DocuPrint 4517 and DocuPrint 4517mp Models

This book is for use with both the Xerox DocuPrint 4517 and DocuPrint 4517mp Network Laser Printers. The DocuPrint 4517mp contains all the components of the DocuPrint 4517, plus the following options:

- Adobe PostScript Level 2
- 4 MB additional memory
- XNIC-E'NET (Xerox Network Interface Card for Ethernet)

As this guide serves both printers, the DocuPrint 4517mp will hereafter be referred to as the DocuPrint 4517.

Note

Some of the features described in this book apply only to Version 2.0 or later of the DocuPrint 4517. Version 2.0 is defined as having system controller software version 2.00.xx or later and XNIC version 6.1 or later (if installed). Features that pertain only to Version 2.0 or later are designated “for V2.0 or later.”

Version 2.0 supports all of the features of the earlier versions and contains the following enhancements:

- *Ability to set IP Address (and Subnet Mask and Gateway Address) via the Control Panel.*
- *Support for LAA (Locally Administered Address) in the XNIC-T'RING (and setup via the Control Panel).*
- *Ability to designate the front tray as the first selected input device for tray switching and source mapping.*
- *Support for the RFC1759 Standard Printer MIB, plus Xerox MIB enhancements, for the DocuPrint 4517 via SNMP (enables CentreWare DP and other SNMP tools to remotely manage the DocuPrint 4517).*
- *An increase of base memory to 4 MB for the DocuPrint 4517 and 8 MB for the DocuPrint 4517mp.*
- *Support for the optional serial port. The serial port is not a customer installable option, and must be ordered as a unique printer configuration at the time of the initial printer order.*

How Much of This Book Must I Read?

You do not have to read any of this guide to use your DocuPrint 4517. The DocuPrint 4517 is ready to go after you set it up following the instructions in the *Setting Up Guide*.

Use this guide as a reference for:

- Learning about special printer features [*“Special Features”* (page 1-6)]
- Tips on taking care of the printer [*“Maintaining the Printer”* (page 1-13)]
- Paper specifications, loading paper, and duplex printing (*Chapter 2: Paper Handling*)
- Instructions on using the Control Panel (*Chapter 3: Using the Control Panel* and *Appendix D: Control Panel Options*)
- Installing printer drivers (*Chapter 4: DocuPrint 4517 Printer Drivers*)
- Downloading fonts (*Chapter 5: Using the Hard Drive / Downloading Fonts*)
- Troubleshooting printing problems if they occur (*Chapter 6: Troubleshooting*)
- Ordering printer options (*Appendix A: Ordering Printer Options*)
- Replacing consumables (*Appendix B: Replacing Consumables*)
- Installing and removing printer options (*Appendix C: Installing and Removing Printer Options*)
- Printer specifications (*Appendix F: Printer Specifications*)

Printer Components

The major printer components are indicated below.

Figure 1.1 Major printer components

Front View

- 1 Control Panel Display
- 2 Control Panel Keypad
- 3 Recessed Grip
- 4 Power Switch
- 5 Standard Output Tray
- 6 Front Cover
- 7 Front Cover Release Button
- 8 Front Tray (Multi-sheet Bypass Tray)
- 9 Front Tray Release Point
- 10 Main Tray

Rear View

- 1 Option Interface Cover
- 2 Rear Cover
- 3 Serial Port (optional†)
- 4 Xerox Font/Macro Card Slots
- 5 Power Inlet
- 6 Network Ports (options)
- 7 Diagnostic LED
- 8 Parallel Port
- 9 Controller Assembly

† The serial port is a factory configuration, and must be ordered at the time of the initial printer order.

Special Features

Several features have been designed into the DocuPrint 4517 to enhance your printing environment. Using the printer's Control Panel menu system, you can tailor printer settings to match your printing requirements.

See *Chapter 3: Using the Control Panel* for more information about the Control Panel and its menu system.

Power Saver

After 60 minutes of inactivity, the printer automatically turns off internal components to reduce the amount of electricity used. The printer automatically turns those parts back on when it receives a print job.

Using the printer's Control Panel menu system, you can send the printer into Power Saver mode after your choice of 15, 30, 60, 90 or 120 minutes of inactivity (or Power Saver mode can be disabled).

See the section “*System Menu*” (page 3-30) in *Chapter 3: Using the Control Panel*.

High Resolution Printing

The DocuPrint 4517 is set to print at 600 x 600 dpi (dots per inch). You can change this setting to 1200 x 600 dpi to enhance grayscale images.

For professional quality printouts, the Print Quality option (in the PCL Emulat and PostScript menus) may be set to *TrueRes* (for 600 x 600 resolution printing). The TrueRes setting smooths edges to produce a crisper looking printout.

If you want to print draft-quality jobs, set Print Quality to *Toner Saving*. The printer automatically reduces the amount of toner used (and prints a lower density output). When this feature is enabled, the printer will print with 62.5% less toner.

See *Chapter 3: Using the Control Panel* for instructions on changing Control Panel settings.

Edge to Edge Printing

For those instances when you need to print PCL 5e Emulation (hereafter referred to as PCL) jobs all the way to the edge of the page, turn on the *Edge to Edge* option in the PCL Emulat Menu. Edge to edge printing is always available for PostScript jobs and requires no setting. Just format your document to the edge of the page.

See *Chapter 3: Using the Control Panel* for instructions on changing Control Panel settings.

Automatic Tray Switching

The DocuPrint 4517 allows you to set automatic tray switching for both PCL and PostScript (when PostScript is installed) jobs. When tray switching is on, and the paper tray runs out of paper, the printer automatically switches to another paper tray (if another tray is loaded with the same size paper). That means you don't have to load paper as often. You can also install one or two optional 500-sheet Paper Deck and Cassettes (lower trays), or the 2,000-sheet High Capacity Feeder, to extend your printing capacity.

For more information on tray switching, see the section "*Automatic Tray Switching*" (page 2-18) in *Chapter 2: Paper Handling*.

Automatic Language Sensing and Switching

When you have installed the PostScript option, the printer can process both PCL and PostScript jobs. When the printer's Language Sensing option is on, the DocuPrint 4517 samples the incoming data stream to determine which language the print job requires. The DocuPrint 4517 then switches to the proper language for that job.

The DocuPrint 4517 can have up to three active ports when you install two optional network interface cards. Turn the Language Sensing option *on* for all the ports, and the printer automatically samples each print job and switches to the appropriate processing language.

For more information about language sensing and switching, see *Appendix D: Control Panel Options*.

State Saving

When you are printing both PostScript and PCL jobs, the printer clears any downloaded fonts, macros, and PostScript headers when it switches between PostScript and PCL 5e Emulation. However, you can set the printer's State Saving option to *On*, and the printer will save downloaded fonts, macros, and PostScript headers when it switches PDLs (Printer Description Language). This saves you from having to download fonts, macros, and headers every time the printer switches between PostScript and PCL 5e Emulation.

Note

State Saving uses printer memory or the optional Hard Drive to save these objects. Refer to "Memory Considerations" (page 1-11).

Printer Generated Reports

Using the printer's Control Panel, you can print five separate reports.

- The **Demo Page** provides a sample of the printer's capabilities and lists the printer's key features.
- The **Configuration Sheet** lists the options you have installed and the current settings for each option in the Control Panel's menu system.
- The **PCL Font List** shows which PCL fonts are currently available. The list includes resident fonts, fonts on font cards, and downloaded fonts.
- When PostScript is installed on the DocuPrint 4517, the **PostScript Font List** shows which PostScript fonts are currently available. The list includes both resident and downloaded fonts.
- The **Test Print** is used by service and repair technicians if problems occur with the printer.

See *Appendix D: Control Panel Options* for more information about these reports.

PostScript Upgrades

Upgrading your printer with PostScript Level 2 is accomplished by adding the PostScript SIMM.

See *Appendix A: Ordering Printer Options* to order PostScript.

Duplex Printing

The DocuPrint 4517 can print two-sided documents when you install the optional Duplex Module. After installing the Duplex Module and a DocuPrint 4517 printer driver, printing a two-sided document is as easy as printing a one-sided job.

See *Appendix A: Ordering Printer Options* to order a Duplex Module.

Increased Paper Handling

An optional 500-sheet lower tray (the 500-sheet Paper Deck and Cassette), and a 2,000-sheet High Capacity Feeder (HCF) are available for the DocuPrint 4517. Install two lower trays and you increase the input capacity for the DocuPrint 4517 by 1,000 sheets. One 500-sheet Paper Deck may be installed with the HCF to increase input capacity by 2,500 sheets.

See *Appendix A: Ordering Printer Options* to order a 500-sheet Paper Deck and Cassette, or the HCF.

Collating and Offsetting

Two optional output trays are available for the DocuPrint 4517 that provide a second output destination for your print jobs. Send your print job to the standard output tray or either optional output device.

- The Offset Catch Tray (OCT) sits above the standard output tray. It increases the output tray capacity for the printer and offsets jobs from each other.
- The Mailbox/Collator sits atop the standard output tray and collates multiple copies or separates your jobs into 10 separate bins. For privacy, set passwords for the bins.

See *Chapter 2: Paper Handling* for more information about using the Offset Catch Tray and Mailbox/Collator.

Memory Expansion

See *Appendix A: Ordering Printer Options* to order an Offset Catch Tray or a Mailbox/Collator.

The DocuPrint 4517 Version 2.0 base printer has 4 MB of resident memory (systems prior to Version 2.0 have 2 MB of base memory) and can be increased with available 4 MB, 16 MB, and 32 MB SIMMs.

A hard drive is also available for the printer. The hard drive can be used for print spooling, font storage, macro storage, and state saving.

See *Chapter 5: Using the Hard Drive / Downloading Fonts* for more information about the hard drive.

See *Appendix A: Ordering Printer Options* to order more printer memory or a hard drive.

Memory Considerations

In today's printing environments, technologies have advanced greatly. Corresponding memory requirements have also increased.

- DocuPrint 4517 printing features such as Page Protection and State Saving, when on, use available printer memory—memory that is otherwise used for processing jobs.
- Downloading fonts also uses available printer memory.
- Installation of the Hard Drive option or Network Interface Card(s) will slightly increase memory needs due to memory buffer allocations.

If you plan to print highly complex jobs or need features like State Saving, Page Protection and Jam Recovery, you may need to add printer memory.

Table 1.1 lists the memory required when printing many types of one-sided jobs at 600 x 600 dpi.

Table 1.1 Minimum memory requirements for printing one-sided jobs at 600 x 600 dpi

Option Settings	Minimum
Page Protection OFF	2 MB
PCL Emulat Page Protection LETTER, A4, LEGAL size	6 MB
PostScript Page Protection ON, printing Letter size	6 MB
PostScript Page Protection ON, printing A4 size	7 MB
PostScript Page Protection ON, printing Legal size	9 MB

- Page protected jobs at high resolution (1200 x 600 dpi) require nearly twice as much memory, as do duplex jobs at 600 x 600 dpi.
- For duplex printing without page protection, a minimum of 4 MB is recommended, regardless of resolution. PCL

requires the extra memory for duplex whenever the duplex unit is installed, even if printing simplex.

- Printing speed of complex jobs, such as those containing extensive graphics or font use, will generally be improved by adding memory beyond the minimums described here.
- Either 1 MB or 4 MB of the printer's memory (depending on the version of the printer) may become unusable when 2-sided 32 MB SIMMs are installed (or other non-Xerox 2-sided SIMMs, such as 8 MB or 2 MB). Thus the total system memory may be less than the sum of resident and SIMM memory when 2-sided SIMMS are used. To maximize usable memory, we suggest selecting slot SIMM3 for a 2-sided SIMM and not using 2 MB SIMMs in slot SIMM2.

For further recommendations to best determine the memory required for your DocuPrint 4517, please contact Xerox/Rank Xerox or your dealer.

Maintaining the Printer

Maintaining the printer in good operating condition is essential to having a reliable, well-running machine.

Cleaning the Printer

For optimum performance, do not place the printer near vents or dust-producing equipment. Particles in the air may enter the printer and cause failures in internal mechanisms.

For best results, clean the outside of the printer with a damp cloth. Power the printer off before cleaning. Do not use detergents.

Replacing the EP Cartridge

An EP (electronic printing) cartridge will print approximately 10,000 pages of A4 or 8.5 x 11 paper under average operating conditions (5% image area coverage). The number of prints per cartridge will decrease if you routinely:

- Print dense text and graphics.
- Set Print Density (in the System Menu) to a dark setting.
- Exceed five percent area coverage.

You may increase the number of prints per cartridge by setting Print Quality to *Toner Saving*. The printer automatically reduces the amount of toner used (and prints a lower density output). See *Chapter 3: Using the Control Panel* for instructions on changing Control Panel settings.

Replace the EP cartridge when you see the following message at the printer's Control Panel display:

Toner Low

Although you can print for a short time after this message first appears, to ensure optimum print quality you should replace the EP cartridge as soon as possible.

See *Appendix A: Ordering Printer Options* for ordering a new EP cartridge.

Recycling the EP Cartridge

The DocuPrint 4517 EP cartridge can be recycled free of charge to you. Follow the instructions packaged with your new EP cartridge to recycle the old one.

Replacing the Fuser Cartridge/ Bias Transfer Roll

The Fuser Cartridge and Bias Transfer Roll (BTR) have expected useful lives of 200,000 prints. When this point is reached, you will see the following message at the printer's Control Panel display:

Replace
Fuser Cartridge

Although printing can continue, to ensure optimum print quality, you should order and replace these parts as soon as possible.

See *Appendix A: Ordering Printer Options* for ordering information.

Technical Support

If you are unable to resolve a printing problem using the instructions in *Chapter 6: Troubleshooting*, contact the dealer from which you bought your printer or contact Xerox/Rank Xerox.

Before Calling for Service

Before contacting your dealer or Xerox/Rank Xerox, please have the following information available:

- Printer Serial No. (located on inside right side of machine after opening the front cover)
- A Configuration Sheet (follow instructions in Step 9 on page C-17)
- Any error code or message displayed on the Control Panel
- A description of the problem
- Type of network (if problem is network related)

Transporting the Printer

When transporting the printer more than a short distance, use the original shipping box and packaging materials. If the original shipping box or packaging materials are not available, use a sturdy packing box and a generous amount of cushioning or packing materials.

To prepare your printer for transportation, follow the instructions below.

- 1 Power off the printer and disconnect the power cord and all interface cables.**
- 2 Remove any paper handling options and repack each in its original packaging.**
- 3 Remove the hard drive (if it is installed), and repack it in its original packaging.** See *Appendix C: Installing and Removing Printer Options*.
- 4 Remove the EP cartridge and pack it in its original packaging.**
- 5 Pack the printer with the sealed EP cartridge and power cord in the original printer box.**

If you need to return the printer for service, follow the instructions of your service provider for packing and shipping.

Selecting Paper

Table 2.1 on page 2-4 lists the size paper, envelopes, and other print media you can use with all DocuPrint 4517 input and output trays. Using sizes other than those listed in Table 2.1, or paper not recommended for laser printers, may result in paper jams.

The DocuPrint 4517 supports paper weights as follows:

- 16-28 lbs. (60-105 gsm) via paper trays
- 16-28 lbs. (60-105 gsm) and A6 international postcard (190 gsm) via the front tray
- 17-24 lbs. (64-90 gsm) with duplex
- The optional HCF supports 18-24 lbs. (68-90 gsm).

Table 2.1 Acceptable paper sizes for all DocuPrint 4517 paper trays

Paper Size	Input			Output	
	Main Tray, Lower Tray [†] and HCF [†]	Front Tray	Envelope Feeder [†]	Standard Output Tray and OCT ^{†‡}	Mailbox / Collator [†]
A4 (210x297mm)	•	•		•	•
Letter (8.5x11" / 216x279mm)	•	•		•	•
Folio (8.5x13" / 216x330mm)	•	•		•	
Legal (8.5x14" / 216x356mm)	•	•		•	
Executive (7.25x10.5" / 184x267mm)	††	•		•	
Statement (5.5x8.5" / 140x216mm)		•		•	
ISO B5 (176x250mm)		•		•	
Envelope COM-10 (4.12x9.5" / 105x241mm) Monarch (3.87x7.5" / 98x191mm) DL (4.33x8.66" / 110x220mm) C5 (6.38x9.01" / 162x229mm) C6 (4.49x6.38" / 114x162mm)		• • • • •	• • • • •	• • • • •	
Transparency A4 (210x297 mm) Letter (8.5x11" / 216x279mm)		• •		• •	
Label A4 (210x297 mm) Letter (8.5x11" / 216x279mm)		• •		• •	
A6 (International Postcard) (105 x 148mm)		•		•	

† Optional 500-sheet or 2,000-sheet paper handler. See Appendix A for ordering information.

‡ Although the OCT will accept all paper sizes listed, it can only offset A4, Letter, Folio, and Legal.

†† Only the main tray accepts Executive.

Storing Paper

The DocuPrint 4517's print quality is optimized when paper and other print media are properly stored. Proper storage ensures optimum print quality and trouble-free printer options.

- Store the paper on a flat surface, in a relatively low humidity environment.
- Do not unwrap paper until you are ready to use it, and rewrap any paper you are not using.
- Do not expose paper to direct sunlight or high humidity.

Loading Paper

The DocuPrint 4517 accepts paper into its main tray (see below), front tray (see page 2-8), optional 500-sheet Paper Deck and Cassette (see page 2-12), optional 2,000-sheet High Capacity Feeder (see page 2-14), and optional Envelope Feeder (see page 2-16).

Using the Main Tray

The main tray holds 250 sheets of 20 lb (75 g/m²) paper. Refer to the section “Selecting Paper” (page 2-3) for acceptable paper sizes and weights.

- Do not attempt to load the main tray during printing.
- Do not overfill the tray.

- 1 Press down on the bottom plate of the paper tray until it clicks into position.**

If you are not changing paper size, go to Step 4 on page 2-7. Otherwise, continue to Step 2.

If you are changing to a smaller size, perform Steps 2 and 3 in reverse order.

- 2 Push in on the size lock button (1) and slide end guide A (2) out.**

3 Slide end guide B (2) out to align it with end guide A (1).

4 Load paper so that it is under both the metal stop tab and the plastic fill tabs. Refer to Figure 2.1 for correct paper orientation.

Figure 2.1 Main tray paper orientation

Top View

- 1** Drilled paper (simplex or duplex printing)
- 2** Letterhead (duplex printing)
- 3** Letterhead (simplex printing)

Using the Front Tray

The front tray accepts all paper sizes, weights and types listed in the section “*Selecting Paper*” (page 2-3).

The front tray holds:

- 100 sheets of 20 lb (75 g/m²) paper
- 30 transparencies or 25 sheets of label paper
- 10 envelopes

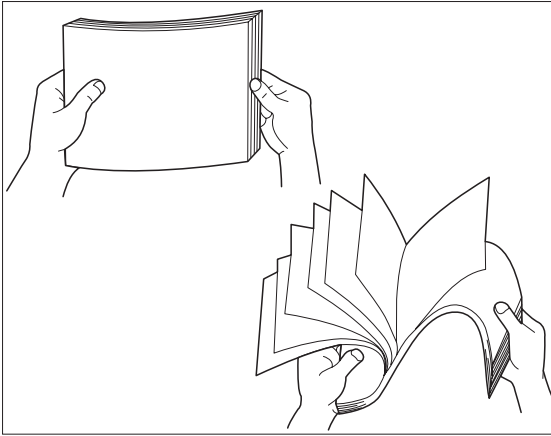

Consult Figure 2.2 for proper orientation of letterhead and drilled paper in the front tray, and Figure 2.3 for proper orientation of envelopes and postcards in the front tray.

- 1** Press the front tray release point to open the front tray, then pull out the tray extension.

- 2** Slide the side guide (1) to the far right.
Flip open the extension bar (2) if feeding long paper. Pull out the envelope stopper (3) if feeding envelopes.

3 Fan transparencies and label paper before loading in the tray.

4 Insert paper along the left side of the tray, under the plastic maximum fill tab (1). Refer to Figure 2.2 on page 2-10 for correct paper orientation.

5 Adjust the side guide to the size of the paper loaded in the front tray.

6 When feeding envelopes, slide the end of the envelope stopper over the end of the envelope stack. Refer to Figure 2.3 on page 2-11 for correct envelope orientation.

The envelope stopper keeps envelopes from backing out of the stack while feeding.

7 Because the front tray does not have a paper size sensor, you must tell the printer which size paper is loaded. Set the following options after loading paper in the front tray:

- For PCL jobs, set the **Front Tray Size** option, via the PCL Emulat menu, to the size paper loaded in the front tray.
- For PostScript jobs, set the **Manual Size** option, via the PostScript menu, to the size paper loaded in the front tray.

 Changing Front Tray Size in the PCL Emulat Menu changes the PostScript Manual Size (and vice versa).

See *Chapter 3: Using the Control Panel* for instructions on accessing the PCL Emulat and PostScript menus.

 When you send a job to the printer that requests a paper size that is different than the size currently entered in the Control Panel, the following message will be displayed: "Front Tray Load X" (or "Feed X"). In response to this message you may either load the requested paper size or press Enter * . The printer will assume the paper size loaded is the requested paper size and will automatically update the Control Panel menus (PostScript and PCL Emulat Front Tray Size) to the size requested by your job. If you load a paper size different than requested, the printer will not be aware of this discrepancy and your job may not be printed as desired. If you load the "correct" paper size before the load message is displayed, you must set the size in the Control Panel.

Figure 2.2 Front tray paper orientation

Top View

- 1 Drilled paper (simplex or duplex printing)
- 2 Letterhead (simplex printing)
- 3 Letterhead (duplex printing)

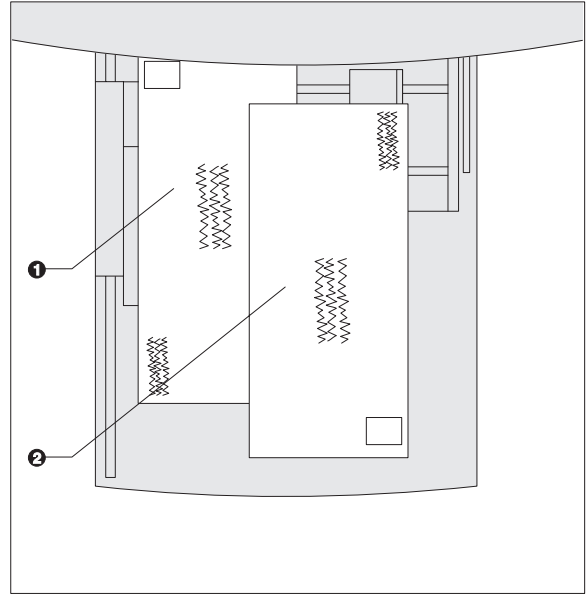

Figure 2.3 Front tray envelope and postcard orientation**Top View**

- 1 Standard orientation (PCL)
- 2 Alternate orientation[†]

[†] For PostScript applications: Some PostScript applications require that the envelopes/post cards be loaded with the return address corner on the right side of the stack and leading as the envelopes/post cards go into the printer. Test your application for proper orientation.

Using the 500-sheet Paper Deck and Cassette

The optional 500-sheet Paper Deck and Cassette holds 500 sheets of 20 lb (75 g/m²) paper. Refer to the section “*Selecting Paper*” (page 2-3) for acceptable paper sizes and weights.

(See *Appendix A* for ordering information and *Appendix C* for installation instructions.)

- Do not attempt to load the 500-sheet Paper Deck and Cassette during printing.
- Do not overfill the paper cassette.

If you are not changing paper size, go to Step 2.

- 1 Adjust the end and width guides to fit the size of paper you are loading.**
 - A Lift up one side of the end guide (1) at the rear of the tray, then lift up the other side of the end guide.**
 - B Pull out the tray to lengthen it, or push it in to shorten it.**
 - C Press both sides of the end guide down until it clicks into place at the desired length.**
 - D Slide the width guide (2) to fit the width of the paper.**
- 2 Load paper. Refer to Figure 2.4 on page 2-13 for correct paper orientation.**

Figure 2.4 500-sheet Paper Deck paper orientation

Top View

- 1 Drilled paper (simplex or duplex printing)
- 2 Letterhead (duplex printing)
- 3 Letterhead (simplex printing)

Using the High Capacity Feeder

The optional High Capacity Feeder (HCF) holds 2,000 sheets of 20 lb (75 g/m²) paper. Refer to the section “*Selecting Paper*” (page 2-3) for acceptable paper sizes and weights.

(See *Appendix A* for ordering information and *Appendix C* for installation instructions.)

Note

When the HCF is installed, it can be accessed using your existing applications/drivers as a “Lower Tray.”

Caution

- Do not attempt to load the High Capacity Feeder during printing.
- Do not overfill the feeder.

- 1** Open the paper drawer, and wait until paper guides fully lowers.

If you are not changing paper size, go to Step 3 on page 2-15. Otherwise, continue to Step 2.

- 2** Adjust the end and side paper guides for paper size.

Ensure that both the top and bottom of the paper guides are seated into the correct size slots.

- 3** Load paper using the opening in the side of the drawer. Refer to Figure 2.5 for correct paper orientation.

Figure 2.5 High Capacity Feeder paper orientation

Top View

- 1** Legal size paper guide position
- 2** Folio size paper guide position
- 3** A4 size paper guide position
- 4** Letter size paper guide position
- 5** Drilled paper (simplex or duplex printing)
- 6** A4 size paper guide position
- 7** Letter/legal/folio size paper guide position
- 8** Letterhead (duplex printing)
- 9** Letterhead (simplex printing)

Using the Envelope Feeder

The Envelope Feeder is an optional paper handling device available for the DocuPrint 4517. Refer to Table 2.1 on page 2-4 for acceptable envelope sizes.

(See *Appendix A* for ordering information and *Appendix C* for installation instructions.)

1 Slide out the envelope support.

2 Lift the envelope holder.

3 Stack the envelopes face up with the stack against the feeder's left edge.

For PCL applications: The corner for the return address should be on the left side of the stack and trailing as the envelopes go into the printer (as shown at left).

For PostScript applications: Some PostScript applications require that the envelopes be loaded with the return address corner on the right side of the stack and leading as the envelopes go into the printer. Test your application for proper orientation.

Push the envelopes gently into the printer. Do not force the envelopes between the last two rollers (the two that touch), as this may cause a jam to occur.

- 4** Adjust the side guide against the right side of the stack and lower the envelope holder.

Do not stack envelopes higher than the red “full” line on the side guide, nor push the side guide so hard against the stack as to deform the envelopes.

- 5** Because the Envelope Feeder does not have a paper size sensor, you must tell the printer which size envelope is loaded. Set the Env Feeder Size option, in either the PCL Emulat or PostScript menu, to the size of envelope loaded.

Changing Env Feeder Size in either the PCL Emulat menu or the PostScript menu changes the size in the other menu.

See *Chapter 3: Using the Control Panel* for instructions on accessing the PCL Emulat and PostScript menus.

With the Envelope Feeder installed, the front tray may still be used.

Automatic Tray Switching

Automatic tray switching is available for both PCL emulation and PostScript jobs. Tray switching is useful for:

- Increasing paper capacity.

When the current paper tray runs out of paper, the printer automatically switches to the next tray in the sequence, provided the paper size in the next tray is the same size as that in the current tray.

- Searching for the correct paper size.

If the paper size specified in your software application does not match the size paper loaded in the current paper tray, the printer automatically searches the next tray in the sequence for a paper size that matches.

PostScript Tray Switching

The **Tray Switching** option (in the PostScript Menu) can be set to any of the settings shown in Table 2.2 below.

Table 2.2 Tray switching settings

Tray Switching Setting	Description
Off Main-Front Tray Front-Main Tray [†]	Tray sequence to be used for PostScript jobs
Lower 1-Main Front-Lower 1 [†]	Additional Tray Switching settings that appear when a 500-sheet Paper Deck and Cassette or 2,000-sheet High Capacity Feeder is installed
Lower 2-Main Lower 1-Lower 2 Lwr1-Lwr2-Main Front-Lower 2 [†]	Additional Tray Switching settings that appear when a second Lower Tray (500-sheet Paper Deck and Cassette or 2,000-sheet High Capacity Feeder) is installed

[†] Version 2.0 or later.

For example, when Tray Switching is off, no tray switching occurs. When set to Main-Front the printer automatically switches to the front tray when the main tray becomes empty (provided the correct size paper is in both trays).

PCL Tray Switching (Source Mapping)

Tray switching for PCL emulation jobs is controlled by the settings for Source Mapping (in the PCL Emulat Menu). (See *Chapter 3: Using the Control Panel* for information on using the Control Panel.)

- If you are familiar with the concept of source mapping, skip to “*Default Source Mapping Settings*” (page 2-21) and “*Customizing Source Mapping Settings*” (page 2-21).
- If source mapping is a new concept to you, continue reading.

When you send a PCL job to the printer, commands in the data stream tell the printer what logical paper source to use and on what size paper to print. The way in which the printer interprets the PCL command for paper source and page size depends on the PCL Emulat Menu settings for Source Mapping and Paper Size.

If the printer receives no paper tray or paper size information from your software application, it uses the PCL Emulat Menu settings for Paper Size and Default Source.

PCL recognizes the six paper sources shown in Table 2.3. (These PCL paper sources may, or may not, appear in your software application, or they may appear under alternate names.)

Table 2.3 Six PCL paper sources

PCL Paper Source	PCL Command [†]	Alternate Names
Upper	<Esc>&11H	Main Tray, Paper Tray, Paper Cassette
Manual	<Esc>&12H	Front Tray, Manual Feed
Manual Envelope	<Esc>&13H	Envelope Manual Feed
Lower	<Esc>&14H	Lower Tray
Large Capacity	<Esc>&15H	Paper Deck
Envelope Feeder	<Esc>&16H	N/A

[†] The character following the “&” in the command string is the lower case character “L.”

When you choose, for example, "Main Tray" or "Paper Tray" as the paper source in your application, the PCL data stream tells the printer to print using paper from the "Upper" paper source.

The printer's Source Mapping option maps the PCL paper source command to the paper trays on the printer. If, for example, the "Upper" source is mapped to the printer's main tray, the printer will feed paper from the main tray whenever you choose "Upper," "Main Tray," or "Paper Cassette" in your application.

Table 2.4 lists the Source Mapping settings that can be set for each of the PCL paper sources in Table 2.3.

Table 2.4 Source Mapping settings

Source Mapping Setting	Description
Main Tray Front Tray Main-Front Tray Front-Main Tray [†]	Tray or tray sequence to be used for each of the six PCL paper sources
Lower 1 Lower 1-Main Front-Lower 1 [†]	Additional Source Mapping settings that appear when a 500-sheet Paper Deck and Cassette or 2,000-sheet High Capacity Feeder is installed
Lower 2 Lower 2-Main Lower 1-Lower 2 Lwr1-Lwr2-Main Front-Lower 2 [†]	Additional Source Mapping settings that appear when a second Lower Tray is installed

[†] Version 2.0 or later.

Note

The optional High Capacity Feeder, when installed, will appear as a "Lower Tray."

Default Source Mapping Settings

Table 2.5 shows the Source Mapping settings in effect with the base printer, as well as those when one or two Lower Trays are installed.

Table 2.5 Default Source Mapping settings

PCL Paper Source	Base Configuration	One Lower Tray	Two Lower Trays	Envelope Feeder
Upper	Main Tray	Main Tray	Main Tray	Main Tray
Manual	Front Tray	Front Tray	Front Tray	Front Tray
Manual Envelope	Front Tray	Front Tray	Front Tray	Envelope Feeder
Lower	Main Tray	Lower 1 Tray	Lower 2 Tray	Main Tray [†]
Large Capacity	Main-Front	Lower 1-Main	Lwr1-Lwr2-Main	Main-Front [†]
Envelope Feeder	Front Tray	Front Tray	Front Tray	Envelope Feeder

[†] These will default the same as the appropriate Lower Tray column if both Lower Tray(s) and Envelope Feeder are installed.

Customizing Source Mapping Settings

You may change the Source Mapping settings to best fit your printing needs. For example, you may want the printer to automatically feed from the front tray when the main tray becomes empty. The Source Mapping examples shown next in this guide can help you customize Source Mapping settings for your printing environment.

Caution

Customizing your Source Mapping settings on the printer may cause different trays to be used than are selected in your printer drivers.

Example: Main Tray-Front Tray

Table 2.6 below shows how to set the Source Mapping settings so that the printer pulls paper first from the main tray and then from the front tray.

Regardless of the source you choose from your application, the printer will always pull paper first from the main tray. When the main tray is empty, the printer will pull paper from the front tray.

Table 2.6 Source Mapping settings for tray switching between the main and front trays

PCL Paper Source	Source Mapping Setting
Upper	Main-Front Tray
Manual	Main-Front Tray [†]
Manual Envelope	Main-Front Tray
Lower	Main-Front Tray
Large Capacity	Main-Front Tray
Envelope Feeder	Main-Front Tray

[†] Set this to Front if you want to print special paper through the front tray.

Example: Lower Tray-Main Tray

Suppose you have a lower tray installed and you want to maximize the paper supply. But you also want to print special paper, such as envelopes or labels, through the front tray.

Table 2.7 below illustrates how to set the Source Mapping settings so that the printer switches between the lower and main trays as one tray becomes empty, yet leaves the front tray available.

Table 2.7 Source Mapping settings for tray switching between the lower and main trays

PCL Paper Source	Source Mapping Setting
Upper	Lower 1-Main
Manual	Front Tray
Manual Envelope	Front Tray
Lower	Lower 1-Main
Large Capacity	Lower 1-Main
Envelope Feeder	Front Tray

When using the settings in Table 2.7, choose Upper, Lower, or Large Capacity (or an equivalent paper source, as shown in Table 2.3 on page 2-19) to engage tray switching. To print a job on special paper, choose Manual, Manual Envelope, or Envelope Feeder as the paper source in your application.

Using the Mailbox/Collator

The Mailbox/Collator (Figure 2.6) is an optional output device available for the DocuPrint 4517. It accepts only A4 and Letter paper sizes. (See *Appendix A* for ordering information; *Appendix C* for installation instructions.)

Figure 2.6 Mailbox/Collator (front view)

- 1 Bin Unlock button
- 2 Open bin indicators
- 3 Power switch

The Mailbox/Collator offers the following capabilities:

- Printing multiple collated sets (2 to 10 sets) of a job. See *“Printing to the Mailbox/Collator”* (page 2-25).
- Directing output to a specific mailbox bin. See *“Printing to the Mailbox/Collator”* (page 2-25).
- Printing secure jobs. See *“Password Protecting Jobs”* (page 2-25).

More detailed information, including driver setup, is found in the *Mailbox/Collator User Guide*.

With the Mailbox/Collator installed, the standard output tray still functions normally. The Mailbox/Collator gives you approximately 50 sheets per bin of letter/A4, 20 lb (75 g/m²) weight paper for a maximum output of 500 sheets. The standard output tray adds another 250 sheets.

Printing to the Mailbox/Collator

Using a DocuPrint 4517 printer driver, select a specific "Bin" or "Collator" as the paper output destination for your job, then print your job.

Note

For job collation, select "Collator" from the DocuPrint 4517 printer driver, but do not select (disable) "Collate" in the application print window.

- Bins are numbered from 1 - 10 (top to bottom).
- Each bin can hold up to 50 sheets of 20 lb (75 g/m²) paper. When a bin becomes full:
 - The remainder of the print job is diverted to the top output tray when the Bin Full option (in the Mailbox Menu) is set to *Send to Standard*, and the full bin is not password protected.
 - Printing stops when the Bin Full option is set to *Stop Printing* or if the full bin is password protected. Once you remove the output, the printer resumes printing.

Password Protecting Jobs

Using the DocuPrint 4517 Control Panel, you can set a different password for each mailbox bin and one password for the collator mode. A job sent to a password-enabled bin can only be removed by the individual with the bin password; a job sent to the collator can only be removed from the password-enabled collator mode by the individual with the collator password.

Xerox recommends that you use the Mailbox/Collator exclusively in either collator mode or bin mode, not both, if you plan to set passwords. The only way to control the mode in which it is used is through the use of passwords. If passwords are enabled for bins but disabled for collator, jobs sent to password-enabled bins can be removed by anyone because no password is needed to open the collator. For this

reason, Xerox recommends you either enable or disable passwords for both bins and collator.

- If you plan to use passwords for bins, also set a password for collator mode. Distribute individual bin passwords to the appropriate users. Do not distribute the password for collator mode.
- If you plan to use a password for collated jobs, also set passwords for each bin. Distribute the collator password to the appropriate users. Do not distribute individual bin passwords.

See “Enabling Passwords” (below) and “Disabling Passwords” (page 2-28) for instructions.

Enabling Passwords

Follow the instructions below to set passwords.

1 Power ON the printer.

The printer will complete its self-test and display the following message at the Control Panel Display:

Online
Ready

2 Press Online , then Menu and you will see:

Main Menu
Language

3 Press Down until you see:

Main Menu
Mailbox Menu

4 Press Enter and the display changes to:

Mailbox Menu
Collator

To set a collator password, continue to Step 5.

To set a bin password, skip to Step 6.

5 Press Enter ***** and the display changes to:

```
Collator
Enable Password
```

Skip to Step 9.

6 Press Down **▼** until you see:

```
Mailbox Menu
Mailbox
```

7 Press Enter ***** and the display changes to:

```
Mailbox
Bin 1
```

8 Press Down **▼** or Up **▲** to select the appropriate bin. Then press Enter *****.

The display changes to:

```
Bin N
Enable Password
```

9 Press Enter ***** again and the display changes to:

```
Enter Password
>> XXXX
```

10 Enter the existing password using the numbered keys on the Control Panel.

The initial passwords for each bin after installing the Mailbox / Collator for the first time are:

```
Collator: 0000
Bin 1: 0001      Bin 6: 0006
Bin 2: 0002      Bin 7: 0007
Bin 3: 0003      Bin 8: 0071
Bin 4: 0004      Bin 9: 0072
Bin 5: 0005      Bin 10: 0010
```

After entering the correct password, the display changes to:

```
New Password
>> XXXX
```

- 11 To enable the existing password, enter it again. To set a new password, enter a new password, then press Enter *.**

The password is now enabled.

- 12 Press Online  to bring the printer back online.**

The Mailbox/Collator is now set up for use. The display should read:

```
Online
Ready
```

Disabling Passwords

Follow the instructions below to disable passwords.

- 1 Power ON the printer.**

The printer will complete its self-test and display the following message at the Control Panel Display:

```
Online
Ready
```

- 2 Press Online , then Menu  and you will see:**

```
Main Menu
Language
```

- 3 Press Down  until you see:**

```
Main Menu
Mailbox Menu
```

- 4 Press Enter * and the display changes to:**

```
Mailbox Menu
Collator
```

To disable a collator password, continue to Step 5 on page 2-29.

To disable a bin password, skip to Step 7 on page 2-29.

5 Press Enter ***** and the display changes to:

```
Collator
Enable Password
```

6 Press Down **▼** until you see:

```
Collator
Disable Password
```

Skip to Step 11.

7 Press Down **▼** until you see:

```
Mailbox Menu
Mailbox
```

8 Press Enter ***** and the display changes to:

```
Mailbox
Bin 1
```

9 Press Down **▼** or Up **▲** to select the appropriate bin. Then press Enter *****.

The display changes to:

```
Bin N
Enable Password
```

10 Press Down **▼** until you see:

```
Bin N
Disable Password
```

11 Press Enter ***** again and the display changes to:

```
Enter Password
>> XXXX
```

12 Enter the existing password using the numbered keys on the Control Panel.

The initial passwords for each bin after installing the Mailbox / Collator for the first time are:

Collator: 0000

Bin 1: 0001

Bin 6: 0006

Bin 2: 0002

Bin 7: 0007

Bin 3: 0003

Bin 8: 0071

Bin 4: 0004

Bin 9: 0072

Bin 5: 0005

Bin 10: 0010

13 Press Online  to bring the printer back online.

The Mailbox/Collator is now set up for use. The display should read:

Online
Ready

Opening Bins

Follow the appropriate instructions for opening either a password-enabled or password-disabled bin.

Opening Password-Enabled Bins

To open a bin (or the collator) for which a password has been enabled:

1. Push the *Bin Unlock* button.

You are prompted to enter your password at the Control Panel.

2. Using the numbered Control Panel keys, enter your password.

If you enter an invalid password, you will be prompted again to enter your password.

A light appears to indicate each unlocked bin. Open the appropriate unlocked bins, then remove the output. You have approximately 30 seconds to open the bin(s).

Opening Password-Disabled Bins

Push the *Bin Unlock* button and a light appears to indicate each unlocked bin. Open all full bins, then remove the printouts. You have approximately 30 seconds to open the bin(s). If the Mailbox/Collator re-locks, push the *Bin Unlock* button again immediately.

Using the Offset Catch Tray (OCT)

The Offset Catch Tray (Figure 2.7)—hereafter referred to as OCT—is an optional output device available for the DocuPrint 4517.

(See *Appendix A* for ordering information and *Appendix C* for installation instructions.)

Figure 2.7 Offset Catch Tray (front view)

After installing the OCT, submit your print jobs as usual.

You can set the OCT to operate in three different manners:

- Set the Output Bin option (in both the PCL Emulat and PostScript menus) to *OCT No Offset*, and the OCT will not offset jobs.
- Set the Output Bin option to *OCT On Job*, and the OCT will offset jobs from one another.
- Set the Output Bin option to *OCT On Job/Copy*, and the OCT will offset jobs from one another. It will also offset each set of copies of individual pages of an uncollated multiple copy job.

With the OCT installed, the standard output tray still functions normally. The OCT gives you approximately 500 sheets of letter/A4 20 lb (75 g/m²) maximum collated output. The standard output tray adds another 250 sheets.

Duplex (Two-Sided) Printing

Once the optional Duplex Module is installed, you can print two-sided (duplex) jobs. (See *Appendix A: Ordering Printer Options* for ordering information and *Appendix C: Installing and Removing Printer Options* for installation instructions.)

Note

At least 4MB of printer memory is recommended (but not required) for duplex printing. See Appendix A for ordering additional memory. Refer to the section "Memory Considerations" (page 1-11) for additional information on memory requirements.

Use only the size paper listed in Table 2.8 for two-sided jobs. Do not use envelopes, postcards, transparencies, or label paper for duplex jobs.

Table 2.8 Paper sizes that can be used with the Duplex Module

Paper Size	Weight
A4 (210x297 mm)	20 lb (75 g/m ²) to 24 lb (90 g/m ²)
Letter (8.5x11" / 216x279mm)	20 lb (75 g/m ²) to 24 lb (90 g/m ²)
Folio (Legal 13") (8.5x13" / 216x330mm)	20 lb (75 g/m ²) to 24 lb (90 g/m ²)
Legal (Legal 14") (8.5x14" / 216x356mm)	20 lb (75 g/m ²) to 24 lb (90 g/m ²)

Refer to Figures 2.1 (page 2-7) and 2.2 (page 2-10) for the proper orientation of letterhead when printing duplex.

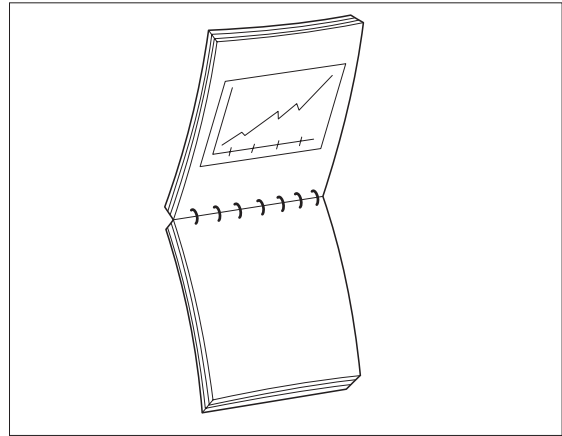

Print Orientation and Control Panel Settings

To ensure that duplex jobs print in the proper orientation, set the Duplex option (in the Control Panel's PCL Emulat and PostScript menus) to the appropriate settings (see Figure 2.8) The DocuPrint 4517 printer driver setting will override the Control Panel setting, and should also be set according to Figure 2.8.

Figure 2.8 Duplex binding orientation and Control Panel menu settings

PCL Emulat Menu: set Duplex to *Long Edge Bind*
PostScript Menu: set Duplex to *Regular*

PCL Emulat Menu: set Duplex to *Short Edge Bind*
PostScript Menu: set Duplex to *Tumble*

PCL Emulat Menu: set Duplex to *Long Edge Bind*
PostScript Menu: set Duplex to *Tumble*

PCL Emulat Menu: set Duplex to *Short Edge Bind*
PostScript Menu: set Duplex to *Regular*

Interface Menu	3-24
System Menu	3-30
Test Menu	3-31
Reset Menu	3-32

Control Panel Features

The DocuPrint 4517 Control Panel (Figure 3.1) serves two purposes:

1. It displays information about the status of the printer (or the job in process) and
2. It provides the means for changing printer settings to control how the DocuPrint 4517 operates.

Figure 3.1 DocuPrint 4517 Control Panel

- 1 2-line by 16-character display
- 2 Indicator lights
- 3 Control keys (8)

The Display

The Control Panel's display performs two functions.

- It informs you of **printer status conditions**, such as when toner is low, when a paper tray is empty, when a job is in process, and so on.

For example, when you turn on the printer, you see the following message on the display:

Online
Ready

This message appears whenever the printer is online and ready to accept print jobs.

- It presents a **hierarchy of menu options and settings** to configure and control the printer.

For example, when you press **Menu**  after taking the printer offline, you see the following message on the display:

```
Main Menu
Language >
```

Note that the > in this example is one of three indicators you will see in the menu systems. See “Menu Indicators” (page 3-9) for more information on indicators.

See “Navigating the Menu System” (page 3-7) for information on the menu system hierarchy.

The Indicator Lights

The Control Panel contains four indicator lights. Table 3.1 describes the function of each light.

Table 3.1 Control Panel indicator lights and their functions

Light	Description
Online	This is lit when the printer is online. It flashes for a few seconds while transitioning from printing to offline.
Form Feed	This is lit as long as there is printable data in the printer, and is not extinguished until the “last” page is printed.
Fault	This is lit when an error condition occurs that stops printing, and is not extinguished until all applicable error conditions are removed. Such error conditions include jams, out of paper, toner cartridge failures and other system errors.
Ready	This is lit when the printer is ready to accept data and print it. It flashes when receiving data to print.

The Keys

The Control Panel keypad consists of **eight** keys, identified with international symbols and labeled in English.

The keys are also numbered 0 - 7. When you install the optional Mailbox / Collator, these same eight keys are used to enter numeric passwords for each of the mailbox bins.

Table 3.2 describes the function of each key.

Table 3.2 Control Panel keys and their functions

Key	Description
<p>Online</p> 	<p>Toggles between online and offline.</p> <p>When online, the printer is able to receive and print pages. When offline, page processing and printing halts, but the printer is still able to respond to status requests.</p> <p>You must take the printer offline to:</p> <ul style="list-style-type: none"> • Access the menu system with Menu  or Reset . • Insert or remove a font card. • Perform tasks such as forcing a form feed for a partially printed page. <p>The printer goes offline automatically when it has a fault condition such as a paper jam or an open cover. Use Online  to put the printer back online after correcting such conditions.</p>
<p>Reset</p> 	<p>Displays the Reset Menu and the first reset function: Reset Printer.</p> <p>Press Up  or Down  repeatedly to scroll through the other Reset Menu functions. See "Reset Menu" (page 3-32).</p> <p>The printer must be offline for Reset  to function.</p>
<p>Form Feed</p> 	<p>Prints a partial page of a PCL emulation job, if one exists in the printer (as indicated by the "Form Feed" indicator light).</p> <p>The printer must be offline for Form Feed  to function.</p>

Key	Description
<p>Up</p> 	<p>In the menu system, scrolls backward (up) through submenus or through the current list of values or functions.</p> <p>For numeric values such as number of Copies, press Up  to increase the number.</p> <p>Scrolling wraps—if the first item in a list is displayed, press Up  to display the last item in the list.</p> <p>Press Up  for more than two seconds to scroll continuously.</p> <p>When the hard disk option has been installed, press Up  to respond to a disk failure error message. Pressing Up  will reformat the hard disk. See <i>Chapter 6: Troubleshooting</i> for more information on hard disk failure error messages.</p>
<p>Down</p> 	<p>In the menu system, scrolls forward (down) through the submenus or through the current list of values or actions.</p> <p>For numeric values such as number of Copies, press Down  to decrease the number.</p> <p>Scrolling wraps—if the last item in a list is displayed, press Down  to display the first item in the list.</p> <p>Press Down  for more than two seconds to scroll continuously.</p> <p>When the hard disk option has been installed, press Down  to respond to a disk failure error message. Hard disk usage will be aborted when Down  is pressed. See <i>Chapter 6: Troubleshooting</i> for more information on hard disk failure error messages.</p>
Table 3.2 Page 3 of 3	

Navigating the Menu System

The DocuPrint 4517 Control Panel contains **two** menu structures.

- **Main Menu** and its submenus:
 - **Language**
 - **Mailbox Menu**
(This menu appears only when the Mailbox / Collator option is installed.)
 - **PCL Emulat Menu**
 - **PostScript Menu**
(This menu appears only when the PostScript option is installed.)
 - **Interface Menu**
 - **System Menu**
 - **Test Menu**

Press **Online**  then **Menu**  to access the **Main Menu**. Each of the submenus may have other submenus, settings, or functions. See “Main Menu” (page 3-12) for more information.

- **Reset Menu** and its functions:
 - **Reset Printer**
 - **Reset Menus**
 - **Reset Ethernet**
(This function appears only when the optional Ethernet card is installed.)
 - **Reset Token Ring**
(This function appears only when the optional Token Ring card is installed.)
 - **Reset LocalTalk**
(This function appears only when the optional LocalTalk card is installed.)
 - **Reset All**
 - **Cancel PS Job**
(This function appears only when the PostScript option is installed and a PostScript job is sent.)

Press **Online**  then **Reset**  to access the Reset Menu. See “Reset Menu” (page 3-32).

Menu Indicators

Three menu indicators (>, = and *) are used to furnish information about menus and settings. The purpose of each indicator is described in Table 3.3 below.

Table 3.3 Indicators found in the Control Panel menu systems

Indicator	Purpose	Example
>	<p>Indicates another menu level below this one.</p> <p>The example at the right tells you that there is another level below the Language option in the Main Menu. Press Enter * to move to the next level.</p> <p>This indicator is also used with the < indicator to mark the segment of a network address that is currently being set.¹</p>	<p>Main Menu Language ></p> <p>IP Address = 50>60<70.80</p>
=	<p>This indicator only appears after options which take a specific setting—it indicates that a value or setting follows the option.</p> <p>The example at the right tells you that Language is an option that takes a specific setting. One setting for the Language option is Français. Another setting is English. (The list of available settings is displayed one at a time on the bottom line of the display as you press Up ^ or Down v.)</p>	<p>Language = Français</p>
*	<p>This indicator identifies the current option setting.</p> <p>The example at the right tells you that Language is currently set to English.</p>	<p>Language = English *</p>

¹ V2.0 or later.

Setting a Menu Option

To set an option, or to invoke a function, follow the steps below:

- 1 Press Online  to take the printer offline.**

You will see:

```
Offline      _/_  
Press a key...
```

- 2 Press Menu  to access the Main Menu or press Reset  to access the Reset Menu.**

- 3 Press Down  or Up  to scroll through the list of submenus, options, or functions.**

- 4 When you see the submenu, option, or function you want, press Enter .**

If you selected a submenu or option you did not want, press **Esc**  to return to the previous level. Then make the selection you want and press **Enter**  to accept it.

- 5 If necessary, repeat Step 3 and Step 4 to go through submenu levels to reach all desired options or functions.**

If many possibilities exist, such as 1 through 99 for number of **Copies**, you can scroll quickly by holding down the key.

After pressing **Enter**  to accept a setting, you will briefly see on the top line of the display:

```
* saved *
```

This indicates the value has been saved as the current setting.

- 6** You may either continue to work in the menu system by repeating the steps above, or exit and return to normal operation by pressing **Online** .

If you press **Online**  before **Enter**  the value will not be saved.

Other ways to exit a menu option or exit the menu system completely are as follows:

- In the Main Menu, press **Menu**  to return to the top of the **Main Menu**.
- Press **Esc**  from the **Main Menu** or **Reset Menu** to exit the menu system and display the following message:

```
Offline      _/_  
Press a key. . .
```

Main Menu

The Main Menu is a cascading system of submenus, each containing other submenus or options designed to configure the printer for your environment. The Main Menu hierarchy is depicted in Table 3.4.

(Menu options are described in *Appendix D: Control Panel Options*, where they are listed in alphabetical order.)

Note

In this chapter, a boldfaced menu item means it is a factory setting. A menu item followed by an asterisk () means a reset will default to this value.*

On the Control Panel, the current setting for each option always appears first and is followed by an asterisk (). The other possible settings are located by pressing **Up**  or **Down**  to scroll through the list.*

See "Reset Menu" (page 3-32) for information on how to revert to factory settings.

Table 3.4 Main Menu hierarchy

Main Menu	Hierarchy and Factory Settings
Language Menu	See Table 3.5 on page 3-13.
Mailbox Menu¹	See Table 3.6 on page 3-14.
PCL Emulat Menu	See Table 3.8 on page 3-16.
PostScript Menu²	See Table 3.10 on page 3-22
Interface Menu	See Table 3.11 on page 3-26.
System Menu	See Table 3.12 on page 3-30.
Test Menu	See Table 3.13 on page 3-31.

1 Appears only when the Mailbox/Collator option is installed.

2 Appears only when the PostScript option is installed.

Language Menu

The setting for Language Menu determines which language is used to display messages on the Control Panel and to print text on the Configuration Sheet and PCL Font List.

Table 3.5 shows the Language Menu options and their English equivalent. See “Setting a Menu Option” (page 3-10) for the steps to find and change the language setting.

Note

The setting for Language Menu does not revert to the factory setting when you initiate a Reset Menu option.

Table 3.5 Language Menu options

Menu Option	English Equivalent
Deutsch	German
English	International English
Español	Spanish
Français	French
Italiano	Italian
Português (BRA)	Brazilian Portuguese

Language Menu

Mailbox Menu

PCL Emulat Menu

PostScript Menu

Interface Menu

System Menu

- System Menu
- Test Menu

Menu Options	Option Settings		Prompt(s)
Collator	Enable Password		Enter Password >> xxxx
			New Password >> xxxx
	Disable Password		Enter Password >> xxxx
Mailbox	Bin 1	Enable Password	Enter Password >> xxxx
	Bin 2		
	Bin 3		
	Bin 4	Disable Password	New Password >> xxxx
	Bin 5		
	Bin 6		
Bin 7			
Bin 8	Enter Password >> xxxx		
Bin 9			
Bin 10			
Bin Full	Stop Printing*		
	Send to Standrd		

See Step 10 on page 2-27 for default Mailbox/Collator passwords.

PCL Emulat Menu

PCL Emulat Menu options establish the default configuration for the printer when printing PCL emulation jobs. You may use your software application to override default settings for certain PCL Emulat Menu options. Table 3.7 lists the options whose settings you may normally override.

Table 3.7 PCL Emulat Menu settings normally overridden by the settings in the data stream

The setting you choose in your software application for:	...will override the PCL Emulat Menu setting for:
Copies	Copies
Duplex	Duplex
Edge to Edge	Edge to Edge
Font	Font Source Font Number Symbol Set
Font Size	Pitch Point Size
Output Bin	Output Bin
Paper Source	Default Source
Paper Size	Paper Size Form Length
Paper Orientation	Orientation
Page Protection ¹	Page Protection
Print Resolution ¹	Resolution

¹ You can change the setting for this feature through your software application ONLY when using the Xerox printer driver.

Note

Banner pages are typically printed separately from the job, and are printed according to the above PCL defaults rather than the values selected in the application.

The PCL Emulat Menu hierarchy is depicted in Table 3.8. (Footnotes appear at the end of the table.)

(Menu options are described in *Appendix D: Control Panel Options*, where they are listed in alphabetical order.)

4 Appears only in V2.0 or greater.

5 Appears only when a lower tray (500-sheet Paper Deck or 2,000-sheet High Capacity Feeder) option is installed.

6 Appears only when the Envelope Feeder option is installed.

7 Appears only when the Offset Catch Tray (OCT) option is installed.

8 Appears only when the Mailbox/Collator option is installed.

9 Appears only when the Duplex Module option is installed.

PostScript Menu

PostScript Menu options establish the default configuration for the printer when printing PostScript jobs. PostScript may be used by software applications to send information and instructions to the printer.

Note

PostScript is available as an option for the DocuPrint 4517. See Appendix A: Ordering Printer Options.

Note

Windows Users:

The Windows PostScript driver for the DocuPrint 4517 allows the user to either download the PostScript header with every job or download it only once. If the printer is used in a network or other shared environment where both PCL emulation and PostScript jobs are printed, the header will be deleted when the printer switches from PostScript to PCL emulation.

- *Banner sheets printed from Novell networks cause the printer to switch between PostScript and PCL emulation. If banner sheets are printed, ensure that the Language Sensing option is set to ON and the default System Language (for each enabled port) is set to PCL Emulation.*
 - *To avoid the loss of the PostScript header:*
 - *select Send Header With Each Job in the PostScript driver,*
 - or:*
 - *set State Saving to On in the PostScript Menu.**You must download the header at least once for each power on cycle. If several different PostScript applications are used, the “Send Header With Each Job” option will guarantee that the correct header is always available.*
-

Note

Macintosh Users:

The Macintosh driver is installed by opening the driver disk and double-clicking the OnPAGE installer icon.

You may use your software application to override default settings for certain PostScript Menu options.

Table 3.9 lists the PostScript Menu options whose settings you may normally override.

Table 3.9 PostScript Menu settings normally overridden by the setting in the data stream

The setting you choose in your software application for:	...will override the PostScript Menu setting for:
Copies	Copies
Duplex	Duplex
Paper Source	Default Tray
Output	Output Bin
Paper Size	The size paper currently in the default tray
Print Resolution ¹	Resolution
Page Protection	Page Protection
Print Quality ¹	Print Quality

¹ You can change the setting for this feature through your software application ONLY when using a Xerox DocuPrint 4517 printer driver.

Note

Banner pages are typically printed separately from the job, and are printed according to the PCL defaults rather than the values selected in the application.

Interface Menu

The Interface Menu contains submenus for the parallel port on the printer. It also includes submenus for network interface ports and serial port *when one or more network interface cards or serial port are present.*

The Interface Menu may include submenus for the following:

- **Parallel Menu** (see page 3-26)
- **Serial Menu** (V2.0 or greater) (see page 3-27)
- **LocalTalk Menu** (see page 3-28)

Contains options for configuring the printer's LocalTalk port when the LocalTalk option (XNIC-L'TALK) has been installed. (LocalTalk functionality requires that the PostScript option be installed.) For detailed information on the XNIC-L'TALK, refer to the *XNIC-L'TALK Configuration Guide* in the XNIC-L'TALK option kit.

- **Ethernet Menu** (see page 3-28)

Contains options for configuring the printer's Ethernet port when the Ethernet option (XNIC-E'NET) has been installed. The XNIC-E'NET supports the following protocols:

- Novell NetWare, Version 2.x, 3.x, and 4.x (BEM)
(4.1 NDS is supported in XNIC version 5.18 and later)
- TCP/IP
- EtherTalk
- LAT
- Microsoft LAN Manager
- IBM OS/2 LAN Server
- Microsoft Windows NT
- SNMP

For more information on the supported protocols, refer to the *XNIC-E'NET/T'RING Configuration Guide* in the XNIC-E'NET option kit.

- **Token Ring Menu** (see page 3-29)

Contains options for configuring the printer's Token Ring port, when the Token Ring option (XNIC-T'RING) has been installed. The XNIC-T'RING supports the following protocols:

- Novell NetWare, Version 2.x, 3.x, and 4.x (BEM)
(4.1 NDS is supported in XNIC version 5.18 and later)
- TCP/IP
- TokenTalk
- Microsoft LAN Manager
- IBM OS/2 LAN Server
- Microsoft Windows NT
- SNMP

For more information on the supported protocols, refer to the *XNIC-E'NET/T'RING Configuration Guide* in the XNIC-T'RING option kit.

Table 3.11, starting on page 3-26, shows the Interface Menu hierarchy. (Footnotes appear at the end of the table.)

¹ Appears only when the Hard Drive option is installed.

Test Menu

Test Menu options are used to generate printed reports. (Results of the Memory Check option are displayed on the Control Panel.)

Table 3.13 shows the Test Menu hierarchy.

(Menu options are described in *Appendix D: Control Panel Options*, where they are listed in alphabetical order.)

Table 3.13 Test Menu hierarchy

	Menu Options
Language	Config. sheet
Mailbox Menu	Demo Page
PCL Emulat Menu	PCL Font List
PostScript Menu	PS Font List ¹
Interface Menu	Test Print
System Menu	Memory Check
Test Menu	Format the Disk ²
	Fmt UprMacroCard ³
	Fmt LwrMacroCard ³

1 Appears only when the PostScript option is installed.

2 Appears only when the Hard Drive option is installed.

3 Appears only when a Macro Card is installed.

Caution

Never generate a printer report or a memory check while the printer is busy. This will cause the printer to reset to its power-on state. As a consequence, you will lose all or part of the job currently being processed and any temporary fonts/macros downloaded to printer memory.

Reset Menu

The Reset Menu is used to reset various printer functions. Selecting Reset Printer resets the printer to its power-on state, while Reset Menus resets the menu settings to their factory settings. Selecting Reset Ethernet, Reset Token Ring, or Reset LocalTalk resets the respective network interface card to its power-on state.

Table 3.14 shows the Reset Menu hierarchy.

(Menu options are described in *Appendix D: Control Panel Options*, where they are listed in alphabetical order.)

Note

The printer clears downloaded fonts and print macros from RAM, and ejects any partially printed pages when you select Reset Printer, Reset Menus, or Reset All.

Table 3.14 Reset Menu hierarchy

DocuPrint 4517 Printer Drivers

<i>DocuPrint 4517 PCL 5e Emulation Printer Drivers</i>	<i>4-2</i>
<i>DocuPrint 4517 PostScript Printer Drivers</i>	<i>4-3</i>

DocuPrint 4517 PCL 5e Emulation Printer Drivers

The base DocuPrint 4517 supports the PCL printer drivers listed in Table 4.1. To take full advantage of all the printer's features when printing PCL jobs, install the appropriate DocuPrint 4517 PCL 5e emulation printer driver(s). (Consult your software application user manual for instructions on installing a new printer driver.)

If the driver you need did not come with the printer, see *Appendix A: Ordering Printer Options*. The latest updates of all Xerox DocuPrint 4517 drivers are available through www.xerox.com.

Table 4.1 DocuPrint 4517 PCL 5e Emulation printer drivers

Environment	Printer Driver	Diskette
DOS [†]	Microsoft Word Ver. 6.0	Xerox DocuPrint 4517 Printer Drivers - DOS Drivers MS Word 6.0
	WordPerfect Ver. 6.0	WordPerfect 6.0
	AutoCAD Rel. 12	AutoCAD (Ver. 12, 13)
Windows	Windows 3.1 / Windows 95	Xerox DocuPrint 4517 Printer Drivers - PCL 5e Emulation Printer Driver for Microsoft Windows 3.1x and Microsoft Windows 95
	Windows NT 3.5	Contact Xerox, Rank Xerox, your dealer or via www.xerox.com
	Windows NT 4.x	Available on the Microsoft NT 4.x release CD
IBM OS/2	OS/2 Ver. 2.1	Xerox DocuPrint 4517 Printer Drivers - PCL 5e Emulation Printer Driver for IBM OS/2 Ver. 2.1
	OS/2 WARP, Ver. 4.0	Xerox DocuPrint 4517 Printer Drivers - PCL 5e Emulation Printer Driver for IBM OS/2 Ver. 3.x, 4.0

[†] If you are using a DOS application other than Microsoft Word, WordPerfect, or AutoCAD, use the HP LaserJet IVsi printer driver supplied with your application software.

Information on setting up your drivers to use the Mailbox/Collator, Envelope Feeder, or High Capacity Feeder is contained in the documentation that accompanies these options.

DocuPrint 4517 PostScript Printer Drivers

The PostScript option supports the PostScript drivers listed in Table 4.2. To take full advantage of all the printer's features when printing PostScript jobs, install the appropriate DocuPrint 4517 PostScript printer driver(s). (Consult your software application user manual for instructions on installing a new printer driver.)

If the driver you need did not come with the printer, see *Appendix A: Ordering Printer Options*. The latest updates of all Xerox DocuPrint 4517 drivers are available through www.xerox.com.

Table 4.2 DocuPrint 4517 PostScript printer drivers

Environment	Printer Driver	Diskette
Windows	Windows 3.1 / Windows 95	Xerox DocuPrint 4517 Printer Drivers - PostScript Printer Driver for Microsoft Windows 3.1x and Microsoft Windows 95

Information on setting up your drivers to use the Mailbox/Collator, Envelope Feeder, or High Capacity Feeder is contained in the documentation that accompanies these options.

Chapter 5

Using the Hard Drive / Downloading Fonts

<i>Hard Drive Considerations</i>	5-2
<i>Print/Disk Spooling</i>	5-2
<i>State Saving</i>	5-2
<i>Formatting the Hard Drive</i>	5-3
<i>Downloading Fonts and Macros</i>	5-4

Hard Drive Considerations

If you install the optional hard drive on the DocuPrint 4517, it will significantly increase the amount of memory available for processing jobs and storing downloaded information (such as fonts and macros).

Print/Disk Spooling

The hard drive can function as a print spooler when you set the **Disk Spooling** option to *On*. With disk spooling enabled, the hard drive simultaneously accepts print jobs from all enabled ports, then processes and prints them in the order in which they are first received.

Disk spooling is useful for both standalone and networked systems:

- When the printer is busy processing a long or complex print job, successive print jobs from the same or other ports can be accepted by the printer and spooled to the hard disk. Accordingly, the printer will free the computer that is submitting print jobs so it can subsequently switch to tasks other than printing.
- While most networks provide spooling outside the printer, spooling to a disk inside the printer will remove network related overhead. Accepting print jobs from a disk in the printer is more efficient than accepting print jobs one at a time from networks.

The number of jobs that can be spooled is limited by the amount of hard drive space available. Also, spooling from networks will not be supported for AppleTalk jobs.

State Saving

When the **State Saving** option is set to *On*, the printer saves downloaded information when it switches between the PCL and PostScript PDLs (Printer Description Language). Installing a hard drive increases the amount of memory the printer has available for saving downloaded fonts and macros when it switches between PDLs.

Formatting the Hard Drive

When a new unformatted hard disk drive is installed in the printer, it must be formatted before it will be available for use. Formatting can be done when the printer is powered on after the installation.

The disk can be reformatted at any time. This is useful when it is desired to erase everything on the disk—all fonts, macros, and spooled print data. Also, in the unusual case of a problem with the disk, it may be desirable to reformat it, again at the expense of erasing everything on it.

Formatting is accomplished by selecting the **Format the Disk** option in the Test Menu. You will be warned of losing data and asked two times to confirm the formatting by pressing Up .

Downloading Fonts and Macros

Xerox DocuPrint 4517 printer drivers provide you with the ability to download fonts and PCL 5e macros to the printer.

Fonts can be downloaded to printer memory or to the optional hard drive. Macros can be downloaded to printer memory, the optional hard drive, or a Xerox macro card (if one is installed).

- To download fonts you must first install the appropriate DocuPrint 4517 Windows 3.1/95, Macintosh, Windows NT, or UNIX drivers. To download macros, you must install the DocuPrint 4517 Windows PCL 5e driver.
- Fonts and macros downloaded to the hard drive are stored on the hard drive until you delete them. Turning the printer power off does not clear these fonts/macros from the hard drive.

You can only delete a macro from the hard drive or the macro card if you know the macro ID#. You should therefore keep a record of downloaded macros. (You cannot print out a list of macros.)

- PCL 5e fonts are available from Xerox via Xerox font cards. Turning the printer power off does not clear these fonts from the font cards. You cannot download fonts to these cards.
- The Xerox macro cards contain flash memory which allows you to download and store PCL 5e macros. Instructions are in the Read Me file of the drivers. Turning the printer power off does not clear these macros from the macro cards.
- "Temporary" fonts/macros downloaded to printer memory, on a job basis, are cleared from the printer's memory after each job.

- “Permanent” fonts downloaded to printer memory are cleared from the printer’s memory whenever the printer is powered off, and when the printer switches PDLs and the **State Saving** option is set to *Off*.

(When **State Saving** is set to *On*, “permanent” fonts/macros are only cleared from printer memory when you turn off the printer.)

Note

For further information on how to download and delete PCL macros, refer to the section “PCL Macro Commands” (page G-8) in Appendix G: DocuPrint 4517 Unique Printer Commands.

For further information on how to create and use PCL macros, refer to the respective DocuPrint 4517 PCL driver help.

Chapter 6

Troubleshooting

Printer Operation Problems	6-2
Control Panel Messages	6-6
Diagnostic LED Flash Sequences	6-28
Paper Jams	6-29
<i>What Causes a Paper Jam?</i>	6-29
<i>Clearing Paper Jams</i>	6-29
Print Quality Problems	6-37

Printer Operation Problems

Consult Table 6.1 starting on page 6-3 for corrective actions when the printer will not print or when the printed output is not what you expect.

Table 6.1 Printer operation problems

Problem	Action
The printer will not print.	<ol style="list-style-type: none"> 1. Power the printer OFF, then ON. 2. Print a Configuration Sheet. <ul style="list-style-type: none"> • If it prints, the printer is okay. • If it does not print, contact your dealer or Xerox/Rank Xerox.
A file sent from the host does not print.	<ol style="list-style-type: none"> 1. Make sure the printer is online. 2. Send a plain text file (i.e., one without printing commands embedded in it) to the printer. <ul style="list-style-type: none"> • If the file prints correctly in the default font, with all of the characters in the original file, the printer is seeing the same data that the host is sending, and the interface or communication line is functioning correctly. • If no data prints (or the last page indicator does not come on): <ol style="list-style-type: none"> A. Make certain the printer is configured properly. B. The port (parallel or network) may be disabled on the printer. Check the Configuration Sheet for the port you are using to see if the Port Enable option in the appropriate Interface Menu is set to <i>On</i>. If it is set to <i>Off</i>, set it to <i>On</i> and try again. C. If using an optional Xerox Network Interface Card (XNIC) for Ethernet, LocalTalk, or Token Ring, check the Configuration Sheet to see if the printer is acknowledging that the XNIC is present. (Refer to XNIC installation instructions in <i>Appendix C: Installing and Removing Printer Options</i>.) <ul style="list-style-type: none"> • If the Configuration Sheet shows the XNIC as “failed,” or does not show the XNIC as present, power OFF the printer and unplug it. Pull out the controller board, remove the XNIC, and check that the connector pins are not bent. If bent, straighten. Reseat the XNIC securely, put the controller board back in the printer, power ON and print another Configuration Sheet. If the Configuration Sheet still shows the XNIC as “failed,” the XNIC has failed. If the Configuration Sheet still does not show the XNIC as present, then either the XNIC has failed or the interface between the XNIC and the printer controller has failed. Contact your dealer or Xerox/Rank Xerox. • If the Configuration Sheet shows the network card as present, check if the printer is recognized by the host. (Refer to the Troubleshooting chapter of the respective XNIC Configuration Guide.) D. If there is garbled data, check the Configuration Sheet to confirm that the correct emulation is selected or that the Language Sensing option is set to <i>On</i>.

Table 6.1 Page 1 of 3

Table 6.1 Printer operation problems (continued)

Problem	Action
<p>A printed page does not look like it should.</p>	<ol style="list-style-type: none"> 1. Make certain that the software application you are using to create your print job is configured properly. Refer to your software documentation. 2. Send a file containing PCL or PostScript commands to the printer. <ul style="list-style-type: none"> • If your page prints as it should, your printer and interface are functioning properly. • If your information prints correctly, but doesn't look right, you may have: <ul style="list-style-type: none"> • An error in your command sequence/operator • A missing downloaded font • A mismatched printer option against your host formatting • A missing or misaligned font card • Command errors may be identified by looking at your input file or by using the Hex Dump feature on the printer. You can determine which fonts are in the system by printing a PCL or PS Font List. You can verify your data setup by printing a Configuration Sheet and checking your printer setup.
<p>The requested font for the job—a font on a font card—does not print.</p>	<p>Print a PCL Font List.</p> <ul style="list-style-type: none"> • If fonts print on the Font List, your print job may need correcting. • If fonts do not print on the Font List, power the printer OFF, remove and reinstall the font card. Power the printer back ON, and print another PCL Font List. • If the font card is still not being recognized, try another slot or font card, then print another Font List. <ul style="list-style-type: none"> • If a different font slot works, contact your dealer or Xerox/Rank Xerox to correct the defective slot. • If a new font card is recognized, contact your dealer or Xerox/Rank Xerox to replace the defective card.
<p>PostScript commands are printed instead of the PostScript job.</p>	<ol style="list-style-type: none"> 1. Make certain that the software application you are using to create your job is configured properly. Refer to your software documentation. 2. If the Lang. Sensing option in the appropriate Interface Menu is set to <i>On</i>, the job sent to the printer might have included an incorrect header and therefore not have indicated that a PostScript job was being sent. <ul style="list-style-type: none"> • Set the System Language option in the appropriate Interface Menu to <i>PostScript</i> and try sending the job again. • Check your software to make sure the PostScript header file is being sent to the printer.

Table 6.1 Page 2 of 3

Table 6.1 Printer operation problems (continued)

Problem	Action
The job does not print in the requested font.	Check the spelling of the requested font in your PostScript file. Many times a typo is the problem. If the font is spelled correctly, print a PS Font List to check if the font is present. If it is not, download the font and resend the job.
The bottom edge of the page is cut off, or there are white bands.	For PCL jobs, set the Page Protection option in the PCL Emulat Menu to the size of the paper for the job (or to the next larger size). For PostScript jobs, set the Page Protection option in the PostScript Menu to <i>On</i> .
A PCL job prints, but the edges are cut off.	Set the Edge to Edge option in the PCL Emulat Menu to <i>On</i> .
A PostScript job fails to print.	<ol style="list-style-type: none"> 1. Check that PostScript is installed; also check that you are using a DocuPrint 4517 PostScript printer driver. 2. If the Lang. Sensing option in the appropriate Interface Menu is set to <i>On</i>, set the System Language option to <i>PostScript</i> and re-send the job. 3. Set the Print Errors option in the PostScript Menu to <i>On</i> and resend the job. <ul style="list-style-type: none"> • If an error page prints, there is a problem in the PostScript coding. Correct the coding problem and resend the job. • If the job does not print and no error page was printed, set the Page Protection option in the PostScript Menu to <i>Off</i>. • If the job still does not print, the job may require additional memory.
Jobs printed from the front tray are skewed with respect to the sheet/envelope.	Check the side guide to be sure that it is snug against the right side of the sheet but not so tight as to buckle it.
Table 6.1 Page 3 of 3	

Control Panel Messages

Listed in Table 6.2 are Control Panel messages that either:

- Cause the printer to stop printing.
- Require the user to call for service.

Also included in Table 6.2 are common, non-error messages you are likely to see. The messages are listed in alphabetical order, preceded by numerical diagnostic error codes.

Table 6.2 Control Panel messages

Message	Description/Corrective Action
0001 [†] [†] Appears in the upper left corner of the display.	A fault condition has occurred. ACTION: Reseat the controller board and test the printer again. If the problem continues, reseat the ROM SIMM(s) on the controller board and test the printer again. If the problem still continues, observe the diagnostic LED at power on. If the LED does <i>not</i> glow, or glows continuously, contact your dealer or Xerox/Rank Xerox. If the LED flashes, refer to Table 6.3 on page 6-28 for further information.
0040 [†] [†] Appears in the upper left corner of the display.	A fault condition has occurred. ACTION: Reseat the controller board and test the printer again. If the problem continues, observe the diagnostic LED at power on. If the LED does <i>not</i> glow, or glows continuously, contact your dealer or Xerox/Rank Xerox. If the LED flashes, refer to Table 6.3 on page 6-28 for further information.
0100 [†] [†] Appears in the upper left corner of the display.	A fault condition has occurred. ACTION: If there is a memory SIMM in slot SIM3, remove it. Move the memory SIMM in slot SIM2 into SIM3, then test the printer again. If code 0101 is displayed at power on, replace the SIMM. If code 0101 is not displayed at power on, move the SIMM back to SIM2 and test the printer again. If code 0100 again displays at power on, contact your dealer or Xerox/Rank Xerox.
0101 [†] [†] Appears in the upper left corner of the display.	A fault condition has occurred. ACTION: If there is a memory SIMM in slot SIM2, remove it. Move the memory SIMM in slot SIM3 into SIM2, then test the printer again. If code 0100 is displayed at power on, replace the SIMM. If code 0100 is not displayed at power on, move the SIMM back to SIM3 and test the printer again. If code 0101 again displays at power on, contact your dealer or Xerox/Rank Xerox.

Table 6.2 Page 1 of 22

Table 6.2 Control Panel messages (continued)

Message	Description/Corrective Action
*****	The printer is in power on diagnostics. ACTION: None, if there is no failure during power on diagnostics. After other diagnostic messages, the final message will be the one that the printer is online and waiting for data.
Any Tray	Paper needs to be loaded in any tray, for a PostScript job. ACTION: Load paper of the size requested in the bottom line of the display into any tray that supports the requested size. After loading the front tray or Envelope Feeder you may need to press Enter * .
Both Cards Fail Please Remove	The upper and lower font/macro cards have failed and can no longer be used. ACTION: Remove the cards and install new cards.
Both Cards Out Replace Original	The upper and lower Xerox PCMCIA font cards were removed while the printer was offline, but the cards were still being used by the software application. ACTION: To clear the error message and resume printing, reseal the cards. Press Online ← . On completion of the print job, you can take the printer offline and remove the cards.
Card Err. both Power Off & On	Both the upper and lower Xerox PCMCIA font/macro cards were removed while the printer was online. ACTION: Power OFF the printer, then power it ON.
Card Err. both Replace Original	Both card slots have the wrong Xerox PCMCIA font/macro cards in them. The card may contain fonts, macros, or code. ACTION: Take the printer offline and replace the cards formerly in the slots.
Card Write Error	An error has occurred while the printer tried to write to the Xerox PCMCIA font/macro card. ACTION: Press Enter * .
Clear Paper Path	A paper jam has occurred. The message alternates with a message that specifies the location of the jam. ACTION: See Table 6.4 on page 6-30.
Close Bin N	The bin numbered <i>N</i> is pulled out. ACTION: Close the bin.
Table 6.2 Page 2 of 22	

Table 6.2 Control Panel messages (continued)

Message	Description/Corrective Action
Close Bins	Two or more bins are pulled out. ACTION: Close the bins.
Close Covers	Either the front or rear cover (or both) is open. ACTION: Close the cover, and press Online  to resume normal operation.
Comm. Error	The printer is not able to communicate with the host using bidirectional parallel. ACTION: Check the parallel cable to make sure it is connected properly on both the printer and the host. Inspect the parallel cable for any defects; if wires are broken or the cable appears to be damaged, replace the cable. Check the host to be certain that it is configured properly. Under the Parallel Menu, turn the Bidirectional option to <i>Off</i> if your host's parallel port is not bidirectional. If problem persists, contact your dealer or Xerox/Rank Xerox.
Comm. Error:nn	A LocalTalk error has occurred. <i>nn</i> is the AppleTalk error number.
Config. Sheet Printing...	The Configuration Sheet is printing. See the Config. sheet option, page D-4. ACTION: Remove the Configuration Sheet from the output tray when it has finished printing.
Confirm: OK To Lose All Data	Second level warning message prior to formatting the hard disk. ACTION: Press Up  to format the disk or press Down  to abort.
Demo Page Printing...	The Demo Page is printing. ACTION: Remove the Demo Page from the output tray when it finishes printing.
Disk	A hard disk error has occurred. ACTION: Power cycle the printer. If this message reappears, power off the printer and contact your dealer or Xerox/Rank Xerox.
Disk Failure	A general failure of the hard disk has occurred. Under this message, the following message is displayed: Press * ACTION: Press Enter  . The printer displays the following message: Disk Not In Use Printing resumes without use of the hard disk.

Table 6.2 Page 3 of 22

Table 6.2 Control Panel messages (continued)

Message	Description/Corrective Action
Disk Format Bad	<p>The hard disk high level format (FAT table) cannot be understood. This is NOT because a new disk has been installed.</p> <p>ACTION: Either initialize the disk format procedure by pressing Up , or abort the procedure by pressing Down .</p> <p>This message flashes alternately with the two-line message:</p> <p style="text-align: center;">Press  to Init Press  to Abort</p>
Disk Not In Use	<p>A failure of the hard disk has occurred and been acknowledged. Printing resumes without use of the hard disk.</p> <p>ACTION: Make sure the hard disk is properly seated on the controller board. If the problem remains, contact your dealer or Xerox/Rank Xerox.</p>
Disk Read Error	<p>The printer cannot read data from the hard disk.</p> <p>ACTION: Try powering the printer OFF then ON again. Make sure the hard disk is properly seated on the controller board. If the problem remains, contact your dealer or Xerox/Rank Xerox.</p>
Disk Write Error	<p>The printer cannot write data to the hard disk.</p> <p>ACTION: Press Enter . The printer will mark the disk sector as bad and retry the write operation at another location on the disk. Make sure the hard disk is properly seated on the controller board. If the problem remains, contact your dealer or Xerox/Rank Xerox.</p>
Duplex Unit Fail	<p>The Duplex Module has failed. Duplex (two-sided) printing cannot continue. You can, however, still print simplex (single-sided) prints.</p> <p>ACTION: Remove and reinstall the Duplex Module following the instructions in <i>Appendix C: Installing and Removing Printer Options</i>. If it still fails, contact your dealer or Xerox/Rank Xerox.</p>
Enter Password >> xxxx	<p>The bin unlock button has been pressed on the Mailbox/Collator and a password has been enabled.</p> <p>ACTION: Enter the password for the bin or collator that you wish to open.</p> <p>This message can also occur while enabling or disabling a password for a bin or the collator.</p> <p>ACTION: Enter the password used last time that bin or collator had its password enabled (or the factory default password the first time). Then you will be allowed to proceed with enabling or disabling the password.</p>

Table 6.2 Page 4 of 22

Table 6.2 Control Panel messages (continued)

Message	Description/Corrective Action
Envelope Feeder	Envelopes need to be loaded in the Envelope Feeder. ACTION: The message on the bottom line of the Control Panel display advises what envelopes to load.
Env Feeder Empty	The Envelope Feeder is empty. ACTION: Load envelopes in the Envelope Feeder.
Env. Feeder Fail Service Required	The Envelope Feeder has failed. Printing from the Envelope Feeder cannot continue. ACTION: Remove and reinstall the Envelope Feeder following the instructions in <i>Appendix C: Installing and Removing Printer Options</i> . If it still fails, you still have the option of feeding envelopes through the front tray. Contact your dealer or Xerox/Rank Xerox.
EnvelFeeder Jam-Remove All Envel	An envelope has jammed feeding from the Envelope Feeder. The message alternates with: Remove EnvFeeder Open Front Cover and Remove Jam Envel ACTION: See "Envelope Feeder Jam" (page 6-32).
Ethernet Fail	The Ethernet card (XNIC-E'NET) has failed and cannot be used. ACTION: Press Enter * to allow the printer to continue as if the Ethernet card were not installed. This error is not subject to Auto Continue (page D-3). Print a Configuration Sheet. If the sheet does not show Ethernet as present, contact your dealer or Xerox/Rank Xerox.
Fan Failure Power Off NOW!	The printer's fan has failed. ACTION: Power cycle the printer. If this message reappears, power off the printer and contact your dealer or Xerox/Rank Xerox.
Feed A4	ACTION: Feed A4 paper through the front tray, as indicated on the top line of the display.
Feed A6	ACTION: Feed A6 paper (international postcard) through the front tray, as indicated on the top line of the display.
Feed Com-10	ACTION: Feed Com-10 envelope through the front tray, as indicated on the top line of the display.

Table 6.2 Page 5 of 22

Table 6.2 Control Panel messages (continued)

Message	Description/Corrective Action
Feed C5	ACTION: Feed C5 envelope through the front tray, as indicated on the top line of the display.
Feed C6	ACTION: Feed C6 envelope through the front tray, as indicated on the top line of the display.
Feed DL	ACTION: Feed DL envelope through the front tray, as indicated on the top line of the display.
Feed Exec	ACTION: Feed Executive paper through the front tray, as indicated on the top line of the display.
Feed Folio	ACTION: Feed Folio paper through the front tray, as indicated on the top line of the display.
Feed ISO B5	ACTION: Feed ISO B5 paper through the front tray, as indicated on the top line of the display.
Feed Legal	ACTION: Feed Legal paper through the front tray, as indicated on the top line of the display.
Feed Letter	ACTION: Feed Letter paper through the front tray, as indicated on the top line of the display.
Feed Monarch	ACTION: Feed Monarch size envelopes through the front tray, as indicated on the top line of the display.
Feed Statement	ACTION: Feed Statement size paper through the front tray, as indicated on the top line of the display.
Flushing...	The PostScript print job was cancelled from the Reset Menu and is being parsed out and discarded. ACTION: None.
Formatting Disk Please Wait...	The hard disk is being partitioned and high level formatted. ACTION: None.
Formatting Macro Please Wait...	The Xerox PCMCIA font/macro card is being formatted. ACTION: None.
Front-Lower 1	Paper needs to be loaded into the front or Lower 1 tray. ACTION: The message on the bottom line of the Control Panel display advises what paper size to load or feed.

Table 6.2 Page 6 of 22

Table 6.2 Control Panel messages (continued)

Message	Description/Corrective Action
Front-Lower 2	Paper needs to be loaded into the front or main tray. ACTION: The message on the bottom line of the Control Panel display advises what paper size to load or feed.
Front-Main Tray	Paper needs to be loaded into the front or Lower 1 tray. ACTION: The message on the bottom line of the Control Panel display advises what paper size to load or feed.
Front Tray	Your application specifies "Manual" (or "Front Tray") as the paper source so you need to load paper in the front tray. ACTION: The message on the bottom line of the Control Panel display advises what paper size to load or feed.
Front Tray Empty	The front tray is empty. ACTION: Reload the correct size of paper.
Front Tray Jam- Remove All Paper	Paper has jammed feeding from the front tray. The message alternates with: <i>Open Front Cover</i> <i>Remove Jam Sheet</i> ACTION: Remove all paper from the front tray, open the front cover and pull out the jammed paper. Then close the front cover and reload the front tray. See "Front Tray Jam" (page 6-30).
Fuser Failure Service Required	The fuser assembly has failed; printing cannot resume. ACTION: Cycle power on the printer. If you have just replaced the Fuser Cartridge, reset it. If the problem persists, contact your dealer or Xerox/Rank Xerox.
Hex Dump	Hex dump mode is <i>On</i> . ACTION: None.
I/O Initializing Please Wait...	The Xerox Network Interface Card is being initialized. ACTION: Wait until you see the following message before taking other actions: <i>Online</i> <i>—</i> <i>Ready</i>
Install Print Cartridge	The EP (print) cartridge is missing or not installed correctly. ACTION: Reinstall the existing EP cartridge or install a new EP cartridge. If problem continues, contact your dealer or Xerox/Rank Xerox.

Table 6.2 Page 7 of 22

Table 6.2 Control Panel messages (continued)

Message	Description/Corrective Action
Invalid Password	An invalid password has been entered for the mailbox password. ACTION: Re-enter the password when prompted.
IOT NVM Fail Service Required	Nonvolatile Memory (NVM) has failed on the print engine (also called the IOT—Image Output Terminal). Printing cannot resume. ACTION: Contact your dealer or Xerox/Rank Xerox.
Laser Failure Service Required	The laser assembly has failed; printing cannot continue. ACTION: Contact your dealer or Xerox/Rank Xerox.
Last Page	The last page of the document has not finished printing. ACTION: None. The last page will print when the printer receives more data, or when the port times out.
Load A4	ACTION: Load A4 paper into the tray(s) indicated on the top line of the display.
Load A6	ACTION: Load A6 paper (international postcard) into the front tray as indicated on the top line of the display.
Load C5	ACTION: Load C5 envelope(s) into the tray(s) indicated on the top line of the display.
Load C6	ACTION: Load C6 envelope(s) into the tray(s) indicated on the top line of the display.
Load Com-10	ACTION: Load Com-10 envelopes into the tray(s) indicated on the top line of the display.
Load DL	ACTION: Load DL envelopes into the tray(s) indicated on the top line of the display.
Load Exec	ACTION: Load Executive paper into the tray(s) indicated on the top line of the display.
Load Folio	ACTION: Load Folio paper into the tray(s) indicated on the top line of the display.
Load ISO B5	ACTION: Load ISO B5 paper into the front tray as indicated on the top line of the display.
Load Legal	ACTION: Load Legal paper into the tray(s) indicated on the top line of the display.
Table 6.2 Page 8 of 22	

Table 6.2 Control Panel messages (continued)

Message	Description/Corrective Action
Load Letter	ACTION: Load Letter paper into the tray(s) indicated on the top line of the display.
Load Monarch	ACTION: Load Monarch size envelopes into the tray(s) indicated on the top line of the display.
Load Statement	ACTION: Load Statement size paper into the front tray as indicated on the top line of the display.
LocalTalk Fail	The LocalTalk card (XNIC-L'TALK) has failed and cannot be used. ACTION: Press Enter * to allow the printer to continue as if the LocalTalk card were not installed. This error is not subject to Auto Continue . Print a Configuration Sheet. If the sheet does not show LocalTalk as present, contact your dealer or Xerox/Rank Xerox.
Lower1 Tray Jam- Open Lower1 Tray	Paper has jammed feeding from the first lower tray (500-sheet Paper Deck and Cassette or 2,000-sheet High Capacity Feeder). The message alternates with: Open Front Cover Remove Jam Sheet ACTION: Remove the first lower tray or open the paper drawer of the HCF, open the front printer cover and pull out the jammed paper. Then replace the lower tray or close the HCF paper drawer, and close the front printer cover. See "Lower 1 Tray Jam with 500-sheet Paper Deck and Cassette" (page 6-31).
Lower 1 Empty	The first lower tray (500-sheet Paper Deck and Cassette or 2,000-sheet High Capacity Feeder) is empty. ACTION: Reload the correct size paper.
Lower 1 Failure Service Required	The first lower tray (500-sheet Paper Deck and Cassette or 2,000-sheet High Capacity Feeder) has failed. Printing from this tray cannot continue. ACTION: Power off the printer and check the lower tray connection. If the failure continues, contact your dealer or Xerox/Rank Xerox.
Lower 1 Out	The paper cassette has been removed (or is not pushed in all the way) from the 500-sheet Paper Deck and Cassette, or the paper drawer is open on the 2,000-sheet High Capacity Feeder. ACTION: Insert the paper cassette into the paper deck or close the paper drawer on the HCF.

Table 6.2 Page 9 of 22

Table 6.2 Control Panel messages (continued)

Message	Description/Corrective Action
Lower 1 Tray	Paper needs to be loaded in the first lower tray (500-sheet Paper Deck and Cassette or 2,000-sheet High Capacity Feeder). ACTION: The message on the bottom line of the Control Panel display advises what size paper to load.
Lower 1-Main	Paper needs to be loaded in the first lower tray (500-sheet Paper Deck and Cassette or 2,000-sheet High Capacity Feeder) and/or the main tray. ACTION: The message on the bottom line of the Control Panel display advises what size paper to load.
Lower 1-Lower 2	Paper needs to be loaded in either lower tray (500-sheet Paper Deck and Cassette or 2,000-sheet High Capacity Feeder). ACTION: The message on the bottom line of the Control Panel display advises what size paper to load.
Lower2 Tray Jam- Open Lower2 Tray	Paper has jammed feeding from the second lower tray (500-sheet Paper Deck and Cassette or 2,000-sheet High Capacity Feeder). The message alternates with: Open Front Cover Remove Jam Sheet ACTION: Remove the second lower tray or open the paper drawer of the HCF, open the front printer cover and pull out the jammed paper. Then replace the lower tray or close the HCF paper drawer, and close the front printer cover. See "Lower 2 Tray Jam with 500-sheet Paper Deck and Cassette" (page 6-31).
Lower 2 Empty	The second lower tray (500-sheet Paper Deck and Cassette or 2,000-sheet High Capacity Feeder) is empty. ACTION: Reload the correct size paper.
Lower 2 Failure Service Required	The second lower tray (500-sheet Paper Deck and Cassette or 2,000-sheet High Capacity Feeder) has failed. Printing from this tray cannot continue. ACTION: Power off the printer and check the Lower Tray connection. If the failure continues, contact your dealer or Xerox/Rank Xerox.
Lower 2 Out	The paper cassette has been removed (or is not pushed in all the way) from the 500-sheet Paper Deck and Cassette, or the paper drawer is open on the 2,000-sheet High Capacity Feeder. ACTION: Insert the paper cassette into the paper deck or close the paper drawer on the HCF.

Table 6.2 Page 10 of 22

Table 6.2 Control Panel messages (continued)

Message	Description/Corrective Action
Lower 2 Tray	Paper needs to be loaded in the second lower tray (500-sheet Paper Deck and Cassette or 2,000-sheet High Capacity Feeder). ACTION: The message on the bottom line of the Control Panel display advises what size paper to load.
Lower 2-Main	Paper needs to be loaded in the second lower tray (500-sheet Paper Deck and Cassette or 2,000-sheet High Capacity Feeder) and/or the main tray. ACTION: The message on the bottom line of the Control Panel display advises what size paper to load.
Lower Card Err Power OFF & ON	The lower Xerox PCMCIA font/macro card was removed while the printer was online. ACTION: Power OFF the printer, then power it ON to resume normal operations.
Lower Card Err. Replace Original	The lower card slot has the wrong Xerox PCMCIA font/macro card in it. The card may contain fonts, macros, or code. ACTION: Take the printer offline and replace the card formerly in the slot.
Lower Card Fail Please Remove	The lower Xerox PCMCIA font/macro card is bad and cannot be used. ACTION: Power OFF the printer, then power it ON. If the problem persists, remove the card and install a new card.
Lower Card Out Replace Original	The lower Xerox PCMCIA font/macro card was removed while the printer was offline, but the card was still being used by the software application. ACTION: To clear the error message, take the printer offline and return the card to its slot. Then press Online  to resume printing. On completion of the print job, you can take the printer offline and remove the card.
Lwr1-Lwr2-Main	Paper needs to be loaded in either lower trays or the main tray. ACTION: The message on the bottom line of the Control Panel display advises what size paper to load.
Mailbox Failure	The Mailbox/Collator has failed. Printing to the Mailbox/Collator cannot continue. You can, however, send output to the standard output tray. ACTION: Remove and reinstall the Mailbox/Collator following the instructions in <i>Appendix C: Installing and Removing Printer Options</i> . If the problem is not resolved, contact your dealer or Xerox/Rank Xerox.

Table 6.2 Page 11 of 22

Table 6.2 Control Panel messages (continued)

Message	Description/Corrective Action
Mailbox Jam- Open Mailbx Door	Paper has jammed feeding to the Mailbox/Collator. The message alternates with: Clear Paper Path ACTION: Open the Mailbox/Collator's rear cover and pull out the jammed paper. Then close the Mailbox/Collator's rear cover. See "Mailbox/Collator Jam" (page 6-33).
Main-Front Tray	Paper needs to be loaded into the Main or Front Trays. ACTION: The message on the bottom line of the Control Panel display advises what size paper to load.
Main Tray	Paper needs to be loaded into the main tray. ACTION: The message on the bottom line of the Control Panel display advises what size paper to load.
Main Tray Empty	The main tray is empty. ACTION: Reload the correct size paper.
Main Tray Fail Service Required	The main tray has failed. Printing cannot continue from this tray. ACTION: Contact your dealer or Xerox/Rank Xerox.
Main Tray Jam- Open Main Tray	Paper has jammed feeding from the main tray. The message alternates with: Open Front Cover Remove Jam Sheet ACTION: Remove the main tray, open the front cover and pull out the jammed paper. Then replace the main tray and close the front cover. See "Main Tray Jam" (page 6-30).
Main Tray Out	The main tray has been removed (or is not pushed in all the way) from the printer. ACTION: Insert the main tray into the printer.
Manual	Your application specifies "Manual Feed" as the paper source. Feed paper from the front tray. ACTION: The message on the bottom line of the Control Panel display advises what size paper to insert. You may use the paper size requested or any size the feeder will accept.
Memory Check Please Wait...	Memory Check was invoked from the Test Menu. The printer reboots upon completion. ACTION: None.

Table 6.2 Page 12 of 22

Table 6.2 Control Panel messages (continued)

Message	Description/Corrective Action
Memory Failure Service Required	The printer controller memory has failed; printing cannot resume. ACTION: <ul style="list-style-type: none"> • Perform a Memory Check to see if you can locate the problem. • Try powering OFF the printer then ON again. If the problem persists, contact your dealer or Xerox/Rank Xerox.
Motor Failure Service Required	The printer motor has failed. Printing cannot continue. ACTION: Cycle the printer's power. If the problem persists, contact your dealer or Xerox/Rank Xerox.
New Password >> XXXX	A new password is being enabled for a bin or the collator. An existing valid password has been entered and a new password is expected to be entered (where the XXXX is displayed). ACTION: Enter a new 4-digit password using the numeric keypad. Be sure to memorize this new password, as it will be needed to open the bin or mailbox.
NV Memory Fail Service Required	Nonvolatile memory on the printer controller has failed; printing cannot resume. ACTION: Contact your dealer or Xerox/Rank Xerox.
Offline _/_ Press a key...	The printer is offline, not in menu mode, and without any fault conditions. Offline does not mean the printer is disconnected from the computer. It means page formatting and printing are halted. ACTION: To put the printer online, press Online  . ACTION: To select menus, press Menu  . ACTION: To reset the printer, press Reset  .
Offset Jam- Open Rear Cover	Paper has jammed feeding to the OCT. The message alternates with: Open Offset Door Clear Paper Path ACTION: See "OCT Jam" (page 6-33).
Offset Tray Fail Service Required	The Offset Catch Tray (OCT) has failed. Printing to the OCT cannot continue. You can however, direct output to the standard output tray. ACTION: Remove and reinstall the OCT as per the instructions in <i>Appendix C: Installing and Removing Printer Options</i> . If the problem persists, contact your dealer or Xerox/Rank Xerox.

Table 6.2 Page 13 of 22

Table 6.2 Control Panel messages (continued)

Message	Description/Corrective Action
Online —	The printer is online and either processing data or ready to accept print jobs. ACTION: None.
Open Bin <i>N</i>	The bin numbered <i>N</i> is unlocked and ready to be pulled out. ACTION: Pull out the bin.
Open Bins	Two or more bins are unlocked and ready to be pulled out. ACTION: Pull out the bins.
Open Front Cover Remove Jam Sheet	A paper jam has occurred. The message alternates with a message that specifies the location of the jam. ACTION: See Table 6.4 on page 6-30.
Open Offset Door Clear Paper Path	A paper jam has occurred. The message alternates with the message: <i>Offset Jam- Open Rear Cover</i> ACTION: See "OCT Jam" (page 6-33).
Out of Memory	Current job cannot print because it exceeds available memory. <ul style="list-style-type: none"> • Even though Auto Continue may be <i>On</i>, you will see the message below for ten seconds: <i>Press *</i> • The printer waits ten seconds, then resumes (in effect, pressing Enter * for you). <p>The page is ejected from the printer. Depending on the cause of the problem, your print job may continue or be ended.</p> <p>ACTION:</p> <ul style="list-style-type: none"> • Reduce resolution to 600 x 600 dpi. • Install additional memory. • Contact your dealer or Xerox/Rank Xerox.

Table 6.2 Page 14 of 22

Table 6.2 Control Panel messages (continued)

Message	Description/Corrective Action
Page Too Complex	<p>In PCL or PostScript, the printing on a page is broken into horizontal bands. When the Page Protection option is set to <i>Off</i>, as a page is processed, each band has a limited time to be composed and imprinted on the page. Page Too Complex means the current page cannot print because there is not enough time to compose it.</p> <p>ACTION: Press Enter * . The page will be ejected and the print job will continue. The page that was too complex may be printed on more than one sheet of paper. To achieve correct printing, set the Page Protection option to the appropriate page size (or to <i>On</i> for PostScript) and send the print job again. Refer to the section “<i>Memory Considerations</i>” (page 1-11) for information on Page Protection memory considerations.</p> <p>Even though Auto Continue may be <i>On</i>, you will see the message below for ten seconds:</p> <p style="text-align: center;">Press *</p> <p>The printer waits ten seconds, then resumes (in effect, pressing Enter * for you).</p>
Paper Jam- Open Front Cover	<p>Paper has jammed at the EP (print) cartridge. The message alternates with:</p> <p style="text-align: center;">Remove PrintCart Clear Paper Path</p> <p>ACTION: See “<i>Print Cartridge Jam</i>” (page 6-35).</p>
Paper Jam- Open Rear Cover	<p>Paper has jammed in the rear of the printer. The message alternates with:</p> <p style="text-align: center;">Clear Paper Path</p> <p>or (if a Duplex Module jam):</p> <p style="text-align: center;">Remove DuplxUnit Clear Paper Path</p> <p>ACTION: See “<i>Paper Exit Jam</i>” (page 6-34) or “<i>Duplex Module Jam</i>” (page 6-34).</p>
Paper Size Jam- Open Rear Cover	<p>Paper has jammed due to being the incorrect size. The message alternates with:</p> <p style="text-align: center;">Clear Paper Path</p> <p>ACTION: See “<i>Paper Mismatch Jam</i>” (page 6-35).</p>
PCL Font List Printing...	<p>The PCL Font List is printing.</p> <p>ACTION: Remove the PCL Font List from the output tray when it has finished printing.</p>

Table 6.2 Page 15 of 22

Table 6.2 Control Panel messages (continued)

Message	Description/Corrective Action
Pg Protect Off	The printer has turned Page Protection <i>Off</i> because there is insufficient memory to process the job with page protection. ACTION: Add printer memory if you want to process future complex jobs with Page Protection.
Power Saver On	The printer has set itself to lower power mode (Power Saver is on). As soon as it receives the next print job, the printer leaves power saver mode. If Power Saver is on and the red Fault LED is blinking, you may need to power off/on the printer. ACTION: None.
Press *	The printer has a PCL error. ACTION: Press Enter * . This message functions with the System Menu option Auto Continue . When Auto Continue is set to <i>On</i> , this message is cleared automatically after ten seconds, and normal printing operation resumes.
Press a key...	The printer has just been taken offline. ACTION: No more processing can take place until you press one of the following keys: Menu, Reset, Online, or LastPage.
Press ↑ to Init. Press ↓ to Abort	Either the hard disk's partition block cannot be understood or it has a bad high level format. This message flashes alternately with either: Unknown Disk or Disk Format Bad ACTION: Press Up ^ to format the disk or press Down v to abort.
Press ↑ to Init. Press ↓ to Abort	Either the Xerox PCMCIA macro card's partition block cannot be understood or it has a bad high level format. This message flashes alternately with either: Unknown Macro Lower Card or Unknown Macro Upper Card ACTION: Press Up ^ to format the card or press Down v to abort.

Table 6.2 Page 16 of 22

Table 6.2 Control Panel messages (continued)

Message	Description/Corrective Action
Prntng Simplex	The printer does not have enough memory to print the job as duplex, and will print it as simplex. This message may appear under certain conditions when printing simplex jobs if the Duplex Module option is installed. ACTION: None. The message clears when the next job starts.
Processing...	The printer is processing data from a computer for printing. ACTION: None.
PS Font List Printing...	The list of PostScript fonts is printing. ACTION: Remove the PostScript Font List from the output tray when it has finished printing.
Ready	The printer is online and waiting for data to print. ACTION: None.
Remove DuplxUnit Clear Paper Path	A paper jam has occurred at the Duplex Module. The message alternates with the message: Paper Jam- Open Rear Cover ACTION: See "Duplex Module Jam" (page 6-34).
Remove EnvFeeder Open Front Cover	An Envelope Feeder jam has occurred. The message alternates with the messages: EnvelFeeder Jam- Remove All Envel and: Remove Jam Envel ACTION: See "Envelope Feeder Jam" (page 6-32).
Remove Jam Envel	An Envelope Feeder jam has occurred. The message alternates with the messages: EnvelFeeder Jam- Remove All Envel and: Remove EnvFeeder Open Front Cover ACTION: See "Envelope Feeder Jam" (page 6-32).

Table 6.2 Page 17 of 22

Table 6.2 Control Panel messages (continued)

Message	Description/Corrective Action
Remove LowerCard Press *	The Xerox PCMCIA font/macro card in the lower slot has failed. ACTION: Remove the lower card. Press Enter * to resume printing without the card.
Remove Output and close bin N	Mailbox bin N is full or has been left open. Printing cannot continue to mailbox. ACTION: Remove the output from bin N. If necessary, press the unlock bin button, then enter the password, if requested. When empty, close the bin.
Remove Output from Offset Tray	The Offset Catch Tray (OCT) is full. Printing cannot continue to the OCT. ACTION: Remove the output from the OCT.
Remove Output from Mailbox N	Mailbox bin N is full. Printing cannot continue to bin N. ACTION: Remove the output from bin N. Press the unlock bin button, then enter the password, if requested.
Remove Output from Std. Tray	The standard output tray is full. Printing cannot continue. ACTION: Remove the output from the standard output tray.
Remove PrintCart Clear Paper Path	A paper jam has occurred. The message alternates with the message: Paper Jam- Open Front Cover ACTION: See "Print Cartridge Jam" (page 6-35).
Remove UpperCard Press *	The Xerox PCMCIA font/macro card in the upper slot has failed. ACTION: Remove the upper card. Press Enter * to resume printing without the card.
Replace Fuser Cartridge	The Fuser Cartridge has reached End of Life. ACTION: Order a new Fuser Cartridge (see <i>Appendix A: Ordering Printer Options</i>) and replace as per the instructions in <i>Appendix B: Replacing Consumables</i> .
Replace Print Cartridge	The EP cartridge, which contains toner and drum, has expired. Printing cannot resume. ACTION: Insert new EP cartridge.

Table 6.2 Page 18 of 22

Table 6.2 Control Panel messages (continued)

Message	Description/Corrective Action
Res. Change	The printer is printing the job at a lower resolution than requested because there is not enough memory available. ACTION: Add printer memory.
Res& Smplx Chg	The printer has changed the job resolution, and changed a duplex job to simplex, because there is not enough memory to process the job at the higher resolution and duplex.
Reset Ethernet Please Wait...	Reset Ethernet has been invoked from the Reset Menu. Returns the Xerox Ethernet Network Interface Card to its power-on state and clears any print job being received, and previously downloaded, temporary fonts, and macros from memory. ACTION: Wait for the procedure to finish before taking any further action.
Reset LocalTalk Please Wait...	Reset LocalTalk has been invoked from the Reset Menu. Returns the Xerox Local Talk Network Interface Card to its power-on state and clears any print job being received, and previously downloaded temporary fonts, and macros from memory. ACTION: Wait for the procedure to finish before taking any further action.
Reset Menus Please Wait...	Reset Menus has been invoked from the Reset Menu. Returns all menu settings except Language , Defaults , PowerSaver , and Password(s) to their factory setting and clears any print job being received, and previously downloaded temporary fonts, and macros from memory. ACTION: Wait for the procedure to finish before taking any further action.
Reset Printer Please Wait...	Reset Printer or Reset All has been invoked from the Reset Menu. The printer clears any print job being received, and previously downloaded temporary fonts and macros from memory, then goes online. ACTION: None.
Reset TokenRing Please Wait...	Reset TokenRing has been invoked from the Reset Menu. Returns the Xerox Token Ring Network Interface Card to its power-on state and clears any print job being received, and previously downloaded temporary fonts, and macros from memory. ACTION: Wait for the procedure to finish before taking any further action.

Table 6.2 Page 19 of 22

Table 6.2 Control Panel messages (continued)

Message	Description/Corrective Action
ResetToSave Or *	A setting will not take effect until a Reset is performed. ACTION: Perform a Reset or press Enter * to continue without the setting taking effect.
Temp Font/Macro	The printer was busy processing PCL data from a host system but the job was not completed since temporary fonts and macros were not deleted. The last page timeout has expired. This message appears until: <ul style="list-style-type: none"> • Another print job is received. • The Port Timeout expires and Auto Job End is On. ACTION: None.
Test Print Printing...	A Test Print is being printed (for use by service technicians). The message clears once the printing is completed. ACTION: None.
Token Ring Fail	The Token Ring card (XNIC-T'RING) has failed and cannot be used. ACTION: Press Enter * to allow the printer to continue as if the Token Ring card were not installed. This error is not subject to Auto Continue . Print a Configuration Sheet. If the sheet does not show Token Ring as present, contact your dealer or Xerox/Rank Xerox.
Toner Low	Toner is getting low in the EP (print) cartridge, but printing will continue without interruption. ACTION: Replace the EP cartridge as soon as possible.
Tray Jam- Open All Trays	Paper has misfed at printer startup. The message alternates with: Open Front Cover Remove Jam Sheet ACTION: See "Misfeed Jam at Startup" (page 6-36).
Turn Power Off Then On	A fatal disk error has occurred. ACTION: Power OFF the printer, then ON.

Table 6.2 Page 20 of 22

Table 6.2 Control Panel messages (continued)

Message	Description/Corrective Action
Unknown Disk	<p>The hard disk partition block cannot be understood. This is probably because a new disk has been installed.</p> <p>This message flashes alternately with the two-line message:</p> <p style="padding-left: 40px;">Press ↑ to Init. Press ↓ to Abort</p> <p>ACTION: Press Up  to format the disk or press Down  to abort.</p>
Unknown Macro Lower Card	<p>The partition block of the Xerox PCMCIA macro card in the lower slot cannot be understood.</p> <p>This message flashes alternately with the two-line message:</p> <p style="padding-left: 40px;">Press ↑ to Init. Press ↓ to Abort</p> <p>ACTION: Press Up  to format the card or press Down  to abort.</p>
Unknown Macro Upper Card	<p>The partition block of the Xerox PCMCIA macro card in the upper slot cannot be understood.</p> <p>This message flashes alternately with the two-line message:</p> <p style="padding-left: 40px;">Press ↑ to Init. Press ↓ to Abort</p> <p>ACTION: Press Up  to format the card or press Down  to abort.</p>
Upper Card Err. Power Off & On	<p>The upper Xerox PCMCIA font/macro card was removed while the printer was online.</p> <p>ACTION: Power OFF the printer, then power it ON to resume normal operations.</p>
Upper Card Err. Replace Original	<p>The upper card slot has the wrong Xerox PCMCIA font/macro card in it. The card may contain fonts, macros, or code.</p> <p>ACTION: Take the printer offline and replace the card formerly in the slot.</p>
Upper Card Fail Please Remove	<p>The upper Xerox PCMCIA font/macro card is bad and cannot be used.</p> <p>ACTION: Power OFF the printer, then power it ON. If the problem persists, remove the card and install a new card.</p>
Upper Card Out Replace Original	<p>The upper Xerox PCMCIA font/macro card was removed while the printer was offline, but the card was still being used by the application.</p> <p>ACTION: To clear the error message, take the printer offline and return the card to its slot. Then press Online  to resume printing. On completion of the print job, you can take the printer offline and remove the card.</p>

Table 6.2 Page 21 of 22

Table 6.2 Control Panel messages (continued)

Message	Description/Corrective Action
Waiting...	<p>The printer was busy processing data from a host but the print job was not completed.</p> <p>This message appears until:</p> <ul style="list-style-type: none"> • Another print job is received. • The Port Timeout expires and Auto Job End is <i>On</i>. • The last page timeout expires. • The PostScript “waittimeout” expires. <p>ACTION: If using Hex Dump mode, press Online , then Form Feed .</p>
Warming Up Please Wait...	<p>The Fuser has not warmed up yet.</p> <p>Message disappears when the printer is ready. The message displays at power-on and may display after the cover has been opened for some time or when the printer is exiting Power Saver mode.</p> <p>ACTION: None.</p>
Warning: Disk Data To Be Lost	<p>The <i>Format The Disk</i> option has been selected.</p> <p>ACTION: Press Up  to format the disk or press Down  to abort.</p>
Table 6.2 Page 22 of 22	

Diagnostic LED Flash Sequences

When the printer is powered on, a sequence of self test diagnostics are run. Some failures that are detected in these tests are identified by a sequence of flashing the system controller diagnostic LED. Table 6.3 identifies the faults associated with the flash sequences.

Table 6.3 Diagnostic LED flash sequences

Flash Sequence	Description/Corrective Action
1 flash — 1 second — 1 flash...etc.	System controller CPU fault. ACTION: Contact your dealer or Xerox/Rank Xerox.
2 flashes — 1 second — 2 flashes...etc.	Base RAM fault. ACTION: Contact your dealer or Xerox/Rank Xerox.
3 flashes — 1 second — 3 flashes...etc.	ROM fault. ACTION: Remove the PostScript SIMM, if installed, and test the printer again. If the problem is resolved, replace the PostScript SIMM. If the problem is not resolved, contact your dealer or Xerox/Rank Xerox.
4 flashes — 1 second — 4 flashes...etc.	System controller to print engine fault. ACTION: Make sure the controller board is firmly seated. If the problem is not resolved, contact your dealer or Xerox/Rank Xerox.
5 flashes — 1 second — 5 flashes...etc.	Resolution enhancement self-test fault. ACTION: Contact your dealer or Xerox/Rank Xerox.
6 flashes — 1 second — 6 flashes...etc.	Communications ports internal loopback test fault. ACTION: Contact your dealer or Xerox/Rank Xerox.
7 flashes — 1 second — 7 flashes...etc.	Slot SIM2 fault. ACTION: Perform the corrective actions listed under 0100 in Table 6.2 on page 6-6.
8 flashes — 1 second — 8 flashes...etc.	Slot SIM3 fault. ACTION: Perform the corrective actions listed under 0101 in Table 6.2 on page 6-6.

Paper Jams

Your printer has been designed to provide reliable, trouble-free operation. Nonetheless, you may experience an occasional paper jam.

When the printer detects a misfeed or a paper jam, the printing process is halted, and a Control Panel message is displayed.

After the paper jam has been cleared, the printer will resume operation to complete the print job. Set the **Jam Recovery** option to *On* to guarantee that pages in the print engine when the jam occurs will be reprinted. Refer to the section “*Memory Considerations*” (page 1-11).

What Causes a Paper Jam?

Paper jams occur most often when:

- The throughput paper stock does not meet specification. See *Chapter 2: Paper Handling*.
- The paper stock is in poor condition.
- The paper stock has been improperly loaded into the paper trays.
- The printer needs cleaning.
- Printer parts are worn and need to be replaced.

Clearing Paper Jams

Table 6.4 on page 6-30 lists the types of paper jams that may occur. If you see a Control Panel message that indicates a paper jam, find the message in the left-hand column and perform the accompanying steps to clear the paper jam.

Caution

Be careful not to touch any of the components inside the printer when removing jammed paper. They may be very hot.

Table 6.4 Paper jam messages and corrective actions

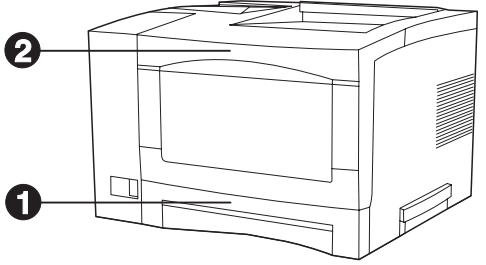

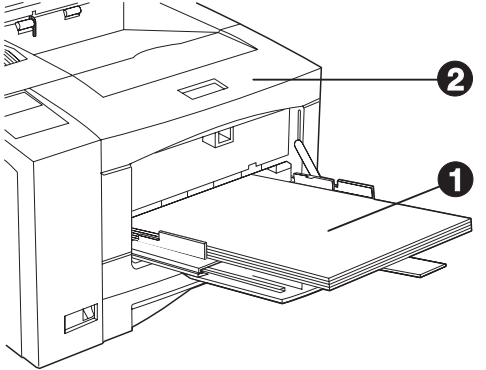

Control Panel Message	Type of Paper Jam/Remedial Action	
<p>Main Tray Jam- Open Main Tray alternating with Open Front Cover Remove Jam Sheet</p>	<p>Main Tray Jam</p> <ol style="list-style-type: none"> 1. Remove the main tray (1). 2. Remove the Envelope Feeder if installed. 3. Open the front cover (2). 4. Remove the jammed sheet. 5. Replace the main tray. 6. Close the front cover. 7. Replace the Envelope Feeder if necessary. 	
<p>Front Tray Jam- Remove All Paper alternating with Open Front Cover Remove Jam Sheet</p>	<p>Front Tray Jam</p> <ol style="list-style-type: none"> 1. Remove all paper from the front tray (1). 2. Remove the Envelope Feeder if installed. 3. Open the front cover (2). 4. Remove the jammed sheet of paper. 5. Close the front cover. 6. Reload the front tray. 7. Replace the Envelope Feeder if necessary.

Print Quality Problems

Table 6.5 lists common print quality problems, the possible cause, and recommended actions.

Table 6.5 Print quality problems

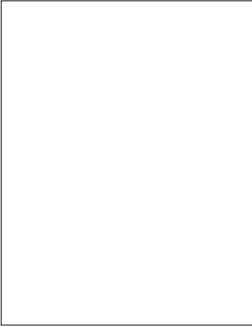

Problem	Possible Cause(s)	Corrective Action(s)
<p>Light/faint prints</p> <p>Overall image is lighter than normal.</p> 	Toner Saver mode.	Turn off Toner Saver. Shake EP cartridge several times.
	Toner level low/empty.	Remove EP cartridge, shake it several times, then reinstall.
	Damp paper stock.	Replace paper stock.
<p>Blank Prints</p> <p>Entire printed page is blank with no visible print.</p> 	If just installed, the EP Cartridge insert (tape) may still be in place.	Remove the tape insert.
	Multiple sheets are being fed from the paper tray at the same time.	Remove paper from paper tray and fan it. Ensure that paper is correctly loaded in tray with edges under metal corners.
	No printable data received from computer.	Print a Test Print. If the Test Print is normal, check the following: <ul style="list-style-type: none"> • Interface cable between computer and printer • Printer set up and application software If the Test Print is blank, contact your dealer or Xerox/Rank Xerox.
	Defective EP cartridge or low on toner.	Replace EP cartridge.

Table 6.5 Page 1 of 8

Table 6.5 Print quality problems *(continued)*

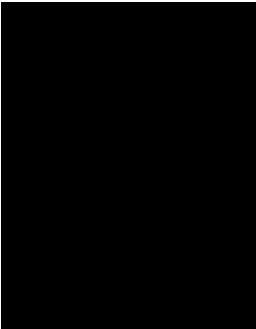

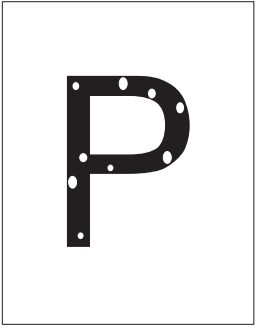

Problem	Possible Cause(s)	Corrective Action(s)
<p>Black prints The page is entirely black.</p> 	<p>Defective EP cartridge, or the EP cartridge is at its end of life.</p> <p>Printer power supply has failed.</p>	<p>Replace EP cartridge.</p> <p>Contact your dealer or Xerox/Rank Xerox.</p>
<p>Spot deletions Areas of the print are extremely light or missing.</p> 	<p>Damp paper stock.</p> <p>Defective EP cartridge, or the EP cartridge is at its end of life.</p>	<p>Replace paper stock.</p> <p>Replace EP cartridge.</p>

Table 6.5 Page 2 of 8

Table 6.5 Print quality problems *(continued)*

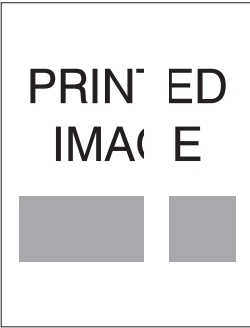

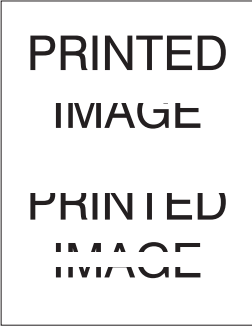

Problem	Possible Cause(s)	Corrective Action(s)
<p>Vertical line deletions</p> <p>Localized print deletions forming narrow lines running in the direction of paper movement.</p> 	<p>EP cartridge not installed correctly</p> <p>Defective EP cartridge, or the EP cartridge is at its end of life</p>	<p>Remove then reinstall the EP cartridge.</p> <p>Replace EP cartridge.</p>
<p>Horizontal line deletions</p> <p>Localized print deletions appearing as bands running across the page perpendicular to the direction of paper movement.</p> 	<p>Defective paper stock, creases, folds, etc.</p>	<p>Replace paper stock.</p>

Table 6.5 Page 3 of 8

Table 6.5 Print quality problems *(continued)*

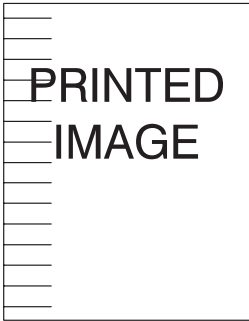

Problem	Possible Cause(s)	Corrective Action(s)
<p>Vertical dark streaks</p> <p>Black lines running across the print in the direction of paper movement.</p>  <p>The diagram shows the words 'PRINTED IMAGE' centered on a page. Several vertical black lines of varying lengths and thicknesses run through the text from top to bottom, representing the problem of vertical dark streaks.</p>	<p>Defective EP cartridge, or the EP cartridge is at its end of life.</p> <p>Defective fuser cartridge.</p>	<p>Replace EP cartridge.</p> <p>Replace the fuser cartridge. (See Appendix A for ordering information. See Appendix B for installation and removal instructions.)</p>
<p>Repetitive horizontal dark streaks</p> <p>Black lines running across the page perpendicular to the direction of paper movement.</p>  <p>The diagram shows the words 'PRINTED IMAGE' centered on a page. On the left side of the page, there are several horizontal black lines of varying lengths, representing the problem of repetitive horizontal dark streaks.</p>	<p>Contaminated paper path.</p> <p>Defective EP cartridge, or the EP cartridge is at its end of life.</p>	<p>Print several blank sheets of paper to remove any toner accumulations.</p> <p>Replace EP cartridge.</p>

Table 6.5 Page 4 of 8

Table 6.5 Print quality problems (continued)

Problem	Possible Cause(s)	Corrective Action(s)
<p>Dark spots/marks</p> 	<p>Defective EP cartridge.</p>	<p>Replace EP cartridge.</p>
<p>Unfused or partially fused image</p> <p>The printed image is not fully fused to the paper and easily rubs off.</p> 	<p>Damp paper stock.</p> <p>Heavy or unusual paper stock.</p> <p>Defective Fuser Module.</p>	<p>Replace paper stock.</p> <p>Use only approved paper/media. (See <i>Chapter 2: Paper Handling</i>).</p> <p>Replace the fuser cartridge. (See Appendix A for ordering information. See Appendix B for installation and removal instructions.)</p>

Table 6.5 Page 5 of 8

Table 6.5 Print quality problems (continued)

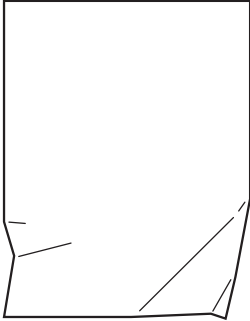

Problem	Possible Cause(s)	Corrective Action(s)
<p>Wrinkled prints</p> <p>Prints are wrinkled, creased, or torn.</p> 	<p>Poor paper condition.</p> <p>Paper is damp.</p> <p>Fuser cartridge is at its end of life</p>	<p>Inspect/replace paper stock.</p> <p>Replace paper stock.</p> <p>Replace the fuser cartridge. (See Appendix A for ordering information. See Appendix B for installation and removal instructions.)</p>
<p>Blurred prints</p> <p>Image is blurred at the edges.</p> 	<p>Poor paper condition.</p> <p>Paper is damp.</p>	<p>Inspect/replace paper stock.</p> <p>Replace paper stock.</p>

Table 6.5 Page 6 of 8

Table 6.5 Print quality problems (continued)

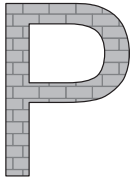

Problem	Possible Cause(s)	Corrective Action(s)
<p>Random deletions</p> <p>Random light areas and deletions.</p> <div data-bbox="147 388 401 718" style="border: 1px solid black; padding: 10px; text-align: center;"> <p>PRINTED IMAGE</p> </div>	<p>Poor paper condition.</p> <p>Paper is damp.</p>	<p>Inspect/replace paper stock.</p> <p>Replace paper stock.</p>
<p>Grainy Graphics</p> <p>A graphic image is coarse or grainy (like a brick or checkerboard pattern) rather than a smooth halftone.</p> <div data-bbox="151 953 401 1277" style="border: 1px solid black; padding: 10px; text-align: center;">  </div>	<p>Lossy compression. The printer tried to print a complex graphic image with inadequate memory or with page protection disabled.</p>	<p>Enable Page Protection from your driver, or through the Control Panel if you are not using a driver that supports Page Protection, and try printing the job again.</p> <p>Refer to the section “<i>Memory Considerations</i>” (page 1-11) for additional information on Page Protection memory requirements.</p>

Table 6.5 Page 7 of 8

Table 6.5 Print quality problems (continued)

Problem	Possible Cause(s)	Corrective Action(s)
<p>Broken Page/Page Too Complex</p> <p>The printed image is missing all of the image print after a straight line.</p> 	<p>The printer tried to print a complex graphic image with inadequate memory or with Page Protection disabled.</p>	<p>Enable Page Protection from your driver, or through the Control Panel if you are not using a driver that supports Page Protection, and try printing the job again.</p> <p>Refer to the section “Memory Considerations” (page 1-11) for additional information on Page Protection memory requirements.</p>

Appendix A

Ordering Printer Options

Contact your dealer or Xerox / Rank Xerox to order any of the printer options and accessories listed in Table A.1.

Table A.1 Printer options and accessories

Option	Part No.	Comments
EP Cartridge	113R00095	
Fuser Cartridge/BTR	108R00092 110V (60 Hz) 108R00093 220V (50 Hz)	
Paper Handling Options		
Main Tray Cassette	97K22700	See Table 2.1 in <i>Chapter 2: Paper Handling</i> for a complete list of supported paper sizes for each paper handling option. Minimum 4 MB printer memory is recommended
500-sheet Paper Deck and Cassette	97K22680	
500-sheet Paper Cassette	97K22710	
2,000-sheet High Capacity Feeder	97S01519	
Duplex Module	97K22660	
Offset Catch Tray (OCT)	97K22670	
Mailbox / Collator	97K22730	
Envelope Feeder	97K22690	
Xerox Macro Cards		
2 MB	97K25780	DocuPrint 4517 supports macro cards for PCL 5e Emulation only.

Appendix B

Replacing Consumables

<i>Replacing the EP Cartridge</i>	<i>B-2</i>
<i>Replacing the Fuser Cartridge/BTR</i>	<i>B-5</i>

Replacing the EP Cartridge

Caution

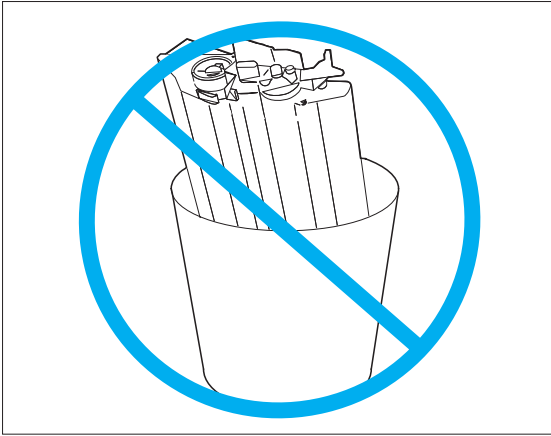

- Do not expose the EP (electronic printing) cartridge to direct sunlight or artificial light for more than 15 minutes. Overexposure will permanently damage the photosensitive imaging drum.
- Do not open the drum shutter or touch the green imaging drum.
- Complete the EP cartridge installation within 15 minutes of removing the cartridge from its package.

- 1** Open the front cover by pressing the button on top of the cover.

- 2** Remove the old EP cartridge by lifting it towards the rear of the printer then pulling it up and out.

! Do not discard the old EP cartridge. Return it to Xerox/Rank Xerox. Refer to the printed instructions accompanying the EP cartridge.

3 Remove the new EP cartridge from its wrapper.

4 Gently shake the EP cartridge several times to evenly distribute the toner.

5 Remove the tape strip.

Replacing the EP Cartridge

- 6** Insert the EP cartridge into the guide channels marked by the arrows inside the front cover. Push in until it clicks in place, then close the front cover.

Replacing the Fuser Cartridge/BTR

Caution

- The fuser area is extremely hot. Turn the printer OFF and allow it to cool for 40 minutes before replacing an existing fuser cartridge.
- Replacing the BTR (Bias Transfer Roll) requires removing the EP cartridge. Do not expose the EP cartridge to direct sunlight or artificial light for more than 15 minutes. Overexposure will permanently damage the photosensitive imaging drum.

- 1** Power OFF the printer and disconnect the power cord.

- 2** Open the rear cover.

- 3** Let the fuser area cool for 40 minutes.

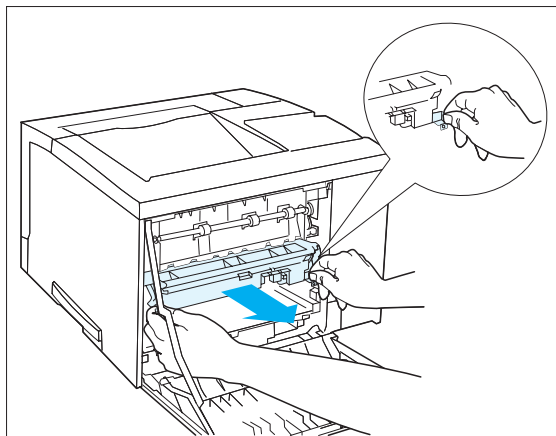

If the Duplex Module is installed, continue with Step 4 on page B-6. Otherwise, skip to Step 5 on page B-6.

4 Remove the Duplex Module by pushing the green lock buttons on either side of it.

5 Remove the mounting screws from the printer as shown above, and set them aside.

6 Pull out the old fuser cartridge by the tabs on either side of the cartridge.

7 Slide the new fuser cartridge into the printer.

- 8** Secure the fuser cartridge by replacing the mounting screws that were removed in Step 5 on page B-6.

If you do not need to re-install the Duplex Module, close the rear cover and skip to Step 11.

- 9** Insert the Duplex Module through the guide channels.

- 10** Make sure the green side-locks at both ends click into position. Then close the rear cover.

- 11** Open the front cover and remove the EP cartridge by lifting it towards the rear of the printer then pulling it up and out.

Replacing the Fuser Cartridge/BTR

12 Use the BTR removal tool to release the left side of the BTR.

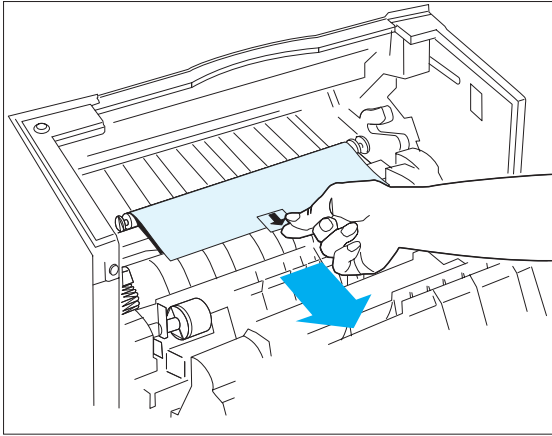

13 Use the BTR removal tool to release the right side of the BTR.

14 Lift the BTR out of the printer.

15 Insert the new BTR, making sure it is seated properly.

- 16** Pull the tab to remove the BTR's protective covering.

- 17** Re-insert the EP cartridge into the guide channels marked by the arrows inside the top cover. Push in until it clicks in place, then close the front cover.

- 18** Plug in the power cord. Press and hold Online  and Menu  while powering ON the printer. This will reset the Fuser Life counter and release the warning message.

After warming up for a few minutes, the Control Panel displays the following message:

Online
Ready

If the [Replace Fuser Cartridge](#) message still appears, repeat the above procedure.

If any other message is displayed, see Table 6.2 starting on page 6-6.

Precautions

The DocuPrint 4517 printer options are easy to install. Installing and testing any one option is likely to take 5 to 15 minutes.

Before installing or removing any printer option, take the precautionary steps outlined below.

POWER OFF THE PRINTER: The printer determines which options are installed through a self-test. The self-test is run when you power ON the printer. Therefore, for proper operation, you must power OFF the printer before installing/removing an option, then power it back ON after installing/removing an option.

DISCONNECT THE POWER CORD: Never remove the printer controller board while the printer is plugged in.

To avoid the possibility of electrical shock, always disconnect the power cord when installing or removing ANY internal or external printer option.

DISCHARGE STATIC ELECTRICITY: The controller board and internal printer options (SIMMs, network interface cards, and the hard drive) are sensitive to static electricity. Before installing or removing an internal option, discharge static electricity from your body by touching something metal, such as the metal back plate on any device plugged into a grounded power source. If you walk around before finishing the installation, again discharge any static electricity.

Memory SIMMs

This section contains two sets of instructions:

- “Installing a Memory SIMM” (page C-4)
- “Removing a Memory SIMM” (page C-7)

Note

Memory SIMMs for the DocuPrint 4517 are available in the following sizes:

- one-sided 4 MB and 16 MB
- two-sided 32 MB

(See Appendix A: Ordering Printer Options for ordering additional memory.)

Installing a Memory SIMM

Caution

SIMMs and controller boards are sensitive to static electricity. Before installing a SIMM, discharge static electricity from your body by touching something metal, such as the metal back plate on any device plugged into a grounded power source. If you walk around before finishing the installation, again discharge any static electricity.

Never remove the printer controller board while the printer is plugged in.

Note

Either 1 MB or 4 MB of the printer's memory (depending on the version of the printer) may become unusable when 2-sided 32 MB SIMMs are installed (or other non-Xerox 2-sided SIMMs, such as 8 MB or 2 MB). Thus the total system memory may be less than the sum of resident and SIMM memory when 2-sided SIMMS are used. To maximize usable memory, we suggest selecting slot SIMM3 for a 2-sided SIMM and not using 2 MB SIMMs in slot SIMM2.

- 1 Power OFF the printer and disconnect the power cord and any interface cables.**

- 2 Loosen the thumb screws and pull out the controller board.**

- 3 Place the controller board on a ream of paper.**

- 4 Select an appropriate SIMM slot to use.**
Slots SIMM2 (2) and SIMM3 (3) are interchangeable (except as described in the note on page C-4) and are used for installing additional printer memory.

- 5 Insert the new SIMM at an angle into the appropriate SIMM slot with the notch in the lower left corner (1), and rotate it up into position.**

6 Make sure that the clips on either side snap closed to lock the SIMM in place.

7 Replace the controller board, sliding it along the alignment channels. Then hand-tighten the thumb screws.

8 Replace the power and interface cables and power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

9 Print a Configuration Sheet to verify that the SIMM has been installed properly.

A Press Online  to take the printer offline.

B Press Menu , then Down  or Up  until you see:

Main Menu
Test Menu

C Press Enter  and the message display changes to:

Test Menu
Config. sheet

D Press Enter  again to print a Configuration Sheet.

E After the Configuration Sheet prints, press Online  to put the printer back online.

On the Configuration Sheet, the "Total system memory" value should match the amount of memory just installed plus the RAM resident on the printer (if not, see the note on page C-4).

Removing a Memory SIMM

SIMMs and controller boards are sensitive to static electricity. Before removing a SIMM, discharge static electricity from your body by touching something metal, such as the metal back plate on any device plugged into a grounded power source. If you walk around before finishing the removal, again discharge any static electricity.

Never remove the printer controller board while the printer is plugged in.

- 1** Power OFF the printer and disconnect the power cord and any interface cables.

- 2** Loosen the thumb screws and pull out the controller board.

- 3** Place the controller board on a ream of paper.

4 Carefully push out on the locking clips to release the SIMM.

5 Rotate the SIMM down out of position, then lift it out.

6 Replace the controller board, sliding it along the alignment channels. Then hand-tighten the thumb screws.

7 Replace the power and interface cables and power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

PostScript SIMM

This section contains two sets of instructions:

- “Installing a PostScript SIMM” (below)
- “Removing a PostScript SIMM” (page C-12)

Installing a PostScript SIMM

SIMMs and controller boards are sensitive to static electricity. Before installing a SIMM, discharge static electricity from your body by touching something metal, such as the metal back plate on any device plugged into a grounded power source. If you walk around before finishing the installation, again discharge any static electricity.

Never remove the printer controller board while the printer is plugged in.

- 1** Power OFF the printer and disconnect the power cord and any interface cables.

- 2** Loosen the thumb screws and pull out the controller board.

- 3** Place the controller board on a ream of paper.

4 Select an appropriate SIMM slot to use.

Slots SIMM0 (0) and SIMM1 (1) are interchangeable and are used for installing the PostScript SIMM.

5 Insert the PostScript SIMM vertically into the appropriate SIMM slot with the notch in the lower left corner (1), and rotate it down into position.

6 Make sure that the clips on either side snap closed to lock the PostScript SIMM in place.

7 Replace the controller board, sliding it along the alignment channels. Then hand-tighten the thumb screws.

8 Replace the power and interface cables and power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

```
Online
Ready
```

If any other message is displayed, see Table 6.2 starting on page 6-6.

9 Print a Configuration Sheet to verify that the SIMM has been installed properly.

A Press Online  to take the printer offline.

B Press Menu , then Down  or Up  until you see:

```
Main Menu
Test Menu
```

C Press Enter  and the message display changes to:

```
Test Menu
Config. sheet
```

D Press Enter  again to print a Configuration Sheet.

E After the Configuration Sheet prints, press Online  to put the printer back online.

The Configuration Sheet should show the PostScript Menu and PostScript version.

10 Install a Xerox DocuPrint 4517 PostScript print driver now.

Table 4.2 on page 4-3 lists the DocuPrint 4517 PostScript printer drivers packaged with your printer.

Removing a PostScript SIMM

SIMMs and controller boards are sensitive to static electricity. Before removing a SIMM, discharge static electricity from your body by touching something metal, such as the metal back plate on any device plugged into a grounded power source. If you walk around before finishing the removal, again discharge any static electricity.

Never remove the printer controller board while the printer is plugged in.

- 1** Power OFF the printer and disconnect the power cord and any interface cables.

- 2** Loosen the thumb screws and pull out the controller board.

- 3** Place the controller board on a ream of paper.

4 Carefully pull out on the locking clips to release the PostScript SIMM.

5 Rotate the PostScript SIMM up to a vertical position, then lift it out.

6 Replace the controller board, sliding it along the alignment channels. Then hand-tighten the thumb screws.

7 Replace the power and interface cables and power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

8 Press Online , then Reset  and you see:

Reset Menu
Reset Printer

9 Press Down  and you see:

Reset Menu
Reset Menus

10 Press Enter ***** and the message display changes to:

Reset Menus
Please Wait...

This message displays while the printer resets to factory defaults.

When the reset is finished, the display changes to:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

Hard Drive

This section contains two sets of instructions:

- “Installing the Hard Drive” (below)
- “Removing the Hard Drive” (page C-18)

The hard drive and controller board are sensitive to static electricity. Before installing the hard drive, discharge static electricity from your body by touching something metal, such as the metal back plate on any device plugged into a grounded power source. If you walk around before finishing the installation, again discharge any static electricity.

Never remove the printer controller board while the printer is plugged in.

Installing the Hard Drive

- 1** Power OFF the printer and disconnect the power cord and any interface cables.

- 2** Loosen the thumb screws and pull out the controller board.

- 3** Place the controller board on a ream of paper.

4 Align the hard drive connector to the controller connector (J180), and gently lay the hard drive on top of the four standoffs.

5 Push down on the drive until all four corners latch into place.

6 Replace the controller board, sliding it along the alignment channels. Then hand-tighten the thumb screws.

7 Replace the power and interface cables and power ON the printer.

If the drive is already formatted, the Control Panel will display:

Online
Ready

If the drive is unformatted, the Control Panel will display:

Press ↑ to Init
Press ↓ to Abort

If any other message is displayed, see Table 6.2 starting on page 6-6.

If you need to format the drive, continue to Step 8 on page C-17. Otherwise, skip to Step 9 on page C-17.

8 Press Up  to format the hard drive.

After the formatting is complete, the Control Panel displays:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

9 Print a Configuration Sheet to verify that the hard drive has been installed properly.

A Press Online  to take the printer offline.

B Press Menu , then Down  or Up  until you see:

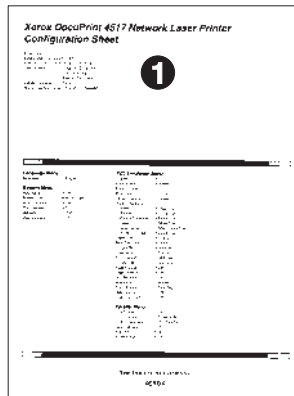

Main Menu
Test Menu

C Press Enter  and the message display changes to:

Test Menu
Config. sheet

D Press Enter  again to print a Configuration Sheet.

E After the Configuration Sheet prints, press Online  to put the printer back online.

**10** Find the “Disk” line on the Configuration Sheet.

If the hard drive has been properly installed, it is listed there (1). “Disk Spooling” also appears under the System menu. (Remove and reinstall the hard drive if you do not see both of these options listed.)

11 Refer to *Chapter 5: Using the Hard Drive / Downloading Fonts* for instructions on using the hard drive.**Note**

Keep the original packaging material in case you ever need to remove the option.

Removing the Hard Drive

- 1** Power OFF the printer and disconnect the power cord and any interface cables.

- 2** Loosen the thumb screws and pull out the controller board.

- 3** Place the controller board on a ream of paper.

- 4** Gently unlatch the hard drive from the standoffs and release the hard drive connector from the controller board connector.

- 5** Gently release the opposite end of the hard drive from the standoffs, then lift the hard drive from the controller board.

If possible, store the hard drive in its original anti-static bag.

6 Replace the controller board, sliding it along the alignment channels. Then hand-tighten the thumb screws.

7 Replace the power and interface cables and power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

Duplex Module

This section contains two sets of instructions:

- “Installing the Duplex Module” (below)
- “Removing the Duplex Module” (page C-22)

Note

At least 4 MB of printer memory is recommended (but not required) for printing two-sided (duplex) jobs. See Appendix A: Ordering Printer Options for ordering additional memory.

Installing the Duplex Module

- 1** Power OFF the printer and disconnect the power cord and any interface cables.

- 2** Open the rear cover.

- 3** Insert the Duplex Module through the guide channels.

- 4** Make sure the green side-locks at both ends click into position.

- 5** Close the rear cover, plug in the power cord, and power ON the printer.

After warming up, the Control Panel displays the following message:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

- 6** Print a Configuration Sheet and check that the Duplex Module appears on it as an installed option. If not, remove the Duplex Unit (page C-22) and reinstall it, repeating Steps 1 to 6 of this procedure.
- 7** Consult “Duplex (Two-Sided) Printing” (page 2-33) in Chapter 2: Paper Handling for instructions on two-sided printing.

During duplex printing, the paper partially enters the standard tray, then feeds back into the printer.

Note

Keep the original packaging material in case you ever need to remove the option.

Removing the Duplex Module

- 1 Power OFF the printer and disconnect the power cord and any interface cables.

- 2 Open the rear cover.

- 3 Remove the Duplex Module by pushing the green lock buttons on either side of it.

Be careful not to touch the metal part of the motor at the right end of the duplex module—it is hot after continuous two-sided printing.

Store the Duplex Module in its original packaging.

- 4 Close the rear cover, plug in the power cord, and power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

500-sheet Paper Deck and Cassette

This section contains three sets of instructions:

- “Installing One 500-sheet Paper Deck and Cassette” (below)
- “Installing Two 500-sheet Paper Decks and Cassettes” (page C-26)
- “Removing a 500-sheet Paper Deck and Cassette” (page C-30)

Installing One 500-sheet Paper Deck and Cassette

- 1** Power OFF the printer and disconnect the power cord and any interface cables.

- 2** Holding the printer by the recessed side hand holds, set it atop the Paper Deck, aligning the corners.

- 3** Cover the right side hand hold with the joint tab, inserting (1) then (2).

- 4** Cover the left side hand hold with the joint tab, inserting (1) then (2).

- 5** Remove the small cover at the back of the Paper Deck. Fit the connector firmly into the printer receptacle. Replace the small cover.

Do not attempt to lift and carry the printer by yourself after installing the Paper Deck.

- 6** Replace the power and interface cords, and power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

- 7** Press Online , then Reset  and you see:

Reset Menu
Reset Printer

- 8** Press Down  and you see:

Reset Menu
Reset Menus

9 Press Enter  and the message display changes to:

Reset Menu
Please Wait...

This message displays while the printer resets the Source Mapping (PCL Menu) settings to include the lower tray just installed.

When the reset is finished, the display changes to:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

To enable automatic tray switching with PostScript jobs, turn **Tray Switching** in the **PostScript** menu to a value that includes the newly installed tray.

10 Consult the section “Using the 500-sheet Paper Deck and Cassette” (page 2-12) for instructions on loading paper in the lower tray.**11** Consult the section “Automatic Tray Switching” (page 2-18) for instructions on engaging tray switching between the lower tray and other printer trays.**Note**

Keep the original packaging material in case you ever need to remove the option.

Installing Two 500-sheet Paper Decks and Cassettes

- 1** Power OFF the printer and disconnect the power cord and any interface cables.

- 2** Holding the top Paper Deck by the recessed side hand holds, set it atop the bottom Paper Deck, aligning the corners.

- 3** Cover the left side hand hold with the joint tab, inserting (1) then (2).

4 Cover the right side hand hold with the joint tab, inserting (1) then (2).

5 Remove the small cover at the back of the bottom Paper Deck. Fit the connector firmly into the top Paper Deck receptacle. Replace the small cover.

6 Holding the printer by the recessed side hand holds, set it atop the top Paper Deck, aligning the corners.

7 Cover the right side hand hold with the joint tab, inserting (1) then (2).

8 Cover the left side hand hold with the joint tab, inserting (1) then (2).

9 Remove the small cover at the back of the top Paper Deck. Fit the connector firmly into the printer receptacle. Replace the small cover.

Do not attempt to lift and carry the printer by yourself after installing the Paper Decks.

10 Replace the power and interface cords, and power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

11 Press Online , then Reset  and you see:

Reset Menu
Reset Printer

12 Press Down  and you see:

Reset Menu
Reset Menus

13 Press Enter  and the message display changes to:

Reset Menu
Please Wait...

This message displays while the printer resets the Source Mapping (PCL Menu) settings to include the lower trays just installed.

When the reset is finished, the display changes to:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

To enable automatic tray switching with PostScript jobs, turn **Tray Switching** in the **PostScript** menu to a value that includes the newly installed trays.

14 Consult the section “Using the 500-sheet Paper Deck and Cassette” (page 2-12) for instructions on loading paper in the 500-sheet Paper Deck and Cassette (lower tray).**15** Consult the section “Automatic Tray Switching” (page 2-18) for instructions on engaging tray switching between the lower tray and other printer trays.**Note**

Keep the original packaging material in case you ever need to remove the option.

Removing a 500-sheet Paper Deck and Cassette

- 1** Power OFF the printer and disconnect the power cord and any interface cables.

- 2** Remove the small cover at the back of the Paper Deck, then unplug the connector from the printer. Replace the small cover.

- 3** Remove the left joint tab joining the printer to the Paper Deck, removing (1) then (2).

- 4** Remove the right joint tab joining the printer to the Paper Deck, removing (1) then (2).

- 5** Holding the printer by the recessed side hand holds, lift it up off the Paper Deck.

6 If two Paper Decks are installed, detach the Paper Decks from each other. Otherwise, continue to Step 7.

A Remove the joint tabs joining the two Paper Decks.

B Disconnect the plug of the bottom Paper Deck from the receptacle of the upper Paper Deck.

Be sure to keep the joint tabs. You will need them to reinstall the Paper Deck(s).

7 Replace the power and interface cords, and power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

```
Online
Ready
```

If any other message is displayed, see Table 6.2 starting on page 6-6.

8 Press Online , then Reset  and you see:

```
Reset Menu
Reset Printer
```

9 Press Down  and you see:

```
Reset Menu
Reset Menus
```

10 Press Enter  and the message display changes to:

```
Reset Menus
Please Wait...
```

This message displays while the printer resets the Source Mapping (PCL Menu) and Tray Switching (PostScript Menu) settings to factory defaults.

When the reset is finished, the display changes to:

```
Online
Ready
```

If any other message is displayed, see Table 6.2 starting on page 6-6.

2,000-sheet High Capacity Feeder (HCF)

This section contains two sets of instructions:

- “Installing the 2,000-sheet High Capacity Feeder” (below)
- “Removing the 2,000-sheet High Capacity Feeder” (page C-37)

Note

The HCF may be installed with or without one optional 500-sheet Paper Deck and Cassette, to increase your paper input capacity to 2,500 sheets. However, when the HCF is installed with a 500-sheet Paper Deck and Cassette, paper feeding from the HCF is slower.

To install the HCF with a 500-sheet Paper Deck and Cassette, first install the 500-sheet Paper Deck and Cassette as per the instructions on page C-23, then install the HCF as per the instructions on page C-33.

Consult the section “Using the High Capacity Feeder” (page 2-14) to load paper in the HCF.

Note

The documentation that accompanied the HCF contains information on configuring your printer driver and application to use the HCF.

Installing the 2,000-sheet High Capacity Feeder

1 Power OFF the printer and disconnect all cables and cords.

Note: If you have options attached to the printer, such as a Mailbox/Collator, Offset Catch Tray or 500-Sheet Paper Deck, you may need another person to assist you with the installation.

2 Hold the printer with its front facing you and stand in front of the HCF. Align the front right corners of the printer and HCF as you lower the printer onto the HCF.

3 Set the printer down onto the HCF so that the HCF's pins insert into the bottom of the printer. The front and right sides of the printer should be flush with the front and right sides of the HCF.

If connecting directly to the printer, continue with Step 4.

If a 500-Sheet Paper Deck is being installed with the HCF, go to Step 5.

- 4** Reach into the HCF from below and fit the HCF connector firmly into the printer's receptacle, aligning the tab on the connector with the notch in the receptacle.

If a Mailbox/Collator is installed on the printer, go to Step 6. If not, go to Step 7.

- 5** Reach into the HCF from below and fit the HCF connector firmly into the paper deck's receptacle, aligning the tab on the connector with the notch in the receptacle.

If a Mailbox/Collator is installed on the printer, go to Step 6. If not, go to Step 7.

- 6** Attach the power cords as follows:
- A** Attach the Mailbox/Collator short power cable (1) between the printer and the Mailbox/Collator.
 - B** Attach the HCF short power cable (2) between the Mailbox/Collator and the HCF.
 - C** Attach the long power cord (3) between the HCF and the power source.
 - D** Skip to Step 8.

- 7 Attach the HCF short power cable (1) between the printer and the HCF. Attach the long power cord (2) between the HCF and the power source.**

- 8 Roll the HCF to its permanent position and lock down the casters. Load paper in the HCF, as described in the section “Using the High Capacity Feeder” (page 2-14). Reconnect the printer interface cord(s) and power ON the printer.**

After warming up, the Control Panel displays:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

- 9 Press Online , then Reset  and you see:**

Reset Menu
Reset Printer

- 10 Press Down  and you see:**

Reset Menu
Reset Menus

- 11 Press Enter  and the message display changes to:**

Reset Menus
Please Wait...

The printer resets the Source Mapping (PCL Emulat) settings to include the HCF. When the reset is finished, the display changes to:

Online
Ready

- 12** Print a Configuration Sheet and check that the HCF and 500-sheet Paper Deck and Cassette (if installed) appear as “Lower 1 Tray” and/or “Lower 2 Tray” under “Installed Options.” If not, power OFF the printer and recheck the HCF connector, the 500-sheet Paper Deck and Cassette connector (if installed) and power cables.

Note

To enable automatic tray switching with PostScript jobs, turn Tray Switching in the PostScript menu to a value that includes the newly installed tray, such as “Lower 1-Main.” Refer to the section “Automatic Tray Switching” (page 2-18).

Note

Keep the original packaging material in case you ever need to remove the option.

Note

The “Installation Setup Guide” that accompanied the HCF tells how to configure your driver and applications to use the HCF.

Removing the 2,000-sheet High Capacity Feeder

- 1 Power OFF the printer and disconnect the power cords and any interface cables.**

- 2 Reach into the HCF from below and disconnect the HCF connector from the printer's receptacle.**

- 3 Lift the printer off of the HCF and set it down where it will be used without the HCF.**

4 Reconnect the printer interface cord(s) and power cord and power ON the printer.

After warming up, the Control Panel displays:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

5 Press Online , then Reset  and you see:

Reset Menu
Reset Printer

6 Press Down  and you see:

Reset Menu
Reset Menus

7 Press Enter  and the message display changes to:

Reset Menus
Please Wait...

This message displays while the printer resets the Source Mapping (PCL Menu) and Tray Switching (PostScript Menu) settings to factory defaults.

When the reset is finished, the display changes to:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

Offset Catch Tray (OCT)

This section contains two sets of instructions:

- "Installing the OCT" (below)
- "Removing the OCT" (page C-42)

Installing the OCT

- 1** Power OFF the printer and disconnect the power cord and any interface cables.

- 2** Open the rear cover.

- 3** Remove the option interface cover by pushing up on it from the underside.

Keep the option interface cover in a safe place. You will need to replace it if you ever remove the option.

Offset Catch Tray (OCT)

4 Close the rear cover.

5 Grasping the OCT by the sides, insert its positioning hook into the outer-most slit in the exhaust grill on top of the printer.

To avoid damage to the positioning hook, do not twist the OCT to the right or left while lowering it into position.

6 Gently guide the OCT down to the printer, aligning the OCT connector plug with the receptacle on the printer.

Make sure the OCT is firmly seated.

7 While holding up the paper weight, flip open the output tray on the OCT.

8 Reconnect the power cord and interface cable(s) and power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

9 Consult "Using the Offset Catch Tray (OCT)" (page 2-32) for usage instruction.

Note

Keep the original packaging material in case you ever need to remove the option.

Removing the OCT

- 1 Power OFF the printer and disconnect the power cord and any interface cables.

- 2 Press the release buttons with your thumbs and push up on the OCT to remove it.

To avoid damage to the positioning hook, do not twist the OCT to the right or left when pushing up to remove it.

Store the OCT in its original packaging materials, or in a dry, dust-free place.

- 3 Replace the option interface cover which was removed and stored when the option was first installed.

- 4 Power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

- 5 Press Online , then Reset  and you see:

Reset Menu
Reset Printer

6 Press Down  and you see:

```
Reset Menu  
Reset Menus
```

7 Press Enter  and the message display changes to:

```
Reset Menus  
Please Wait...
```

This message displays while the printer changes the default Output Bin setting to *Standard*.

When the reset is finished, the display changes to:

```
Online  
Ready
```

If any other message is displayed, see Table 6.2 starting on page 6-6.

Mailbox/ Collator

This section contains two sets of instructions:

- “Installing the Mailbox/Collator” (below)
- “Removing the Mailbox/Collator” (page C-47)

Note

Refer to the section “Using the Mailbox/Collator” (page 2-24) for usage instructions. Also, the Mailbox/Collator User Guide that came with the Mailbox/Collator contains more detailed information about configuring and using the Mailbox/Collator.

Installing the Mailbox/Collator

- 1** Power OFF the printer and disconnect the power cord.

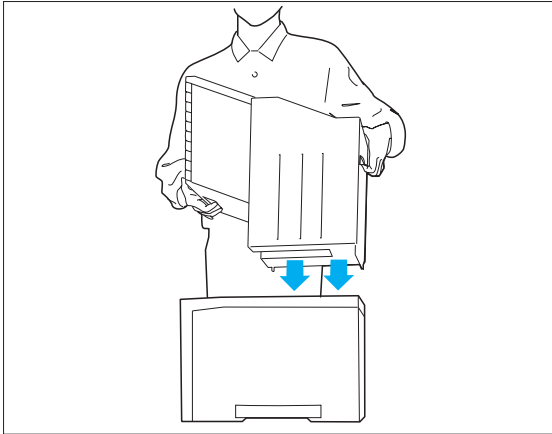

- 2** Open the rear cover.

- 3** Remove the option interface cover by feeling for its tabs from the underside and pushing up on them. (This may require some force.) Then close the rear cover.

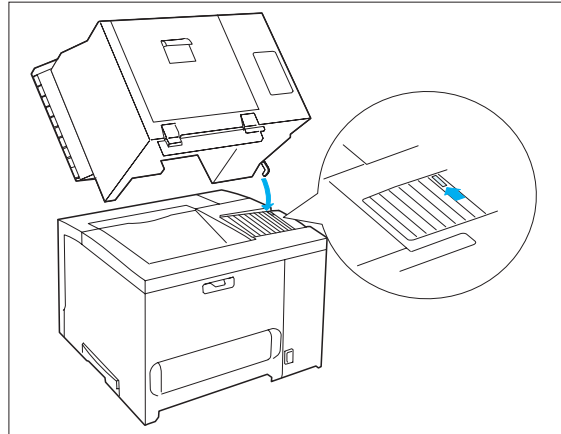

Keep the option interface cover in a safe place. You will need to replace it if you ever remove the option.

- 4** Unpack the Mailbox/Collator and grasp it by the front and rear hand holds.

 Do not allow the rear door of the Mailbox/Collator to open.

 If you must set the Mailbox/Collator down, lay it on its right side (the side showing in the picture above).

- 5** There is a positioning hook on the underside of the Mailbox/Collator. Insert it into the outermost slit in the exhaust grill on top of the printer.

 To avoid damage to the positioning hook, do not twist the Mailbox/Collator to the right or left while lowering it into position.

- 6** Gently guide the Mailbox/Collator down to the printer, aligning the Mailbox/Collator connector plug with the receptacle in the printer.

 Make sure the Mailbox/Collator is firmly seated.

7 Attach the power cords.

- A** Plug one end of the short (60 cm/2 foot) Mailbox/Collator cord (1) into the AC receptacle on the printer, and the other end into the lower AC receptacle on the Mailbox/Collator.
- B** Plug one end of the printer power cord (2) into the upper AC power receptacle on the Mailbox/Collator, and the other end into the wall.

8 Power ON the Mailbox/Collator (1) first, and then power ON the printer.

This is the proper sequence to always use when restoring power to the system.

After warming up for a few minutes, the Control Panel displays the following message:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

9 Print a Configuration Sheet and check that the Mailbox/Collator appears in the "Installed Options" section. If not, remove it as per Steps 1 to 3 on page C-47, then repeat Steps 5 to 9 of this procedure.

Note

Keep the original packaging material should you ever need to remove the option.

Removing the Mailbox/Collator

- 1 Empty all paper from the bins. Power OFF the printer and disconnect both power cords.

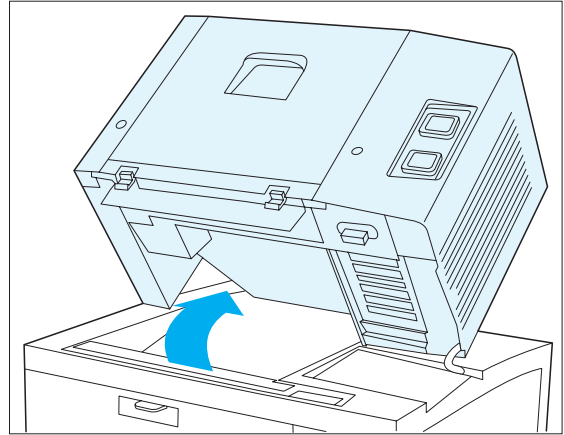

- 2 Press the release buttons with your thumbs and push up on the Mailbox/Collator to remove it.

The Mailbox/Collator is top-heavy. To avoid damage to the positioning hook, do not twist the Mailbox/Collator to the right or left when pushing up to remove it.

You may find it helpful to have two people remove the Mailbox/Collator so as to carefully control its movement and to prevent it from twisting or falling.

- 3 Carefully lift the Mailbox/Collator off the printer, rotating it away from the rear of the printer.

Store the Mailbox/Collator in its original packaging materials, or in a dry, dust-free place.

4 Replace the option interface cover which was removed and stored when the option was first installed.

5 Reconnect the printer's power cord and power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

6 Press Online , then Reset  and you see:

Reset Menu
Reset Printer

You are about to reset all menu values, not just those required by mailbox removal. After the reset you may need to set menu values to their previous values. If you do not know these values, print a Configuration Sheet before proceeding with the reset.

7 Press Down  and you see:

Reset Menu
Reset Menus

8 Press Enter  and the message display changes to:

Reset Menus
Please Wait...

This message displays while the printer changes the default Output Bin setting to *Standard*.

When the reset is finished, the display changes to:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

Now set any menu values that were affected by the reset (see warning after Step 6 above).

After removing the Mailbox/Collator, previous users of the Mailbox should be notified that they need to reconfigure their printer drivers to select another output tray.

Envelope Feeder

This section contains two sets of instructions:

- “Installing the Envelope Feeder” (page C-49)
- “Removing the Envelope Feeder” (page C-52)

Note

Loading envelopes in the Envelope Feeder is explained in the section “Using the Envelope Feeder” (page 2-16). Also, the *Envelope Feeder Installation and Usage Guide* that came with the Envelope Feeder contains more detailed information about configuring and using the Envelope Feeder.

Installing the Envelope Feeder

- 1** Power OFF the printer and disconnect the power cord(s).

- 2** Open the Front Tray.

- 3** Open the hinged clasp at the left side of the tray.

4 Remove the face plate and store it.

The face plate is re-installed after removing the feeder.

5 Angle the Envelope Feeder into the printer.

6 Allow the Envelope Feeder to rest down at its seated position.

7 Reconnect the power cord(s) and power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

8 Print a Configuration Sheet and check that the Envelope Feeder appears in the "Installed Options" section. If not, remove it as per Steps 1 to 2 on page C-52, then repeat Steps 5 to 8 of this procedure.

9 Press Online , then Reset  and you see:

```
Reset Menu
Reset Printer
```

10 Press Down  and you see:

```
Reset Menu
Reset Menus
```

11 Press Enter  and the message display changes to:

```
Reset Menus
Please Wait...
```

This message displays while the printer resets the Source Mapping (PCL Menu) settings to factory defaults, including the Envelope Feeder.

When the reset is finished, the display changes to:

```
Online
Env Feeder Empty
```

If any other message is displayed, see Table 6.2 starting on page 6-6.

12 Set the Envelope Feeder size to the size of envelopes you will be loading into the feeder:

A Press Online  to take the printer offline.

B Press Menu .

C Press Down  until PCL Emulat. Menu (or PostScript Menu) is displayed, then press Enter .

D Press Down  until Env Feeder Size is displayed, then press Enter .

E Press Down  until your envelope size is displayed, then press Enter .

F After the printer finishes displaying **saved** press Online  to bring the printer online.

13 Load envelopes as per the instructions in the section “Using the Envelope Feeder” (page 2-16). For information on configuring your printer driver or application to use the Envelope Feeder, refer to the *Installation and Usage Guide* that came with the Envelope Feeder.

Note

Keep the original packaging material in case you ever need to remove the option.

Removing the Envelope Feeder

- 1 Power OFF the printer and disconnect the power cord(s).**

- 2 Lift the Envelope Feeder up and out from the printer.**

Store the Envelope Feeder in its original packaging materials, or in a dry, dust-free place.

- 3 Re-attach the face plate that was removed when the Envelope Feeder was installed.**

- 4 Close the hinged clasp at the left side of the Front Tray.**

Close the Front Tray if not needed.

- 5 Reconnect the power cord(s) and power ON the printer.**

After warming up for a few minutes, the Control Panel displays the following message:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

6 Press Online , then Reset  and you see:

```
Reset Menu
Reset Printer
```

7 Press Down  and you see:

```
Reset Menu
Reset Menus
```

8 Press Enter  and the message display changes to:

```
Reset Menus
Please Wait...
```

This message displays while the printer resets the Source Mapping (PCL Menu) settings to factory defaults.

When the reset is finished, the display changes to:

```
Online
Ready
```

If any other message is displayed, see Table 6.2 starting on page 6-6.

Font Cards and Macro Cards

Follow the instructions below to either install or remove font cards or macro cards. Up to two cards can be installed, in any combination.

- 1** Press Online  to take the printer offline.
- 2** Insert or remove the card.
If removing a card, skip to Step 5.
- 3** Press Online  to put the printer back online.
- 4** To verify that the printer recognizes the card as installed, print a Configuration Sheet.
 - A** Press Online  to take the printer offline.
 - B** Press Menu , then Down  or Up  until you see:
Main Menu
Test Menu
 - C** Press Enter  and the message display changes to:
Test Menu
Config. sheet
 - D** Press Enter  again to print a Configuration Sheet.
You should see the card listed under "Installed options."
- 5** Press Online  to put the printer back online.

Xerox Network Interface Card (XNIC)

This section contains two sets of instructions:

- “Installing the XNIC” (page C-56)
- “Removing the XNIC” (page C-60)

These instructions apply to Ethernet (XNIC-E'NET), Token Ring (XNIC-T'RING) and LocalTalk (XNIC-L'TALK).

Caution

The XNIC and controller board are sensitive to static electricity. Before installing the XNIC, discharge static electricity from your body by touching something metal, such as the metal back plate on any device plugged into a grounded power source. If you walk around before finishing the installation, again discharge any static electricity.

Never remove the printer controller board while the printer is plugged in.

Note

The printer is capable of supporting two XNICs; however, do not install two of the same XNICs in the printer.

Installing the XNIC

Note

Be sure to refer to the XNIC Configuration Guide for important network connection instructions.

1 Power OFF the printer and disconnect the power cord and any interface cables.

- If installing the XNIC-T'RING, continue with Step 2.
- If installing the XNIC-E'NET, skip to Step 4 on page C-57.
- If installing the XNIC-L'TALK, skip to Step 5 on page C-57.

2 Note the XNIC-T'RING serial number (A) and Token Ring address (B).

This information will not be accessible after the card is installed.

3 Note the XNIC-T'RING data rate, which is determined by the jumpers on the JX2 pins (A).

- Pins 1 and 2 are strapped together for 4 mbps.
- Pins 2 and 3 are strapped together for 16 mbps.

This information will not be accessible after the card is installed.

Skip to Step 5 on page C-57.

4 Note the XNIC-E'NET serial number (A) and Ethernet address (B).

 This information will not be accessible after the card is installed.

 Pins 2 and 3 on JX1 (C) must be strapped together for proper operation of the XNIC-E'NET.

5 Loosen the thumb screws and pull out the controller board.

6 Place the controller board on a ream of paper and remove the screws and faceplate from the slot where you will install the XNIC.

 If installing two XNICs and one of them is the XNIC-T'RING, the XNIC-T'RING must be installed in the right-hand slot.

 Save the faceplate should you ever need to remove the XNIC.

7 Line up the XNIC connector to the slot in the controller board.

8 Gently press the card down until it fits snugly in place.

9 Secure the XNIC mounting bracket to the controller board with the screws removed in Step 6.

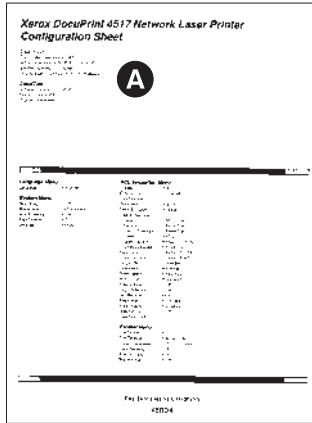

10 Replace the controller board, sliding it along the alignment channels. Then hand-tighten the thumb screws.

11 Replace the power and interface cables and power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

**12** Print a Configuration Sheet to verify that the XNIC has been installed properly. Applicable data should appear on the Configuration Sheet (A).

A Press Online  to take the printer offline.

B Press Menu , then Down  or Up  until you see:

Main Menu
Test Menu

C Press Enter  and the message display changes to:

Test Menu
Config. sheet

D Press Enter  again to print a Configuration Sheet.

E After the Configuration Sheet prints, press Online  to put the printer back online.

**Note**

Keep the original packaging material in case you ever need to remove the option.

Removing the XNIC

- 1** Power OFF the printer and disconnect the power cord and any interface cables.

- 2** Loosen the thumb screws and pull out the controller board.

- 3** Place the controller board on a ream of paper.

- 4** Unscrew the XNIC mounting bracket from the controller board.

- 5** Gently lift up on the card until it detaches from the controller board.

- 6** Lift the card out and away from the slot in the controller board. Then replace the screws and faceplate that came with the printer.

Store the XNIC in its original packaging materials, or in a dry, dust-free place.

- 7** Replace the controller board, sliding it along the alignment channels. Then hand-tighten the thumb screws.

- 8** Replace the power and interface cables and power ON the printer.

After warming up for a few minutes, the Control Panel displays the following message:

Online
Ready

If any other message is displayed, see Table 6.2 starting on page 6-6.

Appendix D

Control Panel Options

Table D.1, starting on page D-3, contains an alphabetical listing of all Control Panel options. For each option listed, you will find:

- The menu(s) under which the option is located
- The factory and default settings for the option.
A boldfaced menu item means it is a factory setting. A menu item followed by an asterisk means a reset will default to this setting. Example: For the option "Auto Job End" the selection **On*** is the factory setting (**bold**) and the reset default value (*).
- All possible settings for the option
- A description of the option

You can normally use your own applications to override many of the printer's default settings. For example, most applications allow you to choose how many copies of the print job you want. The number of copies you specify through your application will override the printer's default setting for the "Copies" option.

Figure D.1 below lists all Control Panel options whose settings you can normally override. (Only in the absence of information from the print job will the printer use the default settings for these options.) Refer to Table 3.7 on page 3-15 or Table 3.9 on page 3-21 for specifics to PCL and PostScript respectively.

Figure D.1 Control Panel settings (options) normally overridden by the print job

Copies	Page Protection
Default Source	Paper Size
Default Tray	Pitch
Duplex	Point Size
Edge to Edge	Print Quality
Font Number	Resolution
Font Source	Symbol Set
Orientation	System Language
Output Bin	Tray Switching

Table D.1 Control Panel menu options, settings, and descriptions

Menu Option, Location(s), Setting(s)	Description
Auto Continue <i>System Menu</i> Off* On	Controls whether the printer resumes printing after system errors occur. <ul style="list-style-type: none"> When set to <i>Off</i>, the printer does not automatically resume. Enter * must be pressed before normal printer operations can continue. When set to <i>On</i>, the printer automatically resumes operation after certain system errors if Enter * is not pressed within ten seconds. The <i>On</i> setting is useful in a networked environment.
Auto Job End <i>Parallel Menu</i> <i>Serial Menu</i> <i>Ethernet Menu</i> <i>Token Ring Menu</i> Off On*	Controls automatic ending of a print job that does not finish printing. <p> <i>With the Hard Disk option installed and Disk Spooling (page D-6) set to On, Auto Job End is always On (regardless of setting).</i></p>
Baud Rate <i>Serial Menu</i> 19200 9600* 4800 2400 1200 600 300	Controls the speed at which data is transferred. <p> <i>This setting must match the host computer baud rate setting. Your software application may set the baud rate. If not, use the DOS MODE command to modify the baud rate on the host computer.</i></p>
Bidirectional <i>Parallel Menu</i> Off On*	Activates two-way communications between the printer and your computer. The <i>On</i> setting enables the printer to send messages to your computer. <p> Only set Bidirectional to Off if you have no software application that supports it.</p>
Bin Full[†] <i>Mailbox Menu</i> Stop Printing* Send to Standard [†] Appears only when the Mailbox/Collator option is installed.	Determines printer's behavior when printing an unsecured job and a mailbox bin is full.

Table D.1 Page 1 of 21

Table D.1 Control Panel menu options, settings, and descriptions (continued)

Menu Option, Location(s), Setting(s)	Description
Bin N[†] <i>Mailbox Menu</i> <i>Mailbox Option</i> N = 1 to 10 [†] Appears only when the Mailbox/Collator option is installed.	Selects Bin 1 to Bin 10 prior to enabling or disabling a password.
Cancel PS Job[†] <i>Reset Menu</i> [†] Appears only when a PostScript job is received.	Cancels the current PostScript job.
Collator[†] <i>Mailbox Menu</i> [†] Appears only when the Mailbox/Collator option is installed.	Sets up and enables or disables a password for the collator.
Config. sheet <i>Test Menu</i>	Prints a Configuration Sheet showing the printer's current information and menu settings.  <i>The Configuration Sheet is printed at Defaults size, regardless of actual paper size, and on letter size or A4 size paper when Defaults is set to USA or Europe respectively.</i> Config. sheet will cause a printer reset.
Copies <i>PCL Emulat Menu</i> <i>PostScript Menu</i> 1* - 99	Specifies the number of times each page is printed.
Data Bits <i>Serial Menu</i> 8* 7	Specifies the number of data bits in a character.

Table D.1 Page 2 of 21

Table D.1 Control Panel menu options, settings, and descriptions (continued)

Menu Option, Location(s), Setting(s)	Description
<p>Defaults</p> <p><i>System Menu</i></p> <p>Europe USA</p>	<p>Controls default paper size settings in various menus.</p> <ul style="list-style-type: none"> When set to <i>Europe</i>, Paper Size (page D-15), Front Tray Size (page D-9), and Manual Size (page D-13) options are set to A4 (210x297), and Form Length (page D-9) is set to 64. When set to <i>USA</i>, Paper Size (page D-15), Front Tray Size (page D-9), and Manual Size (page D-13) options are set to Letter (8.5x11), and Form Length (page D-9) is set to 60. <p> Perform a Reset Menus after changing the Defaults setting.</p>
<p>Default Source</p> <p><i>PCL Emulat Menu</i></p> <p>Upper* Manual Manual Envelope Lower Large Capacity Envelope Feeder</p>	<p>Specifies default paper source in PCL if none is specified by your software application.</p> <p> This source is associated with input tray(s) according to the setting of <i>Source Mapping</i>.</p>
<p>Default Tray</p> <p><i>PostScript Menu</i></p> <p>Main Tray* Front Tray Lower 1 Tray[†] Lower 2 Tray[†] Envelope Feeder[†]</p> <p>[†] Appears only when the option is installed.</p>	<p>Specifies paper tray used if none is specified in your software application.</p> <p> The 2,000-sheet High Capacity Feeder appears as a lower tray when installed.</p>
<p>Demo Page</p> <p><i>Test Menu</i></p>	<p>Prints a page demonstrating the printer's capabilities.</p> <p> The Demo Page is printed at Defaults size, regardless of actual paper size, and on letter size or A4 size paper when Defaults is set to <i>USA</i> or <i>Europe</i> respectively.</p> <p>Demo Page will cause a printer reset.</p>

Table D.1 Page 3 of 21

Table D.1 Control Panel menu options, settings, and descriptions (continued)

<p>Disable Password[†]</p> <p><i>Mailbox Menu</i> <i>Collator Option</i> <i>Mailbox Option</i> <i>Bin N Setting</i></p> <p>[†] Appears only when the Mailbox/Collator option is installed.</p>	<p>Disables the password for a specific mailbox bin or for the collator bins.</p>
<p>Disk Spooling[†]</p> <p><i>System Menu</i></p> <p>Off* On</p> <p>[†] Appears only when the hard drive option is installed.</p>	<p>Controls spooling to the hard disk (if installed).</p> <ul style="list-style-type: none"> • When set to <i>On</i>, data received and waiting to be processed from any port is spooled onto the hard disk and later retrieved for processing. • When set to <i>Off</i>, data received and waiting to be processed is kept in printer memory. Set Disk Spooling to <i>Off</i> to save time if spooling is already done outside the printer.
<p>DTR Polarity</p> <p><i>Serial Menu</i></p> <p>High* Low</p>	<p>Determines the serial port's DTR (Data Terminal Ready) signal sent from the printer to notify the host computer that it is ready to receive data.</p> <ul style="list-style-type: none"> • <i>High</i> is standard for most computers; it uses true logic (+5V). • <i>Low</i> is typically used on nonstandard equipment; it uses inverted logic (0 V).
<p>Duplex (PCL)[†]</p> <p><i>PCL Emulat Menu</i></p> <p>Off* Short Edge Bind Long Edge Bind</p> <p>[†] Appears only when the Duplex option is installed.</p>	<p>Enables and disables duplex printing for PCL jobs.</p>
<p>Duplex (PostScript)[†]</p> <p><i>PostScript Menu</i></p> <p>Off* Tumble Regular</p> <p>[†] Appears only when the Duplex option is installed.</p>	<p>Enables and disables duplex printing for PostScript jobs.</p>

Table D.1 Page 4 of 21

Table D.1 Control Panel menu options, settings, and descriptions (continued)

Menu Option, Location(s), Setting(s)	Description
<p>Edge to Edge</p> <p><i>PCL Emulat Menu</i></p> <p>Off* On</p>	<p>Enables and disables edge to edge printing.</p> <ul style="list-style-type: none"> • When <i>On</i>, PCL jobs are printed to the edge of the paper (however, some PCL applications may force a 0.5 in. top margin). • When <i>Off</i>, PCL jobs are printed in normal printable area of the page (full page size minus a 1/6" margin at top, bottom, left, and right sides of page).
<p>Enable Password[†]</p> <p><i>Mailbox Menu</i> <i>Collator Option</i> <i>Mailbox Option</i> <i>Bin N Setting</i></p> <p>[†] Appears only when the Mailbox/Collator option is installed.</p>	<p>Enables a password for a specific mailbox bin or for the collator bins.</p>
<p>Enter Password[†]</p> <p><i>Mailbox Menu</i> <i>Collator Option</i> <i>Enable Password</i> <i>Disable Password</i> <i>Mailbox Option</i> <i>Bin N Setting</i> <i>Enable Password</i> <i>Disable Password</i></p> <p>0000 - 7777</p> <p>[†] Appears only when the Mailbox/Collator option is installed.</p>	<p>Controls enabling, disabling, and changing of passwords for collator mode or for a specific mailbox bin. The defaults are shown on page 2-27. Enter the old password in order to be allowed to disable it, change it, or enable it.</p>
<p>Env Feeder Size[†]</p> <p><i>PCL Emulat Menu</i> <i>PostScript Menu</i></p> <p>Com-10* (USA) C5 DL* (Europe) Monarch C6</p> <p>[†] Appears only when the Envelope Feeder option is installed.</p>	<p>Informs the printer what size of envelope is currently loaded in the Envelope Feeder.</p> <p>Because the Envelope Feeder does not have a size sensor, this setting is required so that the printer is able to know when the size of envelope requested for printing is different than that loaded. When the sizes do not match, and the Page Size Cont option is set to <i>Off</i>, the printer displays a message asking for a change of envelope size; pressing Enter * causes printing to resume using the (incorrect) envelope size loaded.</p> <p> <i>Changing Env Feeder Size in either the PCL Emulat Menu or the PostScript Menu changes the size in the other menu.</i></p>

Table D.1 Page 5 of 21

Table D.1 Control Panel menu options, settings, and descriptions (continued)

Menu Option, Location(s), Setting(s)	Description
Ethernet Menu [†] <i>Interface Menu</i> [†] Appears only when the XNIC-E'NET option is installed.	Invokes the Ethernet Menu.
Fmt LwrMacroCard [†] <i>Test Menu</i> [†] Appears only when the macro card is installed.	Causes the Lower Macro card to be formatted or reformatted.  This action erases all data on the macro card. It must therefore be confirmed before it is executed.
Fmt UprMacroCard [†] <i>Test Menu</i> [†] Appears only when the macro card is installed.	Causes the Upper Macro card to be formatted or reformatted.  This action erases all data on the macro card. It must therefore be confirmed before it is executed.
Font Number <i>PCL Emulat Menu</i> 0* - 999	Specifies the ID of the default font in PCL. Only values valid for the Font Source location are displayed. For example, if you have <i>internal</i> fonts only, the maximum Font Number is 52. Font Number values are printed on the PCL Font List in the first column. Print a PCL Font List to find the correct number to use with this setting. Hold Up  or Down  for approximately two seconds and Font Number scrolls in increments of 10.  The Font Number setting returns to its factory setting (0) if Symbol Set (page D-22) is changed. If the Font Source setting specifies a location other than Internal, Font Number reverts to 0 automatically.
Font Source <i>PCL Emulat Menu</i> Internal* Upper [†] Lower [†] Soft† [†] Appears only when there are fonts in these locations.	Location of the default font in PCL. <i>Internal</i> refers to the font set residing in the printer's permanent memory. These fonts are resident in the printer and cannot be altered. <i>Upper</i> and <i>Lower</i> refer to the two font card slots and appear only when a font card is installed in a slot.  The Font Source setting returns to its factory setting (Internal) if Symbol Set (page D-22) is changed. If the Font Source setting specifies a location other than Internal, Font Number reverts to 0 automatically.

Table D.1 Page 6 of 21

Table D.1 Control Panel menu options, settings, and descriptions (continued)

Menu Option, Location(s), Setting(s)	Description
<p>Format the Disk[†]</p> <p><i>Test Menu</i></p> <p>[†] Appears only when the hard drive option is installed.</p>	<p>Causes the hard disk to be formatted or reformatted.</p> <p> This action erases all data on the hard disk. It must therefore be confirmed twice before it is executed.</p>
<p>Form Length</p> <p><i>PCL Emulat Menu</i></p> <p>005 - 128 64* (Europe) 60* (USA)</p>	<p>Number of lines per page used in PCL.</p> <p>The Form Length setting is automatically adjusted when Paper Size (page D-15) is changed. For example, if you set Paper Size to A4 (210x297), Form Length is adjusted to 64 automatically. If Paper Size is set to <i>Letter</i> (8.5x11), Form Length is adjusted to 60.</p> <p>Hold Up  or Down  for approximately two seconds and Form Length scrolls in increments of 10.</p>
<p>Front Tray Size</p> <p><i>PCL Emulat Menu</i></p> <p>Legal (8.5x14) Folio (8.5x13) Letter (8.5x11)* (USA) A4 (210x297)* (Europe) Exec (7.25x10.5) ISO B5 (176x250) Statement (5.5x8.5) A6 (105x148) Com-10 (4-1/8x9.5) C5 (162x229) DL (110x220) Monarch (3-7/8x7.5) C6 (114x162)</p>	<p>Specifies the size of paper loaded in the Front Tray.</p> <p>Because the front tray does not have a size sensor, this setting is required so that the printer is able to know when the size of paper requested for printing is different than that loaded. When the sizes do not match, and the Page Size Cont option is set to <i>Off</i>, the printer displays a message asking for a change of paper size; pressing Enter  causes printing to resume using the (incorrect) paper size loaded.</p> <p> Changing Front Tray Size in the PCL Emulat Menu changes the PostScript Manual Size (and vice versa).</p>

Table D.1 Control Panel menu options, settings, and descriptions (continued)

Menu Option, Location(s), Setting(s)	Description
PCL Emulat Menu <i>Main Menu</i>	Invokes the PCL Emulat Menu.
PCL Font List <i>Test Menu</i>	Prints a complete list of all PCL fonts currently available in the printer. Printing is on the paper size and from the default source as per Source Mapping specified in the PCL Emulat Menu.
Perform Enhance <i>System Menu</i> Off On*	<p>Prints jobs with maximum throughput. However, when Page Protection is set to <i>Off</i>, some complex jobs may not print successfully with minimum memory. If this occurs, set Perform Enhance to <i>Off</i>. If the job still does not print, then set Page Protection to <i>On</i> (for PostScript) or to the appropriate paper size (for PCL emulation), and install the required system memory.</p> <p>When Perform Enhance is set to <i>Off</i>, the system will optimize job processing in minimal memory, but throughput will be reduced.</p>
Pitch <i>PCL Emulat Menu</i> 0.44 - 99.99 by .01 steps 10.00* c.p.i.	<p>Specifies the number of characters per inch (cpi) for the font represented by Font Number (page D-8).</p> <p>It appears only when the Font Number setting (page D-8) specifies a scalable fixed pitch font.</p> <p>Up  increments pitch by .01 cpi, from .44 to 99.99 cpi. Down  decrements by .01 cpi.</p> <p>Hold Up  or Down  for approximately two seconds and Pitch scrolls in increments of 1.</p>
Point Size <i>PCL Emulat Menu</i> 4.00 - 999.75 by .25 steps 12.00* points	<p>Specifies the point size (a measurement for type height, 1 point equals 0.351 mm or approximately 1/72 inch) for the font represented by Font Number (page D-8).</p> <p>Appears only when the Font Number setting specifies a scalable proportional spaced font, such as Times New Roman.</p> <p>Up  increments point size by .25 points, from 4.0 to 999.75 points. Down  decrements by .25 points.</p> <p>Hold Up  or Down  for approximately two seconds and Point Size scrolls in increments of 1 point.</p>

Table D.1 Page 14 of 21

Table D.1 Control Panel menu options, settings, and descriptions (continued)

Menu Option, Location(s), Setting(s)	Description
Port Enable <i>Parallel Menu</i> <i>Serial Menu</i> <i>LocalTalk Menu</i> <i>Ethernet Menu</i> <i>Token Ring Menu</i> Off On*	Controls activation of the port. <ul style="list-style-type: none"> • When set to <i>On</i>, the port is enabled so that the printer can receive print jobs through it. The port becomes part of a port polling sequence that includes all ports. • When changed from <i>Off</i> to <i>On</i>, the respective NIC is initialized. • When set to <i>Off</i>, the port is disabled so that no communication with the host occurs through this port. If you are not using the port, you can set Port Enable to <i>Off</i>.
Port Timeout <i>Parallel Menu</i> <i>Serial Menu</i> <i>LocalTalk Menu</i> <i>Ethernet Menu</i> <i>Token Ring Menu</i> 5-999 seconds 30* seconds	Time interval for determining when to end an incomplete print job and poll the next port in the polling sequence. This option works in conjunction with Auto Job End (page D-3). Hold Up  or Down  for approximately two seconds and Port Timeout scrolls in increments of 10.
PostScript Menu[†] <i>Main Menu</i> [†] Appears only with the PostScript option installed.	Invokes the PostScript Menu.
Power Saver <i>System Menu</i> Off 120 minutes 90 minutes 60 minutes 30 minutes 15 minutes	The DocuPrint 4517 conforms to EPA Energy Star guidelines. The printer will enter a low power state after the specified period of inactivity. This timeout is adjustable to 15, 30, 60, 90, or 120 minutes via this option. When in the low power state, the printer displays Power Saver On on the Control Panel. When a print job is received while in the Power Saver mode, the printer may require up to 70 seconds of warm-up time before the first sheet is fed from the input tray.
Print Density <i>System Menu</i> 0 - 12 3*	Controls the density of the image printed on the page. The lower the setting, the lower the density; the higher the number, the higher the print density.  Changing the default setting can adversely affect gray shading, line sharpness and Toner Saving. Change this setting with caution.

Table D.1 Page 15 of 21

Table D.1 Control Panel menu options, settings, and descriptions (continued)

Menu Option, Location(s), Setting(s)	Description
Print Errors <i>PostScript Menu</i> Off* On	Controls PostScript's built-in error handler (debugger). Should the printer encounter a PostScript error while printing a job, PostScript prints an error sheet when Print Errors is set to <i>On</i> . This is useful on a network, as an error sheet will alert the user that the print job had errors and was canceled.
Print Quality <i>PCL Emulat Menu</i> <i>PostScript Menu</i> Normal TrueRes* Toner Saving	Controls print quality through the use of <i>TrueRes</i> for edge smoothing (enhancement), or <i>Toner Saving</i> for draft print quality. <ul style="list-style-type: none"> • <i>Normal</i> = no edge smoothing • <i>TrueRes</i> = edge smoothing (available only with 600x600 print resolution) • <i>Toner Saving</i> = draft print quality (to save on toner usage) (available only with 600x600 print resolution)  <i>When Resolution (page D-19) is set to 1200x600, you cannot set Print Quality to TrueRes or Toner Saving.</i>
PS Font List [†] <i>Test Menu</i> [†] Appears only with the PostScript option installed.	Prints a complete list of all PostScript language typefaces on the printer. Printing is from the Default Tray as specified in the PostScript Menu.
Reset All <i>Reset Menu</i>	Initiates the Reset Printer, Reset Menus, Reset Ethernet, Reset LocalTalk, and Reset TokenRing functions.  <i>To ensure proper operation of this feature, cycle the printer (turn the printer off/on) before invoking Reset All.</i>
Reset Ethernet [†] <i>Reset Menu</i> [†] Appears only when the XNIC-E'NET option is installed and enabled.	Resets the Ethernet network interface card to its power-on state.
Reset LocalTalk [†] <i>Reset Menu</i> [†] Appears only when the XNIC-L'TALK option is installed and enabled.	Resets the Local Talk network interface card to its power-on state.

<i>Printing a PCL Font List</i>	E-3
PostScript Fonts	E-4

Base Printer Fonts

The DocuPrint 4517 base printer is equipped with 46 resident fonts (See Table E.1) that can be used for PCL jobs:

- 10 TrueType™ scalable typefaces
- 35 Intellifont™ scalable typefaces
- 1 PCL Bitmap font

Note

To review the PCL fonts in your printer, print a PCL Font List, as described on the next page.

Printing a PCL Font List

- 1** On the Control Panel, press Online  to take the printer offline.
- 2** Press Menu , then Up  or Down  until you see:
Main Menu
Test Menu
- 3** Press Enter , then Up  or Down  until you see:
Test Menu
PCL Font List
- 4** Press Enter  again to print the PCL Font List.
- 5** After the PCL Font List prints, press Online  again to bring the printer online.

PostScript Fonts

When the PostScript option is installed, there are 35 resident PostScript fonts available for printing PostScript jobs (as shown in Table E.2).

Appendix G

DocuPrint 4517 Unique Printer Commands

<i>Overview</i>	G-2
<i>Paper Size</i>	G-3
<i>Paper Source Selection</i>	G-5
<i>Output Trays</i>	G-6
<i>Raster Resolution</i>	G-7
<i>PCL Macro Commands</i>	G-8
<i>Font Priority</i>	G-11

Overview

In addition to the standard PCL printer commands, Xerox has added some unique settings for the DocuPrint 4517 in the following areas:

- Paper Size

Values are added for the "#" parameter in the PCL Page Size command. See the section "*Paper Size*" (page G-3).

- Paper Source Selection

Additional values are added for the standard PCL paper source command. See the section "*Paper Source Selection*" (page G-5).

- Output Trays

Additional values are added for the standard PCL destination command. See the section "*Output Trays*" (page G-6).

- Raster Resolution

The PCL Raster Graphics Resolution command is expanded to allow 1200 dots per inch. See the section "*Raster Resolution*" (page G-7).

Note

PCL printer commands not listed in this section emulate exactly the standard PCL commands defined in Hewlett Packard's HP PCL 5 Printer Language Technical Reference Manual.

Paper Size

Table G.1 shows the paper sizes and corresponding paper trays supported by the DocuPrint 4517. An "X" indicates support for a paper size in a specific tray. The escape sequence number refers to the "#" parameter in the Page Size command (Esc & | # A).

Table G.1 Paper size support

Paper Size	Escape Sequence Number	Paper Trays			
		DocuPrint 4517			
		Main Tray	Lower Tray	Front Tray	Envelope Feeder
Executive	1	X		X	
Letter	2	X	X	X	
Legal (8.5 x 14")	3	X	X	X	
A4	26	X	X	X	
Monarch (Env.)	80			X	X
Com10 (Env.)	81			X	X
DL (Env.)	90			X	X
C5 (Env.)	91			X	X
ISO B5	100			X	
A6	2003			X	
Folio (8.5 x 13")	3001	X	X	X	
Statement (5.5 x 8.5")	3002			X	
C6 (Env.)	3004			X	X

It is possible that the Envelope Feeder may be removed while one of the PCL source mapping settings contains a sequence that includes the Envelope Feeder. To guard against this, the printer checks the source mapping settings and the presence of an Envelope Feeder each

time the printer is powered on. If an Envelope Feeder is not attached, any mapping that contains "Envelope Feeder" will be changed to "Front." If an Envelope Feeder is attached to the printer again, the Envelope Feeder will not be restored in any source mapping setting automatically. The Control Panel can be used to perform a "Reset Menus" or to select a new value for source mapping.

Paper Source Selection

PCL recognizes the six paper sources shown in Table G.2. (These PCL paper sources may, or may not, appear in your software application, or they may appear under alternate names. Remember that these logical sources are mapped to actual trays by the settings of Source Mapping (see page 2-19.)

Table G.2 Six PCL paper sources

PCL Paper Source	PCL Command [†]	Alternate Names
Upper	<Esc>&11H	Main Tray, Paper Tray, Paper Cassette
Manual	<Esc>&12H	Front Tray, Manual Feed
Manual Envelope	<Esc>&13H	Envelope Manual Feed
Lower	<Esc>&14H	Lower Tray
Large Capacity	<Esc>&15H	Paper Deck
Envelope Feeder	<Esc>&16H	N/A

[†] The character following the "&" in the command string is the lower case character "L."

Output Trays

The output tray is selected with the standard PCL destination command, but with additional values given in Table G.3 to address all the possible DocuPrint 4517 output trays.

Selection of the collator output value causes each copy of the output to use a different bin of the optional Mailbox/Collator, the first n bins for n copies (up to 10). The HP standard output value of 2 will be accepted for compatibility, and will use the standard output tray.

Table G.3 Output tray selection

Output Tray	PCL Command [†]
Standard	<Esc>&l11G
OCT	<Esc>&l99G
Collator	<Esc>&l100G
Mailbox bin 1	<Esc>&l101G
Mailbox bin 2	<Esc>&l102G
Mailbox bin 3	<Esc>&l103G
Mailbox bin 4	<Esc>&l104G
Mailbox bin 5	<Esc>&l105G
Mailbox bin 6	<Esc>&l106G
Mailbox bin 7	<Esc>&l107G
Mailbox bin 8	<Esc>&l108G
Mailbox bin 9	<Esc>&l109G
Mailbox bin 10	<Esc>&l110G

[†] The character following the "&" in the command string is the lower case character "L."

Raster Resolution

The PCL Raster Graphics Resolution command (<Esc>*t#R) is expanded to allow 1200 dots per inch. It also accepts negative arguments to indicate a resolution that applies in the fast-scan dimension only, in order to accommodate 1200x600 resolution.

PCL Macro Commands

The DocuPrint 4517 supports downloading of PCL macros to memory, optional PCMCIA card and or Hard Disk. The 4517 PCL Windows driver provides the capability to create and download macros which will work with most applications. In addition, application specialists that develop tailored applications can use form creation packages or hand code macros and include the 4517 PCL macro download/delete commands.

These commands should be used only by technical persons programming printer applications programs that involve storing/deleting macros on the printer's Hard Disk and/or PCMCIA card.

The 4517 uses custom PCL commands to download and delete PCL macros to/from the optional Hard Disk and PCMCIA card. Standard PCL commands are used to download PCL Macros to memory, and to invoke the downloaded Macros from any device via reference to the Macro ID#. In cases where a duplicate Macro number exists on the printer, the printer will access the Macro in priority order as follows: Memory, PCMCIA Upper Card, PCMCIA Lower Card, Rigid Disk. However, to ensure consistent results, it is recommended to delete duplicate Macro ID#s from the printer, prior to downloading a new Macro.

Tables G.4 to G.6 provide the macro commands for downloading and deleting macros.

Table G.4 4517 Download Macro Command Format

```
<ESC><SOH><STX>MACROL<loc> , <macro_id> , <len> , <macro_data><ETX>
```

where

<ESC> is the ascii ESC character, 1B hexadecimal

<SOH> is the ascii SOH character, 01 hexadecimal

<STX> is the ascii STX character, 02 hexadecimal

<loc> is DC for disk, or

C0 for Upper Card, or

C1 for Lower Card

<macro_id> is an ID number between 0 and 32767 ($=2^{15}-1$), inclusive. This is the ID by which the application references the macro.

<len> is the length of the macro data in bytes. Value allowed between 1 and 4294967294 ($=2^{32}-2$) inclusive. The length does not include the <ETX> following the macro data.

<macro_data> is the macro text. This text does not include the start macro definition command (<ESC>&f0X) or the stop macro definition command (<ESC>&f1X)

<ETX> is the ascii ETX character, 03 hexadecimal

Table G.5 4517 Delete Macro Command Format

```
<ESC><SOH><STX>MACROD<loc> , <macro_id> , <ETX>
```

where

<ESC> is the ascii ESC character, 1B hexadecimal

<SOH> is the ascii SOH character, 01 hexadecimal

<STX> is the ascii STX character, 02 hexadecimal

<loc> is DC for disk, or

C0 for Upper Card, or

C1 for Lower Card

<macro_id> is an ID number between 0 and 32767 ($=2^{15}-1$), inclusive. This is the ID by which the application references the macro.

<ETX> is the ascii ETX character, 03 hexadecimal

Table G.6 4517 Delete Macro Command Format

<ESC><SOH><STX>MACROP<loc><ETX>

where

<ESC> is the ascii ESC character, 1B hexadecimal

<SOH> is the ascii SOH character, 01 hexadecimal

<STX> is the ascii STX character, 02 hexadecimal

<loc> is DC for disk, or

C0 for Upper Card, or

C1 for Lower Card

<ETX> is the ascii ETX character, 03 hexadecimal

Font Priority

In cases where a duplicate font exists on the printer, the printer will access the font in priority order as follows:

1. Soft
2. Upper Font Card
3. Lower Font Card
4. Disk
5. Resident

Appendix H

Environmental Specifications

The Xerox Commitment to Environmental Quality

Xerox Corporation is committed to an international program to safeguard our environment by diverting certain products and materials from the solid waste stream. We do this by reusing serviceable components and remanufacturing selected products.

To support this effort, we have made it easy for you to return selected printer equipment and empty print cartridges to Xerox. We recondition the print cartridges and refill them with Xerox toner and developer. All products we manufacture meet our stringent performance standards.

The world-wide effort to remanufacture printer equipment and recall EP (print) cartridges benefits the environment and conserves our natural resources by reducing waste going into our landfills. Besides, it makes good business sense for Xerox and Xerox customers. Please join us in this effort.

Acoustic Noise Figures

On Standby (ROS Pause): 35dB(A)

Under Operation:

Continuous Sound: 49.5 dB(A)

**FCC Compliance
Statement for
United States
Users**

Class B:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses, and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/television technician for help.

Shielded cables must be used with this equipment to maintain compliance with FCC regulations.

Caution: Changes or modifications not expressly approved by Xerox Corporation could void the user's authority to operate the equipment.

Compliance Statement for International Users

Canadian EME Regulations:

This digital apparatus does not exceed the Class B limits for radio noise emissions from digital apparatus set out in the radio interference regulations of the Canadian Department of Communications.

Cet appareil numérique est conforme aux limites d'émission de bruits radioélectriques pour les appareils de Classe B stipulées dans le Règlement sur le brouillage radioélectrique du Ministère des Communications du Canada.

European EME Regulations:

"The CE marking applied to this product symbolizes Rank Xerox Declaration of Conformity with the following applicable Directives of the European Union as of the dates indicated:

January 1, 1995: - Council Directive 73/23/EEC amended by Council Directive 93/68/EEC, approximation of the laws of the member states related to low voltage equipment.

January 1, 1996: - Council Directive 89/336/EEC, approximation of the laws of the member states related to electromagnetic compatibility.

A full declaration, defining the relevant Directives and referenced standards can be obtained from your Rank Xerox representative."

Operational Safety

Your Xerox equipment and supplies were designed and tested to meet strict safety requirements. These include safety agency examination, approval, and compliance with established environmental standards.

Attention to the following notes ensures the continued safe operation of your equipment.

Always connect the equipment to a properly grounded power source receptacle. If in doubt, have the receptacle checked by a qualified electrician.

WARNING: Improper connection of the equipment grounding conductor can result in electrical shock.

Always follow all warnings and instructions marked on, or supplied with, the equipment.

Always locate the equipment on a solid support surface with adequate strength for the weight of the machine.

Always exercise care in moving or relocating the equipment.

Always place the equipment in an area which provides adequate room area for ventilation and servicing.

Always use the materials and supplies specifically designed for your Xerox equipment. Use of unsuitable materials may result in poor performance and, possibly, a hazardous situation.

Never use a ground adaptor plug to connect the equipment to a power source receptacle that lacks a ground connection terminal.

Never attempt any maintenance function that is not specifically described in this documentation.

Never obstruct ventilation openings. These are provided to prevent overheating.

Never install the equipment near a radiator or any other heat source.

Never override or "cheat" electrical or mechanical interlock devices.

Never push objects of any kind into the ventilation openings.

Never operate the equipment if you notice unusual noises or odors. Disconnect the power cord from the power source receptacle and contact your dealer or Xerox / Rank Xerox to correct the problem.

If you need any additional safety information concerning the equipment or materials, contact your dealer or Xerox / Rank Xerox.

WARNING: Use of controls, adjustments, or performance of procedures other than those specified herein may result in a hazardous radiation exposure.

This product will produce less than 0.1 ppm ozone during normal operation. The ozone produced is dependent on copy volume and is heavier than air. Providing the proper environmental parameters as specified by Xerox will ensure that concentration levels meet safe limits.

If additional information concerning ozone is needed, request the Xerox publication (600P83222), "Ozone," by calling in the USA 1-800-828-6571.

Laser Safety

WARNING: Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous light exposure.

This equipment complies with appropriate safety standards.

With specific regard to lasers, the equipment complies with laser product performance standards set by governmental, national, and international agencies as a Class 1 laser product. It does not emit hazardous light as the beam is totally enclosed during all phases of customer operation and maintenance.

When you perform various operator functions, laser danger labels may be visible. These labels are for your dealer or service technician and are placed on or near panels, or shields, which require a tool for removal. **THESE PANELS ARE NOT TO BE REMOVED BY USERS OF THE PRINTER. THERE ARE NO USER SERVICEABLE AREAS INSIDE THESE COVERS.**

Laser Safety Warning for Finland and Sweden

Luokitus on tehty standardin EN 60825 mukaisesti
Klassningen är gjord i enlighet med standarden EN 60 825

LUOKAN 1 LASERLAITE
KLASS 1 LASER APPARAT

VAROITUS!

Laitteen käyttäminen muulla kuin tässä käyttöohjeessa mainitulla tavalla saattaa altistaa käyttäjän turvallisuusluokan 1 ylittävälle näkymättömälle lasersäteilylle.

VARNING!

Om apparaten används på annat sätt än i denna bruksansvisning specificerats, kan användaren utsättas för osynlig laserstrålning, som överskrider gränsen för laserklass 1.
