HUMAN HEALTH RISK ASSESSMENT REPORT
H-POWER EXPANSION PROJECT

Appendix B
Exposure and Risk Calculations

THIS PAGE INTENTIONALLY LEFT BLANK

Units 1 & 2 Calculations
Pearl Harbor Fisher

This spreadsheet estimates exposure point concentrations in:
1. Soil for direct contact at the receptor's home
2. Air for inhalation at the receptor's home
3. Backyard produce at the receptor's home
4. Beef, dairy, pork, poultry, eggs from a farm location
5. Drinking water from a surface water body
6. Fish from a surface water body

Project	H-POWER Expansion
Locations	All Max

Unit 3 Calculations
Pearl Harbor Fisher

This spreadsheet estimates exposure point concentrations in:
1. Soil for direct contact at the receptor's home
2. Air for inhalation at the receptor's home
3. Backyard produce at the receptor's home
4. Beef, dairy, pork, poultry, eggs from a farm location
5. Drinking water from a surface water body
6. Fish from a surface water body

Project	H-POWER Expansion

H-POWER Expansion **Fisher Child**

Specific Incremental Lifetime Cancer Risk

Risk = *LADI x CSF*

Risk = Incremental lifetime cancer risk (unitless)

LADI = Lifetime average daily intake (mg/kg-day)

CSF = Cancer slope factor $(mg/kg\text{-}day)^{-1}$

Units 1 & 2 Calculations
West Loch Fisher

This spreadsheet estimates exposure point concentrations in:
1. Soil for direct contact at the receptor's home
2. Air for inhalation at the receptor's home
3. Backyard produce at the receptor's home
4. Beef, dairy, pork, poultry, eggs from a farm location
5. Drinking water from a surface water body
6. Fish from a surface water body

Unit 3 Calculations
West Loch Fisher

This spreadsheet estimates exposure point concentrations in:
1. Soil for direct contact at the receptor's home
2. Air for inhalation at the receptor's home
3. Backyard produce at the receptor's home
4. Beef, dairy, pork, poultry, eggs from a farm location
5. Drinking water from a surface water body
6. Fish from a surface water body

H-POWER Expansion **Fisher Adult**
Specific Incremental Lifetime Cancer Risk
Risk = *LADI x CSF*

Risk = Incremental lifetime cancer risk (unitless)
LADI = Lifetime average daily intake (mg/kg-day)
CSF = Cancer slope factor $(mg/kg\text{-}day)^{-1}$

Units 1 & 2 Calculations
Wahiawa Reservoir Fisher

This spreadsheet estimates exposure point concentrations in:
1. Soil for direct contact at the receptor's home
2. Air for inhalation at the receptor's home
3. Backyard produce at the receptor's home
4. Beef, dairy, pork, poultry, eggs from a farm location
5. Drinking water from a surface water body
6. Fish from a surface water body

H-POWER Expansion **Fisher Adult**

Specific Incremental Lifetime Cancer Risk

Risk = *LADI x CSF*

Risk = Incremental lifetime cancer risk (unitless)
LADI = Lifetime average daily intake (mg/kg-day)
CSF = Cancer slope factor $(mg/kg\text{-}day)^{-1}$

Unit 3 Calculations
Wahiawa Reservoir Fisher

This spreadsheet estimates exposure point concentrations in:
1. Soil for direct contact at the receptor's home
2. Air for inhalation at the receptor's home
3. Backyard produce at the receptor's home
4. Beef, dairy, pork, poultry, eggs from a farm location
5. Drinking water from a surface water body
6. Fish from a surface water body

Project	H-POWER Expansion

Units 1 & 2 Calculations
Resident in Poultry Area

This spreadsheet estimates exposure point concentrations in:
1. Soil for direct contact at the receptor's home
2. Air for inhalation at the receptor's home
3. Backyard produce at the receptor's home
4. Beef, dairy, pork, poultry, eggs from a farm location
5. Drinking water from a surface water body
6. Fish from a surface water body

Project	H-POWER Expansion
Locations	All Max

H-POWER Expansion **Resident Child**
Specific Incremental Lifetime Cancer Risk
Risk = *LADI x CSF*

Risk = Incremental lifetime cancer risk (unitless)
LADI = Lifetime average daily intake (mg/kg-day)
CSF = Cancer slope factor $(mg/kg\text{-}day)^{-1}$

Unit 3 Calculations
Resident in Poultry Area

This spreadsheet estimates exposure point concentrations in:
1. Soil for direct contact at the receptor's home
2. Air for inhalation at the receptor's home
3. Backyard produce at the receptor's home
4. Beef, dairy, pork, poultry, eggs from a farm location
5. Drinking water from a surface water body
6. Fish from a surface water body

Project: H-POWER Expansion

Locations:
All Max
Poultry Area
Agriculture Area
Compost Area

Units 1 & 2 Calculations
Farmer

This spreadsheet estimates exposure point concentrations in:
1. Soil for direct contact at the receptor's home
2. Air for inhalation at the receptor's home
3. Backyard produce at the receptor's home
4. Beef, dairy, pork, poultry, eggs from a farm location
5. Drinking water from a surface water body
6. Fish from a surface water body

Project: H-POWER Expansion

H-POWER Expansion **Farmer Adult**
Specific Incremental Lifetime Cancer Risk
Risk = *LADI x CSF*

Risk = Incremental lifetime cancer risk (unitless)
LADI = Lifetime average daily intake (mg/kg-day)
CSF = Cancer slope factor $(mg/kg\text{-}day)^{-1}$

Unit 3 Calculations
Farmer

This spreadsheet estimates exposure point concentrations in:
1. Soil for direct contact at the receptor's home
2. Air for inhalation at the receptor's home
3. Backyard produce at the receptor's home
4. Beef, dairy, pork, poultry, eggs from a farm location
5. Drinking water from a surface water body
6. Fish from a surface water body

Units 1 & 2 Calculations
Resident

This spreadsheet estimates exposure point concentrations in:
1. Soil for direct contact at the receptor's home
2. Air for inhalation at the receptor's home
3. Backyard produce at the receptor's home
4. Beef, dairy, pork, poultry, eggs from a farm location
5. Drinking water from a surface water body
6. Fish from a surface water body

Project	H-POWER Expansion

Unit 3 Calculations
Resident

This spreadsheet estimates exposure point concentrations in:
1. Soil for direct contact at the receptor's home
2. Air for inhalation at the receptor's home
3. Backyard produce at the receptor's home
4. Beef, dairy, pork, poultry, eggs from a farm location
5. Drinking water from a surface water body
6. Fish from a surface water body

H-POWER Expansion **Resident Child**

Specific Incremental Lifetime Cancer Risk

Risk = *LADI x CSF*

Risk = Incremental lifetime cancer risk (unitless)
LADI = Lifetime average daily intake (mg/kg-day)
CSF = Cancer slope factor $(mg/kg\text{-}day)^{-1}$

Units 1 & 2 Calculations
Resident using Compost

This spreadsheet estimates exposure point concentrations in:
1. Soil for direct contact at the receptor's home
2. Air for inhalation at the receptor's home
3. Backyard produce at the receptor's home
4. Beef, dairy, pork, poultry, eggs from a farm location
5. Drinking water from a surface water body
6. Fish from a surface water body

Unit 3 Calculations
Resident using Compost

This spreadsheet estimates exposure point concentrations in:
1. Soil for direct contact at the receptor's home
2. Air for inhalation at the receptor's home
3. Backyard produce at the receptor's home
4. Beef, dairy, pork, poultry, eggs from a farm location
5. Drinking water from a surface water body
6. Fish from a surface water body

Project: H-POWER Expansion

Locations:

H-POWER Expansion **Resident Adult**
Specific Incremental Lifetime Cancer Risk
Risk = *LADI x CSF*

Risk = Incremental lifetime cancer risk (unitless)
LADI = Lifetime average daily intake (mg/kg-day)
CSF = Cancer slope factor $(mg/kg\text{-}day)^{-1}$

Executive Summary

This appendix reviews the alternatives to the proposed H-POWER Expansion. Those alternatives consist of other technologies for processing MSW and an alternative disposal site located on the mainland. The following includes a summary of the report and evaluation.

1.1 Alternatives Considered

The following alternatives to the proposed project were evaluated:

- No Project – The expansion would not be built, with no alternative site or technology available.

- Delayed Project – The action on the expansion would be delayed. The delayed and no action alternatives have the same effect, and the delayed project action could increase the cost of the expansion.

- Transshipment – Oahu's MSW would be baled and transported to a mainland landfill for disposal in Washington, Oregon, or Idaho. Even with this alternative, not all MSW can be transshipped.

- Alternative Technologies – Technologies other than the expansion that could reduce the amount of material requiring disposal and generate electricity or another beneficial reuse product. Alternative technologies that were considered include:

    1. Thermal and non-thermal technologies; and

    2. Enhanced recycling.

The analysis was performed for each of the alternatives. The examination of alternative technologies involved a review of currently operating facilities and includes information describing the technologies.

Alternative technologies were compared to criteria or guidelines established by the City & County of Honolulu in the June 20, 2007 *Competitive Sealed Proposal for Alternative Technology*. The transshipment requirements were compared to criteria or guidelines established in the City's bid documents from January 22, 2008.

1.2 No Project Alternative

Under this alternative, Unit #3 of H–POWER would not be constructed. The existing plant could continue to operate providing energy recovery, recycling and disposal reduction. These benefits would not be increased by the construction of the expansion. Several actions would result:

- Under this alternative, the City would continue to send the MSW that would be converted to energy in H–POWER Unit #3 to the Waimanalo Gulch Sanitary Landfill. The landfill is currently in the environmental process to obtain approval for a 92.5-acre expansion to allow for operation of the landfill for at least an additional 15 years. The landfill currently receives ash, residue, and non-processibles waste from H–POWER. It is also the disposal site for MSW that exceeds the capacity at H–POWER.[1] The Landfill would continue to receive about 900 TPD of MSW that would have been reduced to 225 TPD through operation of Unit #3. Truck traffic to the landfill would have been reduced by the operation of Unit #3. The result would be a reduction in the life of the landfill.

- The loss of energy produced by the expansion would decrease the amount of energy produced from this renewable fuel, which is from five to eight percent of the island needs. Under this alternative, that energy benefit would not be realized and oil would be imported to offset the lost power.

1.3 Delayed Project Alternative

This alternative would have the project benefits realized, but at a later time. The results would be:

- The Waimanalo Gulch Sanitary Landfill would continue to receive about 900 TPD of MSW, but for a limited amount of time. The impact on the life of the landfill would be reduced compared to the "No project" alternative, but the landfill life would be shortened.

- The energy penalty due to the loss of generation from the expansion would occur, but would be reversed when the expansion was built.
- The project cost would likely increase if for no other reason than inflation.

The environmental benefits of the expansion are not realized with the *No Project* alternative and are postponed with the *Delayed Project* alternative. The positive energy impacts are likewise not realized or delayed. There are likely increases in cost of the *Delayed Project* alternative. Taken together the negative impacts of not building the project or delaying it are greater than building the project.

1.4 Technology Alternatives

Alternative technologies would be used in lieu of an H-POWER expansion, but the environmental and economic performance of energy from waste (EfW) is well documented through long-term

---

1 Draft Environmental Impact Statement Waimanalo Gulch Sanitary Landfill Expansion, May 2008.

operation, which is not the case with alternative technologies.

The alternatives fall into several categories:

- Alternative Technology — Thermal. These processes use heat to reduce the waste to energy or a fuel that can be used to produce energy and may produce recyclables. Pyrolysis, gasification, and EfW are examples of thermal processes.

- Alternative Technology — Non-thermal. These processes produce a material, such as compost, that is sold and may also have an energy output. Digestion and hydrolysis are two examples of non-thermal technology.

- Alternative Disposal Location — Transshipment to the Mainland. This alternative would have the waste material shrink wrapped at a facility in Honolulu, barged to the mainland, and disposed at a landfill there.

- Alternative Technology — Enhanced Recycling. Rather than burning the waste in an incinerator, such as H–POWER, this alternative would institute additional recycling programs to remove the materials from the waste stream. The City has characterized the H–POWER plant as "recycling to energy" as it reuses the energy value of the waste as electricity.

1.4.1 City & County of Honolulu Requirements for Alternative Technologies

In its June 20, 2007 *Competitive Sealed Proposal for Alternative Technology* the C&C identified the following six minimum requirements (not applicable to the Alternative Disposal Location or for Alternative Technology — Enhanced Recycling): [2]

- "There exists at least one (1) operational facility processing municipal solid waste that over the past two (2) years has been operating at a rate of at least five hundred (500) TPD in which the Offeror or its design and operational members have been substantially involved. Names, addresses, and phone numbers of persons that can be contacted at the facility or at the agency responsible for the facility shall be provided.

- Such facility has been operated successfully for the past two (2) years and has been fully operational eighty five percent (85 percent) of this time while meeting all performance and environmental compliance requirements.

2 City and County of Honolulu, Notice to Bidders, Project to Construct and Operate Alternative Energy Facility and/or H–POWER Facility. Competitive Sealed Proposals for Alternative Technology (CSP) NO. 037, 16 January 2007.

- The facility without major modification or equipment changes, other than for the acceptable application of good engineering practice for scale up or scale down, would substantially represent the system proposed for Honolulu.

- The product produced at the facility has for the past two (2) years been marketed and resulted in the beneficial reuse of energy. The Offeror shall provide descriptions and documentation of the beneficial reuse such as, operating reports, weight records, names of purchasers, revenues from sales, etc. in sufficient detail to demonstrate fulfillment of this requirement. For example, producing steam for steam sale is not as complex as producing steam for generating electric power. For an Offeror to be able to claim an ability to contract for electric power to a utility, the Offeror must demonstrate that it has power purchase contracts on going and that the utility or energy customer, to which the power is to be sold, provides evidence in writing that it shall enter into a power purchase contract based on its understanding of the proposed facility's ability to produce such power. If energy sales at existing facilities are not comparable to those proposed, anticipated revenues shall not be included in the Offeror's Price Proposal. Research and development projects or similar efforts that have not resulted in a contracted marketed product with actual sales are not acceptable and shall not be included as Revenue in the Offeror's Price Proposal. For the Options proposed, the selected Offerors shall participate with the City in the development and maintenance of the Power Purchase Agreement (PPA) between the City and the Utility similar to the PPA included as Appendix D of the Contract Documents. In order to assure a good understanding of the Hawaiian Electric Co., Inc. service requirements, the Offeror shall complete and submit Sections 1 and 2 of Attachment 'A' as part of its Proposal. In addition, the selected Contractor shall be required to enter into an Interconnection Requirements Study Agreement as provided for in Attachment 'B'. Attachment 'C' Sample Information on Performance Requirements is provided as information for the bidders. The specific values for these performance parameters would be finalized in the course of the PPA negotiations. It is understood that the selected Contractor shall be responsible for the payment of all cost required for the development of and adherence to conditions of the Power Purchase Agreement and those of Attachments 'A', 'B' and 'C' of this Notice to Bidders and for the payment of all penalties for non performance due to Contractors fault associated with these Contract Documents.

- The proposed Facility shall be commercially available such that: (1) The design is proven and the proposed facility is not the first of its kind; (2) The equipment proposed has operated successfully at least eighty-five percent (85 percent) of rated capacity while at the same time operating for at least eighty-five percent (85 percent) of the time during the past twenty-four (24) month period; (3) The equipment is regarded as being reliable and not subject to excessive maintenance, operational problems, or requires major re-designs; (4) The facility has processed a minimum of five hundred (500) TPD of municipal solid waste while operating in accordance with all environmental permits.

- Certification that the ash slag and residue by products from the proposed facility have met all environmental requirements for either marketing or landfill disposal including passage of the [Toxicity Characteristic Leaching Procedure (TCLP)] test and classification as non-hazardous materials, or, if deemed hazardous certification from the final disposal site that materials have been properly disposed of and how it would be disposed of for this project."

1.4.2 Summary of Alternative Evaluation

Each of the technology and non-technology alternatives is compared either to criteria that the City has published or to general criteria that came out of this evaluation. This section summarizes the results of the comparison of the alternatives to the Project, which is the construction and operation of H–POWER Unit #3.

The following two tables summarize the comparison of the alternatives to the Project. In *Table 1, Comparison of Compliance of Alternative Technologies to City's Criteria*, the alternative technologies are compared to the City's criteria for alternatives, which it has published in its Notice to Bidders released on January 22, 2008. Only one technology, EfW, satisfies all of the criteria. One other, Gasification/pyrolysis, satisfies one of the criteria, but none of the others. A criterion was indicated as "ND" if the technology vendor did not satisfy the threshold criteria of having an operating facility for two years processing 500 TPD of MSW. "ND" was not determinable.

Table 1, Comparison of Compliance of Alternative Technologies to City's Criteria

Technology	Criterion and Note #						
	1	2	3	4	5	6	7
	One Facility Operating for 2 Years	500 TPD	85% Capacity	85% of time	Products Marketed	Compliance	Residue
EfW	Yes	Yes	Yes	Yes	Yes	Yes	Yes
Anaerobic Digestion	No	No	ND	ND	ND	ND	ND
Aerobic Digestion	No	Possibly	ND	ND	ND	ND	ND
Hydrolysis	No	No	ND	ND	ND	ND	ND
Plasma Arc	No	No	ND	ND	ND	ND	ND
Gasification/Pyrolysis	Yes	No	ND	ND	ND	ND	ND

ND — not determinable

Notes:

1 The vendor has at least one facility that has been operating for two or more years processing MSW and has also met criteria 2 though 7.
2 The technology processes 500 TPD of MSW or more
3 The technology operates at 85 percent of the rated capacity.
4 The technology operates 85 percent of the time, that is has 85 percent availability.
5 Products produced are marketed. The products can range from electricity, steam, a gaseous fuel, and MSW compost.
6 The technology has operated in compliance with all environmental regulations.

7 The residue and by-products meet environmental requirements for marketing or landfilling.

In *Table 2, Comparison of Other Alternatives*, the other four non-technology based alternatives are compared to the Project based on the greenhouse gas emissions and need for imported oil. These alternatives were the only ones compared in this table because none of the technology alternatives met the City's criteria except EfW, which is the Project for the purposes of this analysis. None of the alternatives in ***Error! Reference source not found.*** results in an improvement in either greenhouse gas emissions or importation of oil.

Table 2, Comparison of Other Alternatives

Alternative	Criterion and Note #	
	1	2
	GHG	Imported Oil
No Project	Negative	Negative
Delayed Project	Negative	Negative
Enhanced Recycling	ND	Negative
Transshipment	Negative	Negative

Notes:

1 GHG refers to whether the greenhouse gas emissions would be increased (detrimental or negative effect) or decreased (beneficial or positive effect) with the alternative as compared to the Project.

2 Imported oil refers to whether the need to import oil for energy production would be increased (detrimental or negative effect) or decreased (beneficial or positive effect) with the alternative as compared to the Project.

Enhanced recycling is indicated as a "ND" for greenhouse gas emissions because the calculation depends on the truck trips and the GHG benefits from recycling the materials, and this information is not known.

1.4.3 Energy from Waste

There are two general approaches to EFW - mass burn and RDF. In a RDF plant (the existing H-POWER facility is an RDF plant) MSW is processed through shredders and screens, through which dirt, glass, and other recyclable and non-burnable materials are sorted out. The remaining material is incinerated, resulting in the creation of ash, residue, and steam used to generate electricity. Metals are separated in the pre-combustion processing and from the ash post-combustion and are recycled.

Mass burn plants combust MSW without pre-processing. Waste is introduced into the furnace after being unloaded from the collection vehicle. The waste combustion creates steam, which is used to make electricity. By-products are ash and residual waste. Metals are separated from the ash and are recycled.

The project host and technology vendor are responsible for the disposal of ash and residual waste.

H-POWER extracts ferrous metals from the waste using magnets and non-ferrous metals from the ash using an eddy current separator. Approximately 18,600 tons of ferrous metals and 2,100 tons of non-ferrous metals were recycled in FY 2006. The sale of ferrous and non-ferrous metals generated approximately $1.5 million in that fiscal year.[3]

Additionally, H-POWER reduces the island's dependence on imported oil. One ton of trash produces saleable energy equivalent to 60 gallons of oil.

1.4.4 Other Jurisdictions Using Waste to Energy

EFW is a proven technology with facilities found throughout the United States and in many areas of the world. Covanta, the operator of H–POWER, owns and/or operates plants in Alabama, California, Connecticut, Florida, Indiana, Maryland, Massachusetts, Michigan, Minnesota, New Jersey, New York, Oregon, Pennsylvania, and Virginia. EFW plants have been operating for more than 75 years in some areas of the world.[4]

1.4.5 Consistency with City Requirements

EFW is consistent with the C&C requirements.

1.5 Non-Thermal Technologies

For the purpose of this report, non-thermal processes are defined as those that primarily produce a solid material, such as MSW compost, which is then marketed. Non-thermal technologies included in this analysis are digestion and hydrolysis.

1.5.1 Anaerobic Digestion

Anaerobic digestion is the decomposition of MSW without the introduction of oxygen. End by-products tend to be liquid, gas, and solid materials. The organic fractions of MSW are converted into

---

4 Covanta Holding. http://www.covantaholding.com/. 21 July 2008.

single-celled proteins, which can be used for compost and fertilizers. Due to the length of time anaerobic digestion takes, a significant amount of land is required to process the amount of MSW the C&C requires of an alternative technology.

1.5.1.1 Other Jurisdictions Using Anaerobic Digestion

Currently the only ArrowBio facility in operation is at the Hiriya transfer station. ArrowBio plans to build a 500 TPD plant in Mexico.[5] A 90,000 TPY facility that is part of Australia's Macarthur Resource Recovery Park at the Jack's Gully landfill site opened its doors on July 4, 2008.[6 7]

1.5.1.2 Consistency with City Requirements

The anaerobic digestion facilities do not meet the City's requirements:

- The existing facilities either process less than the City's minimum waste stream (the existing ArrowBio facility 210 TPD of MSW, 290 TPD less than what the C&C requires) or they process source-separated organics.[8] ArrowBio could use multiple units to meet the City requirement.
- The facility design for the ArrowBio is the first full size facility.
- There is no proven market for the MSW compost product.

1.5.2 Aerobic Digestion

Aerobic digestion is the decomposition of MSW with the introduction of air. Examples of aerobic digestion include Converted Organics (formerly Mining Organics)[9], Real Earth Technologies, and Herhof Environmental's MBT Process. Due to the lack of readily available information about both Converted Organics and Real Earth Technologies, a generic explanation of Herhof Environmental's MBT Process is included in Appendix X. Different companies use different approaches and

9 Mining Organics merged with/bought out by Converted Organics in February 2006. http://www.orgaworld.com/indexgb.html. 21 July 2008.

equipment, but produce similar products.

1.5.2.1 Other Jurisdictions Using Aerobic Digestion

Composting of kitchen, food, and green waste scraps is well established in Europe. Germany has more than 500 biochemical treatment facilities processing more than eight million TPY of food and green wastes; the majority of those facilities are aerobic compost facilities. However, these facilities are not processing MSW.[10] Vancouver, Canada has a 30 TPD demonstration plant by Herhof in operation processing separated food and other organic wastes.[11] There are currently seven commercial MSW Herhof plants in operation in Germany, Belgium, and Italy, with one proposed for the United Kingdom that will use the solid fuel produced by the MBT Process in a combustion plant. In 2009, Herhof plans to open a 160,000 TPY MSW facility in Larnaka, Cyprus and a 40,000 TPY CI&I facility in Athens, Greece.

1.5.2.2 Consistency with City Requirements

None of the Herhof Environmental plants have been in operation more than two years processing more than 500 TPD of MSW. However, Herhof Environmental states their MBT Process is capable of processing up to approximately 1,095 TPD.[12]

1.5.3 Hydrolysis

Hydrolysis is a chemical reaction in which water and another substance react, forming two or more new substances. With the hydrolysis of MSW, the reaction is between water and the cellulose fraction of the wastes to produce sugars. To obtain the cellulose fraction of the MSW, glass, metals, and other inorganic materials must first be removed.

Several types of hydrolysis technologies exist. The description by BlueFire Ethanol, Inc. (formerly Arkenol Fuels) is provided in Appendix X as an example for discussion. Another technology is the Masada Oxynol process.

1.5.3.1 Other Jurisdictions Using Hydrolysis

There are no hydrolysis facilities currently in operation that process MSW as feedstock and none are

12 Herhof Environmental. http:// www.herhof.com/en/. 21 July 2008.

the size the City requires.[13]

1.5.3.2 Consistency with City Requirements

Hydrolysis is inconsistent with the C&C requirements because there has not yet been a successful facility at the size required by the City operating on MSW.

1.6 Thermal Technologies

Thermal or combustion technologies produce a significant amount of heat which can be turned into energy. During the processes, both organic and non-organic materials are combusted while the non-combustible materials can be recycled either before or after combustion. Common thermal technologies are gasification, plasma arc, hydrolysis, pyrolysis, and incineration. Examples of thermal technologies include:

- Covanta Energy — the City's H-POWER facility.
- Rigel Resource Recovery — Westinghouse Plasma Arc Gasification.
- Dynecology — Gasification with Briquetting of Refuse Derived Fuel (RFD)/Coal/Sewage Sludge.
- International Environmental Solutions (IES)—Advanced Pyrolysis Systems
- EBARA Corporation — Fluidized Bed Gasification with Ash Vitrification.
- GEM America — GEM Thermal Cracking Technology (Gasification).
- Global Energy Solutions — Thermal Converter Technology (Gasification and Vitrification).
- Interstate Waste Technologies — Thermoselect Gasification.
- Pan American Resources — Destructive Distillation Lantz Converter.
- Pratt Industries/VISY Paper (RDF).
- Comprehensive Resources, Recovery, & Reuse, Inc. (RDF).
- Takuma Mass Burn Renaissance System.

---

13 Interstate Waste Technologies, http://www.iwtonline.com/. 21 July 2008.

- Resource Recycling, L.L.C. (Mass Burn).

H-POWER technology is discussed in its own section since it is a proven technology that is currently in use by the C&C.

1.6.1 Plasma Arc

This technology uses large carbon rods in a sealed vessel to generate a high temperature arc that converts the materials in the vessel into plasma (ionized gas). Heat generated by the arc melts the inorganic fractions into a running slag (that can appear like glass) and vaporizes the organic fractions, which become a synthetic fuel gas. The glass can be disposed in a landfill or may be used for beneficial purposes, such as for replacement of imported sand for sand blasting. The synthetic gas is cleaned and burned to produce power.

1.6.1.1 Other Jurisdictions Using Plasma Arc

Currently, there are two operating plasma arc facilities that process MSW. The longest running one and the only one that is not a demonstration plant is the Eco Valley Utashinai facility located in Utashinai, Japan. The facility processed more than 270 TPD of MSW and 130 TPD of automobile shredder residue and generated approximately 4,400 kWh of salable energy in fiscal year 2005.[14]

The City of St. Lucie, Florida has been in negotiations for a plasma arc facility. The Georgia-based company, Geoplasma, has agreed to build and operate the facility and claims at full capacity, the facility will process 2,000 TPD of MSW and 1,000 TPD of MSW mined from a landfill while producing 120 MW of electricity.[15]

Geoplasma has agreed to build and operate the facility, estimating that within the next 15 to 18 years the facility will have disposed of all the current waste in the landfill. Ron Roberts, the Assistant Solid Waste Director in St. Lucie, estimates the plant will be finished within 25 to 30 months.[16]

---

16 Miller, Dan. "State-of-the-art plant makes trash vanish into thin air." County News Online. National Association of Counties, Washington, D.C., 2 October 2006.

A second plasma plant operating on MSW started operation in late January 2008 in Ottawa, Canada. It is a demonstration project that is designed to processes 85 TPD. The information about the plant was obtained from news sources[17] , which stated:

> "A demonstration waste-to-energy plant in Ottawa has finally turned its first load of trash into power…
>
> … The $27 million plant uses a process called plasma gasification to decompose waste under high heat and low oxygen into a gas mixture called syngas, and a glass-like material that can be turned into asphalt or concrete….
>
> Once the plant is running at full capacity, it is to divert 85 tonnes of waste a day from the city's landfills while generating enough electricity to run the facility and power 3,600 homes….
>
> Plasco hopes its demonstration plant in Ottawa will persuade other cities to buy the technology….
>
> Construction of the plant started in September 2006. It was to run as a two-year pilot project."

The PLASCO plant was partially funded by the Canadian government.

> "This brings to over C$90 million the equity invested in PlascoEnergy since August 2005. The Company had nominal debt and a modest cash position prior to this issue, and is well funded for development of commercial facilities next year," said Rod Bryden, PlascoEnergy President and CEO. "Commitment of funding from Sustainable Development Technology Canada ('SDTC') to the Ottawa demonstration project was a key factor in bringing the PlascoEnergy technology to reality and to attracting private capital that will fund its future commercial use around the world. SDTC has committed a non-repayable contribution of C$9.5 million," he said.[18]

In June 2008 the City of Ottawa and Plasco Energy agreed to a letter of intent for the company to

17 Information from http://www.cbc.ca/technology/story/2008/02/07/ot-plasco-080207.html, 24 July 2008.

18 Information from PLASCO new release dated December 12, 2007, http://www.plascoenergygroup.com/?News/23/2007-12-03:First_Reserve_leads_PlascoEnergy_equity_funding, 22 July 2008. Information about the expanded plant accessed on October 30, 2008 at http://www.zerowasteottawa.com/en/.

build a 400 tonne per day commercial-scale plant in Ottawa.

1.6.1.2 Consistency with City Requirements

Currently, plasma arc technology does not meet the C&C requirements. The Eco Valley Utashinai facility processes 270 TPD of MSW, 230 TPD short of the C&C requirements. The Ottawa facility, at 85 metric TPD and with less than two years operation, is also short of the C&C requirements. In addition, as shown in ***Error! Reference source not found.*** and expressed in the company's online literature, the Ottawa facility is intended to be a demonstration plant with the full scale facility to be constructed

These facilities are the only ones operating on MSW.

Plasma arc does not meet the City's requirements.

1.6.2 Gasification/Pyrolysis

Gasification is the process of reducing MSW to a synthesis gas. Pyrolysis is similar to gasification and often considered a type of gasification technology. The by-products of gasification are syngas and vitrified material (slag) and pyrolysis by-products are solid carbon and liquid fuel. Pyrolysis generally takes place during the first steps of gasification. Examples of gasification technologies are listed below. Some of these companies may no longer be providing the service.

- Dynecology—Gasification with Briquetting of Refuse Derived Fuel (RDF)/Coal/Sewage Sludge.
- International Environmental Solutions (IES)—Advanced Pyrolysis Systems
- EBARA Corporation—Fluidized Bed Gasification with Ash Vitrification.
- GEM America—GEM Thermal Cracking Technology (Gasification).
- Global Energy Solutions—Thermal Converter Technology (Gasification and Vitrification).
- Interstate Waste Technologies—Thermoselect Gasification.
- Pan American resources—Destructive Distillation Lantz Converter

1.6.2.1 Other Jurisdictions Using this Technology

Global Energy Solutions has 14 facilities in operation in Japan, Asia, and Europe. Two facilities operating in Japan process solely MSW.

Since the start-up of the Aomori, Japan plant in 2000, EBARA has since opened nine TwinRec gasification facilities in Japan and one in Kuala Lumpur, Malaysia. None of these plants process the amount of waste required by the City, but the plant in Kawaguchi City is close.

Interstate Waste Technologies has the following facilities:[19]

- Fondotoce, Italy, operated the demonstration Thermoselect facility for six years, with commercialization commencing in 1994, from 1992-1998. The plant was decommissioned in 1999.

- Karlsruhe, Germany, operated a Thermoselect facility from 1999 until 2004, when it was closed due to "general business strategy decisions." The facility processed 225,000 TPY of waste from surrounding towns and rural districts.

- Currently, seven Thermoselect facilities are operating in Japan. Three of the facilities operate on MSW. Commercialization of the Matsu facility began in 2003 and currently processes 140 TPD. The Nagasaki and Tokushima facilities commenced operations in 2005, with the Nagasaki facility processing 300 TPD and the Tokushima facility processing 120 TPD of MSW.

1.6.2.2 Consistency with City Requirements

Global Energy Solutions' Thermal Converter technology might be consistent with the C&C requirements; there is no information readily available regarding how long either of the two MSW facilities in Japan have been in operation. This residual by-product requires a market that is not proven on Oahu.

Interstate Waste Management's Thermoselect technology is inconsistent with the C&C requirements. Although there are seven Thermoselect facilities in Japan, only three operate on MSW, none at the size the City requires (the Matsu facility processes 140 TPD, the Nagasaki processes 300 TPD, and the Tokushima facility processes 120 TPD.) All those listed here have been in operation for more than two years. The market for the metal pellets and vitrified granulate by-products would have to developed on Oahu.

EBARA has a plant that processes 462 TPD that has been operating for 6 years. It might be an alternative if the cost is reasonable. In a tour of the facility in early July 2008, a question was asked about the cost and the response indicated that they do not discuss cost, but also do not propose in many areas of the US because the market does not support the project cost. [20]

---

19 http://www.iwtonline.com/docs/Thermoselect_process_description.pdf, 21 July 2008.

20 Personal communication with Paul Philleo, Chief of the Sacramento County Department of Waste Management and Recycling.

1.7 Expanded Recycling

Expanding current recycling infrastructure within the C&C would not eliminate the need for expanding H–POWER; however, expanded programs would decrease the amount of materials sent for disposal. The recycling programs cannot handle all the materials in the MSW. As a result, expanded recycling is not a viable alternative to expansion of H–POWER.

The expanded recycling could include expansion of the number of sites that accept materials from the HI5 beverage container program, addition of more sites to the school drop-off program, increasing the frequency of curbside collection of residential green waste, and adding a program to collect other recyclables from residences at the curb.

The City conducted a pilot three-bin curbside program with once-per-week solid waste collection and once-per-week recycling collection, alternating between recycling and green waste. The residents in the pilot locations, Mililani and Hawaii Kai, were generally successful at separating their recyclables and green waste from the solid waste bins and reducing their overall weekly disposal. Most neighborhoods still have twice-per-week solid waste collection and bi-weekly green waste collection, but the three-bin service was extended to other communities on a rolling basis beginning in November 2008. The program is set to be offered island-wide by May 2010. [21]

If the expanded recycling program achieves the higher level of penetration evaluated, it is expected to divert 35,000 tons of recyclables and 60,000 tons of green waste from the landfill, far short of the 300,000 tons to be handled by H–POWER Unit #3.

1.7.1 Consistency with City Requirements

Expanded recycling is consistent with the City's plans, but cannot provide the same diversion from landfilling as H–POWER Unit #3.

1.8 Transshipment Off-Island

The transshipment of waste involves securely containing the MSW, shipping it to the mainland and disposing of it at a mainland landfill. On August 23, 2006, the US Animal and Plant Health Inspection Services (APHIS) announced its decision to allow the transshipment of MSW to the continental United States from Hawaii.[22] Transshipment will be allowed only under certain circumstances. Wastes by federal regulation that would be restricted from transshipment are, hard-to-handle wastes, such as white goods, sewage sludge, auto fluff, and precluded materials such as

---

21 City and County of Honolulu, Curbside Recycling Pilot Program Evaluation, June 2008.

22 Federal Register volume 71, number 163, published 23 August 2006.

green and agricultural wastes (more than three percent of the bale weight). The announcement is attached as Attachment A.

On January 22, 2008 the City provided a notice to bidders that it would entertain proposals for transshipping waste to the mainland for disposal as an interim measure for several years before the proposed Expansion is completed. The C&C has received bids from three transshipment firms: the cost was $99.83 per ton from Hawaiian Waste Systems, $184.47 per ton from Simcoe Environmental Services Inc., and $204.21 per ton from Off-Island Transfer.[23] The companies proposed sending Oahu's waste to Washington State to the Roosevelt Landfill or to a landfill in Idaho. If the C&C were to begin transshipping Oahu's waste, the vendors would have to comply with requirements for the handling and storage established by the federal government in the Compliance Orders, with state regulations for handling and processing the MSW, and with local land use permitting requirements. One of the potential transshipment vendors has approved Compliance Orders for the Hawaii and mainland operations and a permit for the transfer station to shrink wrap and transfer the waste. The C&C would also need to look at the effects of transshipment on H-POWER. With the shipment of Oahu's waste off-island, waste disposed in H-POWER may be reduced and revenue from the energy sold would diminish.

The City's review of the transshipment proposals was delayed due to a protest filed against Hawaiian Waste Systems. The other two bidders challenge the bid of Hawaiian Waste Systems, whose bid was half the cost of their bids.[24] A statutorily-mandated stay on the award of the bid is in effect while the City reviews the protest.

---

23 Laurie Au. "City Reviews Bids to Ship Oahu Trash." Star Bulletin on the Web Vol. 13, Issue 171. 19 June 2008. (23 July 2008) http://starbulletin.com/2008/06/19/news/story08.html.

24 Peter Boylan. "Firm Claims City Pressured on Bids to Ship Trash." Honolulu Advertiser on the Web 11 July 2008. (23 July 2008) http://www.honoluluadvertiser.com/apps/pbcs.dll/article?AID=/20080711/NEWS04/807110350/1008/LOCALNEWSFRONT.

1.8.1 Other Jurisdictions Using Transshipment

Shipment of MSW using shrink-wrap has been used in New Jersey and other areas of the US. It has been used in Europe for as long as 10 years. The Roosevelt Landfill in Washington receives MSW, not only from Washington State, but also from Oregon, Canada, Idaho, and Alaska.[25] Canada has transshipped its MSW to Michigan landfills for many years, while New York is in the process of transshipping its MSW to North Carolina. Most of these operations do not use the shrink-wrap technology.

APHIS determined, with its acceptance of transshipment of MSW stateside from Hawaii, that transshipment could occur from both Oahu and the island of Hawaii once contracts and compliance agreements have been set up in Hawaii.

1.8.2 Consistency with City Requirements

The C&C guidelines regarding the transshipment of MSW off-island are listed in section 5.7.1, which were summarized from the Notice to Bidders released on January 22, 2008.

Not all waste can be shipped off-island. Items such as flocked Christmas trees, sewage sludge, auto fluff, out of date medicines, and other hard-to-handle wastes cannot be shipped without special arrangements to dispose of these materials. The shipping alternative only accepts materials from a specific waste stream and does not eliminate the need for a landfill.

1.9 Sites

This section discusses the project site. The site could be a new location (a Greenfield site), not currently used as a waste processing plant. The project location could be in Campbell Industrial Park. Since the space and access needs for an EFW plant site are similar to a landfill, the sites located as replacements for the Waimanalo Gulch Sanitary Landfill could be considered as potential sites for this expansion.

The environmental, operational, and infrastructure considerations would be the same, whether the potential site were in Campbell Industrial Park or in another area of the island. Comparing a new site to use of the proposed location on the H–POWER property highlights important advantages in using the current H–POWER property rather than a new site.

25 Washington State Department of Ecology, Solid Waste and Financial Assistance Program, "Solid Waste in Washington State Fifteenth Annual Status Report", December 2006.

1.10 Preferred Alternative

Several of the alternative technologies, the continued use of the Waimanalo Gulch landfill, and the transshipment alternative show promise to offer the C&C an alternative option to the expansion of H-POWER at the project site.

A viable alternative must meet several considerations:

- It needs to provide for the health and safety of Honolulu residents and visitors by properly managing the waste produced on the island.

- Because of the complexity of the siting requirements in Hawaii, the high degree of public interest and input into any siting process, the environmental clearances needed, and the permitting process, a significant amount of time (some say up to 10 years for a new landfill site or new alternative technology) may be needed for an alternative to become operational.

Expanding the H-POWER facility with technology proven over the long-term shows the most promise in reducing the amount of waste sent to the landfill while producing electricity. Expansion of H-POWER at the existing project site is the Preferred Alternative.

1.10.1 Expansion of H-POWER at the Project Site

EfW, such as H-POWER, is a technology of choice due to the direct benefits of energy production and reduction in disposal. Approximately 90 percent of the residential garbage and 77 percent of the commercial waste collected on Oahu is disposed at the H-POWER facility and is turned into energy that powers approximately 45,000 homes.[26] Incinerating 90 percent of the garbage that goes through the H-POWER facility means only one-tenth, by volume, remains to be landfilled. Expanding the H-POWER facility would be the most beneficial to the C&C in reducing the amount of waste sent to the landfill.

1.10.2 Landfill Disposal at Waimanalo Gulch Landfill

The Waimanalo Gulch Sanitary Landfill is the only alternative currently available to dispose of MSW and H–POWER ash and residue. The Waimanalo Gulch Sanitary Landfill has capacity to handle MSW for at least 15 years. The site is providing that service today.

However, reducing landfill disposal is one of the goals of the project. Continued use of the Waimanalo Gulch Sanitary Landfill does not accomplish that goal.

---

26 City and County of Honolulu Department of Environmental Services. Solid Waste Integrated Management Plan. Updated: November 2007. Table 63a, Table 63b and Table 2-7.

1.10.3 Transshipment

Transshipment of waste transfers the responsibility for stewardship of the land to the mainland landfill that disposes of the transshipped waste. However, transshipment does offer the C&C a short term alternative for reducing the material being sent to the Waimanalo Gulch Sanitary Landfill for disposal

While transshipment offers an alternative for some of the MSW, there are parts of the waste stream that cannot be shipped due to federal restrictions; some items cannot be accepted due to the process used, and financial and solid waste management considerations that may limit transshipment to a select portion of the waste stream. The expansion of H-POWER offers long term benefits of energy production and reduction in disposal not offered by transshipment.

In addition to the other disadvantages of transshipment, that activity produces much more greenhouse gas emissions than taking the waste to H–POWER. H–POWER results in a reduction in island-wide greenhouse gas emissions (or negative emissions) of 38,883 metric tons per year of CO_2 equivalent compared to a positive generation from transshipment of 44,978.

2 Introduction

2.1 Project Description

The H-POWER expansion (Unit #3 or the Expansion) will be part of a municipal solid waste (MSW) processing facility located at Campbell Industrial Park that substantially reduces the amount of material needing disposal, recycles materials, and produces clean energy. After the expansion, the facility will consist of:

- A new mass burn waterwall MSW combustor that will process 900 tons per day (TPD) as received and produce about three percent of the electricity used on the island.

- An existing refuse derived fuel (RDF) plant that processes approximately 1,700 TPD of MSW into a processed fuel. The two plants convert the fuel into steam to produce energy. The existing plant produces five percent of the electricity used on the island.

The expanded facility will provide increased benefits to the residents and visitors of the City & County of Honolulu (City or C&C). The plant will reduce the volume of waste disposed at a landfill by 90 percent and the disposal weight by 75 percent (that is only 10 percent of the incoming volume and 25 percent of the incoming weight will be sent to the landfill for disposal).

Metals are recycled from the RDF plant and will be recycled from the new unit. Oversized objects such as white goods (refrigerators and ranges) will be recovered from the refuse pit and recycled. Ferrous metals in the ash will be removed with a magnetic drum. Non-ferrous metals will be removed with an eddy current separator and recycled.

Energy is produced by both plants to offset the use of imported oil and coal. The energy produced by the waste burning power plants significantly reduces greenhouse gas emissions compared to the use of oil and coal to produce power. As of 2004 show there are 89 EfW plants operating in the US and a total of 570 plants operating in the rest of the world[27].

The remainder of this appendix discusses the evaluation of the alternatives to the proposed project. Those alternatives consist of other technologies for processing MSW and an alternative disposal site located on the mainland.

The criteria/requirements the City used to evaluate the alternative technologies and the transshipment alternatives are provided. Those criteria were developed for a Request for Proposal the City issued for alternative technology approaches to disposal of waste in the City's Waimanalo Gulch Sanitary Landfill.

2.2 City Requirements

2.2.1 Technology

The requirements for alternative technologies are identified in the City's Invitation for Bid issued to vendors of technology alternatives to landfilling on October 2, 2006. The requirements are detailed in Section 4.1 of this document and are summarized below. This Alternatives Analysis also uses these requirements since they are the minimum a vendor was required to meet for its technology to be considered by the C&C in 2006.

- "There is at least one operational facility that has been processing 900 tons per day (TPD) of municipal solid waste (MSW) for the past two years, and the vendor has been substantially involved in its design and operations."

- The facility has been fully operational and has met all performance and environmental compliance requirements 85 percent of the time during the two years of operation.

- The facility would substantially represent the system proposed for Honolulu without major modification or equipment changes, other than those needed for the scale up or scale down.

- The product produced at the facility has been marketed and resulted in the beneficial reuse of processed materials and/or production of energy.

- The vendor must demonstrate that it has power purchase contracts ongoing to be able to claim an ability to contract for sale of electric power to a utility.

---

27 Integrated Waste Services Association. http://www.wte.org/worldwide/. 7 January 2009.

- The proposed facility shall be commercially available such that:

  (1) The design is proven and the proposed facility is not the first of its kind;

  (2) The equipment has operated successfully at a minimum of 85 percent of rated capacity for at least 85 percent of the time during the past two years;

  (3) The equipment is regarded as being reliable and is not subject to excessive maintenance or operational problems and does not require major re-designs; and

  (4) The facility has processed a minimum of 900 TPD of MSW while operating in accordance with all environmental permits.

- Certification that the ash, slag and residue by-products from the proposed facility have met all environmental requirements for either marketing or landfill disposal."

2.2.2 Transshipment

Transshipment is the packaging of Oahu's waste for shipment to a disposal site located off-island. The transshipment requirements were established in the City's January 22, 2008, bid documents. If the C&C were to begin transshipping Oahu's waste, requirements for the handling and storage may need to be modified if the Compliance Orders established by the federal government with one of the proposers is determined to be inadequate.

The C&C would also need to look at the effects of transshipment on the current H-POWER facility over the long term. With the shipment of Oahu's waste off-island over a period of longer than three years, waste disposed in H-POWER may be reduced, the amount of energy produced for HECO would be reduced, and revenue from the energy sold would diminish. Also, the MSW needed to fuel the new boiler could be inadequate in the future if waste were transshipped to an off-island landfill.

2.3 Background

2.3.1 Sources of Waste to H-POWER

This section discusses the amounts and composition (the percentage of paper, plastic and other materials in the waste) that was taken to H–POWER and the landfill in 2006 to show what the Expansion, or an alternative, would need to be able to process.

Table 3, Total Disposal (2006) shows the total recycled or reused tonnage and the total waste tonnage received at each facility for 2006.

Materials that are unsuitable for combustion are removed during the RDF preparation process. The unacceptable materials, known as RDF processing residue, are then sent to the landfill for disposal. The combustion process also produces an ash by-product which is disposed of at the landfill. From July 1, 2005 to June 31, 2006, H-POWER produced 79,443 tons of RDF processing residue and

88,380 tons of ash.

The PVT landfill is a privately owned and operated site that accepts construction and demolition debris. The unpermitted sites are illegal dumping locations.

Table 3, Total Disposal (2006)[28]

Management	Tons
Recycled or Reused	628,373
H POWER	602,520
Waimanalo Gulch Landfill	337,667
PVT Landfill (estimated)	200,000
Unpermitted Sites (estimated)	25,000
Total	**1,793,560**

The total waste shown for the Waimanalo Gulch Landfill includes the waste disposed at the site and the RDF processing residue and ash taken to the site from the two existing units of H–POWER.

Table 4, Waste Generation Projections shows the projected waste generation rate per capita and the projected tons generated per year. The waste generation was projected using a two percent growth rate from 2007 to 2013. After 2013 the growth rate was kept constant since the generation rate would be recalculated as part of the 2012 plan update. The amount of waste generation (the sum of diversion and disposal) after 2013 used the per capita generation rate with the state's projected population growth to estimate future generation.

28 City and County of Honolulu Draft Integrated Solid Waste Management Plan Update, October 2008.

Table 4, Waste Generation Projections[29]

Fiscal Year	De Facto Population	Generation Rate (Tons/Capita/Year)	Generation Quantities (TPY)
2006	960,940	1.87	1,793,560
2007	969,530	1.88	1,821,730

2030	1,188,610	2.02	2,405,500

Table 5, Annual Waste by Generator Type (2006) shows the amount of waste from each sector which is hauled to the Waimanalo Gulch Landfill and to H-POWER. Approximately 49 percent of the waste going into H–POWER is from residential sources and about 51 percent is commercial waste. Ninety percent of the residential waste goes to H–POWER.

29 City and County of Honolulu Draft Integrated Solid Waste Management Plan Update, October 2008.

Convenience Centers are sites where residents can drop materials for recycling or disposal. Most of that material is not suitable for processing at H–POWER so is disposed.

Table 5, Annual Waste by Generator Type (2006)[30]

Generator Type	Waste Representative of Each Composition Type (Tons)		
	H-POWER	Waimanalo Gulch Landfill	Overall
Residential	371,649	40,367	412,016
Commercial	384,389	114,300	498,689
Convenience Center	283	29,199	29,482
Total	**756,321**	**183,866**	**940,187**

Table 6, Waste Composition Summary by Solid Waste Facility (2006) shows the percent composition of materials received at the Waimanalo Gulch Landfill and H-POWER. The material identified as "HHW" is household hazardous wastes, which are items such as kitchen cleanser and other small amounts of cleaning materials disposed by householders.

Table 6, Waste Composition Summary by Solid Waste Facility (2006)[31]

30 City and County of Honolulu Draft Integrated Solid Waste Management Plan Update, October 2008.

31 City and County of Honolulu Draft Integrated Solid Waste Management Plan Update, October 2008.

Table 7, Waste Composition by Generator Type (2006) shows the percent composition of materials generated from three collection sectors: residential, commercial and the convenience centers. The residential waste is collected by City collection crews. Commercial waste is from commercial haulers that collect from businesses, tourist serving industry, and other sources on the island. Convenience Center waste is from City-operated drop-off collection facilities.

The composition of the waste indicated in ***Error! Reference source not found.*** does not include the H–POWER RDF processing residue and ash received at the landfill because it is not part of the MSW stream. ***Error! Reference source not found.*** reflects the composition of the MSW coming to the site.

Table 7, Waste Composition by Generator Type (2006)[32]

Material	Residential		Commercial		Convenience Center	
	Mean %	Annual Weight (tons)	Mean %	Annual Weight (tons)	Mean %	Annual Weight (tons)

2.3.2 Waste Composition

The composition of the disposed waste is based on hand-sorting randomly selected samples of the waste from garbage trucks. In 2006, the C&C studied the composition of the waste at H-POWER, the Waimanalo Gulch Sanitary Landfill, and the Keehi Transfer Station. The sampling and analysis followed standard protocols. Sampling took place at the Landfill on September 11–14, 2006, at Keehi Transfer Station on September 15–16, 2006, and at H-POWER on September 18–21, 2006. [34]

Table 9, Aggregate Overall Waste Characterization Results (2006) shows the composition of Oahu's waste from H-POWER and the Waimanalo Gulch Sanitary Landfill combined.

36 City and County of Honolulu Draft Integrated Solid Waste Management Plan Update, October 2008.

2.3.3 City Recycling Programs

The current recycling infrastructure consists of community recycling bins, recycling support for schools, HI5 redemption sites, and a new three-bin curbside collection program. The overall goal is to reduce the amount of waste requiring disposal.

The community recycling bin program is supported by participating schools. Students, family members, community members, and the school employees drop-off their recyclable materials in 40 cubic-yard recycling roll-off bins, divided into sections for mixed containers and paper. Each host school receives revenues for the recycled materials collected in its bin(s). Since the program began in 1990, more than $1,000,000 has been paid to the participating schools.

Schools are also receiving additional support through assistance programs, in which the C&C offers 96-gallon wheeled toters labeled for aluminum, glass, plastic, and newspaper. Fundraising materials, such as banners, graphics, lists of recycling companies, collection services, and redemption centers are also provided to help advertise a recycling event. The schools use these events as fundraisers. Currently, there are 75 to 80 schools and 35 non-profit organizations participating in this program. A new contract that began in March 2008 will add 40 additional sites for multi-material recycling.

The C&C also provides recycling through a contract that provides 10 HI5 (redemption value container recycling) event bins. These 40 cubic-yard bins are used for recycling at special school or community events. The City's contractor removes the bin after the event, and the school or community group receives the redemption value from the materials in the HI5 containers.

Another recycling effort is to increase the HI5 redemption sites in the C&C. The HI5 redemption sites are privately-operated for residents to drop-off their recyclable cans, plastic, aluminum, and glass HI5 containers for a 5 cent cash refund per item. There are currently 59 HI5 redemption sites located in Oahu. [37]

Currently the City offers curbside, bi-weekly green waste collection to its residents. Approximately 20,000 tons of green waste is collected annually from residences. The collected green waste is turned into mulch and offered to residents at no cost.[38]

---

37 Department of Environmental Services, www.opala.org, July 17, 2008.
http://hawaii.gov/health/environmental/waste/sw/sw/hi5/support/oahucenters.pdf.

38 City and County of Honolulu, Curbside Recycling Pilot Program Evaluation, June 2008.

The City conducted a pilot three-bin curbside program with once-per-week solid waste collection and once-per-week recycling collection, alternating between recycling and green waste each week. The residents in the pilot locations, Mililani and Hawaii Kai, were generally successful at separating their recyclables and green waste from the solid waste bins and reducing their overall weekly disposal. Most neighborhoods still have twice-per-week solid waste collection and once-per-week green waste collection, but the three-bin service was extended to other communities on a rolling basis beginning in November 2008. The program is set to be offered island-wide by May 2010. The new curbside collection program is expected to reach a recovery rate from 56 percent to 70 percent and increase the amount of recyclables recovered annually from 1,200 tons per year to between 27,000 tons per year and 35,000 tons per year. The green waste recovery rate is also expected to be between 56 percent and 70 percent and increase green waste tonnage from 20,000 tons per year to 48,000 tons per year.[39]

2.3.4 Disposal

The disposal facilities used by the C&C are discussed in this section. This discussion was taken from the October 2008 draft SWIMP update.[40]

2.3.4.1 H-POWER

The City has a waste supply contract with the facility operator to deliver 561,600 tons of solid waste per year to H-POWER. The majority of residential and commercial MSW collected on the island is delivered here. In FY 2006, 602,520 tons of waste was converted to energy at H-POWER. The plant has regularly been able to process more than the contracted capacity.

In FY 2006, H-POWER sent 88,380 tons of ash and 79,443 tons of RDF processing residue to the Landfill. In FY 2006, the Landfill received on average 930 tons per day of MSW and 460 tons per day of ash and RDF processing residue. [41]

The City has an agreement with Hawaiian Electric Company (HECO) to purchase the electricity generated at H-POWER. Over 320 million kilowatt hours of electricity were generated in FY 2006. The sale of this electricity generated nearly $35 million in revenues.

---

39 City and County of Honolulu, Curbside Recycling Pilot Program Evaluation, June 2008.

40 City and County of Honolulu Draft Integrated Solid Waste Management Plan Update, October 2008.

41 City and County of Honolulu, Draft Integrated Solid Waste Management Plan Update, October 2008.

H-POWER extracts ferrous metals from the waste using magnets and non-ferrous metals from the ash using an eddy current separator. Approximately 18,600 tons of ferrous metals and 2,100 tons of non-ferrous metals were recycled in FY 2006. The sale of ferrous and non-ferrous metal generated approximately $1.5 million in that fiscal year.

2.3.4.2 Waimanalo Gulch Sanitary Landfill

The Landfill is located in Kapolei on the leeward side of Oahu in Waimanalo Gulch, Kahe Valley. The Landfill property is 200 plus acres. About half of the property is permitted for landfilling and support operations. It is the intent of the City that the Landfill accept two types of MSW:

1. Noncombustible MSW and

2. Ash and RDF processing residue from H-POWER.

In FY 2006, the Landfill received 337,667 tons of MSW. The permit renewal issued by the State in April 2003, limits the peak daily disposal rate to 3,300 TPD tons per day of MSW and 800 tons per day of ash and RDF processing residue.

2.3.4.3 C&D

Construction and demolition waste and petroleum contaminated soils are disposed in a private landfill, PVT, located in Nanakuli. It is estimated that about 200,000 tons per year are disposed at this site.

3 Alternatives Considered

The alternatives to H-POWER expansion considered were:

- No project,
- Delayed project,
- Transshipment of waste to a mainland landfill, and
- Alternative technologies.

The *No Project* alternative would result in not building the expansion. The *Delayed Project* alternative would delay the decision on the expansion and cause the same impacts as the *No Project* alternative until the expansion was in operation. It would also likely increase the cost of the expansion. Transshipment is a short term alternative that would have some MSW shipped from Oahu to a landfill in Washington, Oregon, or Idaho. Alternative technologies could reduce the amount of material requiring disposal and generate electricity or another beneficial reuse product. The four alternatives are discussed in more detail in the following sections.

4 No Project and Delayed Project Alternatives

4.1 No Project

Under this alternative, Unit #3 of H–POWER would not be constructed. The existing plant would continue to operate providing energy recovery, recycling and disposal reduction. These benefits would not be increased by the construction of the expansion. Several actions would result:

- The Waimanalo Gulch Sanitary Landfill would continue to receive about 900 TPD of MSW that would have been reduced to 225 TPD through operation of the expansion. Truck traffic to the landfill would have been reduced by the expansion. Assuming an average load of six tons per truck delivering waste to H–POWER (that value is an average based on the load carried by collection trucks and transfer trucks delivering waste to H–POWER), the traffic to the landfill would be reduced by 50,000 vehicles per year. The additional trucks bringing ash from H–POWER Unit #3 to the landfill is estimated to be 11,250 per year, resulting in a net reduction in trucks to the landfill of 38,750 per year. The result would be a reduction in the life of the landfill. Since the landfill is in the process of being re-permitted, it is difficult to estimate the impact on the life of the landfill.

- The loss of energy produced by the expansion would decrease the amount of energy produced from this renewable fuel, which is from five to eight percent of the island needs. Under the No Project alternative, that energy benefit would not be realized and more oil would be imported to offset the lost power. Based on the estimated equivalent amount of energy in a ton of waste compared to a barrel of oil, an additional 429,000 barrels of oil would be needed per year (1,175 barrels per day) would be needed if H–POWER Unit #3 were not built.

- Continued production of greenhouse gas emissions from landfilling, which would be reduced by H–POWER Unit #3.

The landfill already exists, is in an expansion mode, and is a long-term resource to be conserved for the City's use. There are opportunities resulting from its permitted status, but constraints in expending the resource before necessary.

The use of the Waimanalo Gulch Sanitary Landfill rather than expanding H–POWER offers an opportunity in that the site can be used immediately without the permitting and construction needed for the H–POWER expansion, assuming the current landfill expansion is permitted.

There are several disadvantages to the use of the Waimanalo Gulch Sanitary Landfill rather than expanding H–POWER, including:

- The landfill has a finite capacity and disposing of MSW in it rather than converting the MSW into energy in H–POWER Unit #3 is wasting land resources and the energy generation resources in the MSW.

- There are energy generation and oil fuel conservation benefits using H–POWER rather than importing oil to produce the electricity needed on the island.

The use of H–POWER reduces disposal thereby reducing traffic to the landfill, which relieves traffic on Farrington Highway. The traffic to H–POWER will be in an industrial area that has been designed for the amount of heavy truck traffic expected.

4.2 Delayed Project

This alternative would have the project benefits realized, but at a later time. The results would include all of the impacts of the No Project Alternative during the period of delay and:

- The energy penalty due to the loss of generation from the expansion would occur, but would be reversed when the expansion was built.
- The project cost would likely increase if for no other reason than inflation.

The environmental benefits and positive energy impacts of the expansion are not realized with the *No Project* alternative and are postponed with the *Delayed Project* alternative. There are likely increases in cost of the *Delayed Project* alternative. Taken together the negative impacts of not building the project or delaying it are greater than building the project.

5 Technology Alternatives

This section of the Alternatives Analysis discusses the alternative technology approaches that were considered in lieu of an additional boiler at the H-POWER facility. Alternative technologies are possible rather than an H-POWER expansion, but the environmental and economic performance of Energy-From-Waste (EfW) is well documented through long-term operation, which is not the case with alternative technologies.

Prior to the evaluation of alternative technologies, there are several factors that need to be identified as they are important to the discussion. The City has used proven alternative methods for waste disposal:

- Prior to the H-POWER facility (in operation since 1988), the City operated several incinerators to the landfill to reduce the volume of material needing disposal. The City has used combustion technology as a disposal alternative for many years.

- Currently, the City has contacted a private vendor to operate a sludge drying/pelletizing facility at the Sand Island Waste Water Treatment Plant. The dryer converts sludge material previously disposed at the Waimanalo Gulch Sanitary Landfill into a fertilizer amendment product. The pelletizer is an alternative to landfill disposal.

These examples share several characteristics:

- All were operated elsewhere for many years using waste material similar to that produced on Oahu and in amounts in excess of the capacity needed for Honolulu.

- The risk of operational problems was minimized because of the history of operations and the availability of firms to design, build, and operate the plants that had long term operating results.

- The environmental impacts of the technologies were well understood and all had long histories of operating in compliance with regulations.

- The total cost of the technology was well understood.

The City has continued its search for additional alternatives. Other areas of the United States and other countries are evaluating disposal alternatives and have observed progress. Some of the results of those evaluations are used in this section to identify the advantages and disadvantages of the alternatives and compare them to the City's criteria, which are also listed in this section.

There are several alternative technologies operating in Europe and Japan. Those areas share characteristics that encourage the development of alternatives, but those characteristics are not necessarily applicable to the Island of Oahu. The following four items illustrate some of the similarities and differences.

- High disposal fees, some areas of Europe charge over $200 per ton for disposal compared to the $92 per ton in Honolulu.
- The price paid for electricity produced by the plant is much higher than Honolulu.
- Often there are government subsidies to support the cost of the technology. No subsidies are provided in Honolulu.
- The environmental controls are strict, just as they are here.

The alternatives fall into several categories:

- Alternative Technology — Thermal. These processes use heat to reduce the waste to energy or a fuel that can be used to produce energy and may produce recyclables. EfW, pyrolysis, and gasification are examples of thermal processes.
- Alternative Technology — Non-thermal. These processes produce a material, such as compost, that is sold and may also have an energy output. Digestion and hydrolysis are two examples of non-thermal technologies.
- Alternative Disposal Location — Transshipment to the Mainland. This alternative would have the waste material shrink wrapped at a facility in Honolulu, barged to the mainland, and disposed at a landfill there.
- Alternative Technology — Enhanced Recycling. Rather than burning the waste in a combustor, such as H–POWER, this alternative would institute additional recycling programs to remove the materials from the waste stream. The City has characterized the H–POWER plant as "recycling to energy" as it reuses the energy value of the waste as electricity.

All of these alternatives have the potential for reducing the need for an expansion of H-POWER.

5.1 City Requirements for Alternative Technologies

The consideration of alternative technologies has been ongoing in the C&C for many years. Those efforts have included implementation of new recycling programs, implementation of bans on disposing certain recyclable materials in the landfill, issuance of a Request for Proposals for Alternative Technologies and issuance of a Notice to Bidders for tenders from vendors desiring to transship waste to the Mainland.

In its June 20, 2007 *Competitive Sealed Proposal for Alternative Technology* the C&C identified the following six minimum requirements (not applicable to the Alternative Disposal Location or for

Alternative Technology — Enhanced Recycling): [42]

- "There exists at least one (1) operational facility processing municipal solid waste that over the past two (2) years has been operating at a rate of at least five hundred (500) TPD in which the Offeror or its design and operational members have been substantially involved. Names, addresses, and phone numbers of persons that can be contacted at the facility or at the agency responsible for the facility shall be provided.

- Such facility has been operated successfully for the past two (2) years and has been fully operational eighty five percent (85 percent) of this time while meeting all performance and environmental compliance requirements.

- The facility without major modification or equipment changes, other than for the acceptable application of good engineering practice for scale up or scale down, would substantially represent the system proposed for Honolulu.

- The product produced at the facility has for the past two (2) years been marketed and resulted in the beneficial reuse of energy. The Offeror shall provide descriptions and documentation of the beneficial reuse such as, operating reports, weight records, names of purchasers, revenues from sales, etc. in sufficient detail to demonstrate fulfillment of this requirement. For example, producing steam for steam sale is not as complex as producing steam for generating electric power. For an Offeror to be able to claim an ability to contract for electric power to a utility, the Offeror must demonstrate that it has power purchase contracts on going and that the utility or energy customer, to which the power is to be sold, provides evidence in writing that it shall enter into a power purchase contract based on its understanding of the proposed facility's ability to produce such power. If energy sales at existing facilities are not comparable to those proposed, anticipated revenues shall not be included in the Offeror's Price Proposal. Research and development projects or similar efforts that have not resulted in a contracted marketed product with actual sales are not acceptable and shall not be included as Revenue in the Offeror's Price Proposal. For the Options proposed, the selected Offerors shall participate with the City in the development and maintenance of the Power Purchase Agreement (PPA) between the City and the Utility similar to the PPA included as Appendix D of the Contract Documents. In order to assure a good understanding of the Hawaiian Electric Co., Inc. service requirements, the Offeror shall complete and submit Sections 1 and 2 of Attachment 'A' as part of its Proposal. In addition, the selected Contractor shall be required to enter into an Interconnection Requirements Study Agreement as provided for in Attachment 'B'. Attachment 'C' Sample Information on Performance Requirements is provided as information for the bidders. The

---

42 City and County of Honolulu, Notice to Bidders, Project to Construct and Operate Alternative Energy Facility and/or H–POWER Facility. Competitive Sealed Proposals for Alternative Technology (CSP) NO. 037, 16 January 2007.

specific values for these performance parameters would be finalized in the course of the PPA negotiations. It is understood that the selected Contractor shall be responsible for the payment of all cost required for the development of and adherence to conditions of the Power Purchase Agreement and those of Attachments 'A', 'B' and 'C' of this Notice to Bidders and for the payment of all penalties for non performance due to Contractors fault associated with these Contract Documents.

- The proposed Facility shall be commercially available such that: (1) The design is proven and the proposed facility is not the first of its kind; (2) The equipment proposed has operated successfully at least eighty-five percent (85 percent) of rated capacity while at the same time operating for at least eighty-five percent (85 percent) of the time during the past twenty-four (24) month period; (3) The equipment is regarded as being reliable and not subject to excessive maintenance, operational problems, or requires major re-designs; (4) The facility has processed a minimum of five hundred (500) TPD of municipal solid waste while operating in accordance with all environmental permits.

- Certification that the ash slag and residue by products from the proposed facility have met all environmental requirements for either marketing or landfill disposal including passage of the [Toxicity Characteristic Leaching Procedure (TCLP)] test and classification as non-hazardous materials, or, if deemed hazardous certification from the final disposal site that materials have been properly disposed of and how it would be disposed of for this project."

In its RFP, the C&C encouraged both thermal and non-thermal technologies. With thermal technologies the by-product is steam or electricity which can be sold. The by-products of non-thermal technologies are materials that require development of a market (i.e., building material, or compost). Technologies that produce a product that must be sold into a market (other than an energy market) would be more difficult in Honolulu than in other locations where such facilities may have operated. For example, a market does not currently exist for an alternative technology that produces an MSW compost product. The reason is that the market for MSW compost is restricted on the mainland and has faced controversy in Honolulu.[43] The proponent of a technology that produces a solid MSW fuel would need to find a fuel user and there are only two solid fuel users, H-POWER and the AES coal fired power plant. The current H-POWER facility is operating at capacity. To handle an MSW fuel at AES would likely require a revision to its permits and a lengthy and expensive effort to modify its process to accept that fuel, provided AES wished to pursue it.

---

43 Leone, Diana. *Waianae Compost Plan Hits Turbulence*. Star Bulletin. 17 August 2006.

5.2 Energy From Waste

5.2.1 How It Works

There are two general approaches to EfW - mass burn and RDF. In a RDF plant (the existing H-POWER facility is an RDF plant) MSW is processed through shredders and screens, through which dirt, glass, and other recyclable and non-burnable materials are sorted out. The remaining material is incinerated, resulting in the creation of ash, RDF processing residue, and steam used to generate electricity. Metals are separated in the pre-combustion processing and from the ash post-combustion and are recycled.

Mass burn plants combust MSW without pre-processing. Waste is introduced into the furnace after being unloaded from the collection vehicle. The waste combustion creates steam, which is used to make electricity. By-products are ash and residual waste. Metals are separated from the ash and are recycled.

The project host and technology vendor are responsible for the disposal of ash and residual waste.

Because of metals removal during RDF processing and metals removal from the bottom ash, a significant percentage of the ferrous and nonferrous metal entering the current H–POWER facility is recovered for recycling. Approximately 18,000 TPY of ferrous metals (tin cans) and 2,500 TPY of non-ferrous metals (aluminum cans) are recovered.[44]

Additionally, H-POWER reduces the island's dependence on imported oil. One ton of trash produces saleable energy equivalent to 60 gallons of oil.

5.2.2 Jurisdictions Using This Technology

EfW is a proven technology with facilities found throughout the United States and in many areas of the world. Covanta, the operator of H–POWER, owns and/or operates plants in Alabama, California, Connecticut, Florida, Indiana, Maryland, Massachusetts, Michigan, Minnesota, New Jersey, New York, Oregon, Pennsylvania, and Virginia. EfW plants have been operating for more than 75 years in some areas of the world.[45]

5.2.3 Physical, Regulatory, and Environmental Requirements

The physical, regulatory, and environmental requirements of a third boiler at H-POWER are well

---

44 Department of Environmental Services. http://www.opala.org/solid_waste/archive/How_our_City_manages_our_waste.html#hpower. 24 July 2008.

45 Covanta Holding. http://www.covantaholding.com/. 21 July 2008.

understood since the C&C already has one of these plants in operation. Land is available on the H–POWER site for the expansion.

5.2.4 Potential Issues

EfW requires a landfill for the disposal of ash and residual wastes. The market for the electricity is already contracted for with the current facility. The technology is well understood from environmental, operational, financial, and technical perspectives.

5.2.5 Consistency With City Requirements

EfW is consistent with the C&C requirements.

5.3 Non-thermal

For the purpose of this report, non-thermal processes are defined as those that primarily produce a solid material, such as MSW compost, which is then marketed. Non-thermal technologies included in this analysis are digestion and hydrolysis.

5.3.1 Anaerobic Digestion

Anaerobic digestion is the decomposition of MSW without the introduction of oxygen. End by-products tend to be liquid, gas, and solid materials. The organic fractions of MSW are converted into biogas and residual materials, which can be used for compost and fertilizers. Due to the length of time anaerobic digestion takes, a significant amount of land is required to process the amount of MSW the C&C requires of an alternative technology.

Examples of anaerobic technologies include:

- ArrowBio
- Orgaworld
- Organic Waste Systems' DRANCO Dry Anaerobic Digestion

The discussions in this section are based on information about the ArrowBio process. ArrowBio uses naturally occurring microbes to break down the organic faction of MSW. Others would have different approaches and equipment, but produce similar products.

Currently, Orgaworld has two operating facilities, each with a capacity of 96 TPD. One Organic Waste Systems' facility in Victoria, Spain processes 120,000 TPY (328 metric TPD assuming 365 days/year) while other Organic Waste Systems' facilities process up to 137 TPD.[46] Both are less than the C&C minimum requirements, and the Orgaworld and Organic Waste Systems are not discussed further. ArrowBio has a 200 TPD plant in operation.

5.3.1.1 How It Works

Using a separation-dissolving tank, organic and inorganic materials are separated based on buoyancy. Heavier inorganic materials, such as metal and glass, sink to the bottom of the tank and are taken for further separation and then are recycled or disposed. Plastics, which remain floating, are separated pneumatically, while the remaining organic fraction is shredded and more water is introduced to further the biodegrading process. The remaining organic material is treated in acetogenic and methanogenic reactors producing an MSW-based fertilizer and biogas. The biogas, made up of approximately 75 percent methane, can be sold as clean, green energy for use in transportation and power facilities, or used internally to power the facility. The technology vendor is responsible for the disposal of these residues.

The demonstration facility, located in Hadera, Israel, processed more than 30 TPD of MSW and operated from 1996 to 1999. The facility was designed to process 11 TPD of MSW.

One full scale ArrowBio facility located at the Hiriya transfer station in Tel Aviv, Israel has been in operation since 2002. The facility processes approximately 210 TPD of MSW and generates biogas sufficient to produce three MW of electricity.[47]

5.3.1.2 Other Jurisdictions Using This Technology

Currently the only ArrowBio facility in operation is at the Hiriya transfer station. ArrowBio plans to build a 500 TPD plant in Mexico [48]. A 90,000 TPY facility that is part of Australia's Macarthur Resource Recovery Park at the Jack's Gully landfill site opened its doors on July 4, 2008.[49] [50]

50 Marshall, A.T. and Morris, J.M., "A Watery Solution," Chartered Institute of Waste Management Journal, August 2006.

5.3.1.3 Physical, Regulatory, and Environmental Requirements

The ArrowBio facility at the Hiriya transfer station has one 210 TPD module and requires approximately two acres of land, with an additional one-half to one acre for long-term storage of materials. If it were sized up to meet the 500 TPD requirement, an estimated six acres would be needed.

This facility would require 0.05 MW of electricity per ton of MSW processed, which is met with the generation from the biogas. Water consumption data is not readily available; however, ArrowBio claims the consumption is low due to moisture in the MSW. Additional water is required for the separation/dissolving tank.

While ArrowBio claims no negative environmental impacts, the gas the plant produces is burned in an internal combustion engine that would have emissions with air impacts. The company literature states that there is no significant odor potential as the MSW is immediately placed into the separation-dissolving tank. The treatment takes place in enclosed tanks, also reducing potential odors. Water used throughout the process is reused in the separation-dissolving tank, which results in low water consumption. A small amount of wastewater is generated from the process, but is expected to be suitable for release into the sanitary sewer system.

The company provided no information regarding economic benefits associated with the technology.[51]

5.3.1.4 Potential Issues

- There may be size-up issues unless several units of the same size as the existing facility are used.
- A market would need to be developed for the MSW compost, which may be difficult. MSW compost is not currently marketed on Oahu and it may be challenging and time consuming to develop the market and obtain the necessary governmental permits.
- A market would be needed for biogas or it would need to be used to generate electricity and sold to HECO.

5.3.1.5 Consistency With City Requirements

The anaerobic digestion facilities do not meet the City's requirements:

- The existing facilities either process less than the City's minimum waste stream (the existing

---

51 *Evaluation of New and Emerging Solid Waste Management Technologies,* New York City Economic Development Corporation and New York City Department of Sanitation, 16 September 2004.

ArrowBio facility 210 TPD of MSW, 290 TPD less than what the C&C requires) or they process source-separated organics.[52] ArrowBio could use multiple units to meet the City requirement.

- The facility design for the ArrowBio is the first fullsize facility.
- There is no proven market for the MSW compost product

5.3.2 Aerobic digestion

Aerobic digestion is the decomposition of MSW with the introduction of air. Examples of aerobic digestion include Converted Organics (formerly Mining Organics)[53], Real Earth Technologies, and Herhof Environmental's MBT Process. Due to the lack of readily available information about both Converted Organics and Real Earth Technologies, a generic explanation of Herhof Environmental's MBT Process is included. Different companies use different approaches and equipment, but produce similar products.

5.3.2.1 How It Works

The aerobic digestion process can be either wet or dry. Dry aerobic digestion is similar to in-vessel aerobic composting.[54] Inorganic materials, such as glass, metals, and plastics are removed from the MSW for recycling. The remaining material is shredded, mixed, and put into a vessel with a controlled amount of air and heat. Liquid is removed thereby reducing the volume. The mixture continues to be aerated, mixed, and depending on the reactor used, heated.[55]

Company literature states that wet aerobic digestion removes inorganic materials, such as glass, metals, and plastics, and pulps the organic materials from the MSW. The slurry is then mixed, aerated, and heated. Heating dries some of the organic material, reducing the total volume. Microbes are then introduced, which reduce the slurry to solid and liquid soil amendments for use in fertilizers.[56] The technology vendor is responsible for the marketing these materials.

56 *Evaluation of New and Emerging Solid Waste Management Technologies,* New York City Economic Development Corporation and New York City Department of Sanitation, 16 September 2004.

5.3.2.2 Other Jurisdictions Using This Technology

Composting of kitchen, food, and green waste scraps is well established in Europe. Germany has more than 500 biochemical treatment facilities processing more than eight million TPY of food and green wastes; the majority of those facilities are aerobic compost facilities. However, these facilities are not processing MSW.[57] Vancouver, Canada has a 30 TPD demonstration plant by Herhof in operation processing separated food and other organic wastes.[58] There are currently seven commercial MSW Herhof plants in operation in Germany, Belgium, and Italy, with one proposed for the United Kingdom that would use the solid fuel produced by the MBT Process in a combustion plant. In 2009, Herhof plans to open a 160,000 TPY MSW facility in Larnaka, Cyprus and a 40,000 TPY CI&I facility in Athens, Greece.

5.3.2.3 Physical, Regulatory, and Environmental Requirements

These requirements are unknown as there are currently no aerobic facilities that meet the requirements of the C&C.

5.3.2.4 Potential Issues

The process results in a compost that would have to be sold, and no markets have been demonstrated in Honolulu. Even with a solid fuel by-product, Honolulu does not have an existing, market for the fuel.

5.3.2.5 Consistency With City Requirements

None of the Herhof Environmental plants have been operation more than two years processing more than 500 TPD of MSW. However, Herhof Environmental states their MBT Process is capable of processing up to approximately 1,095 TPD.[59]

5.3.3 Hydrolysis

Hydrolysis is a chemical reaction in which water and another substance react, forming two or more new substances. With the hydrolysis of MSW, the reaction is between water and the cellulose fraction of the wastes to produce sugars. To obtain the cellulose fraction of the MSW, glass, metals, and other inorganic materials must first be removed.

58 *Evaluation of New and Emerging Solid Waste Management Technologies,* New York City Economic Development Corporation and New York City Department of Sanitation, 16 September 2004.

59 Herhof Environmental. http://www.herhof.com/en/. 21 July 2008.

Several types of hydrolysis technologies exist. The description by BlueFire Ethanol, Inc. (formerly Arkenol Fuels) is provided as an example for discussion. Another technology is the Masada Oxynol process.

5.3.3.1 How It Works

BlueFire Ethanol, also named Concentrated Acid Hydrolysis, uses the source-separated fraction of MSW. The process first sorts out recyclable materials. The remaining material is ground for further processing. Sulfuric acid decrystallizes the material and breaks the organic fraction into its component sugars (cellulose and hemicellulose). The material is then hydrolyzed; the chemical bonds are broken, producing hexose and pentose sugars required for commercial fermentation. Insoluble materials are filtered for processing for other uses. The entire process runs on biomass, including agricultural residues, crops grown specifically for use as biomass, paper, wood, and green waste.[60]

The pilot facility for BlueFire Ethanol located in Orange, California, processed one TPD of MSW. This facility operated for five years beginning in 1992.[61] BlueFire Ethanol recently began the prefabrication process for its first ethanol biorefinery in Lancaster, CA. The Lancaster facility would use post-sorted cellulosic wastes diverted from landfills in Southern California to produce fuel-grade ethanol. The company was awarded $40 million from the U.S. Department of Energy (DOE) for construction of a second plant also in Southern California, and has been invited to submit a formal application for a DOE loan guarantee to assist in the financing of its ethanol production facilities.[62]

The only commercialized BlueFire Ethanol facility is in Izumi, Japan. It has been in operation since 2002, using waste wood chips as feedstock.[63]

5.3.3.2 Other Jurisdictions Using This Technology

There are no hydrolysis facilities currently in operation that process MSW as feedstock and none are the size the City requires.[64]

---

60 *Evaluation of New and Emerging Solid Waste Management Technologies,* New York City Economic Development Corporation and New York City Department of Sanitation, September 16, 2004.

61 Arkenol Fuels. http://www.arkenol.com/. 21 July 2008

63 California Integrated Waste Management Board, Session Summary: Emerging Technology Forum, Brief summary of presentations by Rick Diederich prepared by CIWMB staff, 17–18 April 2006.

64 Interstate Waste Technologies, http://www.iwtonline.com/ . 21 July 2008.

5.3.3.3 Physical, Regulatory, and Environmental Requirements

A Masada facility that could process about 600 TPD is expected to require 10-acres. The environmental impacts include emissions from the process, waste water discharges, and other impacts. The facility would need to satisfy the State's regulatory and environmental process for MSW processing plants.

5.3.3.4 Potential Issues

The use of MSW as feedstock has not successfully been demonstrated except at a pilot facility scale, although Masada is developing commercial facilities with projects in Orange, New York and the Dominican Republic.[65] [66]

According to the President and CEO of Arkenol, a market for the ethanol produced is expected to exist, but will need to be proven. The President and CEO of Arkenol addressed a meeting on alternative technologies and stated that an uncertain market for ethanol is believed to be one of the reasons a California Arkenol Fuel project failed.[67]

5.3.3.5 Consistency With City Requirements

Hydrolysis is inconsistent with the C&C requirements because there has not yet been a successful facility at the size required by the City operating on MSW.

5.4 Thermal

Thermal or combustion technologies produce a significant amount of heat which can be turned into energy. During the processes, both organic and non-organic materials are combusted while the non-combustible materials can be recycled either before or after combustion. Common thermal technologies are EfW, gasification, plasma arc, and pyrolysis. Examples of thermal technologies include the following. Some of these companies may no longer be providing the service.

- Covanta Energy — the City's H-POWER facility.
- Rigel Resource Recovery — Westinghouse Plasma Arc Gasification.

- Takuma Mass Burn Renaissance System.
- Resource Recycling, L.L.C. (Mass Burn).

H-POWER technology is discussed in its own section since it is a proven technology that is currently in use by the C&C.

5.4.1 Plasma Arc

This technology uses large carbon rods in a sealed vessel to generate a high temperature arc that converts the materials in the vessel into plasma (ionized gas). Heat generated by the arc melts the inorganic fractions into a running slag (that can appear like glass) and vaporizes the organic fractions, which become a synthetic fuel gas. The glass can be disposed in a landfill or may be used for beneficial purposes, such as for replacement of imported sand for sand blasting. The synthetic gas is cleaned and burned to produce power.

There are several vendors of plasma systems, including Westinghouse and other project developers. A four TPD plasma system historically operated near the H–POWER plant to process medical waste, but this facility has ceased operations.

The City Council Public Works and Economic Development Committee heard from plasma system representatives during its review of potential landfill sites.[68] The representatives that addressed the

---

68 Memorandum from Councilmember Rod Tam to Concerned Citizens of Oahu transmitting the report titled

Committee were identified in the report as:

> "… the following companies with the plasma gasification technology have made presentations or submitted materials to the Committee on Public Works and Economic Development ...:
>
> (1) JDI/Geoplasma, LLC;
>
> (2) Environmental Solutions Corporation representing the Solena Group;
>
> (3) EnviroDyne;
>
> (4) Startech Environmental Corporation;
>
> (5) Scientific Utilization, Inc. /Waste To Energy; and
>
> (6) Phoenix Consulting Group International, LLC, for Biomass Conversion Technology, LLC".

5.4.1.1 How It Works

Plasma arc technology gasifies MSW with high pressure air and an electric arc that produces very high temperatures (up to 4,532 ^{o} F).[69] These temperatures virtually vaporize the waste into its elemental components, creating syngas, which can then be used to generate electricity.

5.4.1.2 Other Jurisdictions Using This Technology

Currently, there are two operating plasma arc facilities that process MSW. The longest running one and the only one that is not a demonstration plant is the Eco Valley Utashinai facility located in Utashinai, Japan. The facility processed more than 270 TPD of MSW and 130 TPD of automobile shredder residue and generated approximately 4,400 kWh of salable energy in fiscal year 2005.[70]

The City of St. Lucie, Florida has been in negotiations for a plasma arc facility for over 4 years.[71]

"Committee on Public Works and Economic Development's Summary Report on its Landfill Site Selection Process." 16 November 2004.

69 Altar NRG. http://www.alternrg.ca/gasification/plasma_gas.html. 22 August 2008.

70 Shigehiro, Michiaki, General Manager of Eco Valley Utashinai.

The Georgia-based company, Geoplasma, has agreed to build and operate the facility and claims at full capacity, the facility would process 2,000 TPD of MSW and 1,000 TPD of MSW mined from a landfill while producing 120 MW of electricity.[72]

Geoplasma has agreed to build and operate the facility, estimating that within the next 15 to 18 years the facility will have disposed of all the current waste in the landfill. Ron Roberts, the Assistant Solid Waste Director in St. Lucie, estimates the plant will be finished by 2008 or early 2009. The scope of the project downsized. An article in the local newspaper reports a change to 200 TPD and more stringent local emissions limitations.[73]

A second plasma plant operating on MSW started operation in late January 2008 in Ottawa, Canada. It is a demonstration project that is designed to processes 85 TPD. *Table 11, Plasco Trail Road - Average Daily Quantity of MW Processed shows* the average TPD of waste processed monthly at the Plasco Trail Road Gasification Process Demonstration Project in Ottawa, Canada.

Table 11, Plasco Trail Road - Average Daily Quantity of MW Processed [74]

74 Decommissioning Consulting Services Limited. Monthly Engineer's Report Plasco Trail Road Gasification Process Demonstration Project. September 2008.

The information about the demonstration project was obtained from news sources[75], which stated:

> "A demonstration waste-to-energy plant in Ottawa has finally turned its first load of trash into power…
>
> … The $27 million plant uses a process called plasma gasification to decompose waste under high heat and low oxygen into a gas mixture called syngas, and a glass-like material that can be turned into asphalt or concrete….
>
> Once the plant is running at full capacity, it is to divert 85 tonnes of waste a day from the city's landfills while generating enough electricity to run the facility and power 3,600 homes….
>
> Plasco hopes its demonstration plant in Ottawa would persuade other cities to buy the technology….
>
> Construction of the plant started in September 2006. It was to run as a two-year pilot project."

The PLASCO plant was partially funded by the Canadian government.

> "This brings to over C$90 million the equity invested in PlascoEnergy since August 2005. The Company had nominal debt and a modest cash position prior to this issue, and is well funded for development of commercial facilities next year," said Rod Bryden, PlascoEnergy President and CEO. "Commitment of funding from Sustainable Development Technology Canada ('SDTC') to the Ottawa demonstration project was a key factor in bringing the PlascoEnergy technology to reality and to attracting private capital that would fund its future commercial use around the world. SDTC has committed a non-repayable contribution of C$9.5 million," he said.[76]

5.4.1.3 Physical, Regulatory, and Environmental Requirements

The Eco-Valley Utashinai facility is the only one of its kind that has been operating processing MSW for more than one year. If a similar facility were built on Oahu, it would have to meet the same requirements of both State and Federal regulations as any new alternative technology.

---

75 Information from http://www.cbc.ca/technology/story/2008/02/07/ot-plasco-080207.html, 24 July 2008.

5.4.1.4 Potential Issues

The experience with plasma operating on MSW has been limited to one full-scale plant and one demonstration plant. The full scale plant has operated on a combination of MSW and auto shredder waste. In addition, according to visitors to the plant, the MSW burned is not mixed waste as is handled by H–POWER, but is primarily paper and plastic.

The operating results for the Utashinai facility from 2005 show that the plant is operating at less than rated capacity and not producing power in excess of its needs. *Table 12, Actual Treatment Record in 2005 (Fiscal Year)* was provided by the plant operator to the City staff and shows the operational record for one year.

Table 12, Actual Treatment Record in 2005 (Fiscal Year)[77]

Month	Waste Processed (Tons)		Slag (Tons)	Electric Power (MWh)			Operating Days

Total	62,050	23,737	38.3%	5,210	22%	37.6%

*Assumes capacity of 200 TPD MSW and ASW at 85 percent availability.

5.4.1.5 Consistency With City Requirements

Currently, plasma arc technology does not meet the C&C requirements. The Eco-Valley Utashinai facility processes 270 TPD of MSW, 230 TPD short of the C&C requirements. The Ottawa facility, at 85 metric TPD and with less than two years operation, is also short of the C&C requirements. In addition, as shown in ***Error! Reference source not found.*** and expressed in the company's online literature, is intended to be a demonstration plant with the full scale facility to be constructed.

These facilities are the only ones operating on MSW, and only the Plasco Trail Road facility in Ottawa operated solely on MSW.

Plasma arc does not meet the City's requirements.

5.4.2 Gasification/Pyrolysis

Gasification is the process of reducing MSW to a synthesis gas. Pyrolysis is similar to gasification and often considered a type of gasification technology. The by-products of gasification are syngas and vitrified material (slag) and pyrolysis by-products are solid carbon and liquid fuel. Pyrolysis generally takes place during the first steps of gasification. Examples of gasification technologies are

78 Nomura, Akira. Hitachi Metals. Actual Treatment Record for Utashinai Eco Valley. 2005. Correspondence to Wilma Namumnart. 10 August 2006.

as follows. Some of these companies may no longer be providing the service.

- Dynecology—Gasification with Briquetting of Refuse Derived Fuel (RDF)/Coal/Sewage Sludge.
- International Environmental Solutions (IES)—Advanced Pyrolysis Systems
- EBARA Corporation—Fluidized Bed Gasification with Ash Vitrification.
- GEM America—GEM Thermal Cracking Technology (Gasification).
- Global Energy Solutions—Thermal Converter Technology (Gasification and Vitrification).
- Interstate Waste Technologies—Thermoselect Gasification.
- Pan American resources—Destructive Distillation Lantz Converter.

5.4.2.1 How It Works

Dynecology's Gasification with Briquetting of RDF/Coal/Sewage Sludge technology processes MSW into RDF and then blends RDF and dewatered sewage sludge together with coal making briquettes. The briquettes are then introduced to the gasifier, or high-pressure, fixed-bed reactors. The inorganic fraction melts and is removed from the bottom of the chamber as slag and the synthesis gas is removed from the top. Dynecology has no facilities currently operating on MSW.

The International Environmental Solutions (IES) pilot Advanced Pyrolysis Gasification Systems (AP Systems) plant in Romoland, CA uses zero-oxygen fuel input technology to convert MSW into syngas. Many types of waste can be processed using the AP System including MSW, biomass, industrial waste, tires and hazardous waste. AP Systems uses very high heat to decompose organic wastes into synthetic gases and a carbon residue. The gases are then cleaned and combusted to produce steam, which can then be converted to electricity. While the gasification process may not produce emissions, there are emissions from the use of the syngas, and those emissions need to meet regulatory agency requirements The pilot plant in Romoland, CA has been approved by federal, state, and local agencies, including the California South Coast Air Quality Management District, for air quality, and complies with all environmental regulations and guidelines above their standards.

GEM America's GEM Thermal Cracking technology processes unsorted MSW. Recyclable materials, such as metals, glass, and cardboard are separated and the remaining materials are shredded, dried, and granulated. The MSW is then gasified and converted into synthesis gas. The synthesis gas can be used to generate electricity. GEM America has no commercial facilities currently in operation, but has two demonstration plants processing 73 TPD that have been in operation since 2000.

EBARA Corporation's Fluidized Bed Gasification with Ash Vitrification technology introduces shredded MSW into a fluidized bed reactor vessel. Gasification takes place in the reactor at atmospheric pressure. Temperatures range between 1,022–1,166° F, reducing the MSW to ash. The ash and synthesis gas enter into a second chamber where the materials are heated again at higher temperatures (2,372–2,642° F). Fine particles are collected on the walls and become molten slag collected at the bottom of the chamber and cooled to form a vitrified granulate. The synthesis gas is used to produce energy. The largest EBARA plant is its Kawaguchi City reference plant which processes 462 TPD of MSW.

With Global Energy Solutions' Thermal Converter technology (Gasification and Vitrification), unsorted MSW is introduced into the gasification reactor. Preheated air (660–840° F) is then introduced and the MSW is passed to a conversion chamber heated between 2,200–2,500° F and then to a second conversion chamber heated between 3,000–3,100° F. This secondary chamber cleans the gases and vitrifies the residue using a bed of molten material. The synthesis gas produced is used in a boiler to produce steam or to generate electricity.

Interstate Waste Technologies uses a waste treatment process called Thermoselect Gasification. The system compacts unsorted MSW thereby removing most of the air and evenly distributing the moisture content. The compacted waste is then pushed through a high temperature chamber where the inorganic waste turns molten and the organic waste converts into gas. The organic gases enter a lower temperature chamber and are shock cooled to avoid the formation of dioxins or furans. The gases are then shuttled through scrubbers to remove sulfur, heavy metals and other toxins. The resulting synthesis gas can be used for energy production or as a base material for chemical synthesis. The molten inorganic waste is also shock cooled and results in reusable mineral substances and metals. The water condensed during the different phases of the gas treatment is fed into the water treatment chambers where it undergoes a multiple-stage treatment. The processed water is then used for cooling purposes.[79]

5.4.2.2 Other Jurisdictions Using This Technology

Global Energy Solutions has 14 facilities in operation in Japan, Asia, and Europe. Two facilities operating in Japan process solely MSW.

Since the start-up of the Aomori, Japan plant in 2000, EBARA has since opened nine TwinRec gasification facilities in Japan and one in Kuala Lumpur, Malaysia. None of these plants process the amount of waste required by the City, but the plant in Kawaguchi City is close at 420 TPD.

---

79 http://www.iwtonline.com/docs/Thermoselect_process_description.pdf, 21 July 2008.

Interstate Waste Technologies has the following facilities:[80]

- Fondotoce, Italy, operated the demonstration Thermoselect facility for six years, with commercialization commencing in 1994, from 1992-1998. The plant was decommissioned in 1999.

- Karlsruhe, Germany, operated a Thermoselect facility from 1999 until 2004, when it was closed due to "general business strategy decisions." The facility processed 225,000 TPY of waste from surrounding towns and rural districts.

- Currently, seven Thermoselect facilities are operating in Japan. Three of the facilities operate on MSW. Commercialization of the Matsu facility began in 2003 and currently processes 140 TPD. The Nagasaki and Tokushima facilities commenced operations in 2005, with the Nagasaki facility processing 300 TPD and the Tokushima facility processing 120 TPD of MSW.

5.4.2.3 Physical, Regulatory, and Environmental Requirements

Global Energy Solutions states that their Thermal Converter technology exceeds all known emission standards worldwide and that there are no odors due to their storage of MSW inside a building. Global Energy Solutions also states that their technology requires less land than traditional incinerators; however, no documentation of land requirements was found.

The synthesis gas produced is sufficient to power the Thermoselect facility.

Water consumption is 560 gallons/ton of MSW. Wastewater is treated and reused.[81]

EBARA's TwinRec process can treat a variety of waste. Only bulky wastes need to be cut to pieces smaller than 300 mm.[82] For example, car shredder residue can be fed through the gasifier without any additional preparation. The gasifier is a proprietary internally circulating fluidized bed with compact dimensions. The relatively low gasification temperature in the fluidized bed leads to easily controllable process conditions.[83]

5.4.2.4 Potential Issues

---

80 http://www.iwtonline.com/docs/Thermoselect_process_description.pdf , 21 July 2008.

81 Thermoselect. http://www.iwtonline.com/docs/Thermoselect_process_description.pdf. March 12, 2008.

82 Selinger, A., Ch. Steiner and K. Shin. "TwinRec Gasification and Ash Melting Technology – Now also Established for Municipal Waste" 2 July 2003.

83 EBARA Environmental Engineering Company. http://www.ebara.ch/_en_/twinrec.php?n=1. 22 August 2008.

- Global Energy Solutions' Thermal Converter technology vitrified residual by-product requires a market.

- Interstate Waste Management's Thermoselect technology requires a market for the metal pellet and vitrified granulate by-products.

5.4.2.5 Consistency With City Requirements

Global Energy Solutions' Thermal Converter technology might be consistent with the C&C requirements; there is no information readily available regarding how long either of the two MSW facilities in Japan has been in operation. This residual by-product requires a market that is not proven on Oahu.

Interstate Waste Management's Thermoselect technology is inconsistent with the C&C requirements. Although there are seven Thermoselect facilities in Japan, only three operate on MSW, none at the size the City requires (the Matsu facility processes 140 TPD, the Nagasaki processes 300 TPD, and the Tokushima facility processes 120 TPD.) All those listed here have been in operation for more than two years. The market for the metal pellets and vitrified granulate by-products would have to developed on Oahu.

EBARA has a plant that processes 462 TPD that has been operating for 6 years. It might be an alternative if the cost was reasonable. In a tour of the facility in early July 2008, a question was asked about the cost and the response indicated that they do not discuss cost, but also do not propose in many areas of the US because the market does not support the project cost. [84]

5.5 Expanded Recycling

5.5.1 Current city recycling amounts

Current recycling infrastructure consists of community recycling bins, recycling support for schools, HI5 redemption sites, and a three-bin curbside collection program. The City also offers bi-weekly curbside green waste collection to its residents. Approximately 20,000 tons of green waste is collected annually from residences. The City expects green waste recycling to increase to 60,000 tons annually with the new bin system. The collected green waste is turned into mulch and offered to residents at no cost.[85] The overall goal of these programs is to reduce the amount of waste disposed.

---

84 Personal communication with Paul Philleo, Chief of the Sacramento County Department of Waste Management and Recycling.

85 Department of Environmental Services www.opala.org, 22 July 2008.

5.5.2 Expanded programs

Expanding current recycling infrastructure within the City would not eliminate the need for expanding H–POWER; however, expanded programs would decrease the amount of materials sent for disposal. The recycling programs cannot handle all the materials in the MSW. As a result, expanded recycling is not a viable alternative to Expansion of H–POWER.

The expanded recycling could include expansion of the number of sites that accept materials from the HI5 beverage container program, addition of more sites to the school drop-off program, increasing the frequency of curbside collection of residential green waste, and adding a program to collect other recyclables from residences at the curb.

The City conducted a pilot three-bin curbside program with once-per-week solid waste collection and once-per-week recycling collection, alternating between recycling and green waste. The residents in the pilot locations, Mililani and Hawaii Kai, were generally successful at separating their recyclables and green waste from the solid waste bins and reducing their overall weekly disposal. Most neighborhoods still have twice-per-week solid waste collection and bi-weekly green waste collection, but the three-bin service was extended to other communities on a rolling basis beginning in November 2008. The program is set to be offered island-wide by May 2010. [86]

If the expanded recycling program achieves the higher level of penetration evaluated, it is expected to divert 35,000 tons of recyclables and 60,000 tons of green waste from the landfill. According to the City's Integrated Solid Waste Management Plan,[28] even considering Enhanced Recycling and assuming that 300,000 tons of MSW will be recycled into electric power by H–POWER Unit #3, there will still be over 100,000 tons per year of waste requiring landfilling. Thus, Enhanced Recycling is not a viable alternative to the Proposed Expansion Project.

5.5.3 Consistency With City Requirements

Expanded recycling is consistent with the City's plans, but cannot provide the same diversion from landfilling as H–POWER Unit #3. As noted above, even with Enhanced Recycling, there is a need to landfill more than 400,000 tons of MSW per year into the future unless H-POWER is expanded by the addition of Unit #3.

5.5.4 City Study on Recycling Alternative

The City has recently compared the environmental and economic impacts of materials recycling of wastepaper to produce new products and energy recycling of wastepaper to produce electricity at Honolulu's existing H-POWER facility. In 2007, the City contracted with R. W. Beck, Inc. (R.W.

---

86 City and County of Honolulu, Curbside Recycling Pilot Program Evaluation, June 2008.

Beck, 2007) to prepare this limited comparison. The report does not consider energy recovery of waste paper from the proposed Expansion unit at H-POWER. The study considers the existing units at H-POWER. It assumes the disposal and collection of waste paper with mixed MSW, the processing of mixed MSW (containing waste paper) to prepare RDF, and the combustion of RDF to produce electricity in the existing Units 1 and 2 at H-POWER. The report is discussed here to provide general insight into the Expanded Recycling Alternative to the proposed Expansion.

According to the R.W. Beck report (2007)[87]:

> "The study analyzes selected impacts associated with managing 73,555 tons of wastepaper as was recycled in Honolulu during 2005." [R.W. Beck (2007)]
>
> "To provide a balanced analysis, the scenarios were analyzed in two distinct ways:
>
> - First, a variety of environmental and economic impacts accruing on the Island of Oahu were estimated directly; and
> - Second, global life-cycle energy and greenhouse gas impacts accruing both on- and off-Island were estimated using the Waste Reduction Model (WARM), developed by the U.S. Environmental Protection Agency (EPA)." [R.W. Beck (2007)]

The conclusions of the R.W. Beck (2007) report are presented below:

> "If only on-island impacts are considered, energy recycling (i.e., H-POWER) provides greater energy and greenhouse gas benefits compared to materials recycling. However, if off-island impacts and on-island impacts are considered, materials recycling has greater benefits. The off-island energy and greenhouse gas benefits associated with substituting recycled paper for wood pulp to manufacture paper products are greater than the on-island H-POWER benefits." [R.W. Beck (2007)]
>
> "Managing wastepaper using both materials recycling (i.e., remanufacture into paper products) and energy recycling (i.e., H-POWER) yield environmental benefits. Both approaches reduce environmental impacts that would have occurred had the materials not been recycled for materials or energy recovery. Specifically:
>
> - Generating electricity from the combustion of wastepaper at the H-POWER facility provides energy benefits by offsetting the need to generate electricity through combustion of fuel oil. This type of power generation benefits Honolulu

87 R.W. Beck. 2007. Final Report: Comparison of Select Materials and Energy Recycling Scenarios and Transmittal Memorandum from Robert Craggs to Frank Doyle et al. entitled "Final Report: Comparison of Select Materials and Energy Recycling Scenarios."

directly by reducing fuel costs and air emissions associated with burning fuel oil; and

- Materials recycling of wastepaper yields energy benefits because it provides alternative raw material to paper manufacturers, thereby reducing the need for logging and production of "virgin" pulp products. In contrast to the energy benefits of H-POWER, materials recycling energy benefits accrue off-island, where wood pulp and paper products are produced." [R.W. Beck (2007)]

"Materials recycling creates more on-island jobs than energy recycling (i.e., H-POWER). However, H-POWER generates greater overall economic value for the Honolulu economy, resulting in a larger increase in business activity from providing products and services to HPOWER." [R.W. Beck (2007)]

5.6 Transshipment Off-Island

The transshipment of waste involves securely containing the MSW, shipping it to the mainland and disposing of it at a mainland landfill. On August 23, 2006, the US Animal and Plant Health Inspection Services (APHIS) announced its decision to allow the transshipment of MSW to the continental United States from Hawaii.[88] Transshipment would be allowed only under certain circumstances. Wastes by federal regulation that would be restricted from transshipment are, hard-to-handle wastes, such as white goods, sewage sludge, auto fluff, and precluded materials such as green and agricultural wastes (more than three percent of the bale weight). The announcement is attached as Attachment A.

On January 22, 2008 the City provided a notice to bidders that it would entertain proposals for transshipping waste to the mainland for disposal as an interim measure for several years before the proposed Expansion is completed. The C&C has received bids from three transshipment firms: the cost was $99.83 per ton from Hawaiian Waste Systems, $184.47 per ton from Simcoe Environmental Services Inc., and $204.21 per ton from Off-Island Transfer.[89] The companies proposed sending Oahu's waste to Washington State to the Roosevelt Landfill or to a landfill in Idaho. If the C&C were to begin transshipping Oahu's waste, the vendors would have to comply with requirements for the handling and storage established by the federal government in the Compliance Orders, with state regulations for handling and processing the MSW, and with local land use permitting requirements. One of the potential transshipment vendors has approved Compliance Orders for the Hawaii and mainland operations and a permit for the transfer station to shrink wrap

88 Federal Register volume 71, number 163, published 23 August 2006.

89 Laurie Au. "City Reviews Bids to Ship Oahu Trash." Star Bulletin on the Web Vol. 13, Issue 171. 19 June 2008. (23 July 2008) http://starbulletin.com/2008/06/19/news/story08.html.

and transfer the waste. The C&C would also need to look at the effects of transshipment on H-POWER over the long term. With the long term shipment of Oahu's waste off-island, waste disposed in H-POWER may be reduced and revenue from the energy sold would diminish.

The City's review of the transshipment proposals was delayed due to a protest filed against Hawaiian Waste Systems. The other two bidders challenge Hawaiian Waste Systems, whose bid was half the cost of their proposals.[90] A statutorily-mandated stay on the award of the bid is in effect while the City reviews the protest.

5.6.1 City Requirements for Transshipment

In the January 22, 2008 notice to bidders, the C&C established requirements for the transshipment of MSW:

(1) Permits, compliance letters, certifications, environmental assessments, and other documents, related to services needed to carry out the contract, must be current for the transshipment contractor.

(2) The proposed methods and measures to fulfill each requirement of the contract must be identified.

(3) A site plan displaying existing facilities, equipment, traffic conditions, and a description of operations must be provided.

(4) A back-up plan for equipment maintenance, failure, or other disruption, to minimize landfill disposal must be provided.

(5) A back-up plan for barge-loading obstruction or other disruptions of exporting operations to minimize landfill disposal must be provided.

(6) A copy of facility agreements between the bidder and facility, barging, or disposal operators must be provided if the bidder is not the director/operator of each.

(7) The bidder must provide a property easement for the placement of a City-owned scale, scale house, and associated equipment.

---

90 Peter Boylan. "Firm Claims City Pressured on Bids to Ship Trash." Honolulu Advertiser on the Web 11 July 2008. (23 July 2008) http://www.honoluluadvertiser.com/apps/pbcs.dll/article?AID=/20080711/NEWS04/807110350/1008/LOCALNEWSFRONT.

5.6.2 How It Works

The three interested transshipment firms have submitted applications to the State for modifications to the transfer stations that are currently permitted to handle MSW. Modifications include adding the equipment needed to transship MSW to the Roosevelt Landfill in Washington State or a landfill in Idaho.

The transshipment vendors would shrink-wrap the waste to avoid shipment of pests and control nuisance impacts. The approach is described in the risk assessment prepared by APHIS for its regulatory action.[91]

The process for handling the waste in Honolulu is specified in the final Compliance Agreement between the USDA and Hawaii Waste Systems, LLC (HWS). The procedures for handling the waste and transporting it to the landfill for disposal are detailed[92] as follows:

> "…Garbage and Regulated (domestic) Garbage collected by refuse trucks shall be delivered to the HWS facility at HWS Transfer Station …Trucks of agricultural waste shall not be accepted. Waste materials, containers, and bins associated with Foreign Garbage are strictly prohibited and shall not be accepted. The ground surface of the all areas for handling the Garbage and Regulated (domestic) Garbage should be level, solid, and impervious surface of asphalt or cement.
>
> The waste transfer station will receive only household and commercial waste acceptable for disposal at Roosevelt Regional Landfill. Collection trucks will deliver waste picked up from existing collection routes.
>
> Each load of waste received at the facility will be weighed and the date, time, company, driver name, truck number (i.e., company fleet number), weight (loaded), weight (empty), and origin of load, will be recorded. Records will be kept for a minimum of three years."

5.6.3 Other Jurisdictions Using Transshipment

Shipment of MSW using shrink-wrap has been used in New Jersey and other areas of the US. It has been used in Europe for as long as 10 years. The Roosevelt Landfill in Washington receives MSW, not only from Washington State, but also from Oregon, Canada, Idaho, and Alaska.[93] Canada has transshipped its MSW to Michigan landfills for many years, while New York is in the process of transshipping its MSW to North Carolina. Most of these operations do not use the shrink-wrap technology.

APHIS determined, with its acceptance of transshipment of MSW stateside from Hawaii, that transshipment could occur from both Oahu and the island of Hawaii once contracts and compliance agreements have been set up in Hawaii.

5.6.4 Physical, Regulatory, and Environmental Requirements

The limitations on shipping waste from Hawaii to the mainland are established in federal regulations[94] with approval of the specific requirements promulgated in the Federal Register.[95]

Garbage subject to these regulations (Regulated Garbage) is defined as waste on—or removed from—a transport that has been in any non-U.S. or Canadian port within the past two years. The garbage is also regulated if that transport has either directly or indirectly moved in the past year between the United States and its territories and non-U.S. territories.

Any garbage commingled with regulated garbage is considered Regulated Garbage and would have to be shrink-wrapped and handled according to the Compliance Agreement.

The primary regulator of transshipment is the U.S. federal government through APHIS.

Regarding flow control of the waste, it has been determined that if the City controls the scale house, it can direct the flow of the waste to the disposal location. The January 22, 2008 Notice to Bidders requires that the successful bidder provide an easement at their site for the City's scale house and supporting equipment.

93 Washington State Department of Ecology, Solid Waste and Financial Assistance Program, "Solid Waste in Washington State Fifteenth Annual Status Report", December 2006.

94 7CFR 330.400 and 9CFR 94.5.

95 Federal Register volume 71, number 163, published 23 August 2006.

5.6.5 Compliance Agreement

Before any waste can be transshipped, all parties involved with the export must enter into a Compliance Agreement with the USDA. All parties must comply with conditions within the Compliance Agreement, as well as, all provisions in 7CFR 330.400–403 and 9CFR 94.5.

5.6.6 Transshipment Regulations

The requirements for shipping the waste are in the Compliance Agreement and in other federal rules and regulations relating to transportation of materials by barge.

5.6.6.1 Receptacles

MSW transported from Hawaii to the mainland must be stored in specified receptacles. If the MSW is to be sent by watercraft, the receptacles must be contained within the guard rails of that watercraft. Receptacles must be tight, leak-proof, and covered while being transported.[96] Removal of receptacles must be under the direction and supervision of an inspector from APHIS and taken to an approved facility.

The shrink-wrap technology used to contain the MSW before it is transshipped uses plastic film wrapping material. The wrapping material is to be impermeable and made of low density polyethylene at least 16 micrometers in thickness. It is to be coated on one side with a non-hardening mastic/adhesive. Bales are mechanically wrapped to achieve airtight seals. The film anoxiates the wrapped MSW to kill the insects and pests entrained in the bale. In a 10-month study, DEKRA Umwelt, an international service provider, determined that the filmed bale environment is made up of 1 percent oxygen and more than 50 percent methane; that within 24 hours, any insects captured during baling of the MSW died from lack of oxygen. The film contracts once it is wound around the MSW. This ensures that during transshipment and disposal no materials or insects are leaked.[97]

5.6.6.2 Disposal

Disposal of MSW must take place at an approved facility. The Roosevelt Landfill has a permit issued pursuant to the federal Subtitle D regulations and would be considered an approved facility.

96 7CFR 330.400 and 9CFR 94.5.

97 *The Risk of Introduction of Pests to the Continental United States via Plastic-Baled Municipal Solid Waste from Hawaii,* United States Department of Agriculture, Animal and Plant Health Inspection Service, March 2006.

5.6.7 Potential Issues

A shipping strike would create potential problems for Oahu should it occur during transshipment of MSW to the continental United States. The plastic film used to bale the MSW in preparation for transshipment is required by the USDA Compliance Order to be re-wrapped if the bale will not be in the landfill within 75 days.[98] The film has a life of at least 100 days when exposed to sunshine in tropical environments such as that found on Oahu.[99] Assuming a transit time of 14 to 21 days, even a short strike would threaten to cause the shipper to exceed the 75 day time limit from wrapping to disposal as required by the USDA. Oahu would not be able to transship its MSW during a shipping strike. If the strike was lengthy, the shipper would have to landfill the waste to avoid health and safety impacts.

According to the Chief Executive Officer of HWS,[100] the bales can be stacked two high. The space they have at the port facility will allow for storage of 30,000 tons of MSW. Assuming that the company handles 300,000 TPY, they can store about five weeks of shrink-wrapped MSW. In addition, the agreement for barge services allows management of the barge company to operate the equipment needed to transship the waste in a strike due to the health and safety aspects of transporting the waste.

Another issue with transshipment off-island is that green and agricultural wastes, as well as household hazardous wastes, are not permitted to be shipped commingled with the MSW. Incidental amounts, less than three percent of the total amount of MSW shipped, are permitted. Therefore, the source of waste that is transshipped must separate green and agricultural wastes from the MSW.

Assuming that a bale weighs 3.5 tons[101] the total weight in the bale is 7,000 pounds. The limitation of three percent or less of yard wastes[102] allows for 210 pounds of yard waste in the bale. While it is a small percentage of the bale, that amount of green waste should be observed in the inspection prior to baling.

101 Meeting on 14 December 2006, with Jim Hodge and Mark White held in Sacramento, California.

102 Federal Register volume 71, number 163, published 23 August 2006.

Transshipping Honolulu's MSW makes the C&C dependent upon an outside source rather than maintaining self-sufficiency managing its own refuse. For a state that in recent months has continued to voice its desire for independence, transshipment could be a step backwards.

If the entire 300,000 TPY projected to be handled by H–POWER Unit #3 were instead transshipped, it is likely that there would be insufficient fuel for the new unit. If that were the case, the loss of energy production would result in other oil based generation replacing the H–POWER generation, increasing greenhouse gas emissions by 83,861 metric tons of CO_2 per year and increasing (rather than reducing) the island's dependence on foreign oil by an additional 429,000 barrels of oil per year.

Relying on outside sources for the transshipment of MSW leaves Honolulu vulnerable to shipping strikes and with less negotiating power. The municipality would lose control of cost and possibly lose a source for disposal.

5.6.8 Impact on City Solid Waste Management System

From an environmental perspective, the impact of transshipment through the HWS system would be consistent with the impact of on-island disposal, but higher than the impacts of H–POWER Unit #3. It would be consistent with disposal in the Waimanalo Gulch Sanitary Landfill in that:

- The transfer, baling, shrink-wrap, and loading would be done at a permitted transfer station.
- The material would be contained within a system that has received approval from the federal government based on the system's ability to prevent the unexpected discharge of waste or plant pests.

It would have greater impacts than H–POWER Unit #3 in that:

- Greenhouse gas emissions would be greater (see discussion in section 5.6.10)
- The use of higher levels of imported oil for power production would continue.

From the perspective of how transshipment would impact the City's current system for financing the solid waste collection and disposal activities, the conclusion is not so clear. If transshipment removed 300,000 tons, the tip fee and energy revenues from energy production and disposal of that waste would be lost to the City. That revenue helps support the collection system, so the City would have to find other sources of funds to offset the lost revenue.

The additional cost of transshipment compared to the current disposal system is indicated by the bid prices of the three potential vendors compared to the current City disposal fee. The three vendors bid $99.83, $184.47, and $204.21 per ton compared to the current disposal cost of $92 per ton. The two higher priced bidders are protesting the price quoted by the lower priced bidder. [103]

The CEO of HWS has provided a summary of their company's suggestions on how to integrate their transshipment program into the City's solid waste management system. The e-mail summarizing his suggestions is in Attachment B.

5.6.9 Consistency With City Requirements

The C&C guidelines regarding the transshipment of MSW off-island are listed in section 5.6.1, which were summarized from the Notice to Bidders released on January 22, 2008.

Not all waste can be shipped off-island. Items such as flocked Christmas trees, sewage sludge, auto fluff, out of date medicines, and other hard-to-handle wastes cannot be shipped without special arrangements to dispose of these materials. The shipping alternative only accepts materials from a specific waste stream and does not eliminate the need for a landfill.

5.6.10 Global Warming Considerations

The increasing concern about global warming and climate change caused an evaluation of the greenhouse gas emissions from transshipment. An analysis was conducted (See Attachment C for details) of the emissions of greenhouse gases (GHG) from transshipment and landfilling compared to recovering its energy content at H–POWER. The analysis used shipment of 300,000 TPY to match the waste processing capacity of H–POWER Unit #3. We acknowledge that the City has requested proposals to transship a different amount of waste, and used the 300,000 TPY to enable direct comparison of the impacts of the transshipment alternative to the impacts of H–POWER Unit #3.

The results of the evaluation are summarized in *Table 14, Comparison of GHG Emissions from Transshipment to On-island Disposal* which shows the emissions in thousands of metric tons of CO_2 equivalent per year. The negative emissions shown in the table means the facility reduces rather than increases global CO_2. The emissions from H–POWER and the Waimanalo Gulch Sanitary Landfill are negative because of the following factors:

- The power generated by H–POWER more than offsets the GHG emissions from H–POWER due to the reduction in emissions from burning either coal or oil to produce that same amount of energy in other power plants on the island.

---

103 Laurie Au. "City Reviews Bids to Ship Oahu Trash." Star Bulletin on the Web Vol. 13, Issue 171. 19 June 2008. (23 July 2008) http://starbulletin.com/2008/06/19/news/story08.html.

- The emissions from the Waimanalo Gulch Sanitary Landfill are negative because the LFG is flared and the EPA's Waste Reduction (WARM) model, used to track and report GHG emission reductions, reflects sequestration of materials in the landfill.

The emissions from the Roosevelt Sanitary Landfill are positive, reflecting the emissions from transportation of the waste. The positive emissions are partly, but not entirely, offset by the power generation from the landfill gas power plant and sequestration of materials in the landfill.

Table 14, Comparison of GHG Emissions from Transshipment to On-island Disposal[104 105]

Disposal Location	Emissions (MTCO2e per year)
H–POWER Unit #3	(38,883)
Waimanalo Gulch Sanitary Landfil	(29,377)
Roosevelt	44,978

* MTCO$_2$e is defined as metric tons of carbon dioxide equivalent.

The parameters used in the WARM model are listed in *Table 15, Parameters Used in the WARM Model.* These are the variables used to input to the model to calculate emissions.

---

104 Attachment C, Evaluation of CO_2 Emissions from Disposal of Waste at Waimanalo Gulch Sanitary Landfill, H–POWER, and Washington State.

105 The emissions shown in Table 14 are greater than the emissions estimate included in the Waimanalo Gulch Sanitary Landfill EIS because the current analysis was done for transshipment of 300,000 TPY (the other analysis was for 100,000 TPY) of waste to match the proposed waste handling capacity of H–POWER Unit #3. In addition, the emissions estimated here for H–POWER Unit #3 were based on the WARM model for consistency with the method of estimating emissions for the two landfills. The estimate for H–POWER in the Waimanalo Gulch EIS was based on the blended emissions reported for all Covanta facilities in California, including wood burning power plants and landfill gas fired power plants, as that was the best data available at that time. The version of the WARM model used here was released in August 2008, after completion of the draft EIS for Waimanalo Gulch. The estimates in the Waimanalo Gulch document were made using an earlier version of the WARM model.

Table 15, Parameters Used in the WARM Model[106]

Input Assumption	Roosevelt	Waimanalo Gulch	H–POWER Unit #3
Distance traveled *	3,261	5.0	4.8
LFG energy recovery	Yes		N/A
LFG flare		Yes	N/A
LFG collection efficiency	79%	90%	N/A
TPY of mixed MSW	300,000	300,000	300,000

* Total miles from Barbers Point to the port in Portland and to the Roosevelt Sanitary Landfill.

The WARM model uses national factors as the basis for calculation for many of the emissions. The use of national factors does not reflect the local situation, but that approach was used consistently for all three projects. For example, the credit allowed for offsetting local power generation uses a CO_2 emission factor that includes a mix of oil, coal, gas, and hydro power (the fossil fuels are high CO_2 emitting fuels), and most of the power generated in the area where the Roosevelt Sanitary Landfill sells its power comes from hydro sources (a low to no CO_2 emission source). Since this component of the calculation cannot be changed, the amount of emissions shown associated with the Roosevelt Sanitary Landfill are less than the actual CO_2 emissions.

106 Attachment C, Evaluation of CO_2 Emissions from Disposal of Waste at Waimanalo Gulch Sanitary Landfill, H–POWER, and Washington State.

6 Sites

This section discusses the project site. The site could be a new location (a Greenfield site), not currently used as a waste processing plant. The project location could be in Campbell Industrial Park. Since the space and access needs for a EfW plant site are similar to a landfill, the sites located as replacements for the Waimanalo Gulch Sanitary Landfill could be considered as potential sites for this expansion.

The environmental, operational, and infrastructure considerations would be the same, whether the potential site were in Campbell Industrial Park or in another area of the island. Comparing a new site to use of the proposed location on the H–POWER property highlights important advantages in using the current H–POWER property rather than a new site.

6.1 Environmental Considerations

The environmental considerations with respect to using the H–POWER site have been mitigated or the mitigations are part of the project plans for the expansion.

Environmental mitigations for another site would need to be established after extensive and detailed study and the impacts on the surrounding community are evaluated.

If the expansion were located at a new site in the Campbell Industrial Park, the environmental impacts and considerations for the surrounding tenants would be less than at a site in another area of the island. However, the mitigation measures needed could exceed those needed at the current H–POWER site.

6.2 Infrastructure

The Expansion requires facilities for receiving and weighing the waste fuel, storing the fuel until used for power production, and for transferring the power to the HECO grid. The plant will also need a myriad of additional systems and facilities.

The infrastructure requirements can be met at the current H–POWER site with either the existing facilities or minor additions to those facilities (as described elsewhere in the EIS).

At a Greenfield site or another Campbell Industrial Park location, the infrastructure would need to be constructed entirely for the expansion, adding to the environmental impacts and cost of the expansion.

6.3 Conclusion

Even a site located in Campbell Industrial Park would require the addition of the electric power interconnect facilities and addition of the support facilities that already exist at the current H–POWER site. The use of a site located outside the Campbell Industrial Park would require all of the changes of a site in Campbell and result in environmental, aesthetic, and social impacts not present at Campbell Industrial Park.

The environmental impact of those requirements makes sites other than the H–POWER site infeasible.

7 Preferred Alternative

Several of the alternative technologies, the continued use of the Waimanalo Gulch landfill and the transshipment alternative show promise to offer the C&C an alternative option to the expansion of H-POWER at the project site.

A viable alternative must meet several considerations:

- It needs to provide for the health and safety of Honolulu residents and visitors by properly managing the waste produced on the island.

- Because of the complexity of the siting requirements in Hawaii, the high degree of public interest and input into any siting process, the environmental clearance needed, and the permitting process, a significant amount of time (some say up to 10 years for a new landfill site or new alternative technology) may be needed for an alternative to become operational.

Expanding the H-POWER facility with technology proven over the long-term shows the most promise in reducing the amount of waste sent to the landfill while producing electricity. Expansion of H-POWER at the existing project site is the Preferred Alternative.

7.1 Expansion of H-POWER at the Project Site

EfW, such as H-POWER, is a technology of choice due to the direct benefits of energy production and reduction in disposal. Approximately 90 percent of the residential garbage and 77 percent of the commercial waste collected on Oahu is disposed at the H-POWER facility and is converted into energy that powers approximately 45,000 homes.[107] Combusting 90 percent of the garbage that goes through the H-POWER facility means that only one-tenth, by volume, remains to be landfilled. Expanding the H-POWER facility would be the most beneficial to the C&C in reducing the amount of waste sent to the landfill.

7.2 Landfill disposal at Waimanalo Gulch Landfill

The Waimanalo Gulch Sanitary Landfill is the only alternative currently available to dispose of MSW and H–POWER ash and RDF processing residue. The Waimanalo Gulch Sanitary Landfill has the capacity to handle MSW for at least 15 years. The site is providing that service today.

However, reducing landfill disposal is one of the goals of the project. Continued use of the

---

107 City and County of Honolulu Department of Environmental Services. Solid Waste Integrated Management Plan. Updated: November 2007. Table 63a, Table 63b and Table 2-7.

Waimanalo Gulch Sanitary Landfill does not accomplish that goal.

7.3 Transshipment

Transshipment of waste transfers the responsibility for stewardship of the land to the mainland landfill that disposes of the transshipped waste. However, transshipment does offer the C&C a short term alternative for reducing the material being sent to the Waimanalo Gulch Sanitary Landfill for disposal

While transshipment offers an alternative for some of the MSW, there are parts of the waste stream that cannot be shipped due to federal restrictions; some items cannot be accepted due to the process used and financial and solid waste management considerations that may limit transshipment to a select portion of the waste stream. The expansion of H-POWER offers long term benefits of energy production and reduction in disposal that are not offered by the transshipment alternative.

In addition to the other disadvantages of transshipment, that activity produces much higher greenhouse gas emissions than taking the waste to H–POWER or to the Waimanalo Gulch Sanitary Landfill. H–POWER results in a reduction in island-wide greenhouse gas emissions (or negative emissions) of -38,883 metric tons per year of CO_2 equivalent compared to a positive generation from transshipment of 44,987 metric tons per year of CO_2 equivalent per year.

[Docket No. 05–002–4]

RIN 0579–AC12

Interstate Movement of Garbage From Hawaii; Municipal Solid Waste

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Final rule.

SUMMARY: We are amending the regulations pertaining to certain garbage to provide for the interstate movement of garbage from Hawaii subject to measures designed to protect against the dissemination of plant pests into noninfested areas of the continental United States. We are amending these regulations upon request in order to provide the State of Hawaii with additional waste disposal options, and after determining that the action is highly unlikely to result in the introduction and dissemination of plant or animal pests or diseases into the continental United States from Hawaii. We are also making other amendments to the garbage regulations to clarify their intent and make them easier to understand.

DATES: *Effective Date:* September 22, 2006.

FOR FURTHER INFORMATION CONTACT: Ms. Shannon Hamm, Assistant Deputy Administrator, Policy and Program Development, APHIS, 4700 River Road Unit 20, Riverdale, MD 20737–1231; (301) 734–4957.

SUPPLEMENTARY INFORMATION:

Background

Under 7 CFR 330.400 and 9 CFR 94.5 (referred to elsewhere in this document as the regulations), the Animal and Plant Health Inspection Service (APHIS) regulates the importation and interstate movement of garbage that may pose a risk of introducing or disseminating animal or plant pests or diseases that are new to or not widely distributed within the United States. Not all movements of waste material are regulated by APHIS;[1] only movements of waste that meets APHIS's definition of "garbage" are regulated, and even then, only under certain circumstances. Under the regulations, the term "garbage" is defined as "all waste material derived in whole or in part from fruits, vegetables, meats, or other plant or animal (including poultry) material, and other refuse of any character whatsoever that has been associated with any such material on board any means of conveyance, and including food scraps, table refuse, galley refuse, food wrappers or packaging materials, and other waste material from stores, food preparation areas, passengers' or crews' quarters, dining rooms, or any other areas on means of conveyance." Garbage also means "meals and other food that were available for consumption by passengers and crew on an aircraft but were not consumed."

Waste material that meets the definition of garbage is regulated by APHIS if it is removed from a means of conveyance that:

- Within the last 2 years, has been in any port outside the United States or Canada; or
- Within the last year, has moved from Hawaii or a U.S. territory to another U.S. State.[2]

However, garbage onboard a conveyance that meets one of the two conditions above may be exempted from regulation if the conveyance is cleared of all regulated garbage, and after cleaning and disinfection, an inspector certifies that the conveyance contains no garbage that poses a risk of pest introduction into the United States. Garbage from Canada is also exempted from regulation.

The regulations were established to address the risk posed by garbage that originates on or is onboard conveyances that have been located in areas where exotic animal or plant pests or diseases are present. Such garbage includes waste generated during the course of commercial and private air travel and commercial or private transit of goods or persons by sea. The regulations were not intended to address risks posed by movements of municipal solid waste (MSW).

Due to a limited availability of landfill space in Hawaii, business interests and public officials are exploring other options for disposal of the State's waste. These persons have requested that APHIS allow the interstate movement of MSW from Hawaii. We believe the regulations require amendment to provide for the movement of garbage generated in Hawaii.

Pest Risk Assessment

As part of our evaluation of the request by business interests and public officials in Hawaii, we prepared a draft pest risk assessment (PRA), titled "The Risk of Introduction of Pests to the Continental United States via Plastic-Baled Municipal Solid Waste from Hawaii " (March 2006) to evaluate the interstate movement of garbage from Hawaii to the mainland of the United States. The objective of the PRA was to evaluate whether a baling technology that would bundle, wrap, and seal the MSW into airtight bales will effectively mitigate potential plant pest risks associated with MSW from Hawaii. The PRA focused on the planned use of the baling technology because airtight enclosure from creation to burial will mitigate the risks of establishment by any plant pests. The PRA addressed the following three issues:

- The ability of the baling technology to provide a strong, airtight barrier;
- The examination of the occurrence of ruptures or punctures; and
- The examination of general pathway procedures to reduce pest incidence in the bales and the chances of escape in the event of accidental ruptures or punctures.

In addition, the PRA provides qualitative risk ratings for different pest types based on the likelihood of introduction. Only those pathway

[1] The operation of landfills and incinerators and the intrastate and interstate movement of garbage are regulated predominantly by State and local governments. The U.S. Environmental Protection Agency (EPA) regulates the interstate movement of hazardous wastes. See EPA's Web site for additional information: *http://www.epa.gov/epaoswer/osw/index.htm.*

[2] "State" is defined as any of the 50 States and any U.S. territory or possession.

processes likely to be common to all company proposals to transport baled Hawaiian waste were considered. We will prepare separate assessments for other company proposals which will address factors such as the destination landfill, type of transportation to be used on the mainland, and pest species that may pose particular threats.

The PRA concluded that transporting MSW from Hawaii to the continental United States in airtight bales poses a low risk of pest introduction and dissemination because the baling technology mitigates the risk from all types of plant pests. In addition, the other pathway procedures should adequately protect against accidental ruptures or punctures in bales during the handling and transport process. Pest mitigation processes such as the baling technology itself or features of the proposed pathway, including the waste type, and how bales are staged, handled, transported, and buried, are added safeguards that we conclude will prevent the introduction and dissemination of exotic pests. As a complement to the baling technology, the PRA recommends proper staging of bales and certification that they are mollusk-free to mitigate against contaminating pests. As long as those processes and the procedures proposed by the companies (including diversion of yard and agricultural waste, prompt shipment, monitoring and inspection of bales, and thorough cleanup of any ruptures that do occur) are followed, establishment of Hawaiian plant pests via this pathway is highly unlikely.

On April 19, 2006, we published in the **Federal Register** (71 FR 20030–20041, Docket No. 05–002–2) a proposal [3] to amend the regulations in "Subpart—Garbage" (7 CFR 330.100 through 330.400) and 9 CFR 94.5 pertaining to certain garbage to provide for the interstate movement of garbage from Hawaii subject to measures designed to protect against the dissemination of plant pests into noninfested areas of the continental United States.

We solicited comments on the proposed rule for 30 days ending on May 19, 2006. We received five comments by that date, including a request to extend the comment period. In a document published in the **Federal Register** on May 31, 2006 (Docket No. APHIS–2005–0047, 71 FR 30834), we reopened and extended the deadline for comments until June 5, 2006. We received an additional seven comments by that date. The comments came from several municipalities in Hawaii, waste companies, congressional representatives, the State of California, a tribal representative, and members of the general public. Of the 12 comments, 8 fully supported the proposal. The remaining commenters raised several issues, which are discussed below.

Bale Technology

Comment: APHIS must test the bale technology to ensure that the plastic bales will not breach. In addition, APHIS should use its own experts to validate the research data provided by the technology vendors and their consultants regarding the safety of bale technology.

Response: As cited in the PRA, independent researchers have tested the baling technology in a variety of situations and firmly established its utility and effectiveness at creating airtight bales of MSW. Because these studies have been peer reviewed, APHIS believes that it is not necessary to repeat the testing performed in the underlying research.

Pest Risk Assessment

Comment: APHIS should revisit its PRA to clarify the roles played by compaction and shredding because whole fruit containing fruit fly or other insect eggs or larvae will not be affected by the anoxic conditions of the bales.

Response: While insect eggs and larvae, including those of fruit flies and other agricultural pests, could theoretically survive in whole fruit under short-term anoxic conditions, whole fruit would not be present in the bales due to the processing, i.e., pulverizing or shredding followed by compaction, of the MSW prior to being baled. As described in the PRA, bale densities are expected to be in excess of 800 kg/m^3, so compaction will likely kill most insects, including fruit flies, regardless of stage, and may also neutralize some weed seeds and nematodes. Moreover, bales that remain airtight from creation until burial completely mitigate the risk from all plant pests because the pests and pest propagules cannot escape. That mitigation is universal, i.e., it does not depend on pest type or taxonomy, and probably applies equally to both current and future pests that establish in Hawaii.

Comment: How will APHIS ensure that noxious weeds would not be included in the bales of MSW?

Response: As we discussed in the PRA, the exclusion of most yard and agricultural waste from the baling process will greatly reduce the likelihood that seeds of regulated pest plants will be present in the baled MSW. In addition, very few regulated species are likely to have viable seeds in the bales, either because they mostly reproduce vegetatively, or because they are not found in yards and gardens in residential areas in Hawaii. Species of concern to particular mainland States will be further evaluated in site-specific PRAs to identify any exceptions and assess their potential risks.

Environmental Impacts

Comment: APHIS should research the consequences of any spill of baled MSW during transport.

Response: APHIS conducted several evaluations, including a PRA and an EA to determine the consequences of any spill involving bales containing MSW during transport from Hawaii to the mainland United States. We have determined that there is a very low likelihood that plant pests or noxious weeds would be introduced and disseminated into the mainland United States as a result of this action. As described in the PRA, there is a series of mitigations that would take place including limiting waste materials that would exist in the bales and ensuring proper staging, handling, transport, and burial of these bales. There will also be specific contingency plans for emergency response to potential spills outlined in compliance agreements with specific sites. In addition, short of a barge capsizing (which would be considered catastrophic events and would be cause to initiate emergency consultation), there is essentially no risk of impact on aquatic life from the transport of baled MSW from Hawaii to the mainland United States. Situations where there is potential for impacts occur wherever bales are moved from one staging area or mode of transportation to another. These transfer points include: The facility in Honolulu where bales are initially loaded onto the barges; the unloading facility on the mainland where bales are unloaded from the barges and loaded onto trucks; and the final destination where bales are unloaded from trucks and placed into the landfill. In some scenarios there could be intermediate steps requiring the handling of bales, e.g., an ocean-going barge may offload its bales onto smaller-sized barges to navigate a river; an ocean-going barge may offload its bales onto railcars; and railcars would then need to transfer their bales onto

[3] To view the proposed rule and the comments we received, go to *http://www.regulations.gov*, click on the "Advanced Search" tab, and select "Docket Search." In the Docket ID field, enter APHIS–2005–0047, then click on "Submit." Clicking on the Docket ID link in the search results page will produce a list of all documents in the docket.

trucks for the final leg of the trip to the landfill.

At each of the bale transfer points identified above, there is a small potential for dropping a bale into the water or, more likely, compromising the integrity of one or more bales of MSW which could result in spillage of the contents on the ground or into the water. In most cases the spilled MSW would be retrieved and the bale repackaged. If this were to happen over water, it would be more difficult to retrieve the spilled MSW, particularly if the integrity of the bale was breached. Any spill, in the event of a broken bale, would be handled in accordance with a spill cleanup plan, attached to each compliance agreement, that provides guidance on what detergents and disinfectants to use, how to safely use them, and how to avoid aquatic contamination.

Comment: Shipping MSW to the mainland from Hawaii should only be done if alternative disposal options are not available.

Response: Municipal jurisdictions within the State of Hawaii will be responsible for determining which disposal option to pursue. APHIS will be responsible for ensuring that if the disposal option includes the movement of MSW from Hawaii to the mainland United States, it occurs in accordance with conditions provided in our regulations and compliance agreements.

Comment: Sending barges with MSW through the Columbia and Snake Rivers would negatively impact the number of fish in the area.

Response: We do not believe that there will be a significant increase in barge traffic in this region due to this action. We will have the opportunity to quantify this assertion when we conduct a site specific PRA and EA for the Columbia River Basin. In addition, APHIS does not regulate barge traffic. Under our authority we ensure that safeguards are in place to prevent the introduction and dissemination of plant pests, noxious weeds, and animal diseases.

APHIS did conduct a biological assessment for this action to determine impacts on listed species of fish and wildlife. We found that there are two types of risks that must be considered in such a situation. One is a physical disruption of the environment caused by the broken bales and the physical retrieval of their strewn contents. Compromised bales or spilled MSW that is on land can be retrieved relatively easily. MSW that is spilled into waterways will be more difficult to retrieve, and some may not be retrievable, resulting in an incremental degradation of the natural aquatic environment. Since hazardous wastes are not permitted, any negative impacts will be restricted to physical ones and no chemical pollution is likely to result from the MSW itself.

The second type of risk that could result from breaking bales and the spilling of MSW could be from detergents and disinfectants that may be used during a cleanup of any spilled MSW that may occur on land. Detergents and disinfectants would not be effective in aquatic situations, and therefore, would not be used if spills were in or over water. If such tools were used during a cleanup effort, care must be taken to prevent them from entering waterways. Their use would be in accordance with a spill cleanup plan, attached to each compliance agreement, that provides guidance on what detergents and disinfectants to use, how to safely use them, and how to avoid aquatic contamination.

As mentioned above, APHIS will develop a site-specific pest risk assessment and environmental assessment which will examine any risks associated with transporting MSW into specific regions. The public will have an opportunity to comment on those documents before they are finalized.

Comment: Has APHIS conducted any studies on the potential to introduce new plant and animal pathogens to the Columbia Basin Region?

Response: This final rule provides a general framework which will allow for the interstate movement of MSW from Hawaii under certain conditions. One condition of that movement will be that shipments will be moved under provisions outlined in a compliance agreement. A compliance agreement will be developed for each individual site on the mainland of the United States into which these shipments would be moved. For each compliance agreement, APHIS will develop a site-specific pest risk assessment and environmental assessment to examine the risks associated with transporting MSW into the specific region, including into the Columbia Basin region.

Requested Change to the Regulations

Comment: APHIS should add the staging requirement and certification of snail free shipments language found in the PRA to the regulatory text.

Response: The regulations state that garbage must be processed, packaged, safeguarded, and disposed of using a methodology that the Administrator has determined is adequate to prevent the introduction and dissemination of plant pests into noninfested areas of the United States. In addition, specific provisions will be outlined in individual compliance agreements for site-specific shipments. These provisions would be consistent with those in § 318.13–8, which pertain to inspection of articles and persons moved from Hawaii. We believe that the current provisions in the regulations, combined with site-specific compliance agreements, are sufficient to prevent the introduction and dissemination of snails and other hitchhikers.

Tribal Consultation

Comment: APHIS did not consult with Indian Tribes as directed under Executive Order (EO) 13175 and requested government-to-government consultation.

Response: We were petitioned to amend our regulations by the operators of several landfills located in the area of the Columbia River Basin who expressed an interest in receiving MSW from Hawaii. Therefore, our initial contacts were limited to tribes located within that area. To comply with EO 13175, APHIS contacted the tribal chairs of each of the 13 tribes generally considered as Columbia River Basin Tribes (Burn Paiute Tribe, Coeur d'Alene Tribe, Colville Tribe, Kalispel Tribe, Kootenai Tribe, Nez Perce Tribe, Salish Kootenai Tribes, Shoshone Bannock Tribes, Shoshone Paiute Tribe, Spokane Tribe, Umatilla Indian Reservation, Warm Springs Reservation, and Yakama Indian Nation) in early November 2005. Each of these tribes has ties to the land and resources in and near the Columbia River and its drainage. APHIS believes that if there were any effects on tribes resulting from this rule, these are the tribes most likely to be affected. Each tribe was provided information on our proposed rule, environmental assessment, and pest risk analysis and offered an opportunity to request consultation.

At about the same time, APHIS contacted tribal organizations to determine which additional tribes may be affected and should be contacted. The tribal organizations contacted were the Affiliated Tribes of Northwest Indians (ATNI), the National Congress of American Indians, the National Tribal Environmental Council, and the Intertribal Agriculture Council. In addition, APHIS contacted the Columbia Basin Fish and Wildlife Authority.

In mid-February 2006, an Agency official provided a presentation about the proposed rule at the Winter Conference of the ATNI, and invited requests for tribal consultation. ATNI represents over 55 tribes in the Pacific

Northwest. In early March 2006, the Agency sent reminders to tribal chairs stating that APHIS would consider requests for consultation until March 20, 2006. Although we received both oral and written comments from tribes and tribal members, we received no requests for consultation.

In mid-April 2006, upon publication of the proposed rule, copies of the proposed rule, environmental assessment, and pest risk analysis were mailed to the tribal chairs of each of the above-listed tribes and also to the listed tribal organizations. APHIS encouraged tribes and tribal organizations to submit comments. Based on our actions as described above, we believe that we have complied with EO 13175 for the purposes of this rulemaking. We will follow this final rule with risk and environmental assessments as well as compliance agreements with specific waste management sites located on the mainland of the United States that have expressed interest in receiving MSW from Hawaii. At the time that we make the site-specific assessments available to the public, we will also invite potentially affected tribal governments to engage in consultations with APHIS.

Change Regarding Agricultural and Yard Waste

In the proposed rule, the regulations in 7 CFR 330.402(a)(2) and 9 CFR 94.5(d)(1)(ii) provided that "The interstate movement of agricultural wastes and yard waste from Hawaii to the continental United States is prohibited." After further consideration, we have concluded that this provision, which implies a zero tolerance for agricultural or yard waste, is unrealistic. Despite the presence of yard waste recycling programs in Hawaii and the efforts of waste management companies to separate various types of waste, the presence of an incidental amount of agricultural or yard waste in baled MSW is, in practical terms, unavoidable. This situation was taken into account in the PRA, which recognized that there will likely be some minimal volume of agricultural and yard waste entering the pathway despite efforts to exclude that waste. Therefore, we have modified 7 CFR 330.402(a)(2) and 9 CFR 94.5(d)(1)(ii) in this final rule to read: "The interstate movement from Hawaii to the continental United States of agricultural wastes and yard waste (other than incidental amounts (less than 3 percent) that may be present in municipal solid waste despite reasonable efforts to maintain source separation) is prohibited." [4] We believe this change will establish a more practical standard with respect to agricultural and yard waste while continuing to prohibit the interstate movement of dedicated shipments or large quantities of such waste.

Therefore, for the reasons given in the proposed rule and in this document, we are adopting the proposed rule as a final rule, with the change discussed in this document.

Executive Order 12866 and Regulatory Flexibility Act

This rule has been reviewed under Executive Order 12866. The rule has been determined to be not significant for the purposes of Executive Order 12866 and, therefore, has not been reviewed by the Office of Management and Budget.

We are amending the regulations pertaining to certain garbage to provide for the interstate movement of garbage from Hawaii subject to measures designed to protect against the dissemination of plant pests into noninfested areas of the continental United States. We are amending these regulations upon request in order to provide the State of Hawaii with additional waste disposal options, and after determining that the action will not result in the introduction of plant or animal pests or diseases into the continental United States from Hawaii.

For the purposes of this analysis, we have determined that the Island of Oahu (where Honolulu is located) is expected to be the source of most, if not all, of any MSW that is moved to the continental United States under the regulations. Oahu has only one municipal landfill (Waimanalo Gulch), and there is no alternative landfill on the island at the present time.

Oahu generates approximately 1.6 million tons of MSW per year. That figure is expected to rise an additional 20,000 tons and remain at that level for the next 10 years. Of the current total, 500,000 tons are recycled, 600,000 tons are burned for electricity, and 500,000 tons are landfilled. Of the 500,000 tons that are landfilled, 200,000 tons go to a privately operated construction and demolition landfill and 300,000 tons go to Waimanalo Gulch municipal landfill. Waimanalo Gulch landfill is owned by the City of Honolulu and managed by a private company.

The Island of Hawaii (where Hilo is located) is another potential source of MSW that would move to the continental United States if the proposal is adopted. The island's only two landfills are located approximately 75 miles apart, and one (South Hilo Sanitary Landfill) may be nearing capacity. To date, one waste management service company has proposed to bale and move at least some of the island's MSW to a landfill in Washington State. Approximately 200 tons of garbage per day is landfilled at the South Hilo facility.[5]

This rule will allow for the garbage to be compacted into bales, and then wrapped in plastic for transport to the mainland (the baling and wrapping would take place in the State of Hawaii). Estimates of the annual volume of MSW that would be shipped from Oahu to the continental United States range from 100,000 tons to 350,000 tons.[6]

Need for Rule and Alternatives Considered

These are being amended upon request to provide public officials in Hawaii another option for disposal of the State's waste. The only other regulatory alternative is to leave the regulations unchanged, but that alternative would unnecessarily limit Hawaiian officials' disposal options.

Small Entity Impact

The Regulatory Flexibility Act (RFA) requires that agencies consider the economic impact of rules on small entities, *i.e.*, small businesses, organizations, and governmental jurisdictions. The changes to the regulations will allow for the movement of MSW from Hawaii to the continental United States.

These changes will not have a significant economic impact on a substantial number of small entities, because few entities, large or small, are likely to be affected. Only a handful of businesses are potentially affected by the rule—*e.g.*, the company or companies that would secure the contract to move the waste from Hawaii, the barge line or lines that would physically move the waste to the mainland, the trucking company/railroad on the mainland that would physically move the waste to the interior landfill locations, and perhaps a few companies on Hawaii that would be forced to discontinue participation (or play a reduced role) in the State's waste

[4] Based on the mean percentage of yard waste at the Waimanalo Gulch landfill, Oahu (6.0 percent ± 3.4 percent) and on Hawaii (5.4 percent), if companies are only 50 percent effective with additional screening and removal of visible yard waste in transfer stations or on bale processing lines, the fraction of yard waste in baled Hawaiian MSW should be reduced to 3 percent or less.

[5] Source: News accounts in the *Honolulu Star-Bulletin*.

[6] Source: News accounts in the *Honolulu Star-Bulletin* and APHIS staff. Similar estimates for the Island of Hawaii are not available.

disposal process once shipments to the mainland began. Those businesses that will participate in the movement of the waste to the mainland could be expected to benefit, since they will generate additional revenue and, presumably, profits from the increased business activity. Conversely, those businesses that will either no longer participate or will play a reduced role in Hawaii's waste disposal process could be expected to suffer lost revenue.

The revenues generated by the private company that manages the Waimanalo Gulch landfill, for example, are presumably tied to the volume of waste that is landfilled there. If waste is diverted from Waimanalo Gulch to the mainland, that company's revenues are likely to be reduced. The City of Honolulu and the County of Hawaii are also potentially affected by the proposed changes.

The preceding discussion assumes that the rule will not have significant environmentally related economic consequences for small entities. There are several reasons. First, the environmental assessment in this document concludes that the movement of MSW from Hawaii to the continental United States (using the plastic-baled methodology) will not have a significant impact on the environment. Second, site-specific environmental assessments will also be prepared as requests for compliance agreements are made. The site-specific assessments, which will be made available for public comment, will allow APHIS to address any environmental issues that may arise based on precise destination and handling protocols for the proposed movements, which are now unknown.

Although the size of virtually all of the businesses potentially affected by the rule is unknown, it is reasonable to assume that at least some could be small. This assumption is based on composite data for providers of the same and similar services in the United States. As an example, North American Industry Classification System (NAICS) category 562 ("Waste Management and Remediation Services") consists of establishments engaged in the collection, treatment, and disposal of waste materials. Under the U.S. Small Business Administration's (SBA) size standards, the small entity threshold for establishments that fall into most of the activity subcategories under NAICS 562 is annual receipts of $10.5 million. For all 18,405 U.S. establishments in NAICS 562 in 2002, average per-establishment receipts that year were $2.8 million, an indication that most waste management service companies are small entities.[7] Annual receipt data for three of the four firms that have proposed to move Hawaii's waste to the mainland are not available. Although annual receipt data for the fourth company are also not available, that company is considered large by virtue of it being a subsidiary of a publicly owned firm with receipts (operating revenues) of over $13 billion in 1999.[8] The private company that currently manages the Waimanalo Gulch landfill is also a subsidiary of that publicly owned firm.

As another example, there were 677 U.S. entities in NAICS category 483113 in 2002. NAICS 483113 consists of entities primarily engaged in providing deep sea transportation of cargo to and from domestic ports. For all 677 entities, average per-entity employment that year was 36, well below the SBA's small entity threshold of 500 employees for entities in that NAICS category.[9]

Under the RFA, the term "small governmental jurisdiction" generally means cities, counties, townships, etc., with a population of less than 50,000. The City of Honolulu, which owns the Waimanalo Gulch landfill, does not qualify as a small entity because its population exceeds 50,000. The County of Hawaii, where Hilo is located, also has a population that exceeds 50,000.

The changes to the regulations will not, as noted previously, have a significant economic impact on a substantial number of small entities, because few entities, large or small, are likely to be affected. The size of virtually all of the businesses potentially affected by the changes to the regulations is unknown, but it is reasonable to assume that at least some could be small.

Under these circumstances, the Administrator of the Animal and Plant Health Inspection Service has determined that this action will not have a significant economic impact on a substantial number of small entities.

Executive Order 12372

This program/activity is listed in the Catalog of Federal Domestic Assistance under No. 10.025 and is subject to Executive Order 12372, which requires intergovernmental consultation with State and local officials. (See 7 CFR part 3015, subpart V.)

Executive Order 12988

This final rule has been reviewed under Executive Order 12988, Civil Justice Reform. This rule: (1) Preempts all State and local laws and regulations that are inconsistent with this rule; (2) has no retroactive effect; and (3) does not require administrative proceedings before parties may file suit in court challenging this rule.

National Environmental Policy Act

An environmental assessment and finding of no significant impact have been prepared for this final rule. The environmental assessment provides a basis for the conclusion that the importation of MSW from Hawaii to the mainland United States will not have a significant impact on the quality of the human environment. Based on the finding of no significant impact, the Administrator of the Animal and Plant Health Inspection Service has determined that an environmental impact statement need not be prepared.

The environmental assessment and finding of no significant impact were prepared in accordance with: (1) The National Environmental Policy Act of 1969 (NEPA), as amended (42 U.S.C. 4321 *et seq.*), (2) regulations of the Council on Environmental Quality for implementing the procedural provisions of NEPA (40 CFR parts 1500–1508), (3) USDA regulations implementing NEPA (7 CFR part 1b), and (4) APHIS' NEPA Implementing Procedures (7 CFR part 372).

The environmental assessment and finding of no significant impact may be viewed on the Regulations.gov Web site.[10] Copies of the environmental assessment and finding of no significant impact are also available for public inspection at USDA, room 1141, South Building, 14th Street and Independence Avenue, SW., Washington, DC, between 8 a.m. and 4:30 p.m., Monday through Friday, except holidays. Persons wishing to inspect copies are requested to call ahead on (202) 690–2817 to facilitate entry into the reading room. In addition, copies may be obtained by writing to the individual listed under FOR FURTHER INFORMATION CONTACT.

Paperwork Reduction Act

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*), the information collection or recordkeeping requirements included in this rule have been approved by the Office of Management and Budget

The environmental assessment and finding of no significant impact will appear in the resulting list of documents.

(OMB) under OMB control number 0579–0292.

E-Government Act Compliance

The Animal and Plant Health Inspection Service is committed to compliance with the E-Government Act to promote the use of the Internet and other information technologies, to provide increased opportunities for citizen access to Government information and services, and for other purposes. For information pertinent to E-Government Act compliance related to this rule, please contact Mrs. Celeste Sickles, APHIS' Information Collection Coordinator, at (301) 734–7477.

List of Subjects

7 CFR Part 330

Customs duties and inspection, Imports, Plant diseases and pests, Quarantine, Reporting and recordkeeping requirements, Transportation.

9 CFR Part 94

Animal diseases, Imports, Livestock, Meat and meat products, Milk, Poultry and poultry products, Reporting and recordkeeping requirements.

■ Accordingly, we are amending 7 CFR part 330 and 9 CFR part 94 as follows:

Title 7—[Amended]

PART 330—FEDERAL PLANT PEST REGULATIONS; GENERAL; PLANT PESTS; SOIL, STONE, AND QUARRY PRODUCTS; GARBAGE

■ 1. The authority citation for part 330 continues to read as follows:

Authority: 7 U.S.C. 450, 7701–7772, 7781–7786, and 8301–8317; 21 U.S.C. 136 and 136a; 31 U.S.C. 9701; 7 CFR 2.22, 2.80, and 371.3.

■ 2. In § 330.100, a definition for *State* is added and the definition for *United States* is revised to read as follows:

§ 330.100 Definitions.

* * * * *

State. Any of the several States of the United States, the Commonwealth of the Northern Mariana Islands, the Commonwealth of Puerto Rico, the District of Columbia, Guam, the Virgin Islands of the United States, or any other territory or possession of the United States.

* * * * *

United States. All of the States.

* * * * *

■ 3. Subpart—Garbage, § 330.400, is revised to read as follows:

Subpart—Garbage

Sec.

Subpart—Garbage

§ 330.400 Regulation of certain garbage.

(a) *Certain interstate movements and imports*—(1) *Interstate movements of garbage from Hawaii and U.S. territories and possessions to other States.* Hawaii, Puerto Rico, American Samoa, the Commonwealth of the Northern Mariana Islands, the Federated States of Micronesia, Guam, the U.S. Virgin Islands, Republic of the Marshall Islands, and the Republic of Palau are hereby quarantined, and the movement of garbage therefrom to any other State is hereby prohibited except as provided in this subpart in order to prevent the introduction and spread of exotic plant pests and diseases.

(2) *Imports of garbage.* In order to protect against the introduction of exotic animal and plant pests and diseases, the importation of garbage from all foreign countries except Canada is prohibited except as provided in § 330.401(b).

(b) *Definitions—Agricultural waste.* Byproducts generated by the rearing of animals and the production and harvest of crops or trees. Animal waste, a large component of agricultural waste, includes waste (*e.g.*, feed waste, bedding and litter, and feedlot and paddock runoff) from livestock, dairy, and other animal-related agricultural and farming practices.

Approved facility. A facility approved by the Administrator, Animal and Plant Health Inspection Service, upon his determination that it has equipment and uses procedures that are adequate to prevent the dissemination of plant pests and livestock or poultry diseases, and that it is certified by an appropriate Government official as currently complying with the applicable laws for environmental protection.

Approved sewage system. A sewage system approved by the Administrator, Animal and Plant Health Inspection Service, upon his determination that the system is designed and operated in such a way as to preclude the discharge of sewage effluents onto land surfaces or into lagoons or other stationary waters, and otherwise is adequate to prevent the dissemination of plant pests and livestock or poultry diseases, and that is certified by an appropriate Government official as currently complying with the applicable laws for environmental protection.

Carrier. The principal operator of a means of conveyance.

Garbage. All waste material that is derived in whole or in part from fruits, vegetables, meats, or other plant or animal (including poultry) material, and other refuse of any character whatsoever that has been associated with any such material.

Incineration. To reduce garbage to ash by burning.

Interstate. From one State into or through any other State.

Sterilization. Cooking garbage at an internal temperature of 212 °F for 30 minutes.

Stores. The food, supplies, and other provisions carried for the day-to-day operation of a conveyance and the care and feeding of its operators.

Yard waste. Solid waste composed predominantly of grass clippings, leaves, twigs, branches, and other garden refuse.

§ 330.401 Garbage generated onboard a conveyance.

(a) *Applicability.* This section applies to garbage generated onboard any means of conveyance during international or interstate movements as provided in this section and includes food scraps, table refuse, galley refuse, food wrappers or packaging materials, and other waste material from stores, food preparation areas, passengers' or crews' quarters, dining rooms, or any other areas on the means of conveyance. This section also applies to meals and other food that were available for consumption by passengers and crew on an aircraft but were not consumed.

(1) Not all garbage generated onboard a means of conveyance is regulated for the purposes of this section. Garbage regulated for the purposes of this section is defined as "regulated garbage" in paragraphs (b) and (c) of this section.

(2) Garbage that is commingled with regulated garbage is also regulated garbage.

(b) *Garbage regulated because of movements outside the United States or Canada.* For purposes of this section, garbage on or removed from a means of conveyance is regulated garbage, if, when the garbage is on or removed from the means of conveyance, the means of conveyance has been in any port outside the United States and Canada within the previous 2-year period. There are, however, two exceptions to this provision. These exceptions are as follows:

(1) *Exception 1: Aircraft.* Garbage on or removed from an aircraft is exempt from requirements under paragraph (d) of this section if the following

conditions are met when the garbage is on or removed from the aircraft:

(i) The aircraft had previously been cleared of all garbage and of all meats and meat products, whatever the country of origin, except meats that are shelf-stable; all fresh and condensed milk and cream from countries designated in 9 CFR 94.1 as those in which foot-and-mouth disease exists; all fresh fruits and vegetables; and all eggs; and the items previously cleared from the aircraft as prescribed by this paragraph have been disposed of according to the procedures for disposing of regulated garbage, as specified in paragraphs (d)(2) and (d)(3) of this section.

(ii) After the garbage and stores referred to in paragraph (b)(1)(i) of this section were removed, the aircraft has not been in a non-Canadian foreign port.

(2) *Exception 2: Other conveyances.* Garbage on or removed in the United States from a means of conveyance other than an aircraft is exempt from requirements under paragraph (d) of this section if the following conditions are met when the garbage is on or removed from the means of conveyance:

(i) The means of conveyance is accompanied by a certificate from an inspector stating the following:

(A) That the means of conveyance had previously been cleared of all garbage and of all meats and meat products, whatever the country of origin, except meats that are shelf-stable; all fresh and condensed milk and cream from countries designated in 9 CFR 94.1 as those in which foot-and-mouth disease exists; all fresh fruits and vegetables; and all eggs; and the items previously cleared from the means of conveyance as prescribed by this paragraph have been disposed of according to the procedures for disposing of regulated garbage, as specified in paragraphs (d)(2) and (d)(3) of this section.

(B) That the means of conveyance had then been cleaned and disinfected in the presence of the inspector; and

(ii) Since being cleaned and disinfected, the means of conveyance has not been in a non-Canadian foreign port.

(c) *Garbage regulated because of certain movements to or from Hawaii, territories, or possessions.* For purposes of this section, garbage on or removed from a means of conveyance is regulated garbage, if at the time the garbage is on or removed from the means of conveyance, the means of conveyance has moved during the previous 1-year period, either directly or indirectly, to the continental United States from any territory or possession or from Hawaii, to any territory or possession from any other territory or possession or from Hawaii, or to Hawaii from any territory or possession. There are, however, two exceptions to this provision. These exceptions are as follows:

(1) *Exception 1: Aircraft.* Garbage on or removed from an aircraft is exempt from requirements under paragraph (d) of this section if the following two conditions are met when the garbage is on or removed from the aircraft:

(i) The aircraft had been previously cleared of all garbage and all fresh fruits and vegetables, and the items previously cleared from the aircraft as prescribed by this paragraph have been disposed of according to the procedures for disposing of regulated garbage, as specified in paragraphs (d)(2) and (d)(3) of this section.

(ii) After the garbage and stores referred to in paragraph (c)(1)(i) of this section were removed, the aircraft has not moved to the continental United States from any territory or possession or from Hawaii; to any territory or possession from any other territory or possession or from Hawaii; or to Hawaii from any territory or possession.

(2) *Exception 2: Other conveyances.* Garbage on or removed from a means of conveyance other than an aircraft is exempt from requirements under paragraph (d) of this section if the following two conditions are met when the garbage is on or removed from the means of conveyance:

(i) The means of conveyance is accompanied by a certificate from an inspector stating that the means of conveyance had been cleared of all garbage and all fresh fruits and vegetables; and the items previously cleared from the means of conveyance as prescribed by this paragraph have been disposed of according to the procedures for disposing of regulated garbage, as specified in paragraphs (d)(2) and (d)(3) of this section.

(ii) After being cleared of the garbage and stores referred to in paragraph (c)(2)(i) of this section, the means of conveyance has not moved to the continental United States from any territory or possession or from Hawaii; to any territory or possession from any other territory or possession or from Hawaii; or to Hawaii from any territory or possession.

(d) *Restrictions on regulated garbage.* (1) Regulated garbage may not be disposed of, placed on, or removed from a means of conveyance except in accordance with this section.

(2) Regulated garbage is subject to general surveillance for compliance with this section by inspectors and to disposal measures authorized by the Plant Protection Act and the Animal Health Protection Act to prevent the introduction and dissemination of pests and diseases of plants and livestock.

(3) All regulated garbage must be contained in tight, covered, leak-proof receptacles during storage on board a means of conveyance while in the territorial waters, or while otherwise within the territory of the United States. All such receptacles shall be contained inside the guard rail if on a watercraft. Such regulated garbage shall not be unloaded from such means of conveyance in the United States unless such regulated garbage is removed in tight, covered, leak-proof receptacles under the direction of an inspector to an approved facility for incineration, sterilization, or grinding into an approved sewage system, under direct supervision by such an inspector, or such regulated garbage is removed for other handling in such manner and under such supervision as may, upon request in specific cases, be approved by the Administrator as adequate to prevent the introduction and dissemination of plant pests and animal diseases and sufficient to ensure compliance with applicable laws for environmental protection. *Provided that,* a cruise ship may dispose of regulated garbage in landfills at Alaskan ports only, if and only if the cruise ship does not have prohibited or restricted meat or animal products on board at the time it enters Alaskan waters for the cruise season, and only if the cruise ship, except for incidental travel through international waters necessary to navigate safely between ports, remains in Canadian and U.S. waters off the west coast of North America, and calls only at continental U.S. and Canadian ports during the entire cruise season.

(i) Application for approval of a facility or sewage system may be made in writing by the authorized representative of any carrier or by the official having jurisdiction over the port or place of arrival of the means of conveyance to the Administrator, Animal and Plant Health Inspection Service, U.S. Department of Agriculture, Washington, DC 20250. The application must be endorsed by the operator of the facility or sewage system.

(ii) Approval will be granted if the Administrator determines that the requirements set forth in this section are met. Approval may be denied or withdrawn at any time, if the Administrator determines that such requirements are not met, after notice of the proposed denial or withdrawal of the approval and the reasons therefor, and an opportunity to demonstrate or achieve compliance with such requirements, has been afforded to the operator of the facility or sewage system and to the applicant for approval. However, approval may also be withdrawn without such prior procedure in any case in which the public health, interest, or safety requires immediate action, and in such case, the operator of the facility or sewage system and the applicant for approval shall promptly thereafter be given notice of the withdrawal and the reasons therefor and an opportunity to show cause why the approval should be reinstated.

(e) The Plant Protection and Quarantine Programs and Veterinary Services, Animal, and Plant Health Inspection Service, will cooperate with other Federal, State, and local agencies responsible for enforcing other statutes and regulations governing disposal of the regulated garbage to the end that such disposal shall be adequate to prevent the dissemination of plant pests and livestock or poultry diseases and comply with applicable laws for environmental protection. The inspectors, in maintaining surveillance over regulated garbage movements and disposal, shall coordinate their activities with the activities of representatives of the Environmental Protection Agency and other Federal, State, and local agencies also having jurisdiction over such regulated garbage

§ 330.402 Garbage generated in Hawaii.

(a) *Applicability.* This section applies to garbage generated in households, commercial establishments, institutions, and businesses prior to interstate movement from Hawaii, and includes used paper, discarded cans and bottles, and food scraps. Such garbage includes, and is commonly known as, municipal solid waste.

(1) Industrial process wastes, mining wastes, sewage sludge, incinerator ash, or other wastes from Hawaii that the Administrator determines do not pose risks of introducing animal or plant pests or diseases into the continental United States are not regulated under this section.

(2) The interstate movement from Hawaii to the continental United States of agricultural wastes and yard waste (other than incidental amounts (less than 3 percent) that may be present in municipal solid waste despite reasonable efforts to maintain source separation) is prohibited.

(3) Garbage generated onboard any means of conveyance during interstate movement from Hawaii is regulated under § 330.401.

(b) *Restrictions on interstate movement of garbage.* The interstate movement of garbage generated in Hawaii to the continental United States is regulated as provided in this section.

(1) The garbage must be processed, packaged, safeguarded, and disposed of using a methodology that the Administrator has determined is adequate to prevent the introduction or dissemination of plant pests into noninfested areas of the United States.

(2) The garbage must be moved under a compliance agreement in accordance with § 330.403. APHIS will only enter into a compliance agreement when the Administrator is satisfied that the Agency has first satisfied all its obligations under the National Environmental Policy Act and all applicable Federal and State statutes to fully assess the impacts associated with the movement of garbage under the compliance agreement.

(3) All such garbage moved interstate from Hawaii to any of the continental United States must be moved in compliance with all applicable laws for environmental protection.

§ 330.403 Compliance agreement and cancellation.

(a) Any person engaged in the business of handling or disposing of garbage in accordance with this subpart must first enter into a compliance agreement with the Animal and Plant Health Inspection Service (APHIS). Compliance agreement forms (PPQ Form 519) are available without charge from local USDA/APHIS/Plant Protection and Quarantine offices, which are listed in telephone directories.

(b) A person who enters into a compliance agreement, and employees or agents of that person, must comply with the following conditions and any supplemental conditions which are listed in the compliance agreement, as deemed by the Administrator to be necessary to prevent the dissemination into or within the United States of plant pests and livestock or poultry diseases:

(1) Comply with all applicable provisions of this subpart;

(2) Allow inspectors access to all records maintained by the person regarding handling or disposal of garbage, and to all areas where handling or disposal of garbage occurs;

(3)(i) If the garbage is regulated under § 330.401, remove garbage from a means of conveyance only in tight, covered, leak-proof receptacles;

(ii) If the garbage is regulated under § 330.402, transport garbage interstate in packaging approved by the Administrator;

(4) Move the garbage only to a facility approved by the Administrator; and

(5) At the approved facility, dispose of the garbage in a manner approved by the Administrator and described in the compliance agreement.

(c) Approval for a compliance agreement may be denied at any time if the Administrator determines that the applicant has not met or is unable to meet the requirements set forth in this subpart. Prior to denying any application for a compliance agreement, APHIS will provide notice to the applicant thereof, and will provide the applicant with an opportunity to demonstrate or achieve compliance with requirements.

(d) Any compliance agreement may be canceled, either orally or in writing, by an inspector whenever the inspector finds that the person who has entered into the compliance agreement has failed to comply with this subpart. If the cancellation is oral, the cancellation and the reasons for the cancellation will be confirmed in writing as promptly as circumstances allow. Any person whose compliance agreement has been canceled may appeal the decision, in writing, within 10 days after receiving written notification of the cancellation. The appeal must state all of the facts and reasons upon which the person relies to show that the compliance agreement was wrongfully canceled. As promptly as circumstances allow, the Administrator will grant or deny the appeal, in writing, stating the reasons for the decision. A hearing will be held to resolve any conflict as to any material fact. Rules of practice concerning a hearing will be adopted by the Administrator. This administrative remedy must be exhausted before a person can file suit in court challenging the cancellation of a compliance agreement.

(e) Where a compliance agreement is denied or canceled, the person who entered into or applied for the compliance agreement may be prohibited, at the discretion of the Administrator, from handling or disposing of regulated garbage.

(Approved by the Office of Management and Budget under control numbers 0579–0015, 0579–0054, and 0579–0292)

Title 9—[AMENDED]

PART 94—RINDERPEST, FOOT-AND-MOUTH DISEASE, FOWL PEST (FOWL PLAGUE), EXOTIC NEWCASTLE DISEASE, AFRICAN SWINE FEVER, CLASSICAL SWINE FEVER, AND BOVINE SPONGIFORM ENCEPHALOPATHY: PROHIBITED AND RESTRICTED IMPORTATIONS

■ 4. The authority citation for part 94 continues to read as follows:

Authority: 7 U.S.C. 450, 7701–7772, 7781–7786, and 8301–8317; 21 U.S.C. 136 and 136a; 31 U.S.C. 9701; 7 CFR 2.22, 2.80, and 371.4.

■ 5. In § 94.0, a definition for *State* is added and the definition for *United States* is revised to read as follows:

§ 94.0 Definitions.

* * * * *

State. Any of the several States of the United States, the Commonwealth of the Northern Mariana Islands, the Commonwealth of Puerto Rico, the District of Columbia, Guam, the Virgin Islands of the United States, or any other territory or possession of the United States.

* * * * *

United States. All of the States.

* * * * *

■ 6. Section 94.5 is revised to read as follows:

§ 94.5 Regulation of certain garbage.

(a) *General restrictions*—(1) *Interstate movements of garbage from Hawaii and U.S. territories and possessions to the continental United States.* Hawaii, Puerto Rico, American Samoa, the Commonwealth of the Northern Mariana Islands, the Federated States of Micronesia, Guam, the U.S. Virgin Islands, Republic of the Marshall Islands, and the Republic of Palau are hereby quarantined, and the movement of garbage therefrom to any other State is hereby prohibited except as provided in this section in order to prevent the introduction and spread of exotic plant pests and diseases.

(2) *Imports of garbage.* In order to protect against the introduction of exotic animal and plant pests, the importation of garbage from all foreign countries except Canada is prohibited except as provided in paragraph (c)(2) of this section.

(b) *Definitions—Agricultural waste.* Byproducts generated by the rearing of animals and the production and harvest of crops or trees. Animal waste, a large component of agricultural waste, includes waste (*e.g.*, feed waste, bedding and litter, and feedlot and paddock runoff) from livestock, dairy, and other animal-related agricultural and farming practices.

Approved facility. A facility approved by the Administrator, Animal and Plant Health Inspection Service, upon his determination that it has equipment and uses procedures that are adequate to prevent the dissemination of plant pests and livestock or poultry diseases, and that it is certified by an appropriate Government official as currently complying with the applicable laws for environmental protection.

Approved sewage system. A sewage system approved by the Administrator, Animal and Plant Health Inspection Service, upon his determination that the system is designed and operated in such a way as to preclude the discharge of sewage effluents onto land surfaces or into lagoons or other stationary waters, and otherwise is adequate to prevent the dissemination of plant pests and livestock or poultry diseases, and that is certified by an appropriate Government official as currently complying with the applicable laws for environmental protection.

Carrier. The principal operator of a means of conveyance.

Continental United States. The 49 States located on the continent of North America and the District of Columbia.

Garbage. All waste material that is derived in whole or in part from fruits, vegetables, meats, or other plant or animal (including poultry) material, and other refuse of any character whatsoever that has been associated with any such material.

Incineration. To reduce garbage to ash by burning.

Inspector. A properly identified employee of the U.S. Department of Agriculture or other person authorized by the Department to enforce the provisions of applicable statutes, quarantines, and regulations.

Interstate. From one State into or through any other State.

Person. Any individual, corporation, company, association, firm, partnership, society, or joint stock company.

Shelf-stable. The condition achieved in a product, by application of heat, alone or in combination with other ingredients and/or other treatments, of being rendered free of microorganisms capable of growing in the product under nonrefrigerated conditions (over 50 °F or 10 °C).

Sterilization. Cooking garbage at an internal temperature of 212 °F for 30 minutes.

Stores. The food, supplies, and other provisions carried for the day-to-day operation of a conveyance and the care and feeding of its operators.

Yard waste. Solid waste composed predominantly of grass clippings, leaves, twigs, branches, and other garden refuse.

(c) *Garbage generated onboard a conveyance*—(1) *Applicability.* This section applies to garbage generated onboard any means of conveyance during international or interstate movements as provided in this section and includes food scraps, table refuse, galley refuse, food wrappers or packaging materials, and other waste material from stores, food preparation areas, passengers' or crews' quarters, dining rooms, or any other areas on the means of conveyance. This section also applies to meals and other food that were available for consumption by passengers and crew on an aircraft but were not consumed.

(i) Not all garbage generated onboard a means of conveyance is regulated for the purposes of this section. Garbage regulated for the purposes of this section is defined as "regulated garbage" in paragraphs (c)(2) and (c)(3) of this section.

(ii) Garbage that is commingled with regulated garbage is also regulated garbage.

(2) *Garbage regulated because of movements outside the United States or Canada.* For purposes of this section, garbage on or removed from a means of conveyance is regulated garbage, if, when the garbage is on or removed from the means of conveyance, the means of conveyance has been in any port outside the United States and Canada within the previous 2-year period. There are, however, two exceptions to this provision. These exceptions are as follows:

(i) *Exception 1: Aircraft.* Garbage on or removed from an aircraft is exempt from requirements under paragraph (c)(4) of this section if the following conditions are met when the garbage is on or removed from the aircraft:

(A) The aircraft had previously been cleared of all garbage and of all meats and meat products, whatever the country of origin, except meats that are shelf-stable; all fresh and condensed milk and cream from countries designated in § 94.1 as those in which foot-and-mouth disease exists; all fresh fruits and vegetables; and all eggs; and the items previously cleared from the aircraft as prescribed by this paragraph have been disposed of according to the procedures for disposing of regulated garbage, as specified in paragraphs (c)(4)(ii) and (c)(4)(iii) of this section.

(B) After the garbage and stores referred to in paragraph (c)(2)(i)(A) of this section were removed, the aircraft has not been in a non-Canadian foreign port.

(ii) *Exception 2: Other conveyances.* Garbage on or removed in the United States from a means of conveyance other than an aircraft is exempt from requirements under paragraph (c)(4) of this section if the following conditions are met when the garbage is on or removed from the means of conveyance:

(A) The means of conveyance is accompanied by a certificate from an inspector stating the following:

(*1*) That the means of conveyance had previously been cleared of all garbage and of all meats and meat products, whatever the country of origin, except meats that are shelf-stable; all fresh and condensed milk and cream from countries designated in § 94.1 as those in which foot-and-mouth disease exists; all fresh fruits and vegetables; and all eggs; and the items previously cleared from the means of conveyance as prescribed by this paragraph have been disposed of according to the procedures for disposing of regulated garbage, as specified in paragraphs (c)(4)(ii) and (c)(4)(iii) of this section.

(*2*) That the means of conveyance had then been cleaned and disinfected in the presence of the inspector; and

(B) Since being cleaned and disinfected, the means of conveyance has not been in a non-Canadian foreign port.

(3) *Garbage regulated because of certain movements to or from Hawaii, territories, or possessions.* For purposes of this section, garbage on or removed from a means of conveyance is regulated garbage, if at the time the garbage is on or removed from the means of conveyance, the means of conveyance has moved during the previous 1-year period, either directly or indirectly, to the continental United States from any territory or possession or from Hawaii, to any territory or possession from any other territory or possession or from Hawaii, or to Hawaii from any territory or possession. There are, however, two exceptions to this provision. These exceptions are as follows:

(i) *Exception 1: Aircraft.* Garbage on or removed from an aircraft is exempt from requirements under paragraph (c)(4) of this section if the following two conditions are met when the garbage is on or removed from the aircraft:

(A) The aircraft had been previously cleared of all garbage and all fresh fruits and vegetables, and the items previously cleared from the aircraft as prescribed by this paragraph have been disposed of according to the procedures for disposing of regulated garbage, as specified in paragraphs (c)(4)(ii) and (c)(4)(iii) of this section.

(B) After the garbage and stores referred to in paragraph (c)(3)(i)(A) of this section were removed, the aircraft has not moved to the continental United States from any territory or possession or from Hawaii, to any territory or possession from any other territory or possession or from Hawaii, or to Hawaii from any territory or possession.

(ii) *Exception 2: Other conveyances.* Garbage on or removed from a means of conveyance other than an aircraft is exempt from requirements under paragraph (c)(4) of this section if the following two conditions are met when the garbage is on or removed from the means of conveyance:

(A) The means of conveyance is accompanied by a certificate from an inspector stating that the means of conveyance had been cleared of all garbage and all fresh fruits and vegetables, and the items previously cleared from the means of conveyance as prescribed by this paragraph have been disposed of according to the procedures for disposing of regulated garbage, as specified in paragraphs (c)(4)(ii) and (c)(4)(iii) of this section.

(B) After being cleared of the garbage and stores referred to in paragraph (c)(3)(ii)(A) of this section, the means of conveyance has not moved to the continental United States from any territory or possession or from Hawaii; to any territory or possession from any other territory or possession or from Hawaii; or to Hawaii from any territory or possession.

(4) *Restrictions on regulated garbage.* (i) Regulated garbage may not be disposed of, placed on, or removed from a means of conveyance except in accordance with this section.

(ii) Regulated garbage is subject to general surveillance for compliance with this section by inspectors and to disposal measures authorized by the Plant Protection Act and the Animal Health Protection Act to prevent the introduction and dissemination of pests and diseases of plants and livestock.

(iii) All regulated garbage must be contained in tight, covered, leak-proof receptacles during storage on board a means of conveyance while in the territorial waters, or while otherwise within the territory of the United States. All such receptacles shall be contained inside the guard rail if on a watercraft. Such regulated garbage shall not be unloaded from such means of conveyance in the United States unless such regulated garbage is removed in tight, covered, leak-proof receptacles under the direction of an inspector to an approved facility for incineration, sterilization, or grinding into an approved sewage system, under direct supervision by such an inspector, or such regulated garbage is removed for other handling in such manner and under such supervision as may, upon request in specific cases, be approved by the Administrator as adequate to prevent the introduction and dissemination of plant pests and animal diseases and sufficient to ensure compliance with applicable laws for environmental protection. *Provided that,* a cruise ship may dispose of regulated garbage in landfills at Alaskan ports only, if and only if the cruise ship does not have prohibited or restricted meat or animal products on board at the time it enters Alaskan waters for the cruise season, and only if the cruise ship, except for incidental travel through international waters necessary to navigate safely between ports, remains in Canadian and U.S. waters off the west coast of North America, and calls only at continental U.S. and Canadian ports during the entire cruise season.

(A) Application for approval of a facility or sewage system may be made in writing by the authorized representative of any carrier or by the official having jurisdiction over the port or place of arrival of the means of conveyance to the Administrator, Animal and Plant Health Inspection Service, U.S. Department of Agriculture, Washington, DC 20250. The application must be endorsed by the operator of the facility or sewage system.

(B) Approval will be granted if the Administrator determines that the requirements set forth in this section are met. Approval may be denied or withdrawn at any time, if the Administrator determines that such requirements are not met, after notice of the proposed denial or withdrawal of the approval and the reasons therefor, and an opportunity to demonstrate or achieve compliance with such requirements, has been afforded to the operator of the facility or sewage system and to the applicant for approval. However, approval may also be withdrawn without such prior procedure in any case in which the public health, interest, or safety requires immediate action, and in such case, the operator of the facility or sewage system and the applicant for approval shall promptly thereafter be given notice of the withdrawal and the reasons therefore and an opportunity to show cause why the approval should be reinstated.

(iv) The Plant Protection and Quarantine Programs and Veterinary Services, Animal, and Plant Health Inspection Service, will cooperate with other Federal, State, and local agencies responsible for enforcing other statutes and regulations governing disposal of the regulated garbage to the end that such disposal shall be adequate to prevent the dissemination of plant pests and livestock or poultry diseases and comply with applicable laws for environmental protection. The inspectors, in maintaining surveillance over regulated garbage movements and disposal, shall coordinate their activities with the activities of representatives of the U.S. Environmental Protection Agency and other Federal, State, and local agencies also having jurisdiction over such regulated garbage.

(d) *Garbage generated in Hawaii*—(1) *Applicability.* This section applies to garbage generated in households, commercial establishments, institutions, and businesses prior to interstate movement from Hawaii, and includes used paper, discarded cans and bottles, and food scraps. Such garbage includes, and is commonly known as, municipal solid waste.

(i) Industrial process wastes, mining wastes, sewage sludge, incinerator ash, or other wastes from Hawaii that the Administrator determines do not pose risks of introducing animal or plant pests or diseases into the continental United States are not regulated under this section.

(ii) The interstate movement from Hawaii to the continental United States of agricultural wastes and yard waste (other than incidental amounts (less than 3 percent) that may be present in municipal solid waste despite reasonable efforts to maintain source separation) is prohibited.

(iii) Garbage generated onboard any means of conveyance during interstate movement from Hawaii is regulated under paragraph (c) of this section.

(2) *Restrictions on interstate movement of garbage.* The interstate movement of garbage generated in Hawaii to the continental United States is regulated as provided in this section.

(i) The garbage must be processed, packaged, safeguarded, and disposed of using a methodology that the Administrator has determined is adequate to prevent the introduction and dissemination of plant pests into noninfested areas of the United States.

(ii) The garbage must be moved under a compliance agreement in accordance with paragraph (e) of this section. APHIS will only enter into a compliance agreement when the Administrator is satisfied that the Agency has first satisfied all its obligations under the National Environmental Policy Act and all applicable Federal and State statutes to fully assess the impacts associated with the movement of garbage under the compliance agreement.

(iii) All such garbage moved interstate from Hawaii to any of the continental United States must be moved in compliance with all applicable laws for environmental protection.

(e) *Compliance agreement and cancellation*—(1) Any person engaged in the business of handling or disposing of garbage in accordance with this section must first enter into a compliance agreement with the Animal and Plant Health Inspection Service (APHIS). Compliance agreement forms (PPQ Form 519) are available without charge from local USDA/APHIS/Plant Protection and Quarantine offices, which are listed in telephone directories.

(2) A person who enters into a compliance agreement, and employees or agents of that person, must comply with the following conditions and any supplemental conditions which are listed in the compliance agreement, as deemed by the Administrator to be necessary to prevent the introduction and dissemination into or within the United States of plant pests and livestock or poultry diseases:

(i) Comply with all applicable provisions of this section;

(ii) Allow inspectors access to all records maintained by the person regarding handling or disposal of garbage, and to all areas where handling or disposal of garbage occurs;

(iii)(A) If the garbage is regulated under paragraph (c) of this section, remove garbage from a means of conveyance only in tight, covered, leak-proof receptacles;

(B) If the garbage is regulated under paragraph (d) of this section, transport garbage interstate in sealed, leak-proof packaging approved by the Administrator;

(iv) Move the garbage only to a facility approved by the Administrator; and

(v) At the approved facility, dispose of the garbage in a manner approved by the Administrator and described in the compliance agreement.

(3) Approval for a compliance agreement may be denied at any time if the Administrator determines that the applicant has not met or is unable to meet the requirements set forth in this section. Prior to denying any application for a compliance agreement, APHIS will provide notice to the applicant thereof, and will provide the applicant with an opportunity to demonstrate or achieve compliance with requirements.

(4) Any compliance agreement may be canceled, either orally or in writing, by an inspector whenever the inspector finds that the person who has entered into the compliance agreement has failed to comply with this section. If the cancellation is oral, the cancellation and the reasons for the cancellation will be confirmed in writing as promptly as circumstances allow. Any person whose compliance agreement has been canceled may appeal the decision, in writing, within 10 days after receiving written notification of the cancellation. The appeal must state all of the facts and reasons upon which the person relies to show that the compliance agreement was wrongfully canceled. As promptly as circumstances allow, the Administrator will grant or deny the appeal, in writing, stating the reasons for the decision. A hearing will be held to resolve any conflict as to any material fact. Rules of practice concerning a hearing will be adopted by the Administrator. This administrative remedy must be exhausted before a person can file suit in court challenging the cancellation of a compliance agreement.

(5) Where a compliance agreement is denied or canceled, the person who entered into or applied for the compliance agreement may be prohibited, at the discretion of the Administrator, from handling or disposing of regulated garbage.

(Approved by the Office of Management and Budget under control numbers 0579–0015, 0579–0054, and 0579–0292)

Done in Washington, DC, this 17th day of August 2006.

Kevin Shea,

Acting Administrator, Animal and Plant Health Inspection Service.

[Docket No. 00–086–2]

Untreated Oranges, Tangerines, and Grapefruit From Mexico Transiting the United States to Foreign Countries

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Final rule.

SUMMARY: We are amending the regulations to allow untreated oranges, tangerines, and grapefruit from Mexico to be moved overland by truck or rail to Corpus Christi and Houston, TX, for export to another country by water. We

Attachment B — E-mail from Jim Hodges Regarding Transshipment of Honolulu MSW

E-mail sent 12/14/2006 at 3:21 pm from Jim Hodges to Mark White, Subject: Summary

Mark,

In summary of our conversation, a potential interim disposal alternative for the City of Honolulu is our export model to Roosevelt Landfill in Washington State with the following core/essential stipulations:

- HWS would be willing to limit our export to 100,000 – 150,000 tons per year
- the cost would be approximately $80/ton escalated annually by 80 percent of the CPI
- a five-year minimum commitment at the above stated volumes
- HWS would cooperate with the City on integrating our facility into the City's solid waste system. The mechanism for this integration would have to be determined with the City and HWS, but certainly could result in the City's managing the gate at HWS' processing facility

We feel that this could be, at the very least, an excellent interim measure for the City's solid waste system. Let me know if there is additional information that you need or further questions about anything we have discussed.

Thanks, Jim

Attachment C — Evaluation of CO_2 Emissions from Disposal of Waste at Waimanalo Gulch Sanitary Landfill, H–POWER, and Washington State

Evaluation of CO_2 Emissions from Disposal of Waste at the Proposed H–POWER Unit #3 at the Waimanalo Gulch Sanitary Landfill and at the Roosevelt Landfill in Washington State

Table of Contents

List of Figures and Tables

1 Introduction

This report is an evaluation of the greenhouse gas (GHG) emissions resulting from disposing of 300,000 tons per year (TPY) of municipal solid waste (MSW) at H–POWER Unit #3, which is currently under environmental review, the Waimanalo Gulch Sanitary Landfill (Waimanalo Gulch), or at the Roosevelt Sanitary Landfill (Roosevelt) in Washington State. The specific disposal locations evaluated are:

1. Roosevelt Landfill at 500 Roosevelt Grade Road, Roosevelt, Washington.

2. Waimanalo Gulch landfill at Waimanalo Gulch, Kahe Valley, Hawaii.

3. H–POWER Unit #3 Combustor at 91-174 Hanua Street, Kapolei, Hawaii. H–POWER Unit #3 is proposed to be located on the same site as the existing H–POWER plant.

The City and County of Honolulu (City or C&C) has received bids from three firms in response to its January 2008 Request for Proposal for transshipment of MSW to a mainland landfill for disposal. The information about the Hawaiian Waste Systems LLC (HWS) program was used for this analysis because more is known about it than the others. GHG emissions resulting from the other two proposals are expected to be similar though not the same as emissions from the HWS proposal because they may use different locations for the transfer stations and for the disposal site.

HWS would use a transfer station on Oahu to bale the waste after which it would be shipped to the Roosevelt Landfill in Washington State. The transfer to Roosevelt would begin at the HWS Transfer Station at 91-165 Kalaeloa Boulevard, Kapolei, Hawaii. Data in documents filed by HWS were used in this analysis.

The emissions were estimated using the U.S. Environmental Protection Agency (EPA) WARM model (Version 9, August 2008), which estimates emissions for various waste management practices including landfilling and incineration.

This summary is based on data provided in readily available published sources or by direct contact with representatives of firms that provide the services used. The summary is not intended, nor is it appropriate to use, as an assessment of emissions that will satisfy the requirements for a verifiable GHG emissions inventory or other regulatory requirements.

There are six primary GHGs. This review is concerned only with CO_2.

2 Calculation Envelope

The envelope for evaluating emissions at each of the three disposal locations starts at a base point, the intersection of H-1 and Kalaeloa Boulevard. From the base point waste can be taken to H–POWER, Waimanalo Gulch, or to the HWS Transfer Station for transshipment to Roosevelt.

The path for calculating the emissions was:

- Transporting the waste from the base point to the HWS Transfer Station, processing it there, transporting it to Roosevelt, and disposing it at Roosevelt.
- Transporting the waste from the base point to Waimanalo Gulch and landfill disposal.
- Transporting the waste from the base point to H–POWER and energy recovery.

The emissions associated with collecting and transporting the waste to the base point would have occurred regardless of the disposal point and are not included in this evaluation.

3 Emissions Calculations

This section discusses the information used in the WARM model to estimate the emissions from the two landfills and from H–POWER Unit #3. The model uses national factors for

- The CO_2 emission factor that calculates the reduction in CO_2e emissions from generation either from a landfill gas fired generator (as operates at Roosevelt) or energy recovery in a combustor;
- Sequestration of materials in the landfill that prevents CO_2e emissions or lengthens the time before onset of emissions; and
- The CO_2 emission factor that calculates the CO_2 emissions from transportation of municipal solid waste.

The WARM model requires several parameters to calculate the CO_2 emissions. Those parameters are listed in *Table 1, WARM Model Parameters*. The distance shown for Roosevelt includes the transportation from the intersection of H-1 and Kalaeloa Boulevard to the transfer station in Campbell Industrial Park and then to the Roosevelt landfill. The distance traveled in barging the waste was the one-way distance since the barges could back-haul materials to Honolulu, and the CO_2 emissions from the back-haul could logically be associated with the company transporting the materials to Honolulu rather than being associated with any proposed MSW transshipment project. The distances shown for H–POWER and the Waimanalo Gulch Sanitary Landfill are round trip distances from the intersection of H-1 and Kalaeloa Boulevard to the facility.

The emission factors used are summarized in *Table 1, WARM Model Parameters*. The EPA WARM model is used to calculate the net emissions from a landfill, and reflects sequestration of anthropogenic materials, the type of landfill gas controls, and offsetting emissions from sale of power to the local utility.

Table 1, WARM Model Parameters

Input Assumption	Roosevelt	Waimanalo Gulch	H–POWER Unit #3
Distance traveled *	3,261	5.0	4.8
LFG energy recovery	Yes		NA
LFG flare		Yes	NA
LFG collection efficiency	79%	90%	NA
TPY of mixed MSW	300,000	300,000	300,000

4 Summary of Results

Transshipping and disposing of waste at Roosevelt were estimated to produce more emissions than disposal and energy recovery at H–POWER Unit #3 or disposal in the Waimanalo Gulch Sanitary Landfill. *Table 2, Total Emissions from the Alternatives* shows the estimated total emissions for each alternative.

The estimated positive CO_2 emissions from Roosevelt result because of the transportation emissions. The estimated positive Roosevelt emissions would have been greater if not reduced in the WARM model by sequestration and reduction in utility emissions from power sales.

Table 2, Total Emissions from the Alternatives

Disposal Location	Emissions (MTCO2e per year)
H–POWER Unit #3	(38,883)
Waimanalo Gulch Sanitary Landfil	(29,377)
Roosevelt	44,978

$MTCO_2e$ is metric tons of CO_2 equivalent.

The estimated CO_2 emissions from transshipment to Roosevelt for disposal are higher than either of the two on-island alternatives. Even so, the reduction in CO_2 emissions due to the benefit from the electric power generation at Roosevelt is overstated. The WARM model uses a national emission factor (which is not stated in the model or model documentation) to calculate the reduction in utility emissions of CO_2. An example of the effect of the difference can be seen from the different emission factors provided by the California Climate Action Registry for Oahu and the Northwest. The factor for Oahu (reflecting generation with oil, coal, and MSW) is 1,728 pounds of CO_2 per MWh of electricity produced. The factor for the U.S. Northwest (reflecting near zero emission hydro generation) is 921 pounds of CO_2 per MWh of electricity produced, about half of the Oahu emission factor. If the correct factor could be used in the WARM model for Roosevelt, the credit for reducing emissions would be reduced, increasing the estimated CO_2 emissions from the transshipment alternative.

LIST OF FIGURES

EXECUTIVE SUMMARY

Proposed Action: The Proposed Action is the H-POWER Expansion Project, hereafter referred to as the "Expansion", which consists of the addition to the existing H-POWER Facility ("Facility") of a 900 ton per day ("TPD") mass burn waterwall municipal waste combustor (MWC) unit, its associated air pollution control equipment, and all the equipment required to tie the addition into the existing Facility, and a new turbine generator which will provide an additional source of renewable energy to the City and County of Honolulu.

Applicant/Proposing Agency: The applicant for the proposed H-POWER Expansion is the City and County of Honolulu, Hawaii (the "City").

Accepting Agency: The accepting agency is the Department of Environmental Services, City and County of Honolulu.

Agencies Consulted in Making the Assessment: The City and County of Honolulu determined that an EIS would be prepared to fully evaluate the potential environmental effects of the Expansion and to provide documentation for community and agency review. The City has requested the operator of H-POWER, Covanta Honolulu Resource Recovery Venture (CHRRV) to initiate the EIS process. CHRRV has in turn contracted with AMEC Earth & Environmental (AMEC) as an environmental consultant to assist in the EIS process. The City, CHRRV and AMEC have conducted Agency consultations. Agency consultations conducted in advance of the publication of the EIS Preparation Notice in *The Environmental Notice* are listed in Table B – Agencies Consulted (see page 25).

General Description of the Proposed Action's Technical, Economic, Social and Environmental Characteristics; Time Frame; Funding Source:

Technical Characteristics

As shown in Figure 1-1, the Expansion consists of the addition to the Facility of a 900 TPD mass burn waterwall MWC unit, its associated air pollution control equipment, and all the equipment required to tie the addition into the existing H-POWER Facility. It includes modifications and additions to the existing waste feed system and ash handling and other utility systems necessary for the new equipment. A new turbine generator, in addition to the existing 58 MW turbine generator, will be installed. The new unit (Unit 3) will consist of a mass burn waterwall municipal waste combustor unit, fuel feeding system, state-of-the-art reverse reciprocating grate, integrated furnace/boiler, and the most advanced air pollution control system used on these plants in this country. The air pollution control system consists of a dry scrubber, fabric filter baghouse, carbon injection system, selective non-catalytic reduction system in combination with Covanta's proprietary control technology called very low NOx system (VLN®), and associated ash and residue systems. The new unit is expected to generate about 234 tons (wet weight) of ash per day. To provide for adequate cooling water, the proposed project would require increasing the caprock water supply permit limit from 2.26 million gallons per day (MGPD) to 3.34 MGPD and the caprock water injection permit limit from 1.2 MGPD to 1.82 MGPD. H-POWER's cooling tower basin will be expanded by the addition of three new cooling towers.

Economic Characteristics

The Expansion is anticipated to be an economic stimulus in multiple ways:

- H-POWER currently employs 145 island residents and has a $10 million annual payroll. The Expansion is anticipated to result in 300 construction jobs and several additional operational positions.
- H-POWER utilizes local vendors whenever possible to purchase goods, services and equipment. Each year H-POWER spends more than 8.5 million locally on equipment and services from Hawaii vendors, further boosting the local economy. The Expansion is anticipated to result in significant local spending during the construction period.
- The existing H-POWER Facility is a proven and cost effective solution for the management of municipal solid waste (MSW) on the Island of O‘ahu. The Expansion will ensure that the growing demand to manage MSW on the O‘ahu is addressed. The construction of the Expansion will not interfere with the operation of the existing Facility.
- H-POWER has been recycling waste into energy since it started operation. It produces about 5 percent of the power used on the Island avoiding the need to import expensive oil, providing a significant reduction in greenhouse gas emissions, and reducing the need for landfilling on the Island.

Social Characteristics

The H-POWER facility has been operational for 18 years and its reliable service to the City was demonstrated by the recent celebration of the processing of its 11,000,000th ton of solid waste on March 15, 2008. It is anticipated that H-POWER, with development planned at the existing industrial site, would continue to provide reliable service to the City and would continue its existing role as an important community partner, with participation in local organizations such as:

- Sponsorship of the Kapolei Rotary Club;
- Sponsorship of the Kapolei Family Fun Run to benefit literacy programs;
- Sponsorship of the Waianae Comprehensive Health Care Fun Run;
- Participation in Hawaii Food Bank’s annual food drive;
- Sponsorship of statewide science fair and school career days and other youth and school programs and initiatives;
- Membership and service on the Board of Directors for the Campbell Local Emergency Action Network (CLEAN) interfacing with the neighboring communities on safety, environmental, public education, and emergency action needs and response; and
- Provision of over 100 tours and exhibits annually for the community, schools, elected officials, and civic organizations.

Additionally, the Facility has received recognition for its exemplary operation and safety record:

- Recipient of coveted U.S. EPA environmental excellence award. - H-POWER is the first and only U.S. EPA National Environmental Performance Track site in Hawaii. As such, H-POWER has met all criteria and demonstrated excellence in environmental performance management systems and training, continuous improvement, and community outreach.
- Recipient of U.S. OSHA Safety award. COVANTA - H-POWER is one of only five companies in Hawaii to receive the U.S. OSHA Voluntary Protection Program (HVPP) for excellence in Safety.

Environmental Characteristics

The Expansion will increase its waste disposal capacity, increase the energy and recyclable metals recovered annually, and further reduce the need for landfilling of MSW in Honolulu. The environmental characteristics of the Expansion will fully comply with federal, state, and local permits (see Table A) and programs designed for the protection and stewardship of Hawaii's environmental resources. Furthermore, the City has, by virtue of this EIS Preparation Notice, deemed that a full assessment of the potential environmental consequences of the Expansion be prepared for community review and comment. This will include an assessment of the existing natural and human environment, including potential impacts and mitigative measures, as well as an assessment of the project's conformance to federal, state, and local planning polices, and a sustainability analysis. In addition the EIS will document potential irreversible and irretrievable commitments of resources and will identify potential unresolved issues.

Time Frame

The proposed Expansion will undergo environmental permitting and, if fully approved, commencement of construction is anticipated in the second half of 2009. The construction period is expected to last 30 months with an additional three months for Start-up. Commercial operation of the proposed Expansion is anticipated in 2012.

Summary Description of the Affected Environment, including suitable and adequate regional, location and site maps such as Flood Insurance Rate Maps, Floodway Boundary Maps, or United States Geological Survey (USGS) topographic maps: The H-POWER Expansion is proposed to occur on the existing H-POWER Facility parcel. That site consists of 24.635 acres (1,073,100 s. ft.) of industrially zoned and developed property situated within the Campbell Industrial Park at Barbers Point. The parcel's Tax Map Key number is #1(9)-1-026-030. Figure 2-1 depicts the site location on a USGS topographic map and shows the major roadways in the vicinity of the existing H-POWER Facility. Figures 2-2 and 2-3 are aerial photographs showing the existing industrial nature of the site and surroundings. Figure 2-4 is a site plan overlaid onto an aerial photograph. Maps depicting additional site and regional resources will be provided in the EIS.

Impacts to Cultural Practices and Resources, Past and Current: The City recognizes that a key component of the EIS to be developed will be a review of cultural practices and resources, past and current. Pacific Consulting Services, Inc. of Honolulu has been selected to conduct reviews of historic, archaeological and cultural resources to ensure that potential impacts to such resources are fully identified and evaluated.

Identification and Summary of Impacts and Proposed Mitigation Measures: The EIS to be developed will include identification of the project's potential effects to:

- Geology and Soils
- Surface Water and Groundwater Resources/Hydrology
- Biological Resources
- Archaeological, Historic and Cultural Resources
- Roadways and Traffic
- Noise
- Air Quality
- Visual Resources
- Socioeconomics
- Infrastructure
- Solid Waste
- Energy
- Human Health

For each of the above topics, the identification of potential impacts and proposed mitigation measures will include an assessment of both short term (construction impacts) and long-term effects.

Alternatives Considered: The alternatives considered will include eight technology alternatives, two siting alternatives, and two required alternatives (No Project and Delayed Project), as noted below:

Technology Alternatives

- The Project — Mass Burn Energy-from-Waste
- Other Combustion — Refuse Derived Fuel Energy-from-Waste
- Non-Combustion — Thermal Technology
- Non-Combustion — Non-Thermal Technology
- Landfilling at Waimanalo Gulch Sanitary Landfill
- Landfilling at Another On-Island Site
- Landfilling Off-Island

- Expanded Recycling

Siting Alternatives

- The current H–POWER Site
- A Greenfield Site

Required Alternatives

- No Project
- Delayed Project

Discussion of Findings and Reasons Supporting the Agency Anticipated Determination: The City has deemed that an EIS be prepared to fully address the project. Submission of this EIS Preparation Notice is to provide the opportunity for community involvement as part of the EIS process.

List of all Required Permits and Approvals (State, federal, county): Table A, Potential Permits (see page 24), identifies the required permits and approvals (federal, state, and county).

Written Comments and Responses to the Comments under the Early Consultation Provisions: Table B, Agencies Consulted (see page 25), provides a list of agencies contacted.

THIS PAGE INTENTIONALLY LEFT BLANK

1.0 PROJECT OVERVIEW

The primary function of the existing Facility is to provide disposal of municipal solid waste (MSW). The plant, comprised of an MSW processing plant which produces Refuse Derived Fuel (RDF) and two 854 ton per day municipal combustors, processes 610,000 tons of MSW per year[1], reducing the volume of refuse that goes to the landfill by 90%. Additionally, H-POWER annually recovers 20,000 tons of metals, such as aluminum and steel from the waste stream. H-POWER, a City & County of Honolulu facility, combusts the RDF to produce steam that drives a turbine generator. The electricity generated by this waste-to-energy plant is distributed to customers by Hawaiian Electric Company ("HECO").

1.1 Proposed Action

The Expansion consists of the addition to the Facility of a 900 TPD mass burn waterwall MWC unit, its associated air pollution control equipment, and all the equipment required to tie the addition into the existing H-POWER Facility. It includes modifications and additions to the existing waste feed system and ash handling and other utility systems necessary for the new equipment. A new turbine generator, in addition to the existing 58 MW turbine generator, will be installed. The new unit (Unit 3) will consist of a mass burn waterwall municipal waste combustor unit, fuel feeding system, state-of-the-art reverse reciprocating grate, integrated furnace/boiler, and the most advanced air pollution control system used on these plants in this country. The air pollution control system consists of a dry scrubber, fabric filter baghouse, carbon injection system, selective non-catalytic reduction system in combination with Covanta's proprietary control technology called very low NOx system (VLN®), and associated ash and residue systems. The new unit is expected to generate about 234 tons (wet weight) of ash per day. To provide for adequate cooling water, the proposed project would increase the caprock water supply permit limit from 2.26 million gallons per day (MGPD) to 3.34 MGPD and the caprock water injection permit limit from 1.2 MGPD to 1.82 MGPD. H-POWER's cooling tower basin will be expanded by the addition of three new cooling towers.

Figure 1-1 depicts the Site Plan that shows the footprint of the modifications to the H-POWER Facility associated with the Expansion.

The Expansion will increase the facility's waste disposal capacity, increase the energy and recyclable metals recovered annually, and further reduce the need for landfilling of municipal solid waste in Honolulu. The environmental characteristics of the Expansion will fully comply with federal, state, and local permits and programs designed for the protection and stewardship of Hawaii's environmental resources.

1.2 Background and Historical Perspective

Prior to 1977, the City and State had conducted, commissioned or sponsored a number of studies over an approximately 12 year period in order to find a solution to what was then a growing solid waste problem. At that time, approximately 80 percent of O'ahu's refuse was disposed of at City operated landfills and space at these landfills was rapidly being used up. In 1977, analysis of possible waste disposal solutions was conducted by MITRE Corporation. That analysis evaluated development of a solid waste resource recovery system (1983 Revised EIS)

[1] Based on a 10-year average.

to address the solid waste issue. The City subsequently embarked on a program to implement the recommendations contained in MITRE's final report. In the summer of 1978, the City issued a Request for Proposals (RFP) for what was then referred to as H-POWER – the Honolulu Program Of Waste Energy Recovery. In 1982, documents went out on which two bidders were asked to submit bid prices. It was hoped that a contract would be awarded by the end of December 1983 and to enter full-scale operation by January 1987. After a series of submittals and reviews, including environmental considerations by the City and residents, a final decision was eventually reached, and in May of 1990 the H-POWER facility went into commercial operation at its current location in the Campbell Industrial Park.

The H-POWER facility has been operational now for over 18 years, and its reliable service to the City continues. It is anticipated that H-POWER, with the proposed development planned at the existing industrial site, would expand upon its reliable service to the City and in so doing continue its long history of providing cost effective solid waste solutions as well as a critical source of renewable energy to the City and County of Honolulu and the Island of Oahu. H-POWER generates five (5%) percent of Oahu's electricity from a renewable resource, helping Oahu achieve its goal of becoming more energy self-sufficient by reducing dependence on imported fuel. It is anticipated that, after the expansion, H-POWER will generate eight (8%) percent of Oahu's electricity from a renewable resource.

1.3 Purpose of the Preparation Notice

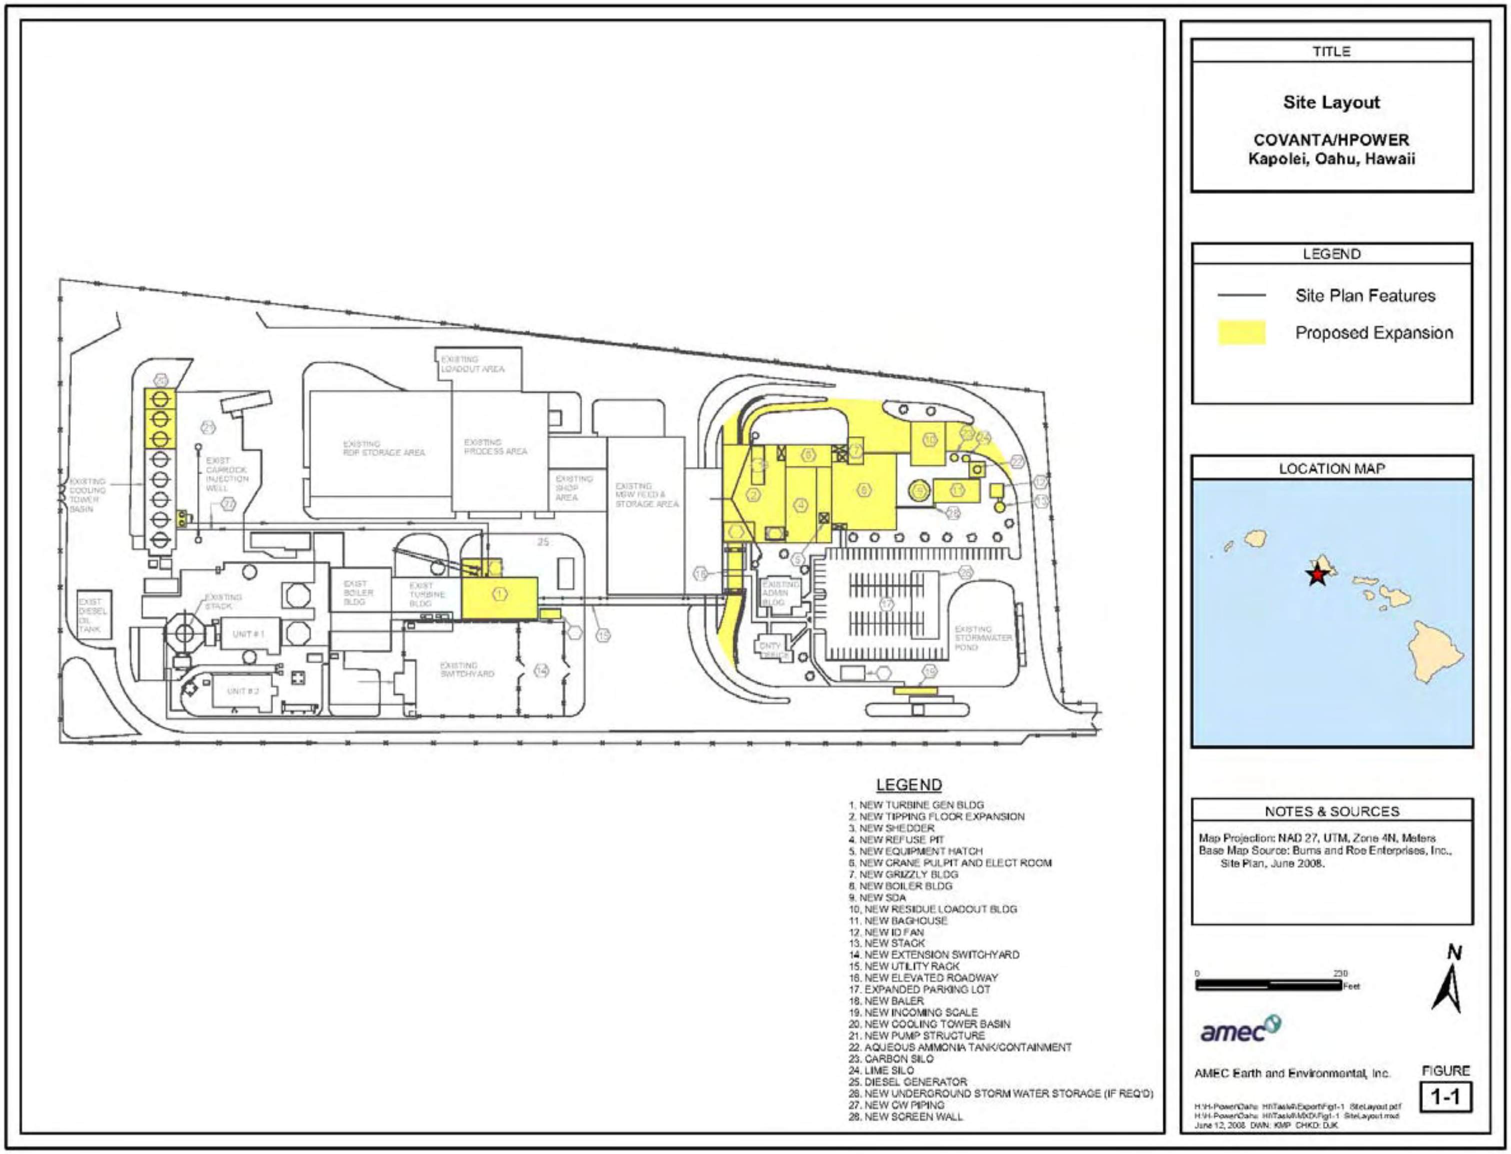
This Preparation Notice has been prepared by CHRRV, the City and County of Honolulu, and their environmental consultants and subcontractors in order to satisfy the requirements of Hawaii Revised Statutes (HRS) Chapter 343. The use of County lands and funds is the primary reason that the City and County of Honolulu has determined that an EIS be prepared. This Preparation Notice is the initial step in that process.

The purpose of this Preparation Notice is to inform interested parties of the proposed project and to seek public input on subject areas that should be addressed in the forthcoming Draft EIS. The EIS will address mitigation measures to prevent or reduce the project's potential effects and will present alternative methods, modes or designs of the proposed action. A key component of the overall process is public participation. As such, CHRRV and the City and County of Honolulu consulted with and continue to consult with numerous state and federal agencies in formulating plans for addressing the County's solid waste disposal needs (see Table B). These efforts are summarized in Section 7.

1.4 Purpose and Need for the Project

The H-POWER Expansion is designed to offer increased efficiency and capacity at the existing H-POWER Facility in Kapolei, Hawaii. The Project is being developed to expand a competitively priced, environmentally sound and proven waste disposal technology on Oahu, thereby extending the life of the existing Waimanalo Gulch Sanitary Landfill and potentially minimizing the capacity needs of landfills yet to be developed.

Figure 1-1. Site Plan



THIS PAGE INTENTIONALLY LEFT BLANK

2.0 PROJECT DESCRIPTION

Unprocessed municipal refuse would be delivered to the facility as it is currently, by standard packer trucks and/or transfer vehicles. Some of the refuse will be converted into Refuse Derived Fuel (RDF) that will be loaded onto conveyors for delivery to the metering bin of the existing steam generators. Some of the waste will be conveyed by a proposed, new waste loading system to the state-of-the-art reverse reciprocating grate of the proposed, new mass burn waterwall MWC unit. Above the grate and integrated with the waterwall furnace is the new steam boiler, designed specifically for mass burn combustion. The proposed design offers highly efficient heat recovery and prolonged operation with a minimum of maintenance. The air pollution control system consists of a dry scrubber, fabric filter baghouse, carbon injection system, and selective non-catalytic reduction system in combination with Covanta's proprietary control technology called very low NOx system (VLN®). Steam generated in the boiler will be delivered to a proposed new turbine generator to produce electricity for in-plant needs and for sale to Hawaiian Electric Company (HECO). The proposed mass burn combustion unit will have new, dedicated ash and residue handing systems to handle the about 234 tons (wet weight) of ash expected to be generated per day from the proposed new unit. It is anticipated that an increase of ash as well as metals recycling will result due to the proposed increase in facility throughput from an average of 610,000 tons per year to 910,000 tons per year. To provide for adequate cooling water, the proposed project would require increasing the caprock water supply permit limit from 2.26 million gallons per day (MGPD) to 3.34 MGPD and the caprock water injection permit limit from 1.2 MGPD to 1.82 MGPD. H-POWER's cooling tower basin will be expanded by the addition of three new cooling towers.

A detailed description of the key elements of the Expansion will be provided within the EIS.

2.1 Project Location and Site Characteristics

The existing H-POWER site consists of 24.635 acres (1,073,100 sq. ft.) of industrially zoned and developed property situated within the Campbell Industrial Park at Barbers Point. The parcel's Tax Map Key number is #1(9)-1-026-030. Figure 2-1 depicts the site location on a topographic map and shows the major roadways in the vicinity of the existing H-POWER facility.

As depicted in Figure 2-1, the site is situated within the industrial area of Barbers Point within the Campbell Industrial Park. Figures 2-2 and 2-3 are aerial photographs showing the site and surrounding areas. Figure 2-4 is a figure showing the Site Plan overlaid onto an aerial photograph showing that the Expansion does not significantly change the industrial character of the Campbell Industrial Park.

2.2 Construction Activities

Initial construction activities will include mobilization, clearing, and site preparation (consisting primarily of identification and repair of surface cavities) followed by leveling the site and placement of footings and foundations prior to full construction.

During mobilization, ground disturbance during clearing, site preparation and grading shall be held to the minimum area necessary to accommodate movement of heavy equipment and materials required for construction. This will minimize storm-generated run-off from disturbed areas of the site. Staging, stockpile and parking areas for workers shall be prepared as necessary with appropriate storm water discharge pollution prevention features and fugitive dust suppression. Temporary staging areas and construction parking may include the use of adjacent off-site parcels. The proposed staging areas are depicted in Figures 2-2 and 2-4.

A complete discussion of potential impacts and recommended mitigation measures for construction related impacts including noise, parking and traffic, equipment storage and laydown areas, as well as the potential positive aspects such as employment and revenues from local spending will be provided in the forthcoming Draft EIS.

Upon completion of construction activities, the site will be landscaped similarly to pre-project conditions. An evaluation of potential landscape improvements, including lighting and fencing requirements, will be prepared as part of the Draft EIS.

2.3 Project Schedule

The proposed Expansion will undergo environmental permitting and, if fully approved, commencement of construction is anticipated in the second half of 2009. The construction period is expected to last 30 months with an additional three months for Start-up. Commercial operation of the proposed Expansion is anticipated in 2012.

3.0 NATURAL ENVIRONMENT

This chapter discusses the natural environment in the area of the proposed project. Where additional investigations are anticipated to support preparation of the Draft EIS and to identify potential impacts, these proposed studies are noted.

3.1 Topography, Climate, and Rainfall

According to the 1986 Final Geotechnical Report (C.E. Maguire, 1986) prepared prior to the construction of H-POWER, the topography of the site was generally flat, ranging from +7 to +16 MSL and averaging approximately +12 to +13 MSL in the area of the major structures. During site preparation and grading prior to construction of the H-POWER facility some elevation changes were made at the site. Updated topographic survey drawings of current conditions at the H-POWER site will be provided within the Draft EIS.

According to the 1983 EIS (Belt, 1983) and the 1986 Final Geotechnical Report, the H-POWER site is approximately 1800 feet from the shoreline and within an area classified as Zone D according to the 1980 U.S. Department of Housing and Urban Development Flood Insurance Rate Maps (FIRM). Only a narrow strip of shoreline (off-site), approximately 200-400 feet in width is classified A4 according to the 1980 FIRM and therefore subject to tsunami inundation up to elevation +8 to +9 (100-year event).

The National Weather Service (NWS) operates a meteorological station at the Honolulu International Airport, approximately 12 miles east of Campbell Industrial Park. Amongst other measurements, the Honolulu NWS station records daily precipitation amounts and temperature. The average rainfall recorded at the Honolulu NWS station for the period of 1999 to 2003 ranged from 7.1 inches per year to 12.2 inches per year. The average rainfall for these years was 10.6 inches. The average rainfall recorded at the Honolulu NWS station over the 30-year period from 1971-2000 was 18.29 inches. The mean monthly temperature recorded at the NWS station between 1999-2003 ranged from 76.9 degrees Fahrenheit to 78.5 degrees Fahrenheit, with an average of 77.8 degrees Fahrenheit. This compares well with the average monthly temperature recorded at the Honolulu NWS station between the 30-year period from 1961-1990, which was 77.2 degrees Fahrenheit. Additional detail regarding climate and rainfall will be compiled and presented within the Draft EIS.

3.2 Geology and Soils

According to both the 1983 EIS (Belt, 1983) and the 1986 Final Geotechnical Report prepared prior to the construction of H-POWER, Barber's Point and the Campbell Industrial Park are contained within the western portion of O'ahu's 'Ewa plain. This area is an emerged coral-algae reef formed during the Pleistocene period when the ocean level was at a higher elevation. The Ewa plain extends from sea level at the coastline to an approximate elevation of 100 MSL about 3 to 5 miles inland. The local coastal plain is quite flat, with the 20-foot contour being more than a mile inland. The 'Ewa plain is made up of interbedded coral reef formations, marine sediments, and alluvium. The basement complex consists of basaltic lavas from the Waianae series. Both the coral reef formations and the basaltic lavas have generally high porosity and permeability; the marine sediments and alluvial deposits have much lower permeability. Because of this, they inhibit the movement of water. A relatively thick layer of these poorly permeable materials separates the basalt from the strata above and is commonly referred to as "caprock". Based on the site's distance from the Waianae Mountains and estimates that the average dip of lavas in the Waianae volcanic series is five degrees, these coastal plain formations are believed to have a thickness of 600 to 800 feet in the vicinity of the project site.

Sinkholes formed by dissolution of the limestone are abundant in the area. However, those that previously occurred at the H-POWER site have been wholly or partially filled as a result of rough grading conducted in the early 1960s and more comprehensive grading and foundation preparation work during construction of the H-POWER facility.

The extremely shallow calcareous soil mantle present on the site prior to development of H-POWER was classified by the U.S. Soil Conservation Service (SCS) of the U.S. Dept. of Agriculture (1972) as Coral Outcrop and was not suitable for agricultural use. The site has since undergone extensive grading and filling due to construction of the H-POWER facility.

Prior to development of the Expansion project a comprehensive geotechnical engineering analysis will be performed to update the available geotechnical and soils information and to support the design of appropriate foundation and structural support for the Expansion. This information will be documented in the Draft EIS, and CHRRV will develop appropriate construction and mitigation procedures on the basis of the results of these investigations and consultations.

3.3 Groundwater, Surface Water and Hydrology

The groundwater table prior to construction of H-POWER ranged from 2 to 15 feet below the existing ground surface and was tidally influenced. The H-POWER facility currently uses groundwater wells to supply cooling water for use at the facility and discharges that water via injection wells.

Prior to development of the Expansion project an analysis of current groundwater and surface water conditions will be performed to update the available hydrological information and potential impacts to surface drainage or groundwater will be evaluated. This information will be documented in the Draft EIS and CHRRV will develop appropriate construction and mitigation procedures on the basis of the results of these analyses.

3.4 Biological Resources

CHRRV is in the process of consulting with both Federal and State agencies to determine if there are species of concern that occur either on the site or in the vicinity of the site so that appropriate avoidance or mitigation measures can be developed. Consultations will include, but are not limited to, the United States Department of the Interior, Fish and Wildlife Service (USFW), the Hawaii Natural Heritage Program, and the Board of Land and Natural Resources.

CHRRV will conduct a site survey prior to preparation of the Draft EIS and will develop appropriate construction mitigation procedures on the basis of the results of the site survey as well as on the basis of consultations, if needed.

4.0 HUMAN ENVIRONMENT

This chapter discusses the potential environmental consequences of the proposed action with respect to the human environment that require assessment during the Draft EIS. Where additional investigations are anticipated to support preparation of the Draft EIS and to identify potential impacts, these proposed studies are noted.

4.1 Archaeological, Historical, and Cultural Resources

As noted within the 1983 Revised Environmental Impact Statement, the Barber's Point area and the 'Ewa Plain in general have been the subject of relatively intense archeological interest and study. An initial archaeological reconnaissance survey and literature search conducted at that time sought to identify and locate surface archaeological material as well as sinkholes large enough to examine for archaeological and paleontological material. That 1983 study confirmed that the parcel had been significantly disturbed by bulldozing, dumping of trash, and the probable logging of kiawe wood for charcoal manufacturing. At that time, the site appeared to contain limited material of significance and the proposed H-POWER project's impacts on those resources were judged minor.

Currently, the H-POWER site is an industrial site with ancillary facilities such as switchyards and storage zones, parking and manicured lawns that has undergone extensive previous disturbance during construction of these facilities. Though intact archeological, historical or cultural impacts at the site would seem unlikely given the prior disturbance and industrial nature of the property, CHRRV is aware of identified resources proximate to the site. CHRRV will consult with the State Historic Preservation Department (SHPD) and other culturally or historically knowledgeable parties to determine if there are issues or resources of concern. Should such areas/resources be identified CHRRV will develop appropriate avoidance or mitigation measures.

Pacific Consulting Services, Inc. of Honolulu, a local firm specializing in archeological, historical and cultural resource investigations, has been employed to conduct research and develop recommendations on the basis of their findings. This information will be documented in the EIS, and CHRRV will develop appropriate mitigation procedures on the basis of the results of these investigations and consultations.

4.2 Roadways and Traffic

Based on recent facility operating logs, the H-POWER facility receives an average of 610,000 tons of MSW per year. Trucks hauling waste to the facility exit Interstate Highway 1 (H-1), exit 1, at Kalaeloa Boulevard (State Route 95) and access the H-POWER facility from Komohana Street at its intersection with Hanua Street. It is anticipated that with the Expansion of H-POWER an additional 300,000 tons of MSW will be processed annually, resulting in additional waste being brought to H-POWER rather than landfilled. It is recognized that there will be resultant traffic increases, both in incoming waste trucks and outgoing ash and metals recovery trucks, affecting the H-POWER access roads of Kalealoa, Komohana, and the intersection of Komohana and Hanua. However, a resultant decrease in westbound waste trucks to Waimanalo Gulch Sanitary Landfill will also be expected as waste is diverted to H-POWER. Though ash would still be transported from H-POWER westbound on Farrington

Highway (State Route 93), the quantity of ash is significantly smaller than the quantity of waste since waste to ash conversion results in an approximately 90% reduction in material volume. This results in a net decrease in truck traffic from the on-ramp at H-1 westbound (transitions to Farrington Hwy) to the Waimanalo Landfill.

AMEC Earth & Environmental experts in traffic analyses will be employed to conduct research and develop recommendations to minimize potential traffic impacts. This information will be documented in the Draft EIS, and CHRRV will develop appropriate mitigation procedures on the basis of the results of this study.

4.3 Noise

The H-POWER facility is an existing industrial facility located in Campbell Industrial Park and is compatible with neighboring industrial uses, including AES Hawaii, Inc. and HECO. As shown previously on Figure 2-2 and 2-3, Aerial Photographs, the area surrounding the H-POWER site is developed and is industrial in nature. The H-POWER facility is currently a source of noise, as are the industrial neighbors proximate to H-POWER. No significant change in noise levels either at or proximate to the site are anticipated to result from the Expansion. It is anticipated that temporary construction-related increases will occur.

AMEC Earth & Environmental experts in noise analysis and mitigation will be employed to conduct research and develop recommendations to minimize potential noise impacts. This information will be documented in the EIS, and CHRRV will develop appropriate mitigation procedures on the basis of the results of the study.

4.4 Air Quality

The original 1970 Clean Air Act authorized the Environmental Protection Agency (EPA) to establish National Ambient Air Quality Standards (NAAQS) to limit levels of critical health-based pollutants in the air. These pollutants, referred to as criteria air pollutants, include: Sulfur Dioxide (SO_2) Nitrogen Oxides (NOx), Ozone (linked to emissions of Volatile Organic Compounds (VOCs)), Carbon Monoxide (CO), Lead (Pb), and Particulate Matter (PM/PM-10). Geographic areas that meet the NAAQS for a given pollutant are classified as attainment areas and those that do not are classified as non-attainment. The H-POWER facility is situated on the Island of O‘ahu, a region classified as attainment for all of the criteria pollutants under the NAAQS and therefore considered to have air quality that is protective of public health.

H-POWER, as is the case for other industrial facilities, must meet a variety of air pollutant control requirements for current operations, consistent with the Facility’s existing air operating permit. With the Expansion a modification to the facility’s existing air operating permit must be made that addresses the proposed changes in emissions and evaluates the potential impact to existing air quality in the region. CHRRV will not be allowed to operate the expanded facility unless compliance with air quality requirements has been demonstrated to both the satisfaction of the State of Hawaii and the Federal EPA. A comprehensive discussion of applicable emission standards and the results of ambient air quality analyses and mitigation measures will be provided within the EIS.

4.5 Visual Resources

The H-POWER facility is an existing industrial facility located in Campbell Industrial Park and is compatible with neighboring industrial properties, including AES Hawaii, Inc. and HECO. As shown previously on Figures 2-2 and 2-3, Aerial Photographs, the area surrounding the H-POWER site is developed and is industrial in nature. The proposed action includes the construction of a new facility stack for the proposed, new Mass Burn combustion unit. This new stack will be constructed in the front area of the H-POWER facility as noted on Figure 1-1. To address potential concerns regarding the change of appearance that are anticipated, CHRRV prepared a photographic simulation of the modified facility. Figure 4-1 shows the facility post-Expansion. As can be seen from the simulation, the H-POWER Expansion will minimize visibility impacts by the use of compatible construction materials.

4.6 Socioeconomics

The proposed H-POWER Expansion is anticipated to be an economic stimulus in multiple ways:

- H-POWER currently employs 145 island residents and has a $10 million annual payroll. The Expansion is anticipated to result in 300 construction jobs and several additional operational positions.
- CHRRV utilizes local vendors whenever possible to purchase goods, services and equipment. Each year CHRRV spends more than $8.5 million locally on equipment and services from Hawaii vendors, further boosting the local economy. The Expansion is anticipated to result in significant local spending during the construction period.
- The existing H-POWER Facility is a proven and cost effective solution for the management of municipal solid waste (MSW) on the island of O‘ahu. The Expansion will ensure that the growing demand to manage MSW on the O‘ahu is addressed. The construction of the Expansion will not interfere with the operation of the existing Facility.
- H-POWER has been recycling waste into energy since it started operation. It produces about 5 percent of the power used on the island avoiding the need to import expensive oil and providing a significant reduction in greenhouse gas emissions.

THIS PAGE INTENTIONALLY LEFT BLANK.

Figure 4-1. Photo-Simulation (Expansion)

THIS PAGE INTENTIONALLY LEFT BLANK

4.7 Infrastructure

The existing H-POWER facility relies on a variety of associated infrastructure to support safe and environmentally responsible waste-to-energy operations. The infrastructure necessary to support such operations includes:

- Water Supply Facilities (both industrial and sanitary)
- Wastewater Facilities
- Stormwater Drainage Facilities
- Storage/Ancillary Facilities

The potential changes, modifications and/or enhancements to the supporting infrastructure of the H-POWER facility will be identified and potential impacts evaluated. This information will be documented in the EIS, and CHRRV will develop appropriate mitigation procedures where impacts are identified.

4.8 Solid Waste

The Expansion is designed to offer increased efficiency and capacity at the existing H-POWER Facility in Kapolei, Hawaii. The Project is being developed to expand a competitively priced, environmentally sound and proven waste disposal technology on O‘ahu, thereby extending the life of the existing Waimanalo Gulch Sanitary Landfill and potentially minimizing the capacity needs of landfills yet to be developed.

The Expansion will increase its waste disposal capacity, increasing throughput of MSW by approximately 300,000 tons per year and increasing the quantity of recyclable metals recovered annually. Expansion of the facility will further reduce the need for landfilling of municipal solid waste in Honolulu, a potentially significant benefit that will be evaluated in depth within the forthcoming EIS.

4.9 Energy

The H-POWER facility has been operational now for over 18 years and its reliable service to the City continues. It is anticipated that H-POWER, with the Expansion planned at the existing industrial site, would enhance its reliable service to the City and in so doing continue its long history of providing cost effective solid waste solutions as well as a critical source of renewable energy to the City and County of Honolulu and the Island of Oahu. H-POWER generates five (5%) percent of Oahu’s electricity from a renewable resource, helping Oahu achieve its goal of becoming more energy self-sufficient by reducing dependence on imported fuel. It is anticipated that, after the expansion, H-POWER will generate eight (8%) percent of Oahu’s electricity from a renewable resource.

CHRRV will evaluate potential impacts to energy resources due to development of the Expansion and will document this information in the EIS.

4.10 Human Health

To ensure that current operations at the H-POWER facility were not adversely affecting human health, the City initiated a risk assessment project in 2002. Human health risks from the H-POWER stack emissions were evaluated in a Screening Level Multipathway Human Health Risk Assessment using emissions data from stack monitoring reports from 1990-2002. Constituents evaluated included arsenic, beryllium, chromium, lead, mercury, nickel and dioxins and furans. The risk assessment used state-of-the-art methodologies that are consistent with the U.S. Environmental Protection Agency's (EPA's) *Human Health Risk Assessment Protocol for Hazardous Waste Combustion Facilities* (updated 2005). Receptors within 20 km of the facility were evaluated assuming exposures from multiple pathways, such as inhalation, incidental ingestion of soil while working or playing outdoors; ingestion of produce, consumption of food products (beef, dairy, pork, poultry, and eggs), and consumption of fish. Estimated risks were less than U.S. EPA's and Hawaii Department of Health's regulatory level of concern for such facilities, which is a noncarcinogenic hazard index of 1 and an estimated lifetime excess cancer risk of 1 in 1,000,000 to 1 in 10,000. Estimated cancer risks from the H-POWER stack emissions for all people who could be exposed to the emissions were less than 1 in 1,000,000.

When the City first started planning to expand the H-POWER facility, it wanted to ensure that such a project would not compromise human health. Accordingly, the risk assessment was updated to estimate the hypothetical risks that would result should a third boiler be added. The addition of this third boiler would increase the total operating hours. However, should a third boiler be added to the facility, the pollution control technologies associated with new boiler design would result in lower emission rates than those associated with the existing boilers. Despite the increased hours of operation, the estimated risks were still less than a noncarcinogenic hazard index of 1 and an estimated lifetime excess cancer risk of 1 in 1,000,000.

In the Draft EIS, this Screening Level Multipathway Human Health Risk Assessment will be updated to include information about the operating conditions associated with the Proposed Action and the on-going Clean Air Act retrofits for the air pollution control systems for each of the two existing RDF combustors.

5.0 CONFORMANCE TO FEDERAL, STATE, AND CITY PLANNING POLICIES

State and County land use plans, policies, and controls are established to guide development in a manner that enhances the overall environment of Hawaii, and to ensure that long-term social, environmental, and land use needs of the people of Hawaii are met. The use of the site for the Expansion will be designed to be consistent with State and County land use plans and policies which will be evaluated as part of the Environmental Review process and summarized within the Draft EIS. Reviews will include, but not be limited to, the Hawaii State Plan, State Land Use Law, City and County of Honolulu Land Use Designations and Controls and State and County Solid Waste and Energy Plans.

6.0 NECESSARY PERMITS AND APPROVALS

Table A, Potential Permits, identifies the permits and approvals that may be required (federal, state, and county).

Table A. Potential Permits

Approval/Permit	Approving Agency/Authority
Covered Source/PSD Air Permit	U.S. EPA and Department of Health (DOH)
Air Navigation Clearance	Federal Aviation Administration (FAA)
Conditional Use Permit for Construction Activities pursuant to Pubic Health Regulations	DOH
Designated Groundwater Control and Use Permit (for well sources of cooling water)	Dept. of Land & Natural Resources
Water Connection Permit	City Board of Water Supply
Well Permit	City Board of Water Supply
National Pollution Discharge Elimination System (NPDES) permit	DOH
Certificate of Compliance and Solid Waste Management Permit	DOH
Coastal Zone Management Program Consistency Review and Certification	Office of Planning
Grading Permit and Drainage Plan Approval	Dept. of Planning and Permitting
Building Permit	Dept. of Planning and Permitting
Construction Dewatering Permit	Dept. of Environmental Services

7.0 AGENCIES, ORGANIZATIONS, AND INTERESTED PARTIES CONSULTED

CHRRV and the City and County of Honolulu have consulted with and continue to consult with state and federal agencies in formulating plans for addressing the County's solid waste disposal needs. Agency consultations conducted in advance of the publication of the EIS Preparation Notice in *The Environmental Notice* are listed in Table B – Agencies Consulted.

Table B. Agencies Consulted (Pre-Assessment Consultations)*

Contact Name	Organization	Meeting/Contact Dates
FEDERAL AGENCIES		
	U.S. EPA Region 9	June 3, 2008 Carol Bohnenkamp Anita Lee
	U.S. National Park Service Air Resources Division	June 23, 2008 Don Shepherd
STATE AGENCIES		
	Hawaii Department of Health Clean Air Branch	May 1, 2008 Nolan Hirai
	Hawaii Department of Health Solid Waste Branch	May 1, 2008 Lene Ichinotsubo Janice Fujimoto

*Consultations conducted by City/County representatives, H-POWER and/or H-POWER subcontractors.

Attention: S. Samuel Joshi

Dear Mr. Joshi,

Thank you for the opportunity to comment. This is not just an issue of mitigating the effects of the proposed expansion of the H-POWER Energy-from-Waste Facility but also the City's compliance with its mandated responsibilities as indicated in the covenants and MOA attached to the deed in the City's purchase of the 23 acre property.

The property to the proposed expansion is a raised fossil reef characterized by large coralline outcrops and sinkholes which are formed by dissolution of the limestone as fresh water passes through its porous structure. Almost no true soils are found. Small amounts of organic matter accumulate in cracks and crevasses in the coral but most of the vegetation grows out of seemingly solid coral.

The subject property is a 23-acre parcel on the makai side of the existing H-POWER facility. It was purchased by the City in October of 2002 to serve as the site of the City's planned Alternative Technology Park. When purchased it had 2 fenced in enclosures in the middle of the parcel. In October of 2003 the City fenced in the entire parcel and placed a gate fronting Kaomi Loop. These 2 enclosed plant sanctuaries have the last remaining natural plant populations of the Endangered Species the Achyranthes Splendens Rotunda surviving in their natural habitat. The entire 23-acre parcel had been cleared and grubbed by the previous landowner with the exception of the areas within the plant sanctuaries. Attached to the deed of purchase were covenants defined in a Mitigation Plan for the Achyranthes Splendens Rotunda. It is these plant sanctuaries that I raise concerns regarding the proposed expansion.

The common name of this plant is the Ewa Hinahina. Its scientific name is the Achyranthes splendens var.rotundata. It is of the Amarantaceae (Kulu`i family). The Achyranthes is a low coastal shrub growing to an average height of 3 feet. It is an extremely salt and drought tolerant plant. It has silvery leaves and spiky flowers. Its silvery leaves have what seem to be traces of silvery hair that may be used to collect water on humid days. It does extremely well growing in close proximity to open sinkholes. I have

92-1309 Uahanai Street, Kapolei, Hawai'i 96707 808-672-4765 H 808-429-7175 C kiha@hawaii.rr.com

noticed beads of water on its leaves on hot humid days. I have also noticed a distinct rise in the humidity as one approaches healthy plants growing in close proximity to sinkholes. The Achyranthes Splenden Rotunda grows very well from seeds and cuttings. It is on the Federal list of endangered plants and thus requires the proper permits to be grown commercially. Such permits can be acquired from the State of Hawaii's Department of Forestry and Wildlife.

Hawaii Revised Statutes Chapter 195D is the State law regarding the treatment and conservation of the endangered species plants such as the Achyranthes Splenden Rotunda. It was drafted in cooperation with the federal Endangered Species Act of 1973 which provides federal protection for plants listed as endangered on the U. S. Endangered Species Plant List.

The Endangered Species Act, which was first passed in 1973, is a federal statute designated to protect plant and animal resources from adverse effects due to developmental projects, and requires consultation with wildlife authorities before committing resources to certain types of projects. **THE ACT PROVIDES FOR THE DESIGNATION AND PROTECTION OF INVERTEBRATES, WILDLIFE, FISH, AND PLANT SPECIES THAT ARE IN DANGER OF BECOMING EXTINCT THROUGHOUT ALL OR A SIGNIFICANT PORTION OF THEIR RANGE AND CONSERVES THE ECOSYSTEM ON WHICH SUCH SPECIES DEPEND**. The Act also makes it illegal for any individual to kill, collect, remove, harass, import, or export an endangered or threatened species without a permit from the Secretary of the Department of the Interior.

The proposed expansion of the H-POWER Energy-from-Waste Facility will adversely affect the endangered Achyranthes Splendon and requires consultation. The proposed expansion however is needed in the interest of solving Hawaii's waste problems and reducing the amount of trash going to landfills. As important, is the survival of this endangered species. It depends on the integrity of the geology of the region. This plant depends on the water that passes beneath it in the porous coral limestone. Any excavation or discharges into the coral substrata will adversely affect these federally protected plants.

Negligence will also adversely affect the survival of these protected plants. With the purchase of this 23 acre property the City was informed and acknowledged the existence of these plant sanctuaries and their responsibilities in the required care and maintenance of the sanctuaries.

I submitted a report to the City on November 24, 2004 referred to as the "Preliminary Report to the H-POWER Achyranthes Splendon Rotunda Habitat Conservation Plan". Attached to this report is the Mitigation Plan agreed upon by the City in the purchase of this property. The last page of this report are the recommendations to the City in an effort to fulfill their mandate:

RECOMMENDATIONS

It is critically important that the deteriorating condition of both plant sanctuaries including the C. Brewer site be stabilized. Following is a list of recommendations that need to be followed:

1. Hire contractor to remove alien vegetation by cutting. Most kiawe trees need to be removed completely with the exception of a few trees that would provide some shade. These few trees will be marked after consultation with the State of Hawaii Botanist and U. S. Fish and Wildlife. No heavy equipment. Hand removal per Mitigation Plan.

2. Hire contractor to remove debris and coral stones from sinkholes per Mitigation Plan. The open sinkholes is important to the survival of the Achyranthes Splenden Rotunda. It has been determined and documented that those parent plants growing in close proximity to sinkholes are doing better than those adjacent to sinkholes filled in with trash and coral stones. These plants survive the long hot seasons from the condensation and humidity within the moist sinkholes.

3. Hire contractor to cut back alien shrubs 5' back from fences per Mitigation Plan. Clear a 5' path on both sides of the fence line.

4. Mulch or remove all green waste.

5. Shad Kane to be notified and present when contractor is on site to monitor cleanup effort.

The last maintenance, care and thinning of invasive species from the sanctuary was done in 2004 as part of the preliminary report. Since 2004 a substantial number of the federally protected Achyranthes Splendon Rotunda in the H-POWER plant sanctuary has been lost due to neglect.

As part of the Mitigation Plan for the Proposed Expansion of the H-POWER Energy-from-Waste Facility I highly suggest that these recommendations as part of the 2004 report be integrated into your plan and Environmental Impact Statement.

Subject: Draft Environmental Impact Statement (DEIS);
Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility, Kapolei, Hawaii

Dear Mr. Kane,

Thank you for your letter dated August 11, 2008, concerning the Draft Environmental Impact Statement for the Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility located in Kapolei, Hawaii. We appreciate your participation in the environmental impact statement review process and have the following responses to your comments.

Comment 1: *It is critically important that the deteriorating condition of both plant sanctuaries including the C. Brewer site be stabilized. Following is a list of recommendations that need to be followed:*

1. Hire contractor to remove alien vegetation by cutting. Most kiawe trees need to be removed completely with the exception of a few trees that would provide some shade. These few trees will be marked after consultation with the State of Hawaii Botanist and U. S. Fish and Wildlife. No heavy equipment. Hand removal per Mitigation Plan.
2. Hire contractor to remove debris and coral stones from sinkholes per Mitigation Plan. The open sinkholes is important to the survival of the Achyranthes Splenden Rotunda. It has been determined and documented that those parent plants growing in close proximity to sinkholes are doing better than those adjacent to sinkholes filled in with trash and coral stones. These plants survive the long hot seasons from the condensation and humidity within the moist sinkholes.
3. Hire contractor to cut back alien shrubs 5' back from fences per Mitigation Plan_ Clear a 5' path on both sides of the fence line.
4. Mulch or remove all green waste.
5. Shad Kane to be notified and present when contractor is on site to monitor cleanup effort.

Response 1: The City and County of Honolulu have taken steps to address your recommendations and are in the process of procuring services to stabilize the conditions at both plant sanctuaries and at the C. Brewer site. Specifically, the City has prepared a bid package to secure a contractor to perform the above-listed activities. The City is also requesting that you be present to monitor the cleanup effort.

Comment 2: *As part of the Mitigation Plan for the Proposed Expansion of the H-POWER Energy-from-Waste Facility I highly suggest that these recommendations as part of the 2004 report be integrated into your plan and Environmental Impact Statement.*

Response 2: The Final EIS will note your recommendations and the City's plans to protect the plant sanctuaries. Additionally, your comment letter and our subsequent response will be incorporated into the Final EIS.

If you have any questions regarding this letter, please feel free to call me at (973) 882-2771 or Dr. Russell Okoji of AMEC at (808) 391-9906.

Sincerely,

Samuel Joshi

Dear Dr. Okoji:

Subject: Hawaii Coastal Zone Management (CZM) Program Federal Consistency Requirements for the HPOWER Facility Expansion, Kapolei, Oahu, Hawaii

This responds to your letter dated November 5, 2008, requesting a determination whether a CZM federal consistency review is required for the expansion of the HPOWER facility, involving the addition of a third combustor unit. According to the information you provided, the project does not involve a federal agency activity, does not require a federal license or permit that is subject to consistency review by the Hawaii CZM Program, and will not be receiving any federal funds from sources that require CZM review. On this basis, we confirm that a CZM federal consistency review is not required for this project.

This determination is not an endorsement of the project nor does it convey approval with any other regulations administered by any State or County agency. Thank you for your cooperation in complying with Hawaii's CZM Program. If you have any questions, please call John Nakagawa of our CZM Program at 587-2878.

Sincerely,

Abbey Seth Mayer
Director

Subject: Draft Environmental Impact Statement (DEIS);
Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility, Kapolei, Hawaii

Dear Ms. Mayer,

Thank you for your letter dated November 17, 2008, concerning the Draft Environmental Impact Statement for the Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility located in Kapolei, Hawaii. We appreciate your participation in the environmental impact statement review.

We understand the Department of Business, Economic Development & Tourism confirms that the proposed Expansion does not require a Coastal Zone Management federal consistency review. Should you have any questions in the future, please feel free to call me at (973) 882-2771 or Dr. Russell Okoji of AMEC at (808) 391-9906.

Sincerely,

Samuel Joshi

Mr. S. Samuel Joshi, PE, QEP
Manager, Environmental Engineering
Covanta Honolulu Resource Recovery Venture
91-174 Hanua Street
Kapolei, Hawaii 96707

Dear Mr. Joshi:

Subject: Your Letter Dated August 5, 2008 Regarding Environmental Impact Statement for the Proposed Expansion of the H-POWER Energy-from-Waste Facility, TMK: 9-1-26:30

Thank you for the opportunity to comment on the proposed expansion improvements at the H-POWER site.

The existing water system is presently adequate to accommodate the proposed improvements. However, please be advised that this information is based upon current data and, therefore, the Board of Water Supply reserves the right to change any position or information stated herein up until the final approval of your building permit application. The final decision on the availability of water will be confirmed when the building permit application is submitted for approval.

When water is made available, the applicant will be required to pay our Water System Facilities Charges for resource development, transmission and daily storage.

The project is subject to Board of Water Supply Cross-Connection Control and Backflow Prevention requirements prior to the issuance of the building permit.

The on-site fire protection requirement should be coordinated with the Fire Prevention Bureau of the Honolulu Fire Department.

If you have any questions, please contact Robert Chun at 748-5443.

Very truly yours,

K. Shida

Subject: Draft Environmental Impact Statement (DEIS);
Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility, Kapolei, Hawaii

Dear Mr. Shida,

Thank you for your letters dated August 12, 2008 and February 5, 2009, concerning the Draft Environmental Impact Statement for the Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility located in Kapolei, Hawaii. We appreciate your participation in the environmental impact statement review process and have the following responses to your comments.

Comment 1: *The existing water system is presently adequate to accommodate the proposed improvements. However, please be advised that this information is based upon current data and, therefore, the Board of Water Supply reserves the right to change any position or information stated herein up until the final approval of your building permit application. The final decision on the availability of water will be confirmed when the building permit application is submitted for approval.*

Response 1: Comment noted.

Comment 2: *When water is made available, the applicant will be required to pay our Water System Facilities Charges for resource development, transmission and daily storage.*

Response 2: Comment noted.

Comment 3: *The project is subject to Board of Water Supply Cross-Connection Control and Backflow Prevention requirements prior to the issuance of the building permit.*

Response 3: Comment noted. Building plans will comply with Board of Water Supply Cross-Connection Control and Backflow Prevention requirements.

Comment 4: *The on-site fire protection requirement should be coordinated with the Fire Prevention Bureau of the Honolulu Fire Department.*

Response 4: The Honolulu Fire Department has been consulted as part of the environmental review process. Comments received from the Honolulu Fire Department will be addressed.

If you have any questions regarding this letter, please feel free to call me at (973) 882-2771 or Dr. Russell Okoji of AMEC at (808) 391-9906.

Sincerely,

Samuel Joshi

Kapolei, Hawaii 96707
Attn: Mr. Stephen Langham

Dear Mr. Langham:

SUBJECT: Draft Environmental Impact Statement
Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility, Kapolei, Hawaii

FILE NO.: NA
TMK NO.: 9-1-026:030

Thank you for the opportunity to review the subject document. The Commission on Water Resource Management (CWRM) is the agency responsible for administering the State Water Code (Code). Under the Code, all waters of the State are held in trust for the benefit of the citizens of the State, therefore, all water use is subject to legally protected water rights. CWRM strongly promotes the efficient use of Hawaii's water resources through conservation measures and appropriate resource management. For more information, please refer to the State Water Code, Chapter 174C, Hawaii Revised Statutes, and Hawaii Administrative Rules, Chapters 13-167 to 13-171. These documents are available via the Internet at *http://www.hawaii.gov/dlnr/cwrm*.

Our comments related to water resources are checked off below.

☐ 1. We recommend coordination with the county to incorporate this project into the county's Water Use and Development Plan. Please contact the respective Planning Department and/or Department of Water Supply for further information.

☐ 2. We recommend coordination with the Engineering Division of the State Department of Land and Natural Resources to incorporate this project into the State Water Projects Plan.

☐ 3. We recommend coordination with the Hawaii Department of Agriculture (HDOA) to incorporate the reclassification of agricultural zoned land and the redistribution of agricultural resources into the State's Agricultural Water Use and Development Plan (AWUDP). Please contact the HDOA for more information.

☐ 4. We recommend that water efficient fixtures be installed and water efficient practices implemented throughout the development to reduce the increased demand on the area's freshwater resources. Reducing the water usage of a home or building may earn credit towards Leadership in Energy and Environmental Design (LEED) certification. More information on LEED certification is available at http://www.usgbc.org/leed. A listing of fixtures certified by the EPA as having high water efficiency can be found at http://www.epa.gov/watersense/pp/index.htm.

☒ 5. We recommend the use of best management practices (BMP) for stormwater management to minimize the impact of the project to the existing area's hydrology while maintaining on-site infiltration and preventing polluted runoff from storm events. Stormwater management BMPs may earn credit toward LEED certification. More information on stormwater BMPs can be found at http://hawaii.gov/dbedt/czm/initiative/lid.php.

☒ 6. We recommend the use of alternative water sources, wherever practicable.

☒ 7. There may be the potential for ground or surface water degradation/contamination and recommend that approvals for this project be conditioned upon a review by the State Department of Health and the developer's acceptance of any resulting requirements related to water quality.

Permits required by CWRM:
Additional information and forms are available at *www.hawaii.gov/dlnr/cwrm/forms.htm*.

☐ 8. The proposed water supply source for the project is located in a designated water management area, and a Water Use Permit is required prior to use of water.

☐ 9. A Well Construction Permit(s) is (are) required before the commencement of any well construction work.

☐ 10. A Pump Installation Permit(s) is (are) required before ground water is developed as a source of supply for the project.

☐ 11. There is (are) well(s) located on or adjacent to this project. If wells are not planned to be used and will be affected by any new construction, they must be properly abandoned and sealed. A permit for well abandonment must be obtained.

☐ 12. Ground-water withdrawals from this project may affect streamflows, which may require an instream flow standard amendment.

☐ 13. A Stream Channel Alteration Permit(s) is (are) required before any alteration can be made to the bed and/or banks of a stream channel.

☐ 14. A Stream Diversion Works Permit(s) is (are) required before any stream diversion works is constructed or altered.

☐ 15. A Petition to Amend the Interim Instream Flow Standard is required for any new or expanded diversion(s) of surface water.

☐ 16. The planned source of water for this project has not been identified in this report. Therefore, we cannot determine what permits or petitions are required from our office, or whether there are potential impacts to water resources.

☒ OTHER:
We would like to update the information on pages 4-46 and 4-53 of the report regarding the proposed modification of the water use permit for the two onsite withdrawal wells (Well Nos. 1806-09 & 10). On December 17, 2008, CWRM approved the water use permit modification application to allow up to 3.34 mgd (based on a twelve-month moving average) to be withdrawn from the two wells for industrial use at the H-Power facility. The modified permit still contains the provision that the CWRM may revoke the permit if an alternative source of water becomes available.

There appears to be a typographical error in the first sentence of Section 7-2-4 (page 7-4) in the citation of the State Water Code – should it be "Chapter HRS 174C"?

If there are any questions, please contact Lenore Ohye at 587-0216.

Sincerely,

Ken C. Kawahara

Subject: Draft Environmental Impact Statement (DEIS);
Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility, Kapolei, Hawaii

Dear Mr. Kawahara:

Thank you for your letter dated February 19, 2009, concerning the Draft Environmental Impact Statement for the Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility located in Kapolei, Hawaii. We appreciate your participation in the environmental impact statement review process and have the following responses to your comments, which are numbered in accordance with your comment check list.

Comment 5: *We recommend the use of best management practices (BMP) for stormwater management to minimize the impact of the project to the existing area's hydrology while maintaining on-site infiltration and preventing polluted runoff from storm events.*

Response 5: BMPs will be the main resource to ensure the prevention of storm water pollutants entering storm water systems and state waters. Covanta Honolulu Resource Recovery Venture is also in the process of complying with all NPDES general permit coverages, which include the facility's Storm Water Pollution Control Plan and Storm Water Monitoring Plan and a site-specific Construction Storm Water Pollution Control Plan. These plans outline all BMPs and maintenance/monitoring programs that will be put into place to ensure effectiveness and achievement of expected performance standards.

Comment 6: *We recommend the use of alternative water sources, wherever practical.*

Response 6: Alternative water sources were discussed during application of the water use permit through DLNR. If alternative water resources become available, CHRRV will work with the CWRM to re-evaluate the potential for alternative water sources.

Comment 7: *There may be the potential for ground or surface water degradation/contamination and recommend that approvals for this project be conditioned upon a review by the State Department of Health and the developer's acceptance of any resulting requirements related to water quality.*

Response 7: The State Department of Health will be involved with this project throughout the review process. Permits from the Department of Health's Clean Air Branch, Clean Water Branch, Safe Drinking Water Branch, and Solid and Hazardous Waste Branch will all be completed prior to any construction activities. The Department of Heath was also provided with the opportunity to comment on all sections of the DEIS.

Comment 17: *We would like to update the information on pages 4-46 and 4-53 of the report regarding the proposed modification of the water use permit for the two onsite withdrawal wells (Well Nos. 1806-09 & 10). On December 17, 2008, CWRM approved the water use permit modification application to allow up to 3.34 mgd (based on a twelve-month moving average) to be withdrawn from the two wells for industrial use at the H-Power facility. The modified permit still contains the provision that the CWRM may revoke the permit if an alternative source of water becomes available.*

There appears to be a typographical error in the first sentence of Section 7-2-4 (page 7-4) in the citation of the State Water Code - should it be "Chapter HRS 174C"?

Response 17: We will update and correct typographical errors as noted in this comment.

If you have any questions regarding this letter, please feel free to call me at (973) 882-2771 or Dr. Russell Okoji of AMEC at (808) 391-9906.

Dear Mr. Yoshioka:

Thank you for your letter dated February 23, 2009, concerning the Draft Environmental Impact Statement for the Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility located in Kapolei, Hawaii. We appreciate your participation in the environmental impact statement review process and have the following responses to your comments.

Comment 1: *In the Final EIS, the ownership of the roadways should be identified.*

Response 1: In the Final EIS, additional information will be added regarding ownership of the roads on Figure 5.2-1 – H-POWER Site and Surrounding Roadway System.

Comment 2: *Figure 5.2-1 should include the latest roadways in the area.*

Response 2: Figure 5.2-1 – H-POWER Site and Surrounding Roadway System includes all major roadways included in the traffic study. It will be updated in the Final EIS to include the latest roadways in the area.

If you have any questions regarding this letter, please feel free to call me at (973) 882-2771 or Dr. Russell Okoji of AMEC at (808) 391-9906.

(X) Please take note that the project site, according to the Flood Insurance Rate Map (FIRM), is located in Flood Zone D. The Flood Insurance Program does not have any regulations for developments within Flood Zone D.

( ) Please note that the correct Flood Zone Designation for the project site according to the Flood Insurance Rate Map (FIRM) is ___.

( ) Please note that the project must comply with the rules and regulations of the National Flood Insurance Program (NFIP) presented in Title 44 of the Code of Federal Regulations (44CFR), whenever development within a Special Flood Hazard Area is undertaken. If there are any questions, please contact the State NFIP Coordinator, Ms. Carol Tyau-Beam, of the Department of Land and Natural Resources, Engineering Division at (808) 587-0267.

Please be advised that 44CFR indicates the minimum standards set forth by the NFIP. Your Community's local flood ordinance may prove to be more restrictive and thus take precedence over the minimum NFIP standards. If there are questions regarding the local flood ordinances, please contact the applicable County NFIP Coordinators below:

- ( ) Mr. Robert Sumitomo at (808) 768-8097 or Mr. Mario Siu Li at (808) 768-8098 of the City and County of Honolulu, Department of Planning and Permitting.
- ( ) Mr. Kelly Gomes at (808) 961-8327 (Hilo) or Mr. Kiran Emler at (808) 327-3530 (Kona) of the County of Hawaii, Department of Public Works.
- ( ) Mr. Francis Cerizo at (808) 270-7771 of the County of Maui, Department of Planning.
- ( ) Mr. Mario Antonio at (808) 241-6620 of the County of Kauai, Department of Public Works.

( ) The applicant should include water demands and infrastructure required to meet project needs. Please note that projects within State lands requiring water service from the Honolulu Board of Water Supply system will be required to pay a resource development charge, in addition to Water Facilities Charges for transmission and daily storage.

( ) The applicant should provide the water demands and calculations to the Engineering Division so it can be included in the State Water Projects Plan Update.

( ) Additional Comments: ______________________________

( ) Other: ______________________________

Should you have any questions, please call Ms. Suzie Agraan of the Planning Branch at 587-0258.

Subject: Draft Environmental Impact Statement (DEIS);
Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility, Kapolei, Hawaii

Dear Mr. Atta:

Thank you for your letter dated February 26, 2009, concerning the Draft Environmental Impact Statement for the Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility located in Kapolei, Hawaii. We appreciate your participation in the environmental impact statement review process and have the following responses to comments received from the Engineering Division of the Department of Land and Natural Resources.

Comment 1: *Please take note that the project site, according to the Flood Insurance Rate Map (FIRM), is located in Flood Zone D. The Flood Insurance Program does not have any regulations for developments within Flood Zone D.*

Response 1: This will be clarified in the Final EIS. Section 4.3.3.2 of the EIS will be updated to include information that the project site is located in Flood Zone D.

If you have any questions regarding this letter, please feel free to call me at (973) 882-2771 or Dr. Russell Okoji of AMEC at (808) 391-9906.

Sincerely,

Samuel Joshi

Date of Request: 1/30/09 Date Received: 1/30/09

Summary of Project

Title: **Draft Environmental Impact Statement for H-Power Expansion Project**
Project By: **Department of Environmental Services**
City and County of Honolulu
Location: **Ewa, Oahu TMK: (1) 9-1-26:30, 33, 34**

Brief Description:

The City and County of Honolulu (City) and Covanta Honolulu Resource Recovery Venture (CHRRV) are proposing an Expansion of the existing Honolulu Program of Waste Energy Recovery facility (H-POWER or the Facility) located at James Campbell Industrial Park (JCIP) in Kapolei. H-POWER has been in operation for over 18 years, providing a reliable, cost effective solid waste solution and source of renewable electric power to the City and County of Honolulu. Over that time period, H-POWER has converted over 10 million tons of refuse into over 5,000 million kilowatt-hours of electric power and saved the importation of over 10 million barrels of oil.

The proposed Expansion consists of the addition to the Facility of a third combustor unit. The new unit will be a 900 ton per day (TPD) Mass Burn waterwall municipal waste combustor (MWC), its associated air pollution control equipment, and all the equipment required to tie the addition into the existing H-POWER facility. It includes modifications and additions to the existing waste feed, ash handling and other utility systems necessary for the new equipment, and a new turbine generator which will provide an additional source of renewable energy to the City and County of Honolulu. The Expansion does not include any changes to the two existing Refuse Derived Fuel (RDF) combustors.

The Expansion is needed to address the solid waste disposal needs of the island of Oahu by increasing the disposal capacity from 610,000 tons to 910,000 tons of Municipal Solid Waste (MSW) per year. As a result the additional waste disposal capacity, the City will benefit from increased energy production and recovered metals recycling and reductions in the land filling of municipal solid waste in Honolulu. While the Expansion and increased recycling will not eliminate the need for landfill disposal of MSW, it will extend the life of the Waimanalo Gulch Sanitary Landfill and reduce the capacity needs of landfill yet to be developed.

The H-POWER Expansion is proposed to occur on the existing H-POWER parcel TMK: 9-1-026:030 which consists of 24,635 acres of industrially zoned and developed property situated within the JCIP in Kapolei along the southwest coast on Oahu. There are no perennial or intermittent streams, tidal channels, or springs located on or within close proximity of the H-POWER Expansion site.

Comments:

Based on the DEIS, populations of the native Hawaiian red shrimp (ʻōpaeʻula), *Halocaridinia rubra,* have been observed in sinkholes in the plant preservation enclosures of parcels 33 and 34 of this proposed project. The sinkholes along this coastline are known to support populations of this Hawaiian red shrimp. The Division therefore, strongly recommends that measures be taken to minimize impact to the aquatic habitat of this species, especially if the underground injection wells for the non-contact coolant water are in close proximity to this habitat.

Other than that, the proposed H-POWER Expansion is not expected to have any significant impact on the aquatic resource values in this area. However, mitigative measures should be implemented during the construction of the facility to minimize the potential for erosion, siltation and pollution of the aquatic environment along the coast.

Subject: Draft Environmental Impact Statement (DEIS);
Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility, Kapolei, Hawaii

Dear Mr. Atta:

Thank you for your letter dated March 3, 2009, concerning the Draft Environmental Impact Statement for the Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility located in Kapolei, Hawaii. We appreciate your participation in the environmental impact statement review process and have the following responses to comments received from the Aquatic Resources Division of the Department of Land and Natural Resources.

Comment 1: *Based on the DEIS, populations of the native Hawaiian red shrimp (‘ōpae‘ula), Halocaridinia rubra, have been observed in sinkholes in the plant preservation enclosures of parcels 33 and 34 of this proposed project. The sinkholes along this coastline are known to support populations of this Hawaiian red shrimp. The Division therefore, strongly recommends that measures be taken to minimize impact to the aquatic habitat of this species, especially if the underground injection wells for the non-contact coolant water are in close proximity to this habitat.*

Response 1: The native Hawaiian red shrimp noted in the DEIS, if present, would be in the sinkholes within the plant enclosures on the construction laydown parcels. These areas will not be affected by the injection wells located on the facility. The injection wells inject water drawn from the same aquifer system and have been in operation for almost 20 years. The plant preservation enclosures on the laydown parcels will also be adequately protected from all aboveground operations by a fence and an additional buffer zone to be put in place during all construction activities.

If you have any questions regarding this letter, please feel free to call me at (973) 882-2771 or Dr. Russell Okoji of AMEC at (808) 391-9906.

Sincerely,

Samuel Joshi

Dear Mr. Joshi:

Subject: Draft Environmental Impact Statement
Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility
Kapolei, Hawaii

In response to your letter dated January 27, 2009, regarding the above-mentioned subject, the Honolulu Fire Department (HFD) reviewed the material provided and requires that the following be complied with:

1. Provide a fire apparatus access road for every facility, building, or portion of a building hereafter constructed or moved into or within the jurisdiction when any portion of the facility or any portion of an exterior wall of the first story of the building is located more than 150 feet (45 720 mm) from a fire apparatus access road as measured by an approved route around the exterior of the building or facility. (1997 Uniform Fire Code, Section 902.2.1.)

2. Provide a water supply, approved by the county, capable of supplying the required fire flow for fire protection to all premises upon which facilities or buildings, or portions thereof, are hereafter constructed or moved into or within the county.

   On-site fire hydrants and mains capable of supplying the required fire flow shall be provided when any portion of the facility or building is in excess of 150 feet (45 720 mm) from a water supply on a fire apparatus access road, as measured by an approved route around the exterior of the facility or building. (1997 Uniform Fire Code, Section 903.2, as amended.)

3. Submit civil drawings to the HFD for review and approval.

Should you have any questions, please call Battalion Chief Socrates Bratakos of our Fire Prevention Bureau at 808-723-7151.

Sincerely,

KENNETH G. SILVA
Fire Chief

Subject: Draft Environmental Impact Statement (DEIS);
Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility, Kapolei, Hawaii

Dear Mr. Silva:

Thank you for your letter dated March 3, 2009, concerning the Draft Environmental Impact Statement for the Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility located in Kapolei, Hawaii. We appreciate your participation in the environmental impact statement review process and have the following responses to your comments.

Comment 1: *Provide a fire apparatus access road for every facility, building, or portion of a building hereafter constructed or moved into or within the jurisdiction when any portion of the facility or any portion of an exterior wall of the first story of the building is located more than 150 feet (45720 mm) from a fire apparatus access road as measured by an approved route around the exterior of the building or facility. (1997 Uniform Fire Code, Section 902.2.1.)*

Response 1: Final facility designs will comply with applicable sections of the Uniform Fire Code. We will submit plans and drawings as part of the Building Permit application for approval by the Department of Planning and Permitting.

Comment 2: *Provide a water supply, approved by the county, capable of supplying the required fire flow for fire protection to all premises upon which facilities or buildings, or portions thereof, are hereafter constructed or moved into or within the county.*

On-site fire hydrants and mains capable of supplying the required fire flow shall be provided when any portion of the facility or building is in excess of 150 feet (45 720 mm) from a water supply on a fire apparatus access road, as measured by an approved route around the exterior of the facility or building. (1997 Uniform Fire Code, Section 903.2, as amended.)

Response 2: Final facility designs will comply with applicable sections of the Uniform Fire Code. We will submit plans and drawings as part of the Building Permit application for approval by the Department of Planning and Permitting.

Comment 3: *Submit civil drawings to the HFD for review and approval.*

Response 3: As part of the application for a Building Permit submitted to the Department of Planning and Permitting, a copy of the applicable civil drawings will be sent to the HFD for review and approval.

If you have any questions regarding this letter, please feel free to call me at (973) 882-2771 or Dr. Russell Okoji of AMEC at (808) 391-9906.

Subject: Draft Environmental Impact Statement (DEIS);
Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility, Kapolei, Hawaii

Dear Ms. Yonaha:

Thank you for your letter dated March 3, 2009, concerning the Draft Environmental Impact Statement (DEIS) for the Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility located in Kapolei, Hawaii. We appreciate your participation in the environmental impact statement review process and have the following responses to your comments.

Comment 1: *It is not apparent that you have adequately accessed the proposed action's impact on the City's recently rolled out recycling initiative. More study is warranted.*

Response 1: As described in the DEIS, the facility will be a crucial part of the City's recycling plan. The Expansion will be a City-owned facility, and it is designed to help meet the City and State's recycling goals. Metals recycling will be increased using the latest technology for the separation of ferrous and non-ferrous material. Energy-from-waste recycling will be increased from 319,000 mWh (average over the last 5 years) to 520,000 mWh, an annual increase of 201,000 mWh. This additional electric power generation will decrease the need to purchase approximately 550,000 barrels of residual fuel oil each year. The Expansion will help Hawaii meet the State's goals for increased production of renewable energy.

In addition, as you are aware, the City has an ongoing curbside recycling initiative. The City prepared a Materials Separation Plan (MSP) in accordance with the U.S. Clean Air Act (40 CFR §60.57(b)). A MSP is required by the U.S. Environmental Protection Agency and the Hawaii Department of Health to ensure that new Energy-from-Waste facilities are sized appropriately for the amount of municipal solid waste generated in a service area after all appropriate source reduction and recycling measures have been implemented. The MSP explicitly took into account the rate of curbside and other recycling reported by the City in 2008 and also took into account the City's plans to increase its recycling collection by 24,600 tons per year of recyclables and 28,000 tons per year of green waste through island-wide expansion of the pilot program by May 2010.

A recent report (April 2009) in the City's *Wasteline* on-line magazine, states that the City's residential curbside recycling program continues to be expanded as assumed in the July 2008 MSP. Specifically, the City recently stated that in May 2009 an additional 40,000 homes in the following communities will be included in the program: Pearl City, Aiea, Halawa Heights, Waipio Gentry, Wahiawa, Whitmore, Waipio Estates, Launani Valley, Kaneohe, and Waimanalo. With this expansion, a total of 100,000 homes will be included in the program. The H-POWER expansion is designed to ensure that the combustible waste remaining after the City separates and recycles residential municipal solid waste as currently planned can be recycled for *energy recovery*. Waste-to-Energy recycling keeps combustible refuse out of the City's landfills and provides numerous economic and environmental benefits to the Island of O'ahu by producing renewable electricity and avoiding or offsetting the use of imported fossil fuels.

Before discussing this issue further, I would like to assure you that the proposal to construct a third unit at the H-POWER facility is not in any way dependent for fuel on the use of waste paper or plastic that is currently being recycled through the residential curbside recycling program or is planned to be so recycled in the future as the program is expanded to additional communities. In fact, the opposite is true. As noted in the DEIS and in the MSP, the project explicitly assumes that this residential curbside recycling program will continue and expand in the future. Even as the recycling program expands, the City anticipates a growth in non-recyclable refuse that will either have to be landfilled or recycled into energy at the H-POWER plant. Everyone wants to keep landfilling on O'ahu to an absolute minimum, so the expansion of the H-POWER facility is being proposed to accommodate this *excess* refuse that cannot be recycled into new products and cannot be recycled into energy at H-POWER with the existing two units, because of capacity limitations. Accordingly, the City's long term management of waste is dependent on *both* the recycling of materials and the recycling of waste to energy.

Even though the proposed expansion of H-POWER will not interfere in any way with the City's paper and plastic recycling efforts, your comment states that "more study is warranted." In answer to this comment, the City is discussing performing a study that estimates the effects of materials recycling on the people of O'ahu both economically and environmentally. As economic conditions change around the world, sound decisions about recycling options require sound technical analyses to support them.

For example, the current recession has reduced demand for recycled materials. The Star Bulletin (April 24, 2009) stated: "While it is becoming easier than ever for local residents to recycle, this is a rough time for the recycling companies, which have to find buyers for what is collected. The slump in the global economy means that demand has plummeted for used paper, cardboard, plastic, glass and aluminum." They further quoted Greg Apa, senior vice president of Honolulu Recovery Systems: "'You're at anywhere from 10 to 40 percent of what the price was just six months ago, depending on the commodity,' said Apa, whose company handles the community recycling bins and many commercial accounts."

It is important to note that the economic and environmental impacts of materials recycling, such as the City's residential curbside recycling program for paper and plastic refuse, is dependent on a community's location, even in good economic times.

On the U.S. mainland, many communities are located at close proximity to efficient and environmentally-regulated facilities that process discarded paper and discarded plastic into new products. A complete Lifecycle Analysis (LCA) of recycling in such a location may show net economic and environmental benefits when materials are recycled.

A complete LCS for the Island of O'ahu would consider O'ahu's unique circumstances. On the Island of O'ahu, there are no pulp mills that convert waste paper into new paper products, and there are no manufacturing plants that convert waste plastic into patio chairs, artificial lumber, carpets, or high performance textiles. When one makes a decision about the best course of action for the environment, one needs to take a hard look at whether a practice that makes sense in one location makes sense in another location. Waste paper and plastic collected by the recycling program on O'ahu is shipped a long distance to China for recycling into new paper products and new plastic products in facilities that operate with different environmental emissions profiles than do U.S. facilities. Both increased emissions at foreign facilities and marine transportation emissions need to be considered when evaluating the net benefit to the environment and the people of O'ahu.

In-depth studies, using LCA techniques, have not yet been done for the Island of O'ahu. The City's residential recycling program was established based on assumptions that such a recycling program would benefit the people of O'ahu both economically and environmentally. However, these assumptions were based on LCA studies performed for communities that are very different than the Island of O'ahu. The fact that O'ahu is an island that is thousands of miles away from any recycling facilities surely makes it a special case that is worthy of its own LCA study.

The City has begun the process of defining the scope of an O'ahu-specific LCA analysis to determine if the separate curbside collection, management and shipment to China for materials recycling of one or another type of waste in the O'ahu waste stream is beneficial to the people of O'ahu from a total lifecycle perspective. Clearly, the answer is not known without designing and executing the study. Also, it would not be unexpected that the results might vary for individual materials in the waste stream. For instance, it might be beneficial to the people of O'ahu to collect and ship one type of plastic waste to China and it might be beneficial for another type of plastic to keep it in the mixed waste stream and recycle the energy content at the H-POWER plant.

While the City is considering the necessity and value of performing a LCA study, any such study is not needed for the environmental review process for the H-POWER expansion. As explained in the DEIS, materials recycling is not a viable "alternative" to the proposed expansion of the H-POWER facility. The DEIS and MSP for the proposed expansion already assume that the City's residential curbside recycling program is expanded as planned. In addition, the alternatives analysis in the DEIS considered even a greater degree of recycling and concluded that even under the most aggressive of recycling programs, there will be excess MSW that will require either landfilling or energy recycling at H-POWER. Thus, an LCA study can inform the City's decision making for the future of its recycling program, but it is not necessary for the DEIS for the proposed expansion of H-POWER because the expansion will not have an impact on the City's recycling program, the expansion will be needed regardless of the level of recycling, and the recycling alternatives have been fully addressed.

Thank you again for bringing to our attention the need for more study on the City's recycling initiative. If you have any questions regarding this letter, please feel free to call me at (973) 882-2771 or Dr. Russell Okoji of AMEC at (808) 391-9906.

Sincerely,

Samuel Joshi

Dear Mr. Langham:

Subject: Draft Environmental Impact Statement (DEIS)
Proposed 3rd Boiler Expansion of H-Power
Energy-from-Waste Facility, Kapolei, Hawaii

Thank you for the opportunity to review and comment on the DEIS dated January 2009 for the proposed expansion of the H-Power facility at Kapolei.

The proposed additional 3rd boiler and other improvements to the facility will be located within the facility property outside City roadways rights-of-ways and will have negligible impact on our Division of Road Maintenance (DRM) facilities and operations.

Should you have any questions, please call Charles Pignataro of the DRM, at 768-3697.

Sincerely,

Jeoffrey Cudiamat

Tax Map Key 9-1-26: 30

This is in response to your request, received January 30, 2009, for comments concerning the Draft Environmental Impact Statement (DEIS) for the subject project.

The project site, as well as the adjoining parcels to be used for construction lay-down (Tax Map Key 9-1-26: 33 and 34), are not located in the Special Management Area (SMA) or the shoreline setback, and will not require an SMA permit or shoreline setback variance.

Please note that the project does not require a modification to Conditional Use Permit (CUP) No. 89/CUP1-17, as stated in Section 3.0, "Required Approvals and Permits," of the DEIS. Since the H-Power facility is now owned and operated by the City, it is thus considered to be a "public use and structure" for purposes of the Land Use Ordinance (LUO); and, as such is a permitted use in all zoning districts. When the CUP had originally been issued, the use was then classified as a "utility installation, Type B," since at that time it had been privately owned and operated.

The project will need to obtain an approved zoning waiver, pursuant to LUO Section 21-2.130(a)(1), for any portion of the project which will exceed the maximum 60-foot zoning height for the site.

Thank you for the opportunity to comment on the DEIS. Please contact Blake La Benz of our staff at 768-8011 for any questions.

Very truly yours,

David K. Tanoue, Director
Department of Planning and Permitting

Subject: Draft Environmental Impact Statement (DEIS);
Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility, Kapolei, Hawaii

Dear Mr. Tanoue:

Thank you for your letter dated March 4, 2009, concerning the Draft Environmental Impact Statement for the Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility located in Kapolei, Hawaii. We appreciate your participation in the environmental impact statement review process and have the following responses to your comments.

Comment 1: *The project site, as well as the adjoining parcels to be used for construction lay-down (Tax Map Key 9-1-26: 33 and 34), are not located in the Special Management Area (SMA) or the shoreline setback, and will not require an SMA permit or shoreline setback variance.*

Response 1: Comment noted.

Comment 2: *The project does not require a modification to Conditional Use Permit (CUP) No. 89/CUP1-17, as stated in Section 3.0, "Required Approvals and Permits," of the DEIS. Since the H-Power facility is now owned and operated by the City, it is thus considered to be a "public use and structure" for purposes of the Land Use Ordinance (LUO); and, as such is a permitted use in all zoning districts. When the CUP had originally been issued, the use was then classified as a "utility installation, Type B," since at that time it had been privately owned and operated.*

Response 2: Comment noted

Comment 3: *The project will need to obtain an approved zoning waiver, pursuant to LUO Section 212.130(a) (1), for any portion of the project which will exceed the maximum 60-foot zoning height for the site.*

Response 3: We plan on obtaining a zoning waiver for any portion of the project which will exceed the 60-foot zoning height restriction.

If you have any questions regarding this letter, please feel free to call me at (973) 882-2771 or Dr. Russell Okoji of AMEC at (808) 391-9906.

Sincerely,

Samuel Joshi

Refuse Division, H-POWER
91-174 Hanua Street
Kapolei, Hawaii 96707

Dear Mr. Langham:

Subject: Draft Environmental Impact Statement (DEIS) Proposed 3rd Boiler Expansion of H-POWER Energy-From-Waste Facility, Kapolei, Hawaii, Tax Map Key: 9-1-026:030, 033, 034

We have reviewed the subject DEIS and offer the following comments.

1. The heading for Section 5.6.2.2 (Page 5-95) should be corrected to read "City and County of Honolulu Plans and Policies."

2. The FEIS should include a section after Section 7.3.2 that discusses the project's conformance to the City's Public Infrastructure Map (PIM) in accordance with Chapter 4, Article 8, Revised Ordinances of Honolulu (ROH). In February 2002, the Department of Environmental Services (ENV) submitted an application to the Department of Planning and Permitting (DPP) to add a "Solid Waste Facility" (SW) symbol to the Ewa PIM for the proposed project. The City Council adopted Resolution 02-164, CD1, that added a "SW" symbol to the Ewa PIM that includes the third boiler. The proposed project is shown on the Ewa PIM as PIM # 036, and is referred to as "H-POWER Expansion" according to DPP records. Thus, the proposed project conforms to the Ewa PIM. A copy of Resolution 02-164, CD1, is attached for your information.

3. In addition to Figure 2.2-2, the FEIS should include another illustration that clearly identifies the proposed third boiler and other improvements in relation to existing structures.

4. Section 4.3.3.2 of the DEA states that the H-POWER site and the construction laydown areas are outside identified floodplain areas as shown in Figure 4.3-4. However, the H-POWER site and the construction laydown areas are located in

Flood Zone D, where flood hazards are undetermined, but possible. We recommend that Section 4.3.3.2 be revised to include this information.

5. Our records indicate that the H-POWER site, TMK: 9-1-026:030 is subject to impact fees associated with the Ewa Highway Master Plan via Ordinance 02-52. We recommend that the FEIS disclose how the project will comply with this ordinance regarding transportation improvements for the Ewa region.

Thank you for the opportunity to comment on this matter. Should you have any questions, please contact Tim Hata of our staff at 768-8043.

Very truly yours,

fr David K. Tanoue, Director
Department of Planning and Permitting

CITY COUNCIL
CITY AND COUNTY OF HONOLULU
HONOLULU, HAWAII

No. 02-164, CD1

RESOLUTION

ADOPTING A REVISION TO THE PUBLIC INFRASTRUCTURE MAP FOR THE EWA DEVELOPMENT PLAN AREA, CAMPBELL INDUSTRIAL PARK, OAHU, HAWAII.

WHEREAS, the Waimanalo Gulch Sanitary Landfill receives approximately 1,400 tons per day of municipal solid waste, ash from the Honolulu Program on Waste Energy Recovery (H-POWER), and other refuse; and

WHEREAS, at this current rate, the Waimanalo Gulch Sanitary Landfill will run out of its permitted capacity by August 2002 unless it is expanded or replaced; and

WHEREAS, the Department of Environmental Services' objective is to reduce the amount of municipal solid waste, ash, and other refuse going to the Waimanalo Gulch Sanitary Landfill by 75 percent; and

WHEREAS, the Department of Environmental Services is planning four major projects to achieve this objective; and

WHEREAS, expanding H-POWER is the quickest project to plan, design and construct; and

WHEREAS, the Department of Environmental Services has requested $6 million to plan and design the expansion of H-POWER; and

WHEREAS, the Ewa Development Plan has been adopted under Ordinance 97-49; and

WHEREAS, the Public Infrastructure Map for the Ewa Development Plan area has been adopted under Resolution 97-325, CD1; and

WHEREAS, a solid waste symbol to depict the proposed expansion of H-POWER as shown on Exhibit A (Location Map) is consistent with the General Plan and the Ewa Development Plan; and therefore;

PH, PLANNING

RESOLUTION

BE IT RESOLVED by the Council of the City and County of Honolulu that the Public Infrastructure Map for the Ewa Development Plan be revised to include a solid waste facility symbol for this project; and

BE IT FURTHER RESOLVED, by the Council of the City and County of Honolulu that the solid waste facility symbol shall be deleted from the Public Infrastructure Map by administrative procedure once completion of the facility has been certified in writing by the applicant/agency to the Department of Planning and Permitting and the City Council.

RESOLUTION

BE IT FINALLY RESOLVED that the City Clerk is directed to transmit a certified copy of this resolution to the Director of Planning and Permitting and to the Director of Environmental Services.

Subject: Draft Environmental Impact Statement (DEIS);
Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility, Kapolei, Hawaii

Dear Mr. Tanoue,

Thank you for your letter dated March 5, 2009, concerning the Draft Environmental Impact Statement for the Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility located in Kapolei, Hawaii. We appreciate your participation in the environmental impact statement review process and have the following responses to your comments.

Comment 1*: The heading for Section 5.6.2.2 (Page 5-95) should be corrected to read "City and County of Honolulu Plans and Policies."*

Response 1: Comment noted. The heading for Section 5.6.2.2 will be corrected in the FEIS to read "City and County of Honolulu Plans and Policies."

Comment 2: *The FEIS should include a section after Section 7.3.2 that discusses the project's conformance to the City's Public Infrastructure Map (PIM) in accordance with Chapter 4, Article 8, Revised Ordinances of Honolulu (ROH). In February 2002, the Department of Environmental Services (ENV) submitted an application to the Department of Planning and Permitting (DPP) to add a "Solid Waste Facility" (SW) symbol to the Ewa PIM for the proposed project. The City Council adopted Resolution 02-164, CD1, that added a "SW" symbol to the Ewa PIM that includes the third boiler. The proposed project is shown on the Ewa PIM as PIM # 036, and is referred to as "H-POWER Expansion" according to DPP records. Thus, the proposed project conforms to the Ewa PIM. A copy of Resolution 02-164, CD1, is attached for your information.*

Response 2: A new section (Section 7.3.3) will be included in the FEIS to discuss the Proposed Expansion's conformance to the City's Public Infrastructure Map (PIM). The new section will read as follows:

7.3.3 Public Infrastructure Map (PIM) for the Ewa Development Plan Area

Resolution 02-164, CD1 calls for "Adopting a Revision To The Public Infrastructure Map For The Ewa Development Plan Area, Campbell Industrial Park, Oahu, Hawaii." This resolution outlines the constraints of current landfill capacity at the Waimanalo Gulch Sanitary Landfill, the Department of Environmental Services' objective to reduce waste disposed of at the landfill by 75% and the H-POWER Expansion's ability to assist the Department of Environmental Services in achieving their goal most expeditiously. As such, the addition of a solid waste symbol to depict H-POWER's proposed expansion was added to the PIM.

Evaluation: The Expansion will reduce the volume of municipal solid waste entering the Waimanalo Gulch Sanitary Landfill thereby extending the life and capacity of the landfill and aiding the Department of Environmental Services in achieving their objective. The project is in conformance to the City's Public Infrastructure Map (PIM) in accordance with Chapter 4, Article 8, Revised Ordinances of Honolulu (ROH)

Comment 3: *In addition to Figure 2.2-2, the FEIS should include another illustration that clearly identifies the proposed third boiler and other improvements in relation to existing structures.*

Response 3: Figure 2.2-2 in the FEIS will be modified to illustrate clearly the new boiler and other improvements by highlighting those areas and labeling them as such on the figure.

Comment 4: *Section 4.3.3.2 of the DEA states that the H-POWER site and the construction laydown areas are outside identified floodplain areas as shown in Figure 4.3-4. However, the H-POWER site and the construction laydown areas are located in Flood Zone D, where flood hazards are undetermined, but possible. We recommend that Section 4.3.3.2 be revised to include this information.*

Response 4: Figure 4.3-4 and text in Section 4.3.3.2 will be revised within the FEIS to reflect that the H-POWER site and construction laydown areas are located in Flood Zone D. Section 4.3-4 will be revised to read:

The H-POWER site and the construction laydown parcels are located within Flood Zone D. Figure 4.3-3, Surface Water Constraints, depicts the mapped Flood Area (DPP, 2004). A review of the most recent Federal Emergency Management Area (FEMA) Flood Insurance Rate Map (FIRM) was also conducted (FEMA 2008). The FIRM maps were not available in hard copy or electronic format. However, no change from the DPP electronic map data was observed in the project area, and DPP confirmed that the H-POWER site and laydown areas are in Flood Zone D. A copy of the 2004 FIRM is provided in Figure 4.3-4. Flood Zone D encompasses all of inland Oahu. The Flood Insurance Program does not have any regulations for developments within Flood Zone D. which is designated for areas where flood hazards are undetermined, but possible. As shown on Figure 4.3-3 and confirmed on the FIRM map, the closest regulated Flood Hazard Area is situated west of Kaomi Loop along the coast and is designated Zone AE which is a flood insurance rate zone that corresponds to the 1-percent annual chance floodplains that are determined in the Flood Insurance Study. Mandatory flood insurance purchase requirements apply to Zone AE.

Comment 5: *Our records indicate that the H-POWER site, TMK: 9-1-026:030 is subject to impact fees associated with the Ewa Highway Master Plan via Ordinance 02-52. We recommend that the FEIS disclose how the project will comply with this ordinance regarding transportation improvements for the Ewa region.*

Response 5: Thank you for bringing Ordinance 02-52 to our attention. We have reviewed the Ordinance and understand that it was passed to assist in paying for roadway improvements in the Ewa region that will be necessary to address the growth in traffic as the region develops. Because the proposed project would cause trucks otherwise bound for the Waimanalo Gulch Sanitary Landfill to be diverted to the H-POWER facility, the proposed project will cause no significant increase in traffic in the overall Ewa region. Accordingly, the City is evaluating if it qualifies for a waiver from this Ordinance.

If you have any questions regarding this letter, please feel free to call me at (973) 882-2771 or Dr. Russell Okoji of AMEC at (808) 391-9906.

Sincerely,

Samuel Joshi

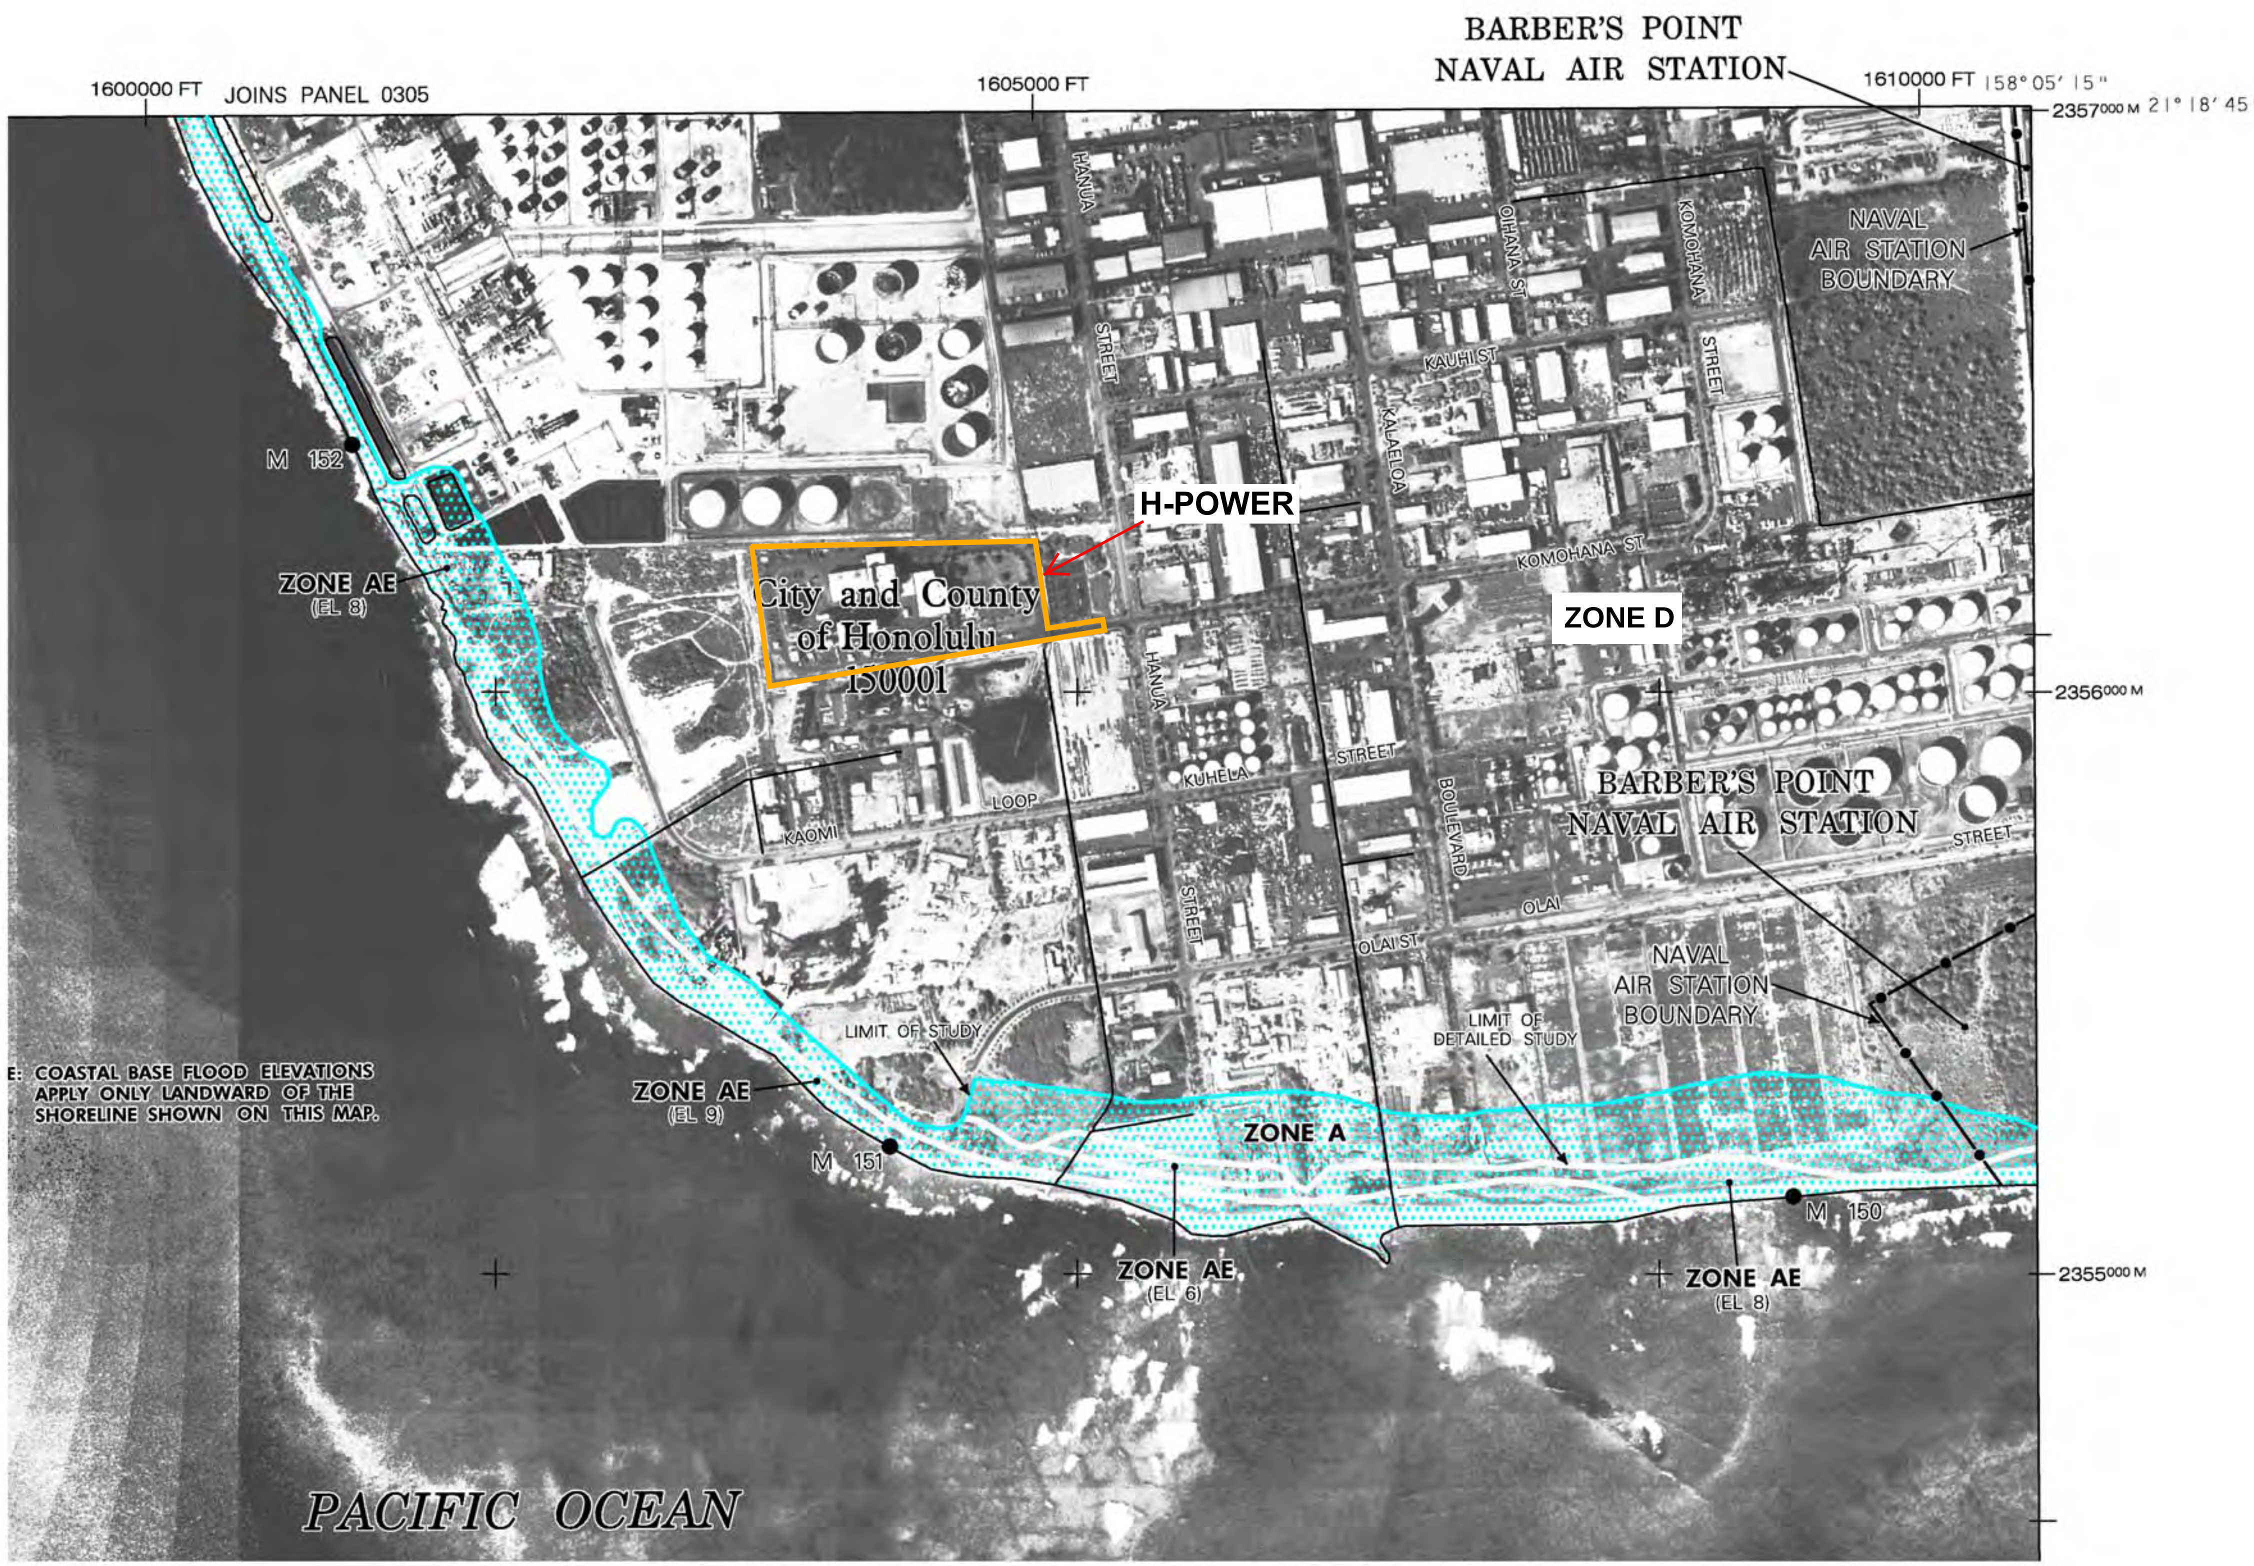
SITE PLAN OF THE PROPOSED EXPANSION

FIGURE 2.2-2

THIS PAGE INTENTIONALLY LEFT BLANK



LEGEND

SPECIAL FLOOD HAZARD AREAS SUBJECT TO INUNDATION BY THE 1% ANNUAL CHANCE FLOOD

The 1% annual chance flood (100-year flood), also known as the base flood, is the flood that has a 1% chance of being equaled or exceeded in any given year. The Special Flood Hazard Area is the area subject to flooding by the 1% annual chance flood. Areas of Special Flood Hazard include Zones A, AE, AH, AO, AR, A99, V, and VE. The Base Flood Elevation is the water-surface elevation of the 1% annual chance flood.

- **ZONE A** No Base Flood Elevations determined.
- **ZONE AE** Base Flood Elevations determined.
- **ZONE AH** Flood depths of 1 to 3 feet (usually areas of ponding); Base Flood Elevations determined.
- **ZONE AO** Flood depths of 1 to 3 feet (usually sheet flow on sloping terrain); average depths determined. For areas of alluvial fan flooding, velocities also determined.
- **ZONE AR** Special Flood Hazard Area formerly protected from the 1% annual chance flood by a flood control system that was subsequently decertified. Zone AR indicates that the former flood control system is being restored to provide protection from the 1% annual chance or greater flood.
- **ZONE A99** Area to be protected from 1% annual chance flood by a Federal flood protection system under construction; no Base Flood Elevations determined.
- **ZONE V** Coastal flood zone with velocity hazard (wave action); no Base Flood Elevations determined.
- **ZONE VE** Coastal flood zone with velocity hazard (wave action); Base Flood Elevations determined.

FLOODWAY AREAS IN ZONE AE

The floodway is the channel of a stream plus any adjacent floodplain areas that must be kept free of encroachment so that the 1% annual chance flood can be carried without substantial increases in flood heights.

OTHER FLOOD AREAS

- **ZONE X** Areas of 0.2% annual chance flood; areas of 1% annual chance flood with average depths of less than 1 foot or with drainage areas less than 1 square mile; and areas protected by levees from 1% annual chance flood.

OTHER AREAS

- **ZONE X** Areas determined to be outside the 0.2% annual chance floodplain.
- **ZONE D** Areas in which flood hazards are undetermined, but possible.

COASTAL BARRIER RESOURCES SYSTEM (CBRS) AREAS

OTHERWISE PROTECTED AREAS (OPAs)

CBRS areas and OPAs are normally located within or adjacent to Special Flood Hazard Areas.

- 1% annual chance floodplain boundary
- 0.2% annual chance floodplain boundary
- Floodway boundary
- Zone D boundary
- CBRS and OPA boundary
- Boundary dividing Special Flood Hazard Area Zones and boundary dividing Special Flood Hazard Areas of different Base Flood Elevations, flood depths or flood velocities.
- 513 Base Flood Elevation line and value; elevation in feet*
- (EL 987) Base Flood Elevation value where uniform within zone; elevation in feet*

Re: Proposed Third Boiler Expansion of H-POWER Energy-from-Waste Facility Kapolei, Oahu

Thank you for the opportunity to comment on the DEIS of the above-referenced project. Hawaiian Electric Company, Inc. (HECO) has no objections at this time.

We appreciate your efforts to keep us apprised of the planning process. As the project progresses, please continue to keep us informed. We will be better able to evaluate any effects on our system facilities further along in the project's development. We request that development plans show all affected HECO facilities and address any conflicts between the proposed plans and our existing facilities. Please forward the pre-final development plans to HECO for review.

Should it become necessary to relocate HECO's facilities, please submit a request in writing and we will work with you so that construction of the project may proceed as smoothly as possible. Please note that there may be costs associated with any relocation work, and that such costs may be borne by the requestor. Because any redesign or relocation of our facilities may cause lengthy delays, upon determination that HECO facilities will need to be relocated or built, HECO should be notified immediately in order to minimize any delays or impacts on the project schedule.

Sincerely,

Kirk S. Tomita
Senior Environmental Scientist

RE: Request for comments on the draft environmental impact statement (DEIS), H-POWER expansion project, 'Ewa, O'ahu, TMKs: 1-9-026-030, 033, & 034.

Aloha e Stephen Langham,

The Office of Hawaiian Affairs (OHA) is in receipt of the above-mentioned letter dated January 27, 2009. OHA has reviewed the project and offers the following comments.

OHA appreciates that construction workers will be trained to suspend construction activities if transient bird species of concern are encountered at or near the site and that a biologist will conduct initial training and provide a short information packet so that workers are familiar with these species. (DEIS, page 4-62) We do, however, ask what will happen after the supervisor, on-call biologist and/or the Pacific Islands Fish and Wildlife Office have been contacted and confirmation made as mentioned in the DEIS.

We also appreciate that there will be no construction activity in the plant preservation areas in Parcels 33 and 34 and a 25-foot buffer zone will be placed around the plant protection areas in Parcels 33 and 34 to further protect these areas from exposure to construction activities. (DEIS, page 4-65) We do ask that the presence of *Achyranthes splendens* var. *rotundata be clarified in this environmental review. OHA asks because page 4-61 of the DIES states that, "* No populations or individuals of *Achyranthes splendens* var. *rotundata* were observed during the November 2004 and August 2008 site reconnaissance surveys." However, page 5-5 of the DIES states, "Following a brief discussion about the burial, Mr. Kane took PCSI into the plant sanctuary on Parcels 33-34, which contains *Achyranthes splenden* var. *rotundata, naio* (*Myoporum sandwicense*) and various other plants." These conflicting reports should be rectified to preserve the integrity of this document.

Further, we ask if these preservation areas are part of a habitat conservation plan or have been designated as critical habitat. We also ask if any incidental take permit consultation under the Endangered Species Act has been initiated.

OHA also urges that the lay down areas not simply be allowed to revegetate but be landscaped with drought tolerant native or indigenous species that are common to the area. Any invasive species should not be considered. Doing so would not only serve as practical water-saving landscaping practices, but also serve to further the traditional Hawaiian concept of mālama ʻāina and create a more Hawaiian sense of place. This would also help to reduce the amount of impervious surfaces in the project area, thereby reducing runoff as well. Tree and landscape planting to shade paved parking areas and provide shade and cooling to building elements and outdoor use areas should also be considered.

We do note that although the project area has been disturbed previously, there is still a high likelihood that cultural deposits will be uncovered. Even in heavily urbanized Honolulu new projects are still unfortunately uncovering such deposits in previously disturbed areas and so we urge more caution be exercised in this sensitive area than the DIES demonstrates. We urge that a cultural monitor be called in for the presence of any cultural deposits or in the event that a subsurface void is discovered as well. We also ask that the 1986 burial discovery and re-internment site be adequately protected and discussed in this document as we inquired about in our January 12, 2005 comment letter for this proposal.

Additionally, OHA asks that, in accordance with Section 6E-46.6, Hawaii Revised Statutes and Chapter 13-300, Hawaii Administrative Rules, if the project moves forward, and if any significant cultural deposits or human skeletal remains are encountered, work shall stop in the immediate vicinity and the State Historic Preservation Division shall be contacted. We note that this may be the "applicable regulatory guidelines" mentioned on page ES-6 of the DEIS, however, these important procedures should be openly and clearly presented.

OHA asks for elaboration upon the facility's storm water pollution control plan mentioned on page 4-38. Increased amounts of impervious surfaces will generate increased flow rates, which may have an effect on water quality and to the sensitive sinkhole environments found in the area. This is important because page 4-37 of the DEIS states that, "Waters are also reported to sometimes occur within sinkholes on protected areas of the site, but these areas may also be affected by tidally influenced groundwaters."

We also see that many of the water quality safeguards are best management practices (BMP) dependent. As such, OHA asks how these BMPs will be assessed to ensure that they are achieving the objectives for which they were selected. Maintenance schedules, monitoring for effectiveness and a listing of each BMP, its expected performance and an assessment of whether the controlled value (noise, dust, water quality, etc.) is within targeted limits should be included.

OHA additionally notes that dewatering is mentioned on page 4-54 of the DEIS. OHA points out that if any dewatering is required, a State Department of Health National Pollutant Discharge Elimination System (NPDES) permit under the Clean Water Act, Section 402 is required that includes this application. Further, this permit will also apply if the water table is reached during subsurface excavation and we simply ask if this has been accounted for.

Procedurally, Hawaii Administrative Rules Section 11-55-38 Historic and burial sites review states that for a new project, activity, or site, the applicant submitting to the Department of Health an NPDES permit application shall also demonstrate to the Clean Water Branch that the project, activity, or site has been reviewed by the state historic preservation division (SHPD). A copy of the Notice of Intent from at least 30 days prior to the start of construction activities or NPDES permit application submitted to SHPD can be a way to meet this requirement. We ask if this has been done in order to meet this timeline.

Thank you for the opportunity to comment. If you have further questions, please contact Grant Arnold by phone at (808) 594-0263 or e-mail him at granta@oha.org.

RE: Request for comments on the proposed expansion of the HPOWER facility at Kapolei, Land of Honouliuli, 'Ewa District, O'ahu TMKs: 9-1-026:30, 33, 34 and 35.

Aloha e Stephan Clark,

The Office of Hawaiian Affairs (OHA) is in receipt of the above-mentioned letter dated August 14, 2008. OHA has reviewed the project and offers the following comments.

Our January 12, 2005 comment letter for the same proposal stated concerns for historic and cultural sites in the area. We specifically asked that the 1986 burial discovery and reinternment site be adequately protected. We further noted that the 'Ewa plain has historically been known to contain sinkholes in which human skeletal remains as well as avi-faunal remains and that these sinkholes can continue to exist in areas that have been graded or heavily cultivated for agricultural uses. There would appear to be a higher than normal probability of unmarked burial sites existing in the project area given the previous find during construction and the possibility of other burials being associated with this burial, either proximally or distally.

According to records at the Bishop Museum pertaining to inventories conducted for compliance with the Native American Graves Protection and Repatriation Act of 1990, burial sites in Honouliuli and in 'Ewa in general have been documented in the past including:

In 1938, human remains representing six individuals from Honouliuli, 'Ewa, O'ahu were collected by Kenneth P. Emory and William A. Lessa and acquired by the Bishop Museum. Museum documentation indicates these remains were in a shallow crypt burial one mile from the coast;

In 1933, human remains representing three individuals form stone pits at ‘Ewa, O’ahu were collected by J.W. Barrington and Edwin H. Bryan;

In 1942, human remains representing two individuals from Kualakai, ‘Ewa Beach, O’ahu were donated to the Bishop Museum;

In 1959, human remains representing seven individuals from ‘Ewa, O’ahu were donated to the Bishop Museum by the Anthropology Club of the University of Hawaii (from Standard Oil Refinery land);

In 1980, human remains representing nine individuals from Honouliuli, O’ahu were collected and donated to the Bishop Museum by Albert, Borthwick and Folk. Donor information indicates these human remains were recovered from coral sinkholes.

In the last decade, unmarked burial sites have been found in the area of St. Francis West, West Loch Estates, Old Fort Weaver Road, Kalaeloa, One‘ula Beach, Campbell Estate, Ko‘Olina and other areas in the vicinity of this project.

Native Hawaiian burial sites have been found just on and under the surface to depths of eight or nine feet depending upon the nature of the terrain. Furthermore, the nature of documented interments in the ‘Ewa area (stone pits, sinkholes, crypts, etc.) could lead to the survival of these sites despite intensive agricultural activities on the surface. OHA notes that the applicant has proposed on-call monitoring by a qualified archeologist as a result of the probable presence of subsurface sites in the project area.

OHA asks if the three plant sanctuaries that contain endangered species have been designated as critical habitat and if they are part of a habitat conservation plan. We are supportive of the idea that these areas should be removed from the proposed construction area and additionally protected by buffer areas.

Thank you for the opportunity to comment and we look forward to further review. If you have additional questions, please contact Grant Arnold by phone at (808) 594-0263 or e-mail him at granta@oha.org.

Subject: Draft Environmental Impact Statement (DEIS);
Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility, Kapolei, Hawaii

Dear Mr. Namu'o,

Thank you for your letters dated September 4, 2008 and March 6, 2009, concerning the Draft Environmental Impact Statement for the Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility located in Kapolei, Hawaii. We appreciate your participation in the environmental impact statement review process and have the following responses to your comments.

<u>September 4, 2008 Letter</u>
Comment 1: *Request that the 1986 burial discovery and reinternment site be adequately protected*

Response 1: Measures will be taken to insure the site will not be impacted by construction activities. A temporary barrier will be employed during construction activities that will further improve the visibility of the re-interment site. Additionally, workers will be made aware of its location prior to construction.

Comment 2: *Inquired if the three plant sanctuaries that contain endangered species have been designated as critical habitat and if they are part of a habitat conservation plan. These areas should be removed from the proposed construction area and additionally protected by buffer areas.*

Response 2: Fenced plant sanctuaries containing the federally listed endangered species, *Achyranthes splendens* var. *rotundata*, exist on Parcels 33 and 34. These fenced plant sanctuaries are not part of a habitat conservation plan nor have they been designated as critical habitat. According to the U.S. Fish and Wildlife website, no critical habitat designation has been published and no habitat conservation plans have been published for *Achyranthes splendens* var. *rotundata*. Protection of these areas, however, has been included as part of a mitigation plan. The fenced areas are not located in the proposed construction area, and they will be protected by an additional 25 foot buffer zone as noted in the DEIS. We have included, as an attachment to this letter, a figure depicting the H-POWER site and construction laydown areas and the protective measures that will be employed: fence, buffer zone, silt fence, and retention basins.

<u>March 6, 2009 Letter</u>
Comment 1: Page 4-62: W*hat will happen after the supervisor, on-call biologist and/or the Pacific Islands Fish and Wildlife Office have been contacted and confirmation made as mentioned in the DEIS.*

Response 1: Once the supervisor, on-call biologist and/or the Pacific Islands Fish and Wildlife Office is contacted and confirmation made, recommendations by the specialist will be followed.

Comment 2: *DEIS, page 4-65: We do ask that the presence of Achyranthes splendens var. rotundata be clarified in this environmental review. OHA asks because page 4-61 of the DEIS states that, "No populations or individuals of Achyranthes splendens var. rotundata were observed during the November 2004 and August 2008 site reconnaissance surveys." However, page 5-5 of the DEIS states, "Following a brief discussion about the burial, Mr. Kane took PCSI into the plant sanctuary on Parcels 33-34, which contains Achyranthes splenden var. rotundata, naio (Myoporum sandwicense) and various other plants." These conflicting reports should be rectified to preserve the integrity of this document.*

Response 2: The plant sanctuary on Parcels 33-34 was established to protect *Achyranthes splendens* var. *rotundata*. The plant sanctuaries were not accessible for the biological site reconnaissance, and no populations of the protected species could be observed from the perimeter. Although the plant sanctuaries were accessible for the archeological site reconnaissance, only items of archeological significance were noted in the archeologist's report. No *Achyranthes splendens* var. *rotundata* were noted in the report, because a biologist was not present during the archeological site reconnaissance. This will be clarified in document.

Comment 3: *We ask if these preservation areas are part of a habitat conservation plan or have been designated as critical habitat. We also ask if any incidental take permit consultation under the Endangered Species Act has been initiated.*

Response 3: Fenced plant sanctuaries containing the federally listed endangered species, *Achyranthes splendens* var. *rotundata*, exist on Parcels 33 and 34. These fenced plant sanctuaries are not part of a habitat conservation plan nor has the area been designated as critical habitat. According to the U.S. Fish and Wildlife website, no critical habitat designation has been published and no habitat conservation plans have been published for *Achyranthes splendens* var. *rotundata*. While portions of Parcels 33 and 34 will be used for construction lay down purposes, neither the fenced areas nor buffer areas within 25 feet of the fenced areas will be used for construction lay down. Thus, *Achyranthes splendens* var. *rotundata* will not be disturbed and there will be no "incidental taking" of these plants. Because there will be no incidental take, there is no need for an Incidental Take Permit. (See http://ecos.fws.gov/speciesProfile/SpeciesReport.do?spcode=Q24I).

Comment 4: *OHA also urges that the lay down areas not simply be allowed to revegetate but be landscaped with drought tolerant native or indigenous species that are common to the area. Any invasive species should not be considered. Doing so would not only serve as practical water-saving landscaping practices, but also serve to further the traditional Hawaiian concept of mālama'āina and create a more Hawaiian sense of place. This would also help to reduce the amount of impervious surfaces in the project area, thereby reducing runoff as well. Tree and landscape planting to shade paved parking areas and provide shade and cooling to building elements and outdoor use areas should also be considered.*

Response 4: Drought tolerant native or indigenous species that are common to the area will be utilized to revegetate the laydown areas once construction is completed.

Comment 5: *We do note that although the project area has been disturbed previously, there is still a high likelihood that cultural deposits will be uncovered. Even in heavily urbanized Honolulu new projects are still unfortunately uncovering such deposits in previously disturbed areas and so we urge more caution be exercised in this sensitive area than the DEIS demonstrates. We urge that a cultural monitor be called in for the presence of any cultural deposits or in the event that a subsurface void is discovered as well.*

Response 5: A cultural monitor will be on-call should the presence of any cultural deposits or if a subsurface void is discovered.

Comment 6: *We also ask that the 1986 burial discovery and re-internment site be adequately protected and discussed in this document as we inquired about in our January 12, 2005 comment letter for this proposal.*

Response 6: A temporary barrier will be employed during construction activities that will further improve the visibility of the re-interment site. Additionally, workers will be made aware of its location so that construction activities will not impact it.

Comment 7: *OHA asks that, in accordance with Section 6E-46.6, Hawaii Revised Statutes and Chapter 13-300, Hawaii Administrative Rules, if the project moves forward, and if any significant cultural deposits or human skeletal remains are encountered, work shall stop in the immediate vicinity and the State Historic Preservation Division shall be contacted. We note that this may be the "applicable regulatory guidelines" mentioned on page ES-6 of the DEIS, however, these important procedures should be openly and clearly presented.*

Response 7: “Applicable regulatory guidelines” as stated in the DEIS will be clarified to include text indicating should any significant cultural deposits or human skeletal remains be encountered, work shall stop in the immediate vicinity and the State Historic Preservation Division will be contacted.

Comment 8: *OHA asks for elaboration upon the facility's storm water pollution control plan mentioned on page 4-38. Increased amounts of impervious surfaces will generate increased flow rates, which may have an effect on water quality and to the sensitive sinkhole environments found in the area. This is important because page 4-37 of the DEIS states that, "Waters are also reported to sometimes occur within sinkholes on protected areas of the site, but these areas may also be affected by tidally influenced groundwaters.*

Response 8: Additional stormwater retention basins are planned, so the storm water flow is not anticipated to differ from that contained in the facility’s current Storm Water Pollution Control Plan. The Storm Water Pollution Control Plan also contains a Storm Water Monitoring Plan which routinely monitors the water quality exiting the site. The current storm water outfalls on the site are located on the southeastern portion of the property and will not affect the sinkholes located on the parcels to the west of the subject site.

Comment 9: *We also see that many of the water quality safeguards are best management practices (BMP) dependent. As such, OHA asks how these BMPs will be assessed to ensure that they are achieving the objectives for which they were selected. Maintenance schedules, monitoring for effectiveness and a listing of each BMP, its expected performance and an assessment of whether the controlled value (noise, dust, water quality, etc.) is within targeted limits should be included.*

Response 9: The Construction Storm Water Pollution Control Plan will be completed prior to the start of construction and will address the effectiveness of all Best Management Practices. Periodic laboratory analysis of stormwater will be outlined in these plans and visual evidence of sediment escaping from the siltation barriers will be noted and corrective action will be taken, if necessary.

Comment 10: *OHA additionally notes that dewatering is mentioned on page 4-54 of the DEIS. OHA points out that if any dewatering is required, a State Department of Health National Pollutant Discharge Elimination System (NPDES) permit under the Clean Water Act, Section 402 is required that includes this application. Further, this permit will also apply if the water table is reached during subsurface excavation and we simply ask if this has been accounted for.*

Response 10: NPDES General permit coverage is currently being drafted. Form B for Industrial Activity and Form C for Construction Activities are being drafted. If dewatering is necessary, Form G for Construction activity dewatering effluent will be drafted.

Comment 11: *Procedurally, Hawaii Administrative Rules Section 11-55-38 Historic and burial sites review states that for a new project, activity, or site, the applicant submitting to the Department of Health an NPDES permit application shall also demonstrate to the Clean Water Branch that the project, activity, or site has been reviewed by the state historic preservation division (SHPD). A copy of the Notice of Intent* *from at least 30 days prior to the start of construction activities or NPDES permit application submitted to SHPD can be a way to meet this requirement. We ask if this has been done in order to meet this timeline.*

Response 11: A copy of the request to SHPD or letter of determination will be submitted to the Clean Water Branch with the NPDES and NOI.

If you have any questions regarding this letter, please feel free to call me at (973) 882-2771 or Dr. Russell Okoji of AMEC at (808) 391-9906.

Sincerely,

Samuel Joshi

Re: Draft Environmental Impact Statement (DEIS)
H-POWER Expansion Project, Ewa, Oahu
Tax Map Key: 1-9-026-030, -033, -034

In response to your January 27, 2009, notice, thank you for the opportunity to provide comments on the DEIS for the H-POWER Expansion Project, located in the Campbell Industrial Park in Kapolei, Oahu. The proposed Expansion will add a third combustor unit, associated air pollution control equipment, and provide for modifications and additions to existing waste feed, ash handling and related utility systems, as well as a new turbine generator. The new unit will be a 900 ton per day mass burn waterwall municipal waste combustor. The City and County will benefit from additional waste disposal capacity, increased energy production, and recovered metals recycling and reduction. The Expansion is expected to extend the life of the Waimanalo Gulch Sanitary Landfill.

The DEIS says that the proposed expansion's increased energy and reliability are fully consistent with the State's 2000 Energy Plan. In the October 2008 agreement between the State and the Hawaiian Electric Companies, Hawaiian Electric recognizes this 21 MW project as one of the projects that it will encourage in order to bring the maximum number of renewable energy projects on line as soon as possible.

We recognize the project's impact on the economy which is estimated to be 300 temporary construction jobs, 5-8 new permanent operating positions, and annual decrease of 550,000 barrels of fuel oil imported.

It is our understanding that the mass burn combuster will reduce MSW by 90% with 10% remaining in ash. This would alleviate, but not eliminate, the waste stream into the landfill. Assuming that this is the case, then, in the long term Oahu will still need an operable landfill. We are also concerned about the possibility of toxic pollutants into the landfill from the waste stream and would hope that appropriate testing would be part of the waste stream disposal activity.

We would like to call your attention to State energy conservation goals that encourage the efficient use of energy resources and call for project buildings, activities, and site grounds to be designed and/or retrofit with energy saving considerations. The mandate for such consideration is found in Chapter 344, HRS ("State Environmental Policy") and Chapter 226 ("Hawaii State Planning Act"). In particular, we would like to call to your attention HRS 226 18(c) (4) which includes a State objective of promoting all cost-effective energy conservation through adoption of energy-efficient practices and technologies. There may be opportunities for energy efficient lighting and/or daylighting at the facility.

Our website (http://hawaii.gov/dbedt) provides detailed information on the Hawaii Clean Energy Initiative, as well as energy efficiency and renewable energy guidelines, directives and statutes, studies, and reports. Please also do not hesitate to contact me at telephone number (808) 587-3812 for additional information.

Sincerely,

Theodore A. Peck

Subject: Draft Environmental Impact Statement (DEIS);
Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility, Kapolei, Hawaii

Dear Mr. Peck,

Thank you for your letter dated March 9, 2009, concerning the Draft Environmental Impact Statement for the Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility located in Kapolei, Hawaii. We appreciate your participation in the environmental impact statement review process and have the following responses to your comments.

Comment 1*: It is our understanding that the mass burn combustor will reduce MSW by 90% with 10% remaining in ash. This would alleviate, but not eliminate, the waste stream into the landfill. Assuming that this is the case, then, in the long term, Oahu will still need an operable landfill. We are also concerned about the possibility of toxic pollutants into the landfill from the waste stream and would hope that appropriate testing would be part of the waste stream disposal activity.*

Response 1: Yes, the mass burn combustor reduces the volume of waste by 90%, resulting in a volume of ash remaining equivalent to 10% of the volume of the received MSW.

Please be assured that appropriate testing will be part of the waste stream disposal activity. The Hawaii State Department of Health is currently reviewing the Solid Waste Management Permit for the Proposed Expansion. Ash management and ash sampling plans are required as part of this permit. Briefly, ash from Unit 3 will consist of bottom ash and conditioned fly ash. From these ash streams, two types of ash will be produced, blended ash and bottom ash only. The blended ash will be made by mixing measured amounts of bottom ash and conditioned fly ash. The blended ash will pass through a sampling station before being loaded into disposal trucks. The excess bottom ash will also pass through a sampling station before being loaded into separate disposal trucks. The sampling plan will address the two ash products. The enclosed figure shows an overview of the ash management plan.

Bottom ash sampling will be conducted after the bottom ash metals removal system (BAMRS) from a transfer conveyor prior to dropping into the bottom ash truck. The sampling location will allow representative sampling without jeopardizing safety. Sampling will consist of representative grab samples collected at predetermined intervals, which will be used to form a representative composite sample.

Blended ash will be sampled in a similar manner so as to allow representative sampling without jeopardizing safety. The blended ash will be sampled from the conveyor leading from the mixing drum to the blended ash truck.

Comment 2: *We would like to call your attention to State energy conservation goals that encourage the efficient use of energy resources and call for project buildings, activities, and site grounds to be designed and/or retrofit with energy saving considerations. The mandate for such consideration is found in Chapter 344, HRS ("State Environmental Policy") and Chapter 226 ("Hawaii State Planning Act"). In particular, we would like to call to your attention HRS 226 18(c) (4) which includes a State objective of promoting all cost-effective energy conservation through adoption of energy-efficient practices and technologies. There may be opportunities for energy efficient lighting and/or daylighting at the facility*

Response 2: The project intends to utilize energy efficient products in the design of the Proposed Expansion.

If you have any questions regarding this letter, please feel free to call me at (973) 882-2771 or Dr. Russell Okoji of AMEC at (808) 391-9906.

Sincerely,

Samuel Joshi

Kapolei, HI 96707

Dear Mr. Langham:

Draft Environmental Impact Statement
H-POWER Expansion Project
Kapolei, Oahu

The City and County of Honolulu and Covanta Honolulu Resource Recovery Venture propose the expansion of the existing Honolulu Program of Waste Energy Recovery facility (H-POWER) located in James Campbell Industrial Park in Kapolei. The expansion would involve the addition of a third combustor unit – a 900 ton per day Mass Burn waterwall municipal waste combustor as well as associated air pollution control provisions and equipment to link the addition to the existing facility. The project would also include modifications and additions to the existing waste feed, ash handling and other utility systems necessary for the new equipment and a new turbine generator that will provide an additional source of renewable energy to the City and County of Honolulu. Construction is anticipated to begin on the expansion project in the second half of 2009 with completion planned for the second half of 2012.

This review was conducted with the assistance of Ryan Riddle, Environmental Center.

Background /Historical Perspective (p. 1-2)

We are not sure that residential solid waste can be characterized as a renewable resource as it is in the last sentence of this section. As future products move to a cradle-to–cradle design paradigm whose materials are perpetually circulated in closed loops, there may be an end to the generation of solid waste to burn. We don't expect to see it any time soon, but it is within the realm of the possible.

2500 Dole Street, Krauss Annex 19 Honolulu, Hawai'i 96822
Telephone: (808) 956-7361 Fax: (808) 956-3980
An Equal Opportunity/Affirmative Action Institution

Unit 3 (Expansion Facility) (p. 2-10)

On page 2-10 the DEIS states, "The Expansion proposes that, except when screening of waste is required, MSW will be brought in by trucks and dumped into the refuse storage pit." Under what conditions will screening of waste be required?" How is screening carried out, what is involved?

Figure 2.3-1: Construction Facilities Site Plan (p. 2-23)

The font utilized in Figure 2.3-1 is illegible throughout the diagram especially in Insert A.

H-POWER Site (p. 4-7)

On page 4-7 the DEIS states, "On the basis of preliminary assessments made by potential contractors reviewing the conceptual design, it is anticipated that some soils will be excavated and removed from the site and that some structural fill will be imported to complete preparation of the site prior to slab and footing construction and full construction of the Expansion." How much structural fill is anticipated to be needed? Where will excavated material be taken?

Subsidence and Settlement (p. 4-8)

On page 4-8 the DEIS states, "Though previously cleared and grubbed, this shallow karst topography requires special construction measures to ensure the stability of foundations and to increase the load bearing capacity of the local soils." Can you summarize the special construction practices that are necessary due to the karst topography? It may be necessary to add a brief explanation of what a karst formation is. Not everyone is familiar with the term.

Construction Laydown Area (pp. 4-7 – 4-8)

Who has jurisdiction over the fenced area at the construction laydown site? Are they aware of the proposed project?

Tsunami (p. 4-9)

What would be the impact to the structure if a large tsunami, on the order of the one that struck Hilo, Hawaii in 1960 were to strike the coast along the James Campbell Industrial Park? Are there design standards for tsunami resistant buildings? If there is will these be used in the proposed new power generator?

Table 4.2-5: Results of BACT Determination for New Unit at H-Power (p. 4-23)

What is the distinction between MACT and BACT? This is unclear throughout the text.

H-POWER Surface Waters (pp. 4-34 – 4-37)

The DEIS mentions at the end of this section that the facility personnel are trained in spill prevention countermeasures. To what level are they trained?

In regard to surface waters at the construction laydown site the DEIS states, "Waters are also reported to sometimes occur within sinkholes on protected areas of the site, but these areas may also be affected by tidally influenced groundwaters." To what extent might this be the case?

Baseline Conditions (pp. 4-45 – 4-46)

In the last paragraph of this section there is a discussion of how much water H-Power is permitted to withdraw from its wells. The amount is 2.24 mgd a day. Does H-POWER use all of that water or just a percentage? Will the expanded plant use all of the 3.34 mgd it plans to withdraw via wells?

Operation Impacts & Mitigation (p. 4-53)

The DEIS mentions that the proposed expansion has been designed to minimize water demands and resultant discharges. Does this extend to the technical design of the Expansion? If so, how?

Flora and Invertebrate Fauna (p. 4-61)

In paragraph 4 on page 4-61 the DEIS states that the enclosures within Parcels 33 and 34 shelter the last two naturally occurring populations of Achranthes splendes var. rotundata. What is unique about this site that promotes the growth of Achranthes splendens var. rotundata? Why is it not found in other nearby areas that have similar site characteristics?

Mitigation Recommendations (pp. 5-41 – 5-42)

There are seven mitigation options bulleted in this section. Who would be implementing these measures? Will this fall to the County to implement or will it be the plant's management?

Citations

In several parts of the DEIS, there are citations to references that don't appear in the reference section. On page 4-45, there is a citation to a USGS 1998 report but no reference in the Reference Section on pages 12-1 – 12-3. Likewise, on page 5-6 there are a number of citations to reports including McAllister 1933; Kamakau 1976; Thrum 1907 and Sterling and Summers 1978, that don't appear in the reference section. These citations may be from references in the accompanying appendix report, but they should be in the reference section of the DEIS.

Thank you for the opportunity to review this Draft EIS.

Sincerely,

Peter Rappa

Subject: Draft Environmental Impact Statement (DEIS);
Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility, Kapolei, Hawaii

Dear Mr. Rappa,

Thank you for your letter dated March 9, 2009, concerning the Draft Environmental Impact Statement for the Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility located in Kapolei, Hawaii. We appreciate your participation in the environmental impact statement review process and have the following responses to your comments.

Comment 1: *We are not sure that residential solid waste can be characterized as a renewable resource as it is in the last sentence of this section [Background/Historical Perspective]. As future products move to a cradle-to-cradle design paradigm whose materials are perpetually circulated in closed loops, there may be an end to the generation of solid waste to burn.*

Response 1: Hawaii's Renewable Portfolio Standards are described in the Hawaii Revised Statutes (HRS), Sections 269-91 through 269-95, "Renewable portfolio standards." As defined in the HRS, "Renewable energy" means energy generated or produced utilizing the following sources:

(1) Wind;
(2) The sun;
(3) Falling water;
(4) Biogas, including landfill and sewage-based digester gas;
(5) Geothermal;
(6) Ocean water, currents and waves;
(7) Biomass, including biomass crops, agricultural and animal residues and wastes, and municipal solid waste;
(8) Biofuels; and
(9) Hydrogen produced from renewable energy sources.

Under Hawaii law, energy from municipal solid waste is defined as renewable energy. We feel it appropriate to characterize residential solid waste as a renewable resource as we live on an island with limited waste disposal alternatives. Our landfills are quickly filling to capacity. Though we are hopeful that in the future we will not have solid waste disposal issues, our current situation calls for the Proposed Expansion.

Comment 2: Unit 3 (Expansion Facility) (p. 2-10): On page 2-10 the DEIS states, "The expansion proposes that, except when screening of waste is required, MSW will be brought in by trucks and dumped into the refuse storage pit." Under what conditions will screening of waste be required?" How is screening carried out, what is involved?

Response 2: Screening of waste, as described in the DEIS, is a visual inspection of waste to determine if it is "acceptable". The FEIS will include the following text that addresses the criteria for what is considered "acceptable".

The following is the definition of Unacceptable Waste:

"Unacceptable Waste" includes large castings, transmissions, rear ends, springs, fenders or other major parts of automobiles, motorcycles, other vehicles or marine vessels, explosives, pathological or biological waste, hazardous chemicals, radioactive materials, large quantities of sulfur-containing materials, large tree branches or trunks, machinery (other than small household appliances), liquid wastes, dirt, concrete, other non-burnable construction materials or debris and regulated hazardous waste of all kinds, including but not limited to, cleaning fluids, crankcase oils, cutting oils, paints, acids and poisons or other materials including those regulated under Federal and State rules and regulations.

The following is the definition of Acceptable Waste:

"Acceptable Waste" shall mean that garbage, trash, rubbish and refuse normally disposed of by and collection from residential, commercial, military, institutional and industrial establishments within the City, provided, however, that the term shall not include wastes in quantities and concentrations which require special handling in their collection and/or processing and disposal such as bulk items, junked automobiles, waste oil and other items of Unacceptable Waste as herein defined. Acceptable Waste may include leaves, twigs, grass and plant cuttings, branches or tree trunks not in excess of five feet long or larger than nine inches in diameter, paper, plastics, ferrous and non-ferrous metals, glass, discarded personal property such as bicycles and baby carriages and other constituents that normally appear in household refuse, and certain wastes which are difficult to process such as leather or automotive and small vehicular tires but which can be processed in small quantities when mixed with other Acceptable Waste provided large quantities of such wastes are not included within any truckload.

Procedures to Prevent Unacceptable Waste from Entering the Facility

All arriving solid waste vehicles are weighed at an inbound scale. At these scales, a clearly visible notice is posted that Unacceptable and Hazardous Waste is prohibited, together with a clear warning of potential hauler bans and other legal penalties for violators.

Although all vehicles are subject to inspection, priority for manual screening will be given to:

- *Those haulers known to serve industrial areas;*
- *Those haulers whose service areas are not well known;*
- *Front-end loaders and roll-off drop boxes; and*
- *Packer trucks with commercial pick-ups.*

The screening procedures used at the facility include the following activities:

- *Visual inspection of trucks by the RDF Tipping Floor Attendant and the Mass Burn Tipping Floor Attendant, for unusual looking loads;*

- *Routine visual inspection by tipping floor and mobile equipment personnel of material in the refuse vehicles during unloading;*
- *Visual inspection of the materials on the tipping floor and the pit of the Mass Burn Unit; and*
- *Selection of vehicles to be screened as part of the spot-check portion of the screening program outlined below is to be done both on a judgmental basis using criteria mentioned above, and on a random load basis.*

Comment 3: *Construction Facilities Site Plan (p. 2-23: The font utilized in Figure 2.3-1 is illegible throughout the diagram especially in Insert A.*

Response 3: A different font will be utilized in the Construction Facilities Site Plan (p. 2-23).

Comment 4: *H-POWER Site (p. 4-7): On page 4-7 the DEIS states, "On the basis of preliminary assessments made by potential contractors reviewing the conceptual design, it is anticipated that some soils will be excavated and removed from the site and that some structural fill will be imported to complete preparation of the site prior to slab and footing construction and full construction of the Expansion." How much structural fill is anticipated to be needed? Where will excavated material be taken?*

Response 4: Based on the current drawings and preliminary assessments, the quantity of excavation and fill anticipated are as follows:

Excavation:	Topsoil:	1,700 cyd
	Soil:	8,890 cyd
	Coral:	7,240 cyd
Total Excavation:		17,830 cyd
Total Fill:		21,290 cyd

Excavated on-site soils may be used as general fill provided that they comply with the requirements stated in the geotechnical report. All materials used will be in accordance with specifications for construction of such facilities by the State and County. It is anticipated that all excavated soils will be used on-site as fill material. Excavated soils not used on-site will be disposed in an appropriate manner.

Comment 5: *Subsidence and Settlement (p. 4-8): On page 4-8 the DEIS states, "Though previously cleared and grubbed, this shallow karst topography requires special construction measures to ensure the stability of foundations and to increase the load bearing capacity of the local soils." Can you summarize the special construction practices that are necessary due to the karst topography? It may be necessary to add a brief explanation of what a karst formation is. Not everyone is familiar with the term.*

Response 5: The following definition of karst formation will be included in the FEIS. “Karst topography is a landscape shaped by the dissolution of a layer or layers of soluble bedrock, usually carbonate rock such as limestone.” Due to the karst topography, it is recommended that all footing excavations be probed to detect the presence of voids beneath the footings and, if found, the voids shall either be 1) filled with grout or 2) opened, cleaned of debris and backfilled with properly compacted fill.

Comment 6: *Construction Laydown Area (pp, 4-7 – 4-8): Who has jurisdiction over the fenced area at the construction laydown site? Are they aware of the proposed project?*

Response 6: The City & County of Honolulu is the owner of the construction laydown areas and is aware of the proposed project.

Comment 7: *Tsunami (p. 4-9): What would be the impact to the structure if a large tsunami, on the order of the one that struck Hilo, Hawaii in 1960 were to strike the coast along the James Campbell Industrial Park? Are there design standards for tsunami resistant buildings? If there is will these be used in the proposed new power generator?*

Response 7: The design of the facility does not take into account the potential impacts of a tsunami, because the proposed facility is shielded from a tsunami by buildings on the makai side.

Comment 8: *Table 4.2-5: Results of BACT Determination for New Unit at H-Power (p. 4-23): What is the distinction between MACT and BACT? This is unclear throughout the text.*

Response 8: In response to your comment, we will add additional information in the text. To summarize: Maximum Achievable Control Technology (MACT) and Best Available Control Technology (BACT) are two different emission control requirements that arise out of different portions of the federal Clean Air Act. MACT is a requirement for control of hazardous air pollutants and BACT is a requirement for the control of any regulated pollutants.

MACT imposes emission limitations for major sources of hazardous air pollutants in specifically listed source categories. For the Municipal Waste Combustor industry, the MACT standards were combined with, and promulgated as part of, the New Source Performance Standards for the industry at 40 CFR 60, Subpart Eb. Subpart Eb imposes emission limitations for MWC metals (particulate matter, lead, cadmium, and mercury), MWC acid gases (SO_2, HCl), dioxins/furans, NO_x, and CO.

BACT is an emission limitation that is imposed through the federal and state Prevention of Significant Deterioration (PSD) requirements for regulated air pollutants that exceed major source thresholds as a result of the project. BACT is defined as:

"an emissions limitation (including a visible emission standard) based on the maximum degree of reduction for each pollutant subject to regulation under the Clean Air Act which would be emitted from any proposed major stationary source or major modification which the Administrator, on a case-by-case basis, taking into account energy, environmental, and economic impacts and other costs, determines is achievable for such source or modification through application of production processes or available methods, systems, and techniques, including fuel cleaning or treatment or innovative fuel combustion techniques for control of such pollutant. In no event shall application of best available control technology result in emissions of any pollutant which would exceed the emissions allowed by any applicable standard...."

Comment 9: *H-POWER Surface Waters (pp. 4-34 – 4-37): The DEIS mentions at the end of this section that the facility personnel are trained in spill prevention countermeasures. To what level are they trained? In regard to surface waters at the construction laydown site the DEIS states, "Waters are also reported to sometimes occur within sinkholes on protected areas of the site, but these areas may also be affected by tidally influenced groundwaters." To what extent might this be the case?*

Response 9: Facility personnel are trained to recognize, report, and respond to oil spills on the facility (mainly small vehicle or equipment spills). These are localized spills that can be easily managed. In the event there is a large spill, personnel are trained to respond and to call Pacific Commercial Services. LLC or 911.

Surface water noted within sinkholes often have a direct hydraulic connection with the underlying groundwater, and are therefore subject to tidal influence. This is especially true of karst sinkholes in the area.

Comment 10: *Baseline Conditions (pp. 4-45 – 4-46)" In the last paragraph of this section there is a discussion of how much water H-Power is permitted to withdraw from its wells. The amount is 224 mgd a day. Does H-POWER use all of that water or just a percentage? Will the expanded plant use all of the 3.34 mgd it plans to withdraw via wells?*

Response 10: H-POWER does not use all of the water that it is permitted to use on a daily basis. Current and future permitted quantities define the maximum water quantity based on engineering design anticipated to be used on a daily basis. Typical actual daily use is currently less than the permitted figure and this is anticipated to be the case in the future, as well. Actual use will be determined when operation of the new plant commences.

Comment 11: *Operation Impacts & Mitigation (p. 4-53): The DEIS mentions that the proposed expansion has been designed to minimize water demands and resultant discharges. Does this extend to the technical design of the Expansion? If so, how?*

Response 11: Yes, the HPOWER expansion is designed to minimize water demands and resultant discharges. The expansion is designed to reuse as much water as possible. The boiler blow down water will be reused for lime slaking and as dilution water in the scrubber. Water from the settling basin will be reused in the ash discharger as quench water. Cooling tower uses water from the caprock wells. The non-contact cooling water will be injected back into the caprock.

Comment 12: *Flora and Invertebrate Fauna (p. 4-61): In paragraph 4 on page 4-61 the DEIS states that the enclosures within Parcels 33 and 34 shelter the last two naturally occurring populations of Achranthes splendes var. rotundata. What is unique about this site that promotes the growth of Achranthes splendens var. rotundata? Why is it not found in other nearby areas that have similar site characteristics?*

Response 12: *Achyranthes splendens* var. *rotundata* has historically been found in open areas that experience prolonged droughts and have very well-drained or minimal soil. *A. splendens* var. *rotundata* has a preference for sinkholes, which may provide more humid conditions and a higher, tidally fluctuating water table within these arid areas. However, the occurrence of *A. splendens* var. *rotundata* on Parcels 33 and 34 may also be due to a relative lack of damaging events rather than to a factor that specifically promotes growth. During the last three decades, the population has been severely impacted by a number of ongoing processes, including human disturbance and resource competition from invasive plants such as *Prosopis pallida* and *Pluchea spp.* Thus, *A. splendens* var. *rotundata* had a larger historical range than is currently observed but may be present here because these sites have so far avoided extirpation caused by human activities and exotic species. Another stand of *A. splendens* var. *rotundata* can be found in the Ka'ena Point area.

Comment 13: *Mitigation Recommendations (pp. 5-41– 5-42): There are seven mitigation options bulleted in this section. Who would be implementing these measures? Will this fall to the County to implement or will it be the plant's management?*

Response 13: Traffic mitigation measures are not required, but several options were listed for consideration. Such measures would be considered by both the City and the plant's management. Both the City and the plant's management work together on a routine basis, and a member of the City's staff is in residence at the facility.

Comment 14: *Citations: In several parts of the DEIS, there are citations to references that don't appear in the reference section. On page 4-45, there is a citation to a USGS 1998 report but no reference in the Reference Section on pages 12-1 – 12-3. Likewise, on page 5-6 there are a number of citations to reports including McAllister 1933; Kamakau 1976; Thrum 1907 and Sterling and Summers 1978, that don't appear in the reference section. These citations may be from references in the accompanying appendix report, but they should be in the reference section of the DEIS.*

Response 14: References that were inadvertently omitted of Section 12.1 – References, will be included in the FEIS.

If you have any questions regarding this letter, please feel free to call me at (973) 882-2771 or Dr. Russell Okoji of AMEC at (808) 391-9906.

Sincerely,

Samuel Joshi

HONOLULU, HAWAII 96813-5097

IN REPLY REFER TO:

STP 8.3156

March 9, 2009

Mr. Stephen Langham
Environmental Services
Refuse Division, H-POWER
91-174 Hanua Street
Kapolei, Hawaii 96707

Dear Mr. Langham:

Subject: H-POWER Expansion Project, Kapolei, Oahu, Hawaii
Draft Environmental Impact Statement (DEIS)
TMK: 1-9-026: 030, 033, 034

Thank you for requesting the State Department of Transportation's (DOT) review of the subject project to expand the H-POWER facility, which is located in the Campbell Industrial Park area of Oahu.

DOT understands that the subject proposed project is intended to increase the City and County of Honolulu's capacity to deal with solid waste disposal and to increase renewable energy production. The proposed project includes the addition of a third combuster unit (900 ton/day Mass Burn waterwall municiple waste combustor), all associated air pollution control equipment and the equipment needed to tie it into the exisiting plant. There will also be modifications to the exisiting systems and the addition of a new turbine generator.

DOT requests that its concerns for potential project impacts be addressed in the Final EIS. The following comments are offered by the DOT Airports Division Planning Section, who may be contacted via telephone number (808) 838-8817.

1. The proposed project is not anticipated to generate any significant, adverse impacts to operations at the State-owned Kalaeloa Airport.

2. However, given the proximity of the proposed project to Kalaeloa Airport, DOT notes that the applicant will file Form 7460-1, "Notice of Proposed Construction or Alternation" with the Federal Aviation Administration (FAA).

3. As an administrative note, the legend in Figure1.6-1 in the subject DEIS is incorrect. Rather than indicating the entire area as "Military Installation," the legend should be updated to show Kalaeloa Airport as owned by the State of Hawaii.

The following comments are offered by the DOT Highways Division Planning Branch, who may be contacted via telephone number (808) 587-1830.

1. The traffic impact discussion does not include any mention of additional personnel needed to operate the expanded portion of the facility. It would be useful to know if this was an omission, if the information was contained elsewhere in the DEIS, in which it should have been referenced, or if the actual personnel requirements would not materially change.

2. The calculation of additional truck traffic delivering trash for processing and conversion seems reasonable. However, it does not provide any estimate for increases in truck traffic over time, since the expanded facility will not be ready for the additional trucks until 2012. In general, the potential impacted intersections occur on roads that are private or otherwise not under DOT jurisdiction.

3. The discussion of the construction impacts might have merited a separate treatment since the impacts would be present while the expansion was constructed and would not represent a continuing and ongoing impact once construction is completed.

DOT appreciates the opportunity to provide comments and requests four (4) copies of the project Final EIS be provided for final review. If there are any other questions, please contact Mr. David Shimokawa of the DOT Statewide Transportation Planning Office at (808) 587-2356.

Very truly yours,

Francis Paul Keeno

for BRENNON T. MORIOKA, PH.D., P.E.

Mr. Brennon T. Morioka, Ph.D., P.E.
Director of Transportation
Department of Transportation
869 Punchbowl Street
Honolulu, Hawaii 96813-5097

Subject: Draft Environmental Impact Statement (DEIS);
Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility,
Kapolei, Hawaii

Dear Mr. Morioka:

Thank you for your letter dated March 9, 2009, concerning the Draft Environmental Impact Statement for the Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility located in Kapolei, Hawaii. We appreciate your participation in the environmental impact statement review process and have the following responses to your comments.

The following comments are offered by the DOT Airports Division Planning Section:

Comment 1: *The proposed project is not anticipated to generate any significant, adverse impacts to operations at the State-owned Kalaeloa Airport.*

Response 1: Comment noted.

Comment 2: *However, given the proximity of the proposed project to Kalaeloa Airport, DOT notes that the applicant will file Form 7460-1, "Notice of Proposed Construction or Alteration" with the Federal Aviation Administration (FAA).*

Response 2: Form 7460-1, "Notice of Proposed Construction or Alteration" will be filed with the FAA 30 days prior to construction.

Comment 3: *As an administrative note, the legend in Figure 1.6-1 in the subject DEIS is incorrect. Rather than indicating the entire area as "Military Installation," the legend should be updated to show Kalaeloa Airport as owned by the State of Hawaii.*

Response 3: Figure 1.6.-1 will be updated accordingly in the Final EIS.

The following comments are offered by the DOT Highways Division Planning Branch:

Comment 1: *The traffic impact discussion does not include any mention of additional personnel needed to operate the expanded portion of the facility. It would be useful to know if this was an omission, if the information was contained elsewhere in the DEIS, in which it should have been referenced, or if the actual personnel requirements would not materially change.*

Response 1: A discussion of additional personnel is provided in Section 5.5.3.2 Socioeconomic Impact of H-POWER Expansion (Operations). This will be discussed in the traffic section of the final EIS, as well, but the personnel requirements do not change in a way that adversely impacts traffic. Only five to eight new fulltime positions would be created to support the expanded operation.

Comment 2: *The calculation of additional truck traffic delivering trash for processing and conversion seems reasonable. However, it does not provide any estimate for increases in truck traffic over time, since the expanded facility will not be ready for the additional trucks until 2012. In general, the potential impacted intersections occur on roads that are private or otherwise not under DOT jurisdiction.*

Response 2: Thank you for noting that the impacted intersections occur on roads that are not under DOT jurisdiction. Regarding the traffic analysis, it is true that the 2008 baseline was compared to the 2012 operational level assuming a maximum operational level (worst case). We have performed additional level of service calculations for the affected intersections comparing an estimated 2012 baseline with and without the estimated additional traffic from the operation of the proposed expansion unit assuming maximum operational traffic.

The following section will be added to the FEIS:

5.2.5 TRAFFIC IMPACTS DUE TO PROJECTED GROWTH IN THE JCIP

Although JCIP is almost completely developed, limited growth of the JCIP area may have an impact on traffic conditions during construction and operation of the proposed Expansion. Actual projected growth numbers were unavailable for JCIP, however growth rates for Kapolei and Ewa were reported as follows in several source documents, including City of Kapolei, Moving Kapolei Forward. http://www.kapolei.com/pdf/news/Moving%20Kapolei%20Forward.pdf; Kapolei Magazine. http://www.kapolei.com/pdf/magazine/MovingKapoleiForward.pdf; Kapolei Quick Facts. http://www.kapolei.com/quick_facts.cfm?quickFactID=16; …ID-21; and Oahu Metropolitan Planning Organization. Oahu Regional Transportation Plan. www.honolulutraffic.com/DraftORTP2030.pdf.

- 6-11% growth/year in jobs in Kapolei
- 5-8% growth/year in population in Kapolei
- 5.6% growth/year in population in Ewa
- 8% growth/year in jobs in Ewa

Due to the minimal growth potential in JCIP itself, AMEC conservatively assumed that the JCIP would expand at a rate of 5% per year. These estimates are likely very optimistic considering the current economic climate. Both Operational and Construction scenarios were evaluated.

Growth was compounded annually to 2012 for the Operational scenario and through 2010 for the Construction scenario to coincide with the construction year with peak transient traffic impacts.

5.2.5.1 Traffic Impacts During Facility Operation

Traffic conditions during operation of the expanded facility prior to roadway improvements and in consideration of JCIP growth through 2012 are discussed below. At Intersection 1, the Northbound direction remains an LOS of F. Southbound traffic declines from an LOS of D to an LOS of E when compared to Level of Service Analysis During Operation Following Expansion (Section 5.2.2). Intersection 2 in the Eastbound, AM analysis declines from an LOS of E to F. Eastbound PM changes from an LOS of B to C. Intersection 3 Southbound conditions remained a LOS of F in the AM hours, but declined from an LOS of B to C in the PM. AM Westbound traffic remained an LOS of F. PM traffic declined from an LOS of C to E. At Intersection 4, a slight decline in the Southbound AM traffic is observed with an LOS change from A to B. Eastbound AM and PM both show a decline from an LOS of C to D and C to F, respectively. Overall there is a slight impact to traffic conditions when potential growth of JCIP (at 5% per year) is considered.

TABLE 5.2-9 LEVEL OF SERVICE ANALYSIS DURING OPERATION FOLLOWING EXPANSION WITH PROJECTED GROWTH TO 2012 PRIOR TO ROADWAY IMPROVEMENTS

	Intersection 1: Kalaeloa + Farrington/Westbound H1 Ramps			
	Northbound	Southbound	Eastbound	Westbound
AM Peak	**F (342 sec)**	***E (40 sec)***	A(0)	A(0)
PM Peak	**F (>1000 sec)**	***E (41 sec)***	A(0)	A(0)
	Intersection 2: Kalaeloa + Eastbound H1 Ramps			
	Northbound	Southbound	Eastbound	Westbound
AM Peak	A(0 sec)	A(0 sec)	***F (64 sec)***	n/a
PM Peak	A(0 sec)	A(0 sec)	*C (15 sec)*	n/a
	Intersection 3: Kalaeloa + Honolulu Advertiser Bldg. (Signal)			
	Northbound	Southbound	Eastbound	Westbound
AM Peak	B (15 sec)	**F (220 sec)**	B (13 sec)	**F (206 sec)**
PM Peak	**F (323 sec)**	*C (24 sec)*	B (13 sec)	***E (58 sec)***
	Intersection 4: Kalaeloa + Malakole (Signal)			
	Northbound	Southbound	Eastbound	Westbound
AM Peak	A (10 sec)	*B (11 sec)*	*D (48 sec)*	B (12 sec)
PM Peak	B (17 sec)	B (10 sec)	***F (100 sec)***	B (12 sec)

*Bolded items either “At Capacity” (LOS E) or “Forced Flow” (LOS F).
Italicized items indicate a change in LOS from Existing Conditions.

Traffic conditions during operation of the expanded facility following roadway improvements and in consideration of JCIP growth through 2012 are discussed below. At Intersection 1, the

Northbound direction remains an LOS of F. Southbound AM and PM traffic declines from an LOS of D to an LOS of E when compared to Traffic Impacts During Facility Operation Post Kalaeloa Roadway Improvements (Section 5.2.4.1). Intersection 2 in the Eastbound, declines from an LOS of E to F in the AM and from B to C in the PM. At Intersection 3, a slight decline in the Southbound traffic is observed with an LOS change from C to D in the AM and B to C in the PM. Northbound PM traffic also has a slight decline from C to D. Westbound AM and PM have a sharp decline from an LOS of C to F. Intersection 4 Northbound PM has a slight decline from an LOS of B to C. Southbound conditions also slightly declined from an LOS of A to B. Eastbound PM declined from C to D, where AM improved from D to C. This isolated improvement at Intersection 4 may be attributed to the Highway Capacity Software redistribution of signal times. Traffic for the intersection should be viewed as a whole. Overall a decline in LOS is observed when JCIP growth is considered. However, traffic conditions are alleviated to some degree when roadway improvements of Kalaeloa are completed.

TABLE 5.2-10 LEVEL OF SERVICE ANALYSIS DURING OPERATION FOLLOWING EXPANSION WITH PROJECTED GROWTH TO 2012 AFTER ROADWAY IMPROVEMENTS

	Intersection 1: Kalaeloa + Farrington/Westbound H1 Ramps			
	Northbound	Southbound	Eastbound	Westbound
AM Peak	**F (342 sec)**	***E (40 sec)***	A (0 sec)	A (0 sec)
PM Peak	**F (>1000 sec)**	***E (41 sec)***	A (0 sec)	A (0 sec)
	Intersection 2: Kalaeloa + Eastbound H1 Ramps			
	Northbound	Southbound	Eastbound	Westbound
AM Peak	A (0 sec)	A (0 sec)	***F (67 sec)***	n/a
PM Peak	A (0 sec)	A (0 sec)	*C (16 sec)*	n/a
	Intersection 3: Kalaeloa + Honolulu Advertiser Bldg. (Signal)			
	Northbound	Southbound	Eastbound	Westbound
AM Peak	C (29 sec)	*D (50 sec)*	B (16 sec)	***F (87 sec)***
PM Peak	*D (47 sec)*	*C (24 sec)*	B (15 sec)	***F (98 sec)***
	Intersection 4: Kalaeloa + Malakole (Signal)			
	Northbound	Southbound	Eastbound	Westbound
AM Peak	B (15 sec)	*B (12 sec)*	*C (30sec)*	B (13 sec)
PM Peak	*C (23 sec)*	B (14 sec)	*D (39 sec)*	B (12 sec)

*Bolded items either “At Capacity” (LOS E) or “Forced Flow” (LOS F).
Italicized items indicate a change in LOS from Existing Conditions.

5.2.5.2 Traffic Impacts During Facility Construction -

Traffic conditions during construction of the expanded facility prior to roadway improvements and in consideration of JCIP growth through 2012 are discussed below. Increases due to personnel and construction vehicles are discussed separately. Month 13 baseline traffic was used as the peak traffic month due to construction vehicle increases during the construction period, while Month 22 baseline traffic was used as the peak traffic month due to increases in construction personnel.

Construction Vehicle Increases – Month 13

At Intersection 1, the Northbound direction remains an LOS of F. LOS designations for the other directional traffic remains the same at this intersection when compared to Level of Service Analysis During Facility Construction (Section 5.2.3). Intersection 2 in the Eastbound, AM analysis declines from an LOS of C to E. Intersection 3 Westbound conditions slightly declines in the AM and PM from an LOS of E to F and C to D, respectively. At Intersection 4, a decline in the Eastbound PM traffic from an LOS of C to E is observed.

TABLE 5.2-11 LEVEL OF SERVICE ANALYSIS DURING CONSTRUCTION (CONSTRUCTION VEHICLE INCREASES) WITH PROJECTED GROWTH TO 2010

	Intersection 1: Kalaeloa + Farrington/Westbound H1 Ramps			
	Northbound	Southbound	Eastbound	Westbound
AM Peak	**F (106 sec)**	D (30 sec)	A(0)	A(5 sec)
PM Peak	**F (>1000 sec)**	D (33 sec)	A(0)	A(3 sec)
	Intersection 2: Kalaeloa + Eastbound H1 Ramps			
	Northbound	Southbound	Eastbound	Westbound
AM Peak	A(0)	A(0)	*E (43 sec)*	n/a
PM Peak	A(0)	A(0)	B (14 sec)	n/a
	Intersection 3: Kalaeloa + Honolulu Advertiser Bldg. (Signal)			
	Northbound	Southbound	Eastbound	Westbound
AM Peak	B (14 sec)	**F (137 sec)**	B (13 sec)	***F (130 sec)***
PM Peak	**F (229 sec)**	B (17 sec)	B (13 sec)	*D (39 sec)*
	Intersection 4: Kalaeloa + Malakole (Signal)			
	Northbound	Southbound	Eastbound	Westbound
AM Peak	A (9 sec)	A (8 sec)	C (30 sec)	B (12 sec)
PM Peak	B (16 sec)	A (10 sec)	***E (56 sec)***	B (11 sec)

*Bolded items either “At Capacity” (LOS E) or “Forced Flow” (LOS F).
Italicized items indicate a change in LOS from Existing Conditions.

Personnel Increases – Month 22

At Intersection 1, the Northbound direction remains an LOS of F. LOS designations for the other directional traffic remains the same when compared to Level of Service Analysis During Facility Construction (Section 5.2.3). Intersection 2 in the Eastbound, AM analysis declines from an LOS of D to E. Intersection 3 Westbound conditions slightly decline in the AM and PM from an LOS of E to F and C to D, respectively. At Intersection 4, a decline in the Eastbound PM traffic from an LOS of C to E. Overall there is a slight impact to traffic conditions assuming a JCIP growth rate of 5% per year.

TABLE 5.2-12 LEVEL OF SERVICE ANALYSIS DURING CONSTRUCTION (PERSONNEL INCREASES) WITH PROJECTED GROWTH TO 2010

	Intersection 1: Kalaeloa + Farrington/Westbound H1 Ramps			
	Northbound	Southbound	Eastbound	Westbound
AM Peak	**F (106 sec)**	D (30 sec)	A(0)	A(5 sec)
PM Peak	**F (>1000 sec)**	D (32 sec)	A(0)	A(3 sec)
	Intersection 2: Kalaeloa + Eastbound H1 Ramps			
	Northbound	Southbound	Eastbound	Westbound
AM Peak	A(0)	A(0)	***E (43 sec)***	n/a

	Intersection 3: Kalaeloa + Honolulu Advertiser Bldg. (Signal)			
	Northbound	Southbound	Eastbound	Westbound
AM Peak	B (13 sec)	**F (145 sec)**	B (13 sec)	***F (131 sec)***
PM Peak	**F (237 sec)**	B (17 sec)	B (13 sec)	*D (39 sec)*
	Intersection 4: Kalaeloa + Malakole (Signal)			
	Northbound	Southbound	Eastbound	Westbound
AM Peak	A (9 sec)	A (9 sec)	C (29 sec)	B (12 sec)
PM Peak	B (16 sec)	A (10 sec)	***E (58 sec)***	B (11 sec)

*Bolded items either "At Capacity" (LOS E) or "Forced Flow" (LOS F).
Italicized items indicate a change in LOS from Existing Conditions.

Traffic conditions during construction of the expanded facility following roadway improvements and in consideration of JCIP growth through 2012 are discussed below. Increases due to construction personnel and construction vehicles are discussed separately.

Construction Vehicle Increases – Month 13

Conditions at Intersection 1 and 2 remain the same when compared to Traffic Impacts During Facility Construction Post Kalaeloa Roadway Improvements (Section 5.2.4.2). Intersection 3 Northbound AM and PM conditions decline slightly from an LOS of B to C for both. Southbound AM conditions decrease to an LOS of D from C. Westbound conditions decline in the AM and PM from an LOS of D to E for both. At Intersection 4, slight decline a decline in the Northbound AM traffic from an LOS of A to B and in Eastbound PM traffic from an LOS of C to D.

TABLE 5.2-13 LEVEL OF SERVICE ANALYSIS DURING CONSTRUCTION (CONSTRUCTION VEHICLE INCREASES) FOLLOWING EXPANSION WITH PROJECTED GROWTH TO 2010 AFTER ROADWAY IMPROVEMENTS

	Northbound	Southbound	Eastbound	Westbound
Intersection 1: Kalaeloa + Farrington/Westbound H1 Ramps				
AM Peak	**F (106 sec)**	D (30 sec)	A(0)	A(5 sec)
PM Peak	**F (>1000 sec)**	D (33 sec)	A(0)	A(3 sec)
Intersection 2: Kalaeloa + Eastbound H1 Ramps				
AM Peak	A(0)	A(0)	**E (45 sec)**	n/a
PM Peak	A(0)	A(0)	B (15 sec)	n/a
Intersection 3: Kalaeloa + Honolulu Advertiser Bldg. (Signal)				
AM Peak	*C (22 sec)*	*D (25 sec)*	B (16 sec)	***E (60 sec)***
PM Peak	*C (26 sec)*	B (18 sec)	B (15 sec)	***E (60 sec)***
Intersection 4: Kalaeloa + Malakole (Signal)				
AM Peak	*B (11 sec)*	A (8 sec)	*D (40 sec)*	B (15 sec)
PM Peak	B (18 sec)	B (12 sec)	C (31 sec)	B (12 sec)

*Bolded items either “At Capacity” (LOS E) or “Forced Flow” (LOS F).
Italicized items indicate a change in LOS from Existing Conditions.

Construction Personnel Increases – Month 22

Conditions at Intersection 1 and 2 remain the same when compared to Traffic Impacts During Facility Construction Post Kalaeloa Roadway Improvements (Section 5.2.4.2). Intersection 3 Northbound PM conditions decline slightly from an LOS of B to C. Westbound conditions decline in the AM and PM from an LOS of D to E for both. At Intersection 4, slight decline a decline in the Northbound AM traffic from an LOS of A to B and in Eastbound PM traffic from an LOS of C to D.

TABLE 5.2-14 LEVEL OF SERVICE ANALYSIS DURING CONSTRUCTION (PERSONNEL INCREASES) FOLLOWING EXPANSION WITH PROJECTED GROWTH TO 2010 AFTER ROADWAY IMPROVEMENTS

	Northbound	Southbound	Eastbound	Westbound
Intersection 1: Kalealoa + Farrington/Westbound H1 Ramps				
AM Peak	**F (106 sec)**	D (30 sec)	A(0)	A(5 sec)
PM Peak	**F (>1000 sec)**	D (33 sec)	A(0)	A(3 sec)
Intersection 2: Kalealoa + Eastbound H1 Ramps				
AM Peak	A(0)	A(0)	**E (45 sec)**	n/a
PM Peak	A(0)	A(0)	B (15 sec)	n/a
Intersection 3: Kalealoa + Honolulu Advertiser Bldg. (Signal)				
AM Peak	C (22 sec)	C (24 sec)	B (16 sec)	***E (59 sec)***
PM Peak	*C (25 sec)*	B (18 sec)	B (15 sec)	***E (59 sec)***
Intersection 4: Kalealoa + Malakole (Signal)				
AM Peak	*B (12 sec)*	A (8 sec)	*D (39 sec)*	B (15 sec)
PM Peak	B (18 sec)	B (12 sec)	C (31 sec)	B (11 sec)

*Bolded items either "At Capacity" (LOS E) or "Forced Flow" (LOS F).
Italicized items indicate a change in LOS from Existing Conditions.

As with Operational traffic, projected growth of the JCIP does negatively impact traffic conditions during Construction activities (truck and personnel increases). However, roadway improvements that are currently underway assist in alleviating some of the congestion. Mitigation options discussed in Section 5.2.4.3 could also further reduce impacts of JCIP growth and the proposed Expansion to the area.

Comment 3: *The discussion of the construction impacts might have merited a separate treatment since the impacts would be present while the expansion was constructed and would not represent a continuing and ongoing impact once construction is completed.*

Response 3: Discussion of construction impacts are presented in Section 5.2.3 of the DEIS (current conditions) and in Section 5.2.4.2 (post Kalaeloa Roadway improvements).

Comment 4: *DOT appreciates the opportunity to provide comments and requests four (4) copies of the project Final EIS be provided for final review.*

Response 4: Four copies of the Final EIS will be provided as requested.

If you have any questions regarding this letter, please feel free to call me at (973) 882-2771 or Dr. Russell Okoji of AMEC at (808) 391-9906.

Sincerely,

Samuel Joshi

Refuse Division, H-Power
Department of Environmental Services
City & County of Honolulu
91-174 Hanua Street
Kapolei, Hawaii 96707

Dear Mr. Langham:

SUBJECT: Draft Environmental Impact Statement (DEIS) for H-Power Expansion Project Kapolei, Island of Oahu, Hawaii Reference #: 09-019

The Department of Health, Clean Water Branch (CWB), has reviewed the subject document and offers these comments on your project. Please note that our review is based solely on the information provided in the subject document and its compliance with Hawaii Administrative Rules (HAR), Chapters 11-54 and 11-55. You may be responsible for fulfilling additional requirements related to our program. We recommend that you also read our standard comments on our website at http://www.hawaii.gov/health/environmental/env-planning/landuse/CWB-standardcomment.pdf.

1. Any project and its potential impacts to State waters must meet the following criteria:

   a. Antidegradation policy (HAR, Section 11-54-1.1), which requires that the existing uses and the level of water quality necessary to protect the existing uses of the receiving State water be maintained and protected.

   b. Designated uses (HAR, Section 11-54-3), as determined by the classification of the receiving State waters.

   c. Water quality criteria (HAR, Sections 11-54-4 through 11-54-8).

2. You are required to obtain a National Pollutant Discharge Elimination System (NPDES) permit for discharges of wastewater, including storm water runoff, into State surface waters (HAR, Chapter 11-55). For the following types of discharges into Class A or Class 2 State waters, you may apply for NPDES general permit coverage by submitting a Notice of Intent (NOI) form:

   a. Storm water associated with industrial activities. A NOI for modification to the NDPES Notice of General Permit Coverage File No. HI R70B771 shall be submitted for the expansion to the subject facility.

   b. Storm water associated with construction activities, including clearing, grading, and excavation, that result in the disturbance of equal to or greater than one (1) acre of total land area. The total land area includes a contiguous area where multiple separate and distinct construction activities may be taking place at different times on different schedules under a larger common plan of development or sale. An NPDES permit is required before the start of the construction activities.

   c. Hydrotesting water.

   d. Construction dewatering effluent. Coverage under this general permit may be required for the dewatering activities conducted during the excavation for the relocation a steam pipe and installation of footings.

   You must submit a separate NOI form for each type of discharge at least 30 calendar days prior to the start of the discharge activity, except when applying for coverage for discharges of storm water associated with construction activity. For this type of discharge, the NOI must be submitted 30 calendar days before to the start of construction activities. The NOI forms may be picked up at our office or downloaded from our website at http://www.hawaii.gov/health/environmental/water/cleanwater/forms/genl-index.html.

3. For types of wastewater not listed in Item 4 above or wastewater discharging into Class 1 or Class AA waters, you may need an NPDES individual permit. An application for an NPDES individual permit must be submitted at least 180 calendar days before the commencement of the discharge. The NPDES application forms may be picked up at our office or downloaded from our website at http://www.hawaii.gov/health/environmental/water/cleanwater/forms/indiv-index.html.

4. You must also submit a copy of the NOI or NPDES permit application to the State Department of Land and Natural Resources, State Historic Preservation Division (SHPD), or demonstrate to the satisfaction of the CWB that SHPD has or is in the process of evaluating your project. Please submit a copy of your request for review by SHPD or SHPD's determination letter for the project along with your NOI or NPDES permit application, as applicable.

5. Please note that all discharges related to the project construction or operation activities, whether or not NPDES permit coverage is required, must comply with the State's Water Quality Standards. Noncompliance with water quality requirements contained in HAR, Chapter 11-54, and/or permitting requirements, specified in HAR, Chapter 11-55, may be subject to penalties of $25,000 per day per violation.

If you have any questions, please visit our website at http://www.hawaii.gov/health/environmental/water/cleanwater/index.html, or contact the Engineering Section, CWB, at 586-4309.

Sincerely,

Alec Wong

Subject: Draft Environmental Impact Statement (DEIS);
Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility, Kapolei, Hawaii

Dear Mr. Wong,

Thank you for your letter dated March 10, 2009, concerning the Draft Environmental Impact Statement for the Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility located in Kapolei, Hawaii. We appreciate your participation in the environmental impact statement review process and have the following responses to your comments.

Comment 1*: Any project and its potential impacts to State waters must meet the following criteria:*

a. *Antidegradation policy (HAR, Section 11-54-1.1), which requires that the existing uses and the level of water quality necessary to protect the existing uses of the receiving State water be maintained and protected.*
b. *Designated uses (HAR, Section 11-54-3), as determined by the classification of the receiving State waters.*
c. *Water quality criteria (HAR, Sections 11-54-4 through 11-54-8).*

Response 1: We are aware of these regulations and appropriate permits which will address these issues are being prepared.

Comment 2: *You are required to obtain a National Pollutant Discharge Elimination System (NPDES) permit for discharges of wastewater, including storm water runoff, into State surface waters (HAR, Chapter 11-55). For the following types of discharges into Class A or Class 2 State waters, you may apply for NPDES general permit coverage by submitting a Notice of Intent (NOI) form:*

a. *Storm water associated with industrial activities. A NOI for modification to the NDPES Notice of General Permit Coverage File No. HI R70B771 shall be submitted for the expansion to the subject facility.*
b. *Storm water associated with construction activities, including clearing, grading, and excavation, that result in the disturbance of equal to or greater than one (1) acre of total land area. The total land area includes a contiguous area where multiple separate and distinct construction activities may be taking place at different times on different schedules under a larger common plan of development or sale. An NPDES permit is required before the start of the construction activities.*

c. Hydrotesting water.
d. Construction dewatering effluent. Coverage under this general permit may be required for the dewatering activities conducted during the excavation for the relocation of a steam pipe and installation of footings.

You must submit a separate NOI form for each type of discharge at least 30 calendar days prior to the start of the discharge activity, except when applying for coverage for discharges of storm water associated with construction activity. For this type of discharge, the NOI must be submitted 30 calendar days before to the start of construction activities. The NOI forms may be picked up at our office or downloaded from our website at http ://vvww.hawaii.gov/health/environmental/water/cleanwater/forms/genl-index.html.

Response 2: We are aware of these regulations and appropriate permits are in the planning. A NOI form will be submitted at least 30 calendar days prior to the start of any discharge activity.

Comment 3: *For types of wastewater not listed in Item 4 above or wastewater discharging into Class 1 or Class AA waters, you may need an NPDES individual permit. An application for an NPDES individual permit must be submitted at least 180 calendar days before the commencement of the discharge. The NPDES application forms may be picked up at our office or downloaded from our website at http ://www.hawaii.gov/health/environmental/water/cleanwater/forms/indiv-index.html.*

Response 3: We are aware of these regulations and appropriate permits are in the planning. If necessary, a NPDES individual permit will be submitted at least 180 calendar days prior to the start of the discharge activity for wastewater not addressed in Item 4 above.

Comment 4: *You must also submit a copy of the NOI or NPDES permit application to the State Department of Land and Natural Resources, State Historic Preservation Division (SHPD), or demonstrate to the satisfaction of the CWB that SHPD has or is in the process of evaluating your project. Please submit a copy of your request for review by SHPD or SHPD's determination letter for the project along with your NOI or NPDES permit application, as applicable.*

Response 4: Comment noted. A copy of our request for review to SHPD or SHPD's determination letter will accompany our NOI or NPDES permit application.

Comment 5: *Please note that all discharges related to the project construction or operation activities, whether or not NPDES permit coverage is required, must comply with the State's Water Quality Standards. Noncompliance with water quality requirements contained in HAR, Chapter 11-54, and/or permitting requirements, specified in HAR, Chapter 11-55, may be subject to penalties of $25,000 per day per violation.*

Response 5: We are aware of these regulations and any discharges will comply with the State's Water Quality Standards.

If you have any questions regarding this letter, please feel free to call me at (973) 882-2771 or Dr. Russell Okoji of AMEC at (808) 391-9906.

Sincerely,

Samuel Joshi

Archaeology

Dear Mr. Joshi:

SUBJECT: 6E-8 Historic Preservation Review—
DRAFT Environmental Impact Statement (DEIS)—
H-POWER Expansion Project,
Hono'uli'uli Ahupua'a, 'Ewa District, O'ahu, Hawai'i
TMK: (1) 9-026-030, 033, 034

Thank you for the opportunity to review this DRAFT Environmental Impact Statement, which we received via CD on January 28, 2009.

The H-POWER site is located in the Campbell Industrial Park at Kalaeloa [formerly called Barbers Point or Barber's Point]. The H-POWER facility, which began operation in May 1990, is operated by Covanta Honolulu Resource Recovery Venture (CHRRV) on behalf of the City and County of Honolulu.

This project will entail the expansion of the current H-POWER facility onto parcels 33 and 34 adjacent to the current facility. They are currently vacant. A garden for endemic plants and the site for the reburial of a single human burial previously discovered when the initial facility was built in the 1980's area present on the site. Because of the possibility that sinkholes prevalent in this portion of 'Ewa could contain historic properties, an archaeological and cultural impact assessment study in support of the proposed expansion on 24.635 acres of industrially zoned land was undertaken to determine the presence or absence of historic properties (*ARCHAEOLOGICAL AND CULTURAL IMPACT ASSESSMENTS FOR THE PROPOSED H-POWER EXPANSION PROJECT, HONO'ULI'ULI AHUPUA'A, 'EWA DISTRICT, ISLAND OF O'AHU, TMK: (1) 9-1-026:30, 33, AND 34[McCoy and Clark, September 2008]*.

There is evidence that large portions of Parcels 33 and 34 have been grubbed and graded. Clearing may have occurred on more than one occasion. Aerial photographs suggest that the land clearing project undertaken by Campbell Estate in the early 1960s on Parcel 30 and documented during the archaeological reconnaissance survey in 1983 also included Parcels 33 and 34.

No historic properties were recorded during this archaeological assessment; however, it is recommended that precautionary monitoring be performed during any ground disturbing activities. We find that there are **no historic properties affected** by this project.

Please call Wendy Tolleson at (808) 692-8024 if there are any questions or concerns regarding this letter.

Aloha,

Nancy A. McMahon

Subject: Draft Environmental Impact Statement (DEIS);
Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility, Kapolei, Hawaii

Dear Ms. McMahon:

Thank you for your letter dated March 16, 2009, concerning the Draft Environmental Impact Statement for the Proposed 3rd Boiler Expansion of H-POWER Energy-from-Waste Facility located in Kapolei, Hawaii. We appreciate your participation in the environmental impact statement review process.

We understand that the Department of Land and Natural Resources, State Historic Preservation Division finds that no historic properties will be affected by the proposed Expansion. As a precautionary measure a cultural monitor will be on-call should the presence of any cultural deposits or if a subsurface void is discovered. Should you have any questions in the future, please feel free to call me at (973) 882-2771 or Dr. Russell Okoji of AMEC at (808) 391-9906.

Sincerely,

Samuel Joshi
