□□□□

pyridyldithio) propionyl hydrazide (PDPH, targeting carbohydrates) have yielded the best results. Frequency curves, however, have shown only small changes in resonant frequency with the addition of BT cells (Figure 2). Atomic Force Microscopy BT cells have been immobilized on Si/SiO₂ surfaces using polyethylene imine (PEI, Figure 3A) and then imaged using tapping mode on the AFM (Figure 3B). Silicon AFM tips have been functionalized with MAb using the scheme in Figure 3C. Force-distance analyses for antibody-coated tips and immobilized A. anophagefferens are underway. ;
