THE VESA STANDARD

The emergence of space-saving, flat TFT and LCD displays at the beginning of the last decade resulted in an increase in the number of displays on office desks as users worked across multiple displays and extended desktops.

This led to a requirement for display brackets that freed up desk space and allowed for convenient, ergonomic screen placement.

To ensure that all displays were equipped with a uniform mounting, in 2002, the VESA organization developed the VESA Flat Display Mounting Interface [FDMI] in various variants which has since become the de facto standard.

The variants differ in the distances between the four squarely arranged mounting screws, e.g. 75mm x 75mm or 100 x 100mm, and are suitable for displays of different sizes and weight classes.
