## 1. Introduction

Chironomidae or non-biting midges are amongst the most diverse and abundant inhabitants of freshwater aquatic habitats, occurring in nearly all regions in the world. Their larvae are known as blood worms and are amongst the most numerous macrofauna species groups, both in number of individuals as well as number of species. The pupae are less known, lacking a vernacular name. After having shed their pupal skin or exuviae, the adult chironomid appears. These adults are known as non-biting midges.

Identification of the larvae of these midges may be important for a number of reasons including their use in ecological monitoring and ecological studies. The authors like to emphasize that identifying chironomid larvae to species level can provide valuable ecological information.

Recently a key was published on the identification of larvae of *Cricotopus* species occurring in north western Europe (Cuppen & Tempelman 2018). This current paper serves as an appendage to this publication. We provide pictures of the species studied, giving still more suggestions for correct identification of species. Also we would like to encourage fellow workers on Chironomidae to share their photos, observations and experiences through the modern portals<sup>1</sup> which have served so well in numerous species groups.

## 2. Morphology

The morphology of Chironomidae larvae is amazingly complicated, especially regarding structures of the head capsule. As for terminology we generally follow Sæther (1980) who produced a glossary of chironomid morphology.

*Cricotopus* larvae have a sclerotized, non-retractile head capsule and a segmented cylindrical body. They bear one pair of not jointed anterior parapods ("prolegs") on the first thoracic segment, one pair of not jointed posterior parapods on the last body segment, which also bears a pair of setae-bearing procerci, and one to two pairs of anal tubules. We introduce a new character for the anterior parapods: the claw index. **Claw index** = ratio distal tooth/subdistal tooth middle long claw of anterior parapod.

The majority of the characters used for larval identification is found in the head. The head capsule is entirely sclerotized in *Cricotopus*, as opposed to the rest of the body, which consists entirely of soft tissues. The best characters are located on the ventral side of the head. They include the spacing of setae submenti, the number of mandibular teeth and width of the central mental tooth. **MR = mentum ratio**: width central mental tooth /1<sup>st</sup> lateral tooth.

The mandible normally has three inner teeth and one apical tooth. Other structures on the ventral part of the head are the ventromental plate, mentum and labrum.

The labrum possesses several characters which can be important for determination. Particularly the pecten epipharyngis and premandibula are important. The premandibula has one or two distal teeth. Other characters such as labral lamella, chaetulae laterales and chaetulae labrales are of little use. More important is the **S1**. Number and size of hairs are used to separate species.

The dorsal part of the head is made up of several sclerites and bears the antennae.

The antennae of *Cricotopus* are placed in the anterior region of the head. There are no obvious pedestals. The antenna has five segments, all but the fifth one completely sclerotized. **AR = antennal ratio**: basal segment/other segments combined. On the distal end of antenna 2 Lauterborn organs are present in nearly all species.

In *Cricotopus* identification, abdominal hair bundles are very important. Size and number of hairs represent important characters. On segment 7, hairs are often shorter and number less than on segments 1-6.

---

<sup>1</sup> Such as Waarneming.nl, Waarnemingen.be and Observation.org.

Morphology of *Cricotopus* larvae: Ventral part of head

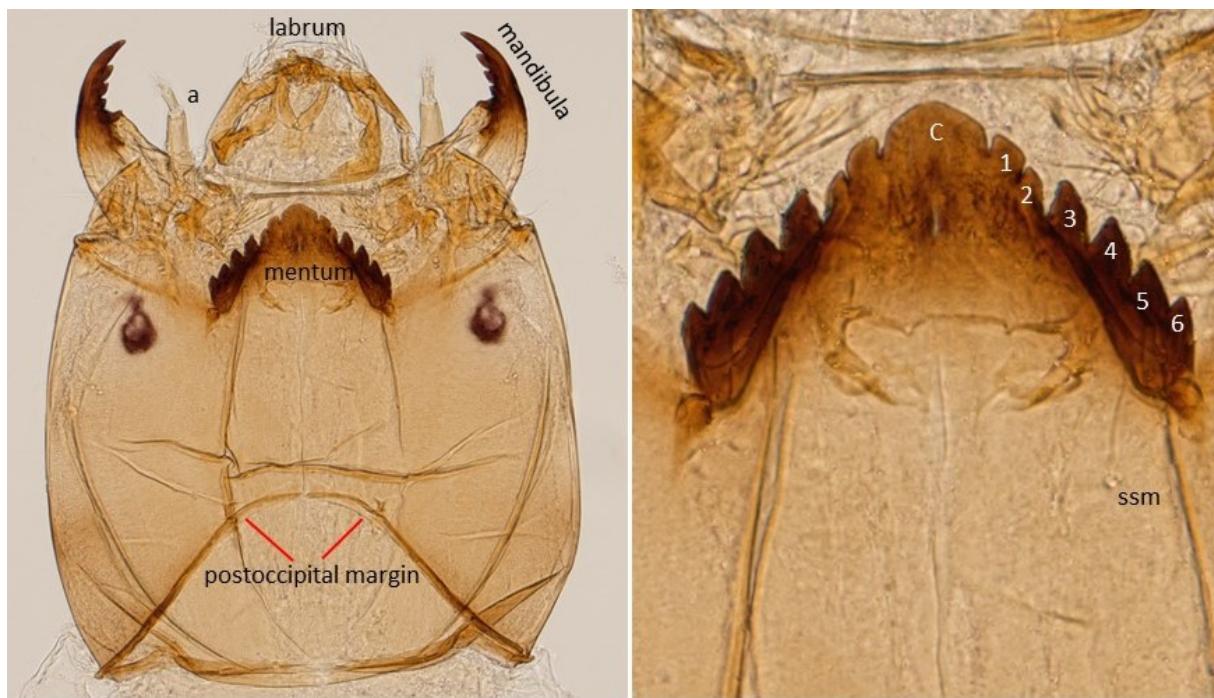

Figure 1. Head ventral of *Cricotopus bicinctus*. a = antenna; C = central mental tooth; 1-6 = lateral mental teeth.

Morphology of *Cricotopus* larvae: antenna and Lauterborn organs.

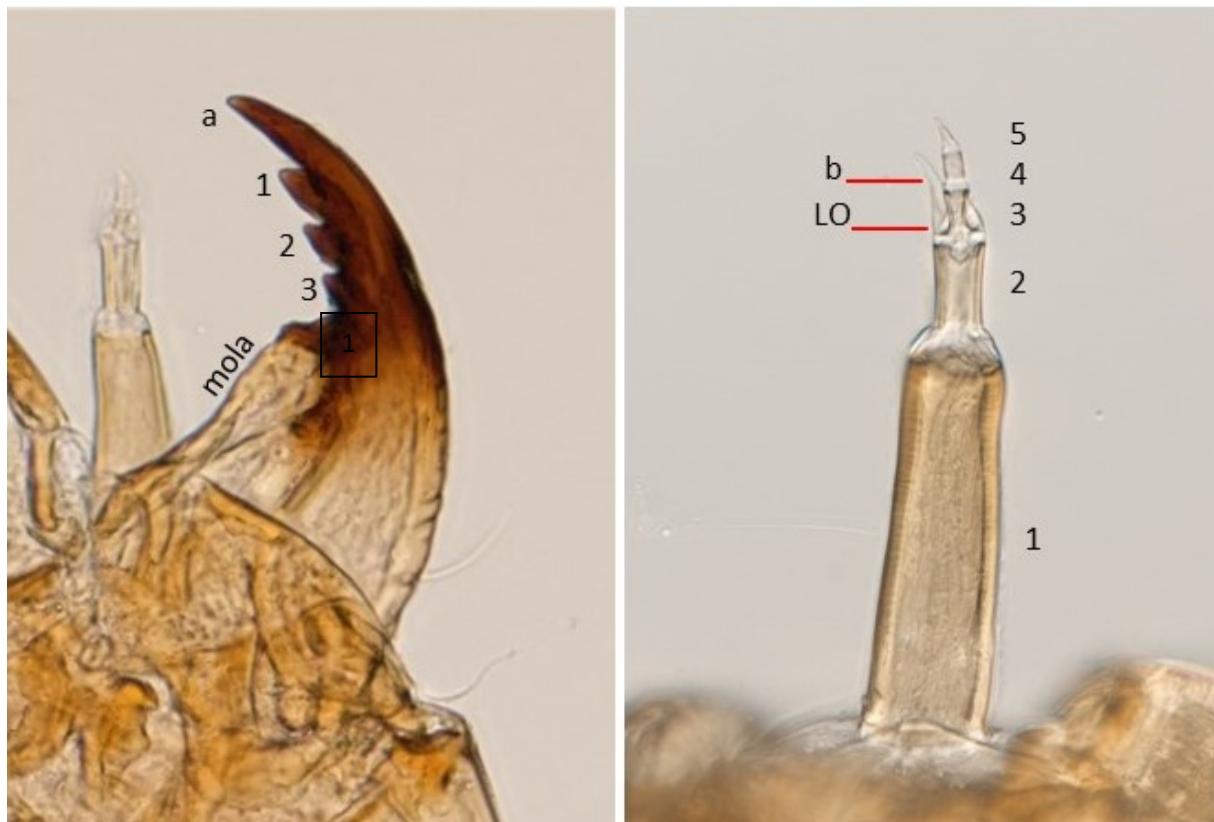

Figure 2. Mandibula of *Cricotopus bicinctus*. a = apical tooth; 1-3 = lateral teeth.

Figure 3. Antenna of *Cricotopus ornatus*. b = antennal blade, LO = Lauterborn organ, 1-5 = segment.

Morphology of *Cricotopus* larvae (continued): claws of the anterior pseudopods.

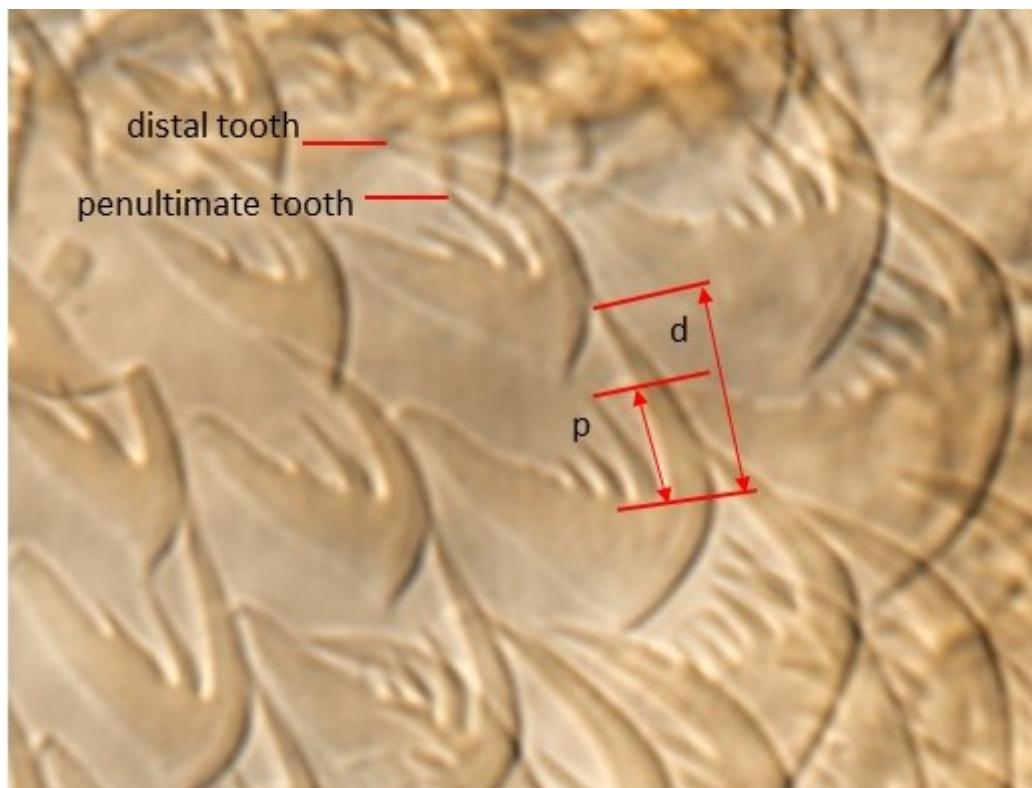

Figure 4. Claws of the anterior pseudopods. Claw index: ratio distal tooth: penultimate tooth, in this example the claw ratio is circa 1.4. (distal tooth is circa 1.4 times larger than penultimate tooth).

### 3. Photographic catalogue

#### *Cricotopus* subgenus *Cricotopus*

*Cricotopus albiforceps* (Kieffer in Thienemann & Kieffer, 1916)

**Body:** body length: 5 mm.

**Head capsule:** yellow; occipital margin yellow; head width: 305 µm.

**Antenna:** 5 segments; antennal blade extends to last segment; length antenna 1: 40 -50 µm; AR: 1.8.

**Mentum:** 6 lateral teeth and a broad median tooth; 2<sup>nd</sup> lateral tooth slightly reduced; MR: 2.5-3.

**Mandibula:** 3 inner teeth, color apically brown extending to molar area with wide pale base; dorsal margin nearly smooth.

**Premandibula:** simple.

**Labrum:** Bifid S1 with branches of similar size.

**Epipharynx:** pecten epipharyngis composed of 3 scales of equal length.

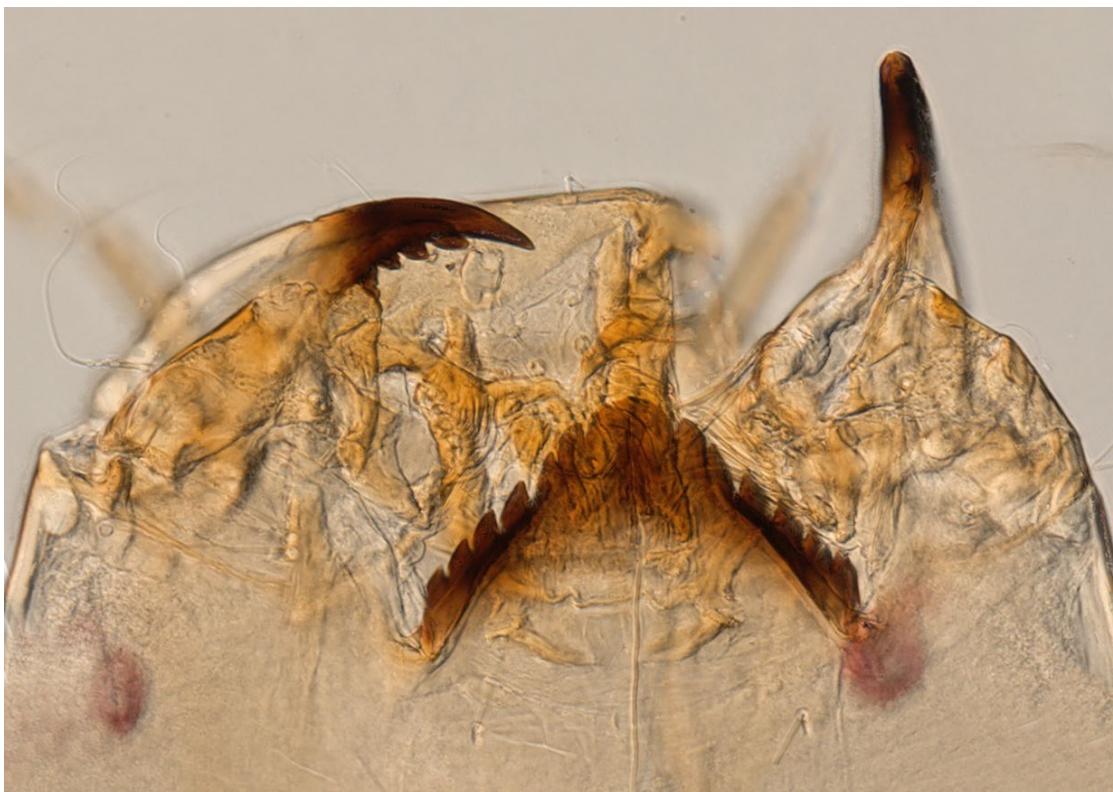

**Submental setae:** located at the transition of the 4<sup>th</sup> and 5<sup>th</sup> lateral tooth; distance between setae: 78 µm (n = 1).

**Anterior parapods:** mid long claws with fine inner teeth which are half as long as distal tooth; claw index: 1.9 – 2.0.

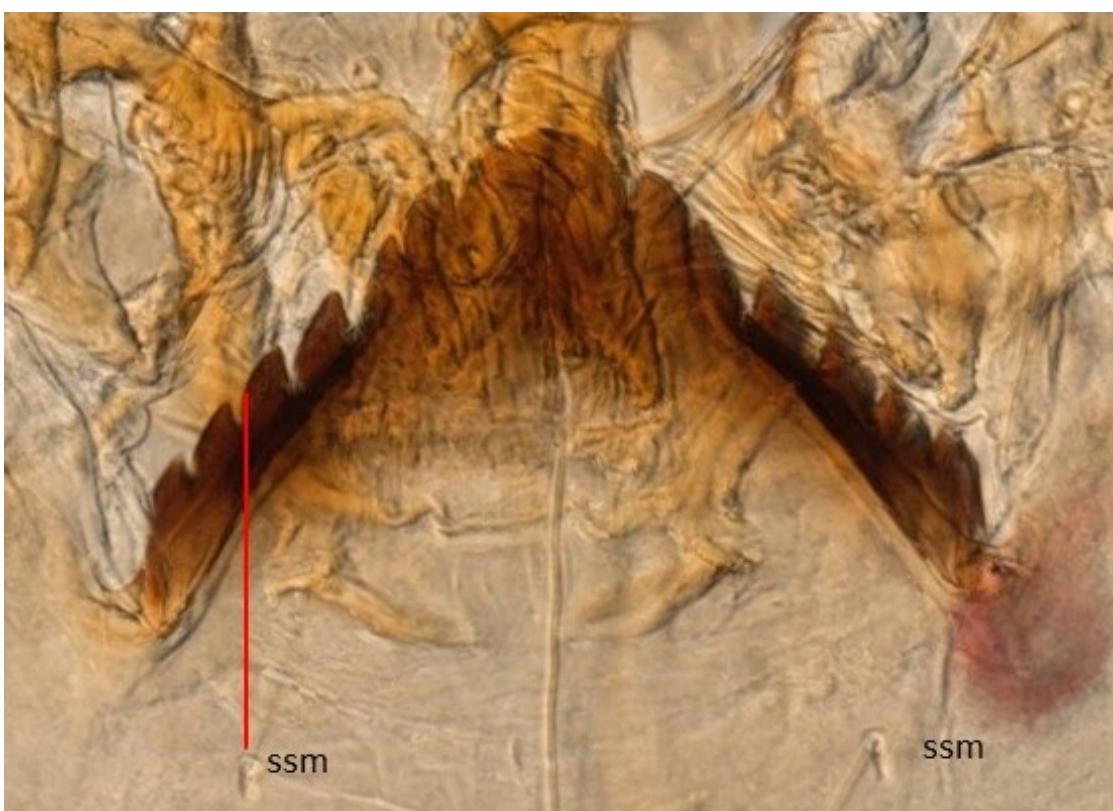

**Abdominal segments:** segments 1 - 6 bear posterolateral setal tufts of 10-20 filaments, which reach 1/4 - 1/3 of the segment length; segment 7 with 1 seta.

**Anal segments:** dorsolateral seta on segment 9 reaches 1/3 of segment length.

*Cricotopus albiforceps*

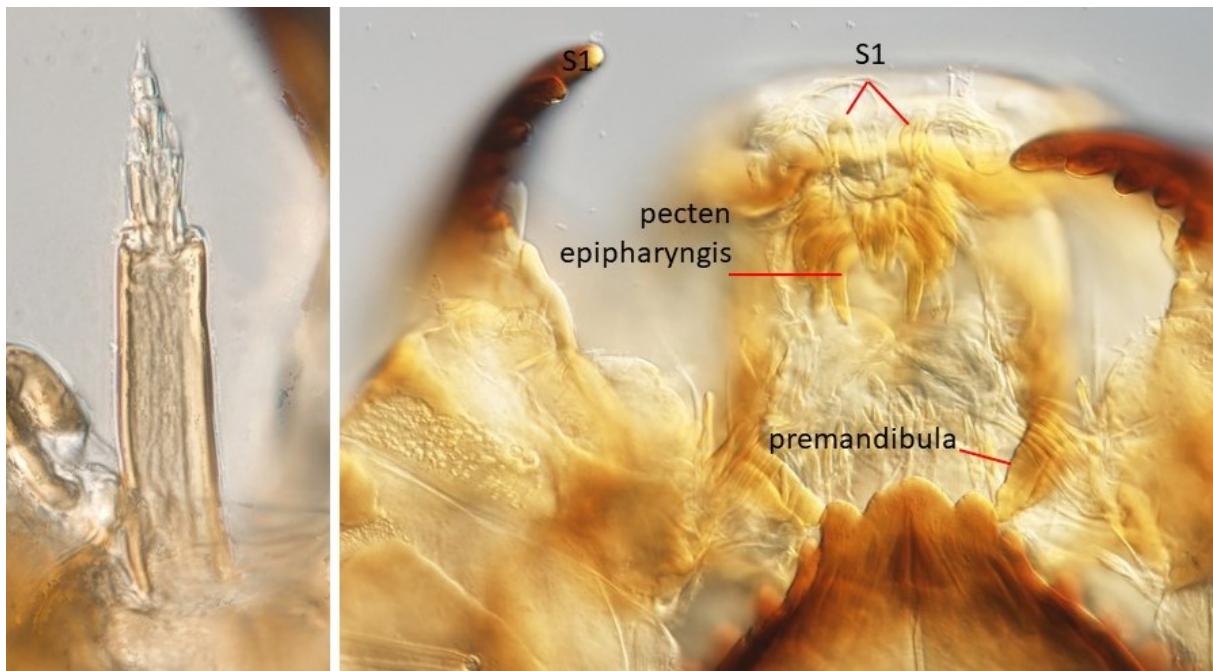

*Cricotopus albiforceps* head ventral Mariaparochie, 28 Apr. 2014 leg. H. Cuppen.

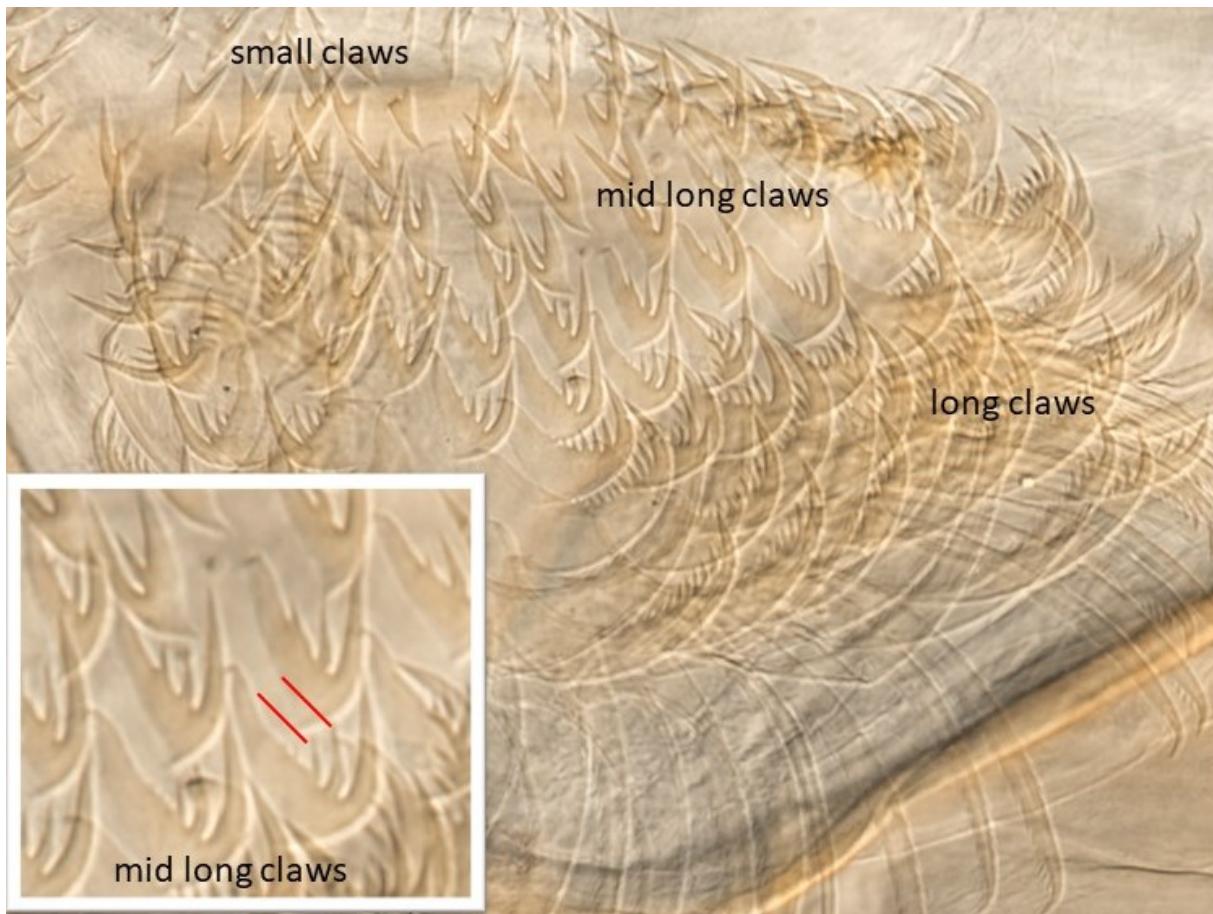

*Cricotopus albiforceps* mentum and submental setae Mariaparochie, 28 Apr. 2014, leg H. Cuppen.  
Arrow: ssm lateral reach.

*Cricotopus albiforceps* continued

*Cricotopus albiforceps* antenna. Mariaparochie, 28 Apr. 2014, leg. H. Cuppen.

*Cricotopus albiforceps* head ventral: S1 and premandibula. Hagmolenbeek, 10 Apr. 2012, leg. H. Cuppen.

*Cricotopus albiforceps* claws of the anterior prolegs. Mariaparochie, 28 Apr. 2014 leg. H. Cuppen.

*Cricotopus annulator* Goetghebuer, 1927

**Body:** body length: 6.5 – 7.5 mm.

**Head capsule:** yellow, lateral posterior region brown; occipital margin dark brown; head width: 370  $\mu\text{m}$ .

**Antenna:** 5 segments; antennal blade extends to tip of last segment; length antenna 1: 65  $\mu\text{m}$ ; AR: 1.75.

**Mentum:** 6 lateral teeth and a broad median tooth; 2<sup>nd</sup> lateral tooth little reduced; MR: 2.3- 2.6.

**Mandibula:** 3 inner teeth, color apically brown extending to molar area with wide pale base; dorsal margin smooth.

**Premandibula:** simple.

**Labrum:** bifid S1 with branches of similar size.

**Epipharynx:** pecten epipharyngis composed of 3 scales of equal length.

**Submental setae:** located at the level of the 6<sup>th</sup> lateral tooth; distance between setae: 102  $\mu\text{m}$  ( $n = 1$ ).

**Anterior parapods:** mid long claws with fine inner teeth which are two third as long as distal tooth; claw index: 1.4 – 1.6 ( $n = 2$ ).

**Abdominal segments:** segments 1 - 6 bear posterolateral setal tufts of 10-15 filaments, which reach 1/4 of the segment length; segment 7 with 1 seta.

**Anal segments:** dorsolateral seta on segment 9 reaches 1/2 of segment length.

*Cricotopus annulator* head ventral en mentum. Gasterensediep, 14 Apr. 2014, leg. H. Cuppen.

*Cricotopus annulator* continued

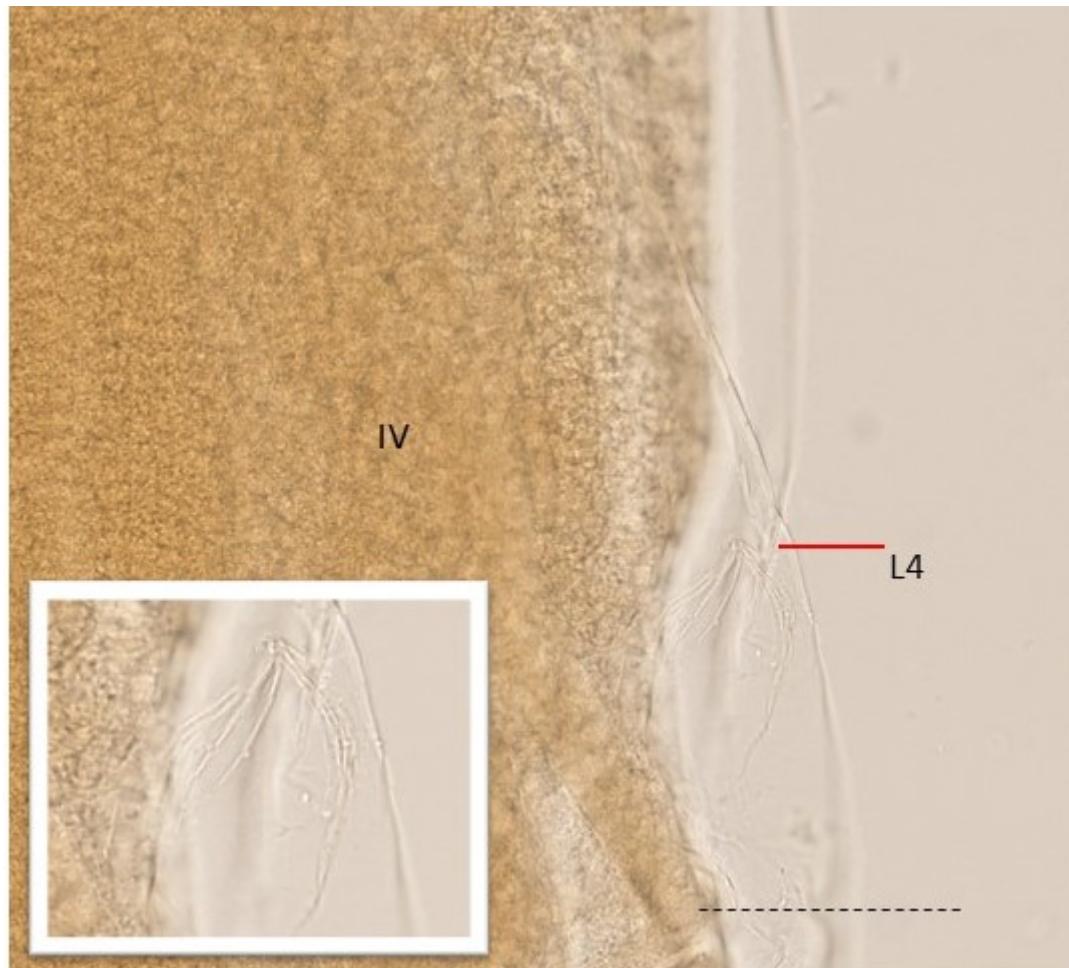

*Cricotopus annulator* antenna Gasterensediep, 14 Apr. 2014, leg. H. Cuppen.

*Cricotopus annulator*. Claws of anterior parapods. Gasterensediep, 14 Apr. 2014, leg. H. Cuppen.

*Cricotopus annulator* continued

*Cricotopus annulator*. L4 of segment 4. Gasterensediep, 14 Apr. 2014, leg. H. Cuppen.

*Cricotopus bicinctus* Meigen, 1818

**Body:** body length: 6-6,5 mm

**Head capsule:** yellow , backside yellow or brownish; occipital margin light to dark brown; head width:  $\pm 400 \mu\text{m}$ .

**Antenna:** 5 segments; antennal blade extends half way fourth segment; length antenna 1: 64  $\mu\text{m}$ ; AR: 1.8-1.9.

**Mentum:** 6 lateral teeth and a broad median tooth; second lateral tooth little reduced; MR: 2.5-4.

**Mandibula:** 3 inner teeth, color apically brown extending to molar area with wide pale base; dorsal margin slightly crenulated; mola terminating in a strong, acute, black hook-like process (Figure , arrow); inner margin of mola with two fine spines.

**Premandibula:** simple.

**Labrum:** bifid S1 with branches of similar size.

**Epipharynx:** pecten epipharyngis composed of 3 scales of equal length.

**Submental setae:** located at the level of the fourth lateral tooth; distance between setae: 95  $\mu\text{m}$  ( $n = 1$ ).

**Anterior parapods:** mid long claws with fine inner teeth which are two third as long as distal tooth; claw index: 1,54 ( $n = 1$ ).

**Abdominal segments:** segments 1 - 6 bear posterolateral setal tufts of 3 - 10 filaments, which reach  $1/5^{\text{th}}$  of the segment length; segment 7 with 1 seta.

**Anal segments:** dorsolateral seta on segment 9 reaches  $1/4$  of segment length.

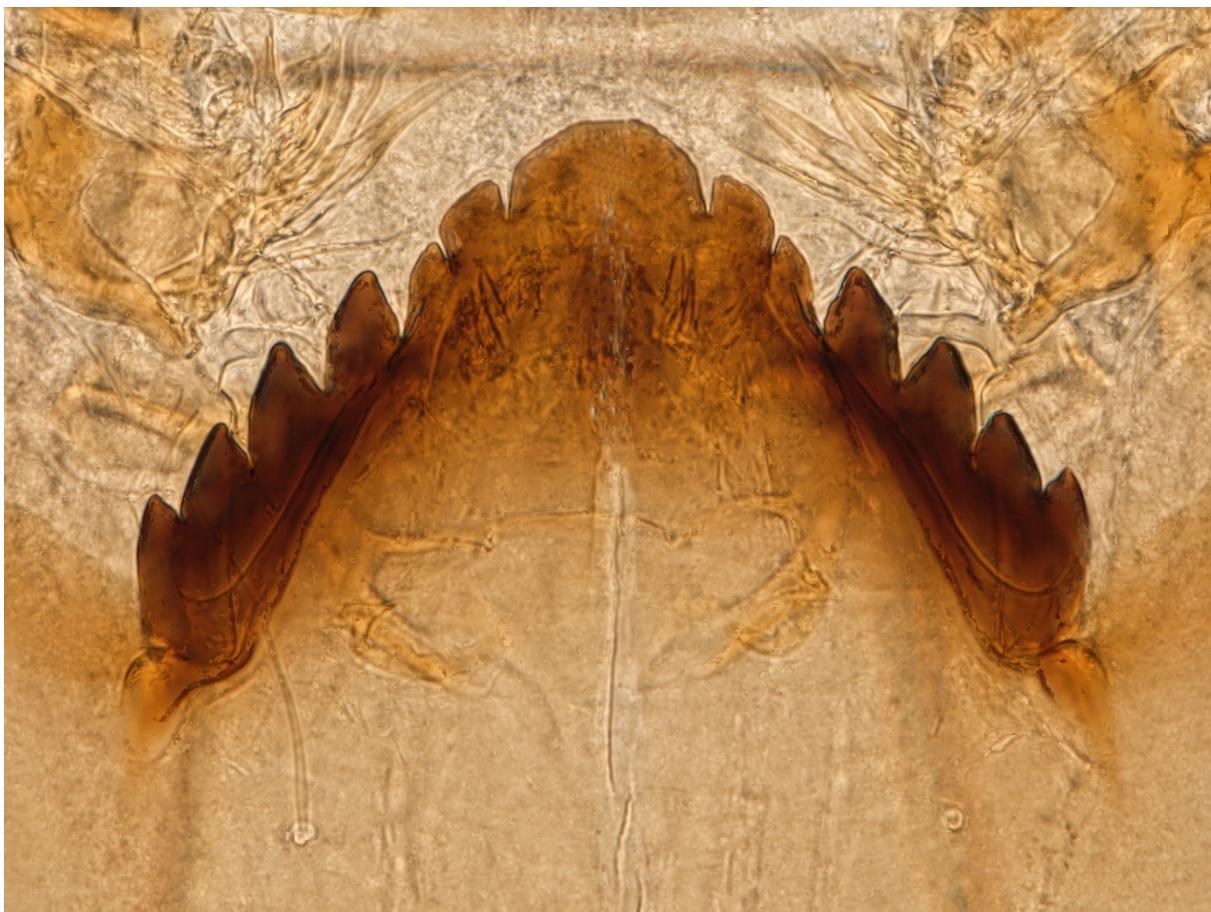

*Cricotopus bicinctus*, anterior part of body lateral. Niers, 408262, leg. J. van Mil.

*Cricotopus bicinctus* continued

*Cricotopus bicinctus* continued

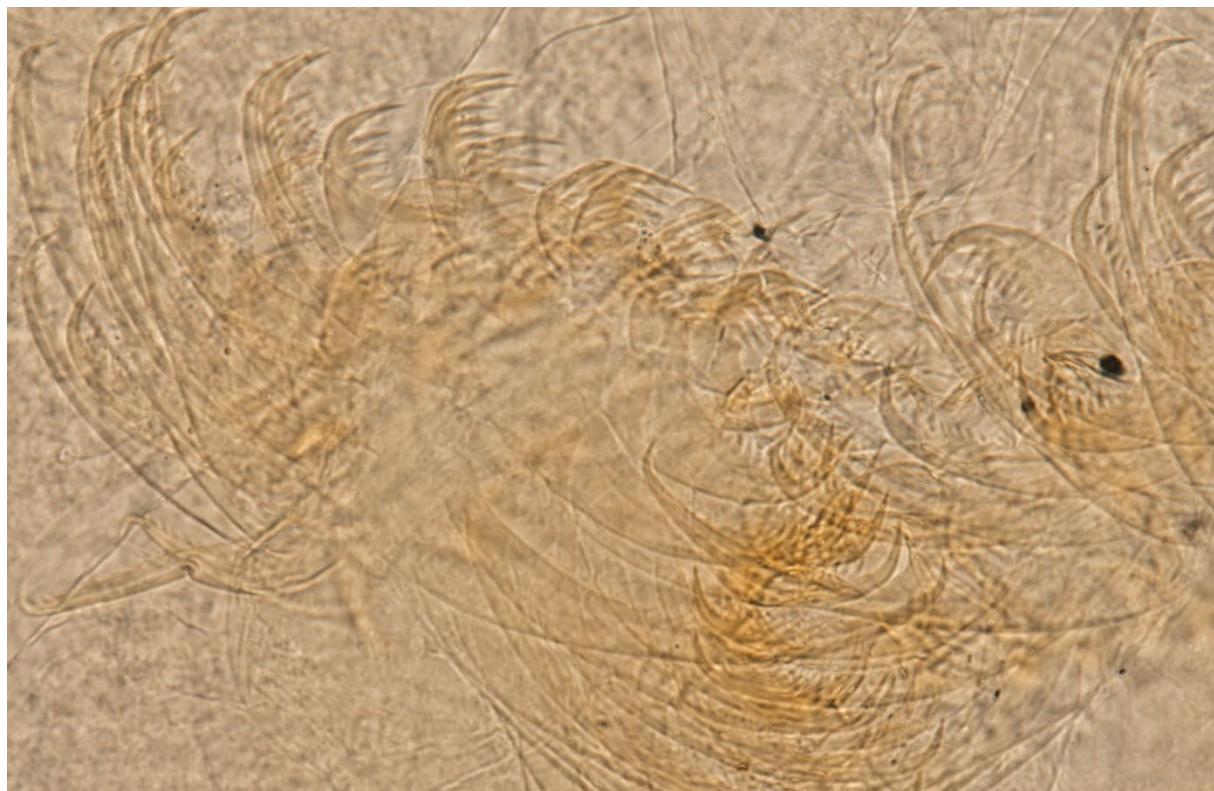

*Cricotopus bicinctus* mentum. Witterdiep Assen, 29 Sep. 2007, leg. H. Cuppen.

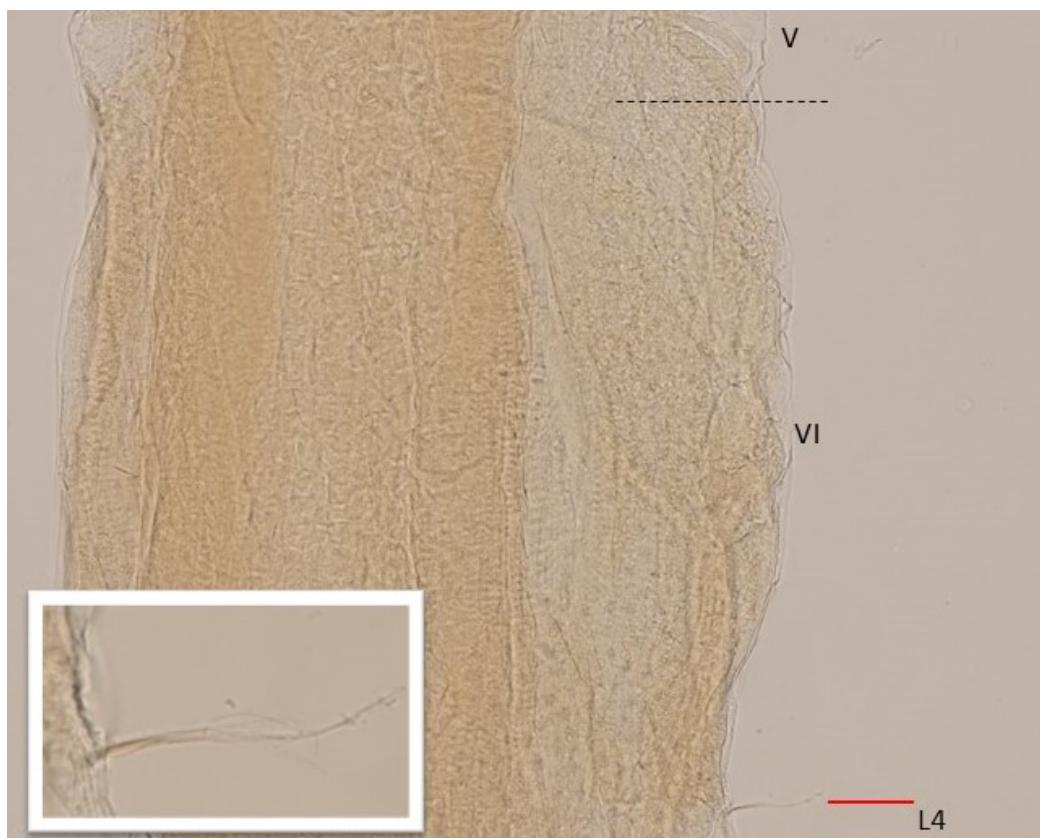

*Cricotopus bicinctus* mandibula. Witterdiep Assen, 29 Sep. 2007, leg. H. Cuppen.

*Cricotopus bicinctus* antenna. Witterdiep Assen, 29 Sep. 2007, leg. H. Cuppen. spines: arrows indicate location on inner side of mola where spines are present; the spines themselves are poorly visible in the photograph.

*Cricotopus bicinctus* continued

*Cricotopus bicinctus* claws of the anterior pseudopods. Witterdiep Assen, 29 Sep. 2007, leg. H. Cuppen.

*Cricotopus bicinctus* segment 6 and L4 setal tuft. Witterdiep Assen, 29 Sep. 2007, leg. H. Cuppen.

*Cricotopus festivellus* (Kieffer, 1906)

**Body:** body length: 5 – 5.5 mm.

**Head capsule:** yellow; occipital margin dark brown; head width: 334 - 344  $\mu\text{m}$  ( $n = 2$ ).

**Antenna:** 5 segments; antennal blade extends to last segment; length antenna 1: 54 - 60  $\mu\text{m}$ ; AR: 1.9-2.1 ( $n = 3$ ).

**Mentum:** 6 lateral teeth and a broad median tooth; 2<sup>nd</sup> lateral tooth little reduced; MR: 2.7-3.0.

**Mandibula:** 3 inner teeth, color apically brown extending to molar area with wide pale base; dorsal margin smooth.

**Premandibula:** simple.

**Labrum:** bifid S1 with branches of similar size.

**Epipharynx:** pecten epipharyngis composed of 3 scales of equal length.

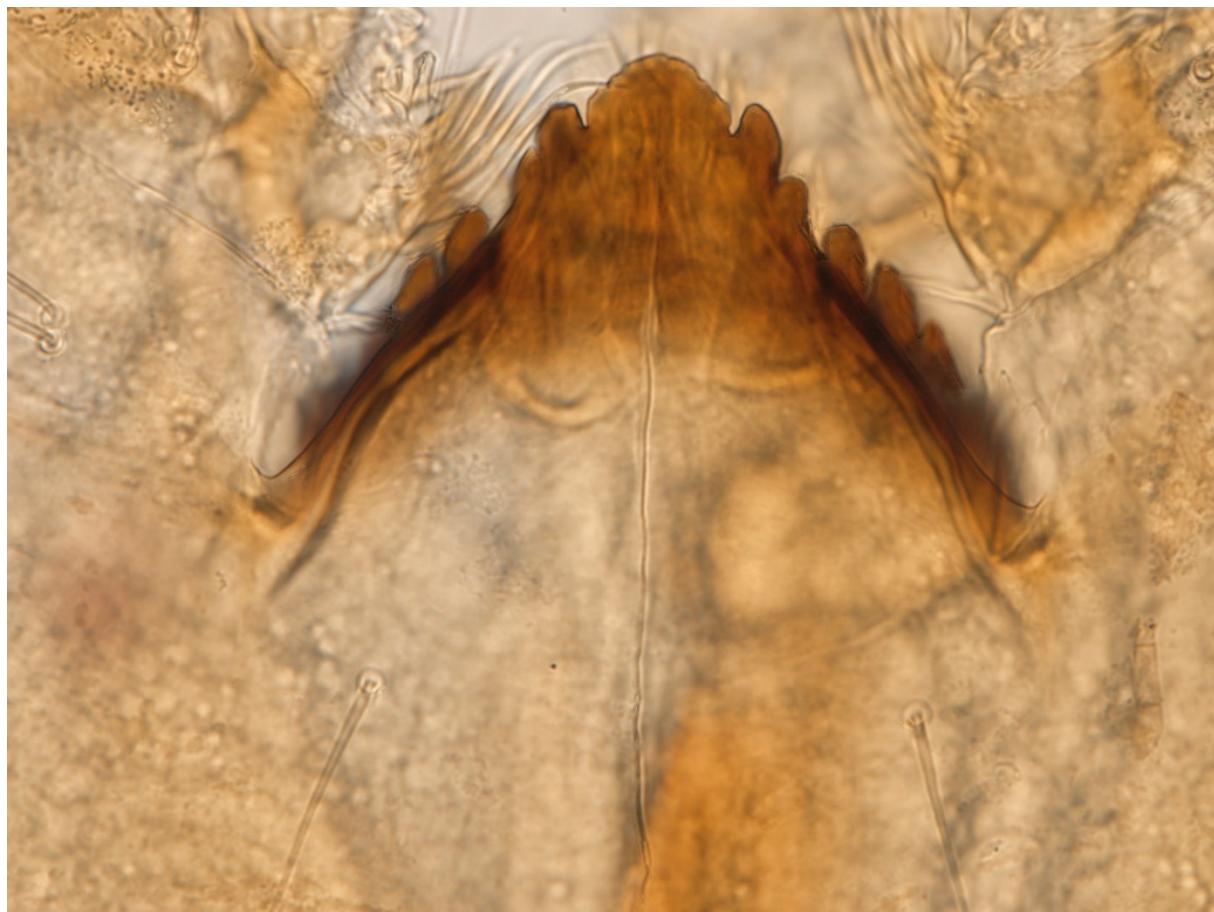

**Submental setae:** located at the level of the 4<sup>th</sup> lateral tooth; distance between setae: 78  $\mu\text{m}$  ( $n = 1$ ).

**Anterior parapods:** mid long claws with fine inner teeth which are at most half as long as distal tooth; claw index: 1.8 – 1.9 ( $n = 2$ ).

**Abdominal segments:** segments 1 - 6 bear posterolateral setal tufts of 12-24 filaments, which reach 1/2 – 3/4 of the segment length; segment 7 with 8-10 setae.

**Anal segments:** dorsolateral seta on segment 9 reaches 1/3<sup>rd</sup> of segment length.

*Cricotopus festivellus* continued

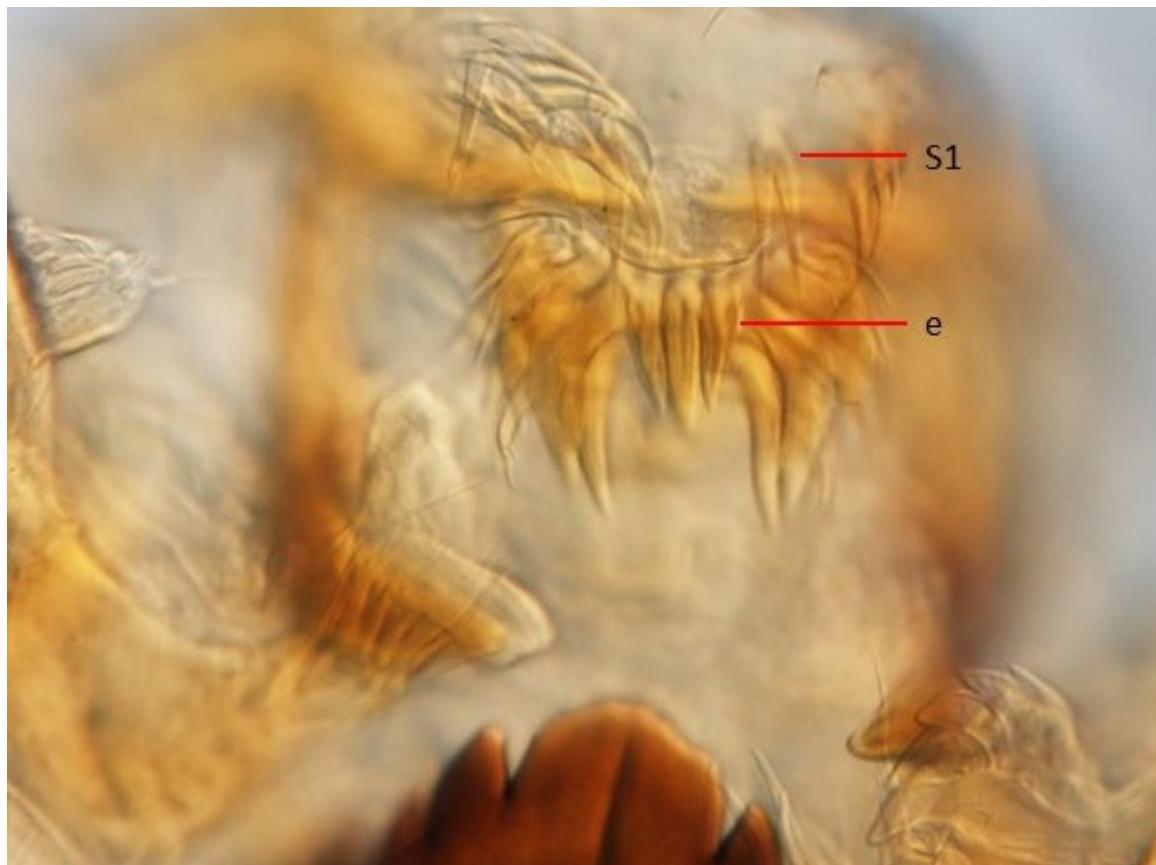

*Cricotopus festivellus* mentum Enschede, Landweerven, 18 May 2009, leg. H. Cuppen.

*Cricotopus festivellus* mandibula and premandibula. Enschede, Landweerven, 18 May 2009, leg. H. Cuppen.

*Cricotopus festivellus* antenna. Enschede, Landweerven, 18 May 2009, leg. H. Cuppen.

*Cricotopus festivellus* continued

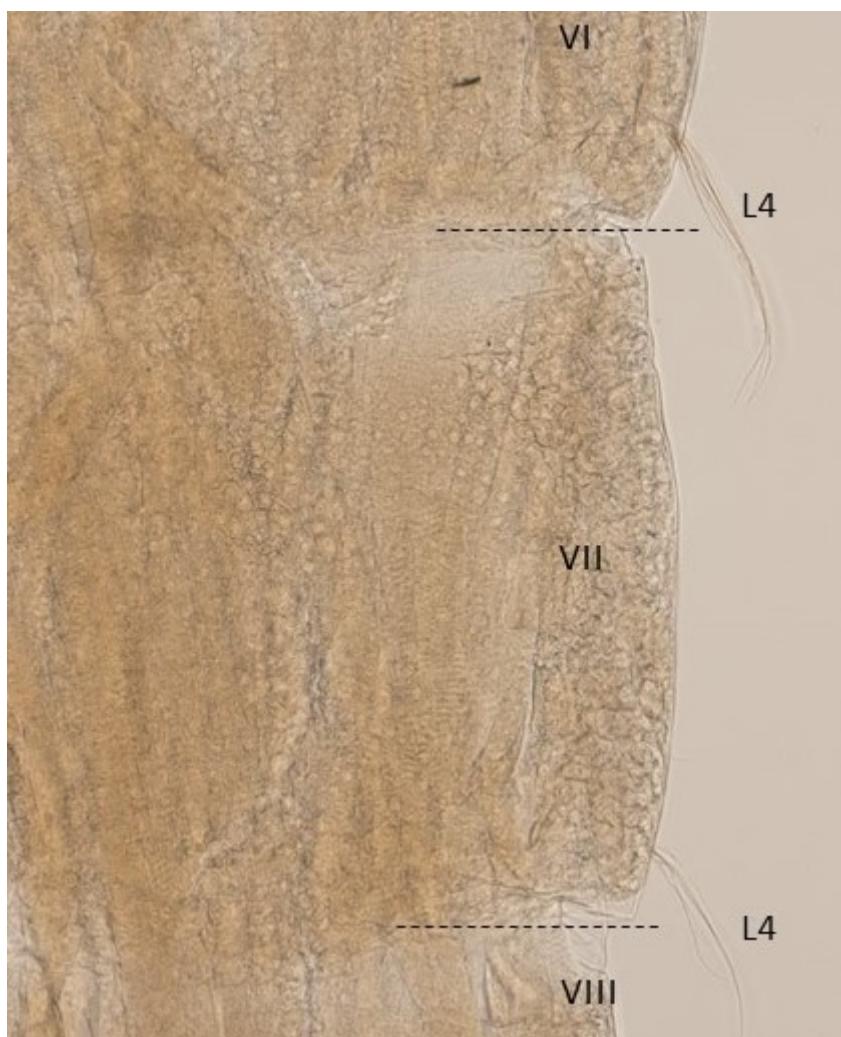

*Cricotopus festivellus*, epipharynx (e) and S1. Veluwerandmeer, 5 Oct. 2016, leg. R. Wiggers.

*Cricotopus festivellus*, claws of the anterior pseudopods. Veluwerandmeer, 5 Oct. 2016, leg. R. Wiggers.

*Cricotopus festivellus* continued

*Cricotopus festivellus*, segments 6 and 7 with L4 setal tufts. Enschede, Landweerven, 18 May 2009,  
leg. H. Cuppen.

*Cricotopus flavocinctus* (Kieffer, 1924)

**Body:** body length: 4.5 mm.

**Head capsule:** yellow; occipital margin light brown; head width: 320  $\mu\text{m}$  ( $n = 1$ ).

**Antenna:** 5 segments; antennal blade extends to last segment; length antenna 1: 48  $\mu\text{m}$ ; AR: 1.9 ( $n = 1$ ).

**Mentum:** 6 lateral teeth and a very broad median tooth; 2<sup>nd</sup> lateral tooth little reduced; MR: 6 ( $n = 1$ ).

**Mandibula:** 3 inner teeth, color apically brown extending to molar area with wide pale base; dorsal margin slightly crenulated.

**Premandibula:** simple.

**Labrum:** bifid S1 with branches of similar size.

**Epipharynx:** pecten epipharyngis composed of 3 scales of equal length.

**Submental setae:** located at the level of the 6<sup>th</sup> lateral tooth; distance between setae: 99  $\mu\text{m}$  ( $n = 1$ ).

**Anterior parapods:** Mid long claws with fine inner teeth which are half as long as distal tooth; claw index: 2.0 ( $n = 2$ ).

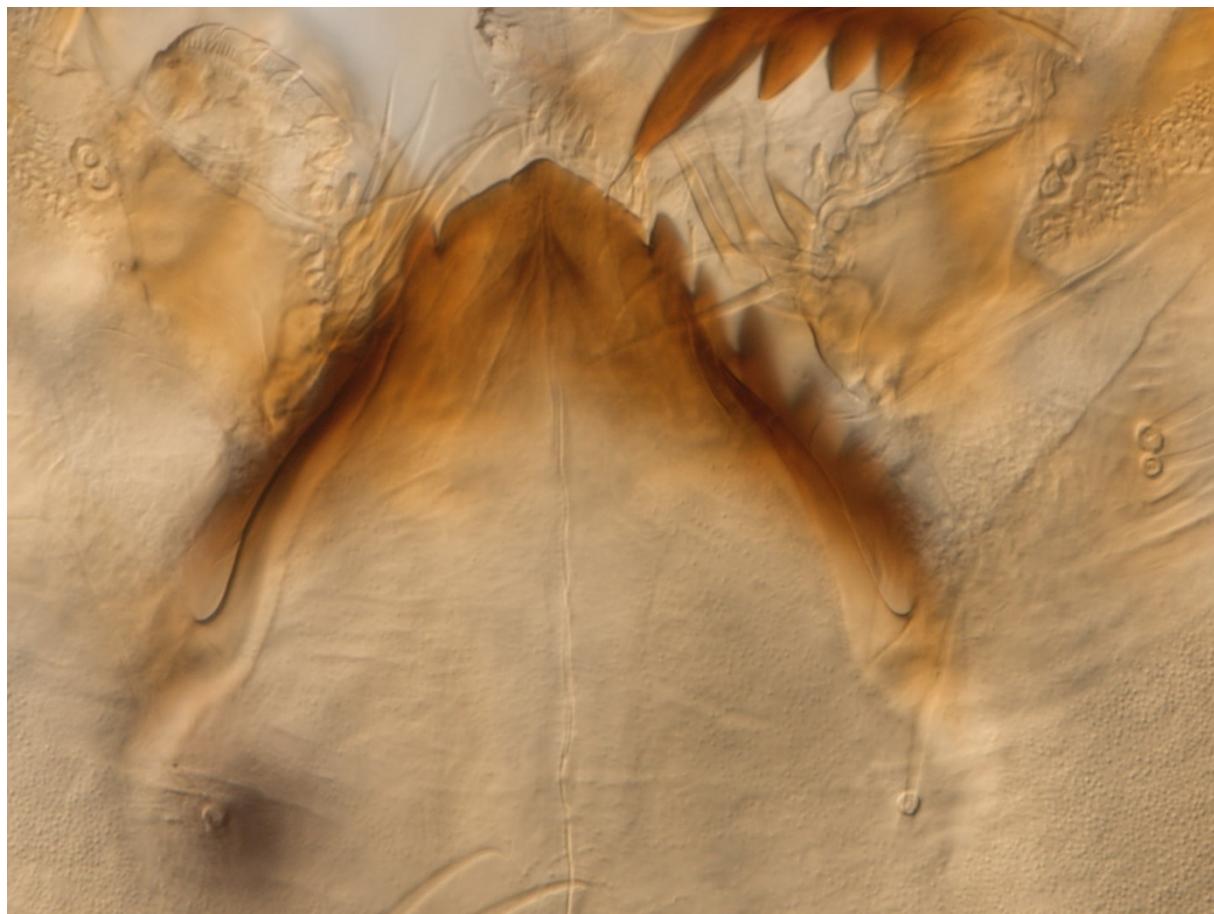

**Abdominal segments:** segments 1 - 6 bear posterolateral setal tufts of 10-12 filaments, which reach 1/2 – 3/4 of the segment length; segment 7 with ? setae.

**Anal segments:** dorsolateral seta on segment 9 reaches 1/3 of segment length.

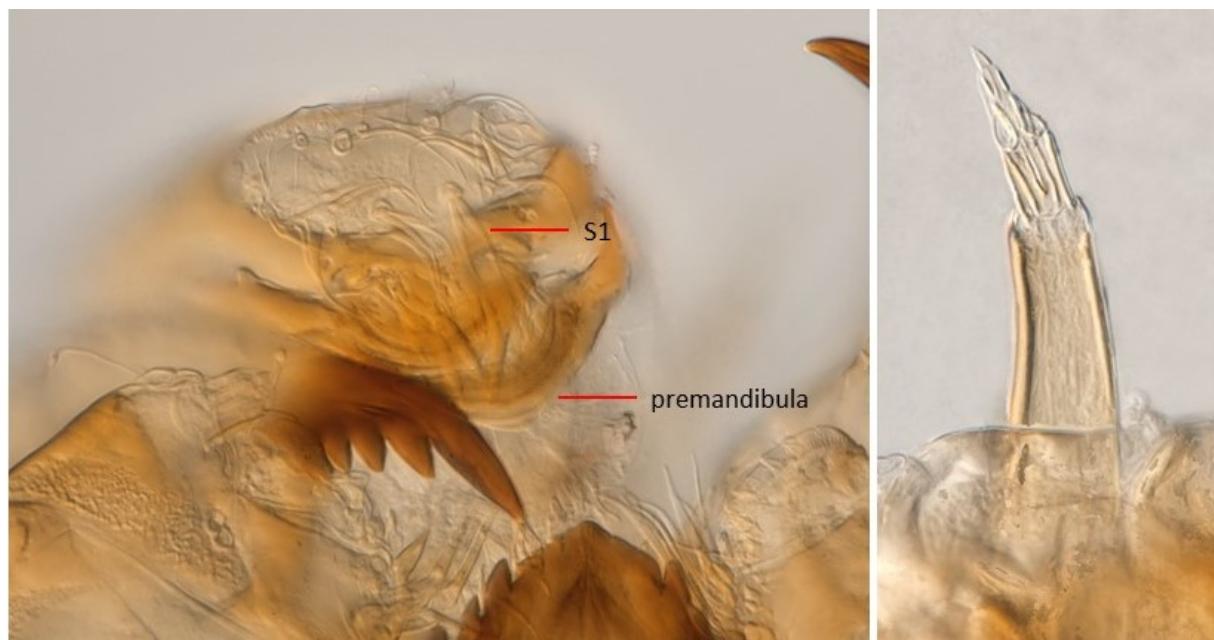

*Cricotopus flavocinctus*, prepupa larva lateral. Tiengemeten freshwater lake, 4 Sep. 2012, leg. D. Tempelman.

*Cricotopus flavocinctus* continued

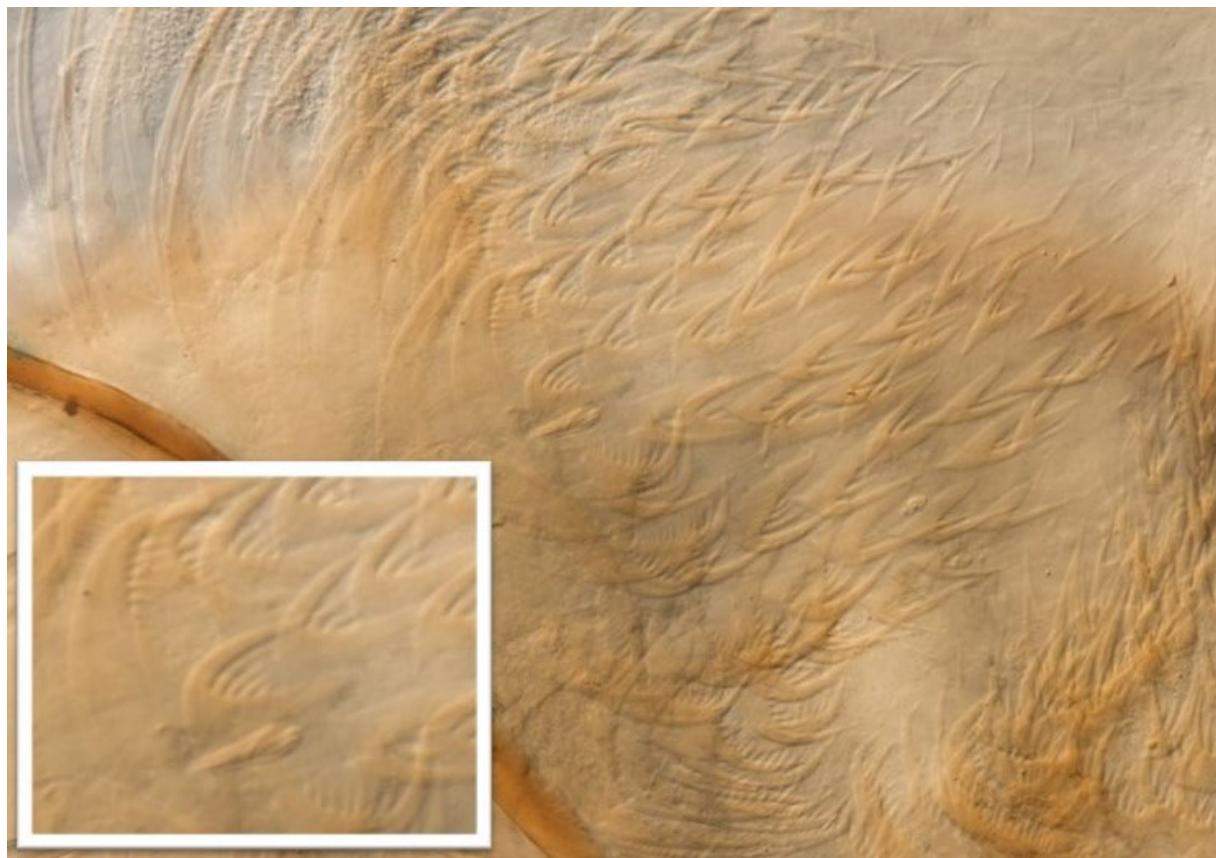

*Cricotopus flavocinctus*, mentum. Tiengemeten freshwater lake, 4 Sep. 2012, leg. D. Tempelman.

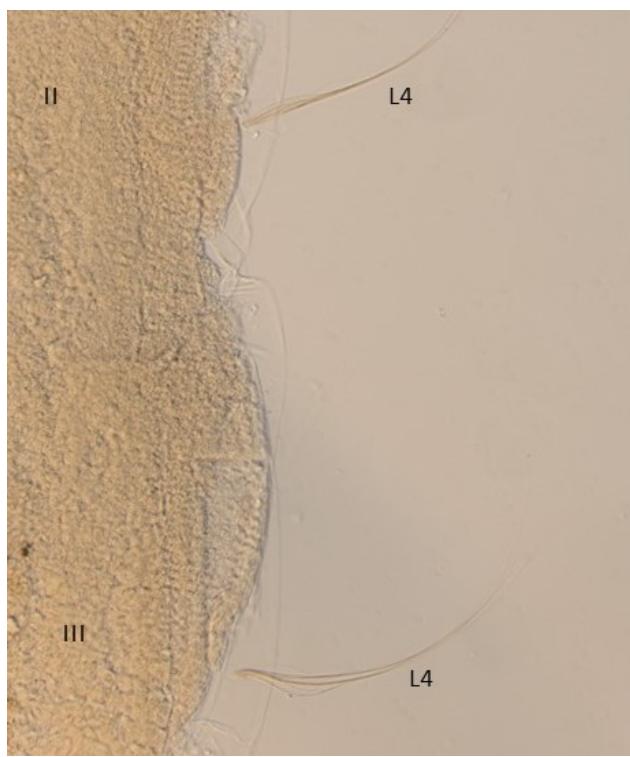

*Cricotopus flavocinctus*, mandibula, premandibula and S1; right: antenna. Tiengemeten freshwater lake, 4 Sep. 2012, leg. D. Tempelman.

*Cricotopus flavocinctus* continued

*Cricotopus flavocinctus*, claws of the anterior pseudopods. Tiengemeten freshwater lake, 4 Sep. 2012, leg. D. Tempelman.

*Cricotopus flavocinctus*, segment 2and 3 with L4 setal tufts. Tiengemeten freshwater lake, 4 Sep. 2012, leg. D. Tempelman.

*Cricotopus fuscus* (Kieffer, 1909)

**Body:** body length: 6.5 mm. Often with dark blue color.

**Head capsule:** light brown; occipital margin light to dark brown; head width: 457  $\mu\text{m}$  ( $n = 1$ ).

**Antenna:** 5 segments; antennal blade extends to halfway last segment; length antenna 1: 56  $\mu\text{m}$ ; AR: 1.7 ( $n = 1$ ).

**Mentum:** 6 lateral teeth and a relatively small median tooth; 2<sup>nd</sup> lateral tooth little reduced; MR: 1.5 ( $n = 1$ ).

**Mandibula:** 3 inner teeth, color apically brown extending to molar area with wide pale base; dorsal margin crenulated.

**Premandibula:** bifid.

**Labrum:** bifid S1 with outer branch longer than inner branch.

**Epipharynx:** pecten epipharyngis composed of 3 scales of equal length.

**Submental setae:** located at the level of the mentum base; distance between setae: 158  $\mu\text{m}$  ( $n = 1$ ).

**Anterior parapods:** mid long claws with fine inner teeth which are 2/3<sup>rd</sup> as long as distal tooth; claw index: 1.5 ( $n = 2$ ).

**Abdominal segments:** segments 1 - 6 bear posterolateral setal tufts of 1-7 filaments, which reach 1/3 of the segment length; segment 7 with 1 seta.

**Anal segments:** dorsolateral seta on segment 9 reaches 1/4 of segment length.

*Cricotopus fuscus* continued

*Cricotopus fuscus*, head ventral. Scheumerbeek, 8 May 2000, leg. H. Cuppen.

*Cricotopus fuscus* continued

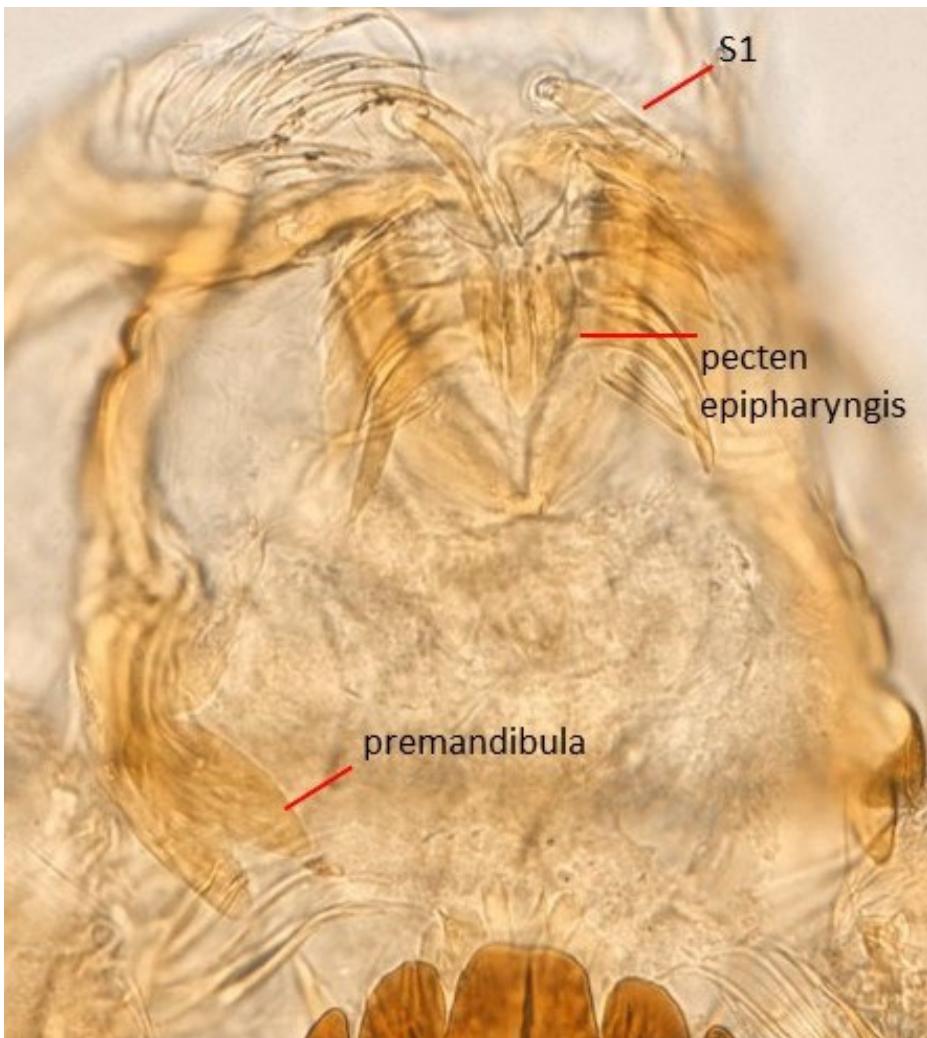

*Cricotopus fuscus*, mentum. Scheumerbeek, 8 May 2000, leg. H. Cuppen.

*Cricotopus fuscus*, antenna. Scheumerbeek, 8 May 2000, leg. H. Cuppen.

*Cricotopus fuscus* continued

*Cricotopus fuscus*, distal region of head ventral. Scheumerbeek, 8 May 2000, leg. H. Cuppen.

*Cricotopus fuscus*, claws of anterior parapods. Scheumerbeek, 8 May 2000, leg. H. Cuppen.

*Cricotopus fuscus*, L4 segment 3. Twente, leg. B. Klutman.

*Cricotopus pilosellus* Brundin, 1956

**Body:** body length: 7.5 mm.

**Head capsule:** yellow; occipital margin dark brown; head width: 428  $\mu\text{m}$  ( $n = 1$ )

**Antenna:** 5 segments; antennal blade extends to last segment; length antenna 1: 72  $\mu\text{m}$ ; AR: 2.0 ( $n = 1$ ).

**Mentum:** 6 lateral teeth and very broad median tooth; without strong squashing of slide-mounted material, only the 1<sup>st</sup> lateral tooth is distinctly visible, the other lateral teeth 2-6 normally hidden under a rather wide paralabial plate; MR: 4.5 ( $n = 1$ )

**Mandibula:** 4 inner teeth, color apically brown extending to molar area with wide pale base; dorsal margin very slightly crenulated.

**Premandibula:** simple.

**Labrum:** trifid S1 with broad flat base.

**Epipharynx:** pecten epipharyngis composed of 3 broad scales of equal length.

**Submental setae:** located at the level of the 4<sup>th</sup> lateral teeth; distance between setae: 82  $\mu\text{m}$  ( $n = 1$ ).

**Anterior parapods:** mid long claws with fine inner teeth which are 2/3<sup>rd</sup> as long as distal tooth; claw index: 1.5 ( $n = 2$ ).

**Abdominal segments:** segments 1 - 6 bear posterolateral setal tufts of 10 - 15 filaments, which reach 1/3 – 1/2 of the segment length; segment 7 with 1 seta.

**Anal segments:** dorsolateral seta on segment 9 reaches 1/3<sup>rd</sup> of segment length.

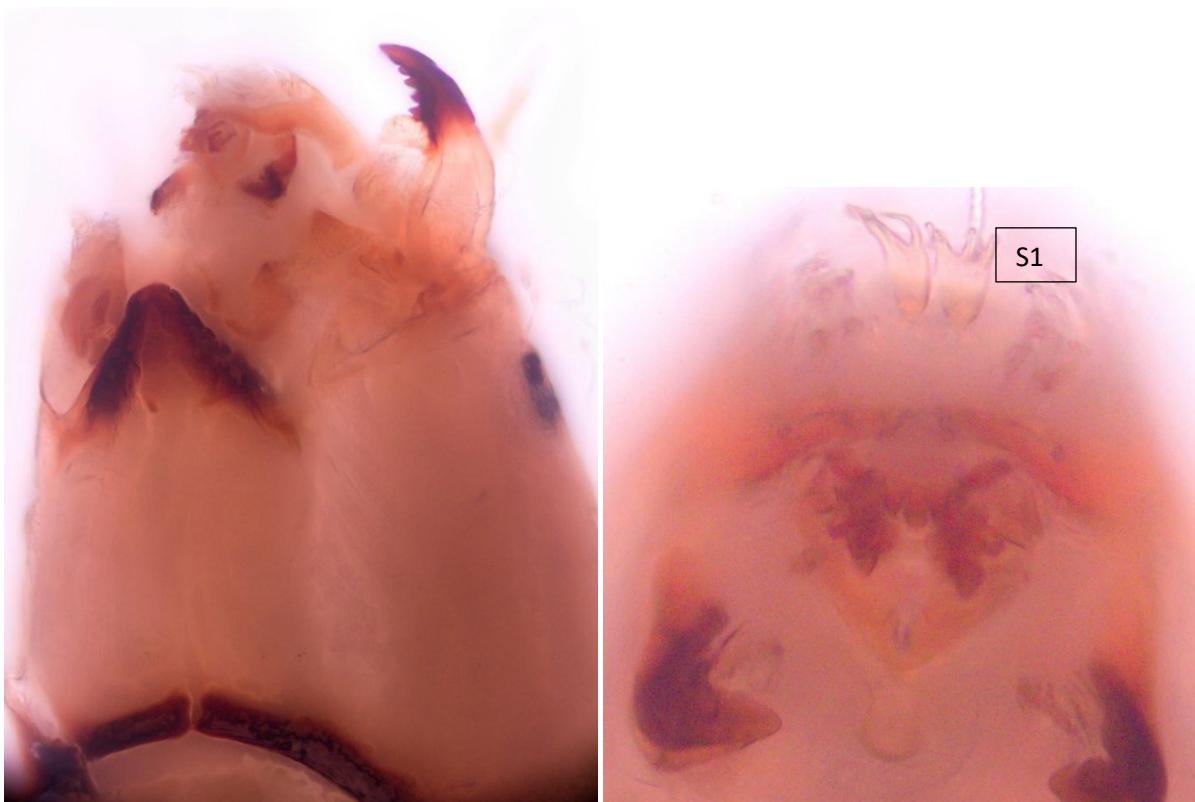

*Cricotopus pilosellus* continued

*Cricotopus pilosellus*, mentum. Lateral teeth 2-6 obscured by paralabial plate. Markermeer near Warder, 10 Oct. 2016, leg. R. Wiggers.

*Cricotopus pilosellus*, mentum strongly squashed, showing lateral teeth 2 – 6. Laachersee, 26 April 2013, leg. A. Dettinger-Klemm.

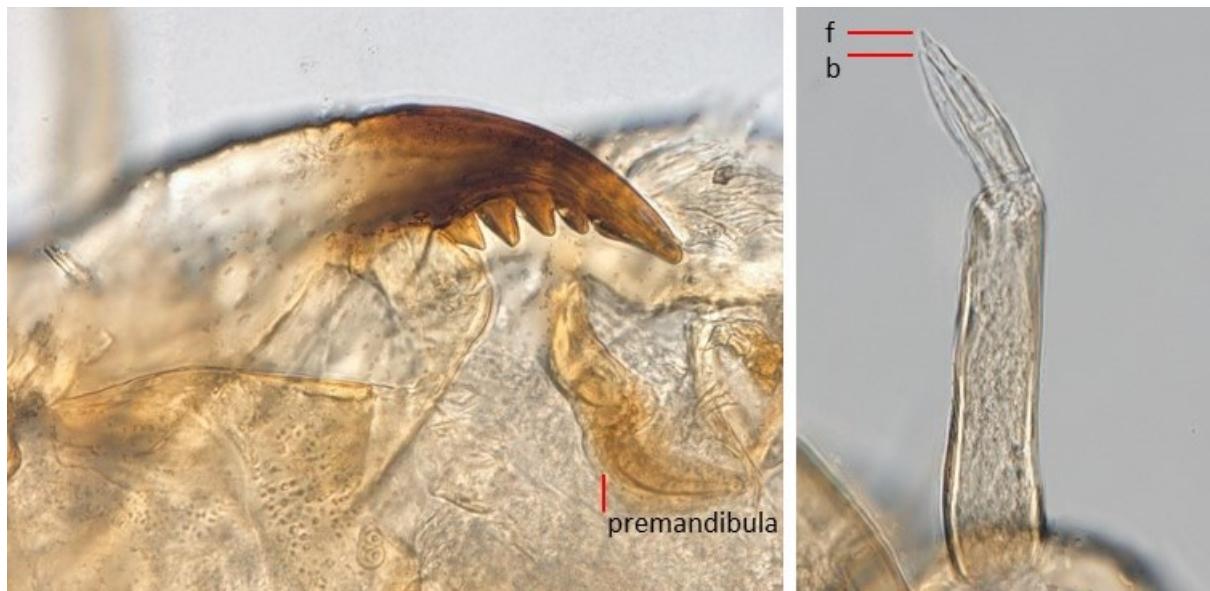

p = paralabial plate.

*Cricotopus pilosellus*, head ventral. Marknesse, canal; 2014. Leg. and picture O. Duijts.

*Cricotopus pilosellus*, S1 and premandibula. Marknesse, canal; 2014. Leg. and picture O. Duijts.

*Cricotopus pilosellus* continued

*Cricotopus pilosellus*, mandibula and premandibula. Warder Markermeer, 10 Oct. 2016, leg. R. Wiggers. f = tip of antennal flagellum; b = tip of antennal blade.

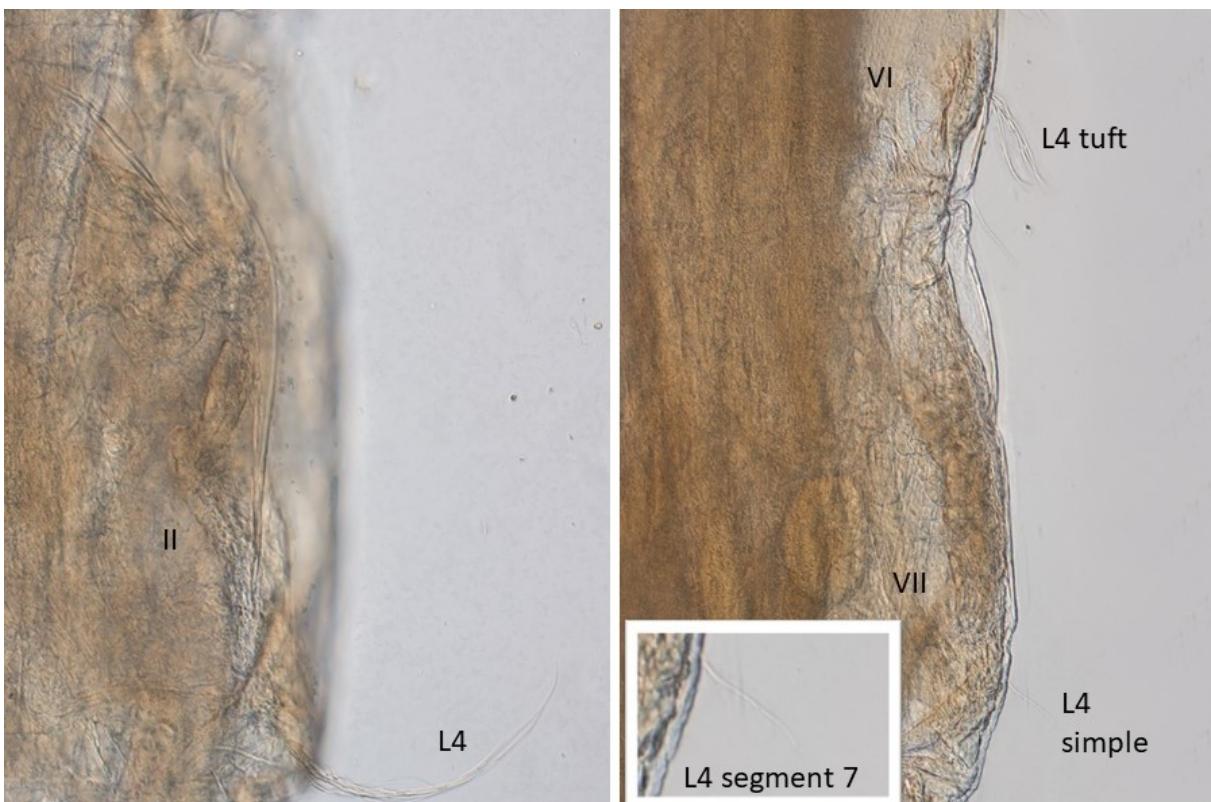

*Cricotopus pilosellus*, antenna (same specimen).

*Cricotopus pilosellus*, epipharynx. Marknesse canal, 2014. Leg. and picture O. Duijts.

*Cricotopus pilosellus*, small and long claws anterior parapods. Markermeer near Warder, 10 Oct. 2016, leg. R. Wiggers.

*Cricotopus pilosellus*, segment 2 and setae. Markermeer near Warder, 10 Oct. 2016, leg. R. Wiggers.  
*Cricotopus pilosellus*, segment 6-7 and setae (same specimen).

*Cricotopus tibialis* (Meigen, 1804)

**Body:** body length: 6 - 8 mm.

**Head capsule:** light brown; occipital margin light to dark brown; head width: 482 - 544  $\mu\text{m}$  ( $n = 2$ ).

**Antenna:** 5 segments; antennal blade extends to 3/4 of 4<sup>th</sup> segment; length antenna 1: 68  $\mu\text{m}$ ; AR: 2.0 ( $n = 1$ ).

**Mentum:** 6 lateral teeth and a relatively small median tooth; MR: 1.5 ( $n = 1$ ).

**Mandibula:** 3 inner teeth, color apically brown extending to molar area with wide pale base; dorsal margin crenulated.

**Premandibula:** bifid.

**Labrum:** bifid S1 with outer branch longer than inner branch.

**Epipharynx:** pecten epipharyngis composed of 3 scales of equal length.

**Submental setae:** located at the level of the 4<sup>th</sup> or 5<sup>th</sup> lateral teeth; distance between setae: 93 - 114  $\mu\text{m}$  ( $n = 2$ ).

**Anterior parapods:** Mid long claws with fine inner teeth which are half as long as distal tooth; claw index: 1.7 – 2.0 ( $n = 2$ ).

**Abdominal segments:** 1 - 6 bear posterolateral setal tufts of 10-20 filaments, which reach 1/2 - 3/4 of the segment length; segment 7 with 10 setae.

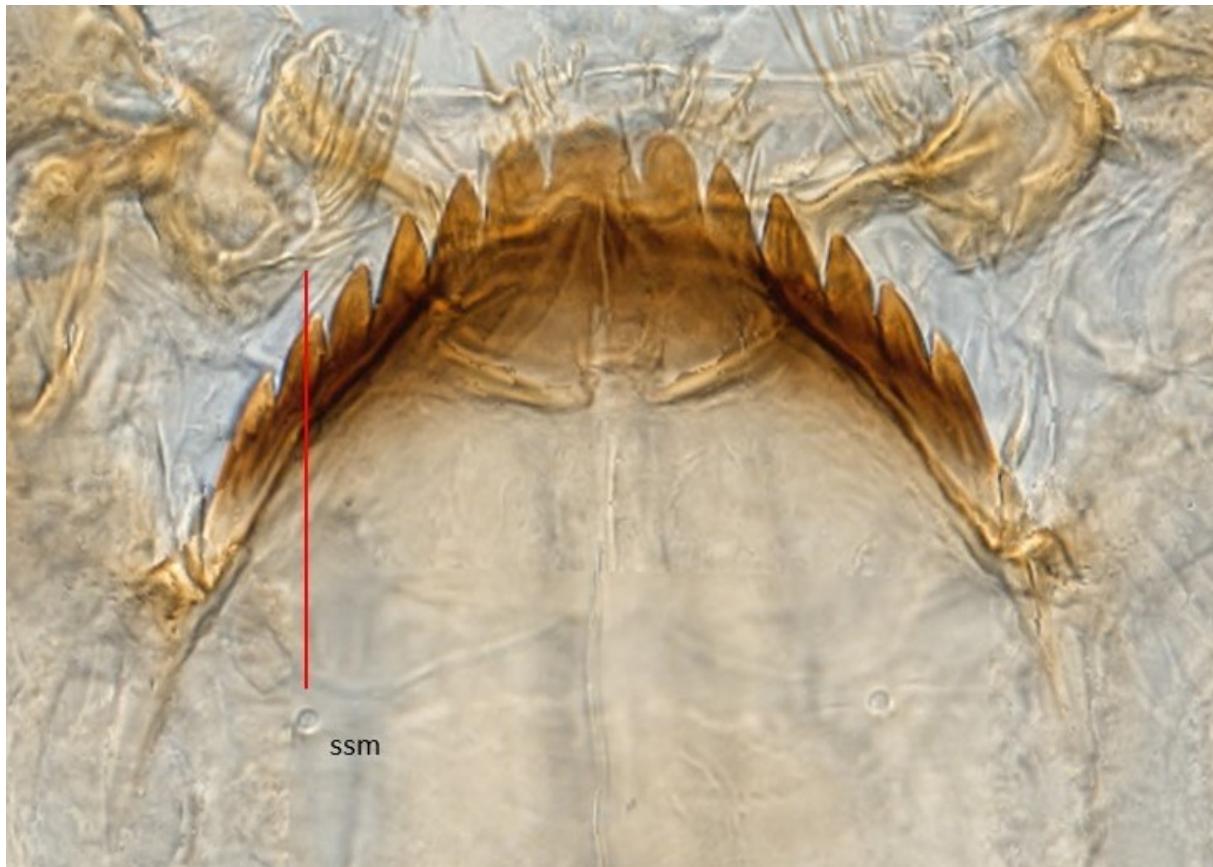

**Anal segments:** dorsolateral seta on segment 9 reaches 1/3<sup>rd</sup> of segment length.

*Cricotopus tibialis* continued

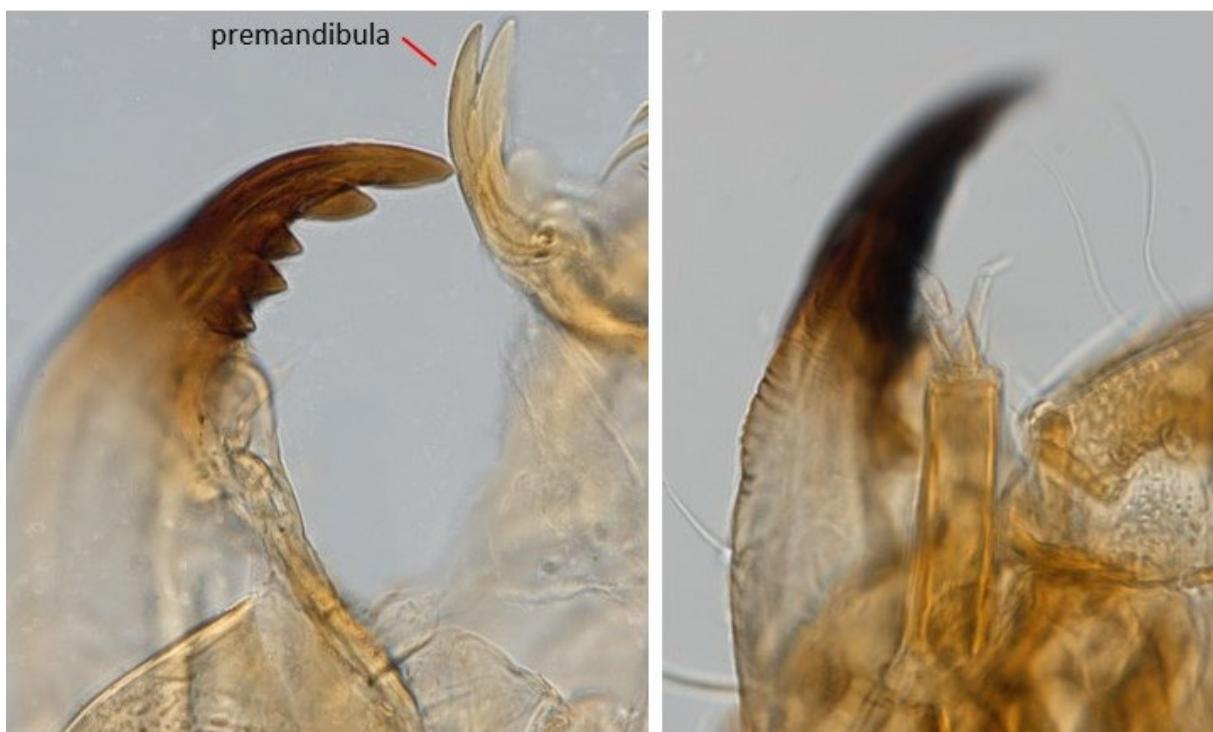

*Cricotopus tibialis*, head ventral. Boven Slinge, Bekendelle, 12 Oct. 2012. Leg. B. Klutman.

*Cricotopus tibialis* continued

*Cricotopus tibialis*, antenna. Miltenberg, Brunnen Filter, 12 July 2012. Leg. C. Schiffels.

*Cricotopus tibialis* continued

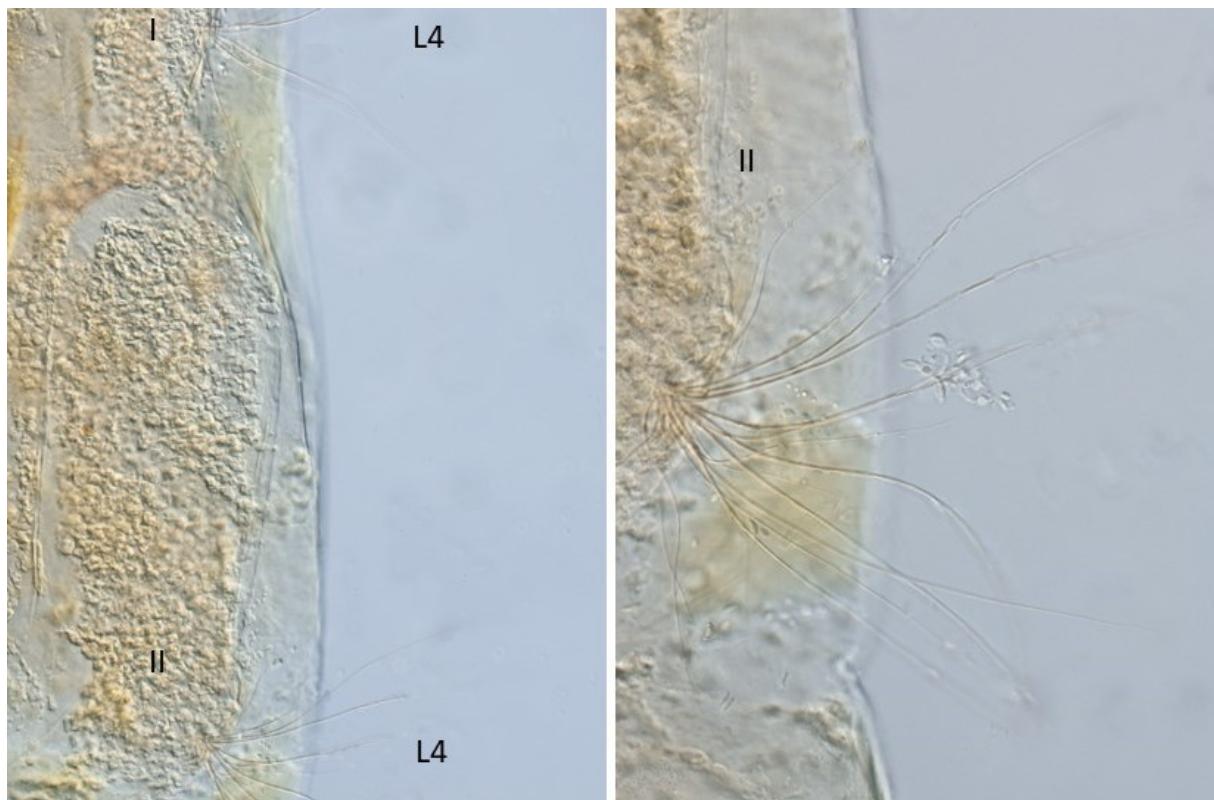

*Cricotopus tibialis*, claws anterior parapods. Boven Slinge, Bekendelle, 12 Oct. 2012. Leg. B. Klutman.

*Cricotopus tibialis*, claws anterior parapods detail. Boven Slinge, Bekendelle, 12 Oct. 2012. Leg. B. Klutman.

*Cricotopus tibialis* continued

*Cricotopus tibialis*, segments 1 and 2. Miltenberg, Brunnen Filter, 12 July 2012. Leg. C. Schiffels.

*Cricotopus tremulus*

**Body:** body length: 6.5 mm.

**Head capsule:** brown; occipital margin dark brown; head width: 305  $\mu\text{m}$  ( $n = 2$ ).

**Antenna:** 5 segments; antennal blade extends to end of fifth segment; length antenna 1: 48  $\mu\text{m}$ ; AR: 1.6 ( $n = 1$ ).

**Mentum:** 6 lateral teeth and a relatively small median tooth; 1<sup>st</sup> lateral teeth subequal in height with median tooth; 2<sup>nd</sup> lateral tooth reduced and partly fused with 1<sup>st</sup> lateral tooth; MR: 1.6 ( $n = 1$ ).

**Mandibula:** 3 inner teeth, color mandibula distal part dark brown, basal part brown; dorsal margin slightly crenulated.

**Premandibula:** simple.

**Labrum:** bifid S1 with outer branch longer than inner branch.

**Epipharynx:** pecten epipharyngis composed of 3 scales of equal length.

**Submental setae:** located at the level of the fifth/sixth lateral teeth; distance between setae: 129  $\mu\text{m}$  ( $n = 1$ ).

**Anterior parapods:** Mid long claws with coarse inner teeth which are 3/4 as long as distal tooth; claw index: 1.4 ( $n = 1$ ).

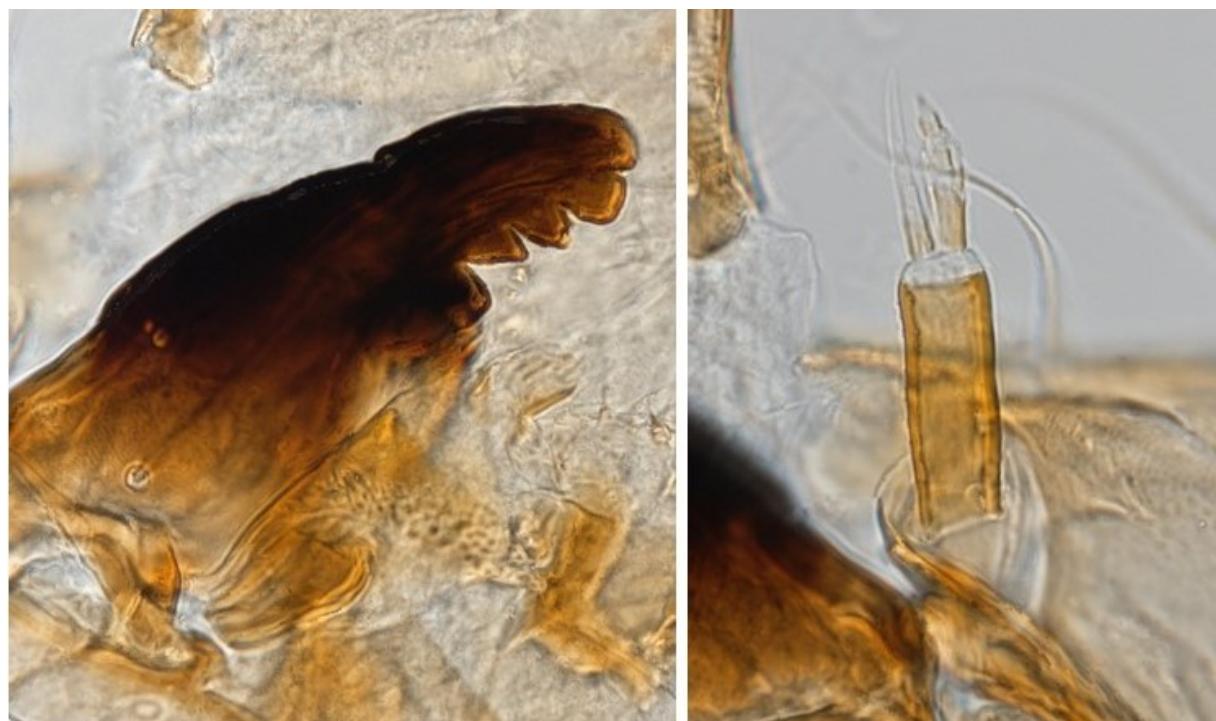

**Abdominal segments:** 1 - 6 bear posterolateral setal tufts of 1 filament, which reach 1/4 - 1/3 of the segment length; segment 7 with 1 seta.

**Anal segments:** dorsolateral seta on segment 9 reaches 1/2 of segment length.

*Cricotopus tremulus* continued

*Cricotopus tremulus*, mentum, central mental tooth slightly worn. Beverbach Aachen, leg. C. Schiffels.

*Cricotopus tremulus*, mandibula and antenna. Beverbach Aachen, leg. C. Schiffels.

*Cricotopus tremulus* continued

*Cricotopus tremulus*, claws anterior parapods. Beverbach Aachen, leg. C. Schiffels.

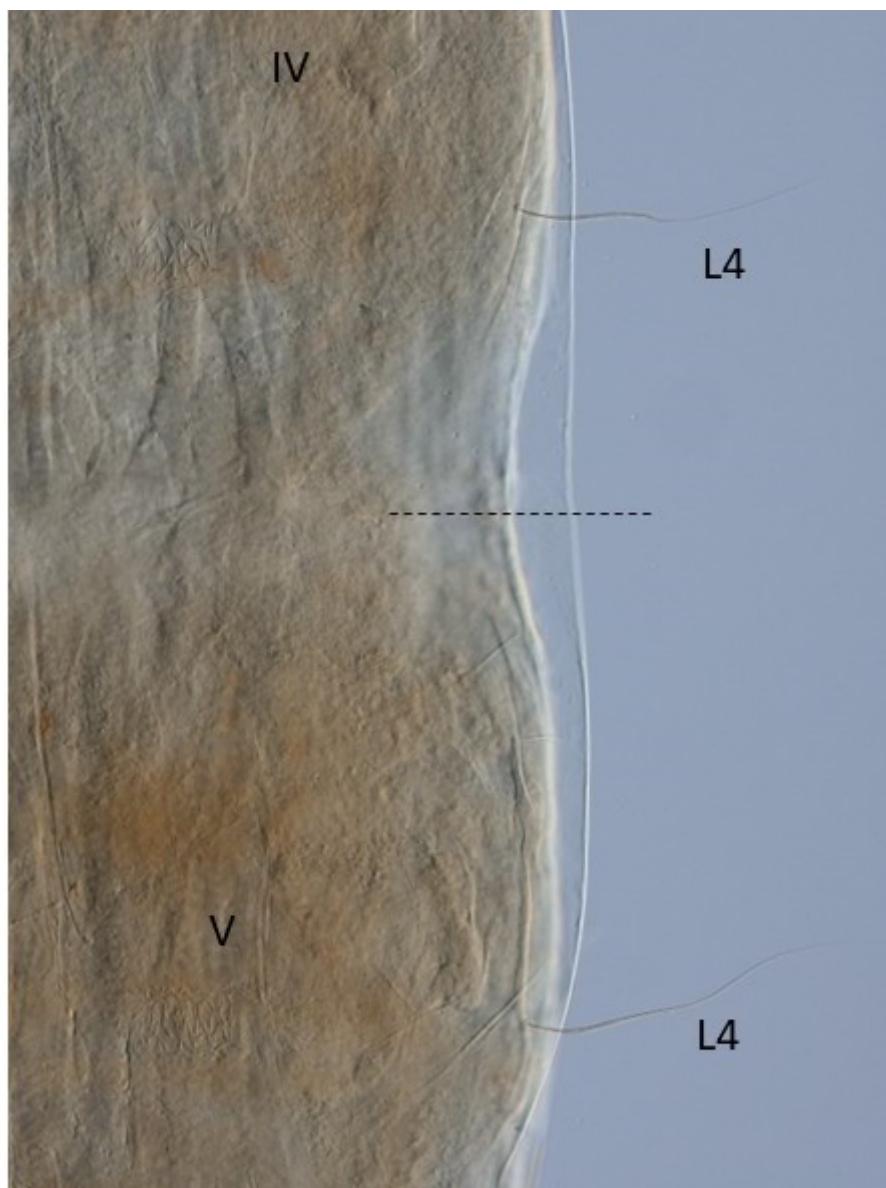

*Cricotopus tremulus*, premandibula. Beverbach Aachen, leg. C. Schiffels.

*Cricotopus tremulus* continued

*Cricotopus tremulus*, anal segments and dorsolateral hair of segment 9. Beverbach Aachen, leg. C. Schiffels.

*Cricotopus tremulus* continued

*Cricotopus tremulus*, L4 segment 4 and 5 . Leg. C. Schiffels.

*Cricotopus triannulatus* (Macquart, 1826)

**Body:** body length: 5 mm.

**Head capsule:** light brown; occipital margin brown; head width: 394  $\mu\text{m}$ .

**Antenna:** 5 segments; antennal blade extends to end fourth segment; length antenna 1: 50  $\mu\text{m}$ ; AR: 1.7.

**Mentum:** 6 lateral teeth and a broad median tooth; second lateral tooth little reduced; MR: 2 – 2.5.

**Mandibula:** 3 inner teeth, color apically dark brown extending halfway molar area with wide pale base, so distal 2/3 part dark brown; dorsal margin crenulated.

**Premandibula:** simple.

**Labrum:** bifid S1 with branches of similar size; between the a S1 setae a row of small spines.

**Epipharynx:** pecten epipharyngis composed of 3 scales of equal length.

**Submental setae:** located at the level of the 6<sup>th</sup> lateral tooth; distance between setae: 102  $\mu\text{m}$  (n = 1).

**Anterior parapods:** mid long claws with fine inner teeth which are 3/5 as long as distal tooth; claw index: 1.6.

**Abdominal segments:** 1 - 6 bear posterolateral setal tufts of 10-20 filaments, which reach 1/4 - 1/3 of the segment length; segment 7 with ? setae.

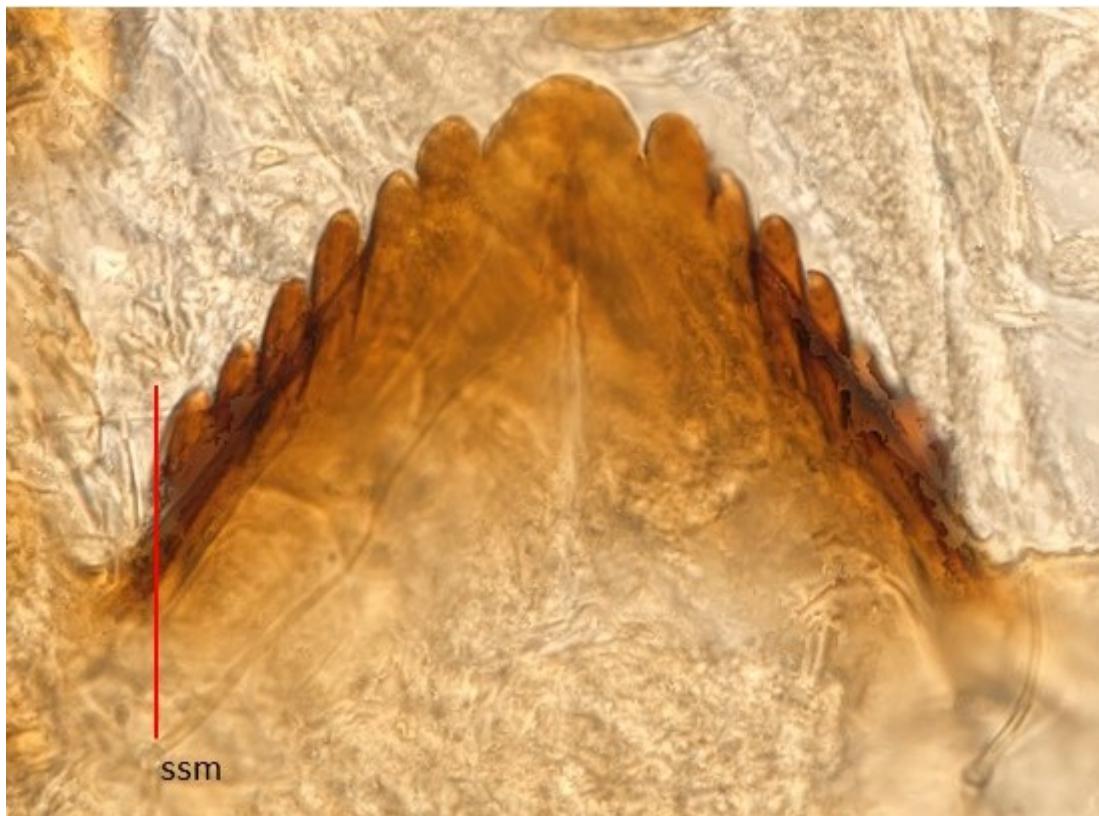

**Anal segments:** dorsolateral seta on segment 9 reaches 1/3<sup>rd</sup> of segment length.

*Cricotopus triannulatus* continued

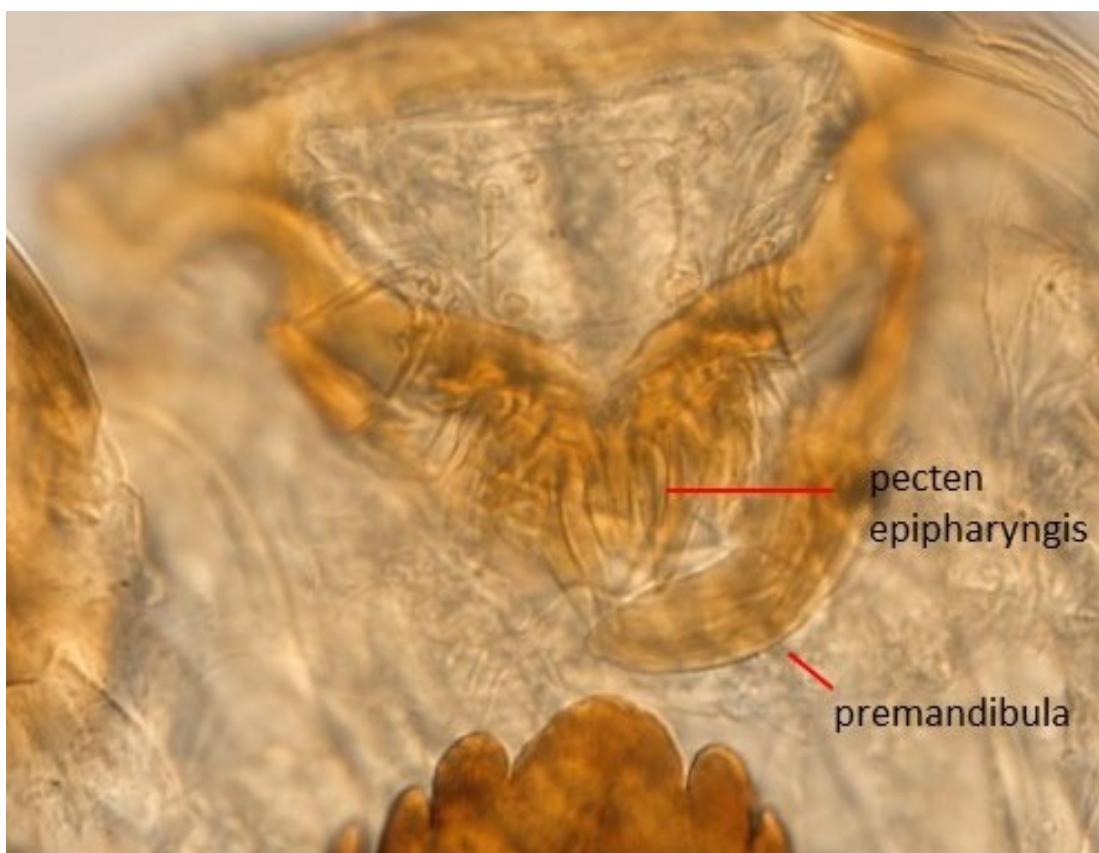

*Cricotopus triannulatus*, head ventral. Vuren, Waal, 4 Oct. 1988. leg. H. Cuppen.

*Cricotopus trifascia* Edwards, 1929

**Body:** body length: 6 mm.

**Head capsule:** yellow posterior part light brown; occipital margin dark brown; head width: 487  $\mu\text{m}$ .

**Antenna:** 5 segments; antennal blade extends halfway 4<sup>th</sup> segment; length antenna 1: 78  $\mu\text{m}$ ; AR: 1.7 – 1.8.

**Mentum:** 6 lateral teeth and a broad median tooth; 1<sup>st</sup>, 2<sup>nd</sup> and 6<sup>th</sup> lateral tooth strongly reduced; MR: 3.8 – 4.8.

**Mandibula:** 3 inner teeth, color apically brown extending to molar area with wide pale base; dorsal margin slightly crenulated.

**Premandibula:** simple.

**Labrum:** bifid S1 with outer branch longer than inner branch.

**Epipharynx:** pecten epipharyngis composed of 3 scales of equal length.

**Submental setae:** located at the level of the sixth lateral tooth; distance between setae: 131  $\mu\text{m}$  (n = 1).

**Anterior parapods:** mid long claws with coarse inner teeth which are nearly as long as distal tooth; claw index: 1.1.

**Abdominal segments:** segments 3-5 bear posterolateral setal tufts of 10 filaments, which reach 1/6 of the segment length; segment 6 and 7 with 1 seta.

**Anal segments:** dorsolateral seta on segment 9 reaches 1/5 of segment length; ventral seta at base posterior parapods relatively big; anal papillae well developed and equal in length as posterior parapods; dorsal pair longer than ventral pair.

**Body:** body length: 5.0- 7.0 mm (n = 6).

**Head capsule:** light brown; occipital margin light brown; wide head: 408 - 418 µm (n = 4).

**Antenna:** 5 segments; antennal blade extends halfway fourth segment; length antenna 1: 36 – 41 µm (n = 3); AR: 1.3 – 1.6 (n = 4).

**Mentum:** 6 lateral teeth and a relatively small median tooth; 2<sup>nd</sup> lateral tooth strongly reduced; MR: 1.6 (n = 1).

**Mandibula:** 3 inner teeth, color apically brown extending to molar area with wide pale base; dorsal margin crenulated.

**Premandibula:** bifid.

**Labrum:** bifid S1, with outer branch much longer than inner branch.

**Epipharynx:** pecten epipharyngis consisting of one conical scale and two strongly reduced toothlets joined proximally with the conical scale.

**Submental setae:** located at the level of the transition of the 5<sup>th</sup> and 6<sup>th</sup> lateral teeth; distance between setae: 102 - 122 µm (n = 3).

**Anterior parapods:** mid long claws with relatively coarse inner teeth which are one third as long as distal tooth; claw index: 3 – 3.6 (n = 2).

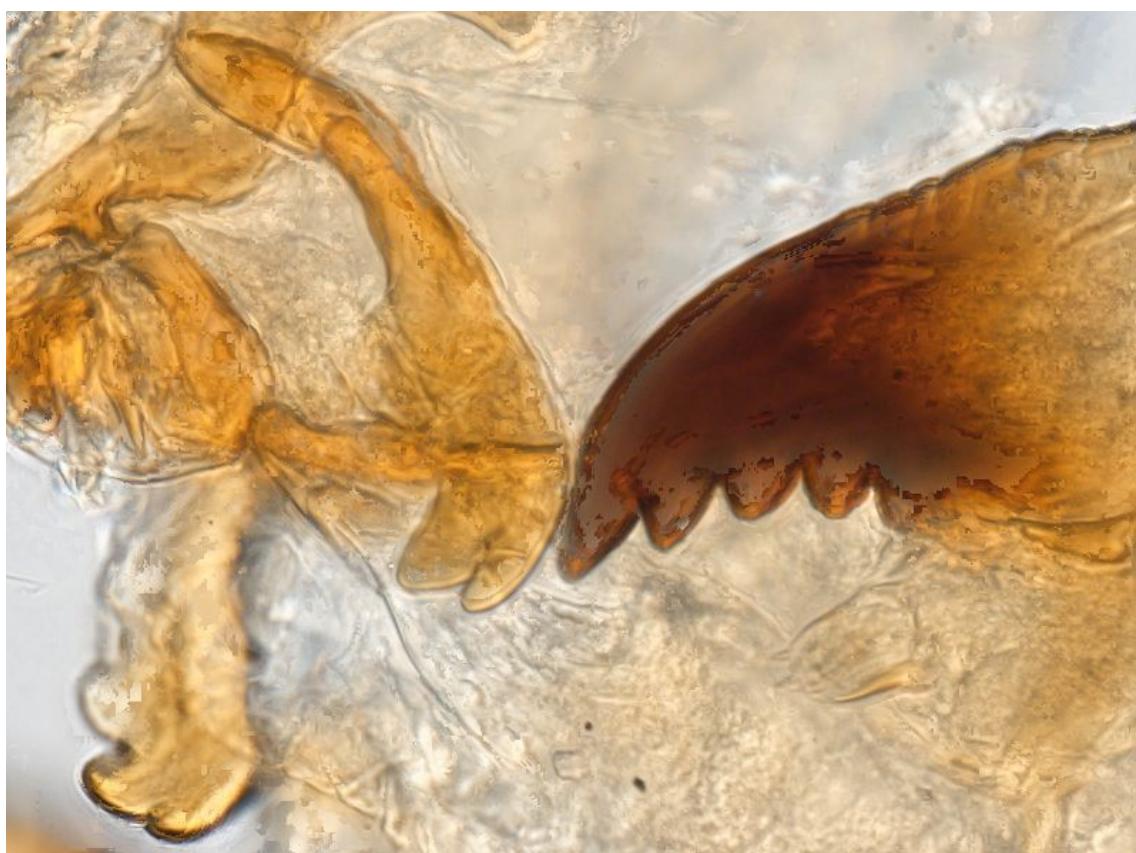

**Abdominal segments:** 1 - 6 bear posterolateral setal tufts of 10 - 20 filaments, which reach 3/4 of the segment length; segment 7 with 5 - 8 setae.

**Anal segments:** dorsolateral seta on segment 9 reaches 1/3<sup>rd</sup> of segment length; ratio supra-anal seta/anal papilla: 0.9 – 1.4 (n = 2).

*Cricotopus trifasciatus* (Meigen in Panzer, 1813)

**Body:** body length: 7.0- 8.0 mm.

**Head capsule:** yellow to light brown; occipital margin yellow; head width: 505 µm (n = 1).

**Antenna:** 5 segments; antennal blade extends to the end of 4<sup>th</sup> segment; length antenna 1: 55 – 63 µm; AR: 1.9 – 2.0 (n = 4).

**Mentum:** 6 lateral teeth and a relatively small median tooth; 2<sup>nd</sup> lateral tooth strongly reduced; MR: 1.6 – 1.9 (n = 3).

**Mandibula:** 3 inner teeth, color apically brown extending to molar area with wide pale base; dorsal margin crenulated.

**Premandibula:** bifid.

**Labrum:** bifid S1 with outer branch much longer than inner branch.

**Epipharynx:** pecten epipharyngis consisting of one conical scale and two strongly reduced toothlets joined proximally with the conical scale.

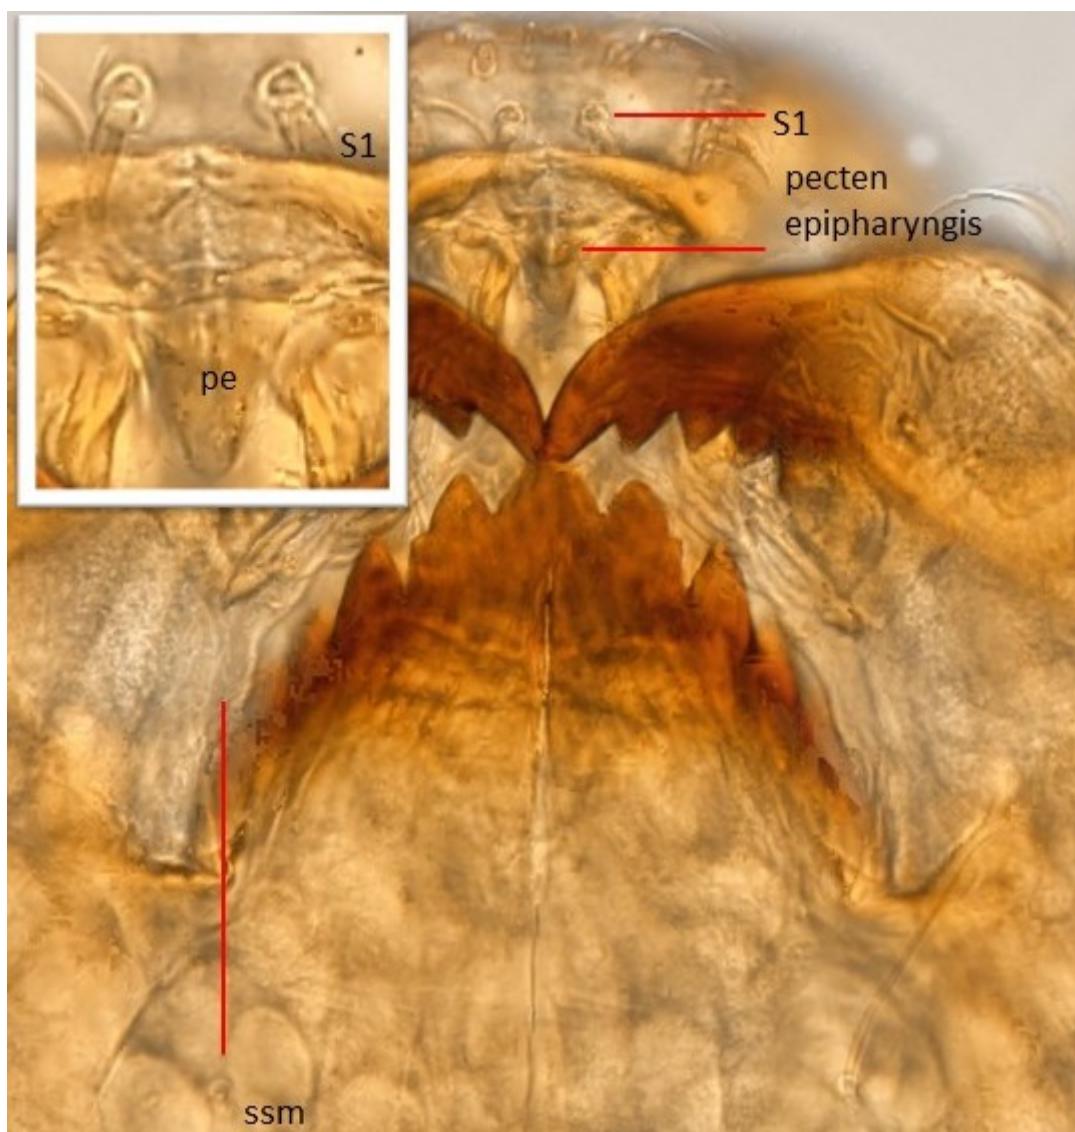

**Submental setae:** located at the level of the 6<sup>th</sup> lateral teeth; distance between setae: 124-129 µm (n = 2).

**Anterior parapods:** mid long claws with relatively coarse inner teeth which are one third in length as distal tooth; claw index: 2.8 - 3 (n = 2).

**Abdominal segments:** 1 - 6 bear posterolateral setal tufts of 6-11 filaments, which reach ½ - 3/4 of the segment length; segment 7 with 1 – 2 setae, rarely 3 – 5.

**Anal segments:** dorsolateral seta on segment 9 reaches 1/3 of segment length; ratio supra-anal seta/anal papilla: 0.7 – 1.2 (n = 10).

*Cricotopus* spec. Ronde Hoep

**Body:** body length: 4.0- 5.0 mm; color in alcohol blueish.

**Head capsule:** yellow, backside light brown; occipital margin light brown; wide head: 389 - 398  $\mu\text{m}$  (n = 3).

**Antenna:** 5 segments; antennal blade reaching to the end of 4<sup>th</sup> segment; length antenna 1: 54 – 56  $\mu\text{m}$ ; AR: 1.5 – 1.6 (n = 2).

**Mentum:** 6 lateral teeth and a relatively small median tooth; second lateral tooth strongly reduced; MR: 1.5 – 1.6 (n = 2).

**Mandibula:** 3 inner teeth, color apically brown extending to molar area with wide pale base; dorsal margin crenulated.

**Premandibula:** bifid.

**Labrum:** bifid S1 with outer branch much longer than inner branch.

**Epipharynx:** pecten epipharyngis consisting of one conical scale and two strongly reduced toothlets joined proximally with the conical scale.

**Submental setae:** located at the level of the mentum curve, further laterally than all other species of *C. sylvestris* species group; distance between setae: 102-122  $\mu\text{m}$  (n = 2).

**Anterior parapods:** Mid long claws with relatively coarse inner teeth which are one third as long as distal tooth; claw index: 3 (n = 1).

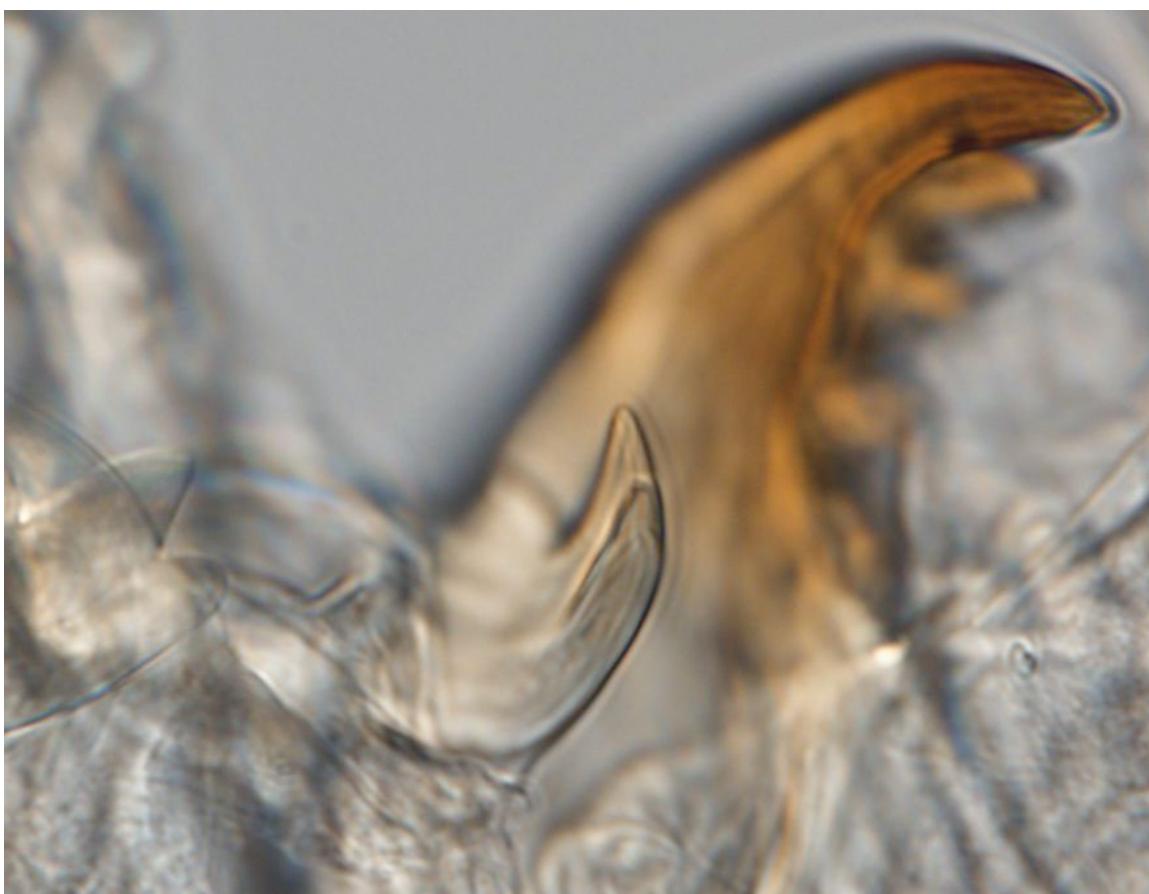

**Abdominal segments:** 1 - 6 bear posterolateral setal tufts of 10-15 filaments, which length is equal to the segment length; segment 7 with 5 setae.

**Anal segments:** dorsolateral seta on segment 9 reaches 1/2 of segment length; ratio supra-anal seta/anal papilla: 2.7 (n = 1).
