

BUSINESS & INFORMATION SYSTEMS ENGINEERING

The International Journal of WIRTSCHAFTSINFORMATIK

The journal is receptive to research results from the field of business and information systems engineering as well as cutting-edge business practice findings. Specific solutions for application systems are published only if they serve as a model for other fields of application.

The journal also covers important peripheral areas if developments in the narrower sphere of business and information systems engineering are substantially affected. Examples are the impact of computer science on business, individuals, and society as well as issues regarding training and further education.

The journal publishes original research papers. All papers undergo a thorough double-blind review process. Some issues are devoted to a special focus.

The section BISE – Research Paper splits into the following departments (department editors in brackets):

1. Business Engineering and Theories of BISE Design (Winter, Pries-Heje, Goul)
2. Information Systems Engineering (Müller, Lin, Echizen)
3. Information Systems Management & Operations (Bichler, Bhattacharya)
4. Theories for BISE (Heinzl, Leidner)

Besides, the journal is organized into the following sections (section editors in brackets):

- BISE – State of the Art (Buxmann)
- BISE – Catchword (Sinz)
- BISE – Profile (Heinzl)
- BISE – Discussion (Winter)

The journal's website <http://www.bise-journal.org> is managed by Detlef Schoder.
