

M70/1342 BORANUP

DETAILED FLORA AND VEGETATION SURVEY

Prepared for: Lime Industries

Report Date: 5 April 2022

Version: 1

Report No. 2022-661

PGV ENVIRONMENTAL

The logo consists of the letters "PGV" in a large, bold, white sans-serif font. Below "PGV", the word "ENVIRONMENTAL" is written in a smaller, white, all-caps sans-serif font. The background of the logo area is a solid orange color with a subtle radial gradient effect, transitioning from a darker shade at the top to a lighter shade at the bottom. The entire logo is centered on a white rectangular background.

1 INTRODUCTION

1.1 Background

Mining Lease M70/1342 is located in the Shire of Augusta Margaret River, approximately 25km south of the Margaret River townsite (Figure 1). The mining lease is 77ha in size of which around 9ha has been excavated for lime sand mining at the eastern end. Lime Industries is proposing to extend the current sand mine further west and south-west (Figure 2).

The proposed expansion area is around 15.5ha and contains native vegetation. PGV Environmental was commissioned by Lime Industries to undertake a Detailed Flora and Vegetation Survey in the proposed expansion area (the site).

1.2 Scope of Works

A Detailed Flora and Vegetation Survey was undertaken in accordance with EPA Technical Guidance *Flora and Vegetation Surveys for Environmental Impact Assessment* (EPA, 2016). The survey included the following:

- Desktop search and review of the Department of Biodiversity, Conservation and Attractions (DBCA) Threatened and Priority flora and Ecological Community Databases;
- A search of the Atlas of Living Australia database (ALA, 2021);
- A search of the Commonwealth Government's Protected Matters Search Tool (DAWE, 2022) to identify species potentially occurring within the area that are protected under the *Environment Protection and Biodiversity Conservation (EPBC) Act 1999*;
- Examination of historic and recent aerial photography and contour and soil maps to provisionally identify vegetation types and condition;
- Field survey using quadrats to record native and introduced species as well as a thorough site walkover of any areas of native vegetation;
- Recording of any significant plant species using a hand-held GPS;
- Description and mapping of vegetation types and vegetation condition;
- Compilation of a flora list; and
- Assessing the conservation value of flora species and vegetation communities.

2 EXISTING ENVIRONMENT

2.1 Land Use

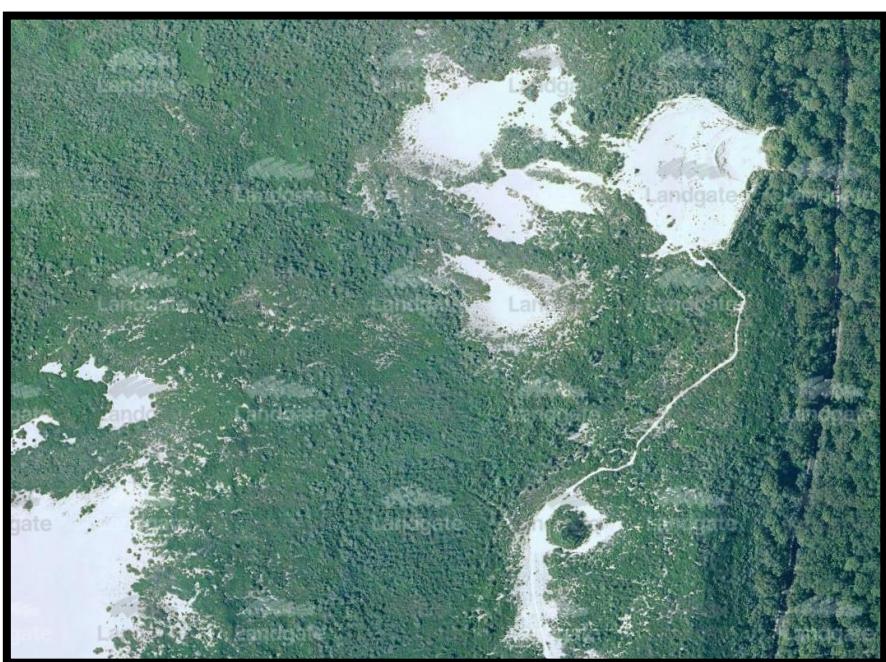

The earliest available historic aerial photograph on-line from 1971 shows that the site was mostly bare sand with some areas of native vegetation (Plate 1) (Landgate, 2022).

Plate 1: Aerial Photograph 1971 (Landgate, 2022)

Native vegetation established over much of the bare sand areas over time (Plate 2). Lime sand mining has commenced at the north-east end of the tenement.

Plate 2: Aerial Photograph 2004 (Landgate, 2022)

The most recently available aerial photograph from 2020 shows the expansion of the sand mine over the eastern part of the tenement. The area subject of this survey is all native vegetation.

Plate 3: Aerial Photograph 2020 (Landgate, 2022)

2.2 Topography

The site gently slopes up from the top of the existing pit at around 120m to a high point near the south-west corner with an elevation of around 170 m Australian Height Datum (AHD) (Figure 2). A network of small dunes and swales occurs within the site.

2.3 Geology and Soils

The site is mapped as part of the Gracetown Ridge System which is a limestone ridge, in the coastal edge of the Leeuwin Zone (DPIRD, 2022). The soil units mapped on the site are:

- Kilcarnup dunes (organic) Phase (216GrKPf) which are steep dunes, (gradients usually in excess of 20%) not exposed to prevailing winds with deep pale calcareous sands with brown topsoil (DPIRD, 2022) and are mapped over the majority of the site.
- Kilcarnup blowout Phase (216GrKPM) which are steep bare dunes of mobile pale calcareous sand, not exposed to prevailing winds. (DPIRD, 2022). This phase is mapped on the north-eastern corner of the site.

2.4 Hydrology

The Surficial Aquifer in the Cape to Cape South sub-area ranges from alluvial and colluvial deposits in river valleys to dunes and swales which can reach a thickness exceeding 100 m. The saturated thickness of the aquifer is small and in places, dune sands lie over dry bedrock with no water-table development (DoW, 2009).

The site is elevated on highly porous material and there are no drainage lines or wetlands.

3 METHODOLOGY

3.1 Database Searches

Searches of the following databases were undertaken prior to the site survey:

- Department of Biodiversity, Conservation and Attractions (DBCA) Threatened and Priority Flora database and Threatened Ecological Communities database (Appendix 1) with a buffer radius of 20km;
- Atlas of Living Australia (ALA, 2021) (Appendix 2) with a buffer radius of 10km; and
- The Commonwealth Government's Protected Matters Search Tool to identify species potentially occurring within the area that are protected under the *Environment Protection and Biodiversity Conservation (EPBC) Act 1999* (DAWE, 2021). A radius of 5km was used for this database (Appendix 3).

3.2 Detailed Survey

A Detailed spring flora and vegetation survey of the site was conducted by Dr Paul van der Moezel on 22 October 2021. The site was walked to record all species in the survey area. The vegetation on the site is extremely thick in most places and difficult to walk through. All areas that appeared to be different vegetation types on the aerial photographs were able to be accessed. In addition, the highest point in the south-west corner of the site was reached. PGV Environmental consider the inability to survey the whole site in detail was not a constraint to the results given the uniform nature of the vegetation types recorded.

Information on flora composition and vegetation structure was recorded in seven 10m x 10m non-permanent quadrats sampled from representative vegetation types.

Most plant species were identified in the field. Some specimens were photographed or taken for identification at the Perth Reference Herbarium or office using standard reference guides.

3.3 Survey Conditions

The conditions that the survey was undertaken in are presented in Table 1 in order to assess the adequacy of the survey. Rainfall for Jandakot (Measured at Jandakot Airport, Site Number 009712, 16km from the site) was above average for July in 2021 being 242.2mm and slightly below average in August being 144.6mm compared to mean values of 222.0mm and 164.8mm (BOM, 2021). The rainfall in September was 93.6mm compared to an average of 112.0mm (BOM, 2021). The rainfall was higher than average rainfall in October (109.4mm compared to a mean of 71.8mm) (BOM, 2021). There are no extremes in weather events so the climatic conditions are not a constraint on the survey.

Table 1: Statement of Botanical Survey Conditions

Issue	Constraints (Y/N)*	Comment
Competency/experience of the consultant conducting the survey	No	Dr Paul van der Moezel has extensive botanical survey experience in the Augusta-Margaret River area.
Proportion of the flora identified^	No	The timing of the survey in mid-October was optimal to identify most flora species on the site including all potential Threatened and Priority Flora. No follow-up survey required.
Sources of information (historic/recent or new data)	No	The flora of the region is relatively well known.
Proportion of the task achieved and further work that may need to be undertaken	No	No follow-up survey required as no Threatened Flora expected to occur in other seasons.
Timing/weather/season/cycle	No	The spring survey was optimal for most flora species. 2021 was a good year for ephemeral species.
Disturbances (Fire)	No	The fire age of the vegetation was greater than 5 years
Intensity of survey (e.g. In retrospect was the intensity adequate)	No	Site coverage was low due to the very difficult vegetation to walk through. All vegetation types and topographical areas accessed. Low site coverage unlikely to impact on results due to the uniformity of vegetation types.
Completeness (e.g. was relevant area fully surveyed)	No	
Resources (e.g. degree of expertise available for plant identification)	No	Experienced botanist undertook most plant identifications on site.
Remoteness and/or access problems	No	Accessible site close to Caves Road.
Availability of contextual (e.g. bioregional) information for the study area.	No	Beard <i>et al.</i> (2013)

*Constraints have been rated as Significant, Moderate or No constraints

[^]Fungi and nonvascular flora (e.g. algae, mosses and liverworts) were not specifically surveyed for during the survey.

4 RESULTS

4.1 Flora Database Searches

The search of the DBCA Threatened and Priority Flora Databases: the WA Herbarium database (WAHerb), the Threatened and Priority Flora Species List (TFPL) (37-1021FL) (Appendix 1) and Atlas of Living Australia (Appendix 2) indicates that a number of species that are listed as Endangered, Threatened or Priority have been recorded within the vicinity of the site. The EPBC Act Protected Matters Search Tool (Appendix 3) identifies species listed under the EPBC Act as potentially having habitat in the area. The results from these database searches are shown in Table 2. None of the species has been recorded from the survey area.

Table 2: Conservation Significant Flora Identified in Database Searches

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act
<i>Caladenia lodeana</i>	Lodge's Spider-orchid	Critically Endangered	Critically Endangered
<i>Gastrolobium papilio</i>	Butterfly-leaved Poison	Critically Endangered	Endangered
<i>Lambertia echinata</i> subsp. <i>occidentalis</i>	Western Prickly Honeysuckle	Critically Endangered	Endangered
<i>Banksia nivea</i> subsp. <i>uliginosa</i>	Swamp Honeypot	Endangered	Endangered
<i>Boronia exilis</i>	Scott River Boronia	Endangered	Endangered
<i>Caladenia excelsa</i>	Giant Spider-orchid	Endangered	Endangered
<i>Caladenia hoffmannii</i>	Hoffman's Spider-orchid	Endangered	Endangered
<i>Darwinia ferricola</i>	Scott River Darwinia	Endangered	Endangered
<i>Drakaea micrantha</i>	Dwarf Hammer-orchid	Endangered	Vulnerable
<i>Grevillea brachystylis</i> subsp. <i>australis</i>		Endangered	Vulnerable
<i>Kennedia lateritia</i>	Augusta Kennedia	Endangered	Endangered
<i>Lambertia orbifolia</i> subsp. Scott River Plains (L.W. Sage 684)	Roundleaf Honeysuckle	Endangered	Endangered
<i>Reediea spathacea</i>	Reedia	Endangered	Critically Endangered
<i>Banksia squarrosa</i> subsp. <i>argillacea</i>	Whicher Range Dryandra	Vulnerable	Vulnerable
<i>Leptomeria dielsiana</i>	Diels' Currant Bush	Presumed Extinct	Vulnerable
<i>Caladenia pholcoidea</i> subsp. <i>augustensis</i>	Augusta Spider Orchid	Priority 1	
<i>Deyeuxia inaequalis</i>		Priority 1	
<i>Hemigenia obovata</i>		Priority 1	
<i>Netrostylis</i> sp. Nannup (P.A. Jurjevich 1133)		Priority 1	

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act
<i>Philydrella pygmaea</i> subsp. <i>minima</i>		Priority 1	
<i>Schoenus indutus</i>		Priority 1	
<i>Stylium</i> sp. Scott River Plain (N.G. Marchant 74/23)		Priority 1	
<i>Synaphea macrophylla</i>		Priority 1	
<i>Synaphea nexosa</i>		Priority 1	
<i>Synaphea</i> sp. Redgate Road (J. Scott 16)		Priority 1	
<i>Caladenia ambusta</i>	Boranup Spider Orchid	Priority 2	
<i>Conospermum quadripetalum</i>		Priority 2	
<i>Hemigenia</i> sp. Nillup (R.D. Royce 98)		Priority 2	
<i>Hydrocotyle</i> sp. <i>Hamelinensis</i> (G.J. Keighery s.n. PERTH 02391325)		Priority 2	
<i>Leptomeria furtiva</i>		Priority 2	
<i>Lepyrodia extensa</i>		Priority 2	
<i>Schoenus loliaceus</i>		Priority 2	
<i>Schoenus</i> sp. Grassy (E. Gude & J. Harvey 250)		Priority 2	
<i>Stenanthemum sublineare</i>		Priority 2	
<i>Acacia lateriticola</i> var. Glabrous variant (B.R.Maslin 6765)		Priority 3	
<i>Actinotus repens</i>		Priority 3	
<i>Andersonia</i> sp. Amabile (N. Gibson & M. Lyons 355)		Priority 3	
<i>Austrostipa mundula</i>		Priority 3	
<i>Blennospora doliformis</i>		Priority 3	
<i>Boronia anceps</i>		Priority 3	
<i>Caladenia abbreviata</i>	Coastal Spider Orchid	Priority 3	
<i>Calothamnus lateralis</i> var. <i>crassus</i>		Priority 3	
<i>Chordifex gracilior</i>		Priority 3	
<i>Chordifex jacksonii</i>		Priority 3	
<i>Cyathochaeta stipoides</i>		Priority 3	
<i>Dampiera heteroptera</i>		Priority 3	
<i>Gastrolobium formosum</i>		Priority 3	
<i>Grevillea manglesioides</i> subsp. <i>ferricola</i>		Priority 3	
<i>Grevillea papillosa</i>		Priority 3	
<i>Isopogon formosus</i> subsp. <i>dasyloepis</i>		Priority 3	

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act
<i>Juncus meianthus</i>		Priority 3	
<i>Leptinella drummondii</i>		Priority 3	
<i>Lepyrodia heleocharoides</i>		Priority 3	
<i>Leucopogon alternifolius</i>		Priority 3	
<i>Leucopogon wheelerae</i>		Priority 3	
<i>Loxocarya magna</i>		Priority 3	
<i>Netrostylis</i> sp. Blackwood River (A.R. Annels 3043)		Priority 3	
<i>Notisia intonsa</i>	Shaggy Gnephosis	Priority 3	
<i>Pimelea ciliata</i> subsp. <i>longituba</i>		Priority 3	
<i>Pultenaea pinifolia</i>		Priority 3	
<i>Stylium lowrieorum</i>	Lowrie's Triggerplant	Priority 3	
<i>Stylium trudgenii</i>		Priority 3	
<i>Thysanotus cymosus</i>		Priority 3	
<i>Acacia semitrullata</i>		Priority 4	
<i>Acacia tayloriana</i>		Priority 4	
<i>Adenanthes detmoldii</i>		Priority 4	
<i>Adenanthes x pamela</i>		Priority 4	
<i>Aotus carinata</i>		Priority 4	
<i>Astartea onycis</i>		Priority 4	
<i>Banksia meisneri</i> subsp. <i>ascendens</i>		Priority 4	
<i>Banksia sessilis</i> var. <i>cordata</i>		Priority 4	
<i>Caladenia interjacens</i>	Walpole Spider Orchid	Priority 4	
<i>Eucalyptus calcicola</i> subsp. <i>calcicola</i>		Priority 4	
<i>Eucalyptus marginata</i> x <i>megacarpa</i>		Priority 4	
<i>Franklandia triaristata</i>	Lanoline Bush	Priority 4	
<i>Gonocarpus pusillus</i>		Priority 4	
<i>Hypolaena robusta</i>		Priority 4	
<i>Melaleuca basicephala</i>		Priority 4	
<i>Pultenaea skinneri</i>	Skinner's Pea	Priority 4	
<i>Stylium gloeophyllum</i>		Priority 4	
<i>Stylium ireneae</i>		Priority 4	
<i>Stylium leeuwinense</i>		Priority 4	
<i>Tripterococcus</i> sp. <i>Brachylobus</i> (A.S. George 14234)		Priority 4	
<i>Verticordia lehmannii</i>		Priority 4	

Definitions of the Conservation Codes are in Appendix 4.

Based on the soil types and vegetation type and conditions observed during the survey the likelihood of conservation significant species identified in the database searches occurring on the site has been examined (Table 3). No Threatened species are considered to have potential to occur on the site.

Three Priority flora species have potential to occur on the site based on the soil type.

Table 3: Likelihood of Identified Significant Flora Species Occurring on the Site

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
Critically Endangered			
<i>Caladenia lodeana</i>	Lodge's Spider-orchid	Lodge's Spider-orchid occurs in clay soils or in black loam on the margins or winter-wet areas and below granite outcrops (Hopper and Brown, 2001).	No – not suitable habitat
<i>Gastrolobium papilio</i>	Butterfly-leaved Poison	Butterfly-leaved Poison occurs on sandy clay over ironstone and laterite on flat plains.	No – not suitable habitat
<i>Lambertia echinata</i> subsp. <i>occidentalis</i>	Western Prickly Honeysuckle	The Western Prickly Honeysuckle prefers white sandy soils over laterite, orange/brown-red clay over ironstone on flats to foothills, winter-wet sites.	No – not suitable habitat
Endangered			
<i>Banksia nivea</i> subsp. <i>uliginosa</i>	Swamp Honeypot	The Swamp Honeypot occurs in sandy clay, gravel.	Highly Unlikely – not suitable habitat
<i>Boronia exilis</i>	Scott River Boronia	The Scott River Boronia grows in seasonally wet heath.	Highly Unlikely – not suitable habitat
<i>Caladenia excelsa</i>	Giant Spider-orchid	The Giant Spider-orchid Giant Spider-orchid grows on hilltops, slopes, swales and low plains in deep pale yellow, white or grey sandy soils (Brown <i>et al</i> , 2013), and is found among dense low shrubs in Banksia, Jarrah and Marri woodlands (Williams <i>et al.</i> , 2001).	Highly Unlikely – not suitable vegetation types not on site
<i>Caladenia hoffmanii</i>	Hoffman's Spider-orchid	Hoffman's Spider-orchid grows in clay, loam, laterite, granite on rocky outcrops and hillsides, ridges, swamps and gullies.	Highly Unlikely – not suitable habitat
<i>Darwinia ferricola</i>	Scott River Darwinia	The Scott River Darwinia prefers peaty sand over ironstone, around winter wet areas near the coast (Luu and English, 2004).	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
<i>Drakaea micrantha</i>	Dwarf Hammer-orchid	Dwarf Hammer-orchid occurs in grey sands over dark, grey to blackish, sandy clay-loam substrates in winter wet depressions or swamps. Usually occurs on cleared fire breaks or open sandy patches in Banksia, Jarrah and Sheoak woodlands or forest and often found under Spearwood thickets.	Highly Unlikely – not suitable habitat
<i>Grevillea brachystylis</i> subsp. <i>australis</i>		<i>Grevillea brachystylis</i> subsp. <i>australis</i> grows in sand, sandy clay in swampy situations, stream banks.	Highly Unlikely – not suitable habitat
<i>Kennedia lateritia</i>	Augusta Kennedia	The Augusta Kennedia occurs on black humus-rich sand, often amongst granite outcrops.	Highly Unlikely – not suitable habitat
<i>Lambertia orbifolia</i> subsp. Scott River Plains (L.W. Sage 684)	Roundleaf Honeysuckle	<i>Lambertia orbifolia</i> subsp. Scott River Plains grows in yellow-brown sandy clay, grey sand, sandy gravel, laterite along riverbanks, sand dunes, plains and ridges, seasonally-inundated areas.	Highly Unlikely – not suitable habitat
<i>Reedia spathacea</i>	Reedia	Reedia occurs in peaty sand in swamps and on river edges.	Highly Unlikely – not suitable habitat
Vulnerable			
<i>Banksia squarrosa</i> subsp. <i>argillacea</i>	Whicher Range Dryandra	The Whicher Range Dryandra grows in white/grey sand, gravelly clay or loam on winter-wet flats, clay flats.	Highly Unlikely – not suitable habitat
Presumed Extinct			
<i>Leptomeria dielsiana</i>	Diels' Currant Bush	Diels' Currant Bush was recorded from scrubby heath in the Scott River area.	Highly Unlikely – not suitable habitat
Priority 1			
<i>Caladenia pholcoidea</i> subsp. <i>augustensis</i>	Augusta Spider Orchid	Augusta Spider Orchid grows in sandy clay on winter-wet flat in summer burnt areas.	Highly Unlikely – not suitable habitat
<i>Deyeuxia inaequalis</i>		<i>Deyeuxia inaequalis</i> grows in loam.	Highly Unlikely – not loam habitat
<i>Hemigenia obovata</i>		<i>Hemigenia obovata</i> occurs in white or black wet sand on flats.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
<i>Netrostylis</i> sp. Nannup (P.A. Jurjevich 1133)		<i>Netrostylis</i> sp. Nannup is recorded from a wetland (Western Australian Herbarium, 2007).	Highly Unlikely – not wetland habitat
<i>Philydrella</i> <i>pygmaea</i> subsp. <i>minima</i>		<i>Philydrella pygmaea</i> subsp. <i>minima</i> grows in damp sites.	Highly Unlikely – not damp habitat
<i>Schoenus</i> <i>indutus</i>		<i>Schoenus indutus</i> occurs in gravelly sand.	Highly Unlikely – not gravelly habitat
<i>Stylium</i> sp. Scott River Plain (N.G. Marchant 74/23)		<i>Stylium</i> sp. Scott River Plain occurs on the Scott River Plain.	Highly Unlikely – not river plain habitat
<i>Synaphea</i> <i>macrophylla</i>		<i>Synaphea macrophylla</i> occurs in gravelly loam.	Highly Unlikely – not gravelly habitat
<i>Synaphea</i> <i>nexosa</i>		<i>Synaphea nexosa</i> occurs in clay-loam on winter-wet flats.	Highly Unlikely – not winter-wet habitat
<i>Synaphea</i> sp. Redgate Road (J. Scott 16)		<i>Synaphea</i> sp. Redgate Road (J. Scott 16) occurs on grey clay, litter in winter-wet areas, wet areas along road verges and ditches.	Highly Unlikely – not suitable habitat
Priority 2			
<i>Caladenia</i> <i>ambusta</i>	Boranup Spider Orchid	Boranup Spider Orchid is recorded from a flat - gentle slope in brown soil (Western Australian Herbarium, 2002).	Highly Unlikely – not suitable soil type
<i>Conospermum</i> <i>quadripetalum</i>		<i>Conospermum quadripetalum</i> grows in sandy clay, grey sand on flats behind coastal hills.	Highly Unlikely – not suitable habitat
<i>Hemigenia</i> sp. Nillup (R.D. Royce 98)		<i>Hemigenia</i> sp. Nillup grows in grey sand or gravelly soil in swamps and on sandy slopes.	Highly Unlikely – not suitable habitat
<i>Hydrocotyle</i> sp. <i>Hamelinensis</i> (G.J. Keighery s.n. PERTH 02391325)		<i>Hydrocotyle</i> sp. <i>Hamelinensis</i> grows in grey sand on limestone ridges.	Highly Unlikely – not suitable habitat
<i>Leptomeria</i> <i>furtiva</i>		<i>Leptomeria furtiva</i> grows in grey or black peaty sand on winter-wet flats.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
<i>Lepyrodia extensa</i>		<i>Lepyrodia extensa</i> grows in sand and sandy peat in seasonally inundated swamps.	Highly Unlikely – not suitable habitat
<i>Schoenus loliaceus</i>		<i>Schoenus loliaceus</i> occurs on sandy soils in winter-wet depressions.	Highly Unlikely – not wet habitat
<i>Schoenus</i> sp. Grassy (E. Gude & J. Harvey 250)		<i>Schoenus</i> sp. Grassy grows in black silt on swamps.	Highly Unlikely – not suitable habitat
<i>Stenanthemum sublineare</i>		<i>Stenanthemum sublineare</i> grows in littered white sand on coastal plain (Rye, 2001).	Highly Unlikely – not suitable habitat
Priority 3			
<i>Acacia lateriticola</i> var. Glabrous variant (B.R.Maslin 6765)		<i>Acacia lateriticola</i> var. Glabrous variant (B.R.Maslin 6765) occurs in lateritic soils.	Highly Unlikely – not suitable habitat
<i>Actinotus repens</i>		<i>Actinotus repens</i> grows in sandy clay, mud on roadside ditches, creek banks.	Highly Unlikely – not suitable habitat
<i>Andersonia</i> sp. Amabile (N. Gibson & M. Lyons 355)		<i>Andersonia</i> sp. Amabile grows in grey or black peaty sand, loam on creek banks, swamp edges, seasonally wet flats.	Highly Unlikely – not suitable habitat
<i>Austrostipa mundula</i>		<i>Austrostipa mundula</i> occurs on plains in grey sand (Western Australian Herbarium, 2001).	Highly Unlikely – not suitable habitat
<i>Blennospora doliformis</i>		<i>Blennospora doliformis</i> grows in grey or red clay soils over ironstone on seasonally-wet flats.	Highly Unlikely – not suitable habitat
<i>Boronia anceps</i>		<i>Boronia anceps</i> grows in white sand, gravelly laterite on seasonally swampy heaths.	Highly Unlikely – not suitable habitat
<i>Caladenia abbreviata</i>	Coastal Spider Orchid	Coastal Spider Orchid grows in open sandy areas on coastal sand dunes under Agonis and Melaleuca species.	Possible – habitat may occur on the site
<i>Calothamnus lateralis</i> var. <i>crassus</i>		<i>Calothamnus lateralis</i> var. <i>crassus</i> grows in sand on wet depressions.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
<i>Chordifex gracilior</i>		<i>Chordifex gracilior</i> grows in peaty sand on swamps.	Highly Unlikely – not suitable habitat
<i>Chordifex jacksonii</i>		<i>Chordifex jacksonii</i> grows in sand, loamy sand on seasonally inundated swamps.	Highly Unlikely – not suitable habitat
<i>Cyathochaeta stipoides</i>		<i>Cyathochaeta stipoides</i> grows in grey or red-brown sand on seasonally wet flats.	Highly Unlikely – not suitable habitat
<i>Dampiera heteroptera</i>		<i>Dampiera heteroptera</i> grows in sandy soils on swampy areas.	Highly Unlikely – not suitable habitat
<i>Gastrolobium formosum</i>		<i>Gastrolobium formosum</i> grows in clay loam along river banks or in swamps.	Highly Unlikely – not suitable habitat
<i>Grevillea manglesioides</i> subsp. <i>ferricola</i>		<i>Grevillea manglesioides</i> subsp. <i>ferricola</i> grows in red sandy clay over ironstone on winter wet flats.	Highly Unlikely – not suitable habitat
<i>Grevillea papillosa</i>		<i>Grevillea papillosa</i> grows in brown or peaty sand, sandy clay, loam on seasonally-wet areas, swamps.	Highly Unlikely – not suitable habitat
<i>Isopogon formosus</i> subsp. <i>dasylepis</i>		<i>Isopogon formosus</i> subsp. <i>dasylepis</i> grows in sand, sandy clay, gravelly sandy soils over laterite, often swampy areas.	Highly Unlikely – not suitable habitat
<i>Juncus meianthus</i>		<i>Juncus meianthus</i> grows in black sand, sandy clay near creeks, seepage areas.	Highly Unlikely – not suitable habitat
<i>Leptinella drummondii</i>		<i>Leptinella drummondii</i> grows in clay loam, mud along rivers.	Highly Unlikely – not suitable habitat
<i>Lepyrodia heleocharoides</i>		<i>Lepyrodia heleocharoides</i> grows in moist peaty sand in dry or seasonally inundated heath or woodland, swamps.	Highly Unlikely – not suitable habitat
<i>Leucopogon alternifolius</i>		<i>Leucopogon alternifolius</i> grows in grey/white sand in swampy areas, seasonally wet areas.	Highly Unlikely – not suitable habitat
<i>Leucopogon wheelerae</i>		<i>Leucopogon wheelerae</i> occurs in swamps, in heath or occasionally open woodland (Hislop, 2008).	Highly Unlikely – not suitable habitat
<i>Loxocarya magna</i>		<i>Loxocarya magna</i> grows in sand, loam, clay, ironstone on seasonally inundated or damp habitats.	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
<i>Netrostylis</i> sp. Blackwood River (A.R. Annels 3043)		<i>Netrostylis</i> sp. Blackwood River (A.R. Annels 3043) is recorded from a creek bed (Western Australian Herbarium, 2005).	Highly Unlikely – not suitable habitat
<i>Notisia intonsa</i>	Shaggy Gnephosis	Shaggy Gnephosis grows in red/brown clay, stony saline loam.	Highly Unlikely – not suitable habitat
<i>Pimelea ciliata</i> subsp. <i>longituba</i>		<i>Pimelea ciliata</i> subsp. <i>longituba</i> occurs in grey sand over clay, loam.	Highly Unlikely – not suitable habitat
<i>Pultenaea</i> <i>pinifolia</i>		<i>Pultenaea pinifolia</i> grows in loam or clay on floodplains, swampy areas.	Highly Unlikely – not suitable habitat
<i>Stylium</i> <i>lowrieorum</i>	Lowrie's Triggerplant	Lowrie's Triggerplant grows in sand or sandy loam over limestone. Eucalypt or Agonis woodland, forest, scrub.	Possible – habitat may occur on the site
<i>Stylium</i> <i>trudgenii</i>		<i>Stylium trudgenii</i> grows in grey sand, dark grey to black sandy peat on the margins of winter-wet swamps, depressions.	Highly Unlikely – not suitable habitat
<i>Thysanotus</i> <i>cymosus</i>		<i>Thysanotus cymosus</i> occurs in clay, granitic or lateritic sand.	Highly Unlikely – not suitable habitat
Priority 4			
<i>Acacia</i> <i>semitrullata</i>		<i>Acacia semitrullata</i> grows in white/grey sand, sometimes over laterite, clay on sandplains, swampy areas.	Highly Unlikely – not suitable habitat
<i>Acacia</i> <i>tayloriana</i>		<i>Acacia tayloriana</i> grows in grey or yellow/orange sandy soils, lateritic gravel, clay loam in winter-wet areas.	Highly Unlikely – not suitable habitat
<i>Adenanthes</i> <i>detmoldii</i>		<i>Adenanthes detmoldii</i> grows in grey or black peaty sand, wet on swamps, roadsides.	Highly Unlikely – not suitable habitat
<i>Adenanthes x</i> <i>pamelae</i>		<i>Adenanthes x pamelae</i> grows in grey sand, laterite on damp flats, roadsides.	Highly Unlikely – not suitable habitat
<i>Aotus carinata</i>		<i>Aotus carinata</i> occurs in sandy soils on seasonally wet flats.	Highly Unlikely – not suitable habitat
<i>Astartea onycis</i>		<i>Astartea onycis</i> grows in pale grey sand or sandy clay over clay in seasonally wet sedgelands (Rye, 2013).	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
<i>Banksia meisneri</i> subsp. <i>ascendens</i>		<i>Banksia meisneri</i> subsp. <i>ascendens</i> grows in white or grey sand on swampy flats.	Highly Unlikely – not suitable habitat
<i>Banksia sessilis</i> var. <i>cordata</i>		<i>Banksia sessilis</i> var. <i>cordata</i> grows in white/grey sand on coastal limestone.	Possible but no limestone present
<i>Caladenia interjacens</i>	Walpole Spider Orchid	Walpole Spider Orchid grows in sand on consolidated coastal dunes.	No – error in entry in ALA – occurs 100km away
<i>Eucalyptus calcicola</i> subsp. <i>calcicola</i>		<i>Eucalyptus calcicola</i> subsp. <i>calcicola</i> grows in red-brown sand over limestone on coastal dunes, calcareous ridges, rocky outcrops.	Unlikely – not typical habitat
<i>Eucalyptus marginata</i> x <i>megacarpa</i>		<i>Eucalyptus marginata</i> x <i>megacarpa</i> grows in sandy loam on interdunal areas.	Unlikely – may have habitat on the site
<i>Franklandia triaristata</i>	Lanoline Bush	Lanoline Bush grows in white or grey sand.	Unlikely – not recorded in area since 1945 and generally occurs further inlands
<i>Gonocarpus pusillus</i>		<i>Gonocarpus pusillus</i> grows in grey sandy clay on winter-wet swamps.	Highly Unlikely – not suitable habitat
<i>Hypolaena robusta</i>		<i>Hypolaena robusta</i> grows in white sand on sandplains in poorly drained areas.	Highly Unlikely – not suitable habitat
<i>Melaleuca basicephala</i>		<i>Melaleuca basicephala</i> grows in black peaty sand, clay on winter-wet flats, swamps.	Highly Unlikely – not suitable habitat
<i>Pultenaea skinneri</i>	Skinner's Pea	Skinner's Pea occurs in sandy or clayey soils in winter-wet depressions.	Highly Unlikely – not suitable habitat
<i>Stylidium gloeophyllum</i>		<i>Stylidium gloeophyllum</i> grows in sandy clay loam, granite on winter wet depressions, or fringing outcrops with <i>Agonis</i> , mallee, or Hakea shrubland with sedges.	Highly Unlikely – not suitable habitat
<i>Stylidium ireneae</i>		<i>Stylidium ireneae</i> occurs in sandy loam in valleys near creek lines, woodland, often with <i>Agonis</i> .	Highly Unlikely – not suitable habitat

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
<i>Stylium leeuwinense</i>		<i>Stylium leeuwinense</i> grows in grey to black peaty sand on winter-wet habitats and depressions in shrubland, heath, sedgeland or low woodland.	Highly Unlikely – not suitable habitat
<i>Tripteroecoccus sp. Brachylobus (A.S. George 14234)</i>		<i>Tripteroecoccus</i> sp. <i>Brachylobus</i> occurs in grey, black or peaty sand winter-wet flats.	Highly Unlikely – not suitable habitat
<i>Verticordia lehmannii</i>		<i>Verticordia lehmannii</i> grows in sandy clay on winter-wet flats.	Highly Unlikely – not suitable habitat

* sourced from Florabase (DBCA, 2017) and SPRAT Database (DoEE, 2016) as well as the DBCA database searches unless otherwise denoted

Three Priority species were identified that possibly occur on the site being:

- *Caladenia abbreviata* (Coastal Spider Orchid) (P3);
- *Stylium lowrieorum* (Lowrie's Triggerplant) (P3); and
- *Eucalyptus marginata x megacarpa* (P4).

Both Coastal Spider Orchid and Lowrie's Triggerplant flower in October. *Eucalyptus marginata x megacarpa* is identifiable all year round.

4.2 TEC and PEC Desktop Study

A search of DBCA's Threatened (TEC) and Priority Ecological Communities (PEC) database was conducted within a radius of 20km around the site (27_1021EC). Three TECs and four PECs at State level were identified in the database search. There are two TECs and one PEC listed as TECs under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act). The communities identified in the database searches are outlined in Table 4.

None of the TECs or PECs are expected to occur on the site given the preferred habitat of the communities identified.

Table 4: Threatened and Priority Ecological Communities likely to occur within 5km of the Site

Ecological Community	Description	Conservation Status WA	Status under the EPBC Act
CAVES LEEUWIN01	Aquatic Root Mat Community Number 1 of Caves of the Leeuwin Naturaliste Ridge (Easter and Jewel Caves)	Critically Endangered	Endangered
SCOTT IRONSTONE	Scott River Ironstone Association	Endangered	Endangered
Augusta-microbial	Rimstone Pools and Cave Structures Formed by Microbial Activity on Marine Shorelines (Augusta microbialites)	Endangered	

Ecological Community	Description	Conservation Status WA	Status under the EPBC Act
Reedia swamps - Blackwood Plateau	<i>Reedia spathacea</i> - <i>Empodium gracillimum</i> - <i>Sporadanthus rivularis</i> dominated floodplains and paluslopes of the Blackwood Plateau.	Priority 1	
Sedgelands of Cape Leeuwin Spring	Tall closed sedgeland on shallow soils derived from granite gneiss on the Leeuwin Naturaliste Ridge	Priority 1	
Melaleuca lanceolata forests	Melaleuca lanceolata forests, Leeuwin Naturaliste Ridge	Priority 2	
Coastal Saltmarsh	Subtropical and Temperate Coastal Saltmarsh	Priority 3	Vulnerable

4.3 Flora

A total of 42 plant species were recorded during the flora survey (Appendix 5). This total consisted of 36 native species and 6 introduced species (14%). The total number of native species is low for a 15.5ha area of native vegetation mostly in Excellent condition, however is indicative of the type of sand dune vegetation (mostly Peppermint woodland) which is typically species poor. The percentage of introduced species is low.

No Threatened species were recorded on the site.

One Priority 4 species, *Banksia sessilis* var. *cordata*, was recorded on the site. The plants were up to 5m high and scattered in an area mixed with *Agonis flexuosa* small trees (Plate 4; Figure 3).

Plate 4: *Banksia sessilis* var. *cordata* on the site

Plant families with the greatest number of species were the Asteraceae (Daisy family – 6 species, 4 native and 2 introduced) and Cyperaceae (Sedge family – 4 species, all native).

The total number of species recorded in the six quadrats sampled ranged from 8 to 22, averaging 14 (Appendix 6). The percentage of introduced species in the quadrats ranged from 0-12%. The number of species in the quadrats is low but was considered average for the dune vegetation types which have a moderately dense tree canopy cover.

4.4 Vegetation Complex

Vegetation complexes/associations are a broad level of vegetation description which is based on the underlying geomorphology and rainfall (Heddle *et al.*, 1980). Two vegetation associations are mapped on the site as follows:

- Beard Association Boranup 1108 Thicket of wattle, casuarina and teatree acacia-allocasuarina-melaleuca alliance; and
- Beard Association Boranup 1109 Scrub, open scrub or sparse scrub of wattle, teatree and other species Acacia spp. Melaleuca spp. (Beard *et al.*, 2013)

The Peppermint-dominated vegetation on the site does not closely match either of the Beard Associations.

4.5 Vegetation

4.5.1 Vegetation Type

Vegetation complexes are a very broad mapping unit used to map the vegetation at the scale of the Swan Coastal Plain for example. For small scale sites, such as the survey area, vegetation mapping can be further refined by using vegetation types which are based on the composition and structure of the dominant species rather than based on geomorphology.

Four native vegetation types were described and mapped on the site. The vegetation types are similar to each other but differ slightly in the understorey structure and composition.

The vegetation types are described in Table 5 and mapped in Figure 3.

Table 5: Vegetation Types on the Site

Vegetation Type	Description	Photograph
AfSg¹ <i>Agonis flexuosa</i> Low Open Woodland over <i>Spyridium globulosum</i> Shrubland over <i>Acrotriche cordata</i> Open Low Heath	<p>Occurs at the eastern end of the survey area and contains fewer trees than the AfSg² vegetation type. <i>Agonis flexuosa</i> trees are small (2-4m) and sparse (<2% cover) over <i>Spyridium globulosum</i> to 1-2m high and 10-20% cover. Other common species include <i>Acrotriche cordata</i>, <i>Acacia littorea</i>, <i>Ficinia nodosa</i>, <i>Pimelea ferruginea</i>, <i>Leucopogon parviflorus</i>, <i>Comesperma confertum</i> and several ephemeral herb species.</p> <p>The soils are cream sand.</p> <p>Quadrats B1 and 3 are representative of this vegetation type.</p>	
AfSg² <i>Agonis flexuosa</i> Low Open Woodland over <i>Spyridium globulosum</i> Shrubland over <i>Acrotriche cordata/ Leucopogon parviflorus</i> Open Low Heath	<p>This is the main vegetation type on the site. <i>Agonis flexuosa</i> is 5-10m high and 10-20% cover over <i>Spyridium globulosum</i> 2-4m high and 10-25% cover. The understorey is sparse and contains abundant moss on the ground. Typical understorey species include <i>Leucopogon parviflorus</i>, <i>Acrotriche cordata</i>, <i>Lepidosperma gladiatum</i> and the creeper <i>Cassytha racemosa</i>.</p> <p>The soils are cream sand.</p> <p>Quadrats B2, 5 and 7 are representative of this vegetation type.</p>	

Vegetation Type	Description	Photograph
BsAf <i>Banksia sessilis</i> var. <i>cordata</i> / <i>Agonis flexuosa</i> Low Open Woodland over <i>Spyridium globulosum</i> / <i>Acacia littorea</i> Shrubland over <i>Acrotriche cordata</i> / <i>Leucopogon parviflorus</i> Open Low Heath	<p>One small stand of this vegetation type occurred in the central part of the site. <i>Banksia sessilis</i> var. <i>cordata</i> was emergent to 5m high over <i>Agonis flexuosa</i> 1.5-2m high. Otherwise similar species composition to AfSg²</p> <p>The soils are dark orange-brown sand.</p> <p>Quadrat B4 is representative of this vegetation type.</p>	
AfHcSg <i>Agonis flexuosa</i> / <i>Hibbertia cuneiformis</i> / <i>Spyridium globulosum</i> Tall Shrubland over <i>Acrotriche cordata</i> / <i>Leucopogon parviflorus</i> Open Low Heath	<p>This vegetation type occurred on the highest part of the site in the south-west corner. <i>Hibbertia cuneiformis</i> and <i>Spyridium globulosum</i> were the main tall shrub species present 1.8-2.5m high with <i>Agonis flexuosa</i> less common. Other common species included <i>Leucopogon parviflorus</i>, <i>Acrotriche cordata</i> and <i>Lepidosperma gladiatum</i>.</p> <p>The soils are cream sand.</p> <p>Quadrat B6 is representative of this vegetation type.</p>	

4.5.2 Vegetation Condition

The condition of the vegetation was assessed according to the system of Keighery as described in Bush Forever (Government of Western Australia, 2000) (Table 6).

Table 6: Vegetation Condition Rating Scale

Condition	Description
Pristine	Pristine or nearly so, no obvious signs of disturbance.
Excellent	Vegetation structure intact, disturbance affecting individual species and weeds are non-aggressive species.
Very Good	Vegetation structure altered, obvious signs of disturbance. For example, disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.
Good	Vegetation structure significantly altered by very obvious signs of multiple disturbance. Retains basic vegetation structure or ability to regenerate to it. For example, disturbance to vegetation structure caused by very frequent fires, the presence of some very aggressive weeds at high density, partial clearing, dieback and grazing.
Degraded	Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. For example, disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds, partial clearing, dieback and grazing.
Completely Degraded	The structure of the vegetation is no longer intact and the area is completely or almost completely without native species. These are often described as 'parkland cleared' with the flora comprising weed or crop species with isolated native trees or shrubs.

The condition of the native vegetation was all rated as Excellent with very few weed species present (Figure 3).

4.6 Conservation Significance of Flora and Vegetation

4.6.1 Flora

One Priority 4 species, *Banksia sessilis* var. *cordata*, was recorded on the site. The number of plants was not counted but would be in excess of 50. *Banksia sessilis* var. *cordata* occurs on white/grey sand and coastal limestone along the coast from Cape Naturaliste to just west of Albany.

Priority 4 species are those that are rare or near threatened but have been adequately surveyed and not currently threatened or in need of special protection. Priority species are not protected under State or Commonwealth environmental legislation in the way that Threatened species are.

4.6.2 Vegetation

4.6.2.1 Vegetation Complex

Two vegetation associations are mapped on the site as follows:

- Beard Association Boranup 1108 Thicket of wattle, casuarina and teatree acacia-allocasuarina-melaleuca alliance; and
- Beard Association Boranup 1109 Scrub, open scrub or sparse scrub of wattle, teatree and other species Acacia spp. Melaleuca spp. (Beard *et al.*, 2013)

The extent of each vegetation association remaining is shown in Table 7 (Government of Western Australia, 2014). Both vegetation associations have a high percentage of the original extent remaining and a high percentage protected in the conservation estate. Both Association 1108 and 1109 occur extensively in the nearby Leeuwin-Naturaliste National Park (National Map, 2022).

The percentage remaining and in the conservation estate is above the 30% target set by the EPA for vegetation complexes in Western Australia. Therefore, the vegetation on the site is not considered to be a regionally significant remnant of either vegetation association.

Table 7: Vegetation Association Statistics

Vegetation Association	Pre-European Extent (ha)	Current Extent (ha)	% Remaining	Current Extent Protected for Conservation (ha)	% Current Extent Protected for Conservation
1108	8247.847	7666.396	92.95	5717.032	69.3
1109	29988.44	29143.46	97.18	24175.23	80.6

4.6.2.2 Threatened and Priority Ecological Communities

None of the Threatened or Priority Ecological Communities listed in the database searches occur on the site.

5 SUMMARY AND CONCLUSIONS

The 2021 Detailed Flora and Vegetation Survey of a 15.5ha portion of M70/1342 in Boranup resulted in the following findings:

- Native vegetation occurs over the whole 15.5ha survey area. A lot of the vegetation is regrowth from a time when it was a bare, sand sheet in the 1970s;
- Four vegetation types were described and mapped on the site. The vegetation types were all similar, with *Agonis flexuosa* (WA Peppermint) the dominant tree and tall shrub species over a slightly varying understorey;
- The vegetation was all rated in Excellent condition;
- A total of 42 plant species were recorded in the survey area, consisting of 36 native species and 6 introduced species. The low number of introduced species reflects the Excellent condition of the vegetation;
- No Threatened flora species were recorded during the survey or are expected to occur at any other time of the year;
- One Priority 4 species, *Banksia sessilis* var. *cordata*, was recorded in the centre of the site. Approximately 50 plants were recorded in an area of around 0.3ha;
- No Threatened or Priority Ecological Communities were recorded on the site;
- The Vegetation Associations occurring on the site (1108 and 1109) both have more than 90% of their original extent remaining and 69% and 80% retained in the conservation estate, including the nearby Leeuwin-Naturaliste National Park. The vegetation on the site therefore is not a significant remnant of these vegetation associations.

APPENDIX 3

Protected Matters Search Tool Report

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected. Please see the caveat for interpretation of information provided here.

Report created: 10-Feb-2022

[Summary](#)

[Details](#)

[Matters of NES](#)

[Other Matters Protected by the EPBC Act](#)

[Extra Information](#)

[Caveat](#)

[Acknowledgements](#)

Summary

Matters of National Environment Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance (Ramsar)	None
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	None
Listed Threatened Ecological Communities:	1
Listed Threatened Species:	52
Listed Migratory Species:	42

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <http://www.environment.gov.au/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Lands:	1
Commonwealth Heritage Places:	None
Listed Marine Species:	64
Whales and Other Cetaceans:	12
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	None
Habitat Critical to the Survival of Marine Turtles:	None

Matters of National Environmental Significance

Listed Threatened Ecological Communities		[Resource Information]	
Community Name	Threatened Category	Presence Text	Buffer Status
Aquatic Root Mat Community 2 in Caves of the Leeuwin Naturaliste Ridge	Endangered	Community known to occur within area	In buffer area only
Listed Threatened Species		[Resource Information]	
Status of Conservation Dependent and Extinct are not MNES under the EPBC Act. Number is the current name ID.			
Scientific Name	Threatened Category	Presence Text	Buffer Status
BIRD			
Anous tenuirostris melanops	Vulnerable	Species or species habitat may occur within area	In buffer area only
Australian Lesser Noddy [26000]			
Botaurus poiciloptilus	Endangered	Species or species habitat likely to occur within area	In feature area
Australasian Bittern [1001]			
Calidris canutus	Endangered	Species or species habitat may occur within area	In feature area
Red Knot, Knot [855]			
Calidris ferruginea	Critically Endangered	Species or species habitat may occur within area	In feature area
Curlew Sandpiper [856]			
Calyptorhynchus banksii naso	Vulnerable	Species or species habitat known to occur within area	In feature area
Forest Red-tailed Black-Cockatoo, Karrak [67034]			
Charadrius leschenaultii	Vulnerable	Species or species habitat may occur within area	In buffer area only
Greater Sand Plover, Large Sand Plover [877]			

Scientific Name	Threatened Category	Presence Text	Buffer Status
<u>Diomedea amsterdamensis</u> Amsterdam Albatross [64405]	Endangered	Species or species habitat may occur within area	In buffer area only
<u>Diomedea dabbenena</u> Tristan Albatross [66471]	Endangered	Species or species habitat may occur within area	In buffer area only
<u>Diomedea epomophora</u> Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
<u>Diomedea exulans</u> Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
<u>Diomedea sanfordi</u> Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
<u>Halobaena caerulea</u> Blue Petrel [1059]	Vulnerable	Species or species habitat may occur within area	In buffer area only
<u>Limosa lapponica menzbieri</u> Northern Siberian Bar-tailed Godwit, Russkoye Bar-tailed Godwit [86432]	Critically Endangered	Species or species habitat may occur within area	In buffer area only
<u>Macronectes giganteus</u> Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area	In buffer area only
<u>Macronectes halli</u> Northern Giant Petrel [1061]	Vulnerable	Species or species habitat may occur within area	In buffer area only
<u>Numenius madagascariensis</u> Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area	In feature area
<u>Pachyptila turtur subantarctica</u> Fairy Prion (southern) [64445]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only

Scientific Name	Threatened Category	Presence Text	Buffer Status
<u><i>Phoebetria fusca</i></u> Sooty Albatross [1075]	Vulnerable	Species or species habitat may occur within area	In buffer area only
<u><i>Pterodroma mollis</i></u> Soft-plumaged Petrel [1036]	Vulnerable	Species or species habitat may occur within area	In buffer area only
<u><i>Sternula nereis nereis</i></u> Australian Fairy Tern [82950]	Vulnerable	Species or species habitat known to occur within area	In feature area
<u><i>Thalassarche carteri</i></u> Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only
<u><i>Thalassarche cauta</i></u> Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
<u><i>Thalassarche impavida</i></u> Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area	In buffer area only
<u><i>Thalassarche melanophris</i></u> Black-browed Albatross [66472]	Vulnerable	Species or species habitat may occur within area	In buffer area only
<u><i>Thalassarche steadi</i></u> White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
<u><i>Zanda baudinii</i></u> listed as <i>Calyptorhynchus baudinii</i> Baudin's Black-Cockatoo, Long-billed Black-cockatoo [87736]	Endangered	Breeding known to occur within area	In feature area
<u><i>Zanda latirostris</i></u> listed as <i>Calyptorhynchus latirostris</i> Carnaby's Black Cockatoo, Short-billed Black-cockatoo [87737]	Endangered	Species or species habitat likely to occur within area	In feature area
FISH			
<u><i>Thunnus maccoyii</i></u> Southern Bluefin Tuna [69402]	Conservation Dependent	Species or species habitat likely to occur within area	In buffer area only
FROG			

Scientific Name	Threatened Category	Presence Text	Buffer Status
<u>Geocrinia alba</u> White-bellied Frog, Creek Frog [26181]	Critically Endangered	Species or species habitat known to occur within area	In buffer area only
MAMMAL			
<u>Balaenoptera musculus</u> Blue Whale [36]	Endangered	Species or species habitat likely to occur within area	In buffer area only
<u>Dasyurus geoffroii</u> Chuditch, Western Quoll [330]	Vulnerable	Species or species habitat likely to occur within area	In feature area
<u>Eubalaena australis</u> Southern Right Whale [40]	Endangered	Breeding known to occur within area	In buffer area only
<u>Megaptera novaeangliae</u> Humpback Whale [38]	Vulnerable	Congregation or aggregation known to occur within area	In buffer area only
<u>Neophoca cinerea</u> Australian Sea-lion, Australian Sea Lion [22]	Endangered	Species or species habitat may occur within area	In buffer area only
<u>Pseudocheirus occidentalis</u> Western Ringtail Possum, Ngwayir, Womp, Woder, Ngoor, Ngoolangit [25911]	Critically Endangered	Species or species habitat known to occur within area	In feature area
<u>Setonix brachyurus</u> Quokka [229]	Vulnerable	Species or species habitat likely to occur within area	In feature area
OTHER			
<u>Westralunio carteri</u> Carter's Freshwater Mussel, Freshwater Mussel [86266]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only
PLANT			
<u>Banksia nivea subsp. uliginosa</u> Swamp Honeypot [82766]	Endangered	Species or species habitat likely to occur within area	In feature area
<u>Banksia squarrosa subsp. argillacea</u> Whicher Range Dryandra [82769]	Vulnerable	Species or species habitat may occur within area	In feature area

Scientific Name	Threatened Category	Presence Text	Buffer Status
<u><i>Caladenia hoffmannii</i></u> Hoffman's Spider-orchid [56719]	Endangered	Species or species habitat may occur within area	In feature area
<u><i>Drakaea micrantha</i></u> Dwarf Hammer-orchid [56755]	Vulnerable	Species or species habitat may occur within area	In feature area
<u><i>Gastrolobium papilio</i></u> Butterfly-leaved Gastrolobium [78415]	Endangered	Species or species habitat may occur within area	In feature area
<u><i>Lambertia echinata subsp. occidentalis</i></u> Western Prickly Honeysuckle [64528]	Endangered	Species or species habitat may occur within area	In feature area
<u><i>Reedia spathacea</i></u> Reedia [2995]	Critically Endangered	Species or species habitat likely to occur within area	In buffer area only
REPTILE			
<u><i>Caretta caretta</i></u> Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area	In buffer area only
<u><i>Chelonia mydas</i></u> Green Turtle [1765]	Vulnerable	Species or species habitat may occur within area	In buffer area only
<u><i>Dermochelys coriacea</i></u> Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area	In buffer area only
<u><i>Natator depressus</i></u> Flatback Turtle [59257]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
SHARK			
<u><i>Carcharias taurus (west coast population)</i></u> Grey Nurse Shark (west coast population) [68752]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
<u><i>Carcharodon carcharias</i></u> White Shark, Great White Shark [64470]	Vulnerable	Foraging, feeding or related behaviour known to occur within area	In buffer area only

Scientific Name	Threatened Category	Presence Text	Buffer Status
<u>Rhincodon typus</u> Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area	In buffer area only
<u>Sphyraña lewini</u> Scalloped Hammerhead [85267]	Conservation Dependent	Species or species habitat may occur within area	In buffer area only

Listed Migratory Species	[Resource Information]		
Scientific Name	Threatened Category	Presence Text	Buffer Status
Migratory Marine Birds			
<u>Apus pacificus</u> Fork-tailed Swift [678]		Species or species habitat likely to occur within area	In feature area
<u>Ardenna carneipes</u> Flesh-footed Shearwater, Fleshly-footed Shearwater [82404]		Foraging, feeding or related behaviour likely to occur within area	In buffer area only
<u>Diomedea amsterdamensis</u> Amsterdam Albatross [64405]	Endangered	Species or species habitat may occur within area	In buffer area only
<u>Diomedea dabbenena</u> Tristan Albatross [66471]	Endangered	Species or species habitat may occur within area	In buffer area only
<u>Diomedea epomophora</u> Southern Royal Albatross [89221]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
<u>Diomedea exulans</u> Wandering Albatross [89223]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
<u>Diomedea sanfordi</u> Northern Royal Albatross [64456]	Endangered	Foraging, feeding or related behaviour likely to occur within area	In buffer area only

Scientific Name	Threatened Category	Presence Text	Buffer Status
<u>Hydroprogne caspia</u> Caspian Tern [808]		Foraging, feeding or related behaviour known to occur within area	In buffer area only
<u>Macronectes giganteus</u> Southern Giant-Petrel, Southern Giant Petrel [1060]	Endangered	Species or species habitat may occur within area	In buffer area only
<u>Macronectes halli</u> Northern Giant Petrel [1061]	Vulnerable	Species or species habitat may occur within area	In buffer area only
<u>Onychoprion anaethetus</u> Bridled Tern [82845]		Foraging, feeding or related behaviour likely to occur within area	In buffer area only
<u>Phoebetria fusca</u> Sooty Albatross [1075]	Vulnerable	Species or species habitat may occur within area	In buffer area only
<u>Thalassarche carteri</u> Indian Yellow-nosed Albatross [64464]	Vulnerable	Species or species habitat likely to occur within area	In buffer area only
<u>Thalassarche cauta</u> Shy Albatross [89224]	Endangered	Foraging, feeding or related behaviour likely to occur within area	In buffer area only
<u>Thalassarche impavida</u> Campbell Albatross, Campbell Black-browed Albatross [64459]	Vulnerable	Species or species habitat may occur within area	In buffer area only
<u>Thalassarche melanophris</u> Black-browed Albatross [66472]	Vulnerable	Species or species habitat may occur within area	In buffer area only
<u>Thalassarche steadi</u> White-capped Albatross [64462]	Vulnerable	Foraging, feeding or related behaviour likely to occur within area	In buffer area only

Migratory Marine Species

Scientific Name	Threatened Category	Presence Text	Buffer Status
<u>Balaenoptera edeni</u> Bryde's Whale [35]		Species or species habitat may occur within area	In buffer area only
<u>Balaenoptera musculus</u> Blue Whale [36]	Endangered	Species or species habitat likely to occur within area	In buffer area only
<u>Caperea marginata</u> Pygmy Right Whale [39]		Species or species habitat may occur within area	In buffer area only
<u>Carcharhinus longimanus</u> Oceanic Whitetip Shark [84108]		Species or species habitat may occur within area	In buffer area only
<u>Carcharodon carcharias</u> White Shark, Great White Shark [64470]	Vulnerable	Foraging, feeding or related behaviour known to occur within area	In buffer area only
<u>Caretta caretta</u> Loggerhead Turtle [1763]	Endangered	Breeding likely to occur within area	In buffer area only
<u>Chelonia mydas</u> Green Turtle [1765]	Vulnerable	Species or species habitat may occur within area	In buffer area only
<u>Dermochelys coriacea</u> Leatherback Turtle, Leathery Turtle, Luth [1768]	Endangered	Breeding likely to occur within area	In buffer area only
<u>Eubalaena australis</u> as <u>Balaena glacialis australis</u> Southern Right Whale [40]	Endangered	Breeding known to occur within area	In buffer area only
<u>Lagenorhynchus obscurus</u> Dusky Dolphin [43]		Species or species habitat may occur within area	In buffer area only
<u>Lamna nasus</u> Porbeagle, Mackerel Shark [83288]		Species or species habitat may occur within area	In buffer area only
<u>Megaptera novaeangliae</u> Humpback Whale [38]	Vulnerable	Congregation or aggregation known to occur within area	In buffer area only

Scientific Name	Threatened Category	Presence Text	Buffer Status
<u><i>Mobula alfredi</i> as <i>Manta alfredi</i></u> Reef Manta Ray, Coastal Manta Ray [90033]		Species or species habitat may occur within area	In buffer area only
<u><i>Mobula birostris</i> as <i>Manta birostris</i></u> Giant Manta Ray [90034]		Species or species habitat may occur within area	In buffer area only
<u><i>Natator depressus</i></u> Flatback Turtle [59257]	Vulnerable	Species or species habitat known to occur within area	In buffer area only
<u><i>Orcinus orca</i></u> Killer Whale, Orca [46]		Species or species habitat may occur within area	In buffer area only
<u><i>Rhincodon typus</i></u> Whale Shark [66680]	Vulnerable	Species or species habitat may occur within area	In buffer area only
Migratory Wetlands Species			
<u><i>Actitis hypoleucos</i></u> Common Sandpiper [59309]		Species or species habitat may occur within area	In feature area
<u><i>Calidris acuminata</i></u> Sharp-tailed Sandpiper [874]		Species or species habitat may occur within area	In feature area
<u><i>Calidris canutus</i></u> Red Knot, Knot [855]	Endangered	Species or species habitat may occur within area	In feature area
<u><i>Calidris ferruginea</i></u> Curlew Sandpiper [856]	Critically Endangered	Species or species habitat may occur within area	In feature area
<u><i>Calidris melanotos</i></u> Pectoral Sandpiper [858]		Species or species habitat may occur within area	In feature area
<u><i>Charadrius leschenaultii</i></u> Greater Sand Plover, Large Sand Plover [877]	Vulnerable	Species or species habitat may occur within area	In buffer area only

Scientific Name	Threatened Category	Presence Text	Buffer Status
<u>Limosa lapponica</u> Bar-tailed Godwit [844]		Species or species habitat may occur within area	In buffer area only
<u>Numenius madagascariensis</u> Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat may occur within area	In feature area

Other Matters Protected by the EPBC Act

Commonwealth Lands	[Resource Information]		
The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.			
<u>Commonwealth Land Name</u>

<u>Megaptera novaeangliae</u> Humpback Whale [38]	Migration (north and south)	Known to occur	In buffer area only

Caveat

1 PURPOSE

This report is designed to assist in identifying the location of matters of national environmental significance (MNES) and other matters protected by the Environment Protection and Biodiversity Conservation Act 1999 (Cth) (EPBC Act) which may be relevant in determining obligations and requirements under the EPBC Act.

The report contains the mapped locations of:

- World and National Heritage properties;
- Wetlands of International and National Importance;
- Commonwealth and State/Territory reserves;
- distribution of listed threatened, migratory and marine species;
- listed threatened ecological communities; and
- other information that may be useful as an indicator of potential habitat value.

2 DISCLAIMER

This report is not intended to be exhaustive and should only be relied upon as a general guide as mapped data is not available for all species or ecological communities listed under the EPBC Act (see below). Persons seeking to use the information contained in this report to inform the referral of a proposed action under the EPBC Act should consider the limitations noted below and whether additional information is required to determine the existence and location of MNES and other protected matters.

Where data are available to inform the mapping of protected species, the presence type (e.g. known, likely or may occur) that can be determined from the data is indicated in general terms. It is the responsibility of any person using or relying on the information in this report to ensure that it is suitable for the circumstances of any proposed use. The Commonwealth cannot accept responsibility for the consequences of any use of the report or any part thereof. To the maximum extent allowed under governing law, the Commonwealth will not be liable for any loss or damage that may be occasioned directly or indirectly through the use of, or reliance

3 DATA SOURCES

Threatened ecological communities

For threatened ecological communities where the distribution is well known, maps are generated based on information contained in recovery plans, State vegetation maps and remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species

Threatened, migratory and marine species distributions have been discerned through a variety of methods. Where distributions are well known and if time permits, distributions are inferred from either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc.) together with point locations and described habitat; or modelled (MAXENT or BIOCLIM habitat modelling) using

Where little information is available for a species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc.).

In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More detailed distribution mapping methods are used to update these distributions

4 LIMITATIONS

The following species and ecological communities have not been mapped and do not appear in this report:

- threatened species listed as extinct or considered vagrants;
- some recently listed species and ecological communities;
- some listed migratory and listed marine species, which are not listed as threatened species; and
- migratory species that are very widespread, vagrant, or only occur in Australia in small numbers.

The following groups have been mapped, but may not cover the complete distribution of the species:

- listed migratory and/or listed marine seabirds, which are not listed as threatened, have only been mapped for recorded
- seals which have only been mapped for breeding sites near the Australian continent

The breeding sites may be important for the protection of the Commonwealth Marine environment.

Refer to the metadata for the feature group (using the Resource Information link) for the currency of the information.

APPENDIX 4

Conservation Codes

Conservation Codes for Western Australian Flora and Fauna

Specially protected fauna or flora are species* which have been adequately searched for and are deemed to be, in the wild, either rare, at risk of extinction, or otherwise in need of special protection, and have been gazetted as such. Conservation codes have been transitioned under regulations 170, 171 and 172 of the *Biodiversity Conservation Regulations 2018*.

T Threatened species – Schedules 1-4

Listed by order of the Minister as Threatened in the category of critically endangered, endangered or vulnerable under section 19(1), or is a rediscovered species to be regarded as threatened species under section 26(2) of the *Biodiversity Conservation Act 2016* (BC Act).

- **Threatened fauna** is that subset of ‘Specially Protected Fauna’ listed under schedules 1 to 3 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for Threatened Fauna.
- **Threatened flora** is that subset of ‘Rare Flora’ listed under schedules 1 to 3 of the *Wildlife Conservation (Rare Flora) Notice 2018* for Threatened Flora.

The assessment of the conservation status of these species is based on their national extent and ranked according to their level of threat using IUCN Red List categories and criteria as detailed below.

CR Critically endangered species

Threatened species considered to be “*facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with criteria set out in the ministerial guidelines*”.

Listed as critically endangered under section 19(1)(a) of the BC Act in accordance with the criteria set out in section 20 and the ministerial guidelines. Published under schedule 1 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for critically endangered fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for critically endangered flora.

EN Endangered species

Threatened species considered to be “*facing a very high risk of extinction in the wild in the near future, as determined in accordance with criteria set out in the ministerial guidelines*”.

Listed as endangered under section 19(1)(b) of the BC Act in accordance with the criteria set out in section 21 and the ministerial guidelines. Published under schedule 2 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for endangered fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for endangered flora.

VU Vulnerable species

Threatened species considered to be “*facing a high risk of extinction in the wild in the medium-term future, as determined in accordance with criteria set out in the ministerial guidelines*”.

Listed as vulnerable under section 19(1)(c) of the BC Act in accordance with the criteria set out in section 22 and the ministerial guidelines. Published under schedule 3 of the *Wildlife*

Conservation (Specially Protected Fauna) Notice 2018 for vulnerable fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for vulnerable flora.

EX Presumed extinct species

Species where “*there is no reasonable doubt that the last member of the species has died*”, and listing is otherwise in accordance with the ministerial guidelines (section 24 of the BC Act).

Published as presumed extinct under schedule 4 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for extinct fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for extinct flora.

EW Extinct in the wild species

Species that “*is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; and it has not been recorded in its known habitat or expected habitat, at appropriate seasons, anywhere in its past range, despite surveys over a time frame appropriate to its life cycle and form*”, and listing is otherwise in accordance with the ministerial guidelines (section 25 of the BC Act).

Currently there are no threatened fauna or threatened flora species listed as extinct in the wild. If listing of a species as extinct in the wild occurs, then a schedule will be added to the applicable notice.

Specially protected species

Listed by order of the Minister as specially protected under section 13(1) of the BC Act. Meeting one or more of the following categories: species of special conservation interest; migratory species; cetaceans; species subject to international agreement; or species otherwise in need of special protection.

Species that are listed as threatened species (critically endangered, endangered or vulnerable) or extinct species under the BC Act cannot also be listed as Specially Protected species.

MI Migratory species

Fauna that periodically or occasionally visit Australia or an external Territory or the exclusive economic zone; or the species is subject of an international agreement that relates to the protection of migratory species and that binds the Commonwealth; and listing is otherwise in accordance with the ministerial guidelines (section 15 of the BC Act).

Includes birds that are subject to an agreement between the government of Australia and the governments of Japan (JAMBA), China (CAMBA) and The Republic of Korea (ROKAMBA), and fauna subject to the Convention on the Conservation of Migratory Species of Wild Animals (Bonn Convention), an environmental treaty under the United Nations Environment Program. Migratory species listed under the BC Act are a subset of the migratory animals, that are known to visit Western Australia, protected under the international agreements or treaties, excluding species that are listed as Threatened species.

Published as migratory birds protected under an international agreement under schedule 5 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018*.

CD Species of special conservation interest (conservation dependent fauna)

Fauna of special conservation need being species dependent on ongoing conservation intervention to prevent it becoming eligible for listing as threatened, and listing is otherwise in accordance with the ministerial guidelines (section 14 of the BC Act).

Published as conservation dependent fauna under schedule 6 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018*.

OS Other specially protected species

Fauna otherwise in need of special protection to ensure their conservation, and listing is otherwise in accordance with the ministerial guidelines (section 18 of the BC Act).

Published as other specially protected fauna under schedule 7 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018*.

P Priority species

Possibly threatened species that do not meet survey criteria, or are otherwise data deficient, are added to the Priority Fauna or Priority Flora Lists under Priorities 1, 2 or 3. These three categories are ranked in order of priority for survey and evaluation of conservation status so that consideration can be given to their declaration as threatened fauna or flora.

Species that are adequately known, are rare but not threatened, or meet criteria for near threatened, or that have been recently removed from the threatened species or other specially protected fauna lists for other than taxonomic reasons, are placed in Priority 4. These species require regular monitoring.

Assessment of Priority codes is based on the Western Australian distribution of the species, unless the distribution in WA is part of a contiguous population extending into adjacent States, as defined by the known spread of locations.

Priority 1: Poorly-known species

Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either: very small; or on lands not managed for conservation, e.g. agricultural or pastoral lands, urban areas, road and rail reserves, gravel reserves and active mineral leases; or otherwise under threat of habitat destruction or degradation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under immediate threat from known threatening processes. Such species are in urgent need of further survey.

Priority 2: Poorly-known species

Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, e.g. national parks, conservation parks, nature reserves and other lands with secure tenure being managed for conservation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under threat from known threatening processes. Such species are in urgent need of further survey.

Priority 3: Poorly-known species

Species that are known from several locations, and the species does not appear to be under imminent threat, or from few but widespread locations with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat. Species may be included if they are comparatively well known from several locations but do not meet adequacy of survey requirements and known threatening processes exist that could affect them. Such species are in need of further survey.

Priority 4: Rare, Near Threatened and other species in need of monitoring

- (a) Rare. Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection but could be if present circumstances change. These species are usually represented on conservation lands.
- (b) Near Threatened. Species that are considered to have been adequately surveyed and that are close to qualifying for vulnerable but are not listed as Conservation Dependent.
- (c) Species that have been removed from the list of threatened species during the past five years for reasons other than taxonomy.

*Species includes all taxa (plural of taxon - a classificatory group of any taxonomic rank, e.g. a family, genus, species or any infraspecific category i.e. subspecies or variety, or a distinct population).

Western Australian Ecological Communities

Threatened Ecological Communities

The BC Act provides for the statutory listing of threatened ecological communities (TECs) by the Minister.

Presumed Totally Destroyed (PD)

An ecological community that has been adequately searched for but for which no representative occurrences have been located. The community has been found to be totally destroyed or so extensively modified throughout its range that no occurrence of it is likely to recover its species composition and/or structure in the foreseeable future.

Critically Endangered (CR)

An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or that was originally of limited distribution and is facing severe modification or destruction throughout its range in the immediate future, or is already severely degraded throughout its range but capable of being substantially restored or rehabilitated.

Endangered (EN)

An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or was originally of limited distribution and is in danger of significant modification throughout its range or severe modification or destruction over most of its range in the near future.

Vulnerable (VU)

An ecological community that has been adequately surveyed and is found to be declining and/or has declined in distribution and/or condition and whose ultimate security has not yet been assured and/or a community that is still widespread but is believed likely to move into a category of higher threat in the near future if threatening processes continue or begin operating throughout its range.

Priority Ecological Communities

Possible threatened ecological communities that do not meet survey criteria or that are not adequately defined are added to the Priority Ecological Community List under priorities 1, 2 and 3. These three categories are ranked in order of priority for survey and/or definition of the community. Ecological communities that are adequately known, and are rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list, are placed in Priority 4. These ecological communities require regular monitoring. Conservation Dependent ecological communities are placed in Priority 5.

Priority One: Poorly-known ecological communities

Ecological communities that are known from very few occurrences with a very restricted distribution (generally ≤ 5 occurrences or a total area of $\leq 100\text{ha}$).

Occurrences are believed to be under threat either due to limited extent, or being on lands under immediate threat (e.g. within agricultural or pastoral lands, urban areas, active mineral leases) or for which current threats exist. May include communities with occurrences on protected lands. Communities may be included if they are comparatively well-known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under immediate threat from known threatening processes across their range.

Priority Two: Poorly-known ecological communities

Communities that are known from few occurrences with a restricted distribution (generally ≤10 occurrences or a total area of ≤200ha). At least some occurrences are not believed to be under immediate threat (within approximately 10 years) of destruction or degradation. Communities may be included if they are comparatively well known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under threat from known threatening processes.

Priority Three: Poorly known ecological communities

- (i) Communities that are known from several to many occurrences, a significant number or area of which are not under threat of habitat destruction or degradation or;
- (ii) communities known from a few widespread occurrences, which are either large or with significant remaining areas of habitat in which other occurrences may occur, much of it not under imminent threat (within approximately 10 years), or;
- (iii) munities made up of large, and/or widespread occurrences, that may or may not be represented in the reserve system, but are under threat of modification across much of their range from processes such as grazing by domestic and/or feral stock, inappropriate fire regimes, clearing, hydrological change etc.

Communities may be included if they are comparatively well known from several localities but do not meet adequacy of survey requirements and/or are not well defined, and known threatening processes exist that could affect them.

Priority Four: Ecological communities that are adequately known, rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list. These communities require regular monitoring.

- (i) Rare. Ecological communities known from few occurrences that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection, but could be if present circumstances change. These communities are usually represented on conservation lands.
- (ii) Near Threatened. Ecological communities that are considered to have been adequately surveyed and that do not qualify for Conservation Dependent, but that are close to qualifying for a higher threat category.
- (iii) Ecological communities that have been removed from the list of threatened communities during the past five years.

Priority Five: Conservation Dependent ecological communities

Ecological communities that are not threatened but are subject to a specific conservation program, the cessation of which would result in the community becoming threatened within five years.

Commonwealth of Australia Conservation Codes

Threatened Flora and Fauna

Threatened fauna and flora may be listed under Section 178 of the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) in any one of the following six categories:

Extinct

A native species is eligible to be included in the extinct category at a particular time if, at that time, there is no reasonable doubt that the last member of the species has died.

Extinct in the wild

A native species is eligible to be included in the extinct in the wild category at a particular time if, at that time:

- a) it is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; or
- b) it has not been recorded in its known and/or expected habitat, at appropriate seasons, anywhere in its past range, despite exhaustive surveys over a time frame appropriate to its life cycle and form.

Critically endangered

A taxon is Critically Endangered when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing an extremely high risk of extinction in the wild.

Endangered

A taxon is Endangered when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing a very high risk of extinction in the wild.

Vulnerable

A taxon is Vulnerable when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing a high risk of extinction in the wild.

Conservation dependent

A native species is eligible to be included in the conservation dependent category at a particular time if, at that time:

- a) the species is the focus of a specific conservation program the cessation of which would result in the species becoming vulnerable, endangered or critically endangered; or
- b) the following subparagraphs are satisfied:
 - i. the species is a species of fish;

- ii. the species is the focus of a plan of management that provides for management actions necessary to stop the decline of, and support the recovery of, the species so that its chances of long term survival in nature are maximised;
- iii. the plan of management is in force under a law of the Commonwealth or of a State or Territory;
- iv. cessation of the plan of management would adversely affect the conservation status of the species.

The EPBC Act does not provide for listing in a data deficient category. Where sufficient data (evidence) is unavailable to allow assessment by the Threatened Species Scientific Committee against the criteria for listing, the species are found to be ineligible. A recommendation is made to the Minister to not include the species in any category under the EPBC Act. For reasons of transparency and to inform future research, the Threatened Species Scientific Committee publishes the names of those species found to be data deficient. As data deficient is not a listing category under the EPBC Act, this has no statutory implications and the species is not considered to be listed under the EPBC Act.

Threatened Ecological Communities

Threatened Ecological communities under the EPBC Act are listed in three categories.

Critically endangered

If, at that time, an ecological community is facing an extremely high risk of extinction in the wild in the immediate future (indicative timeframe being the next 10 years).

Endangered

If, at that time, an ecological community is not critically endangered but is facing a very high risk of extinction in the wild in the near future (indicative timeframe being the next 20 years).

Vulnerable

If, at that time, an ecological community is not critically endangered or endangered, but is facing a high risk of extinction in the wild in the medium-term future (indicative timeframe being the next 50 years).

<i>Spyridium globulosum</i>	1.9	5
<i>Acacia littorea</i>	1.7	5
<i>Leucopogon parviflorus</i>	1.5	10
<i>Acrotriche cordata</i>	0.5	25
<i>Pimelea ferruginea</i>	0.4	<1
<i>Cassytha racemosa</i>	Climber	<1

* introduced species

QUADRAT B5

50 322340 E 6215263 N

Vegetation: *Agonis flexuosa* Low Open Woodland over *Spyridium globulosum*
Shrubland over *Acrotriche cordata*/*Leucopogon parviflorus* Open
Low Heath

Condition: Excellent

Soil Type: Dark cream sand

Landform: Undulating

Date: 22.10.21

Recorder: Paul van der Moezel

QUADRAT (10 x 10m)

SPECIES	HEIGHT (m)	COVER (%)
<i>Agonis flexuosa</i>	5	20
<i>Spyridium globulosum</i>	2.1	10
<i>Leucopogon parviflorus</i>	1.7	20
<i>Acacia littorea</i>	1.4	2
<i>Lepidosperma gladiatum</i>	0.8	2
