes: |
| Description | OTU Expected TTI. |
| Displayed name | Expected Rx String |
| Maximum | 192 |
| Minimum | 0 |
| OSS name | exTti |

Table 3-3936 Expected Rx String (continued)

| Tab Panel | General General |
| Type | STRING |

Operational State

Table 3-3940 Operational State

| Name | Value |
|----------------|-------------------------------------|
| Default | yes:unknown |
| Description | Operational state of the interface. |
| Displayed name | Operational State |
| OSS name | operationalState |
| Read-only | yes |
| Tab Panel | General States |
| Type | optical.XcState |

OTU-TIM reaction

Table 3-3941 OTU-TIM reaction

| Name | Value |
|----------------|--|
| Default | yes:none |
| Description | Specifies the reaction that should be taken in the event of a Section Monitor Trace Identifier Mismatch. |
| Displayed name | OTU-TIM reaction |
| OSS name | timReaction |
| Read-only | no |
| Tab Panel | General TTI |
| Type | ethernetequipment.OTUTimReaction |

Rate
Table 3-3942 Rate

| Name | Value |
|----------------|--|
| Description | The assigned rate - OTU1, GigE, OC3... |
| Displayed name | Rate |
| OSS name | assignedRate |
| Read-only | no |
| Tab Panel | General General |
| Type | optical.AssignedRate |

SD Threshold**Table 3-3943 SD Threshold**

| Name | Value |
|----------------|--|
| Default | yes:7 |
| Description | Specifies the bit error rate(BER) threshold used to determine when to raise and clear otuBerSd/fecSd alarms. |
| Displayed name | SD Threshold |
| Maximum | 9 |
| Minimum | 5 |
| OSS name | sdThreshold |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |
| Units | 1/10E-n bits received |

SF Threshold**Table 3-3944 SF Threshold**

| Name | Value |
|----------------|--|
| Default | yes:5 |
| Description | Specifies the bit error rate(BER) threshold used to determine when to raise and clear otuBerSf/fecSf alarms. |
| Displayed name | SF Threshold |
| Maximum | 6 |

Table 3-3944 SF Threshold (continued)

| Name | Value |
|-------------|-----------------------|
| Minimum | 3 |
| OSS name | sfThreshold |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |
| Units | 1/10E-n bits received |

SF-SD Method**Table 3-3945 SF-SD Method**

| Name | Value |
|----------------|---|
| Default | yes:fec |
| Description | Specifies the method on which to detect Signal Failure and Signal Degradation |
| Displayed name | SF-SD Method |
| OSS name | sfsdMethod |
| Read-only | no |
| Tab Panel | General General |
| Type | ethernetequipment.SFSDMethod |

Site ID**Table 3-3946 Site ID**

| Name | Value |
|----------------|--------------|
| Default | yes: |
| Displayed name | Site ID |
| Maximum | 50 |
| OSS name | nodeId |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

Site Name
Table 3-3947 Site Name

| Name | Value |

| Default | yes: |
| Displayed name | Site Name |
| Maximum | 252 |
| OSS name | nodeName |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

TP ID**Table 3-3948 TP ID**

| Name | Value |
|-----------------------|-----------------------------|
| Default | yes:1 |
| Description | The identifier for the Ctp. |
| Displayed name | TP ID |
| Mandatory on creation | yes |
| Minimum | 1 |
| OSS name | ctpId |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Transmitter Mode**Table 3-3949 Transmitter Mode**

| Name | Value |
|----------------|---|
| Default | yes:auto |
| Description | Specifies the type of transmitted Trail Trace Identifier (TTI) for the Section Monitoring (SM) in the OTU overhead. |
| Displayed name | Transmitter Mode |
| OSS name | txTtiMode |
| Read-only | no |

Table 3-3949 Transmitter Mode (continued)

| Type | ethernetequipment.OTUTtiMode |

Transmitter String

Table 3-3950 Transmitter String

| Name | Value |
|----------------|----------------------|
| Default | yes: |
| Description | OTU Transmitted TTI. |
| Displayed name | Transmitter String |
| Maximum | 192 |
| Minimum | 0 |
| OSS name | txTti |
| Read-only | no |
| Tab Panel | General TTI |
| Type | STRING |

OTUk parameters

Administrative State

Table 3-3951 Administrative State

| Name | Value |
|----------------|---|
| Default | yes:unknown |
| Description | Administrative state of the interface. It may be used to suppress the alarms or disable consequent actions on the entity. |
| Displayed name | Administrative State |
| OSS name | administrativeState |
| Read-only | no |
| Tab Panel | States General |
| Type | optical.XcState |

AINS Countdown
Table 3-3952 AINS Countdown

| Name | Value |
|----------------|--|
| Description | Number of seconds until the OTUk AINS DebounceTime expires. {BR} If OTUk AINS is false or OTUk AINS Debounce Time is 0, the value of this attribute will be 0. |
| Displayed name | AINS Countdown |
| OSS name | ainsDebounceTimeRemaining |
| Read-only | yes |
| Tab Panel | States AINS |
| Type | STRING |
| Units | HH:MM |

AINS State**Table 3-3953 AINS State**

| Name | Value |
|----------------|------------------------------|
| Default | yes:false |
| Description | AINS state of the interface. |
| Displayed name | AINS State |
| OSS name | ainsState |
| Read-only | no |
| Tab Panel | States AINS |
| Type | BOOL |

AINS Timer**Table 3-3954 AINS Timer**

| Name | Value |
|----------------|--|
| Description | This attribute must be set in multiples of 60s. {BR} It is equal to System AINS Debounce Time when OTUk AINS Use System Default is true. {BR} Setting the OTUk AINS Debounce Time and OTUk AINS Use System Default to true in the same set request is restricted. {BR} Current configurable range: 1m to 96h 0m. |
| Displayed name | AINS Timer |
| OSS name | ainsDebounceTime |
| Read-only | no |
| Tab Panel | States AINS |

Table 3-3954 AINS Timer (continued)

| Name | Value |

Alarm Profile**Table 3-3955 Alarm Profile**

| Name | Value |
|----------------|---------------------|
| Displayed name | Alarm Profile |
| OSS name | alarmProfilePointer |
| Read-only | no |
| Tab Panel | General General |
| Type | POINTER |

Assigned Rate**Table 3-3956 Assigned Rate**

| Name | Value |
|----------------|--|
| Description | The assigned rate - OTU1, GigE, OC3... |
| Displayed name | Assigned Rate |
| OSS name | assignedRate |
| Read-only | no |
| Tab Panel | General General |
| Type | optical.AssignedRate |

Asymmetric Interworking Enabled**Table 3-3957 Asymmetric Interworking Enabled**

| Name | Value |
|----------------|--|
| Description | OtuK Asymmetric interworking mode.OtukAsymInterworking |
| Displayed name | Asymmetric Interworking Enabled |
| OSS name | otukAsymInterworking |
| Read-only | no |
| Tab Panel | General General |

Table 3-3957 Asymmetric Interworking Enabled (continued)

| Name | Value |
|------|-------|
| Type | BOOL |

Consequent Action Loopback**Table 3-3958 Consequent Action Loopback**

| Name | Value |
|----------------|--|
| Default | yes:enabled |
| Description | Specifies whether a consequent action is performed in the context of loopback switching. |
| Displayed name | Consequent Action Loopback |
| OSS name | consActionLoopback |
| Read-only | no |
| Tab Panel | General Test/Analysis |
| Type | optical.AluWdmEnabledDisabled |

Ctp ID**Table 3-3959 Ctp ID**

| Name | Value |
|-----------------------|-----------------------------|
| Default | yes:1 |
| Description | The identifier for the Ctp. |
| Displayed name | Ctp ID |
| Mandatory on creation | yes |
| Minimum | 1 |
| OSS name | ctpId |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Expected DAPI
Table 3-3960 Expected DAPI

| Name | Value |
|----------------|---|
| Description | The DAPI expected by the receiver. This object has no effect when timDetMode has the value off(1) or dapi(2). {BR} DAPI: Destination Access Point Identifier. |
| Displayed name | Expected DAPI |
| Maximum | 31 |
| Minimum | 0 |
| OSS name | expectedDapi |
| Read-only | no |
| Tab Panel | General TTI |
| Type | STRING |

Facility Loopback**Table 3-3961 Facility Loopback**

| Name | Value |
|----------------|-----------------------|
| Description | Facility Loopback. |
| Displayed name | Facility Loopback |
| OSS name | facilityLoopback |
| Read-only | no |
| Tab Panel | General Test/Analysis |
| Type | BOOL |

FEC Enabled**Table 3-3962 FEC Enabled**

| Name | Value |
|----------------|--|
| Description | Forward Error Correction Enabled Mode. |
| Displayed name | FEC Enabled |
| OSS name | fecEnable |
| Read-only | no |
| Tab Panel | General General |
| Type | optical.FecEnable |

FEC Mode
Table 3-3963 FEC Mode

| Name | Value |
|----------------|---|
| Default | yes:unknown |
| Description | Specifies what type of Forward Error Correction (FEC) has been enabled on the port. |
| Displayed name | FEC Mode |
| OSS name | fecMode |
| Read-only | no |
| Tab Panel | General General |
| Type | optical.FecMode |

Incoming DAPI**Table 3-3964 Incoming DAPI**

| Tab Panel | States General |
| Type | optical.SecondaryStateType |

Signal Degradate Burst Interval

Table 3-3984 Signal Degradate Burst Interval

| Name | Value |
|----------------|---|
| Description | Burst Interval specifies the number of consecutive bad seconds (see parameter BRSTTH) to be detected before declaring a signal degrade defect (SDBER) on the ODU path layer. The defect is cleared if BRSTINTVL consecutive good seconds (see parameter BRSTTH) are detected. |
| Displayed name | Signal Degradate Burst Interval |
| Maximum | 10 |
| Minimum | 2 |
| OSS name | signalDegradateBurstInterval |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Signal Degradate Burst Threshold

Table 3-3985 Signal Degradate Burst Threshold

| Name | Value |
|----------------|--|
| Description | Burst Threshold specifies a number of errored blocks on the ODU path layer. A second is declared as good if the number of detected errored blocks within one second is less than BRSTTH; otherwise the second is declared as bad second. |
| Displayed name | Signal Degradate Burst Threshold |
| Maximum | 856388 |
| Minimum | 1 |
| OSS name | signalDegradateBurstThreshold |
| Read-only | no |
| Tab Panel | General General |

| Name | Value |
|----------------|---|
| Description | This Specifies the channel spacing to use for line ports. 1 - 100GHz 2 - 50GHz. |
| Displayed name | Channel Spacing(GHZ) |
| OSS name | nwPortChannelSpacing |
| Read-only | no |
| Tab Panel | Port Specifics.General OT |
| Type | ChannelSpacing |

Class**Table 3-4054 Class**

| Name | Value |
|--------------------------|-----------------|
| Default | yes:none |
| Displayed name | Class |
| OSS name | portClass |
| Read-only | yes |
| Tab Panel | General General |
| Type | PortClass |
| Enumerated types: | |
| 10 Gigabit Ethernet | |
| 100 Gigabit Ethernet | |
| 40 Gigabit Ethernet | |
| DSL | |
| Fast Ethernet | |

Table 3-4054 Class (continued)

| Name | Value |
|-------------------------|-------|
| Gigabit Ethernet | |
| GPON | |
| GPS | |
| None | |
| Radio | |
| Serial | |
| SONET | |
| SONET Channel | |
| TDM | |
| Variable Speed Ethernet | |
| Virtual Port | |
| Voice | |
| VSM Ethernet | |
| WDM | |

Clear GMRE Topology Alarm**Table 3-4055 Clear GMRE Topology Alarm**

| Name | Value |
|----------------|--|
| Description | Clears ASON topology connectivity alarm. |
| Displayed name | Clear GMRE Topology Alarm |
| OSS name | asonTopoClearAlarm |
| Read-only | no |
| Tab Panel | Port Specifics.General General |
| Type | BOOL |

CLEI**Table 3-4056 CLEI**

| Name | Value |
|----------------|------------|
| Description | Port CLEI. |
| Displayed name | CLEI |
| OSS name | portClei |

Table 3-4056 CLEI (continued)

| Name | Value |
|-------------|----------------------------------|
| Read-only | no |
| Tab Panel | Port Specifics.General Inventory |
| Type | STRING |

CLEI Code**Table 3-4057 CLEI Code**

| Name | Value |
|----------------|----------------------------------|
| Default | yes: |
| Displayed name | CLEI Code |
| Maximum | 16 |
| Minimum | 0 |
| OSS name | cleiCode |
| Read-only | yes |
| Tab Panel | General Equipment Location Codes |
| Type | STRING |

CLI Name**Table 3-4058 CLI Name**

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | CLI Name |
| Maximum | 252 |
| OSS name | portName |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

Collect Accounting Statistics
Table 3-4059 Collect Accounting Statistics

| Name | Value |
|----------------|-------------------------------|
| Default | yes:true |
| Displayed name | Collect Accounting Statistics |
| OSS name | collectStats |
| Read-only | no |
| Tab Panel | Policies.General Accounting |
| Type | BOOL |

Collect Accounting Statistics**Table 3-4060 Collect Accounting Statistics**

| Name | Value |
|----------------|--------------------------------------|
| Default | yes:false |
| Displayed name | Collect Accounting Statistics |
| OSS name | etherCollectStats |
| Read-only | no |
| Tab Panel | Policies.General Ethernet Accounting |
| Type | BOOL |

Combiner**Table 3-4061 Combiner**

| Name | Value |
|----------------|---|
| Default | yes:disable |
| Description | Enable/Disable Combiner(SD)function on MPT. |
| Displayed name | Combiner |
| OSS name | mptCombiner |
| Read-only | no |
| Tab Panel | General Port Usage |
| Type | LONG |

Commissioning Completed**Table 3-4062 Commissioning Completed**

| Name | Value |
|----------------|--|
| Description | Each external OSC card port whose power management mode setting is Automatic has a Power Management Commissioned Flag. When commissioning is completed these flags are set to complete by users. |
| Displayed name | Commissioning Completed |
| OSS name | powerMgmtIsCommissioned |
| Read-only | no |
| Tab Panel | Port Specifics.General Power |
| Type | BOOL |

Company ID**Table 3-4063 Company ID**

| Name | Value |
|----------------|----------------------------------|
| Description | Port Company ID. |
| Displayed name | Company ID |
| OSS name | portCompanyId |
| Read-only | no |
| Tab Panel | Port Specifics.General Inventory |
| Type | STRING |

Compatibility Mode**Table 3-4064 Compatibility Mode**

| Name | Value |
|----------------|---|
| Default | yes:default |
| Description | This parameter is used to set the compatible mode of the OTU2 port. default: The port operates in the default mode which is supported by all 12xGE cards except the 11DPE12. 11DPE12: The port operates in the 11DPE12 interworking mode. |
| Displayed name | Compatibility Mode |
| OSS name | portConfigCompatibilityMode |
| Read-only | no |
| Tab Panel | Port Specifics.General OTU |
| Type | PortConfigCompatibilityMode |

Compensation Module
Table 3-4065 Compensation Module

| Name | Value |
|----------------|---|
| Description | The parameter specifies the properties w.r.t. compensation modules. |
| Displayed name | Compensation Module |
| OSS name | compensationModule |
| Read-only | yes |
| Tab Panel | Port Specifics.General OT |
| Type | CompensationModule |

Configured MAC**Table 3-4066 Configured MAC**

| Name | Value |
|----------------|-----------------------|
| Default | yes:00-00-00-00-00-00 |
| Displayed name | Configured MAC |
| OSS name | macAddress |
| Read-only | no |
| Tab Panel | General General |
| Type | MACADDR |

Connected From**Table 3-4067 Connected From**

| Name | Value |
|----------------|---|
| Description | External port far end address that points to this port. |
| Displayed name | Connected From |
| Maximum | 64 |
| OSS name | apFarEndAddrFrom |
| Read-only | no |
| Tab Panel | Port Specifics.General Connection |
| Type | STRING |

Connected From**Table 3-4068 Connected From**

| Name | Value |
|----------------|---|
| Description | External port far end address that points to this port. |
| Displayed name | Connected From |
| OSS name | apFarEndIfIndexFromDisplay |
| Read-only | no |
| Tab Panel | Port Specifics.General Connection |
| Type | STRING |

Connected From**Table 3-4069 Connected From**

| Name | Value |
|----------------|---|
| Description | PTP Sig port connected from |
| Displayed name | Connected From |
| OSS name | ptpSigConnectedFromPort |
| Read-only | no |
| Tab Panel | Port Specifics.General Connection Information |
| Type | POINTER |

Connected LD OTDR Port**Table 3-4070 Connected LD OTDR Port**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Specifies the assigned LD port that is connected to the OTDR port. |
| Displayed name | Connected LD OTDR Port |
| OSS name | connectedLDOTDRPort |
| Read-only | no |
| Tab Panel | Port Specifics.General Connection |
| Type | POINTER |

Connected To**Table 3-4071 Connected To**

| Name | Value |
|----------------|---|
| Description | Address of the external port to which this port is connected. |
| Displayed name | Connected To |
| Maximum | 64 |
| OSS name | apFarEndAddr |
| Read-only | no |
| Tab Panel | Port Specifics.General Connection |
| Type | STRING |

Connected To**Table 3-4072 Connected To**

| Name | Value |
|----------------|---|
| Description | External port far end address that points to this port. |
| Displayed name | Connected To |
| OSS name | apFarEndIfIndexDisplay |
| Read-only | no |
| Tab Panel | Port Specifics.General Connection |
| Type | STRING |

Connected To**Table 3-4073 Connected To**

| Name | Value |
|----------------|---|
| Description | PTP Sig port connected to |
| Displayed name | Connected To |
| OSS name | ptpSigConnectedToPort |
| Read-only | no |
| Tab Panel | Port Specifics.General Connection Information |
| Type | POINTER |

Connected To Port**Table 3-4074 Connected To Port**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Sets reference to degree input port when MVAC port used external. |
| Displayed name | Connected To Port |
| OSS name | connToPort |
| Read-only | no |
| Tab Panel | Port Specifics.General General |
| Type | POINTER |

Connected Type From**Table 3-4075 Connected Type From**

| Name | Value |
|----------------|---|
| Description | Indicates whether an internal/external port is pointing to this port. |
| Displayed name | Connected Type From |
| OSS name | apFarEndTypeFrom |
| Read-only | no |
| Tab Panel | Port Specifics.General Connection |
| Type | FarEndType |

Connected Type To**Table 3-4076 Connected Type To**

| Name | Value |
|----------------|---|
| Description | Indicates if this port is connected to another internal port or an external port. |
| Displayed name | Connected Type To |
| OSS name | apFarEndType |
| Read-only | no |
| Tab Panel | Port Specifics.General Connection |
| Type | FarEndType |

Connection Monitoring End Point Mode
Table 3-4077 Connection Monitoring End Point Mode

| Name | Value |
|----------------|--|
| Default | yes:bypass |
| Description | Connection monitoring End Point Mode |
| Displayed name | Connection Monitoring End Point Mode |
| OSS name | connectionMonitoringEndPointMode |
| Read-only | no |
| Tab Panel | Port Specifics.General Delay Measurement |
| Type | oth.CMEPMode |

Connection Retry Count**Table 3-4078 Connection Retry Count**

| Name | Value |
|----------------|---|
| Description | The number of consecutive retries that cnLinkAutoStateSourceIP is un-reachable when cnLinkCitAutoStateCtrl is true, which results in CIT port to be auto-enabled. |
| Displayed name | Connection Retry Count |
| Maximum | 10000 |
| Minimum | 5 |
| OSS name | cnLinkSourceLossCount |
| Read-only | no |
| Tab Panel | Port Specifics.General Auto-Disable port Status |
| Type | LONG |

Connection Retry Interval**Table 3-4079 Connection Retry Interval**

| Name | Value |
|----------------|--|
| Description | The interval to contact cnLinkAutoStateSourceIP when cnLinkCitAutoStateCtrl is true. |
| Displayed name | Connection Retry Interval |
| Maximum | 7200 |
| Minimum | 10 |
| OSS name | cnLinkSourceIPCheckInterval |
| Read-only | no |

Table 3-4079 Connection Retry Interval (continued)

| Name | Value |
|-------------|---|
| Tab Panel | Port Specifics.General Auto-Disable port Status |
| Type | LONG |
| Units | seconds |

Consequent Action Loopback**Table 3-4080 Consequent Action Loopback**

| Name | Value |
|----------------|--|
| Default | yes:enabled |
| Description | Specifies whether a consequent action is performed in the context of loopback switching. |
| Displayed name | Consequent Action Loopback |
| OSS name | consActionLoopback |
| Read-only | no |
| Tab Panel | Port Specifics.General Test/Analysis |
| Type | AluWdmEnabledDisabled |

Consequent Actions Performed**Table 3-4081 Consequent Actions Performed**

| Name | Value |
|----------------|---|
| Description | Determines if the consequent actions are performed if a Trace Identifier Mismatch defect (dTIM) is detected |
| Displayed name | Consequent Actions Performed |
| OSS name | trcConsAct |
| Read-only | no |
| Tab Panel | Port Specifics.General SONET / SDH |
| Type | BOOL |

Container**Table 3-4082 Container**

| Name | Value |
|-------------|------------------------------------|
| Description | Define Client port Container Type. |

Table 3-4082 Container (continued)

| Name | Value |
|----------------|---------------------------|
| Displayed name | Container |
| OSS name | cpContainer |
| Read-only | no |
| Tab Panel | Port Specifics.General OT |
| Type | Container |

Containing Equipment Status

Table 3-4083 Containing Equipment Status

| Name | Value |
|--------------------------|-----------------------------|
| Default | yes:indeterminate |
| Displayed name | Containing Equipment Status |
| OSS name | containingEquipmentState |
| Read-only | yes |
| Tab Panel | States General |
| Type | ContainingEquipmentState |
| Enumerated types: | |
| Admin Down | |
| Equipment In Test | |
| N/A | |
| OK | |
| Oper Down | |
| Removed | |
| Type Mismatch | |

Cost Metric

Table 3-4084 Cost Metric

| Name | Value |
|----------------|-------------------------------------|
| Description | The Traffic eng metric of the link. |
| Displayed name | Cost Metric |
| Maximum | 65535 |
| Minimum | 1 |

Table 3-4084 Cost Metric (continued)

| Name | Value |
|-------------|-----------------------------|
| OSS name | cnTeMetric |
| Read-only | no |
| Tab Panel | Port Specifics.General OSPF |
| Type | LONG |

CrossRegen Partner Port**Table 3-4085 CrossRegen Partner Port**

| Name | Value |
|----------------|--------------------------------------|
| Description | Cross reg partner port of Line Port. |
| Displayed name | CrossRegen Partner Port |
| OSS name | lpCrossRegPartner |
| Read-only | no |
| Tab Panel | Port Specifics.General OT |
| Type | CrossRegPartner |

CSF Laser Consequent Action**Table 3-4086 CSF Laser Consequent Action**

| Name | Value |
|----------------|---|
| Description | This parameter defines the Consequent Action in case of CSF for port-port applications. |
| Displayed name | CSF Laser Consequent Action |
| OSS name | csfLaserConsequentAction |
| Read-only | no |
| Tab Panel | Port Specifics.General Gigabit Ethernet |
| Type | ConsequentActionType |

Current Key Info**Table 3-4087 Current Key Info**

| Name | Value |
|----------------|----------------------------------|
| Description | Port Encryption CurrentKey Info. |
| Displayed name | Current Key Info |

Table 3-4087 Current Key Info (continued)

| Name | Value |
|-------------|--|
| Maximum | 256 |
| Minimum | 0 |
| OSS name | currentKeyInfo |
| Read-only | no |
| Tab Panel | Port Specifics.General Encryption Management |
| Type | STRING |

Data Bearer Details**Table 3-4088 Data Bearer Details**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Pointer to gmpls.Databearer instance discovered through the CORBA interface. Applicable if this is the port is being used as a databearer. |
| Displayed name | Data Bearer Details |
| OSS name | dataBearerPointer |
| Read-only | yes |
| Tab Panel | Port Specifics.General ASON Control Plane - Data Bearer |
| Type | POINTER |

Date**Table 3-4089 Date**

| Name | Value |
|----------------|----------------------------------|
| Description | Port Date. |
| Displayed name | Date |
| OSS name | portDate |
| Read-only | no |
| Tab Panel | Port Specifics.General Inventory |
| Type | STRING |

DDM Event Suppression
Table 3-4090 DDM Event Suppression

| Name | Value |
|----------------|-----------------------|
| Default | yes:false |
| Displayed name | DDM Event Suppression |
| OSS name | ddmEventSuppression |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Dead Interval**Table 3-4091 Dead Interval**

| Name | Value |
|----------------|--|
| Description | The router dead interval of the link. For 1830, the range is (1..'FFFF'h). This value must be greater than or equal to hello interval value. |
| Displayed name | Dead Interval |
| Maximum | 65535 |
| Minimum | 2 |
| OSS name | cnRtrDeadInterval |
| Read-only | no |
| Tab Panel | Port Specifics.General OSPF |
| Type | LONG |
| Units | seconds |

Decommissioned**Table 3-4092 Decommissioned**

| Name | Value |
|----------------|--------------------------------|
| Default | yes:false |
| Displayed name | Decommissioned |
| OSS name | isDecommissioned |
| Read-only | yes |
| Tab Panel | General Port Decommission Info |
| Type | BOOL |

Default VLAN
Table 3-4093 Default VLAN

| Name | Value |
|----------------|--|
| Default | yes:1 |
| Description | Applicable to Telco 7250 only, default VLAN for the port |
| Displayed name | Default VLAN |
| Maximum | 4092 |
| Minimum | 1 |
| OSS name | vlan |
| Read-only | no |
| Tab Panel | General VLAN Info |
| Type | INT |

Defect Holdoff Timer**Table 3-4094 Defect Holdoff Timer**

| Name | Value |
|----------------|---|
| Description | Line port consequent action (whether AIS insertion or laser off) must be delayed by a hold-off timer. |
| Displayed name | Defect Holdoff Timer |
| OSS name | IpDefectHoldoffTimer |
| Read-only | no |
| Tab Panel | Port Specifics.General OTU |
| Type | DisabledEnabled |

Defect Holdoff Timer**Table 3-4095 Defect Holdoff Timer**

| Name | Value |
|----------------|---|
| Description | Line port consequent action (whether AIS insertion or laser off) must be delayed by a hold-off timer. |
| Displayed name | Defect Holdoff Timer |
| OSS name | IpLineDefectHoldoffTimer |
| Read-only | no |
| Tab Panel | Port Specifics.General OT |

Table 3-4095 Defect Holdoff Timer (continued)

| Name | Value |
|------|-----------------|
| Type | DisabledEnabled |

Description**Table 3-4096 Description**

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Description |
| Maximum | 256 |
| Minimum | 0 |
| OSS name | description |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Description**Table 3-4097 Description**

| Name | Value |
|----------------|---|
| Default | no |
| Description | This property is specific to AOS family |
| Displayed name | Description |
| Maximum | 80 |
| Minimum | 0 |
| OSS name | portAccessDescription |
| Read-only | no |
| Tab Panel | General Service Access Info |
| Type | STRING |

DHCP IP Range**Table 3-4098 DHCP IP Range**

| Name | Value |
|----------------|---|
| Description | Control Network DHCP range. Current configurable range: 0 to 10 |
| Displayed name | DHCP IP Range |
| Maximum | 10 |
| Minimum | 1 |
| OSS name | cnDhcpRange |
| Read-only | no |
| Tab Panel | Port Specifics.General Control Network |
| Type | INT |

DHCP Server Enabled**Table 3-4099 DHCP Server Enabled**

| Name | Value |
|----------------|---|
| Description | Control Network DHCP server configured. |
| Displayed name | DHCP Server Enabled |
| OSS name | cnDhcpServer |
| Read-only | no |
| Tab Panel | Port Specifics.General Control Network |
| Type | BOOL |

Direction**Table 3-4100 Direction**

| Name | Value |
|----------------|---------------------------------------|
| Default | yes:0 |
| Description | Direction |
| Displayed name | Direction |
| OSS name | direction |
| Read-only | no |
| Tab Panel | Port Specifics.General TOD Attributes |
| Type | PtpTodDirection |

Direction**Table 3-4101 Direction**

| Name | Value |
|----------------|--|
| Description | Port Direction Specifier |
| Displayed name | Direction |
| OSS name | syncEBitsPortDirection |
| Read-only | no |
| Tab Panel | Port Specifics.General BITS Attributes |
| Type | SyncEBitsPortDirection |

Disable Port Automatically**Table 3-4102 Disable Port Automatically**

| Name | Value |
|----------------|---|
| Description | false - System is not in auto_state. CIT enable/disable is done by ifAdminStatus. true - System is in auto_state. CIT enable/disable is done by the connectivity status of source_ip. The CIT port will be disabled when the source IP is reachable and enabled when source IP becomes un-reachable. Provisioning of this attribute is restricted to administrators only. |
| Displayed name | Disable Port Automatically |
| OSS name | cnLinkCitAutoStateCtrl |
| Read-only | no |
| Tab Panel | Port Specifics.General Auto-Disable port Status |
| Type | BOOL |

Distribute Default Gateway via DHCP**Table 3-4103 Distribute Default Gateway via DHCP**

| Name | Value |
|----------------|--|
| Description | Indicates if default gateway IP address is distributed via DHCP on this interface. |
| Displayed name | Distribute Default Gateway via DHCP |
| OSS name | cnDhcpGateway |
| Read-only | no |
| Tab Panel | Port Specifics.General Control Network |
| Type | BOOL |

DM Current Status**Table 3-4104 DM Current Status**

| Name | Value |
|----------------|--|
| Default | yes:none |
| Description | Delay measurement - current status |
| Displayed name | DM Current Status |
| OSS name | delayMeasurementCurrentStatus |
| Read-only | yes |
| Tab Panel | Port Specifics.General Delay Measurement |
| Type | oth.DMCurrentStatus |

DM Current Value**Table 3-4105 DM Current Value**

| Name | Value |
|----------------|--|
| Description | Delay measurement - current value |
| Displayed name | DM Current Value |
| OSS name | delayMeasurementCurrentValue |
| Read-only | yes |
| Tab Panel | Port Specifics.General Delay Measurement |
| Type | FLOAT |
| Units | us |

Drop**Table 3-4106 Drop**

| Name | Value |
|----------------|---|
| Default | yes:unspecified |
| Description | The current disposition of the port in the SIG to AD direction. |
| Displayed name | Drop |
| OSS name | currentDropDisposition |
| Read-only | no |
| Tab Panel | Port Specifics.General AD Port Details |
| Type | AddDropDisposition |

Drop Path Target Power

Table 3-4107 Drop Path Target Power

| Name | Value |
|----------------|--|
| Default | yes:-99.0 |
| Description | The following description applies to the colorless port of the CWR8-88 card: The drop target power |
| Displayed name | Drop Path Target Power |
| Maximum | -4 |
| Minimum | -26.5 |
| OSS name | cwrPortDropTargetPower |
| Read-only | no |
| Tab Panel | Port Specifics.General Power |
| Type | FLOAT |
| Units | dBm |

Drop Path Wavelength Tracker Decoder Usage

Table 3-4108 Drop Path Wavelength Tracker Decoder Usage

| Name | Value |
|----------------|---|
| Description | The type of WTD used egress. |
| Displayed name | Drop Path Wavelength Tracker Decoder Usage |
| OSS name | powerMgmtWtdUsageTypeOut |
| Read-only | no |
| Tab Panel | Port Specifics.General Wavelength Tracker Decoder Usage |
| Type | WtdUsageType |

DTV Amplitude

Table 3-4109 DTV Amplitude

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Reports the current DTV amplitude value. If the module is not present, it returns -1. |
| Displayed name | DTV Amplitude |
| OSS name | lpDTVPortValueAmplitude |
| Read-only | no |

Table 3-4109 DTV Amplitude (continued)

| Name | Value |
|-------------|----------------------------|
| Tab Panel | Port Specifics.General DTV |
| Type | STRING |

DTV Control Enabled**Table 3-4110 DTV Control Enabled**

| Name | Value |
|----------------|---|
| Default | yes:disabled |
| Description | When this is set to disabled, the DTV amplitude will be reset to the default value. |
| Displayed name | DTV Control Enabled |
| OSS name | IpDTVControlEnabled |
| Read-only | no |
| Tab Panel | Port Specifics.General DTV |
| Type | AluWdmEnabledDisabled |

DTV Phase**Table 3-4111 DTV Phase**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Reports the current DTV phase value. If the module is not present, it returns -1. |
| Displayed name | DTV Phase |
| OSS name | IpDTVPortValuePhase |
| Read-only | no |
| Tab Panel | Port Specifics.General DTV |
| Type | STRING |

E1 Frame Format**Table 3-4112 E1 Frame Format**

| Name | Value |
|-------------|---------------------------|
| Default | yes:1 |
| Description | Indicates the E1T1 format |

Table 3-4112 E1 Frame Format (continued)

| Name | Value |
|----------------|--|
| Displayed name | E1 Frame Format |
| OSS name | frameFormat |
| Read-only | no |
| Tab Panel | Port Specifics.General E1/T1 Specifics |
| Type | E1T1FrameFormatType |

Egress Percentage of Rate**Table 3-4113 Egress Percentage of Rate**

| Name | Value |
|----------------|-------------------------------|
| Default | yes:100 |
| Displayed name | Egress Percentage of Rate |
| Maximum | 1000 |
| Minimum | 0 |
| OSS name | portEgrPoolPercentageRate |
| Read-only | no |
| Tab Panel | General Port Percentage Rates |
| Type | INT |
| Units | % |

Egress Pool Policy**Table 3-4114 Egress Pool Policy**

| Name | Value |
|----------------|---------------------------|
| Default | yes: |
| Displayed name | Egress Pool Policy |
| OSS name | portEgrNamedPoolPlcy |
| Read-only | no |
| Tab Panel | General Named Buffer Pool |
| Type | POINTER |

Egress Timing Mode

Table 3-4115 Egress Timing Mode

| Name | Value |
|----------------|--|
| Default | yes:1 |
| Description | Indicates E1T1 client egress timing mode |
| Displayed name | Egress Timing Mode |
| OSS name | egressTimingMode |
| Read-only | no |
| Tab Panel | Port Specifics.General E1/T1 Specifics |
| Type | E1T1ClientEgressTimingModeType |

Embedded ODU Facility Type

Table 3-4116 Embedded ODU Facility Type

| Name | Value |
|----------------|----------------------------|
| Description | Embedded ODU FacilityType. |
| Displayed name | Embedded ODU Facility Type |
| OSS name | oduFacilityType |
| Read-only | no |
| Tab Panel | Port Specifics.General OT |
| Type | EmbeddedODUFacilityType |

Enable DEI

Table 3-4117 Enable DEI

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether or not the port is enabled for color-aware policing using DEI bits. |
| Displayed name | Enable DEI |
| OSS name | enableDei |
| Read-only | no |
| Tab Panel | General Enable DEI |
| Type | BOOL |

Encapsulation Mode

Table 3-4118 Encapsulation Mode

| Name | Value |
|----------------|--------------------------------------|
| Description | The packet interface type. |
| Displayed name | Encapsulation Mode |
| OSS name | gpPortPacketIfType |
| Read-only | no |
| Tab Panel | Port Specifics.General Fiber Channel |
| Type | IfType |

Encapsulation Mode

Table 3-4119 Encapsulation Mode

| Name | Value |
|----------------|---|
| Description | The packet interface type. |
| Displayed name | Encapsulation Mode |
| OSS name | gpPortPacketIfType |
| Read-only | no |
| Tab Panel | Port Specifics.General Gigabit Ethernet |
| Type | IfType |

Encapsulation Type

Table 3-4120 Encapsulation Type

| Name | Value |
|--------------------------|--------------------|
| Default | yes:nullEncap |
| Displayed name | Encapsulation Type |
| OSS name | encapType |
| Read-only | no |
| Tab Panel | General General |
| Type | PortEncapType |
| Enumerated types: | |
| ATM | |
| BCP Dot1 Q | |
| BCP Null | |

Table 3-4120 Encapsulation Type (continued)

| Name | Value |
|------------|-------|
| CEM | |
| Cisco HDLC | |
| Dot1 Q | |
| FR | |
| HDLC | |
| IPCP | |
| MPLS | |
| N/A | |
| Null | |
| PPP Auto | |
| Q in Q | |
| WAN Mirror | |

Encoder Fault Active**Table 3-4121 Encoder Fault Active**

| Name | Value |
|----------------|---|
| Description | The parameter specifies whether there is a power convergence failure or {BR} other fault which would disable power control for the Wavetracker encoder. |
| Displayed name | Encoder Fault Active |
| OSS name | encoderFaultActive |
| Read-only | yes |

| Description | The tolerance for clearing LOS shutdown,above the set threshold.Current range:0 to 1000. |
| Displayed name | Input LOS threshold tolerance |
| Maximum | 1000 |
| Minimum | 0 |
| OSS name | ampInfoLosThresholdTol |
| Read-only | no |
| Tab Panel | Port Specifics.General Amplifier |
| Type | INT |
| Units | dB |

Input LOS Threshold Tolerance**Table 3-4186 Input LOS Threshold Tolerance**

| Name | Value |
|----------------|--|
| Default | yes:-99.0 |
| Description | This is the difference above the LOS set and clear points and applies to the SIG_IN of the OMD port of the SFC1, SFC2, SFC4, SFC8, SFD5, and SFD8 cards. |
| Displayed name | Input LOS Threshold Tolerance |
| Maximum | 6 |
| Minimum | 0 |
| OSS name | omdPortLosThresholdTolerance |
| Read-only | no |
| Tab Panel | Port Specifics.General OMD |
| Type | FLOAT |
| Units | dB |

Input Loss of Signal Threshold
Table 3-4187 Input Loss of Signal Threshold

| Name | Value |
|----------------|--|
| Default | yes:-2500 |
| Description | The threshold for going into LOS shutdown.Current range:-2700to 0. |
| Displayed name | Input Loss of Signal Threshold |
| Maximum | 0 |
| Minimum | -2700 |
| OSS name | ampInfoLosThreshold |
| Read-only | no |
| Tab Panel | Port Specifics.General Amplifier |
| Type | INT |
| Units | dBm |

Input Power**Table 3-4188 Input Power**

| Name | Value |
|----------------|---|
| Default | yes:-99.0 |
| Description | The measured power at the SIG_IN of the OMD port. |
| Displayed name | Input Power |
| OSS name | omdPortRxPower |
| Read-only | no |
| Tab Panel | Port Specifics.General OMD |
| Type | FLOAT |
| Units | dBm |

Input Power**Table 3-4189 Input Power**

| Name | Value |
|----------------|--|
| Default | yes:-99.0 |
| Description | The received power in mBm. This is accessible from ports 2 and 3 (working or protected) exclusively. |
| Displayed name | Input Power |

Table 3-4189 Input Power (continued)

| Name | Value |
|-------------|----------------------------|
| OSS name | opsTxInputPower |
| Read-only | no |
| Tab Panel | Port Specifics.General OPS |
| Type | FLOAT |
| Units | dBm |

Input to Output Gain**Table 3-4190 Input to Output Gain**

| Name | Value |
|----------------|---|
| Default | yes:15.0 |
| Description | LINEOUT port of the uni-directional amplifier Card. |
| Displayed name | Input to Output Gain |
| OSS name | ampPortInputToOutputGain |
| Read-only | no |
| Tab Panel | Port Specifics.General Amplifier |
| Type | FLOAT |
| Units | dB |

Input to Output Gain**Table 3-4191 Input to Output Gain**

| Name | Value |
|----------------|---|
| Default | yes:15.0 |
| Description | LINEOUT port of the uni-directional amplifier Card. |
| Displayed name | Input to Output Gain |
| OSS name | ampPortInputToOutputGain |
| Read-only | no |
| Tab Panel | Port Specifics.General EDFA Amp Attributes |
| Type | FLOAT |
| Units | dB |

Input to Output Gain
Table 3-4192 Input to Output Gain

| Name | Value |
|----------------|---|
| Default | yes:7.0 |
| Description | OA module gain - EVOA loss - SEEPROM loss of splitter. Reports the gain from sigIn to sigOut ports of the MESH4 card. |
| Displayed name | Input to Output Gain |
| OSS name | meshPortInputToOutputGain |
| Read-only | no |
| Tab Panel | Port Specifics.General Power |
| Type | FLOAT |
| Units | dB |

Interface Enabled**Table 3-4193 Interface Enabled**

| Name | Value |
|----------------|---------------------------------------|
| Default | yes:0 |
| Description | Interface Enabled |
| Displayed name | Interface Enabled |
| OSS name | interfaceEnabled |
| Read-only | no |
| Tab Panel | Port Specifics.General TOD Attributes |
| Type | PtpTodInterfaceEnabled |

Interface ID**Table 3-4194 Interface ID**

| Name | Value |
|----------------|-----------------|
| Default | yes:0 |
| Displayed name | Interface ID |
| OSS name | snmpPortId |
| Read-only | yes |
| Tab Panel | General General |
| Type | LONG |

Internal Port is Valid XC Endpoint
Table 3-4195 Internal Port is Valid XC Endpoint

| Name | Value |
|----------------|--|
| Description | Indicates if this is an end point of internal OT cross connect |
| Displayed name | Internal Port is Valid XC Endpoint |
| OSS name | validInternalOTSXCEndPoint |
| Read-only | no |
| Tab Panel | Port Specifics.General Connection |
| Type | BOOL |

IP Address**Table 3-4196 IP Address**

| Name | Value |
|----------------|--|
| Default | yes:0.0.0.0 |
| Description | Control Network Link IpAddress. |
| Displayed name | IP Address |
| OSS name | cnIpAddr |
| Read-only | no |
| Tab Panel | Port Specifics.General Control Network |

| Description | Line Impedance |
| Displayed name | Line Impedance |
| OSS name | syncEBitsPortLineImpedance |
| Read-only | no |
| Tab Panel | Port Specifics.General BITS Attributes |
| Type | SyncEImpedenceType |

Link Group ID**Table 3-4215 Link Group ID**

| Name | Value |
|----------------|------------------------------------|
| Default | yes:notApplicable |
| Description | > Specifies the port ISL group Id. |
| Displayed name | Link Group ID |
| OSS name | islGroupId |
| Read-only | no |
| Tab Panel | Port Specifics.General OT |
| Type | ISLGroupIdType |

Link Integrity**Table 3-4216 Link Integrity**

| Name | Value |
|----------------|---|
| Description | The Operational status of the associated physical link. |
| Displayed name | Link Integrity |
| OSS name | cnLinkOperStatus |
| Read-only | no |
| Tab Panel | Port Specifics.General Control Network |
| Type | OperStatus |

Link Trap**Table 3-4217 Link Trap**

| Name | Value |
|----------------|-----------------|
| Default | yes:disable |
| Displayed name | Link Trap |
| OSS name | linkTrap |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Link Up**Table 3-4218 Link Up**

| Name | Value |
|----------------|----------------|
| Default | yes:false |
| Displayed name | Link Up |
| OSS name | isLinkUp |
| Read-only | yes |
| Tab Panel | States General |
| Type | BOOL |

Load Balance Algorithm

Table 3-4219 Load Balance Algorithm

| Name | Value |
|----------------|---|
| Default | yes:notApplicable |
| Description | Specifies the load balancing algorithm to be used on this port. |
| Displayed name | Load Balance Algorithm |
| OSS name | loadBalanceAlgorithm |
| Read-only | no |
| Tab Panel | General General |
| Type | equipment.PortLoadBalanceAlgorithm |

LOS Mode

Table 3-4220 LOS Mode

| Name | Value |
|----------------|----------------------------------|
| Description | The Amplifier Port LOS Mode. |
| Displayed name | LOS Mode |
| OSS name | ampPortLosMode |
| Read-only | no |
| Tab Panel | Port Specifics.General Amplifier |
| Type | PortLosMode |

LOS Propagation

Table 3-4221 LOS Propagation

| Name | Value |
|----------------|-------------------------------------|
| Description | The LOS propagation of Client Port. |
| Displayed name | LOS Propagation |
| OSS name | cpLosProp |
| Read-only | no |
| Tab Panel | Port Specifics.General OT |
| Type | LosPropagation |

LPT Consequent Action
Table 3-4222 LPT Consequent Action

| Name | Value |
|----------------|---|
| Default | yes:noAction |
| Description | Indicates the 11DPE12A port LPT Consequence Action. |
| Displayed name | LPT Consequent Action |
| OSS name | lptConsequenceAction |
| Read-only | no |
| Tab Panel | Port Specifics.General Ethernet |
| Type | LptCActionType |

MAC Address**Table 3-4223 MAC Address**

| Name | Value |
|----------------|--|
| Default | yes:00-00-00-00-00-00 |
| Displayed name | MAC Address |
| OSS name | hwMacAddress |
| Read-only | yes |
| Tab Panel | Port Specifics.General UserPanelCardProperties |
| Type | MACADDR |

Manufacture Date**Table 3-4224 Manufacture Date**

| Name | Value |
|----------------|------------------------------|
| Default | yes: |
| Displayed name | Manufacture Date |
| Maximum | 252 |
| OSS name | manufactureDate |
| Read-only | yes |
| Tab Panel | General Manufacturer Details |
| Type | STRING |

Manufacturer**Table 3-4225 Manufacturer**

| Name | Value |
|----------------|------------------------------|

| Description | This is for OTU4 FEC Mode. |
| Displayed name | Post-FEC BER |
| OSS name | otuPostFecBER |
| Read-only | no |
| Tab Panel | Port Specifics.General OTU |
| Type | STRING |

Power Achieved**Table 3-4319 Power Achieved**

| Name | Value |
|----------------|---|
| Description | The parameter specifies whether the target output power is achieved (value Y) or not (value N). |
| Displayed name | Power Achieved |
| OSS name | powerAchieved |
| Read-only | no |
| Tab Panel | Port Specifics.General OT |
| Type | BOOL |

Power Control Enabled**Table 3-4320 Power Control Enabled**

| Name | Value |
|----------------|--|
| Description | The parameter specifies whether WaveTracker power control is enabled (value: Y) or not (value N) . . |
| Displayed name | Power Control Enabled |
| OSS name | waveKeyEncodePowerControl |
| Read-only | no |
| Tab Panel | Port Specifics.General Wave Key Encode |
| Type | BOOL |

Power Delta**Table 3-4321 Power Delta**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | The parameter describes the acceptable power delta (unit: dBm){BR} from the target transmit power at the addressed WaveTracker encoder (TXDELTAPOWER: Transmit Delta Power). |
| Displayed name | Power Delta |
| Maximum | 99.99 |
| Minimum | -99.99 |
| OSS name | otPortPowerDelta |
| Read-only | no |

Table 3-4321 Power Delta (continued)

| Name | Value |
|-------------|---------------------------|
| Tab Panel | Port Specifics.General OT |
| Type | FLOAT |
| Units | dBm |

Power Gain**Table 3-4322 Power Gain**

| Name | Value |
|----------------|---|
| Default | yes:-99.0 |
| Description | Applies to the signal port of the amplifier card. |
| Displayed name | Power Gain |
| Maximum | 33 |
| Minimum | 6 |
| OSS name | ampPortPowerGain |
| Read-only | no |
| Tab Panel | Port Specifics.General Amplifier |
| Type | FLOAT |
| Units | dB |

Power Management Type**Table 3-4323 Power Management Type**

| Name | Value |
|----------------|--------------------------------------|
| Description | The type of power management egress. |
| Displayed name | Power Management Type |
| OSS name | powerMgmtTypeOut |
| Read-only | no |
| Tab Panel | Port Specifics.General Power |
| Type | PowerMgmtType |

Power Setting
Table 3-4324 Power Setting

| Name | Value |
|----------------|---|
| Default | yes:3.00 |
| Description | Configures the power setting for signal output power in power mode.The operating mode tnAarPortConfigOperatingMode must be configured to Power prior to setting the power. Only use for test purposes.Current configurable range:-500to 1000. |
| Displayed name | Power Setting |
| Maximum | 10.00 |
| Minimum | -5.00 |
| OSS name | ampPowerSetting |
| Read-only | no |
| Tab Panel | Port Specifics.General Amplifier |
| Type | FLOAT |
| Units | dB |

Power Setting**Table 3-4325 Power Setting**

| Name | Value |
|----------------|---|
| Default | yes:3.00 |
| Description | Configures the power setting for signal output power in power mode.The operating mode tnAarPortConfigOperatingMode must be configured to Power prior to setting the power. Only use for test purposes.Current configurable range:-500to 1000. |
| Displayed name | Power Setting |
| Maximum | 10.00 |
| Minimum | -5.00 |
| OSS name | ampPowerSetting |
| Read-only | no |
| Tab Panel | Port Specifics.General Connectivity Testing |
| Type | FLOAT |
| Units | dB |

Power Target
Table 3-4326 Power Target

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | The parameter specifies the target transmit power (unit: dBm) {BR} at the addressed WaveTracker (TXTARGETPOWER: Transmit Target Power). |
| Displayed name | Power Target |
| Maximum | 99.99 |
| Minimum | -99.99 |
| OSS name | otPortPowerTarget |
| Read-only | no |
| Tab Panel | Port Specifics.General OT |
| Type | FLOAT |
| Units | dBm |

PPS Status**Table 3-4327 PPS Status**

| Name | Value |
|----------------|---------------------------------------|
| Default | yes:0 |
| Description | Direction |
| Displayed name | PPS Status |
| OSS name | ppsStatus |
| Read-only | no |
| Tab Panel | Port Specifics.General TOD Attributes |
| Type | PtpTodPPSStatus |

Pre-FEC BER**Table 3-4328 Pre-FEC BER**

| Name | Value |
|----------------|----------------------------|
| Description | This is for OTU4 FEC Mode. |
| Displayed name | Pre-FEC BER |
| OSS name | otuPreFecBER |
| Read-only | no |

Table 3-4328 Pre-FEC BER (continued)

| Name | Value |
|-------------|----------------------------|
| Tab Panel | Port Specifics.General OTU |
| Type | STRING |

Present Duplex Mode**Table 3-4329 Present Duplex Mode**

| Name | Value |
|----------------|---|
| Default | yes:full |
| Description | Defines the current mode of operation of the MAC entity. 'unkwn' indicates that the current duplex mode could not be determined. Management control of the duplex mode is accomplished through the MAU MIB. When an interface does not support autonegotiation, or when autonegotiation is not enabled, the duplex mode is controlled using ifMauDefaultType. When autonegotiation is supported and enabled, duplex mode is controlled using ifMauAutoNegAdvertisedBits. In either case, the currently operating duplex mode is reflected both in this object and in ifMauType. Note that this object provides redundant information with ifMauType. Normally, redundant objects are discouraged. However, in this instance, it allows a management application to determine the duplex status of an interface without having to know every possible value of ifMauType. This was felt to be sufficiently valuable to justify the redundancy. |
| Displayed name | Present Duplex Mode |
| OSS name | dot3StatsDuplexStatus |
| Read-only | no |
| Tab Panel | Port Specifics.General Control Network |
| Type | Duplex |

Present Link Speed**Table 3-4330 Present Link Speed**

| Name | Value |
|----------------|--|

| Description | apLEDStatus is built using apLEDColor and apLEDState |
| Displayed name | Status LED Color |
| OSS name | apLEDStatus |
| Read-only | no |
| Tab Panel | Port Specifics.General General |
| Type | STRING |

Subnet Mask**Table 3-4429 Subnet Mask**

| Name | Value |
|----------------|--|
| Default | yes:0.0.0.0 |
| Description | Control Network Link SubnetMask. |
| Displayed name | Subnet Mask |
| OSS name | cnSubnetMask |
| Read-only | no |
| Tab Panel | Port Specifics.General Control Network |
| Type | INETADDR |

Subrack Connection**Table 3-4430 Subrack Connection**

| Name | Value |
|----------------|--|
| Default | no |
| Description | specifies where the MPT is connected to on the subrack |
| Displayed name | Subrack Connection |
| OSS name | mptSubrackPointer |
| Read-only | no |
| Tab Panel | General Port Usage |
| Type | POINTER |

SVLAN Tag Protocol ID
Table 3-4431 SVLAN Tag Protocol ID

| Name | Value |
|----------------|---------------------------------------|
| Default | yes:qinqtpid1 |
| Description | The QinQ mode TPID for 11DPE12E port. |
| Displayed name | SVLAN Tag Protocol ID |
| OSS name | sVLANTagProtocolTPID |
| Read-only | no |
| Tab Panel | Port Specifics.General Ethernet |
| Type | QinQTPID |

Switching Threshold**Table 3-4432 Switching Threshold**

| Name | Value |
|----------------|--|
| Default | yes:-99.0 |
| Description | If the power drops below this threshold, a protection switch will be executed. This is accessible from ports 2 and 3 (working or protected) exclusively. |
| Displayed name | Switching Threshold |
| Maximum | 5 |
| Minimum | -32 |
| OSS name | opsSwitchingThreshold |
| Read-only | no |
| Tab Panel | Port Specifics.General OPS |
| Type | FLOAT |
| Units | dBm |

Switching Threshold Calculation Mode**Table 3-4433 Switching Threshold Calculation Mode**

| Name | Value |
|----------------|--|
| Description | Indicates if the OPSA switch threshold is calculated by the NE (auto) or set by the user (manual) - applies to ports 2 and 3 (A and B) of the OPSA card. |
| Displayed name | Switching Threshold Calculation Mode |
| OSS name | opsSwitchingThreshCalcControl |

Table 3-4433 Switching Threshold Calculation Mode (continued)

| Name | Value |

Stack-VLAN ID**Table 3-4516 Stack-VLAN ID**

| Name | Value |
|----------------|---|
| Default | yes:None |
| Description | Used for SVLAN tagged traffic. Can be provisioned only when CMODE is set as SVLAN TAGGED. |
| Displayed name | Stack-VLAN ID |
| OSS name | stackVLANIDForGUI |
| Read-only | no |
| Tab Panel | General VTS Map Details |
| Type | STRING |

VTS CE-VLAN ID**Table 3-4517 VTS CE-VLAN ID**

| Name | Value |
|----------------|--|
| Description | CEVLANID string indicates the VLANID or VLANID ranges, separated by comma. Example: 1,5,1-100. Current configurable range: 1 to 4095, ALL. |
| Displayed name | VTS CE-VLAN ID |
| OSS name | vtsMapCEVLANID |
| Read-only | no |
| Tab Panel | General VTS Map Details |
| Type | STRING |

VTs Direction
Table 3-4518 VTs Direction

| Name | Value |
|--------------------------|---|
| Description | If Direction = Egress, an entry is made in the tnEgressVtsMap table/tnEgressVtsCmodeMap Table. If Direction = Ingress, an entry is made in the tnIngressVtsMactable/tnIngressVtsCmodeMap Table. If Direction = Ingress and Egress, an entry is made in the tnVtsMapTable OR On Both tnIngressVtsCmodeMapTable and tnEgressVtsCmodeMapTable. |
| Displayed name | VTs Direction |
| OSS name | vtsDirection |
| Read-only | no |
| Tab Panel | General General |
| Type | VTsDirection |
| Enumerated types: | |
| Egress | |
| Ingress | |
| Ingress and Egress | |

VTs Egress CE-VLAN ID**Table 3-4519 VTs Egress CE-VLAN ID**

| Name | Value |
|----------------|--|
| Description | Egress CEVLANID string indicates the VLANID or VLANID ranges, separated by commas. Example: 1,5,1-100. Current configurable range: 1 to 4095, ALL. |
| Displayed name | VTs Egress CE-VLAN ID |
| Maximum | 64 |
| Minimum | 0 |
| OSS name | egressVtsCmodeMapCEVLANID |
| Read-only | no |
| Tab Panel | General VTs Egress Map Details |
| Type | STRING |

VTS Egress CE-VLAN ID
Table 3-4520 VTS Egress CE-VLAN ID

| Name | Value |
|----------------|--|
| Description | CEVLANID string indicates the VLANID or VLANID ranges, separated by comma. Example: 1,5,1-100. Current configurable range: 1 to 4095, ALL. |
| Displayed name | VTS Egress CE-VLAN ID |
| OSS name | vtMapEgressCEVLANID |
| Read-only | no |
| Tab Panel | General VTS Egress Map Details |
| Type | STRING |

VTS Egress S-VLAN ID**Table 3-4521 VTS Egress S-VLAN ID**

| Name | Value |
|----------------|---|
| Description | Indicates the stack VLANID for egress cmode for 11DPE12E Example: Current configurable range: 2 to 4094 |
| Displayed name | VTS Egress S-VLAN ID |
| Maximum | 4094 |
| OSS name | egressVtsCmodeMapSVLANID |
| Read-only | no |
| Tab Panel | General VTS Egress Map Details |
| Type | LONG |

VTS Egress S-VLAN ID**Table 3-4522 VTS Egress S-VLAN ID**

| Name | Value |
|----------------|---|
| Description | SVLANID string indicates the egress VLANID on Line Port If Card is in QinQ Mode. Current configurable range: 1 to 4095. |
| Displayed name | VTS Egress S-VLAN ID |
| Maximum | 4095 |
| OSS name | vtMapEgressSVLANID |
| Read-only | no |
| Tab Panel | General VTS Egress Map Details |
| Type | LONG |

VTS Ingress CE-VLAN ID**Table 3-4523 VTS Ingress CE-VLAN ID**

| Name | Value |
|----------------|--|
| Description | Ingress CEVLANID string indicates the VLANID or VLANID ranges, separated by commas. Example: 1,5,1-100. Current configurable range: 1 to 4095, ALL |
| Displayed name | VTS Ingress CE-VLAN ID |
| Maximum | 64 |
| Minimum | 0 |
| OSS name | ingressVtsCmodeMapCEVLANID |
| Read-only | no |
| Tab Panel | General VTS Ingress Map Details |
| Type | STRING |

VTS Ingress CE-VLAN ID**Table 3-4524 VTS Ingress CE-VLAN ID**

| Name | Value |
|----------------|--|
| Description | CEVLANID string indicates the VLANID or VLANID ranges, separated by comma. Example: 1,5,1-100. Current configurable range: 1 to 4095, ALL. |
| Displayed name | VTS Ingress CE-VLAN ID |

| Type | FLOAT |
| Units | dB |

Power Converge Retries**Table 3-4576 Power Converge Retries**

| Name | Value |
|----------------|---|
| Default | yes:3 |
| Description | The number of retries for measured power to converge with the target power being set. |
| Displayed name | Power Converge Retries |
| Maximum | 10 |
| Minimum | 0 |
| OSS name | powerConvergeRetries |
| Read-only | no |
| Tab Panel | General Source Port |
| Type | INT |

Power Converge Wait Time**Table 3-4577 Power Converge Wait Time**

| Name | Value |
|----------------|--|
| Default | yes:60 |
| Description | The wait time in seconds for measured power to converge with the target power being set. |
| Displayed name | Power Converge Wait Time |
| Maximum | 180 |
| Minimum | 10 |
| OSS name | powerConvergeWaitTime |
| Read-only | no |
| Tab Panel | General Source Port |
| Type | INT |
| Units | seconds |

Service Mode
Table 3-4578 Service Mode

| Name | Value |
|--------------------------|---|
| Default | yes:unprotected |
| Description | The service mode - Unprotected, Working or Protection |
| Displayed name | Service Mode |
| Mandatory on creation | yes |
| OSS name | serviceMode |
| Read-only | no |
| Tab Panel | General General |
| Type | TransportServiceMode |
| Enumerated types: | |

Discovery State

Table 3-4687 Discovery State

| Name | Value |
|----------------|--|
| Default | yes:notApplicable |
| Description | Only applicable to the global policy. Set to "inProgress" if the global policy is created as part of the specific NE resync during the full node resync or node discovery. At the end of full node resync, if the resync is successful, the global policy is completely updated from first discovered local policy and its discoveryState is set to "completed". Otherwise, the global policy is not updated and its discoveryState is set to "failed". For "failed" global policy, it will be updated by next successful full node resync or synchronized from the specific local policy. Set to "initialized" if the global policy is created by SNMP trap notification. User may need to synchronize the global policy manually with the specific local policy. Set to "N/A" if the global policy is created or modified by a SAM user. |
| Displayed name | Discovery State |
| OSS name | discoveryState |
| Read-only | yes |

Lost Frames - Local**Table 3-4759 Lost Frames - Local**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Specifies the number of frames lost during this test at the near-end. |
| Displayed name | Lost Frames - Local |
| OSS name | frameLossLocal |
| Read-only | yes |
| Tab Panel | General dualEndedResults |
| Type | UINT128 |

Lost Frames - Peer**Table 3-4760 Lost Frames - Peer**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Specifies the number of frames lost during this test at the far-end. |
| Displayed name | Lost Frames - Peer |
| OSS name | frameLossPeer |
| Read-only | yes |
| Tab Panel | General dualEndedResults |
| Type | UINT128 |

MAC Address**Table 3-4761 MAC Address**

| Name | Value |
|----------------|---|
| Default | yes:00-00-00-00-00-00 |
| Description | Specifies the MAC address for remote MEP. |
| Displayed name | MAC Address |
| OSS name | macAddress |
| Read-only | yes |
| Tab Panel | General General |
| Type | MACADDR |

MEP ID

Table 3-4762 MEP ID

| Name | Value |
|-----------------------|--------------------------------|
| Default | yes:0 |
| Description | The identifier for remote MEP. |
| Displayed name | MEP ID |
| Mandatory on creation | yes |
| Maximum | 8191 |
| Minimum | 1 |
| OSS name | remoteMepId |
| Read-only | no |
| Tab Panel | General General |
| Type | LONG |

Port Status

Table 3-4763 Port Status

| Name | Value |
|--------------------------|---|
| Default | yes:psNoPortStateTLV |
| Description | An enumerated value of the Port status TLV received in the last CCM from the remote MEP or the default value psNoPortStateTLV indicating either no CCM has been received, or that nor port status TLV was received in the last CCM. |
| Displayed name | Port Status |
| OSS name | portStatus |
| Read-only | yes |
| Tab Panel | General General |
| Type | Dot1agCfmPortSatus |
| Enumerated types: | |
| Blocked | |
| None | |
| Up | |

Rdi**Table 3-4764 Rdi**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | State of the RDI bit in the last received CCM (true for RDI=1), or false if none has been received. |
| Displayed name | Rdi |
| OSS name | rdiFlag |
| Read-only | yes |
| Tab Panel | General General |
| Type | BOOL |

Received CCM Frames**Table 3-4765 Received CCM Frames**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Specifies the number of CCM frames received for this Dual-Ended Loss test. |
| Displayed name | Received CCM Frames |
| OSS name | rxLmrCcmCount |
| Read-only | yes |
| Tab Panel | General dualEndedResults |
| Type | LONG |

RemoteState**Table 3-4766 RemoteState**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies the DB state for remote MEP. |
| Displayed name | RemoteState |
| OSS name | remoteMepDbState |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Rx Frames - Local**Table 3-4767 Rx Frames - Local**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Specifies the number of frames received during this test by the near-end. |
| Displayed name | Rx Frames - Local |
| OSS name | rxFramesLocal |
| Read-only | yes |
| Tab Panel | General dualEndedResults |
| Type | UINT128 |

Rx Frames - Peer**Table 3-4768 Rx Frames - Peer**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Specifies the number of frames received during this test by the far-end. |
| Displayed name | Rx Frames - Peer |
| OSS name | rxFramesPeer |
| Read-only | yes |
| Tab Panel | General dualEndedResults |
| Type | UINT128 |

Tx Frames - Local**Table 3-4769 Tx Frames - Local**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Specifies the number of frames transmitted during this test by the near-end. |
| Displayed name | Tx Frames - Local |
| OSS name | txFramesLocal |
| Read-only | yes |
| Tab Panel | General dualEndedResults |
| Type | UINT128 |

Tx Frames - Peer
Table 3-4770 Tx Frames - Peer

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Specifies the number of frames transmitted during this test by the far-end. |
| Displayed name | Tx Frames - Peer |
| OSS name | txFramesPeer |
| Read-only | yes |
| Tab Panel | General dualEndedResults |
| Type | UINT128 |

Remote MEP parameters

Auto Discovered RemoteMep

Table 3-4771 Auto Discovered RemoteMep

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies whether or not the remote peer was automatically discovered ('true') or not. |
| Displayed name | Auto Discovered RemoteMep |
| OSS name | autoDiscoveredRemoteMep |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

MEP ID

Table 3-4772 MEP ID

| Name | Value |
|-----------------------|--------------------------------|
| Default | yes:0 |
| Description | The identifier for remote MEP. |
| Displayed name | MEP ID |
| Mandatory on creation | yes |
| Maximum | 8191 |

Table 3-4772 MEP ID (continued)

| Name | Value |
|-------------|-----------------|
| Minimum | 1 |

|-------------|-------------------|
| Tab Panel | Multicast General |
| Type | BOOL |

IS-IS Enabled**Table 3-4879 IS-IS Enabled**

| Name | Value |
|----------------|-------------------|
| Default | yes:false |
| Displayed name | IS-IS Enabled |
| OSS name | isisEnabled |
| Read-only | no |
| Tab Panel | Protocols General |
| Type | BOOL |

ISA-BB Group**Table 3-4880 ISA-BB Group**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | The value of rsmGroup specifies the ISA-BB group associated with this virtual router instance for the purpose of IP datagram fragment reassembly. The value zero specifies that no such ISA-BB group is associated. |
| Displayed name | ISA-BB Group |
| OSS name | rsmGroup |
| Read-only | no |
| Tab Panel | General General |
| Type | POINTER |

L2TP Enabled**Table 3-4881 L2TP Enabled**

| Name | Value |
|----------------|--------------|
| Default | yes:false |
| Displayed name | L2TP Enabled |

Table 3-4881 L2TP Enabled (continued)

| Name | Value |
|-------------|-------------------|
| OSS name | l2tpEnabled |
| Read-only | no |
| Tab Panel | Protocols General |
| Type | BOOL |

LDP Enabled**Table 3-4882 LDP Enabled**

| Name | Value |
|----------------|-------------------|
| Default | yes:false |
| Displayed name | LDP Enabled |
| OSS name | ldpEnabled |
| Read-only | no |
| Tab Panel | Protocols General |
| Type | BOOL |

LMP Enabled**Table 3-4883 LMP Enabled**

| Name | Value |
|----------------|-------------------|
| Default | yes:false |
| Displayed name | LMP Enabled |
| OSS name | lmpEnabled |
| Read-only | no |
| Tab Panel | Protocols General |
| Type | BOOL |

MLD Enabled**Table 3-4884 MLD Enabled**

| Name | Value |
|----------------|-------------|
| Default | yes:false |
| Displayed name | MLD Enabled |

Table 3-4884 MLD Enabled (continued)

| Name | Value |
|-------------|-------------------|
| OSS name | mldEnabled |
| Read-only | no |
| Tab Panel | Multicast General |
| Type | BOOL |

MPLS Enabled**Table 3-4885 MPLS Enabled**

| Name | Value |
|----------------|-------------------|
| Default | yes:false |
| Displayed name | MPLS Enabled |
| OSS name | mplsEnabled |
| Read-only | no |
| Tab Panel | Protocols General |
| Type | BOOL |

MPLS-TP Enabled**Table 3-4886 MPLS-TP Enabled**

| Name | Value |
|----------------|-------------------|
| Default | yes:false |
| Displayed name | MPLS-TP Enabled |
| OSS name | mplstpEnabled |
| Read-only | no |
| Tab Panel | Protocols General |
| Type | BOOL |

MSDP Enabled**Table 3-4887 MSDP Enabled**

| Name | Value |
|----------------|--------------|
| Default | yes:false |
| Displayed name | MSDP Enabled |

Table 3-4887 MSDP Enabled (continued)

| Name | Value |
|-------------|-------------------|
| OSS name | msdpEnabled |
| Read-only | no |
| Tab Panel | Multicast General |
| Type | BOOL |

Name**Table 3-4888 Name**

| Name | Value |
|----------------|--------------------------|
| Default | yes: |
| Displayed name | Name |
| Maximum | 252 |
| OSS name | displayName |
| Read-only | yes |
| Tab Panel | General Routing Instance |
| Type | STRING |

Operational State**Table 3-4889 Operational State**

| Name | Value |
|----------------|-------------------|
| Default | yes:unknown |
| Displayed name | Operational State |
| OSS name | operationalState |
| Read-only | yes |
| Tab Panel | General General |
| Type | OperationalState |

OSPFv2 Enabled**Table 3-4890 OSPFv2 Enabled**

| Name | Value |
|---------|-----------|
| Default | yes:false |

Table 3-4890 OSPFv2 Enabled (continued)

| Name | Value |
|----------------|-------------------|
| Displayed name | OSPFv2 Enabled |
| OSS name | ospfEnabled |
| Read-only | no |
| Tab Panel | Protocols General |
| Type | BOOL |

OSPFv3 Enabled**Table 3-4891 OSPFv3 Enabled**

| Name | Value |
|----------------|-------------------|
| Default | yes:false |
| Displayed name | OSPFv3 Enabled |
| OSS name | ospfv3Enabled |
| Read-only | no |
| Tab Panel | Protocols General |
| Type | BOOL |

PIM Enabled**Table 3-4892 PIM Enabled**

| Name | Value |
|----------------|-------------------|
| Default | yes:false |
| Displayed name | PIM Enabled |
| OSS name | pimEnabled |
| Read-only | no |
| Tab Panel | Multicast General |
| Type | BOOL |

RIP Enabled**Table 3-4893 RIP Enabled**

| Name | Value |
|---------|-----------|
| Default | yes:false |

Table 3-4893 RIP Enabled (continued)

| Name | Value |
|----------------|-------------------|
| Displayed name | RIP Enabled |
| OSS name | ripEnabled |
| Read-only | no |
| Tab Panel | Protocols General |
| Type | BOOL |

RIPNG Enabled**Table 3-4894 RIPNG Enabled**

| Name | Value |
|----------------|-------------------|
| Default | yes:false |
| Displayed name | RIPNG Enabled |
| OSS name | ripNgEnabled |
| Read-only | no |
| Tab Panel | Protocols General |
| Type | BOOL |

Role**Table 3-4895 Role**

| Name | Value |
|----------------|--|
| Default | yes:hub |
| Description | Specifies if Test Suite Generation should use this interface as a Hub or Spoke (Hubs target Hubs and Spokes, Spoke can only target Hubs) |
| Displayed name | Role |
| OSS name | testRole |
| Read-only | no |
| Tab Panel | oam-config testOptions |
| Type | sas.TestedObjectRole |

Routing Instance ID
Table 3-4896 Routing Instance ID

| Name | Value |
|----------------|--------------------------|
| Default | yes:1 |
| Displayed name | Routing Instance ID |
| Maximum | 10240 |
| Minimum | 1 |
| OSS name | routerId |
| Read-only | yes |
| Tab Panel | General Routing Instance |
| Type | INT |

Routing Instance Name**Table 3-4897 Routing Instance Name**

| Name | Value |
|----------------|--------------------------|
| Default | yes: |
| Displayed name | Routing Instance Name |
| Maximum | 32 |
| Minimum | 0 |
| OSS name | routerName |
| Read-only | yes |
| Tab Panel | General Routing Instance |
| Type | STRING |

RSVP Enabled**Table 3-4898 RSVP Enabled**

| Name | Value |
|----------------|-------------------|
| Default | yes:false |
| Displayed name | RSVP Enabled |
| OSS name | rsvpEnabled |
| Read-only | no |
| Tab Panel | Protocols General |
| Type | BOOL |

Site ID**Table 3-4899 Site ID**

| Name | Value |
|----------------|--------------|
| Default | yes:0.0.0.0 |
| Displayed name | Site ID |
| Maximum | 64 |
| OSS name | siteId |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

Site Name**Table 3-4900 Site Name**

| Name | Value |
|----------------|--------------|
| Default | yes: |
| Displayed name | Site Name |
| Maximum | 252 |
| OSS name | siteName |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

Test Suite Count**Table 3-4901 Test Suite Count**

| Name | Value |
|----------------|-------------------|
| Default | yes:0 |
| Displayed name | Test Suite Count |
| Minimum | 0 |
| OSS name | sasTestSuiteCount |
| Read-only | yes |
| Tab Panel | General General |
| Type | INT |

Use as Test Source**Table 3-4902 Use as Test Source**

| Name | Value |
|----------------|--|
| Default | yes:true |
| Description | Specifies if Test Suite Generation should use this interface as a test source. |
| Displayed name | Use as Test Source |
| OSS name | testSource |
| Read-only | no |
| Tab Panel | oam-config testOptions |
| Type | BOOL |

Use as Test Target**Table 3-4903 Use as Test Target**

| Name | Value |
|----------------|--|
| Default | yes:true |
| Description | Specifies if Test Suite Generation should use this interface as a test target. |
| Displayed name | Use as Test Target |
| OSS name | testTarget |
| Read-only | no |
| Tab Panel | oam-config testOptions |
| Type | BOOL |

VRF Name**Table 3-4904 VRF Name**

| Name | Value |
|-----------------------|-----------------|
| Default | yes: |
| Displayed name | VRF Name |
| Mandatory on creation | yes |
| Maximum | 20 |
| Minimum | 1 |
| OSS name | vRFName |
| Read-only | no |
| Tab Panel | General General |

Table 3-4904 VRF Name (continued)

| Name | Value |
|------|--------|
| Type | STRING |

WPP Enabled

Table 3-4905 WPP Enabled

| Name | Value |
|----------------|-------------------|
| Default | yes:false |
| Displayed name | WPP Enabled |
| OSS name | wppEnabled |
| Read-only | no |
| Tab Panel | Protocols General |
| Type | BOOL |

Sap Alarm Category parameters**Category**

Table 3-4906 Category

| Name | Value |
|--------------------------|----------------------|
| Description | The trap entity type |
| Displayed name | Category |
| Mandatory on creation | yes |
| OSS name | alarmEntityType |
| Read-only | no |
| Tab Panel | General General |
| Type | TrapEntityType |
| Enumerated types: | |
| | 100GBE |
| | 10GBE |
| | 1GBE |
| | 40GBE |

Sas Port parameters

Access Egress Policy**Table 3-4912 Access Egress Policy**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Specifies the Access Egress used by this port. Only applicable to 7210 SAS-E/M Ports. |
| Displayed name | Access Egress Policy |
| OSS name | accessEgressPolicy |
| Read-only | no |
| Tab Panel | General Access Egress |
| Type | POINTER |

Network Policy**Table 3-4913 Network Policy**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Specifies the Network policy used by this port/interface. Only applicable to 7210 SAS-E Ports and 7210 SAS-M interfaces. |
| Displayed name | Network Policy |
| OSS name | networkPolicy |
| Read-only | no |
| Tab Panel | General Network |

Service parameters

Auto MEG Site Creation

Table 3-4926 Auto MEG Site Creation

| Name | Value |
|-----------------------|---|
| Default | yes:true |
| Description | Specifies if MEG Sites will be generated or not if this is unchecked then no MEG sites or MEP/MIPs will be auto generated for this service. |
| Displayed name | Auto MEG Site Creation |
| Mandatory on creation | yes |
| OSS name | autoMegSite |
| Read-only | no |
| Tab Panel | General Auto-Creation of MEG(s) |
| Type | BOOL |

Direction

Table 3-4927 Direction

| Name | Value |
|-----------------------|--|
| Default | yes:up |
| Description | Specifies the direction the auto-created MEPs will have on all access interfaces in the service. |
| Displayed name | Direction |
| Mandatory on creation | yes |
| OSS name | mepDirectionAccessInterface |
| Read-only | no |
| Tab Panel | General Auto-Creation of MEP(s) |
| Type | ethernetoam.Direction |

Direction**Table 3-4928 Direction**

| Name | Value |
|-----------------------|---|
| Default | yes:down |
| Description | Specifies the direction the auto-created MEPs will have on all SDP bindings in the service. |
| Displayed name | Direction |
| Mandatory on creation | yes |
| OSS name | mepDirectionSdpBindings |
| Read-only | no |
| Tab Panel | General Auto-Creation of MEP(s) |
| Type | ethernetoam.Direction |

Direction**Table 3-4929 Direction**

| Name | Value |
|----------------|--|
| Default | yes:up |
| Description | Specifies the direction of the auto-created Virtual MEPs, it must be UP. |
| Displayed name | Direction |
| OSS name | virtualMepDirection |
| Read-only | no |
| Tab Panel | General Auto-Creation of MEP(s) |
| Type | ethernetoam.Direction |

Follow Service Topology Changes**Table 3-4930 Follow Service Topology Changes**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies if OAM Objects to be regenerated upon service Topology Change. |
| Displayed name | Follow Service Topology Changes |
| OSS name | keepupdatedServiceTopology |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Level**Table 3-4931 Level**

| Name | Value |
|----------------|--------------------------------|
| Default | yes:0 |
| Description | Specifies the MD level 0 to 7. |
| Displayed name | Level |
| Maximum | 7 |
| Minimum | 0 |
| OSS name | maintDomainLevel |
| Read-only | yes |
| Tab Panel | General General |
| Type | INT |

MEG Global ID**Table 3-4932 MEG Global ID**

| Name | Value |
|----------------|-------------------------------------|
| Default | yes: |
| Description | The display global name of the MEG. |
| Displayed name | MEG Global ID |
| Maximum | 252 |
| Minimum | 0 |
| OSS name | globalId |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

MEP(s) Creation on Access Interfaces**Table 3-4933 MEP(s) Creation on Access Interfaces**

| Name | Value |
|-----------------------|--|
| Default | yes:true |
| Description | Specifies the MEPs will be configured on all access interfaces in the service. |
| Displayed name | MEP(s) Creation on Access Interfaces |
| Mandatory on creation | yes |

Table 3-4933 MEP(s) Creation on Access Interfaces (continued)

| Name | Value |
|-------------|---------------------------------|
| OSS name | autoMepCreationAccessInterface |
| Read-only | no |
| Tab Panel | General Auto-Creation of MEP(s) |
| Type | BOOL |

MEP(s) Creation on SDP Bindings**Table 3-4934 MEP(s) Creation on SDP Bindings**

| Name | Value |
|-----------------------|---|
| Default | yes:false |
| Description | Specifies the MEPs will be configured on all sdp bindings in the service. |
| Displayed name | MEP(s) Creation on SDP Bindings |
| Mandatory on creation | yes |
| OSS name | autoMepCreationSdpBindings |
| Read-only | no |
| Tab Panel | General Auto-Creation of MEP(s) |
| Type | BOOL |

MIP(s) Creation on Access Interfaces**Table 3-4935 MIP(s) Creation on Access Interfaces**

| Name | Value |
|-----------------------|--|
| Default | yes:false |
| Description | Specifies the MIPs will be configured on all access interfaces in the service. |
| Displayed name | MIP(s) Creation on Access Interfaces |
| Mandatory on creation | yes |
| OSS name | autoMipCreationAccessInterface |
| Read-only | no |
| Tab Panel | General Auto-Creation of MIP(s) |
| Type | BOOL |

MIP(s) Creation on SDP Bindings
Table 3-4936 MIP(s) Creation on SDP Bindings

| Name | Value |
|-----------------------|---|
| Default | yes:true |
| Description | Specifies the MIPs will be configured on all sdp bindings in the service. |
| Displayed name | MIP(s) Creation on SDP Bindings |
| Mandatory on creation | yes |
| OSS name | autoMipCreationSdpBindings |
| Read-only | no |
| Tab Panel | General Auto-Creation of MIP(s) |
| Type | BOOL |

Multi-Service MEG**Table 3-4937 Multi-Service MEG**

| Name | Value |
|-----------------------|---|
| Default | yes:false |
| Description | Specifies if MEG Generation should skip MEP generation on overlapping site and Service Connection SAPs. |
| Displayed name | Multi-Service MEG |
| Mandatory on creation | yes |
| OSS name | multiServiceMeg |
| Read-only | no |
| Tab Panel | General Auto-Creation of MEG(s) |
| Type | BOOL |

Object ID**Table 3-4938 Object ID**

| Name | Value |
|-----------------------|---------------------------------------|
| Default | yes:0 |
| Description | The identifier for the CcTestService. |
| Displayed name | Object ID |
| Mandatory on creation | yes |
| Maximum | 2147483647 |

Primary VLAN Enable**Table 3-4939 Primary VLAN Enable**

| Name | Value |
|-----------------------|---|
| Default | yes:false |
| Description | Primary VLAN Enabled on generated MEPS. |
| Displayed name | Primary VLAN Enable |
| Mandatory on creation | yes |
| OSS name | mepPrimaryVlanEnable |
| Read-only | no |
| Tab Panel | General Auto-Creation of MEP(s) |
| Type | BOOL |

Primary VLAN Enable**Table 3-4940 Primary VLAN Enable**

| Name | Value |
|-----------------------|--|
| Default | yes:false |
| Description | Primary VLAN MIP Configuration on SAP. |
| Displayed name | Primary VLAN Enable |
| Mandatory on creation | yes |
| OSS name | mipSapPrimaryVlanEnable |
| Read-only | no |
| Tab Panel | General Auto-Creation of MIP(s) |
| Type | BOOL |

Service
Table 3-4941 Service

| Name | Value |
|-----------------------|--|
| Default | yes: |
| Description | The service selected for this CC Test. |
| Displayed name | Service |
| Mandatory on creation | yes |
| OSS name | servicePointer |
| Read-only | no |
| Tab Panel | General General |
| Type | POINTER |

Service ID**Table 3-4942 Service ID**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | The service ID associated with the CCTest. |
| Displayed name | Service ID |
| OSS name | serviceId |
| Read-only | yes |
| Tab Panel | General General |
| Type | LONG |

Service Name**Table 3-4943 Service Name**

| Name | Value |
|----------------|-------------------|
| Description | The service name. |
| Displayed name | Service Name |
| Maximum | 100 |
| OSS name | serviceName |
| Read-only | yes |

| Type | STRING |

Virtual MEP(s) Creation on VPLS Sites
Table 3-4944 Virtual MEP(s) Creation on VPLS Sites

| Name | Value |
|-----------------------|--|
| Default | yes:false |
| Description | Specifies that only virtual MEPs will be configured on all B-Sites in the service, but no regular MEPs will be configured on SAPs/SDP bindings of those B-Sites. |
| Displayed name | Virtual MEP(s) Creation on VPLS Sites |
| Mandatory on creation | yes |
| OSS name | autoVirtualMepCreation |
| Read-only | no |
| Tab Panel | General Auto-Creation of MEP(s) |
| Type | BOOL |

VLAN ID**Table 3-4945 VLAN ID**

| Name | Value |
|-----------------------|---|
| Default | yes:0 |
| Description | VLAN ID to be set on generated MEG Site bindings. |
| Displayed name | VLAN ID |
| Mandatory on creation | yes |
| Maximum | 4094 |
| Minimum | 0 |
| OSS name | vlanId |
| Read-only | no |
| Tab Panel | General Auto-Creation of MEG(s) |
| Type | INT |

Shelf parameters

Active Switch Status

Table 3-4946 Active Switch Status

| Name | Value |

| Default | yes:90 |
| Displayed name | Low Watermark |
| Maximum | 100 |
| Minimum | 0 |
| OSS name | lowWatermark |
| Read-only | no |
| Tab Panel | General Properties |
| Type | LONG |
| Units | % |

MAC Flush on Fail

Table 3-5064 MAC Flush on Fail

| Name | Value |
|--------------------------|--|
| Default | yes:disabled |
| Description | Specifies whether a special mac-flush is sent when a port or sap becomes operational down. Replace the property "macflushOnFail" on VPLS site. |
| Displayed name | MAC Flush on Fail |
| OSS name | macFlushOnFail |
| Read-only | no |
| Tab Panel | General Properties |
| Type | MacFlushAdminState |
| Enumerated types: | |
| | Disabled |
| | Enabled |

MAC Subnet Length

Table 3-5065 MAC Subnet Length

| Name | Value |
|---------|--------|
| Default | yes:48 |

Table 3-5065 MAC Subnet Length (continued)

| Name | Value |
|----------------|--|
| Description | "Specifies how many bits, starting from the beginning of the MAC address are used for MAC learning and switching." |
| Displayed name | MAC Subnet Length |
| Maximum | 48 |
| Minimum | 24 |
| OSS name | macSubnetLength |
| Read-only | no |
| Tab Panel | General Properties |
| Type | INT |

Move Frequency**Table 3-5066 Move Frequency**

| Name | Value |
|----------------|------------------|
| Default | yes:2 |
| Displayed name | Move Frequency |
| Maximum | 10 |
| Minimum | 1 |
| OSS name | macMoveFrequency |
| Read-only | no |
| Tab Panel | General MAC Move |
| Type | INT |

Number of Retries**Table 3-5067 Number of Retries**

| Name | Value |
|----------------|--|
| Default | yes:3 |
| Description | "This value specifies the number of times retries are performed for re-enabling the SAP/SDP. A value of zero indicates unlimited number of retries." |
| Displayed name | Number of Retries |
| Maximum | 255 |
| Minimum | 0 |
| OSS name | macMoveNumRetries |

Table 3-5067 Number of Retries (continued)

| Name | Value |
|-------------|------------------|
| Read-only | no |
| Tab Panel | General MAC Move |
| Type | LONG |

Primary Ports Cumulative Factor**Table 3-5068 Primary Ports Cumulative Factor**

| Name | Value |
|----------------|--|
| Default | yes:3 |
| Description | "The value specifies a factor for the secondary ports defining how many MAC-relearn periods should be used to measure the MAC-relearn rate. This rate must be exceeded during consecutive periods before the corresponding ports (SAP and/or spoke-SDP) are blocked by the MAC-move feature. |
| Displayed name | Primary Ports Cumulative Factor |
| Maximum | 10 |
| Minimum | 3 |
| OSS name | macMovePrimaryPortsCumulativeFactor |
| Read-only | no |
| Tab Panel | General MAC Move |
| Type | LONG |

Propagate MAC Flush**Table 3-5069 Propagate MAC Flush**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies whether 'MAC flush' messages received from the given LDP are propagated to all spoke-SDPs and mesh-SDPs within the context of this VPLS service. The propagation will follow the 'split-horizon' principle and any data-path blocking in order to avoid the looping of these messages. |
| Displayed name | Propagate MAC Flush |
| OSS name | propagateMacFlush |
| Read-only | no |
| Tab Panel | General Properties |
| Type | BOOL |

| None | |

Time To Wait Before Fallback To Previous Software Version**Table 3-5132 Time To Wait Before Fallback To Previous Software Version**

| Name | Value |
|----------------|---|
| Default | yes:30 |
| Description | This parameter is used to specify the timer (minutes) to wait for eNodeB performing a full fallback to the previous SW version when eNodeB failed to use new (updated) version. OMC can also use this parameter to detect network problems and re-configure eNodeB. The value 0 is used to turn off the SW fallback functionality. The supported timer range is 30 .. 120 min. The default value is 30 min. |
| Displayed name | Time To Wait Before Fallback To Previous Software Version |

| Default | yes:tmnxInService |
| Displayed name | Administrative State |
| OSS name | administrativeState |
| Read-only | no |
| Tab Panel | General Other |
| Type | netw.AdministrativeState |

Aggregator ID**Table 3-5151 Aggregator ID**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | aggregator ID that this static route goes from/to |
| Displayed name | Aggregator ID |
| Maximum | 50 |
| OSS name | aggregatorId |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

BFD Enabled**Table 3-5152 BFD Enabled**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | specifies whether Bi-directional Forwarding Detection is enabled in this interface. When the value is 'true', this interface can establish BFD sessions and use BFD as a signalling mechanism. When it is 'false', it cannot use BFD. |
| Displayed name | BFD Enabled |
| OSS name | bfdEnabled |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

BFD Operational State**Table 3-5153 BFD Operational State**

| Name | Value |
|----------------|--------------------------------------|
| Default | yes:0 |
| Description | operational state of the BFD session |
| Displayed name | BFD Operational State |
| OSS name | bfdOperationalState |
| Read-only | no |

Table 3-5153 BFD Operational State (continued)

| Tab Panel | General Other |
| Type | INT |

BFD State**Table 3-5154 BFD State**

| Name | Value |
|--------------------------|--------------------------|
| Default | yes:-1 |
| Description | state of the BFD session |
| Displayed name | BFD State |
| OSS name | bfdState |
| Read-only | no |
| Tab Panel | General Other |
| Type | BfdSessionState |
| Enumerated types: | |
| Administrative Down | |
| Down | |
| Initialization | |
| N/A | |
| Up | |

Community**Table 3-5155 Community**

| Name | Value |
|----------------|---|
| Description | The Community parameter specifies a route policy community ID for the static or aggregated route. A route policy uses the community value to control the distribution of the route into other protocols. BGP uses the community value to control the distribution of this route into other routers. Only one community can be associated with an aggregate or static route. The parameter is defined as an ID string or a well-known standard community. The format for an ID string is [2-byte-AS-number]:[2-byte-decimal-number]. For example, 100:30 is a valid ID string. The permitted well-known standard communities are no-export, no-export-subconfed, no-advertise, and null. |
| Displayed name | Community |
| Maximum | 72 |
| Minimum | 0 |

Table 3-5155 Community (continued)

| OSS name | community |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Description**Table 3-5156 Description**

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Description |
| Maximum | 80 |
| Minimum | 0 |
| OSS name | description |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Destination**Table 3-5157 Destination**

| Name | Value |
|-----------------------|---------------------|
| Displayed name | Destination |
| Mandatory on creation | yes |
| OSS name | destination |
| Read-only | no |
| Tab Panel | General Destination |
| Type | INETADDR |

Destination Class Index

Table 3-5158 Destination Class Index

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | The value of destination class specifies the destination-class for this static route. The value of 0 means no destination-class. |
| Displayed name | Destination Class Index |
| Maximum | 255 |
| Minimum | 0 |
| OSS name | destinationClass |
| Read-only | no |
| Tab Panel | General Source/Destination Class Index |
| Type | INT |

Disallow IGP

Table 3-5159 Disallow IGP

| Name | Value |
|----------------|----------------------|
| Default | yes:false |
| Displayed name | Disallow IGP |
| OSS name | disallowIGP |
| Read-only | no |
| Tab Panel | General IGP Shortcut |
| Type | generic.TruthValue |

Drop Count

Table 3-5160 Drop Count

| Name | Value |
|----------------|---|
| Default | yes:3 |
| Description | The number of consecutive ping-replies that must be missed before concluding the CPE is down. If the CPE is determined to be down, the associated static route will be deactivated. |
| Displayed name | Drop Count |
| Maximum | 255 |
| Minimum | 1 |

Table 3-5160 Drop Count (continued)

| Name | Value |
|-------------|-------------------|
| OSS name | cpeDropCount |
| Read-only | no |
| Tab Panel | General CPE Check |
| Type | INT |

Dynamic BGP**Table 3-5161 Dynamic BGP**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | The Dynamic BGP parameter specifies whether dynamic BGP route selection is enabled. When the parameter is enabled, the black hole static route dynamically derives its next hop from the best BGP route with the same IP prefix. |
| Displayed name | Dynamic BGP |
| OSS name | enableDynamicBgp |
| Read-only | no |
| Tab Panel | General Destination |
| Type | BOOL |

Edge ID**Table 3-5162 Edge ID**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | edge ID that this static route goes from/to |
| Displayed name | Edge ID |
| Maximum | 50 |
| OSS name | edgeId |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Enable CPE Check

Table 3-5163 Enable CPE Check

| Name | Value |
|----------------|------------------------|
| Default | yes:false |
| Description | SAM internal use only. |
| Displayed name | Enable CPE Check |
| OSS name | enableCpe |
| Read-only | no |
| Tab Panel | General CPE Check |
| Type | BOOL |

Enable LDP Sync Timer

Table 3-5164 Enable LDP Sync Timer

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | If the value of enableLdpSyncTimer is true, this static route will not enable the preferred route immediately after the interface to the next-hop comes up but will wait for the LDP adjacency on the link to come up and start the ldp sync timer. On timer expiration, routing will enable the static route. |
| Displayed name | Enable LDP Sync Timer |
| OSS name | enableLdpSyncTimer |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Forwarding Class Name

Table 3-5165 Forwarding Class Name

| Name | Value |
|----------------|--|
| Default | yes:none |
| Description | The forwarding class associated to the static route. |
| Displayed name | Forwarding Class Name |
| OSS name | fcName |
| Read-only | no |
| Tab Panel | General General |

Table 3-5165 Forwarding Class Name (continued)

| Tab Panel | General Destination |
| Type | BOOL |

ID on the Node**Table 3-5168 ID on the Node**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | The SNMP mib index id on the applicable nodes. |
| Displayed name | ID on the Node |
| OSS name | snmpId |
| Read-only | yes |
| Tab Panel | General General |
| Type | LONG |

IGP Shortcut**Table 3-5169 IGP Shortcut**

| Name | Value |
|--------------------------|---|
| Default | yes:unused |
| Description | This attribute is deprecated for 7750/7450/7950 13.0 and above nodes. It has been replaced by indirectTunnelLdp and indirectTunnelRsvpTe. |
| Displayed name | IGP Shortcut |
| OSS name | igpShortcut |
| Read-only | no |
| Tab Panel | General IGP Shortcut |
| Type | IgpShortcut |
| Enumerated types: | |
| LDP | |
| RSVP-TE | |
| Unused | |

Interface
Table 3-5170 Interface

| Name | Value |
|----------------|---------------------|
| Default | yes: |
| Displayed name | Interface |
| Maximum | 252 |
| OSS name | interfaceName |
| Read-only | yes |
| Tab Panel | General Destination |
| Type | STRING |

Interval**Table 3-5171 Interval**

| Name | Value |
|----------------|--|
| Default | yes:1 |
| Description | The interval, in seconds, between ICMP pings to the target CPE IP address. |
| Displayed name | Interval |
| Maximum | 255 |
| Minimum | 1 |
| OSS name | cpeInterval |
| Read-only | no |
| Tab Panel | General CPE Check |
| Type | INT |
| Units | seconds |

IP Address**Table 3-5172 IP Address**

| Name | Value |
|-----------------------|-----------------|
| Default | yes:0.0.0.0 |
| Displayed name | IP Address |
| Mandatory on creation | yes |
| OSS name | targetIpAddress |
| Read-only | no |

IPSec Tunnel**Table 3-5173 IPSec Tunnel**

| Name | Value |
|----------------|---------------------|
| Default | yes: |
| Displayed name | IPSec Tunnel |
| Maximum | 252 |
| OSS name | tunnelName |
| Read-only | yes |
| Tab Panel | General Destination |
| Type | STRING |

LDP**Table 3-5174 LDP**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | This specifies if LDP Route Forwarding Equivalence Class (FEC) tunneling mechanism will be used to resolve next-hop for the static-route or not |
| Displayed name | LDP |
| OSS name | indirectTunnelLdp |
| Read-only | no |
| Tab Panel | General IGP Shortcut |
| Type | generic.TruthValue |

Log**Table 3-5175 Log**

| Name | Value |
|---------|-----------|
| Default | yes:false |

Table 3-5175 Log (continued)

| Name | Value |
|----------------|---|
| Description | It specifies whether to enable the logging of transitions between active and in-active based on the CPE connectivity check. |
| Displayed name | Log |
| OSS name | cpeEnableLog |
| Read-only | no |
| Tab Panel | General CPE Check |
| Type | BOOL |

Metric**Table 3-5176 Metric**

| Name | Value |
|----------------|---------------|
| Default | yes:1 |
| Displayed name | Metric |
| Maximum | 65535 |
| Minimum | 0 |
| OSS name | metric |
| Read-only | no |
| Tab Panel | General Other |
| Type | INT |

Multicast Capable Peers**Table 3-5177 Multicast Capable Peers**

| Name | Value |
|-----------------------|-------------------------|
| Default | yes:false |
| Displayed name | Multicast Capable Peers |
| Mandatory on creation | yes |
| OSS name | multicastCapablePeers |
| Read-only | no |
| Tab Panel | General Destination |
| Type | BOOL |

Operational State
Table 3-5178 Operational State

| Name | Value |
|----------------|-------------------|
| Default | yes:inactive |
| Displayed name | Operational State |
| OSS name | operationalState |
| Read-only | yes |
| Tab Panel | General Other |
| Type | INT |

Packet Size**Table 3-5179 Packet Size**

| Name | Value |
|----------------|---|
| Default | yes:56 |
| Description | specifies the padding size for the ICMP ping test packet. vRtrInetStaticRoutePaddingSize is valid if the value of vRtrInetStaticRouteCpeAddr is non-empty. This option only applies to IPv4 static routes." |
| Displayed name | Packet Size |
| Maximum | 16384 |
| Minimum | 0 |
| OSS name | paddingSize |
| Read-only | no |
| Tab Panel | General CPE Check |
| Type | INT |

Preference**Table 3-5180 Preference**

Switch Name

Table 3-5205 Switch Name

| Name | Value |
|-----------------------|---|
| Default | yes: |
| Description | On 1830 PSS nodes, new cards like 11QPE24 supports E-LAN (VPLS) and later E-Line (VLL); other cards will follow. All of these cards support the SR-OS object model and behave similar to 7210 nodes. This object represents a customer object on a given a site and a given card. This attribute is a pointer to the card model object. |

|----------------|----------------------------------|
| Default | yes:0 |
| Displayed name | Max Fill Level |
| OSS name | maxFillLevel |
| Read-only | yes |
| Tab Panel | General Jitter Buffer Attributes |
| Type | INT |

Min Fill Level**Table 3-5335 Min Fill Level**

| Name | Value |
|----------------|----------------------------------|
| Default | yes:0 |
| Displayed name | Min Fill Level |
| OSS name | minFillLevel |
| Read-only | yes |
| Tab Panel | General Jitter Buffer Attributes |
| Type | INT |

Raise Threshold**Table 3-5336 Raise Threshold**

| Name | Value |
|----------------|----------------------------------|
| Default | yes:0 |
| Displayed name | Raise Threshold |
| OSS name | raiseThreshold |
| Read-only | yes |
| Tab Panel | General Decapsulation Attributes |
| Type | INT |

Rate**Table 3-5337 Rate**

| Name | Value |
|----------------|---|
| Description | OC3/STM1 when device type = TSoP-OC3 OC12/STM4 when device type = TSoP-OC12 |
| Displayed name | Rate |
| OSS name | rate |
| Read-only | yes |
| Tab Panel | General General |
| Type | optical.AssignedRate |

Recenter Increment**Table 3-5338 Recenter Increment**

| Name | Value |
|----------------|----------------------------------|
| Default | yes:0 |
| Displayed name | Recenter Increment |
| OSS name | recIncrement |
| Read-only | yes |
| Tab Panel | General Jitter Buffer Attributes |
| Type | INT |

Recenter Position**Table 3-5339 Recenter Position**

| Name | Value |
|----------------|----------------------------------|
| Default | yes:0 |
| Displayed name | Recenter Position |
| OSS name | recPosition |
| Read-only | yes |
| Tab Panel | General Jitter Buffer Attributes |
| Type | INT |

Recenter Threshold

Table 3-5340 Recenter Threshold

| Name | Value |
|----------------|----------------------------------|
| Default | yes:0 |
| Displayed name | Recenter Threshold |
| OSS name | recThreshold |
| Read-only | yes |
| Tab Panel | General Jitter Buffer Attributes |
| Type | INT |

RTP Clock Source

Table 3-5341 RTP Clock Source

| Name | Value |
|--------------------------|----------------------------------|
| Displayed name | RTP Clock Source |
| OSS name | decapRtpClkSource |
| Read-only | yes |
| Tab Panel | General Decapsulation Attributes |
| Type | RtpClockSource |
| Enumerated types: | |
| RTP Clock Ethernet | |
| RTP Clock TDM | |

RTP Clock Source

Table 3-5342 RTP Clock Source

| Name | Value |
|--------------------------|----------------------------------|
| Displayed name | RTP Clock Source |
| OSS name | encapRtpClkSource |
| Read-only | yes |
| Tab Panel | General Encapsulation Attributes |
| Type | RtpClockSource |
| Enumerated types: | |
| RTP Clock Ethernet | |
| RTP Clock TDM | |

RTP Frequency
Table 3-5343 RTP Frequency

| Name | Value |
|--------------------------|----------------------------------|
| Displayed name | RTP Frequency |
| OSS name | decapRtpFreq |
| Read-only | yes |
| Tab Panel | General Decapsulation Attributes |
| Type | RtpFrequency |
| Enumerated types: | |
| | 19MHz |
| | 25MHz |

RTP Frequency**Table 3-5344 RTP Frequency**

| Name | Value |
|--------------------------|----------------------------------|
| Displayed name | RTP Frequency |
| OSS name | encapRtpFreq |
| Read-only | yes |
| Tab Panel | General Encapsulation Attributes |
| Type | RtpFrequency |
| Enumerated types: | |
| | 19MHz |
| | 25MHz |

RTP Payload Type Mismatch Detect**Table 3-5345 RTP Payload Type Mismatch Detect**

| Name | Value |
|----------------|----------------------------------|
| Default | yes:false |
| Displayed name | RTP Payload Type Mismatch Detect |
| OSS name | rtpPldTypeMismDeted |
| Read-only | yes |
| Tab Panel | General Decapsulation Attributes |
| Type | generic.TruthValue |

Shift Value
Table 3-5346 Shift Value

| Name | Value |
|----------------|----------------------------------|
| Default | yes:0 |
| Displayed name | Shift Value |
| OSS name | shiftValue |
| Read-only | yes |
| Tab Panel | General Jitter Buffer Attributes |
| Type | INT |

Timing Mode**Table 3-5347 Timing Mode**

| Name | Value |
|--------------------------|----------------------------------|
| Displayed name | Timing Mode |
| OSS name | timingMode |
| Read-only | yes |
| Tab Panel | General Decapsulation Attributes |
| Type | IwfTimingMode |
| Enumerated types: | |
| Differential | |
| Loop Timing | |
| Not Applicable | |
| ReTiming | |

Unexpected Wave Keys parameters

Direction

Table 3-5348 Direction

| Name | Value |
|--------------------------|-----------------------|
| Description | The signal direction. |
| Displayed name | Direction |
| Mandatory on creation | yes |
| OSS name | direction |
| Read-only | no |
| Tab Panel | General General |
| Type | Direction |
| Enumerated types: | |
| In | |
| N/A | |
| Out | |

Frequency

Table 3-5349 Frequency

| Name | Value |
|--------------------------|------------------|
| Description | The ITU channel. |
| Displayed name | Frequency |

| None | |

Measured Power**Table 3-5350 Measured Power**

| Name | Value |
|----------------|--|
| Default | yes:-99.0 |
| Description | The power, expressed in units of mBm, associated with the unexpected Wave Key. |
| Displayed name | Measured Power |
| OSS name | uwtKeyPower |
| Read-only | no |
| Tab Panel | General General |
| Type | FLOAT |
| Units | dBm |

Wave Key**Table 3-5351 Wave Key**

| Name | Value |
|----------------|---------------------------------|
| Description | One of many possible Wave Keys. |
| Displayed name | Wave Key |
| OSS name | uwtKey |
| Read-only | no |
| Tab Panel | General General |
| Type | LONG |

Virtual OCH Cross Connect parameters

A-Z Rekey

Table 3-5352 A-Z Rekey

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Setting rekeyAZ to true allows the user to request a rekey in the A-Z direction. |
| Displayed name | A-Z Rekey |
| OSS name | rekeyAZ |
| Read-only | no |
| Tab Panel | General ReKey |
| Type | BOOL |

Administrative State

Table 3-5353 Administrative State

| Name | Value |
|--------------------------|---|
| Default | yes:up |
| Description | The administrative state of the connection. |
| Displayed name | Administrative State |
| Mandatory on creation | yes |
| OSS name | administrativeState |
| Read-only | no |
| Tab Panel | General States |
| Type | ConnectionAdminState |
| Enumerated types: | |
| Automatic In-Service | |
| Blocking | |
| Down | |
| Maintenance | |
| Partially Down | |
| Standby/Backup | |
| Unknown | |
| Up | |

Bidirectional**Table 3-5354 Bidirectional**

| Name | Value |
|----------------|---|
| Default | yes:true |
| Description | Indicates if this connection is a unidirectional or bidirectional connection. |
| Displayed name | Bidirectional |
| OSS name | biDirectional |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Bit Rate / Encoding AZ**Table 3-5355 Bit Rate / Encoding AZ**

| Name | Value |
|----------------|---|
| Description | Pointer to a user provisioned system-wide technology type (Bit-Rate + Encoding) in the AZ direction |
| Displayed name | Bit Rate / Encoding AZ |
| OSS name | technologyTypeAZ |
| Read-only | no |
| Tab Panel | General User Technology AZ |
| Type | POINTER |

Bit Rate / Encoding ZA**Table 3-5356 Bit Rate / Encoding ZA**

| Name | Value |
|----------------|---|
| Description | Pointer to a user provisioned system-wide technology type (Bit-Rate + Encoding) in the ZA direction |
| Displayed name | Bit Rate / Encoding ZA |
| OSS name | technologyTypeZA |
| Read-only | no |
| Tab Panel | General User Technology ZA |
| Type | POINTER |

Bit Rate AZ**Table 3-5357 Bit Rate AZ**

| Name | Value |

Enable LMM Session Stats Collection

Table 3-5433 Enable LMM Session Stats Collection

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies whether or not to compute the Y.1731 ETH-LM 'RxFCI' and 'TxFCI' service frame counters for the specified SAP.The 'RxFCI' and 'TxFCI' counters are used by ETH-LM loss measurement tests. |
| Displayed name | Enable LMM Session Stats Collection |
| OSS name | ImmCollectStats |
| Read-only | no |
| Tab Panel | OAM.ETH-CFM LMM Session Stats Collection |
| Type | BOOL |

Enable Port Redundancy

Table 3-5434 Enable Port Redundancy

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Indicates whether to enable the backup port configuration for manual switching. Currently it is only applicable to Epipe and Cpipe on 7x50/7710/7705 node. |
| Displayed name | Enable Port Redundancy |
| OSS name | enablePortRedundancy |
| Read-only | no |
| Tab Panel | Port Port Redundancy |
| Type | BOOL |

Enable Split Horizon

Table 3-5435 Enable Split Horizon

| Name | Value |
|-----------------------|----------------------|
| Default | yes:false |
| Displayed name | Enable Split Horizon |
| Mandatory on creation | yes |
| OSS name | enableShg |
| Read-only | no |
| Tab Panel | Port Ethernet Ring |

Table 3-5435 Enable Split Horizon (continued)

| Name | Value |
|------|-------|
| Type | BOOL |

Enable Virtual MEP Filter**Table 3-5436 Enable Virtual MEP Filter**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | The value of vMepFilter specifies whether ETH-CFM PDUs egressing the sap at the same level or lower than that of the configured service MEP (the virtual MEP) should be discarded or continue to egress. |
| Displayed name | Enable Virtual MEP Filter |
| OSS name | vMepFilter |
| Read-only | no |
| Tab Panel | OAM.ETH-CFM Virtual MEPs |
| Type | BOOL |

Encapsulation Type**Table 3-5437 Encapsulation Type**

| Name | Value |
|----------------|-------------------------|
| Default | yes:unspecified |
| Displayed name | Encapsulation Type |
| OSS name | encapType |
| Read-only | no |
| Tab Panel | Port General |
| Type | equipment.PortEncapType |

Ethernet CFM Monitor Flags**Table 3-5438 Ethernet CFM Monitor Flags**

| Name | Value |
|----------------|----------------------------|
| Default | yes:0 |
| Displayed name | Ethernet CFM Monitor Flags |
| OSS name | cpmProtEthCfmMonitorFlags |

Table 3-5438 Ethernet CFM Monitor Flags (continued)

| Name | Value |
|-------------|------------------------|
| Read-only | no |
| Tab Panel | Security General |
| Type | EthCfmMonitorFlagsType |

Ethernet Tunnel Endpoint Control SAP**Table 3-5439 Ethernet Tunnel Endpoint Control SAP**

| Name | Value |
|-----------------------|---|
| Default | yes:false |
| Description | For SAPs that have an Ethernet Tunnel Endpoint as the Terminating Port, indicates if this is a control SAP. If set to 'true', the value of the 'outerEncapValue' property is set to 8191. |
| Displayed name | Ethernet Tunnel Endpoint Control SAP |
| Mandatory on creation | yes |
| OSS name | ethTunnelControlSap |
| Read-only | no |
| Tab Panel | Port Ethernet Tunnel |
| Type | BOOL |

Force ctag Vlan Forwarding**Table 3-5440 Force ctag Vlan Forwarding**

| Name | Value |
|----------------|------------------------------------|
| Default | yes:false |
| Displayed name | Force ctag Vlan Forwarding |
| OSS name | forceCtagVlanFwd |
| Read-only | no |
| Tab Panel | General Force ctag VLAN Forwarding |
| Type | BOOL |

Frame-Based Accounting
Table 3-5441 Frame-Based Accounting

| Name | Value |
|----------------|--|
| Default | yes:false |
| Displayed name | Frame-Based Accounting |
| OSS name | egressFrameBaseAccounting |
| Read-only | no |
| Tab Panel | Schedulers Egress Aggregate Rate Limit |
| Type | BOOL |

Ingress Aggregate Shaper Rate**Table 3-5442 Ingress Aggregate Shaper Rate**

| Name | Value |
|----------------|-------------------------------|
| Default | yes:-1 |
| Displayed name | Ingress Aggregate Shaper Rate |
| Maximum | 3000000 |
| Minimum | -1 |
| OSS name | sapIngressAggregateShaperRate |
| Read-only | no |
| Tab Panel | QoS Aggregate Rate Limit |
| Type | INT |
| Units | kbps |

Ingress Counter Mode**Table 3-5443 Ingress Counter Mode**

| Name | Value |
|----------------|--------------------------|
| Default | yes:packet |
| Displayed name | Ingress Counter Mode |
| OSS name | sapIngressCounterMode |
| Read-only | no |
| Tab Panel | Accounting 7210 Specific |
| Type | SapIngressCounterMode |

Ingress Counter Type
Table 3-5444 Ingress Counter Type

| Name | Value |
|----------------|--------------------------|
| Default | yes:inOutProfileCount |
| Displayed name | Ingress Counter Type |
| OSS name | sapIngressCounterType |
| Read-only | no |
| Tab Panel | Accounting 7210 Specific |
| Type | SapIngressCounterType |

Ingress Filter**Table 3-5445 Ingress Filter**

| Name | Value |
|----------------|----------------------|
| Default | yes: |
| Displayed name | Ingress Filter |
| OSS name | ingressFilterPointer |
| Read-only | no |
| Tab Panel | ACL IP Filter |
| Type | POINTER |

Ingress Filter**Table 3-5446 Ingress Filter**

| Name | Value |
|----------------|----------------------|
| Default | yes: |
| Displayed name | Ingress Filter |
| OSS name | ingressFilterPointer |
| Read-only | no |
| Tab Panel | ACL IP/MAC Filter |
| Type | POINTER |

Ingress Match QinQ Dot1P**Table 3-5447 Ingress Match QinQ Dot1P**

| Name | Value |
|----------------|----------------------------|
| Default | yes:none |
| Displayed name | Ingress Match QinQ Dot1P |
| OSS name | ingressMatchQinqDot1pBits |
| Read-only | no |
| Tab Panel | QoS General |
| Type | rtr.MatchQinqDot1pBitsType |

Ingress Meter**Table 3-5448 Ingress Meter**

| Name | Value |
|----------------|------------------------------|
| Default | yes:false |
| Displayed name | Ingress Meter |
| OSS name | sapIngressWithAggregateMeter |
| Read-only | no |
| Tab Panel | QoS Aggregate Rate Limit |
| Type | generic.TruthValue |

Ingress Meter Burst**Table 3-5449 Ingress Meter Burst**

| Name | Value |
|----------------|-------------------------------|
| Default | yes:-1 |
| Displayed name | Ingress Meter Burst |
| Maximum | 2146959 |
| Minimum | -1 |
| OSS name | sapIngressAggregateMeterBurst |
| Read-only | no |
| Tab Panel | QoS Aggregate Rate Limit |
| Type | INT |

Ingress Meter Rate**Table 3-5450 Ingress Meter Rate**

| Name | Value |
|----------------|------------------------------|
| Default | yes:0 |
| Displayed name | Ingress Meter Rate |
| Maximum | 20000000 |
| Minimum | -1 |
| OSS name | sapIngressAggregateMeterRate |
| Read-only | no |
| Tab Panel | QoS Aggregate Rate Limit |
| Type | INT |
| Units | kbps |

Ingress Policy**Table 3-5451 Ingress Policy**

| Name | Value |
|----------------|--|
| Default | yes:Access Ingress:1 |
| Description | Specifies the SAP-Ingress QoS for the SAP. For L3 when changing the port the SAP will retain the originalSAP-Ingress QoS selected unless explicitly changed. |
| Displayed name | Ingress Policy |
| OSS name | ingressPolicyObjectPointer |
| Read-only | no |
| Tab Panel | QoS General |
| Type | POINTER |

Ingress Queue Group Template Policy**Table 3-5452 Ingress Queue Group Template Policy**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Specifies the forwarding-plane queue group instance for this SAP. For L3 when changing the port the SAP will retain the original forwarding-plane queue group instance selected unless explicitly changed. |
| Displayed name | Ingress Queue Group Template Policy |
| OSS name | ingressQueueGroupName |

Table 3-5452 Ingress Queue Group Template Policy (continued)

| Name | Value |
|-------------|---------------------------------------|
| Read-only | no |
| Tab Panel | QoS General Forwarding Plane Redirect |
| Type | STRING |

Ingress Scheduler

Table 3-5453 Ingress Scheduler

| Name | Value |
|----------------|-------------------------------|
| Default | yes: |
| Displayed name | Ingress Scheduler |
| OSS name | ingressSchedulerObjectPointer |
| Read-only | no |
| Tab Panel | Schedulers Ingress Scheduler |
| Type | POINTER |

Inner Encapsulation Value

Table 3-5454 Inner Encapsulation Value

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Provisioned inner encap value. This value is propagated into: terminatedPortInnerEncapValue. |
| Displayed name | Inner Encapsulation Value |
| Maximum | 65535 |
| Minimum | 0 |
| OSS name | innerEncapValue |
| Read-only | no |
| Tab Panel | Port General |
| Type | INT |

Instance ID
Table 3-5455 Instance ID

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Specifies the instance id of the forwarding-plane queue group instance for this SAP. For L3 when changing the port the SAP will retain the original instance id selected unless explicitly changed. |
| Displayed name | Instance ID |
| Maximum | 65535 |
| Minimum | 0 |
| OSS name | ingressInstanceId |
| Read-only | no |
| Tab Panel | QoS General Forwarding Plane Redirect |
| Type | LONG |

IPv6 Egress Filter**Table 3-5456 IPv6 Egress Filter**

| Name | Value |
|----------------|-------------------------|
| Default | yes: |
| Displayed name | IPv6 Egress Filter |
| OSS name | egressIpv6FilterPointer |
| Read-only | no |
| Tab Panel | ACL IPv6 Filter |
| Type | POINTER |

IPv6 Ingress Filter**Table 3-5457 IPv6 Ingress Filter**

| Name | Value |
|----------------|--------------------------|
| Default | yes: |
| Displayed name | IPv6 Ingress Filter |
| OSS name | ingressIpv6FilterPointer |
| Read-only | no |
| Tab Panel | ACL IPv6 Filter |

Table 3-5457 IPv6 Ingress Filter (continued)

| Name | Value |
|------|---------|
| Type | POINTER |

ISA-AA Group ID**Table 3-5458 ISA-AA Group ID**

| Name | Value |
|----------------|---|
| Default | yes:1 |
| Description | Specifies the groupId of the application profile corresponding to aaApplicationProfile. |
| Displayed name | ISA-AA Group ID |
| OSS name | aaGrpId |
| Read-only | no |
| Tab Panel | Application Assurance.General General |
| Type | INT |

ISA-AA Partition ID**Table 3-5459 ISA-AA Partition ID**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Specifies the partitionId of the application profile corresponding to aaApplicationProfile. |
| Displayed name | ISA-AA Partition ID |
| OSS name | aaPartId |
| Read-only | no |
| Tab Panel | Application Assurance.General General |
| Type | INT |

L2 Protocol Termination**Table 3-5460 L2 Protocol Termination**

| Name | Value |
|-------------|--|
| Default | yes:disabled |
| Description | The value specifies whether received L2 Protocol Tunnel PDUs are terminated on this L2 Access Interface. |

Table 3-5460 L2 Protocol Termination (continued)

| Name | Value |
|--------------------------|---|
| Displayed name | L2 Protocol Termination |
| OSS name | l2ptTermination |
| Read-only | no |
| Tab Panel | Forwarding Control.BPDU Termination General |
| Type | L2PtTermination |
| Enumerated types: | |
| Disabled | |
| Enabled | |

L2PT Protocol**Table 3-5461 L2PT Protocol**

| Name | Value |
|--------------------------|--|
| Default | yes:stp |
| Description | The L2ptProtocols indicates which L2 protocols should have their tunnels terminated when 'L2ptTermination' is enabled. |
| Displayed name | L2PT Protocol |
| OSS name | l2ptProtocol |
| Read-only | no |
| Tab Panel | Forwarding Control.BPDU Termination L2PtProtocol1 |
| Type | L2PtProtocol |
| Enumerated types: | |
| cdp | |
| dtp | |
| pagp | |
| stp | |
| udld | |
| vtp | |

LAG Link Map Profile

Table 3-5462 LAG Link Map Profile

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Pointer to the LAG Link Mapping Profile |
| Displayed name | LAG Link Map Profile |
| OSS name | lagLinkMapProfilePointer |
| Read-only | no |
| Tab Panel | Port General |
| Type | POINTER |

Leaf Access

Table 3-5463 Leaf Access

| Name | Value |
|-----------------------|--|
| Default | yes:false |
| Description | Specifies whether or not this SAP is an e-tree leaf access circuit |
| Displayed name | Leaf Access |
| Mandatory on creation | yes |
| OSS name | etreeLeafAccess |
| Read-only | no |
| Tab Panel | General Etree |
| Type | BOOL |

Leaf Tag

Table 3-5464 Leaf Tag

| Name | Value |
|-----------------------|---|
| Default | yes:0 |
| Description | Specifies the VLAN tag to be used for e-tree leaf traffic |
| Displayed name | Leaf Tag |
| Mandatory on creation | yes |
| Maximum | 4094 |
| Minimum | 0 |
| OSS name | etreeLeafTag |

Table 3-5464 Leaf Tag (continued)

| Name | Value |
|-------------|---------------|
| Read-only | no |
| Tab Panel | General Etree |
| Type | INT |

Lightweight SAP**Table 3-5465 Lightweight SAP**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | A SAP is considered Lightweight if it is associated to a SHG Site that is Residential : - <code>tlsShgResidential</code> indicates whether or not the split-horizon-group is residential. In a Residential Split Horizon Group (RSHG) there is no downstream broadcast, and all saps in the group will share the default ingress queue. The value can be specified during row-creation, cannot be changed later on. |
| Displayed name | Lightweight SAP |
| OSS name | lightweightSap |
| Read-only | no |
| Tab Panel | General Split Horizon Group |
| Type | BOOL |

Limit Unused Bandwidth**Table 3-5466 Limit Unused Bandwidth**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether to limit the unused bandwidth and allow a tighter control in allocation of bandwidth by HQos. |
| Displayed name | Limit Unused Bandwidth |
| OSS name | egressAggRateLUB |
| Read-only | no |
| Tab Panel | Schedulers Egress Aggregate Rate Limit |
| Type | BOOL |

LLF Enabled**Table 3-5467 LLF Enabled**

| Name | Value |
|----------------|---|
| Default | yes:Disabled |
| Description | Is Link Loss Forwarding enabled on this sap. It only applies to 1830 VPLS services. |
| Displayed name | LLF Enabled |
| OSS name | llfEnabled |
| Read-only | no |
| Tab Panel | Port Link Loss Forwarding |
| Type | INT |

LLF ID**Table 3-5468 LLF ID**

| Name | Value |
|----------------|---------------------------------------|
| Default | yes:0 |
| Description | Setting the LLF ID to 0 disables LLF. |
| Displayed name | LLF ID |
| Maximum | 5 |
| Minimum | 0 |
| OSS name | llfId |
| Read-only | no |
| Tab Panel | Port Link Loss Forwarding |
| Type | INT |

LLF Status**Table 3-5469 LLF Status**

| Name | Value |
|----------------|---|
| Default | yes:Clear |
| Description | Link Loss Forward state. It only applies to 1830 VPLS services (See name binding behavior items). |
| Displayed name | LLF Status |
| OSS name | llfState |
| Read-only | no |

Table 3-5469 LLF Status (continued)

| Name | Value |
|-------------|---------------------------|
| Tab Panel | Port Link Loss Forwarding |
| Type | INT |

MAC Monitoring**Table 3-5470 MAC Monitoring**

| Name | Value |
|----------------|------------------|
| Default | yes:false |
| Displayed name | MAC Monitoring |
| OSS name | macMonitoring |
| Read-only | no |
| Tab Panel | Security General |
| Type | BOOL |

MAC-Swap-Enable**Table 3-5471 MAC-Swap-Enable**

| Name | Value |
|----------------|-----------------|
| Default | yes:false |
| Displayed name | MAC-Swap-Enable |
| OSS name | macSwapEnable |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Manual Switch Backup State**Table 3-5472 Manual Switch Backup State**

| Name | Value |
|----------------|---|
| Default | yes:none |
| Description | Indicates the redundant state of this L2 Access Interface for manual switching. |
| Displayed name | Manual Switch Backup State |
| OSS name | redundantSwitchState |

Table 3-5472 Manual Switch Backup State (continued)

| Name | Value |
|-------------|-------------------------|
| Read-only | yes |
| Tab Panel | Port Port Redundancy |
| Type | ManualSwitchBackupState |

MAX**Table 3-5473 MAX**

| Name | Value |
|----------------|---|
| Displayed name | MAX |
| OSS name | valueManager:sapEgressAggregateShaperRate |
| Read-only | no |
| Tab Panel | QoS Aggregate Rate Limit |

MAX**Table 3-5474 MAX**

| Name | Value |
|----------------|---|
| Displayed name | MAX |

| Read-only | no |
| Tab Panel | QoS Aggregate Rate Limit |

MAX**Table 3-5475 MAX**

| Name | Value |
|----------------|---|
| Displayed name | MAX |
| OSS name | valueManager:sapIngressAggregateShaperRatePIR |
| Read-only | no |
| Tab Panel | QoS Aggregate Rate Limit |

MAX**Table 3-5476 MAX**

| Name | Value |
|----------------|--|
| Displayed name | MAX |
| OSS name | valueManager:sapIngressAggregateShaperRate |
| Read-only | no |
| Tab Panel | QoS Aggregate Rate Limit |

Maximum Frame Size Mismatch**Table 3-5477 Maximum Frame Size Mismatch**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | The value is set to 'true' when the provisioned MTU value is greater than the actual MTU value (provisionedMtu > actualMtu). |
| Displayed name | Maximum Frame Size Mismatch |
| OSS name | mtuMismatch |
| Read-only | yes |
| Tab Panel | Port General |
| Type | BOOL |

MC Ring Node**Table 3-5478 MC Ring Node**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Specifies the unique name of a multi-chassis ring access node. |
| Displayed name | MC Ring Node |
| Maximum | 32 |
| Minimum | 0 |
| OSS name | ringNodeName |
| Read-only | no |
| Tab Panel | General McRedundancy |
| Type | STRING |

MC-LAG Hold Time
Table 3-5479 MC-LAG Hold Time

| Name | Value |
|----------------|---|
| Description | "The value of mcLagPropHoldTimeRemain indicates the remaining time, in seconds, until MEPs on this SAP will react to a Multi-Chassis LAG protocol or port change. The value zero (0) indicates there are no pending events, or the SAP is not a MC-LAG SAP. This object corresponds to the global configuration timer: TIMETRA-IEEE8021-CFM-MIB::tmnxDot1agCfmMcLagPropHoldTime." |
| Displayed name | MC-LAG Hold Time |
| OSS name | mcLagPropHoldTimeRemain |
| Read-only | no |
| Tab Panel | OAM.ETH-CFM Facility MEPs |
| Type | LONG |

MIP**Table 3-5480 MIP**

| Name | Value |

Name**Table 3-5482 Name**

| Name | Value |
|-----------------------|-----------------|
| Default | yes: |
| Displayed name | Name |
| Mandatory on creation | yes |
| Maximum | 40 |
| Minimum | 0 |
| OSS name | displayName |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

NE DDoS Protection Policy**Table 3-5483 NE DDoS Protection Policy**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Pointer specifies the DDoS Protection Policy that's applicable to this interface. |
| Displayed name | NE DDoS Protection Policy |
| OSS name | dCpuProtectionPolicyPointer |
| Read-only | no |
| Tab Panel | Security General |
| Type | POINTER |

NE DoS Protection
Table 3-5484 NE DoS Protection

| Name | Value |
|----------------|--|
| Default | yes:NE DoS Protection:254 |
| Description | Pointer specifies the DoS Protection Policy that's applicable to this interface. |
| Displayed name | NE DoS Protection |
| OSS name | dosProtection |
| Read-only | no |
| Tab Panel | Security General |
| Type | POINTER |

Operational State**Table 3-5485 Operational State**

| Name | Value |
|----------------|-------------------|
| Default | yes:unknown |
| Displayed name | Operational State |
| OSS name | operationalState |
| Read-only | yes |
| Tab Panel | General General |
| Type | OperationalState |

OSS Meta Data**Table 3-5486 OSS Meta Data**

| Name | Value |
|----------------|-----------------------|
| Default | yes: |
| Displayed name | OSS Meta Data |
| Maximum | 300 |
| Minimum | 0 |
| OSS name | ossMetaData |
| Read-only | no |
| Tab Panel | OSS Meta Data General |
| Type | STRING |

Outer Encapsulation Value
Table 3-5487 Outer Encapsulation Value

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Provisioned outer encap value. This value is propagated into: terminatedPortOuterEncapValue. |
| Displayed name | Outer Encapsulation Value |
| Maximum | 4095 |
| Minimum | 0 |
| OSS name | outerEncapValue |
| Read-only | no |
| Tab Panel | Port General |
| Type | INT |

Override**Table 3-5488 Override**

| Name | Value |
|----------------|--|
| Displayed name | Override |
| OSS name | valueManager:hsmdaEgrQosPackByteOffOvr |
| Read-only | no |
| Tab Panel | QoS Egress HSMDA Override |

Packet Byte Offset (bytes)**Table 3-5489 Packet Byte Offset (bytes)**

| Name | Value |
|----------------|--|
| Default | yes:-128 |
| Description | Specifies the Packet Byte Offset of an hsmda egress policy for this service. The value -128 means that there is no override. |
| Displayed name | Packet Byte Offset (bytes) |
| Maximum | 31 |
| Minimum | -128 |
| OSS name | hsmdaEgrQosPackByteOffOvr |
| Read-only | no |

Table 3-5489 Packet Byte Offset (bytes) (continued)

| Name | Value |

| Default | yes:0 |
| Displayed name | Priority |
| Maximum | 7 |
| Minimum | 0 |
| OSS name | priority |
| Read-only | no |
| Tab Panel | Port General |
| Type | INT |

Process CPM Traffic on LAG SAP Down
Table 3-5498 Process CPM Traffic on LAG SAP Down

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | When enabled, a simple LAG SAP will not be removed from the forwarding plane and flooded traffic (unknown unicast, broadcast and multicast) will be dropped on egress rather than ingress. This allows control traffic to be extracted on egress and where applicable processed by the CPM. The value of <code>tmnxSapTlsExProcCpmTrfcSapDn</code> will not prevent a VPLS service from entering an Operational Down state if it is the last active connection to enter a non-operational state. By default, without this value, when a LAG enters a non-operational state it is removed from the forwarding plane and traffic is dropped on ingress. |
| Displayed name | Process CPM Traffic on LAG SAP Down |
| OSS name | <code>processCpmTrafficOnLagSapDown</code> |
| Read-only | no |
| Tab Panel | General SAP Down behavior |
| Type | BOOL |

Provisioned Maximum Frame Size**Table 3-5499 Provisioned Maximum Frame Size**

| Name | Value |
|----------------|--------------------------------|
| Default | yes:1500 |
| Displayed name | Provisioned Maximum Frame Size |
| OSS name | <code>provisionedMtu</code> |
| Read-only | yes |
| Tab Panel | Port General |
| Type | INT |
| Units | bytes |

Role**Table 3-5500 Role**

| Name | Value |
|----------------|--|
| Default | yes:hub |
| Description | Specifies if Test Suite Generation should use this MEP as a Hub or Spoke (Hubs target Hubs and Spokes, Spoke can only target Hubs) |
| Displayed name | Role |

Table 3-5500 Role (continued)

| Name | Value |

| Type | ethernetoam.MepRole |

Root Leaf Tag**Table 3-5501 Root Leaf Tag**

| Name | Value |
|-----------------------|---|
| Default | yes:false |
| Description | Specifies whether or not this SAP is e-tree tagging, with the first VLAN tag in the SAP identifier being the VLAN tag for e-tree root traffic |
| Displayed name | Root Leaf Tag |
| Mandatory on creation | yes |
| OSS name | etreeRootLeafTag |
| Read-only | no |
| Tab Panel | General Etree |
| Type | BOOL |

SAP Sub Type**Table 3-5502 SAP Sub Type**

| Name | Value |
|-----------------------|---|
| Default | yes:regular |
| Description | Indicates the sub-type for this Access Interface. |
| Displayed name | SAP Sub Type |
| Mandatory on creation | yes |
| OSS name | sapSubType |
| Read-only | no |
| Tab Panel | General SAP Sub Type |
| Type | service.SapSubType |

SAP TCA Profile
Table 3-5503 SAP TCA Profile

| Name | Value |
|----------------|----------------------------|
| Default | yes: |
| Displayed name | SAP TCA Profile |
| OSS name | cardStatsTCAProfilePointer |
| Read-only | no |
| Tab Panel | General Performance |
| Type | POINTER |

SAS Egress Policy**Table 3-5504 SAS Egress Policy**

| Name | Value |
|----------------|------------------------------|
| Default | yes:sasAccessEgress:1 |
| Displayed name | SAS Egress Policy |
| OSS name | sasEgressPolicyObjectPointer |
| Read-only | no |
| Tab Panel | QoS 7210 Specific |
| Type | POINTER |

SAS Ingress Policy**Table 3-5505 SAS Ingress Policy**

| Name | Value |
|----------------|-------------------------------|
| Default | yes:sasAccessIngress:1 |
| Displayed name | SAS Ingress Policy |
| OSS name | sasIngressPolicyObjectPointer |
| Read-only | no |
| Tab Panel | QoS 7210 Specific |
| Type | POINTER |

Scheduler Mode
Table 3-5506 Scheduler Mode

| Name | Value |
|----------------|--|
| Default | yes:fourPriority |
| Description | Specifies the mode that the egress scheduler is provisioned for this SAP to operate in. All MDAs can support four-priority mode, but not all MDAs can support sixteen-priority mode. |
| Displayed name | Scheduler Mode |
| OSS name | egressSchedulerMode |
| Read-only | no |
| Tab Panel | Schedulers Egress Scheduler |
| Type | SchedulerMode |

Scheduler Mode**Table 3-5507 Scheduler Mode**

| Name | Value |
|----------------|---|
| Default | yes:fourPriority |
| Description | Specifies the mode that the ingress scheduler is provisioned for this SAP to operate in. All MDAs can support four-priority mode, but not all MDAs can support sixteen-priority mode. |
| Displayed name | Scheduler Mode |
| OSS name | ingressSchedulerMode |
| Read-only | no |
| Tab Panel | Schedulers Ingress Scheduler |
| Type | SchedulerMode |

Service Description**Table 3-5508 Service Description**

| Name | Value |
|----------------|---------------------|
| Default | yes: |
| Displayed name | Service Description |
| Maximum | 80 |
| Minimum | 0 |
| OSS name | serviceDescription |
| Read-only | yes |

Table 3-5508 Service Description (continued)

| Name | Value |
|-------------|-----------------|
| Tab Panel | General Service |
| Type | STRING |

Service ID**Table 3-5509 Service ID**

| Name | Value |
|----------------|-----------------|
| Default | yes:0 |
| Displayed name | Service ID |
| OSS name | serviceId |
| Read-only | yes |
| Tab Panel | General Service |
| Type | LONG |

Service Name**Table 3-5510 Service Name**

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Service Name |
| Maximum | 64 |
| Minimum | 0 |
| OSS name | serviceName |
| Read-only | yes |
| Tab Panel | General Service |
| Type | STRING |

Service Type**Table 3-5511 Service Type**

| Name | Value |
|----------------|--------------|
| Default | yes:unknown |
| Displayed name | Service Type |

Table 3-5511 Service Type (continued)

| Name | Value |
|-------------|---------------------|
| OSS name | serviceType |
| Read-only | yes |
| Tab Panel | General General |
| Type | service.ServiceType |

SHCV Action**Table 3-5512 SHCV Action**

| Name | Value |
|----------------|--|
| Default | yes:alarm |
| Description | Specifies the action to be taken for hosts on this interface whose host connectivity checking fails. "Alarm" will raise an alarm indicating that a host is disconnected on this SAP. "Remove" will raise an alarm and remove the DHCP state and release allocated resources. |
| Displayed name | SHCV Action |
| OSS name | shcvAction |
| Read-only | no |
| Tab Panel | Host Connectivity SHCV |
| Type | service.ShcvAction |

SHCV Interval**Table 3-5513 SHCV Interval**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | The default value depends whether the NE supports SHCV: if NE supports SHCV the default value is 10 minutes, otherwise is 0. The interval specifies the time, in minutes, within which hosts on a SAP should be verified. The interval starts for each host individually, when it is created. Dynamic and static hosts are treated in the same way. The actual rate depends on the number of known hosts and the interval. Interval value '0' means SHCV is administratively disabled. |
| Displayed name | SHCV Interval |
| Maximum | 6000 |
| Minimum | 0 |
| OSS name | shcvInterval |
| Read-only | no |
| Tab Panel | Host Connectivity SHCV |

Table 3-5513 SHCV Interval (continued)

| Name | Value |
|-------|---------|
| Type | INT |
| Units | minutes |

SHCV Retry Count**Table 3-5514 SHCV Retry Count**

| Name | Value |
|----------------|--|
| Default | yes:2 |
| Description | Specifies the number of connectivity check retransmissions. Setting the value to (n) specifies that, for any given host, at most (n+1) probes are done each interval, and (n+1) missed replies are considered as a connectivity failure. |
| Displayed name | SHCV Retry Count |
| Maximum | 29 |
| Minimum | 2 |
| OSS name | shcvRetryCount |
| Read-only | no |
| Tab Panel | Host Connectivity SHCV |
| Type | INT |

SHCV Retry Timeout**Table 3-5515 SHCV Retry Timeout**

| Name | Value |
|----------------|--|
| Default | yes:10 |
| Description | Specifies the timeout in seconds before a connectivity check retransmission. |
| Displayed name | SHCV Retry Timeout |
| Maximum | 60 |
| Minimum | 10 |
| OSS name | shcvRetryTimeout |
| Read-only | no |
| Tab Panel | Host Connectivity SHCV |
| Type | INT |
| Units | seconds |

SHCV Source IP Address

Table 3-5516 SHCV Source IP Address

| Name | Value |
|----------------|---|
| Default | yes:0.0.0.0 |
| Description | The IP address to be used as the source for the UC ARP packets. A source IP address of 0.0.0.0 is valid and will prevent the host installing the ARP entry. |
| Displayed name | SHCV Source IP Address |
| OSS name | shcvSourceIpAddress |
| Read-only | no |
| Tab Panel | Host Connectivity SHCV |
| Type | INETADDR |

SHCV Source MAC Address

Table 3-5517 SHCV Source MAC Address

| Name | Value |
|----------------|--|
| Default | yes:00-00-00-00-00-00 |
| Description | The MAC address to be used as the source for the UC ARP packets. If an all 0 MAC address is specified, the 7x50 will use the MAC address for the CPM known in the context of the VPLS service. |
| Displayed name | SHCV Source MAC Address |
| OSS name | shcvSourceMacAddress |
| Read-only | no |
| Tab Panel | Host Connectivity SHCV |
| Type | MACADDR |

Site ID

Table 3-5518 Site ID

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Site ID |
| Maximum | 50 |
| OSS name | nodeId |
| Read-only | yes |
| Tab Panel | General General |

Table 3-5518 Site ID (continued)

| Name | Value |
|------|--------|
| Type | STRING |

Site ID**Table 3-5519 Site ID**

| Name | Value |
|----------------|--------------|
| Default | yes: |
| Displayed name | Site ID |
| Maximum | 50 |
| OSS name | nodeId |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

Site Name**Table 3-5520 Site Name**

| Name | Value |
|----------------|--------------|
| Default | yes: |
| Displayed name | Site Name |
| Maximum | 252 |
| OSS name | nodeName |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

Split Horizon Group Name**Table 3-5521 Split Horizon Group Name**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Pointer to the Split Horizon Group Site. |
| Displayed name | Split Horizon Group Name |

Table 3-5521 Split Horizon Group Name (continued)

| Name | Value |
|-------------|-----------------------------|
| OSS name | shgSitePointer |
| Read-only | no |
| Tab Panel | General Split Horizon Group |
| Type | POINTER |

Squelch Ingress Level**Table 3-5522 Squelch Ingress Level**

| Name | Value |
|----------------|---|
| Default | yes:none |
| Description | Specifies the ETH-CFM level or levels that are silently discarded on ingress to the SAP. Any received ETH-CFM PDU matching a level that has been set will be dropped without regard for any other ETH-CFM criteria. |
| Displayed name | Squelch Ingress Level |
| OSS name | squelchIngressLevel |
| Read-only | no |
| Tab Panel | OAM.ETH-CFM Squelch Ingress Level |
| Type | ethernetoam.SquelchIngressLevelType |

State Cause**Table 3-5523 State Cause**

| Name | Value |
|----------------|---|
| Description | Specifies all the conditions that affect the operating status of this access interface. |
| Displayed name | State Cause |
| OSS name | operationalFlags |
| Read-only | yes |
| Tab Panel | General General |
| Type | service.SapOperFlags |

State Qualifier
Table 3-5524 State Qualifier

| Name | Value |
|----------------|---|
| Default | yes:OK |
| Description | This value is derived from underlyingResourceState and/or resourceState attributes. If the underlyingResourceState is not 'OK' and is not 'unspecified' the value of compositeState will be set to the same value as underlyingResourceState. Otherwise the value of compositeState will be set to the same value as resourceState. |
| Displayed name | State Qualifier |
| OSS name | compositeState |
| Read-only | yes |
| Tab Panel | General General |
| Type | ResourceCompositeState |

Subscriber Authentication Policy**Table 3-5525 Subscriber Authentication Policy**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Defines which subscriber authentication policy must be applied when a DHCP msg is received on the interface. The authentication policies must be previously defined. The policy will only be applied when DHCP snooping is enabled. |
| Displayed name | Subscriber Authentication Policy |
| OSS name | subscrAuthPolicyPointer |
| Read-only | no |
| Tab Panel | General Subscriber Authentication Policy |
| Type | POINTER |

SVC Mgr Service ID**Table 3-5526 SVC Mgr Service ID**

| Name | Value |
|----------------|--------------------|
| Default | yes:0 |
| Displayed name | SVC Mgr Service ID |
| OSS name | svcComponentId |
| Read-only | yes |
| Tab Panel | General Service |

Table 3-5526 SVC Mgr Service ID (continued)

| Name | Value |
|------|-------|
| Type | LONG |

Terminated Port Class Name**Table 3-5527 Terminated Port Class Name**

| Name | Value |
|----------------|----------------------------|
| Default | yes: |
| Displayed name | Terminated Port Class Name |
| Maximum | 252 |
| OSS name | terminatedPortClassName |
| Read-only | yes |
| Tab Panel | Port General |
| Type | STRING |

Terminating Port**Table 3-5528 Terminating Port**

| Name | Value |
|----------------|------------------|
| Default | yes: |
| Displayed name | Terminating Port |
| Maximum | 252 |
| OSS name | portPointer |
| Read-only | no |
| Tab Panel | Port General |
| Type | STRING |

Time of Day Suite**Table 3-5529 Time of Day Suite**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Pointer to the instance of the ToD Suite object. |
| Displayed name | Time of Day Suite |

Table 3-5529 Time of Day Suite (continued)

| Name | Value |
|-------------|-------------------|
| OSS name | todSuitePointer |
| Read-only | no |
| Tab Panel | TOD Suite General |
| Type | POINTER |

Transit Prefix Policy**Table 3-5530 Transit Prefix Policy**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Specifies a pointer to the transit prefix policy to be associated with this SAP. The value must either be "" indicating an invalid transit prefix policy or the specified transit prefix policy needs to exist |
| Displayed name | Transit Prefix Policy |
| OSS name | transitPrefixPolicyPointer |
| Read-only | no |
| Tab Panel | Application Assurance.General General |
| Type | POINTER |

Transit SAP**Table 3-5531 Transit SAP**

| Name | Value |
|-----------------------|--------------|
| Default | yes:false |
| Displayed name | Transit SAP |
| Mandatory on creation | yes |
| OSS name | transitSap |
| Read-only | no |
| Tab Panel | Port General |
| Type | BOOL |

Translation**Table 3-5532 Translation**

| Name | Value |
|----------------|---|
| Default | yes:None |
| Description | Specifies the desired Ingress Vlan Translation. It only applies to EPIPE service. |
| Displayed name | Translation |
| OSS name | vlanTranslation |
| Read-only | no |
| Tab Panel | Port VLAN Translation |
| Type | INT |

Translation ID**Table 3-5533 Translation ID**

| Name | Value |
|----------------|--|
| Default | yes:-1 |
| Description | Specifies the VLAN id to be used to overwrite the preserved VLAN id in the packet. It only applies to EPIPE service. |
| Displayed name | Translation ID |
| Maximum | 4094 |
| Minimum | -1 |
| OSS name | vlanTranslationId |
| Read-only | no |
| Tab Panel | Port VLAN Translation |
| Type | LONG |

Trust Mode**Table 3-5534 Trust Mode**

| Name | Value |
|----------------|--------------|
| Default | yes:true |
| Displayed name | Trust Mode |
| OSS name | trustMode |
| Read-only | no |
| Tab Panel | Port General |

Table 3-5534 Trust Mode (continued)

| Name | Value |
|------|-------|
| Type | BOOL |

Tunnel Fault Notification

Table 3-5535 Tunnel Fault Notification

| Name | Value |
|----------------|--|
| Default | yes:accept |
| Description | The value of tunnelFaultNotification specifies whether the SAP will 'accept' CFM fault notifications from a Tunnel MEP and process the notifications (i.e. do fault handling and/or fault propagation), or 'ignore' the notification. Both TIMETRA-SERV-MIB::svcEthCfmTunnelFaultNotification and this object MUST be set to 'accept' for the SAP to process the notification. The value 'notApplicable' is used by the system to represent a SAP which supports ETH-CFM, but not this object. |
| Displayed name | Tunnel Fault Notification |
| OSS name | tunnelFaultNotification |
| Read-only | no |
| Tab Panel | OAM.ETH-CFM Facility MEPs |
| Type | service.TunnelFaultNotificationType |

Underlying Port State

Table 3-5536 Underlying Port State

| Name | Value |
|----------------|---|
| Default | yes:noAssociation |
| Description | State of the underlying resource. (An underlying resource is for example a netw.ConnectionTerminationPoint) |
| Displayed name | Underlying Port State |
| OSS name | underlyingResourceState |
| Read-only | yes |
| Tab Panel | Port General |
| Type | UnderlyingResourceState |

Use as Test Source
Table 3-5537 Use as Test Source

| Name | Value |
|----------------|---|
| Default | yes:true |
| Description | Specifies if Test Suite Generation should use this MEP as a CFM test source (Originating MEP in test) |
| Displayed name | Use as Test Source |
| OSS name | testSource |
| Read-only | no |
| Tab Panel | OAM.Configuration testOptions |
| Type | BOOL |

Use as Test Target**Table 3-5538 Use as Test Target**

| Name | Value |
|----------------|--|
| Default | yes:true |
| Description | Specifies if Test Suite Generation should use this MEP as a CFM test target (Target Mac Address in test) |
| Displayed name | Use as Test Target |
| OSS name | testTarget |
| Read-only | no |
| Tab Panel | OAM.Configuration testOptions |
| Type | BOOL |

Use Multipoint Shared Queue**Table 3-5539 Use Multipoint Shared Queue**

| Name | Value |
|----------------|-----------------------------|
| Default | yes:false |
| Displayed name | Use Multipoint Shared Queue |
| OSS name | usesMultipointShared |
| Read-only | no |
| Tab Panel | QoS Shared Queue |
| Type | generic.TruthValue |

Use Shared Queue

Table 3-5540 Use Shared Queue

| Name | Value |
|----------------|------------------|
| Default | yes:false |
| Displayed name | Use Shared Queue |
| OSS name | sharedQueueOn |
| Read-only | no |
| Tab Panel | QoS Shared Queue |
| Type | BOOL |

VLAN Range SAP

Table 3-5541 VLAN Range SAP

| Name | Value |
|-----------------------|---|
| Default | yes:false |
| Description | Specifies, when enabled, that the configured SAP is a VLAN Range SAP. |
| Displayed name | VLAN Range SAP |
| Mandatory on creation | yes |
| OSS name | vlanRangeSap |
| Read-only | no |
| Tab Panel | Port General |
| Type | BOOL |

WRR Policy

Table 3-5542 WRR Policy

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | HSMDA WRR Policy is the Weighted Round Robin (WRR) policy |
| Displayed name | WRR Policy |
| OSS name | hsmdaEgrQosWrrPleyOvrd |
| Read-only | no |
| Tab Panel | QoS Egress HSMDA Override |
| Type | POINTER |

Data Delay Interval**Table 3-5557 Data Delay Interval**

| Name | Value |
|----------------|---|
| Default | yes:15 |
| Description | Specifies the data delay interval associated for the inclusive provider tunnel in this service. |
| Displayed name | Data Delay Interval |
| Maximum | 180 |
| Minimum | 3 |
| OSS name | iPmsiDataDelayInterval |
| Read-only | no |
| Tab Panel | Provider Tunnel Inclusive Provider Tunnel |
| Type | INT |
| Units | seconds |

Default Gateway IP Address**Table 3-5558 Default Gateway IP Address**

| Name | Value |
|---------|-------------|
| Default | yes:0.0.0.0 |

Table 3-5558 Default Gateway IP Address (continued)

| Name | Value |
|----------------|--|
| Description | Specifies the default gateway IP address used in multi-chassis operation associated with this TLS service. |
| Displayed name | Default Gateway IP Address |
| OSS name | defaultGatewayIpAddr |
| Read-only | no |
| Tab Panel | Default Gateway General |
| Type | INETADDR |

Default Gateway MAC Address**Table 3-5559 Default Gateway MAC Address**

| Name | Value |
|----------------|---|
| Default | yes:00-00-00-00-00-00 |
| Description | Specifies the type of default gateway MAC address used in multi-chassis operation associated with this TLS service. |
| Displayed name | Default Gateway MAC Address |
| OSS name | defaultGatewayMacAddr |
| Read-only | no |
| Tab Panel | Default Gateway General |
| Type | MACADDR |

Default Mesh VC ID**Table 3-5560 Default Mesh VC ID**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | The virtual circuit identifier. For VPLS/MVPLS services on 7750/7450/7710-family nodes, it inherits the value of the default Mesh VC ID from the VPLS/MVPLS service component and the value is used for Mesh SDP Bindings. For 7250 nodes, it is the VC ID used for spoke SDP Bindings. |
| Displayed name | Default Mesh VC ID |
| Maximum | 4294967295 |
| Minimum | 0 |
| OSS name | vcId |
| Read-only | no |

Table 3-5560 Default Mesh VC ID (continued)

| Read-only | no |
| Tab Panel | Provider Tunnel General |
| Type | BOOL |

ETree Enabled**Table 3-5571 ETree Enabled**

| Name | Value |
|-----------------------|--|
| Default | yes:false |
| Description | Specifies whether VPLS is ETREE enabled. |
| Displayed name | ETree Enabled |
| Mandatory on creation | yes |
| OSS name | eTreeEnabled |
| Read-only | no |
| Tab Panel | General ETree |
| Type | BOOL |

Formatted VSI ID Prefix
Table 3-5572 Formatted VSI ID Prefix

| Name | Value |
|----------------|--|
| Default | yes:0.0.0.0 |
| Description | The value of the VSI ID Prefix but in an IP format for better readability. |
| Displayed name | Formatted VSI ID Prefix |
| OSS name | vsiIdPrefixIpFormat |
| Read-only | no |
| Tab Panel | BGP.General BGP AD |
| Type | INETADDR |

Global Service VPLS ID**Table 3-5573 Global Service VPLS ID**

| Name | Value |
|----------------|--|
| Default | yes:0:0 |
| Description | The VPLS-ID of this VPLS Instance is BGP-AD is supported. This value will be used to uniquely identify this service. This attribute will could be displayed on the GUI if the use enables BGP-AD at the site level. This step has to be done manually at each instance site level. This value will be taken from the SAM service object. |
| Displayed name | Global Service VPLS ID |
| Maximum | 32 |
| Minimum | 3 |
| OSS name | vplsId |
| Read-only | yes |
| Tab Panel | BGP.General BGP AD Service Identification |

|----------------|------------------------------|
| Default | yes:90 |
| Displayed name | Low Watermark |
| Maximum | 100 |
| Minimum | 0 |
| OSS name | mfibTableLowWatermark |
| Read-only | no |
| Tab Panel | Forwarding Control.MFIB MFIB |
| Type | LONG |
| Units | % |

LSP Name**Table 3-5581 LSP Name**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Indicates the LSP name used for signalling inclusive provider tunnel in this service. |
| Displayed name | LSP Name |
| OSS name | iPmsiLspName |
| Read-only | yes |
| Tab Panel | Provider Tunnel Inclusive Provider Tunnel |
| Type | STRING |

LSP Template**Table 3-5582 LSP Template**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Specifies the name of the LSP template to be used for signalling inclusive provider tunnel in this service. |
| Displayed name | LSP Template |
| OSS name | iPmsiLspTemplatePointer |
| Read-only | no |

Table 3-5582 LSP Template (continued)

| Name | Value |
|-------------|---|
| Tab Panel | Provider Tunnel Inclusive Provider Tunnel |
| Type | POINTER |

MAC Advertisement**Table 3-5583 MAC Advertisement**

| Name | Value |
|----------------|--|
| Default | yes:true |
| Description | Specifies whether all the non BGP EVPN macs will be advertised to BGP or not |
| Displayed name | MAC Advertisement |
| OSS name | bgpEvpnMacAdvertisement |
| Read-only | no |
| Tab Panel | BGP.EVPN bgpEvpn |
| Type | generic.TruthValue |

MAC Duplication Detect Number Of Moves**Table 3-5584 MAC Duplication Detect Number Of Moves**

| Name | Value |
|----------------|--|
| Default | yes:5 |
| Description | Specifies number of moves with in bgpEvpnMacDupDetWindow between evpn and non-evpn destinations above which a MAC is considered duplicate. This can be due to loops, incorrect configuration in the network etc. |
| Displayed name | MAC Duplication Detect Number Of Moves |
| Maximum | 10 |
| Minimum | 3 |
| OSS name | bgpEvpnMacDupDetNumMoves |
| Read-only | no |
| Tab Panel | BGP.EVPN bgpEvpn |
| Type | INT |

MAC Duplication Detect Window
Table 3-5585 MAC Duplication Detect Window

| Name | Value |
|----------------|--|
| Default | yes:3 |
| Description | Specifies the length of the window in minutes. |
| Displayed name | MAC Duplication Detect Window |
| Maximum | 15 |
| Minimum | 1 |
| OSS name | bgpEvpnMacDupDetWindow |
| Read-only | no |
| Tab Panel | BGP.EVPN bgpEvpn |
| Type | INT |
| Units | minutes |

MAC Duplication Retry**Table 3-5586 MAC Duplication Retry**

| Name | Value |
|----------------|--|
| Default | yes:9 |
| Description | Indicates the hold down time in minutes. This value is expected to be equal to or more than two times that of bgpEvpnMacDupDetWindow. If bgpEvpnMacDupDetRetry is set to its default value, this implies that once a duplicate MAC is detected, until a user intervenes or a network event (MAC flush) occurs, updates for that MAC will be held down. In the absence of the above mentioned events, MAC duplication detection will be tried again after bgpEvpnMacDupDetRetry time. This value is expected to be either 0 (= no auto retry) or equal to more than two times that of bgpEvpnMacDupDetWindow. |
| Displayed name | MAC Duplication Retry |
| Maximum | 60 |
| Minimum | 0 |
| OSS name | bgpEvpnMacDupDetRetry |
| Read-only | no |
| Tab Panel | BGP.EVPN bgpEvpn |
| Type | INT |
| Units | minutes |

Max VE ID**Table 3-5587 Max VE ID**

| Name | Value |
|----------------|--|
| Default | yes:65535 |
| Description | Specifies the allowed range for the veId value: locally configured and received in a NLRI. Configuration of a veId higher than the value specified in this command is not allowed. Valid values are from 0 to 65535, 0 means disabled. |
| Displayed name | Max VE ID |
| Maximum | 65535 |
| Minimum | 0 |
| OSS name | maxVeId |
| Read-only | no |
| Tab Panel | BGP.General BGP VPLS |
| Type | INT |

Modified for Throughput Test**Table 3-5588 Modified for Throughput Test**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Indicates whether the service site is modified for the service throughput test. |
| Displayed name | Modified for Throughput Test |
| OSS name | mfThroughputTest |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Monitor Access Interface Operational State**Table 3-5589 Monitor Access Interface Operational State**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Displayed name | Monitor Access Interface Operational State |
| OSS name | monitorAccessInterfaceOper |
| Read-only | no |

| Name | Value |
|-------------|-----------------|
| Tab Panel | General General |
| Type | BOOL |

MTU**Table 3-5590 MTU**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | The maximum transfer unit of this site. |
| Displayed name | MTU |
| Maximum | 9194 |
| Minimum | 0 |
| OSS name | mtu |
| Read-only | no |
| Tab Panel | General General |
| Type | LONG |

Name**Table 3-5591 Name**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Specifies the Name of the Service Site. It cannot be set to only spaces. Setting to "", "N/A", or "n/a" after creation, will clear Site Name from the node and SAM GUI will display "N/A". |
| Displayed name | Name |
| Maximum | 64 |
| Minimum | 0 |
| OSS name | displayName |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Number Of Duplicate MAC addresses
Table 3-5592 Number Of Duplicate MAC addresses

| Name | Value |
|----------------|--|
| Description | Indicates the number of duplicate MAC addresses in BGP-EVPN in a VPLS service context. |
| Displayed name | Number Of Duplicate MAC addresses |
| OSS name | bgpEvpnMacDupDetNumDups |
| Read-only | yes |
| Tab Panel | BGP.EVPN bgpEvpn |
| Type | LONG |

Number of SAPs**Table 3-5593 Number of SAPs**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | The number of access interfaces directly connected to this site. |
| Displayed name | Number of SAPs |
| OSS name | numberOfAccessInterfaces |
| Read-only | yes |
| Tab Panel | General General |
| Type | LONG |

Operational Route Distinguisher**Table 3-5594 Operational Route Distinguisher**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Indicates the route distinguisher value in use by the system for this service. |
| Displayed name | Operational Route Distinguisher |
| OSS name | operationalRD |
| Read-only | yes |
| Tab Panel | BGP.General BGP |
| Type | STRING |

Operational State
Table 3-5595 Operational State

| Name | Value |
|----------------|--|
| Default | yes:unknown |
| Description | The operational status of this service site. |
| Displayed name | Operational State |
| OSS name | operationalState |
| Read-only | yes |
| Tab Panel | General General |
| Type | netw.OperationalState |

Per Service Hashing for LAG Enabled**Table 3-5596 Per Service Hashing for LAG Enabled**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | The value of PerSvcHashing specifies service-level hashing for Ethernet services. |
| Displayed name | Per Service Hashing for LAG Enabled |
| OSS name | perServiceHashing |
| Read-only | no |
| Tab Panel | General Load Balancing |
| Type | BOOL |

Pim Snooping Enabled**Table 3-5597 Pim Snooping Enabled**

| Name | Value |
|----------------|----------------------|
| Default | yes:false |
| Displayed name | Pim Snooping Enabled |
| OSS name | pimSnpgEnabled |
| Read-only | no |
| Tab Panel | General Pim Snooping |
| Type | BOOL |

PPPoE Circuit Id
Table 3-5598 PPPoE Circuit Id

| Name | Value |
|----------------|------------------|
| Default | yes:false |
| Displayed name | PPPoE Circuit Id |
| OSS name | pppoeCircuitId |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Role**Table 3-5599 Role**

| Name | Value |
|----------------|--|
| Default | yes:hub |
| Description | Specifies if Test Suite Generation should use this Site/ Virtual MEP as a Hub or Spoke (Hubs target Hubs and Spokes, Spoke can only target Hubs) |
| Displayed name | Role |
| OSS name | testRole |
| Read-only | no |
| Tab Panel | OAM.Configuration testOptions |
| Type | sas.TestedObjectRole |

Root And Leaf**Table 3-5600 Root And Leaf**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether the node acts as both a root and leaf or only act as a leaf for P2MP LSP. |
| Displayed name | Root And Leaf |
| OSS name | iPmsiRootAndLeaf |
| Read-only | no |
| Tab Panel | Provider Tunnel Inclusive Provider Tunnel |
| Type | BOOL |

Route Distinguisher

Table 3-5601 Route Distinguisher

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | The RD will be signaled in the MPBGP NLRI for L2VPN AFI. It is used for service routing, e.g. BGP Multi-Homing for VPLS and Epipe, BGP AD and BGP VPLS. Values and format (6 bytes, other 2 bytes of type will be automatically generated) [ip-addr:comm-val] or [as-number:ext-comm-val] |
| Displayed name | Route Distinguisher |
| Maximum | 32 |
| Minimum | 3 |
| OSS name | routeDistinguisher |
| Read-only | no |
| Tab Panel | BGP.General BGP |
| Type | STRING |

RVPLS

Table 3-5602 RVPLS

| Name | Value |
|-----------------------|---|
| Default | yes:false |
| Description | This attribute is a property of 7210 SAS M/X/R nodes. |
| Displayed name | RVPLS |
| Mandatory on creation | yes |
| OSS name | rvplsEnabled |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

SAP Type

Table 3-5603 SAP Type

| Name | Value |
|-------------|---|
| Default | yes:nullStar |
| Description | Specifies the type of SAPs which can be configured on the service site. The SAP type determines the encapsulation type (tagging behavior) for packets processed on the SAP. |

Table 3-5603 SAP Type (continued)

| Name | Value |
|--------------------------|-----------------|
| Displayed name | SAP Type |
| Mandatory on creation | yes |
| OSS name | svcSapType |
| Read-only | no |
| Tab Panel | General General |
| Type | SapType |
| Enumerated types: | |
| any | |
| dot1q | |
| dot1q-preserve | |
| dot1q-range | |
| null-star | |

Service ID**Table 3-5604 Service ID**

| Name | Value |
|----------------|-----------------|
| Default | yes:0 |
| Displayed name | Service ID |
| OSS name | serviceId |
| Read-only | yes |
| Tab Panel | General Service |
| Type | LONG |

Service Name**Table 3-5605 Service Name**

| Name | Value |
|----------------|--------------|
| Default | yes: |
| Displayed name | Service Name |
| Maximum | 64 |
| OSS name | serviceName |
| Read-only | yes |

Table 3-5605 Service Name (continued)

| Name | Value |
|-------------|-----------------|
| Tab Panel | General Service |
| Type | STRING |

SHCV Action**Table 3-5606 SHCV Action**

| Name | Value |
|----------------|--|
| Default | yes:alarm |
| Description | Specifies the action to be taken for hosts on this interface whose host connectivity checking fails. "Alarm" will raise an alarm indicating that a host is disconnected on this SAP. "Remove" will raise an alarm and remove the DHCP state and release allocated resources. |
| Displayed name | SHCV Action |
| OSS name | shcvAction |
| Read-only | no |
| Tab Panel | Host Connectivity SHCV |
| Type | service.ShcvAction |

SHCV Interval**Table 3-5607 SHCV Interval**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | The default value depends whether the NE supports SHCV: if NE supports SHCV the default value is 10 minutes, otherwise is 0. The interval specifies the time, in minutes, within which hosts on a SAP should be verified. The interval starts for each host individually, when it is created. Dynamic and static hosts are treated in the same way. The actual rate depends on the number of known hosts and the interval. Interval value '0' means SHCV is administratively disabled. |
| Displayed name | SHCV Interval |
| Maximum | 6000 |
| Minimum | 0 |
| OSS name | shcvInterval |
| Read-only | no |
| Tab Panel | Host Connectivity SHCV |
| Type | INT |
| Units | minutes |

SHCV Retry Count
Table 3-5608 SHCV Retry Count

| Name | Value |
|----------------|--|
| Default | yes:2 |
| Description | Specifies the number of connectivity check retransmissions. Setting the value to (n) specifies that, for any given host, at most (n+1) probes are done each interval, and (n+1) missed replies are considered as a connectivity failure. |
| Displayed name | SHCV Retry Count |
| Maximum | 29 |
| Minimum | 2 |
| OSS name | shcvRetryCount |
| Read-only | no |
| Tab Panel | Host Connectivity SHCV |
| Type | INT |

SHCV Retry Timeout**Table 3-5609 SHCV Retry Timeout**

| Name | Value |
|----------------|--|
| Default | yes:10 |
| Description | Specifies the timeout in seconds before a connectivity check retransmission. |
| Displayed name | SHCV Retry Timeout |
| Maximum | 60 |
| Minimum | 10 |
| OSS name | shcvRetryTimeout |
| Read-only | no |
| Tab Panel | Host Connectivity SHCV |
| Type | INT |
| Units | seconds |

SHCV Source IP Address**Table 3-5610 SHCV Source IP Address**

| Name | Value |
|---------|-------------|
| Default | yes:0.0.0.0 |

Table 3-5610 SHCV Source IP Address (continued)

| Name | Value |
|----------------|---|
| Description | The IP address to be used as the source for the UC ARP packets. A source IP address of 0.0.0.0 is valid and will prevent the host installing the ARP entry. |
| Displayed name | SHCV Source IP Address |
| OSS name | shcvSourceIpAddress |
| Read-only | no |
| Tab Panel | Host Connectivity SHCV |
| Type | INETADDR |

SHCV Source MAC Address**Table 3-5611 SHCV Source MAC Address**

| Name | Value |
|----------------|--|
| Default | yes:00-00-00-00-00-00 |
| Description | The MAC address to be used as the source for the UC ARP packets. If an all 0 MAC address is specified, the 7x50 will use the MAC address for the CPM known in the context of the VPLS service. |
| Displayed name | SHCV Source MAC Address |
| OSS name | shcvSourceMacAddress |
| Read-only | no |
| Tab Panel | Host Connectivity SHCV |
| Type | MACADDR |

SPI Load Balancing**Table 3-5612 SPI Load Balancing**

| Name | Value |
|----------------|--|
| Default | yes:disabled |
| Description | Specifies specifies whether SPI use in hashing is enabled on this service. |
| Displayed name | SPI Load Balancing |
| OSS name | spiLoadBalancing |
| Read-only | no |
| Tab Panel | General Load Balancing |
| Type | generic.EnabledDisabled |

State Cause
Table 3-5613 State Cause

| Name | Value |
|----------------|--|
| Description | Specifies all the conditions that affect the operating status of this service. |
| Displayed name | State Cause |
| OSS name | operationalFlags |
| Read-only | yes |
| Tab Panel | General General |
| Type | SiteOperFlags |

SVC Mgr Service ID**Table 3-5614 SVC Mgr Service ID**

| Name | Value |
|----------------|--------------------|
| Default | yes:0 |
| Displayed name | SVC Mgr Service ID |
| OSS name | svcComponentId |
| Read-only | yes |
| Tab Panel | General Service |
| Type | LONG |

Switch Name**Table 3-5615 Switch Name**

| Name | Value |
|-----------------------|--|
| Default | yes: |
| Description | On 1830 PSS nodes, new cards like 11QPE24 supports E-LAN (VPLS) and later E-Line (VLL); other cards will follow. All of these cards support the SR-OS object model and behave similar to 7210 nodes. This object represents a service object on a given a site and card. This attribute is a pointer to the card model object. |
| Displayed name | Switch Name |
| Mandatory on creation | yes |
| OSS name | ethernetSwitchCardPointer |
| Read-only | no |
| Tab Panel | General Network Element |
| Type | POINTER |

System ID
Table 3-5616 System ID

| Name | Value |

| Type | service.TunnelFaultNotificationType |

Type**Table 3-5619 Type**

| Name | Value |
|--------------------------|---|
| Default | yes:none |
| Description | Specifies the type of protocol supported for the inclusive provider tunnel in this service. |
| Displayed name | Type |
| OSS name | iPmsiType |
| Read-only | no |
| Tab Panel | Provider Tunnel Inclusive Provider Tunnel |
| Type | IPmsiTypeOption |
| Enumerated types: | |
| | mLDP |
| | None |
| | RSVP |

Unknown MAC Route**Table 3-5620 Unknown MAC Route**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies whether the default mac will be advertised to BGP or not. When the value of bgpEvpnMacAdvDefaultRoute is true, only the Default-mac is advertised. |
| Displayed name | Unknown MAC Route |
| OSS name | bgpEvpnMacAdvDefaultRoute |
| Read-only | no |
| Tab Panel | BGP.EVPN bgpEvpn |
| Type | generic.TruthValue |

Use as Test Source
Table 3-5621 Use as Test Source

| Name | Value |
|----------------|---|
| Default | yes:true |
| Description | Specifies if Test Suite Generation should use this Site/Virtual MEP as a test source (Originating Site/MEP in test) |
| Displayed name | Use as Test Source |
| OSS name | testSource |
| Read-only | no |
| Tab Panel | OAM.Configuration testOptions |
| Type | BOOL |

Use as Test Target**Table 3-5622 Use as Test Target**

| Name | Value |
|----------------|--|
| Default | yes:true |
| Description | Specifies if Test Suite Generation should use this Site/Virtual MEP as a test target (Target Site/MEP in test) |
| Displayed name | Use as Test Target |
| OSS name | testTarget |
| Read-only | no |
| Tab Panel | OAM.Configuration testOptions |
| Type | BOOL |

VE ID**Table 3-5623 VE ID**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Specifies the VE ID value for this BGP VPLS site. The VE ID is advertised by BGP update message as part of NLRI and used to calculate the pseudowire label to other VPLS members. It should be unique within a VPLS, except for multi-home scenario. For more information, please refer to RFC4761. Valid values are from 0 to 65535, 0 means disabled. |
| Displayed name | VE ID |
| Maximum | 65535 |
| Minimum | 0 |

Table 3-5623 VE ID (continued)

VE Name**Table 3-5624 VE Name**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Specifies a name for this BGP VPLS instance under the VPLS. |
| Displayed name | VE Name |
| Maximum | 32 |
| Minimum | 0 |
| OSS name | veName |
| Read-only | no |
| Tab Panel | BGP.General BGP VPLS |
| Type | STRING |

VPLS ID**Table 3-5625 VPLS ID**

| Name | Value |
|----------------|---|
| Default | yes:0:0 |
| Description | The vplsId value but in a CLI readable format. [ip-addr:comm-val] or [as-number:ext-comm-val] |
| Displayed name | VPLS ID |
| Maximum | 32 |
| Minimum | 3 |
| OSS name | vplsIdCli |
| Read-only | no |
| Tab Panel | BGP.General BGP AD |
| Type | STRING |

VXLAN Admin State
Table 3-5626 VXLAN Admin State

| Name | Value |
|--------------------------|--|
| Default | yes:down |
| Description | Specifies the desired administrative state for VLAN under BGP EVPN context in this VPLS service. |
| Displayed name | VXLAN Admin State |
| OSS name | bgpEvpnVxlanAdminStatus |
| Read-only | no |
| Tab Panel | BGP.EVPN bgpEvpn |
