

## **Mosses of Mt. Kinabalu, Borneo, Malaysia**

### **Abstrak**

The moss flora of Mt. Kinabalu, Borneo, Malaysia was investigated in 2005. The mosses recognized comprise 18 families, 43 genera and 97 species except pleurocarpous mosses. *Ditrichum heteromallum*, *Fissidens braunii* and *Syrrhopodon tjibodensis* are new additions to the moss flora of Borneo Island. For each species recognized here, locality, substrate, specimen number and taxonomic note are provided.
