Revenue Estimate Profile

Individual Income Tax

Revenue Description: The tax is levied against taxable income, which is defined as Montana personal income adjusted for exemptions and deductions. Once tax liability is determined, the amount of tax due is computed by subtracting allowable credits.

Statutory Reference:

Tax Rate (MCA) – 15-30-2103, 15-30-2104, 15-30-2105

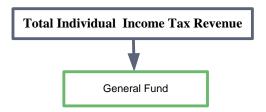

Tax Distribution (MCA) - 17-2-124(2)

Date Due -15^{th} day of the fourth month of the filer's fiscal year (15-30-2604). Withholding taxes are due monthly, quarterly, or on an accelerated schedule depending on income (15-30-2504). Estimated taxes are due on the 15^{th} day of the 4^{th} , 6^{th} , and 9^{th} month and the month following the close of the tax year.

Applicable Tax Rate(s): Tax rates vary from 1.0% to 6.9%, depending on the level of taxable income. Tax brackets, personal exemption amounts, and the standard deduction are adjusted for inflation each year. SB 407, enacted by the 2003 Legislature, created a new capital gains income tax credit. As a result, the tax rate on capital gains income was less than the tax rate on ordinary income by 1% in tax years 2005 and 2006, and by 2% in tax year 2007 and beyond.

Distribution: All proceeds are deposited into the general fund.

Distribution Chart:

Collection Frequency: Withholding and estimated taxes are collected monthly, bi-weekly, and weekly.

% of Total General Fund Revenue:

FY 2004 – 43.82%	FY 2007 – 45.04%	FY 2010 - 44.12%
FY 2005 - 46.13%	FY 2008 – 44.17%	FY 2011 - 45.78%
FY 2006 – 45.01%	FY 2009 – 45.09%	FY 2012 – 48.04%

Revenue Estimate Methodology:

Data

There are three kinds of data required to make forecasts of individual income tax revenue: historical individual income tax return data; state and national historical data on income, inflation, employment, and other economic variables; and forecasts of economic activity that determine income and deductions.

Actual individual income tax return data is supplied annually by the Department of Revenue (DOR). This data is usually available in November and is for the prior tax year. It includes line-by-line tax return information for each state income taxpayer (except those that have been removed because of the existence of certain federal information).

The historical information on type of income, inflation rates, employment and other economic variables is available from individual income tax returns, Bureau of Economic Analysis, Bureau of Labor Statistics, IHS and MA.

IHS provides forecasts of a wide variety of state and national economic variables that are used to assess overall state and national economic activity. These data are used to produce future growth rates for each income and deduction item, as explained in the methodology section below.

Revenue Estimate Profile

Individual Income Tax

Analysis

An individual income tax simulation model is used to forecast Montana calendar year individual income tax liability for all residents. These forecasts are converted to fiscal year liability and are adjusted for audits, legislative impacts and one-time events. The model includes the effects of SB 407, which changed the individual income tax system in Montana and was passed by the 2003 legislature. This legislation collapsed 10 tax brackets with a top tax rate of 11% into a system of 7 tax brackets with a top rate of 6.9%, and limited the deductibility of federal taxes paid to \$5,000 for single taxpayers and \$10,000 for married taxpayers.

The calendar year state tax liability forecast is developed by applying growth rates to each resident taxpayer's income and deduction items. The latest year for which tax return data is available is tax year 2011; therefore, growth rates must be formulated for tax years 2012 through 2015 and applied to each taxpayer's 2011 tax return data. The result is a forecast of calendar year state individual income tax liability for each resident, the sum of which produces a statewide forecast of individual income tax liability for each year.

The statewide forecast of resident liability is multiplied by an all-filers percentage to include the tax liability for nonresidents and partial-year residents. In tax year 2011, the tax liability of nonresidents and part-time residents amounted to 7.3% of resident filers' liability. Next, the all-filers calendar year tax liability is adjusted by the expected growth in the number of taxpayers. This results in a forecast of total calendar year individual income tax liability before credits. An estimate of allowable credits is deducted, producing a calendar year individual income tax liability for each future year.

Fiscal Year Conversion

The calendar year liabilities are converted to fiscal year liabilities by summing 50% of the prior calendar year's liability with 50% of the current calendar year tax liability.

Audits and Other Assumptions

After fiscal year liabilities are determined, growth rates between fiscal years are calculated; these growth rates are applied to the base year (FY 2012) collections of individual income tax to produce forecasted collections before audits and other adjustments. Projected audit revenue and any other adjustments are added in, resulting in total fiscal year collections. The table below summarizes these assumptions:

Audit and O	ther Assumptions (Millions	5)	
		Fiscal Year	
	2013	2014	2015
Audits, Penalties and Interest	\$36.049	\$36.734	\$37.245
