1 What's New in Development Information

This section provides an overview of all new and changed features that have been addressed in SAP Landscape Management 3.0, development information.

What's New in 3.0 SP5

Table 1:

Description	Related Link	Type of Documentation Change	Type of Software Change
You have now information how to call a servlet to receive validation and monitoring data.	Calling the Validation Servlet [page 493]	New	None
New REST API methods are now available to retrieve information about registered hosts, instances, systems, change, and operation logs, or to trigger a full text search.	Viewing REST Application Programming Interface Methods [page 8]	Changed	Enhanced

What's New in 3.0 SP4

There have been no updates.

What's New in 3.0 SP3

Table 2:

Description	Related Link	Type of Documentation Change	Type of Software Change
The external interface method <code>getCustomRelationType</code> is now available.	[page 451]	New	New

Description	Related Link	Type of Documentation Change	Type of Software Change
The external interface method addCustomRelation is now available.	addCustomRelation [page 457]	New	New
The external interface method deleteCustomRelation is now available.	deleteCustomRelation [page 465]	New	New
The external interface method getCustomRelations is now available.	getCustomRelations [page 473]	New	New
The external interface method getRKSConfigurationsData is now available	getRKSConfigurationsData [page 301]	New	New
The external interface method addCharacteristics is now available.	addCharacteristics [page 151]	New	New
The external interface method addCharacteristicValues is now available.	addCharacteristicValues [page 159]	New	New
The external interface method addCharacterizations is now available.	addCharacterizations [page 164]	New	New
The external interface method deleteCharacterizations is now available.	deleteCharacterizations [page 168]	New	New
The external interface method deleteCharacteristics is now available.	deleteCharacteristics [page 171]	New	New
The external interface method deleteCharacteristicValues is now available.	deleteCharacteristicValues [page 175]	New	New
The external interface method getCharacteristic is now available.	getCharacteristic [page 179]	New	New

Description	Related Link	Type of Documentation Change	Type of Software Change
The external interface method <code>getCharacteristics</code> is now available.	getCharacteristics [page 184]	New	New
The external interface method <code>getCharacterizations</code> is now available.	getCharacterizations [page 190]	New	New
You can now execute, manage, and monitor activities using the SAP Landscape Management REST API.	Viewing REST Application Programming Interface Methods [page 8]	New	New
You have now a description how to receive parameters of a roadmap based activity for execution using the REST API.	Receiving Parameters of a Specific Provisioning Process [page 9]	New	New

What's New in 3.0 SP2

There have been no updates.

What's New in 3.0 SP1

Table 3:

Description	Related Link	Type of Documentation Change	Type of Software Change
The external interface method <code>listScheduledTemplates</code> is now available.	listScheduledTemplates [page 364]	New	New
The external interface method <code>deleteScheduledTemplate</code> is now available.	deleteScheduledTemplate [page 369]	New	New
The external interface method <code>listCustomProcesses</code> is now available.	listCustomProcesses [page 405]	New	New

Description	Related Link	Type of Documentation Change	Type of Software Change
The external interface method <code>getCustomProcessDetails</code> is now available.	getCustomProcessDetails [page 407]	New	New
The external interface method <code>deleteCustomProcesses</code> is now available.	deleteCustomProcesses [page 413]	New	New
The external interface method <code>resolveCustomProcess</code> is now available.	resolveCustomProcess [page 415]	New	New
The external interface method <code>executeCustomProcess</code> is now available.	executeCustomProcess [page 424]	New	New
The external interface method <code>listTaskDetails</code> has been deleted.	Not applicable	Deleted	Deleted
The external interface method <code>getValidationResults</code> has been enhanced.	getValidationResults [page 224]	Enhanced	Enhanced
The external interface method <code>getValidations</code> is now available.	getValidations [page 220]	New	New

What's New in 3.0 SPO

Table 4:

Description	Related Link	Type of Documentation Change	Type of Software Change
You have now information how to call a servlet to delete configuration data.	Calling the SysDel Servlet [page 487]	New	None
You have now information how to call a servlet to export configuration data. A new parameter <code>useDefaultPwd</code> is available.	Calling the Download Servlet [page 489]	New	Enhanced

Description	Related Link	Type of Documentation Change	Type of Software Change
You have now information how to call a servlet to import configuration data. A new parameter <code>useDefaultPwd</code> is available.	Calling the Upload Servlet [page 491]	New	Enhanced
You can now use the external interface method <code>queryEntitiesById</code> to search for various entity properties in your landscape.	queryEntitiesById [page 287]	New	New
You can now use the external interface method <code>queryEntitiesFullText</code> to search for various entity properties in your landscape.	queryEntitiesFullText [page 294]	New	New
The external interface parameter structure <code>AbstractServiceData</code> is now enhanced with the element <code>isLocked</code> .	Service Functions [page 315]	Enhanced	Enhanced
The external interface method <code>storeTemplate2</code> is now available.	storeTemplate2 [page 146]	New	New
The external interface method <code>listTemplates2</code> is now available.	listTemplates2 [page 362]	New	New
The external interface method <code>deleteTemplates2</code> is now available.	deleteTemplates2 [page 373]	New	New
The external interface method <code>validateTemplate2</code> is now available.	validateTemplate2 [page 382]	New	New

2 Development Information

The development information provides an overview of external interfaces and servlets available for SAP Landscape Management.

[REST Application Programming Interface \[page 8\]](#)

You use the SAP Landscape Management REST Application Programming Interface (API).

[Web Services \[page 13\]](#)

You use external interfaces to programmatically execute methods related to both configuration and operations, as well as mass operations in SAP Landscape Management.

[Servlets \[page 487\]](#)

This section provides an overview of invoker servlets available for SAP Landscape Management.

2.1 REST Application Programming Interface

You use the SAP Landscape Management REST Application Programming Interface (API).

[Viewing REST Application Programming Interface Methods \[page 8\]](#)

You view all REST Application Programming Interface (API) methods available for SAP Landscape Management.

[Receiving Parameters of a Specific Provisioning Process \[page 9\]](#)

You receive parameters of a specific provisioning process.

2.1.1 Viewing REST Application Programming Interface Methods

You view all REST Application Programming Interface (API) methods available for SAP Landscape Management.

Prerequisites

You have the required authorization.

For more information, see https://help.sap.com/viewer/lama_security.

Context

SAP Landscape Management provides REST API methods for the following:

- Execute, manage, and monitor activities
- Retrieve information about registered hosts, instances, and systems
- Retrieve information about change and operation logs
- Perform a full text search

Procedure

- For a detailed overview, open the URL <https://<host>:<port>/lama-api>.

2.1.2 Receiving Parameters of a Specific Provisioning Process

You receive parameters of a specific provisioning process.

Procedure

1. In SAP Landscape Management, choose .
2. Choose the provisioning process for which you want to receive the parameters.
3. Navigate through the roadmap by following the instructions on the screen.
4. On the *Summary* screen, choose *Remote Execution*.

The *Remote Execution* dialog box displays the following:

- *Execution Request*

Displays the operation, the entity, and all parameters you have changed. It does not display parameters generated by SAP Landscape Management which have not been changed in the roadmap.

Sample Code

```
{  
    "type" : "provisioning",  
    "operation" : "SYSTEM_CLONING",  
    "entityType" : "SYSTEM",  
    "entityId" : "SystemID.X14.SystemHost.simdbx14",  
    "changeId" : null,  
    "ignoreWarnings" : false,  
    "validateOnly" : false,  
    "parameters" : {  
        "HOSTS" : {  
            "provisionedVirtualHosts" : [ ]  
        },  
        "CONSISTENCY" : { },  
        "HOSTNAMES" : { },  
        "FENCING" : { },  
    }  
}
```

```

        "STORAGE_CLONE" : { },
        "BASE" : { }
    }
}

```

- *Parameters*

Displays all parameters, including the parameters generated by SAP Landscape Management that have not been changed in the roadmap.

Sample Code

```

{
    "HOSTS" : {
        "provisionedVirtualHosts" : [ ],
        "hosts" : [ {
            "host" : "simatsw01",
            "serviceId" : "SystemID.X14.Number.00.InstanceHost.simcix14",
            "type" : "RESOURCE"
        }, {
            "host" : "simatsw01",
            "serviceId" :
        "DatabaseName.X14.DatabaseType.MSS.DatabaseHost.simdbx14",
            "type" : "RESOURCE"
        }, {
            "host" : "simatsw01",
            "serviceId" : "SystemID.X14.Number.10.InstanceHost.simas0x14",
            "type" : "RESOURCE"
        } ]
    },
    "CONSISTENCY" : {
        "delayedExecutionTime" : "-1",
        "maximumBackupTime" : "90",
        "consistency" : "CLONING_CONSISTENCY_DB",
        "isExecutionDelayed" : "false"
    },
    "HOSTNAMES" : {
        "hostnames" : [ {
            "hostname" : "simdbx14clone",
            "autoCalcIPAddress" : "true",
            "serviceId" :
        "DatabaseName.X14.DatabaseType.MSS.DatabaseHost.simdbx14",
            "type" : "COM_HOST",
            "network" : "SimSysProvNet"
        }, {
            "hostname" : "simcix14clone",
            "autoCalcIPAddress" : "true",
            "serviceId" : "SystemID.X14.Number.00.InstanceHost.simcix14",
            "type" : "COM_HOST",
            "network" : "SimSysProvNet"
        }, {
            "hostname" : "simglobalhostx14clone",
            "autoCalcIPAddress" : "true",
            "serviceId" : "SystemID.X14.Number.00.InstanceHost.simcix14",
            "type" : "VIRT_HOST",
            "network" : "SimSysProvNet"
        }, {
            "hostname" : "simas0x14clone",
            "autoCalcIPAddress" : "true",
            "serviceId" : "SystemID.X14.Number.10.InstanceHost.simas0x14",
            "type" : "COM_HOST",
            "network" : "SimSysProvNet"
        } ]
    },
    "FENCING" : {
        "unfenceAfterCopy" : "false",
        "allowedPorst" : [ ],
    }
}

```

```

        "allowedHostnames" : [ ],
        "requestUnfenceConfirmation" : "true"
    },
    "STORAGE_CLONE" : {
        "storageVolumeList" : [ {
            "fullClone" : "false",
            "customCloningProperties" : [ {
                "key" : "%booleanKey"
            }, {

Related Information

[Provisioning](#)

2.2 Web Services

You use external interfaces to programmatically execute methods related to both configuration and operations, as well as mass operations in SAP Landscape Management.

The methods exposed as web services are grouped under configuration and control methods.

- Configuration Methods
 - Allow you to configure instances, systems, networks, and pools.
- Control Methods
 - Allow you to execute start and stop operations, reserve systems, retrieve status information of instances and execute operations.

To access the WSDL file, use the following URL:`http://<host>:<port>/LVMWebServices/ACCAdapter?wsdl`

The following table shows terms used in the development information documentation and the corresponding synonyms used in SAP Landscape Management software and application help.

Table 5:

Web Service Terminology	SAP Landscape Management Terminology
Service	Instance
Resource	Host

[Viewing Methods in Web Services Navigator \[page 14\]](#)

You view all web service methods available on the system in the WebServices Navigator.

[Method Overview \[page 14\]](#)

This section shows all available web service methods for SAP Landscape Management.

[Configuration Methods \[page 19\]](#)

Configuration methods allow you to configure instances, systems, networks, and pools.

[Control Methods \[page 193\]](#)

Control methods allow you to execute start and stop operations, reserve systems, retrieve status information of instances and execute operations.

[Error Codes \[page 481\]](#)

This section lists possible error codes and the corresponding message.

2.2.1 Viewing Methods in Web Services Navigator

You view all web service methods available on the system in the WebServices Navigator.

Procedure

1. Log on to Web Services Navigator using the URL `http://<host>:<J2EE Port>/wsnavigator`.
2. Enter your administrator credentials.
3. In the *Search Service Interfaces* area, choose *Provider System*.
4. Search for service interface name **ACCAdapter**.
5. To view a list of all web service methods available, choose *Next*.

2.2.2 Method Overview

This section shows all available web service methods for SAP Landscape Management.

Table 6:

Method	Description
addCharacteristics [page 151]	Adds new characteristics.
addCharacteristicValues [page 159]	Adds characteristic values to characteristics.
addCharacterizations [page 164]	Assigns instances, hosts, or virtual hosts to characteristic values.
addCustomRelation [page 457]	Adds a new custom relation that defines a static relationships between entities.
addNetworkConfig [page 96]	Adds a new network to SAP Landscape Management.
addPoolConfig [page 38]	Adds a new pool to SAP Landscape Management.
autoselectComputerSystem [page 195]	Selects suitable computer systems for performing operations on instances or groups of instances.
cancelProcess [page 284]	Cancels a process which is currently being executed.
changePassword [page 215]	Modifies all passwords stored in SAP Landscape Management
clearNotes [page 211]	Clears notes for serviceID collections.
deleteCustomProcesses [page 413]	Deletes a custom process specified by its ID.

Method	Description
deleteCustomProperties [page 445]	Deletes custom properties.
deleteCustomRelation [page 465]	Deletes custom relations.
deleteCharacteristics [page 171]	Deletes characteristics.
deleteCharacterizations [page 168]	Deletes instances, hosts, or virtual hosts from characteristic values.
deleteCharacteristicValues [page 175]	Deletes characteristic values.
deleteNetworkConfig [page 109]	Deletes networks with the network ID specified in the input data from SAP Landscape Management if there are no referencing instances and hosts for that network.
deleteNetworkConfig2 [page 111]	Deletes details of networks with the network ID specified in the input data from SAP Landscape Management if there are no referencing instances and hosts for that network.
deleteOperationTemplate [page 395]	Deletes an operation template specified by its ID.
deletePoolConfig [page 50]	Deletes pools with the pool ID specified in the input data from SAP Landscape Management if there are no referencing instances and hosts for that pool.
deletePoolConfig2 [page 52]	Deletes details of pool configurations if there are no referencing instances and hosts for that pool.
deleteTemplates [page 371]	Deletes templates using the corresponding template IDs.
deleteTemplates2 [page 373]	Deletes templates using the corresponding template IDs.
downloadTemplate [page 376]	Downloads a template from SAP Landscape Management based on the template ID.
executeCustomProcess [page 424]	Executes a custom process specified by ID over an entity specified by ID.
executeOperation [page 202]	Executes operations on instances such as start, stop, or relocate.
executeOperationTemplate [page 398]	Executes an operation template specified by ID over an entity specified by ID.
executeTemplate [page 378]	Executes templates in SAP Landscape Management using the template ID that is already stored in SAP Landscape Management. To find out which operations are supported, search for Managing Provisioning Templates, within the Application Help.

Method	Description
getAdapterVersion [page 356]	Retrieves the adapter version.
getAllComputerSystemConfigHostnames [page 117]	Retrieves host names of all computer systems configured in SAP Landscape Management.
getAllComputerSystemConfigs [page 119]	Retrieves computer system details configured in SAP Landscape Management, along with their hardware, network, pool and SAP Host Agent information.
getAllComputerSystemData [page 339]	Retrieves details of all computer systems configured and available in SAP Landscape Management.
getAllComputerSystemHostnames [page 139]	Retrieves host names of all computer systems configured and available in SAP Landscape Management.
getAllNetworkConfigs [page 85]	Retrieves the details of all networks available in SAP Landscape Management for configuration.
getAllNetworkIds [page 83]	Retrieves IDs of all networks configured and available in SAP Landscape Management. The Network ID is the UUID as the unique identifier of networks.
getAllPoolConfigs [page 23]	Retrieves details of all pools available in SAP Landscape Management for configuration.
getAllPoolContainerConfigs [page 33]	Retrieves details of the pools for the given input pool ID collection.
getAllPoolData [page 304]	Retrieves details of all pool information configured and available in SAP Landscape Management. The Pool ID is the UUID and a unique identifier of pools. The pool data also includes information about the instances and the hosts configured under this pool.
getAllPoolIds [page 21]	Retrieves IDs of all pools configured and available in SAP Landscape Management. The Pool ID is the UUID and a unique identifier of pools.
getAllSystemServiceConfigIds [page 57]	Retrieves IDs of all systems available in SLD.
getAllSystemServiceConfigs [page 62]	Retrieves details of all root level system information available in SLD.
getAllSystemServiceData [page 320]	Retrieves details of all system-related information configured and available in SAP Landscape Management.
getAllSystemServiceIds [page 316]	Retrieves details of all the systems available in SAP Landscape Management along with some property information such as system ID, or system type.

Method	Description
getCharacteristic [page 179]	Retrieves details of a specific characteristic defined.
getCharacteristics [page 184]	Retrieves details of all characteristics defined.
getCharacterizations [page 190]	Retrieves details of elements assigned to characteristic values.
getComputerSystemConfigs [page 125]	Retrieves information related to the requested computer system host names. That includes information about the hardware configuration, as to whether its AC-managed or not, as to whether it is AC-operational, or AC-enabled, as well as pool- and network related details, SAP Host Agent details and so on.
getComputerSystemData [page 348]	Retrieves details of computer systems along with complete information for all host names specified in the input data.
getCustomProcessDetails [page 407]	Retrieves extended information about a custom process specified by its ID.
getCustomProperties [page 433]	Retrieves custom properties.
getCustomRelations [page 473]	Retrieves custom relations configured
getCustomRelationType [page 451]	Retrieves custom relation source entity types and target entity types.
getNetworkConfigs [page 90]	Retrieves details of the network configuration for the input network ID collection specified.
getOperationProcessStatus [page 209]	Retrieves the status of the operation executed. The input of this method should be the process ID which was returned in the result of <code>executeOperation</code> .
getOperationTemplateDetails [page 388]	Retrieves extended information about the operation template specified by its ID.
getPoolConfigs [page 28]	Retrieves details of the pools for the input pool ID collection specified.
getPoolData [page 309]	Retrieves details of the pool information for all collections of pool IDs specified in the input data. The Pool ID is the UUID and a unique identifier of pools. The pool data also includes information about the instances and the hosts configured under this pool.
getProcessDetails [page 234]	Retrieves process details using process IDs.
getProcessesOfState [page 249]	Retrieves details of a process state using process IDs.

Method	Description
getProcessStepLog [page 264]	Retrieves logs for one step in one process.
getRKSConfigurationsData [page 301]	Retrieves all rolling kernel switch (RKS) configurations created for a system.
listScheduledTemplates [page 364]	Retrieves all or defined templates scheduled, based on operation or provisioning template IDs
deleteScheduledTemplate [page 369]	Deletes scheduled templates where the ID is provided as parameter.
getServiceConfigForSystem [page 65]	Retrieves the complete details of the system along with the details of its children for the system specified for the input system service ID.
getServiceData [page 324]	Retrieves details of the instance for the service ID collection specified in the input data.
getServiceDataForSystem [page 332]	Retrieves details of the input system along with full context information of the system and its children. The method returns a collection of service data, the system details and its children details.
getValidations [page 220]	Retrieves information about all validations for a specific entity type.
getValidationResults [page 224]	Retrieves results of the runtime validation using entity IDs.
holdProcess [page 272]	Holds (suspects) a process which is currently being executed.
listCustomProcesses [page 405]	Lists all custom processes.
listOperationTemplates [page 386]	Lists all operation templates.
listTemplates [page 360]	Lists the template IDs and template names stored in SAP Landscape Management.
listTemplates2 [page 362]	Lists the template IDs and template names stored in SAP Landscape Management
queryEntitiesByld [page 287]	Searchs for various entity properties available in your landscape.
queryEntitiesFullText [page 294]	Search for various entity properties available in your landscape.
releaseProcess [page 276]	Releases a process which is currently on hold (suspended).
resolveCustomProcess [page 415]	Tries to resolve a custom process specified by ID over an entity specified by ID.

Method	Description
respondToProcessStep [page 279]	Responds to a process step waiting for user interaction.
retryProcess [page 269]	Retries a failed process.
storeKey [page 141]	Stores the decryption passcode of the encrypted property values within the template.
storeTemplate [page 143]	Stores the partner template in SAP Landscape Management in XML format.
storeTemplate2 [page 146]	Stores the partner template in SAP Landscape Management in XML format.
updateComputerSystemConfig [page 132]	Modifies existing configuration data for a computer system, such as its pool- or, network-related details, SAP Host Agent details, details as to whether it is adaptive-enabled or not, AC-operational etc.
updateCustomProperties [page 439]	Modifies custom properties.
updateNetworkConfig [page 104]	Modifies details of the network specified in the input data. The Network ID cannot be changed and is the unique identifier for the network.
updatePoolConfig [page 45]	Modifies details of the pool specified in the input data. The Pool ID cannot be changed and is the unique identifier for the pool.
updateServiceConfigForSystem [page 74]	Modifies the instance configuration of the system.
updateTemplate [page 148]	Modifies an existing template in SAP Landscape Management. The template ID must be part of the template. The ID attribute should be part of the template tag within the XML file.
validateTemplate [page 381]	Validates an existing template using the template ID.
validateTemplate2 [page 382]	Validates an existing template using the template ID.

2.2.3 Configuration Methods

Configuration methods allow you to configure instances, systems, networks, and pools.

[Pool Configuration \[page 20\]](#)

Pool configuration comprises a collection of methods to add, delete, and access pool information.

[Service Configuration \[page 57\]](#)

Service configuration exposes methods to add, delete, and access network information.

[Network Configuration \[page 82\]](#)

Network configuration exposes methods to add, delete, and access network information.

[Computer System Configuration \[page 116\]](#)

Computer system configuration exposes methods to access, modify, and delete resource information.

[Template Configuration \[page 141\]](#)

[Characteristics Configuration \[page 150\]](#)

Characteristics configuration exposes methods to add, delete, and receive characteristics information.

2.2.3.1 Pool Configuration

Pool configuration comprises a collection of methods to add, delete, and access pool information.

[getAllPoolIds \[page 21\]](#)

This method retrieves IDs of all pools configured and available in SAP Landscape Management. The Pool ID is the UUID and a unique identifier of pools.

[getAllPoolConfigs \[page 23\]](#)

This method retrieves details of all pools available in SAP Landscape Management for configuration.

[getPoolConfigs \[page 28\]](#)

This method retrieves details of the pools for the input pool ID collection specified.

[getAllPoolContainerConfigs \[page 33\]](#)

This method retrieves details of the pools for the given input pool ID collection.

[addPoolConfig \[page 38\]](#)

This method adds a new pool to SAP Landscape Management.

[updatePoolConfig \[page 45\]](#)

This method modifies details of the pool mentioned in the input.

[deletePoolConfig \[page 50\]](#)

This method deletes pools with the pool ID specified in the input data from SAP Landscape Management if there are no referencing instances and hosts for that pool.

[deletePoolConfig2 \[page 52\]](#)

This method deletes details of pool configurations if there are no referencing instances and hosts for that pool.

Table 58: ServiceType

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceType	not applicable	not applicable	String	Service type which identifies the type of service. Possible values: <ul style="list-style-type: none"> • Database • SAPInstance • System • HomogenousAggregate

Table 59: ServiceTypeSpecificConfig

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
SAPInstanceServiceConfig	0	1	SAPInstanceServiceConfig	If the service type is "SAPInstance", there is a corresponding SAPInstanceServiceConfig and other 3 properties are null.
DatabaseServiceConfig	0	1	DatabaseServiceConfig	If the service type is database, there is a corresponding DatabaseServiceConfig and other 3 properties are null.
SystemServiceConfig	0	1	SystemServiceConfig	If the service type is 'System', there is a corresponding SystemServiceConfig and other 3 properties are null.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
HomogenousAggregateServiceConfig	0	1	HomogenousAggregateServiceConfig	If the service type is 'HomogenousAggregate', there is a corresponding HomogenousAggregateServiceConfig and other 3 properties are null.

Table 60: SAPInstanceServiceConfig extends AbstractServiceElementConfig

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
SystemId	1	1	String	Indicates the system ID of the service.
InstanceNumber	1	1	String	Instance number of the service.
InstanceHost	1	1	String	Instance host of the service.
InstanceAgentDestinationConfig	0	1	DestinationConfig	Destination port and credentials of the agent.
StartProfilePath	0	1	String	Startprofile path.

Table 61: DatabaseServiceConfig extends AbstractServiceElementConfig

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
SystemId	1	1	String	Indicates the system ID of the service.
DbHost	1	1	String	Indicates the database host of the service.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
DbType	1	1	String	<p>Indicates the database type of the service.</p> <p>For example:</p> <ul style="list-style-type: none"> • SAP • ADA • DB2 • DB4 • DB6 • INF • ORA • MSS
DbName	1	1	String	Indicates the database name of the service.
DbUsage	1	1	String	<p>Indicates the database usage of the service.</p> <p>For example:</p> <ul style="list-style-type: none"> • ABAP • Java • Doublestack • LiveCache
DbAdminCredentials	0	1	Credentials	Credentials for connecting to the database.

Table 62: SystemServiceConfig extends AbstractServiceAggregateConfig

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
SystemId	1	1	String	Indicates the system ID of the service.
SystemHost	1	1	String	System host of the service.
SystemType	1	1	String	System type of the service.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
PoolId	0	1	PoolId	<p>UUID identifier of the pool.</p> <p>This parameter is not required for method addPoolConfig.</p> <p>This parameter is mandatory for method deletePoolConfig 2 and method updatePoolConfig .</p>

Table 63: HomogenousAggregateServiceConfig extends AbstractServiceAggregateConfig

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
SystemId	1	1	String	Indicates the system ID of the service.
SystemHost	1	1	String	System host of the service.
SystemType	1	1	String	System type of the service.
ComponentTypeOfAggregatedServices	1	1	String	Denotes what type of aggregated instances is grouped under this service.
				 Example 2EEEEngineCluster/CentralServiceInstanceSet – Grouping of CI instances of a J2EE system

Table 64: PoolId

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
PoolId	0	1	String	UUID identifier of the pool. This parameter is not required for method addPoolConfig. This parameter is mandatory for method deletePoolConfig 2 and method updatePoolConfig .

Table 65: DestinationConfig

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Port	0	1	Integer	Agent port.
UseHTTPS	0	1	Boolean	If 'HTTPS' is to be used for connection, set this field to true.
AgentCredentials	0	1	Credentials	Credentials for connecting to the agents.
Properties	0	1	PropertyCollection	Collection of name and value pairs which can be used for later extensions.

Table 66: Credentials

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
User	1	1	String	User name
Password	0	1	String	Password
UpdateCredentials	1	1	Boolean	If UpdateCredentials is set to true, then the credentials are updated.

Table 67: PropertyCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Properties	0	*	Property	Collection of name and value pairs which can be used for later extensions.

Table 68: Property

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Name	1	1	String	<p>Name of the entity.</p> <p>This parameter is mandatory for the following methods:</p> <ul style="list-style-type: none"> • addNetworkConfig • addPoolConfig • updateNetworkConfig • updatePoolConfig
Value	0	1	String	Value for the corresponding Name property.

2.2.3.2.4 updateServiceConfigForSystem

This method modifies instance configuration of the system.

Request

Request Parameters

Table 69: ServiceConfigCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceConfigs	0	*	ServiceConfig	Collection of ServiceConfig objects. This parameter is mandatory for method updateServiceConfigForSystem.
Properties	0	1	PropertyCollection	Collection of name and value pairs which can be used for later extensions.

Table 70: ServiceConfig

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceType	1	1	ServiceType	Service type which identifies the type of service. Possible values: <ul style="list-style-type: none"> • Database • SAPInstance • System • HomogenousAggregate
ServiceTypeSpecificContent	1	1	ServiceTypeSpecificConfig	Service type content contains one of the entries depending on the service type of the service.

Table 71: ServiceType

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceType	not applicable	not applicable	String	Service type which identifies the type of service. Possible values: <ul style="list-style-type: none"> • Database • SAPInstance • System • HomogenousAggregate

Table 72: ServiceTypeSpecificConfig

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
SAPInstanceServiceConfig	0	1	SAPInstanceServiceConfig	If the service type is "SAPInstance", there is a corresponding SAPInstanceServiceConfig and other 3 properties are null.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
DatabaseServiceConfig	0	1	DatabaseServiceConfig	If the service type is 'database', there is a corresponding DatabaseServiceConfig and other 3 properties are null.
SystemServiceConfig	0	1	SystemServiceConfig	If the service type is 'System', there is a corresponding SystemServiceConfig and other 3 properties are null.
HomogenousAggregateServiceConfig	0	1	HomogenousAggregateServiceConfig	If the service type is 'HomogenousAggregate', there is a corresponding HomogenousAggregateServiceConfig and other 3 properties are null.

Table 73: SAPInstanceServiceConfig extends AbstractServiceElementConfig

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
SystemId	1	1	String	Indicates the system ID of the service.
InstanceNumber	1	1	String	Instance number of the service.
InstanceHost	1	1	String	Instance host of the service.
InstanceAgentDestinationConfig	0	1	DestinationConfig	Destination port and credentials of the agent.
StartProfilePath	0	1	String	Startprofile path.

Table 74: DatabaseServiceConfig extends AbstractServiceElementConfig

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
SystemId	1	1	String	Indicates the system ID of the service.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
DbHost	1	1	String	Indicates the database host of the service.
DbType	1	1	String	Indicates the database type of the service. For example: <ul style="list-style-type: none">• SAP• ADA• DB2• DB4• DB6• INF• ORA• MSS
DbName	1	1	String	Indicates the database name of the service.
DbUsage	1	1	String	Indicates the database usage of the service. For example: <ul style="list-style-type: none">• ABAP• Java• Doublestack• LiveCache
DbAdminCredentials	0	1	Credentials	Credentials for connecting to the database.

Table 75: SystemServiceConfig extends AbstractServiceAggregateConfig

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
SystemId	1	1	String	Indicates the system ID of the service.
SystemHost	1	1	String	System host of the service.
SystemType	1	1	String	System type of the service.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
PoolId	0	1	PoolId	<p>UUID identifier of the pool.</p> <p>This parameter is not required for method addPoolConfig.</p> <p>This parameter is mandatory for method deletePoolConfig 2 and method updatePoolConfig .</p>

Table 76: PoolId

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
PoolId	0	1	String	<p>UUID identifier of the pool.</p> <p>This parameter is not required for method addPoolConfig.</p> <p>This parameter is mandatory for method deletePoolConfig 2 and method updatePoolConfig .</p>

Table 77: HomogenousAggregateServiceConfig extends AbstractServiceAggregateConfig

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
SystemId	1	1	String	Indicates the system ID of the service.
SystemHost	1	1	String	System host of the service.
SystemType	1	1	String	System type of the service.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ComponentTypeOfAggregatedServices	1	1	String	<p>Denotes what type of aggregated instances is grouped under this service.</p> <p> Example J2EEEngineCluster/CentralServiceInstanceSet – Grouping of CI instances of a J2EE system</p>

Table 78: DestinationConfig

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Port	0	1	Integer	Agent port.
UseHTTPS	0	1	Boolean	If 'HTTPS' is to be used for connection, set this field to true.
AgentCredentials	0	1	Credentials	Credentials for connecting to the agents.
Properties	0	1	PropertyCollection	Collection of name and value pairs which can be used for later extensions.

Table 79: Credentials

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
User	1	1	String	User name
Password	0	1	String	Password
UpdateCredentials	1	1	Boolean	If UpdateCredentials is set to true, then the credentials are updated.

Table 80: PropertyCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Properties	0	*	Property	Collection of name and value pairs which can be used for later extensions.

Table 81: Property

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Name	1	1	String	<p>Name of the entity.</p> <p>This parameter is mandatory for the following methods:</p> <ul style="list-style-type: none"> • addNetworkConfig • addPoolConfig • updateNetworkConfig • updatePoolConfig
Value	0	1	String	Value for the corresponding Name property.

2.2.3.3 Network Configuration

Network configuration exposes methods to add, delete, and access network information.

[getAllNetworkIds \[page 83\]](#)

This method retrieves IDs of all networks configured and available in SAP Landscape Management.

[getAllNetworkConfigs \[page 85\]](#)

This method retrieves the details of all networks available in SAP Landscape Management for configuration.

[getNetworkConfigs \[page 90\]](#)

This method retrieves details of the network configuration for the given input network ID collection specified.

[addNetworkConfig \[page 96\]](#)

This method adds a network to SAP Landscape Management

[updateNetworkConfig \[page 104\]](#)

This method modifies details of the network specified in the input data. Network ID cannot be changed and is the unique identifier for the network.

[deleteNetworkConfig \[page 109\]](#)

This method deletes networks with the network ID mentioned in the input data from SAP Landscape Management if there are no referencing instances and hosts for that network.

[deleteNetworkConfig2 \[page 111\]](#)

This method deletes details of networks with the network ID mentioned in the input data from SAP Landscape Management if there are no referencing instances and hosts for that network.

2.2.3.4 Computer System Configuration

Computer system configuration exposes methods to access, modify, and delete resource information.

[getAllComputerSystemConfigHostnames \[page 117\]](#)

This method retrieves hostnames of all computer systems configured in SAP Landscape Management

[getAllComputerSystemConfigs \[page 119\]](#)

This method retrieves computer system details configured in SAP Landscape Management, along with their hardware, network, pool, and SAP Host Agent information.

[getComputerSystemConfigs \[page 125\]](#)

This method retrieves information related to the requested computer system host names. That includes information about the hardware configuration, as to whether its AC-managed or not, as to whether it is AC-operational, or AC-enabled, as well as pool- and network related details, SAP Host Agent details and so on.

[updateComputerSystemConfig \[page 132\]](#)

This method modifies existing configuration data for a computer system, such as its pool- or, network-related details, SAP Host Agent details, details as to whether it is adaptive-enabled or not, AC-operational and so on.

[getAllComputerSystemHostnames \[page 139\]](#)

This method retrieves host names of all computer systems configured in SAP Landscape Management

OS	0	1	String	Type of the operating system of the resource.  Example Linux
OSRelease	0	1	String	Operating system release of the computer system.
OSAddressSpace	0	1	Integer	Operating system's address space of the computer system.
ACManaged	1	1	Boolean	Possible values: <ul style="list-style-type: none">• true Service is managed by SAP Landscape Management• false Service is not managed by SAP Landscape Management

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ACEEnabled	1	1	Boolean	Possible values: <ul style="list-style-type: none">• true Service is adaptive enabled• false Traditional service is not adaptive enabled
ACOperational	1	1	Boolean	Possible values: <ul style="list-style-type: none">• true Computer system is active/operational in SAP Landscape Management.• false Computer system is not active/operational in SAP Landscape Management.
SAPS	0	1	Integer	SAPS recommended for the service.
PoolId	0	1	String	UUID identifier of the pool. This parameter is not required for method <code>addPoolConfig</code> . This parameter is mandatory for method <code>deletePoolConfig</code> and method <code>updatePoolConfig</code> .
NetworkInterfaceConfigCollection	0	1	NetworkInterfaceConfigCollection	Collection of network interface configurations.
HostAgentConfig	0	1	HostAgentConfig	Details for connecting to the SAP Host Agent.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Properties	0	1	PropertyCollection	Collection of name and value pairs which can be used for later extensions.

Table 121: Hostname

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Hostname	not applicable	not applicable	String	Host name

Table 122: NetworkInterfaceConfigCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
NetworkInterfaceConfigs	0	*	NetworkInterfaceConfig	Collection of network interface configurations.

Table 123: NetworkInterfaceConfig

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
NetworkInterfaceId	1	1	String	Network Interface ID of the network.
NetworkId	1	1	String	<p>Identifier of the network which is a UUID.</p> <p>This parameter is not required for method addNetworkConfig .</p> <p>This parameter is mandatory for method deleteNetworkConfig2 and method updateNetworkConfig .</p>

Table 124: HostAgentConfig

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
UseDefaultCredentials	1	1	Boolean	If set to true, default credentials are used to connect to the SAP Host Agent, else the credentials mentioned are used.
AgentDestinationConfig	0	1	DestinationConfig	Agent port and credentials.

Table 125: DestinationConfig

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Port	0	1	Integer	Agent port.
UseHTTPS	0	1	Boolean	If 'HTTPS' is to be used for connection, set this field to true.
AgentCredentials	0	1	Credentials	Credentials for connecting to the agents.
Properties	0	1	PropertyCollection	Collection of name and value pairs which can be used for later extensions.

Table 126: Credentials

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
User	1	1	String	User name
Password	0	1	String	Password
UpdateCredentials	1	1	Boolean	If UpdateCredentials is set to true, then the credentials are updated.

Table 127: PropertyCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Properties	0	*	Property	Collection of name and value pairs which can be used for later extensions.

Table 128: Property

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Name	1	1	String	<p>Name of the entity.</p> <p>This parameter is mandatory for the following methods:</p> <ul style="list-style-type: none"> • addNetworkConfig • addPoolConfig • updateNetworkConfig • updatePoolConfig
Value	0	1	String	Value for the corresponding Name property.

Response Example

2.2.3.4.3 getComputerSystemConfigs

This method retrieves information related to the requested computer system host names. That includes information about the hardware configuration, as to whether its AC-managed or not, as to whether it is AC-operational, or AC-enabled, as well as pool- and network related details, SAP Host Agent details and so on.

Request

Request Parameters

2.2.3.5.1 storeKey

This method stores the decryption passcode of the encrypted property values within the template.

Request

Request Parameters

Table 152: OperationRequests

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Key	1	1	String	The passcode key for decrypting the encrypted value which is part of the template XML.
changeId	0	1	String	This is used to pass the change ID if required.

Note

The same passcode must be used for encrypting the property values.

Request Example

Sample Code

XML

```
<?xml version="1.0" encoding="utf-8"?>
<SOAP-ENV:Envelope xmlns:SOAP-ENV="http://schemas.xmlsoap.org/soap/envelope/"

2.2.3.5.2 storeTemplate

This method stores the partner template in XML format.

Request

To make any encrypted property as part of your template properties, follow the steps given below:

1. Encrypt the property value using the standard Java encryption algorithm Cipher class API under JDK.
2. Add the value to the template as a property.
3. Call the `storeKey` method by passing the passcode for decryption

Request Parameters

Table 153: storeTemplateParams

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
templateRequest	1	1	String	Template XML for specific process executed using SAP Landscape Management. Must be wrapped in CDATA section.
referenceId	1	1	String	Reference ID returned by <code>storeKey</code> for the passcode used to encrypt the values in the template XML.
changeId	0	1	String	This is used to pass the change ID if required.

Request Example

Sample Code

XML

```
<?xml version="1.0" encoding="utf-8"?>
<SOAP-ENV:Envelope xmlns:SOAP-ENV="http://schemas.xmlsoap.org/soap/envelope/" xmlns:xs="http://www.w3.org/2001/XMLSchema" xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance">

[updateTemplate \[page 148\]](#)

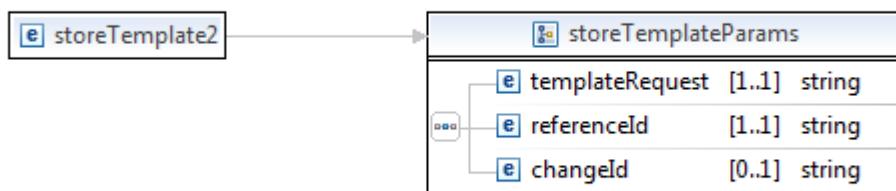

2.2.3.5.3 storeTemplate2

This method stores the partner template in XML format.

Request

To make any encrypted property as part of your template properties, follow the steps given below:

1. Encrypt the property value using the standard Java encryption algorithm Cipher class API under JDK.
2. Add the value to the template as a property.
3. Call the `storeKey` method by passing the passcode for decryption

Request Parameters

Table 154: storeTemplateParams

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
templateRequest	1	1	String	Template XML for specific process executed using SAP Landscape Management. Must be wrapped in CDATA section.
referenceId	1	1	String	Reference ID returned by <code>storeKey</code> for the passcode used to encrypt the values in the template XML.
changeId	0	1	String	This is used to pass the change ID if required.

Request Example

Sample Code

XML

```

2.2.3.5.4 updateTemplate

This method modifies an existing template. The template ID must be part of the template. The ID attribute should be part of the template tag within the XML file.

Request

Request Parameters

Table 157: updateTemplateParams

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Template	1	1	String	Template XML for specific process executed using SAP Landscape Management. Must be wrapped in CDATA section.
referenceId	0	1	String	Reference ID returned by storeKey for the passcode used to encrypt the values in the template XML.
changeId	0	1	String	This is used to pass the change ID if required.

2.2.3.6 Characteristics Configuration

Characteristics configuration exposes methods to add, delete, and receive characteristics information.

You configure characteristics and define the attributes for the characteristics according to the needs of your company such as grouping instances and hosts according to these characteristics or making the mass operations easier to handle.

Example

A company that is located in different time zones requires systems to be started, stopped, or relocated in a certain time zone.

[addCharacteristics \[page 151\]](#)

This method adds new characteristics.

[addCharacteristicValues \[page 159\]](#)

This method adds characteristic values to characteristics.

[addCharacterizations \[page 164\]](#)

This method assigns instances, hosts, or virtual hosts to characteristic values.

[deleteCharacterizations \[page 168\]](#)

This method deletes instances, hosts, or virtual hosts from characteristic values.

[deleteCharacteristics \[page 171\]](#)

This method deletes characteristics.

[deleteCharacteristicValues \[page 175\]](#)

This method deletes characteristic values.

[getCharacteristic \[page 179\]](#)

This method retrieves details of a specific characteristic defined.

[getCharacteristics \[page 184\]](#)

This method retrieves details of all characteristics defined.

[getCharacterizations \[page 190\]](#)

This method retrieves details of elements assigned to characteristic values.

2.2.3.6.5 deleteCharacteristics

This method deletes characteristics.

Request

Request Parameters

Table 194: Characteristics

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
characteristics	0	*	Characteristic	Collection of characteristics.
changeId	1	1	String	This is used to pass the change ID if required.
includeAssignedElements	1	1	Boolean	Flag, that indicates if assigned elements are included.

Table 195: Characteristic

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
characteristicId	1	1	Integer	ID of the characteristic.
name	1	1	String	Name of the characteristic.
description	1	1	String	Description of the characteristic.
entityCardinality	1	1	CharacterizationEntityCardinality	Cardinality of the entity.

Characterization Entity

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
entityTypes	0	*	CharacterizationEntityType	Collection of entity types.
characteristicValues	1	1	CharacteristicValues	Collection of characteristic values.

Table 196: CharacterizationEntityCardinality

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
CharacterizationEntityCardinality	not applicable	not applicable	String	Possible values: <ul style="list-style-type: none"> SINGLE Entity assigned to a single characteristic value of the characteristic. MULTIPLE Entity assigned to multiple characteristic values of the characteristic.

Table 197: CharacterizationEntityType

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
CharacterizationEntityType	not applicable	not applicable	String	Possible values: <ul style="list-style-type: none"> HOST VIRTUAL HOST VIRTUAL HOST PROVIDER SYSTEM INSTANCE

Table 198: CharacteristicValues

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
characteristicValues	0	*	CharacteristicValue	Collection of characteristic values.
changeId	1	1	String	This is used to pass the change ID if required.
includeAssignedElements	1	1	Boolean	Flag, that indicates if assigned elements are included.

Table 199: CharacteristicValue

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
characteristicId	1	1	Integer	ID of the characteristic.
characteristicName	1	1	String	Name of the characteristic.
characteristicValueId	1	1	Integer	ID of the characteristic value.
name	1	1	String	Name of the characteristic value.
description	1	1	String	Description of the characteristic value.
characterizations	1	1	Characterizations	Collection of characterizations.

Table 200: Characterizations

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
characterizations	0	*	Characterizations	Collection of characterizations.
changeId	1	1	String	This is used to pass the change ID if required.

Table 201: Characterization

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
characteristicId	1	1	Integer	ID of the characteristic.
characteristicValueId	1	1	Integer	ID of the characteristic value.
characteristicName	1	1	String	Name of the characteristic.
characteristicValueName	1	1	String	Name of the characteristic value.
entityId	1	1	String	ID of the entity.
entityType	1	1	CharacterizationEntityType	Entity type

2.2.4 Control Methods

Control methods allow you to execute start and stop operations, reserve systems, retrieve status information of instances and execute operations.

[Operation Functions \[page 194\]](#)

Methods to perform start, stop, relocate operations, to reserve computer systems for startinng or stoping operations and also to retrieve the status of the operations triggered.

[Pool Functions \[page 303\]](#)

Methods to access all or specific pool information which is available in SAP Landscape Management. Also the details of the services and computer systems configured to the pool are retrieved.

[Service Functions \[page 315\]](#)

Methods to retrieve details of systems or instances.

[Computer System Functions \[page 338\]](#)

Methods to access all or specific resource information which is available in SAP Landscape Management.

[Template Functions \[page 359\]](#)

[Operation Template Functions \[page 385\]](#)

Methods to retrieve details of operation templates, delete, or execute operation templates.

[Custom Process Functions \[page 404\]](#)

Methods to retrieve details of custom processes, delete, or execute custom processes.

[Custom Property Functions \[page 432\]](#)

Methods to retrieve, modify, or delete custom properties.

[Custom Relation Functions \[page 450\]](#)

Methods to add, retrieve, or delete custom relations.

2.2.4.1 Operation Functions

Methods to perform start, stop, relocate operations, to reserve computer systems for starting or stopping operations and also to retrieve the status of the operations triggered.

[autoselectComputerSystem \[page 195\]](#)

This method selects suitable computer systems for performing operations on instances or groups of instances.

[executeOperation \[page 202\]](#)

This method executes operations on instances such as start, stop, or relocate.

[getOperationProcessStatus \[page 209\]](#)

This method allows you to retrieve the status of the operation executed. The input of this method should be the process ID which was returned in the result of method `executeOperation`.

[clearNotes \[page 211\]](#)

This method clears notes for ServiceId collections.

[changePassword \[page 215\]](#)

This method modifies all passwords stored in SAP Landscape Management.

[getValidations \[page 220\]](#)

This method retrieves information about all validations for a specific entity type.

[getValidationResults \[page 224\]](#)

This method retrieves results of the runtime validation using entity IDs.

[getProcessDetails \[page 234\]](#)

This method retrieves process details using process IDs.

[getProcessesOfState \[page 249\]](#)

This method retrieves details of a process state using process IDs.

[getProcessStepLog \[page 264\]](#)

This method retrieves logs for one step in one process.

[retryProcess \[page 269\]](#)

This method retries a failed process.

[holdProcess \[page 272\]](#)

This method holds (suspends) a process which is currently being executing.

[releaseProcess \[page 276\]](#)

This method releases a process which is currently on hold (suspended).

[respondToProcessStep \[page 279\]](#)

This method responds to a process step waiting for user interaction.

[cancelProcess \[page 284\]](#)

This method cancels an activity (process) which is currently being executed.

[queryEntitiesById \[page 287\]](#)

This method searches for various entity properties available in your landscape.

[queryEntitiesFullText \[page 294\]](#)

This method searches for various entity properties available in your landscape.

[getRKSConfigurationsData \[page 301\]](#)

This method retrieves all rolling kernel switch (RKS) configurations created for a system.

2.2.4.1.2 executeOperation

This method executes operations on instances such as start, stop, or relocate.

Request

Request Parameters

Table 244: OperationRequest

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Operation	1	1	String	<p>Type of operation to be performed. Allowed operations include</p> <ul style="list-style-type: none"> • start • stop • prepare • unprepare • relocate • restart • move • prepare+start • stop+unprepare • (prepare+)start • stop(+unprepare) • preparedForStart • forcedStart • forcedStop • forcedPrepare • forcedUnprepare • forcedRestart • forcedRelocate • forcedMove • registerIA • restartIA • clearAlerts • setNote • acc_internal_validate <div style="background-color: #ffffcc; padding: 10px; margin-top: 10px;"> <p>i Note</p> <ul style="list-style-type: none"> • relocate means: stop + unprepare + prepare + start of a service. • move means: unprepare + prepare of a service. </div>

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
				<ul style="list-style-type: none"> You use acc_internal_validate to schedule validations. <p>Custom Operations are referenced by name.</p>
CheckRecommendedResourceReq	1	1	Boolean	<p>Possible values:</p> <ul style="list-style-type: none"> true Checks resource requirements of the service. false Does not check resource requirements of the service.
SkipUserExits	1	1	Boolean	Set this field to true if User Exit scripts should be executed else set to false.
Note	0	1	String	<p>Notes For method getOperationTemplateDetails, the note of the operation template (concatenated note from all entities).</p>
OperationRequestItems	1	*	OperationRequestItem	List of services and hosts which are to be operated.
Properties	0	1	PropertyCollection	Collection of name and value pairs which can be used for later extensions.

For standard operations the following predefined `Property` parameters are available:

Table 245:

Name	Value
changeId	String
instanceSoftTimeout	Integer
dbHardShutdown	Boolean: true/false
ignoreNotes	Boolean: true/false
ignoreISD	Boolean: true/false
services_for_isd	Comma separated list of dependent services

For custom operations, Property parameters are passed by the name configured.

Table 246: OperationRequestItem

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceId	1	1	ServiceId	Unique identifier for the service.
Hostname	1	1	Hostname	Host name
Properties	0	1	PropertyCollection	Collection of name and value pairs which can be used for later extensions.

Table 247: ServiceId

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceId	not applicable	not applicable	String	Unique identifier for the service.

Table 248: Hostname

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Hostname	not applicable	not applicable	String	Host name

Table 249: PropertyCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Properties	0	*	Property	Collection of name and value pairs which can be used for later extensions.

Table 250: Property

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Name	1	1	String	<p>Name of the entity.</p> <p>This parameter is mandatory for the following methods:</p> <ul style="list-style-type: none"> • addNetworkConfig • addPoolConfig • updateNetworkConfig • updatePoolConfig
Value	0	1	String	Value for the corresponding Name property.

2.2.4.1.4 clearNotes

This method clears notes for ServiceId collections.

Request

Request Parameters

Table 255: ServiceIdCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceIds	0	*	ServiceId	<p>Collection of Service-Ids.</p> <p>This parameter is mandatory for the following methods:</p> <ul style="list-style-type: none"> • autoselectComputerSystem • clearNotes • getServiceData
Properties	0	1	PropertyCollection	Collection of name and value pairs which can be used for later extensions.

Table 256: ServiceId

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceId	not applicable	not applicable	String	Unique identifier for the service.

Table 257: PropertyCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Properties	0	*	Property	Collection of name and value pairs which can be used for later extensions.

Table 258: Property

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Name	1	1	String	<p>Name of the entity.</p> <p>This parameter is mandatory for the following methods:</p> <ul style="list-style-type: none"> • addNetworkConfig • addPoolConfig • updateNetworkConfig • updatePoolConfig
Value	0	1	String	Value for the corresponding Name property.

2.2.4.1.5 changePassword

This method modifies all passwords stored in SAP Landscape Management.

Request

Request Parameters

Table 260: ChangePasswordType

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
SystemId	1	1	String	Indicates the system ID of the service.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
EntityId	0	1	String	<p>Name of the service which belongs to a given SystemId.</p> <p>This parameter is not required for the following scenarios:</p> <ul style="list-style-type: none"> • In combination with AccountType SIDADM. • In combination with AccountType SAPADM. Used for changing SAP Host Agent password stored for all hosts which belong to a given SystemId. <div style="background-color: #f9e79f; padding: 10px;"> <p>i Note</p> <p>In this case, the EntityId represents the host name for which the SAP Host Agent password is stored.</p> </div> <ul style="list-style-type: none"> • In combination with AccountType SAPADM and AccountId = default Used for changing DEFAULT SAPADM (SAP Host Agent) password stored. <p>For all other scenarios you must specify the EntityId.</p>

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description								
AccountType	1	1	AccountType	<p>Possible values:</p> <ul style="list-style-type: none"> • SAPADM • SIDADM • DB_ADMIN • DB_SUPER_ADMIN • DB_JAVA_SCHEMA • DB_ABAP_SCHEMA • RFC 								
AccountId	1	1	String	<p>Name of the account that belongs to the AccountType.</p> <div style="background-color: #f0f0d0; padding: 10px; margin-top: 10px;"> + Example <p>Table 261:</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th>Ac- count- Type</th><th>Accoun- tId</th></tr> </thead> <tbody> <tr> <td>SA- PADM</td><td>SA- PADM</td></tr> <tr> <td>SAPSID</td><td><SID>ADM</td></tr> <tr> <td>DBAD- MIN</td><td>myD- bADM</td></tr> </tbody> </table> </div>	Ac- count- Type	Accoun- tId	SA- PADM	SA- PADM	SAPSID	<SID>ADM	DBAD- MIN	myD- bADM
Ac- count- Type	Accoun- tId											
SA- PADM	SA- PADM											
SAPSID	<SID>ADM											
DBAD- MIN	myD- bADM											
NewPassword	1	1	String	New password.								
Properties	0	1	PropertyCollection	Collection of name and value pairs which can be used for later extensions.								

Table 262: AccountType

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
AccountType	not applicable	not applicable	String	<p>Possible values:</p> <ul style="list-style-type: none"> • SAPADM • SIDADM • DB_ADMIN • DB_SUPER_ADMIN • DB_JAVA_SCHEM A • DB_ABAP_SCHEM A • RFC

Table 263: PropertyCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Properties	0	*	Property	Collection of name and value pairs which can be used for later extensions.

Table 264: Property

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Name	1	1	String	<p>Name of the entity. This parameter is mandatory for the following methods:</p> <ul style="list-style-type: none"> • addNetworkConfig • addPoolConfig • updateNetworkConfig • updatePoolConfig
Value	0	1	String	Value for the corresponding Name property.

Response

Response Parameters

Table 285: ProcessDataCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ProcessData	0	*	ProcessData	Collection of properties for a process.

Table 286: ProcessData

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ProcessId	0	1	String	Latest Process ID of the service. Returns the Process ID of the operation which was created for the <code>OperationRequest</code> . This process ID can be used to get the status of this operation.
ProcessState	0	1	String	Overall process state aggregating all process step states. For example initial, preparing.
Username	0	1	String	User that started execution of a process.
Description	0	1	String	Description for the entity.
ProcessNumber	0	1	Integer	Unique number of process.
RetryCounter	0	1	Integer	How many times to retry one process in case of failure.
Note	0	1	String	Notes For method <code>getOperationTemplateDetails</code> , the note of the operation template (concatenated note from all entities).
ProcessBeginExecutingTimestamp	0	1	String	Time stamp of starting of execution of one process.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ProcessEndExecutingTimestamp	0	1	String	Time stamp of starting of execution of one process.
ProcessElapsedTime	0	1	Long	How long continues one process step or a process.
IsCancelable	0	1	Boolean	Flag, that indicates if process can be canceled
IsSuspendable	0	1	Boolean	Indicates if one process can be suspend or not.
IsResumable	0	1	Boolean	Indicates if one process can be resumed or not.
IsRetryable	0	1	Boolean	Indicates if one process can be retried or not.
IsRemovable	0	1	Boolean	Indicates if one process can be removed or not.
ChangeId	0	1	String	<ul style="list-style-type: none"> Identifies changes performed from outside. ChangeID used to track the entity with the ID CustomProcessId. ChangeID used to track the entity with the ID OperationTemplateId.
AllSharedEntities	0	*	AllSharedEntities	All types of entities (like services, host, pool) that are shared in one process and all steps can access them.
ProcessSteps	0	*	ProcessSteps	Collection of Process steps.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Properties	0	1	PropertyCollection	Collection of name and value pairs which can be used for later extensions.

Table 287: AllSharedEntitie

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
SharedEntitie	0	*	SharedEntitie	Shared entity

Table 288: SharedEntitie

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
CsId	0	1	String	Unique identifier for the host in one shared entity.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
EntityId	0	1	String	<p>Name of the service which belongs to a given SystemId.</p> <p>This parameter is not required for the following scenarios:</p> <ul style="list-style-type: none"> • In combination with AccountType SIDADM. • In combination with AccountType SAPADM. Used for changing SAP Host Agent password stored for all hosts which belong to a given SystemId. <div style="background-color: #fdf5e6; padding: 10px;"> <p>i Note</p> <p>In this case, the EntityId represents the host name for which the SAP Host Agent password is stored.</p> </div> <ul style="list-style-type: none"> • In combination with AccountType SAPADM and AccountId = default Used for changing DEFAULT SAPADM (SAP Host Agent) password stored. <p>For all other scenarios you must specify the EntityId.</p>

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
EntityType	0	1	String	<p>Type of entities on which the validations are applicable.</p> <p>Possible values:</p> <ul style="list-style-type: none"> • COMPUTERSYSTEM • SERVICE • VIRTUAL_SOURCE • VIRTUAL_SOURCE_PROVIDER <p>Additional values for method <code>queryEntitiesByIId</code> and <code>queryEntitiesFullText</code>:</p> <ul style="list-style-type: none"> • HOST • POOL • CONTAINER
ProcessId	0	1	String	<p>Latest Process ID of the service.</p> <p>Returns the Process ID of the operation which was created for the <code>OperationRequest</code>. This process ID can be used to get the status of this operation.</p>
Count	0	1	Integer	Number of shared entity of specific type.

Table 289: ProcessSteps

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ProcessStep	0	*	ProcessStep	Collection with properties for one step in process.

Table 290: ProcessStep

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ProcessStepId	0	1	String	Process step ID.
ServiceId	0	1	String	Unique identifier for the service.
ComputerSystemId	0	1	String	Unique identifier for the host.
VirtualResourceId	0	1	String	Unique identifier of virtual resource.
VirtualResourceProviderId	0	1	String	Unique identifier for provider of virtual resource.
DetailedState	0	1	String	Detailed state of one process step.
BeginExecutingTimestamp	0	1	String	Time stamp of starting of execution of one step.
				 Example Start operation begin on <time stamp>
EndExecutingTimeStamp	0	1	String	Time stamp of finishing of execution of one step
				 Example Start operation begin on <time stamp>
Elapsed Time In Millisecond	0	1	Long	Elapsed time in milliseconds.
ProcessStepTimeoutInMilliseconds	0	1	Long	Time out period in millisecond for one step.
OperationId	0	1	String	Unique identifier for the operation.
OperationName	0	1	String	Name of operation.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
IsErrorHook	0	1	Boolean	Indicates if one step contains a hook on error or not.
IsPreHook	0	1	Boolean	Indicates if one step contains hook or after ordinary operation not.
IsPostHook	0	1	Boolean	Indicates if one step contains hook before ordinary operation or not.
IsHook	0	1	Boolean	Indicates if one step contains a hook or not.
IsCustomOperation	0	1	Boolean	Indicates if one step contains custom operation or not.
VpmOperation	0	1	Boolean	Operation on virtual resource.
TimedOut	0	1	Boolean	Flag that indicates if one process or step into process need to fail if time for execution time out without result.
IsPredecessor	0	1	Boolean	Indicates if one step has successors or not.
ProcessStepOrderNumber	0	1	Integer	Order number of the step in a process.
NumberOfPredecessors	0	1	Integer	How many steps there are before this step in process.
ProcessStepState	0	1	ProcessStepState Type	Individual process step states.
OperationInteraction	0	1	OperationInteraction	Parameter of a user interaction needed for a one step in process.

Table 291: ProcessStepStateType

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ProcessStepStateType	not applicable	not applicable	String	Possible values: <ul style="list-style-type: none"> • initial • executing • completed • failed • failedPredecessor • cancelling • cancelled • timedout • skipped • waiting

Table 292: OperationInteraction

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Message	0	1	String	Detailed message.
HasUserInputAction	1	1	Boolean	Flag that indicates if user input is needed.
HasRetryAction	1	1	Boolean	Flag that indicates if user input has <i>Retry</i> option.
HasSkipAction	1	1	Boolean	Flag that indicates if user input has <i>Skip</i> option.
HasCancelAction	1	1	Boolean	Flag that indicates if user input has <i>Cancel</i> option.
HasOKAction	1	1	Boolean	Flag that indicates if user input has <i>OK</i> option.
HasYesAction	1	1	Boolean	Flag that indicates if user input has <i>Yes</i> option.
HasNoAction	1	1	Boolean	Flag that indicates if user input has <i>No</i> option.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
UserResponse	0	1	UserResponse	Collection of UserId, UserAction, and UserInput.

Table 293: UserResponse

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
UserId	1	1	String	ID of the user that respond to operation interaction.
UserInput	0	1	String	Free text input.
UserAction	1	1	UserActionType	User input as action such as yes, no, or cancel.

Table 294: UserActionType

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
UserActionType	not applicable	not applicable	String	Possible values: <ul style="list-style-type: none"> • retry • skip • cancel • ok • yes • no • empty

Table 295: PropertyCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Properties	0	*	Property	Collection of name and value pairs which can be used for later extensions.

Table 296: Property

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Name	1	1	String	<p>Name of the entity.</p> <p>This parameter is mandatory for the following methods:</p> <ul style="list-style-type: none"> • addNetworkConfig • addPoolConfig • updateNetworkConfig • updatePoolConfig
Value	0	1	String	Value for the corresponding Name property.

2.2.4.1.9 getProcessesOfState

This method retrieves details of a process state using process IDs.

Request

Request Parameters

Table 297: ProcessStateTypeCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ProcessStateTypes	0	*	ProcessStateType	Collection of ProcessStateType. This parameter is mandatory for method getProcessesOfState.

Table 298: ProcessStateType

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ProcessStateType	not applicable	not applicable	String	Possible values: <ul style="list-style-type: none"> • initial • executing • completed • failed • cancelling • cancellingHard • cancelled • partiallyFailed • suspending • suspended • timedout

Response

Response Parameters

Table 299: ProcessDataCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ProcessData	0	*	ProcessData	Collection of properties for a process.

Table 300: ProcessData

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ProcessId	0	1	String	Latest Process ID of the service. Returns the Process ID of the operation which was created for the <code>OperationRequest</code> . This process ID can be used to get the status of this operation.
ProcessState	0	1	String	Overall process state aggregating all process step states. For example initial, preparing.
Username	0	1	String	User that started execution of a process.
Description	0	1	String	Description for the entity.
ProcessNumber	0	1	Integer	Unique number of process.
RetryCounter	0	1	Integer	How many times to retry one process in case of failure.
Note	0	1	String	Notes For method <code>getOperationTemplateDetails</code> , the note of the operation template (concatenated note from all entities).
ProcessBeginExecutingTimestamp	0	1	String	Time stamp of starting of execution of one process.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ProcessEndExecutingTimestamp	0	1	String	Time stamp of starting of execution of one process.
ProcessElapsedTime	0	1	Long	How long continues one process step or a process.
IsCancelable	0	1	Boolean	Flag, that indicates if process can be canceled
IsSuspendable	0	1	Boolean	Indicates if one process can be suspend or not.
IsResumable	0	1	Boolean	Indicates if one process can be resumed or not.
IsRetryable	0	1	Boolean	Indicates if one process can be retried or not.
IsRemovable	0	1	Boolean	Indicates if one process can be removed or not.
ChangeId	0	1	String	<ul style="list-style-type: none"> Identifies changes performed from outside. ChangeID used to track the entity with the ID CustomProcessId. ChangeID used to track the entity with the ID OperationTemplateId.
AllSharedEntities	0	*	AllSharedEntities	All types of entities (like services, host, pool) that are shared in one process and all steps can access them.
ProcessSteps	0	*	ProcessSteps	Collection of Process steps.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Properties	0	1	PropertyCollection	Collection of name and value pairs which can be used for later extensions.

Table 301: AllSharedEntitie

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
SharedEntitie	0	*	SharedEntitie	Shared entity

Table 302: SharedEntitie

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
CsId	0	1	String	Unique identifier for the host in one shared entity.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
EntityId	0	1	String	<p>Name of the service which belongs to a given SystemId.</p> <p>This parameter is not required for the following scenarios:</p> <ul style="list-style-type: none"> • In combination with AccountType SIDADM. • In combination with AccountType SAPADM. Used for changing SAP Host Agent password stored for all hosts which belong to a given SystemId. <div style="background-color: #f9e79f; padding: 10px;"> <p>i Note</p> <p>In this case, the EntityId represents the host name for which the SAP Host Agent password is stored.</p> </div> <ul style="list-style-type: none"> • In combination with AccountType SAPADM and AccountId = default Used for changing DEFAULT SAPADM (SAP Host Agent) password stored. <p>For all other scenarios you must specify the EntityId.</p>

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
EntityType	0	1	String	<p>Type of entities on which the validations are applicable.</p> <p>Possible values:</p> <ul style="list-style-type: none"> • COMPUTERSYSTEM • SERVICE • VIRTUAL_RESOURCE • VIRTUAL_RESOURCE_PROVIDER <p>Additional values for method <code>queryEntitiesByIId</code> and <code>queryEntitiesFullText</code>:</p> <ul style="list-style-type: none"> • HOST • POOL • CONTAINER
ProcessId	0	1	String	<p>Latest Process ID of the service.</p> <p>Returns the Process ID of the operation which was created for the <code>OperationRequest</code>. This process ID can be used to get the status of this operation.</p>
Count	0	1	Integer	Number of shared entity of specific type.

Table 303: ProcessSteps

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ProcessStep	0	*	ProcessStep	Collection with properties for one step in process.

Table 304: ProcessStep

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ProcessStepId	0	1	String	Process step ID.
ServiceId	0	1	String	Unique identifier for the service.
ComputerSystemId	0	1	String	Unique identifier for the host.
VirtualResourceId	0	1	String	Unique identifier of virtual resource.
VirtualResourceProviderId	0	1	String	Unique identifier for provider of virtual resource.
DetailedState	0	1	String	Detailed state of one process step.
BeginExecutingTimestamp	0	1	String	Time stamp of starting of execution of one step.
				 Example Start operation begin on <time stamp>
EndExecutingTimeStamp	0	1	String	Time stamp of finishing of execution of one step
				 Example Start operation begin on <time stamp>
Elapsed Time In Millisecond	0	1	Long	Elapsed time in milliseconds.
ProcessStepTimeoutInMillisSeconds	0	1	Long	Time out period in millisecond for one step.
OperationId	0	1	String	Unique identifier for the operation.
OperationName	0	1	String	Name of operation.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
IsErrorHook	0	1	Boolean	Indicates if one step contains a hook on error or not.
IsPreHook	0	1	Boolean	Indicates if one step contains hook or after ordinary operation not.
IsPostHook	0	1	Boolean	Indicates if one step contains hook before ordinary operation or not.
IsHook	0	1	Boolean	Indicates if one step contains a hook or not.
IsCustomOperation	0	1	Boolean	Indicates if one step contains custom operation or not.
VpmOperation	0	1	Boolean	Operation on virtual resource.
TimedOut	0	1	Boolean	Flag that indicates if one process or step into process need to fail if time for execution time out without result.
IsPredecessor	0	1	Boolean	Indicates if one step has successors or not.
ProcessStepOrderNumber	0	1	Integer	Order number of the step in a process.
NumberOfPredecessors	0	1	Integer	How many steps there are before this step in process.
ProcessStepState	0	1	ProcessStepStateType	Individual process step states.
OperationInteraction	0	1	OperationInteraction	Parameter of a user interaction needed for a one step in process.

Table 305: ProcessStepStateType

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ProcessStepStateType	not applicable	not applicable	String	<p>Possible values:</p> <ul style="list-style-type: none"> • initial • executing • completed • failed • failedPredecessor • cancelling • cancelled • timedout • skipped • waiting

Table 306: OperationInteraction

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Message	0	1	String	Detailed message.
HasUserInputAction	1	1	Boolean	Flag that indicates if user input is needed.
HasRetryAction	1	1	Boolean	Flag that indicates if user input has <i>Retry</i> option.
HasSkipAction	1	1	Boolean	Flag that indicates if user input has <i>Skip</i> option.
HasCancelAction	1	1	Boolean	Flag that indicates if user input has <i>Cancel</i> option.
HasOKAction	1	1	Boolean	Flag that indicates if user input has <i>OK</i> option.
HasYesAction	1	1	Boolean	Flag that indicates if user input has <i>Yes</i> option.
HasNoAction	1	1	Boolean	Flag that indicates if user input has <i>No</i> option.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
UserResponse	0	1	UserResponse	Collection of UserId, UserAction, and UserInput.

Table 307: UserResponse

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
UserId	1	1	String	ID of the user that respond to operation interaction.
UserInput	0	1	String	Free text input.
UserAction	1	1	User ActionType	User input as action such as yes, no, or cancel.

Table 308: User ActionType

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
User ActionType	not applicable	not applicable	String	Possible values: <ul style="list-style-type: none"> • retry • skip • cancel • ok • yes • no • empty

Table 309: PropertyCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Properties	0	*	Property	Collection of name and value pairs which can be used for later extensions.

Table 310: Property

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Name	1	1	String	<p>Name of the entity.</p> <p>This parameter is mandatory for the following methods:</p> <ul style="list-style-type: none"> • addNetworkConfig • addPoolConfig • updateNetworkConfig • updatePoolConfig
Value	0	1	String	Value for the corresponding Name property.

2.2.4.1.10 getProcessStepLog

This method retrieves logs for one step in one process.

Request

Request Parameters

Table 311: downloadProcessLogs

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ProcessId	1	1	String	Latest Process ID of the service. Returns the Process ID of the operation which was created for the <code>OperationRequest</code> . This process ID can be used to get the status of this operation.
StepId	1	1	String	Unique identifier of a step in concrete process.
Severities	1	1	(Severities Type)	Severities

Table 312: LogSeverity

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
LogSeverity	not applicable	not applicable	String	Possible values: <ul style="list-style-type: none">• DEBUG• INFO• WARNING• ERROR• RESULT• ALL

Response

Response Parameters

Table 313: LogOverview

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ID	not applicable	not applicable	Integer	ID
ActivityId	not applicable	not applicable	Integer	ID of the activity.
StartTimestamp	not applicable	not applicable	Long	Start of the operation.
EndTimestamp	not applicable	not applicable	Long	End of the operation.
User	0	1	String	User name
TaskName	0	1	String	Name of the template.
Action	0	1	String	Operation name.
ErrorCode	0	1	String	Error code
Status	0	1	String	Status
Service	0	1	String	Service
Server	0	1	String	Server

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ActionLogDetails	0	1	(ActionLogDetailsType)	Action log details
ChangeLogDetails	0	1	(ChangeLogDetailsType)	Change log details

Table 314: (ActionLogDetailsType)

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ActionLog	0	*	generalLogDetailImplDTO	Action log details

Table 315: generalLogDetailImplDTO

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
HeaderKey	not applicable	not applicable	Integer	Header key
ActionTimestamp	not applicable	not applicable	Long	Action time stamp
StepIndex	not applicable	not applicable	Integer	Step index
MessageCode	0	1	String	Message code.
Severity	0	1	String	Severity of log or validation result.
MessageText	0	1	String	Message text.
computerSystemId	0	1	String	Unique identifier for the host.
changeId	0	1	String	This is used to pass the change ID if required.

Table 316: (ChangeLogDetailsType)

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ChangeLog	0	*	changeLogDetailImplDTO	Change log details

Table 317: changeLogDetailImplDTO

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ActionTimestamp	not applicable	not applicable	Long	Action time stamp

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
KeyName	0	1	String	ID of the configuration value changed.
OldValue	0	1	String	Old value of the configuration changed.
NewValue	0	1	String	New value of the configuration changed.
headerKey	not applicable	not applicable	Integer	Header key
detailKey	not applicable	not applicable	Integer	Detail key
changeId	0	1	String	This is used to pass the change ID if required.

2.2.4.2 Pool Functions

Methods to access all or specific pool information which is available in SAP Landscape Management. Also the details of the services and computer systems configured to the pool are retrieved.

[getAllPoolData \[page 304\]](#)

This method retrieves details of all pool information configured and available in SAP Landscape Management. Pool data also gives information about the instances and the hosts which are configured under this pool.

[getPoolData \[page 309\]](#)

This method retrieves details of the pool information for all the collection of pool IDs mentioned in the input. Pool ID is the UUID and a unique identifier of pools. Pool data also gives information about the instances and the hosts which are configured under this pool.

Response Parameters

Table 361: PoolDataCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
PoolData	0	*	PoolData	Collection of pool data information.

Table 362: PoolData

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
PoolId	1	1	PoolId	UUID identifier of the pool. This parameter is not required for method addPoolConfig. This parameter is mandatory for method deletePoolConfig 2 and method updatePoolConfig .
Name	1	1	String	Name of the entity. This parameter is mandatory for the following methods: <ul style="list-style-type: none">• addNetworkConfig• addPoolConfig• updateNetworkConfig• updatePoolConfig
Description	0	1	String	Description for the entity.
ReferencingSystemServiceIds	1	1	ServiceIdInfoCollection	List of services which are configured under this pool.
ReferencingHostnames	1	1	HostnameCollection	List of resources which are configured under this pool.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Properties	0	1	PropertyCollection	Collection of name and value pairs which can be used for later extensions.

Table 363: PoolId

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
PoolId	0	1	String	<p>UUID identifier of the pool.</p> <p>This parameter is not required for method addPoolConfig.</p> <p>This parameter is mandatory for method deletePoolConfig 2 and method updatePoolConfig .</p>

Table 364: ServiceIdInfoCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceIdInfos	0	*	ServiceIdInfo	Contains a collection of service ID information.

Table 365: ServiceIdInfo

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceId	1	1	ServiceId	Unique identifier for the service.
ServiceType	1	1	ServiceType	<p>Service type which identifies the type of service. Possible values:</p> <ul style="list-style-type: none"> • Database • SAPInstance • System • HomogenousAggregate

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceIdProperties	1	1	PropertyCollection	Name, value pairs where the values for keys like SystemId, SystemHost, SystemType etc. are set.
SldCimSystemCreationClassName	0	1	String	Refers to the SystemCreationClassName for this service in SLD.
SldCimSystemName	0	1	String	Refers to the CIM System Name for this service in SLD.
Properties	0	1	PropertyCollection	Collection of name and value pairs which can be used for later extensions.

Table 366: ServiceId

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceId	not applicable	not applicable	String	Unique identifier for the service.

Table 367: ServiceType

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceType	not applicable	not applicable	String	<p>Service type which identifies the type of service. Possible values:</p> <ul style="list-style-type: none"> • Database • SAPInstance • System • HomogenousAggregate

Table 368: HostNameCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Hostnames	0	*	Hostname	<p>Host names</p> <p>This parameter is mandatory for method <code>getComputerSystemConfigs</code> and method <code>getComputerSystemData</code>.</p>

Table 369: Hostname

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Hostname	not applicable	not applicable	String	Host name

Table 370: PropertyCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Properties	0	*	Property	Collection of name and value pairs which can be used for later extensions.

Table 371: Property

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Name	1	1	String	<p>Name of the entity.</p> <p>This parameter is mandatory for the following methods:</p> <ul style="list-style-type: none"> • <code>addNetworkConfig</code> • <code>addPoolConfig</code> • <code>updateNetworkConfig</code> • <code>updatePoolConfig</code>
Value	0	1	String	Value for the corresponding Name property.

Response

Response Parameters

Table 397: ServiceDataCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceData	0	*	ServiceData	Collection of ServiceData objects.

Table 398: ServiceData

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceType	1	1	ServiceType	Service type which identifies the type of service. Possible values: <ul style="list-style-type: none">• Database• SAPInstance• System• HomogenousAggregate
ServiceTypeSpecificContent	1	1	ServiceTypeSpecificData	Service type content contains one of the entries depending on the service type of the service.

Table 399: ServiceType

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceType	not applicable	not applicable	String	<p>Service type which identifies the type of service. Possible values:</p> <ul style="list-style-type: none"> • Database • SAPInstance • System • HomogenousAggregate

Table 400: ServiceTypeSpecificData

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
SAPInstanceServiceData	0	1	SAPInstanceServiceData	If the service type is "SAPInstance", there is a corresponding SAPInstanceServiceData and other 3 properties are null.
DatabaseServiceData	0	1	DatabaseServiceData	If the service type is Database, there is a corresponding DatabaseServiceData and other 3 properties are null.
SystemServiceData	0	1	SystemServiceData	If the service type is 'System', there is a corresponding SystemServiceData and other 3 properties are null.
HomogenousAggregateServiceData	0	1	HomogenousAggregateServiceData	If the service type is 'HomogenousAggregate', there is a corresponding HomogenousAggregateServiceData and other 3 properties are null.

Table 401: SAPInstanceServiceData extends AbstractServiceElementData

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
SystemId	1	1	String	Indicates the system ID of the service.
InstanceNumber	1	1	String	Instance number of the service.
InstanceHost	1	1	String	Instance host of the service.

Table 402: DatabaseServiceData extends AbstractServiceElementData

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
SystemId	1	1	String	Indicates the system ID of the service.
DbHost	1	1	String	Indicates the database host of the service.
DbType	1	1	String	Indicates the database type of the service. For example: <ul style="list-style-type: none">• SAP• ADA• DB2• DB4• DB6• INF• ORA• MSS
DbName	1	1	String	Indicates the database name of the service.
DbUsage	1	1	String	Indicates the database usage of the service. For example: <ul style="list-style-type: none">• ABAP• Java• Doublestack• LiveCache

Table 403: SystemServiceData extends AbstractServiceAggregateData

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
SystemId	1	1	String	Indicates the system ID of the service.
SystemHost	1	1	String	System host of the service.
SystemType	1	1	String	System type of the service.

Table 404: HomogenousAggregateServiceData extends AbstractServiceAggregateConfig

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
SystemId	1	1	String	Indicates the system ID of the service.
SystemHost	1	1	String	System host of the service.
SystemType	1	1	String	System type of the service.
ComponentTypeOfAggregatedServices	1	1	String	Denotes what type of aggregated instances is grouped under this service.

Example

2EEEngineCluster/CentralServiceInstanceSet – Grouping of CI instances of a J2EE system

Response

Response Parameters

Table 414: ComputerSystemDataCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ComputerSystemData	0	*	ComputerSystemData	Collection of computer system data objects.

Table 415: ComputerSystemData

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Hostname	1	1	Hostname	Host name
Available	1	1	Boolean	Set to true if the computer system is available.
ACEnabled	1	1	Boolean	Possible values: <ul style="list-style-type: none">• true Service is adaptive enabled• false Traditional service is not adaptive enabled

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ACOperational	1	1	Boolean	<p>Possible values:</p> <ul style="list-style-type: none"> • true Computer system is active/operational in SAP Landscape Management. • false Computer system is not active/operational in SAP Landscape Management.
IPAddress	0	1	String	IP address of the computer system.
CPUArchitecture	0	1	String	CPU architecture of the computer system.
CPUCount	0	1	Integer	CPU count of the computer system.
CPUClockRate	0	1	Integer	CPU clock rate of the computer system.
OS	0	1	String	<p>Type of the operating system of the resource.</p> <div style="background-color: #ffffcc; padding: 5px;">  Example Linux </div>
OSRelease	0	1	String	Operating system release of the computer system.
OSAddressSpace	0	1	Integer	Operating system's address space of the computer system.
CPUUtilization	0	1	Integer	CPU utilization of the computer system.
Memory	0	1	Integer	Physical RAM memory recommended for the service.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
MemoryAvailable	0	1	Integer	Memory available from the computer system.
MemoryUtilization	0	1	Integer	Memory utilization of the computer system.
SAPS	0	1	Integer	SAPS recommended for the service.
SAPSAvailable	0	1	Integer	SAPS available of the computer system.
AssignedServices	0	1	ServiceIdInfoCollection	Collection of currently running or assigned services for this computer system.
PoolId	0	1	String	<p>UUID identifier of the pool.</p> <p>This parameter is not required for method addPoolConfig.</p> <p>This parameter is mandatory for method deletePoolConfig2 and method updatePoolConfig.</p>
Properties	0	1	PropertyCollection	Collection of name and value pairs which can be used for later extensions.

Table 416: ServiceIdInfoCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceIdInfos	0	*	ServiceIdInfo	Contains a collection of service ID information.

Table 417: ServiceIdInfo

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceId	1	1	ServiceId	Unique identifier for the service.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceType	1	1	ServiceType	<p>Service type which identifies the type of service. Possible values:</p> <ul style="list-style-type: none"> • Database • SAPInstance • System • HomogenousAggregate
ServiceIdProperties	1	1	PropertyCollection	Name, value pairs where the values for keys like SystemId, SystemHost, SystemType etc. are set.
SldCimSystemCreationClassName	0	1	String	Refers to the SystemCreationClassName for this service in SLD.
SldCimSystemName	0	1	String	Refers to the CIM System Name for this service in SLD.
Properties	0	1	PropertyCollection	Collection of name and value pairs which can be used for later extensions.

Table 418: ServiceId

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceId	not applicable	not applicable	String	Unique identifier for the service.

Table 419: ServiceType

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceType	not applicable	not applicable	String	<p>Service type which identifies the type of service. Possible values:</p> <ul style="list-style-type: none"> • Database • SAPInstance • System • HomogenousAggregate

Table 420: PropertyCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Properties	0	*	Property	Collection of name and value pairs which can be used for later extensions.

Table 421: Property

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Name	1	1	String	<p>Name of the entity. This parameter is mandatory for the following methods:</p> <ul style="list-style-type: none"> • addNetworkConfig • addPoolConfig • updateNetworkConfig • updatePoolConfig
Value	0	1	String	Value for the corresponding Name property.

2.2.4.4.2 getComputerSystemData

This method retrieves details of computer systems along with complete information for all host names specified in the input data.

Request

Request Parameters

Table 422: HostNameCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Hostnames	0	*	Hostname	Host names This parameter is mandatory for method getComputerSystemConfigs and method getComputerSystemData.

Table 423: Hostname

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Hostname	not applicable	not applicable	String	Host name

Request Example

Sample Code

XML

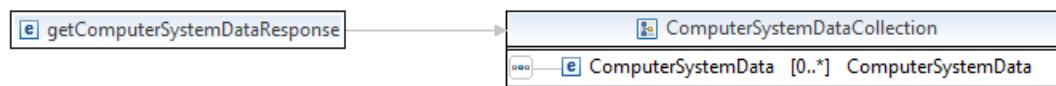

```
<?xml version="1.0" encoding="utf-8"?>
<SOAP-ENV:Envelope xmlns:SOAP-ENV="http://schemas.xmlsoap.org/soap/envelope/">
<SOAP-ENV:Body>
```

```

<yql:getComputerSystemData xmlns:yql="http://xml.sap.com/2007/07/acc">
  <Hostnames>simcs000</Hostnames>
</yql:getComputerSystemData>
</SOAP-ENV:Body>
</SOAP-ENV:Envelope>

```

Response

Response Parameters

Table 424: ComputerSystemDataCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ComputerSystemData	0	*	ComputerSystemData	Collection of computer system data objects.

Table 425: ComputerSystemData

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Hostname	1	1	Hostname	Host name
Available	1	1	Boolean	Set to true if the computer system is available.
ACEnabled	1	1	Boolean	Possible values: <ul style="list-style-type: none"> • true Service is adaptive enabled • false Traditional service is not adaptive enabled

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ACOperational	1	1	Boolean	<p>Possible values:</p> <ul style="list-style-type: none"> • true Computer system is active/operational in SAP Landscape Management. • false Computer system is not active/operational in SAP Landscape Management.
IPAddress	0	1	String	IP address of the computer system.
CPUArchitecture	0	1	String	CPU architecture of the computer system.
CPUCount	0	1	Integer	CPU count of the computer system.
CPUClockRate	0	1	Integer	CPU clock rate of the computer system.
OS	0	1	String	<p>Type of the operating system of the resource.</p> <div style="background-color: #fdf5e6; padding: 5px;"> + Example Linux </div>
OSRelease	0	1	String	Operating system release of the computer system.
OSAddressSpace	0	1	Integer	Operating system's address space of the computer system.
CPUUtilization	0	1	Integer	CPU utilization of the computer system.
Memory	0	1	Integer	Physical RAM memory recommended for the service.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
MemoryAvailable	0	1	Integer	Memory available from the computer system.
MemoryUtilization	0	1	Integer	Memory utilization of the computer system.
SAPS	0	1	Integer	SAPS recommended for the service.
SAPSAvailable	0	1	Integer	SAPS available of the computer system.
AssignedServices	0	1	ServiceIdInfoCollection	Collection of currently running or assigned services for this computer system.
PoolId	0	1	String	UUID identifier of the pool. This parameter is not required for method addPoolConfig. This parameter is mandatory for method deletePoolConfig2 and method updatePoolConfig.
Properties	0	1	PropertyCollection	Collection of name and value pairs which can be used for later extensions.

Table 426: ServiceIdInfoCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceIdInfos	0	*	ServiceIdInfo	Contains a collection of service ID information.

Table 427: ServiceIdInfo

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceId	1	1	ServiceId	Unique identifier for the service.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceType	1	1	ServiceType	<p>Service type which identifies the type of service. Possible values:</p> <ul style="list-style-type: none"> • Database • SAPInstance • System • HomogenousAggregate
ServiceIdProperties	1	1	PropertyCollection	Name, value pairs where the values for keys like SystemId, SystemHost, SystemType etc. are set.
SldCimSystemCreationClassName	0	1	String	Refers to the SystemCreationClassName for this service in SLD.
SldCimSystemName	0	1	String	Refers to the CIM System Name for this service in SLD.
Properties	0	1	PropertyCollection	Collection of name and value pairs which can be used for later extensions.

Table 428: ServiceId

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceId	not applicable	not applicable	String	Unique identifier for the service.

Table 429: ServiceType

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ServiceType	not applicable	not applicable	String	<p>Service type which identifies the type of service. Possible values:</p> <ul style="list-style-type: none"> • Database • SAPInstance • System • HomogenousAggregate

Table 430: PropertyCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Properties	0	*	Property	Collection of name and value pairs which can be used for later extensions.

Table 431: Property

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Name	1	1	String	<p>Name of the entity. This parameter is mandatory for the following methods:</p> <ul style="list-style-type: none"> • addNetworkConfig • addPoolConfig • updateNetworkConfig • updatePoolConfig
Value	0	1	String	Value for the corresponding Name property.

2.2.4.5 Template Functions

[listTemplates \[page 360\]](#)

This method lists the template IDs and template names stored in SAP Landscape Management.

[listTemplates2 \[page 362\]](#)

This method lists the template IDs and template names stored in SAP Landscape Management.

[listScheduledTemplates \[page 364\]](#)

This method lists all or specific defined scheduled templates based on operation or provisioning template IDs.

[deleteScheduledTemplate \[page 369\]](#)

This method deletes scheduled templates where the ID is provided as parameter.

[deleteTemplates \[page 371\]](#)

This method deletes templates using the corresponding template IDs.

[deleteTemplates2 \[page 373\]](#)

This method deletes templates using the corresponding template IDs.

[downloadTemplate \[page 376\]](#)

This method downloads a template based on the template ID.

[executeTemplate \[page 378\]](#)

This method executes templates in SAP Landscape Management using the template ID that is already stored in SAP Landscape Management.

[validateTemplate \[page 381\]](#)

This method validates an existing template using the template ID.

[validateTemplate2 \[page 382\]](#)

This method validates an existing template using the template ID.

```

Response

Response Parameters

Table 438: ScheduledTemplatesCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ScheduledTemplate	0	*	ScheduledTemplate	Collection of templates scheduled.

Table 439: ScheduledTemplate

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
SchTemplateId	0	1	String	ID of the template scheduled.
TaskName	0	1	String	Name of the template.
DesignProcessId	0	1	String	ID of the provisioning or operation template that has been scheduled.
DesignProcessType	0	1	DesignProcessType	Type of the template that has been scheduled. Possible values: <ul style="list-style-type: none">• OPERATION• PROVISIONING
Description	0	1	String	Description for the entity.
TaskUser	0	1	String	Template user

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
TaskStatus	0	1	ScheduleTaskStatus	Status of the template.
TaskEmailNotification	0	1	TaskNotification	Email notification if defined.
TaskCustomNotification	0	1	TaskNotification	Custom notification if defined.
CronEntry	0	1	String	The CRON entry for the task as a String.
StartDate	0	1	Long	Task start time in UNIX time (milliseconds).
EndDate	0	1	Long	Task end time in UNIX time (milliseconds).

Table 440: TaskNotification

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
enabled	0	1	Boolean	The ID of the template scheduled.
notificationId	0	1	String	Name of the template.
emailAddresses	0	*	String	Email addresses as string.
successful	0	1	Boolean	Flag if notification should be triggered on successful execution.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
failed	0	1	Boolean	Flag if notification should be triggered on failed execution.
warning	0	1	Boolean	Flag if notification should be triggered on warning execution.

Table 441: DesignProcessType

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
DesignProcessType	not applicable	not applicable	String	Type of the template that has been scheduled. Possible values: <ul style="list-style-type: none"> • OPERATION • PROVISIONING

Table 442: ScheduledTaskStatus

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ScheduledTaskStatus	not applicable	not applicable	String	Possible values: <ul style="list-style-type: none"> • ACTIVE • ON_HOLD • INCONSISTENT • EXPIRED

  </soapenv:Body>
</soapenv:Envelope>
```

Response

Response Parameters

Table 462: OperationTemplateDetails

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
<code>Id</code>	1	1	String	ID of the custom process or the operation template.
<code>Name</code>	1	1	String	Name of the entity. This parameter is mandatory for the following methods: <ul style="list-style-type: none"> • <code>addNetworkConfig</code> • <code>addPoolConfig</code> • <code>updateNetworkConfig</code> • <code>updatePoolConfig</code>
<code>Description</code>	0	1	String	Description for the entity.
<code>Creator</code>	0	1	String	Name of the user who created the operation template.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
IsIgnoreISD	1	1	Boolean	Indicates if intersystem dependencies are checked or not.
IsIgnoreValidations	1	1	Boolean	Indicates if validations are ignored or not.
IsIgnoreNote	1	1	Boolean	Indicates if notes are ignored or not.
Note	0	1	String	Notes For method getOperationTemplateDetails, the note of the operation template (concatenated note from all entities).
IsIgnoreHostCheck	1	1	Boolean	Indicates if the host is checked or not.
Steps	1	1	OperationTemplateStepsCollection	Collection of steps which represent a operation that will be executed.
StepLinks	0	1	StepLinksCollection	Collection of step links which represent the edges of the graph of the custom process.

Table 463: OperationTemplateStepsCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Step	0	*	OperationTemplateStep	Collection of custom process or operation template steps.

Table 464: OperationTemplateStep

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
StepId	1	1	Integer	Unique identifier of a step in concrete process.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
OperationId	1	1	String	Unique identifier for the operation.
OperationName	1	1	String	Name of operation.
Entities	1	1	EntitiesCollection	Collection of resolved entities.
OperationParameters	0	1	OperationParametersCollection	Collection of operation parameters

Table 465: EntitiesCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Entity	0	*	Entity	SAP Landscape Management entity.

Table 466: Entity

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
EntityId	1	1	String	<p>Name of the service which belongs to a given SystemId.</p> <p>This parameter is not required for the following scenarios:</p> <ul style="list-style-type: none"> • In combination with AccountType SIDADM. • In combination with AccountType SAPADM. <p>Used for changing SAP Host Agent password stored for all hosts which belong to a given SystemId.</p> <div style="background-color: #f9e79f; padding: 10px;"> <p>i Note</p> <p>In this case, the EntityId represents the host name for which the SAP Host Agent password is stored.</p> </div> <ul style="list-style-type: none"> • In combination with AccountType SAPADM and AccountId = default <p>Used for changing DEFAULT SAPADM (SAP Host Agent) password stored.</p>

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
				For all other scenarios you must specify the EntityId.
EntityParameters	0	1	PropertyCollection	Entity parameters

Table 467: StepLinksCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
StepLink	0	*	StepLink	Collection of constraints.

Table 468: StepLink

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
SourceStepId	1	1	Integer	ID of a source step.
TargetStepId	1	1	Integer	ID of a target step.

Table 469: OperationParametersCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
OperationParameter	0	*	ExecutionParameter	Collection of operation parameters.

Table 470: ExecutionParameter

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Name	1	1	String	<p>Name of the entity.</p> <p>This parameter is mandatory for the following methods:</p> <ul style="list-style-type: none"> • addNetworkConfig • addPoolConfig • updateNetworkConfig • updatePoolConfig

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Values	1	1	ExecutionParameterValuesCollection	Collection of values.

Table 471: ExecutionParameterValuesCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Value	1	*	String	Value for the corresponding Name property.

```

Response

Response Parameters

Table 500: ResolveCustomProcessResponse

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Status	1	1	ResolveStatus	Status

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
StatusDescription	0	1	String	Detailed description of the status of the execution launch.
Steps	1	1	ResolvedStepsCollection	Collection of steps which represent a operation that will be executed.
StepLinks	0	1	StepLinksCollection	Collection of step links which represent the edges of the graph of the custom process.

Table 501: ResolveStatus

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ResolveStatus	not applicable	not applicable	String	<p>Status of the overall resolve of the custom process step.</p> <p>Possible values:</p> <ul style="list-style-type: none"> • SUCCESS • WARNING • ERROR

Table 502: ResolvedStepsCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Step	1	*	ResolvedStep	Collection of custom process or operation template steps.

Table 503: ResolvedStep

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
StepId	1	1	Integer	Unique identifier of a step in concrete process.
OperationId	1	1	String	Unique identifier for the operation.
OperationName	1	1	String	Name of operation.

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
ResolveStatus	1	1	ResolveStatus	<p>Status of the overall resolve of the custom process step.</p> <p>Possible values:</p> <ul style="list-style-type: none"> • SUCCESS • WARNING • ERROR
Entities	0	1	EntitiesCollection	Collection of resolved entities.
UnresolvedEntities	0	1	UnresolvedEntitiesCollection	Collection of unresolved entities.

Table 504: EntitiesCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Entity	0	*	Entity	SAP Landscape Management entity.

Table 505: Entity

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
EntityId	1	1	String	<p>Name of the service which belongs to a given SystemId.</p> <p>This parameter is not required for the following scenarios:</p> <ul style="list-style-type: none"> • In combination with AccountType SIDADM. • In combination with AccountType SAPADM. <p>Used for changing SAP Host Agent password stored for all hosts which belong to a given SystemId.</p> <div style="background-color: #f9e79f; padding: 10px;"> <p>i Note</p> <p>In this case, the EntityId represents the host name for which the SAP Host Agent password is stored.</p> </div> <ul style="list-style-type: none"> • In combination with AccountType SAPADM and AccountId = default <p>Used for changing DEFAULT SAPADM (SAP Host Agent) password stored.</p>

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
				For all other scenarios you must specify the EntityId.
EntityParameters	0	1	PropertyCollection	Entity parameters

Table 506: PropertyCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Properties	0	*	Property	Collection of name and value pairs which can be used for later extensions.

Table 507: Property

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Name	1	1	String	<p>Name of the entity. This parameter is mandatory for the following methods:</p> <ul style="list-style-type: none"> • addNetworkConfig • addPoolConfig • updateNetworkConfig • updatePoolConfig
Value	0	1	String	Value for the corresponding Name property.

Table 508: UnresolvedEntitiesCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
UnresolvedEntity	0	*	UnresolvedEntity	Unresolved entity.

Table 509: UnresolvedEntity

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
EntityId	1	1	String	<p>Name of the service which belongs to a given SystemId.</p> <p>This parameter is not required for the following scenarios:</p> <ul style="list-style-type: none"> • In combination with AccountType SIDADM. • In combination with AccountType SAPADM. <p>Used for changing SAP Host Agent password stored for all hosts which belong to a given SystemId.</p> <div style="background-color: #f9e79f; padding: 10px;"> <p>i Note</p> <p>In this case, the EntityId represents the host name for which the SAP Host Agent password is stored.</p> </div> <ul style="list-style-type: none"> • In combination with AccountType SAPADM and AccountId = default <p>Used for changing DEFAULT SAPADM (SAP Host Agent) password stored.</p>

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
				For all other scenarios you must specify the EntityId.
Reason	1	1	String	Reason why the entity is not resolved.

Table 510: StepLinksCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
StepLink	0	*	StepLink	Collection of constraints.

Table 511: StepLink

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
SourceStepId	1	1	Integer	ID of a source step.
TargetStepId	1	1	Integer	ID of a target step.

This method modifies custom properties.

Request

Request Parameters

Table 529: CustomProperties

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
EntityType	1	1	CustomPropertyEntityType	<p>Type of entities on which the validations are applicable.</p> <p>Possible values:</p> <ul style="list-style-type: none"> • COMPUTERSYSTEM • SERVICE • VIRTUAL_RESOURCE • VIRTUAL_RESOURCE_PROVIDER <p>Additional values for method queryEntitiesById and queryEntitiesFullText:</p> <ul style="list-style-type: none"> • HOST • POOL • CONTAINER

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
EntityId	0	1	String	<p>Name of the service which belongs to a given SystemId.</p> <p>This parameter is not required for the following scenarios:</p> <ul style="list-style-type: none"> • In combination with AccountType SIDADM. • In combination with AccountType SAPADM. Used for changing SAP Host Agent password stored for all hosts which belong to a given SystemId. <div style="background-color: #fdf5e6; padding: 10px;"> <p>i Note</p> <p>In this case, the EntityId represents the host name for which the SAP Host Agent password is stored.</p> </div> <ul style="list-style-type: none"> • In combination with AccountType SAPADM and AccountId = default Used for changing DEFAULT SAPADM (SAP Host Agent) password stored. <p>For all other scenarios you must specify the EntityId.</p>

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
CustomProperty	0	*	CustomProperty	Property of type key-value pair that can be secured.
Properties	0	1	PropertyCollection	Collection of name and value pairs which can be used for later extensions.

Table 530: CustomPropertyEntityType

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
CustomPropertyEntityType	not applicable	not applicable	String	Possible values: <ul style="list-style-type: none"> • CONTAINERS • POOLS • SYSTEMS • HOSTS • INSTANCES • SETUP

Table 531: CustomProperty

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
IsSecure	0	1	Boolean	Indicates if property needs to be secured with encryption.
PropKey	1	1	String	Unique identifier key for custom property.
PropValue	0	1	String	Value for custom property.

Table 532: PropertyCollection

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Properties	0	*	Property	Collection of name and value pairs which can be used for later extensions.

Table 533: Property

Parameter	Minimum Occurrence	Maximum Occurrence	Type	Description
Name	1	1	String	<p>Name of the entity.</p> <p>This parameter is mandatory for the following methods:</p> <ul style="list-style-type: none"> • addNetworkConfig • addPoolConfig • updateNetworkConfig • updatePoolConfig
Value	0	1	String	Value for the corresponding Name property.

2.2.5 Error Codes

This section lists possible error codes and the corresponding message.

Table 575: Error Codes

Error Code	Message
ERROR_CODE_ACC_INTERNAL_ERROR = 1	Internal exception occurred during configuration.
ERROR_CODE_NO_SUCH_PROCESS = 2	No such process exists.
ERROR_CODE_INVALID_OPERATION_TYPE = 3	Operation type provided is not valid.
ERROR_CODE_OPERATION_EXECUTION_ERROR = 4	Error occurs during the execution of the operation.
ERROR_CODE_INVALID_CONFIGURATION_DATA = 5	Configuration data provided is not valid.
ERROR_CODE_USER_HAS_NO_PERMISSION = 6	User has no permission to perform specific operation.
ERROR_CODE_NO_SUCH_COMPUTER_SYSTEM = 7	No computer system exists for the host name provided.
ERROR_CODE_COMPUTER_SYSTEM_ALREADY_LOCKED = 8	Computer system already locked for configuration.

Error Code	Message
ERROR_CODE_COMPUTER_SYSTEM_LOCK_FAILURE = 9	Configuration operation cannot receive a lock on the computer system.
ERROR_CODE_COMPUTER_SYSTEM_UNLOCK_FAILURE = 10	Error unlocking the computer system.
ERROR_CODE_NO_SUCH_COMPUTER_SYSTEM_HOSTNAME = 11	No such computer system host name exists.
ERROR_CODE_EMPTY_OR_NULL_COMPUTER_SYSTEM_HOSTNAME = 12	No computer system host name is provided when required.
ERROR_CODE_HOST_AGENT_CREDENTIALS_MISSING = 13	SAP Host Agent credentials are missing for the computer system specified.
ERROR_CODE_NETWORK_CONFIGURATION_MISSING = 14	Network configuration details are missing for the computer system specified.
ERROR_CODE_EMPTY_OR_NULL_NETWORK_INTERFACE_ID = 16	Network interface ID is null or empty for the computer system specified.
ERROR_CODE_NO_SUCH_NETWORK = 17	Network ID specified in the input data is not valid.
ERROR_CODE_EMPTY_OR_NULL_NETWORK_ID = 18	Network ID specified in the input data of a method is empty or null.
ERROR_CODE_REFERENCED_SERVERS = 19	Error retrieving the referenced server details for the network.
ERROR_CODE_REFERENCED_SERVICES = 20	Error retrieving the referenced instance details for the network.
ERROR_NETWORK_ALREADY_LOCKED = 21	Network is locked by another user or application.
ERROR_NETWORK_LOCK_FAILURE = 22	Failure obtaining the lock for the network.
ERROR_NETWORK_UNLOCK_FAILURE = 23	Failure trying to unlock the network.
ERROR_CODE_EMPTY_OR_NULL_POOL_ID = 24	Pool ID specified in the input data of a method is empty or null.
ERROR_CODE_NO_SUCH_POOL = 25	Pool ID specified in the input data is not valid.
ERROR_POOL_ALREADY_LOCKED = 26	Pool is already locked by some other user or application.
ERROR_POOL_LOCK_FAILURE = 27	Failure obtaining the lock for the pool.
ERROR_POOL_UNLOCK_FAILURE = 28	Failure trying to unlock the pool.
ERROR_CODE_INVALID_SERVICE_ID = 29	Service ID provided is not valid.

Error Code	Message
ERROR_CODE_NO_SUCH_SERVICE = 30	No instance matching the input service ID.
ERROR_CODE_EMPTY_OR_NULL_SERVICE_ID = 31	No service ID provided where expected.
ERROR_CODE_SERVICE_LOCKED = 32	Instance already locked for configuration.
ERROR_CODE_EMPTY_OPERATION_REQUEST = 33	Operation request is empty.
ERROR_CODE_INVALID_OPERATION_REQUEST = 34	Operation request is not valid.
ERROR_CODE_EMPTY_OPERATION_REQUEST_ITEM = 35	Operation request item is empty.
ERROR_CODE_DEPENDED_SERVICES_MISSING = 36	Dependent instances are missing for a system.
ERROR_CODE_SELECTED_SERVICE_OR_RESOURCE_IN_VALID = 37	Selected instance or host is not valid.
ERROR_CODE_SERVICE_HAS_ALERT = 38	Instance has an alert.
ERROR_CODE_NULL_OR_EMPTY_PROCESS_ID = 39	No process ID specified.
ERROR_CODE_NOT_SERVICE_ELEMENT = 40	No instance element for the value provided.
ERROR_CODE_UNFULFILL_REQ = 41	Instance does not meet the requirements for an operation.
ERROR_CODE_INVALID_AUTO_SELECTION_POLICY = 42	Auto-selection policy specified is not valid.
ERROR_CODE_NULL_OR_EMPTY_AUTO_SELECTION_POLICY = 43	Auto-selection policy is not specified.
ERROR_CODE_EMPTY_AUTO_SELECTOR_REQUEST = 44	Auto-selector request is empty.
ERROR_CODE_NOT_ADAPTIVE_SERVICE_ELEMENT = 45	Service element is not adaptively installed.
ERROR_CODE_IMPROPER_DATA = 46	Service has improper data in SLD.
ERROR_CODE_EMPTY_NOTE = 47	Empty note to call Set Note.
ERROR_CODE_NULL_OR_EMPTY_TASK_ID = 48	Empty task ID.
ERROR_CODE_NO_SUCH_TASK = 49	No task exists for the given task ID.
ERROR_CODE_ILLEGITIMATE_CHANGE_ID_USAGE = 50	Illegitimate change ID usage.

Error Code	Message
ERROR_CODE_NO SUCH_VALIDATIONRESULT = 51	No task exists for the given entity ID and entity type.
ERROR_CODE_NULL_OR_EMPTY_ENTITY_ID = 52	Empty entity ID.
ERROR_CODE_NULL_OR_EMPTY_ENTITY_TYPE = 53	Empty entity type.
ERROR_CODE_NULL_OR_EMPTY_PROCESS_STATE = 54	No process state is specified.
ERROR_CODE_ENTERPRISE_LICENSE_REQUIRED = 55	Enterprise license is required but not installed.
ERROR_CODE_RETRIEVE_CUSTOM_PARAMETER = 56	Error retrieving the replaced default values.
TEMPLATE_ERROR_CODE_NOTSUPPORTED = 0	Functionality is not supported.
TEMPLATE_ERROR_CODE_ENTERPRISE_LICENSE = 1	Enterprise license is not available.
TEMPLATE_ERROR_CODE_INVALID_SERVICE = 2	Instance is null or empty.
TEMPLATE_ERROR_CODE_INVALID_SERVICE_SERVIC Eid = 3	Instance {0} not configured in SAP Landscape Management.
TEMPLATE_ERROR_CODE_INVALID_HOST = 4	Host is null or empty.
TEMPLATE_ERROR_CODE_INVALID_HOST_HOSTID = 5	Host {0} not configured in SAP Landscape Management.
TEMPLATE_ERROR_CODE_INVALID_DEPENDENT_STEP _ID = 6	Dependent Steps {0} are invalid.
TEMPLATE_ERROR_CODE_SERVICE_LOCKED = 7	Instance {0} is locked.
TEMPLATE_ERROR_CODE_RESOURCE_LOCKED = 8	Host {0} is locked.
TEMPLATE_ERROR_CODE_INVALID_SERVICE_STATE = 9	Instance {0} is already in target state.
TEMPLATE_ERROR_CODE_MISSING_OUTGOING_ISD = 10	Instance {0} has missing outgoing dependencies.
TEMPLATE_ERROR_CODE_MISSING_INCOMING_ISD = 11	Instance {0} has missing incoming dependencies.
TEMPLATE_ERROR_CODE_INVALID_XML = 12	Template is invalid.
TEMPLATE_ERROR_CODE_XML_IMPROPER = 13	Template content is improper.

Error Code	Message
TEMPLATE_ERROR_CODE_IO_EXCEPTION = 14	Internal exception occurs.
TEMPLATE_ERROR_CODE_DOMEXCEPTION = 15	DOMException occurs when parsing the XML.
TEMPLATE_ERROR_CODE_VCMCONTROLLER_NOT_FOUND = 16	VCMController instance is not found.
TEMPLATE_ERROR_CODE_TEMPLATE_LIST_EMPTY = 17	There are no templates stored in SAP Landscape Management.
TEMPLATE_ERROR_CODE_FOR_EXCEPTIONS = 18	VCMController instance not found.
TEMPLATE_ERROR_CODE_FOR_TEMPLATE_CANNOT_BE_DELETED = 19	Template locked when being executed.
TEMPLATE_ERROR_CODE_OPERATION_INVALID = 20	Operation {0} is not supported in SAP Landscape Management.
TEMPLATE_ERROR_CODE_INVALID_SYSTEM = 21	System is null or empty.
TEMPLATE_ERROR_CODE_INVALID_SYSTEM_SYSTEMID = 22	System {0} not configured in SAP Landscape Management.
TEMPLATE_ERROR_CODE_INVALID_VIRTUAL_RESOURCE = 23	Virtual host is null or empty.
TEMPLATE_ERROR_CODE_INVALID_VIRTUAL_RESOURCE_VIRTUAL_RESOURCEID = 24	Virtual host {0} not configured in SAP Landscape Management.
TEMPLATE_ERROR_CODE_INVALID_VIRTUAL_RESOURCE_PROVIDER_VIRTUAL_RESOURCE_PROVIDERID = 25	Virtual host provider cannot be null or empty.
TEMPLATE_ERROR_CODE_INVALID_VIRTUAL_RESOURCE_PROVIDER_VIRTUAL_RESOURCE_PROVIDER_ID = 26	Virtual host provider {0} not configured in SAP Landscape Management.
TEMPLATE_ERROR_CODE_INVALID_PROPERTY_REF_ID = 27	Property references {0} are invalid.
TEMPLATE_ERROR_CODE_INVALID_DEPENDENT_PROPERTY_ID = 28	Dependent properties {0} are invalid.
TEMPLATE_ERROR_CODE_TEMPLATE_LOCKED = 29	Template {0} is locked.
TEMPLATE_ERROR_CODE_UNKNOWN = 33	Unknown error occurs while executing the template.

Error Code	Message
TEMPLATE_CANNOT_BE_EXECUTED_WITHOUT_REFERE NCE_ID = 34	Template {0} cannot be executed without reference ID.
TEMPLATE_CANNOT_BE_STORED_WITHOUT_REFERENC E_ID = 35	Template cannot be stored without reference ID.
TEMPLATE_CANNOT_BE_STORED_WITH_WRONG_REFER ENCE_ID = 36	Passed reference ID {0} is not related to the key these tem- plates secured values were encrypted with.
TEMPLATE_IS_INVALID_FOR_XPATH_EXPRESSION = 37	Template is invalid for a given xpath expression.
TEMPLATE_ERROR_CODE_TEMPLATE_IS_CORRUPTED = 38	Template <name of template> is inconsistent and cannot be executed. Probably some configuration entities are cur- rently not managed by this SAP Landscape Management. For more information, see SAP Note 2170861 .
ERROR_CODE_UNABLE_TO_DELETE_SCHEDULED_TEMP LATE = 63	Failure trying to delete the scheduled template.
ERROR_CODE_OPERATION_TEMPLATE_EXECUTE_ERRO R = 64	Failure trying to execute the operation template.
ERROR_CODE_NO_OPERATION_TEMPLATE_WITH_ID_F OUND_ERROR = 65	Unknown operation template.
ERROR_CODE_NO_CUSTOM_PROCESS_WITH_ID_FOUND = 66	Unknown custom process.
ERROR_CODE_CUSTOM_PROCESS_RESOLVE_ERROR = 67	Failure trying to resolve custom process.
ERROR_CODE_NO_ENTITY_WITH_ID_FOUND = 68	Unknown entity.
ERROR_CODE_CUSTOM_PROCESS_EXECUTE_ERROR = 69	Failure trying to execute custom process.
ERROR_CODE_NO_OPERATION_WITH_ID_FOUND_ERRO R = 70	Unknown operation.
ERROR_CODE_CHANGEID_LOGGING_NOT_POSSIBLE = 71	Change ID logging failure.
ERROR_CODE_INVALID_VALIDATION_SHORT_NAME = 72	Invalid validation short name.
ERROR_CODE_INVALID_ENTITY_REFERENCE = 73	Invalid entity reference.

2.3 Servlets

This section provides an overview of invoker servlets available for SAP Landscape Management.

You access servlets by using the following:

- Browser
- Script which is capable of performing HTTP-POST calls
- Program which is capable of performing HTTP-POST calls

[Calling the SysDel Servlet \[page 487\]](#)

You call servlet `SysDel` to clean up configuration data.

[Calling the Download Servlet \[page 489\]](#)

You call servlet `Download` to export configuration data.

[Calling the Upload Servlet \[page 491\]](#)

You call servlet `Upload` to import configuration data.

[Calling the Validation Servlet \[page 493\]](#)

You call servlet `Validation` to receive validation and monitoring data.

2.3.1 Calling the SysDel Servlet

You call servlet `SysDel` to clean up configuration data.

Prerequisites

You have configuration permissions.

For more information, search for *Standard Permissions* within the Application Help .

Procedure

1. The servlet operations are secured against Cross-Site Request Forgery (CSRF). Request a token by passing the parameter `getToken` to the servlet as follows: `https://<host>:<port>/LVMMassConfig/SysDel?getToken`
When performing the operation, pass the token returned as input to parameter `token=<token ID>`. The token is valid up to 5 minutes for a single request.
2. Call URL `https://<hostname>:<port>/LVMMassConfig/SysDel` to delete system and host content. To specify the operation, you can use the following parameters:

Operation	URL
Deleting a system including all instances	<code>https://<hostname>:<port>/LVMMassConfig/SysDel? systemId=<SID>&hostname=<registered hostname of system>&token=<token ID></code>
Deleting a database instance	<code>https://<hostname>:<port>/LVMMassConfig/ SysDel? serviceSystemId=<ABC>&serviceHostname=<r egistered hostname of system>&serviceDbType=<database type, possible values: ORA, MSS, DB2, DB4, DB6, INF, SAP, ADA, HDB, SYB>&token=<token ID></code>
Deleting a single instance	<code>https://<hostname>:<port>/LVMMassConfig/ SysDel? serviceSystemId=<SID>&serviceHostname=<r egistered hostname of system>&serviceSystemNumber=<installatio n number>&token=<token ID></code>
Deleting a single host	<code>https://<hostname>:<port>/LVMMassConfig/ SysDel?resourceName=<hostname, FQDN>&deleteInstances=<optional boolean, possible values: true, false>&token=<token ID></code>
Deleting all instances configured	<code>https://<hostname>:<port>/LVMMassConfig/ SysDel? serviceSystemId=<ALL>&token=<token ID></code>
Deleting all hosts configured	<code>https://<hostname>:<port>/LVMMassConfig/ SysDel?resourceName=<ALL>&token=<token ID></code>
Resetting all configuration data	<code>https://<hostname>:<port>/LVMMassConfig/ SysDel?resetAll=<boolean, possible values: true, false>&resetReason=<reason>&token=<token ID></code>

Related Information

[SAP Note 2206968 - Delete System Landscape content of SAP Landscape Management](#) 

2.3.2 Calling the Download Servlet

You call servlet `Download` to export configuration data.

Prerequisites

You have the required permissions to export configuration data, which means, you have at least role `SAP_LVM_READONLY` assigned. For exporting configuration data containing passwords, you must have role `SAP_LVM_SUPERADMIN` assigned.

For more information, search for *Standard Permissions* within the Application Help .

Context

Configuration data is provided as an XML file whose structure is compatible to the export and import functionality in SAP Landscape Management. The data structure is defined through a DTD which must be part of the import content. Both the upload and the download servlet accept HTTP-POST parameters while the download servlet also accepts HTTP-GET parameters.

Procedure

1. The servlet operations are secured against Cross-Site Request Forgery (CSRF). Request a token by passing the parameter `getToken` to the servlet as follows: `https://<host>:<port>/LVMMassConfig/download?getToken`

When performing the operation, pass the token returned as input to parameter `token=<tokenid>`. The token is valid up to 5 minutes for a single request.

2. Call URL `https://<hostname>:<port>/LVMMassConfig/download` to export configuration data. To specify the operation, you use the following parameters:

Table 576:

Parameter Name	Value	Description
<code>exportType</code>	<code>All</code>	Exports all landscape data.
<code>exportType</code>	<code>services</code>	Exports systems and instances including their dependencies.
<code>exportType</code>	<code>resources</code>	Exports hosts including their dependencies.

Parameter Name	Value	Description
exportType	systems	Exports systems including their dependencies.
exportType	instances	Exports instances including their dependencies.
exportType	hosts	Exports hosts including their dependencies.
exportType	networks	Exports networks including their dependencies.
exportType	pools	Exports pools including their dependencies.
exportType	characteristics	Exports characteristics and their corresponding values.
exportType	tasks	Exports tasks including their dependencies.
pwd	<password>	<p>Optional parameter</p> <p>The password used to encrypt passwords of users configured.</p> <p>If you set the parameter useDefaultPwd to true, the pwd parameter entered will be overwritten.</p>
useDefaultPwd	true	<p>Optional parameter</p> <p>To encrypt passwords, the default password defined under <i>Setup</i> <i>Settings</i> will be used.</p> <p>This parameter overwrites parameter pwd.</p>
useDefaultPwd	false	<p>Optional parameter</p> <p>To encrypt passwords, the default password defined under <i>Setup</i> <i>Settings</i> will not be used.</p>

Table 577:

Operation	URL
Download configuration data of a specific host	<code>https://<hostname>:<port>/LVMMassConfig/download? exportType=hosts&hostname=<host>&token=<token ID></code>
Download configuration data of a specific system	<code>https://<hostname>:<port>/LVMMassConfig/download? exportType=system&systemId=<SID>&hostname=<host the system is installed on>&token=<token ID></code>
Download configuration data of a specific instance	<code>https://<hostname>:<port>/LVMMassConfig/download? exportType=instance&systemId=<SID>&hostname=<host the instance is installed on>&instanceNumber=<instance number>&token=<token ID></code>
Download configuration data of a specific database instance	<code>https://<hostname>:<port>/LVMMassConfig/download? exportType=instance&systemId=<SID>&hostname=<host the instance is installed on>&dbType=<database type, possible values: ORA, MSS, DB2, DB4, DB6, INF, SAP, ADA, HDB, SYB>&token=<token ID></code>

Related Information

[SAP Note 1752385 - Upload & download capability of SAP Landscape Management configuration data](#)

2.3.3 Calling the Upload Servlet

You call servlet `Upload` to import configuration data.

Prerequisites

You have the required permissions to import configuration data, that is, you have at least role `SAP_LVM_CONFIGURATOR` assigned.

For more information, search for *Standard Permissions* within the Application Help .

Context

Configuration data is provided as an XML file whose structure is compatible to the export and import functionality in SAP Landscape Management. The data structure is defined through a DTD which must be part of the import content. Both the upload and the download servlet accept HTTP-POST parameters while the download servlet also accepts HTTP-GET parameters.

Procedure

1. The servlet operations are secured against Cross-Site Request Forgery (CSRF). Request a token by passing the parameter `getToken` to the servlet as follows `http://<host>:<port>/LVMMassConfig/upload?getToken`

When performing the operation, pass the token returned as input to parameter `token=<tokenid>`. The token is valid up to 5 minutes for a single request.

2. Call URL `http://<hostname>:<port>/LVMMassConfig/upload` to import configuration data. To specify the operation, you use the following parameters:

Table 578:

Parameter Name	Values	Description
content	<data/XML>	Data/XML file to be imported.
outputType	HTML	The result is returned in HTML format (default).
outputType	XML	The result is returned in XML format.
mode	overwrite	Optional parameter Overwrites existing data. If the parameter is not set, existing data remains unchanged.
pwd	<password>	Optional parameter The password used during export/download to encrypt existing user data. If you have set the parameter <code>useDefaultPwd</code> to true, the <code>pwd</code> parameter entered will be overwritten.

Parameter Name	Values	Description
useDefaultPwd	true	<p>Optional parameter</p> <p>To decrypt passwords, the default password defined under  Setup > Settings will be used.</p> <p>This parameter overwrites parameter pwd.</p>
useDefaultPwd	false	<p>Optional parameter</p> <p>To decrypt passwords, the default password defined under  Setup > Settings will not be used.</p>

Related Information

[SAP Note 1752385 - Upload & download capability of SAP Landscape Management configuration data](#) 

2.3.4 Calling the Validation Servlet

You call servlet validation to receive validation and monitoring data.

Prerequisites

You have the required permissions to view the state, configuration, activities status, logs of instances, hosts, and virtual hosts, that is, you have at least role SAP_LVM_READONLY assigned.

For more information, search for *Standard Permissions* within the Application Help.

Procedure

- The servlet operations are secured against Cross-Site Request Forgery (CSRF). Request a token by passing the parameter getToken to the servlet as follows: `https://<host>:<port>/LVMMassConfig/SysDel?getToken`

When performing the operation, pass the token returned as input to parameter `token=<token ID>`. The token is valid up to 5 minutes for a single request.

2. Call URL `https://<hostname>:<port>/LVMMassConfig/Validation` to receive validation and monitoring data. To specify the operation, you can use the following parameters:

Table 579:

Operation	Parameter Name	Value	Description	URL
One validation for all hosts	oneValidationForAllHosts	<validator ID>	Retrieves all hosts and validations assigned to the validator ID specified.	<code>https://<hostname>:<port>/LVMMassConfig/validation?exportType=oneValidationForAllHosts&id=<validator ID>&token=<token ID></code>
One validation for all hosts	oneValidationForAllHosts	<validator name>	Retrieves all hosts and validations assigned to the validator name specified.	<code>https://<hostname>:<port>/LVMMassConfig/validation?exportType=oneValidationForAllHosts&id=<validator name>&token=<token ID></code>
One validation for all services	oneValidationForAllServices	<validator ID>	Retrieves all services and validations assigned to the validator ID specified.	<code>https://<hostname>:<port>/LVMMassConfig/validation?exportType=oneValidationForAllServices&id=<validator ID>&token=<token ID></code>

Operation	Parameter Name	Value	Description	URL
One validation for all services	oneValidationForAllServices	<validator name>	Retrieves all services and validations assigned to the validator name specified.	<code>https://<hostname>:<port>/LVMMassConfig/validation?exportType=oneValidationForAllServices&id=<validator name>&token=<token ID></code>

Important Disclaimers and Legal Information

Coding Samples

Any software coding and/or code lines / strings ("Code") included in this documentation are only examples and are not intended to be used in a productive system environment. The Code is only intended to better explain and visualize the syntax and phrasing rules of certain coding. SAP does not warrant the correctness and completeness of the Code given herein, and SAP shall not be liable for errors or damages caused by the usage of the Code, unless damages were caused by SAP intentionally or by SAP's gross negligence.

Gender-Neutral Language

As far as possible, SAP documentation is gender neutral. Depending on the context, the reader is addressed directly with "you", or a gender-neutral noun (such as "sales person" or "working days") is used. If when referring to members of both sexes, however, the third-person singular cannot be avoided or a gender-neutral noun does not exist, SAP reserves the right to use the masculine form of the noun and pronoun. This is to ensure that the documentation remains comprehensible.

Internet Hyperlinks

The SAP documentation may contain hyperlinks to the Internet. These hyperlinks are intended to serve as a hint about where to find related information. SAP does not warrant the availability and correctness of this related information or the ability of this information to serve a particular purpose. SAP shall not be liable for any damages caused by the use of related information unless damages have been caused by SAP's gross negligence or willful misconduct. All links are categorized for transparency (see: <https://help.sap.com/viewer/disclaimer>).
