

Math 30200 / CS 38000, Winter 2024: Assignment 1  
Due Friday, January 19th

1. Let  $A = \{e : \Phi_e(e) \downarrow = 0\}$  and  $B = \{e : \Phi_e(e) \downarrow \neq 0\}$ . Note that  $A$  and  $B$  are disjoint. Show that  $A$  and  $B$  are *computably inseparable*, i.e., that there is no computable set  $C$  such that  $A \subseteq C$  and  $B \cap C = \emptyset$ .

2. Write  $\text{img } f$  for the image of a function  $f$ , i.e.,  $\{n : \exists k f(k) = n\}$ . Give an example of a total computable function  $f$  such that  $\text{img } f$  is not computable. Then show that if  $f$  and  $g$  are computable functions such that  $\text{img } f$  is the complement of  $\text{img } g$ , then both  $\text{img } f$  and  $\text{img } g$  are computable.

3. Show that  $\emptyset' = \{e : \Phi_e(e) \downarrow\}$  is not an index set. [*Hint: Define a computable function  $f$  such that for all  $i$ , we have that  $f(i) \neq i$  and  $\Phi_{f(i)}$  behaves differently on  $i$  than on other indices. Then use the Recursion Theorem.*]

4. Read Section 1.7.2 in Soare. Do Exercises 1.7.8 and 1.7.9 in Soare. [You may assume Exercise 1.7.7.]
