Medicine : Pathology

Murdock, T.A., Veras, E.F.T., Kurman, R.J., Mazur, M.T.

Diagnosis of Endometrial Biopsies and Curettings

A Practical Approach

- Richly illustrated in color
- Outlines criteria for diagnosis, helps in solving diagnostic dilemmas and clarifies controversial issues
- End of chapter "Clinical Queries and Reporting" clarifies how to best report findings in a clinically useful fashion
- Stresses practical aspects and common problems in endometrial biopsy interpretation

The 3rd edition of this text entails a comprehensive review of endometrial pathophysiology, including the recognition of physiologic conditions (i.e. normal phases and pregnancy), as well as the accurate interpretation of pathologic entities (i.e. polyps, endometritis, gestational trophoblastic diseases, endometrial hyperplasia, carcinoma, etc). The book will maintain a compact size with numerous illustrations and tables. Although, in its essence, the table of contents remains unaltered from the previous edition, we intend to incorporate significant updates related to the expansion of our knowledge of old and newer entities, use of immunohistochemical and molecular ancillary techniques to assist in the correct diagnosis, as well as two new chapters - one with recommendations/suggestions of appropriate terminology for a pathology report (sign out templates) and another one focusing on specific pitfalls /mimickers/confounding factors in the diagnosis of endometrial samples (surface metaplasias, cytoplasmic changes, endocervical contaminants). The complicated subject of hyperplasia and cancer precursors will include expanded commentary on the application of endometrial intraepithelial neoplasia (EIN) and how it relates to the traditional classification of endometrial hyperplasia. Additionally, a substantial number of new, all color images, some of which will be available in electronic format, will aid readers to fully understand and confidently classify such complex specimens.
