

Drought Tolerant & Low Water Use Grasses & Sedges

Using plants that are drought tolerant and have low water needs are smart choices. Drought tolerant grasses do not need supplemental irrigation and can withstand periods of water scarcity and prolonged dry conditions once established. Low water use grasses have adapted to water scarcity, use water efficiently, and continue to look good in times of water scarcity once established.

Here are a few of our top picks for drought tolerant grasses and sedges. See our full list on back!
