Disclaimers

TiMetra and lightRadio are registered trademarks of Alcatel-Lucent.

Alcatel-Lucent products are intended for commercial uses. Without the appropriate network design engineering, they must not be sold, licensed or otherwise distributed for use in any hazardous environments requiring fail-safe performance, such as in the operation of nuclear facilities, aircraft navigation or communication systems, air traffic control, direct life-support machines, or weapons systems, in which the failure of products could lead directly to death, personal injury, or severe physical or environmental damage. The customer hereby agrees that the use, sale, license or other distribution of the products for any such application without the prior written consent of Alcatel-Lucent, shall be at the customer's sole risk. The customer hereby agrees to defend and hold Alcatel-Lucent harmless from any claims for loss, cost, damage, expense or liability that may arise out of or in connection with the use, sale, license or other distribution of the products in such applications.

This document may contain information regarding the use and installation of non-Alcatel-Lucent products. Please note that this information is provided as a courtesy to assist you. While Alcatel-Lucent tries to ensure that this information accurately reflects information provided by the supplier, please refer to the materials provided with any non-Alcatel-Lucent product and contact the supplier for confirmation. Alcatel-Lucent assumes no responsibility or liability for incorrect or incomplete information provided about non-Alcatel-Lucent products.

However, this does not constitute a representation or warranty. The warranties provided for Alcatel-Lucent products, if any, are set forth in contractual documentation entered into by Alcatel-Lucent and its customers.

This document was originally written in English. If there is any conflict or inconsistency between the English version and any other version of a document, the English version shall prevail.

1 Overview

| | |
|-----------------------------|-----|
| Parameter information | 1-1 |
|-----------------------------|-----|

2 Alcatel-Lucent 1830 PSS (PSS-36 OCS, PSS-64 OCS) parameters

| | |
|--|-------|
| Area parameters | 2-1 |
| Area Range parameters | 2-4 |
| Area Site parameters | 2-8 |
| BackupPolicy parameters | 2-21 |
| Base Card parameters | 2-39 |
| Card Slot parameters | 2-88 |
| Card Specifics parameters | 2-154 |
| Color parameters | 2-217 |
| Control Plane Node parameters | 2-218 |
| Data Bearer Link parameters | 2-225 |
| Data Bearer parameters | 2-235 |
| Digital Diagnostic Monitoring parameters | 2-248 |
| DirectInterfaceCtp parameters | 2-269 |
| GMRE Specifics parameters | 2-271 |
| Hop parameters | 2-273 |
| IP Address parameters | 2-285 |

| | |
|--|-------|
| IP Filter Entry parameters | 2-295 |
| LineReference parameters | 2-306 |
| Multipoint Service Path parameters | 2-316 |
| Multipoint Transport Service parameters | 2-317 |
| NE Specifics parameters | 2-359 |
| Network Element parameters | 2-386 |
| Network Interface (NetworkInterface, optical) parameters | 2-436 |
| Network Interface (NetworkInterface, rtr) parameters | 2-443 |
| Network Interface Facility Binding parameters | 2-483 |
| NTP NE Config parameters | 2-485 |
| NTP Server parameters | 2-493 |
| OchCtp parameters | 2-501 |
| OCS ACL IP Filter parameters | 2-503 |
| OCS Alarm Profile parameters | 2-507 |
| OCS ASAP Condition parameters | 2-514 |
| OCS NE TCA Profiles parameters | 2-524 |
| OCS NE TCA Thresholds parameters | 2-531 |
| ODU Cross Connect parameters | 2-567 |
| ODU NIM parameters | 2-572 |
| ODU NIM Point parameters | 2-580 |
| ODU Path Termination parameters | 2-586 |
| ODU Trail parameters | 2-607 |
| ODUk Cross Connect parameters | 2-627 |
| OduK Nim Substructure parameters | 2-640 |
| ODUk Protection Group parameters | 2-650 |
| OMS parameters | 2-666 |
| OMS Trail parameters | 2-670 |

| | |
|--|--------|
| OMSOCH parameters | 2-682 |
| OMSOCHIF parameters | 2-688 |
| Optical Channel parameters | 2-693 |
| Optical Link parameters | 2-718 |
| Optical Path Constraint parameters | 2-725 |
| Optical Service Path parameters | 2-734 |
| Optical Site parameters | 2-739 |
| Optical Trail Path parameters | 2-747 |
| Optical Transport Service parameters | 2-751 |
| OSPF Site parameters | 2-792 |
| OTS parameters | 2-826 |
| OTU Trail parameters | 2-831 |
| OTUk parameters | 2-854 |
| Physical Port parameters | 2-870 |
| PMON Configuration parameters | 2-1063 |
| Port Group parameters | 2-1067 |
| PreviewHop parameters | 2-1069 |
| PreviewPath parameters | 2-1082 |
| Shelf parameters | 2-1085 |
| SNC Route parameters | 2-1142 |
| SNC Route XC parameters | 2-1146 |
| SNC Site parameters | 2-1156 |
| SNC Termination Point parameters | 2-1157 |
| SoftwareUpgradePolicy parameters | 2-1158 |
| SRG (SnppSrgMapping, gmpls) parameters | 2-1176 |
| SRG (Srg, gmpls) parameters | 2-1177 |
| Sub-node parameters | 2-1178 |

| | |
|--|--------|
| Subnetwork Connection Exclusion parameters | 2-1183 |
| SubnetworkConnection parameters | 2-1185 |
| Subscriber Site parameters | 2-1197 |
| TE Link Endpoint parameters | 2-1200 |
| TE Link Exclusion parameters | 2-1206 |
| TE Link parameters | 2-1209 |
| Termination Point parameters | 2-1218 |
| Trail Site parameters | 2-1226 |
| Trail Termination Point parameters | 2-1235 |
| Virtual OCH Cross Connect parameters | 2-1237 |
| Virtual Plane HO-ODU Termination parameters | 2-1256 |
| 3 Alcatel-Lucent 1830 PSS (PSS-4, 16/32) parameters | |
| 1830 PSS Performance Management Policy parameters | 3-1 |
| 7210 and 1830 Access Ingress Policy parameters | 3-4 |
| 7210 and 1830 Network Queue parameters | 3-12 |
| 7210 and 1830 Network Policy parameters | 3-16 |
| 7210 and 1830 Port Access Egress Policy parameters | 3-25 |
| 7210 and 1830 Port Scheduler Policy parameters | 3-30 |
| 7210 and 1830 WRED Slope Policy parameters | 3-40 |
| AccessIngressForwardingClass parameters | 3-44 |
| ACL MAC Filter parameters | 3-47 |
| ACL Pattern Binding parameters | 3-61 |
| ACL Pattern parameters | 3-63 |
| ACLManagement parameters | 3-74 |
| Alarm Profile parameters | 3-75 |
| APS Group parameters | 3-122 |
| Area parameters | 3-137 |

| | |
|---|-------|
| Area Range parameters | 3-140 |
| Area Site parameters | 3-144 |
| BackupPolicy parameters | 3-157 |
| Base Card parameters | 3-175 |
| Baseline parameters | 3-224 |
| Card Firmware parameters | 3-228 |
| Card Slot parameters | 3-234 |
| Card Specifics parameters | 3-300 |
| Card TCA Profile Assignment parameters | 3-363 |
| Card TCA Profiles parameters | 3-365 |
| Card TCA Thresholds parameters | 3-375 |
| CFM Link Trace parameters | 3-410 |
| CFM LM Test parameters | 3-423 |
| CFM Loopback parameters | 3-438 |
| CFM One Way Delay Test parameters | 3-456 |
| CFM Two Way Delay Test parameters | 3-464 |
| CFM Two Way SLM Test parameters | 3-480 |
| Channel Disposition parameters | 3-496 |
| Channel Summary parameters | 3-508 |
| Command parameters | 3-517 |
| Control Processor parameters | 3-518 |
| DirectInterfaceCtp parameters | 3-529 |
| Discovered Remote Managed Device parameters | 3-531 |
| DryContact parameters | 3-534 |
| Dynamic Tilt Adjustment parameters | 3-540 |

| Wave Key Decoder parameters | 3-3242 |
| Wave Keys parameters | 3-3243 |
| WaveLength Tracker Domains parameters | 3-3256 |
| WSS Attenuation (Wr8c88aAttenPortConfig, optical) parameters | 3-3264 |
| WSS Attenuation (WssAttenuation, optical) parameters | 3-3272 |

About this document

Purpose

The *5620 SAM Optical Parameter Reference* describes the parameters of 1830 PSS devices and optical-specific 5620 SAM functions. See the *5620 SAM Parameter Guide* for descriptions of non-optical parameters.

1 Overview

Parameter information

Document structure

The *5620 SAM Optical Parameter Reference* lists the parameter classes by their GUI name in alphabetical order and displays parameter entries in tabular form.

Parameter attributes

The *5620 SAM Optical Parameter Reference* describes the following aspects of 1830 PSS parameters, where applicable:

- OSS property name
- description
- value type
- default value
- minimum and maximum values
- tab and panel location in the 5620 SAM GUI
- displayed name

Aspects that are not described for a property are not applicable.

Parameter Search Tool

The Parameter Search tool is a part of the online user documentation that is available under Help→User Documentation in the 5620 SAM client main menu. The tool contains searchable information about parameters and configuration forms. You can search using the following criteria:

- Parameter GUI display name
- Parameter XML name
- Form GUI name

Search results contain information about forms and parameters, including applicable devices, restrictions, the defaults and ranges of parameters, and other information. The information is displayed in HTML format in a web browser. Dynamic links allow you to navigate the tool to access more information, such as parameter options (also called enumerated lists).

The Parameter Search Tool does not include information about some types of forms or parameters that are specific to the 5620 SAM, such as:

- User preferences
- System preferences
- OLC state
- Faults or Deployment tabs

2 Alcatel-Lucent 1830 PSS (PSS-36 OCS, PSS-64 OCS) parameters

Area parameters

Description

| Displayed name | Import Summary |
| OSS name | areaSummary |
| Read-only | yes |
| Tab Panel | Stub/NSSA General |
| Type | INT |

Instance ID**Table 2-33 Instance ID**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Identifies a specific instance of a version of the OSPF protocol running in the router instance specified by the routerId. |
| Displayed name | Instance ID |
| OSS name | instanceIndex |
| Read-only | yes |
| Tab Panel | General General |
| Type | LONG |

Loop-free Alternate Exclude**Table 2-34 Loop-free Alternate Exclude**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | The value of loopfreeAlternateExclude specifies whether or not the OSPF area should be excluded during LFA calculations. The value of loopfreeAlternateExclude is only valid when OSPF Site loopfreeAlternate has a value of 'true'. |
| Displayed name | Loop-free Alternate Exclude |
| OSS name | loopfreeAlternateExclude |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

LSA Checksum Sum**Table 2-35 LSA Checksum Sum**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Checksum of all AS-scoped LSAs in the database. |
| Displayed name | LSA Checksum Sum |
| OSS name | lsaChecksumSum |
| Read-only | yes |
| Tab Panel | General General |

| Enumerated types: | |
| No | |
| Yes | |

BackupPolicy parameters

Auto Backup Scheme**Table 2-56 Auto Backup Scheme**

| Name | Value |
|--|--|
| Default | yes:none |
| Description | Used to determine whether 5620 SAM server shall perform a node backup, after initiating a number of config saves as specified by the "autoBackupSchemeTreshold". |
| Displayed name | Auto Backup Scheme |
| OSS name | autoBackupScheme |
| Read-only | no |
| Tab Panel | General Backup Triggering |
| Type | AutoBackupScheme |
| Enumerated types: | |
| Every 5620 SAM Server Initiated Save | |
| Every Nth 5620 SAM Server Initiated Save | |
| No Auto-backup | |

Auto Backup Threshold**Table 2-57 Auto Backup Threshold**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Works in conjunction with the Auto Backup Scheme parameter, to specify the number of configuration saves that occur, before the 5620 SAM server performs a node backup. |
| Displayed name | Auto Backup Threshold |
| Maximum | 1000 |
| Minimum | 0 |
| OSS name | autoBackupSchemeTreshold |
| Read-only | no |
| Tab Panel | General Backup Triggering |
| Type | INT |
| Units | operations |

Auto Purge Scheme**Table 2-58 Auto Purge Scheme**

| Name | Value |
|---|---|
| Default | yes:atMostNBackups |
| Description | Specifies the criteria, used by the 5620 SAM server during a cleanup of backups, to determine when and which backup files to delete from the 5620 SAM server. |
| Displayed name | Auto Purge Scheme |
| OSS name | purgeMode |
| Read-only | no |
| Tab Panel | General Backup Purging |
| Type | BackupPurgeMode |
| Enumerated types: | |
| By Age | |
| By Age But Limit To A Maximum Number Of Backups | |
| By Age But Retain A Minimum Number Of Backups | |
| Limit To A Maximum Number Of Backups | |

Auto Reboot After Successful Restore**Table 2-59 Auto Reboot After Successful Restore**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether to reboot the node, after a successful transfer of config/BOF files, to the node, on a restore operation. |
| Displayed name | Auto Reboot After Successful Restore |
| OSS name | isAutoReboot |
| Read-only | no |
| Tab Panel | General Auto Reboot |
| Type | BOOL |

Backup 7705 Radio Database**Table 2-60 Backup 7705 Radio Database**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether and when to backup the 7705 radio database files as a part of the backup operation. Possible values are true/false. The radio databases are saved on each admin save. |
| Displayed name | Backup 7705 Radio Database |
| OSS name | sarRadioDbFileBackupMode |
| Read-only | no |
| Tab Panel | General Backup Settings |
| Type | BOOL |

Boot Option File Mode**Table 2-61 Boot Option File Mode**

| Name | Value |
|----------------|--|
| Default | yes:always |
| Description | Specifies whether and when to backup the config files as a part of the backup operation. Possible values are always, never (disabled) or whenever a new version is detected. |
| Displayed name | Boot Option File Mode |
| OSS name | bootOptionFileBackupMode |
| Read-only | no |
| Tab Panel | General Backup Settings |

Table 2-61 Boot Option File Mode (continued)

| Name | Value |
|--------------------------|----------------|
| Type | FileBackupMode |
| Enumerated types: | |
| Always | |
| Disabled | |
| New Version Only | |
| unknown | |

CLI Config File Mode**Table 2-62 CLI Config File Mode**

| Name | Value |
|--------------------------|--|
| Default | yes:always |
| Description | Specifies whether and when to backup the config files as a part of the backup operation. Possible values are always, never (disabled) or whenever a new version is detected. |
| Displayed name | CLI Config File Mode |
| OSS name | cliConfigFileBackupMode |
| Read-only | no |
| Tab Panel | General Backup Settings |
| Type | FileBackupMode |
| Enumerated types: | |
| Always | |
| Disabled | |
| New Version Only | |
| unknown | |

CLI Config Save Details**Table 2-63 CLI Config Save Details**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether to backup a basic configuration file or a detailed one. |
| Displayed name | CLI Config Save Details |
| OSS name | cliConfigSaveDetails |

Table 2-63 CLI Config Save Details (continued)

| Name | Value |
|-------------|-------------------------|
| Read-only | no |
| Tab Panel | General Backup Settings |
| Type | BOOL |

CLI Debug Save Config File Mode**Table 2-64 CLI Debug Save Config File Mode**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether to backup the debug config files as a part of the backup operation. |
| Displayed name | CLI Debug Save Config File Mode |
| OSS name | debugConfigFileBackupMode |
| Read-only | no |
| Tab Panel | General Backup Settings |
| Type | BOOL |

Command to Apply After Backup**Table 2-65 Command to Apply After Backup**

| Name | Value |
|----------------|---|
| Default | yes:notSignificant |
| Description | Specifies the software control module command to apply after successful backup. |
| Displayed name | Command to Apply After Backup |
| OSS name | commandToApply |
| Read-only | no |
| Tab Panel | General AOS Backup Settings |
| Type | sw.AosVersionMngt |

Enable Backup**Table 2-66 Enable Backup**

| Name | Value |
|---------|----------|
| Default | yes:true |

Table 2-66 Enable Backup (continued)

| Name | Value |
|----------------|---|
| Description | Indicates whether backups are enabled for this Backup Policy. |
| Displayed name | Enable Backup |
| OSS name | enableBackup |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

File Compression

Table 2-67 File Compression

| Name | Value |
|--------------------------|--|
| Default | yes:none |
| Description | Specifies the compression format to be used for the backup files. Possible values - GZIP, ZIP, no compression. |
| Displayed name | File Compression |
| OSS name | compressionMode |
| Read-only | no |
| Tab Panel | General AOS Backup Settings |
| Type | BackupCompressionMode |
| Enumerated types: | |
| GZIP | |
| None | |
| ZIP | |

File Compression

Table 2-68 File Compression

| Name | Value |
|----------------|--|
| Default | yes:none |
| Description | Specifies the compression format to be used for the backup files. Possible values - GZIP, ZIP, no compression. |
| Displayed name | File Compression |
| OSS name | compressionMode |
| Read-only | no |

Table 2-68 File Compression (continued)

| Description | Card Company ID. |
| Displayed name | Company ID |
| OSS name | cardCompanyId |
| Read-only | no |
| Tab Panel | General Inventory |
| Type | STRING |

Cross Card Service Enabled

Table 2-233 Cross Card Service Enabled

| Name | Value |
|--------------------------|---|
| Default | yes:enabled |
| Description | Indicates whether the cross card service is enabled or not. |
| Displayed name | Cross Card Service Enabled |
| OSS name | crossCardService |
| Read-only | no |
| Tab Panel | General Card Details |
| Type | AluWdmEnabledDisabled |
| Enumerated types: | |
| Disabled | |
| Enabled | |

Date**Table 2-234 Date**

| Name | Value |
|----------------|-------------------|
| Description | Card Date. |
| Displayed name | Date |
| OSS name | cardDate |
| Read-only | no |
| Tab Panel | General Inventory |
| Type | STRING |

Dispersion Fiber Length**Table 2-235 Dispersion Fiber Length**

| Name | Value |
|----------------|--|
| Description | The total length of dispersion fiber inside the DCM module, to the closest km. |
| Displayed name | Dispersion Fiber Length |
| OSS name | dcmCardDispFiberLength |
| Read-only | no |
| Tab Panel | General DCM |
| Type | STRING |
| Units | km |

Distance**Table 2-236 Distance**

| Name | Value |
|----------------|---|
| Description | The present compensation distance associated with this DCM card. Not applicable to the 1830 PSS-32. |
| Displayed name | Distance |
| Maximum | 140 |
| Minimum | 0 |
| OSS name | dcmCardDistance |
| Read-only | no |
| Step | 10 |
| Tab Panel | General DCM |

Table 2-236 Distance (continued)

| Name | Value |
|-------|-------|
| Type | INT |
| Units | km |

Extra Data**Table 2-237 Extra Data**

| Name | Value |
|----------------|-------------------|
| Description | Card Extra Info. |
| Displayed name | Extra Data |
| OSS name | cardExtraData |
| Read-only | no |
| Tab Panel | General Inventory |
| Type | STRING |

Factory ID**Table 2-238 Factory ID**

| Name | Value |
|----------------|-------------------|
| Description | Card Factory ID. |
| Displayed name | Factory ID |
| OSS name | cardFactoryId |
| Read-only | no |
| Tab Panel | General Inventory |
| Type | STRING |

Fan Speed**Table 2-239 Fan Speed**

| Name | Value |
|----------------|--------------------|
| Description | Fan Speed Control. |
| Displayed name | Fan Speed |
| OSS name | fanSpeed |
| Read-only | no |

Table 2-239 Fan Speed (continued)

| Name | Value |
|--------------------------|----------------------|
| Tab Panel | General Card Details |
| Type | FanSpeed |
| Enumerated types: | |
| Maximum | |
| Normal | |

Fiber Mode**Table 2-240 Fiber Mode**

| Name | Value |
|--------------------------|---------------------------|
| Description | Fiber mode for SFC Cards. |
| Displayed name | Fiber Mode |
| OSS name | sfcCardFiberMode |
| Read-only | no |
| Tab Panel | General Card Details |
| Type | SfcCardFiberMode |
| Enumerated types: | |
| OneFiberMux | |
| TwoFiber | |

Fiber Type**Table 2-241 Fiber Type**

| Name | Value |
|----------------|--|
| Description | The type of fiber that the DCM is designed to dispersion-compensate. |
| Displayed name | Fiber Type |
| OSS name | dcmCardFiberType |
| Read-only | no |
| Tab Panel | General DCM |
| Type | STRING |

Firmware Upgrade Available**Table 2-242 Firmware Upgrade Available**

| Name | Value |
|----------------|---|
| Description | YES - An upgrade to the new version of the installed/running firmware package is recommended. {BR} NO - No new firmware package is available or can be evaluated. |
| Displayed name | Firmware Upgrade Available |
| OSS name | fwUpgradeable |
| Read-only | yes |
| Tab Panel | General Card Details |
| Type | optical.FWUpgradeable |

Flow Continuity Monitoring**Table 2-243 Flow Continuity Monitoring**

| Name | Value |
|--------------------------|---------------------------------------|
| Description | The flow control mode for 11DPE12A/E. |
| Displayed name | Flow Continuity Monitoring |
| OSS name | flowCm |
| Read-only | no |
| Tab Panel | General Card Details |
| Type | FlowControlMode |
| Enumerated types: | |
| APS/PCC | |
| CCM | |
| CSF | |

Force Protection Switch**Table 2-244 Force Protection Switch**

| Name | Value |
|----------------|---|
| Default | yes:noCmd |
| Description | Perform an activity switch on this shelf. When read, this object returns noCmd. |
| Displayed name | Force Protection Switch |
| OSS name | shelfActivitySwitch |
| Read-only | no |

Table 2-244 Force Protection Switch (continued)

| Name | Value |
|--------------------------|---------------------------|
| Tab Panel | General Protection Switch |
| Type | PerformCommand |
| Enumerated types: | |
| Execute | |
| Execute with Force | |
| No Cmd | |

Gain**Table 2-245 Gain**

| Name | Value |
|----------------|--|
| Default | yes:7 |
| Description | Applies to the output port of amplifier module in the mesh card. |
| Displayed name | Gain |
| Maximum | 24 |
| Minimum | 7 |
| OSS name | meshCardPowerGain |
| Read-only | no |
| Tab Panel | General MESH4 Details |
| Type | FLOAT |
| Units | dB |

Gain Tilt**Table 2-246 Gain Tilt**

| Name | Value |
|----------------|---|
| Description | Current OA tilt setting for the output port of the amplifier module in the mesh card. |
| Displayed name | Gain Tilt |
| OSS name | meshCardGainTilt |
| Read-only | no |
| Tab Panel | General MESH4 Details |
| Type | FLOAT |
| Units | dB |

High Temperature Threshold**Table 2-247 High Temperature Threshold**

| Name | Value |
|----------------|--|
| Description | The high temperature threshold of the card. Current configurable range: 1830 PSS-32: -5 to 90 1830 PSS-1: -5 to 90 |
| Displayed name | High Temperature Threshold |
| Maximum | 90 |
| Minimum | -5 |
| OSS name | cardHighTemperatureThresh |
| Read-only | no |
| Tab Panel | General Temperature |
| Type | INT |
| Units | Celsius |

Impedance**Table 2-248 Impedance**

| Name | Value |
|--------------------------|---------------------------|
| Default | yes:seventyfive |
| Description | The card impedance level. |
| Displayed name | Impedance |
| OSS name | cardImpedence |
| Read-only | no |
| Tab Panel | General Card Details |
| Type | ImpedenceType |
| Enumerated types: | |
| | 120 |
| | 75 |

Input Current 1**Table 2-249 Input Current 1**

| Name | Value |
|----------------|-----------------|
| Displayed name | Input Current 1 |
| OSS name | inputCurrent |

| Displayed name | Input Voltage 3 |
| OSS name | inputVoltage3 |
| Read-only | no |
| Tab Panel | General Card Details Input Power Data |
| Type | FLOAT |
| Units | Volts |

Insertion Loss Slope**Table 2-259 Insertion Loss Slope**

| Name | Value |
|----------------|---|
| Description | A linear least-squares fitted slope of the measured attenuation (positive or negative) over the wavelength range with no external attenuation added to the DCM. The slope is defined over the full wavelength range with a negative slope signifying a higher insertion loss at the lower wavelength. |
| Displayed name | Insertion Loss Slope |
| OSS name | dcmCardInsertionLossSlope |
| Read-only | no |
| Tab Panel | General DCM |
| Type | STRING |
| Units | dB |

Insertion Loss Slope Pad**Table 2-260 Insertion Loss Slope Pad**

| Name | Value |
|----------------|--|
| Description | A linear least-squares fitted slope of the measured attenuation (positive or negative) over the wavelength range with external attenuation added to the DCM. The slope is defined over the full wavelength range with a negative slope signifying a higher insertion loss at the lower wavelength. |
| Displayed name | Insertion Loss Slope Pad |
| OSS name | dcmCardInsertionLossSlopePad |
| Read-only | no |
| Tab Panel | General DCM |

Table 2-260 Insertion Loss Slope Pad (continued)

| Name | Value |
|-------|--------|
| Type | STRING |
| Units | dB |

Laser Temperature

Table 2-261 Laser Temperature

| Name | Value |
|----------------|--|
| Description | The temperature of the Laser. Applies to the output port of the amplifier module in the mesh card. |
| Displayed name | Laser Temperature |
| OSS name | meshCardInternalTemp |
| Read-only | no |
| Tab Panel | General MESH4 Details |
| Type | INT |
| Units | Celsius |

Level in Optical Node

Table 2-262 Level in Optical Node

| Name | Value |
|--------------------------|---|
| Default | yes:0 |
| Description | For C/WR Card. Level in Optical Node. Current configurable range: 0 to 3. |
| Displayed name | Level in Optical Node |
| OSS name | wssCardAdBlockLevelAdd |
| Read-only | no |
| Tab Panel | General CWR/WR |
| Type | CardLevel |
| Enumerated types: | |
| 0 | |
| 1 | |
| 2 | |
| 3 | |

Loopback Message Interval**Table 2-263 Loopback Message Interval**

| Name | Value |
|----------------|--|
| Default | yes:10 |
| Description | The interval between consequent Loopback messages. |
| Displayed name | Loopback Message Interval |
| Maximum | 100 |
| Minimum | 10 |
| OSS name | IBMInterval |
| Read-only | no |
| Tab Panel | General Ethernet Loopback |
| Type | INT |
| Units | x100ms |

Loopback Reply Timeout**Table 2-264 Loopback Reply Timeout**

| Name | Value |
|----------------|---------------------------|
| Default | yes:30 |
| Description | Loopback Reply Timeout. |
| Displayed name | Loopback Reply Timeout |
| Maximum | 30 |
| Minimum | 1 |
| OSS name | IBMRTIMEOUT |
| Read-only | no |
| Tab Panel | General Ethernet Loopback |
| Type | INT |
| Units | seconds |

Loss Threshold**Table 2-265 Loss Threshold**

| Name | Value |
|-------------|--|
| Default | yes:1.50 |
| Description | The optical intrusion loss threshold value. Current configurable range:1 to 5. |

Table 2-265 Loss Threshold (continued)

| Name | Value |
|----------------|-------------------------------------|
| Displayed name | Loss Threshold |
| Maximum | 5 |
| Minimum | 1 |
| OSS name | ampCardOptIntLossThreshold |
| Read-only | no |
| Tab Panel | General Optical Intrusion Detection |
| Type | FLOAT |
| Units | dB |

Low Temperature Threshold**Table 2-266 Low Temperature Threshold**

| Name | Value |
|----------------|---|
| Description | The low temperature threshold of the card. Current configurable range: 1830 PSS-32: -5 to 90 1830 PSS-1: -5 to 90 |
| Displayed name | Low Temperature Threshold |
| Maximum | 90 |
| Minimum | -45 |
| OSS name | cardLowTemperatureThresh |
| Read-only | no |
| Tab Panel | General Temperature |
| Type | INT |
| Units | Celsius |

Maximum Add Channel Count**Table 2-267 Maximum Add Channel Count**

| Name | Value |
|----------------|---|
| Description | For CWR Card.The maximum number of channels supported on the add path. Current configurable range: CWR8: 8 to 44. CWR8-88: WR2-88: 8 to 88. |
| Displayed name | Maximum Add Channel Count |
| Maximum | 88 |
| Minimum | 8 |
| OSS name | wssCardAddPathTotalChannel |

| Displayed name | Maximum Current |
| OSS name | cardMaxCurrent |
| Read-only | no |
| Tab Panel | General Card Details |
| Type | FLOAT |
| Units | Amps |

Maximum Gain**Table 2-269 Maximum Gain**

| Name | Value |
|----------------|--|
| Default | yes:24 |
| Description | Applies to the output port of amplifier module in the mesh card. |
| Displayed name | Maximum Gain |
| Maximum | 24 |
| Minimum | 7 |
| OSS name | meshCardPowerGainMax |
| Read-only | no |
| Tab Panel | General MESH4 Details |
| Type | FLOAT |
| Units | dB |

Maximum Power**Table 2-270 Maximum Power**

| Name | Value |
|----------------|--|
| Description | P sub 0, P sub 50 and P sub 100 (percent utilization of transmission function) provided for ATIS TEER calculation. These measurements are to be made under the conditions provided in ATIS-0600015-2009: Temperature: 25 deg C +/- 3 deg C (77 deg F +/- 5 deg F) Humidity: Relative humidity between 30% and 75% Barometric Pressure: Between 1020 and 812 mbar. Current range: 0.00 to 1,000.00. |
| Displayed name | Maximum Power |
| OSS name | cardMaxPower |
| Read-only | no |
| Tab Panel | General Card Details |
| Type | FLOAT |
| Units | Watts |

Minimum Gain**Table 2-271 Minimum Gain**

| Name | Value |
|----------------|--|
| Default | yes:7 |
| Description | Applies to the output port of amplifier module in the mesh card. |
| Displayed name | Minimum Gain |
| Maximum | 24 |
| Minimum | 7 |
| OSS name | meshCardPowerGainMin |
| Read-only | no |
| Tab Panel | General MESH4 Details |

Pump1 Bias Current**Table 2-300 Pump1 Bias Current**

| Name | Value |
|----------------|---|
| Description | The Amplifier card parameter that specifies the existing bias current of the OA laser pump 1. |
| Displayed name | Pump1 Bias Current |
| OSS name | ampCardPump1Bias |
| Read-only | no |
| Tab Panel | General EDFA Attributes |
| Type | INT |
| Units | mA |

Pump1 Bias Current

Table 2-301 Pump1 Bias Current

| Name | Value |
|----------------|---|
| Description | The Amplifier card parameter that specifies the existing bias current of the OA laser pump 1. |
| Displayed name | Pump1 Bias Current |
| OSS name | ampCardPump1Bias |
| Read-only | no |
| Tab Panel | General Pump Attributes |
| Type | INT |
| Units | mA |

Pump1 Temperature

Table 2-302 Pump1 Temperature

| Name | Value |
|----------------|--|
| Description | The Amplifier card parameter that specifies the existing temperature of the OA laser Pump 1. |
| Displayed name | Pump1 Temperature |
| OSS name | ampCardPump1Temp |
| Read-only | no |
| Tab Panel | General EDFA Attributes |
| Type | INT |
| Units | Celsius |

Pump1 Temperature

Table 2-303 Pump1 Temperature

| Name | Value |
|----------------|--|
| Description | The Amplifier card parameter that specifies the existing temperature of the OA laser Pump 1. |
| Displayed name | Pump1 Temperature |
| OSS name | ampCardPump1Temp |
| Read-only | no |
| Tab Panel | General Pump Attributes |
| Type | INT |
| Units | Celsius |

Pump2 Bias Current

Table 2-304 Pump2 Bias Current

| Name | Value |
|----------------|---|
| Description | The Amplifier card parameter that specifies the existing bias current of the OA laser pump 2. |
| Displayed name | Pump2 Bias Current |
| OSS name | ampCardPump2Bias |
| Read-only | no |
| Tab Panel | General EDFA Attributes |
| Type | INT |
| Units | mA |

Pump2 Bias Current

Table 2-305 Pump2 Bias Current

| Name | Value |
|----------------|---|
| Description | The Amplifier card parameter that specifies the existing bias current of the OA laser pump 2. |
| Displayed name | Pump2 Bias Current |
| OSS name | ampCardPump2Bias |
| Read-only | no |
| Tab Panel | General Pump Attributes |
| Type | INT |
| Units | mA |

Pump2 Temperature

Table 2-306 Pump2 Temperature

| Name | Value |
|----------------|--|
| Description | The Amplifier card parameter that specifies the existing temperature of the OA laser Pump 2. |
| Displayed name | Pump2 Temperature |
| OSS name | ampCardPump2Temp |
| Read-only | no |
| Tab Panel | General EDFA Attributes |
| Type | INT |
| Units | Celsius |

Pump2 Temperature**Table 2-307 Pump2 Temperature**

| Name | Value |
|----------------|--|
| Description | The Amplifier card parameter that specifies the existing temperature of the OA laser Pump 2. |
| Displayed name | Pump2 Temperature |
| OSS name | ampCardPump2Temp |
| Read-only | no |
| Tab Panel | General Pump Attributes |
| Type | INT |
| Units | Celsius |

Pump3 Bias Current**Table 2-308 Pump3 Bias Current**

| Name | Value |
|----------------|---|
| Description | The Amplifier card parameter that specifies the existing bias current of the OA laser pump 3. |
| Displayed name | Pump3 Bias Current |
| OSS name | ampCardPump3Bias |
| Read-only | no |
| Tab Panel | General EDFA Attributes |
| Type | INT |
| Units | mA |

Pump3 Bias Current**Table 2-309 Pump3 Bias Current**

| Name | Value |
|----------------|---|
| Description | The Amplifier card parameter that specifies the existing bias current of the OA laser pump 3. |
| Displayed name | Pump3 Bias Current |
| OSS name | ampCardPump3Bias |
| Read-only | no |
| Tab Panel | General Pump Attributes |
| Type | INT |
| Units | mA |

Pump3 Temperature

Table 2-310 Pump3 Temperature

| Name | Value |
|----------------|--|
| Description | The Amplifier card parameter that specifies the existing temperature of the OA laser Pump 3. |
| Displayed name | Pump3 Temperature |
| OSS name | ampCardPump3Temp |
| Read-only | no |
| Tab Panel | General EDFA Attributes |
| Type | INT |
| Units | Celsius |

Pump3 Temperature

Table 2-311 Pump3 Temperature

| Name | Value |
|----------------|--|
| Description | The Amplifier card parameter that specifies the existing temperature of the OA laser Pump 3. |
| Displayed name | Pump3 Temperature |
| OSS name | ampCardPump3Temp |
| Read-only | no |
| Tab Panel | General Pump Attributes |
| Type | INT |
| Units | Celsius |

Pump4 Bias Current

Table 2-312 Pump4 Bias Current

| Name | Value |
|----------------|---|
| Description | The Amplifier card parameter that specifies the existing bias current of the OA laser pump 4. |
| Displayed name | Pump4 Bias Current |
| OSS name | ampCardPump4Bias |
| Read-only | no |
| Tab Panel | General Pump Attributes |
| Type | INT |
| Units | mA |

Pump4 Temperature**Table 2-313 Pump4 Temperature**

| Name | Value |
|----------------|--|
| Description | The Amplifier card parameter that specifies the existing temperature of the OA laser Pump 4. |
| Displayed name | Pump4 Temperature |
| OSS name | ampCardPump4Temp |
| Read-only | no |
| Tab Panel | General Pump Attributes |
| Type | INT |
| Units | Celsius |

Pump5 Bias Current**Table 2-314 Pump5 Bias Current**

| Name | Value |
|----------------|---|
| Description | The Amplifier card parameter that specifies the existing bias current of the OA laser pump 5. |
| Displayed name | Pump5 Bias Current |
| OSS name | ampCardPump5Bias |
| Read-only | no |
| Tab Panel | General Pump Attributes |
| Type | INT |
| Units | mA |

Pump5 Temperature**Table 2-315 Pump5 Temperature**

| Name | Value |
|----------------|--|
| Description | The Amplifier card parameter that specifies the existing temperature of the OA laser Pump 5. |
| Displayed name | Pump5 Temperature |
| OSS name | ampCardPump5Temp |
| Read-only | no |
| Tab Panel | General Pump Attributes |
| Type | INT |
| Units | Celsius |

Pump6 Bias current

Table 2-316 Pump6 Bias current

| Name | Value |
|----------------|---|
| Description | The Amplifier card parameter that specifies the existing bias current of the OA laser pump 6. |
| Displayed name | Pump6 Bias current |
| OSS name | ampCardPump6Bias |
| Read-only | no |
| Tab Panel | General Pump Attributes |
| Type | INT |
| Units | mA |

Pump6 Temperature

Table 2-317 Pump6 Temperature

| Name | Value |
|----------------|--|
| Description | The Amplifier card parameter that specifies the existing temperature of the OA laser Pump 6. |
| Displayed name | Pump6 Temperature |
| OSS name | ampCardPump6Temp |
| Read-only | no |
| Tab Panel | General Pump Attributes |
| Type | INT |
| Units | Celsius |

Quality Level Threshold

| TNC | |
| unspecified | |
| Unstable | |

Tag Protocol ID**Table 2-351 Tag Protocol ID**

| Name | Value |
|----------------|--|
| Description | The Q in Q Mode TPID for 11DPGE12. Current configurable range: 0x00 to 0xFFFF. |
| Displayed name | Tag Protocol ID |
| OSS name | dpge12QINQModeTPID |
| Read-only | no |
| Tab Panel | General Card Details |
| Type | STRING |
| Units | Hex: 0001-FFFF |

Target Tilt**Table 2-352 Target Tilt**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Current OA tilt setting for the output port of the amplifier module in the mesh card. |
| Displayed name | Target Tilt |
| Maximum | 4 |
| Minimum | -4 |
| OSS name | meshCardTargetTilt |
| Read-only | no |
| Tab Panel | General MESH4 Details |
| Type | FLOAT |
| Units | dB |

Temperature Tolerance**Table 2-353 Temperature Tolerance**

| Name | Value |
|----------------|--|
| Description | The temperature tolerance of the card, applied to the card's high and low temperature thresholds. Current configurable range: 0 to 10. |
| Displayed name | Temperature Tolerance |
| Maximum | 10 |
| Minimum | 0 |

Table 2-353 Temperature Tolerance (continued)

| Name | Value |

| Read-only | no |
| Tab Panel | General Temperature |
| Type | INT |
| Units | Celsius |

Total Dispersion Fit**Table 2-354 Total Dispersion Fit**

| Name | Value |
|----------------|---|
| Description | Coefficients A, B, C and D of a 3rd Order polynomial fit of Chromatic dispersion vs. wavelength from 1528 to 1565nm in 0.4-2.0nm steps such that TotalDispersion = $A*(l-1546)^3 + B*(l-1546)^2 + C*(l-1546) + D$. |
| Displayed name | Total Dispersion Fit |
| OSS name | dcmCardTotalDispTilt |
| Read-only | no |
| Tab Panel | General DCM |
| Type | STRING |

Total Input Power**Table 2-355 Total Input Power**

| Name | Value |
|----------------|--|
| Default | yes:-99.0 |
| Description | The total input power. Applies to the input port of the amplifier module in the mesh card. |
| Displayed name | Total Input Power |
| OSS name | meshCardPowerIn |
| Read-only | no |
| Tab Panel | General MESH4 Details |
| Type | FLOAT |
| Units | dBm |

Total Output Power**Table 2-356 Total Output Power**

| Name | Value |
|----------------|--|
| Default | yes:-99.0 |
| Description | The total output power. Applies to the output port of the amplifier module in the mesh card. |
| Displayed name | Total Output Power |
| OSS name | meshCardPowerOut |
| Read-only | no |
| Tab Panel | General MESH4 Details |
| Type | FLOAT |
| Units | dBm |

Unit Part Number**Table 2-357 Unit Part Number**

| Name | Value |
|----------------|---------------------------------|
| Description | Card Manufacturing Part Number. |
| Displayed name | Unit Part Number |
| OSS name | cardManufacturingPartNum |
| Read-only | no |
| Tab Panel | General Inventory |
| Type | STRING |

Wait To Restore**Table 2-358 Wait To Restore**

| Name | Value |
|----------------|--|
| Default | yes:5 |
| Description | The system timing WTR. Possible values are {0-12}. |
| Displayed name | Wait To Restore |
| Maximum | 12 |
| Minimum | 0 |
| OSS name | waitToRestore |
| Read-only | no |
| Tab Panel | General Sync0 Settings |

Table 2-358 Wait To Restore (continued)

Control Plane Node parameters

Active Network Version**Table 2-362 Active Network Version**

| Name | Value |
|----------------|--|
| Description | Current active SW Release number in m.n.p, with m = major release, n = sub release. Eg: "6.0.0". A change is possible at max to the Installed NWVersion. All GMPLS Nodes in the network must support this release. The ActiveNetworkVersion is the protocol version of the GMRE that is currently running. The InstalledNetworkVersion is the protocol version the GMRE can be upgraded to. If they are identical no upgrade is possible. This property is R/W in CORBA i/f. |
| Displayed name | Active Network Version |
| OSS name | activeNwVersion |
| Read-only | no |
| Tab Panel | General GMRE Software |
| Type | STRING |

Administrative State**Table 2-363 Administrative State**

| Name | Value |
|----------------|------------------------------------|
| Description | Possible values: unlocked, locked. |
| Displayed name | Administrative State |
| OSS name | cpNeAdministrativeState |
| Read-only | no |

|----------------|---|
| Default | yes: |
| Description | Management Plane Remote Port Name associated with this data bearer. |
| Displayed name | ASON Remote Port |
| Maximum | 252 |
| OSS name | remotePortName |
| Read-only | yes |
| Tab Panel | General Remote Resources |
| Type | STRING |

ASON SubNode**Table 2-414 ASON SubNode**

| Name | Value |
|---------|-------|
| Default | yes: |

Table 2-414 ASON SubNode (continued)

| Name | Value |
|----------------|---------------------|
| Description | Pointer to SubNode. |
| Displayed name | ASON SubNode |
| OSS name | subNodePointer |
| Read-only | no |
| Tab Panel | General General |
| Type | POINTER |

ASON TELink**Table 2-415 ASON TELink**

| Name | Value |
|----------------|-----------------|
| Default | yes:0 |
| Displayed name | ASON TELink |
| OSS name | asonSnppLinkId |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

CP Node ID**Table 2-416 CP Node ID**

| Name | Value |
|----------------|--|
| Description | EMS name of CP Node ie GMRE_LSR_Id. Encoded as IPv4 address (xxx.xxx.xxx.xxx). |
| Displayed name | CP Node ID |
| OSS name | cpNodeId |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

Data Bearer ID**Table 2-417 Data Bearer ID**

| Name | Value |
|-----------------------|---|
| Description | Corresponds to "PTP" portion of the CORBA name of the DataBearer (external name). Eg: "UNTERM-1020304". |
| Displayed name | Data Bearer ID |
| Mandatory on creation | yes |
| OSS name | dataBearerId |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Databearer ID (CLI)**Table 2-418 Databearer ID (CLI)**

| Name | Value |
|----------------|--|
| Description | Corresponds to CLI name of the DataBearer. It consists of the dataBearerId and the suffix. Eg: "UNTERM-102030416". |
| Displayed name | Databearer ID (CLI) |
| OSS name | dataBearerIdCliName |
| Read-only | yes |
| Tab Panel | General GMRE CLI Naming |
| Type | STRING |

DataBearer User Label**Table 2-419 DataBearer User Label**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Applies to DROP and I-NNI. Maps to CORBA layered attribute UserLabel. |
| Displayed name | DataBearer User Label |
| Maximum | 64 |
| Minimum | 0 |
| OSS name | tpUserLabel |
| Read-only | no |

Table 2-419 DataBearer User Label (continued)

| Name | Value |
|-------------|-----------------|
| Tab Panel | General General |
| Type | STRING |

Direction**Table 2-420 Direction**

| Name | Value |
|--------------------------|-------------------------|
| Default | yes:d_bidirectional |
| Description | Always d_bidirectional. |
| Displayed name | Direction |
| OSS name | direction |
| Read-only | yes |
| Tab Panel | General General |
| Type | TPDirection |
| Enumerated types: | |
| Bidirectional | |

I-NNI Link Pointer**Table 2-421 I-NNI Link Pointer**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Pointer to data bearer link instance in SAM. |
| Displayed name | I-NNI Link Pointer |
| OSS name | dbLinkPointer |
| Read-only | yes |
| Tab Panel | General I-NNI Link |
| Type | POINTER |

Is Virtual ODU Termination**Table 2-422 Is Virtual ODU Termination**

| Name | Value |
|-----------------------|----------------------------|
| Default | yes:false |
| Displayed name | Is Virtual ODU Termination |
| Mandatory on creation | yes |
| OSS name | oduPoolEndpoint |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Link Type**Table 2-423 Link Type**

| Name | Value |
|--------------------------|-----------------|
| Displayed name | Link Type |
| OSS name | asonLinkType |
| Read-only | no |
| Tab Panel | General General |
| Type | AsonLinkType |
| Enumerated types: | |
| DROP | |
| FA-UNTERM | |
| GMRE-E-NNI | |
| I-NNI | |
| Inter-E-NNI | |
| SPLIT | |
| Undefined | |
| UNI | |

Link-in Maintenance**Table 2-424 Link-in Maintenance**

| Name | Value |
|-------------|----------------------------|
| Description | Applies to DROP and I-NNI. |

Table 2-424 Link-in Maintenance (continued)

| Name | Value |
|--------------------------|---------------------|
| Displayed name | Link-in Maintenance |
| OSS name | linkInMaintenance |
| Read-only | yes |
| Tab Panel | States General |
| Type | TPLinkInMaintenance |
| Enumerated types: | |
| False | |
| True | |

Local Port Pointer**Table 2-425 Local Port Pointer**

| Name | Value |
|-----------------------|--|
| Default | yes: |
| Description | Pointer to management plane physical port supporting this data bearer. |
| Displayed name | Local Port Pointer |
| Mandatory on creation | yes |
| OSS name | ptpPointer |
| Read-only | no |
| Tab Panel | General General |
| Type | POINTER |

Local Virtual ODU Termination**Table 2-426 Local Virtual ODU Termination**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Management Plane Local Virtual ODU termination for facility associated with this data bearer. |
| Displayed name | Local Virtual ODU Termination |
| Maximum | 252 |
| Minimum | 0 |
| OSS name | localOduPtfName |

Table 2-426 Local Virtual ODU Termination (continued)

| Name | Value |

| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

MS Signal Degraded**Table 2-427 MS Signal Degraded**

| Name | Value |
|--------------------------|---|
| Description | Applies to I-NNI only (not applicable to DROP). |
| Displayed name | MS Signal Degraded |
| OSS name | msSignalDegraded |
| Read-only | no |
| Tab Panel | States General |
| Type | TPMSSignalDegraded |
| Enumerated types: | |
| Disabled | |
| Enabled | |

Operational State**Table 2-428 Operational State**

| Name | Value |
|--------------------------|----------------------------|
| Description | Applies to I-NNI and DROP. |
| Displayed name | Operational State |
| OSS name | operationalState |
| Read-only | yes |
| Tab Panel | States General |
| Type | TPOperationalState |
| Enumerated types: | |
| Degraded | |
| Disabled | |
| Enabled | |

Port Name**Table 2-429 Port Name**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Management Plane Local Port Name associated with this data bearer. |
| Displayed name | Port Name |
| Maximum | 252 |
| OSS name | localPortName |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

Remote Port Pointer**Table 2-430 Remote Port Pointer**

| Name | Value |
|-----------------------|--|
| Default | yes: |
| Description | Pointer to management plane physical port supporting the remote data bearer. |
| Displayed name | Remote Port Pointer |
| Mandatory on creation | yes |
| OSS name | remotePtpPointer |
| Read-only | no |
| Tab Panel | General Remote Resources |
| Type | POINTER |

Site ID**Table 2-431 Site ID**

| Name | Value |
|-----------------------|--|
| Default | yes: |
| Description | Management Plane Remote Site Identifier associated with data bearer. |
| Displayed name | Site ID |
| Mandatory on creation | yes |
| OSS name | remoteSiteId |
| Read-only | no |

Table 2-431 Site ID (continued)

| Displayed name | Site Name |
| Maximum | 252 |
| OSS name | siteName |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

SubNode ID**Table 2-435 SubNode ID**

| Name | Value |
|----------------|---|
| Description | In SAM, subNodeId is in format rss: - r: rackId (1..9) - ss: subRackId (01..99) subNodeId does not contain trailing 000000. |
| Displayed name | SubNode ID |
| OSS name | subNodeId |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

TCM Layer**Table 2-436 TCM Layer**

| Name | Value |
|--------------------------|---|
| Description | Indicates TCM Layer. Applies to I-NNI only (NOTE: DROP reports value of "None" but this attribute effectively does not apply to DROP). In OCS R7.x, valid values are: "1", "2", ..., "6". |
| Displayed name | TCM Layer |
| OSS name | tcMonitor |
| Read-only | yes |
| Tab Panel | General General |
| Type | TPTCMonitor |
| Enumerated types: | |
| 1 | |

Table 2-436 TCM Layer (continued)

| Name | Value |
|------|-------|
| 2 | |
| 3 | |
| 4 | |
| 5 | |

| None | |

Virtual ODU Termination**Table 2-437 Virtual ODU Termination**

| Name | Value |
|-----------------------|---|
| Default | yes: |
| Description | Pointer to management plane facility supporting this data bearer. |
| Displayed name | Virtual ODU Termination |
| Mandatory on creation | yes |
| OSS name | ctpPointer |
| Read-only | no |
| Tab Panel | General General |
| Type | POINTER |

Wait To Revert**Table 2-438 Wait To Revert**

| Name | Value |
|----------------|---|
| Default | yes:300 |
| Description | Unsigned int, wait value in seconds. Applies to I-NNI only (not applicable to DROP). Recommended values: - 1m to 15m (with one minute increments, the value is expressed in seconds (e.g. 120 for 2m) - 20m, 30m, 45m, 60m, 90m, 2h, 4h, 12h, 24h, 48h (the value is expressed in seconds: e.g. 1.800 for 30m) |
| Displayed name | Wait To Revert |
| Maximum | 172800 |
| Minimum | 0 |
| OSS name | waitToRevert |
| Read-only | yes |

| Type | STRING |

GMRE Specifics parameters

Additional Details**Table 2-504 Additional Details**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Pointer to gmpls.CPNode instance discovered through the CORBA interface. |
| Displayed name | Additional Details |
| OSS name | cpNodePointer |
| Read-only | yes |
| Tab Panel | General ASON Control Plane Node Details |
| Type | POINTER |

GMRE Address**Table 2-505 GMRE Address**

| Name | Value |
|----------------|---|
| Default | yes:0.0.0.0 |
| Description | Used in GMPLS protocols for communication between directly attached NEs. It is used for the RSVP-TE, OSPF-TE and LMP protocols. |
| Displayed name | GMRE Address |
| OSS name | nodeAddress |
| Read-only | yes |

Table 2-505 GMRE Address (continued)

| Name | Value |
|-------------|---|
| Tab Panel | General ASON Control Plane Node Details |
| Type | INETADDR |

GMRE Management address

Table 2-506 GMRE Management address

| Name | Value |
|----------------|--|
| Default | yes:0.0.0.0 |
| Description | Used for CORBA communication between Alcatel-Lucent 5620 SAM and GMRE. |
| Displayed name | GMRE Management address |
| OSS name | managementAddress |
| Read-only | yes |
| Tab Panel | General ASON Control Plane Node Details |
| Type | INETADDR |

GMRE Name

Prefix Length**Table 2-537 Prefix Length**

| Name | Value |
|----------------|--------------------|
| Default | yes:24 |
| Displayed name | Prefix Length |
| Maximum | 128 |
| Minimum | 1 |
| OSS name | prefixLength |
| Read-only | no |
| Tab Panel | General Properties |
| Type | INT |

Remote IP Address**Table 2-538 Remote IP Address**

| Name | Value |
|----------------|---------------------------|
| Default | yes:0.0.0.0 |
| Displayed name | Remote IP Address |
| OSS name | remoteIpAddress |
| Read-only | no |
| Tab Panel | General Remote IP Address |
| Type | INETADDR |

Routing Instance ID**Table 2-539 Routing Instance ID**

| Name | Value |
|----------------|---------------------|
| Default | yes:1 |
| Displayed name | Routing Instance ID |

Table 2-539 Routing Instance ID (continued)

| Name | Value |
|-------------|--------------------------|
| OSS name | virtualRouterId |
| Read-only | yes |
| Tab Panel | General Routing Instance |
| Type | LONG |

Routing Instance Name**Table 2-540 Routing Instance Name**

| Name | Value |
|----------------|--------------------------|
| Default | yes: |
| Displayed name | Routing Instance Name |
| Maximum | 32 |
| Minimum | 0 |
| OSS name | routerName |
| Read-only | yes |
| Tab Panel | General Routing Instance |
| Type | STRING |

Service ID**Table 2-541 Service ID**

| Name | Value |
|----------------|-----------------|
| Default | yes:0 |
| Displayed name | Service ID |
| OSS name | serviceId |
| Read-only | yes |
| Tab Panel | General Service |
| Type | LONG |

Service Name

Table 2-542 Service Name

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Service Name |
| Maximum | 64 |
| OSS name | serviceName |
| Read-only | yes |
| Tab Panel | General Service |
| Type | STRING |

Site ID

Table 2-543 Site ID

| Name | Value |
|----------------|--------------|
| Default | yes: |
| Displayed name | Site ID |
| Maximum | 50 |
| OSS name | nodeId |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

Site Name

Table 2-544 Site Name

| Name | Value |
|----------------|--------------|
| Default | yes: |
| Displayed name | Site Name |
| Maximum | 252 |
| OSS name | nodeName |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

System IP**Table 2-545 System IP**

| Name | Value |
|----------------|-------------------|
| Default | yes:false |
| Displayed name | System IP |
| OSS name | isSystemIpAddress |
| Read-only | yes |
| Tab Panel | General Network |
| Type | BOOL |

Track SRRP Instance**Table 2-546 Track SRRP Instance**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Specifies the SRRP instance whose state is tracked on this ipaddress. |
| Displayed name | Track SRRP Instance |
| Maximum | 4294967295 |
| Minimum | 0 |
| OSS name | trackSrrpInstance |
| Read-only | no |
| Tab Panel | General Properties |
| Type | LONG |

IP Filter Entry parameters**Action****Table 2-547 Action**

| Name | Value |
|----------------|------------|
| Default | yes:Accept |
| Displayed name | Action |
| OSS name | action |
| Read-only | no |

Table 2-547 Action (continued)

| Name | Value |
|--------------------------|-----------------|
| Tab Panel | General General |
| Type | Action |
| Enumerated types: | |
| Accept | |
| Block | |
| Drop | |
| Pass | |
| Reject | |

Connection State

Table 2-548 Connection State

| Name | Value |
|--------------------------|---------------------|
| Default | yes:none |
| Displayed name | Connection State |
| OSS name | connectionState |
| Read-only | no |
| Tab Panel | General General |
| Type | ConnectionStateMask |
| Enumerated types: | |
| Established | |
| Invalid | |
| New | |
| None | |
| Related | |

Destination IP Address

Table 2-549 Destination IP Address

| Name | Value |
|----------------|------------------------|
| Default | yes:0.0.0.0 |
| Displayed name | Destination IP Address |
| OSS name | dstIpAddress |

| Enumerated types: | |
| All | |
| Disabled | |
| Enabled | |

ICMP Code**Table 2-556 ICMP Code**

| Name | Value |
|----------------|-----------------|
| Default | yes:255 |
| Displayed name | ICMP Code |
| Maximum | 255 |
| Minimum | 0 |
| OSS name | icmpCode |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

ICMP Type**Table 2-557 ICMP Type**

| Name | Value |
|----------------|-----------------|
| Default | yes:255 |
| Displayed name | ICMP Type |
| Maximum | 255 |
| Minimum | 0 |
| OSS name | icmpType |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Incoming Interface**Table 2-558 Incoming Interface**

| Name | Value |
|--------------------------|--------------------|
| Default | yes:all |
| Displayed name | Incoming Interface |
| OSS name | incomingInt |
| Read-only | no |
| Tab Panel | General General |
| Type | InterfaceType |
| Enumerated types: | |
| All | |
| IPIPT | |
| IPIPT-ALL | |
| LAN CIT | |
| LAN OAMP | |
| NETIF | |
| NETIF-ALL | |

Incoming Interface ID**Table 2-559 Incoming Interface ID**

| Name | Value |
|----------------|-----------------------|
| Default | yes:1 |
| Displayed name | Incoming Interface ID |
| Maximum | 512 |
| Minimum | 1 |
| OSS name | incomingIntId |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Insert Index

Table 2-560 Insert Index

| Name | Value |
|----------------|-----------------|
| Default | yes:0 |
| Displayed name | Insert Index |
| Maximum | 4000 |
| Minimum | 0 |
| OSS name | insertIndex |
| Read-only | no |
| Tab Panel | General General |
| Type | LONG |

Internet Protocol

Table 2-561 Internet Protocol

| Name | Value |
|--------------------------|-----------------------------------|
| Default | yes:ALL |
| Description | IP Protocol specified by keyword. |
| Displayed name | Internet Protocol |
| OSS name | ipProtocolKeyword |
| Read-only | no |
| Tab Panel | General General Protocol |
| Type | Protocol |
| Enumerated types: | |
| ALL | |
| GRE | |
| ICMP | |
| IGMP | |
| IPIP | |
| OSPF | |
| OSPFTE | |
| Others | |
| RSVP | |
| TCP | |
| UDP | |

Internet Protocol (value)

Table 2-562 Internet Protocol (value)

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | IP Protocol specified by explicit protocol number (0 to 255). |
| Displayed name | Internet Protocol (value) |
| Maximum | 255 |
| Minimum | 0 |
| OSS name | ipProtocol |
| Read-only | no |
| Tab Panel | General General Protocol |
| Type | INT |

Outgoing Interface

Table 2-563 Outgoing Interface

| Name | Value |
|--------------------------|--------------------|
| Default | yes:all |
| Displayed name | Outgoing Interface |
| OSS name | outgoingInt |
| Read-only | no |
| Tab Panel | General General |
| Type | InterfaceType |
| Enumerated types: | |
| All | |
| IPIPT | |
| IPIPT-ALL | |
| LAN CIT | |
| LAN OAMP | |
| NETIF | |
| NETIF-ALL | |

Outgoing Interface ID**Table 2-564 Outgoing Interface ID**

| Name | Value |
|----------------|-----------------------|
| Default | yes:1 |
| Displayed name | Outgoing Interface ID |
| Maximum | 512 |
| Minimum | 1 |
| OSS name | outgoingIntId |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Source IP Address**Table 2-565 Source IP Address**

| Name | Value |
|----------------|-------------------|
| Default | yes:0.0.0.0 |
| Displayed name | Source IP Address |
| OSS name | srcIpAddress |
| Read-only | no |
| Tab Panel | General General |
| Type | INETADDR |

Source IP Mask**Table 2-566 Source IP Mask**

| Name | Value |
|----------------|------------------|
| Default | yes:ipAddrMask0 |
| Displayed name | Source IP Mask |
| OSS name | srcIpAddressMask |
| Read-only | no |
| Tab Panel | General General |
| Type | acl.IpAddrMask |

Source Port (value)**Table 2-567 Source Port (value)**

| Name | Value |
|----------------|-----------------------|
| Default | yes: |
| Displayed name | Source Port (value) |
| Maximum | 95 |
| Minimum | 0 |
| OSS name | srcPort |
| Read-only | no |

| Enumerated types: | |
| Deleted | |
| Failure | |
| Normal | |
| Not Assigned | |
| Out of Frequency Range | |
| SF | |
| Unassigned | |
| WTR | |

SSM Status

Table 2-584 SSM Status

| Name | Value |
|--------------------------|--|
| Description | The current status of incoming QL on that port |
| Displayed name | SSM Status |
| OSS name | lineRefIncSSMStatus |
| Read-only | no |
| Tab Panel | General Line Timing |
| Type | SSMStatus |
| Enumerated types: | |
| Invalid | |
| Not Applicable | |
| Not Supported | |
| Valid | |

Multipoint Service Path parameters

ID

Table 2-585 ID

| Name | Value |
|-----------------------|-------------------------------|
| Default | yes:0 |
| Description | Unique id for the Connection. |
| Displayed name | ID |
| Mandatory on creation | yes |
| OSS name | connId |
| Read-only | no |
| Tab Panel | General General |
| Type | LONG |

Service Component ID

Table 2-586 Service Component ID

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | The id of the transport service to which this service path is associated with. |
| Displayed name | Service Component ID |
| OSS name | svcComponentId |
| Read-only | yes |
| Tab Panel | General General |
| Type | LONG |

Service Path Mode

Table 2-587 Service Path Mode

| Name | Value |
|-----------------------|---|
| Description | The protection state of the connection. |
| Displayed name | Service Path Mode |
| Mandatory on creation | yes |
| OSS name | protectionState |
| Read-only | no |

Table 2-587 Service Path Mode (continued)

| Type | ProtectionState |
| Enumerated types: | |
| A1Z1 | |
| A1Z2 | |
| A2Z1 | |
| A2Z2 | |
| Protection | |
| Unprotected | |
| Working | |

Multipoint Transport Service parameters

A to Z

Table 2-588 A to Z

| Name | Value |
|--------------------------|---|
| Description | Indicates which service path is the active one in the AZ direction. |
| Displayed name | A to Z |
| OSS name | activePathAZ |
| Read-only | no |
| Tab Panel | General Active Path |
| Type | TransportServiceMode |
| Enumerated types: | |
| A1Z1 | |
| A1Z2 | |
| A2Z1 | |
| A2Z2 | |
| Protection | |
| Unprotected | |
| Working | |

Administrative State

Table 2-589 Administrative State

| Name | Value |
|----------------|---|
| Default | yes:up |
| Description | The administrative state of the service . |
| Displayed name | Administrative State |
| OSS name | administrativeState |
| Read-only | no |
| Tab Panel | General General |
| Type | ServiceState |

Administrative State

Table 2-590 Administrative State

| Name | Value |
|----------------|---|
| Default | yes:up |
| Description | The administrative state of the service . |
| Displayed name | Administrative State |
| OSS name | administrativeState |
| Read-only | no |
| Tab Panel | General States |
| Type | ServiceState |

Aggregated Service Site Operational State

Table 2-591 Aggregated Service Site Operational State

| Name | Value |
|----------------|--|
| Default | yes:up |
| Description | The operational status of this service site. |
| Displayed name | Aggregated Service Site Operational State |
| OSS name | aggrOperationalState |
| Read-only | yes |
| Tab Panel | General General |
| Type | AggrOperState |

APS Direction**Table 2-592 APS Direction**

| Name | Value |
|--------------------------|--|
| Default | yes:unspecified |
| Description | Indicates the protection direction of the APS Group to be provisioned as part of the ESNCP-protected service |
| Displayed name | APS Direction |
| OSS name | apsDirection |
| Read-only | no |
| Tab Panel | General APS Group |
| Type | ApsDirection |
| Enumerated types: | |
| Bidirectional | |
| Unidirectional | |

APS Direction**Table 2-593 APS Direction**

| Name | Value |
|--------------------------|---|
| Default | yes:unidirectional |
| Description | Duplicated from ApsGroup. Applicable only for y-cable protected service in creation mode. |
| Displayed name | APS Direction |
| OSS name | apsDirection |
| Read-only | no |
| Tab Panel | General YCable APS Group |
| Type | ApsDirection |
| Enumerated types: | |
| Bidirectional | |
| Unidirectional | |

Ason Domain**Table 2-594 Ason Domain**

| Name | Value |
|---------|-------|
| Default | yes: |

Table 2-594 Ason Domain (continued)

| Name | Value |
|-----------------------|--|
| Description | Applies to the control plane segment only. |
| Displayed name | Ason Domain |

Restoration Method**Table 2-638 Restoration Method**

| Name | Value |
|-----------------------|---|
| Default | yes:unprotected |
| Description | Applies to the control plane segment only. - Permanent connections support unprotected and snep values. - Soft permanent connections support all values. - Switched connections support all values. See common behavior shell for supported restoration types (depends on connectionSetupType and protection type). |
| Displayed name | Restoration Method |
| Mandatory on creation | yes |
| OSS name | restorationMethod |
| Read-only | no |
| Tab Panel | General Control Plane |
| Type | gmpls.RestorationMethodType |

Reversion Mode**Table 2-639 Reversion Mode**

| Name | Value |
|----------------|--|
| Default | yes>manual |
| Description | Applies to the control plane segment only. |
| Displayed name | Reversion Mode |
| OSS name | reversionType |
| Read-only | no |
| Tab Panel | General Control Plane |
| Type | gmpls.ReversionType |

Revert Mode

Table 2-640 Revert Mode

| Name | Value |
|--------------------------|---|
| Default | yes:unspecified |
| Description | Indicates whether revertive or non-revertive APS Group is to be provisioned as part of the ESNCP-protected service. |
| Displayed name | Revert Mode |
| OSS name | revertMode |
| Read-only | no |
| Tab Panel | General APS Group |
| Type | ApsRevertMode |
| Enumerated types: | |
| Non Revertive | |
| Revertive | |

Revert Mode

Table 2-641 Revert Mode

| Name | Value |
|--------------------------|--|
| Default | yes:nonrevertive |
| Description | Duplicated from ApsGroup. Applicable only for y-cable protected service in creation mode. Specifies the Reversion mode of the Transport Service. |
| Displayed name | Revert Mode |
| OSS name | revertMode |
| Read-only | no |
| Tab Panel | General YCable APS Group |
| Type | ApsRevertMode |
| Enumerated types: | |
| Non Revertive | |
| Revertive | |

Service Deployment Mode**Table 2-642 Service Deployment Mode**

| Name | Value |
|--------------------------|---|
| Default | yes:deploy |
| Description | Indicates if the TransportService is created in Preview (or) Deploy Mode. |
| Displayed name | Service Deployment Mode |
| OSS name | connectionMode |
| Read-only | no |

Active Management IP

Table 2-731 Active Management IP

| Name | Value |
|---------|-------------|
| Default | yes:0.0.0.0 |

Table 2-731 Active Management IP (continued)

| Name | Value |
|-----------------------|--|
| Description | Starting in 8.0R1 the initial value for this attribute is always the discovery address which is considered to be the initial management address. If the node's active management IP will change this attribute will be populated with the new management IP. The following scenarios are applicable: - changing the management IP from Out Of Band to Inband and vice-versa - changing the IP address for the active management IP |
| Displayed name | Active Management IP |
| Mandatory on creation | yes |
| OSS name | ipAddress |
| Read-only | no |
| Tab Panel | General General |
| Type | INETADDR |

Advertise Message**Table 2-732 Advertise Message**

| Name | Value |
|--------------------------|---|
| Default | no |
| Description | The value of dhcp6AdvertiseMessage specifies the composition of DHCPv6 Advertise Messages in case a DHCP6 application in this system will not assign any addresses to any Identity Association (IA) in a subsequent Request from the client. DHCP6 applications in this system are Relay, Server, Enhanced Subscriber Management (ESM) Proxy and ESM Relay. By default, a DHCP6 application in this system will send an Advertise message to the client that includes the IA containing a Status Code option with status code 'NoAddrsAvail', as specified in Errata 2472. If the bit corresponding to a DHCP6 application is set, that application will send an Advertise message to the client that includes only a Status Code option with code 'NoAddrsAvail'. This system will refuse bit combinations that are not supported: the 'esmRelay' and 'server' bits must be toggled together, and the 'esmProxy' and 'relay' bits are read-only. |
| Displayed name | Advertise Message |
| OSS name | dhcp6AdvertiseMessage |
| Read-only | no |
| Tab Panel | Globals.Subscriber Management DHCPv6 |
| Type | Dhcp6AdvertiseMessage |
| Enumerated types: | |

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | It is used to specify the URL for the NE for element management. The IP address can be identified as a tag in the URL with %IP%. |
| Displayed name | Element Management URL |
| Maximum | 500 |
| OSS name | elementManagerUrl |
| Read-only | no |
| Tab Panel | General Generic NE |
| Type | STRING |

Enable Auto Route Distinguisher**Table 2-757 Enable Auto Route Distinguisher**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether BGP Auto RD is enabled in the system. |
| Displayed name | Enable Auto Route Distinguisher |
| OSS name | svcBgpAutoRDEnabled |
| Read-only | no |
| Tab Panel | Globals.Service.BGP.General General |
| Type | BOOL |

Enable L3 Management Interface**Table 2-758 Enable L3 Management Interface**

| Name | Value |
|----------------|--------------------------------|
| Default | yes:false |
| Displayed name | Enable L3 Management Interface |
| OSS name | isL3MgmtItfEnabled |
| Read-only | no |
| Tab Panel | Polling.Management In Band |
| Type | BOOL |

Enable Q in Q Untagged Sap**Table 2-759 Enable Q in Q Untagged Sap**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | The value of qinqUntaggedSap controls the forwarding of packets on a QinQ X.0 access SAP. When qinqUntaggedSap is set to true, the SAP will only accept: - frames with a single tag matching the SAP's outer tag or, - frames with double tag where the outer tag matches the SAP's outer tag and inner tag is set to 0. When qinqUntaggedSap is set to false, forwarding of packets remains unchanged. |
| Displayed name | Enable Q in Q Untagged Sap |
| OSS name | qinqUntaggedSap |
| Read-only | no |
| Tab Panel | Globals.Ethernet General |
| Type | BOOL |

Enable SNMP Streaming**Table 2-760 Enable SNMP Streaming**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Displayed name | Enable SNMP Streaming |
| OSS name | snmpStreamEnable |
| Read-only | no |
| Tab Panel | Polling.Management Management Preference |
| Type | BOOL |

End**Table 2-761 End**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Specifies the end of the the BGP route-distinguisher community value range. Value of svcBgpAutoRDType1CommValEnd must be same or larger of the value of svcBgpAutoRDType1CommValStart |
| Displayed name | End |
| Maximum | 65535 |
| Minimum | 0 |

Table 2-761 End (continued)

| Name | Value |
|-------------|--|
| OSS name | svcBgpAutoRDType1CommValEnd |
| Read-only | no |
| Tab Panel | Globals.Service.BGP.General Auto Route Distinguisher CommRange |
| Type | LONG |

eNodeB Equipment**Table 2-762 eNodeB Equipment**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Pointer to the equipment on this Network Element. |
| Displayed name | eNodeB Equipment |
| OSS name | equipmentPointer |
| Read-only | no |
| Tab Panel | General ENB Base Configuration |
| Type | POINTER |

External EMS**Table 2-763 External EMS**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Specifies the local installation path of an external EM application on a client or client delegate server station. |
| Displayed name | External EMS |
| Maximum | 500 |
| OSS name | externalEms |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Feeder Port**Table 2-764 Feeder Port**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | The port to be used to feed the test traffic only to generator port of a group. If the feeder port value is zero, it implies that feeder port is not created in the system. Applicable to AOS 6250 Metro nodes |
| Displayed name | Feeder Port |
| OSS name | feederPort |
| Read-only | no |
| Tab Panel | Globals.AOS OAM General |
| Type | POINTER |

Global RADIUS Operational State**Table 2-765 Global RADIUS Operational State**

| Name | Value |
|----------------|----------------------------------|
| Default | no |
| Displayed name | Global RADIUS Operational State |
| OSS name | radiusOperState |
| Read-only | no |
| Tab Panel | Globals.RADIUS NE Authentication |
| Type | INT |

Hi-Water-Mark**Table 2-766 Hi-Water-Mark**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Displayed name | Hi-Water-Mark |
| Maximum | 100 |
| Minimum | 0 |
| OSS name | secActiveSessionHiWtrMrk |
| Read-only | no |
| Tab Panel | Security Water Mark Settings (Active Sessions) |

Table 2-766 Hi-Water-Mark (continued)

| Name | Value |
|-------|-------|
| Type | LONG |
| Units | % |

Id-Permission**Table 2-767 Id-Permission**

| Name | Value |
|----------------|--|
| Default | yes:sendIdNone |
| Description | Enumerated value indicating what, if anything, is to be included in the Sender ID TLV (21.5.3) transmitted by MHFs created by the Default Maintenance Domain, for each dot1agCfmDefaultMdEntry whose dot1agCfmDefaultMdIdPermission object contains the value sendIdDefer. Since, in this variable, there is no encompassing Maintenance Domain, the value sendIdDefer is not allowed. After this initialization, this object needs to be persistent upon reboot or restart of a device. |
| Displayed name | Id-Permission |
| OSS name | mhfIdPermission |
| Read-only | no |
| Tab Panel | Globals.CFM Default Maintenance Domain |
| Type | ethernetoam.Dot1agCfmIdPermissionEnum |

IP Address**Table 2-768 IP Address**

| Name | Value |
|----------------|--|
| Default | yes:0.0.0.0 |
| Description | Indicates IP address to be used for selecting route-distinguisher value in the system. |
| Displayed name | IP Address |
| OSS name | svcBgpAutoRDType1IpAddr |
| Read-only | no |
| Tab Panel | Globals.Service.BGP.General Auto Route Distinguisher |
| Type | INETADDR |

IP Load Balancing**Table 2-769 IP Load Balancing**

| Name | Value |
|--------------------------|--|
| Default | yes:standard |
| Description | The value of tnmXIpLoadBalancing specifies whether or not this node's system IP address is used in the final stage of the load balancing (hashing) algorithm used to choose the LAG member or ECMP route for an outbound packet. If 'systemIp' is selected, this node's system IP address (i.e. TIMETRA-VRTR-MIB::vRiaIpAddress.1.1.1) is used in the final stage of the LAG and ECMP load balancing algorithm. 'systemIp' is supported on iom3-xp IOMs, equivalent IMMs, and newer IOM and IMM types. When older IOMs/IMMs are present in a system which has 'systemIp' configured, the older IOMs operate in 'standard' mode. If 'standard' is selected, this node's system IP address is not used in the final stage of the LAG and ECMP load balancing algorithm. 'standard' is supported on all IOM and IMM types. The earlier stages of the load balancing algorithm are controlled by tnmXL4LoadBalancing and tnmXLsrIpLoadBalancing (when applicable). |
| Displayed name | IP Load Balancing |
| OSS name | ipLoadBalancing |
| Read-only | no |
| Tab Panel | Globals.Load Balancing General |
| Type | IpLoadBalancing |
| Enumerated types: | |
| | Standard |
| | System IP |

IP Next Hop Limit**Table 2-770 IP Next Hop Limit**

| Name | Value |
|----------------|---|
| Default | yes:16383 |
| Description | This value specifies the maximum number of IP next-hop entries available for subscriber management host's managed routes. |
| Displayed name | IP Next Hop Limit |
| Maximum | 16383 |
| Minimum | 0 |
| OSS name | subSysNextHopLimit |
| Read-only | no |
| Tab Panel | Globals.Subscriber Management General |
| Type | LONG |

IP Next Hop Usage High**Table 2-771 IP Next Hop Usage High**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | This value indicates if the IP next-hop usage is near the limit specified with the value of subSysNextHopLimit. |
| Displayed name | IP Next Hop Usage High |
| OSS name | subSysNextHopUsageHigh |
| Read-only | yes |
| Tab Panel | Globals.Subscriber Management General |
| Type | BOOL |

L3 Management Interface**Table 2-772 L3 Management Interface**

| Name | Value |
|----------------|--|
| Default | yes:0.0.0.0 |
| Description | The L3 network interface or IES used to manage the node. |
| Displayed name | L3 Management Interface |
| OSS name | inBandL3ManagementIf |
| Read-only | no |
| Tab Panel | Polling.Management In Band |
| Type | INETADDR |

L4 Load Balancing**Table 2-773 L4 Load Balancing**

| Name | Value |

Latitude(degrees)**Table 2-780 Latitude(degrees)**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | The latitude of the node location in degrees. |
| Displayed name | Latitude(degrees) |
| Maximum | 90 |
| Minimum | -90 |
| OSS name | latitudeInDegrees |
| Read-only | no |
| Tab Panel | General Latitude/Longitude Configuration |
| Type | FLOAT |

Level**Table 2-781 Level**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | A value indicating the MD Level at which MHFs are to be created, and Sender ID TLV transmission by those MHFs is to be controlled, for each dot1agCfmDefaultMdEntry whose dot1agCfmDefaultMdLevel object contains the value -1. After this initialization, this object needs to be persistent upon reboot or restart of a device. |
| Displayed name | Level |
| Maximum | 7 |
| Minimum | 0 |
| OSS name | maintDomainLevel |
| Read-only | no |
| Tab Panel | Globals.CFM Default Maintenance Domain |
| Type | INT |

LI Local Save Allowed**Table 2-782 LI Local Save Allowed**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Admin value of li-local-save. Specifies whether or not Lawful Intercept (LI) configuration is allowed to be save to a local file. A change to the value of this object does not take affect until the system is rebooted. |
| Displayed name | LI Local Save Allowed |
| OSS name | liLocalSaveAdmin |
| Read-only | no |
| Tab Panel | Polling.General Bof Configuration |
| Type | generic.TruthValue |

Location**Table 2-783 Location**

| Type | LONG |
| Units | % |

LSR IP Load Balancing**Table 2-786 LSR IP Load Balancing**

| Name | Value |
|----------------|--|
| Default | yes:label_only |
| Description | The value of lsrIpLoadBalancing specifies whether the IP Header is used in the LAG and ECMP LSR hashing algorithm. This is the global system setting that all ports will inherit. When set to 'label_only' only the label is used in the hashing algorithm. When set to 'label_ip', the IP Header is included in the hashing algorithm. When set to 'ip_only' the IP Header is used exclusively in the hashing Algorithm. When set to 'ethEncapIP' the IP SA/DA fields is used in the hashing Algorithm. |
| Displayed name | LSR IP Load Balancing |
| OSS name | lsrIpLoadBalancing |
| Read-only | no |
| Tab Panel | Globals.Load Balancing General |
| Type | LsrIpLoadBalancing |

Table 2-786 LSR IP Load Balancing (continued)

| Default | yes:outbandOnly |
| Displayed name | Management IP Selection |
| OSS name | mgmtIpRule |
| Read-only | no |
| Tab Panel | Polling.Management Management Preference |
| Type | PollingRule |
| Enumerated types: | |
| In Band Only | |
| In Band Preferred | |
| Out Of Band Only | |
| Out Of Band Preferred | |
| Primary Only | |
| Primary Preferred | |
| Secondary Only | |
| Secondary Preferred | |

Maximum Cleared Alarms**Table 2-792 Maximum Cleared Alarms**

| Name | Value |
|----------------|--|
| Default | yes:500 |
| Description | This attribute specifies the maximum number of cleared alarms to store in the alarmClearTable. When this number is reached, the cleared alarms with the earliest clear time will be removed from the table |
| Displayed name | Maximum Cleared Alarms |
| Maximum | 500 |
| Minimum | 0 |
| OSS name | maxClearedAlarms |
| Read-only | no |
| Tab Panel | Globals.Alarm Management General |
| Type | INT |

MHF-Creation**Table 2-793 MHF-Creation**

| Name | Value |
|----------------|--|
| Default | yes:none |
| Description | A value indicating if the Management entity can create MHFs (MIP Half Function) for the VID, for each dot1agCfmDefaultMdEntry whose dot1agCfmDefaultMdMhfCreation object contains the value defMHFdefer. Since, in this variable, there is no encompassing Maintenance Domain, the value defMHFdefer is not allowed. After this initialization, this object needs to be persistent upon reboot or restart of a device. |
| Displayed name | MHF-Creation |
| OSS name | mhfCreation |
| Read-only | no |
| Tab Panel | Globals.CFM Default Maintenance Domain |
| Type | ethernetoam.MhfCreationEnum |

Mirror Port**Table 2-794 Mirror Port**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | This port is used for dot1Q mirroring. |
| Displayed name | Mirror Port |
| OSS name | mirrorPort |
| Read-only | no |
| Tab Panel | Globals.Service.General Loopback No Service Ports |
| Type | POINTER |

| Displayed name | Number of Tries For Up State |
| Maximum | 10 |
| Minimum | 0 |
| OSS name | atmOamRetryUp |
| Read-only | no |
| Tab Panel | ATM ATM OAM |
| Type | INT |

Operational State Transition Interval**Table 2-800 Operational State Transition Interval**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Specifies the system-wide interval (in seconds) for which a BFD session on an interface transitions from Up to Down and back to Up. A BFD Session Flapped alarm will be raised. This value can be overridden on a per-interface basis. |
| Displayed name | Operational State Transition Interval |
| Maximum | 30 |
| Minimum | 0 |
| OSS name | sysBfdFlapInterval |
| Read-only | no |
| Tab Panel | Globals.BFD General |
| Type | INT |
| Units | seconds |

PBB Source Backbone MAC Address**Table 2-801 PBB Source Backbone MAC Address**

| Name | Value |
|----------------|---|
| Default | yes:00-00-00-00-00-00 |
| Description | The value of svcPbbSrcBVplsMacAddr specifies the source Backbone MAC-Address to be used for Provider Backbone Bridging (PBB) packets. Value of default for this object indicates that chassis MAC address will be used for PBB packets. |
| Displayed name | PBB Source Backbone MAC Address |
| OSS name | pbbSrcBVplsMacAddr |
| Read-only | no |
| Tab Panel | Globals.Service.General General |
| Type | MACADDR |

Persistent Index Status**Table 2-802 Persistent Index Status**

| Name | Value |

| Up | |

Primary DNS**Table 2-807 Primary DNS**

| Name | Value |
|----------------|-----------------------------------|
| Default | yes:0.0.0.0 |
| Displayed name | Primary DNS |
| OSS name | sbiPrimaryDns |
| Read-only | no |
| Tab Panel | Polling.General Bof Configuration |
| Type | INETADDR |

Primary Route Preference**Table 2-808 Primary Route Preference**

| Name | Value |
|----------------|--|
| Default | yes:outband |
| Description | The value of <code>tmnxEventPrimaryRoutePref</code> specifies the primary routing preference for traffic generated for SNMP notifications and syslog messages. A value of 'inband' specifies that the Logging utility will attempt to use the Base routing context to send SNMP notifications and syslog messages to remote destinations. A value of 'outband' specifies that the Logging utility will attempt to use the management routing context to send SNMP notifications and syslog messages to remote destinations. If the remote destination, as specified by <code>tmnxStdDestAddr</code> or <code>tmnxSyslogTargetAddr</code> , is not reachable via the routing context specified by <code>tmnxEventPrimaryRoutePref</code> , the secondary routing preference as specified by <code>tmnxEventSecondaryRoutePref</code> will be attempted. |
| Displayed name | Primary Route Preference |

| Tab Panel | General General |
| Type | RegionType |
| Enumerated types: | |
| ANSI | |
| ETSI | |

Remote URL**Table 2-815 Remote URL**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | This value specifies the URL of the Deterministic NAT script that this system generates to allow offline calculation of Deterministic NAT. |
| Displayed name | Remote URL |
| Maximum | 180 |
| Minimum | 0 |
| OSS name | natDetScriptLocation |
| Read-only | no |
| Tab Panel | Globals.Subscriber Management NAT Deterministic Script |
| Type | STRING |

Resource Group ID**Table 2-816 Resource Group ID**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | The resource group that this network element belongs to. This assignment governs which worker pool resources will be used to service this router. |
| Displayed name | Resource Group ID |
| Maximum | 2147483647 |
| Minimum | 0 |
| OSS name | resourceGroupId |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Resync Status**Table 2-817 Resync Status**

| Name | Value |
|--------------------------|-------------------------|
| Default | yes:notAttempted |
| Displayed name | Resync Status |
| OSS name | resyncStatus |
| Read-only | yes |
| Tab Panel | Polling.General General |
| Type | NeResyncStatus |
| Enumerated types: | |

Secondary DNS

Table 2-821 Secondary DNS

| Name | Value |
|----------------|-----------------------------------|
| Default | yes:0.0.0.0 |
| Displayed name | Secondary DNS |
| OSS name | sbiSecondaryDns |
| Read-only | no |
| Tab Panel | Polling.General Bof Configuration |
| Type | INETADDR |

Secondary Route Preference

Table 2-822 Secondary Route Preference

| Name | Value |
|----------------|--|
| Default | yes:inband |
| Description | The value of <code>tmnxEventSecondaryRoutePref</code> specifies the secondary routing preference for traffic generated for SNMP notifications and syslog messages. The routing context specified by the <code>tmnxEventSecondaryRoutePref</code> will be attempted if the remote destination was not reachable by the primary routing preference, specified by <code>tmnxEventPrimaryRoutePref</code> . The value specified for <code>tmnxEventSecondaryRoutePref</code> must be distinct from the value for <code>tmnxEventPrimaryRoutePref</code> . A value of 'inband' specifies that the Logging utility will attempt to use the Base routing context to send SNMP notifications and syslog messages to remote destinations. A value of 'outband' specifies that the Logging utility will attempt to use the management routing context to send SNMP notifications and syslog messages to remote destinations. A value of 'none' specifies that no attempt will be made to send SNMP notifications and syslog messages to remote destinations. If the remote destination, as specified by <code>tmnxStdDestAddr</code> or <code>tmnxSyslogTargetAddr</code> , is not reachable via the routing contexts specified by <code>tmnxEventPrimaryRoutePref</code> and <code>tmnxEventSecondaryRoutePref</code> , the Log utility will fail to send SNMP notifications and syslog messages to the remote destination. |
| Displayed name | Secondary Route Preference |

Table 2-822 Secondary Route Preference (continued)

| Type | netw.SecondaryEventRoutePreference |

Separate LI Administration**Table 2-823 Separate LI Administration**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Admin value of li-separate. Specifies whether or not a non-LI user has access to Lawful Intercept (LI) information. When the value is 'true', a user who does not have the TMETRA-SECURITY-MIB::tmnxUserAccess 'li' bit set will not be allowed to access CLI or SNMP objects in the 'li' context. A change to the value of this object does not take affect until the system is rebooted. |
| Displayed name | Separate LI Administration |
| OSS name | liSeparateAdmin |
| Read-only | no |
| Tab Panel | Polling.General Bof Configuration |
| Type | generic.TruthValue |

Service ID Lag Hashing**Table 2-824 Service ID Lag Hashing**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | The value specifies how the node distributes LAG link traffic in a VLL service when both ECMP and LAG load balancing are performed. The default value, 'false (1),' preserves the behaviour prior to the introduction of this object: the ingress IOM will select one ECMP interface and one LAG link for all packets on the VLL service based on a modulo of the service ID. The value of 'true (2)' introduces an enhanced distribution which hashes the service-id prior to the LAG link modulo operation. |
| Displayed name | Service ID Lag Hashing |
| OSS name | svcIdLagHashing |
| Read-only | no |
| Tab Panel | Globals.Load Balancing General |

Table 2-824 Service ID Lag Hashing (continued)

| Tab Panel | Port General |
| Type | INT |
| Units | bytes |

Actual Primary Status

Table 2-873 Actual Primary Status

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Actual primary interface status for this interface. |
| Displayed name | Actual Primary Status |
| OSS name | actualPrimaryStatus |
| Read-only | no |
| Tab Panel | General General |
| Type | generic.TruthValue |

Admin Link Local Address

Table 2-874 Admin Link Local Address

| Name | Value |
|----------------|---------------------------------|
| Default | yes: |
| Displayed name | Admin Link Local Address |
| OSS name | adminLinkLocalAddrWithZoneIndex |
| Read-only | no |
| Tab Panel | General General |
| Type | INETADDR |

Admin Link Local Address

Table 2-875 Admin Link Local Address

| Name | Value |
|----------------|--------------------------|
| Default | yes:0:0:0:0:0:0:0 |
| Displayed name | Admin Link Local Address |
| OSS name | adminLinkLocalAddr |
| Read-only | no |
| Tab Panel | General General |
| Type | INETADDR |

Admin Link Local Address Preferred**Table 2-876 Admin Link Local Address Preferred**

| Name | Value |
|----------------|------------------------------------|
| Default | yes:false |
| Displayed name | Admin Link Local Address Preferred |
| OSS name | adminLinkLclAddrPreferred |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Administrative State**Table 2-877 Administrative State**

| Name | Value |
|--------------------------|----------------------|
| Default | yes:unspecified |
| Displayed name | Administrative State |
| OSS name | administrativeState |
| Read-only | no |
| Tab Panel | General General |
| Type | AdministrativeState |
| Enumerated types: | |
| | Down |
| | Up |

Aggregate CIR**Table 2-878 Aggregate CIR**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Specifies the CIR of all egress queues for this Network Interface. |
| Displayed name | Aggregate CIR |
| Maximum | 10000000 |
| Minimum | -1 |
| OSS name | egressAggCIR |
| Read-only | no |

Table 2-878 Aggregate CIR (continued)

| Name | Value |
|-------------|-------------|
| Tab Panel | QoS General |
| Type | INT |
| Units | kbps |

Aggregate Rate Limit

Table 2-879 Aggregate Rate Limit

| Name | Value |
|----------------|--|
| Default | yes:-1 |
| Description | Specifies the maximum total rate of all egress queues for this Network Interface. The value -1 means that there is no limit. |
| Displayed name | Aggregate Rate Limit |
| Maximum | 10000000 |
| Minimum | -1 |
| OSS name | egressAggRateLimit |
| Read-only | no |
| Tab Panel | QoS General |
| Type | INT |
| Units | kbps |

Allow Directed Broadcasts

Table 2-880 Allow Directed Broadcasts

| Name | Value |
|----------------|---------------------------|
| Default | yes:false |
| Displayed name | Allow Directed Broadcasts |
| OSS name | directedBroadcast |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Assign Aggregate CIR**Table 2-881 Assign Aggregate CIR**

| Name | Value |
|----------------|---------------------------|
| Displayed name | Assign Aggregate CIR |
| OSS name | valueManager:egressAggCIR |
| Read-only | no |
| Tab Panel | QoS General |

Assign Aggregate Rate Limit**Table 2-882 Assign Aggregate Rate Limit**

| Name | Value |
|----------------|---------------------------------|
| Displayed name | Assign Aggregate Rate Limit |
| OSS name | valueManager:egressAggRateLimit |
| Read-only | no |
| Tab Panel | QoS General |

BFD Configured**Table 2-883 BFD Configured**

| Name | Value |
|----------------|---|
| Description | Specifies if BFD is configured on this interface. |
| Displayed name | BFD Configured |
| OSS name | bfdConfigured |
| Read-only | no |
| Tab Panel | General BFD Configured |
| Type | BOOL |

Broadcast**Table 2-884 Broadcast**

| Name | Value |
|----------------|-----------|
| Displayed name | Broadcast |
| OSS name | broadcast |
| Read-only | no |

Table 2-884 Broadcast (continued)

| Name | Value |
|-------------|-------------|
| Tab Panel | General NTP |

Broadcast Address**Table 2-885 Broadcast Address**

| Name | Value |
|----------------|-------------------|
| Default | yes:0.0.0.0 |
| Displayed name | Broadcast Address |
| Maximum | 50 |
| OSS name | bcastAddress |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

ByPass Zone Config**Table 2-886 ByPass Zone Config**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | The value of securityPolicyBypass indicates whether traffic on this interface bypasses the security check. |
| Displayed name | ByPass Zone Config |
| OSS name | securityPolicyBypass |
| Read-only | no |
| Tab Panel | Zone General |
| Type | BOOL |

Cflowd Type**Table 2-887 Cflowd Type**

| Name | Value |
|-------------|--|
| Default | yes:1 |
| Description | This attribute is deprecated for 7750/7450/7950 13.0 and above nodes. Please use <code>{{cflowd.CflowdSampling}}</code> instead. |

Table 2-887 Cflowd Type (continued)

| Name | Value |
|----------------|-----------------|
| Displayed name | Cflowd Type |
| OSS name | cflowdType |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Class**Table 2-888 Class**

| Name | Value |
|--------------------------|-------------------|
| Default | yes:numbered |
| Displayed name | Class |
| OSS name | interfaceClass |
| Read-only | no |
| Tab Panel | General General |
| Type | RtrInterfaceClass |
| Enumerated types: | |
| Management | |
| Numbered | |
| System | |
| Unnumbered | |
| Unspecified | |

Client Status**Table 2-889 Client Status**

| Name | Value |
|----------------|--|
| Description | DHCP status of the DHCP Client IP interface. |
| Displayed name | Client Status |
| OSS name | ifDhcpStatus |
| Read-only | yes |
| Tab Panel | DHCP-CLIENT Parameter General |
| Type | InterfaceDhcpStatus |

Table 2-889 Client Status (continued)

| Name | Value |
|--------------------------|-------|
| Enumerated types: | |
| Active | |
| Discovery | |
| Timeout | |

Configured Primary Status**Table 2-890 Configured Primary Status**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Primary interface configuration status for this interface. If set to true, this interface will be used as the default interface for the VLAN on which it resides when possible. |
| Displayed name | Configured Primary Status |
| OSS name | configPrimaryStatus |
| Read-only | no |
| Tab Panel | General General |
| Type | generic.TruthValue |

Description**Table 2-891 Description**

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Description |
| Maximum | 80 |
| Minimum | 0 |
| OSS name | description |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

DHCP Option-60**Table 2-892 DHCP Option-60**

| Name | Value |
|----------------|---|
| Default | yes:OmniSwitch |
| Description | The value of option-60 filed that should be inserted in DHCP discover/request packet if configured. |
| Displayed name | DHCP Option-60 |
| Maximum | 64 |
| Minimum | 1 |
| OSS name | ifDhcpOption60 |
| Read-only | no |
| Tab Panel | DHCP-CLIENT Parameter General |
| Type | STRING |

Domain**Table 2-893 Domain**

| Name | Value |
|-----------------------|--|
| Default | yes:network |
| Description | This property will distinguish between a regular network interface and an mpls-tp interface. |
| Displayed name | Domain |
| Mandatory on creation | yes |
| OSS name | ifType |
| Read-only | no |
| Tab Panel | General General |
| Type | rtr.RtrInterfaceType |

Duplicate Address Detection Disabled**Table 2-894 Duplicate Address Detection Disabled**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | The value of dadDisable specifies if the Duplicate Address Detection (DAD) is disabled for this interface. |
| Displayed name | Duplicate Address Detection Disabled |

Table 2-894 Duplicate Address Detection Disabled (continued)

| Name | Value |
|-------------|-----------------|
| OSS name | dadDisable |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Egress IP ACL**Table 2-895 Egress IP ACL**

| Name | Value |
|----------------|-------------------------|
| Default | yes: |
| Displayed name | Egress IP ACL |
| OSS name | egressFilterPointer |
| Read-only | no |
| Tab Panel | Policies.General IP ACL |
| Type | POINTER |

Egress IP Load Balancing**Table 2-896 Egress IP Load Balancing**

| Name | Value |
|--------------------------|---|
| Default | yes:both |
| Description | Specifies whether to include source address or destination address or both in LAG/ECMP hash on IP interfaces. |
| Displayed name | Egress IP Load Balancing |
| OSS name | egrIpLoadBalancing |
| Read-only | no |
| Tab Panel | General Load Balancing |
| Type | EgrIpLoadBalancing |
| Enumerated types: | |
| Both | |
| Destination | |
| Source | |

Egress IPv6 ACL**Table 2-897 Egress IPv6 ACL**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Pointer to the instance of the ACL IPv6 filter. |
| Displayed name | Egress IPv6 ACL |
| OSS name | egressIpv6FilterPointer |
| Read-only | no |
| Tab Panel | Policies.General IPv6 ACL |
| Type | POINTER |

Egress Network Queue Policy**Table 2-898 Egress Network Queue Policy**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Pointer to the instance of Network Queue Policy |
| Displayed name | Egress Network Queue Policy |
| OSS name | egressNqueuePolicyObjectPointer |
| Read-only | no |
| Tab Panel | QoS General |
| Type | POINTER |

Enable**Table 2-899 Enable**

| Name | Value |
|----------------|-----------------------------------|
| Displayed name | Enable |
| OSS name | valueManager:ldpSyncTimerEnabled |
| Read-only | no |
| Tab Panel | General LDP Synchronization Timer |

Enable Forwarding

Table 2-900 Enable Forwarding

| Name | Value |
|----------------|--------------------|
| Default | yes:false |
| Displayed name | Enable Forwarding |
| OSS name | enableForwarding |
| Read-only | no |
| Tab Panel | General General |
| Type | generic.TruthValue |

Enable Ingress FlowSpec IPv4

Table 2-901 Enable Ingress FlowSpec IPv4

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies if ingress flowspec IPv4 is enabled for this interface. |
| Displayed name | Enable Ingress FlowSpec IPv4 |
| OSS name | ingressFlowspec |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Enable Ingress FlowSpec IPv6

Table 2-902 Enable Ingress FlowSpec IPv6

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies if ingress flowspec IPv6 is enabled for this interface. |
| Displayed name | Enable Ingress FlowSpec IPv6 |
| OSS name | ingressIPv6Flowspec |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Enable Ingress Stats**Table 2-903 Enable Ingress Stats**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies if ingress statistics gathering is enabled for this interface. |
| Displayed name | Enable Ingress Stats |
| OSS name | enableIngressStats |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Enable MAC Accounting Stats**Table 2-904 Enable MAC Accounting Stats**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies if MAC accounting statistics gathering is enabled for this interface. |
| Displayed name | Enable MAC Accounting Stats |
| OSS name | enableMacAccountingStats |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Encapsulation Type**Table 2-905 Encapsulation Type**

| Name | Value |
|----------------|-------------------------|
| Default | yes:unspecified |
| Displayed name | Encapsulation Type |
| OSS name | encapType |
| Read-only | no |
| Tab Panel | Port General |
| Type | equipment.PortEncapType |

GNE

Table 2-906 GNE

| Name | Value |
|----------------|---------------------------------------|
| Default | yes:false |
| Description | Is this a network interface on a GNE? |
| Displayed name | GNE |
| OSS name | isGne |
| Read-only | yes |
| Tab Panel | General GNE |
| Type | BOOL |

Groups Included

Table 2-907 Groups Included

| Name | Value |
|----------------|------------------------------|
| Default | yes:0 |
| Displayed name | Groups Included |
| OSS name | adminGroupInclude |
| Read-only | no |
| Tab Panel | General Administrative Group |
| Type | LONG |
| Units | bitmap |

High Threshold

Table 2-908 High Threshold

| Name | Value |
|----------------|------------------------------|
| Default | yes:1000 |
| Displayed name | High Threshold |
| Minimum | 0 |
| OSS name | monitorMcRedirectHighThresh |
| Read-only | no |
| Tab Panel | McRedirect Threshold Packets |
| Type | INT |

Ingress IP ACL**Table 2-909 Ingress IP ACL**

| Name | Value |
|----------------|-------------------------|
| Default | yes: |
| Displayed name | Ingress IP ACL |
| OSS name | ingressFilterPointer |
| Read-only | no |
| Tab Panel | Policies.General IP ACL |
| Type | POINTER |

Ingress IPv6 ACL**Table 2-910 Ingress IPv6 ACL**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Pointer to the instance of the ACL IPv6 filter. |
| Displayed name | Ingress IPv6 ACL |
| OSS name | ingressIpv6FilterPointer |
| Read-only | no |
| Tab Panel | Policies.General IPv6 ACL |
| Type | POINTER |

Inner Encapsulation Value**Table 2-911 Inner Encapsulation Value**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Provisioned inner encaps value. This value is propagated into: terminatedPortInnerEncapValue. |
| Displayed name | Inner Encapsulation Value |
| OSS name | innerEncapValue |
| Read-only | no |
| Tab Panel | Port General |
| Type | INT |

Interface Encap Type

Table 2-912 Interface Encap Type

| Name | Value |
|--------------------------|---|
| Default | yes:ethernet2 |
| Description | This is the encapsulation type of the IP Interface. Only applicable for AOS Node types. |
| Displayed name | Interface Encap Type |
| OSS name | encapsulationType |
| Read-only | no |
| Tab Panel | General General |
| Type | EncapType |
| Enumerated types: | |
| Ethernet2 | |
| SNAP | |

Interface ID

Table 2-913 Interface ID

| Name | Value |
|-----------------------|-----------------|
| Default | yes:0 |
| Displayed name | Interface ID |
| Mandatory on creation | yes |
| Maximum | 5119 |
| Minimum | 1 |
| OSS name | id |
| Read-only | no |
| Tab Panel | General General |
| Type | LONG |

IPv6 Allowed

Table 2-914 IPv6 Allowed

| Name | Value |
|----------------|--------------|
| Default | yes:false |
| Displayed name | IPv6 Allowed |
| OSS name | ipv6Allowed |

Table 2-914 IPv6 Allowed (continued)

| Name | Value |
|-------------|-----------------|
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

IPv6 Operational State**Table 2-915 IPv6 Operational State**

| Name | Value |
|----------------|------------------------|
| Default | yes:vRtrIfUnknown |
| Displayed name | IPv6 Operational State |
| OSS name | ipv6OperationalState |
| Read-only | yes |
| Tab Panel | General General |
| Type | netw.OperationalState |

L4 Load Balance**Table 2-916 L4 Load Balance**

| Name | Value |
|--------------------------|--|
| Default | yes:system |
| Description | aluVrtrIfL4LoadBalancing specifies the load balancing algorithm to be used on this interface. When the value is 'includeL4', the src and dst port are used in the hashing algorithm. When it's 'excludeL4', they are not included. When the value is 'system', the port inherits the global settings in {netw.NetworkElement.l4LoadBalancing}. |
| Displayed name | L4 Load Balance |
| OSS name | aluIfL4LoadBalancing |
| Read-only | no |
| Tab Panel | General General |
| Type | AluIfL4LoadBalancing |
| Enumerated types: | |
| Exclude L4 | |
| Include L4 | |
| System | |

LAG Link Map Profile**Table 2-917 LAG Link Map Profile**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Pointer to the LAG Link Mapping Profile |
| Displayed name | LAG Link Map Profile |
| OSS name | lagLinkMapProfilePointer |
| Read-only | no |
| Tab Panel | Port General |
| Type | POINTER |

Last Operational State Change**Table 2-918 Last Operational State Change**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Indicates the sysUpTime when the operational state of this interface last changed. |
| Displayed name | Last Operational State Change |
| OSS name | lastOperStateChange |
| Read-only | yes |
| Tab Panel | General General |
| Type | DATE |

LDP Synchronization Timer**Table 2-919 LDP Synchronization Timer**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Specifies a time interval used for IGP-LDP synchronization. |
| Displayed name | LDP Synchronization Timer |
| Maximum | 1800 |
| Minimum | 0 |
| OSS name | ldpSyncTimer |
| Read-only | no |
| Tab Panel | General LDP Synchronization Timer |

Table 2-919 LDP Synchronization Timer (continued)

| Name | Value |
|-------|---------|
| Type | INT |
| Units | seconds |

Link Local Address**Table 2-920 Link Local Address**

| Name | Value |
|----------------|--------------------|
| Default | yes:0.0.0.0 |
| Displayed name | Link Local Address |
| OSS name | linkLocalAddress |
| Read-only | yes |
| Tab Panel | General General |
| Type | INETADDR |

Link Local Address State**Table 2-921 Link Local Address State**

| Name | Value |
|--------------------------|--------------------------|
| Default | yes:unknown |
| Displayed name | Link Local Address State |
| OSS name | linkLocalAddressState |
| Read-only | yes |
| Tab Panel | General General |
| Type | IPv6AddressState |
| Enumerated types: | |
| deprecated | |
| duplicated | |
| inaccessible | |
| preferred | |
| tentative | |
| unknown | |

Local DHCP Server

Table 2-922 Local DHCP Server

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Pointer to the instance of local DHCP server. |
| Displayed name | Local DHCP Server |
| OSS name | localDhcpServerPointer |
| Read-only | no |
| Tab Panel | Local DHCP General |
| Type | POINTER |

Local DHCPv6 Server

Table 2-923 Local DHCPv6 Server

| Name | Value |
|----------------|-----------------------------------|
| Default | yes: |
| Description | Pointer to a Local DHCPv6 server. |
| Displayed name | Local DHCPv6 Server |
| OSS name | localDhcp6ServerPointer |
| Read-only | no |
| Tab Panel | Local DHCP General |
| Type | POINTER |

Loopback Enabled

Table 2-924 Loopback Enabled

| Name | Value |
|----------------|------------------|
| Default | yes:false |
| Displayed name | Loopback Enabled |
| OSS name | loopbackEnabled |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Low Threshold**Table 2-925 Low Threshold**

| Name | Value |
|----------------|------------------------------|
| Default | yes:500 |
| Displayed name | Low Threshold |
| Minimum | 0 |
| OSS name | monitorMcRedirectLowThresh |
| Read-only | no |
| Tab Panel | McRedirect Threshold Packets |
| Type | INT |

LSR IP Load Balancing**Table 2-926 LSR IP Load Balancing**

| Name | Value |
|--------------------------|--|
| Default | yes:system |
| Description | The value of ifLsrIpLoadBalancing specifies whether the IP Header is used in the LAG and ECMP LSR hashing algorithm. This is the per interface setting. When set to 'label-only (1)' only the label is used in the hashing algorithm. When set to 'label-ip (2)', the IP Header is included in the hashing algorithm. When set to 'ip-only (3)' the IP Header is used exclusively in the hashing algorithm. When set to 'system (0)', the hashing algorithm is inherited from the setting of 'lsrIpLoadBalancing' under the NetworkElement object. |
| Displayed name | LSR IP Load Balancing |
| OSS name | ifLsrIpLoadBalancing |
| Read-only | no |
| Tab Panel | General Load Balancing |
| Type | IfLsrIpLoadBalancing |
| Enumerated types: | |
| Ethernet Encapsulated IP | |
| IP Only | |
| Label IP | |
| Label Only | |
| System | |

MAC Address**Table 2-927 MAC Address**

| Name | Value |
|----------------|-----------------------|
| Default | yes:00-00-00-00-00-00 |
| Displayed name | MAC Address |
| OSS name | physicalAddress |
| Read-only | no |
| Tab Panel | General General |
| Type | MACADDR |

Maximum Frame Size Mismatch**Table 2-928 Maximum Frame Size Mismatch**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | The value is set to 'true' when the provisioned MTU value is greater than the actual MTU value (provisionedMtu > actualMtu). |
| Displayed name | Maximum Frame Size Mismatch |
| OSS name | mtuMismatch |
| Read-only | yes |
| Tab Panel | Port General |
| Type | BOOL |

Monitor McRedirect**Table 2-929 Monitor McRedirect**

| Name | Value |
|----------------|--------------------|
| Default | yes:false |
| Displayed name | Monitor McRedirect |
| OSS name | monitorMcRedirect |
| Read-only | no |
| Tab Panel | McRedirect General |
| Type | BOOL |

Name**Table 2-930 Name**

| Name | Value |
|-----------------------|-----------------|
| Default | yes: |
| Displayed name | Name |
| Mandatory on creation | yes |
| Maximum | 40 |
| Minimum | 0 |
| OSS name | displayName |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

NE DDoS Protection Policy**Table 2-931 NE DDoS Protection Policy**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Associates Distributed CPU Protection Policy with a Base Router Interface. |
| Displayed name | NE DDoS Protection Policy |
| OSS name | dCpuProtectionPolicyPointer |
| Read-only | no |
| Tab Panel | Security NE Protection |
| Type | POINTER |

NE DoS Protection**Table 2-932 NE DoS Protection**

| Name | Value |
|----------------|---|
| Default | yes:NE DoS Protection:255 |
| Description | Pointer specifies the DoS Protection Policy that is applicable to this interface. |
| Displayed name | NE DoS Protection |
| OSS name | dosProtection |
| Read-only | no |
| Tab Panel | Security NE Protection |

Table 2-932 NE DoS Protection (continued)

| Name | Value |
|------|---------|
| Type | POINTER |

Network Policy

Table 2-933 Network Policy

| Name | Value |
|----------------|----------------------------|
| Default | yes:Network:1 |
| Displayed name | Network Policy |
| OSS name | networkPolicyObjectPointer |
| Read-only | no |
| Tab Panel | Policies.General Network |
| Type | POINTER |

Operational State

Table 2-934 Operational State

| Name | Value |
|----------------|-------------------|
| Default | yes:unknown |
| Displayed name | Operational State |
| OSS name | operationalState |
| Read-only | yes |
| Tab Panel | General General |
| Type | OperationalState |

Operational State Reason

Table 2-935 Operational State Reason

| Name | Value |
|----------------|--------------------------|
| Displayed name | Operational State Reason |
| OSS name | operStateReason |
| Read-only | yes |
| Tab Panel | General General |
| Type | OperStateReason |

Table 2-935 Operational State Reason (continued)

| Name | Value |
|--------------------------|-------|
| Enumerated types: | |
| Admin Down | |
| Device Down | |
| Interface Up | |
| No Router MAC | |
| No Such Device | |
| Tunnel Dest Unreachable | |
| Tunnel Src Invalid | |
| Unbound | |

Outer Encapsulation Value**Table 2-936 Outer Encapsulation Value**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Provisioned outer encap value. This value is propagated into: terminatedPortOuterEncapValue. |
| Displayed name | Outer Encapsulation Value |
| Maximum | 4094 |
| Minimum | 0 |
| OSS name | outerEncapValue |
| Read-only | no |
| Tab Panel | Port General |
| Type | INT |

PIM RP Delayed Up Period**Table 2-937 PIM RP Delayed Up Period**

| Name | Value |
|----------------|--------------------------|
| Default | yes:0 |
| Displayed name | PIM RP Delayed Up Period |
| Maximum | 1200 |
| Minimum | 0 |

Table 2-937 PIM RP Delayed Up Period (continued)

|-------------|----------------------|
| OSS name | pimRPDelayedUpPeriod |
| Read-only | no |
| Tab Panel | General General |
| Type | LONG |

PIM RP Delayed Up Timer

Table 2-938 PIM RP Delayed Up Timer

| Name | Value |
|----------------|-------------------------|
| Default | yes:-1 |
| Displayed name | PIM RP Delayed Up Timer |
| Maximum | 300 |
| Minimum | -1 |
| OSS name | pimRPDelayedUpTimer |
| Read-only | yes |
| Tab Panel | General General |
| Type | INT |

Policy Accounting Template

Table 2-939 Policy Accounting Template

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | The value points to the policy accounting template created under Routing policies. |
| Displayed name | Policy Accounting Template |
| OSS name | policyAccountingTemplatePointer |
| Read-only | no |
| Tab Panel | Policies.General Routing Ingress Accounting Template |
| Type | POINTER |

Port**Table 2-940 Port**

| Name | Value |
|----------------|--------------|
| Default | yes: |
| Displayed name | Port |
| Maximum | 252 |
| OSS name | portName |
| Read-only | yes |
| Tab Panel | Port General |

| Displayed name | PTP HW Assist |
| OSS name | ptpVrtrIfAdminState |
| Read-only | no |
| Tab Panel | General PTP HW |

PTP Interface**Table 2-944 PTP Interface**

| Name | Value |
|----------------|-----------------|
| Default | yes:false |
| Displayed name | PTP Interface |
| OSS name | isPtpInterface |
| Read-only | yes |
| Tab Panel | General General |
| Type | BOOL |

QoS Route Lookup IPv4**Table 2-945 QoS Route Lookup IPv4**

| Name | Value |
|--------------------------|---|
| Default | yes:none |
| Description | QoS classification of the ingress IPv4 packets on an interface based on the QoS information associated with routes in the forwarding table. |
| Displayed name | QoS Route Lookup IPv4 |
| OSS name | qosRouteLookupIpv4 |
| Read-only | no |
| Tab Panel | General General |
| Type | QosLookup |
| Enumerated types: | |
| Destination | |
| None | |
| Source | |

QoS Route Lookup IPv6**Table 2-946 QoS Route Lookup IPv6**

| Name | Value |
|--------------------------|---|
| Default | yes:none |
| Description | QoS classification of the ingress IPv6 packets on an interface based on the QoS information associated with routes in the forwarding table. |
| Displayed name | QoS Route Lookup IPv6 |
| OSS name | qosRouteLookupIpv6 |
| Read-only | no |
| Tab Panel | General General |
| Type | QosLookup |
| Enumerated types: | |
| Destination | |
| None | |
| Source | |

Queue Group Instance ID**Table 2-947 Queue Group Instance ID**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Specifies the instance of the egress queue group for this interface. |
| Displayed name | Queue Group Instance ID |
| Maximum | 65535 |
| Minimum | 0 |
| OSS name | qosEgrQGrpInstanceId |
| Read-only | no |
| Tab Panel | Policies.General Network Egress Port Redirect |
| Type | LONG |

Queue Group Instance ID**Table 2-948 Queue Group Instance ID**

| Name | Value |
|---------|-------|
| Default | yes:0 |

Table 2-948 Queue Group Instance ID (continued)

| Name | Value |
|----------------|---|
| Description | Specifies the instance of the forwarding-plane ingress queue group for this interface |
| Displayed name | Queue Group Instance ID |
| Maximum | 65535 |
| Minimum | 0 |
| OSS name | qosIngQGrpInstanceId |
| Read-only | no |
| Tab Panel | Policies.General Network Ingress Forwarding Plane Redirect |
| Type | LONG |

Queue Group Template Policy**Table 2-949 Queue Group Template Policy**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Specifies the forwarding-plane queue group policy for this interface. |
| Displayed name | Queue Group Template Policy |
| OSS name | qosIngFpRedirectQGrpPointer |
| Read-only | no |
| Tab Panel | Policies.General Network Ingress Forwarding Plane Redirect |
| Type | POINTER |

Queue Group Template Policy**Table 2-950 Queue Group Template Policy**

| Name | Value |
|----------------|---|
| Default | yes: |
| Displayed name | Queue Group Template Policy |
| OSS name | redirectQueueGroupPointer |
| Read-only | no |
| Tab Panel | Policies.General Network Egress Port Redirect |
| Type | POINTER |

RADIUS Proxy Server**Table 2-951 RADIUS Proxy Server**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Pointer to a RADIUS Proxy Server. Setting this pointer binds the interface to a particular RADIUS Proxy Server and creates an instance of aaa.RadiusProxyInterface. Clearing this pointer deletes the associated RADIUS Proxy Interface. |
| Displayed name | RADIUS Proxy Server |
| OSS name | radiusProxyServerPointer |
| Read-only | no |
| Tab Panel | RADIUS Proxy Server General |
| Type | POINTER |

Routing Instance ID**Table 2-952 Routing Instance ID**

| Name | Value |
|----------------|--------------------------|
| Default | yes:1 |
| Displayed name | Routing Instance ID |
| Maximum | 10240 |
| Minimum | 1 |
| OSS name | routerId |
| Read-only | yes |
| Tab Panel | General Routing Instance |
| Type | INT |

Routing Instance Name**Table 2-953 Routing Instance Name**

| Name | Value |
|----------------|-----------------------|
| Default | yes: |
| Displayed name | Routing Instance Name |
| Maximum | 32 |
| Minimum | 0 |
| OSS name | routerName |

Table 2-953 Routing Instance Name (continued)

| Name | Value |
|-------------|--------------------------|
| Read-only | yes |
| Tab Panel | General Routing Instance |
| Type | STRING |

Show Link In IGP Topology**Table 2-954 Show Link In IGP Topology**

| Name | Value |
|--------------------------------------|---|
| Default | yes:policy |
| Description | Indicates the link associated with this interface should be showed on the IGP topology map. |
| Displayed name | Show Link In IGP Topology |
| OSS name | showLinkInIgpTopology |
| Read-only | no |
| Tab Panel | General General |
| Type | IgpTopologyType |
| Enumerated types: | |
| Derive from Non-Routed Edge policies | |
| No | |
| Yes | |

Site ID**Table 2-955 Site ID**

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Site ID |
| Maximum | 50 |
| OSS name | nodeId |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

Site ID**Table 2-956 Site ID**

| Name | Value |
|----------------|--------------|
| Default | yes: |
| Displayed name | Site ID |
| Maximum | 50 |
| OSS name | nodeId |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

Site Name**Table 2-957 Site Name**

| Name | Value |
|----------------|--------------|
| Default | yes: |
| Displayed name | Site Name |
| Maximum | 252 |
| OSS name | nodeName |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

SPI Load Balancing**Table 2-958 SPI Load Balancing**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether SPI use in hashing is enabled on the configured router interface. |
| Displayed name | SPI Load Balancing |
| OSS name | spiLoadBalancing |
| Read-only | no |
| Tab Panel | General Load Balancing |
| Type | BOOL |

State Qualifier**Table 2-959 State Qualifier**

| Name | Value |
|----------------|---|
| Default | yes:OK |
| Description | This value is derived from underlyingResourceState and/or resourceState attributes. If the underlyingResourceState is not 'OK' and is not 'unspecified' the value of compositeState will be set to the same value as underlyingResourceState. Otherwise the value of compositeState will be set to the same value as resourceState. |
| Displayed name | State Qualifier |
| OSS name | compositeState |
| Read-only | yes |
| Tab Panel | General General |
| Type | ResourceCompositeState |

Strip Label**Table 2-960 Strip Label**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | The value of stripLabel specifies whether a packet received on the interface will have its MPLS labels stripped from the packet (true) or not (false). |
| Displayed name | Strip Label |
| OSS name | stripLabel |
| Read-only | no |
| Tab Panel | General General |
| Type | generic.TruthValue |

TCP-MSS IPv4**Table 2-961 TCP-MSS IPv4**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | This property specifies the TCP maximum segment size(MSS) for TCP connections originated from the associated IP interface. The valid range is [0, 480-9158]. |
| Displayed name | TCP-MSS IPv4 |
| Maximum | 9158 |
| Minimum | 0 |

Table 2-961 TCP-MSS IPv4 (continued)

| Name | Value |
|-------------|-----------------|
| OSS name | tcpMss |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

TCP-MSS IPv6**Table 2-962 TCP-MSS IPv6**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | This property specifies the TCP maximum segment size(MSS) for TCP connections originated from the associated IPv6 interface. The valid range is [0, 1220-9138]. |
| Displayed name | TCP-MSS IPv6 |
| Maximum | 9138 |
| Minimum | 0 |
| OSS name | tcpMssIpv6 |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

TEID Load Balancing**Table 2-963 TEID Load Balancing**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether TEID load balancing is enabled for GTP-U/GTP-C tunnels on all configured Router interfaces. |
| Displayed name | TEID Load Balancing |
| OSS name | ifTeIdLoadBalancing |
| Read-only | no |
| Tab Panel | General Load Balancing |
| Type | BOOL |

Trusted

Table 2-964 Trusted

| Name | Value |
|----------------|--------------------|
| Default | yes:true |
| Displayed name | Trusted |
| OSS name | isTrusted |
| Read-only | no |
| Tab Panel | General General |
| Type | generic.TruthValue |

Type

Table 2-965 Type

| Name | Value |
|----------------|-----------------|
| Default | yes:unspecified |
| Displayed name | Type |
| OSS name | domain |
| Read-only | yes |
| Tab Panel | General General |
| Type | DomainType |

Underlying Port State

Table 2-966 Underlying Port State

| Name | Value |
|----------------|---|
| Default | yes:noAssociation |
| Description | State of the underlying resource. (An underlying resource is for example a netw.ConnectionTerminationPoint) |
| Displayed name | Underlying Port State |
| OSS name | underlyingResourceState |
| Read-only | yes |
| Tab Panel | Port General |
| Type | UnderlyingResourceState |

Unnumbered Reference**Table 2-967 Unnumbered Reference**

| Name | Value |
|----------------|----------------------|
| Default | yes: |
| Displayed name | Unnumbered Reference |
| Maximum | 32 |
| Minimum | 0 |
| OSS name | unnumberedReference |
| Read-only | no |
| Tab Panel | General Unnumbered |
| Type | STRING |

Unnumbered Type**Table 2-968 Unnumbered Type**

| Name | Value |
|--------------------------|-------------------------|
| Default | yes:system |
| Displayed name | Unnumbered Type |
| OSS name | unnumberedReferenceType |
| Read-only | no |
| Tab Panel | General Unnumbered |
| Type | UnnumberedReferenceType |
| Enumerated types: | |
| IP Address | |
| Name | |
| System | |

URPF Check Mode IPv4**Table 2-969 URPF Check Mode IPv4**

| Name | Value |
|----------------|---|
| Default | yes:strict |
| Description | Specifies the mode of unicast RPF check for IPv4. It is applicable only when uRPFCheckState is set to 'enabled'." |
| Displayed name | URPF Check Mode IPv4 |

Table 2-969 URPF Check Mode IPv4 (continued)

| Name | Value |
|--------------------------|---------------------|
| OSS name | uRPFCheckMode |
| Read-only | no |
| Tab Panel | General Unicast RPF |
| Type | URPFCheckMode |
| Enumerated types: | |
| | Loose |
| | Strict |
| | Strict-No-Ecmp |

URPF Check Mode IPv6**Table 2-970 URPF Check Mode IPv6**

| Name | Value |
|--------------------------|--|
| Default | yes:strict |
| Description | Specifies the mode of unicast RPF check for IPv6. It is applicable only when uRPFCheckStateIpv6 is set to 'enabled'. |
| Displayed name | URPF Check Mode IPv6 |
| OSS name | uRPFCheckModeIpv6 |
| Read-only | no |
| Tab Panel | General Unicast RPF |
| Type | URPFCheckMode |
| Enumerated types: | |
| | Loose |
| | Strict |
| | Strict-No-Ecmp |

URPF Check State IPv4**Table 2-971 URPF Check State IPv4**

| Name | Value |
|----------------|--|
| Default | yes:disabled |
| Description | Specifies whether unicast RPF (uRPF) Check is enabled for IPv4 on the interface. |
| Displayed name | URPF Check State IPv4 |

Table 2-971 URPF Check State IPv4 (continued)

| Name | Value |
|-------------|-------------------------|
| OSS name | uRPFCheckState |
| Read-only | no |
| Tab Panel | General Unicast RPF |
| Type | generic.EnabledDisabled |

URPF Check State IPv6**Table 2-972 URPF Check State IPv6**

| Name | Value |
|----------------|--|
| Default | yes:disabled |
| Description | Specifies whether unicast RPF (uRPF) Check is enabled for IPv6 on the interface. |
| Displayed name | URPF Check State IPv6 |
| OSS name | uRPFCheckStateIpv6 |
| Read-only | no |
| Tab Panel | General Unicast RPF |
| Type | generic.EnabledDisabled |

URPF Ignore Default IPv4**Table 2-973 URPF Ignore Default IPv4**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies if the default route is to be disregarded while performing the uRPF check for IPv4 on the interface. |
| Displayed name | URPF Ignore Default IPv4 |
| OSS name | uRPFIgnoreDefault |
| Read-only | no |
| Tab Panel | General Unicast RPF |
| Type | BOOL |

URPF Ignore Default IPv6

Table 2-974 URPF Ignore Default IPv6

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies if the default route is to be disregarded while performing the uRPF check for IPv6 on the interface. |
| Displayed name | URPF Ignore Default IPv6 |
| OSS name | uRPFIgnoreDefaultIpv6 |
| Read-only | no |
| Tab Panel | General Unicast RPF |
| Type | BOOL |

VLAN

Table 2-975 VLAN

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Pointer to the instance of local DHCP server. |
| Displayed name | VLAN |
| OSS name | vlanPointer |
| Read-only | no |
| Tab Panel | VLAN VLAN |
| Type | POINTER |

Zone Id

Table 2-976 Zone Id

| Name | Value |
|----------------|--------------|
| Default | yes: |
| Displayed name | Zone Id |
| OSS name | zonePointer |
| Read-only | no |
| Tab Panel | Zone General |
| Type | POINTER |

Network Interface Facility Binding parameters

Channel Type

Table 2-977 Channel Type

| Name | Value |
|--------------------------|---|
| Description | The ECC type of the referred ECC Channel. |
| Displayed name | Channel Type |
| OSS name | gccChannelType |
| Read-only | no |
| Tab Panel | General General |
| Type | GccChannelType |
| Enumerated types: | |
| GCC0 | |
| GCC1 | |
| GCC2 | |

Facility Name

Table 2-978 Facility Name

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Facility Name |
| Maximum | 252 |
| OSS name | ifFacilityName |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

no

Table 2-979 no

| Name | Value |
|-----------------------|-------|
| Default | yes: |
| Displayed name | no |
| Mandatory on creation | yes |

Table 2-979 no (continued)

| Name | Value |
|-------------|-------------------|
| OSS name | ifFacilityPointer |
| Read-only | no |
| Tab Panel | General General |
| Type | POINTER |

Protection Status

Table 2-980 Protection Status

| Name | Value |
|--------------------------|-------------------------|
| Displayed name | Protection Status |
| OSS name | protectionStatus |
| Read-only | no |
| Tab Panel | General General |
| Type | NetworkIfProtectionType |
| Enumerated types: | |
| Disabled | |
| FLT | |
| Standby | |
| Working | |

yes

Table 2-981 yes

| Name | Value |
|-----------------------|--------------------------|
| Default | yes:clientTransparentOdu |
| Displayed name | yes |
| Mandatory on creation | yes |
| OSS name | ifFacilityContainerType |
| Read-only | no |
| Tab Panel | General General |
| Type | oth.OduContainerType |

NTP NE Config parameters

Admin State

Table 2-982 Admin State

| Name | Value |
|-----------------------------|--|
| Default | yes:3 |
| Description | This specifies the desired administrative state of NTP |
| Displayed name | Admin State |
| OSS name | ntpAdminState |
| Read-only | no |
| Tab Panel | General NTP Attributes |
| Type | NtpAdminState |
| Enumerated types: | |
| All Servers Reachable | |
| Down | |
| No Server Reachable | |
| Noop | |
| Only Main Server Reachable | |
| Only Spare Server Reachable | |
| Up | |

Authentication Check

Table 2-983 Authentication Check

| Name | Value |
|----------------|--|
| Default | yes:true |
| Description | This specifies whether or not to skip the rejection of NTP PDUs that do not match the authentication key or authentication type requirements. When authenticationCheck has a value of 'true', authentication PDUs are generated and NTP PDUs are authenticated upon receipt. |
| Displayed name | Authentication Check |
| OSS name | authenticationCheck |
| Read-only | no |
| Tab Panel | General NTP Attributes |
| Type | BOOL |

Clock Source

Table 2-984 Clock Source

| Name | Value |
|----------------|------------------------|
| Default | no |
| Displayed name | Clock Source |
| OSS name | ntpSysRefId |
| Read-only | no |
| Tab Panel | General NTP Attributes |
| Type | STRING |

Current Server

Table 2-985 Current Server

| Name | Value |
|----------------|---------------------------|
| Default | yes:0.0.0.0 |
| Displayed name | Current Server |
| OSS name | ntpServerCurrentIpAddress |
| Read-only | no |
| Tab Panel | General NTP |
| Type | IPADDR |

DaylightSavingsTime Configured

Table 2-986 DaylightSavingsTime Configured

| Name | Value |
|----------------|--------------------------------|
| Displayed name | DaylightSavingsTime Configured |
| OSS name | daylightSavingsConfigured |
| Read-only | no |
| Tab Panel | General NTP |
| Type | BOOL |

Drift (Microsecond/second)**Table 2-987 Drift (Microsecond/second)**

| Name | Value |
|----------------|----------------------------|
| Displayed name | Drift (Microsecond/second) |
| OSS name | drift |
| Read-only | no |
| Tab Panel | General NTP |
| Type | STRING |

MDA Time Stamp**Table 2-988 MDA Time Stamp**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | This specifies whether the NTP origin timestamp is generated by the MDA. Also the ntpMdaTimeStamp indicates that the reception time of NTP packets is performed by the MDA. MDA timestamping cannot be enabled if servers are configured with authentication enabled. Enabling MDA timestamping will not affect NTP packets that are transmitted or received on the management port. |
| Displayed name | MDA Time Stamp |
| OSS name | ntpMdaTimeStamp |
| Read-only | no |
| Tab Panel | General NTP Attributes |
| Type | BOOL |

NTP Clock Mode**Table 2-989 NTP Clock Mode**

| Name | Value |
|--------------------------|----------------|
| Displayed name | NTP Clock Mode |
| OSS name | clockMode |
| Read-only | no |
| Tab Panel | General NTP |
| Type | NtpClockMode |
| Enumerated types: | |
| FreeRunning | |

Table 2-989 NTP Clock Mode (continued)

| Name | Value |
|------------------|-------|
| Holdover | |
| NtpSync | |
| NtpSyncRedundant | |

NTP Enabled

Table 2-990 NTP Enabled

| Name | Value |
|----------------|-------------|
| Displayed name | NTP Enabled |
| OSS name | ntpEnable |
| Read-only | no |
| Tab Panel | General NTP |
| Type | BOOL |

NTP Scale

Table 2-991 NTP Scale

| Name | Value |
|----------------|-------------|
| Default | yes:10 |
| Displayed name | NTP Scale |
| OSS name | ntpScale |
| Read-only | no |
| Tab Panel | General NTP |
| Type | INT |

NTP Server

Table 2-992 NTP Server

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | This specifies whether or not the NTP configuration is acting as a NTP server or not. |
| Displayed name | NTP Server |
| OSS name | ntpConfigServer |

Table 2-992 NTP Server (continued)

| Name | Value |
|-------------|------------------------|
| Read-only | no |
| Tab Panel | General NTP Attributes |
| Type | BOOL |

NTP State**Table 2-993 NTP State**

| Name | Value |
|--------------------------|---|
| Default | yes:delete |
| Description | This specifies whether or not NTP is configured to execute in the system. |
| Displayed name | NTP State |
| OSS name | ntpStatus |
| Read-only | no |
| Tab Panel | General General |
| Type | NtpStatus |
| Enumerated types: | |
| Disabled | |
| Enabled | |

NTP Synched**Table 2-994 NTP Synched**

| Name | Value |
|----------------|-------------|
| Displayed name | NTP Synched |
| OSS name | ntpSynched |
| Read-only | no |
| Tab Panel | General NTP |
| Type | BOOL |

Operational State**Table 2-995 Operational State**

| Name | Value |
|-----------------------------|--|
| Default | no |
| Description | This indicates the current operational state for NTP |
| Displayed name | Operational State |
| OSS name | ntpOperState |
| Read-only | no |
| Tab Panel | General NTP Attributes |
| Type | NtpAdminState |
| Enumerated types: | |
| All Servers Reachable | |
| Down | |
| No Server Reachable | |
| Noop | |
| Only Main Server Reachable | |
| Only Spare Server Reachable | |
| Up | |

Server Authenticate**Table 2-996 Server Authenticate**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | This specifies whether or not to require authentication of NTP PDUs when acting as a server. When ntpConfigServerAuthenticate has a value of 'true', NTP PDUs are authenticated upon receipt. |
| Displayed name | Server Authenticate |
| OSS name | ntpConfigServerAuthenticate |
| Read-only | no |
| Tab Panel | General NTP Attributes |
| Type | BOOL |

Site ID**Table 2-997 Site ID**

| Name | Value |
|----------------|--------------|
| Default | yes:0.0.0.0 |
| Displayed name | Site ID |
| Maximum | 64 |
| OSS name | siteId |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

Site Name**Table 2-998 Site Name**

| Name | Value |
|----------------|--------------|
| Default | yes: |
| Displayed name | Site Name |
| Maximum | 252 |
| OSS name | siteName |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

Stratum**Table 2-999 Stratum**

| Name | Value |
|----------------|------------------------|
| Default | no |
| Displayed name | Stratum |
| OSS name | ntpSysStratum |
| Read-only | no |
| Tab Panel | General NTP Attributes |
| Type | STRING |

Time Offset Hours

Table 2-1000 Time Offset Hours

| Name | Value |
|----------------|-------------------|
| Default | yes:0 |
| Displayed name | Time Offset Hours |
| Maximum | 12 |
| Minimum | -12 |
| OSS name | timeOffsetHours |
| Read-only | no |
| Tab Panel | General NTP |
| Type | INT |

Time Offset Mins

Table 2-1001 Time Offset Mins

| Name | Value |
|----------------|------------------|
| Default | yes:0 |
| Displayed name | Time Offset Mins |
| Maximum | 59 |
| Minimum | 0 |
| OSS name | timeOffsetMins |
| Read-only | no |
| Tab Panel | General NTP |
| Type | INT |

Time Offset Seconds

Table 2-1002 Time Offset Seconds

| Name | Value |

| Default | yes:0 |
| Displayed name | Time Offset Seconds |
| OSS name | timeOffsetSeconds |
| Read-only | no |
| Tab Panel | General NTP |
| Type | STRING |

Timezone**Table 2-1003 Timezone**

| Name | Value |
|----------------|-------------|
| Default | yes: |
| Displayed name | Timezone |
| Maximum | 128 |
| Minimum | 0 |
| OSS name | timezone |
| Read-only | no |
| Tab Panel | General NTP |
| Type | STRING |

NTP Server parameters

Address Type**Table 2-1004 Address Type**

| Name | Value |
|----------------|-----------------------|
| Default | yes:ipv4 |
| Displayed name | Address Type |
| OSS name | ntpServersAddressType |
| Read-only | no |
| Tab Panel | General General |
| Type | rtr.InetAddressType |

Authentication Key Id**Table 2-1005 Authentication Key Id**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | This specifies the key-id of the authentication key and its authentication type used by this node to receive and transmit NTP packets to and from an NTP node. |
| Displayed name | Authentication Key Id |
| Maximum | 255 |
| Minimum | 0 |

Table 2-1005 Authentication Key Id (continued)

| Name | Value |
|-------------|--------------------|
| OSS name | ntpServerAuthKeyId |
| Read-only | no |
| Tab Panel | General General |
| Type | LONG |

ClockType**Table 2-1006 ClockType**

| OSS name | index |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

IP Address

Table 2-1009 IP Address

| Name | Value |
|-----------------------|--|
| Default | yes: |
| Description | This specifies the ip address that uniquely identifies a node that will provide time to the NTP client of this system. |
| Displayed name | IP Address |
| Mandatory on creation | yes |
| OSS name | ipAddress |
| Read-only | no |
| Tab Panel | General General |
| Type | INETADDR |

Is Active

Table 2-1010 Is Active

| Name | Value |
|----------------|-----------------|
| Default | yes:false |
| Displayed name | Is Active |
| OSS name | isActive |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Jitter**Table 2-1011 Jitter**

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Jitter |
| OSS name | jitter |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Key Index**Table 2-1012 Key Index**

| Name | Value |
|----------------|-----------------|
| Default | no |
| Displayed name | Key Index |
| OSS name | keyIndex |
| Read-only | no |
| Tab Panel | General General |
| Type | LONG |

NTP Version**Table 2-1013 NTP Version**

| Name | Value |
|--------------------------|--|
| Default | yes:4 |
| Description | This specifies the NTP version number generated or accepted by this node in NTP packets. |
| Displayed name | NTP Version |
| OSS name | ntpServerVersion |

| Type | ConfigurationMode |

Discovery State**Table 2-1034 Discovery State**

| Name | Value |
|----------------|--|
| Default | yes:notApplicable |
| Description | Only applicable to the global policy. Set to "InProgress" if the global policy is created as part of the specific NE resync during the full node resync or node discovery. At the end of full node resync, if the resync is successful, the global policy is completely updated from first discovered local policy and its discoveryState is set to "completed". Otherwise, the global policy is not updated and its discoveryState is set to "failed". For "failed" global policy, it will be updated by next successful full node resync or synchronized from the specific local policy. Set to "initialized" if the global policy is created by SNMP trap notification. User may need to synchronize the global policy manually with the specific local policy. Set to "N/A" if the global policy is created or modified by a SAM user. |

Default

Table 2-1062 Default

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Indicates whether the addressed profile is a default profile for the corresponding profile type. |
| Displayed name | Default |
| OSS name | dflt |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Discovery State**Table 2-1063 Discovery State**

| Name | Value |
|----------------|--|
| Default | yes:notApplicable |
| Description | Only applicable to the global policy. Set to "InProgress" if the global policy is created as part of the specific NE resync during the full node resync or node discovery. At the end of full node resync, if the resync is successful, the global policy is completely updated from first discovered local policy and its discoveryState is set to "completed". Otherwise, the global policy is not updated and its discoveryState is set to "failed". For "failed" global policy, it will be updated by next successful full node resync or synchronized from the specific local policy. Set to "initialized" if the global policy is created by SNMP trap notification. User may need to synchronize the global policy manually with the specific local policy. Set to "N/A" if the global policy is created or modified by a SAM user. |
| Displayed name | Discovery State |
| OSS name | discoveryState |
| Read-only | yes |
| Tab Panel | General Policy Configuration |
| Type | DiscoveryState |

Distribution Mode**Table 2-1064 Distribution Mode**

Path Overhead Monitoring**Table 2-1124 Path Overhead Monitoring**

| Name | Value |
|----------------|--|
| Description | True activates non-intrusive monitoring. |
| Displayed name | Path Overhead Monitoring |
| OSS name | pomEnabled |
| Read-only | no |
| Tab Panel | General Path Overhead Monitoring TTI |
| Type | BOOL |

Signal Degrade Burst Interval**Table 2-1125 Signal Degrade Burst Interval**

| Name | Value |
|----------------|---|
| Description | Burst Interval specifies the number of consecutive bad seconds (see parameter BRSTTH) to be detected before {BR} declaring a signal degrade defect (SDBER) on the ODU path layer. The defect is cleared if BRSTINTVL consecutive {BR} good seconds (see parameter BRSTTH) are detected. |
| Displayed name | Signal Degrade Burst Interval |
| Maximum | 10 |
| Minimum | 2 |
| OSS name | signalDegradeBurstInterval |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Signal Degrade Burst Threshold**Table 2-1126 Signal Degrade Burst Threshold**

| Name | Value |
|----------------|--|
| Description | Burst Threshold specifies a number of errored blocks on the ODU path layer. A second is declared as good if the number of detected errored blocks within one second is less than BRSTTH; otherwise the second is declared as bad second. |
| Displayed name | Signal Degrade Burst Threshold |
| Maximum | 856388 |
| Minimum | 1 |
| OSS name | signalDegradeBurstThreshold |

Table 2-1126 Signal Degrade Burst Threshold (continued)

| Displayed name | Alarm Profile |
| OSS name | alarmProfilePointer |
| Read-only | no |
| Tab Panel | General General |
| Type | POINTER |

APS Enabled**Table 2-1137 APS Enabled**

| Name | Value |
|----------------|---|
| Description | Enable or disable the proprietary APS bytes insertion in the ODU2 overhead. |
| Displayed name | APS Enabled |
| OSS name | apsEnabled |
| Read-only | no |
| Tab Panel | General General |
| Type | optical.APSConfigType |

Assigned Rate**Table 2-1138 Assigned Rate**

| Name | Value |
|----------------|--|
| Description | The assigned rate - OTU1, GigE, OC3... |
| Displayed name | Assigned Rate |
| OSS name | assignedRate |
| Read-only | no |
| Tab Panel | General General |
| Type | optical.AssignedRate |

Clear All Bins**Table 2-1139 Clear All Bins**

| Name | Value |
|----------------|---|
| Default | yes:noCmd |
| Description | Clear all ODURx and ODUTx PMs in both current 15 minute bin and the current 1 day interval. |
| Displayed name | Clear All Bins |
| OSS name | clearAllBins |
| Read-only | no |
| Tab Panel | General Stats Control |
| Type | optical.PerformCommand |

Client Payload Type**Table 2-1140 Client Payload Type**

| Name | Value |
|----------------|---|
| Description | Type of client signal fail format. Indicates the kind of format of signal carrying client signal fail indication. The signal is generated by the addressed ODU to the far end. LCS - Loss of Client signal. GFP frame reporting CSF indication has UPI equal to 1, that means Loss of Client signal, this value is not recommended by Standard ITU-T G.7041. LCCS - Loss of client character Synchronization. GFP frame reporting CSF indication has UPI equal to 2, that means Loss of client character Synchronization, this value is recommended by Standard ITU-T G.7041. |
| Displayed name | Client Payload Type |
| OSS name | payloadType |
| Read-only | no |

Table 2-1140 Client Payload Type (continued)

|--------------------------|---------------------|
| Tab Panel | General ODU Payload |
| Type | CSPayloadType |
| Enumerated types: | |
| 1000BaseX | |
| AMCC | |
| ASCBR | |
| BSCBR | |
| CAMCC | |
| GBENTTT | |
| GFP | |
| ODUM | |
| ODUMPT21 | |
| OLDAMCC | |
| STM1OC3 | |
| STM4OC12 | |

Connection Monitoring End Point Mode

Table 2-1141 Connection Monitoring End Point Mode

| Name | Value |
|--------------------------|--------------------------------------|
| Default | yes:bypass |
| Description | Connection monitoring End Point Mode |
| Displayed name | Connection Monitoring End Point Mode |
| OSS name | connectionMonitoringEndPointMode |
| Read-only | no |
| Tab Panel | General Delay Measurement Attributes |
| Type | CMEPMode |
| Enumerated types: | |
| Bypass | |
| Destination | |
| Source | |

CSF Format

Table 2-1142 CSF Format

| Name | Value |
|--------------------------|---|
| Description | Type of client signal fail format. Indicates the kind of format of signal carrying client signal fail indication. The signal is generated by the addressed ODU to the far end. LCS - Loss of Client signal. GFP frame reporting CSF indication has UPI equal to 1, that means Loss of Client signal, this value is not recommended by Standard ITU-T G.7041. LCCS - Loss of client character Synchronization. GFP frame reporting CSF indication has UPI equal to 2, that means Loss of client character Synchronization, this value is recommended by Standard ITU-T G.7041. |
| Displayed name | CSF Format |
| OSS name | csfType |
| Read-only | no |
| Tab Panel | General General |
| Type | CSFType |
| Enumerated types: | |
| LCCS | |
| LCS | |

CSF Propagation

Table 2-1143 CSF Propagation

| Name | Value |
|--------------------------|--|
| Description | Propagation of Client Signal Fail indication. Displays modalities of the propagation of Client Signal Fail indication. The signal is generated by the addressed ODU to the far end. FWD - Forward CSF Propagation. Failure on the interface at client side will be propagated forward by the addressed ODU as Client Signal Fail indication to the far end. FWDBWD - Forward and Backward CSF Propagation. Failure on the interface at client side will be propagated forward by the addressed ODU as Client Signal Fail indication to the far end. Server Signal Fail alarm detected by the addressed ODU will be propagated in the backward direction as the Client Signal Fail to the far end. NONE - No CSF Propagation. |
| Displayed name | CSF Propagation |
| OSS name | csfPropogationMode |
| Read-only | no |
| Tab Panel | General General |
| Type | CSFPropogationMode |
| Enumerated types: | |
| FWD | |
| FWDBWD | |
| FWDGFPENH | |

Table 2-1143 CSF Propagation (continued)

| Name | Value |
|------|-------|
| NONE | |

Ctp ID**Table 2-1144 Ctp ID**

| Name | Value |
|-----------------------|-----------------------------|
| Default | yes:1 |
| Description | The identifier for the Ctp. |
| Displayed name | Ctp ID |
| Mandatory on creation | yes |
| Minimum | 1 |
| OSS name | ctpId |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Data Bearer Details**Table 2-1145 Data Bearer Details**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Pointer to gmpls.Databearer instance discovered through the CORBA interface. Applicable if the virtual ODU PTF is being used in a databearer. |
| Displayed name | Data Bearer Details |
| OSS name | dataBearerPointer |
| Read-only | yes |
| Tab Panel | General ASON Control Plane - Data Bearer |
| Type | POINTER |

DM Current Status

Table 2-1146 DM Current Status

| Name | Value |
|--------------------------|--------------------------------------|
| Default | yes:none |
| Description | Delay measurement - current status |
| Displayed name | DM Current Status |
| OSS name | delayMeasurementCurrentStatus |
| Read-only | yes |
| Tab Panel | General Delay Measurement Attributes |
| Type | DMCurrentStatus |
| Enumerated types: | |
| | |
| Invalid | |
| N/A | |
| Valid | |

DM Current Value

| Displayed name | TCA Profile |
| OSS name | tcaProfilePointer |
| Read-only | no |
| Tab Panel | General General |
| Type | POINTER |

Transmit DAPI

Table 2-1180 Transmit DAPI

| Name | Value |
|----------------|--|
| Description | Transmitted Trail Trace Identifier (TTI), Transmit Destination Access Point Identifier |
| Displayed name | Transmit DAPI |
| Maximum | 31 |
| Minimum | 0 |
| OSS name | txDapi |
| Read-only | no |
| Tab Panel | General TTI |
| Type | STRING |

Transmit OS**Table 2-1181 Transmit OS**

| Name | Value |
|----------------|---|
| Description | Transmitted Trail Trace Identifier (TTI), Transmit Source Access Point Identifier |
| Displayed name | Transmit OS |
| Maximum | 65 |
| Minimum | 0 |
| OSS name | txOs |
| Read-only | no |
| Tab Panel | General TTI |
| Type | STRING |

Transmitted Payload Structure**Table 2-1182 Transmitted Payload Structure**

| Name | Value |
|----------------|---|
| Description | The transmitted ODU payload structure value. It is programmed into the transmitted ODU MSI bytes. |
| Displayed name | Transmitted Payload Structure |
| OSS name | txOduStruct |
| Read-only | yes |
| Tab Panel | General ODU Payload Structure |
| Type | STRING |

Transmitted TTI**Table 2-1183 Transmitted TTI**

| Name | Value |
|----------------|--|
| Description | Transmitted Trail Trace Identifier (TTI), Transmit Source Access Point Identifier. |
| Displayed name | Transmitted TTI |
| Maximum | 31 |
| Minimum | 0 |
| OSS name | txSapi |
| Read-only | no |
| Tab Panel | General TTI |

Table 2-1183 Transmitted TTI (continued)

| Name | Value |
|------|--------|
| Type | STRING |

TTI Comparison

Table 2-1184 TTI Comparison

| Name | Value |
|----------------|---|
| Description | Indicates the mode of the Trace Identifier Mismatch (TIM) Detection function. |
| Displayed name | TTI Comparison |
| OSS name | timDetMode |
| Read-only | no |
| Tab Panel | General TTI |
| Type | optical.TimDetectionMode |

TTI Mismatch Response

Table 2-1185 TTI Mismatch Response

| Name | Value |
|----------------|--|
| Description | Indicates whether the Trace Identifier Mismatch (TIM) Consequent Action function is enabled. |
| Displayed name | TTI Mismatch Response |
| OSS name | timActEnabled |
| Read-only | no |
| Tab Panel | General TTI |
| Type | BOOL |

TTI Status

Table 2-1186 TTI Status

| Name | Value |
|----------------|-------------|
| Description | TTI status. |
| Displayed name | TTI Status |
| OSS name | tTiStatus |
| Read-only | yes |

| Displayed name | Use System AINS Timer |
| OSS name | usingSysAinsDebounceTime |
| Read-only | no |
| Tab Panel | States AINS |
| Type | BOOL |

ODU Trail parameters**A to Z****Table 2-1188 A to Z**

| Name | Value |
|--------------------------|---|
| Description | Indicates which trail path is the active one in the AZ direction. |
| Displayed name | A to Z |
| OSS name | activePathAZ |
| Read-only | no |
| Tab Panel | General Active Path |
| Type | ProtectionState |
| Enumerated types: | |
| A1Z1 | |
| A1Z2 | |
| A2Z1 | |
| A2Z2 | |
| Protection | |
| Unprotected | |
| Working | |

A-Z Expected TTI**Table 2-1189 A-Z Expected TTI**

| Name | Value |
|----------------|--|
| Default | yes:N/A |
| Description | ODU expected Trail Trace Identifier in Z End of Trail (A-Z direction). For 1830PSS nodes, valid range is [0..15] bytes. For other nodes, valid range is [0..64] bytes. |
| Displayed name | A-Z Expected TTI |
| Maximum | 64 |
| Minimum | 0 |
| OSS name | expectedSapiZA |
| Read-only | no |
| Tab Panel | General TTI Attributes |
| Type | STRING |

A-Z Transmitted OS**Table 2-1190 A-Z Transmitted OS**

| Name | Value |
|----------------|---|
| Default | yes:N/A |
| Description | Transmitted Trail Trace Identifier (TTI), Transmit Source Access Point Identifier |
| Displayed name | A-Z Transmitted OS |
| Maximum | 65 |
| Minimum | 0 |
| OSS name | txOsAz |
| Read-only | no |
| Tab Panel | General TTI Attributes |
| Type | STRING |

A-Z Transmitted TTI**Table 2-1191 A-Z Transmitted TTI**

| Name | Value |
|-------------|---|
| Default | yes:N/A |
| Description | ODU transmitted Trail Trace Identifier at A End of Trail (A-Z direction). For 1830PSS nodes, valid range is [0..15] bytes. For other nodes, valid range is [0..64] bytes. |

Table 2-1191 A-Z Transmitted TTI (continued)

| Name | Value |
|----------------|------------------------|
| Displayed name | A-Z Transmitted TTI |
| Maximum | 64 |
| Minimum | 0 |

| Description | The administrative state of the connection. |
| Displayed name | Administrative State |
| Mandatory on creation | yes |
| OSS name | administrativeState |
| Read-only | no |
| Tab Panel | General States |
| Type | ConnectionAdminState |
| Enumerated types: | |
| Automatic In-Service | |
| Blocking | |
| Down | |
| Maintenance | |
| Partially Down | |
| Standby/Backup | |
| Unknown | |
| Up | |

Asymmetric Interworking

Table 2-1194 Asymmetric Interworking

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Indicates if this trail is interworking between OTH and non-OTH endpoints. |
| Displayed name | Asymmetric Interworking |
| OSS name | interworking |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Bidirectional**Table 2-1195 Bidirectional**

| Name | Value |
|----------------|---|
| Default | yes:true |
| Description | Indicates if this connection is a unidirectional or bidirectional connection. |
| Displayed name | Bidirectional |
| OSS name | biDirectional |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Connection Type**Table 2-1196 Connection Type**

| Name | Value |
|--------------------------|---------------------|
| Default | yes:unspecified |
| Description | Type of connection. |
| Displayed name | Connection Type |
| Mandatory on creation | yes |
| OSS name | connectionType |
| Read-only | no |
| Tab Panel | General General |
| Type | ConnectionType |
| Enumerated types: | |
| Multipoint Service Path | |
| OCH CrossConnect | |
| OCH CrossConnect Group | |
| OCH Trail | |
| OCH Trail Path | |
| OCH Trail Path - Preview | |
| ODU Trail | |
| ODU Trail Path | |

| OSS name | subscriberId |
| Read-only | no |
| Tab Panel | General General |
| Type | LONG |

Customer Name**Table 2-1199 Customer Name**

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Customer Name |
| Maximum | 32 |
| Minimum | 0 |
| OSS name | subscriberName |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

DM Current Status**Table 2-1200 DM Current Status**

| Name | Value |
|----------------|------------------------------------|
| Default | yes:none |
| Description | Delay measurement - current status |
| Displayed name | DM Current Status |
| OSS name | delayMeasurementCurrentStatus |
| Read-only | yes |
| Tab Panel | General Delay Measurement |
| Type | oth.DMCurrentStatus |

DM Current Value

Table 2-1201 DM Current Value

| Name | Value |
|----------------|-----------------------------------|
| Description | Delay measurement - current value |
| Displayed name | DM Current Value |
| OSS name | delayMeasurementCurrentValue |
| Read-only | yes |
| Tab Panel | General Delay Measurement |
| Type | FLOAT |
| Units | us |

Force Create OCh XC

Table 2-1202 Force Create OCh XC

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Indicates whether the OCH XC should be created by force when power commissioning provisioning state is "InProgress". |
| Displayed name | Force Create OCh XC |
| OSS name | forceXcCreate |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Inconsistency

Table 2-1203 Inconsistency

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Description of discrepancy if there is discrepancy in the Trail. |
| Displayed name | Inconsistency |
| OSS name | discrepancy |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Inconsistent**Table 2-1204 Inconsistent**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Flag that indicates if there is any discrepancy in the Trail. Example - when APS Protection Mode parameters for the APS Groups in the trail do not match, then this flag will be enabled. |
| Displayed name | Inconsistent |
| OSS name | discrepancyFlag |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Operational State**Table 2-1205 Operational State**

| Name | Value |
|--------------------------|--|
| Description | The operational state of the connection. |
| Displayed name | Operational State |
| OSS name | operationalState |
| Read-only | no |
| Tab Panel | General States |
| Type | ConnectionOperState |
| Enumerated types: | |
| Degraded | |
| Disabled | |
| Down | |
| Enabled | |
| Partially Down | |
| Unknown | |
| Up | |

Path Preference**Table 2-1206 Path Preference**

| Name | Value |
|-------------------------------------|---|
| Default | yes:working |
| Description | Indicates whether the working path or the protection path needs to be retained when Trail protection is modified to unprotected |
| Displayed name | Path Preference |
| OSS name | modifyProtectionPreference |
| Read-only | no |
| Tab Panel | General General |
| Type | ModifyProtectionPreference |
| Enumerated types: | |
| None | |
| Retain Path A1Z1 | |
| Retain Path A1Z2 | |
| Retain Path A2Z1 | |
| Retain Path A2Z2 | |
| Retain Protection Path | |
| Retain Termination Points A1 and Z1 | |
| Retain Termination Points A1 and Z2 | |
| Retain Termination Points A2 and Z1 | |
| Retain Termination Points A2 and Z2 | |
| Retain Working Path | |

Path Search Option**Table 2-1207 Path Search Option**

| Name | Value |
|----------------|---|
| Default | yes:system |
| Description | Specifies if routing path should be Auto-picked or User Defined. In case of User Defined, complete route needs to be defined by User via constraints. |
| Displayed name | Path Search Option |
| OSS name | pathSearchOption |
| Read-only | no |
| Tab Panel | General General |

Table 2-1207 Path Search Option (continued)

| Name | Value |
|--------------------------|----------------|
| Type | PathSearchType |
| Enumerated types: | |
| GMRE Defined | |
| Interactive Mode | |
| System Defined | |
| User Defined | |

Payload Type**Table 2-1208 Payload Type**

| Name | Value |
|----------------|-------------------------|
| Default | yes:N/A |
| Description | ODU Payload Type. |
| Displayed name | Payload Type |
| Maximum | 3 |
| Minimum | 0 |
| OSS name | txPayloadType |
| Read-only | no |
| Tab Panel | General ODUk Attributes |
| Type | STRING |

Payload Type Mismatch Response**Table 2-1209 Payload Type Mismatch Response**

| Name | Value |
|--------------------------|---|
| Default | yes:notApplicable |
| Description | Payload Type Mismatch Response Enabled. |
| Displayed name | Payload Type Mismatch Response |
| OSS name | plmConsequenceAction |
| Read-only | no |
| Tab Panel | General ODUk Attributes |
| Type | TimActEnabled |
| Enumerated types: | |

Table 2-1209 Payload Type Mismatch Response (continued)

| Name | Value |
|----------|-------|
| Disabled | |
| Enabled | |
| Unknown | |

Plane Type

Table 2-1210 Plane Type

| Name | Value |
|-----------------------|---|
| Default | yes:MP |
| Description | - Management plane, control plane or mixed. |
| Displayed name | Plane Type |
| Mandatory on creation | yes |
| OSS name | managementDomains |
| Read-only | no |
| Tab Panel | General General |
| Type | oth.MgmtAccessDomains |

Protection Level

Table 2-1211 Protection Level

| Name | Value |
|--------------------------|---|
| Default | yes:unprotected |
| Description | The calculated level of protection based on the underlying server OTN layers. |
| Displayed name | Protection Level |
| Mandatory on creation | yes |
| OSS name | protectionLevel |
| Read-only | no |
| Tab Panel | General General |
| Type | ProtectionLevel |
| Enumerated types: | |
| Protected | |
| Segment Protected | |
| Unprotected | |

Protection Type

Table 2-1212 Protection Type

| Name | Value |
|--------------------------|-------------------------------|
| Default | yes:unprotected |
| Description | Protection type of the trail. |
| Displayed name | Protection Type |
| OSS name | protection |
| Read-only | no |
| Tab Panel | General General |
| Type | TrailProtectionType |
| Enumerated types: | |
| Diverse Route | |
| OPS Protected | |
| Segment Protected | |
| SNCI Protected | |
| SNCN Protected | |
| SNCNC Protected | |
| Unprotected | |
| Y-Cable Protected | |

Rate

Table 2-1213 Rate

| Name | Value |
|--------------------------|----------------------------------|
| Description | Indicates the rate of the trail. |
| Displayed name | Rate |
| Mandatory on creation | yes |
| OSS name | rate |
| Read-only | no |
| Tab Panel | General General |
| Type | AssignedRate |
| Enumerated types: | |
| 100GbE LAN | |

| Type | ApsGroupMethod |

Protection Switch**Table 2-1307 Protection Switch**

| Name | Value |
|-----------------------------|--|
| Default | yes:noCmd |
| Description | This value is used to perform a protection switch on the working/protection APS Member |
| Displayed name | Protection Switch |
| OSS name | protectionSwitch |
| Read-only | no |
| Tab Panel | APS Group Protection Management |
| Type | ApsMemberSwitch |
| Enumerated types: | |
| Clear | |
| Forced Switch To Protection | |
| Forced Switch To Working | |
| Manual Switch To Protection | |
| Manual Switch To Working | |
| No Cmd | |
| Protection Lockout | |

Protection Type**Table 2-1308 Protection Type**

| Name | Value |
|--------------------------|---|
| Default | yes:sncl |
| Description | The protection type of the APS group. {UL} {LI}sncl - subnetwork connection with non-intrusive monitoring. {LI}sncl - subnetwork connection based on ODUk client signal with non-intrusive monitoring. {LI}sncl - subnetwork connection with inherent monitoring. {/UL} |
| Displayed name | Protection Type |
| Mandatory on creation | yes |
| OSS name | apsMode |
| Read-only | no |
| Tab Panel | APS Group APS Configuration |
| Type | ApsMode |

Remote

Table 2-1309 Remote

| Name | Value |
|--------------------------|---|
| Description | Corresponds to the remote status mapped from tnOthOdukApsMemberCurrentStatus for the protection port. |
| Displayed name | Remote |
| OSS name | protectionPortRemoteStatus |
| Read-only | no |
| Tab Panel | APS Group Protection Port Status |
| Type | ApsMemberStatus |
| Enumerated types: | |
| Active | |
| Standby | |
| Unknown | |

Remote

Table 2-1310 Remote

| Name | Value |
|--------------------------|--|
| Description | Corresponds to the remote status mapped from tnOthOdukApsMemberCurrentStatus for the working port. |
| Displayed name | Remote |
| OSS name | workingPortRemoteStatus |
| Read-only | no |
| Tab Panel | APS Group Working Port Status |
| Type | ApsMemberStatus |
| Enumerated types: | |
| Active | |
| Standby | |
| Unknown | |

Request For

Table 2-1311 Request For

| Name | Value |
|--------------------------|---------------------------------------|
| Description | This Value is deduced from k1k2Trans. |
| Displayed name | Request For |
| OSS name | requestFor |
| Read-only | no |
| Tab Panel | APS Group Protection Management |
| Type | RequestFor |
| Enumerated types: | |
| Protection | |
| Working | |

Secondary State

Table 2-1312 Secondary State

| Name | Value |
|----------------|----------------------------|
| Default | yes:unspecified |
| Displayed name | Secondary State |
| OSS name | secondaryState |
| Read-only | yes |
| Tab Panel | States General |
| Type | optical.SecondaryStateType |

Shelf

Table 2-1313 Shelf

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Reference to Shelf within the Network Element. |
| Displayed name | Shelf |
| OSS name | shelfPointer |
| Read-only | no |
| Tab Panel | APS Group General |
| Type | POINTER |

Shelf ID

Table 2-1314 Shelf ID

| Name | Value |
|----------------|-------------------|
| Default | yes:0 |
| Description | Shelf Identifier. |
| Displayed name | Shelf ID |
| OSS name | shelfId |
| Read-only | yes |
| Tab Panel | APS Group General |
| Type | INT |

Signal Degrade

Table 2-1315 Signal Degrade

| Name | Value |
|----------------|---|
| Default | yes:true |
| Description | Indicates whether or not Signal Degrade is used for protection switching. |
| Displayed name | Signal Degrade |
| OSS name | apsSdEnable |
| Read-only | no |
| Tab Panel | APS Group APS Configuration |
| Type | BOOL |

Site

Table 2-1316 Site

| Name | Value |

| Description | This Value is deduced from k1k2Trans. |
| Displayed name | Switch Status |
| OSS name | switchStatus |
| Read-only | no |
| Tab Panel | APS Group Protection Management |
| Type | SwitchStatus |
| Enumerated types: | |
| Do Not Revert | |
| Forced Switch | |
| Manual Switch | |
| No Request | |
| Protection Lockout | |
| Reverse Request | |
| Signal Degrade | |
| Signal failure | |
| Unknown | |
| Wait To Restore | |

Type

Table 2-1321 Type

| Name | Value |
|--------------------------|---|
| Default | yes:nonrevertive |
| Description | Indicates whether revertive or non-revertive APS Group. |
| Displayed name | Type |
| OSS name | revertMode |
| Read-only | no |
| Tab Panel | APS Group APS Configuration |
| Type | ApsRevertMode |
| Enumerated types: | |
| NonRevertive | |
| Revertive | |

Wait to Restore

Table 2-1322 Wait to Restore

| Name | Value |
|----------------|---|
| Default | yes:notapplicable |
| Description | The wait-to-restore time for the revertive mode automatic switching. Corresponds to tnApsGroupWaitToRestore in the MIB. |
| Displayed name | Wait to Restore |
| OSS name | waitToRestore |
| Read-only | no |
| Tab Panel | APS Group APS Configuration |
| Type | ApsWaitToRestore |
| Units | min |

Working Facility Name

Table 2-1323 Working Facility Name

| OSS name | endPointAType |
| Read-only | no |
| Tab Panel | General General |
| Type | EndPointType |

Endpoint B - Port

Table 2-1467 Endpoint B - Port

| Name | Value |
|-----------------------|--|
| Default | yes: |
| Description | A pointer to the physical port at endpoint B, if usesManagedEndpointB is true. |
| Displayed name | Endpoint B - Port |
| Mandatory on creation | yes |
| OSS name | endpointBPointer |
| Read-only | no |
| Tab Panel | General Endpoint B - Port |
| Type | POINTER |

Endpoint B Name

Table 2-1468 Endpoint B Name

| Name | Value |
|----------------|--------------------------|
| Description | Port name of endpoint B. |
| Displayed name | Endpoint B Name |
| OSS name | endPointBName |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

Endpoint B Type**Table 2-1469 Endpoint B Type**

| Name | Value |
|----------------|--------------------|
| Default | yes:Port |
| Description | Type of endpoint B |
| Displayed name | Endpoint B Type |
| OSS name | endPointBType |
| Read-only | no |
| Tab Panel | General General |
| Type | EndPointType |

gneInterfaceEndpointAPointer**Table 2-1470 gneInterfaceEndpointAPointer**

| Name | Value |
|-----------------------|--|
| Default | yes: |
| Description | A pointer to a generic NE interface at endpoint A. |
| Mandatory on creation | yes |
| OSS name | gneInterfaceEndpointAPointer |
| Read-only | no |
| Tab Panel | General Endpoint A - Generic NE Interface |
| Type | POINTER |

gneInterfaceEndpointBPointer**Table 2-1471 gneInterfaceEndpointBPointer**

| Name | Value |
|-----------------------|--|
| Default | yes: |
| Description | A pointer to a generic NE interface at endpoint B. |
| Mandatory on creation | yes |
| OSS name | gneInterfaceEndpointBPointer |
| Read-only | no |
| Tab Panel | General Endpoint B - Generic NE Interface |
| Type | POINTER |

ID

Table 2-1472 ID

| Name | Value |
|----------------|-------------------------------------|
| Default | yes:0 |
| Description | Uniquely identifies an optical link |
| Displayed name | ID |
| Maximum | 2147483647 |
| Minimum | 1 |
| OSS name | opticalLinkId |
| Read-only | no |
| Tab Panel | General General |
| Type | LONG |

Link Rate

Table 2-1473 Link Rate

| Name | Value |
|--------------------------|-----------------|
| Default | yes:os |
| Displayed name | Link Rate |
| OSS name | linkRate |
| Read-only | no |
| Tab Panel | General General |
| Type | LinkRate |
| Enumerated types: | |
| OS | |
| OTS | |

Name

Table 2-1474 Name

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Name provided by user. It is not mandatory on create. If nothing is given by the user, then SAM provides the name. This is not deployed on the NE for 1830 PSS. |
| Displayed name | Name |

Table 2-1474 Name (continued)

| Name | Value |
|-------------|-----------------|
| Maximum | 200 |
| Minimum | 0 |
| OSS name | displayName |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Notes**Table 2-1475 Notes**

| Name | Value |
|----------------|-------------------------------------|
| Description | Information about the optical link. |
| Displayed name | Notes |
| Maximum | 254 |
| Minimum | 0 |
| OSS name | notes |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Site A name**Table 2-1476 Site A name**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Site Name of endpoint A. If the link is created from LLDP, this should always be a managed node. |
| Displayed name | Site A name |
| OSS name | endPointASiteName |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

Site B name

Table 2-1477 Site B name

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Site Name of endpoint B. If the link is created from LLDP, this should always be a managed node. |
| Displayed name | Site B name |
| OSS name | endPointBSiteName |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

Type

Table 2-1478 Type

| Name | Value |
|--------------------------|--|
| Description | Type of optical link - internal or external. |
| Displayed name | Type |
| OSS name | opticalLinkType |
| Read-only | no |
| Tab Panel | General General |
| Type | OpticalLinkType |
| Enumerated types: | |
| External | |
| Inter-Compound | |
| Internal | |

Unmanaged NE Identifier

Table 2-1479 Unmanaged NE Identifier

| Name | Value |
|----------------|--------------------------------------|
| Description | Endpoint of NE which is not managed. |
| Displayed name | Unmanaged NE Identifier |
| OSS name | unManagedNEEndPoint |
| Read-only | no |

Table 2-1479 Unmanaged NE Identifier (continued)

| Name | Value |
|-------------|-----------------------------------|

| OSS name | constraintName |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Constraint Type

Table 2-1483 Constraint Type

| Name | Value |
|--------------------------|--|
| Default | yes:exclusion |
| Description | Type of constraint, e.g. inclusion, exclusion. |
| Displayed name | Constraint Type |
| Mandatory on creation | yes |
| OSS name | constraintType |
| Read-only | no |
| Tab Panel | General General |
| Type | ConstraintType |
| Enumerated types: | |
| Exclusion | |
| Inclusion | |

Exclude Colors**Table 2-1484 Exclude Colors**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Applies to the control plane segment only. |
| Displayed name | Exclude Colors |
| OSS name | excludeAnyColor |
| Read-only | no |
| Tab Panel | General Traffic Engineering Constraints |
| Type | LONG |
| Units | bitmap |

Excluded Colors**Table 2-1485 Excluded Colors**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | User-friendly presentation of colors as comma separated list of numbers. For display use only. |
| Displayed name | Excluded Colors |
| OSS name | excludedColorList |
| Read-only | yes |
| Tab Panel | General Traffic Engineering Constraints |
| Type | STRING |

Include Colors**Table 2-1486 Include Colors**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Applies to the control plane segment only. |
| Displayed name | Include Colors |
| OSS name | includeAnyColor |
| Read-only | no |
| Tab Panel | General Traffic Engineering Constraints |

Optical Service Path parameters

Additional Information

Table 2-1501 Additional Information

| Name | Value |
|--------------------------|--|
| Description | Indicates why operational state is down for this connection. |
| Displayed name | Additional Information |
| OSS name | stateCause |
| Read-only | yes |
| Tab Panel | General States |
| Type | OperationalFlags |
| Enumerated types: | |
| | Cross Connect Down |
| | Missing Cross Connect |
| | Missing ODUk Connection |
| | Missing VTS Connection |
| | OCH Trail Name Mismatch |
| | Port (that is not part of CrossConnect) Down |
| | VTS Connection is Down |
| | Wave Key Mode Mismatch |

Bidirectional

Table 2-1502 Bidirectional

| Name | Value |
|----------------|---|
| Default | yes:true |
| Description | Indicates if this connection is a unidirectional or bidirectional connection. |
| Displayed name | Bidirectional |
| OSS name | biDirectional |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Config Type

Table 2-1503 Config Type

| Name | Value |
|--------------------------|--|
| Description | Auto assigned during service discovery or creation based on configuration found. |
| Displayed name | Config Type |
| OSS name | svcPathConfigType |
| Read-only | yes |
| Tab Panel | General Service Path Config |
| Type | SvcPathConfigFlags |
| Enumerated types: | |
| Dual stage Mux | |
| Regen | |
| Single Fiber | |

Operational State

Table 2-1504 Operational State

| Name | Value |
|--------------------------|--|
| Description | The operational state of the connection. |
| Displayed name | Operational State |

| Description | Indicates whether the OCH xc should be created by force when power commissioning provisioning state is "InProgress" |
| Displayed name | Force Create OCh XC |
| OSS name | forceXcCreate |

Table 2-1566 Force Create OCh XC (continued)

| Name | Value |
|-------------|-----------------|
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Holding Priority**Table 2-1567 Holding Priority**

| Name | Value |
|----------------|---|
| Default | yes:5 |
| Description | Applies to the control plane segment only. Priority used in restoration (holding priority)? TODO: rename if it is the case |
| Displayed name | Holding Priority |
| Maximum | 5 |
| Minimum | 1 |
| OSS name | holdingPriority |
| Read-only | no |
| Tab Panel | General Control Plane |
| Type | INT |

Inconsistency**Table 2-1568 Inconsistency**

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Description | Discrepancy. |
| Displayed name | Inconsistency |
| OSS name | discrepancy |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Inconsistent**Table 2-1569 Inconsistent**

| Name | Value |
|----------------|-------------------|
| Default | yes:false |
| Description | Discrepancy Flag. |
| Displayed name | Inconsistent |
| OSS name | discrepancyFlag |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Is SubGige Full Rate Service**Table 2-1570 Is SubGige Full Rate Service**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Specifies whether the transport service is QinQ Service with Port Mode [Indicate if the service to be created is a Full Rate Service under subgige rate for QinQ mode] |
| Displayed name | Is SubGige Full Rate Service |
| OSS name | isQinQFullRateService |
| Read-only | no |
| Tab Panel | General VLAN Configuration Details |
| Type | BOOL |

Is SubGige Service QinQ**Table 2-1571 Is SubGige Service QinQ**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Indicate if the service to be created is a qinq service under subgige rate |
| Displayed name | Is SubGige Service QinQ |
| OSS name | isQinQService |
| Read-only | no |
| Tab Panel | General VLAN Configuration Details |
| Type | BOOL |

Is SVLAN Push-Pop/Keep Capable QinQ Service**Table 2-1572 Is SVLAN Push-Pop/Keep Capable QinQ Service**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Indicates if SVLAN ID Push Pop Keep feature is applicable for this SubGige QinQ Service |
| Displayed name | Is SVLAN Push-Pop/Keep Capable QinQ Service |
| OSS name | isApplicableSVLANPushPop |
| Read-only | no |
| Tab Panel | General VLAN Configuration Details |
| Type | BOOL |

Is Untagged Traffic Supported**Table 2-1573 Is Untagged Traffic Supported**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | If Untagged Traffic Supported.Specifies whether the transport service is carrying untagged traffic. |
| Displayed name | Is Untagged Traffic Supported |
| OSS name | isUntaggedTrafficSupported |
| Read-only | no |
| Tab Panel | General VLAN Configuration Details |
| Type | BOOL |

Link Group ID**Table 2-1574 Link Group ID**

| Name | Value |
|----------------|------------------------------------|
| Default | yes:notApplicable |
| Description | > Specifies the port ISL group Id. |
| Displayed name | Link Group ID |
| OSS name | islGroupId |
| Read-only | no |
| Tab Panel | General General |
| Type | ISLGroupIdType |

Table 2-1574 Link Group ID (continued)

| Name | Value |
|--------------------------|-------|
| Enumerated types: | |
| 1 | |
| 2 | |
| 3 | |
| 4 | |
| 5 | |
| Not Applicable | |

Managed

Table 2-1575 Managed

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | If true, sites cannot be modified, only 'complete service' can be done. |
| Displayed name | Managed |
| OSS name | isServicePathCreated |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Modified for Throughput Test

Table 2-1576 Modified for Throughput Test

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Indicates whether this service is modified for the service throughput test. |
| Displayed name | Modified for Throughput Test |
| OSS name | mfThroughputTest |
| Read-only | yes |
| Tab Panel | General General |
| Type | BOOL |

Number Of IP Detail Addresses**Table 2-1577 Number Of IP Detail Addresses**

| Name | Value |
|----------------|---|
| Default | yes:10 |
| Description | 5670 RAM property for the number of addresses that require IP Detail reporting. |
| Displayed name | Number Of IP Detail Addresses |
| Maximum | 100 |
| Minimum | 0 |
| OSS name | ipDetailCount |
| Read-only | no |
| Tab Panel | Application Assurance.5670 RAM Parameters.General General |
| Type | INT |

Number Of Sites**Table 2-1578 Number Of Sites**

| Name | Value |
|----------------|-----------------|
| Default | yes:0 |
| Displayed name | Number Of Sites |
| OSS name | numberOfSites |
| Read-only | yes |
| Tab Panel | General General |
| Type | INT |

Operational State**Table 2-1579 Operational State**

| Name | Value |
|----------------|--|
| Default | yes:portOutOfService |
| Description | Operational State is built depending on the OT port oper states and XC oper state of Working Path. |
| Displayed name | Operational State |
| OSS name | operationalState |
| Read-only | no |
| Tab Panel | General States |

Table 2-1579 Operational State (continued)

Path Preference

Table 2-1580 Path Preference

| Name | Value |
|-------------------------------------|---|
| Default | yes:working |
| Description | Indicates whether the working path or the protection path needs to be retained when Service protection is modified to unprotected |
| Displayed name | Path Preference |
| OSS name | modifyProtectionPreference |
| Read-only | no |
| Tab Panel | General General |
| Type | ModifyProtectionPreference |
| Enumerated types: | |
| None | |
| Retain Path A1Z1 | |
| Retain Path A1Z2 | |
| Retain Path A2Z1 | |
| Retain Path A2Z2 | |
| Retain Protection Path | |
| Retain Termination Points A1 and Z1 | |
| Retain Termination Points A1 and Z2 | |
| Retain Termination Points A2 and Z1 | |
| Retain Termination Points A2 and Z2 | |
| Retain Working Path | |

Path Search Option

Table 2-1581 Path Search Option

| Name | Value |
|-------------|---|
| Default | yes:system |
| Description | Specifies if routing path should be Auto-picked or User Defined. In case of User Defined, complete route needs to be defined by User via constraints. |

Table 2-1581 Path Search Option (continued)

| Name | Value |
|--------------------------|--------------------|
| Displayed name | Path Search Option |

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Set to 'true', while creating a diverse routed service, using two existing unprotected services. |
| Displayed name | Use Existing Unprotected Services |
| OSS name | isCreateDiverseFromExisting |
| Read-only | no |
| Tab Panel | General Diverse Route Details |
| Type | BOOL |

Wait For Server Restoration

Table 2-1611 Wait For Server Restoration

| Name | Value |
|----------------|-----------------------------|
| Default | yes:true |
| Displayed name | Wait For Server Restoration |
| OSS name | waitForServerRestoration |
| Read-only | no |
| Tab Panel | General Control Plane |
| Type | BOOL |

Wait To Restore

Table 2-1612 Wait To Restore

| Name | Value |
|----------------|--|
| Default | yes:5 |
| Description | Duplicated from ApsGroup. Applicable only for y-cable protected service in creation/edit mode. |
| Displayed name | Wait To Restore |
| Maximum | 20 |
| Minimum | 1 |
| OSS name | waitToRestore |
| Read-only | no |
| Tab Panel | General YCable APS Group |

Table 2-1612 Wait To Restore (continued)

| Name | Value |
|-------|---------|
| Type | INT |
| Units | minutes |

Wave Key Assign Mode**Table 2-1613 Wave Key Assign Mode**

| Name | Value |
|--------------------------|--|
| Default | yes:auto |
| Description | Indicates the wavekey generation mode for the service. |
| Displayed name | Wave Key Assign Mode |
| OSS name | wavekeyAssignMode |
| Read-only | no |
| Tab Panel | General General |
| Type | WavekeySelect |
| Enumerated types: | |
| Auto Keying (NE) | |
| Auto Keying (NMS) | |
| Unkeyed | |

Working Path Service**Table 2-1614 Working Path Service**

| Name | Value |
|-----------------------|---|
| Default | yes: |
| Description | Needs to be set , while creating a diverse routed service, using two existing unprotected services. |
| Displayed name | Working Path Service |
| Mandatory on creation | yes |
| OSS name | diverseWorkingService |
| Read-only | no |
| Tab Panel | General Diverse Route Details |
| Type | POINTER |

Z to A

Table 2-1615 Z to A

| Name | Value |
|--------------------------|---|
| Description | Indicates which service path is the active one in the ZA direction. |
| Displayed name | Z to A |
| OSS name | activePathZA |
| Read-only | no |
| Tab Panel | General Active Path |
| Type | TransportServiceMode |
| Enumerated types: | |
| A1Z1 | |
| A1Z2 | |
| A2Z1 | |
| A2Z2 | |
| Protection | |
| Unprotected | |
| Working | |

OSPF Site parameters

Administrative State

Table 2-1616 Administrative State

| Name | Value |
|----------------|----------------------|
| Default | yes:unknown |
| Displayed name | Administrative State |
| OSS name | administrativeState |
| Read-only | no |
| Tab Panel | General State |
| Type | AdministrativeState |

Advertise Router Capabilities**Table 2-1617 Advertise Router Capabilities**

| Name | Value |
|--------------------------|---|
| Default | yes:disable |
| Description | The value of ospfAdvRtrCapability specifies the OSPF advertise router capabilities. |
| Displayed name | Advertise Router Capabilities |
| OSS name | ospfAdvRtrCapability |
| Read-only | no |
| Tab Panel | Behavior General |
| Type | OspfAdvRtrCapabTypes |
| Enumerated types: | |
| Area | |
| As | |
| Disable | |
| Link | |

Advertise Tunnel Links Enabled**Table 2-1618 Advertise Tunnel Links Enabled**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | The value of tmnxOspfAdvertiseTunnelLink indicates whether advertisement of LSP shortcuts into IGP has been enabled or disabled for OSPF. When the value of tmnxOspfAdvertiseTunnelLink is set to true LSP shortcut advertisement into IGP is enabled and when tmnxOspfAdvertiseTunnelLink is set to false LSP shortcut advertisement into IGP is disabled. |
| Displayed name | Advertise Tunnel Links Enabled |
| OSS name | advertiseTunnelLink |
| Read-only | no |
| Tab Panel | Behavior OSPFv2 |
| Type | BOOL |

Area Border Router**Table 2-1619 Area Border Router**

| Name | Value |
|----------------|--------------------|
| Default | yes:false |
| Displayed name | Area Border Router |
| OSS name | isAreaBorderRouter |
| Read-only | yes |
| Tab Panel | General Type |
| Type | BOOL |

AS-Scope Checksum Sum**Table 2-1620 AS-Scope Checksum Sum**

| Name | Value |
|----------------|------------------------------------|
| Default | yes:0 |
| Displayed name | AS-Scope Checksum Sum |
| OSS name | asScopeLsaChecksumSum |
| Read-only | yes |
| Tab Panel | Behavior Link State Advertisements |
| Type | LONG |

AS-Scope Count**Table 2-1621 AS-Scope Count**

| Name | Value |
|----------------|------------------------------------|
| Default | yes:0 |
| Displayed name | AS-Scope Count |
| OSS name | asScopeLsaCount |
| Read-only | yes |
| Tab Panel | Behavior Link State Advertisements |
| Type | LONG |

Autonomous System Border Router**Table 2-1622 Autonomous System Border Router**

| Name | Value |
|----------------|---------------------------------|
| Default | yes:false |
| Displayed name | Autonomous System Border Router |
| OSS name | isAutonomousSystemBorderRouter |
| Read-only | no |
| Tab Panel | General Type |
| Type | BOOL |

Average Run Time**Table 2-1623 Average Run Time**

| Name | Value |
|----------------|---------------------|
| Default | yes:0 |
| Displayed name | Average Run Time |
| Maximum | 2147483647 |
| Minimum | 0 |
| OSS name | averageSpfRunTime |
| Read-only | yes |
| Tab Panel | Dijkstra Statistics |
| Type | INT |
| Units | 1/100 s |

Backbone Router**Table 2-1624 Backbone Router**

| Name | Value |
|----------------|------------------|
| Default | yes:false |
| Displayed name | Backbone Router |
| OSS name | isBackBoneRouter |
| Read-only | yes |
| Tab Panel | General Type |
| Type | BOOL |

Boot Overload Enabled**Table 2-1625 Boot Overload Enabled**

| Name | Value |
|----------------|---------------------------------|
| Default | yes:disabled |
| Displayed name | Boot Overload Enabled |
| OSS name | bootOverloadAdministrativeState |
| Read-only | no |
| Tab Panel | Overload General |
| Type | INT |

Boot Overload Interval**Table 2-1626 Boot Overload Interval**

| Name | Value |
|----------------|------------------------|
| Default | yes:0 |
| Displayed name | Boot Overload Interval |
| Maximum | 1800 |
| Minimum | 0 |
| OSS name | bootOverloadInterval |
| Read-only | no |
| Tab Panel | Overload General |
| Type | INT |
| Units | seconds |

Domain ID**Table 2-1627 Domain ID**

| Name | Value |
|----------------|---|
| Default | yes:-1 |
| Description | specifies the domain-id associated with this instance of OSPF on the router. If no value is specified for tmnxOspfAsbrDomainId, it is set to -1 |
| Displayed name | Domain ID |
| Maximum | 31 |
| Minimum | -1 |
| OSS name | domainId |

Table 2-1627 Domain ID (continued)

| Name | Value |
|-------------|---|
| Read-only | no |
| Tab Panel | General Autonomous System Border Router |
| Type | INT |

Enable LDP Synchronization**Table 2-1628 Enable LDP Synchronization**

| Name | Value |
|----------------|---|
| Default | yes:true |
| Description | specifies whether the IGP-LDP synchronization feature is enabled or disabled on all interfaces participating in the OSPF routing protocol |
| Displayed name | Enable LDP Synchronization |
| OSS name | enableLdpSync |
| Read-only | no |
| Tab Panel | Behavior General |
| Type | BOOL |

Exit Overflow Interval**Table 2-1629 Exit Overflow Interval**

| Name | Value |
|----------------|---------------------------|
| Default | yes:0 |
| Displayed name | Exit Overflow Interval |
| Maximum | 2147483647 |
| Minimum | 0 |
| OSS name | exitOverflowInterval |
| Read-only | no |
| Tab Panel | Behavior Overflow Control |
| Type | INT |

Export Limit**Table 2-1630 Export Limit**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | The value of <code>tmnxOspfExportLimit</code> specifies the maximum number of routes or prefixes that can be exported into OSPF or OSPF3 from the route table. A value of 0 indicates that the export limit for routes or prefixes has been disabled. |
| Displayed name | Export Limit |
| Maximum | 4294967295 |
| Minimum | 0 |
| OSS name | exportLimit |
| Read-only | no |
| Tab Panel | Behavior General |
| Type | LONG |

Export Limit Log Percent**Table 2-1631 Export Limit Log Percent**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | The value of <code>tmnxOspfExportLimitLogPercent</code> specifies the percentage of the export-limit, at which a warning log message and SNMP notification would be sent. This would only be a warning and additional routes will be learned up to 100% of <code>tmnxOspfExportLimit</code> . A value of 0 indicates that <code>tmnxOspfExportLimitLogPercent</code> is disabled and no log message or SNMP notification would be sent. |
| Displayed name | Export Limit Log Percent |
| Maximum | 100 |
| Minimum | 0 |
| OSS name | exportLimitLogPercent |
| Read-only | no |
| Tab Panel | Behavior General |
| Type | INT |

External

Table 2-1632 External

| Name | Value |
|----------------|----------------------------|
| Default | yes:150 |
| Displayed name | External |
| Maximum | 255 |
| Minimum | 1 |
| OSS name | externalPreference |
| Read-only | no |
| Tab Panel | Behavior Route Preferences |
| Type | INT |

External (LS Type 5) Checksum Sum

Table 2-1633 External (LS Type 5) Checksum Sum

| Name | Value |
|----------------|------------------------------------|
| Default | yes:0 |
| Displayed name | External (LS Type 5) Checksum Sum |
| OSS name | externalLsaChecksumSum |
| Read-only | yes |
| Tab Panel | Behavior Link State Advertisements |
| Type | LONG |

External (LS Type 5) Count

Table 2-1634 External (LS Type 5) Count

| Name | Value |
|----------------|------------------------------------|
| Default | yes:0 |
| Displayed name | External (LS Type 5) Count |
| OSS name | externalLsaCount |
| Read-only | yes |
| Tab Panel | Behavior Link State Advertisements |
| Type | LONG |

External LSA Limit**Table 2-1635 External LSA Limit**

| Name | Value |
|----------------|---------------------------|
| Default | yes:-1 |
| Displayed name | External LSA Limit |
| Maximum | 2147483647 |
| Minimum | -1 |
| OSS name | externalLsdbLimit |
| Read-only | no |
| Tab Panel | Behavior Overflow Control |
| Type | INT |

Graceful Restart**Table 2-1636 Graceful Restart**

| Name | Value |
|----------------|--------------------------|
| Default | yes:false |
| Displayed name | Graceful Restart |
| OSS name | gracefulRestart |
| Read-only | no |
| Tab Panel | Graceful Restart General |
| Type | generic.TruthValue |

Helper Mode**Table 2-1637 Helper Mode**

| Name | Value |
|----------------|--------------------------|
| Default | yes:false |
| Displayed name | Helper Mode |
| OSS name | grHelperMode |
| Read-only | no |
| Tab Panel | Graceful Restart General |
| Type | generic.TruthValue |

Ignore DN Bit**Table 2-1638 Ignore DN Bit**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether to ignore the DN bit for OSPF LSA packets for this instance of OSPF on the router. When ignoreDNBit has a value of 'true' the DN bit for OSPF LSA packets will be ignored. When it has a value of 'false' the DN bit will not be ignored for OSPF LSA packets." |
| Displayed name | Ignore DN Bit |
| OSS name | ignoreDNBit |
| Read-only | no |
| Tab Panel | Behavior General |
| Type | BOOL |

Incremental External Run Count**Table 2-1639 Incremental External Run Count**

| Name | Value |
|----------------|--------------------------------|
| Default | yes:0 |
| Displayed name | Incremental External Run Count |
| OSS name | incrementalExternalSpfRunCount |
| Read-only | yes |
| Tab Panel | Dijkstra Statistics |
| Type | LONG |

Incremental Internal Run Count**Table 2-1640 Incremental Internal Run Count**

| Name | Value |
|----------------|--------------------------------|
| Default | yes:0 |
| Displayed name | Incremental Internal Run Count |
| OSS name | incrementalInternalSpfRunCount |
| Read-only | yes |
| Tab Panel | Dijkstra Statistics |
| Type | LONG |

Incremental SPF Wait**Table 2-1641 Incremental SPF Wait**

| Name | Value |
|----------------|--|
| Default | yes:1000 |
| Description | The value of incrSpfWait defines the internal OSPF delay before an incremental SPF calculation is performed. |
| Displayed name | Incremental SPF Wait |
| Maximum | 1000 |
| Minimum | 0 |
| OSS name | incrSpfWait |
| Read-only | no |
| Tab Panel | Dijkstra Configuration |
| Type | INT |
| Units | milliseconds |

Initial Wait**Table 2-1642 Initial Wait**

| Name | Value |
|----------------|------------------------|
| Default | yes:5000 |
| Displayed name | Initial Wait |
| Maximum | 600000 |
| Minimum | 10 |
| OSS name | IsaGenerateInitialWait |
| Read-only | no |
| Tab Panel | Dijkstra Configuration |
| Type | INT |
| Units | milliseconds |

Initial Wait**Table 2-1643 Initial Wait**

| Read-only | yes |
| Tab Panel | Dijkstra Statistics |
| Type | DATE |

LDP Over RSVP Include**Table 2-1655 LDP Over RSVP Include**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | The value of tmnxOspfLdpOverRsvp specifies whether LDP-over-RSVP feature is enabled or disabled for a specific OSPF instance. When enabled, OSPF will select the endpoint that is closest to the destination for further selection of LDP-over-RSVP tunnels to that endpoint. |
| Displayed name | LDP Over RSVP Include |
| OSS name | ldpOverRsvp |
| Read-only | no |
| Tab Panel | Behavior OSPFv2 |
| Type | BOOL |

Loop-free Alternate**Table 2-1656 Loop-free Alternate**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | The value of loopfreeAlternate specifies whether to enable or disable IP fast re-route capability for OSPF. |
| Displayed name | Loop-free Alternate |
| OSS name | loopfreeAlternate |
| Read-only | no |
| Tab Panel | Behavior General |
| Type | BOOL |

LSA Accumulate

Table 2-1657 LSA Accumulate

| Name | Value |
|----------------|---|
| Default | yes:1000 |
| Description | The value of IsaAccumulate defines the accumulation delay for multiple LSA's. |
| Displayed name | LSA Accumulate |
| Maximum | 1000 |
| Minimum | 0 |
| OSS name | IsaAccumulate |
| Read-only | no |
| Tab Panel | Dijkstra Configuration |
| Type | INT |
| Units | milliseconds |

LSA Arrival Wait

Table 2-1658 LSA Arrival Wait

| Displayed name | Overload Stubs |
| OSS name | overloadStubs |
| Read-only | no |
| Tab Panel | Behavior General |
| Type | BOOL |

Redistribute Delay**Table 2-1679 Redistribute Delay**

| Name | Value |
|----------------|---|
| Default | yes:1000 |
| Description | The value of redistDelay defines the internal OSPF hold down timer for external routes being redistributed into OSPF. |
| Displayed name | Redistribute Delay |
| Maximum | 1000 |
| Minimum | 0 |
| OSS name | redistDelay |
| Read-only | no |
| Tab Panel | Dijkstra Configuration |
| Type | INT |
| Units | milliseconds |

RFC1583 Compatible**Table 2-1680 RFC1583 Compatible**

| Name | Value |
|----------------|---------------------|
| Default | yes:true |
| Displayed name | RFC1583 Compatible |
| OSS name | isRFC1583Compatible |
| Read-only | no |
| Tab Panel | Behavior OSPFv2 |

Table 2-1680 RFC1583 Compatible (continued)

| Type | BOOL |

Routing Instance ID**Table 2-1681 Routing Instance ID**

| Name | Value |
|----------------|--------------------------|
| Default | yes:1 |
| Displayed name | Routing Instance ID |
| Maximum | 10240 |
| Minimum | 1 |
| OSS name | routerId |
| Read-only | yes |
| Tab Panel | General Routing Instance |
| Type | INT |

Routing Instance Name**Table 2-1682 Routing Instance Name**

| Name | Value |
|----------------|--------------------------|
| Default | yes: |
| Displayed name | Routing Instance Name |
| Maximum | 32 |
| Minimum | 0 |
| OSS name | routerName |
| Read-only | yes |
| Tab Panel | General Routing Instance |
| Type | STRING |

RSVP Shortcut Enabled**Table 2-1683 RSVP Shortcut Enabled**

| Name | Value |
|---------|-----------|
| Default | yes:false |

Table 2-1683 RSVP Shortcut Enabled (continued)

| Name | Value |
|----------------|---|
| Description | The value of tmnxOspfRsvpShortcut indicates whether RSVP-TE shortcut for resolving IGP routes has been enabled or disabled for OSPF. When the value of tmnxOspfRsvpShortcut is set to true RSVP-TE shortcut is enabled and when tmnxOspfRsvpShortcut is set to false RSVP-TE shortcut is disabled for OSPF. |
| Displayed name | RSVP Shortcut Enabled |
| OSS name | rsvpShortcut |
| Read-only | no |
| Tab Panel | Behavior OSPFv2 |
| Type | BOOL |

Second Wait**Table 2-1684 Second Wait**

| Name | Value |
|----------------|------------------------|
| Default | yes:5000 |
| Displayed name | Second Wait |
| Maximum | 600000 |
| Minimum | 10 |
| OSS name | IsaGenerateSecondWait |
| Read-only | no |
| Tab Panel | Dijkstra Configuration |
| Type | INT |
| Units | milliseconds |

Second Wait**Table 2-1685 Second Wait**

| Name | Value |
|----------------|---------------|
| Default | yes:1000 |
| Displayed name | Second Wait |
| Maximum | 100000 |
| Minimum | 10 |
| OSS name | spfSecondWait |
| Read-only | no |

|-------------|------------------------|
| Tab Panel | Dijkstra Configuration |
| Type | INT |
| Units | milliseconds |

Site ID**Table 2-1686 Site ID**

| Name | Value |
|----------------|--------------|
| Default | yes:0.0.0.0 |
| Displayed name | Site ID |
| Maximum | 64 |
| OSS name | siteId |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

Site Name**Table 2-1687 Site Name**

| Name | Value |
|----------------|--------------|
| Default | yes: |
| Displayed name | Site Name |
| Maximum | 252 |
| OSS name | siteName |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

SPF Max Wait**Table 2-1688 SPF Max Wait**

| Name | Value |
|---------|-----------|
| Default | yes:10000 |

Table 2-1688 SPF Max Wait (continued)

| Name | Value |
|----------------|------------------------|
| Displayed name | SPF Max Wait |
| Maximum | 120000 |
| Minimum | 10 |
| OSS name | spfMaxWait |
| Read-only | no |
| Tab Panel | Dijkstra Configuration |
| Type | INT |
| Units | milliseconds |

Stub Router Support**Table 2-1689 Stub Router Support**

| Name | Value |
|----------------|---------------------|
| Default | yes:true |
| Displayed name | Stub Router Support |
| OSS name | stubRouterSupport |
| Read-only | yes |
| Tab Panel | General Type |
| Type | BOOL |

Super-Backbone**Table 2-1690 Super-Backbone**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | The value of tnnxOspfSuperBackBone specifies whether CE-PE functionality is required or not. tnnxOspfSuperBackBone indicates the type of the LSA generated as a result of routes redistributed into OSPF. When the value is set to 'true' the redistributed routes are injected as summary, external or NSSA LSAs. When the value is set to 'false' the redistributed routes are injected as either external or NSSA LSAs only. |
| Displayed name | Super-Backbone |
| OSS name | superBackBone |
| Read-only | no |
| Tab Panel | OSPF Super-Backbone General |

Table 2-1690 Super-Backbone (continued)

| Name | Value |
|------|--------------------|
| Type | generic.TruthValue |

Suppress DN Bit**Table 2-1691 Suppress DN Bit**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | specifies whether to suppress the setting of the DN bit for OSPF LSA packets generated by this instance of OSPF on the router. When suppressDNBit has a value of 'true' the DN bit for OSPF LSA packets generated by this instance of the OSPF router will not be set. When it has a value of 'false' this instance of the OSPF router will follow the normal procedure to determine whether to set the DN bit. |
| Displayed name | Suppress DN Bit |
| OSS name | suppressDNBit |
| Read-only | no |
| Tab Panel | Behavior General |
| Type | BOOL |

Time Entered**Table 2-1692 Time Entered**

| Name | Value |
|----------------|---------------------------|
| Default | yes:0 |
| Displayed name | Time Entered |
| OSS name | lastOverflowEnteredTime |
| Read-only | yes |
| Tab Panel | Behavior Overflow Control |
| Type | DATE |

Time of Exit**Table 2-1693 Time of Exit**

| Name | Value |
|---------|-------|
| Default | yes:0 |

Table 2-1693 Time of Exit (continued)

| Name | Value |
|----------------|---------------------------|
| Displayed name | Time of Exit |
| OSS name | lastOverflowExitTime |
| Read-only | yes |
| Tab Panel | Behavior Overflow Control |
| Type | DATE |

Total Exported Routes**Table 2-1694 Total Exported Routes**

| Name | Value |
|----------------|---|
| Description | The value of tmnxOspfTotalExportedRoutes indicates the total number of routes exported into OSPF from the route table manager when an export policy is configured. Value of tmnxOspfTotalExportedRoutes would be 0 when no export policy is configured. |
| Displayed name | Total Exported Routes |
| OSS name | exportedRoutes |
| Read-only | no |
| Tab Panel | Behavior General |
| Type | LONG |

Traffic Engineering Support**Table 2-1695 Traffic Engineering Support**

| Name | Value |
|----------------|-----------------------------|
| Default | yes:true |
| Displayed name | Traffic Engineering Support |
| OSS name | trafficEngineeringSupport |
| Read-only | no |
| Tab Panel | Behavior General |
| Type | generic.TruthValue |

Unicast Import**Table 2-1696 Unicast Import**

| Name | Value |
|----------------|------------------|
| Default | yes:true |
| Displayed name | Unicast Import |
| OSS name | unicastImport |
| Read-only | no |
| Tab Panel | Behavior General |
| Type | BOOL |

Unknown AS-Scope Checksum Sum**Table 2-1697 Unknown AS-Scope Checksum Sum**

| Name | Value |
|----------------|------------------------------------|
| Default | yes:0 |
| Displayed name | Unknown AS-Scope Checksum Sum |
| OSS name | unknownLsaChecksumSum |
| Read-only | yes |
| Tab Panel | Behavior Link State Advertisements |
| Type | LONG |

Unknown AS-Scope Count**Table 2-1698 Unknown AS-Scope Count**

| Name | Value |
|----------------|------------------------------------|
| Default | yes:0 |
| Displayed name | Unknown AS-Scope Count |
| OSS name | unknownLsaCount |
| Read-only | yes |
| Tab Panel | Behavior Link State Advertisements |
| Type | LONG |

Version**Table 2-1699 Version**

| Name | Value |
|-----------------------|--------------------------|
| Default | yes:v2 |
| Displayed name | Version |
| Mandatory on creation | yes |
| OSS name | version |
| Read-only | no |
| Tab Panel | General OSPF Instance |
| Type | ospf.ProtocolVersionEnum |

VPN Domain ID**Table 2-1700 VPN Domain ID**

| Name | Value |
|----------------|--|
| Default | yes:0000.0000.0000 |
| Description | The value of tmnxOspfVpnDomainId specifies the OSPF VPN Domain. This is exchanged using BGP in the extended community attribute associated with a prefix. This object applies to VPRN instances of OSPF only. An attempt to modify the value of this object will result in an 'inconsistentValue' error when the vRtrID index for this row entry is not a VPRN instance. |
| Displayed name | VPN Domain ID |
| Maximum | 14 |
| Minimum | 0 |
| OSS name | vpnDomainId |
| Read-only | no |
| Tab Panel | OSPF Super-Backbone General |
| Type | STRING |
| Units | hex |

VPN Domain Type**Table 2-1701 VPN Domain Type**

| Name | Value |
|---------|--------------|
| Default | yes:type0000 |

Table 2-1701 VPN Domain Type (continued)

| Name | Value |
|--------------------------|---|
| Description | The value of <code>tmnxOspfVpnDomainType</code> specifies type of the extended community attribute exchanged using BGP to carry the OSPF VPN Domain ID. This object applies to VPRN instances of OSPF only. An attempt to modify the value of this object will result in an 'inconsistentValue' error when the <code>vRtrID</code> index for this row entry is not a VPRN instance. |
| Displayed name | VPN Domain Type |
| OSS name | <code>vpnDomainType</code> |
| Read-only | no |
| Tab Panel | OSPF Super-Backbone General |
| Type | <code>VpnDomainTypes</code> |
| Enumerated types: | |
| | 0005 |
| | 0105 |
| | 0205 |
| | 8005 |
| | None |

VPN Tag

Table 2-1702 VPN Tag

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | The value of <code>tmnxOspfVpnTag</code> specifies the route tag for an OSPF VPN on a PE router. This field is set in the tag field of the OSPF external LSAs generated by the PE. This is mainly used to prevent routing loops. This object applies to VPRN instances of OSPF only. An attempt to modify the value of this object will result in an 'inconsistentValue' error when the <code>vRtrID</code> index for this row entry is not a VPRN instance |
| Displayed name | VPN Tag |
| Maximum | 4294967295 |
| Minimum | 0 |
| OSS name | <code>vpnTag</code> |
| Read-only | no |
| Tab Panel | OSPF Super-Backbone General |
| Type | LONG |

OTS parameters

Administrative State

Table 2-1703 Administrative State

| Name | Value |
|----------------|---|
| Default | yes:unknown |
| Description | Administrative state of the interface. It may be used to suppress the alarms or disable consequent actions on the entity. |
| Displayed name | Administrative State |
| OSS name | administrativeState |
| Read-only | no |
| Tab Panel | States General |
| Type | optical.XcState |

| Read-only | no |
| Tab Panel | General General |
| Type | POINTER |

Assigned Rate**Table 2-1753 Assigned Rate**

| Name | Value |
|----------------|--|
| Description | The assigned rate - OTU1, GigE, OC3... |
| Displayed name | Assigned Rate |
| OSS name | assignedRate |
| Read-only | no |
| Tab Panel | General General |
| Type | optical.AssignedRate |

Asymmetric Interworking Enabled**Table 2-1754 Asymmetric Interworking Enabled**

| Name | Value |
|----------------|--|
| Description | OtuK Asymmetric interworking mode.OtukAsymInterworking |
| Displayed name | Asymmetric Interworking Enabled |
| OSS name | otukAsymInterworking |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Consequent Action Loopback**Table 2-1755 Consequent Action Loopback**

| Name | Value |
|----------------|--|
| Default | yes:enabled |
| Description | Specifies whether a consequent action is performed in the context of loopback switching. |
| Displayed name | Consequent Action Loopback |
| OSS name | consActionLoopback |
| Read-only | no |
| Tab Panel | General Test/Analysis |
| Type | optical.AluWdmEnabledDisabled |

Ctp ID**Table 2-1756 Ctp ID**

| Name | Value |
|-----------------------|-----------------------------|
| Default | yes:1 |
| Description | The identifier for the Ctp. |
| Displayed name | Ctp ID |
| Mandatory on creation | yes |
| Minimum | 1 |
| OSS name | ctpId |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Expected DAPI**Table 2-1757 Expected DAPI**

| Name | Value |
|----------------|---|
| Description | The DAPI expected by the receiver. This object has no effect when timDetMode has the value off(1) or dapi(2). {BR} DAPI: Destination Access Point Identifier. |
| Displayed name | Expected DAPI |
| Maximum | 31 |
| Minimum | 0 |
| OSS name | expectedDapi |
| Read-only | no |
| Tab Panel | General TTI |
| Type | STRING |

Facility Loopback**Table 2-1758 Facility Loopback**

| Name | Value |
|----------------|-----------------------|
| Description | Facility Loopback. |

Background Diagnostics Fault Reason**Table 2-1846 Background Diagnostics Fault Reason**

| Name | Value |
|----------------|-------------------------------------|
| Default | yes: |
| Displayed name | Background Diagnostics Fault Reason |
| OSS name | backgroundDiagnosticsFaultReason |
| Read-only | yes |
| Tab Panel | General Manufacturer Details |
| Type | STRING |

Background Diagnostics State

Table 2-1847 Background Diagnostics State

| Name | Value |
|--------------------------|--------------------------------|
| Default | yes:unknown |
| Displayed name | Background Diagnostics State |
| OSS name | backgroundDiagnosticsState |
| Read-only | yes |
| Tab Panel | General Manufacturer Details |
| Type | BackgroundDiagnosticsStateType |
| Enumerated types: | |
| Critical Fault Detected | |
| Fault Detected | |
| N/A | |
| Ok | |
| Unknown | |

Cable Delay Correction (ns)

Table 2-1848 Cable Delay Correction (ns)

| Name | Value |
|----------------|---------------------------------------|
| Default | yes:0 |
| Description | Cable Delay Correction |
| Displayed name | Cable Delay Correction (ns) |
| Maximum | 100000000 |
| Minimum | 0 |
| OSS name | cableDelayCorrection |
| Read-only | no |
| Tab Panel | Port Specifics.General TOD Attributes |
| Type | LONG |

Channel

Table 2-1849 Channel

| Name | Value |
|---------|-------|
| Default | yes:0 |

Table 2-1849 Channel (continued)

| Name | Value |
|----------------|--------------|
| Displayed name | Channel |
| OSS name | dwdmChannel |
| Read-only | no |
| Tab Panel | General DWDM |
| Type | INT |

Channel Spacing(GHZ)**Table 2-1850 Channel Spacing(GHZ)**

| Name | Value |
|----------------|---|
| Description | This Specifies the channel spacing to use for line ports. 1 - 100GHz 2 - 50GHz. |
| Displayed name | Channel Spacing(GHZ) |
| OSS name | nwPortChannelSpacing |
| Read-only | no |
| Tab Panel | Port Specifics.General OT |
| Type | ChannelSpacing |

Class**Table 2-1851 Class**

| Name | Value |
|--------------------------|-----------------|
| Default | yes:none |
| Displayed name | Class |
| OSS name | portClass |
| Read-only | yes |
| Tab Panel | General General |
| Type | PortClass |
| Enumerated types: | |
| 10 Gigabit Ethernet | |
| 100 Gigabit Ethernet | |
| 40 Gigabit Ethernet | |
| DSL | |
| Fast Ethernet | |

Table 2-1851 Class (continued)

| Name | Value |
|-------------------------|-------|
| Gigabit Ethernet | |
| GPON | |
| GPS | |
| None | |
| Radio | |
| Serial | |
| SONET | |
| SONET Channel | |
| TDM | |
| Variable Speed Ethernet | |
| Virtual Port | |
| Voice | |
| VSM Ethernet | |
| WDM | |

Clear GMRE Topology Alarm

Table 2-1852 Clear GMRE Topology Alarm

| Name | Value |
|----------------|--|
| Description | Clears ASON topology connectivity alarm. |
| Displayed name | Clear GMRE Topology Alarm |
| OSS name | asonTopoClearAlarm |
| Read-only | no |
| Tab Panel | Port Specifics.General General |
| Type | BOOL |

CLEI

Table 2-1853 CLEI

| Name | Value |
|----------------|------------|
| Description | Port CLEI. |
| Displayed name | CLEI |
| OSS name | portClei |

Table 2-1853 CLEI (continued)

| Name | Value |
|-------------|----------------------------------|
| Read-only | no |
| Tab Panel | Port Specifics.General Inventory |
| Type | STRING |

CLEI Code**Table 2-1854 CLEI Code**

| Name | Value |
|----------------|----------------------------------|
| Default | yes: |
| Displayed name | CLEI Code |
| Maximum | 16 |
| Minimum | 0 |
| OSS name | cleiCode |
| Read-only | yes |
| Tab Panel | General Equipment Location Codes |
| Type | STRING |

CLI Name**Table 2-1855 CLI Name**

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | CLI Name |
| Maximum | 252 |
| OSS name | portName |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

Collect Accounting Statistics

Table 2-1856 Collect Accounting Statistics

| Name | Value |
|----------------|-------------------------------|
| Default | yes:true |
| Displayed name | Collect Accounting Statistics |
| OSS name | collectStats |
| Read-only | no |
| Tab Panel | Policies.General Accounting |
| Type | BOOL |

Collect Accounting Statistics

Table 2-1857 Collect Accounting Statistics

| Name | Value |
|----------------|--------------------------------------|
| Default | yes:false |
| Displayed name | Collect Accounting Statistics |
| OSS name | etherCollectStats |
| Read-only | no |
| Tab Panel | Policies.General Ethernet Accounting |
| Type | BOOL |

Combiner

Table 2-1858 Combiner

| Name | Value |
|----------------|---|
| Default | yes:disable |
| Description | Enable/Disable Combiner(SD)function on MPT. |
| Displayed name | Combiner |
| OSS name | mptCombiner |
| Read-only | no |
| Tab Panel | General Port Usage |
| Type | LONG |

Commissioning Completed**Table 2-1859 Commissioning Completed**

| Name | Value |
|----------------|--|
| Description | Each external OSC card port whose power management mode setting is Automatic has a Power Management Commissioned Flag. When commissioning is completed these flags are set to complete by users. |
| Displayed name | Commissioning Completed |
| OSS name | powerMgmtIsCommissioned |
| Read-only | no |
| Tab Panel | Port Specifics.General Power |
| Type | BOOL |

Company ID**Table 2-1860 Company ID**

| Name | Value |
|----------------|----------------------------------|
| Description | Port Company ID. |
| Displayed name | Company ID |
| OSS name | portCompanyId |
| Read-only | no |
| Tab Panel | Port Specifics.General Inventory |
| Type | STRING |

Compatibility Mode**Table 2-1861 Compatibility Mode**

| Name | Value |
|----------------|---|
| Default | yes:default |
| Description | This parameter is used to set the compatible mode of the OTU2 port. default: The port operates in the default mode which is supported by all 12xGE cards except the 11DPE12. 11DPE12: The port operates in the 11DPE12 interworking mode. |
| Displayed name | Compatibility Mode |
| OSS name | portConfigCompatibilityMode |
| Read-only | no |
| Tab Panel | Port Specifics.General OTU |
| Type | PortConfigCompatibilityMode |

Compensation Module**Table 2-1862 Compensation Module**

| Name | Value |
|----------------|---|
| Description | The parameter specifies the properties w.r.t. compensation modules. |
| Displayed name | Compensation Module |
| OSS name | compensationModule |
| Read-only | yes |
| Tab Panel | Port Specifics.General OT |
| Type | CompensationModule |

Configured MAC**Table 2-1863 Configured MAC**

| Name | Value |
|----------------|-----------------------|
| Default | yes:00-00-00-00-00-00 |
| Displayed name | Configured MAC |
| OSS name | macAddress |
| Read-only | no |
| Tab Panel | General General |
| Type | MACADDR |

Connected From**Table 2-1864 Connected From**

| Name | Value |
|----------------|---|
| Description | External port far end address that points to this port. |
| Displayed name | Connected From |
| Maximum | 64 |
| OSS name | apFarEndAddrFrom |
| Read-only | no |
| Tab Panel | Port Specifics.General Connection |
| Type | STRING |

Connected From**Table 2-1865 Connected From**

| Name | Value |
|----------------|---|
| Description | External port far end address that points to this port. |
| Displayed name | Connected From |
| OSS name | apFarEndIfIndexFromDisplay |
| Read-only | no |
| Tab Panel | Port Specifics.General Connection |
| Type | STRING |

Connected From**Table 2-1866 Connected From**

| Name | Value |
|----------------|---|
| Description | PTP Sig port connected from |
| Displayed name | Connected From |
| OSS name | ptpSigConnectedFromPort |
| Read-only | no |
| Tab Panel | Port Specifics.General Connection Information |
| Type | POINTER |

Connected LD OTDR Port**Table 2-1867 Connected LD OTDR Port**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Specifies the assigned LD port that is connected to the OTDR port. |
| Displayed name | Connected LD OTDR Port |
| OSS name | connectedLDOTDRPort |
| Read-only | no |
| Tab Panel | Port Specifics.General Connection |
| Type | POINTER |

Connected To

Table 2-1868 Connected To

| Name | Value |
|----------------|---|
| Description | Address of the external port to which this port is connected. |
| Displayed name | Connected To |
| Maximum | 64 |
| OSS name | apFarEndAddr |
| Read-only | no |
| Tab Panel | Port Specifics.General Connection |
| Type | STRING |

Connected To

Table 2-1869 Connected To

| Name | Value |
|----------------|---|
| Description | External port far end address that points to this port. |
| Displayed name | Connected To |
| OSS name | apFarEndIfIndexDisplay |
| Read-only | no |
| Tab Panel | Port Specifics.General Connection |
| Type | STRING |

Connected To

Table 2-1870 Connected To

| Name | Value |
|----------------|---|
| Description | PTP Sig port connected to |
| Displayed name | Connected To |
| OSS name | ptpSigConnectedToPort |
| Read-only | no |
| Tab Panel | Port Specifics.General Connection Information |
| Type | POINTER |

Connected To Port**Table 2-1871 Connected To Port**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Sets reference to degree input port when MVAC port used external. |
| Displayed name | Connected To Port |
| OSS name | connToPort |
| Read-only | no |
| Tab Panel | Port Specifics.General General |
| Type | POINTER |

Connected Type From**Table 2-1872 Connected Type From**

| Name | Value |
|----------------|---|
| Description | Indicates whether an internal/external port is pointing to this port. |
| Displayed name | Connected Type From |
| OSS name | apFarEndTypeFrom |
| Read-only | no |
| Tab Panel | Port Specifics.General Connection |
| Type | FarEndType |

Connected Type To**Table 2-1873 Connected Type To**

| Name | Value |
|----------------|---|
| Description | Indicates if this port is connected to another internal port or an external port. |
| Displayed name | Connected Type To |
| OSS name | apFarEndType |
| Read-only | no |
| Tab Panel | Port Specifics.General Connection |
| Type | FarEndType |

Connection Monitoring End Point Mode**Table 2-1874 Connection Monitoring End Point Mode**

| Name | Value |
|----------------|--|
| Default | yes:bypass |
| Description | Connection monitoring End Point Mode |
| Displayed name | Connection Monitoring End Point Mode |
| OSS name | connectionMonitoringEndPointMode |
| Read-only | no |
| Tab Panel | Port Specifics.General Delay Measurement |
| Type | oth.CMEPMode |

Connection Retry Count**Table 2-1875 Connection Retry Count**

| Name | Value |
|----------------|---|
| Description | The number of consecutive retries that cnLinkAutoStateSourceIP is un-reachable when cnLinkCitAutoStateCtrl is true, which results in CIT port to be auto-enabled. |
| Displayed name | Connection Retry Count |
| Maximum | 10000 |
| Minimum | 5 |
| OSS name | cnLinkSourceLossCount |
| Read-only | no |
| Tab Panel | Port Specifics.General Auto-Disable port Status |
| Type | LONG |

Connection Retry Interval**Table 2-1876 Connection Retry Interval**

| Name | Value |
|----------------|--|
| Description | The interval to contact cnLinkAutoStateSourceIP when cnLinkCitAutoStateCtrl is true. |
| Displayed name | Connection Retry Interval |
| Maximum | 7200 |
| Minimum | 10 |
| OSS name | cnLinkSourceIPCheckInterval |
| Read-only | no |

Table 2-1876 Connection Retry Interval (continued)

| Name | Value |
|-------------|---|
| Tab Panel | Port Specifics.General Auto-Disable port Status |
| Type | LONG |
| Units | seconds |

Consequent Action Loopback**Table 2-1877 Consequent Action Loopback**

| Name | Value |
|----------------|--|
| Default | yes:enabled |
| Description | Specifies whether a consequent action is performed in the context of loopback switching. |
| Displayed name | Consequent Action Loopback |
| OSS name | consActionLoopback |
| Read-only | no |
| Tab Panel | Port Specifics.General Test/Analysis |
| Type | AluWdmEnabledDisabled |

Consequent Actions Performed**Table 2-1878 Consequent Actions Performed**

| Name | Value |
|----------------|---|
| Description | Determines if the consequent actions are performed if a Trace Identifier Mismatch defect (dTIM) is detected |
| Displayed name | Consequent Actions Performed |
| OSS name | trcConsAct |
| Read-only | no |
| Tab Panel | Port Specifics.General SONET / SDH |
| Type | BOOL |

Container**Table 2-1879 Container**

| Name | Value |
|-------------|------------------------------------|
| Description | Define Client port Container Type. |

Table 2-1879 Container (continued)

| Name | Value |
|----------------|---------------------------|
| Displayed name | Container |
| OSS name | cpContainer |
| Read-only | no |
| Tab Panel | Port Specifics.General OT |
| Type | Container |

Containing Equipment Status

Table 2-1880 Containing Equipment Status

| Name | Value |
|--------------------------|-----------------------------|
| Default | yes:indeterminate |
| Displayed name | Containing Equipment Status |
| OSS name | containingEquipmentState |
| Read-only | yes |
| Tab Panel | States General |
| Type | ContainingEquipmentState |
| Enumerated types: | |
| Admin Down | |
| Equipment In Test | |
| N/A | |
| OK | |
| Oper Down | |
| Removed | |
| Type Mismatch | |

Cost Metric

Table 2-1881 Cost Metric

| Name | Value |
|----------------|-------------------------------------|
| Description | The Traffic eng metric of the link. |
| Displayed name | Cost Metric |
| Maximum | 65535 |
| Minimum | 1 |

Table 2-1881 Cost Metric (continued)

| Name | Value |
|-------------|-----------------------------|
| OSS name | cnTeMetric |
| Read-only | no |
| Tab Panel | Port Specifics.General OSPF |
| Type | LONG |

CrossRegen Partner Port**Table 2-1882 CrossRegen Partner Port**

| Name | Value |
|----------------|--------------------------------------|
| Description | Cross reg partner port of Line Port. |
| Displayed name | CrossRegen Partner Port |
| OSS name | lpCrossRegPartner |
| Read-only | no |
| Tab Panel | Port Specifics.General OT |
| Type | CrossRegPartner |

CSF Laser Consequent Action**Table 2-1883 CSF Laser Consequent Action**

| Name | Value |
|----------------|---|
| Description | This parameter defines the Consequent Action in case of CSF for port-port applications. |
| Displayed name | CSF Laser Consequent Action |
| OSS name | csfLaserConsequentAction |
| Read-only | no |
| Tab Panel | Port Specifics.General Gigabit Ethernet |
| Type | ConsequentActionType |

Current Key Info**Table 2-1884 Current Key Info**

| Name | Value |
|----------------|----------------------------------|
| Description | Port Encryption CurrentKey Info. |
| Displayed name | Current Key Info |

Table 2-1884 Current Key Info (continued)

| Name | Value |
|-------------|--|
| Maximum | 256 |
| Minimum | 0 |
| OSS name | currentKeyInfo |
| Read-only | no |
| Tab Panel | Port Specifics.General Encryption Management |
| Type | STRING |

Data Bearer Details**Table 2-1885 Data Bearer Details**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Pointer to gmpls.Databearer instance discovered through the CORBA interface. Applicable if this is the port is being used as a databearer. |
| Displayed name | Data Bearer Details |
| OSS name | dataBearerPointer |
| Read-only | yes |
| Tab Panel | Port Specifics.General ASON Control Plane - Data Bearer |
| Type | POINTER |

Date**Table 2-1886 Date**

| Name | Value |
|----------------|----------------------------------|
| Description | Port Date. |
| Displayed name | Date |
| OSS name | portDate |
| Read-only | no |
| Tab Panel | Port Specifics.General Inventory |
| Type | STRING |

DDM Event Suppression**Table 2-1887 DDM Event Suppression**

| Name | Value |
|----------------|-----------------------|
| Default | yes:false |
| Displayed name | DDM Event Suppression |
| OSS name | ddmEventSuppression |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Dead Interval**Table 2-1888 Dead Interval**

| Name | Value |
|----------------|--|
| Description | The router dead interval of the link. For 1830, the range is (1..'FFFF'h). This value must be greater than or equal to hello interval value. |
| Displayed name | Dead Interval |
| Maximum | 65535 |
| Minimum | 2 |
| OSS name | cnRtrDeadInterval |
| Read-only | no |
| Tab Panel | Port Specifics.General OSPF |
| Type | LONG |
| Units | seconds |

Decommissioned**Table 2-1889 Decommissioned**

| Name | Value |
|----------------|--------------------------------|
| Default | yes:false |
| Displayed name | Decommissioned |
| OSS name | isDecommissioned |
| Read-only | yes |
| Tab Panel | General Port Decommission Info |
| Type | BOOL |

Default VLAN

Table 2-1890 Default VLAN

| Name | Value |
|----------------|--|
| Default | yes:1 |
| Description | Applicable to Telco 7250 only, default VLAN for the port |
| Displayed name | Default VLAN |
| Maximum | 4092 |
| Minimum | 1 |
| OSS name | vlan |
| Read-only | no |
| Tab Panel | General VLAN Info |
| Type | INT |

Defect Holdoff Timer

Table 2-1891 Defect Holdoff Timer

| Name | Value |
|----------------|---|
| Description | Line port consequent action (whether AIS insertion or laser off) must be delayed by a hold-off timer. |
| Displayed name | Defect Holdoff Timer |
| OSS name | IpDefectHoldoffTimer |
| Read-only | no |
| Tab Panel | Port Specifics.General OTU |
| Type | DisabledEnabled |

Defect Holdoff Timer

Table 2-1892 Defect Holdoff Timer

| Name | Value |
|----------------|---|
| Description | Line port consequent action (whether AIS insertion or laser off) must be delayed by a hold-off timer. |
| Displayed name | Defect Holdoff Timer |
| OSS name | IpLineDefectHoldoffTimer |
| Read-only | no |
| Tab Panel | Port Specifics.General OT |

| Name | Value |
|------|-----------------|
| Type | DisabledEnabled |

Description

Table 2-1893 Description

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Description |
| Maximum | 256 |
| Minimum | 0 |
| OSS name | description |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Description

Table 2-1894 Description

| Name | Value |
|----------------|---|
| Default | no |
| Description | This property is specific to AOS family |
| Displayed name | Description |
| Maximum | 80 |
| Minimum | 0 |
| OSS name | portAccessDescription |
| Read-only | no |
| Tab Panel | General Service Access Info |
| Type | STRING |

DHCP IP Range

Table 2-1895 DHCP IP Range

| Name | Value |
|----------------|---|
| Description | Control Network DHCP range. Current configurable range: 0 to 10 |
| Displayed name | DHCP IP Range |
| Maximum | 10 |
| Minimum | 1 |
| OSS name | cnDhcpRange |
| Read-only | no |
| Tab Panel | Port Specifics.General Control Network |
| Type | INT |

DHCP Server Enabled

Table 2-1896 DHCP Server Enabled

| Name | Value |
|----------------|---|
| Description | Control Network DHCP server configured. |
| Displayed name | DHCP Server Enabled |
| OSS name | cnDhcpServer |
| Read-only | no |
| Tab Panel | Port Specifics.General Control Network |
| Type | BOOL |

Direction

Table 2-1897 Direction

| Name | Value |
|----------------|---------------------------------------|
| Default | yes:0 |
| Description | Direction |
| Displayed name | Direction |
| OSS name | direction |
| Read-only | no |
| Tab Panel | Port Specifics.General TOD Attributes |
| Type | PtpTodDirection |

Direction**Table 2-1898 Direction**

| Name | Value |
|----------------|--|
| Description | Port Direction Specifier |
| Displayed name | Direction |
| OSS name | syncEBitsPortDirection |
| Read-only | no |
| Tab Panel | Port Specifics.General BITS Attributes |
| Type | SyncEBitsPortDirection |

Disable Port Automatically**Table 2-1899 Disable Port Automatically**

| Name | Value |
|----------------|---|
| Description | false - System is not in auto_state. CIT enable/disable is done by ifAdminStatus. true - System is in auto_state. CIT enable/disable is done by the connectivity status of source_ip. The CIT port will be disabled when the source IP is reachable and enabled when source IP becomes un-reachable. Provisioning of this attribute is restricted to administrators only. |
| Displayed name | Disable Port Automatically |
| OSS name | cnLinkCitAutoStateCtrl |
| Read-only | no |
| Tab Panel | Port Specifics.General Auto-Disable port Status |
| Type | BOOL |

Distribute Default Gateway via DHCP**Table 2-1900 Distribute Default Gateway via DHCP**

| Name | Value |
|----------------|--|
| Description | Indicates if default gateway IP address is distributed via DHCP on this interface. |
| Displayed name | Distribute Default Gateway via DHCP |
| OSS name | cnDhcpGateway |
| Read-only | no |
| Tab Panel | Port Specifics.General Control Network |
| Type | BOOL |

DM Current Status**Table 2-1901 DM Current Status**

| Name | Value |
|----------------|--|
| Default | yes:none |
| Description | Delay measurement - current status |
| Displayed name | DM Current Status |
| OSS name | delayMeasurementCurrentStatus |
| Read-only | yes |
| Tab Panel | Port Specifics.General Delay Measurement |
| Type | oth.DMCurrentStatus |

DM Current Value**Table 2-1902 DM Current Value**

| Name | Value |
|----------------|--|
| Description | Delay measurement - current value |
| Displayed name | DM Current Value |
| OSS name | delayMeasurementCurrentValue |
| Read-only | yes |
| Tab Panel | Port Specifics.General Delay Measurement |
| Type | FLOAT |
| Units | us |

Drop**Table 2-1903 Drop**

| Name | Value |
|----------------|---|
| Default | yes:unspecified |
| Description | The current disposition of the port in the SIG to AD direction. |
| Displayed name | Drop |
| OSS name | currentDropDisposition |
| Read-only | no |
| Tab Panel | Port Specifics.General AD Port Details |
| Type | AddDropDisposition |

Drop Path Target Power**Table 2-1904 Drop Path Target Power**

| Name | Value |
|----------------|--|
| Default | yes:-99.0 |
| Description | The following description applies to the colorless port of the CWR8-88 card: The drop target power |
| Displayed name | Drop Path Target Power |
| Maximum | -4 |
| Minimum | -26.5 |
| OSS name | cwrPortDropTargetPower |
| Read-only | no |
| Tab Panel | Port Specifics.General Power |
| Type | FLOAT |
| Units | dBm |

Drop Path Wavelength Tracker Decoder Usage**Table 2-1905 Drop Path Wavelength Tracker Decoder Usage**

| Name | Value |
|----------------|---|
| Description | The type of WTD used egress. |
| Displayed name | Drop Path Wavelength Tracker Decoder Usage |
| OSS name | powerMgmtWtdUsageTypeOut |
| Read-only | no |
| Tab Panel | Port Specifics.General Wavelength Tracker Decoder Usage |
| Type | WtdUsageType |

DTV Amplitude**Table 2-1906 DTV Amplitude**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Reports the current DTV amplitude value. If the module is not present, it returns -1. |
| Displayed name | DTV Amplitude |
| OSS name | lpDTVPortValueAmplitude |
| Read-only | no |

Table 2-1906 DTV Amplitude (continued)

| Name | Value |
|-------------|----------------------------|
| Tab Panel | Port Specifics.General DTV |
| Type | STRING |

DTV Control Enabled**Table 2-1907 DTV Control Enabled**

| Name | Value |
|----------------|---|
| Default | yes:disabled |
| Description | When this is set to disabled, the DTV amplitude will be reset to the default value. |
| Displayed name | DTV Control Enabled |
| OSS name | IpDTVControlEnabled |
| Read-only | no |
| Tab Panel | Port Specifics.General DTV |
| Type | AluWdmEnabledDisabled |

DTV Phase**Table 2-1908 DTV Phase**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Reports the current DTV phase value. If the module is not present, it returns -1. |
| Displayed name | DTV Phase |
| OSS name | IpDTVPortValuePhase |
| Read-only | no |
| Tab Panel | Port Specifics.General DTV |
| Type | STRING |

E1 Frame Format**Table 2-1909 E1 Frame Format**

| Name | Value |
|-------------|---------------------------|
| Default | yes:1 |
| Description | Indicates the E1T1 format |

Table 2-1909 E1 Frame Format (continued)

| Name | Value |
|----------------|--|
| Displayed name | E1 Frame Format |
| OSS name | frameFormat |
| Read-only | no |
| Tab Panel | Port Specifics.General E1/T1 Specifics |
| Type | E1T1FrameFormatType |

Egress Percentage of Rate**Table 2-1910 Egress Percentage of Rate**

| Name | Value |
|----------------|-------------------------------|
| Default | yes:100 |
| Displayed name | Egress Percentage of Rate |
| Maximum | 1000 |
| Minimum | 0 |
| OSS name | portEgrPoolPercentageRate |
| Read-only | no |
| Tab Panel | General Port Percentage Rates |
| Type | INT |
| Units | % |

Egress Pool Policy**Table 2-1911 Egress Pool Policy**

| Name | Value |
|----------------|---------------------------|
| Default | yes: |
| Displayed name | Egress Pool Policy |
| OSS name | portEgrNamedPoolPlcy |
| Read-only | no |
| Tab Panel | General Named Buffer Pool |
| Type | POINTER |

Egress Timing Mode

Table 2-1912 Egress Timing Mode

| Name | Value |
|----------------|--|
| Default | yes:1 |
| Description | Indicates E1T1 client egress timing mode |
| Displayed name | Egress Timing Mode |
| OSS name | egressTimingMode |
| Read-only | no |
| Tab Panel | Port Specifics.General E1/T1 Specifics |
| Type | E1T1ClientEgressTimingModeType |

Embedded ODU Facility Type

Table 2-1913 Embedded ODU Facility Type

| Name | Value |
|----------------|----------------------------|
| Description | Embedded ODU FacilityType. |
| Displayed name | Embedded ODU Facility Type |
| OSS name | oduFacilityType |
| Read-only | no |
| Tab Panel | Port Specifics.General OT |
| Type | EmbeddedODUFacilityType |

Enable DEI

Table 2-1914 Enable DEI

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether or not the port is enabled for color-aware policing using DEI bits. |
| Displayed name | Enable DEI |
| OSS name | enableDei |
| Read-only | no |
| Tab Panel | General Enable DEI |
| Type | BOOL |

Encapsulation Mode**Table 2-1915 Encapsulation Mode**

| Name | Value |
|----------------|--------------------------------------|

| Units | dB |

Input LOS Threshold

Table 2-1981 Input LOS Threshold

| Name | Value |
|----------------|-----------------------------|
| Default | yes:-99.0 |
| Description | LOS Threshold for OMD Port. |
| Displayed name | Input LOS Threshold |
| Maximum | 20 |
| Minimum | -32 |
| OSS name | omdPortLosThreshold |
| Read-only | no |
| Tab Panel | Port Specifics.General OMD |
| Type | FLOAT |

Table 2-1981 Input LOS Threshold (continued)

| Name | Value |
|-------|-------|
| Units | dBm |

Input LOS threshold tolerance**Table 2-1982 Input LOS threshold tolerance**

| Name | Value |
|----------------|--|
| Default | yes:100 |
| Description | The tolerance for clearing LOS shutdown,above the set threshold.Current range:0 to 1000. |
| Displayed name | Input LOS threshold tolerance |
| Maximum | 1000 |
| Minimum | 0 |
| OSS name | ampInfoLosThresholdTol |
| Read-only | no |
| Tab Panel | Port Specifics.General Amplifier |
| Type | INT |
| Units | dB |

Input LOS Threshold Tolerance**Table 2-1983 Input LOS Threshold Tolerance**

| Name | Value |
|----------------|--|
| Default | yes:-99.0 |
| Description | This is the difference above the LOS set and clear points and applies to the SIG_IN of the OMD port of the SFC1, SFC2, SFC4, SFC8, SFD5, and SFD8 cards. |
| Displayed name | Input LOS Threshold Tolerance |
| Maximum | 6 |
| Minimum | 0 |
| OSS name | omdPortLosThresholdTolerance |
| Read-only | no |
| Tab Panel | Port Specifics.General OMD |
| Type | FLOAT |
| Units | dB |

Input Loss of Signal Threshold**Table 2-1984 Input Loss of Signal Threshold**

| Name | Value |
|----------------|--|
| Default | yes:-2500 |
| Description | The threshold for going into LOS shutdown.Current range:-2700to 0. |
| Displayed name | Input Loss of Signal Threshold |
| Maximum | 0 |
| Minimum | -2700 |
| OSS name | ampInfoLosThreshold |
| Read-only | no |
| Tab Panel | Port Specifics.General Amplifier |
| Type | INT |
| Units | dBm |

Input Power**Table 2-1985 Input Power**

| Name | Value |
|----------------|---|
| Default | yes:-99.0 |
| Description | The measured power at the SIG_IN of the OMD port. |
| Displayed name | Input Power |
| OSS name | omdPortRxPower |
| Read-only | no |
| Tab Panel | Port Specifics.General OMD |
| Type | FLOAT |
| Units | dBm |

Input Power**Table 2-1986 Input Power**

| Name | Value |
|----------------|--|
| Default | yes:-99.0 |
| Description | The received power in mBm. This is accessible from ports 2 and 3 (working or protected) exclusively. |
| Displayed name | Input Power |

Table 2-1986 Input Power (continued)

| Name | Value |
|-------------|----------------------------|
| OSS name | opsTxInputPower |
| Read-only | no |

| Description | Line Impedance |
| Displayed name | Line Impedance |
| OSS name | syncEBitsPortLineImpedance |
| Read-only | no |
| Tab Panel | Port Specifics.General BITS Attributes |
| Type | SyncEImpedenceType |

Link Group ID**Table 2-2012 Link Group ID**

| Name | Value |
|----------------|------------------------------------|
| Default | yes:notApplicable |
| Description | > Specifies the port ISL group Id. |
| Displayed name | Link Group ID |
| OSS name | islGroupId |
| Read-only | no |
| Tab Panel | Port Specifics.General OT |
| Type | ISLGroupIdType |

Link Integrity

Table 2-2013 Link Integrity

| Name | Value |
|----------------|---|
| Description | The Operational status of the associated physical link. |
| Displayed name | Link Integrity |
| OSS name | cnLinkOperStatus |
| Read-only | no |
| Tab Panel | Port Specifics.General Control Network |
| Type | OperStatus |

Link Trap

Table 2-2014 Link Trap

| Name | Value |
|----------------|-----------------|
| Default | yes:disable |
| Displayed name | Link Trap |
| OSS name | linkTrap |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Link Up

Table 2-2015 Link Up

| Name | Value |
|----------------|----------------|
| Default | yes:false |
| Displayed name | Link Up |
| OSS name | isLinkUp |
| Read-only | yes |
| Tab Panel | States General |
| Type | BOOL |

Load Balance Algorithm**Table 2-2016 Load Balance Algorithm**

| Name | Value |
|----------------|---|
| Default | yes:notApplicable |
| Description | Specifies the load balancing algorithm to be used on this port. |
| Displayed name | Load Balance Algorithm |
| OSS name | loadBalanceAlgorithm |
| Read-only | no |
| Tab Panel | General General |
| Type | equipment.PortLoadBalanceAlgorithm |

LOS Mode**Table 2-2017 LOS Mode**

| Name | Value |
|----------------|----------------------------------|
| Description | The Amplifier Port LOS Mode. |
| Displayed name | LOS Mode |
| OSS name | ampPortLosMode |
| Read-only | no |
| Tab Panel | Port Specifics.General Amplifier |
| Type | PortLosMode |

LOS Propagation**Table 2-2018 LOS Propagation**

| Name | Value |
|----------------|-------------------------------------|
| Description | The LOS propagation of Client Port. |
| Displayed name | LOS Propagation |
| OSS name | cpLosProp |
| Read-only | no |
| Tab Panel | Port Specifics.General OT |
| Type | LosPropagation |

LPT Consequent Action

Table 2-2019 LPT Consequent Action

| Name | Value |
|----------------|---|
| Default | yes:noAction |
| Description | Indicates the 11DPE12A port LPT Consequence Action. |
| Displayed name | LPT Consequent Action |
| OSS name | lptConsequenceAction |
| Read-only | no |
| Tab Panel | Port Specifics.General Ethernet |
| Type | LptCActionType |

MAC Address

Table 2-2020 MAC Address

| Name | Value |
|----------------|--|
| Default | yes:00-00-00-00-00-00 |
| Displayed name | MAC Address |
| OSS name | hwMacAddress |
| Read-only | yes |
| Tab Panel | Port Specifics.General UserPanelCardProperties |
| Type | MACADDR |

Manufacture Date

| Type | POINTER |

Port Mode**Table 2-2108 Port Mode**

| Name | Value |
|--------------------------|---|
| Description | PMODE (Port Mode), determines if the conditions for the facility are reported or not. |
| Displayed name | Port Mode |
| OSS name | portMode |
| Read-only | no |
| Tab Panel | Port Specifics.General OT |
| Type | PortMode |
| Enumerated types: | |
| Access | |
| Hybrid | |
| N/A | |
| Network | |

Port Role**Table 2-2109 Port Role**

| Name | Value |
|----------------|--|
| Default | yes:notApplicable |
| Description | Specifies the role (client/line) for the port. |
| Displayed name | Port Role |
| OSS name | portRole |
| Read-only | no |
| Tab Panel | Port Specifics.General General |
| Type | PortRole |

Port Role**Table 2-2110 Port Role**

| Name | Value |
|----------------|------------------------|
| Default | yes:unspecified |
| Description | Used for the GUI only. |
| Displayed name | Port Role |
| OSS name | terminationPointRole |

Table 2-2110 Port Role (continued)

| Name | Value |
|-------------|--------------------------------|
| Read-only | no |
| Tab Panel | Port Specifics.General General |
| Type | TerminationPointRole |

Port Scheduler Policy**Table 2-2111 Port Scheduler Policy**

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | Specifies the port scheduler policy used by this port |
| Displayed name | Port Scheduler Policy |
| OSS name | portSchedulerPolicyObjectPointer |
| Read-only | no |
| Tab Panel | Policies.General Port Scheduler |
| Type | POINTER |

Port TCA Profile**Table 2-2112 Port TCA Profile**

| Name | Value |
|----------------|--|
| Default | yes: |
| Displayed name | Port TCA Profile |
| OSS name | portTCAProfilePointer |
| Read-only | no |
| Tab Panel | Port Specifics.Performance.Ethernet TCA Profile Assignment General |
| Type | POINTER |

Port Type**Table 2-2113 Port Type**

| Name | Value |
|-------------|--|
| Description | Specifies the port type which can be distinguished: - NORMALSO normal optical physical STMn port - TRANSTDMOT transparent TDM OTU client STMn port |

Table 2-2113 Port Type (continued)

| Name | Value |
|----------------|------------------------------------|
| Displayed name | Port Type |
| Maximum | 255 |
| Minimum | 0 |
| OSS name | ocnStmnPortType |
| Read-only | no |
| Tab Panel | Port Specifics.General SONET / SDH |
| Type | STRING |

Port Usage**Table 2-2114 Port Usage**

| Name | Value |
|----------------|--------------------|
| Default | yes:0 |
| Displayed name | Port Usage |
| OSS name | portUsage |
| Read-only | no |
| Tab Panel | General Port Usage |
| Type | INT |

Post-FEC BER**Table 2-2115 Post-FEC BER**

| Name | Value |
|----------------|----------------------------|
| Description | This is for OTU4 FEC Mode. |
| Displayed name | Post-FEC BER |
| OSS name | otuPostFecBER |
| Read-only | no |
| Tab Panel | Port Specifics.General OTU |
| Type | STRING |

Power Achieved**Table 2-2116 Power Achieved**

| Name | Value |
|----------------|---|
| Description | The parameter specifies whether the target output power is achieved (value Y) or not (value N). |
| Displayed name | Power Achieved |
| OSS name | powerAchieved |
| Read-only | no |
| Tab Panel | Port Specifics.General OT |
| Type | BOOL |

Power Control Enabled**Table 2-2117 Power Control Enabled**

| Name | Value |
|----------------|--|
| Description | The parameter specifies whether WaveTracker power control is enabled (value: Y) or not (value N) . . |
| Displayed name | Power Control Enabled |
| OSS name | waveKeyEncodePowerControl |
| Read-only | no |
| Tab Panel | Port Specifics.General Wave Key Encode |
| Type | BOOL |

Power Delta**Table 2-2118 Power Delta**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | The parameter describes the acceptable power delta (unit: dBm){BR} from the target transmit power at the addressed WaveTracker encoder (TXDELTAPOWER: Transmit Delta Power). |
| Displayed name | Power Delta |
| Maximum | 99.99 |
| Minimum | -99.99 |
| OSS name | otPortPowerDelta |
| Read-only | no |

Table 2-2118 Power Delta (continued)

| Name | Value |
|-------------|---------------------------|
| Tab Panel | Port Specifics.General OT |
| Type | FLOAT |
| Units | dBm |

Power Gain**Table 2-2119 Power Gain**

| Name | Value |
|----------------|---|
| Default | yes:-99.0 |
| Description | Applies to the signal port of the amplifier card. |
| Displayed name | Power Gain |
| Maximum | 33 |
| Minimum | 6 |
| OSS name | ampPortPowerGain |
| Read-only | no |
| Tab Panel | Port Specifics.General Amplifier |
| Type | FLOAT |
| Units | dB |

Power Management Type**Table 2-2120 Power Management Type**

| Name | Value |
|----------------|--------------------------------------|
| Description | The type of power management egress. |
| Displayed name | Power Management Type |
| OSS name | powerMgmtTypeOut |
| Read-only | no |
| Tab Panel | Port Specifics.General Power |
| Type | PowerMgmtType |

Power Setting

Table 2-2121 Power Setting

| Name | Value |
|----------------|---|
| Default | yes:3.00 |
| Description | Configures the power setting for signal output power in power mode.The operating mode tnAarPortConfigOperatingMode must be configured to Power prior to setting the power. Only use for test purposes.Current configurable range:-500to 1000. |
| Displayed name | Power Setting |
| Maximum | 10.00 |
| Minimum | -5.00 |
| OSS name | ampPowerSetting |
| Read-only | no |
| Tab Panel | Port Specifics.General Amplifier |
| Type | FLOAT |
| Units | dB |

Power Setting

Table 2-2122 Power Setting

| Name | Value |
|----------------|---|
| Default | yes:3.00 |
| Description | Configures the power setting for signal output power in power mode.The operating mode tnAarPortConfigOperatingMode must be configured to Power prior to setting the power. Only use for test purposes.Current configurable range:-500to 1000. |
| Displayed name | Power Setting |
| Maximum | 10.00 |
| Minimum | -5.00 |
| OSS name | ampPowerSetting |
| Read-only | no |
| Tab Panel | Port Specifics.General Connectivity Testing |
| Type | FLOAT |
| Units | dB |

Power Target**Table 2-2123 Power Target**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | The parameter specifies the target transmit power (unit: dBm) {BR} at the addressed WaveTracker (TXTARGETPOWER: Transmit Target Power). |
| Displayed name | Power Target |
| Maximum | 99.99 |
| Minimum | -99.99 |
| OSS name | otPortPowerTarget |
| Read-only | no |
| Tab Panel | Port Specifics.General OT |
| Type | FLOAT |
| Units | dBm |

PPS Status**Table 2-2124 PPS Status**

| Name | Value |
|----------------|---------------------------------------|
| Default | yes:0 |
| Description | Direction |
| Displayed name | PPS Status |
| OSS name | ppsStatus |
| Read-only | no |
| Tab Panel | Port Specifics.General TOD Attributes |
| Type | PtpTodPPSStatus |

Pre-FEC BER**Table 2-2125 Pre-FEC BER**

| Name | Value |
|----------------|----------------------------|
| Description | This is for OTU4 FEC Mode. |
| Displayed name | Pre-FEC BER |
| OSS name | otuPreFecBER |
| Read-only | no |

Table 2-2125 Pre-FEC BER (continued)

| Name | Value |
|-------------|----------------------------|
| Tab Panel | Port Specifics.General OTU |
| Type | STRING |

Present Duplex Mode**Table 2-2126 Present Duplex Mode**

| Name | Value |
|----------------|---|
| Default | yes:full |
| Description | Defines the current mode of operation of the MAC entity. 'unkwn' indicates that the current duplex mode could not be determined. Management control of the duplex mode is accomplished through the MAU MIB. When an interface does not support autonegotiation, or when autonegotiation is not enabled, the duplex mode is controlled using ifMauDefaultType. When autonegotiation is supported and enabled, duplex mode is controlled using ifMauAutoNegAdvertisedBits. In either case, the currently operating duplex mode is reflected both in this object and in ifMauType. Note that this object provides redundant information with ifMauType. Normally, redundant objects are discouraged. However, in this instance, it allows a management application to determine the duplex status of an interface without having to know every possible value of ifMauType. This was felt to be sufficiently valuable to justify the redundancy. |
| Displayed name | Present Duplex Mode |
| OSS name | dot3StatsDuplexStatus |
| Read-only | no |
| Tab Panel | Port Specifics.General Control Network |
| Type | Duplex |

Present Link Speed**Table 2-2127 Present Link Speed**

| Name | Value |
|----------------|--|
| Default | yes:100 |
| Description | Duplicated from OpticalPortSpecifics |
| Displayed name | Present Link Speed |
| OSS name | portSpeed |
| Read-only | no |
| Tab Panel | Port Specifics.General Control Network |
| Type | INT |
| Units | Mbps |

Present MTU Size**Table 2-2128 Present MTU Size**

| Name | Value |
|----------------|--|
| Default | yes:Not Available |
| Description | The actual (negotiated) Maximum Transmission Unit size, in units of bytes with default value -1, when the MTU size has not yet been negotiated. The default value -1 should be interpreted by UIs as '-1'. |
| Displayed name | Present MTU Size |
| OSS name | oscMtuNeg |
| Read-only | no |
| Tab Panel | Port Specifics.General OSC / OSCSFP Attributes |
| Type | STRING |

Previous State**Table 2-2129 Previous State**

| Name | Value |
|--------------------------|----------------|
| Default | yes:1 |
| Displayed name | Previous State |
| OSS name | previousState |
| Read-only | yes |
| Tab Panel | States General |
| Type | PortState |
| Enumerated types: | |
| Diagnose | |
| Ghost | |
| Link Down | |
| Link Up | |
| None | |
| Up | |

Primary State

Table 2-2130 Primary State

| Name | Value |
|----------------|--|
| Default | yes:unspecified |
| Displayed name | Primary State |
| OSS name | primaryState |
| Read-only | no |
| Tab Panel | Port Specifics.General Facility States |
| Type | PrimaryStateType |

Primary State

Table 2-2131 Primary State

| Name | Value |
|----------------|------------------|

| Read-only | no |
| Tab Panel | States General |
| Type | PrimaryStateType |

Protection Time Slot

Table 2-2132 Protection Time Slot

| Name | Value |
|----------------|--|
| Description | This is for 11dpge12, string built using protTs1 and protTs2 values. |
| Displayed name | Protection Time Slot |
| OSS name | protectionTimeSlot |
| Read-only | no |
| Tab Panel | Port Specifics.General OT |
| Type | STRING |

Provisioned Duplex Mode**Table 2-2133 Provisioned Duplex Mode**

| Name | Value |
|----------------|--|
| Default | yes:auto |
| Description | Control Network Link Duplex. |
| Displayed name | Provisioned Duplex Mode |
| OSS name | cnLinkDuplex |
| Read-only | no |
| Tab Panel | Port Specifics.General Control Network |
| Type | Duplex |

Provisioned Link Speed**Table 2-2134 Provisioned Link Speed**

| Name | Value |
|----------------|--|
| Default | yes:auto |
| Description | Control Network Link Speed. |
| Displayed name | Provisioned Link Speed |
| OSS name | cnLinkSpeed |
| Read-only | no |
| Tab Panel | Port Specifics.General Control Network |
| Type | LinkSpeed |

Provisioned MTU Size**Table 2-2135 Provisioned MTU Size**

| Name | Value |
|----------------|--|
| Default | yes:1491 |
| Description | The MTU size for OSC interface, which to allow remote monitoring of RAMAN/EDFA devices as well remote monitoring of RAMAN/EDFA devices as well as to limit overall packet fragmentation in the network |
| Displayed name | Provisioned MTU Size |
| Maximum | 1500 |
| Minimum | 576 |
| OSS name | oscSfpPortMtu |

Table 2-2135 Provisioned MTU Size (continued)

| Description | apLEDStatus is built using apLEDColor and apLEDState |
| Displayed name | Status LED Color |
| OSS name | apLEDStatus |
| Read-only | no |
| Tab Panel | Port Specifics.General General |
| Type | STRING |

Subnet Mask**Table 2-2226 Subnet Mask**

| Name | Value |
|----------------|--|
| Default | yes:0.0.0.0 |
| Description | Control Network Link SubnetMask. |
| Displayed name | Subnet Mask |
| OSS name | cnSubnetMask |
| Read-only | no |
| Tab Panel | Port Specifics.General Control Network |
| Type | INETADDR |

Subrack Connection**Table 2-2227 Subrack Connection**

| Name | Value |
|----------------|--|
| Default | no |
| Description | specifies where the MPT is connected to on the subrack |
| Displayed name | Subrack Connection |
| OSS name | mptSubrackPointer |
| Read-only | no |
| Tab Panel | General Port Usage |
| Type | POINTER |

SVLAN Tag Protocol ID**Table 2-2228 SVLAN Tag Protocol ID**

| Name | Value |
|----------------|---------------------------------------|
| Default | yes:qinqtpid1 |
| Description | The QinQ mode TPID for 11DPE12E port. |
| Displayed name | SVLAN Tag Protocol ID |
| OSS name | sVLANTagProtocolTPID |
| Read-only | no |
| Tab Panel | Port Specifics.General Ethernet |
| Type | QinQTPID |

Switching Threshold**Table 2-2229 Switching Threshold**

| Name | Value |
|----------------|--|
| Default | yes:-99.0 |
| Description | If the power drops below this threshold, a protection switch will be executed. This is accessible from ports 2 and 3 (working or protected) exclusively. |
| Displayed name | Switching Threshold |
| Maximum | 5 |
| Minimum | -32 |
| OSS name | opsSwitchingThreshold |
| Read-only | no |
| Tab Panel | Port Specifics.General OPS |
| Type | FLOAT |
| Units | dBm |

Switching Threshold Calculation Mode**Table 2-2230 Switching Threshold Calculation Mode**

| Name | Value |
|----------------|--|
| Description | Indicates if the OPSA switch threshold is calculated by the NE (auto) or set by the user (manual) - applies to ports 2 and 3 (A and B) of the OPSA card. |
| Displayed name | Switching Threshold Calculation Mode |
| OSS name | opsSwitchingThreshCalcControl |

SNC Route XC parameters

aEnd1 TpName Ctp Id

Table 2-2449 aEnd1 TpName Ctp Id

| Name | Value |
|-----------------------|---|
| Default | no |
| Description | Corresponds to "CTP" portion of the CORBA name of the aEnd tpName. Eg: "odu3-3=1-g=0-ts=1". |
| Displayed name | aEnd1 TpName Ctp Id |
| Mandatory on creation | yes |
| OSS name | aEnd1TpNameCtpId |
| Read-only | no |
| Tab Panel | General A End 1 |
| Type | STRING |

aEnd1 TpName Databearer Id

Table 2-2450 aEnd1 TpName Databearer Id

| Name | Value |
|-----------------------|---|
| Default | no |
| Description | Corresponds to "PTP" portion of the CORBA name of the aEnd tpName. Databearer external name. Eg: "OTU-1020304". |
| Displayed name | aEnd1 TpName Databearer Id |
| Mandatory on creation | yes |
| OSS name | aEnd1TpNameDataBearerId |
| Read-only | no |
| Tab Panel | General A End 1 |

Table 2-2450 aEnd1 TpName Dabearer Id (continued)

| Name | Value |
|------|--------|
| Type | STRING |

aEnd1 TpName Ems**Table 2-2451 aEnd1 TpName Ems**

| Name | Value |
|-----------------------|---|
| Default | no |
| Description | Corresponds to EMS name (ie GMRE LSR ID) of the aEnd tpName. Encoded as IPv4 address (xxx.xxx.xxx.xxx). |
| Displayed name | aEnd1 TpName Ems |
| Mandatory on creation | yes |
| OSS name | aEnd1TpNameEms |
| Read-only | no |
| Tab Panel | General A End 1 |
| Type | STRING |

aEnd1 TpName Managed Element**Table 2-2452 aEnd1 TpName Managed Element**

| Name | Value |
|-----------------------|---|
| Default | yes:0 |
| Description | Corresponds to "ManagedElement" portion of the CORBA name of the aEnd tpName. In CORBA interface, for the time being, it is always "0". |
| Displayed name | aEnd1 TpName Managed Element |
| Mandatory on creation | yes |
| OSS name | aEnd1TpNameManagedElement |

| Read-only | no |
| Tab Panel | General FGW Based Setting |
| Type | BOOL |

Auto-Activate After Successful File Transfer**Table 2-2483 Auto-Activate After Successful File Transfer**

| Name | Value |
|----------------|---|
| Default | yes:true |
| Description | Indicates whether the 5620SAM server shall activate the software image, after transferring it successfully to the node. Image activation involves updating the bof file on the node to point to this image, backing up the currently active boot loader and replacing it by the boot loader from the selected image and then forcing a boot env resync for nodes with redundant CPMs. Note : Deprecated for SR family in 12.0, use <code>{{mediation.SoftwareFolderDescriptor.activateImage()}}</code> instead. |
| Displayed name | Auto-Activate After Successful File Transfer |
| OSS name | isAutoActivate |
| Read-only | no |
| Tab Panel | General PSS Based Setting |
| Type | BOOL |

Auto-Commit After Successful Software Activation**Table 2-2484 Auto-Commit After Successful Software Activation**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Indicates whether the 5620 SAM shall automatically send the 'Accept Software Image' request to the eNodeB following a successful 'Activation' of that same Software Image. |
| Displayed name | Auto-Commit After Successful Software Activation |
| OSS name | isAutoAccept |
| Read-only | no |
| Tab Panel | General PSS Based Setting |
| Type | BOOL |

CFlash Backup Root Path**Table 2-2485 CFlash Backup Root Path**

| Name | Value |
|----------------|--|
| Default | yes:cf3:/backup |
| Description | Specifies the location on the node file system, where the currently active boot loader shall be backed up, before replacing it with the new boot loader. |
| Displayed name | CFlash Backup Root Path |

Table 2-2485 CFlash Backup Root Path (continued)

| OSS name | cpNodeId |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Local DP Node ID**Table 2-2532 Local DP Node ID**

| Name | Value |
|----------------|--|
| Description | SubNode is identified in the network by a unique unsigned int32 called the Data Plane Node ID (SAM: dpNodeId; GMRE CLI interface-subnode-LocalDPNodeId). The dpNodeId, which can be different from subNodeId, is CLI user provisioned integer that is modifiable before the admin state of SubNode is brought UP for the first time. In TMF814 CORBA i/f, dpNodeId value is encoded as IPv4 address (xxx.xxx.xxx.xxx). For example, for CLI user provisioned value of dpNodeId="333", TMF814 CORBA i/f reports dpNodeId as dpNodeId_ipv4="0.0.1.77". |
| Displayed name | Local DP Node ID |
| OSS name | dpNodeId |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Local DP Node ID (IPv4)**Table 2-2533 Local DP Node ID (IPv4)**

| Name | Value |
|----------------|---|
| Description | Eg. for dpNodeId="333", dpNodeId_ipv4="0.0.1.77". |

| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

SubNode ID

Table 2-2538 SubNode ID

| Name | Value |
|-----------------------|---|
| Description | SAM subNodeId corresponds to GMRE CLI interface-subnode-IfIndex property. On the NE, GMRE CLI interface-subnode-IfIndex property is provisioned by the user and has to follow format rss000000 where: - r: rackId (1..9) - ss: subRackId (01..99; subRackId=5 means that ss=05; subRackId=66 means that ss=66) NOTE: For DWDM/L0 CPNode, subNodeId is always 101000000. In SAM, subNodeId is in format rss: - r: rackId (1..9) - ss: subRackId (01..99) Therefore, subNodeId does not contain trailing 000000 in SAM model. |
| Displayed name | SubNode ID |
| Mandatory on creation | yes |

| Type | LONG |

Color Exclude

Table 2-2547 Color Exclude

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Color is used for administrative partitioning of an ASON domain; is a 32 bit presented in hex format (0x00000000 .. 0xFFFFFFFF). Colors that can be edited are 1-28; additionally to these 28 colors, NE reports 4 extra colors (29-32) with the most significant HEX digit; these 4 extra colors are for internal GMRE use and are not editable by the user, but are displayed in CLI. Default value: 0x0 (no constraints). This means that all Te Links which do not contain any of the specified colors can be used. A color cannot be set at any time in both attributes (see includeAnyColor). |
| Displayed name | Color Exclude |

| Type | STRING |

Cost

Table 2-2585 Cost

| Name | Value |
|---------|--------|
| Default | yes:25 |

Table 2-2585 Cost (continued)

| Name | Value |
|----------------|---|
| Description | Cost metric. Corresponds to SNPPLink.linkMetric in CORBA. Can be changed if administrativeState=unlocked. |
| Displayed name | Cost |
| Maximum | 254 |
| Minimum | 1 |
| OSS name | cost |
| Read-only | yes |
| Tab Panel | General Traffic Engineering Parameters |
| Type | INT |

DP Node IP Address**Table 2-2586 DP Node IP Address**

| Name | Value |
|----------------|--|
| Default | yes:0.0.0.0 |
| Description | dpNodeId_ipv4 of a DpNode associate to this Snpp. Maps to name.EMS attribute in NE CORBA. Note, however, that this property does not qualify to be part of Snpp name because its value can change during the lifetime of Snpp object. Instead, ems is just a n-1 relationship between Snpp and local DpNode. If Snpp (SNPPLink on the NE) is associated to a DataBearer, value of ems property is a local dpNodeId_ipv4 that the DataBearer belongs to; any subsequent DataBearers assigned to this Snpp must belong to the same local dpNodeId_ipv4. If Snpp is not associated to any DataBearers, ems value is "0.0.0.0"; the next DataBearer assigned to this Snpp can be from any DpNode on this CpNode. |
| Displayed name | DP Node IP Address |
| OSS name | localDpNodeId_ipv4 |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

Latency**Table 2-2587 Latency**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Unsigned integer in microseconds. Range is [0..1000000], 0 means no latency. Default is 0. |
| Displayed name | Latency |

Table 2-2587 Latency (continued)

| Name | Value |
|-------------|--|
| Maximum | 1000000 |
| Minimum | 0 |

| Enabled | |

Remote CP Node

Table 2-2590 Remote CP Node

| Name | Value |
|----------------|---|
| Description | GMRE LSR Id (cpNodeId_IPv4) of remote node, encoded as IPv4 address (xxx.xxx.xxx.xxx). Corresponds to SnppLink_T.additionalInfo.RemoteGMRELSrId attribute in CORBA. Provisioned at Snpp create scenario, not modifiable after that. Combining SnppLink_T.additionalInfo.RemoteGMRELSrId, SnppLink_T.remoteSNPPLinkName.SNPPLinkScope, and SnppLink_T.remoteSNPPLinkName.SNPPLink from CORBA i/f, SAM mediation creates remoteSnppPointer. |
| Displayed name | Remote CP Node |
| OSS name | remoteCpNodeId_ipv4 |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

Remote TE Link Endpoint

Table 2-2591 Remote TE Link Endpoint

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Pointer to the remote Snpp. Provisioned at Snpp create scenario, not modifiable after that. SAM mediation creates remoteSnppPointer by combining CORBA i/f input: - SnppLink_T.additionalInfo.RemoteGMRELSrId (remoteCpNodeId_ipv4 in SAM), - SnppLink_T.remoteSNPPLinkName.SNPPLinkScope, and - SnppLink_T.remoteSNPPLinkName.SNPPLink. |
| Displayed name | Remote TE Link Endpoint |

Discovery State

Table 3-81 Discovery State

| Name | Value |
|----------------|--|
| Default | yes:notApplicable |
| Description | Only applicable to the global policy. Set to "InProgress" if the global policy is created as part of the specific NE resync during the full node resync or node discovery. At the end of full node resync, if the resync is successful, the global policy is completely updated from first discovered local policy and its discoveryState is set to "completed". Otherwise, the global policy is not updated and its discoveryState is set to "failed". For "failed" global policy, it will be updated by next successful full node resync or synchronized from the specific local policy. Set to "initialized" if the global policy is created by SNMP trap notification. User may need to synchronize the global policy manually with the specific local policy. Set to "N/A" if the global policy is created or modified by a SAM user. |

MAC Filter Type

Table 3-145 MAC Filter Type

| Name | Value |
|--------------------------|---|
| Default | yes:normal |
| Description | Specifies which type of entries this MAC Filter can contain. If set to 'isid' the only accepted match criteria for the MAC Filter entries are isidLow and isidHigh. If set to 'normal', all match criteria except isidLow and isidHigh are accepted. Can only be changed if the filter is not applied and has no entries. |

| Read-only | yes |
| Tab Panel | General General |
| Type | PolicyType |

RADIUS**Table 3-150 RADIUS**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | The value indicates how many filter entries are currently inserted in the filter on request the RADIUS application. |
| Displayed name | RADIUS |
| OSS name | radiusInsertion |
| Read-only | yes |
| Tab Panel | Insertion Blocks Group Entries Inserted |
| Type | LONG |

RADIUS Count**Table 3-151 RADIUS Count**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | The value specifies how many filter entries received from Radius for subscriber hosts can be inserted in the filter. If radiusStartEntry is set to 0, then this object will be put to 0 as well. Any change attempts will be silently discarded in this case. |
| Displayed name | RADIUS Count |
| Maximum | 65535 |
| Minimum | 0 |
| OSS name | radiusCount |
| Read-only | no |

|-------------|--|
| Tab Panel | Insertion Blocks Group Entry Insertion Configuration |
| Type | LONG |

RADIUS Start Entry**Table 3-152 RADIUS Start Entry**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | The value specifies at what place the filter entries received from Radius will be inserted in the filter. No regular entries, nor Credit Control provided entries can be configured in this range. The value 0 means that no Radius provided filter entries can be inserted in the filter. If radiusCount is set to 0, then this object will be put to 0 as well. Any change attempts will be silently discarded in this case. |
| Displayed name | RADIUS Start Entry |

ACL Pattern Binding parameters

Filter ID**Table 3-158 Filter ID**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Identifier for the ACL filter the (index, pattern) pair is binding to. |
| Displayed name | Filter ID |
| Maximum | 30 |
| OSS name | filterName |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

Packet Match Count**Table 3-159 Packet Match Count**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Packet match counter. {BR} It is incremented whenever a packet matches the specified ACL pattern in the filter. This counter will be incremented regardless of the provisioned action on that pattern. |
| Displayed name | Packet Match Count |
| OSS name | packetMatchCount |
| Read-only | yes |
| Tab Panel | General General |
| Type | LONG |

Pattern
Table 3-160 Pattern

Configuration Mode

Table 3-165 Configuration Mode

| Name | Value |
|----------------|------------------------------|
| Default | yes:draft |
| Displayed name | Configuration Mode |
| OSS name | configurationMode |
| Read-only | yes |
| Tab Panel | General Policy Configuration |
| Type | ConfigurationMode |

Destination IP Address

Table 3-166 Destination IP Address

| Name | Value |
|----------------|--|
| Default | yes:0.0.0.0 |
| Description | Source IP address. {BR} It can be specified explicitly to match only packets that originate from a particular address or can be used along with the DestPrefix parameter to specify a range of supported originating IP addresses. |
| Displayed name | Destination IP Address |
| OSS name | destinationIpAddress |
| Read-only | no |
| Tab Panel | General General |
| Type | INETADDR |

Destination IP Mask Prefix
Table 3-167 Destination IP Mask Prefix

| Name | Value |
|----------------|---|
| Default | yes:0.0.0.0 |
| Description | Source IP mask prefix. {BR} It's the reverse of a subnet mask, where 0 indicates a position that must be matched and 1 indicates a position that does not matter. If the DestAddr is specified and the DestPrefix is unspecified (0.0.0.0), the originating IP address of the packet must match the DestAddr exactly. Otherwise, the pattern will allow packets whose originating IP is within the range implied by the source IP and subnet mask. This parameter is not valid unless the DestAddr is also specified. |
| Displayed name | Destination IP Mask Prefix |
| OSS name | destinationIpMaskPrefix |
| Read-only | no |
| Tab Panel | General General |
| Type | INETADDR |

Discovery State**Table 3-168 Discovery State**

| Name | Value |
|----------------|--|
| Default | yes:notApplicable |
| Description | Only applicable to the global policy. Set to "InProgress" if the global policy is created as part of the specific NE resync during the full node resync or node discovery. At the end of full node resync, if the resync is successful, the global policy is completely updated from first discovered local policy and its discoveryState is set to "completed". Otherwise, the global policy is not updated and its discoveryState is set to "failed". For "failed" global policy, it will be updated by next successful full node resync or synchronized from the specific local policy. Set to "initialized" if the global policy is created by SNMP trap notification. User may need to synchronize the global policy manually with the specific local policy. Set to "N/A" if the global policy is created or modified by a SAM user. |
| Displayed name | Discovery State |
| OSS name | discoveryState |
| Read-only | yes |
| Tab Panel | General Policy Configuration |
| Type | DiscoveryState |

Distribution Mode
Table 3-169 Distribution Mode

| Name | Value |
|----------------|------------------------------|
| Default | yes:syncWithGlobal |
| Displayed name | Distribution Mode |
| OSS name | distributionMode |
| Read-only | yes |
| Tab Panel | General Policy Configuration |
| Type | DistributionMode |

ICMP Code**Table 3-170 ICMP Code**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | ICMP code. {BR} It is applicable only when IP protocol is ICMP and is used along with certain ICMP types to further specify the message type. {BR} It must also specify the ICMP type when setting this parameter. {BR} If specified, the pattern will only match packets with this exact ICMP code value. |
| Displayed name | ICMP Code |
| Maximum | 255 |
| Minimum | 0 |
| OSS name | icmpCode |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

ICMP Error Reporting Enabled**Table 3-171 ICMP Error Reporting Enabled**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | ICMP error reporting behavior for blocked packets. {BR} If no icmpError value is specified, the behavior will be determined by the system default setting. {BR} Valid values are: {UL} {LI} true - send ICMP error for blocked packets. {LI} false - do not send ICMP error for blocked packets. |
| Displayed name | ICMP Error Reporting Enabled |

Table 3-171 ICMP Error Reporting Enabled (continued)

| Name | Value |

Discovery State**Table 3-197 Discovery State**

| Name | Value |
|----------------|--|
| Default | yes:notApplicable |
| Description | Only applicable to the global policy. Set to "InProgress" if the global policy is created as part of the specific NE resync during the full node resync or node discovery. At the end of full node resync, if the resync is successful, the global policy is completely updated from first discovered local policy and its discoveryState is set to "completed". Otherwise, the global policy is not updated and its discoveryState is set to "failed". For "failed" global policy, it will be updated by next successful full node resync or synchronized from the specific local policy. Set to "initialized" if the global policy is created by SNMP trap notification. User may need to synchronize the global policy manually with the specific local policy. Set to "N/A" if the global policy is created or modified by a SAM user. |
| Displayed name | Discovery State |
| OSS name | discoveryState |
| Read-only | yes |
| Tab Panel | General Policy Configuration |
| Type | DiscoveryState |

Distribution Mode**Table 3-198 Distribution Mode**

| SNCNC | |
| Unprotected | |

Card Sub Type

Table 3-208 Card Sub Type

| Name | Value |
|----------------|--|
| Default | yes:pss_aluWdmOpsaCard |
| Description | The subtype of the card on which the APS group is created. |
| Displayed name | Card Sub Type |
| OSS name | cardSubType |
| Read-only | no |
| Tab Panel | APS Group General |
| Type | equipment.CardSubType |

Channel

Table 3-209 Channel

| Name | Value |
|----------------|---|
| Description | This Value is deduced from members value. |
| Displayed name | Channel |
| Maximum | 100 |
| Minimum | 1 |
| OSS name | clientChannel |
| Read-only | no |
| Tab Panel | APS Group General |
| Type | INT |

Client ODUk Facility
Table 3-210 Client ODUk Facility

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | ODUK (TO) entity within the SNCP. {BR} If the client is the ODUPool the value should be empty, otherwise it should be the pointer to the client facility. |
| Displayed name | Client ODUk Facility |
| OSS name | clientFacilityPointer |
| Read-only | no |
| Tab Panel | APS Group General |
| Type | POINTER |

Connection Direction**Table 3-211 Connection Direction**

| Name | Value |
|--------------------------|---|
| Default | yes:notapplicable |
| Description | It indicates the connection direction of the APS group. |
| Displayed name | Connection Direction |
| OSS name | xcDirection |
| Read-only | no |
| Tab Panel | APS Group APS Configuration |
| Type | ApsXcDirection |
| Enumerated types: | |
| | Bidirectional |
| | N/A |
| | Unidirectional |

Description**Table 3-212 Description**

| Name | Value |
|----------------|-----------------------------------|
| Default | yes: |
| Description | The description of the APS group. |
| Displayed name | Description |

ODU1 PTF**Table 3-216 ODU1 PTF**

| Name | Value |
|-----------------------|-------------------------|
| Default | yes: |
| Description | Working Lo-oduK channel |
| Displayed name | ODU1 PTF |
| Mandatory on creation | yes |
| OSS name | clientCtp |
| Read-only | no |
| Tab Panel | APS Group General |
| Type | POINTER |

ODUk Protected Interface Type
Table 3-217 ODUk Protected Interface Type

| Name | Value |
|--------------------------|--|
| Default | yes:NA |
| Description | The value is to determining whether 11dpm12 has the aps group with Client Port or ODU1PTF1 |
| Displayed name | ODUk Protected Interface Type |
| Mandatory on creation | yes |
| OSS name | endPointInterfaceType |
| Read-only | no |
| Tab Panel | APS Group General |
| Type | EndPointInterfaceType |
| Enumerated types: | |
| Client Port | |
| N/A | |
| ODU1PTF | |

Port**Table 3-218 Port**

| Name | Value |
|-----------------------|-----------------------------------|
| Default | yes: |
| Description | Client port FDN of the APS group. |
| Displayed name | Port |
| Mandatory on creation | yes |
| OSS name | clientPort |
| Read-only | no |
| Tab Panel | APS Group General |
| Type | POINTER |

Protection Method**Table 3-219 Protection Method**

| Name | Value |
|---------|-------------------|
| Default | yes:notapplicable |

Table 3-219 Protection Method (continued)

| Name | Value |
|--------------------------|--|
| Description | The protection method of the working leg. Default is pnim for snen and snenc, and padapt for sncl. |
| Displayed name | Protection Method |
| OSS name | apsGroupMethod |
| Read-only | no |
| Tab Panel | APS Group APS Configuration |
| Type | ApsGroupMethod |

| TCM 5 | |
| TCM 6 | |

Protection ODUk facility**Table 3-220 Protection ODUk facility**

| Name | Value |
|-----------------------|---------------------------------------|
| Default | yes: |
| Description | ODUk (FROMED) entity within the SNCP. |
| Displayed name | Protection ODUk facility |
| Mandatory on creation | yes |
| OSS name | protectionFacilityPointer |
| Read-only | no |
| Tab Panel | APS Group Protection |
| Type | POINTER |

Protection Port
Table 3-221 Protection Port

| Name | Value |
|-----------------------|---------------------------------------|
| Default | yes: |
| Description | Protection port FDN of the APS group. |
| Displayed name | Protection Port |
| Mandatory on creation | yes |
| OSS name | protectionPort |
| Read-only | no |
| Tab Panel | APS Group Protection |
| Type | POINTER |

Protection Switch**Table 3-222 Protection Switch**

| Name | Value |
|-----------------------------|--|
| Default | yes:noCmd |
| Description | This value is used to perform a protection switch on the working/protection APS Member |
| Displayed name | Protection Switch |
| OSS name | protectionSwitch |
| Read-only | no |
| Tab Panel | APS Group Protection Management |
| Type | ApsMemberSwitch |
| Enumerated types: | |
| Clear | |
| Exercise | |
| Forced Switch To Protection | |
| Forced Switch To Working | |
| Manual Switch To Protection | |
| Manual Switch To Working | |
| No Cmd | |
| Protection Lockout | |

Protection VTS
Table 3-223 Protection VTS

| Name | Value |
|----------------|---|
| Description | This Value is deduced from members value. |
| Displayed name | Protection VTS |
| Maximum | 100 |
| Minimum | 1 |
| OSS name | protectionChannel |
| Read-only | no |
| Tab Panel | APS Group Protection |
| Type | INT |

Remote**Table 3-224 Remote**

| Name | Value |
|--------------------------|---|
| Description | Corresponds to the remote status mapped from tnOthOdukApsMemberCurrentStatus for the protection port. |
| Displayed name | Remote |

| Type | INT |

Virtual Link IP

Table 3-289 Virtual Link IP

| Name | Value |
|----------------|-----------------|
| Default | yes:0.0.0.0 |
| Displayed name | Virtual Link IP |
| OSS name | virtualLinkId |
| Read-only | no |
| Tab Panel | General General |
| Type | INETADDR |

Wave Key Opaque LSAs Distributed

Table 3-290 Wave Key Opaque LSAs Distributed

| Name | Value |
|--------------------------|----------------------------------|
| Default | yes:yes |
| Displayed name | Wave Key Opaque LSAs Distributed |
| OSS name | wavekeyOpaqueLsa |
| Read-only | no |
| Tab Panel | General General |
| Type | YesNo |
| Enumerated types: | |
| No | |
| Yes | |

BackupPolicy parameters

Auto Backup Scheme

Table 3-291 Auto Backup Scheme

| Name | Value |
|--|--|
| Default | yes:none |
| Description | Used to determine whether 5620 SAM server shall perform a node backup, after initiating a number of config saves as specified by the "autoBackupSchemeTreshold". |
| Displayed name | Auto Backup Scheme |
| OSS name | autoBackupScheme |
| Read-only | no |
| Tab Panel | General Backup Triggering |
| Type | AutoBackupScheme |
| Enumerated types: | |
| Every 5620 SAM Server Initiated Save | |
| Every Nth 5620 SAM Server Initiated Save | |
| No Auto-backup | |

Auto Backup Threshold

Table 3-292 Auto Backup Threshold

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Works in conjunction with the Auto Backup Scheme parameter, to specify the number of configuration saves that occur, before the 5620 SAM server performs a node backup. |
| Displayed name | Auto Backup Threshold |
| Maximum | 1000 |
| Minimum | 0 |
| OSS name | autoBackupSchemeTreshold |
| Read-only | no |
| Tab Panel | General Backup Triggering |
| Type | INT |
| Units | operations |

Auto Purge Scheme

Table 3-293 Auto Purge Scheme

| Name | Value |
|---|---|
| Default | yes:atMostNBackups |
| Description | Specifies the criteria, used by the 5620 SAM server during a cleanup of backups, to determine when and which backup files to delete from the 5620 SAM server. |
| Displayed name | Auto Purge Scheme |
| OSS name | purgeMode |
| Read-only | no |
| Tab Panel | General Backup Purging |
| Type | BackupPurgeMode |
| Enumerated types: | |
| By Age | |
| By Age But Limit To A Maximum Number Of Backups | |
| By Age But Retain A Minimum Number Of Backups | |
| Limit To A Maximum Number Of Backups | |

Auto Reboot After Successful Restore

Table 3-294 Auto Reboot After Successful Restore

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether to reboot the node, after a successful transfer of config/BOF files, to the node, on a restore operation. |
| Displayed name | Auto Reboot After Successful Restore |
| OSS name | isAutoReboot |
| Read-only | no |
| Tab Panel | General Auto Reboot |
| Type | BOOL |

Backup 7705 Radio Database

Table 3-295 Backup 7705 Radio Database

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether and when to backup the 7705 radio database files as a part of the backup operation. Possible values are true/false. The radio databases are saved on each admin save. |
| Displayed name | Backup 7705 Radio Database |
| OSS name | sarRadioDbFileBackupMode |
| Read-only | no |
| Tab Panel | General Backup Settings |
| Type | BOOL |

Boot Option File Mode

Table 3-296 Boot Option File Mode

| Name | Value |
|----------------|--|
| Default | yes:always |
| Description | Specifies whether and when to backup the config files as a part of the backup operation. Possible values are always, never (disabled) or whenever a new version is detected. |
| Displayed name | Boot Option File Mode |
| OSS name | bootOptionFileBackupMode |
| Read-only | no |
| Tab Panel | General Backup Settings |

Table 3-296 Boot Option File Mode (continued)

| Name | Value |
|--------------------------|----------------|
| Type | FileBackupMode |
| Enumerated types: | |
| Always | |
| Disabled | |
| New Version Only | |
| unknown | |

CLI Config File Mode

Table 3-297 CLI Config File Mode

| Name | Value |
|--------------------------|--|
| Default | yes:always |
| Description | Specifies whether and when to backup the config files as a part of the backup operation. Possible values are always, never (disabled) or whenever a new version is detected. |
| Displayed name | CLI Config File Mode |
| OSS name | cliConfigFileBackupMode |
| Read-only | no |
| Tab Panel | General Backup Settings |
| Type | FileBackupMode |
| Enumerated types: | |
| Always | |
| Disabled | |
| New Version Only | |
| unknown | |

CLI Config Save Details

Table 3-298 CLI Config Save Details

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether to backup a basic configuration file or a detailed one. |
| Displayed name | CLI Config Save Details |
| OSS name | cliConfigSaveDetails |

Table 3-298 CLI Config Save Details (continued)

| Name | Value |
|-------------|-------------------------|
| Read-only | no |
| Tab Panel | General Backup Settings |
| Type | BOOL |

CLI Debug Save Config File Mode**Table 3-299 CLI Debug Save Config File Mode**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether to backup the debug config files as a part of the backup operation. |
| Displayed name | CLI Debug Save Config File Mode |
| OSS name | debugConfigFileBackupMode |
| Read-only | no |
| Tab Panel | General Backup Settings |
| Type | BOOL |

Command to Apply After Backup**Table 3-300 Command to Apply After Backup**

| Name | Value |
|----------------|---|
| Default | yes:notSignificant |
| Description | Specifies the software control module command to apply after successful backup. |
| Displayed name | Command to Apply After Backup |
| OSS name | commandToApply |
| Read-only | no |
| Tab Panel | General AOS Backup Settings |
| Type | sw.AosVersionMngt |

Enable Backup**Table 3-301 Enable Backup**

| Name | Value |
|---------|----------|
| Default | yes:true |

Table 3-301 Enable Backup (continued)

| Name | Value |
|----------------|---|
| Description | Indicates whether backups are enabled for this Backup Policy. |
| Displayed name | Enable Backup |
| OSS name | enableBackup |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

File Compression

Table 3-302 File Compression

| Name | Value |
|--------------------------|--|
| Default | yes:none |
| Description | Specifies the compression format to be used for the backup files. Possible values - GZIP, ZIP, no compression. |
| Displayed name | File Compression |
| OSS name | compressionMode |
| Read-only | no |
| Tab Panel | General AOS Backup Settings |
| Type | BackupCompressionMode |
| Enumerated types: | |
| | GZIP |
| | None |
| | ZIP |

File Compression

Table 3-303 File Compression

| Name | Value |
|----------------|--|
| Default | yes:none |
| Description | Specifies the compression format to be used for the backup files. Possible values - GZIP, ZIP, no compression. |
| Displayed name | File Compression |
| OSS name | compressionMode |
| Read-only | no |

Table 3-303 File Compression (continued)

| None | |
| ZIP | |

File Transfer Server Directory

Table 3-306 File Transfer Server Directory

| Name | Value |
|----------------|-------------------------------------|
| Default | yes:/ |
| Displayed name | File Transfer Server Directory |
| Maximum | 255 |
| Minimum | 0 |
| OSS name | ftpRootDir |
| Read-only | no |
| Tab Panel | General PSS Backup/Restore Settings |
| Type | STRING |

File Transfer Server Port

Table 3-307 File Transfer Server Port

| Name | Value |
|----------------|-------------------------------------|
| Default | yes:21 |
| Displayed name | File Transfer Server Port |
| OSS name | ftpServerPort |
| Read-only | no |
| Tab Panel | General PSS Backup/Restore Settings |
| Type | INT |

Is Default Policy
Table 3-308 Is Default Policy

| Name | Value |
|----------------|-------------------|
| Default | yes:false |
| Displayed name | Is Default Policy |
| OSS name | isDefaultPolicy |
| Read-only | yes |
| Tab Panel | General General |
| Type | BOOL |

Maximum Backup Age**Table 3-309 Maximum Backup Age**

| Name | Value |
|----------------|--|
| Default | yes:100 |
| Description | Specifies the number of days a backup is kept before deleting it. Works in conjunction with purgeMode attribute. |
| Displayed name | Maximum Backup Age |
| Maximum | 365 |
| Minimum | 0 |
| OSS name | maxBackupAge |
| Read-only | no |
| Tab Panel | General Backup Purging |
| Type | INT |
| Units | days |

Name**Table 3-310 Name**

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | Specifies the name assigned to this backup policy. |
| Displayed name | Name |
| Maximum | 80 |
| Minimum | 0 |

Table 3-310 Name (continued)

| Name | Value |
|-------------|-----------------|
| OSS name | displayName |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Number Of Backups**Table 3-311 Number Of Backups**

| Name | Value |
|----------------|--|
| Default | yes:30 |
| Description | Specifies how many backups to keep at a time. Works in conjunction with purgeMode attribute. |
| Displayed name | Number Of Backups |
| Maximum | 365 |
| Minimum | 1 |
| OSS name | numBackupsToKeep |
| Read-only | no |
| Tab Panel | General Backup Purging |
| Type | INT |

Policy ID**Table 3-312 Policy ID**

| Name | Value |
|-----------------------|--|
| Default | yes:1 |
| Description | Specifies the ID assigned to this backup policy. |
| Displayed name | Policy ID |
| Mandatory on creation | yes |
| Maximum | 65535 |
| Minimum | 1 |
| OSS name | policyId |
| Read-only | no |
| Tab Panel | General General |

Scheduled Backup Interval

Table 3-318 Scheduled Backup Interval

| Name | Value |
|--------------------------|---|
| Default | yes:24hours |
| Description | Used in conjunction with scheduleBackupScheme, to specify how often to perform the backups. |
| Displayed name | Scheduled Backup Interval |
| OSS name | scheduledBackupFrequency |
| Read-only | no |
| Tab Panel | General Backup Triggering |
| Type | ScheduledBackupFrequency |
| Enumerated types: | |
| 1 hour | |
| 12 hours | |
| 15 minutes | |
| 2 hours | |
| 24 hours | |
| 3 hours | |
| 30 minutes | |
| 48 hours | |
| 6 hours | |

Scheduled Backup Scheme

Table 3-319 Scheduled Backup Scheme

| Name | Value |
|----------------|---|
| Default | yes:always |
| Description | Specifies that the node backups occur at regular intervals, as specified by the scheduledBackupFrequency attribute. |
| Displayed name | Scheduled Backup Scheme |

Table 3-319 Scheduled Backup Scheme (continued)

| Name | Value |
|--|---------------------------|
| OSS name | scheduledBackupScheme |
| Read-only | no |
| Tab Panel | General Backup Triggering |
| Type | ScheduledBackupScheme |
| Enumerated types: | |
| Every Scheduled Interval | |
| Every Scheduled Interval If 5620 SAM Server Initiated Save Performed | |
| No Scheduled Backup | |

Scheduled Backup Sync Time

Table 3-320 Scheduled Backup Sync Time

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Specifies the scheduled backup start time. |
| Displayed name | Scheduled Backup Sync Time |
| OSS name | scheduledBackupSyncTime |
| Read-only | no |
| Tab Panel | General Backup Triggering |
| Type | DATE |

Scheduled Backup Threshold

Table 3-321 Scheduled Backup Threshold

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Specifies the number of times that a backup retry occurs, if a backup fails. |
| Displayed name | Scheduled Backup Threshold |
| Maximum | 1000 |
| Minimum | 0 |
| OSS name | scheduledBackupTreshold |
| Read-only | no |

| Tab Panel | General Inventory |
| Type | STRING |

Fan Speed**Table 3-499 Fan Speed**

| Name | Value |
|--------------------------|----------------------|
| Description | Fan Speed Control. |
| Displayed name | Fan Speed |
| OSS name | fanSpeed |
| Read-only | no |
| Tab Panel | General Card Details |
| Type | FanSpeed |
| Enumerated types: | |
| | Maximum |
| | Normal |

Fiber Mode**Table 3-500 Fiber Mode**

| Name | Value |
|-------------|---------------------------|
| Description | Fiber mode for SFC Cards. |

Table 3-500 Fiber Mode (continued)

| Name | Value |
|--------------------------|----------------------|
| Displayed name | Fiber Mode |
| OSS name | sfcCardFiberMode |
| Read-only | no |
| Tab Panel | General Card Details |
| Type | SfcCardFiberMode |
| Enumerated types: | |
| OneFiberMux | |
| TwoFiber | |

Fiber Type

Table 3-501 Fiber Type

| Name | Value |
|----------------|--|
| Description | The type of fiber that the DCM is designed to dispersion-compensate. |
| Displayed name | Fiber Type |
| OSS name | dcmCardFiberType |
| Read-only | no |
| Tab Panel | General DCM |
| Type | STRING |

Firmware Upgrade Available

Table 3-502 Firmware Upgrade Available

| Name | Value |
|----------------|---|
| Description | YES - An upgrade to the new version of the installed/running firmware package is recommended. {BR} NO - No new firmware package is available or can be evaluated. |
| Displayed name | Firmware Upgrade Available |
| OSS name | fwUpgradeable |
| Read-only | yes |
| Tab Panel | General Card Details |
| Type | optical.FWUpgradeable |

Flow Continuity Monitoring

Table 3-503 Flow Continuity Monitoring

| Name | Value |
|--------------------------|---------------------------------------|
| Description | The flow control mode for 11DPE12A/E. |
| Displayed name | Flow Continuity Monitoring |
| OSS name | flowCm |
| Read-only | no |
| Tab Panel | General Card Details |
| Type | FlowControlMode |
| Enumerated types: | |
| APS/PCC | |
| CCM | |
| CSF | |

Force Protection Switch

Table 3-504 Force Protection Switch

| Name | Value |
|--------------------------|---|
| Default | yes:noCmd |
| Description | Perform an activity switch on this shelf. When read, this object returns noCmd. |
| Displayed name | Force Protection Switch |
| OSS name | shelfActivitySwitch |
| Read-only | no |
| Tab Panel | General Protection Switch |
| Type | PerformCommand |
| Enumerated types: | |
| Execute | |
| Execute with Force | |
| No Cmd | |

Gain

Table 3-505 Gain

| Name | Value |
|---------|-------|
| Default | yes:7 |

Table 3-505 Gain (continued)

| Name | Value |
|----------------|--|
| Description | Applies to the output port of amplifier module in the mesh card. |
| Displayed name | Gain |
| Maximum | 24 |
| Minimum | 7 |
| OSS name | meshCardPowerGain |
| Read-only | no |
| Tab Panel | General MESH4 Details |
| Type | FLOAT |
| Units | dB |

Gain Tilt**Table 3-506 Gain Tilt**

| Name | Value |
|----------------|---|
| Description | Current OA tilt setting for the output port of the amplifier module in the mesh card. |
| Displayed name | Gain Tilt |
| OSS name | meshCardGainTilt |
| Read-only | no |
| Tab Panel | General MESH4 Details |
| Type | FLOAT |
| Units | dB |

High Temperature Threshold**Table 3-507 High Temperature Threshold**

| Name | Value |
|----------------|--|
| Description | The high temperature threshold of the card. Current configurable range: 1830 PSS-32: -5 to 90 1830 PSS-1: -5 to 90 |
| Displayed name | High Temperature Threshold |
| Maximum | 90 |
| Minimum | -5 |
| OSS name | cardHighTemperatureThresh |
| Read-only | no |

Table 3-507 High Temperature Threshold (continued)

| Units | Volts |

Insertion Loss Slope

Table 3-519 Insertion Loss Slope

| Name | Value |
|----------------|---|
| Description | A linear least-squares fitted slope of the measured attenuation (positive or negative) over the wavelength range with no external attenuation added to the DCM. The slope is defined over the full wavelength range with a negative slope signifying a higher insertion loss at the lower wavelength. |
| Displayed name | Insertion Loss Slope |
| OSS name | dcmCardInsertionLossSlope |
| Read-only | no |
| Tab Panel | General DCM |
| Type | STRING |
| Units | dB |

Insertion Loss Slope Pad

Table 3-520 Insertion Loss Slope Pad

| Name | Value |
|----------------|--|
| Description | A linear least-squares fitted slope of the measured attenuation (positive or negative) over the wavelength range with external attenuation added to the DCM. The slope is defined over the full wavelength range with a negative slope signifying a higher insertion loss at the lower wavelength. |
| Displayed name | Insertion Loss Slope Pad |
| OSS name | dcmCardInsertionLossSlopePad |
| Read-only | no |
| Tab Panel | General DCM |
| Type | STRING |
| Units | dB |

Laser Temperature

Table 3-521 Laser Temperature

| Name | Value |
|----------------|--|
| Description | The temperature of the Laser. Applies to the output port of the amplifier module in the mesh card. |
| Displayed name | Laser Temperature |
| OSS name | meshCardInternalTemp |

Table 3-521 Laser Temperature (continued)

| Name | Value |

| Tab Panel | General Ethernet Loopback |
| Type | INT |
| Units | x100ms |

Loopback Reply Timeout

Table 3-524 Loopback Reply Timeout

| Name | Value |
|----------------|---------------------------|
| Default | yes:30 |
| Description | Loopback Reply Timeout. |
| Displayed name | Loopback Reply Timeout |
| Maximum | 30 |
| Minimum | 1 |
| OSS name | IBMRTimeout |
| Read-only | no |
| Tab Panel | General Ethernet Loopback |
| Type | INT |
| Units | seconds |

Loss Threshold

Table 3-525 Loss Threshold

| Name | Value |
|----------------|--|
| Default | yes:1.50 |
| Description | The optical intrusion loss threshold value. Current configurable range:1 to 5. |
| Displayed name | Loss Threshold |
| Maximum | 5 |
| Minimum | 1 |
| OSS name | ampCardOptIntLossThreashold |
| Read-only | no |
| Tab Panel | General Optical Intrusion Detection |
| Type | FLOAT |
| Units | dB |

Low Temperature Threshold

Table 3-526 Low Temperature Threshold

| Name | Value |
|----------------|---|
| Description | The low temperature threshold of the card. Current configurable range: 1830 PSS-32: -5 to 90 1830 PSS-1: -5 to 90 |
| Displayed name | Low Temperature Threshold |
| Maximum | 90 |
| Minimum | -45 |
| OSS name | cardLowTemperatureThresh |
| Read-only | no |
| Tab Panel | General Temperature |
| Type | INT |
| Units | Celsius |

Maximum Add Channel Count

Table 3-527 Maximum Add Channel Count

| Name | Value |
|----------------|---|
| Description | For CWR Card.The maximum number of channels supported on the add path. Current configurable range: CWR8: 8 to 44. CWR8-88: WR2-88: 8 to 88. |
| Displayed name | Maximum Add Channel Count |
| Maximum | 88 |
| Minimum | 8 |
| OSS name | wssCardAddPathTotalChannel |
| Read-only | no |
| Tab Panel | General CWR/WR |
| Type | INT |

Maximum Current

Table 3-528 Maximum Current

| Name | Value |

Temperature Tolerance

Table 3-613 Temperature Tolerance

| Name | Value |
|----------------|--|
| Description | The temperature tolerance of the card, applied to the card's high and low temperature thresholds. Current configurable range: 0 to 10. |
| Displayed name | Temperature Tolerance |
| Maximum | 10 |
| Minimum | 0 |
| OSS name | cardTemperatureTolerance |
| Read-only | no |
| Tab Panel | General Temperature |
| Type | INT |
| Units | Celsius |

Total Dispersion Fit

Table 3-614 Total Dispersion Fit

| Name | Value |
|----------------|---|
| Description | Coefficients A, B, C and D of a 3rd Order polynomial fit of Chromatic dispersion vs. wavelength from 1528 to 1565nm in 0.4-2.0nm steps such that TotalDispersion = $A*(l-1546)^3 + B*(l-1546)^2 + C*(l-1546) + D$. |
| Displayed name | Total Dispersion Fit |
| OSS name | dcmCardTotalDispTilt |
| Read-only | no |
| Tab Panel | General DCM |
| Type | STRING |

Total Input Power
Table 3-615 Total Input Power

| Name | Value |
|----------------|--|
| Default | yes:-99.0 |
| Description | The total input power. Applies to the input port of the amplifier module in the mesh card. |
| Displayed name | Total Input Power |
| OSS name | meshCardPowerIn |
| Read-only | no |
| Tab Panel | General MESH4 Details |
| Type | FLOAT |
| Units | dBm |

Total Output Power**Table 3-616 Total Output Power**

| Name | Value |
|----------------|--|
| Default | yes:-99.0 |
| Description | The total output power. Applies to the output port of the amplifier module in the mesh card. |
| Displayed name | Total Output Power |
| OSS name | meshCardPowerOut |
| Read-only | no |
| Tab Panel | General MESH4 Details |
| Type | FLOAT |
| Units | dBm |

Unit Part Number**Table 3-617 Unit Part Number**

| Name | Value |
|----------------|---------------------------------|
| Description | Card Manufacturing Part Number. |
| Displayed name | Unit Part Number |
| OSS name | cardManufacturingPartNum |
| Read-only | no |
| Tab Panel | General Inventory |
| Type | STRING |

Wait To Restore
Table 3-618 Wait To Restore

| Name | Value |
|----------------|--|
| Default | yes:5 |
| Description | The system timing WTR. Possible values are {0-12}. |
| Displayed name | Wait To Restore |
| Maximum | 12 |
| Minimum | 0 |
| OSS name | waitToRestore |
| Read-only | no |
| Tab Panel | General Sync0 Settings |
| Type | LONG |
| Units | minutes |

Card TCA Profile Assignment parameters

Clear Bins
Table 3-619 Clear Bins

| Name | Value |
|--------------------------|---|
| Default | yes:1 |
| Description | This attribute is used to clear all the bins in an interval on a particular card and group. |
| Displayed name | Clear Bins |
| OSS name | clearBins |
| Read-only | no |
| Tab Panel | General General |
| Type | PerformCommand |
| Enumerated types: | |
| Execute | |
| Execute with Force | |
| No Cmd | |

Interval
Table 3-620 Interval

| Name | Value |
|--------------------------|--------------------------|
| Default | yes:0 |
| Description | The collection interval. |
| Displayed name | Interval |
| Mandatory on creation | yes |
| OSS name | interval |
| Read-only | no |
| Tab Panel | General General |
| Type | IntervalType |
| Enumerated types: | |
| 15 min Interval | |
| 24 hour Interval | |
| All | |
| Continuous | |
| Not Applicable | |

Number of Bins**Table 3-621 Number of Bins**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | The number of collection bins in the interval. |
| Displayed name | Number of Bins |
| Maximum | 33 |
| Minimum | 1 |
| OSS name | noOfBins |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Profile Type

| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Discovery State**Table 3-629 Discovery State**

| Name | Value |
|----------------|--|
| Default | yes:notApplicable |
| Description | Only applicable to the global policy. Set to "InProgress" if the global policy is created as part of the specific NE resync during the full node resync or node discovery. At the end of full node resync, if the resync is successful, the global policy is completely updated from first discovered local policy and its discoveryState is set to "completed". Otherwise, the global policy is not updated and its discoveryState is set to "failed". For "failed" global policy, it will be updated by next successful full node resync or synchronized from the specific local policy. Set to "initialized" if the global policy is created by SNMP trap notification. User may need to synchronize the global policy manually with the specific local policy. Set to "N/A" if the global policy is created or modified by a SAM user. |
| Displayed name | Discovery State |

Table 3-629 Discovery State (continued)

| Name | Value |

Threshold Value
Table 3-648 Threshold Value

| Name | Value |
|----------------|-----------------|
| Default | yes:0 |
| Displayed name | Threshold Value |
| Maximum | 20 |
| Minimum | 0 |
| OSS name | tcaValue |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

CFM Link Trace parameters

Accounting Files

Table 3-649 Accounting Files

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Specifies whether this test uses SAA Accounting |
| Displayed name | Accounting Files |
| OSS name | accountingFiles |
| Read-only | no |
| Tab Panel | Results Configuration Accounting |
| Type | BOOL |

Administrative State

Table 3-650 Administrative State

| Name | Value |
|----------------|--|
| Default | yes:enabled |
| Description | The administrative state of the test. Disabled tests cannot be executed (even if it is a scheduled execution). |
| Displayed name | Administrative State |
| OSS name | administrativeState |

Table 3-650 Administrative State (continued)

| Name | Value |
|-------------|--------------------|
| Read-only | no |
| Tab Panel | General General |
| Type | sas.TestAdminState |

Aggregated With**Table 3-651 Aggregated With**

| Name | Value |
|----------------|--|
| Default | yes:none |
| Description | Specifies if/how the test is aggregated with others tests. |
| Displayed name | Aggregated With |
| OSS name | aggregatedWith |
| Read-only | yes |
| Tab Panel | test_suite general |
| Type | sas.AggregationType |

Continuous Execution**Table 3-652 Continuous Execution**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | This value specifies whether or not the OAM NE Schedulable test is to be executed indefinitely. |
| Displayed name | Continuous Execution |
| OSS name | continuousExec |
| Read-only | no |
| Tab Panel | test_params execution_info |
| Type | BOOL |

Description
Table 3-653 Description

| Name | Value |
|----------------|--|
| Default | yes: |
| Description | The description of the test. Not interpreted by SAM. |
| Displayed name | Description |
| Maximum | 80 |
| Minimum | 0 |
| OSS name | description |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Forwarding Class**Table 3-654 Forwarding Class**

| Name | Value |
|----------------|--|
| Default | yes:nc |
| Description | <p>specifies the forwarding class to be used when launching the probe(s). The forwarding class name must be present in the index column of TIMETRA-QOS-MIB::tFCNameTable. This object is optional. As shown in the following table a) this object is applicable to a subset of the test types, and b) the default forwarding class depends on the test type.</p> <p>tmnxOamPingCtlTestMode Applicable? Default ----- 'cpePing' yes 'be' 'ethCfmLoopback' yes 'nc' 'ethCfmTwoWayDelay' yes 'nc' 'ethCfmTwoWaySlm' yes 'nc' 'icmpPing' yes 'nc' 'lspPing' yes 'be' 'macPing' yes 'be' 'p2mpLspPing' yes 'be' 'sdpPing' yes 'be' 'vccvPing' yes 'be' 'vprnPing' yes 'be' otherwise no N/A For 'ethCfmLoopback', 'ethCfmTwoWayDelay', and 'ethCfmTwoWaySlm', the forwarding class depends on whether the request is configured to egress on a network port or an access port. In the network port case, the forwarding class is the forwarding class of the pseudowire. In the access port case, the forwarding class is that of the SAP's egress encapsulation policy. For 'lspPing' this is the forwarding class of the LSP tunnel. For 'macPing' or 'sdpPing' this is the forwarding class of the SDP encapsulation. For 'p2mpLspPing' this is the forwarding class of the P2MP LSP tree. For 'vccvPing' this is the forwarding class of the pseudowire. If forwarding classes are mapped by the applicable QoS policy, the probe(s) may be launched using a different forwarding class than the forwarding class specified by this object.</p> |

| Tab Panel | General meptarget_info |
| Type | BOOL |

Forwarding Class**Table 3-725 Forwarding Class**

| Name | Value |
|----------------|--|
| Default | yes:nc |
| Description | <p>specifies the forwarding class to be used when launching the probe(s). The forwarding class name must be present in the index column of TIMETRA-QOS-MIB::tFCNameTable. This object is optional. As shown in the following table a) this object is applicable to a subset of the test types, and b) the default forwarding class depends on the test type.</p> <p>tmnxOamPingCtlTestMode Applicable? Default ----- 'cpePing' yes 'be' 'ethCfmLoopback' yes 'nc' 'ethCfmTwoWayDelay' yes 'nc' 'ethCfmTwoWaySlm' yes 'nc' 'icmpPing' yes 'nc' 'lspPing' yes 'be' 'macPing' yes 'be' 'p2mpLspPing' yes 'be' 'sdpPing' yes 'be' 'vccvPing' yes 'be' 'vprnPing' yes 'be' otherwise no N/A For 'ethCfmLoopback', 'ethCfmTwoWayDelay', and 'ethCfmTwoWaySlm', the forwarding class depends on whether the request is configured to egress on a network port or an access port. In the network port case, the forwarding class is the forwarding class of the pseudowire. In the access port case, the forwarding class is that of the SAP's egress encapsulation policy. For 'lspPing' this is the forwarding class of the LSP tunnel. For 'macPing' or 'sdpPing' this is the forwarding class of the SDP encapsulation. For 'p2mpLspPing' this is the forwarding class of the P2MP LSP tree. For 'vccvPing' this is the forwarding class of the pseudowire. If forwarding classes are mapped by the applicable QoS policy, the probe(s) may be launched using a different forwarding class than the forwarding class specified by this object.</p> |
| Displayed name | Forwarding Class |

ID**Table 3-730 ID**

| Name | Value |
|-----------------------|----------------------------------|
| Default | yes:0 |
| Description | The identifier for the STM test. |
| Displayed name | ID |
| Mandatory on creation | yes |
| Maximum | 99999999 |
| Minimum | 1 |
| OSS name | id |
| Read-only | no |

Table 3-730 ID (continued)

| Name | Value |
|-------------|-----------------|
| Tab Panel | General General |
| Type | LONG |

Last Generated**Table 3-731 Last Generated**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Date (time from January 1st, 1970) when this test was last generated. This attribute has value only when this test is bound to a Test Suite. |
| Displayed name | Last Generated |
| OSS name | lastGeneratedTime |
| Read-only | yes |
| Tab Panel | test_suite general |
| Type | DATE |

LBM Interval**Table 3-732 LBM Interval**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | The value of tmnxDot1agCfmMepTxLbmInterval specifies the duration, in deciseconds, between loopback PDU transmissions. A value of zero is only valid if there are 5 or fewer loopbacks in the test (as defined by dot1agCfmMepTransmitLbmMessages). |
| Displayed name | LBM Interval |
| Maximum | 600 |
| Minimum | 0 |

Forwarding Class
Table 3-789 Forwarding Class

| Name | Value |
|----------------|--|
| Default | yes:nc |
| Description | <p>specifies the forwarding class to be used when launching the probe(s). The forwarding class name must be present in the index column of TIMETRA-QOS-MIB::tFCNameTable. This object is optional. As shown in the following table a) this object is applicable to a subset of the test types, and b) the default forwarding class depends on the test type.</p> <p>tmnxOamPingCtlTestMode Applicable? Default ----- 'cpePing' yes 'be' 'ethCfmLoopback' yes 'nc' 'ethCfmTwoWayDelay' yes 'nc' 'ethCfmTwoWaySlm' yes 'nc' 'icmpPing' yes 'nc' 'lspPing' yes 'be' 'macPing' yes 'be' 'p2mpLspPing' yes 'be' 'sdpPing' yes 'be' 'vccvPing' yes 'be' 'vprnPing' yes 'be' otherwise no N/A For 'ethCfmLoopback', 'ethCfmTwoWayDelay', and 'ethCfmTwoWaySlm', the forwarding class depends on whether the request is configured to egress on a network port or an access port. In the network port case, the forwarding class is the forwarding class of the pseudowire. In the access port case, the forwarding class is that of the SAP's egress encapsulation policy. For 'lspPing' this is the forwarding class of the LSP tunnel. For 'macPing' or 'sdpPing' this is the forwarding class of the SDP encapsulation. For 'p2mpLspPing' this is the forwarding class of the P2MP LSP tree. For 'vccvPing' this is the forwarding class of the pseudowire. If forwarding classes are mapped by the applicable QoS policy, the probe(s) may be launched using a different forwarding class than the forwarding class specified by this object.</p> |
| Displayed name | Forwarding Class |
| OSS name | forwardingClass |
| Read-only | no |
| Tab Panel | test_params exec_details |

Forwarding Class

Table 3-827 Forwarding Class

| Name | Value |
|---------|--------|
| Default | yes:nc |

Table 3-827 Forwarding Class (continued)

| Name | Value |
|----------------|---|
| Description | <p>specifies the forwarding class to be used when launching the probe(s). The forwarding class name must be present in the index column of TIMETRA-QOS-MIB::tFCNameTable. This object is optional. As shown in the following table a) this object is applicable to a subset of the test types, and b) the default forwarding class depends on the test type.</p> <p>tmnxOamPingCtlTestMode Applicable? Default ----- 'cpePing' yes 'be' 'ethCfmLoopback' yes 'nc' 'ethCfmTwoWayDelay' yes 'nc' 'ethCfmTwoWaySlm' yes 'nc' 'icmpPing' yes 'nc' 'lspPing' yes 'be' 'macPing' yes 'be' 'p2mpLspPing' yes 'be' 'sdpPing' yes 'be' 'vccvPing' yes 'be' 'vprnPing' yes 'be' otherwise no N/A For 'ethCfmLoopback', 'ethCfmTwoWayDelay', and 'ethCfmTwoWaySlm', the forwarding class depends on whether the request is configured to egress on a network port or an access port. In the network port case, the forwarding class is the forwarding class of the pseudowire. In the access port case, the forwarding class is that of the SAP's egress encapsulation policy. For 'lspPing' this is the forwarding class of the LSP tunnel. For 'macPing' or 'sdpPing' this is the forwarding class of the SDP encapsulation. For 'p2mpLspPing' this is the forwarding class of the P2MP LSP tree. For 'vccvPing' this is the forwarding class of the pseudowire. If forwarding classes are mapped by the applicable QoS policy, the probe(s) may be launched using a different forwarding class than the forwarding class specified by this object.</p> |
| Displayed name | Forwarding Class |

| Default | yes:1 |
| Displayed name | Monitored Status |
| OSS name | enableStatus |
| Read-only | no |
| Tab Panel | General General |
| Type | EnableStatus |
| Enumerated types: | |
| Disabled | |
| Enabled | |

Name**Table 3-922 Name**

| Name | Value |
|----------------|-----------------|
| Displayed name | Name |
| Maximum | 16 |
| Minimum | 0 |
| OSS name | dryContactName |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Pin Number

Table 3-923 Pin Number

| Name | Value |
|----------------|-----------------|
| Default | yes:1 |
| Displayed name | Pin Number |
| Maximum | 12 |
| Minimum | 1 |
| OSS name | pinNumber |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Polarity

Table 3-924 Polarity

| Name | Value |
|--------------------------|-----------------|
| Default | yes:1 |
| Displayed name | Polarity |
| OSS name | polarity |
| Read-only | no |
| Tab Panel | General General |
| Type | Polarity |
| Enumerated types: | |
| Normally Closed | |
| Normally Opened | |

Dynamic Tilt Adjustment parameters

Card Sub Type

Table 3-925 Card Sub Type

| Name | Value |
|----------------|---|
| Default | yes:unspecified |
| Description | The assigned card subtype of the card on which this power adjustment is applicable. |
| Displayed name | Card Sub Type |
| OSS name | assignedCardSubType |
| Read-only | no |
| Tab Panel | General General |
| Type | equipment.CardSubType |

Connector Loss to Span

Table 3-926 Connector Loss to Span

| Name | Value |
|----------------|--|
| Default | yes:0.0 |
| Description | Configurable loss from the egress Line Out to the fiber span input. Current configurable range: 0 to 17.0. |
| Displayed name | Connector Loss to Span |
| Maximum | 17.0 |
| Minimum | 0.0 |
| OSS name | srsTiltCalcOutputLoss |
| Read-only | no |
| Tab Panel | General Dynamic Tilt Attributes |
| Type | FLOAT |
| Units | dB |

Description

Table 3-927 Description

| Name | Value |
|----------------|------------------------------------|
| Description | The displayed name of this object. |
| Displayed name | Description |

Table 3-927 Description (continued)

| Name | Value |

| OSS name | displayName |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Direction**Table 3-928 Direction**

| Name | Value |
|--------------------------|--|
| Description | The direction of power adjustment - ingress, egress, add, drop, etc. |
| Displayed name | Direction |
| Mandatory on creation | yes |
| OSS name | direction |
| Read-only | no |
| Tab Panel | General Power Adjustment |
| Type | PowerAdjDirection |
| Enumerated types: | |
| Add | |
| Drop | |
| Egress | |
| Ingress | |

Execute Command**Table 3-929 Execute Command**

| Name | Value |
|----------------|---|
| Default | yes:noCmd |
| Description | The power adjustment operation exposed to the user - start, stop, abort, etc. |
| Displayed name | Execute Command |
| OSS name | powerAdjustCommand |
| Read-only | no |
| Tab Panel | General Power Adjustment |
| Type | PowerAdjCommand |

Table 3-929 Execute Command (continued)

| Name | Value |
|--------------------------|-------|
| Enumerated types: | |
| Abort | |
| No Command | |
| Start | |
| Stop | |

Post-Compensated SRS Tilt Fraction**Table 3-930 Post-Compensated SRS Tilt Fraction**

| Name | Value |
|----------------|---|
| Default | yes:0.0 |
| Description | Used to modify the fraction of upstream span SRS tilt post compensated. Current configurable range: 0.0 to 3.0. |
| Displayed name | Post-Compensated SRS Tilt Fraction |
| Maximum | 3.0 |
| Minimum | 0.0 |
| OSS name | srsTiltPostFraction |
| Read-only | no |
| Tab Panel | General Dynamic Tilt Attributes |
| Type | FLOAT |

Pre-Compensated Span Loss Tilt**Table 3-931 Pre-Compensated Span Loss Tilt**

| Name | Value |
|----------------|--|
| Default | yes:0.0 |
| Description | Amount of fiber span tilt to pre compensate. Current configurable range: 0.0 to 3.0. |
| Displayed name | Pre-Compensated Span Loss Tilt |
| Maximum | 3.0 |
| Minimum | 0.0 |
| OSS name | fiberSpanTiltPreComp |
| Read-only | no |
| Tab Panel | General Dynamic Tilt Attributes |

Table 3-931 Pre-Compensated Span Loss Tilt (continued)

| Name | Value |
|-------|-------|
| Type | FLOAT |
| Units | dB |

Pre-Compensated SRS Tilt Fraction**Table 3-932 Pre-Compensated SRS Tilt Fraction**

| Name | Value |
|----------------|---|
| Default | yes:0.0 |
| Description | This is used to modify the fraction of following span SRS tilt pre compensated. Current configurable range: 0.0 to 3.0. |
| Displayed name | Pre-Compensated SRS Tilt Fraction |
| Maximum | 3.0 |
| Minimum | 0.0 |
| OSS name | srsTiltPreFraction |
| Read-only | no |
| Tab Panel | General Dynamic Tilt Attributes |
| Type | FLOAT |

Result**Table 3-933 Result**

| Name | Value |
|----------------|---|
| Description | The result of the last executed power adjustment operation. |
| Displayed name | Result |
| OSS name | powerAdjustResult |
| Read-only | no |
| Tab Panel | General Power Adjustment |
| Type | STRING |

Site ID**Table 3-934 Site ID**

| Name | Value |
|----------------|----------------------|
| Description | The site identifier. |
| Displayed name | Site ID |
| OSS name | siteId |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Site Name**Table 3-935 Site Name**

| Name | Value |
|----------------|-----------------|
| Description | The site name. |
| Displayed name | Site Name |
| OSS name | siteName |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

SRS Tilt Calculation Coefficient**Table 3-936 SRS Tilt Calculation Coefficient**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | Modeling coefficient for the $SRSTilt = A * Pout(mW)$ equation. Current configurable range: 0 to 10000. |
| Displayed name | SRS Tilt Calculation Coefficient |
| Maximum | 10000 |
| Minimum | 0 |
| OSS name | srsTiltCalcACoeff |
| Read-only | no |
| Tab Panel | General Dynamic Tilt Attributes |
| Type | INT |

SRS Tilt Calculation Multiplier
Table 3-937 SRS Tilt Calculation Multiplier

| Name | Value |
|----------------|---|
| Default | yes:0.0 |
| Description | This is used to modify the calculated SRS tilt of the span. Current configurable range: 0.0 to 3.0. |
| Displayed name | SRS Tilt Calculation Multiplier |
| Maximum | 3.0 |
| Minimum | 0.0 |
| OSS name | srsTiltCalcMultiplier |
| Read-only | no |
| Tab Panel | General Dynamic Tilt Attributes |
| Type | FLOAT |

Status**Table 3-938 Status**

| Name | Value |
|--------------------------|--|
| Description | Indicates the status of the executed power adjustment operation. |
| Displayed name | Status |
| OSS name | powerAdjustStatus |
| Read-only | no |
| Tab Panel | General Power Adjustment |
| Type | PowerAdjStatus |
| Enumerated types: | |
| Completed | |
| In Progress | |
| Not In Progress | |

Tilt Calculation Offset**Table 3-939 Tilt Calculation Offset**

| Name | Value |
|---------|-----------|
| Default | yes:-99.0 |

Table 3-939 Tilt Calculation Offset (continued)

| Name | Value |
|----------------|--|
| Description | Indicates if the LD setting has been offset to compensate downstream TiltMismatch. Range: -5.0 to 5.0. |
| Displayed name | Tilt Calculation Offset |
| OSS name | srsTiltCalcOffset |
| Read-only | no |
| Tab Panel | General Dynamic Tilt Attributes |
| Type | FLOAT |
| Units | dB |

Topology

Table 3-940 Topology

| Name | Value |
|------------------------------|---|
| Default | yes:notApplicable |
| Description | The type of topology - linear, ring, etc. |
| Displayed name | Topology |
| Mandatory on creation | yes |
| OSS name | topology |
| Read-only | no |
| Tab Panel | General Power Adjustment |
| Type | TopologyType |
| Enumerated types: | |
| Linear (Forced X-Conn Req'd) | |
| Not Applicable | |
| Ring (ASE Adjust) | |

Type

Table 3-941 Type

| Name | Value |

| Read-only | no |
| Tab Panel | Ethernet General |
| Type | INT |

Broadcast Frame Rate**Table 3-954 Broadcast Frame Rate**

| Name | Value |
|----------------|--|
| Default | yes:100 |
| Description | This attribute is applicable to MPR 9500. This attribute carries out 'on per port basis' ingress admitted broadcast traffic rate (the threshold value of broadcast traffic rate as admitted on this ingress interface). This value is requested to trigger discarding of NE generated broadcast traffic on this ingress interface and is minor or equal to that specified in ifSpeed for this interface. |
| Displayed name | Broadcast Frame Rate |
| Maximum | 16777215 |
| Minimum | 0 |
| OSS name | broadcastFrameRate |
| Read-only | no |
| Tab Panel | Ethernet Storm Control |
| Type | LONG |
| Units | framesec |

Broadcast Limit
Table 3-955 Broadcast Limit

| Name | Value |
|-----------------------|---|
| Default | yes:-1 |
| Description | The broadcast limit in Kilo-bits per second. This protects the switch against massive reception of broadcast (and multicast) packets. A value of -1 signified no broadcast limit. |
| Displayed name | Broadcast Limit |
| Mandatory on creation | no |
| Maximum | 102400 |
| Minimum | -1 |
| OSS name | broadcastLimit |
| Read-only | no |
| Tab Panel | Ethernet Flow Control |
| Type | LONG |
| Units | kbps |

CFM LoopBack Mode**Table 3-956 CFM LoopBack Mode**

| Name | Value |

| Default | yes:disabled |
| Displayed name | CFM LoopBack Mode |
| OSS name | cfmlbMode |
| Read-only | no |
| Tab Panel | Ethernet General |
| Type | LoopBackCfmlbMode |
| Enumerated types: | |
| Disabled | |
| Priority-Dot1p | |
| Priority-High | |
| Priority-Low | |

CFM LoopBack VLAN Range
Table 3-957 CFM LoopBack VLAN Range

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | specifies the list of Vlan Ids to be enabled for CFM loopback when cfmlbMode is priority-dot1p. |
| Displayed name | CFM LoopBack VLAN Range |
| Maximum | 255 |
| Minimum | 0 |
| OSS name | cfmlbVlanList |
| Read-only | no |
| Tab Panel | Ethernet General |
| Type | STRING |

Connection Type**Table 3-958 Connection Type**

| Name | Value |
|--------------------------|---|
| Default | yes:sfp |
| Description | Specifies the hardware connection that is used by the port. |
| Displayed name | Connection Type |
| OSS name | sasEtherConnectorType |
| Read-only | no |
| Tab Panel | Ethernet General |
| Type | SasEtherConnectorType |
| Enumerated types: | |
| Auto - Copper | |
| Auto - SFP | |
| Copper | |
| SFP | |

Connection Type (Operational)
Table 3-959 Connection Type (Operational)

| Name | Value |
|--------------------------|-------------------------------|
| Default | yes:sfp |
| Displayed name | Connection Type (Operational) |
| OSS name | operSasEtherConnectorType |
| Read-only | yes |
| Tab Panel | Ethernet General |
| Type | SasEtherConnectorType |
| Enumerated types: | |
| Auto - Copper | |
| Auto - SFP | |
| Copper | |
| SFP | |

Connector Type**Table 3-960 Connector Type**

| Name | Value |
|--------------------------|--|
| Default | yes:sfp |
| Description | Specifies whether the ethernet physical interface is in SFP or RJ45. |
| Displayed name | Connector Type |
| OSS name | etherConnectorType |
| Read-only | no |
| Tab Panel | Ethernet General |
| Type | EtherConnectorType |
| Enumerated types: | |
| RJ-45 | |
| SFP | |

CRC SD Threshold**Table 3-961 CRC SD Threshold**

| Name | Value |
|---------|-------|
| Default | yes:0 |

Table 3-961 CRC SD Threshold (continued)

| Name | Value |
|----------------|--|
| Description | The value of sdThreshold specifies a packet error rate threshold used to determine when to send a tnnxEqPortEtherCrcAlarm notification for a CRC Signal Degradation (SD) failure and tnnxEqPortEtherCrcAlarmClear notification for a CRC SD failure clear. The CRC SD error rate threshold is calculated as: $sdThresholdMultiplier * 10e-sdThreshold$. |
| Displayed name | CRC SD Threshold |
| Maximum | 9 |
| Minimum | 0 |
| OSS name | sdThreshold |
| Read-only | no |
| Tab Panel | Ethernet CRC Failure |
| Type | INT |

CRC SD Threshold Multiplier**Table 3-962 CRC SD Threshold Multiplier**

| Name | Value |
|----------------|--|
| Default | yes:1 |
| Description | The value of sdThresholdMultiplier specifies the sdThreshold multiplier. |
| Displayed name | CRC SD Threshold Multiplier |
| Maximum | 9 |
| Minimum | 1 |
| OSS name | sdThresholdMultiplier |
| Read-only | no |
| Tab Panel | Ethernet CRC Failure |
| Type | INT |

CRC SF Threshold**Table 3-963 CRC SF Threshold**

| Name | Value |
|-------------|--|
| Default | yes:0 |
| Description | The value of sfThreshold specifies a packet error rate threshold used to determine when to send a tnnxEqPortEtherCrcAlarm notification for a CRC Signal Failure (SF) failure and tnnxEqPortEtherCrcAlarmClear notification for a CRC SF failure clear. The CRC SF error rate threshold is calculated as: $sfThresholdMultiplier * 10e-sfThreshold$. |

Table 3-963 CRC SF Threshold (continued)

| Name | Value |
|----------------|----------------------|
| Displayed name | CRC SF Threshold |
| Maximum | 9 |
| Minimum | 0 |
| OSS name | sfThreshold |
| Read-only | no |
| Tab Panel | Ethernet CRC Failure |
| Type | INT |

CRC SF Threshold Multiplier**Table 3-964 CRC SF Threshold Multiplier**

| Name | Value |
|----------------|--|
| Default | yes:1 |
| Description | The value of sfThresholdMultiplier specifies the sfThreshold multiplier. |
| Displayed name | CRC SF Threshold Multiplier |
| Maximum | 9 |
| Minimum | 1 |
| OSS name | sfThresholdMultiplier |
| Read-only | no |
| Tab Panel | Ethernet CRC Failure |
| Type | INT |

Default VLAN**Table 3-965 Default VLAN**

| Name | Value |
|----------------|------------------------|
| Displayed name | Default VLAN |
| OSS name | mobilePortCfgDefVlan |
| Read-only | yes |
| Tab Panel | Ethernet Port Mobility |
| Type | INT |

Default VLAN Enable**Table 3-966 Default VLAN Enable**

| Name | Value |
|--------------------------|------------------------|
| Default | yes:notApplicable |
| Displayed name | Default VLAN Enable |
| OSS name | defaultVlanEnable |
| Read-only | no |
| Tab Panel | Ethernet Port Mobility |
| Type | MobilePortType |
| Enumerated types: | |
| Disable | |
| Enable | |
| Not Applicable | |

Default VLAN Restore**Table 3-967 Default VLAN Restore**

| Name | Value |
|--------------------------|------------------------|
| Default | yes:notApplicable |
| Displayed name | Default VLAN Restore |
| OSS name | defaultVlanRestore |
| Read-only | no |
| Tab Panel | Ethernet Port Mobility |
| Type | MobilePortType |
| Enumerated types: | |
| Disable | |
| Enable | |
| Not Applicable | |

Destination MAC Address**Table 3-968 Destination MAC Address**

| Name | Value |
|----------------|-------------------------|
| Default | yes:00-00-00-00-00-00 |
| Displayed name | Destination MAC Address |

Table 3-968 Destination MAC Address (continued)

| Name | Value |
|-------------|-----------------------------|
| OSS name | dstMacAddress |
| Read-only | no |
| Tab Panel | Ethernet Timed Loopback MAC |
| Type | MACADDR |

Detection**Table 3-969 Detection**

| Name | Value |
|-----------------------|--|
| Default | yes:0 |
| Description | Enabling crossover detection allows the interconnection of any combination of MDI/MDIX ports using either type of cable. |
| Displayed name | Detection |
| Mandatory on creation | no |
| OSS name | mdiMdxCrossoverDetection |
| Read-only | no |
| Tab Panel | Ethernet MDI/MDIX Crossover |
| Type | INT |

Detection Status**Table 3-970 Detection Status**

| Name | Value |
|--------------------------|---|
| Default | yes:3 |
| Description | The operational status of MDI/MDIX crossover detection. See <code>mdiMdxCrossoverDetection</code> . |
| Displayed name | Detection Status |
| OSS name | mdiMdxCrossoverDetectionStatus |
| Read-only | yes |
| Tab Panel | Ethernet MDI/MDIX Crossover |
| Type | MdiMdxCrossoverStatus |
| Enumerated types: | |
| MDI | |
| MDIX | |

Dot1 Q Acceptable Frames

Table 3-971 Dot1 Q Acceptable Frames

| Name | Value |
|-----------------------|---------------------------|
| Default | yes:admitAll |
| Displayed name | Dot1 Q Acceptable Frames |
| Mandatory on creation | no |
| OSS name | dot1qAcceptableFrameTypes |
| Read-only | no |
| Tab Panel | Ethernet General |
| Type | INT |

Dot1 Q Ethertype

Table 3-972 Dot1 Q Ethertype

| Name | Value |
|-----------------------|------------------|
| Default | yes:33024 |
| Displayed name | Dot1 Q Ethertype |
| Mandatory on creation | no |
| Maximum | 65535 |
| Minimum | 1536 |
| OSS name | dot1qEtype |
| Read-only | no |
| Tab Panel | Ethernet General |
| Type | INT |

Down on Internal MAC Tx Error

Table 3-973 Down on Internal MAC Tx Error

| Name | Value |
|----------------|---|
| Default | yes:disabled |
| Description | The value of downOnInternalError specifies whether or not the port is monitored for excessive internal MAC tx errors. |
| Displayed name | Down on Internal MAC Tx Error |
| OSS name | downOnInternalError |
| Read-only | no |

Table 3-973 Down on Internal MAC Tx Error (continued)

| Name | Value |
|-------------|-------------------------|
| Tab Panel | Ethernet General |
| Type | generic.EnabledDisabled |

Down When Looped

Table 3-974 Down When Looped

| Name | Value |
|--------------------------|--------------------|
| Default | yes:disabled |
| Displayed name | Down When Looped |
| OSS name | downWhenLooped |
| Read-only | no |
| Tab Panel | Ethernet General |
| Type | DownWhenLoopedType |
| Enumerated types: | |
| Disabled | |
| Enabled | |

Down When Looped Status

Table 3-975 Down When Looped Status

| Name | Value |
|--------------------------|---|
| Default | yes:noLoopDetected |
| Displayed name | Down When Looped Status |
| OSS name | downWhenLoopedState |
| Read-only | no |
| Tab Panel | Ethernet Down When Looped Configuration |
| Type | DownWhenLoopedState |
| Enumerated types: | |
| Loop Detected | |
| No Loop Detected | |

Duplex
Table 3-976 Duplex

| Name | Value |
|-----------------------|---|
| Default | yes:1 |
| Description | duplex is ignored if autoNegotiate is set to true. Some combinations of speed and duplex are invalid, for instance when speed=1000 and duplex=halfDuplex. |
| Displayed name | Duplex |
| Mandatory on creation | no |
| OSS name | duplex |
| Read-only | no |
| Tab Panel | Ethernet General |
| Type | INT |

Duplex(Actual)**Table 3-977 Duplex(Actual)**

| Name | Value |
|-----------------------|-------------------|
| Default | yes:0 |
| Displayed name | Duplex(Actual) |
| Mandatory on creation | no |
| OSS name | operationalDuplex |
| Read-only | yes |
| Tab Panel | Ethernet General |
| Type | INT |

Egress CIR**Table 3-978 Egress CIR**

| Name | Value |
|----------------|---|
| Default | yes:64 |
| Description | This attribute is applicable to MPR 9500 only. This attribute carries out the egress shaping rate (sustained rate permitted by egress traffic shaping) in kbit/sec. |
| Displayed name | Egress CIR |
| Maximum | 16777152 |
| Minimum | 0 |

Table 3-978 Egress CIR (continued)

| Name | Value |
|-------------|----------------------------|
| OSS name | egressCir |
| Read-only | no |
| Step | 64 |
| Tab Panel | Ethernet Port Rate Limiter |
| Type | INT |
| Units | Kbps |

Egress Enabled**Table 3-979 Egress Enabled**

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | This attribute is applicable to MPR 9500. This is used for enabling the egress port rate limiting. |
| Displayed name | Egress Enabled |
| OSS name | egressEnabled |
| Read-only | no |
| Tab Panel | Ethernet Port Rate Limiter |
| Type | BOOL |

Egress Max Burst Rate**Table 3-980 Egress Max Burst Rate**

| Name | Value |
|----------------|--|
| Default | yes:12 |
| Description | This attribute is applicable to MPR 9500 only. This attribute carries out the burst egress shaping size (amount of traffic in excess of egress shaping rate) in bytes. |
| Displayed name | Egress Max Burst Rate |
| Maximum | 16000 |
| Minimum | 0 |

| 4-Priority-HQos | |
| FC Based | |
| Four-Priority | |
| Profile | |
| SAP Based | |
| Sixteen-Priority | |

Egress Unshaped Network Interface CIR**Table 3-984 Egress Unshaped Network Interface CIR**

| Name | Value |
|-----------------------|--|
| Default | yes:-1 |
| Description | Specifies the egress CIR of all unshaped network interfaces (those without a network queue policy) on this port. |
| Displayed name | Egress Unshaped Network Interface CIR |
| Mandatory on creation | no |
| Maximum | 10000000 |
| Minimum | -1 |
| OSS name | egressUnshapedNwIfCir |
| Read-only | no |
| Tab Panel | Ethernet Egress Rate |
| Type | INT |
| Units | kbps |

Egress Unshaped SAP CIR
Table 3-985 Egress Unshaped SAP CIR

| Name | Value |
|-----------------------|---|
| Default | yes:-1 |
| Description | Specifies the egress CIR that the ethernet port can generate. |
| Displayed name | Egress Unshaped SAP CIR |
| Mandatory on creation | no |
| Maximum | 10000000 |
| Minimum | -1 |
| OSS name | egressUnshapedSapCir |
| Read-only | no |
| Tab Panel | Ethernet Egress Rate |
| Type | INT |
| Units | kbps |

Enable**Table 3-986 Enable**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | This attribute is applicable to MPR 9500. This attribute is for enabling storm control. |
| Displayed name | Enable |
| OSS name | stormControl |
| Read-only | no |
| Tab Panel | Ethernet Storm Control |
| Type | BOOL |

Enable Broadcast Limit Mode**Table 3-987 Enable Broadcast Limit Mode**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Enable/disable the maximum flood rate for broadcast traffic |
| Displayed name | Enable Broadcast Limit Mode |
| OSS name | enableBroadcastLimitMode |

Table 3-987 Enable Broadcast Limit Mode (continued)

| Name | Value |

Enable Multicast Limit Mode**Table 3-988 Enable Multicast Limit Mode**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Enable/disable the maximum flood rate for multicast traffic |
| Displayed name | Enable Multicast Limit Mode |
| OSS name | enableMulticastLimitMode |
| Read-only | no |
| Tab Panel | Ethernet Flow Control |
| Type | generic.TruthValue |

Enable Port Mobility**Table 3-989 Enable Port Mobility**

| Name | Value |
|----------------|----------------------|
| Default | yes:false |
| Displayed name | Enable Port Mobility |
| OSS name | enablePortMobility |
| Read-only | no |
| Tab Panel | Ethernet General |
| Type | generic.TruthValue |

Enable Unknown Unicast Limit Mode**Table 3-990 Enable Unknown Unicast Limit Mode**

| Name | Value |
|-------------|---|
| Default | yes:false |
| Description | Enable/disable the maximum flood rate for unknown unicast traffic |

Table 3-990 Enable Unknown Unicast Limit Mode (continued)

| Name | Value |
|----------------|-----------------------------------|
| Displayed name | Enable Unknown Unicast Limit Mode |
| OSS name | enableUUnicastLimitMode |
| Read-only | no |
| Tab Panel | Ethernet Flow Control |
| Type | generic.TruthValue |

Ethernet Down Reason

Table 3-991 Ethernet Down Reason

| Name | Value |
|--------------------------|----------------------|
| Default | yes:0 |
| Displayed name | Ethernet Down Reason |
| OSS name | ethernetDownReason |
| Read-only | no |
| Tab Panel | Ethernet General |
| Type | EtherStatusBitMap |
| Enumerated types: | |
| Link Loss Forwarding | |
| No Service Port | |
| Unknown | |

Frame Base Accounting

Table 3-992 Frame Base Accounting

| Name | Value |
|----------------|-----------------------|
| Default | yes:false |
| Displayed name | Frame Base Accounting |
| OSS name | frameBasedAccounting |
| Read-only | no |
| Tab Panel | Ethernet General |
| Type | BOOL |

Ignore BPDU**Table 3-993 Ignore BPDU**

| Name | Value |
|--------------------------|------------------------|
| Default | yes:notApplicable |
| Displayed name | Ignore BPDU |
| OSS name | mobilePortIgnoreBPDU |
| Read-only | no |
| Tab Panel | Ethernet Port Mobility |
| Type | MobilePortType |
| Enumerated types: | |
| Disable | |
| Enable | |
| Not Applicable | |

Ingress CBS**Table 3-994 Ingress CBS**

| Name | Value |
|----------------|-----------------------|
| Default | yes:130816 |
| Displayed name | Ingress CBS |
| Maximum | 130816 |
| Minimum | 1 |
| OSS name | ingressCbs |
| Read-only | no |
| Tab Panel | Ethernet Ingress Rate |
| Type | INT |

Ingress CIR**Table 3-995 Ingress CIR**

| Name | Value |
|-------------|--|
| Default | yes:64 |
| Description | This attribute is applicable to MPR 9500. This attribute carries out the rate limiting functionality. ifSpeed value means that the rate limitation of the interface is disabled. The value can be expressed in kbit/s NE dependent |

Table 3-995 Ingress CIR (continued)

| Name | Value |
|----------------|----------------------------|
| Displayed name | Ingress CIR |
| Maximum | 16777152 |
| Minimum | 0 |
| OSS name | ingressCir |
| Read-only | no |
| Step | 64 |
| Tab Panel | Ethernet Port Rate Limiter |
| Type | INT |
| Units | Kbps |

Ingress Enabled**Table 3-996 Ingress Enabled**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | This attribute is applicable to MPR 9500. This is used for enabling the ingress port rate limiting. |
| Displayed name | Ingress Enabled |
| OSS name | ingressEnabled |
| Read-only | no |
| Tab Panel | Ethernet Port Rate Limiter |
| Type | BOOL |

Ingress Filtering**Table 3-997 Ingress Filtering**

| Name | Value |
|----------------|------------------------|
| Default | yes:false |
| Displayed name | Ingress Filtering |
| OSS name | mobilePortIngFiltering |
| Read-only | no |
| Tab Panel | Ethernet Port Mobility |
| Type | generic.TruthValue |

Ingress Max Burst Rate
Table 3-998 Ingress Max Burst Rate

| Name | Value |
|----------------|---|
| Default | yes:12 |
| Description | This attribute is applicable to MPR 9500. This attribute carries out 'on per port basis' ingress admitted unknown unicast rate (the threshold value of unknown unicast traffic rate as admitted on this ingress interface). This value is requested to trigger discarding of NE generated unknown unicast traffic rate on this ingress interface and is minor or equal to that specified in ifSpeed for this interface. |
| Displayed name | Ingress Max Burst Rate |
| Maximum | 16000 |
| Minimum | 0 |
| OSS name | ingressCommittedMaxBurst |
| Read-only | no |
| Step | 4 |
| Tab Panel | Ethernet Port Rate Limiter |
| Type | INT |
| Units | Kbytes |

Ingress Rate**Table 3-999 Ingress Rate**

| Name | Value |
|----------------|-----------------------|
| Default | yes:-1 |
| Displayed name | Ingress Rate |
| Maximum | 100000 |
| Minimum | -1 |
| OSS name | ingressRate |
| Read-only | no |
| Tab Panel | Ethernet Ingress Rate |
| Type | INT |
| Units | Mbps |

Inter-Frame Gap
Table 3-1000 Inter-Frame Gap

| Name | Value |
|----------------|-----------------------|
| Default | yes:12 |
| Displayed name | Inter-Frame Gap |
| Maximum | 12 |
| Minimum | 9 |
| OSS name | interFrameGap |
| Read-only | no |
| Tab Panel | Ethernet Flow Control |
| Type | INT |
| Units | bytes |

IP MTU**Table 3-1001 IP MTU**

| Name | Value |
|----------------|------------------|
| Default | yes:0 |
| Displayed name | IP MTU |
| OSS name | ipMTU |
| Read-only | no |
| Tab Panel | Ethernet General |
| Type | INT |
| Units | bytes |

Keep-Alive Interval (Sec)**Table 3-1002 Keep-Alive Interval (Sec)**

| Name | Value |
|----------------|---------------------------|
| Default | yes:10 |
| Displayed name | Keep-Alive Interval (Sec) |
| Maximum | 120 |
| Minimum | 1 |
| OSS name | keepAliveInterval |
| Read-only | no |

Table 3-1002 Keep-Alive Interval (Sec) (continued)

| Name | Value |
|-------------|---|
| Tab Panel | Ethernet Down When Looped Configuration |
| Type | INT |

LACP Tunnel**Table 3-1003 LACP Tunnel**

| Name | Value |
|----------------|----------------------|
| Default | yes:false |
| Displayed name | LACP Tunnel |
| OSS name | lacpTunnel |
| Read-only | no |
| Tab Panel | Ethernet LACP Tunnel |
| Type | BOOL |

Loopback Messages Dropped**Table 3-1004 Loopback Messages Dropped**

| Name | Value |
|----------------|---------------------------|
| Default | yes:0 |
| Displayed name | Loopback Messages Dropped |
| OSS name | cfmLbmDropped |
| Read-only | no |
| Tab Panel | Ethernet Statistics |
| Type | LONG |

Loopback Messages Received**Table 3-1005 Loopback Messages Received**

| Name | Value |
|----------------|----------------------------|
| Default | yes:0 |
| Displayed name | Loopback Messages Received |
| OSS name | cfmLbmRx |
| Read-only | no |

Table 3-1005 Loopback Messages Received (continued)

| Name | Value |
|-------------|---------------------|
| Tab Panel | Ethernet Statistics |
| Type | LONG |

Loopback Reply Transmitted**Table 3-1006 Loopback Reply Transmitted**

| Name | Value |
|----------------|----------------------------|
| Default | yes:0 |
| Displayed name | Loopback Reply Transmitted |
| OSS name | cfmLbrTx |
| Read-only | no |
| Tab Panel | Ethernet Statistics |
| Type | LONG |

MDI/MDX**Table 3-1007 MDI/MDX**

| Name | Value |
|----------------|-----------------------|
| Default | yes:0 |
| Displayed name | MDI/MDX |
| OSS name | ethernetInterfaceType |
| Read-only | yes |
| Tab Panel | Ethernet General |
| Type | INT |

Media Mode**Table 3-1008 Media Mode**

| Name | Value |
|----------------|---------------------|
| Displayed name | Media Mode |
| OSS name | mediaMode |
| Read-only | no |
| Tab Panel | Ethernet Media Mode |

Table 3-1008 Media Mode (continued)

| Name | Value |
|------|-------------------------|
| Type | equipment.PortMediaMode |

Minimum Frame Length**Table 3-1009 Minimum Frame Length**

| Name | Value |
|----------------|--|
| Default | yes:64 |
| Description | This attribute specifies the minimum length of ethernet frame transmitted out of the port. |
| Displayed name | Minimum Frame Length |
| OSS name | etherMinFrameLength |
| Read-only | no |
| Tab Panel | Ethernet General |
| Type | INT |
| Units | Bytes |

Multicast Frame Rate**Table 3-1010 Multicast Frame Rate**

| Name | Value |
|----------------|--|
| Default | yes:100 |
| Description | This attribute is applicable to MPR 9500. This attribute carries out 'on per port basis' ingress admitted multicast traffic rate (the threshold value of multicast traffic rate as admitted on this ingress interface). This value is requested to trigger discarding of NE generated multicast traffic on this ingress interface and is minor or equal to that specified in ifSpeed for this interface. |
| Displayed name | Multicast Frame Rate |
| Maximum | 16777215 |
| Minimum | 0 |
| OSS name | multicastFrameRate |
| Read-only | no |
| Tab Panel | Ethernet Storm Control |
| Type | LONG |
| Units | framesec |

Multicast Ingress

Table 3-1011 Multicast Ingress

| Name | Value |
|--------------------------|--|
| Default | yes:l2Mc |
| Description | This Represents Multicast Ingress Lookup Type. |
| Displayed name | Multicast Ingress |
| OSS name | multicastIngress |
| Read-only | no |
| Tab Panel | Ethernet General |
| Type | MulticastIngressType |
| Enumerated types: | |
| IP Multicast | |
| L2 Multicast | |

Multicast Limit

Table 3-1012 Multicast Limit

| Name | Value |
|-----------------------|--|
| Description | The value of the maximum multicast traffic that can flow through the port. The actual value depends on the port speed if the configured values is greater than the current port speed. |
| Displayed name | Multicast Limit |
| Mandatory on creation | no |
| OSS name | multicastLimit |
| Read-only | no |
| Tab Panel | Ethernet Flow Control |
| Type | LONG |

Network Egress

Table 3-1013 Network Egress

| Name | Value |
|----------------|---------------------------|
| Default | yes: |
| Displayed name | Network Egress |
| OSS name | netEgrShaperPolicyPointer |
| Read-only | no |

Table 3-1013 Network Egress (continued)

| Name | Value |
|-------------|------------------------|
| Tab Panel | Ethernet Shaper Policy |
| Type | POINTER |

Oper Physical Tx Clock

Table 3-1014 Oper Physical Tx Clock

| Name | Value |
|--------------------------|---|
| Description | OperPhyTxClock value indicates the result of Master/Slave resolution on copper based Ethernet ports. OperPhyTxClock is 'notApplicable' if PortClass is not 'xcme' and PortType is not 'portTypeXcmeTx' and 'PortEtherOperSpeed' is not 1000 |
| Displayed name | Oper Physical Tx Clock |
| OSS name | operPhyTxClock |
| Read-only | yes |
| Tab Panel | Ethernet Synchronous Ethernet |
| Type | OperPhyTxClock |
| Enumerated types: | |
| Master | |
| Not Applicable | |
| Slave | |

Operational Flow

Table 3-1015 Operational Flow

| Name | Value |
|----------------|---|
| Default | yes:notApplicable |
| Description | The actual flow control. See <code>flowControl</code> . |
| Displayed name | Operational Flow |
| OSS name | operationalFlowControl |
| Read-only | no |
| Tab Panel | Ethernet Flow Control |
| Type | INT |

Operational State

Table 3-1016 Operational State

| Name | Value |
|--------------------------|--|
| Default | yes:up |
| Description | indicates the operational status of the Ethernet LMI interface |
| Displayed name | Operational State |
| OSS name | operationalState |
| Read-only | yes |
| Tab Panel | Ethernet E-LMI |
| Type | ElmiOperationalStateType |
| Enumerated types: | |
| Down | |
| Up | |

Outstanding Alarms

Table 3-1017 Outstanding Alarms

| Name | Value |
|--------------------------|-----------------------------|
| Default | yes:0 |
| Displayed name | Outstanding Alarms |
| OSS name | reportAlarmStatus |
| Read-only | yes |
| Tab Panel | Ethernet General |
| Type | EthernetPortReportAlarmBits |
| Enumerated types: | |
| Duplicate Lane | |
| High Bit Error Rate | |
| Local Fault | |
| No AM Lock | |
| No Block Lock | |
| No Frame Lock | |
| Remote Fault | |
| Signal Failure | |

PBB Ethertype
Table 3-1018 PBB Ethertype

| Name | Value |
|-----------------------|------------------|
| Default | yes:35047 |
| Displayed name | PBB Ethertype |
| Mandatory on creation | no |
| Maximum | 65535 |
| Minimum | 1536 |
| OSS name | pbbEtype |
| Read-only | no |
| Tab Panel | Ethernet General |
| Type | INT |

Persistent Loopback**Table 3-1019 Persistent Loopback**

| Name | Value |
|----------------|--------------------------|
| Default | yes:false |
| Displayed name | Persistent Loopback |
| OSS name | portEtherLoopbackPersist |
| Read-only | no |
| Tab Panel | Ethernet Timed Loopback |
| Type | BOOL |

Phy Tx Clock**Table 3-1020 Phy Tx Clock**

| Name | Value |
|----------------|-------------------|
| Default | yes:autoPrefSlave |
| Displayed name | Phy Tx Clock |
| OSS name | adminPhyTxClock |
| Read-only | no |
| Tab Panel | Ethernet General |
| Type | INT |

Polling Timer UNI-C (T391)**Table 3-1021 Polling Timer UNI-C (T391)**

| Name | Value |
|----------------|---|
| Default | yes:10 |
| Description | specifies the polling timer for the E-LMI UNI-C |
| Displayed name | Polling Timer UNI-C (T391) |
| Maximum | 30 |
| Minimum | 5 |
| OSS name | t391 |
| Read-only | no |
| Tab Panel | Ethernet E-LMI |
| Type | INT |
| Units | seconds |

Polling Verification Timer (T392)**Table 3-1022 Polling Verification Timer (T392)**

| Name | Value |
|----------------|--|
| Default | yes:15 |
| Description | specifies the polling verification timer for the E-LMI UNI-N |
| Displayed name | Polling Verification Timer (T392) |
| Maximum | 30 |
| Minimum | 5 |
| OSS name | t392 |
| Read-only | no |
| Tab Panel | Ethernet E-LMI |
| Type | INT |
| Units | seconds |

Port Clock Mode**Table 3-1023 Port Clock Mode**

| Name | Value |
|---------|----------|
| Default | yes:auto |

Table 3-1023 Port Clock Mode (continued)

| Name | Value |
|----------------|--|
| Description | Specifies the clock mode of the Ethernet port. The parameter must be set to Manual Slave in order for the port to be used with Synchronous Ethernet. |
| Displayed name | Port Clock Mode |
| OSS name | clockMode |
| Read-only | no |
| Tab Panel | Ethernet General |
| Type | INT |

Port ID**Table 3-1024 Port ID**

| Name | Value |
|----------------|------------------|
| Default | yes:0 |
| Displayed name | Port ID |
| OSS name | portId |
| Read-only | yes |
| Tab Panel | Ethernet General |
| Type | LONG |

Port Name**Table 3-1025 Port Name**

| Name | Value |
|----------------|------------------|
| Default | yes: |
| Displayed name | Port Name |
| Maximum | 252 |
| OSS name | displayName |
| Read-only | yes |
| Tab Panel | Ethernet General |
| Type | STRING |

Protocols
Table 3-1026 Protocols

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | The tmnxPortUpProtocols variable is a bitmap that indicates what protocols can be used on this port type. |
| Displayed name | Protocols |
| OSS name | upProtocols |
| Read-only | yes |
| Tab Panel | Ethernet Protocols |
| Type | PortProtocols |

Provider Bridge Type**Table 3-1027 Provider Bridge Type**

| Name | Value |

| Default | yes: |
| Displayed name | SAP |
| OSS name | sapPointer |
| Read-only | no |
| Tab Panel | Ethernet Timed Loopback SAP |
| Type | POINTER |

Sap Qos Marking**Table 3-1035 Sap Qos Marking**

| Name | Value |
|----------------|--|
| Default | yes:enabled |
| Description | This Represents Port Ethernet Access Egress Sap Qos Marking Value. |
| Displayed name | Sap Qos Marking |
| OSS name | sapQosMarking |
| Read-only | no |
| Tab Panel | Ethernet General |
| Type | generic.EnabledDisabled |

SFLOW**Table 3-1036 SFLOW**

| Name | Value |
|----------------|----------------|
| Default | yes:false |
| Displayed name | SFLOW |
| OSS name | sflowEnable |
| Read-only | no |
| Tab Panel | Ethernet SFLOW |
| Type | BOOL |

Single Fiber

Table 3-1037 Single Fiber

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | singleFiber is used to enable/disable packet gathering and redirection of IP packets from a single fiber on RX port of the Ethernet interface and redistribute packets to other interfaces through either state routes or policy-based forwarding. |
| Displayed name | Single Fiber |
| OSS name | singleFiber |
| Read-only | no |
| Tab Panel | Ethernet General |
| Type | generic.TruthValue |

Site ID

Table 3-1038 Site ID

| Name | Value |
|----------------|------------------|
| Default | yes: |
| Displayed name | Site ID |
| Maximum | 64 |
| OSS name | siteId |
| Read-only | yes |
| Tab Panel | Ethernet General |
| Type | STRING |

Source MAC Address

Table 3-1039 Source MAC Address

| Name | Value |
|----------------|-----------------------------|

| Default | yes:false |
| Displayed name | Src Pause |
| Mandatory on creation | no |
| OSS name | ingressSrcPause |
| Read-only | no |
| Tab Panel | Ethernet Ingress Rate |
| Type | BOOL |

SSM Code-Type**Table 3-1041 SSM Code-Type**

| Name | Value |
|--------------------------|-------------------------------|
| Default | yes:3 |
| Displayed name | SSM Code-Type |
| OSS name | codeType |
| Read-only | no |
| Tab Panel | Ethernet Synchronous Ethernet |
| Type | SSMCodeType |
| Enumerated types: | |
| None | |
| Sdh | |
| Sonet | |

Status Counter (N393)**Table 3-1042 Status Counter (N393)**

| Name | Value |
|----------------|---|
| Default | yes:4 |
| Description | specifies the ELMI monitored count of the consecutive errors for both UNI-N and UNI-C. It is used to determine if E-LMI is operational or not |
| Displayed name | Status Counter (N393) |
| Maximum | 10 |

Table 3-1042 Status Counter (N393) (continued)

| Name | Value |
|-------------|----------------|
| Minimum | 2 |
| OSS name | n393 |
| Read-only | no |
| Tab Panel | Ethernet E-LMI |
| Type | INT |

Swap Mac Address**Table 3-1043 Swap Mac Address**

| Name | Value |
|----------------|-------------------------|
| Default | yes:false |
| Displayed name | Swap Mac Address |
| OSS name | swapMacAddr |
| Read-only | no |
| Tab Panel | Ethernet Timed Loopback |
| Type | BOOL |

Symbol Alarm Reason**Table 3-1044 Symbol Alarm Reason**

| Name | Value |
|--------------------------|--|
| Description | The value of symMonAlarmReason indicates the current status of the Ethernet Symbol Monitored alarms on the port. |
| Displayed name | Symbol Alarm Reason |
| OSS name | symMonAlarmReason |
| Read-only | yes |
| Tab Panel | Ethernet Symbol Monitor Failure |
| Type | PortEtherMonReportStatus |
| Enumerated types: | |
| None | |
| SD Threshold Exceeded | |
| SF Threshold Exceeded | |

Symbol Error Count

Table 3-1045 Symbol Error Count

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | The value of symMonErrorCount indicates the total number of Symbol Monitor errors since tmnxPortEtherSymMonEnabled was set to 'enabled (1)'. |
| Displayed name | Symbol Error Count |
| OSS name | symMonErrorCount |
| Read-only | yes |
| Tab Panel | Ethernet Symbol Monitor Failure |
| Type | LONG |

Symbol Monitor Status

Table 3-1046 Symbol Monitor Status

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | The symMonStatus specifies whether or not symbol monitor is operationally 'enabled(1)' on the system, or 'disabled(2)'. The value of tmnxPortEtherSymMonEnabled specifies whether or not Symbol Monitoring is enabled on the port. |
| Displayed name | Symbol Monitor Status |
| OSS name | symMonStatus |
| Read-only | no |
| Tab Panel | Ethernet Symbol Monitor Failure |
| Type | BOOL |

Symbol SD Threshold

Table 3-1047 Symbol SD Threshold

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | The value of symMonSdThreshold specifies a packet error rate threshold used to determine when to send a tmnxEqPortEtherSymMonAlarm notification for a Symbol Monitor Signal Degradation (SD) failure and tmnxEqPortEtherSymMonAlarmClear notification for a Symbol Monitor SD failure clear. The Symbol Monitor SD error rate threshold is calculated as: $\text{tmnxPortEtherSymMonSdTMultiplier} * 10e\text{-tmnxPortEtherSymMonSdThreshold}$. A value of 0 disables Symbol Monitor SD monitoring. |
| Displayed name | Symbol SD Threshold |

Table 3-1047 Symbol SD Threshold (continued)

| Name | Value |
|-------------|---------------------------------|
| Maximum | 9 |
| Minimum | 0 |
| OSS name | symMonSdThreshold |
| Read-only | no |
| Tab Panel | Ethernet Symbol Monitor Failure |
| Type | INT |

Symbol SD Threshold Multiplier**Table 3-1048 Symbol SD Threshold Multiplier**

| Name | Value |
|----------------|--|
| Default | yes:1 |
| Description | The value of symMonSdTMultiplier specifies the tnnxPortEtherSymMonSdThreshold multiplier value. The Symbol Monitor SD error rate threshold is calculated as: $\text{tnnxPortEtherSymMonSdTMultiplier} * 10e\text{-tnnxPortEtherSymMonSdThreshold}$. |
| Displayed name | Symbol SD Threshold Multiplier |
| Maximum | 9 |
| Minimum | 1 |
| OSS name | symMonSdTMultiplier |
| Read-only | no |
| Tab Panel | Ethernet Symbol Monitor Failure |
| Type | INT |

Symbol SF Threshold**Table 3-1049 Symbol SF Threshold**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | The value of tnnxPortEtherSymMonSfThreshold specifies a packet error rate threshold used to determine when to send a tnnxEqPortEtherSymMonAlarm notification for a Symbol Monitor Signal Failure (SF) failure. Crossing the tnnxPortEtherSymMonSfThreshold will result in the tnnxPortOperStatus being set to 'outOfService'. The Symbol Monitor SF error rate threshold is calculated as: $\text{tnnxPortEtherSymMonSfTMultiplier} * 10e\text{-tnnxPortEtherSymMonSfThreshold}$. A value of 0 disables Symbol Monitor SF monitoring. |
| Displayed name | Symbol SF Threshold |
| Maximum | 9 |

Table 3-1049 Symbol SF Threshold (continued)

| Name | Value |
|-------------|---------------------------------|
| Minimum | 0 |
| OSS name | symMonSfThreshold |
| Read-only | no |
| Tab Panel | Ethernet Symbol Monitor Failure |
| Type | INT |

Symbol SF Threshold Multiplier

Table 3-1050 Symbol SF Threshold Multiplier

| Name | Value |
|----------------|--|
| Default | yes:1 |
| Description | The value of symMonSfMultiplier specifies the tnnxPortEtherSymMonSfThreshold multiplier value. The Symbol Monitor SF error rate threshold is calculated as: $\text{tnnxPortEtherSymMonSfMultiplier} * 10e\text{-tnnxPortEtherSymMonSfThreshold}$. |
| Displayed name | Symbol SF Threshold Multiplier |
| Maximum | 9 |
| Minimum | 1 |
| OSS name | symMonSfMultiplier |
| Read-only | no |
| Tab Panel | Ethernet Symbol Monitor Failure |
| Type | INT |

Symbol Window Size

Table 3-1051 Symbol Window Size

| Name | Value |
|----------------|---|
| Default | yes:10 |
| Description | The value of symMonWindowSize specifies the size of the sliding window in seconds over which the tnnxPortEtherSymMonSdThreshold and tnnxPortEtherSymMonSfThreshold are applied. |
| Displayed name | Symbol Window Size |
| Maximum | 60 |
| Minimum | 5 |
| OSS name | symMonWindowSize |

UNI Identifier**Table 3-1063 UNI Identifier**

| Name | Value |
|----------------|--|
| Description | specifies the UNI Identifier of the E-LMI entity |
| Displayed name | UNI Identifier |
| Maximum | 64 |
| OSS name | uniIdentifier |
| Read-only | no |
| Tab Panel | Ethernet E-LMI |
| Type | STRING |

UNI Mode**Table 3-1064 UNI Mode**

| Name | Value |
|--------------------------|--|
| Default | yes:none |
| Description | specifies the mode of the interface It can be set as User Network Interface Network (UNI-N), or 'none (0)' to disable E-LMI. |
| Displayed name | UNI Mode |
| OSS name | uniMode |
| Read-only | no |
| Tab Panel | Ethernet E-LMI |
| Type | UniModeType |
| Enumerated types: | |
| None | |
| UNI-N | |

UNI Priority**Table 3-1065 UNI Priority**

| Name | Value |
|--------------------------|---|
| Default | yes:portPriority |
| Displayed name | UNI Priority |
| OSS name | uniPriority |
| Read-only | no |
| Tab Panel | Ethernet Provider Bridge Configurations |
| Type | VlanPriorityType |
| Enumerated types: | |
| C VLAN Priority | |
| Port Priority | |

UNI Type**Table 3-1066 UNI Type**

| Name | Value |
|--------------------------|--|
| Description | indicates the information retrieved from the CE-VLAN ID/EVC Map Type contained in the UNI Status Information Element |
| Displayed name | UNI Type |
| OSS name | uniType |
| Read-only | no |
| Tab Panel | Ethernet E-LMI |
| Type | ElmiUniType |
| Enumerated types: | |
| All To One Bundling | |
| Bundling | |
| Multiplex No Bundling | |
| Not Used | |

Unknown Unicast Frame Rate**Table 3-1067 Unknown Unicast Frame Rate**

| Name | Value |
|---------|---------|
| Default | yes:100 |

Table 3-1067 Unknown Unicast Frame Rate (continued)

| Name | Value |
|----------------|---|
| Description | This attribute is applicable to MPR 9500. This attribute carries out 'on per port basis' ingress admitted unknown unicast rate (the threshold value of unknown unicast traffic rate as admitted on this ingress interface). This value is requested to trigger discarding of NE generated unknown unicast traffic rate on this ingress interface and is minor or equal to that specified in ifSpeed for this interface. |
| Displayed name | Unknown Unicast Frame Rate |
| Maximum | 16777215 |
| Minimum | 0 |
| OSS name | unknownUnicastFrameRate |
| Read-only | no |
| Tab Panel | Ethernet Storm Control |
| Type | LONG |
| Units | framesec |

Unknown Unicast Limit**Table 3-1068 Unknown Unicast Limit**

| Name | Value |
|-----------------------|---|
| Description | The value of the maximum unknown unicast traffic that can flow through the port. The actual value depends on the port speed if the configured values is greater than the current port speed |
| Displayed name | Unknown Unicast Limit |
| Mandatory on creation | no |
| OSS name | uUnicastLimit |
| Read-only | no |
| Tab Panel | Ethernet Flow Control |
| Type | LONG |

Untag C-VLAN**Table 3-1069 Untag C-VLAN**

| Name | Value |
|----------------|--------------|
| Default | yes:false |
| Displayed name | Untag C-VLAN |
| OSS name | untagCvlan |

Table 3-1069 Untag C-VLAN (continued)

| Name | Value |
|-------------|---|
| Read-only | no |
| Tab Panel | Ethernet Provider Bridge Configurations |
| Type | BOOL |

Use Broadcast Address**Table 3-1070 Use Broadcast Address**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Displayed name | Use Broadcast Address |
| OSS name | useBroadCastAddress |
| Read-only | no |
| Tab Panel | Ethernet Down When Looped Configuration |
| Type | generic.TruthValue |

Vlan Filter**Table 3-1071 Vlan Filter**

| Name | Value |
|----------------|----------------------|
| Default | yes: |
| Displayed name | Vlan Filter |
| OSS name | vlanFilterPointer |
| Read-only | no |
| Tab Panel | Ethernet Vlan Filter |
| Type | POINTER |

Window Size**Table 3-1072 Window Size**

| Name | Value |
|-------------|--|
| Default | yes:10 |
| Description | The value of windowSize specifies the size of the sliding window over which the sdThreshold and sfThreshold are applied. |

Table 3-1072 Window Size (continued)

| Name | Value |
|----------------|----------------------|
| Displayed name | Window Size |
| Maximum | 60 |
| Minimum | 5 |
| OSS name | windowSize |
| Read-only | no |
| Tab Panel | Ethernet CRC Failure |
| Type | INT |
| Units | seconds |

XGig Mode**Table 3-1073 XGig Mode**

| Name | Value |
|--------------------------|---|
| Default | yes:notApplicable |
| Description | Specifies whether the ethernet interface is in LAN or WAN mode. |
| Displayed name | XGig Mode |
| OSS name | networkMode |
| Read-only | no |
| Tab Panel | Ethernet Ethernet Interface Mode |
| Type | XGigMode |
| Enumerated types: | |
| LAN | |
| N/A | |
| WAN | |

| Enumerated types: | |
| none | |
| Provisioning Mismatch | |

Ethernet Ring ID

Table 3-1086 Ethernet Ring ID

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Specifies the id of the Element this Element is interconnected to. A value of 4294967295 specifies that this Element is interconnected to a VPLS service. This property can only be set to 4294967295 if the subRingType is set to 'nonVirtualLink'. A value of 0 specifies that this Element is not interconnected. |
| Displayed name | Ethernet Ring ID |
| Maximum | 4294967295 |
| Minimum | 0 |
| OSS name | subRingInterconnectId |
| Read-only | no |
| Tab Panel | General Sub-Ring |
| Type | LONG |

|----------------|-----------------------|
| Default | yes: |
| Displayed name | Ethernet Ring Manager |
| OSS name | ringPointer |
| Read-only | yes |
| Tab Panel | General General |
| Type | POINTER |

Guard Time

Table 3-1089 Guard Time

| Name | Value |
|----------------|---|
| Default | yes:5 |
| Description | Specifies the guard timer, in deciseconds, of a Ring-APS (R-APS) node. The guard timer is used to prevent the Ethernet Ring node from acting upon outdated R-APS messages and prevent the possibility of forming a closed loop. While the guard timer is running, any received R-APS Request/State and Status information is blocked and not forwarded to the Priority Logic. When the guard timer is not running, the R-APS Request/State and Status information is forwarded unchanged. |
| Displayed name | Guard Time |
| Maximum | 20 |
| Minimum | 1 |
| OSS name | guardTime |
| Read-only | no |

Table 3-1089 Guard Time (continued)

| OSS name | revertVersionFallback |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Revert Time**Table 3-1099 Revert Time**

| Name | Value |
|----------------|---|
| Default | yes:300 |
| Description | Specifies the Wait-To-Restore (WTR) timer, in seconds. The WTR timer is used to prevent frequent operation of the protection switching due to intermittent signal failure defects. The valid range is 60 to 720 seconds. A value of 0 puts the Ethernet Ring Element into a non-revertive mode. |
| Displayed name | Revert Time |

Table 3-1099 Revert Time (continued)

| Name | Value |
|-------------|-----------------|
| Maximum | 720 |
| Minimum | 0 |
| OSS name | revertTime |

| Read-only | no |
| Tab Panel | General General |
| Type | MACADDR |

Ring Protection Link Type

Table 3-1104 Ring Protection Link Type

| Name | Value |
|----------------|--|
| Default | yes:rplNone |
| Description | Specifies the Ring Protection Link (RPL) type of the Ethernet Ring Element. If this property is set to 'rplNone', the Ethernet Ring Element is not designated as either an RPL Owner or Neighbor. If this property is set to 'rplOwner', the Ethernet Ring Element is adjacent to the RPL that is responsible for blocking its end of the RPL under normal conditions. It is the responsibility of the rplOwner for activating reversion behaviour from protected or MS/FS conditions. If this property is set to 'rplNeighbor', the Ethernet Ring Element is adjacent to the RPL that is responsible for blocking its end of the RPL under normal conditions in addition to the block by the RPL Owner Node. The Ethernet Ring Element is not responsible for activating the reversion. |

| Force Switch | |
| Manual Switch | |
| No Command | |

Underlying Port State

Table 3-1144 Underlying Port State

| Name | Value |
|----------------|---|
| Default | yes:noAssociation |
| Description | State of the underlying resource. (An underlying resource is for example a netw.ConnectionTerminationPoint) |
| Displayed name | Underlying Port State |
| OSS name | underlyingResourceState |
| Read-only | yes |
| Tab Panel | Port General |
| Type | UnderlyingResourceState |

EthernetCtp parameters

Assigned Rate

Table 3-1145 Assigned Rate

| Name | Value |
|----------------|--|
| Description | The assigned rate - OTU1, GigE, OC3... |
| Displayed name | Assigned Rate |
| OSS name | assignedRate |
| Read-only | no |
| Tab Panel | General General |
| Type | optical.AssignedRate |

CE-VLAN ID**Table 3-1146 CE-VLAN ID**

| Name | Value |
|----------------|---|
| Description | CE-VLANID string indicates the CE-VLANID or CE-VLANID ranges, separated by comma. Example: 1,5,1-100. Current configurable range: 1 to 4095, ALL. |
| Displayed name | CE-VLAN ID |
| OSS name | ceVlan |
| Read-only | no |
| Tab Panel | General General |
| Type | STRING |

Ctp ID**Table 3-1147 Ctp ID**

| Name | Value |
|-----------------------|-----------------------------|
| Default | yes:1 |
| Description | The identifier for the Ctp. |
| Displayed name | Ctp ID |
| Mandatory on creation | yes |
| Minimum | 1 |
| OSS name | ctpId |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Layer Type**Table 3-1148 Layer Type**

| Name | Value |
|----------------|---|
| Description | The layer type - OCH, OTU, ODU, Electrical... |
| Displayed name | Layer Type |
| OSS name | layerType |
| Read-only | no |
| Tab Panel | General General |
| Type | optical.LayerType |

Name

Table 3-1149 Name

| Name | Value |
|----------------|-----------------|
| Default | yes: |
| Displayed name | Name |
| Maximum | 252 |
| OSS name | displayName |
| Read-only | yes |
| Tab Panel | General General |
| Type | STRING |

S-VLAN ID

Table 3-1150 S-VLAN ID

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | S-VLANID string indicates the S-VLANID on Line Port Current configurable range: 1 to 4095. |
| Displayed name | S-VLAN ID |
| Maximum | 4095 |
| Minimum | 0 |
| OSS name | sVlan |
| Read-only | no |
| Tab Panel | General General |
| Type | LONG |

Site ID

Table 3-1151 Site ID

| Name | Value |
|----------------|---------|
| Default | yes: |
| Displayed name | Site ID |
| Maximum | 50 |
| OSS name | nodeId |
| Read-only | yes |

Table 3-1151 Site ID (continued)

| Name | Value |
|-------------|--------------|
| Tab Panel | General Site |
| Type | STRING |

Site Name**Table 3-1152 Site Name**

| Name | Value |
|----------------|--------------|
| Default | yes: |
| Displayed name | Site Name |
| Maximum | 252 |
| OSS name | nodeName |
| Read-only | yes |
| Tab Panel | General Site |
| Type | STRING |

VTS Direction**Table 3-1153 VTS Direction**

| Name | Value |
|----------------|---|
| Description | If Direction = Egress, an entry is made in the tnEgressVtsMap table/tnEgressVtsCmodeMap Table. If Direction = Ingress, an entry is made in the tnIngressVtsMactable/tnIngressVtsCmodeMap Table. If Direction = Ingress and Egress, an entry is made in the tnVtsMapTable OR On Both tnIngressVtsCmodeMapTable and tnEgressVtsCmodeMapTable. |
| Displayed name | VTS Direction |
| OSS name | vtsDirection |
| Read-only | no |
| Tab Panel | General General |
| Type | optical.VTSDirection |

Number of EPIPEs**Table 3-1182 Number of EPIPEs**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Indicates the number of E-Pipes that resolve to this MAC Address. This property only applies to B-VPLS service site and should contain a value of 0 for other types of service site. |
| Displayed name | Number of EPIPEs |
| OSS name | numOfEpipes |
| Read-only | yes |
| Tab Panel | General PBB |
| Type | LONG |

Number of I-VPLS MAC**Table 3-1183 Number of I-VPLS MAC**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | Indicates the number of ISID VPLS service MAC addresses which are using this Backbone MAC address forwarding entry. This property only applies to B-VPLS service site and should contain a value of 0 for other types of service site. |
| Displayed name | Number of I-VPLS MAC |
| OSS name | numOfIvplsMac |
| Read-only | yes |
| Tab Panel | General PBB |
| Type | LONG |

Operational Spoke SDP Binding
Table 3-1184 Operational Spoke SDP Binding

| Name | Value |
|----------------|---|
| Default | yes: |
| Description | A pointer pointing to the Spoke SDP Binding associated to this static MAC address for this end point when the termination type is "endpoint". |
| Displayed name | Operational Spoke SDP Binding |
| OSS name | endpointOperSdpBindingPointer |
| Read-only | yes |
| Tab Panel | General Endpoint |
| Type | POINTER |

Protected**Table 3-1185 Protected**

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | Indicates whether or not the MAC is protected. When the value of this object is 'true' the agent will protect the MAC from being learned or re-learned on a SAP that has restricted learning enabled. |
| Displayed name | Protected |
| OSS name | isProtected |
| Read-only | yes |
| Tab Panel | General General |
| Type | BOOL |

Service ID**Table 3-1186 Service ID**

| Name | Value |
|----------------|-----------------|
| Default | yes:0 |
| Displayed name | Service ID |
| OSS name | serviceId |
| Read-only | yes |
| Tab Panel | General General |
| Type | LONG |

Type
Table 3-1187 Type

| Default | yes:false |
| Displayed name | Egress |
| OSS name | egressFrameBased |
| Read-only | no |
| Tab Panel | General General |
| Type | generic.TruthValue |

Ingress**Table 3-1189 Ingress**

| Name | Value |
|----------------|--------------------|
| Default | yes:false |
| Displayed name | Ingress |
| OSS name | ingressFrameBased |
| Read-only | no |
| Tab Panel | General General |
| Type | generic.TruthValue |

Hop parameters

Administrative State

Table 3-1190 Administrative State

| Name | Value |
|----------------|-------------------------------|
| Description | Administrative State. |
| Displayed name | Administrative State |
| OSS name | administrativeState |
| Read-only | no |
| Tab Panel | General General |
| Type | equipment.AdministrativeState |

AINS Enabled

Table 3-1191 AINS Enabled

| Name | Value |
|----------------|--|
| Default | yes:false |
| Description | Indicates if Port Level AINS(Automatic In Service) is enabled on the port which is represented by this Hop Object. |
| Displayed name | AINS Enabled |
| OSS name | ainsEnabled |
| Read-only | no |
| Tab Panel | General General |
| Type | BOOL |

Channel

Table 3-1192 Channel

| Name | Value |
|----------------|--|
| Description | The optical channel - used for display in the service screen in SAM GUI. |
| Displayed name | Channel |
| OSS name | channel |
| Read-only | no |
| Tab Panel | General General |
| Type | ITUChannel |

| Displayed name | Leap 61 |
| OSS name | leap61 |
| Read-only | yes |
| Tab Panel | General Time Information |
| Type | PtpClockAttributesTriState |
| Enumerated types: | |
| No | |
| Unknown | |
| Yes | |

Locked PTP Port**Table 3-1245 Locked PTP Port**

| Name | Value |
|----------------|-------------------------------------|
| Displayed name | Locked PTP Port |
| OSS name | lockedPtpPort |
| Read-only | yes |
| Tab Panel | General Current Data Set Attributes |
| Type | INT |

Log sync interval**Table 3-1246 Log sync interval**

| Name | Value |
|----------------|--|
| Default | yes:-6 |
| Description | Specifies the packet request rate for clock synchronization packets from the master clock. A value of -3 = 8 packets per second (pps), -4 = 16 pps, -5 = 32 pps, and -6 = 64 pps. The -6 option is recommended when PTP is selected as the first timing reference. |
| Displayed name | Log sync interval |
| Maximum | -3 |
| Minimum | -6 |
| OSS name | logSyncInterval |

| Displayed name | Parent Port Number |
| OSS name | clockParentPortNumber |
| Read-only | yes |
| Tab Panel | General Parent Clock |
| Type | LONG |

Peer Limit

Table 3-1261 Peer Limit

| Name | Value |
|----------------|---|
| Default | yes:-1 |
| Description | Specifies the maximum number of PTP peers that may be created by the system upon reception of PTP signaling packets. If the system has already automatically created PTP peers on a virtualrouter instance, the limit cannot be reduced lower than the current count of automatically created PTP peers on the virtual router instance. |
| Displayed name | Peer Limit |
| Maximum | 512 |
| Minimum | -1 |
| OSS name | peerLimit |
| Read-only | no |
| Tab Panel | General General |
| Type | INT |

Phase Change Rate

| Type | EfmAdministrativeState |
| Enumerated types: | |
| Disabled | |
| Enabled | |

Advertise Link Monitoring Capabilities

Table 3-1333 Advertise Link Monitoring Capabilities

| Name | Value |
|----------------|---|
| Default | yes:true |
| Description | The value of tmnxDot3OamDiscAdCapLinkMon specifies whether or not the link monitoring capabilities will be advertised to the OAM peer when tmnxDot3OamLinkMonEnabled is set to 'enabled (1)'. |
| Displayed name | Advertise Link Monitoring Capabilities |
| OSS name | tmnxDot3OamDiscAdCapLinkMon |
| Read-only | no |
| Tab Panel | General linkEvent |
| Type | generic.TruthValue |

Average Delay

Table 3-1334 Average Delay

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | This object is used to keep the average delay taken by frames during last L1 ping |
| Displayed name | Average Delay |
| OSS name | l1PingAverageRoundTripDelay |
| Read-only | no |
| Tab Panel | General l1Ping |
| Type | INT |
| Units | ms |

Configuration Revision
Table 3-1335 Configuration Revision

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | The configuration revision of the OAM entity as reflected in the latest OAMPDU sent by the OAM entity. The config revision is used by OAM entities to indicate configuration changes have occurred which might require the peer OAM entity to re-evaluate whether OAM peering is allowed. |
| Displayed name | Configuration Revision |
| Maximum | 65535 |
| Minimum | 0 |
| OSS name | dot3OamConfigRevision |
| Read-only | no |
| Tab Panel | General general |
| Type | INT |

Critical Event Notify**Table 3-1336 Critical Event Notify**

| Name | Value |
|-----------------------|---|
| Default | yes:true |
| Description | If true, the local OAM entity should attempt to indicate a critical event via the OAMPDU flags to its peer OAM entity when a critical event occurs. The exact definition of a critical event is implementation dependent. If the system does not support critical event capability, setting this object has no effect, and reading the object should always result in 'false'. By default, this object should have the value true for Ethernet-like interfaces that support OAM. If the OAM layer does not support Event Notifications (as indicated via the dot3OamFunctionsSupported attribute), this value is ignored. |
| Displayed name | Critical Event Notify |
| Mandatory on creation | no |
| OSS name | dot3OamCriticalEventEnable |
| Read-only | no |
| Tab Panel | General general |
| Type | BOOL |

Defect**Table 3-1337 Defect**

| Type | INT |
| Units | OAMPDU _s |

Dying Gasp Notify**Table 3-1340 Dying Gasp Notify**

| Name | Value |
|-----------------------|---|
| Default | yes:true |
| Description | If true, the local OAM entity should attempt to indicate a dying gasp via the OAMPDU flags field to its peer OAM entity when a dying gasp event occurs. The exact definition of a dying gasp event is implementation dependent. If the system does not support dying gasp capability, setting this object has no effect, and reading the object should always result in 'false'. By default, this object should have the value true for Ethernet-like interfaces that support OAM. If the OAM layer does not support Event Notifications (as indicated via the dot3OamFunctionsSupported attribute), this value is ignored. |
| Displayed name | Dying Gasp Notify |
| Mandatory on creation | no |
| OSS name | dot3OamDyingGaspEnable |
| Read-only | no |
| Tab Panel | General general |
| Type | BOOL |

Enabled**Table 3-1341 Enabled**

| Name | Value |
|----------------|--|
| Default | yes:disabled |
| Description | The value of tnmxDot3OamErrFrmEnabled specifies whether or not Errored Frame events are monitored on the port. |
| Displayed name | Enabled |
| OSS name | tnmxDot3OamErrFrmEnabled |
| Read-only | no |
| Tab Panel | General linkEvent errorFrame |
| Type | generic.EnabledDisabled |

Enabled**Table 3-1342 Enabled**

| Name | Value |
|----------------|--|
| Default | yes:disabled |
| Description | The value of tmnxDot3OamErrFrmPrdEnabled specifies whether or not Errored Frame Period events are monitored on the port. |
| Displayed name | Enabled |
| OSS name | tmnxDot3OamErrFrmPrdEnabled |
| Read-only | no |
| Tab Panel | General linkEvent errorFramePeriod |
| Type | generic.EnabledDisabled |

Enabled**Table 3-1343 Enabled**

| Name | Value |
|----------------|---|
| Default | yes:disabled |
| Description | The value of tmnxDot3OamErrFrmSecEnabled specifies whether or not Errored Frame Seconds Summary events are monitored on the port. |
| Displayed name | Enabled |
| OSS name | tmnxDot3OamErrFrmSecEnabled |
| Read-only | no |
| Tab Panel | General linkEvent errorFrameSeconds |
| Type | generic.EnabledDisabled |

Enabled**Table 3-1344 Enabled**

| Name | Value |
|----------------|---|
| Default | yes:disabled |
| Description | The value of tmnxDot3OamErrSymPrdEnabled specifies whether or not Errored Symbol Period events are monitored on the port. |
| Displayed name | Enabled |
| OSS name | tmnxDot3OamErrSymPrdEnabled |
| Read-only | no |

Frames Delay

Table 3-1345 Frames Delay

| Name | Value |
|-----------------------|--|
| Default | yes:1000 |
| Description | This object is used to set the delay between two frames transmitted during L1 ping |
| Displayed name | Frames Delay |
| Mandatory on creation | no |
| Maximum | 1000 |
| Minimum | 100 |
| OSS name | l1PingFramesDelay |
| Read-only | no |
| Tab Panel | General l1Ping |
| Type | INT |
| Units | ms |

Frames Lost Due To OAM

Table 3-1346 Frames Lost Due To OAM

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | A count of the number of frames that were dropped by the OAM multiplexer. Since the OAM multiplexer has multiple inputs and a single output, there may be cases where frames are dropped due to transmit resource contention. This counter is incremented whenever a frame is dropped by the OAM layer. Note that any Ethernet frame, not just OAMPDUs, may be dropped by the OAM layer. This can occur when an OAMPDU takes precedence over a 'normal' frame resulting in the 'normal' frame being dropped. When this counter is incremented, no other counters in this MIB are incremented. Discontinuities of this counter can occur at re-initialization of the management system, and at other times as indicated by the value of the ifCounterDiscontinuityTime. |
| Displayed name | Frames Lost Due To OAM |
| OSS name | dot3OamFramesLostDueToOam |
| Read-only | no |
| Tab Panel | General counters |

Table 3-1346 Frames Lost Due To OAM (continued)

| Name | Value |
|-------|--------|
| Type | INT |
| Units | Frames |

Frames Received**Table 3-1347 Frames Received**

| Name | Value |
|----------------|---|
| Default | yes:0 |
| Description | This object is used to keep the number of frames received during last L1 ping operation |
| Displayed name | Frames Received |
| OSS name | l1PingFramesReceived |
| Read-only | no |
| Tab Panel | General l1Ping |
| Type | INT |

Frames Sent**Table 3-1348 Frames Sent**

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | This object is used to keep the actual frames sent during last L1 ping operation |
| Displayed name | Frames Sent |
| OSS name | l1PingFramesSent |
| Read-only | no |
| Tab Panel | General l1Ping |
| Type | INT |

Functions Supported**Table 3-1349 Functions Supported**

| Name | Value |
|---------|---------------------|
| Default | yes:loopbackSupport |

Table 3-1349 Functions Supported (continued)

| Name | Value |
|--------------------------|---|
| Description | The OAM functions supported on this Ethernet like interface. OAM consists of separate functional sets beyond the basic discovery process which is always required. These functional groups can be supported independently by any implementation. These values are communicated to the peer via the local configuration field of Information OAMPDUs. Setting 'unidirectionalSupport(0)' indicates that the OAM entity supports the transmission of OAMPDUs on links that are operating in unidirectional mode (traffic flowing in one direction only). Setting 'loopbackSupport(1)' indicates the OAM entity can initiate and respond to loopback commands. Setting 'eventSupport(2)' indicates the OAM entity can send and receive Event Notification OAMPDUs. Setting 'variableSupport(3)' indicates the OAM entity can send and receive Variable Request and Response OAMPDUs. |
| Displayed name | Functions Supported |
| OSS name | dot3OamFunctionsSupported |
| Read-only | yes |
| Tab Panel | General general |
| Type | Dot3OamFunctionsSupported |
| Enumerated types: | |
| Event Support | |
| Loopback Support | |
| Unidirectional Support | |
| Variable Support | |

Grace Tx State

Table 3-1350 Grace Tx State

| Name | Value |
|----------------|---|
| Default | yes:false |
| Description | The value of tmnxDot3OamGraceTxState indicates whether or not the node is locally executing a grace period. A value of 'true' indicates that all peer timeouts are extended locally and an eligible EFM-OAM entity is transmitting grace period information. A value of 'false' indicates no grace period information is transmitted and standard values are used for timing out remote peers. Note that for a local EFM-OAM entity to be eligible for grace period transmission it must be admin up and active, and the port level tmnxDot3OamGraceTxEnabled and global level tmnxDot3OamSystemGraceTxEnable values must be set to 'true'. |
| Displayed name | Grace Tx State |
| OSS name | gracePeriodTx |
| Read-only | yes |
| Tab Panel | General general |
| Type | BOOL |

Grace Tx State Enable
Table 3-1351 Grace Tx State Enable

| Name | Value |
|-----------------------|--|
| Default | yes:true |
| Description | The value of <code>tmnxDot3OamGraceTxState</code> indicates whether or not the node is locally executing a grace period. A value of 'true' indicates that all peer timeouts are extended locally and an eligible EFM-OAM entity is transmitting grace period information. A value of 'false' indicates no grace period information is transmitted and standard values are used for timing out remote peers. Note that for a local EFM-OAM entity to be eligible for grace period transmission it must be admin up and active, and the port level <code>tmnxDot3OamGraceTxEnabled</code> and global level <code>tmnxDot3OamSystemGraceTxEnable</code> values must be set to 'true'. |
| Displayed name | Grace Tx State Enable |
| Mandatory on creation | no |
| OSS name | <code>graceTxStateEnable</code> |
| Read-only | no |
| Tab Panel | General general |
| Type | BOOL |

Hold Time**Table 3-1352 Hold Time**

| Name | Value |
|-----------------------|--|
| Default | yes:0 |
| Description | The value of <code>tmnxDot3OamHoldTime</code> specifies the number of seconds the efm-oam protocol should wait after <code>dot3OamOperStatus</code> transitions from 'operational (9)' to a non-operational state before going back to the 'operational (9)' state again. Note that a transition to the 'linkFault (2)' state does not cause <code>tmnxDot3OamHoldTime</code> to be used if <code>dot3OamOperStatus</code> was previously in the 'operational (9)' state." |
| Displayed name | Hold Time |
| Mandatory on creation | no |
| Maximum | 50 |
| Minimum | 0 |
| OSS name | <code>dot3OamHoldTime</code> |
| Read-only | no |
| Tab Panel | General general |
| Type | INT |
| Units | s |

Ignore EFM State

Table 3-1353 Ignore EFM State

| Name | Value |
|-----------------------|---|
| Default | yes:false |
| Description | The value of <code>tmnxDot3OamIgnoreEfmState</code> specifies whether the efm-oam status (<code>dot3OamOperStatus</code>) on a port will affect the operational state of the port it is running on when efm-oam is enabled. If <code>tmnxDot3OamIgnoreEfmState</code> is set to 'true' then efm-oam status will have no effect on the port state. |
| Displayed name | Ignore EFM State |
| Mandatory on creation | no |
| OSS name | <code>ignoreEfmState</code> |
| Read-only | no |
| Tab Panel | General general |
| Type | BOOL |

Information Rx

Table 3-1354 Information Rx

| Name | Value |
|----------------|--|
| Default | yes:0 |

Local SF Crossing Event Burst**Table 3-1358 Local SF Crossing Event Burst**

| Name | Value |
|----------------|---|
| Default | yes:1 |
| Description | The value of <code>tmnxDot3OamLocalSfActEventBurst</code> specifies the number of Event Notification OAMPDUs to send the OAM peer to notify when a local Signal Failure (SF) threshold crossing event occurs. This occurs when a locally monitored error count is equal to or greater than the threshold set for that error type within the window (E.g. burst the peer when the number of errored frames within <code>dot3OamErrFrameWindow</code> is equal to or greater than <code>dot3OamErrFrameThreshold</code> and <code>tmnxDot3OamErrFrmEnabled</code> is set to 'enabled (1)'). |
| Displayed name | Local SF Crossing Event Burst |

Loopback Status**Table 3-1364 Loopback Status**

| Name | Value |
|---------|----------------|
| Default | yes:noLoopback |

Table 3-1364 Loopback Status (continued)

| Name | Value |
|--------------------------|---|
| Description | The loopback status of the OAM entity. This status is determined by a combination of the local parser and multiplexer states, the remote parser and multiplexer states, as well as by the actions of the local OAM client. When operating in normal mode with no loopback in progress, the status reads noLoopback(1). The values initiatingLoopback(2) and terminatingLoopback(4) can be read or written. The other values can only be read - they can never be written. Writing initiatingLoopback causes the local OAM entity to start the loopback process with its peer. This value can only be written when the status is noLoopback(1). Writing the value initiatingLoopback(2) in any other state has no effect. When in remoteLoopback(3), writing terminatingLoopback(4) causes the local OAM entity to initiate the termination of the loopback state. Writing terminatingLoopback(4) in any other state has no effect. If the OAM client initiates a loopback and has sent an Loopback OAMPDU and is waiting for a response, where the local parser and multiplexer states are DISCARD (see [802.3ah, 57.2.11.1]), the status is 'initiatingLoopback'. In this case, the local OAM entity has yet to receive any acknowledgement that the remote OAM entity has received its loopback command request. If the local OAM client knows that the remote OAM entity is in loopback mode (via the remote state information as described in [802.3ah, 57.2.11.1, 30.3.6.1.15]), the status is remoteLoopback(3). If the local OAM client is in the process of terminating the remote loopback [802.3ah, 57.2.11.3, 30.3.6.1.14], with its local multiplexer and parser states in DISCARD, the status is terminatingLoopback(4). If the remote OAM client has put the local OAM entity in loopback mode as indicated by its local parser state, the status is localLoopback(5). The unknown(6) status indicates the parser and multiplexer combination is unexpected. This status may be returned if the OAM loopback is in a transition state but should not persist. |
| Displayed name | Loopback Status |
| OSS name | dot3OamLoopbackStatus |

| Unknown | |

Max. PDU Size**Table 3-1365 Max. PDU Size**

| Name | Value |
|---------|----------|
| Default | yes:1514 |

Table 3-1365 Max. PDU Size (continued)

| Name | Value |
|----------------|---|
| Description | The largest OAMPDU that the OAM entity supports. OAM entities exchange maximum OAMPDU sizes and negotiate to use the smaller of the two maximum OAMPDU sizes between the peers. This value is determined by the local implementation. |
| Displayed name | Max. PDU Size |
| Maximum | 1518 |
| Minimum | 64 |
| OSS name | dot3OamMaxOamPduSize |
| Read-only | no |
| Tab Panel | General general |
| Type | INT |

Mode**Table 3-1366 Mode**

| Name | Value |
|--------------------------|--|
| Default | yes:active |
| Description | This object configures the mode of OAM operation for this Ethernet like interface. OAM on Ethernet interfaces may be in 'active' mode or 'passive' mode. These two modes differ in that active mode provides additional capabilities to initiate monitoring activities with the remote OAM peer entity, while passive mode generally waits for the peer to initiate OAM actions with it. As an example, an active OAM entity can put the remote OAM entity in a loopback state, where a passive OAM entity cannot. The default value of dot3OamMode is dependent on the type of system on which this Ethernet like interface resides. The default value should be 'active(1)' unless it is known that this system should take on a subservient role to the other device connected over this interface. Changing this value results in incrementing the configuration revision field of locally generated OAMPDUs (30.3.6.1.12) and potentially re-doing the OAM discovery process if the dot3OamOperStatus was already operational(9). |
| Displayed name | Mode |
| OSS name | dot3OamMode |
| Read-only | no |
| Tab Panel | General general |
| Type | Dot3OamMode |
| Enumerated types: | |
| Active | |
| Passive | |

Multiplier
Table 3-1367 Multiplier

| Name | Value |
|-----------------------|---|
| Default | yes:5 |
| Description | The value of this property indicates how many receive intervals may expire with no OAMPDU receive. After the configured number of intervals with OAMPDU receive have passed, the OAM negotiation process will restart |
| Displayed name | Multiplier |
| Mandatory on creation | no |
| Maximum | 5 |
| Minimum | 2 |

| Name | Value |
|------|-------|
| Type | INT |

Operational Status

Table 3-1374 Operational Status

| Name | Value |
|----------------|---|
| Default | yes:notApplicable |
| Description | <p>"At initialization and failure conditions, two OAM entities on the same full-duplex Ethernet link begin a discovery phase to determine what OAM capabilities may be used on that link. The progress of this initialization is controlled by the OAM sublayer. This value is always disabled(1) if OAM is disabled on this interface via the dot3OamAdminState. If the link has detected a fault and is transmitting OAMPDUs with a link fault indication, the value is linkFault(2). Also, if the interface is not operational (ifOperStatus is not up(1)), linkFault(2) is returned. Note that the object ifOperStatus may not be up(1) as a result of link failure or administrative action (ifAdminState being down(2) or testing(3)). The passiveWait(3) state is returned only by OAM entities in passive mode (dot3OamMode) and reflects the state in which the OAM entity is waiting to see if the peer device is OAM capable. The activeSendLocal(4) value is used by active mode devices (dot3OamMode) and reflects the OAM entity actively trying to discover whether the peer has OAM capability but has not yet made that determination. The state sendLocalAndRemote(5) reflects that the local OAM entity has discovered the peer but has not yet accepted or rejected the configuration of the peer. The local device can, for whatever reason, decide that the peer device is unacceptable and decline OAM peering. If the local OAM entity rejects the peer OAM entity, the state becomes oamPeeringLocallyRejected(7). If the OAM peering is allowed by the local device, the state moves to sendLocalAndRemoteOk(6). Note that both the sendLocalAndRemote(5) and oamPeeringLocallyRejected(7) states fall within the state SEND_LOCAL_REMOTE of the Discovery state diagram [802.3ah, Figure 57-5], with the difference being whether the local OAM client has actively rejected the peering or has just not indicated any decision yet. Whether a peering decision has been made is indicated via the local flags field in the OAMPDU (reflected in the aOAMLocalFlagsField of 30.3.6.1.10). If the remote OAM entity rejects the peering, the state becomes oamPeeringRemotelyRejected(8). Note that both the sendLocalAndRemoteOk(6) and oamPeeringRemotelyRejected(8) states fall within the state SEND_LOCAL_REMOTE_OK of the Discovery state diagram [802.3ah, Figure 57-5], with the difference being whether the remote OAM client has rejected the peering or has just not yet decided. This is indicated via the remote flags field in the OAM PDU (reflected in the aOAMRemoteFlagsField of 30.3.6.1.11). When the local OAM entity learns that both it and the remote OAM entity have accepted the peering, the state moves to operational(9) corresponding to the SEND_ANY state of the Discovery state diagram [802.3ah, Figure 57-5]. Since Ethernet OAM functions are not designed to work completely over half-duplex interfaces, the value nonOperHalfDuplex(10) is returned whenever Ethernet OAM is enabled (dot3OamAdminState is enabled(1)) but the interface is in half-duplex operation.</p> |
| Displayed name | Operational Status |
| OSS name | dot3OamOperStatus |
| Read-only | no |
| Tab Panel | General general |
| Type | Dot3OamOperStatus |

Table 3-1374 Operational Status (continued)

| Send Local And Remote Ok | |

Peer Configuration Revision

Table 3-1375 Peer Configuration Revision

| Name | Value |
|----------------|---|
| Description | The configuration revision of the OAM peer as reflected in the latest OAMPDU. This attribute is changed by the peer whenever it has a local configuration change for Ethernet OAM this interface. The configuration revision can be determined from the Revision field of the Local Information TLV of the most recently received Information OAMPDU with a Local Information TLV. A value of zero is returned if no Local Information TLV has been received. |
| Displayed name | Peer Configuration Revision |
| OSS name | dot3OamPeerConfigRevision |
| Read-only | no |
| Tab Panel | General peer |
| Type | INT |

Peer Functions Supported

Table 3-1376 Peer Functions Supported

| Name | Value |
|--------------------------|--|
| Description | The OAM functions supported on this Ethernet like interface. OAM consists of separate functionality sets above the basic discovery process. This value indicates the capabilities of the peer OAM entity with respect to these functions. This value is initialized so all bits are clear. If unidirectionalSupport(0) is set, then the peer OAM entity supports sending OAM frames on Ethernet interfaces when the receive path is known to be inoperable. If loopbackSupport(1) is set, then the peer OAM entity can send and receive OAM loopback commands. If eventSupport(2) is set, then the peer OAM entity can send and receive event OAMPDUs to signal various error conditions. If variableSupport(3) is set, then the peer OAM entity can send and receive variable requests to monitor attribute value as described in Clause 57 of [802.3ah]. The capabilities of the OAM peer can be determined from the configuration field of the Local Information TLV of the most recently received Information OAMPDU with a Local Information TLV. All zeros are returned if no Local Information TLV has yet been received. |
| Displayed name | Peer Functions Supported |
| OSS name | dot3OamPeerFunctSupported |
| Read-only | no |
| Tab Panel | General peer |
| Type | Dot3OamFunctionsSupported |
| Enumerated types: | |

| Read-only | no |
| Tab Panel | General peer |
| Type | MACADDR |

Peer Max PDU Size

Table 3-1379 Peer Max PDU Size

| Name | Value |
|----------------|---|
| Description | "The maximum size of OAMPDU supported by the peer as reflected in the latest Information OAMPDU received with a Local Information TLV. Ethernet OAM on this interface must not use OAMPDUs that exceed this size. The maximum OAMPDU size can be determined from the PDU Configuration field of the Local Information TLV of the last Information OAMPDU received from the peer. A value of zero is returned if no Local Information TLV has been received. Otherwise, the value of the OAM peer's maximum OAMPDU size is returned in this value. Note that the values 1..63 are invalid sizes for Ethernet frames and should never appear. |
| Displayed name | Peer Max PDU Size |
| OSS name | dot3OamPeerMaxOamPduSize |
| Read-only | no |
| Tab Panel | General peer |
| Type | INT |

Peer Mode

Table 3-1380 Peer Mode

| Name | Value |
|-------------|---|
| Default | yes:unknown |
| Description | The mode of the OAM peer as reflected in the latest Information OAMPDU received with a Local Information TLV. The mode of the peer can be determined from the Configuration field in the Local Information TLV of the last Information OAMPDU received from the peer. The value is unknown(3) whenever no Local Information TLV has been received. The values of active(1) and passive(2) are returned when a Local Information TLV has been received indicating the peer is in active or passive mode, respectively. |

SD Threshold

Table 3-1391 SD Threshold

| Name | Value |
|----------------|--|
| Default | yes:0 |
| Description | The value of <code>tmnxDot3OamErrSymPrdSdThreshold</code> specifies the Signal Degrade (SD) threshold for symbol period errors. This object's value must be lower than the Signal Failure (SF) threshold, <code>dot3OamErrFramePeriodThresholdLo</code> . If the number of symbol errors within <code>dot3OamErrSymPeriodWindowLo</code> is equal to or greater than <code>tmnxDot3OamErrSymPrdSdThreshold</code> and <code>tmnxDot3OamErrSymPrdEnabled</code> is set to 'enabled (1)', the port is considered degraded but still functional, and a <code>tmnxDot3OamSdThresholdEvent</code> notification is generated. A value of 0 indicates this SD threshold is ignored. |
| Displayed name | SD Threshold |
| Maximum | 1000000 |
| Minimum | 0 |
| OSS name | <code>tmnxDot3OamErrSymPrdSdThreshold</code> |
| Read-only | no |

| Type | INT |
| Units | symbols |

Set Local Loopback
Table 3-1392 Set Local Loopback

| Name | Value |
|-----------------------|--|
| Default | yes:1 |
| Description | The value of this property indicates the local loopback status of the OAM entity. This attribute allows the user to manually set the local OAM entity loopback mode overriding the 802.3ah protocol for loopback. Setting the value to 'localLoopback' can only be done if dot3OamLoopbackStatus is set to 'noLoopback'. If dot3OamLoopbackStatus is any value other than 'noLoopback', the changes to dot3OamLoopbackLocalStatus will have no effect. If dot3OamLoopbackStatus is set to 'localLoopback', the OAM entity will act as if its peer put the OAM entity into local loopback. This entry allows the user to put an OAM entity into local loopback mode, even if dot3OamLoopbackIgnoreRx is set to 'ignore'." |
| Displayed name | Set Local Loopback |
| Mandatory on creation | no |
| OSS name | dot3OamLoopbackLocalStatus |
| Read-only | no |
| Tab Panel | General general |
| Type | INT |

Set Remote Loopback**Table 3-1393 Set Remote Loopback**

| Name | Value |
|---------|-----------|
| Default | yes:false |
