SUMMARY

A total of 554 taxa (species, subspecies and varieties), 527 native and 27 weeds were recorded from 71 plant families in the course of a survey on Charles Darwin Reserve in 2007-2008 by volunteers of the Wildflower Society of Western Australia. Nineteen threatened species comprising five Priority 1 taxa, one Priority 2 taxon, twelve Priority 3 taxa and one Priority 4 taxon were located within the study area. Thirty-four quadrats were established within six of the fifteen land systems.

A field herbarium of specimens held in 24 A4 lever arch files has been given to Bush Heritage. Most of the specimens have been vouchered at the WA Herbarium. A small reference herbarium has also been compiled for ready use by visitors, of specimens representing taxa in the vicinity of the homestead.

1 INTRODUCTION

The Wildflower Society's Bushland Plant Survey Project is a community project that has been in existence since 1988. It has the combined objectives of learning through involvement and bushland conservation. It is based on the belief that by developing an understanding of our surroundings we are better able to value them. It aims to help community groups and individual landholders know and conserve their bushland by providing training and help to survey, document and monitor vegetation and flora. In particular it encourages the recognition of native plants and plant communities. This knowledge can then be utilised in the management and conservation of the bushland.

Within this program the Wildflower Society of Western Australia (WSWA) conducted a survey and compiled a field herbarium for Eurardy Station (WSWA 2005). That project highlighted the flora and vegetation values of Eurardy, playing an important part in its purchase by Australian Bush Heritage. Through ongoing connections of volunteers and the recognition by Bush Heritage of the value of the Eurardy Field Herbarium project, it was agreed to conduct a similar project at Charles Darwin Reserve. This Reserve is renowned for its York Gum and mixed Salmon Gum and Gimlet Woodlands which have been widely cleared elsewhere; natural salt lakes; and its wildflowers, with carpets of daisies and a wide selection of shrubs bursting into flower in spring. The WSWA applauds and supports Bush Heritage's aims of protecting the biodiversity of the area by purchasing Charles Darwin Reserve for the purpose of conservation.

It was agreed that the aim of the project was to survey several areas of the Reserve, in order to provide a species list and field herbarium to complement existing floristic and vegetation information for the Reserve and to provide voucher specimens for incorporation into the Western Australian Herbarium. Over 2007 and 2008, forty volunteers from the WSWA Bushland Plant Survey Project visited Charles Darwin Reserve to conduct the survey work. This involved the establishment of 34 permanent quadrats and general (opportunistic) collecting. Identification of the specimens and compiling of the field herbarium was conducted by volunteers at the WA Herbarium from the time of the first collections in 2007 through to 2010. This report marks the completion of the project.

2 STUDY AREA

Charles Darwin Reserve (also known as White Wells Station) is approximately 375 km north-east of Perth, in the Shire of Perenjori (Map 1). It is 68,600 hectares in size and, when acquired by Bush Heritage in 2003, operated as a sheep station. It has a semi-desert Mediterranean climate. Average annual rainfall at the Reserve is about 314 mm (Bureau of Meteorology 2010). Rain falls predominantly in winter as a result of southern low pressure systems and associated cold fronts; summer rain occurs sporadically as thundershowers or associated with tropical cyclones or rain-bearing depressions (Burbidge *et al.* 1989). It is, however, highly variable and in 2000 to 2002 and 2005 and 2006, the winter rains failed. Fortunately the area received “average” rains in the year of this survey with 364.4 mm being recorded at White Wells weather station in 2008.

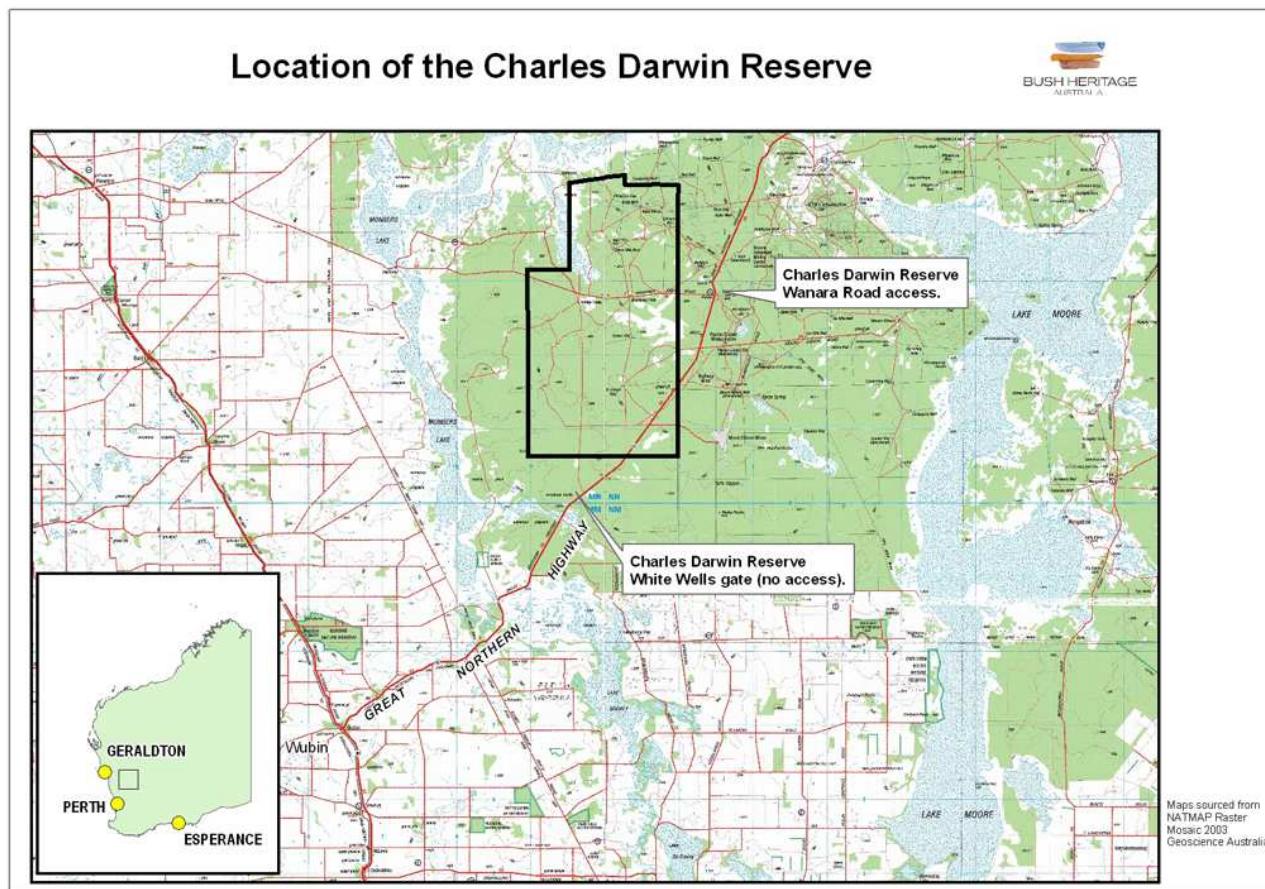

The general physiography is subdued, with topographical variation of only a few metres between the tops of breakaways and beds of salt lakes. The weathered and eroded landscape is one of vast sand plains, low ridges of laterite or granite bedrock, breakaways and extensive natural salt lake systems. Lake Moore is to the east of the Reserve and Lake Monger is to the west.

A recognised method of mapping and describing the geology, landform, climate, soils and native vegetation of rangeland areas is by using land systems. A land system was defined by Christian and Stewart (1953) as an “area with a recurring pattern of topography, soils and vegetation”. Fifteen land systems have been identified in the Reserve (Payne *et al.* 1998) (see Appendix 1, Table 2). For an interesting account by Charlie Nicholson of the derivation of the Land System names go to “The Charles Darwin Reserve Community History” on the Australian Bush Heritage web site (Bush Heritage Australia 2010).

Vegetation in Western Australia has been described on a broad scale in a series of publications by Beard. He divided the state into botanical provinces, districts, subdistricts and systems. Within this framework Charles Darwin Reserve falls on the border of the Avon Botanical District in the Wheatbelt Region of the South-West Botanical Province, and the Austin Botanical District of the Murchison Region of the Eremaean Botanical Province (Beard 1976, 1981, 1990). Beard’s Avon Botanical District corresponds with the Interim Biogeographic Regionalisation for Australia (IBRA) Avon Wheatbelt region and his Austin Botanical District corresponds with the Yalgoo IBRA region (Environment Australia, 2000). The Yalgoo region is an interzone, between southwest bioregions and the Murchison IBRA region. Twelve vegetation associations described by Beard are represented on Charles Darwin Reserve. They are described in the management plan (Australian Bush Heritage Fund 2006).

As a result of its location, the Reserve falls in a transitional zone between the temperate, species rich South-West (a biodiversity hotspot) and the arid Eremaean Botanical Provinces, straddling the mulga-eucalypt line, with its flora and vegetation displaying some characteristics of each. To quote Charlie Nicholson *“The Mulga-Eucalypt line can be drawn as a line on a map: it is a real phenomenon on the ground. It is possible to see the change from dense shrublands on yellow sandplain and York gum woodlands on red loamy soils, to the stony red earths with their covering of open acacia shrubland as one moves into the north-eastern end of Charles Darwin Reserve, from Seven Mile Well to Christmas Bore.”*

Flora and vegetation work specific to the Reserve had been limited prior to the commencement of this project. Collections were made by Western Australian Herbarium botanists Sue Patrick and Daphne Edinger in 2003 and 2004, and the weed species were collected by Dr Ian Clarke of the Herbarium of Victoria in 2005. Bush Heritage volunteer Len Warren has carried out detailed observations and understorey plant collections in some Salmon Gum and York Gum Woodlands on the Reserve since 2004 (Warren 2010). As part of the new Climate Change Observatory Project the WA Herbarium recently conducted flora survey work which, along with this project, adds significantly to the collections for the Reserve.

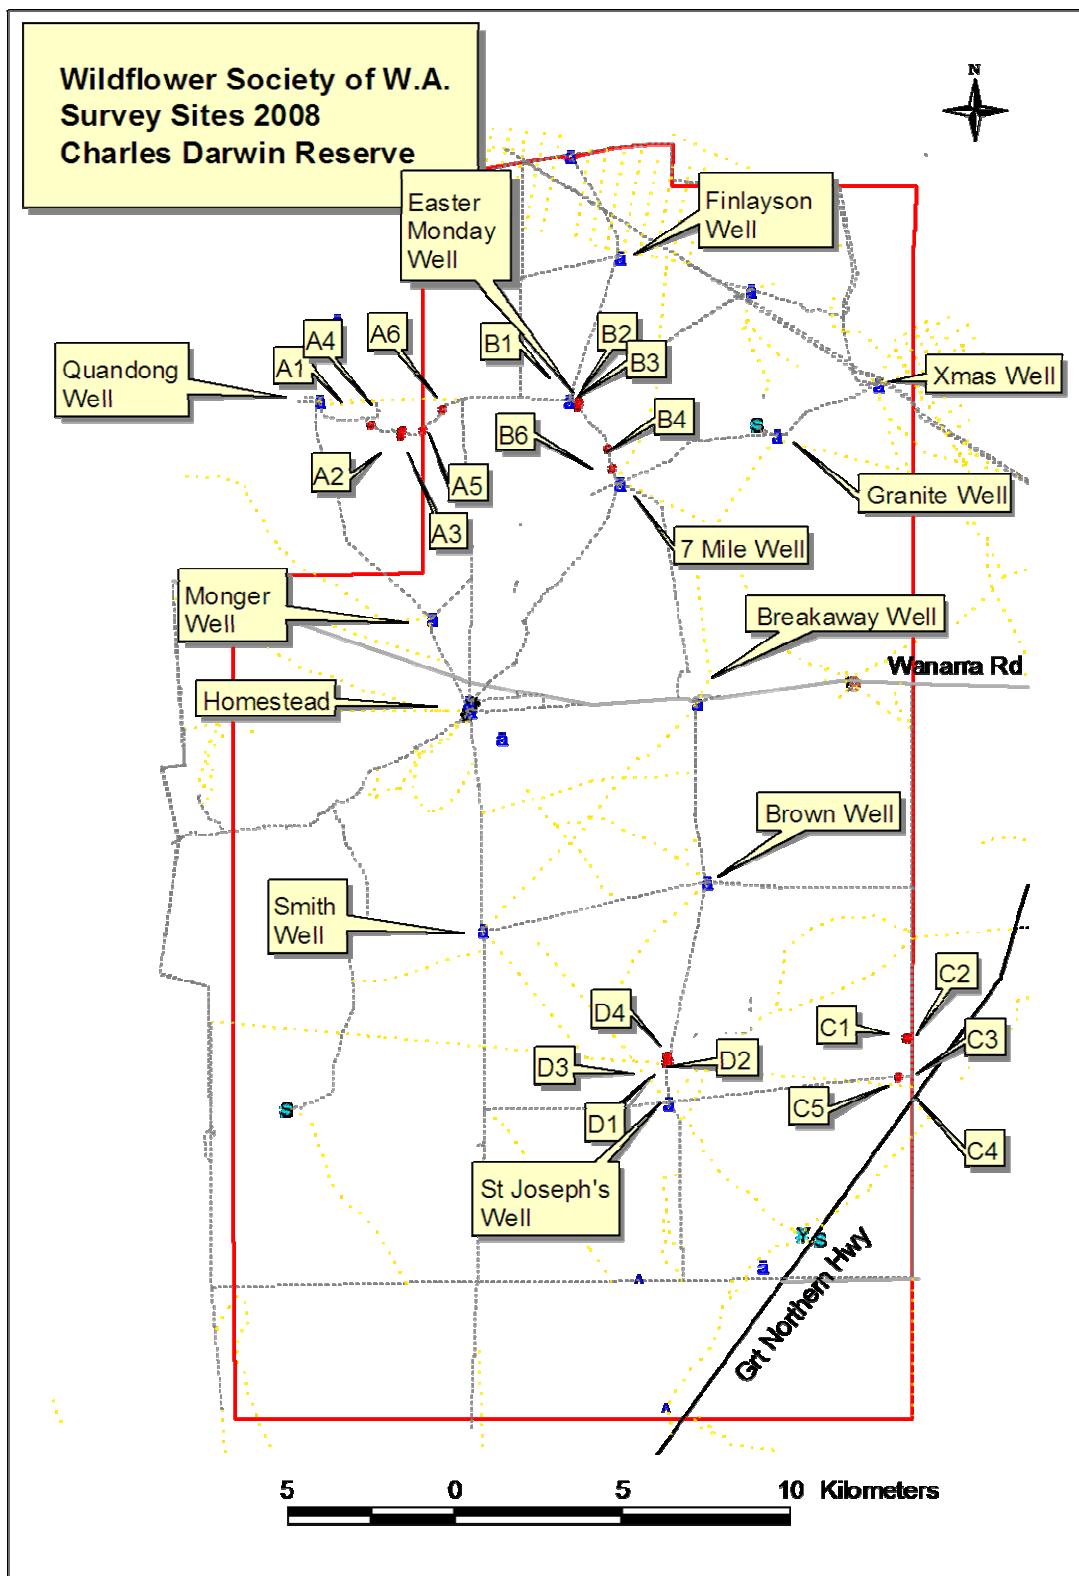

Map 1 Location of Charles Darwin Reserve

3 METHODS

The standard survey techniques used are well described in the Wildflower Society publication "Bushland Plant Survey for the Community" (Keighery 1994). The methods have proved successful for community participation with the use of quadrats and standardised data sheets providing a systematic procedure for the collection of information, ensuring all species, not just the most conspicuous, are sampled. In this project large 20 m x 20 m quadrats were used in order to adequately sample the vegetation. The quadrats were marked with galvanised steel fence droppers and the markers left in position enabling them to be relocated for future monitoring. Their position was recorded by GPS co-ordinates.

Three previsits were conducted on 28th – 29th August 2007 (five WSWA participants); 23rd March 2008 (one WSWA participant) and 11th – 13th July 2008 (four WSWA participants). The purpose of the previsits was to familiarize with the landscape and plan a suitable program for survey weekends involving at least 20 volunteers. Suitable quadrat locations were determined for the upcoming surveys, to enable sampling of a range of plant communities within a reasonable distance of the homestead. Survey areas were selected on the basis of sampling different vegetation communities within areas of highest priority indicated by the Bush Heritage managers. Sites also needed to be readily accessible. Given the size and diversity of the Reserve, a comprehensive survey of all vegetation types was impossible. For example, the northern area of the Reserve including the banded ironstone and gold mining site was not included and lower priority was given to the sandplain vegetation. Greatest emphasis was given to granites. The quadrats located according to land system are listed in Appendix 1, Table 2.

Map 2 Wildflower Society of WA survey sites at Charles Darwin Reserve - August 2008

It was decided to conduct two surveys, one early in spring and one later, so that plants and habitats that flower at different times would be sampled. For example, granite areas flower early but are finished by the time the sandplain comes into flower. The first survey was held on 22nd - 25th August 2008, and was hosted by locum managers Len and Valerie Warren. Twenty-six participants established twenty-one 20 m x 20 m quadrats (A1-A6, B1-B5, C1-C5, D1-D5; see Map 2), both north and south of the homestead. Data was recorded by groups of volunteers led by a botanist or experienced volunteer.

The second survey was held on 10th – 13th October 2008, and was hosted by managers Kurt and Andrea Tschirner. Twenty-three participants established a further thirteen 20 m x 20 m quadrats (W1-W4, X1-X5, Y1-Y4; see Map 3), revisited some of the August quadrats and made several opportunistic collections, including around the homestead. The purpose of the revisits was to collect further material of any plants that were not yet in flower in August (eg. grasses). Opportunistic collections were conducted to collect good flowering material for herbarium specimens, especially of plants that might not have been recorded in quadrats.

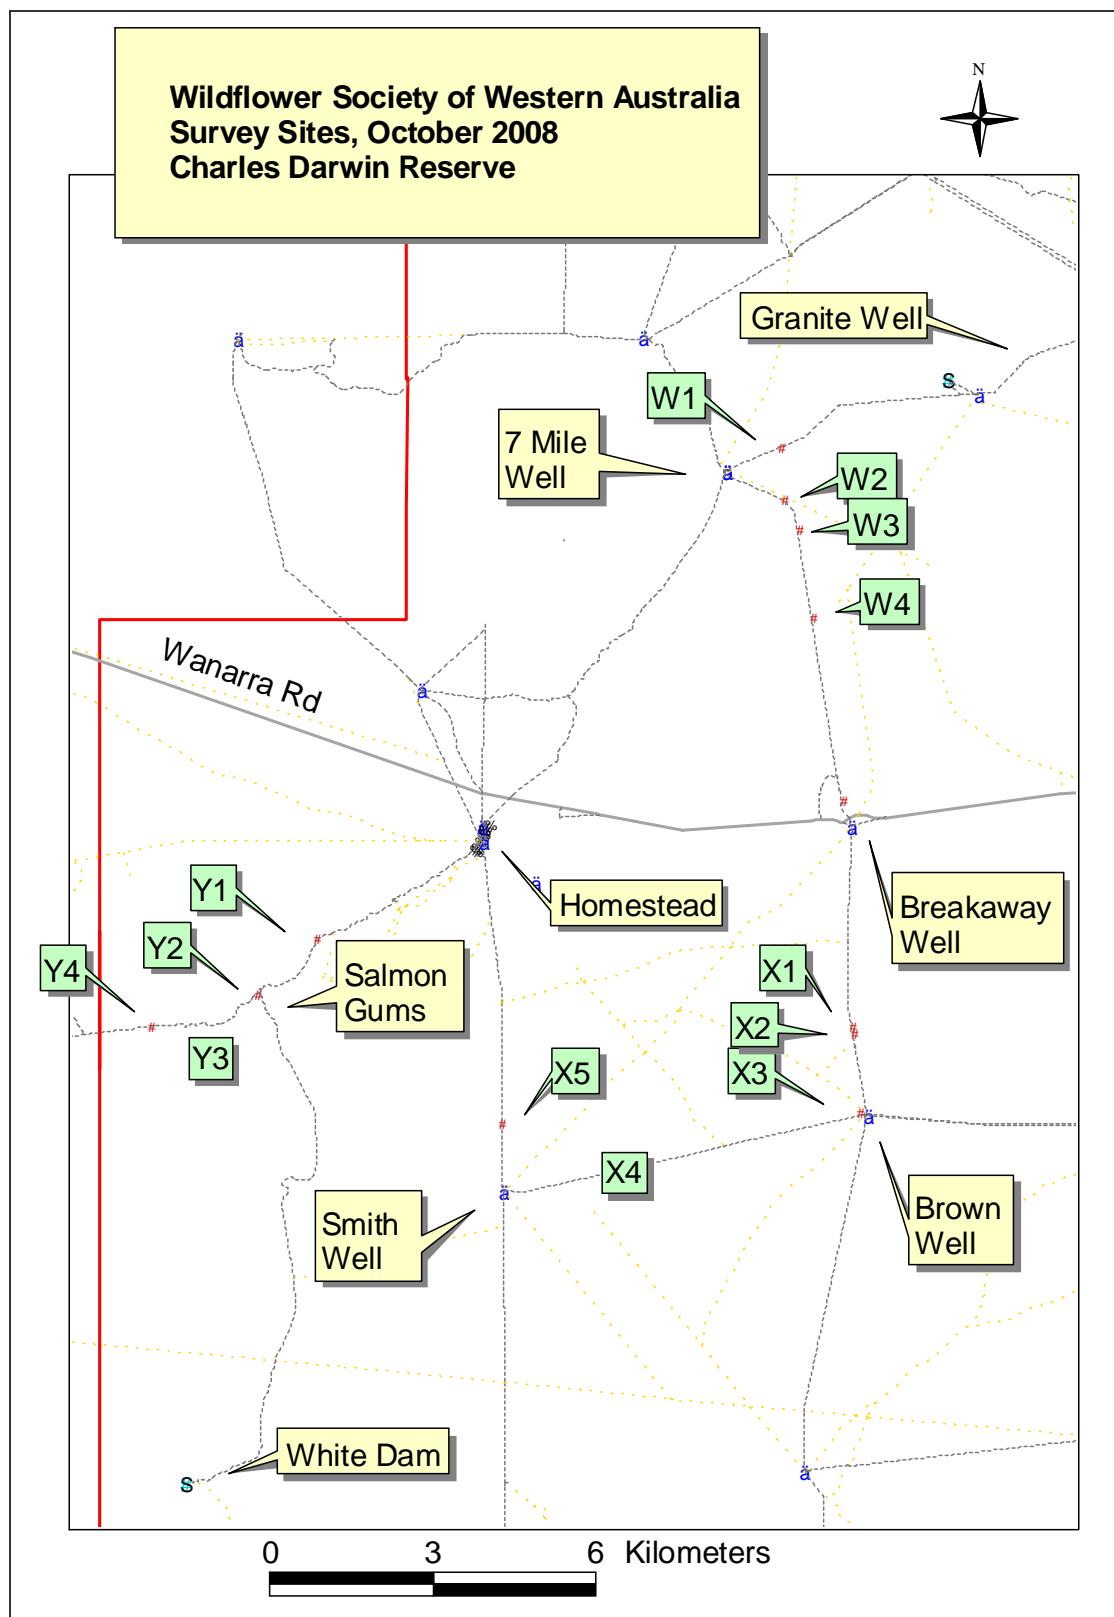

Because of high visitation to Charles Darwin Reserve it was felt a reference set of species growing close to the homestead would be a useful resource for the visitor's quarters. So a collection of specimens from the area around the homestead was made. A separate little field herbarium with colour scans of specimens has been made as a useful and durable ready reference for visitors.

The season for the surveys was good with sufficient rains for spectacular shows of flowers (including annuals) in most areas, especially the granites.

At the completion of field work specimens were pressed and taken to Perth for drying. Identification work was then carried out by a band of volunteers in regular sessions at the Western Australian Herbarium. All plant specimens were verified against specimens from the WA Herbarium with many specimens verified with the help of specialist botanists.

Once identifications were completed, for each of the species, material suitable for mounting for a WA Herbarium voucher, with a duplicate for the Charles Darwin Reserve field herbarium, was selected. Some species had been collected on several sampling sites, some only once. In a few cases there was inadequate material for a WA Herbarium voucher. Some specimens were sterile and could not be identified.

Descriptions for the herbarium labels were compiled from the information gathered on the quadrat data sheets. Specimen data was typed onto the Herbarium Max software program, ready for database staff to produce duplicate labels – one for the WA Herbarium voucher and one for the field herbarium, each with its identifying barcode. This barcode, located in the bottom right hand corner of the specimen sheet, means that name changes and re-identifications can be tracked in the future through FloraBase (WA Herbarium 1998-). FloraBase is an online record of the WA Herbarium collection.

Map 3 Wildflower Society of WA survey sites at Charles Darwin Reserve – October 2008

4 RESULTS

4.1 FLORA

A total of 554 taxa (species, subspecies and varieties), 527 native and 27 weeds were recorded from 71 plant families (Appendix 2a). These were comprised of 353 perennials and 201 annuals. Included are 35 taxa which were unable to be identified to species level. This includes records from the 34 quadrats and adjacent areas, collections made on site previsits and opportunistic collections along tracks and around the homestead (Appendix 2b).

Eleven plant families accounted for 60 % of the total taxa, four families for 40%, with the daisy family (Asteraceae) being the largest group with 70 native taxa and 6 weeds. The top eleven species rich families were as follows:

Family	No. native taxa	No. weed taxa	Total no. taxa
Asteraceae (daisies)	70	6	76
Fabaceae (incl Mimosaceae- wattles)	57 (37)	0	57
Myrtaceae	52	0	52
Chenopodiaceae	39	0	39
Poaceae (grasses)	21	6	27
Proteaceae	20	0	20
Goodeniaceae	16	0	16
Portulacaceae (<i>Calandrinia</i>)	15	0	15
Amaranthaceae	14	0	14
Scrophulariaceae (<i>Eremophila</i>)	14	0	14
Asparagaceae	13	0	13

This survey does not provide a full representation of the flora of the reserve, having surveyed only 6 of the 15 land systems but has added significantly to the records for the Reserve. At the time of planning for this survey only 222 species of native flowering plants from Charles Darwin Reserve had been identified by the WA Herbarium with a further 80 specimens awaiting identification (ABHF Management Plan 2006).

Most of the taxa recorded in this survey have been vouchered with the WA Herbarium (Appendix 3). That is, they have been mounted, labelled, entered onto FloraBase (WA Herbarium 1998-) and incorporated into the main herbarium collection. Duplicates have been mounted for the Charles Darwin Reserve field herbarium with herbarium labels and barcodes attached. Some field herbarium duplicates carry different locality labels to the herbarium voucher. In these cases there was insufficient material from one quadrat for a voucher and its duplicate. The specimen will match the taxon which has been barcoded. Some un-vouchered specimens have been included in the field herbarium so they do not carry a barcode.

The field herbarium specimens have been mounted on A4 sheets in plastic sleeves, held in 24 lever arch files. The specimens have been arranged alphabetically in plant **families** and within families alphabetically by **genera**. Grasses, rushes, sedges and sedge-like herbs have been grouped together in one file; they have similar life forms and it was considered this would make identification easier for users. The weeds have been grouped alone in another file as it is considered important to any bushland management to be able to distinguish between a native plant and an introduced plant. All specimens in the field herbarium have been scanned and have been given to Bush Heritage on disc.

Copies of the quadrat field recording sheets have also been given to Bush Heritage.

4.1.1 Declared Rare and Priority Flora (Table 1)

No declared rare flora were recorded. Nineteen threatened species (Priority taxa) (Atkins 2010) were located within the study area. These comprised five Priority 1 taxa, one Priority 2 taxon, twelve Priority 3 taxa and one Priority 4 taxon. Rare and threatened species are protected under the *Wildlife Conservation Act 1950* and

their management falls under the jurisdiction of the Department of Environment and Conservation (DEC). Priority taxa are those which have uncertain conservation status. The various categories relating to threatened flora and their meanings are summarised in Appendix 1, Table 1.

No EPBC taxa (conservation taxa at the Commonwealth level, under the Environment Protection and Biodiversity Conservation Act 1999) or IUCN taxa (conservation taxa at an International level, according to the IUCN Red List of Threatened Species) were recorded.

Table 1 Priority flora recorded by the Wildflower Society on Charles Darwin Reserve

Botanical name	Family	Conservation Code
<i>Acacia cerastes</i>	Fabaceae	P1
<i>Acacia</i> sp. Goodlands (B.R. Maslin 7761)	Fabaceae	P1
<i>Lepidosperma</i> sp. Blue Hills (A. Markey & S. Dillon 3468) PN	Cyperaceae	P1
<i>Mirbelia cordifolia</i> MS	Fabaceae	P1
<i>Philotheca nutans</i>	Rutaceae	P1
<i>Stenanthemum poicilum</i>	Rhamnaceae	P2
<i>Acacia formidabilis</i>	Fabaceae	P3
<i>Austrostipa blackii</i>	Poaceae	P3
<i>Calotis</i> sp. Perrinvalle Station (R.J. Cranfield 7096) PN	Asteraceae	P3
<i>Gnephosis</i> sp. Norseman (K.R. Newbey 8096) PN	Asteraceae	P3
<i>Elatine macrocalyx</i>	Elatinaceae	P3
<i>Enebatus longistylus</i> MS	Myrtaceae	P3
<i>Euryomyrtus recurva</i>	Myrtaceae	P3
<i>Gunniopsis rubra</i>	Aizoaceae	P3
<i>Persoonia pentasticha</i>	Proteaceae	P3
<i>Podotheca uniseta</i>	Asteraceae	P3
<i>Psammomoya implexa</i>	Celastraceae	P3
<i>Tricoryne</i> sp. Morawa (G.J. Keighery & N. Gibson 6759) PN	Hemerocallidaceae	P3
<i>Wurmbea murchisoniana</i>	Colchicaceae	P4

- ***Acacia cerastes* Priority 1**

The earliest collection of this shrub with intricate wiry branches and reduced phyllodes was made in 1952 by Gardner on slopes of Mt Gibson. Twenty collections are in the Western Australian Herbarium, one from White Wells (Charles Darwin Reserve) in 2004 and one from this survey in 2007; the remainder are from Ninghan Station and Mt Gibson. So it has a limited known distribution and occurs on granites and banded ironstone.

- ***Acacia* sp. Goodlands (B.R. Maslin 7761) Priority 1**

Prior to this survey, only 3 collections were recorded on FloraBase from locations NE of Kalannie on sandy loam flats. It is a dense domed shrub, wider than high with erect phyllodes. It was initially mistaken for *Acacia coolgardiensis* in this survey and recorded from four locations in the Reserve. It appears to be a colonizer species, being recorded as regrowth on the Kalannie specimens and two in this survey from fire regrowth areas in the Bannar Land System and one from the Joseph Land System.

- ***Lepidosperma* sp. Blue Hills (A. Markey & S. Dillon 3468) PN Priority 1**

This sedge was first recognised as a new taxon from collections made on Karara Station in 2005. Of six specimens in the WA Herbarium 3 are from Karara Station and 3 from Charles Darwin Reserve. It is well represented on the Reserve, being recorded on six quadrats around granites in this survey.

- ***Mirbelia cordifolia* MS Priority 1**

Prior to this collection only 2 specimens were recorded on FloraBase. This shrub was recorded twice in this survey – in regrowth after 2003-04 fires on yellow sand in the Bannar land system and at the base of St Joseph's granites. These occurrences are considerable eastern extensions of the previously collected populations.

○ ***Philotheeca nutans* Priority 1**

Several specimens have been collected from the region including some from White Wells in the early 1990's. It was not collected during this survey but was noted by visitors to Charles Darwin Reserve and a specimen sent to the Wildflower Society for identification. The pendulous red flowers are distinctive compared to the other six *Philotheeca* taxa recorded on the Reserve.

○ ***Stenanthesum poicilum* Priority 2**

This small shrub with white flowers has been recorded in an area from Mullewa to Perenjori, Blue Hills Range, Koolanooka and Warriedar. A specimen was collected on White Wells station (the Reserve) in 2004. In this survey it was recorded only once on yellow sandy loam in the Pindar land system in regrowth from 2002 fires.

○ ***Acacia formidabilis* Priority 3**

This prickly, glaucous wattle was first collected in the White Wells area by Charles Gardner in 1960. It has also been recorded from near Southern Cross, Merredin, Koolyanobbing and Paynes Find. It was recorded in this survey in regrowth after 2003-04 fires on yellow sand in the Bannar land system.

○ ***Austrostipa blackii* Priority 3**

This perennial grass is found mainly in the eastern states of Australia. It has a scattered distribution in WA – records from Yandhanoo Hills, the south west and the Goldfields area. It was recorded from only one quadrat in this survey in the Euchre Land System on the slopes of a granite breakaway.

○ ***Calotis* sp. Perrinvale Station (R.J. Cranfield 7096) PN Priority 3**

An annual herb with several collections from Karara Station, Blue Hills, Golden Grove and Perrinvale Station on banded ironstone formations. It was recorded once in this survey on rock outcrop near Easter Monday Well.

○ ***Elatine macrocalyx* Priority 3**

This prostrate herb is found on the edge of wetlands and only 3 other collections have been made in WA. This record from one of the dams near the homestead extends its known distribution westwards.

○ ***Enekbatis longistylus* MS Priority 3**

This pink flowering spreading shrub has been well collected in the Perenjori area and seems to be confined to an area between Morawa and Charles Darwin Reserve. It was recorded once in this survey in regrowth after 2003-04 fires on yellow sand in the Bannar land system.

○ ***Euryomyrtus recurva* Priority 3**

Another myrtaceous shrub with 23 records on FloraBase from the local region and areas further north-east and east. It has been recorded from Lake Moore but this appears to be the first record for Charles Darwin Reserve.

○ ***Gnephosis* sp. Norseman (K.R. Newbey 8096) PN Priority 3**

FloraBase had 8 records from 5 different locations of this low spreading annual daisy. This collection from around the Charles Darwin Reserve homestead is a significant north-west extension of its range.

○ ***Gunniopsis rubra* Priority 3**

This succulent annual herb has been fairly widely collected in a range of habitats from ironstone ranges to saline depressions. This was the first collection on Charles Darwin Reserve from under Salmon Gum Woodland.

○ ***Persoonia pentasticha* Priority 3**

There are 39 records on FloraBase of this proteaceous shrub with pungent 5 ribbed leaves, mostly from banded iron formations in the region. It was recorded on three quadrats in this survey, twice in Woodlands on granites near Easter Monday Well and in *Callitris columellaris* Woodland in the Bannar land system.

○ ***Podotheca uniseta* Priority 3**

This semi-succulent annual daisy has been collected in several locations and favours saline habitats. This collection was on a dune between salt lakes in the Carnegie land system.

○ ***Psammomoya implexa* Priority 3**

This much branched shrub was first collected by Charles Gardner in 1945 near Wilroy and again in 1953 near Ninghan. It has since been collected over an area from Mullewa to Lake Mollerin often in Mallee or Shrublands. It was recorded once in this survey in regrowth after 2003-04 fires on yellow sand in the Bannar land system.

○ ***Tricoryne* sp. Morawa (G.J. Keighery & N. Gibson 6759) PN Priority 3**

Eight collections of this sprawling herb had been made since 1980 from an area east of Morawa to Nungarin. It was recorded four times in this survey, twice around laterite breakaways in the Euchre land system and twice in Woodlands in the Pindar land system. It has recently changed from Priority 1 to Priority 3.

○ ***Wurmbea murchisoniana* Priority 4**

This annually appearing herb with a perennial corm and white flowers favours seasonally inundated hollows and rock pools. It has been recorded from scattered locations north from Eurardy Station and the Murchison River and south to Norseman. It was recorded in August five times during this survey, on granites in the Euchre land system.

It is interesting to note that multiple Priority taxa were recorded on some quadrats:

Four were recorded on quadrat WSWA B2 (*Lepidosperma* sp. Blue Hills (A. Markey & S. Dillon 3468) PN, *Calotis* sp. Perrinvale Station (R.J. Cranfield 7096) PN, *Persoonia pentasticha* and *Wurmbea murchisoniana*). This was on the edge of a granite outcrop near Easter Monday Well.

Three were recorded on quadrat WSWA C4 (*Lepidosperma* sp. Blue Hills (A. Markey & S. Dillon 3468) PN, *Austrostipa blackii* and *Wurmbea murchisoniana*). This was on the slope of a granite breakaway.

Three were recorded on or adjacent to quadrat WSWA D2 (*Acacia cerastes*, *Lepidosperma* sp. Blue Hills (A. Markey & S. Dillon 3468) PN, *Mirbelia cordifolia*). This was at the base of the St Joseph's Well granite outcrop.

Four were recorded on quadrat WSWA WI (*Acacia formidabilis*, *Acacia* sp. Goodlands (B.R. Maslin 7761), *Enekباتus longistylis* and *Mirbelia cordifolia*). This was between 7 Mile Well and Granite Well in regrowth after 2003-04 fires on yellow sand in the Bannar land system.

Two were recorded on quadrat WSWA B6 (*Crassula colorata* var. *miriamiae* and *Tricoryne* sp. Morawa (G.J. Keighery & N. Gibson 6759) PN). This was on another granite outcrop between 7 Mile Well and Easter Monday Well.

Two were recorded on quadrat WSWA X5 (*Stenanthemum poicilum* and *Tricoryne* sp. Morawa (G.J. Keighery & N. Gibson 6759) PN). As well, *Actinotus* sp. Comet Vale (A.V. Milewski AVM 1093) was recorded on the roadside adjoining this quadrat and this record was a significant range extension westwards of this annual herb. This quadrat was in regrowth from a 2002 fire, north of Smith Well towards the Homestead on a yellow sandy loam flat.

Other Priority Taxa recorded for Charles Darwin Reserve

The following taxa have been recorded for the Reserve but were not recorded in the course of this survey (Australian Bush Heritage Fund 2006 and FloraBase).

Botanical name	Family	Conservation Code
<i>Comesperma griffinii</i>	Polygalaceae	P2
<i>Grevillea subtiliflora</i>	Proteaceae	P3
<i>Micromyrtus acuta</i> (formerly <i>M. cuensis</i>)	Myrtaceae	P3
<i>Verticordia venusta</i>	Myrtaceae	P3

4.1.2 Geographically significant flora

The distribution of species which have been collected throughout the state and incorporated into the collection of the Western Australian Herbarium is recorded on FloraBase. Survey records and field experience combined with this information enables a picture of the distribution of species to be developed. As more survey work is carried out within Western Australia, the knowledge of species occurrences will continue to change. For example this survey has extended the range of the following species:

- *Actinotus* sp. Comet Vale (A.V. Milewski AVM 1093) - a significant range extension westwards of this annual herb.
- *Lobelia anceps* an eastern extension of its northern range.

4.2 VEGETATION

Vegetation was recorded for each of the 34 quadrats and the descriptions are attached in Appendix 2e. Vegetation structure (Appendix 1, Table 3) and condition (Appendix 1, Table 4) were recorded according to Keighery (1994). As the purpose of the project was to increase the knowledge of the flora of the Reserve and to compile a field herbarium, no attempts to analyse the vegetation data have been made. Len Warren's studies of "The Salmon Gums" (quadrat WSWA Y2) and the York Gum Woodlands offer insights and detailed descriptions of these two vegetation types (Warren 2010).

Broadly speaking the quadrats were selected to adequately sample a selection of vegetation types in different land systems as follows:

WSWA Quadrat	Vegetation type	Landsystem
A1-6	Salt lake samphires and surrounding dunes	Carnegie
B1, C2, C5	York Gum (<i>E. loxophleba</i>) Woodland on granites and breakaways	Euchre
B2-6, C1, C3-4	Shrublands and Herblands on granites and breakaways	Euchre
D1-5	Herblands and surrounding shrublands of granite outcrops	Bandy
W1-2	Fire regrowth Shrublands	Bannar
W3	Cypress Pine (<i>Callitris columellaris</i>) Woodland	Bannar
W4	Mixed Shrublands	Bannar
X1	Fire regrowth <i>E. leptopoda</i> Mallee over Acacia Shrublands	Joseph
X2	<i>E. subangusta</i> Mallee over Acacia Shrublands	Joseph
X3	<i>E. kochii</i> Mallee over Acacia Shrublands	Joseph
X4	York Gum (<i>E. loxophleba</i>) Woodland on red soils	Pindar
X5	<i>E. horistes</i> Mallee over Shrublands	Pindar
Y1, Y4	Mixed Shrublands	Joseph
Y2	Salmon Gums (<i>E. salmonophloia</i>) Woodland	Euchre
Y3	<i>E. subangusta</i> Mallee	Euchre

5 ACKNOWLEDGEMENTS

Thank you to the recent managers of the Reserve, Kurt and Andrea Tschirner (and Geri and baby Maia) whose whole-hearted support allowed the surveys to take place. Bush Heritage contributed to the costs of materials for the Field Herbarium and for report printing.

The help and enthusiasm of the Wildflower Society volunteers and botanists along with Friends of Charles Darwin Reserve were vital and they all gave generously of their time. Special acknowledgment must go to the dedicated group of volunteers who carried out the lion's share of work each Wednesday at the WA

Herbarium. This project was almost totally a volunteer effort. More than 4,500 hours were volunteered by 46 people over the four years. Project co-ordinator Vanda Longman was supported in part by funds from the Wildflower Society and also gave generously of her own time.

Participants in the previsits and surveys were Logan Anderson, Anne and Alan Bellman, Arthur Blundell, Kate Brown, Ross Cockerell, Geoff Corrick, Margaret Corrick, Hazel Dempster, Janet and Barry Dufall, Helen and Keld Frederiksen, Elizabeth George, Ann Gunness, Rosemary Harper, Bronwen and Greg Keighery, Margaret and Jeff Langley, Margaret Larke, Kristina, Arie, Aidan and Ella Lemson, Vanda Longman, Nina McLaren, Diane and Gary Matthews, Brian Moyle, Dorothy Perret, Phylis Robertson, Marta Rossignoli, Tracy Scott, Nina Stick, Alice Stubber, Lorraine Todd, Margaret Tyrka, Len and Valerie Warren, Pat Wenham and Mary Yates.

The work at the Western Australian Herbarium, including plant sorting and identification, input of data to plot sheets, entering data onto Max, mounting and labeling voucher specimens and compiling the field herbarium was carried out by Anne Bellman, Arthur Blundell, Geoff Corrick, Hazel Dempster, Elizabeth George, Ann Gunness, Rosemary Harper, Cyril Kelly, Georgina Lambert, Margaret Larke, Kristina Lemson, Melissa and Vanda Longman, Brian Moyle, Sue Pedrick, Dorothy Perret, Phylis Robertson, Alice Stubber, Pat Wenham and Mary Yates.

Plant identifications were verified at the Western Australian Herbarium with the assistance from the following specialists: Russell Barrett, Rob Davis, Malcolm French, Alex George, Elizabeth George, Mike Hislop, Bruce Maslin, Barbara Rye, Kelly Shepherd, Malcolm Trudgen, Carol Wilkins and Paul Wilson.

The project relied on weekly sessions at the Reference Herbarium, using its facilities. The support of the WA Herbarium is gratefully acknowledged. A big thank you to all the Herbarium staff who have been involved in various ways in our project.

7 APPENDICES

APPENDIX 1: Threatened species codes, land systems, vegetation structure and condition

Table 1: Categories used to define the conservation status of flora taxa at state level, under the *Wildlife Conservation Act 1950*

Categories are defined in Atkins (2010).

Western Australian Flora Conservation Codes	
R	Declared Rare Flora – Extant Taxa Taxa which have been adequately searched for, and are deemed to be in the wild either rare, in danger of extinction, or otherwise in need of special protection, and have been gazetted as such.
X	Declared Rare Flora - Presumed Extinct Taxa Taxa which have not been collected, or otherwise verified, over the past 50 years despite thorough searching, or of which all known wild populations have been destroyed more recently, and have been gazetted as such.
P1	Priority One - Poorly Known Taxa Taxa which are known from one or a few (generally <5) populations which are under threat, either due to small population size, or being on lands under immediate threat, e.g. road verges, urban areas, farmland, active mineral leases, etc., or the plants are under threat, e.g. from disease, grazing by feral animals, etc. May include taxa with threatened populations on protected lands. Such taxa are under consideration for declaration as ‘rare flora’, but are in urgent need of further survey
P2	Priority Two - Poorly Known Taxa Taxa which are known from one or a few (generally <5) populations, at least some of which are not believed to be under immediate threat (i.e. not currently endangered). Such taxa are under consideration for declaration as ‘rare flora’, but are in urgent need of further survey
P3	Priority Three - Poorly Known Taxa Taxa which are known from several populations, and the taxa are not believed to be under immediate threat (i.e. not currently endangered), either due to the number of known populations (generally >5), or known populations being large, and either widespread or protected. Such taxa are under consideration for declaration as ‘rare flora’ but are in need of further survey.
P4	Priority Four – Rare Taxa Taxa which are considered to have been adequately surveyed and which, whilst being rare (in Australia), are not currently threatened by any identifiable factors. These taxa require monitoring every 5–10 years.

Note, the need for further survey of poorly known taxa is prioritised into the three categories depending on the perceived urgency for determining the conservation status of those taxa, as indicated by the apparent degree of threat to the taxa based on the current information.

Table 2: Land systems of Charles Darwin Reserve

Taken from Payne *et al.* (1998)

System	Description	WSWA Quadrats
Bandy	Low outcrops of granite and fringing plains	D1, D2, D3, D4, Dam
Bannar	Level sandplain and gravelly sandplain	W1, W2, W3, W4
Carnegie	Salt lakes with fringing saline plains, dunes and sandy banks	A1, A2, A3, A4, A5, A6
Challenge	Gently undulating plains with occasional hills, tors and breakaways	
Euchre	Low breakaways with short saline footslopes	B1, B2, B3, B4, B6, C1, C2, C3, C4, C5, Y2, Y3
Gabanintha	Ridges and rounded hills of basalt, dolerite, jaspilite and greenstone	
Graves	Low hills of greenstone, rises with limonite and undulating lower plains	
Joseph	Undulating yellow sandplain with very dense mixed shrublands	X1, X2, X3, Y1, Y4
Kalli	Level to gently undulating plains of red sand over laterite	
Moriarty	Gently undulating stony plains, low rises with limonite and alluvial plains	
Olympic	Irregular plains and occasional low rises, breakaways and granite domes	
Pindar	Level plains with eucalypt woodlands, surrounded by sandplain	X4, X5
Rainbow	Level to very gently inclined wash plains	
Waguin	Undulating sandy plains and stripped surfaces with small breakaways	
Yowie	Extensive nearly level plains with sandy surfaces	

Table 3: Vegetation structure

The classification system used to describe vegetation structure (based on Keighery 1994, as adapted from Muir 1977 and Aplin 1979). Each row indicates a different vegetation layer.

Growth Form/Height Class	Canopy Cover			
	100-70%	70-30%	30-10%	10-2%
Trees over 30m	Closed Tall Forest CTF	Open Tall Forest OTF	Tall Woodland TW	Open Tall Woodland OTW
Trees 10-30m	Closed Forest CF	Open Forest OF	Woodland W	Open Woodland OW
Trees under 10m	Closed Low Forest CLF	Open Low Forest OLF	Low Woodland LW	Open Low Woodland OLW
Mallee over 8m (Tree Mallee)	Closed Tree Mallee CTM	Tree Mallee TM	Open Tree Mallee OTM	Very Open Tree Mallee VOTM
Mallee under 8m (Shrub Mallee)	Closed Shrub Mallee CSM	Shrub Mallee SM	Open Shrub Mallee OSM	Very Open Shrub Mallee VOSM
Shrubs over 2m	Closed Scrub CSC	Open Scrub OSC	Tall Shrubland TS	Open Tall Shrubland OTS
Shrubs 1-2m	Closed Heath CH	Open Heath OH	Shrubland S	Open Shrubland OS
Shrubs under 1m	Closed Low Heath CLH	Open Low Heath OLH	Low Shrubland LS	Open Low Shrubland OLS
Grasses	Closed Grassland CG	Grassland G	Open Grassland OG	Very Open Grassland VOG
Herbs	Closed Hermland CHB	Hermland HB	Open Hermland OHB	Very Open Hermland VOHB
Sedges	Closed Sedgeland CSG	Sedgeland SG	Open Sedgeland OSG	Very Open Sedgeland VOSG
Ferns	Closed Fernland CFL	Fernland FL	Open Fernland OFL	Very Open Fernland VOFL
Climbers	Closed Climbers CC	Climbers C	Open Climbers OC	Very Open Climbers VOC

Table 4: Vegetation condition scale

Taken from Keighery (1994).

Vegetation Condition Scale	
1 Pristine	Pristine or nearly so, no obvious signs of disturbance
2 Excellent	Vegetation structure intact, disturbance affecting individual species and weeds are non-aggressive species.
3 Very Good	Vegetation structure altered, obvious signs of disturbance. For example, disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.
4 Good	Vegetation structure significantly altered by very obvious signs of multiple disturbance. Retains basic vegetation structure or ability to regenerate it. For example, disturbance to vegetation structure caused by very frequent fires, the presence of some very aggressive weeds at high density, partial clearing, dieback and grazing.
5 Degraded	Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. For example, disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds, partial clearing, dieback and grazing.
6 Completely Degraded	The structure of the vegetation is no longer intact and the area is completely or almost completely without native species. These areas are often described as 'parkland cleared' with the flora comprising weed or crop species with isolated native trees or shrubs.

APPENDIX 2: Flora and vegetation of Charles Darwin Reserve

APPENDIX 2a: Native and weedy vascular plants found by the Wildflower Society on Charles Darwin Reserve, with reference to life forms, growth forms and conservation status

KEY

Column 1

Family

Families are ordered alphabetically.

Column 2

W = Weed

* indicates a weed species

Column 3

Botanical Name

Genus + Species + Infra Species Rank + Infra Species Name + Informal Name. Taxa (species, sub-species, varieties and formae) are listed alphabetically within each family.

Infraspecific Ranks

subsp.	Subspecies
var.	Variety
forma	Forma

Informal descriptors

MS	A manuscript name yet to be published
PN	A phrase name for a taxon yet to be described and published.

Column 4

Common Name

Column 5

Life Form

A	Annual: a plant which completes its life cycle in less than one year, i.e. germinates from seed, flowers, sets seed and dies in the same year.
P	Perennial: a plant that lives three or more years (growing seasons).
P/A	Perennial annually renewed from below ground part (e.g., bulbs, corms) but with above ground parts which die back each year.

Column 6

Growth Form

Woody Plants

Tree	Plants with a single trunk and a canopy. The canopy is less than or equal to two thirds of the height of the trunk. No lignotuber is evident.
Mallee	Plants with many trunks (usually 2-5) arising from a lignotuber. The canopy is usually well above the base of the plant. Most are from the genus <i>Eucalyptus</i> .
Shrub	Plants with one or more woody stems and foliage all or part of the total height of the plant. Includes palms, grass trees and cycads.

Non-woody Plants: non-grass-like

Herb	A plant without a persistent above ground woody stem (excluding grasses, sedges and rushes).
------	--

Non-woody Plants: grass-like

Grass	Tufted, spreading or hummock-forming plants from the family Poaceae.
Sedge or sedge-like	Tufted or spreading plants from the families Cyperaceae, Juncaginaceae, Centrolepidaceae or Ecdeiocoleaceae.
herb	
Rush	Tufted or spreading plants from the families Juncaceae or Restionaceae.

Other

Fern	Plants which produce by spores rather than seeds.
------	---

It is also indicated in this field if the plant is aquatic, parasitic or twining.

Column 7	Supra code
FER	Ferns
GYM	Gymnosperms
MON	Monocotyledons
DIC	Dicotyledons
Column 8	Cons Code = Conservation Code
	Significant plant taxa (species, sub-species and varieties) listed under the State <i>Wildlife Conservation Act 1950</i> (Government of Western Australia 2010) and by the Department of Environment and Conservation (Atkins 2010). Priority taxa conservation code listings are current as at March 2010 (Western Australian Herbarium 1998-). See Appendix 1 for further descriptions of the categories below.
R	Declared Rare Flora: Extant Taxa
X	Declared Rare Flora: Presumed Extinct Taxa
1	Priority 1: Poorly Known Taxa
2	Priority 2: Poorly Known Taxa
3	Priority 3: Poorly Known Taxa
4	Priority 4: Rare Taxa
Column 9	NAME_ID
	Positive NAME_IDs are from the Census of Western Australian Plants (Western Australian Herbarium 2010a).

APPENDIX 2b: Native and weedy vascular plants found by the Wildflower Society on Charles Darwin Reserve, with reference to quadrat location

KEY

Column 1

W = Weed

* indicates a weed species

Column 2

Botanical Name

Genus + Species + Infra Species Rank + Infra Species Name + Informal Name. Taxa (species, sub-species, varieties and formae) are listed alphabetically.

Infraspecific Ranks

subsp. Subspecies

var. Variety

forma Forma

Informal descriptors

MS A manuscript name yet to be published

PN A phrase name for a taxon yet to be described and published.

Column 3

Family

Column 4

C = Conservation Code

Significant plant taxa (species, sub-species and varieties) listed under the State *Wildlife Conservation Act 1950* (Government of Western Australia 2010) and by the Department of Environment and Conservation (Atkins 2010). Priority taxa conservation code listings are current as at March 2010 (Western Australian Herbarium 1998-). See Appendix 1 for further descriptions of the categories below.

R Declared Rare Flora: Extant Taxa

X Declared Rare Flora: Presumed Extinct Taxa

1 Priority 1: Poorly Known Taxa

2 Priority 2: Poorly Known Taxa

3 Priority 3: Poorly Known Taxa

4 Priority 4: Rare Taxa

Columns 5-43

Quadrat or site

See locations and further descriptions of quadrats and sites in Appendix 2e

q Recorded in the quadrat or site

a Recorded adjacent to the quadrat or site (in the same plant community)

o Recorded in a nearby but different plant community

Opportunistic collections not associated with quadrats or sites

v A voucher has been lodged of this taxon from this quadrat or site. The voucher may be from in, or adjacent or opportunistic to, the quadrat.

APPENDIX 2c: Recent changes to botanical names of taxa found on Charles Darwin Reserve

Taken from the most recent Census of Western Australian Plants (Western Australian Herbarium 2010a). The family names listed are current names (see Appendix 2d for recent changes to family names). The date column lists the date that the Western Australian Herbarium recorded the name change.

Old Botanical Name	New Botanical Name	Family	Date
<i>Acacia acuminata</i> subsp. <i>acuminata</i> MS	<i>Acacia acuminata</i>	Fabaceae	20-May-03
<i>Acacia acuminata</i> subsp. <i>burkittii</i> MS	<i>Acacia burkittii</i>	Fabaceae	21-May-98
<i>Acacia acuminata</i> (narrow phyllode variant) MS	<i>Acacia</i> sp. narrow phyllode (B.R. Maslin 7831) PN	Fabaceae	14-Feb-06

APPENDIX 2d: Recent changes to plant family names

Major herbaria in the world, including the Western Australian Herbarium, have recently adopted a new sequence of arranging their collections of plants. This has been done to better reflect the relationships of plant groups. The change has involved some changes to plant family allocations. Some of these involve the simple merging of one or more families, whilst others have necessitated more complex changes. The tables below list the families that have been changed.

Table 1: Simple (entire family) changes; cases where an entire family has moved, been renamed or excluded (no longer recognized as occurring in WA)

Taken from Western Australian Herbarium (2010b). Not all the families listed occur on Charles Darwin Reserve.

Old Family	New Family
Adiantaceae	Pteridaceae
Agavaceae	Asparagaceae
Asclepiadaceae	Apocynaceae
Avicenniaceae	Acanthaceae
Azollaceae	Salviniaceae
Bombacaceae	Malvaceae
Buddlejaceae	Scrophulariaceae
Caesalpiniaceae	Fabaceae
Cochlospermaceae	Bixaceae
Cuscutaceae	Convolvulaceae
Davalliaceae	Lomariopsidaceae
Dipsacaceae	Caprifoliaceae
Epacridaceae	Ericaceae
Fumariaceae	Papaveraceae
Hippocrateaceae	Celastraceae
Hyacinthaceae	Asparagaceae
Hydrophyllaceae	Boraginaceae
Lemnaceae	Araceae
Lobeliaceae	Campanulaceae

Old Family	New Family
Mimosaceae	Fabaceae
Myoporaceae	Scrophulariaceae
Myrsinaceae	Primulaceae
Najadaceae	Hydrocharitaceae
Papilionaceae	Fabaceae
Parkeriaceae	Pteridaceae
Phormiaceae	Hemerocallidaceae
Platyzomataceae	Pteridaceae
Sonneratiaceae	Lythraceae
Stackhousiaceae	Celastraceae
Sterculiaceae	Malvaceae
Taxodiaceae	Cupressaceae
Tiliaceae	Malvaceae
Tremandraceae	Elaeocarpaceae
Turneraceae	Passifloraceae
Ulmaceae	Cannabaceae
Valerianaceae	Caprifoliaceae
Viscaceae	Santalaceae
Zannichelliaceae	Potamogetonaceae

Table 2: Family changes involving splits to old families; cases where some genera have been moved to a new family and others retained, or where different genera have moved to different families.

Taken from Western Australian Herbarium (2010b). Not all the families listed occur on Charles Darwin Reserve.

Old Family	Genus	New Family	Old Family	Genus	New Family
Alliaceae	<i>Agapanthus</i>	Agapanthaceae		<i>Sauropolis</i>	Phyllanthaceae
Anthericaceae	<i>Arthropodium</i>	Asparagaceae		<i>Leptopus</i>	Phyllanthaceae
	<i>Laxmannia</i>	Asparagaceae		<i>Petalostigma</i>	Picrodendraceae
	<i>Murchisonia</i>	Asparagaceae		<i>Drypetes</i>	Putranjivaceae
	<i>Sowerbaea</i>	Asparagaceae	Hydrophyllaceae	<i>Phacelia</i>	Boraginaceae
	<i>Thysanotus</i>	Asparagaceae		<i>Wigandia</i>	Boraginaceae
	<i>Chamaescilla</i>	Asparagaceae		<i>Hydrolea</i>	Hydroleaceae
	<i>Chlorophytum</i>	Asparagaceae	Potamogetonaceae	<i>Ruppia</i>	Ruppiaceae
	<i>Dichopogon</i>	Asparagaceae	Restionaceae	<i>Anarthria</i>	Anarthriaceae
	<i>Agrostocrinum</i>	Hemerocallidaceae	Scrophulariaceae	<i>Lindernia</i>	Linderniaceae
	<i>Arnocrinum</i>	Hemerocallidaceae		<i>Centranthera</i>	Orobanchaceae
	<i>Caesia</i>	Hemerocallidaceae		<i>Striga</i>	Orobanchaceae
	<i>Hensmania</i>	Hemerocallidaceae		<i>Bartsia</i>	Orobanchaceae
	<i>Hodgsoniola</i>	Hemerocallidaceae		<i>Parentucellia</i>	Orobanchaceae
	<i>Johnsonia</i>	Hemerocallidaceae		<i>Elacholoma</i>	Phrymaceae
	<i>Stawellia</i>	Hemerocallidaceae		<i>Glossostigma</i>	Phrymaceae
	<i>Corynotheca</i>	Hemerocallidaceae		<i>Mimulus</i>	Phrymaceae
	<i>Tricoryne</i>	Hemerocallidaceae		<i>Peplidium</i>	Phrymaceae
Apiaceae	<i>Hydrocotyle</i>	Araliaceae		<i>Dopatrium</i>	Plantaginaceae
	<i>Neosciadium</i>	Araliaceae		<i>Bacopa</i>	Plantaginaceae
	<i>Trachymene</i>	Araliaceae		<i>Gratiola</i>	Plantaginaceae
	<i>Uldinia</i>	Araliaceae		<i>Limnophila</i>	Plantaginaceae
Capparaceae	<i>Cleome</i>	Cleomaceae		<i>Stemodia</i>	Plantaginaceae
Clusiaceae	<i>Hypericum</i>	Hypericaceae		<i>Veronica</i>	Plantaginaceae
Cunoniaceae	<i>Aphanopetalum</i>	Aphanopetalaceae		<i>Misopates</i>	Plantaginaceae
Dasypogonaceae	<i>Chamaexeros</i>	Asparagaceae		<i>Linaria</i>	Plantaginaceae
	<i>Lomandra</i>	Asparagaceae		<i>Maurandya</i>	Plantaginaceae
	<i>Xerolirion</i>	Asparagaceae		<i>Scoparia</i>	Plantaginaceae
Euphorbiaceae	<i>Antidesma</i>	Phyllanthaceae		<i>Buchnera</i>	Orobanchaceae
	<i>Breynia</i>	Phyllanthaceae		<i>Euphrasia</i>	Orobanchaceae
	<i>Bridelia</i>	Phyllanthaceae		<i>Rhamphicarpa</i>	Orobanchaceae
	<i>Flueggea</i>	Phyllanthaceae		<i>Microcarpa</i>	Phrymaceae
	<i>Glochidion</i>	Phyllanthaceae		<i>Kickxia</i>	Plantaginaceae
	<i>Margaritaria</i>	Phyllanthaceae		<i>Cymbalaria</i>	Plantaginaceae
	<i>Phyllanthus</i>	Phyllanthaceae	Simaroubaceae	<i>Harrisonia</i>	Rutaceae
	<i>Poranthera</i>	Phyllanthaceae	Zygophyllaceae	<i>Nitraria</i>	Nitrariaceae

APPENDIX 2e: Data for quadrats, transects and sites established by the Wildflower Society at Charles Darwin Reserve

Physical, vegetation and flora information is listed for each quadrat. Dominant taxa are listed in the vegetation description IN ORDER OF DOMINANCE within each vegetation layer (according to Table 3 in Appendix 1). All flora recorded is listed by growth form at the end of each quadrat description, IN ALPHABETICAL ORDER.

Quadrat WSWA A1

Vegetation: *Melaleuca stereophloia* Tall Shrubland over *Acacia andrewsii*, *A. inceana* subsp. *conformis* Shrubland.

GPS location (WGS 84): 29° 30.377' S 116° 56.042' E

Location: Between Quandong Well and Easter Monday Well ca 40 m S of track.

Date Sampled: 23/08/2008; 10/10/2008

Land System: Carnegie

Topographic position: Lower slope sand deposition

Site description: Moderately drained SW facing flat, fringing salt lakes. Reddish-yellow-brown sandy loam.

Vegetation Condition: Excellent

Shrubs: *Acacia andrewsii*, *Acacia inceana* subsp. *conformis*, *Acacia ramulosa*, *Acacia* sp., *Comesperma integerrimum*, *Eremophila clarkei*, *Eremophila decipiens* subsp. *decipiens*, *Eremophila oppositifolia* subsp. *angustifolia*, *Eremophila serrulata*, *Grevillea pityophylla*, *Gunniopsis quadrifida*, *Maireana thesioides*, *Melaleuca stereophloia*, *Rhagodia drummondii*, *Ricinocarpos velutinus*, *Scaevola spinescens*

Grasses: *Amphipogon carnicinus* var. *carnicinus*, *Austrostipa elegantissima*, *Eragrostis dielsii*, *Tripogon loliiformis*

Herbs: *Arthropodium dyeri*, *Bellida graminea*, *Blennospora drummondii*, *Brachyscome ciliocarpa*, *Caesia* sp. Wongan (K.F. Kenneally 8820) PN, *Calandrinia eremaea*, *Calandrinia granulifera*, *Calandrinia* sp. ridged papillate (M. Hislop & E. Hudson MH161) PN, *Chthonocephalus pseudevax*, *Crassula colorata* var. *acuminata*, *Drosera bulbosa*, *Drosera glanduligera*, *Erodium cygnorum*, *Gnephosis angianthoides*, *Gonocarpus nodulosus*, *Goodenia occidentalis*, *Goodenia pinnatifida*, *Hyalochlamys globifera*, *Lawrencella rosea*, *Levenhookia leptantha*, *Maireana carnosa*, *Nicotiana rotundifolia*, *Podolepis capillaris*, *Podolepis lessonii*, *Pogonolepis muelleriana*, *Rhodanthe chlorocephala* subsp. *splendida*, *Sclerolaena diacantha*, *Thysanotus* sp., *Trachymene cyanopetala*, *Waitzia acuminata* var. *acuminata*

Sedges/rushes/sedge-like herbs: *Centrolepis cephaloformis* subsp. *cephaloformis*, *Isolepis cernua* var. *setiformis*, *Schoenus nanus*

Adjacent:

Trees: *Melaleuca hamata*

Shrubs: *Exocarpos aphyllus*, *Maireana glomerifolia*, *Senna charlesiana*

Herbs: *Caladenia* sp., *Drosera macrantha* subsp. *macrantha*

Quadrat WSWA A2

Vegetation: *Eremophila miniata* Open Low Woodland over *Gunniopsis quadrifida*, *Jacksonia arida*, *Scaevola spinescens* Low Shrubland over *Aristida holathera* var. *holathera*, *Eragrostis dielsii* Grassland and *Calandrinia* spp. and mixed species Herland.

GPS location (WGS 84): 29° 30.501' S 116° 56.592' E

Location: Between Quandong Well and Easter Monday Well ca 10 m S of track

Date Sampled: 23/08/2008; 12/10/2008

Land System: Carnegie

Topographic position: Low rise between salt lakes

Site description: Well drained dune with a gentle SSW slope, fringing salt lakes. Orange sand.

Vegetation Condition: Excellent

Trees: *Eremophila miniata*

Shrubs: *Gunniopsis quadrifida*, *Jacksonia arida*, *Maireana amoena*, *Rhagodia drummondii*, *Scaevola spinescens*, *Zygophyllum fruticulosum*

Grasses: *Aristida holathera* var. *holathera*, *Austrostipa elegantissima*, *Eragrostis dielsii*, **Pentaschistis airoides* subsp. *airoides*

Herbs: *Acanthocarpus canaliculatus*, *Brachyscome ciliocarpa*, *Brachyscome iberidifolia*, *Calandrinia aff. remota*, *Calandrinia eremaea*, *Calandrinia* sp., *Chthonocephalus pseudevax*, *Crassula colorata* var. *colorata*, *Dianella revoluta* var. *divaricata*, *Erodium cygnorum*, *Gnephosis angianthoides*, *Gonocarpus nodulosus*, *Goodenia pinnatifida*, *Hyalochlamys globifera*, *Myriocephalus* sp., *Nicotiana rotundifolia*, *Ophioglossum lusitanicum*, *Podotheca uniseta*, *Ptilotus chamaecladus*, *Sclerolaena eurotioides*, *Stylium warriedarensis*, *Tetragonia diptera*

Sedges/rushes/sedge-like herbs: *Cyperus rigidellus*, *Triglochin isingiana*, *Triglochin longicarpa*

Adjacent:

Shrubs: *Acacia tetragonophylla*, *Hakea preissii*, *Maireana atkinsiana*, *Solanum orbiculatum* subsp. *orbiculatum*

Herbs: *Lawrencella davenportii*, *Levenhookia* sp., *Lomandra effusa*, *Senecio glossanthus*, *Senecio lacustrinus*

Transect WSWA A3

Vegetation: *Tecticornia halocnemoides*, *T. doleiformis* Low Shrubland over *Senecio lacustrinus* Open Hermland.

GPS location (WGS 84): 29° 30.511' S 116° 56.589' E

Location: Between Quandong Well and Easter Monday Well ca 40 m S of track

Date Sampled: 23/08/2008; 12/10/2008

Land System: Carnegie

Topographic position: Salt lake

Site description: Gentle S slope along transect into salt lake. Orange sand grading to salty grey clay of lake bed. Seasonally waterlogged.

Vegetation Condition: Excellent

Shrubs: *Maireana amoena*, *Tecticornia doleiformis*, *Tecticornia halocnemoides*, *Tecticornia loriae*

Grasses: *Eragrostis dielsii*

Herbs: *Atriplex holocarpa*, *Brachyscome oncocarpa*, *Cotula cotuloides*, *Crassula colorata* var. *acuminata*, *Gilberta tenuifolia*, *Gnephosis acicularis*, *Gnephosis angianthoides*, *Gnephosis trifida*, *Gomphrena* sp. Belele (D.W. Goodall 3215) PN, *Gunniopsis intermedia*, *Gunniopsis rodwayi*, *Hyalochlamys globifera*, *Podolepis capillaris*, *Polygonalepis muelleriana*, *Polygonalepis muelleriana/stricta*, *Sclerolaena eurotioides*, *Senecio lacustrinus*, *Stenopetalum filifolium*

Adjacent:

Sedges/rushes/sedge-like herbs: *Triglochin* sp.

Quadrat WSWA A4

Vegetation: *Tecticornia indica* subsp. *biden*, *Disphyma crassifolium* subsp. *clavellatum* Low Shrubland over *Aristida holathera* var. *holathera*, *Austrostipa nitida*, *Eragrostis dielsii* Very Open Grassland and *Brachyscome cheilocarpa*, *Polygonalepis stricta* Open Hermland.

GPS location (WGS 84): 29° 30.473' S 116° 56.623' E

Location: Between Quandong Well and Easter Monday Well ca 40 m N of track

Date Sampled: 23/08/2008; 12/10/2008

Land System: Carnegie

Topographic position: Salt lake

Site description: Gentle NE slope of salt lake. Light orange beige sand over clay. Seasonally waterlogged.

Vegetation Condition: Excellent

Shrubs: *Atriplex vesicaria*, *Disphyma crassifolium* subsp. *clavellatum*, *Enchytraea lanata*, *Exocarpos aphyllus*, *Frankenia pauciflora*, *Frankenia* sp., *Gunniopsis quadrifida*, *Maireana amoena*, *Maireana atkinsiana*, *Rhagodia drummondii*, *Solanum orbiculatum* subsp. *orbiculatum*, *Tecticornia disarticulata*, *Tecticornia indica* subsp. *bidens*, *Tecticornia pruinosa*

Grasses: *Aristida holathera* var. *holathera*, *Austrostipa nitida*, *Eragrostis dielsii*

Herbs: **Arctotheca calendula*, *Atriplex codonocarpa*, *Brachyscome cheilocarpa*, *Brachyscome perpusilla*, *Calandrinia* ?sp. ridged papillate (M. Hislop & E. Hudson MH161), *Calandrinia granulifera*, *Calandrinia* sp., *Chthonocephalus pseudovexax*, *Didymanthus roei*, *Erodium cygnorum*, *Gomphrena* sp. Belele (D.W. Goodall 3215) PN, *Goodenia pinnatifida*, *Goodenia pusilliflora*, *Gunniopsis* sp., *Hyalochlamys globifera*, *Isotoma scapigera*, *Maireana carnosa*, **Mesembryanthemum nodiflorum*, *Nicotiana rotundifolia*, *Ophioglossum lusitanicum*, *Polygonolepis muelleriana*, *Polygonolepis stricta*, *Prasophyllum gracile*, *Ptilotus chamaecladus*, *Rhodanthe chlorocephala* subsp. *rosea*, *Sclerolaena eurotioides*, *Wahlenbergia tumidifructa*

Sedges/rushes/sedge-like herbs: *Cyperus rigidellus*, *Triglochin longicarpa*

Adjacent:

Shrubs: *Grevillea obliquistigma* subsp. *funicularis*

Herbs: *Levenhookia leptantha*, *Sclerolaena densiflora*, *Senecio glossanthus*, *Swainsona perlóngua*

Quadrat WSWA A5

Vegetation: *Melaleuca acuminata* var. *websteri* Open Tall Shrubland over *Tecticornia indica* subsp. *bidens* Low Shrubland over *Eragrostis dielsii* Very Open Grassland over *Nicotiana rotundifolia*, *Brachyscome cheilocarpa* Open Herbland.

GPS location (WGS 84): 29° 30.414' S 116° 57.004' E

Location: Between Quandong Well and Easter Monday Well ca 26 m E of track

Date Sampled: 23/08/2008

Land System: Carnegie

Topographic position: Salt lake

Site description: Gentle SE to E slope fringing a salt lake. Upper slope of red brown sandy loam grading down slope to yellow clay.

Vegetation Condition: Excellent

Shrubs: *Enchytraea lanata*, *Eremophila oppositifolia* subsp. *angustifolia*, *Frankenia* sp., *Gunniopsis quadrifida*, *Lawrenzia squamata*, *Melaleuca acuminata* subsp. *websteri*, *Rhagodia drummondii*, *Solanum nummularium*, *Tecticornia indica* subsp. *bidens*

Grasses: *Aristida holathera* var. *holathera*, *Austrostipa trichophylla*, *Eragrostis dielsii*, **Pentaschistis airoides* subsp. *airoides*, **Rostraria pumila*
