Stratosphere -Troposphere (ST) Radar Centre Gauhati University

Year of establishment : 2019

Director (i/c) : Dr. Biman J. Medhi

The climatic environment of the North Eastern region of India is significantly influenced by the different major atmospheric and ocean energy systems like the West Pacific Ocean energy system, the South-West monsoon, the North-East trade wind system and South Asian land mass energy system. These factors along with zonal orographic structure have made this region a unique natural laboratory which is yet to be explored. High resolution remote sensing data up to the stratosphere over this region will be scientifically very important for framing plans and socio-economic programmes, mitigation of natural calamity in the context and understanding of global climatic changes. It is already established that Radar is an excellent and indispensable experimental tool to measure different physical parameters related to earth's atmosphere, weather patterns, atmospheric winds, waves, turbulence, temperature, pressure etc. So, to study the lower atmospheric dynamics over the North-Eastern region, a state of the art Stratosphere-Troposphere (ST) Radar has been designed and installed at Gauhati University, Guwahati (26.10N, 91.70E, ~ 50 m above MSL) for operating at frequency of 212.5 Mhz in collaboration with the Society for Applied Microwave Electronics Engineering and Research (SAMEER), Mumbai led by Prof. Minakshi Devi, former Head, Department of Physics, Gauhati University. Guwahati is considered to be the gateway to the North-Eastern region of India dominated with intriguing dynamical and meteorological aspects such as wind structures, cloud morphology, monsoon troughs, tropospheric temperature, boundary layer characteristics and different short and large scale variabilities associated with atmospheric background oscillations. The ST Radar system has been sponsored by the Ministry of Electronics and information technology (Meity), Government of India which was initiated in November, 2010 (Rs.1968.0 lacs). Government of Assam has funded the infrastructure and site development such as antenna site preparation, approach road, laboratory, scientist building etc. for scientists, research scholars and students coming from different parts of country and abroad. The Gauhati University ST Radar is a very advance system with cutting edge indigenous technology in VHF band with open configuration (Antennas, Transmit/Receive Module (T/R) Modules and Cables are placed in the open field) where active phased array concept has been used. It is a coherent pulsed Doppler radar operating in Doppler Beam Swinging (DBS) mode consists of 576 antenna elements arranged in a circle with square grid. Each antenna is connected with its own T/R Module to generate high quality wind data (wind speed and its direction) with high spatial and temporal resolution on continuous basis.

The state of the art ST-Radar system will provide a deep insight into synoptic processes and mesoscale systems with high vertical and temporal resolutions over North-Eastern region. The forecasting and now casting of the atmospheric phenomena in North-Eastern region will be very helpful to various sectors viz., meteorology, agriculture, civil aviation, disaster management etc. It will be extensively utilized by the universities and research laboratories in the North-Eastern region as well as rest of the India and will also be produced skilled manpower in the field of atmospheric research and RF technology.
