Advanced secondary forest at Savannakhet Medicinal Biodiversity Preserve (MBP) located about 19 km east of the capital city Savannakhet during the months of November and December.

The following images are preserved as voucher herbarium specimens in deposit at the Herbarium of the Institute of Traditional Medicine in Vientiane, Laos (Lao People's Democratic Republic) and at the J. D. Searle Herbarium of the Field Museum of Natural History (Chicago, USA). They were collected as part of a project in the discovery of anticancer agents from plants.

Collections were made primarily in the advanced secondary lowland tropical rainforest of the Medicinal Biodiversity Preserve of Savannakhet, located about 19 km east of the Savannakhet capital city of Savannakhet. Sporadic collections were also made in the degraded forests in the surrounding areas.

This research was performed under a collaborative agreement between the University of Illinois at Chicago and the Institute of Traditional Medicine of the Ministry of Health of Laos.
