Status of New Marine Faunal Discoveries by CMLRE

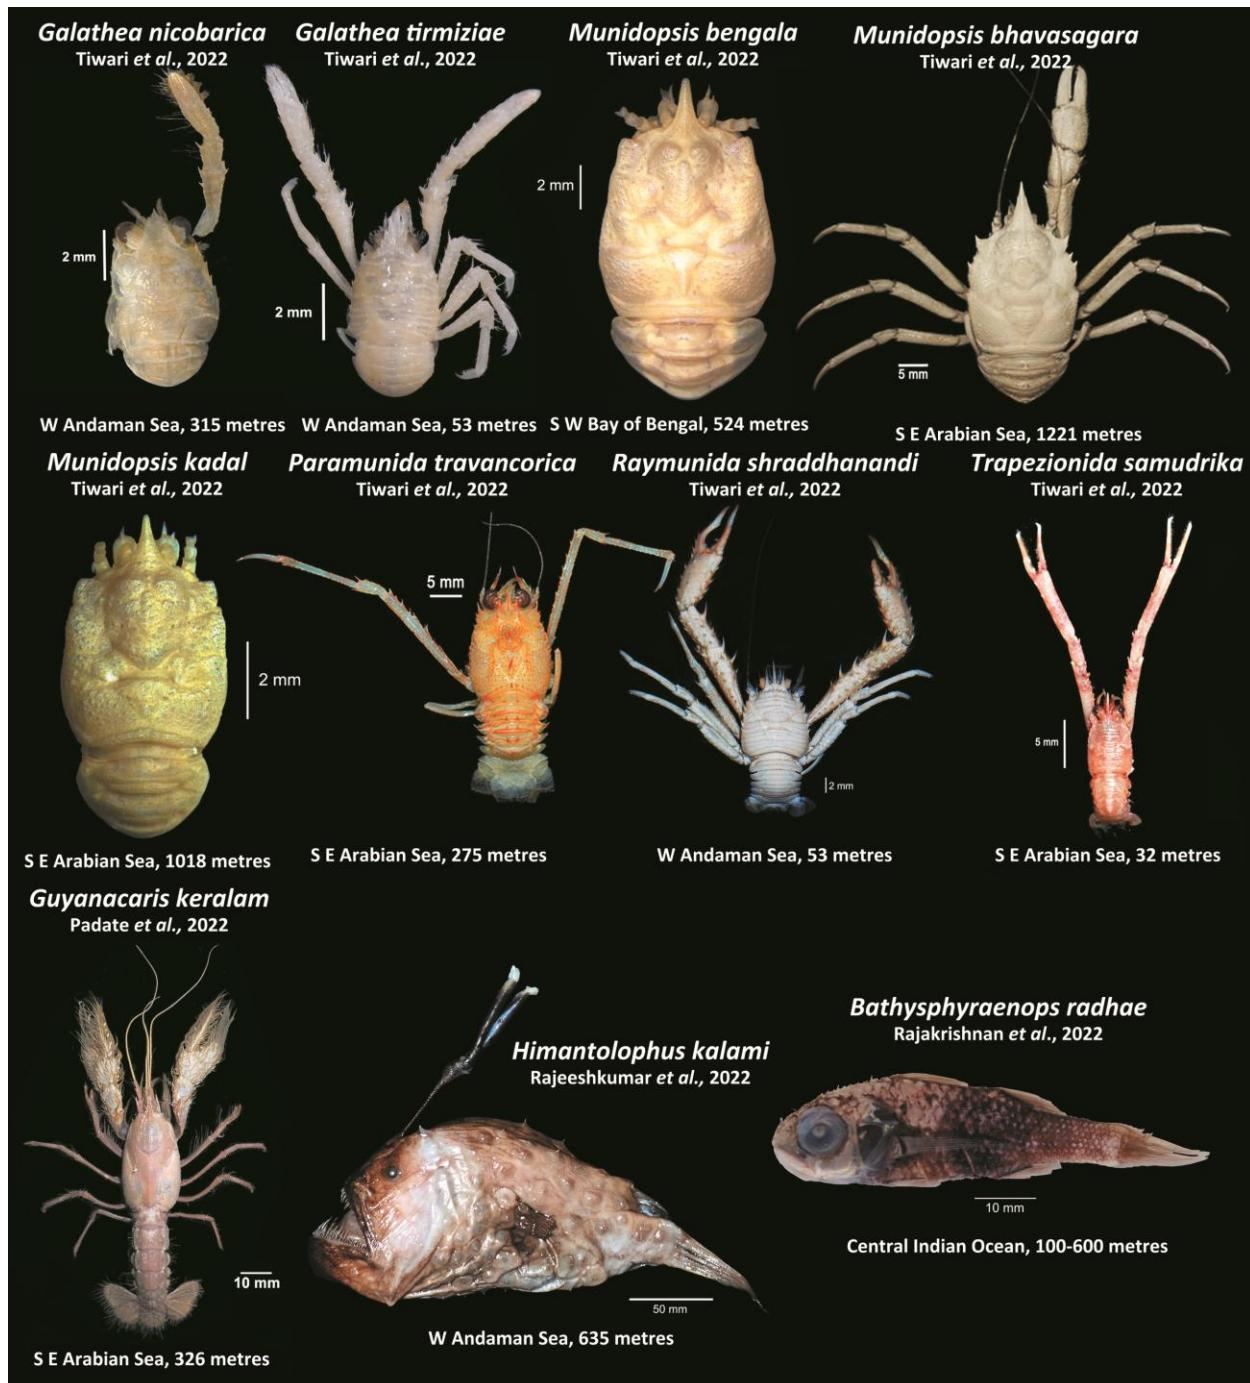

Figure 1: New Species published by CMLRE during January to December 2022

India is one of the 17 megadiverse nations on the planet with diverse marine ecosystems supporting more than 20,000 animal species. Comprehensive surveys of the seas in the Indian EEZ by the CMLRE-owned Fishery Oceanographic Research Vessel (FORV) Sagar Sampada during the 10th, 11th and 12th Five-year plans and the 14th Finance Commission Scheme (2017–2020) have resulted in moderately large faunal collections deposited in the FORV Referral Centre of the institute. The sampling surveys comprised dedicated cruises on-board the FORV Sagar Sampada in the Indian EEZ and Central Indian Ocean, and by SCUBA diving as well as intertidal surveys in the Agatti Island, Lakshadweep. These efforts carried out by the CMLRE under the aegis of the MLRP from the 10th Five-year plan to till date have yielded peer-reviewed publications on 34 species new to science (Table 1) and 66 new zoogeographical records to the Indian EEZ (Table 2). **The recently publication of a new species of mesopelagic fish *Bathysphyraenops radhae* Rajakrishnan et al., 2022 from the Central Indian Ocean (Figure 1) constituted the 100th new faunal discovery by CMLRE.**

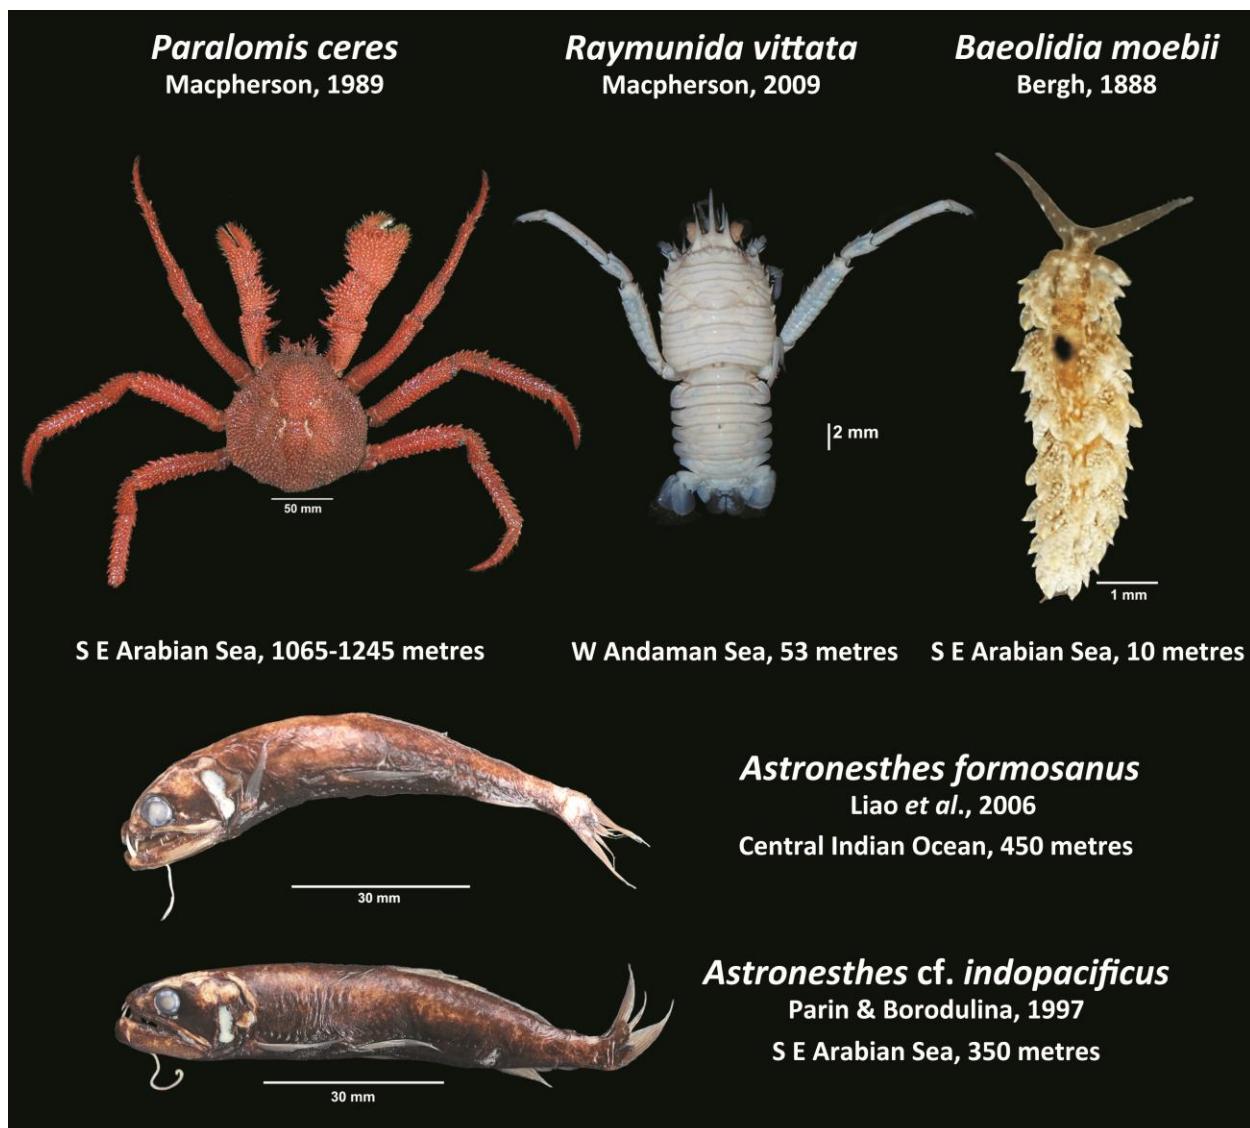

Figure 2: New zoo-geographical records of marine fauna published by CMLRE during January to December 2022

Furthermore, the period from January to December 2022 witnessed a remarkable quantum of research effort by the Resource Exploration and Inventorization System scientific team, which resulted in the publication of 11 new species (Figure 1) and 5 new zoo-geographical records (Figure 2), which accounted for 32% and 8% to the total number of new species and new zoo-geographical records published by CMLRE, respectively.

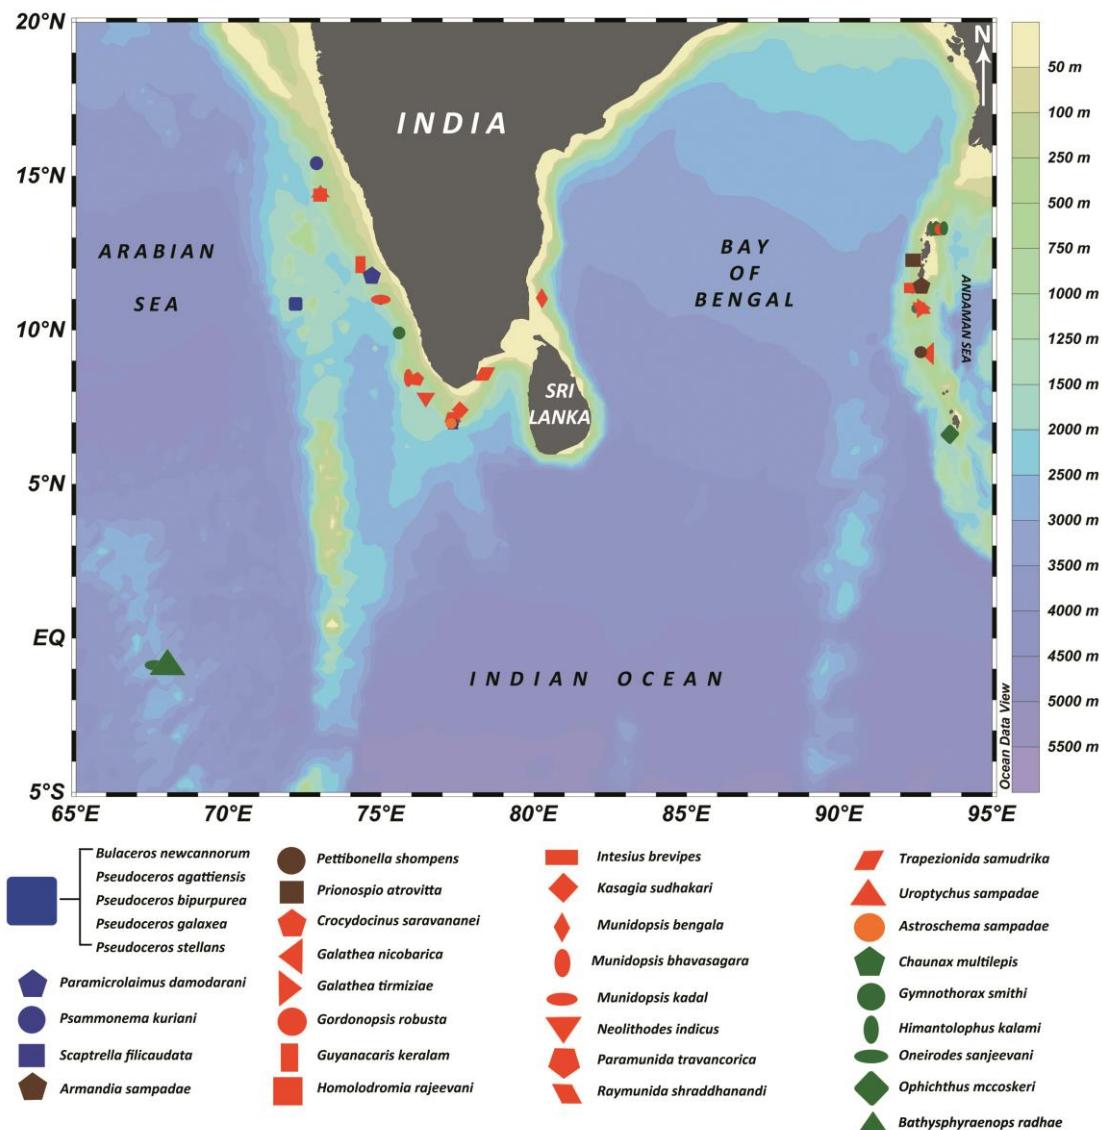

Figure 3: Type localities of 34 new species described by CMLRE

Substantial research effort of the REIS scientific team yielded a significantly high number of new faunal discoveries, particularly from the deep-waters, which has enabled the CMLRE to emerge as the foremost contributor of information on the deep-water biodiversity of the Indian EEZ. These discoveries have created a greater potential for envisaging further biodiversity surveys in the deep-waters of the Indian EEZ, and also highlighting the significance of the **Southeastern Arabian Sea** (14 new species, 18 new zoo-geographical records) and **Andaman Sea** (11 new species, 38 new zoo-geographical records) as potential “marine biodiversity hotspots” (Figures 3 and 4).

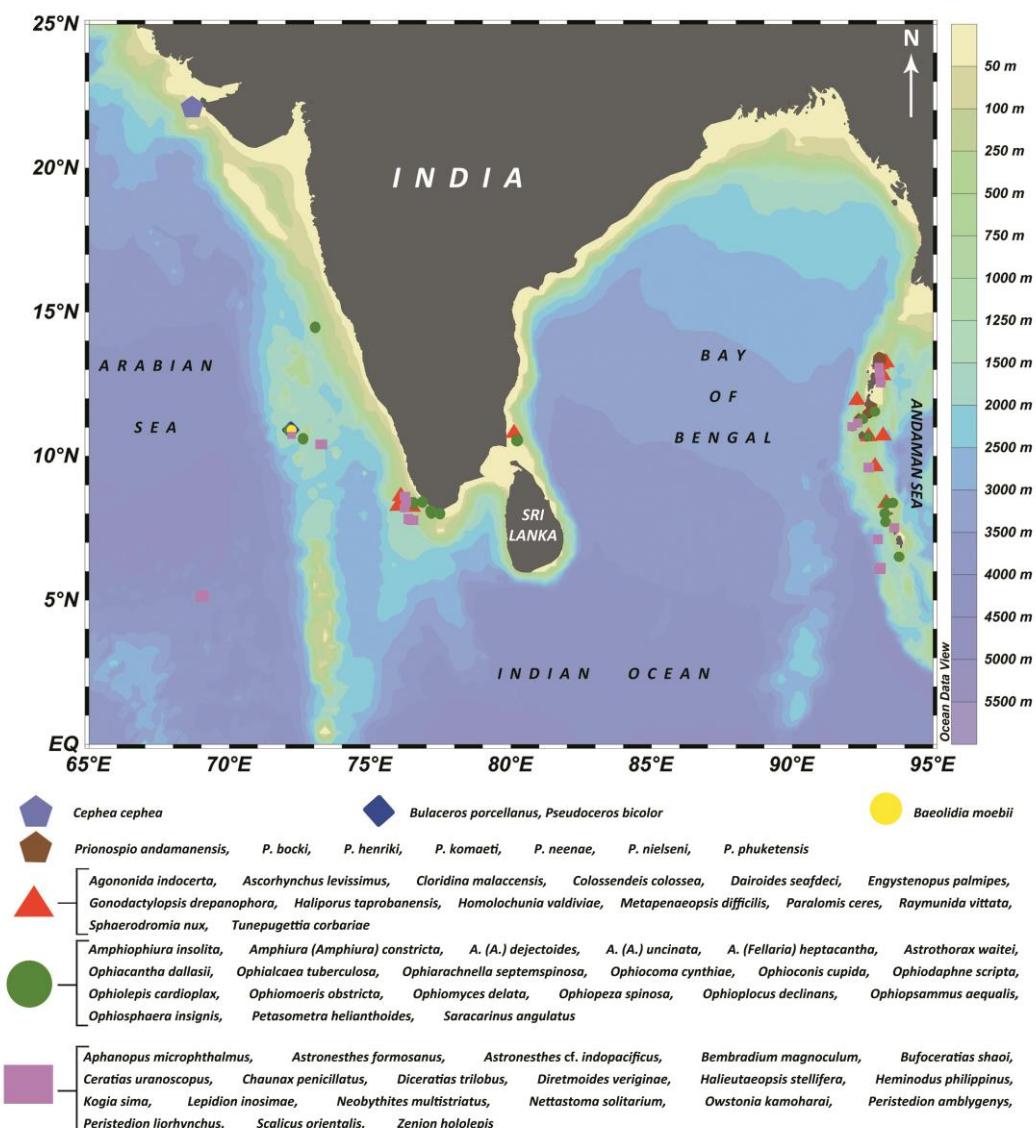

Figure 4: Distribution of 66 new zoo-geographical records published by CMLRE

The 100 new faunal discoveries (new species and new records) species could be categorized into 8 animal phyla, of which the Phylum Arthropoda accounted for a significant 30%, followed by Chordata (26%) and Echinodermata (22%). The remaining 22% species belonged to Annelida, Platyhelminthes, Cnidaria, Mollusca and Nematoda (Figure 5).

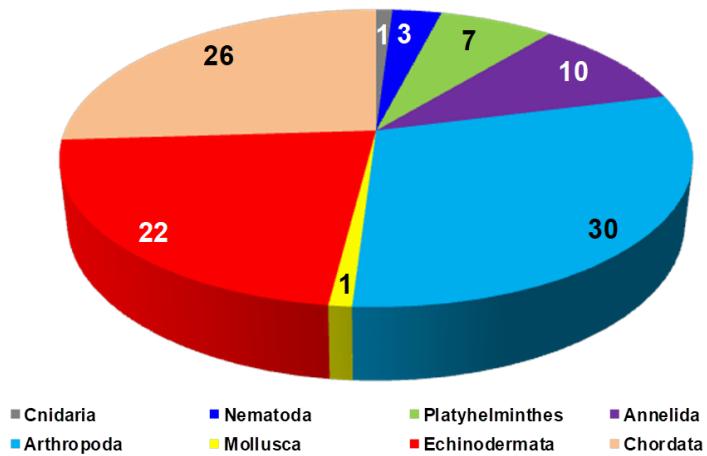

Figure 5: Phylum-wise contribution to the new marine faunal discoveries (new species and zoogeographical records)

Phylum Arthropoda accounted for the highest number of new species (16) followed by Chordata (6) and Platyhelminthes (5) (Figure 6); whereas Phylum Echinodermata contributed for the highest number of new zoogeographical records (21), followed by Chordata (20) and Arthropoda (14) (Figure 6).

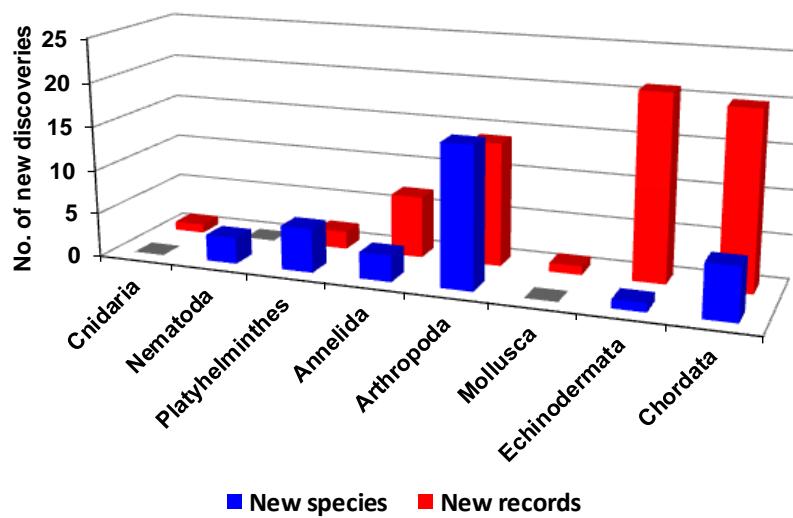

Figure 6: Phylum-wise numbers of new species and new records

Table 1: List of new marine animal species discovered by CMLRE

S. No.	Year of publication	Phylum	Name of new species with Authority	Depth (m)	Region
1	2012	Echinodermata	<i>Asteroschema sampadae</i> Parameswaran & Abdul Jaleel, 2012	454	SEAS
2	2014	Annelida	<i>Pettibonella shompens</i> Gopal, Useph, Varghese & Narayana, 2014	50	ANI
3	2015	Nematoda	<i>Paramicrolaimus damodarani</i> Jacob, Jaleel & Vijayan, 2015	95	SEAS
4	2015	Nematoda	<i>Scaptrella filicaudata</i> Jacob, Abdul-Jaleel, Philip & Damodaran, 2015	1100	SEAS
5	2016	Nematoda	<i>Psammonema kuriani</i> Jacob, Anilkumar, Philip & Rayaroth, 2016	214	EAS
6	2016	Annelida	<i>Armandia sampadae</i> Gopal, Jaleel, Parameswaran & Vijayan, 2016	57	ANI
7	2016	Chordata	<i>Chaunax multilepis</i> Ho, Meleppura & Bineesh, 2016	323	ANI
8	2017	Chordata	<i>Oneirodes sanjeevani</i> Rajeshkumar, Meera & Hashim, 2017	600	CIO
9	2019	Platyhelminthes	<i>Pseudoceros agattiensis</i> Dixit, 2019	0	LKD
10	2019	Platyhelminthes	<i>Pseudoceros stellans</i> Dixit, 2019	15	LKD
11	2019	Arthropoda	<i>Kasagia sudhakari</i> Padate, Manjebreyakath & Ng, 2019	109	SEAS
12	2019	Arthropoda	<i>Gordonopsis robusta</i> Ng, Padate & Saravanane, 2019	635	ANI
13	2019	Chordata	<i>Ophichthus mccoskeri</i> Sumod, Hibino, Manjabrayakath & Sanjeevan, 2019	321	ANI
