### Abstract

The study documented a total of 490 vascular plant species belonging to 288 genera and 92 families, including 50 species of ferns and fern allies, 10 species of gymnosperms and 430 species of angiosperms from the Gyasuvmbdo valley of Manang district. Asteraceae with 21 genera and 40 species was found to be the largest family, followed by Ranunculaceae (8 genera, 28 species), Rosaceae (13 genera, 23 species), Orchidaceae (18 genera, 23 species), Apiaceae (13 genera, 18 species), Pteridaceae (10 genera, 17 species) and Lamiaceae (13 genera, 17 species). *Thalictrum* was found to the largest genera with 11 species, which was followed by *Pedicularis* (9), *Carex*, *Saxifraga*, *Primula* with eight species each. The rich flora of Gyasumbdo valley reflects that the valley serves as a meeting place for both western and eastern Himalayan floristic elements.

**Keywords:** Checklist, Compositae, Enumeration, Flora

### Introduction

Biodiversity is the variation of life at different levels of biological organizations. Thus, it includes diversity within species and between species and ecosystems (Chaudhary, 1998). Himalayan region is considered as the hotspot of biodiversity with diverse vegetation, community and floral diversity (Sharma et al., 2014). Biodiversity is essential for the survival as well as economic well-being and for the ecosystem functioning and its stability. Therefore, it is necessary to conserve the biodiversity. Biodiversity conservation and sustainability cannot be achieved without adequate knowledge of vegetation of any area. As per the Convention on Biological Diversity 1992, documentation of the biodiversity is one of the most prioritized tasks by the world, which is possible only through extensive botanical exploration and floristic studies.

Floristic study refers to the documentation of all plants species in a given geographical region (Simpson, 2006). These studies help in botanical enumeration, updating nomenclature changes of the species, adding herbarium specimens in the existing herbaria and comparison of close or distantly related plants. Together, they also help to protect and preserve threatened plant species, monitor their

status and provide effective management strategies for the particular vegetation type (Sahu & Dhal, 2012). The results of such floristic works mostly come in the form of floras (Palmer et al., 1995) which may be local, regional, country-wise and so on or they may be in the form of checklists too.

Nepal comprises a unique and enormous diversity of flora within a relatively small geographical area due to variation in topography, altitude (60 m asl in Southern Terai to over 8000 m asl towards the Himalayas in the north) and climate. Nepal lies in a transitional zone between Eastern and Western Himalayan flora (Takhtajan, 1986). Thus, Nepal has a gift of over 7000 species of vascular plants among which, 6653 are flowering plants (Poudel, 2011).

Dobremez (1976) divided Nepal Himalaya into four regions: Eastern, Central, Western and Trans-Himalayan biogeographic regions. He included Mustang and Manang into trans- Himalayan biogeographic regions. Manang district lies in the arid zone northward of the massif Himalayas, the vegetation of the study area is quite similar to that of Tibetan Plateau (Chaudhary, 1998). The vegetation is mostly composed of scares and scattered patches of the thorny cushion plants, whereas sheltered places have *Juniperus* and blue

pine while moist ravines and riverbanks have poplars and seabuckthorn (Dobremez, 1976).

Adhikari (2007) studied the flora of lower Manang and adjoining area and reported 245 species under 203 genera and 79 families. Pohle (1990) reported 239 useful plants from Manang district, of which 77 were from Gyasumbdo valley alone. Joshi (2011) reported 176 species of vascular plants, belonging to 96 genera and 49 families from upper Manang. Shrestha et al. (1995) reported 90 species of medicinal and aromatic plants (MAPs) belonging to 81 genera and 51 families have been recorded from the lower valleys of Manang district.

## Materials and Methods

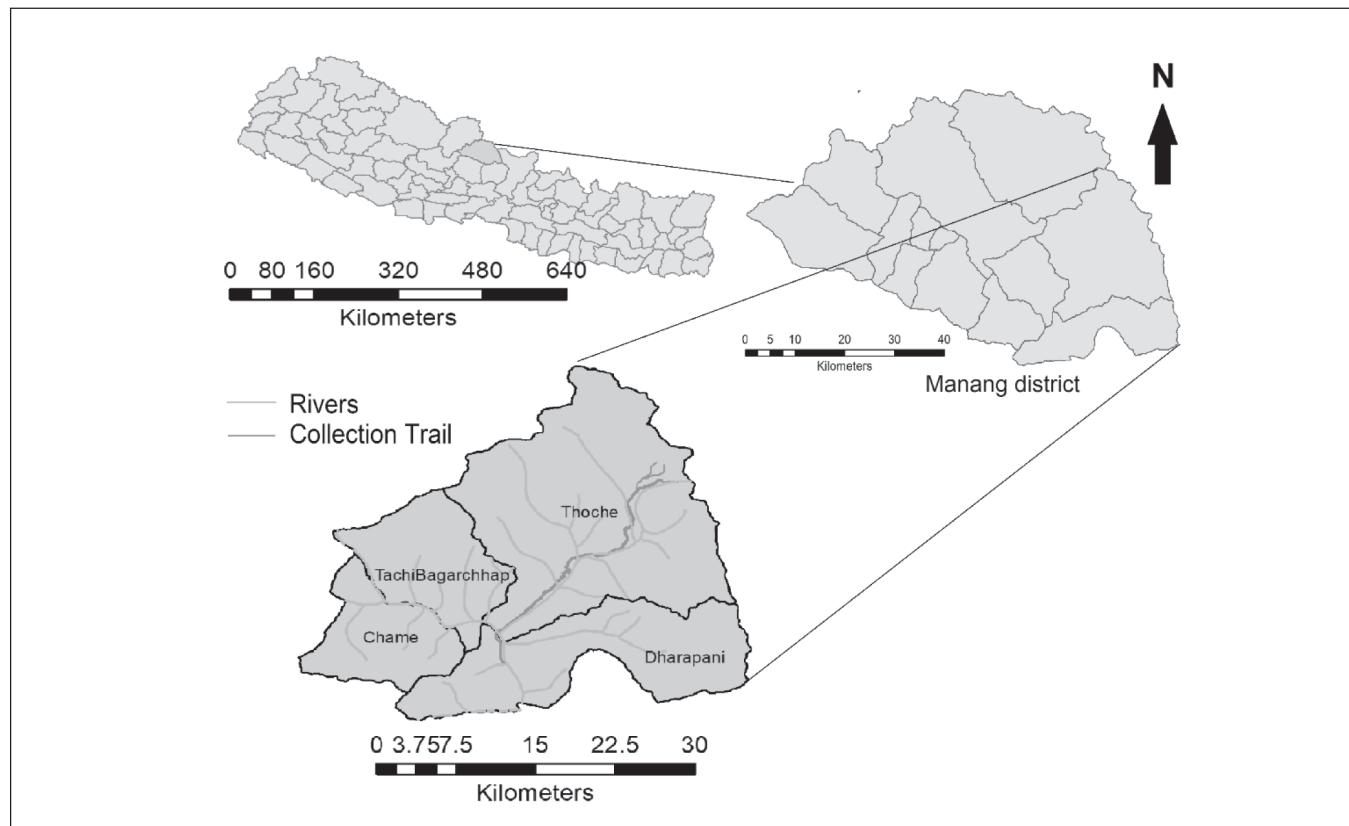

### Study site

Gyasumdo valley lies on the south eastern part of the Manang district thus; it receives comparatively higher precipitation compared to the other valleys of the district. Monsoon enters from south-east, resulting a decreasing moisture from east to west in

Manang valley, thus, the south-facing slopes are significantly drier and warmer than those facing north (Baniya et al., 2009). Depending upon the rainfall extent Manang is categorized into Upper Manang and Lower Manang. Lower Manang consists of single large valley; the Gyasumbdo valley. There is still a relatively rich subtropical vegetation, predominant with dense oak (*Quercus* species) and *Rhododendron* forests in the lower belt and conifers (*Pinus wallichiana*, *Picea smithiana*, *Taxus contorta*, *Tsuga dumosa* and *Abies spectabilis*) in the upper belt (Shrestha et al., 1995). The study area partially lies within the territory of the Annapurna Conservation Area.

### Methods

Voucher specimens of each species of the vascular plants on the state of either flowering or fruiting or both were collected from the study area during three field visits from September, 2015 to August, 2017, especially along the trail and herbarium specimens were prepared. Identification of those voucher specimens was carried out by following standard

**Figure 1:** Map of Nepal showing Manang district & collection trail in Gyasumbdo valley.

literatures (Grieson and Long 1983-2001; Polunin and Stainton 1984; Stainton 1988; Zheng-Yi and Raven 1996-2003; Press et al. 2000; Ohba et al. 2008; Fraser-Jenkins 2015), expert consultation and visit to the herbaria (TUCH and KATH). Nomenclature follows the Catalogue of Life ([www.catalogueoflife.org](http://www.catalogueoflife.org) 2019) and Plants of the World Online ([plantsoftheworldonline.org](http://plantsfortheworldonline.org) 2019).

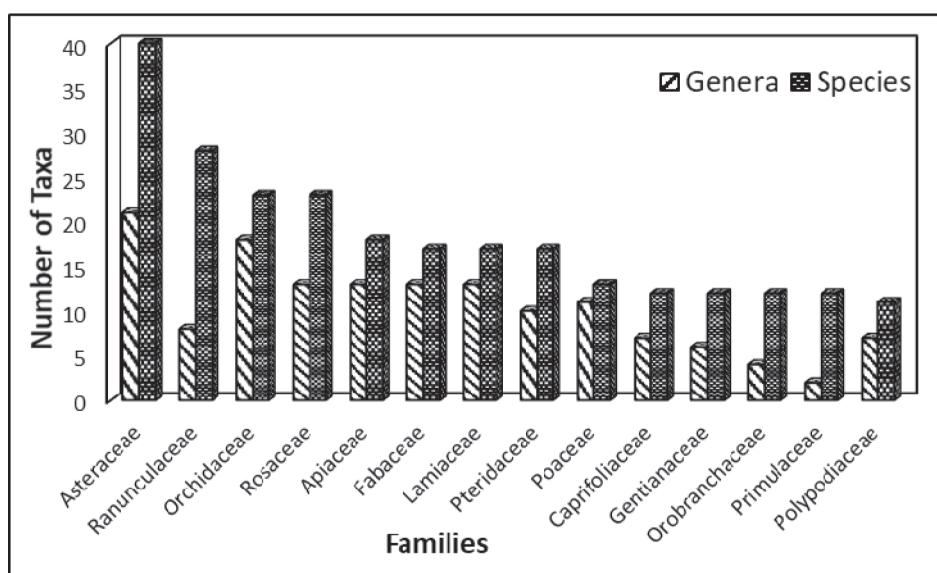

## Results and Discussion

The present study documented a total of 490 vascular plant species belonging to 288 genera and 92 families, including 50 species of ferns and fern allies, 10 species of gymnosperms and 430 species of angiosperms (357 dicots and 73 monocots). The dominant family was Asteraceae with 40 species belonging to 21 genera, which is similar to the findings from previous studies (Joshi, 2011; Chapagain, 2014). It was followed by Ranunculaceae (28), Rosaceae (23), Orchidaceae (23), Apiaceae (18), Pteridaceae, Lamiaceae and Fabaceae (17 each). *Thalictrum* was found to be the largest genera with 11 species, which was followed by *Pedicularis* (9), *Carex*, *Saxifraga*, *Primula* (8 species each), *Potentilla* (7), *Polystichum*, *Juncus*, *Anaphalis*, *Clematis* (6 species each) and so on. The voucher specimens collected during the study have been

deposited at Tribhuvan University Central Herbarium (TUCH).

Asteraceae (21 genera and 40 species) was found to be the largest family of dicots whereas Orchidaceae (18 genera, 23 species) was found to be the largest genera of monocots. Together, Pteridaceae (10 genera, 17 species) was found to be the largest family of pteridophytes whereas Pinaceae (4 genera, 5 species) was found to be the largest family of Gymnosperms.

Typical eastern Himalayan elements such as *Heracleum walichii*, *Codonopsis thalictrifolia*, *Bromus himalaicus*, *Boenninghausenia albiflora*, *Coriaria nepalensis* and some characteristic western Himalayan elements such as *Abies pindrow*, *Picea smithiana*, *Androsace robusta* were recorded during this study (Takhatajan, 1984; Welk, 2015). Some of the characteristic taxa endemic to Nepal, such as *Hedysarum manaslense*, *Carex himalaica*, *Berberis mucrifolia* etc were also recorded. This indicates that Gyasumbdo valley serves as a meeting place of both western and eastern Himalayan floristic elements as well as characteristic taxa endemic to eastern and western Nepal. Some potentially high valued medicinal plants such as *Dactylorhiza hatagirea*, *Neopicrorhiza scrophulariiflora*, *Nardostachys grandiflora*, *Rheum australe*, *Lilium nanum* etc. were also recorded.

**Figure 2:** Bar- diagram showing the dominant families of vascular plants in terms of the number of genera & species.

## Conclusion

The study came up with a basic idea about the diversity of vascular plants in Gyasumbdo valley of Manang district. Asteraceae and Orchidaceae were found to be the largest families of dicots and monocots respectively. Similarly, Pinaceae was found to be the largest family of Gymnosperms and Pteridaceae was found to be the largest family of pteridophytes. Thus the valley is rich in terms of biodiversity. Together, it provides homage to characteristic taxa endemic to eastern as well as western Nepal. This divine valley also serves as a meeting place of both western and eastern Himalayan floristic elements which is possible due to its complex, unique topography and varied ecosystems. There are many virgin places still to be explored as collection was made only along transects and there is still high possibility of recording a higher number of species from this valley.

## Acknowledgements

We express our sincere thanks to the Chinese Academy of Sciences, Beijing, China for providing partial financial support. We would like to thank Dr. Keshab Raj Rajbhandari and Dr. Christopher-Fraser Roy Jenkins for helping us during specimen identification. We are grateful to Mr. Ghanshyam Chalise, Ms. Shanta Budamagar and Ms. Deepjyoti Chapagain, for helping us during the field works. We are also thankful to Annapurna Conservation Area Project and Department of Plant Resources for providing permission to carry out field visits to the study area. Together, we are also thankful to the local pupil of the Gyasumbdo valley for sharing their experiences and knowledge.

71	<i>Smilax elegans</i> Wall. ex Kunth	Smilacaceae	MP.123
72	<i>Smilax menispermoidea</i> A. DC.	Smilacaceae	MP.168
73	<i>Hedychium spicatum</i> Sm.	Zingiberaceae	MP.153

### Appendix: 1c- Gymnosperms

S. N.	Scientific Name	Family	Tag No.
1	<i>Juniperus indica</i> Bertol.	Cupressaceae	MP.037
2	<i>Juniperus recurva</i> Buch.-Ham. ex D. Don	Cupressaceae	MP.060
3	<i>Juniperus squamata</i> Buch.-Ham. ex D. Don	Cupressaceae	MP.293
4	<i>Ephedra gerardiana</i> Wall. ex Klotzsch & Garcke	Ephedraceae	MP.046
5	<i>Abies pindrow</i> (Royle ex D. Don) Royle	Pinaceae	
6	<i>Abies spectabilis</i> (D. Don) Mirb.	Pinaceae	MP.286
7	<i>Picea smithiana</i> (Wall.) Boiss.	Pinaceae	MP.365
8	<i>Pinus wallichiana</i> A.B. Jacks.	Pinaceae	MP.109
9	<i>Tsuga dumosa</i> (D. Don) Eichler	Pinaceae	MP.102
10	<i>Taxus contorta</i> Griff.	Taxaceae	MP.591

### Appendix: 1d- Pteridophytes

S. N.	Scientific Name	Family	Tag No.
1	<i>Cystopteris fragilis</i> subsp. <i>Kansuana</i> (C.Chr.) Fraser-Jenk.	Aspleniaceae	MP.201
2	<i>Athyrium biserrulatum</i> Christ.	Athyriaceae	MP.597
3	<i>Athyrium rupicola</i> (Hope) C. Chr.	Athyriaceae	MP.579
4	<i>Athyrium</i> sp.	Athyriaceae	MP.205
5	<i>Athyrium wallichianum</i> Ching	Athyriaceae	MP.211
6	<i>Diplazium spinulosum</i> Bl.	Athyriaceae	MP.343
7	<i>Woodwardia unigemmata</i> (Mak.) Nakai	Blechnaceae	MP.435
8	<i>Davallia pulchra</i> D. Don	Davalliaceae	MP.428
9	<i>Dennstaedtia appendiculata</i> (Wall. ex Hook.) J. Sm.	Dennstaedtiaceae	MP.456
10	<i>Cyrtomium anomophyllum</i> (Zenker) Fraser-Jenk.	Dryopteridaceae	MP.439
11	<i>Dryopteris barbigera</i> (Hook.) O. Kuntze	Dryopteridaceae	MP.717
12	<i>Dryopteris fructuosa</i> (Christ) C. Chr.	Dryopteridaceae	MP.217
13	<i>Polystichum mehrae</i> Fraser-Jenk. & Khullar	Dryopteridaceae	MP.396
14	<i>Polystichum neolobatum</i> Nakai	Dryopteridaceae	MP.421
15	<i>Polystichum obliquum</i> (D. Don) Moore	Dryopteridaceae	MP.412
16	<i>Polystichum oblongum</i> Ching ex W. M. Chu & Z. R. He	Dryopteridaceae	MP.355
17	<i>Polystichum shensiense</i> Christ	Dryopteridaceae	MP.443
18	<i>Polystichum woodsioides</i> Christ	Dryopteridaceae	MP.385
19	<i>Phlegmariurus phlegmaria</i> (L.) Holub	Lycopodiaceae	MP.108
20	<i>Botrychium lunaria</i> (L.) Sw.	Ophioglossaceae	MP.673
21	<i>Japanobotrychum lanuginosum</i> (Wall. ex Hook. & Grev.) M. Nishida ex Tagawa	Ophioglossaceae	MP.420
22	<i>Ophioglossum petiolatum</i> Hook.	Ophioglossaceae	MP.086
23	<i>Aglaomorpha mollis</i> (Bedd.) Hovenkamp & S.Linds.	Polypodiaceae	MP.445
24	<i>Goniophlebium argutum</i> (Wall. ex Hook.) J. Sm.	Polypodiaceae	MP.413
25	<i>Lepisorus clathratus</i> (C. B. Cl.) Ching	Polypodiaceae	MP.484
26	<i>Lepisorus mehrae</i> Fraser-Jenkins	Polypodiaceae	MP.482

S. N.	Scientific Name	Family	Tag No.
27	<i>Lepisorus thunbergianus</i> (Kaulf.) Ching	Polypodiaceae	MP.483
28	<i>Microsorum membranaceum</i> (D. Don) Ching	Polypodiaceae	MP.454
29	<i>Pichisermolloides malacodon</i> (Hook.) Fraser-Jenk.	Polypodiaceae	MP.703
30	<i>Pichisermolloides quasidivaricata</i> (Hayata) Fraser-Jenk.	Polypodiaceae	MP.602
31	<i>Polypodiodes amoena</i> (Wall. ex Mett) Ching	Polypodiaceae	MP.402
32	<i>Polypodiodes lachnopus</i> (Wall. ex Hook.) Ching	Polypodiaceae	MP.438
33	<i>Pyrrosia porosa</i> (C. Presl) Hovenk.	Polypodiaceae	MP.436
34	<i>Adiantum tibeticum</i> Ching & Y.X.Lin	Pteridaceae	MP.216
35	<i>Aleuritopteris anceps</i> (Blanf.) Panigr.	Pteridaceae	MP.288
36	<i>Conogramme affinis</i> (Wall. ex C. Presl) Hieron.	Pteridaceae	MP.545
37	<i>Cryptogramma brunonianum</i> Wall. ex Hook. & Grev.	Pteridaceae	MP.709
38	<i>Cryptogramma stelleri</i> (Gmel.) Prantl	Pteridaceae	MP.712
39	<i>Haplopteris mediosora</i> (Hayata) X. C. Zhang	Pteridaceae	MP.581
40	<i>Hemionitis marantae</i> (L.) Christenh.	Pteridaceae	MP.696
41	<i>Onychium cryptogrammoides</i> Christ	Pteridaceae	MP.429
42	<i>Paragymnopteris borealisinensis</i> (Kitag.)	Pteridaceae	MP.236
43	<i>Pteris cretica</i> subsp. <i>cretica</i>	Pteridaceae	MP.425
44	<i>Pteris aspericaulis</i> Wall. ex Ag.	Pteridaceae	MP.476
45	<i>Pteris cretica</i> L.	Pteridaceae	MP.446
46	<i>Pteris dactylina</i> Hook.	Pteridaceae	MP.611
47	<i>Pteris</i> sp.	Pteridaceae	MP.455
48	<i>Aleuritopteris albomarginata</i> (C. B. Cl.) Ching	Pteridaceae	MP.466
49	<i>Pteridium revolutum</i> (Bl.) Nakai	Pteridaceae	MP.479
50	<i>Selaginella chrysocaulos</i> (Hook. & Grev.) Spring.	Selaginellaceae	MP.493
