PIRELLI CYCLING RANGE

P ZERO™ VELO 4S TT TUB

P ZERO™ Velo family tyres are designed with **maximum performance** in mind, whether they are tailored for racing against the clock with P ZERO Velo TT, or in bad weather conditions with the 4S, or simply on any circumstance all year long with the more versatile P ZERO™ Velo, they all are built over grip, handling, light weight and rolling efficiency as primary object. Whether it is a climb, a long flat or a descent, P ZERO™ Velo tyres make you faster.

Cinturato™ VELO

Pirelli automotive know-how allowed to create the first tyre of its category which doesn't compromise **maximum protection** with riding quality and handling Pirelli has become famous for. With innovation coming straight from the car industry tyres, Pirelli has created a cycling clincher tyre which has a level of protection and confort never seen before at the same time in a robust bicycle tyre, allowing Pirelli to grow its size range to widths which make it ready for any surface and any weather condition. Cinturato Velo makes you riding better, and longer.

Cinturato™ GRAVEL & CROSS H M

Pirelli offroad know-how brings a series of tyres made to enhance your experience on any offroad condition, whether it is dry or wet. With a wide and succesfull offroad pedigree that goes from rally car world titles to motocross ones, Pirelli knows a thing or two when it comes to tackle demanding offroad terrains without sacrificing rolling efficiency and mileage. Cinturato Gravel range allow you to forget about weather and punctures and focus only on **riding longer, more comfortably** and explore new territories of riding experiences.

SCORPION™ MTB H M S R

Pirelli Scorpion™ MTB range is tailor developed in all the sizes needed to cover any different riding style, regardless of the weather. The innovative SmartGRIP Compound closes the gap between tear resistance and wet grip, ensuring high performances both on dry and wet surfaces. The shape of the knobs is based on the experience and technology behind the Scorpion™ MX range, with its 70+ World Championship Titles speaking for itself. Available for Hard, Mixed or Soft terrains plus Rear specific, the Pirelli Scorpion™ MTB range allows you to **forget the weather variable** and focus your choice only on the consistency of the terrain you are going to ride.

CYCL-e GT DT XT WT

Pirelli CYCL-e™ range is developed with **commuting eBikes** in mind, but of course compatible with any normal bicycle too. It is available in 4 versions: GranTurismo, DownTown, CrossTerrain and Winter and they offer **great safety** in unforeseen situations, whether they be sudden steering or emergency braking, dry or wet, hot or cold, without compromising rolling efficiency and puncture resistance. A complete and innovative range, designed for the needs and style of each rider which intend cycling as a commuting or leisure activity, in or just outside the city boundaries.

SPEED

GRIP

Developed on the fields of World Tour racing and already winner of a Grand Tour in its debut year with Team Mitchelton-Scott, the P ZERO™ Velo TUBULAR brings the handling and cornering behavior Pirelli is famous for to the finest handmade tubular construction. Now available for your own #pureperformance.

The TUBULAR in short:

- Corespun 320tpi w/aramid reinforced casing
- Anti-puncture belt under the tread
- FGD tread pattern design technology tuned for tubular structure
- Sizes available: 25-28" and 28-28"
- Latex inner tube for better rolling and anti-puncture
- Yellow Soft racing compound
- Designed for modern wide tubular rims
- 48mm RVC valve

TECHNOLOGY OVERVIEW ROAD

SMARTNET™ SILICA

PATENTED

Directly from its Motorsport expertise, Pirelli introduced its first innovation in cycling compound technology: a particular Silica with an **elongated shape molecule**, against industry-standard Silica which has it round. This allowed Pirelli technicians to enhance the level of sophistication: orientation of such molecules to the rolling direction of the tyre is now possible, increasing the energy efficiency of the tyre in many aspects. Further to that, the natural attitude of the SmartNET™ Silica to dispose itself in an **ordered network** of polymer chains, allows for better interaction with other components, such as aramid fibers which thus can be dispersed into the rubber in very high density: better mechanical resistance of the material itself and extended mileage and puncture protection when compared to standard Silica compounds.

The result is a tyre which has at the same time:

- high grip on both dry and wet (handling)
- high rolling efficiency (speed)
- good mechanical properties (protection and mileage)

armour tech™

PATENT PENDING

Another innovation straight from Motorsport expertise, where Pirelli technicians focus has now been pointed to increase **puncture protection** of road racing bicycle tyres to a whole new level: small aramid fibers are directly dispersed into the rubber blend of the base tread, in a high density amount as never before, working as a spider net to trap any sharp object before it even hit the textile breaker underneath. This effect dramatically drops the capability to penetrate of any external object, exponentially increasing the protection capability of the textile layers built within the rest of the tyre structure, such as the aramid breaker and the woven Nylon bead-to-bead layer, while retaining the possibility to use high performing compound on the outer tread in order to maintain **high handling, grip, rolling and mileage**.

FGD - FUNCTIONAL GROOVE DESIGN

Under this name it is summarized the know-how and expertise of designing the tread pattern and overall shape of a two-wheel tyre. For Pirelli, this means to source design criteria and dynamic analysis from its SBK (World Superbike) background, where lean angles and handling is taken to the extreme, and where pilots demand for **maximum feedback** from the tyre: it is key for a racing tyre to precisely tell to the pilot how far he is from the limit, at each and every moment.

This is what Pirelli tyre designers focused also for bicycle tyres: maximum confidence on every riding situation, being it in full lean down a hill or in an emergency braking/steering situation at lower speed.

So the **"flash" design**, a Pirelli iconic landmark:

- slick on the center for maximum rolling and traction at high loads, such as when sprinting or braking
- open angles in the first phase of the lean, at the beginning of the turn when the speed is usually still high
- mid-grooved portion on the side tread to provide an optimal footprint and feedback
- slick again for the very side of the tread, when maximum grip is mandatory again

TECHNOLOGY OVERVIEW OFF ROAD

SMARTGRIP COMPOUND

Decades of Motorsport successes brought Pirelli engineers to develop a cutting edge compound that puts together two diametrically **opposed characteristics**:

- **tear resistance:** it guarantees maximum mechanical grip in dry conditions and an higher puncture protection
- **chemical grip on wet conditions:** no need to be worried if it's going to rain or if you find muddy or slippery sections on the trails

SPEEDGRIP COMPOUND

The properties of the new Pirelli compound formulation SpeedGRIP are tailored for any weather condition, regardless if the terrain is dry or wet. As developed into the Scorpion™ MTB rubber formulation – SmartGRIP – the new SpeedGRIP Compound retains the same polymer matrix, improving in the **rolling efficiency**.

The higher need for speed or mileage with the same effort riding gravel, with a combination of tarmac, gravel and more aggressive terrain as well as a mix of intended uses – from racing to bike packing and adventures – pushed Pirelli technicians to fine tune this new rubber towards a better energy management.

The SpeedGRIP Compound retains the same tear resistance of its MTB counterpart (SmartGRIP) as well as its high chemical grip (known as the **wet grip**), with a more efficient energy management decreasing the rolling resistance to a level very close to pure road racing tyres.

HYPER WALL

PATENT PENDING

The third innovation Pirelli brings to the cycling world from its Motorsport background: a newly designed construction of the bead and sidewall area that increases even further the tyre performances in terms of handling at low pressure and pinch flat resistance. Key in offroad applications, especially in the most demanding ones such as **gravity** and **eMTB**, the integrity of the bead area and the stability of the sidewalls are a founding pillar for the overall tyre performance: the tread with its sophisticated rubber compound highly relies on, and strictly behaves dependently to the stability and integrity of the bead and sidewall themselves.

Pirelli introduced a construction that solidly anchors the bead and the rubber sidewall insert with a woven fabric flipper, making them behave as one whole solid piece instead of as separate components with relative movements to each other, as it is with industry standard constructions.

The benefit of this innovation in numbers:

- Improved bead stability (+10%*)
- More protection against pinch-flats (+50%**)
- Better handling at low pressure (+25%***)
- Higher strength against sidewall cuts

* Pirelli internal laboratory multi-axis stiffness test
 ** Pirelli internal laboratory obstacle impact test
 *** Pirelli Field Testing Dep. evaluation score on blind outdoor test

DEVELOPED FOR E-BIKES

Granturismo is a tyre developed to enhance the dynamic characteristics of the modern riding style, whether it is taken in the city in the twisty roads of the country side: here is the Pirelli's famous 2-wheels expertise shines.

CYCL-E^{GT} GRANTURISMO

- Sportive handling and feeling
- Moto-derived tread design

TECHNOLOGY OVERVIEW URBAN

CAP

- +15% in WET grip
- anti-tacking feature
- efficient rolling

BASE

- thickness from 3mm to 3,5mm depending on the sizes
- favor deformation against ext objects
- keep better dynamic properties

This solution avoids compromising the dynamic properties and allows an optimal footprint to be maintained, unlike solutions formulated on very hard base mixtures which, on the other hand, negatively impact these characteristics. Pirelli Cycl-e tyre is built to match market standard on rolling resistance and puncture protection, while **outperform it on SAFETY**.

All Pirelli tyres are developed, manufactured and tested to internal safety standards which exceed ECE/R75.
