

# Earli Dew Honeydew

Round, 6 to 8 inch, 7 pound smooth-skinned melon with very sweet green flesh. Vigorous vines yield plenty of fruit. Resistant to Fusarium Wilt.

## *Cucumis melo 'Earli Dew' (Maturation days: 80 days)*

- **Use**: Earli Dew is the earliest round, 2-1/2 to 3 lb. creamy -green honeydew hybrid we've seen. The smooth melons have a distinctive lime green flesh of excellent flavor and texture. Earli-dew slips at maturity like a muskmelon. Intermediate resistance to fusarium wilt (race 2).
- **Exposure/Soil**: Full sun or at least 5-6 hours of afternoon sun. Water regularly, when top 3 in. of soil is dry.
- **Growth**: Five to six feet is the recommended row spacing with 18 - 24 inches between plants.
- **Hardiness**: Zone 9-11, Annual
- **Fruit/Flower**: Produces smooth melons with light green interiors and a sweet flavor, growing to be between two and three pounds. The honeydew melons are ripe in eighty days from seed (60 or less from transplants)
