2017 will go slow

“The appreciation of Slow Coffee has never been greater than it is today. In fact, it is the heart and soul of everything we’ve been doing since the 1950s, where my father – Peter Bodum – introduced our first vacuum coffee maker. And here on the brink of 2017, we’re excited to introduce e-PEBO: a fully automatic vacuum/siphon coffee maker that brings out the best in your preferred coffee beans.

Brewing coffee with an e-PEBO:

1. Use cold water fresh from the tap.
2. Grind those flavorsome coffee beans right before brewing.
3. Turn on your e-PEBO and watch the miracle unfold. It looks like a science experiment, and that is no coincidence. Because this brewing method was invented in 1756 by a French chemist who needed a strong cup of steaming hot coffee while he was working.

BODUM’s passion for good coffee is shared by coffee lovers across the world under the slogan: *Make Taste, Not Waste*. No paper filters. No capsules. Nothing disposable.

In 2017 we will also launch a wide range of other new products, such as our new bar-line, mugs and electrical kitchen tools. Take your time and relax with a nice cup of coffee while you browse through this catalog.”

BODUM® Portuguesa

BODUM AG is responsible for the manufacturing and distribution of BODUM products worldwide. BODUM AG ensures that all BODUM products meet the highest standards and that only state-of-the-art products find its way into the market. More and more BODUM products are produced for and on behalf of BODUM AG by BODUM Portuguesa.

Since the beginning of BODUM® Portuguesa, environment has been a driving force and a major concern in our activity. During almost 30 years of production, BODUM® Portuguesa assumed a responsible position towards the surrounding environment but also to the internal working conditions and safety and well-being of the workers.

By having production processes that are majorly focused in transforming metal and applying surface treatments to metals, a lot of “environment unfriendly” unitary processes are used and required such as stamping or welding, but the most concerning are those connected to the plating line and degreasing processes.

These production processes consume natural resources, BODUM® works to minimize the impacts in:

- Emission of greenhouse gases
- Emission of other pollutant air streams
- Emission of pollutants in water
- Emission of pollutants in soils
- Risk of industrial accidents
- Workers safety, health and well-being

This was done by adopting the best available techniques (BAT) as preventive at the source of the pollution emission:

- Training to workers in operating, control and contain processes.
- Reducing the number or quantity of hazardous and dangerous materials.
- Equipment and process good-keeping by internal maintenance procedures.
- Optimization of operational conditions and control of processes.
- Reduction of re-processing needs.
- Project and built processes and facilities prevent and contain pollution in its source.
- Good storage of materials to prevent accidents with environmental impact.
- Good storage of materials and production parts to prevent its deterioration.
- Installing containment tanks and isolated floors in risk areas.
- Saving energy in power sources and make the processes energy efficient.
- Introduction of thermal isolation in the whole building and process tank walls to avoid heat loss.
- Isolation of equipments to avoid the noise propagation.

Saving water

- Recycling water – only 20% of the total consume is fresh water.
- Consume control by introducing automatic valves and volume controllers.
- Reducing drag-outs and introduce cascade rinsing between processes.
- Extend the liquid baths life and processes to prevent the treatment need by using filtration, evaporation, ionic exchange techniques.

In 2008, BODUM® Portuguesa had its recognition for all the efforts made and processes developed and implemented along the last decades, by having the Environmental Permit¹ issued by the Portuguese Environment Ministry.

Because it is impossible to contain all pollutant in its sources, BODUM® Portuguesa has installed end processes to treat, reduce or eliminate the pollution charge in its effluents and wastes. On these, we can highlight:

Waste Water Treatment Plant

- All liquid effluents are separated according to their characteristics and treated as in batches
- All pre-treatments and final treatments are permanently monitored until the admissible values of discharge are achieved.
- The discharge of BODUM® lines are connected to a municipal waste water treatment plant that complements the final treatment.
- The sludge generated in the water treatment are de-watered by using recycled air of the pressed air equipments.

Waste Classification and Separation

- All wastes generated in the plant are submitted to a proper separation, classification, handling and storage until there are sent to the destination.
- All waste management is outsourced to licensed entities, meaning the proper destination has as priority the recyclability of the wastes. Only two of the wastes generated at BODUM® must be eliminated because the recycling limitations in the market.

Air Aspiration System

- The air aspiration system is connected to all the pollution sources avoiding the pollutants spread inside the plant.
- These systems filter the air before its release to the atmosphere.
- In the plating line, besides the filtration, all the air is washed with water in scrubbers.

1. The permit is mandatory and directly comes from the EC Directive 2008/1/EC of January 15 (IPPC). According to this permit, BODUM® must have a permanent monitoring of the environmental indicators and values so; it is the guarantee of the legislation fulfilling, good practices and procedures.

Coffee

BODUM® was founded in 1944 by Peter Bodum. Launching a new business during the war wasn't easy, and jobs were scarce, but my father sensed it was time to venture out on his own. He was incredibly fortunate to be granted an import license, and by the late 1940s he had achieved great success. As he looked to grow the business, he found new interest in coffee makers. The company's first vacuum coffee maker, MOCCA, was introduced in the early fifties, but it wasn't until 1958 with the production of the SANTOS Vacuum Coffee maker that BODUM® became a household name for quality coffee products, and coffee has been the major product group for BODUM® ever since.

In the 1970s we introduced the now iconic French press, which continues to be BODUM®'s most popular item. Today, the majority of BODUM® coffee makers are produced at our factory in Portugal, where producing the highest quality products as well as environmental responsibility and safe working conditions are of the utmost importance.

In the years to come we are focused on expanding BODUM®'s factory in Portugal and moving more and more BODUM® products there, this move will make the entire process from design to manufacturing a family operation. Another important part of the BODUM® line is our collection of electric products that have been introduced over the past few years. Centered around coffee, from boiling water to grinding beans to the perfect automatic brew produced by our BISTRO Automatic Pour Over Coffee Machine, the collection encompasses everything the modern kitchen might need.

But no matter how much we grow, we will always reflect on our core value that form should follow function.

Coffee Brewing Methods

French Press

The French press coffee maker is the simplest of all brewing systems, where coarsely ground beans meet hot water right off the boil. The right temperature (92–96 °C, 195–205 °F) brings the optimal extraction power for the essential oils in the beans to develop their full flavor profile in just four minutes. An easy press on the plunger locks the grinds at the bottom of the glass carafe and stops the brewing process.

Note: For the French press brewing method, BODUM® recommends a coarse grind.

CHAMBORD®, p. 29

Vacuum

The vacuum brew method has fascinated generations of coffee drinkers with its theatrical technique. Water heats in the lower chamber, creating water vapor pressure that forces the boiling water up to mix with coffee grounds. The coffee maker is then removed from the heat and vacuum pressure draws the brewed coffee downward through a strainer, and into the bottom chamber for serving.

Note: For the PEBO® vacuum brewing method, BODUM® recommends a grind between coarse and medium.

PEBO®, p. 38

Pour Over

The pour over brew method features a fine mesh stainless steel filter that eliminates need for paper filters. Paper filters actually absorb the coffee's essential oils hence robbing coffee of true flavor, plus no paper filter means no waste!

Note: For the pour over brewing method, BODUM® recommends a medium grind.

[POUR OVER, p. 41](#)

**How to prepare cold brew coffee!
Brewing with cold water will give
70% less bitter taste.**

Cold Brew

Quality cold brewed coffee can be made using essentially the same steps. Instead of hot water, add filtered water at room temperature and stir. Place the lid on the carafe and let brew for 12 – 24 hours at room temperature or in your refrigerator. Press and enjoy!

Note: For the French press brewing method, BODUM® recommends a coarse grind.

Coffee-House Style Drinks

Double wall glasses are the perfect vessel for showcasing the beauty of your coffeehouse style drinks at home. Plus the double wall glass construction will keep your drinks hot longer!

Espresso

An espresso is about 1 to 1.5 oz of espresso coffee. It fills about $\frac{1}{4}$ to $\frac{3}{8}$ of a demitasse. Espresso is made in an espresso machine by quickly forcing steam and boiling water through finely ground coffee.

PAVINA, p. 90

Americano

Americano is a style of coffee that is prepared by adding hot water to black coffee which result in a similar strength to traditional drip.

ASSAM, p. 91

Cappuccino

In Italy cappuccino is served in a 6 oz cup. The coffee is topped by a dense froth (half foam, half steamed milk) in a ratio of 3:1. Usually the drink is dusted with unsweetened cocoa.

PILATUS, p. 93

Latte Macchiato

The coffee is slowly poured into an 8 oz glass filled with hot, frothed milk. The coffee “stains” the milk and creates a darker layer over the milk. Then it all gets topped off with pure white foam – making a perfect latte macchiato, a three-layer drink.

PAVINA, p. 90

Caffe Mocha

Caffe mocha has been served in Italian-American cafes since the 1950s. It's a combination of equal amounts of coffee, hot chocolate and hot frothed milk. Today the hot chocolate is often-times substituted with chocolate syrup. For the ultimate sinners it is topped off with whipped cream.

PAVINA, P.90

Caffe Latte

Latte is made with coffee and steamed milk in a ratio of 5:1. The coffee is topped with steamed milk then finished with steamed milk foam.

Coffee Makers

The **BODUM® COLUMBIA** Coffee Makers are made of double wall stainless steel which means that your coffee stays hot much longer. The air in between the two walls provides a highly effective layer of insulation. The **COLUMBIA** is not just any nice looking coffee pot: It is a coffee press. After all, you would not want to compromise taste for beauty. And it works just like any of our coffee presses.

Coffee Makers

CHAMBORD® is a true original. The iconic design, now synonymous with the **BODUM®** name, dates back to the 1950s. To this day we continue to produce the **CHAMBORD®** with the same artisan craftsmanship of yesteryear, but with a focus on environmentally responsible manufacturing in our **BODUM®** owned factory in Portugal. The French press system continues to be a greener way to brew coffee with the truest flavor possible.

Parts of The French Press Coffee Maker

Plunger - The bar of the plunger is made of stainless steel. After the 4 minutes recommended brewing time, you simply depress the plunger with the tip of your finger. The knob is made of heat-resistant plastic.

Safety Lid - BODUM®'s safety lid prevents the splashing of liquids. Line the safety lid so that it is in the closed position in line with the pour spout. After the brewing has stopped, turn the safety lid back and enjoy your coffee!

Spiral plate - The spiral plate keeps the filter mesh in place and makes sure that water goes through but no ground coffee. The flexible spiral provides a universal fit taking into account the manufacturing tolerances of glass jugs.

Mesh - The filter mesh is a key component to the BODUM® Coffee Makers. It separates the ground coffee beans from the water after the brewing has stopped.

Cross plate - The cross plate holds the mesh in place together with the spiral plate.

Glass beaker - French press coffee makers feature a durable borosilicate beaker. Borosilicate glass is an outstanding material: It is ultra-light and strong, has great heat resistant properties, and will not get cloudy in the dishwasher.

Metal frame - The original CHAMBORD® Coffee Maker features a frame made of chrome-plated, durable stainless steel that protects the glass beaker from cracks and scratches, as well as protecting surfaces from heat damage.

Handle - The plastic handle provides heat-resistance and durability. In other words, it keeps your fingers from getting burnt.

The vacuum brewing system extracts all of the flavorful oils and aromas from your coffee without using paper filters. Made of borosilicate glass, users can view the theatrical brewing process from start to finish. Its exceptionally effective vacuum brewing method extracts all precious oils of your favorite coffee. The vacuum brewing process is entirely sealed off so no aroma can escape. In addition, the brewing time and temperature are perfectly calibrated, ensuring a perfect cup of coffee with each brew.

Pour Over Coffee Makers

The POUR OVER promises excellent, rich taste and robust aroma while maintaining the natural oils of the ground coffee. For the perfect cup of coffee, simply fill the cone-shaped filter with freshly ground coffee and pour a small amount of heated water over them until soaked. Slowly pour the remaining hot water into the filter. Coffee will drip into the mouth-blown, borosilicate glass carafe and, in 3–4 minutes, will be ready to serve. Remove the filter from the carafe before serving and enjoy!

Travel Presses

Enjoy a single-serving of French press coffee or loose leaf tea on the go with the TRAVEL PRESS Coffee Maker. Brew and drink or use in the place of a traditional 3 cup French Press. Add 3–4 tablespoons coarse ground coffee, preferred milk and sweetener, and hot water to the mug. Stir contents, replace lid with plunger up, and go. After 4 minutes press down the plunger and enjoy! The stainless steel double wall design with a vacuum seal maintains heat for hours while remaining cool to the touch.

Tea

No wonder tea has been the most popular drink after water for centuries. Black teas, white teas, green teas, herbal teas, fruit teas, rooibos teas – the options for pleasure and delight are simply limitless. We have the right tea maker for all of your tea preferences, including iced tea.

Tea brewing doesn't get any purer than with the BODUM® tea presses. With this unique system your tea is brewed precisely to your desired strength and aroma. We developed the tea press in collaboration with the English Tea Council over 30 years ago and we've been perfecting it ever since.

BODUM® tea presses are made of the highest quality borosilicate glass – a material that doesn't stain and is absolutely neutral in taste. The glass allows you to observe the brewing process and stop it when it's exactly right. It's just fascinating to see all the beautiful tea colors come to life. The BODUM® tea presses are as much a pleasure for your eyes as they are for your taste buds.

Our collection of various infusers are the perfect match when brewing green teas, rooibos teas and herbal teas which have become more and more popular. Here, the brewing process does not necessarily need interruption and the leaves can be left to swirl freely in the infuser to develop their full flavor. The filter with the tea leaves inside can be removed to stop the brewing process and used again to re-infuse quality loose leaf tea a second time. Green tea for example can be reused for up to four times, taken that it is a high quality loose leaf tea.

Tea Brewing Methods

Tea Press

The tea press utilizes the same brewing system as the French press to allow for full control of the tea steeping process. Once your preferred coloring and strength is reached, you simply press down the plunger and seal the tea leaves into the bottom part of the filter that has no holes. This makes the brewing process stop with one easy push and you can discard or re-use the tea leaves after you have enjoyed your beverage. Silicone rim secures filter firmly into the teapot and stays cool to the touch for safe removal.

Note: All loose leaf teas are suitable for the BODUM® tea press. The tea press works best with fruit teas and black tea because it interrupts the brewing process – avoiding bitterness.

[Tea Press, p. 65](#)

Teapot And Tea Infuser

Tea leaves can be left to swirl freely in the infuser to develop their full flavor, and can be left to brew without interruption. The filter, along with the tea leaves, can be removed at any time to stop the brewing process and can even be used a second time to re-infuse quality loose leaf tea. The highest quality green tea, for example, can be reused up to four times.

Teapot, p. 67

Parts of The Tea Press

Lid – During the brewing process, place the lid with the plunger on top of the tea filter to retain heat during and after the tea brewing process. The lid is attached to the plunger and made of high-polished stainless steel.

Plunger – To stop the brewing process, simply press down the plunger made of stainless steel with the tip of your finger. The knob is made of a heat-resistant plastic and will keep your fingers from getting burnt.

Silicone rim – The coronated, elastic silicone rim improves the combined benefits of a glass pot with a stainless steel filter. It provides a universal fit between teapot and tea filter and it keeps your fingers from getting burnt and the tea filter from falling out when pouring hot beverages.

Plunger – Depressing the plunger keeps the hot water away from the tea in order to stop the brewing process entirely. It is made of heat-resistant plastic and silicone. The silicone gasket ensures a clean performance.

Perforated strainer – The perforated strainer ensures that leaves and kernels remain within the strainer while brewing. The filter basket is made of stainless steel.

Glass Pot – Most of BODUM® tea presses feature a durable borosilicate pot. Borosilicate glass is an outstanding material: It is ultra-light and strong, has great heat resistant properties, and will not get cloudy in the dishwasher.

Varieties of Tea

Black Tea

90–96°C
195–205°F

2–3 min

One of the most known varieties of tea is black tea. It is made from the tea-plant *Camellia sinensis/assamica* and amongst the most popular in Europe and North America. After harvest, the tea leaves are allowed to oxidize to the fullest, so that the freshly plucked leaves slowly turn brownish and darker. The flavour is usually stronger, than other types of tea, but can also vary from light and floral Himalayan first flush to strong and malty Assam teas.

[PAVINA, p. 90](#)

Rooibos Tea

90–96°C
195–205°F

5–6 min

Only a very limited area in the Cedar mountains, in the heart of South Africa is capable of providing the right soil and climate to grow rooibos. Being used for centuries by the local people, the rooibos cultivation and processing started only a few hundred years ago. Now the bush is treated nearly the same way, as it has been for decades. The bush is allowed to ferment after harvest, giving the tea its distinctive sweet and red cup.

[PAVINA, p. 90](#)

Green Tea

70–80 °C
158–175 °F

1–2 min

The freshly plucked leaves of the tea plant *camellia sinensis* must be heated directly after harvest, to prevent the leaves from oxidization and becoming black tea. Traditionally heating in iron pans in China, the Japanese have developed a hot water steam heating to prevent the tea from burning. Both methods create a distinct flavour for each region, that can vary from light, floral, sweet to full bodied and slightly toasted.

BISTRO, p. 94

White Tea

70–80 °C
158–175 °F

4–6 min

Coming from the same plant as green or black tea, white tea is the one with the least human effect during production. Only the youngest and most fragile buds are harvested by hand and left to dry under the sun. No oxidization or heating is done to preserve the full natural character of the white tea. The name derives from the fuzzy white appearance of the young tea leaves.

BODUM® CANTEEN, p. 92

Fruit Tea

90–96 °C
195–205 °F

5–6 min

Commonly used in Europe, dried fruit pieces and other parts of suitable plants have been brewed with hot water into fruit tea – or tisane – for thousands of years. The basic fruit tea consists of apple, orange, hibiscus and rosehip and is given a special twist with whatever exotic fruits and ingredients is added to it. Fruit teas are naturally caffeine free and make the perfect iced teas for children!

BODUM® COLUMBIA

Tea Press

Stainless steel

11496-16

1.5l, 51oz

BODUM® COLUMBIA pairs utility with timeless elegance. Highly polished stainless steel and classic design make this the perfect choice for entertaining and gifting. The French press brewing system allows for full control over the tea steeping process. The silicone plunger locks the tea leaves into bottom of the filter once brewing is complete, cutting off access of water to the tea leaves. This allows tea to be used multiple times.

Tea Presses

The ASSAM Tea Press is the icon among the wide variety of BODUM® Tea Presses. Its classic round shape and borosilicate glass let all teas shine in their best light. Contrary to non-transparent pots, the glass pot allows the distinct color palates to be viewed as they are a big part of any tea lover's delight. There is also a very practical reason for making glass the preferred staging ground for your teas: You have precise control over the extraction and strength of the tea as the color's intensity indicates how far along in the brewing process.

Drinkware

BODUM® premiered its line of double wall glasses in 2002. The inventive design coupled with timeliness style made these glasses an instant classic. Over the past ten years, the collection has earned numerous awards and expanded to include a variety of styles and sizes. Made of heat-resistant borosilicate glass, and individually mouth-blown by expert artisans, the double wall construction creates a highly effective layer of insulation. Hot drinks stay hot longer, while the glass remains cool to the touch, and cold drinks stay cold without producing messy condensation. The result is endless serving possibilities.

The patent pending hydrophobic silicone vent at the bottom of each glass equalizes pressure within the walls of the glass with the outside air pressure. The glass will self-adjust to any temperature liquid, and the vent is only permeable to air, not water, so whether your beverage is hot or cold it will never allow fluids into the interior of the glass layers.

Our new collection of unbreakable Outdoor Tumblers, allows you to entertain with BODUM® classic design silhouettes at your next BBQ or poolside gathering!

These Outdoor Tumblers have the same thermal properties as our glass versions, so your hot drinks will stay hot and cold drinks will stay cold for a longer period of time and with no messy condensation rings to worry about! Crystal clear design for the outdoors. We'll toast to that.

The BODUM® Double Wall Glasses have won the following awards:

reddot design award

Double Wall Glasses that Breathe!

A silicone vent at the base of each of BODUM®'s Double Wall Glasses equalizes the air pressure between the two layers of glass when either hot or cold liquids are added. Permeable only to air, never water, the vent enhances durability and will never allow liquids to enter between the two layers.

Drinkware

USE & CARE

Every double wall glass is mouth-blown by expert artisans, and therefore each may have slight differences in height, thickness, and weight. To preserve the longevity of the glass, please adhere to the following precautions:

Microwave Safe
Up to 350°F/180°C.

Oven Safe
Up to 350°F/180°C.

Dishwasher safe
Do not place glasses into a crowded dishwasher.

Grill

BODUM®'s first FYRKAT Grill was introduced in 1961 with the launch of the FYRKAT Cone Grill. Since then, we have refined our offering to focus on compact grilling. We saw a real need to bring good design to the aesthetics of BBQ and created our Charcoal Picnic Grill. The Picnic Grill is perfect for urban grilling and easily transportable for spontaneous beach parties.

Grill Tools

FYRKAT Grill Tools

The FYRKAT grill tools are made mainly from stainless steel and heat-resistant silicone so you stay safe while grilling.

- 1. 11487-01 **Nipper**
- 2. 11488-01 **Oil Brush**
- 3. 11489-01 **Tool Brush**
- 4. 11490-01 **Shovel**

- 6. 11492-01 **Tweezers**
- 7. K11487-01 **BBQ Tools set**, includes Nipper, Tool Brush and Shovel

FYRKAT Skewers

These skewers are made of 100% stainless steel. They come in a set of 5, each with their own letter to keep track of which is who's.

11351-16 5 pcs set

BISTRO Oil or Vinegar Dispenser

11190-143 **0.5l, 17oz**

BISTRO Sauce Pot

Make marinade directly in the pot, and the sealed lid allows you to store any leftover marinade in the fridge. The lid, with its long handle, doubles as a brush.

11203-01 **0.25l, 8oz**

Mini Picnic Charcoal Grill

FYRKAT

Picnic Charcoal Grill

Grill on the go with the sleek, portable FYRKAT Charcoal Grill. Ideal for picnics in the park or small space living but large enough to fit 4 burgers or small filets. The sleek chrome-plated finish adds strength and durability to the steel body and legs. The silicone handle stays cool to the touch and adjusts air flow into the grill while in use. The clips lock lid into place for easy and safe transport. Removable cooking rack easily transports to the sink or dishwasher for cleaning. Metal bowl captures grease while controlling heat for safe use on most outdoor surfaces.

Cork Line

BODUM has a new design line with cork. One of nature's most beautiful and functional materials. Cork comes from the bark of cork oak that is a bit of a miracle in itself. Each 9 years you can harvest all the tree's bark so that it is completely naked. Without damaged. The tree generates new bark and can grow up to 200-300 years old.

Kork-oak grows in the Mediterranean region, not least in Portugal, which supplies about half of all the cork that is used in the world. We know the cork from winebootles plugs, but because cork has so many good qualities, it also moved into the home. Cork is thermal insulation, water and air-tight, elastic, light and soundproofing. And it is beautiful to look at and smooth to touch.

Cork is a 100% natural materials and sustainable. And we have almost the cork-trees standing just outside the windows. All BODUM products are produced namely in our own factory in Portugal, where environmental responsibility already has the highest priority.

e-BODUM® inspires you to build a collection of power tools that reflect our core principle: Good design has to be functional and affordable. Once you see past the good looks of e-BODUM®, each product's attributes and performance will make you a loyal fan! Not only will you appreciate the award-winning design of these products, e-BODUM® will bring the power and innovation necessary to make kitchen duty a breeze!

Stand Mixer

The Stand Mixer effortlessly takes care of blending, mixing, and kneading your dough as well as whipping cream and beating egg whites.

Capacity 4.7l, 5Qt, 160oz

Measurements 234 × 397 × 343mm

Material Plastic, silicone, rubber, stainless steel, non-stick coated cast aluminum, chrome-plated steel

Rating Europe 700W, 220–240V, 50–60Hz

The Stand Mixer comes with the following attachments:

- 1 Stainless steel mixing bowl
- 1 Dough hook
- 1 Beater
- 1 Whisk

- Powerful 700W, 7 speed motor delivers up to twice the power of traditional stand mixers.
- Rotating attachment head provides orbital movement, maximizing capture surface for thorough mixing.
- Includes 3 attachments: Dough hook, ideal for bread and pizza doughs, rolls and sweet bread dough; Beater for cake batters; Stainless steel whisk for beating egg whites, cream and cocktail sauces. Attachments and mixing bowl are dishwasher safe.
- Lift-assist mixer head locks into place during use with lever for easy release.

Double Wall Water Kettle

This Water Kettle can be set and held at desired temperature for up to 30 min! Ideal for maintaining optimal brew temperatures for your teas!

Capacity 1.1l, 37 oz

Measurements 145 × 230 × 260 mm

Material Plastic, silicone, borosilicate glass, metal, stainless steel, rubber

Rating Europe 1500 W, 220–240 V, 50–60 Hz

- Five temperature settings perfect for different kinds of teas: 60°C/140°F, 70°C/158°F, 80°C/176°F, 90°C/194°F and boiling.
- The inner glass wall is made of borosilicate glass, the outer one of transparent plastic. It protects the glass, insulates, and keeps you from burning your fingers.
- The water only comes in contact with glass – the process is therefore BPA-free.
- Mesh-screened spout captures chalk while pouring.
- The transparent container makes it easier to control the water level. The scale line indicates liters, ounces and cups.
- Manual On/Off switch plus temperature sensor for automatic shut off and added safety.
- Keep warm for up to 30 min

Coffee

Step 3
Brew

Step 4
Enjoy !

Funnel Made of borosilicate glass, users can view the theatrical brewing process from start to finish.

Filter The coffee maker is removed from the heat and vacuum pressure draws the brewed coffee downward through a strainer, and into the bottom chamber for serving.

Jug Water heats in the lower chamber, creating vapor pressure that forces the boiling water up to mix with coffee grounds.

Base The brewing time and temperature are perfectly calibrated, ensuring a perfect cup of coffee with each brew.

Burr Coffee Grinder

The Burr coffee grinder uses conical burr grinders, the best you can get. The result is oily and flavoured coffees.

Measurements 170 × 163 × 296 mm

Material Ceramic, Plastic, Silicone

Rating Europe

160 W, 220–240 V, 50–60 Hz

Rating USA

160 W, 120 V, 60 Hz

Rounds per minute (r/min)

720 +/- 15%

- This space-saving grinder holds an amazing 220gr of coffee and therefore allows for larger quantities in one go.
- Settings allow you to grind from a coarse French press to a fine espresso with the ability to micro-adjust between settings.
- Programmable time function for even easier handling.
- You can use a conical burr grinder for oily or flavoured coffees and it is not likely to clog, like the other kinds of grinders.
- Tightly fitting plastic lid keeps the grounds from spilling.
- The burr spins slower than the wheel model, which makes them quieter and less messy

Burr Coffee Grinder

Grinder crushes beans between stainless steel conical burrs rather than slicing them which preserves bean's intrinsic flavor and aroma.

Measurements 120x156x275 mm

Material Plastic, rubber, silicone, borosilicate glass, stainless steel, die-cast aluminium (for 70/73 version)

Rating Europe

160 W, 220-240 V, 50-60Hz

Rounds per minute (r/min)

720+/-15%

- This space-saving grinder holds an amazing 220 gr of coffee and therefore allows for larger quantities in one go.
- 12 settings allow you to grind from a coarse French press to a fine espresso with the ability to micro-adjust between settings.
- Programmable time function for even easier handling.
- The wide open funnel prevents spilling of the beans.
- Tightly fitting plastic lid keeps the grounds from spilling.
- Equipped with a friction clutch, preventing damage to the grinding gear by the presence of small stones.

Blade Coffee Grinder

Grinds coffee beans from coarse to fine quickly and efficiently with its strong, durable, stainless steel cutting blade.

Measurements 90 × 95 × 166 mm

Material Plastic, stainless steel, rubber, die-cast aluminium (for 70/73 version)

Rating Europe 150 W, 220–240 V, 50–60 Hz

Rounds per minute (r/min)
26'000 +/- 20%

- Compact and small – this space efficient coffee grinder can easily be left on the kitchen counter.
- The transparent lid allows you to control the grinding progress – the longer the grind, the finer the grounds.
- The power cord can be tucked away within the grinder.
- Easy, push-button control allows for pulse action or continuous grind.
- Strong, durable stainless steel cutting blade that spins at a precise RPM.
- Convenient cord storage in base.
