

Client Authentication Agent installation and configuration

(For MAC-OS, and Windows)

1. On the user's workstation, download the Client Authentication Agent from given link.
2. Select the client as per your OS.

3. Run the downloaded file and follow the wizard.
4. Once installed, double-click on the Client Authentication Agent icon on the desktop.

5. It will run in the system tray. Right-click on the CAA icon and select **Set Credentials**.

6. Enter the user's credentials and click **OK**. The user will be authenticated and provided access if the login is successful.
