

OROVILLE CITY COUNCIL

Council Chambers
1735 Montgomery Street
Oroville, CA. 95965

September 19, 2023
REGULAR MEETING
CLOSED SESSION 4:00 PM
OPEN SESSION 4:30 PM
AGENDA

PUBLIC ACCESS AND PARTICIPATION

Please review the options below for ways to participate or observe the Council Meetings.

To Observe the Meeting:

1. Live Feed: <https://www.youtube.com/channel/UCAoRW34swYI85UBfYqT7IbQ/>
2. Zoom Link: <https://zoom.us/j/96870319529?pwd=dW9kMGRZSFo5MFFNQk5wVDUzRkRrZz09>
3. Zoom Application: Meeting ID: 968 7031 9529 Passcode: 67684553
4. By Phone: Telephone: 1-669-900-6833 Meeting ID: 968 7031 9529 Passcode: 67684553

To Provide Comment to the Council:

1. Attend the meeting in person
2. Send an Email by 2:00 PM the day of the meeting to publiccomment@cityoforoville.org. All comments emailed will be provided to the Council Members for their consideration.

If you would like to address the Council at this meeting, you are requested to complete the blue speaker request form (located on the wall by the agendas) and hand it to the City Clerk, who is seated on the right of the Council Chamber. The form assists the Clerk with minute taking and assists the Mayor or presiding chair in conducting an orderly meeting. Providing personal information on the form is voluntary. For scheduled agenda items, please submit the form prior to the conclusion of the staff presentation for that item. Council has established time limitations of three (3) minutes per speaker on all items and an overall time limit of thirty minutes for non-agenda items. If more than 10 speaker cards are submitted for an item, the time limitation would be reduced to one and a half (1.5) minutes per speaker for that item. If more than 15 speaker cards are submitted for non-agenda items, the first 15 speakers will be randomly selected to speak at the beginning of the meeting, with the remaining speakers given an opportunity at the end. **(California Government Code §54954.3(b)). Pursuant to Government Code Section 54954.2, the Council is prohibited from taking action except for a brief response from the Council or staff to statements or questions relating to a non-agenda item.**

CALL TO ORDER / ROLL CALL

Council Members: Tracy Johnstone, Krysi Riggs, Scott Thomson, Janet Goodson, Shawn Webber, Vice Mayor Eric Smith, Mayor David Pittman

CLOSED SESSION

The Council will hold a Closed Session on the following:

1. Pursuant to Government Code section 54956.9(d)(2), the Council will meet with the City Administrator and City Attorney regarding potential exposure to litigation – One case.

OPEN SESSION

1. Announcement from Closed Session
2. Pledge of Allegiance
3. Adoption of Agenda

PRESENTATIONS AND PROCLAMATIONS

1. None at this time.

PUBLIC COMMUNICATION – HEARING OF NON-AGENDA ITEMS

This is the time to address the Council about any item not listed on the agenda. If you wish to address the Council on an item listed on the agenda, please follow the directions listed above.

REPORTS / DISCUSSIONS

1. Council Announcements and Reports
2. Administration Reports

CONSENT CALENDAR

Consent calendar **items 1 – 9** are adopted in one action by the Council. Items that are removed will be discussed and voted on immediately after adoption of consent calendar items.

1. Approval of the September 5, 2023 Oroville City Council Meeting Minutes

The Council may approve the Minutes of September 5, 2023.

ACTION REQUESTED - APPROVE THE MINUTES OF SEPTEMBER 5, 2023.

2. Contract Amendment with Avenu Muniservices, LLC Extending Term by Three Years

The Council may consider the approval of a contract extension amendment with Avenu MuniServices, LLC for continuing Sales and Use Tax Audit Services, Sales and Use Tax Analysis & Reporting Services (STARS), Utility Users Tax Compliance and Revenue Protection Program, and Solid Waste Hauler Franchise Fee Compliance Program Services.

ACTION REQUESTED - APPROVE THE CONTRACT AMENDMENT WITH AVENU MUNISERVICES, LLC, EXTENDING THE CONTRACT THROUGH OCTOBER 13, 2026.

3. Lease Software Purchase

The Council may consider the purchase of lease software necessary to comply with new mandatory Governmental Accounting Standards Board (GASB) 87 and 96 related to new lease reporting requirements.

ACTION REQUESTED - STAFF IS RECOMMENDING THE APPROVAL OF THE PURCHASE OF LEASE SOFTWARE FROM LEASEQUERY, FOR A TERM OF THREE YEARS.

4. Fee Waiver Request by the Oroville Hmong New Year Festival Committee

The Council may consider a fee waiver request from the Oroville Hmong New Year Festival Committee, in the amount of \$6,415.00 for Police Services relating to the 2023 Oroville Hmong New Year Festival, to be held October 14th and 15th, 2023 at the Nelson Avenue Sports Complex.

ACTION REQUESTED - WAIVE 65% OF THE FEES, IN THE AMOUNT OF \$5,876.00, AND HAVE THE APPLICANT PAY THE REMAINDER OF THE FEES, IN THE AMOUNT OF \$3,164, FOR THE 2023 OROVILLE HMONG NEW YEAR FESTIVAL.

5. Capital Projects Task Order 3; Rolls, Anderson & Rolls

The Council may direct staff regarding the issuing of Task Order 3 for the design of three (3) capital improvement projects.

ACTION REQUESTED - STAFF RECOMMENDS THE COUNCIL DIRECT THE CITY ADMINISTRATOR TO PROCEED WITH THE TASK ORDER DISCUSSED ABOVE WITH ROLLS, ANDERSON & ROLLS CIVIL ENGINEERS.

PUBLIC COMMUNICATION - HEARING OF NON-AGENDA ITEMS

- Renee Gramps

1. City Council Announcements and Reports
 - A. Smith – Spoke on a correction he wanted to enter into the record in which he mentioned Natalie Sheard does have a building background. He also spoke on AB 553.
 - B. Mayor Pittman – Spoke on his attendance at the BCAG and SCOR meetings.
 - C. Goodson – Spoke on the letter from Mayor Pittman that was sent to Maui and subsequently read to the firefighters during one of their evening briefs.

2. Future Agenda Items
 - A. Council Member Smith – Requested that bring back an item regarding the fencing that has gone up on Montgomery Road as it poses a hazard to traffic attempting to turn onto Montgomery. This request was seconded by Council Member Johnstone.
 - B. Council Member Goodson – Requested that staff provide an update on the Gateway Project. City Administrator Ring stated they would have an update at the next meeting.
 - C. Council Member Webber – Requested a plaque be placed on the Ehmann House in remembrance of Alberta Tracy “The Lady of Butte County”. Webber also asked that staff look into the possibility of the creation of an ordinance that would allow for local preference when issuing contracts. The City Attorney provided Webber with an update on what that would consist of.

3. Administration Reports –

Brian Ring, City Administrator, spoke on productive meetings had with BCAG regarding the Hwy 162 update. A briefing on this item will be brought to the September 19, 2023, council meeting. Mr. Ring also supplied an update on the progress of the City Charter project.

Ron Belser, Code Enforcement Director, spoke on several reports regarding caseloads and progress that has been made on them. Mr. Belser spoke on progress with Lexipol and the weekly meetings being held regarding this matter. He also spoke on the Salmon Festival.

Amy Bergstrand, Housing and Business Assistance Director, spoke on Mission Esperanza and how it did not receive ERF funding this round. There will be another opportunity to apply for these funds at the end of the year.

Ruth Duncan, Assistant City Administrator and Finance Director spoke on pension update for unfunded liability and gave the Council notice that there will be a 10 minute presentation to come on this topic in October. Ms. Duncan is currently working on an RFP for new carpet to be installed at City Hall. Lastly, Ms. Duncan reported on her upcoming vacation to notify staff that she will be out of office.

4. Correspondence

- i. Letter from Lorraine Christensen received August 18, 2023.
- ii. Letter from Bob Gustafson received August 23, 2023.

ADJOURN THE MEETING

Mayor Pittman adjourned the meeting at 7:28PM.

CITY OF OROVILLE STAFF REPORT

TO: MAYOR PITTMAN AND COUNCIL MEMBERS

FROM: RUTH DUNCAN, ASSISTANT CITY ADMINISTRATOR-ADMINISTRATIVE SERVICES

**RE: CONTRACT AMENDMENT WITH AVENU MUNISERVICES, LLC
EXTENDING TERM BY THREE YEARS**

DATE: SEPTEMBER 19, 2023

SUMMARY

The Council may consider the approval of a contract extension amendment with Avenu MuniServices, LLC for continuing Sales and Use Tax Audit Services, Sales and Use Tax Analysis & Reporting Services (STARS), Utility Users Tax Compliance and Revenue Protection Program, and Solid Waste Hauler Franchise Fee Compliance Program Services.

DISCUSSION

The City has worked with Avenu MuniServices since before 1995. They provide the City with valuable assistance in the areas of Sales Tax analysis, reporting and auditing services.

The existing agreement We are at the end of our current contract period and staff is requesting Council approval to continue our work with them and extend our contract for another 3-year period ending October 13, 2026.

FISCAL IMPACT

Ongoing budgeted item in the Finance Department, Outside Services. 100.1090. Charges for the prior year were \$23,242.11 for reference.

RECOMMENDATION

Approve the contract amendment Avenu MuniServices, LLC, extending the contract through October 13, 2026.

ATTACHMENTS

Resolution XXXX

**CONTRACT AMENDMENT #3 TO CONTRACT BETWEEN
City of Oroville AND Avenu MuniServices, LLC**

THIS THIRD AMENDMENT (“Amendment No. 3”) is entered into between City of Oroville, a government entity in the State of California (“City”) and MuniServices, LLC, a Delaware limited liability company (“Consultant” or “AVENU”), (collectively the “Parties”).

The City and Consultant agree as follows:

WHEREAS, on or about October 13, 2014, City and Consultant entered into an agreement to provide Sales and Use Tax Audit Services, Sales/Use Tax Analysis & Reporting Services (STARS), Utility Users Tax Compliance and Revenue Protection Program, and Solid Waste Hauler Franchise Fee Compliance Program Services (the "Agreement");

WHEREAS, under Section 5, Term of this Agreement, the initial term of the Agreement was for a three-year period and renews for successive three-year terms if the Parties mutually agree to extend the Agreement in writing;

WHEREAS, Amendment No. 1 formally extending the term of the agreement for an additional three years was executed on April 9, 2018;

WHEREAS, Amendment No. 2 further extended the term of the agreement for an additional three years effective January 20, 2020;

WHEREAS, the Parties seek to renew the Term of the Agreement for an additional three (3) years through October 13, 2026.

NOW THEREFORE, in consideration of the promises and mutual covenants contained herein, the Parties hereby agree to amend the Agreement as follows:

1. This Amendment No. 3 is effective as of October 14, 2023 (“Effective Date of Amendment No. 3”).
2. The Term of the Agreement is renewed for an additional three (3) years through October 13, 2026.
3. All other terms and conditions of the Agreement, except as modified by this Amendment No. 3, shall remain in full force and effect.

SIGNATURE PAGE TO FOLLOW

IN WITNESS WHEREOF, the undersigned authorized representatives of Consultant and City have executed this Amendment No. 3.

CITY OF OROVILLE STAFF REPORT

TO: MAYOR PITTMAN AND COUNCIL MEMBERS

FROM: RUTH DUNCAN, ASSISTANT CITY ADMINISTRATOR-ADMINISTRATIVE SERVICES

RE: LEASE SOFTWARE PURCHASE

DATE: SEPTEMBER 19, 2023

SUMMARY

The Council may consider the purchase of lease software necessary to comply with new mandatory Governmental Accounting Standards Board (GASB) 87 and 96 related to new lease reporting requirements.

DISCUSSION

New GASB pronouncements have been issued and require mandatory compliance. The City has sought out two software companies who provide this compliance for leases. Our external auditor also confirmed this was necessary and particularly for our Airport leases.

A comparison chart of the two companies is as follows:

	<u>LeaseQuery</u>	<u>Debtbook</u>
Year 1		
Software subscription	9,396.00	10,000.00
Implementation	-	2,500.00
Year 2		
Software subscription	9,396.00	15,000.00
Year 3		
Software subscription	9,396.00	15,000.00
	<u>28,188.00</u>	<u>42,500.00</u>

FISCAL IMPACT

Annual expenditure of \$9,396.00 for three years. Finance Department software expense – 100.1090 6410. There are sufficient appropriations in the budget to cover this expense. No additional appropriations are being requested.

RECOMMENDATION

Staff is recommending the approval of the purchase of lease software from LeaseQuery for a term of three years.

Oroville Hmong New Year Festival 2023-2024

August 21, 2023

To: City of Oroville

Re: Oroville Hmong New Year Festival 2023-2024

Dear the Honorable Mayor David Pittman and Members of the City Council:

On behalf of the Oroville Hmong New Year Committee, we are writing this letter to request for your support of the annual cultural event, and ask the city for a waiver on the Oroville Police Department's fee for providing security and services to help with the community event scheduled for October 14th and 15th, 2023 at the Nelson Sports Complex here in Oroville.

The Oroville Hmong New Year Festival is one of the largest annual events held in Oroville annually and draws thousands of attendees from the surrounding cities as well as those from out of state. The Hmong New Year Festival is a community event and is not for profit. The committee and individuals who work on this event are volunteers, and no one gets paid for their time and services. Despite the long-standing history of this event, we have not been able to set aside a budget that is enough to operate this event. Every year, the community struggles to make ends meet by leasing booths and collecting a very low admission fee to pay for the expenses required to do this event. As we progress up to the days of the event, we will be able to collect the admission fees, plus the booth leasing fees to put together a minimal budget which we hope will cover the expenses. After all the expenses are paid and if there are any proceeds made, then it will be donated 100% toward a future Hmong community center, which will be operated by the local Hmong nonprofit organizations and the Hmong community leaders.

Therefore, on behalf of the Oroville Hmong New Year Committee and the Hmong community of Oroville, we would like to ask for your leadership to waive the Oroville Police Department's fee for providing the security and services to the Oroville Hmong New Year Festival. The Oroville Hmong community fully understand the heavy burden this event has put on the city budget. However, we simply cannot host this cultural event without the help of the city and would like to continue to ask the city to be a part of this community event as a joint team effort between the City of Oroville and the Hmong citizens. We ask for your leadership to support to make this event as successful as it has been for the past many years and for the years to come. If you have any questions or need to reach us, please feel free to contact Kay Cha at (530) 720-6513 or Yeng Vang at (530) 403-8262. You can also email us at orvillehmongnewyear@outlook.com. Thank you for your time and consideration on this matter, and we look forward to hearing from you.

Sincerely yours,

Kay Cha
 President of Lao Veterans of America, Inc., Oroville

Yeng Vang,
 President of Hmong United Community of Oroville

CITY OF OROVILLE STAFF REPORT

TO: MAYOR PITTMAN AND COUNCIL MEMBERS

FROM: BILL LAGRONE, CHIEF OF POLICE

RE: FEE WAIVER REQUEST BY THE OROVILLE HMONG NEW YEAR FESTIVAL COMMITTEE

DATE: SEPTEMBER 19, 2023

SUMMARY

The Council may consider a fee waiver request from the Oroville Hmong New Year Festival Committee, in the amount of \$6,415, for Police Services relating to the 2023 Oroville Hmong New Year Festival, to be held October 14th and 15th, 2023 at the Nelson Avenue Sports Complex.

DISCUSSION

On October 14th and 15th of this year, the Oroville Hmong New Year Festival for 2023 will be held at the Nelson Avenue Sports Complex. This event will run from 8:00 AM to 5:00 PM each day. An average daily attendance of 5,000 people is expected. This event has occurred for the past twenty-three years with few major incidents that required Law Enforcement intervention. The Hmong community has always been supportive and responsive to the needs of Law Enforcement to make this event safe and successful.

In 2018, the Hmong community paid \$2,641.52 for Police Services for the New Year celebration. The event was canceled after this event do to various reasons along with Covid. This fee was based upon the Police Department supplying nine Officers over the two day celebration for a total of 80 hours. The hourly rate was \$71 per hour. The Police Department cost for providing this service in 2018 was \$7,547.20. The Council authorized a discount of 65%, which resulted in the lower rate being collected.

The reason for the waiver is that this event is organized by non profit organizations that depend upon the proceeds from this event to fund their organizations over the course of the year.

This is a worthy event that is well attended by both local community members and out of town visitors. It is the recommendation of the Police Department that the fees for this event be reduced to help support the Hmong Community and to show our support of this event. (See *Chart below for details of fees.*)

PROPOSED FEE FOR 2015

PROPOSED FEE FOR 2017

Hours	Rate	Total	Discount	Total Proposed Fee
80	\$113.00	\$9,040.00	65% = -\$5,876.00	\$3,164.00

This is a City event which has the potential to have a positive impact on business activity, recreation, and community activity and destination point improvement.

FISCAL IMPACT

Partial waiver of Police Services fees will result in a negative impact of \$5,876.00 on the overtime budget of the Oroville Police Department

RECOMMENDATIONS

Waive 65% of the fees, in the amount of \$5,876.00, and have the applicant pay the remainder of the fees, in the amount of \$3,164, for the 2023 Oroville Hmong New Year Festival.

CITY OF OROVILLE STAFF REPORT

TO: MAYOR PITTMAND AND COUNCIL MEMBERS

FROM: FRED MAYO, PUBLIC WORKS DIRECTOR

RE: CAPITAL PROJECT TASK ORDER 3 WITH ROLLS, ANDERSON & ROLLS FOR ROADWAY DESIGN WORK

DATE: SEPTEMBER 19, 2023

SUMMARY

The Council may direct staff regarding the issuing of Task Order 3 for the design of three (3) capital improvement projects on Georgia Pacific Way, Oro Dam Boulevard East, and Norton Avenue.

DISCUSSION

Staff is continuing development of capital improvement projects. Staff is proposing to issue a task order (TO) to Rolls Anderson & Rolls Civil Engineers for design services under contract number 3345. Staff requests authority to proceed with the task orders for the following projects:

- Georgia Pacific Way - Feather River Boulevard to Baggett Marysville Road. Improvements to include Pavement reconstruction, ADA curb ramp compliance and drainage improvements. \$94,400.00. Target construction date is 2025/26.
- Oro Dam Boulevard East – Washington Avenue to Orange Avenue. Improvements to include Pavement reconstruction, ADA compliance, bike lanes, curb, gutter, and sidewalks. \$96,600.00. Target construction date is 2025/26.
- Norton Avenue – Montgomery Street to Bridge Street. Improvements to include pavement reconstruction, drainage improvements, road widening, on street parking, curb, gutter, and ADA curb ramp compliance. \$51,050.00. Target construction date is 2025/26.

FISCAL IMPACT

The funds in the amount of \$191,000 will come from Measure U Funds for Georgia Pacific Way and Oro Dam Boulevard East (included in FY 23/24 budget); for Norton Avenue \$26,050.00 will come from Transportation Impact Fees, and \$25,000.00 will come from Drainage Impact Fees.

RECOMMENDATION

Staff recommends the Council direct the City Administrator to proceed with the task order discussed above with Rolls Anderson & Rolls Civil Engineers.

Rolls Anderson & Rolls Proposal

Task Order

TASK ORDER #3
FOR PROFESSIONAL SERVICES

This Task Order is made and entered into as of _____, 2023, by and between the City of Oroville (“City”) and **Rolls, Anderson & Rolls, Inc.** (“Consultant”).

RECITALS

- A. The Consultant is licensed, trained, experienced and competent to provide Professional Services for as required by this Task Order, specifically production of plans, specifications, estimates, etc. for roadway construction, rehabilitation, drainage improvements, ADA upgrades and restriping of Oro Dam Boulevard East Ave, from Washington Avenue to Orange Avenue, Norton Street from Bridge Street to Montgomery Street, Georgia Pacific Way from Feather River Boulevard to 5th Avenue, and associated work; and
- B. The Consultant possesses the skill, experience, ability, background, license, certification, and knowledge to provide the services described in this Task Order on the terms and conditions described herein.
- C. City desires the Consultant to render professional services as set forth in this Task Order and in accordance with City Contract Number **3345** between the City and the Consultant.

TASK ORDER

1. Scope of Services. The Consultant shall complete all services in a professional manner. Consultant shall complete the services described in

Consultant's proposal attached as Exhibit "A" which is incorporated herein by reference.

2. Time of Performance. The services of Consultant shall commence upon execution of this Task Order and shall be completed at the end of Project close out.
3. Compensation. Compensation to be paid to Consultant shall be in accordance with the fee **budget/schedule** set forth in Exhibit "A," which is attached hereto and incorporated herein by reference. **In no event shall Consultant's compensation exceed the amount of \$242,050.00 without additional written authorization from the City.** Payment by City under this Task Order shall not be deemed a waiver of defects in Consultant's services, even if such defects were known to the City at the time of payment.
4. Method of Payment. Consultant shall submit monthly billings to City describing the work performed during the preceding month. Consultant's bills shall include a brief description of the services performed, the date the services were performed, the number of hours spent and by whom, a description of any reimbursable expenditures, the contract number, and the Task Order number. City shall pay Consultant no later than 30 days after approval of the monthly invoice by City staff.
5. Extra Work. At any time during the term of this Task Order, City may request that Consultant perform Extra Work. As used herein, "Extra Work" means any work which is determined by City to be necessary for the

- proper completion of Consultant's services, but which the parties did not reasonably anticipate would be necessary at the execution of this Task Order. Consultant shall not perform, nor be compensated for, Extra Work without prior written authorization from City.
6. Termination. This Task Order may be terminated by the City immediately for cause or by either party without cause upon fifteen days' written notice of termination. Upon termination, Consultant shall be entitled to compensation for services properly performed up to the effective date of termination.
 7. Ownership of Documents. All plans, studies, documents and other writings prepared by and for Consultant, its officers, employees and agents and subcontractors in the course of implementing this Task Order, except working notes and internal documents, shall become the property of the City upon payment to Consultant for such work, and the City shall have the sole right to use such materials in its discretion without further compensation to Consultant or to any other party. Consultant shall, at Consultant's expense, provide such reports, plans, studies, documents, and other writings to City within three (3) days after written request.
 8. Licensing of Intellectual Property. This Task Order creates a nonexclusive and perpetual license for City to copy, use, modify, reuse, or sublicense any and all copyrights, designs, and other intellectual property embodied in documents or works of authorship fixed in any tangible medium of expression, including but not limited to, data magnetically or otherwise

- recorded on computer diskettes, which are prepared or caused to be prepared by Consultant under this Task Order (“Documents and Data”). Consultant shall require all subcontractors to agree in writing that City is granted a nonexclusive and perpetual license for any Documents and Data the subcontractor prepares under this Task Order. Consultant represents and warrants that Consultant has the legal right to license any and all Documents and Data. Consultant makes no such representation and warranty in regard to Documents and Data which may be provided to Consultant by City. City shall not be limited in any way in its use of the Documents and Data at any time, provided that any such use not within the purposes intended by this Task Order shall be at City’s sole risk.
9. Confidentiality. All ideas, memoranda, specifications, plans, procedures, drawings, descriptions, computer program data, input record data, written information, and other Documents and Data either created by or provided to Consultant in connection with the performance of this Task Order shall be held confidential by Consultant. Such materials shall not, without the prior written consent of City, be used by Consultant for any purposes other than the performance of the services under this Task Order. Nor shall such materials be disclosed to any person or entity not connected with the performance of the services under this Task Order. Nothing furnished to Consultant which is otherwise known to Consultant or is generally known, or has become known, to the related industry shall be deemed confidential. Consultant shall not use City’s name or insignia,

photographs relating to project for which Consultant's services are rendered, or any publicity pertaining to the Consultant's services under this Task Order in any magazine, trade paper, newspaper, television or radio production or other similar medium without the prior written consent of City.

10. Consultant's Books and Records.

- a. Consultant shall maintain any and all ledgers, books of account, invoices, vouchers, canceled checks, and other records or documents evidencing or relating to charges for services, expenditures and disbursements charged to City for a minimum period of three (3) years, or for any longer period required by law, from the date of final payment to Consultant to this Task Order.
- b. Consultant shall maintain all documents and records which demonstrate performance under this Task Order for a minimum of three (3) years, or for any longer period required by law, from the date of termination or completion of this Task Order.
- c. Any records or documents required to be maintained pursuant to this Task Order shall be made available for inspection or audit, at any time during regular business hours, upon written request by the City Administrator, City Attorney, City Finance Director, or a designated representative of these officers. Copies of such documents shall be provided to the City for inspection at City Hall when it's practical to do so. Otherwise, unless an alternative is

mutually agreed upon, the records shall be available at Consultant's address indicated for receipt of notices in this Task Order.

- d. Where City has reason to believe that such records or documents may be lost or discarded due to dissolution, disbandment or termination of Consultant's business, City may, by written request by any of the above-named officers, require that custody of the records be given to the City and that the records and documents be maintained by City Hall.
11. Independent Contractor. It is understood that Consultant, in the performance of the work and services agreed to be performed, shall act as and be an independent contractor and shall not act as an agent or employee of the City. Consultant shall obtain no rights to retirement benefits or other benefits which accrue to City's employees, and Consultant hereby expressly waives any claim it may have to any such rights.
 12. Interest of Consultant. Consultant (including principals, associates, and professional employees) covenants and represents that it does not now have any investment or interest in real property and shall not acquire any interest, direct or indirect, in the area covered by this Task Order or any other source of income, interest in real property or investment which would be affected in any manner or degree by the performance of Consultant's services hereunder. Consultant further covenants and represents that in

the performance of its duties hereunder no person having any such interest shall perform any services under this Task Order. Consultant is not a designated employee within the meaning of the Political Reform Act because Consultant:

- a. will conduct research and arrive at conclusions with respect to its rendition of information, advice, recommendation, or counsel independent of the control and direction of the City or any City official, other than normal Task Order monitoring; and
- b. possesses no authority with respect to any City decision beyond rendition of information, advice, recommendation or counsel.

(FPPC Reg. 18700(a)(2).)

13. Professional Ability of Consultant. City has relied upon the professional training and ability of Consultant to perform the services hereunder as a material inducement to enter into this Task Order. All work performed by Consultant under this Task Order shall be in accordance with applicable legal requirements and shall meet the standard of quality ordinarily to be expected of competent professionals in Consultant's field of expertise.
14. Compliance with Laws. Consultant shall use the standard of care in its profession to comply with all applicable federal, state and local laws, codes, ordinances and regulations.
15. Licenses. Consultant represents and warrants to City that it has all licenses, permits, qualifications, insurance and approvals of whatsoever nature which are legally required of Consultant to practice its profession.

Consultant represents and warrants to City that Consultant shall, at its sole cost and expense, keep in effect or obtain at all times during the term of this Task Order, any licenses, permits, insurance and approvals which are required by the City for its business.

16. Indemnity. Consultant agrees to indemnify and hold harmless the City, its officers, officials, employees and volunteers from and against any and all claims, demands, actions, losses, damages, injuries, and liability, direct or indirect (including reimbursement of reasonable costs and expenses in connection therein), arising from its negligent performance of this Task Order or its failure to comply with any of its obligations contained in this Task Order, except for any such claim arising from the negligence or willful misconduct of the City, its officers, agents, employees or volunteers. With regard to any claim alleging Consultant's negligent performance of professional services, Consultant's defense obligation under this indemnity paragraph means only the reimbursement of reasonable defense costs to the proportionate extent of its actual indemnity obligation hereunder.

17. Insurance Requirements, Incorporation and Conflicts. Consultant, at Consultant's own cost and expense, shall procure and maintain insurance, for the duration of the Task Order, as required under Contract Number [3345](#) between the City and the Consultant. The terms of Contract Number [3345](#) between the City and the Consultant are incorporated by reference as if fully set forth herein. To the extent that any conflict exists between

Contract Number 3345 and this Task Order, the terms of Contract Number 3345 shall control.

18. Notices. Any notice required to be given under this Task Order shall be in writing and either served personally or sent prepaid, first class mail. Any such notice shall be addressed to the other party at the address set forth below. Notice shall be deemed communicated within 48 hours from the time of mailing if mailed as provided in this section:

If to City: **Brian Ring, City Administrator
City of Oroville
1735 Montgomery Street
Oroville, CA 95965-4897
bring@cityoforoville.org**

If to Consultant: **Keith Doglio, Secretary/Principal
Rolls, Anderson & Rolls
115 Yellowstone Drive
Chico, CA 95973
KDoglio@rarcivil.com**

19. Entire Task Order. This Task Order constitutes the complete and exclusive statement of agreement between the City and Consultant for this Task Order. All prior written and oral communications, including correspondence, drafts, memoranda, and representations are superseded in total by this Task Order in regard to professional services specifically provided under this Task Order. Other task orders issued to the Consultant by the City under Contract Number 3345 stand alone and are unaffected by this Task Order.
20. Amendments. This Task Order may be modified or amended only by a

- written document executed by both Consultant and City and approved as to form by the City Attorney.
21. Assignment and Subcontracting. The parties recognize that a substantial inducement to City for entering into this Task Order is the professional reputation, experience and competence of Consultant. Assignments of any or all rights, duties or obligations of the Consultant under this Task Order will be permitted only with the express prior written consent of the City. Consultant shall not subcontract any portion of the work to be performed under this Task Order without the prior written authorization of the City. If City consents to such subcontract, Consultant shall be fully responsible to City for all acts or omissions of the subcontractor. Nothing in this Task Order shall create any contractual relationship between City and subcontractor nor shall it create any obligation on the part of the City to pay or to see to the payment of any monies due to any such subcontractor other than as otherwise required by law.
22. Waiver. Waiver of a breach or default under this Task Order shall not constitute a continuing waiver of a subsequent breach of the same or any other provision under this Task Order.
23. Severability. If any term or portion of this Task Order is held to be invalid, illegal, or otherwise unenforceable by a court of competent jurisdiction, the remaining provisions of this Task Order shall continue in full force and effect.
24. Controlling Law Venue. This Task Order and all matters relating to it shall

- be governed by the laws of the State of California and any action brought relating to this Task Order shall be held exclusively in Butte County Superior Court or the United States District Court, Eastern District of California.
25. Litigation Expenses and Attorney's Fees. If either party to this Task Order commences any legal action against the other part arising out of this Task Order, the prevailing party shall be entitled to recover its reasonable litigation expenses, including court costs, expert witness fees, discovery expenses, and attorneys' fees.
26. Execution. This Task Order may be executed in several counterparts, each of which shall constitute one and the same instrument and shall become binding upon the parties when at least one copy hereof shall have been signed by both parties hereto. In approving this Task Order, it shall not be necessary to produce or account for more than one such counterpart.
27. Authority to Enter Task Order. Consultant has all requisite power and authority to conduct its business and to execute, deliver, and perform the Task Order. Each party warrants that the individuals who have signed this Task Order have the legal power, right, and authority to make this Task Order and to bind each respective party.
28. Prohibited Interests. Consultant maintains and warrants that it has not employed nor retained any company or person, other than a bona fide employee working solely for Consultant, to solicit or secure this Task

Order. Further, Consultant warrants that it has not paid nor has it agreed to pay any company or person, other than a bona fide employee working solely for Consultant, any fee, commission, percentage, brokerage fee, gift or other consideration contingent upon or resulting from the award or making of this Task Order. For breach or violation of this warranty, City shall have the right to rescind this Task Order without liability. For the term of this Task Order, no member, officer or employee of City, during the term of his or her service with City, shall have any direct interest in this Task Order, or obtain any present or anticipated material benefit arising therefrom.

- 29. Equal Opportunity Employment. Consultant represents that it is an equal opportunity employer and it shall not discriminate against any subcontractor, employee or applicant for employment because of race, religion, color, national origin, disability, ancestry, sex or age. Such non-discrimination shall include, but not be limited to, all activities related to initial employment, upgrading, demotion, transfer, recruitment or recruitment advertising, layoff or termination.

IN WITNESS WHEREOF, the parties have caused this Task Order to be executed on the date first written above.

**SUBJECT: CITY OF OROVILLE – ROAD PAVEMENT REHABILITATION PROJECTS
GEORGIA PACIFIC WAY, OROVILLE DAM BLVD. EAST, NORTON STREET
PROPOSAL FOR PROFESSIONAL SERVICES – REVISION #1**

Dear Josh:

Based on the information that you emailed us and our subsequent discussion, we propose to provide you the following professional services:

- Task 1 - would involve sending letters to Cal Water, PG&E, Comcast and AT&T requesting utility markings within the three project areas.
- Task 2 - would involve requesting right-of-way mapping and dedication documents from the City of Oroville, researching recorded maps and deed documents and compiling information for monument searching for the three project areas.
- Task 3 - would involve establishing horizontal and vertical control throughout the three project sites based on State Plane Coordinates and City of Oroville datum.
- Task 4 - would involve performing a field search for property corner monuments adjacent to the three project sites and surveying found monuments.
- Task 5 - would involve coordination with the drone aerial topography consultant regarding survey control, scheduling and project deliverables.
- Task A - would involve utilizing a drone to obtain aerial topographic data and orthographic aerial images within the Georgia Pacific Way right-of-way. All work would be performed by a sub-consultant.
- Task B - would involve utilizing a drone to obtain an aerial topographic data and orthographic aerial images within the Oroville Dam Boulevard East right-of-way. All work would be performed by a sub-consultant.
- Task 6 - would involve performing a supplemental ground topographic survey along Georgia Pacific Way that would be used in conjunction with the drone aerial topographic survey (by others). Work would include locating curb ramps and flowline and top of roadside ditches. Locations to be surveyed would include the northeast corner at the intersection of South 7th Avenue, four curb ramps at both driveways to 650 Georgia Pacific Way and the northeast corner at the intersection of South 5th Avenue for curb ramps and the entire project area for roadside ditches.
- Task 7 - would involve performing a supplemental ground topographic survey along Oroville Dam Boulevard East that would be used in conjunction with the drone aerial topographic survey (by others). Work would include locating curb ramps. Locations to be surveyed would include the northerly and easterly corners at the intersection of Olive Highway, westerly and northerly corners at the intersection to The Courtyard Apartments (2720 Oro-Dam Blvd.) including the area with no sidewalk, the northeasterly and southeasterly corners at the intersection of Gilmore Lane, all four returns at the intersection of Bridge Street and the northeasterly and southeasterly corners at the intersection of Stanford Avenue.

July 14, 2023
Mr. Josh Freitas
Page 2

- Task 8 - would involve performing survey cross-sections along Norton Street from Bridge Street to Montgomery Street at approximate 25-foot intervals and would include location edge of pavement, curb, gutter and sidewalk, curb ramps, driveways, utility poles, sign posts, utility poles, fire hydrants, fence corners, gates, ditch flowlines, ends of culverts, trees larger than four inches in diameter, mailboxes, pavement markings and surface visible utilities. When pipes are visible for sanitary sewer and storm drainage facilities pipe sizes and invert elevations would be measured. Work would include surveying the Montgomery Street intersection for an approximate length of 130 feet and the Bridge Street intersection for an approximate length of 120 feet.
- Task 9 - would involve importing found property corner monuments from Task 4 into AutoCAD software and resolving right-of-way lines based on Task 2 information. Right-of-way lines would be shown within reasonable accuracy. Should right-of-way acquisitions be necessary additional review may be required.
- Task 10 - would involve drafting topographic survey data collected in Tasks 6 and 7 and compiling the data with drone aerial topographic surveying and aerial images to create one AutoCAD file per project. Work would include drafting the topographic survey collected in Task 8. PDF's of the surveys for each site would be provided to the City in PDF format.
- Task 11 - would involve coordination with the geotechnical engineering consultant regarding soil testing and pavement recommendations for the three project sites. Pavement rehabilitations recommendations would be provided to the City for review and approval. Subsequent tasks would not begin until this task is complete.
- Task 12 - would involve preparation of conceptual improvement layout sheets for the three site that would depict new pavement limits, curb ramp and sidewalk improvements, measuring quantities for each project and preparation of an itemized construction cost estimate for each of the sites
- Task 13 - would involve creation of existing ground surfaces utilizing AutoCAD software for the roadways for the three project sites, creating roadway alignments and existing ground profiles to depict the existing ground and setup of plan and profile sheets for all three projects.
- Task 14 - would involve roadway design and preparation of improvement plans for Georgia Pacific Way. Work would include design of a road centerline profile for the pavement surfacing finish grade, layout of striping and pavement markings, design of replacement curb ramps at the locations surveyed in Task 6 and regrading roadside ditches as necessary to provide positive drainage. Plans would include centerline monuments to be preserved, typical roadway cross-sections, details for curb ramps, striping and pavement markings and notes. Improvement plans would consist of a cover sheet, overall project layout sheet, plan and profile sheets, striping plan sheets and notes and details sheets.
- Task 15 - would involve roadway design and preparation of improvement plans for Oroville Dam Boulevard East. Work would include design of a road centerline profile for the pavement surfacing finish grade, layout of striping and pavement markings (including bicycle lanes per City provided layout), design of replacement curb ramps at the locations surveyed in Task 7 and curb and gutter and sidewalk along the northwesterly side of the road along The Courtyard Apartments. Plans would include centerline monuments to be preserved, typical roadway cross-sections, details for curb ramps, striping and pavement markings and notes. Improvement plans would consist of a cover sheet, overall project layout sheet, plan and profile sheets, striping plan sheets and notes and details sheets.
- Task 16 - would involve roadway design and preparation of improvement plans for Norton Street. Work would include design of a road centerline profile for the pavement surfacing finish grade, layout and design of curb and gutter on both sides of the road, layout of pavement markings and

July 14, 2023
Mr. Josh Freitas
Page 3

design of replacement curb ramps at the locations surveyed in Task 8. Plans would include centerline monuments to be preserved, typical roadway cross-sections, details for curb ramps, pavement markings and notes. Improvement plans would consist of a cover sheet, overall project layout sheet, plan and profile sheets, striping plan sheets and notes and details sheets.

Task 17 - would involve design and preparation of an erosion and sediment control plan sheets for the three project sites that would include notes and details for BMP's.

Task 18 - would involve preparation of an engineer's quantity and cost estimate for the three project sites based on the improvement plans.

Task 19 - would involve preparation of technical specifications for the three project sites.

Task 20 - would involve receiving general conditions, special conditions and other bid book documents from the City of Oroville and compiling the documents to create contract documents for the three project sites.

Task 21 - would involve attending a maximum of four project meetings in Oroville or conference calls.

The cost to complete the above tasks would be:

	Project Name			Sum of all three projects
	Georgia Pacific Way	Oroville Dam Blvd. East	Norton Street	
Tasks 1 – 10	\$39,300.00	\$35,200.00	\$19,500.00	\$94,000.00
Tasks 11 – 12	\$5,000.00	\$3,800.00	\$1,700.00	\$10,500.00
Tasks 13 – 20	\$44,850.00	\$51,250.00	\$29,400.00	\$125,500.00
Task 21	\$450.00	\$450.00	\$450.00	\$1,350.00
Tasks A & B	\$4,800.00	\$5,900.00	N/A	\$10,700.00
Total =	\$94,400.00	\$96,600.00	\$51,050.00	\$242,050.00

Prevailing wage rates have been used for survey work.

This proposal is based on the following assumptions:

1. A sufficient amount of right-of-way documents would be found during Task 2 and a sufficient amount of property corner monuments would be found during Task 4 to determine right-of-way lines.
2. Work for all three projects would occur concurrently.

If any of the assumptions are found to not be correct the above tasks and costs would need to be revised.

The following items are not included in the scope of professional services:

1. Payment of any fees including title company fees, permit fees, plan check fees, inspection fees, etc.

July 14, 2023
Mr. Josh Freitas
Page 4

2. Obtaining encroachment permits.
3. Excavating or "potholing" existing utilities or piping to determine the location, depth, size and pipe material.
4. Unless specifically provided in the above tasks, performing a topographic survey utilizing conventional survey equipment. A subconsultant will be providing an aerial topographic survey for portions of the projects.
5. Surveying the location of landscape sprinkler heads.
6. Preparation of a record of survey.
7. Determining easement locations.
8. Preparation of a soils report or performing soil testing. A separate proposal for geotechnical engineering services will be provided.
9. Performing any redesign work after receiving approval of the conceptual improvement layout sheets.
10. Design to replace non-ADA compliant sidewalks.
11. Design to replace non-ADA compliant driveways.
12. Layout or design of new or replacement signs.
13. Depicting existing utilities in profile views.
14. Design of facilities within the Caltrans or railroad right-of-way.
15. Design or preparation of plans for sanitary sewer, water or storm drain infrastructure.
16. Design or preparation of plans for relocating existing utilities.
17. Design of any stormwater "post-construction" or "Low Impact Development" (LID) features.
18. Design or preparation of plans for landscaping and irrigation improvements.
19. Design or preparation of plans for retaining walls.
20. Design or preparation of plans for fencing.
21. Design or preparation of plans for stairs, pedestrian ramps or handrails.
22. Design or preparation of plans for lighting.
23. Design or preparation of plans for electric facilities.
24. Providing road cross-sections.
25. Conducting or providing assistance with project bidding.
26. Responding to Requests for Information during project bidding and construction.
27. Providing construction administration.
28. Preparation of a Storm Water Pollution Prevention Plan.
29. Providing survey control data.
30. Construction staking.
31. Reviewing material submittals or performing contract administration.
32. Performing construction inspection or preparation of as-built plans.
33. Other than as provided in Task 21, preparation for and attendance at meetings that are required by the owner, contractor or public agency will be provided on a time and materials basis and would be in addition to the proposed cost.

Thank you for the opportunity to submit this proposal for your review and consideration. Please call if you have any questions.

Sincerely,

ROLLS, ANDERSON & ROLLS

Keith Doglio

DATE: SEPTEMBER 19, 2023

SUMMARY

The Council may consider a Memorandum of Understanding with the Oroville City Elementary School District for a School Resource Officer (SRO).

DISCUSSION

The Oroville Police Department has successfully partnered with the Oroville City Elementary School District to establish a School Resource Officer (SRO) Program. This program provides for a dedicated full-time Police Officer to serve the Oroville City Elementary School District Campuses.

A School Resource Officer will be provided for the Oroville City Elementary School District Campuses. The School District has expressed the desire to continue the program. The Oroville City Elementary School Board approved a five year contract for these services at their August 16, 2023 meeting, pending City Council approval.

The Oroville City Elementary School District will contribute Fifty Thousand Dollars (\$50,000) per year for the salary and benefits of an Oroville Police Officer necessary for the role of School Resource Officer beginning August 10, 2023, through June 10, 2028.

The Oroville Police Department will provide the Oroville City Elementary School District with an invoice quarterly for \$12,500.00 for a total of \$250,000.00 dollars by June 30, 2028. For additional details see attached contract.

FISCAL IMPACT

Expenditure reimbursement of \$50,000.00 will be included in the Fiscal Year (FY) 2023/24, along with the next four FY budgets.

RECOMMENDATION

Adopt Resolution No. XXXX - A RESOLUTION OF THE OROVILLE CITY COUNCIL AUTHORIZING AND DIRECTING THE MAYOR TO EXECUTE A MEMORANDUM OF UNDERSTANDING WITH THE OROVILLE CITY ELEMENTARY SCHOOL DISTRICT FOR SCHOOL RESOURCE OFFICER SERVICES FOR 2023/2024, 2024/2025, 2025/2026, 2026/2027, AND 2027/2028 SCHOOL YEARS– (Agreement No. XXXX).

MEMORANDUM OF UNDERSTANDING
BETWEEN THE
OROVILLE POLICE DEPARTMENT AND THE
OROVILLE CITY ELEMENTARY SCHOOL DISTRICT

The Oroville Police Department (Department) and the Oroville City Elementary School District (District) recognize the need for a School Resource Officer (SRO) to be directly involved with the youth on the campuses of The Studios @ Central, Ishi Hills Middle, Oakdale Heights Elementary, Ophir Elementary, Stanford Elementary, and Wyandotte Academy schools. The District is aware of the risks for violence on school campuses; of drug and alcohol use by students, both on and off school campuses; the risks of gang mentality/involvement and the accompanying criminal behavior; and the challenges of social media, electronic communication, bullying and truancy.

The purpose of the School Resource Officer is to be a liaison between the staff, faculty, students, and parents of the students at Oroville City Elementary School District schools to promote a safe environment where an orderly educational process can take place.

The following is agreed to by the Department and the District:

1. **Services and Independent Contractor.** The Department shall provide and SRO to perform the Services set forth in the Agreement, including Exhibit A. The SRO will be available every regular day school is in session. When school is not in regular session, the School Resource Officer will be assigned to the Oroville Police Department. The Department, in the performance of this Agreement, shall be and act as an independent contractor with the sole authority for controlling and directing the performance of the details of the Services, District being interested only in the results obtained. The Department understands and agrees that it/he/she and all of its/his/her employees shall not be considered officers, employees, agents, partner, or joint venture of the District, and are not entitled to benefits of any kind or nature normally provided employees of the District and/or to which District's employees are normally entitled, including, but not limited to, State Unemployment Compensation or Worker's Compensation. The Department shall assume full responsibility for payment of all federal, state and local taxes with respect to Department employees.
2. **Compensation.** The Department will provide a quarterly invoice to the District within 60 days after the end of each quarter in the amount of \$12,500.00 dollars for a total of \$50,000.00 dollars annually, and the final invoice will include the end-of-year report. The billing to the District shall be invoiced reflecting the total number of hours worked by the SRO for duties requested or required as overtime or straight-time assignments at the applicable rate. Any overtime must be preapproved by the District in writing. The maximum amount billable to the District for the term of this agreement is \$250,000.
3. **Standard of Care.** The Department represents that the Department has the qualifications and ability to perform the Services in a professional manner, without the advice, control or supervision of the District. Services shall only be performed by competent personnel under the supervision of and in the employment of the Department. The Department's services will be performed, findings obtained, reports and recommendations prepared in accordance with

generally and currently accepted principles and practices of his/her profession for services to California school districts.

Equipment and Materials. The Department shall furnish, at its own expense, all tools, labor, materials, equipment, supplies, transportation services and any other items (collectively, "Equipment") necessary to complete the Services in a manner which is consistent with generally accepted standards of the profession for similar services. Notwithstanding the foregoing, the District shall not be responsible for any damages to persons or property as a result of the use, misuse or failure of any equipment used by the Department even if such Equipment is furnished, rented or loaned to the Department by the District. All original curricular materials provided in conjunction with Department services must be authorized for use by the District only and remain exclusively the intellectual property of the authors.

The District will provide the SRO with office space and the necessary furniture to conduct interviews, write reports, etc., and will prepare a work schedule for the SRO that is agreeable to the Department. This work schedule may be modified with agreement by both the Department and the District.

4. **Confidentiality.** The Department shall maintain the confidentiality of all information received in the course of performing the Services. This requirement to maintain confidentiality shall extend beyond the termination of this Agreement.
5. **Term.** This Memorandum of Understanding will begin on August 16, 2023, and will remain in effect until June 30, 2028, unless terminated earlier in accordance with the MOU.

6. **Termination.**

6.1 **With Cause by District.** The District may terminate this Agreement upon giving of written notice of intention to terminate for cause. Cause shall include:

- 6.1.1. material violation of this Agreement by the Department; or
- 6.1.2. any act by the Department Exposing the District to liability to others for personal injury or property damage; or

Written notice by the District shall contain the reasons for such intention to terminate and unless within three (3) calendar days after that notice the condition or violation shall cease, or satisfactory arrangements for the correction thereof be made, this Agreement shall upon the expiration of the three (3) calendar days cease and terminate. In the event of this termination, the District may secure the required services from another party. If the expense, fees, and costs to the District exceed the cost of providing the service pursuant to this Agreement, the Department shall immediately pay the excess expense, fees, and/or costs to the District upon the receipt of the District's notice of these expense, fees, and/or costs. The foregoing provisions are in addition to and not a limitation of any other rights or remedies available to District.

6.2 **Reduction in District Funding.** If the District has an unforeseen reduction in funding, the District may, at any time, with or without reason, terminate this Agreement upon fifteen (15) days written notice and compensate the Department only for services satisfactorily rendered to the date of termination. Written notice by the District shall be sufficient to stop further performance of services by the Department. Notice shall be deemed given when received by the Department or no later than three days after the day or mailing, whichever is sooner. In the event that District terminates this Agreement pursuant to this section, District shall compensate the Department for Services completed to date.

~~7. **Indemnification.** To the furthest extent permitted by California law, the Department shall, at its sole expense, indemnify, and hold harmless the District, the State of California, and their agents, representatives, officers, contractors, employees, trustees, and volunteers (the "District Parties") from any and all demands, losses, liabilities, claims, suits, and actions (the "Claims") of any kind, nature, and description, including, but not limited to, personal injury, death, property damage, and the Department's and/or attorneys' fees and costs, directly or indirectly arising out of, connected with, or resulting from the performance of the Agreement or from any activity, work, or thing done, permitted or suffered by the Department under or in conjunction with this agreement, unless the Claims are caused wholly by the sole negligence or willful misconduct of the District Parties. The Department shall, to the furthest extent permitted by California law, defend the District at the Department's own expense, from any and all Claim(s) and allegations relating thereto with counsel approved by the District where such approval is not to be unreasonably withheld. Whereas the cost to defend the District Parties charged to the Department shall not exceed the Proportionate percentage of the Department's fault as determined by a court of competent Jurisdiction, any amounts paid in excess of such established fault will be reimbursed by the District. The District shall have the right to accept or reject any legal representation that the Department proposes to defend the indemnified parties.~~

8. **Insurance.** The Department shall procure and maintain at all times it performs any portion of the Services the following insurance:

8.1 **General Liability.** One Million Dollars (\$1,000,000) per occurrence and two Million Dollars (\$2,000,000) general aggregate for bodily injury, personal injury and property damage in the form of Comprehensive General Liability and Contractual Liability.

8.2 **Law Enforcement Legal Liability Insurance.** Ten Million Dollars (\$10,000,000).

8.3 **Automobile Liability Insurance.** One Million Dollars (\$1,000,000) per occurrence and One Million Dollars (\$1,000,000) general aggregate for automobile liability insurance that shall protect the Department and the District from all claims of Bodily injury, property damage, personal injury, death, and medical payments arising from performing any portion of the Services by the Department.

8.4 **Workers' Compensation and Employers' Liability Insurance.** For all the Department's employees who are subject to this Agreement and to the extent required by the applicable state or federal law, the Department shall keep in full force and effect, a Workers' Compensation policy. That policy shall provide employers' liability coverage with minimum liability coverage of One Million Dollars (\$1,000,000) per accident for bodily injury or disease. The Department shall provide an endorsement that the insurer waives the right of Subrogation against the District and its respective elected officials, officers, employees, agents, representatives, Contractors, Trustees, and Volunteers.

8.5 **Other Insurance Provisions:**

8.5.1. The general liability and automobile liability policies are to contain, or be endorsed to contain, the following provisions:

8.5.1.1. The District, its representatives, Contractors, trustees, officers, officials, employees, agents, and volunteers ("Additional Insureds") are to be covered as additional insureds as respects liability arising out of activities performed by or on behalf of the Department; instruments of Service and completed operation of the Department; premises owned, occupied or used by the Department; or automobiles owned, leased, hired or borrowed by the Department. The coverage shall contain no special limitations on the scope of protection afforded to the Additional Insureds.

8.5.1.2. For any claims related to the services, the Department's insurance coverage shall be primary insurance as respects the Additional Insureds. Any insurance or self-insurance maintained by the Additional Insureds shall be in excess of the Department's insurance and shall not contribute with it.

8.5.1.3. Any failure to comply with reporting or other provisions of the policies including breaches of warranties shall not affect coverage provided to the Additional Insureds.

8.5.2. The Department's Insurance shall apply separately to each insured against who claim is made of suit is brought, except with respect to the limits of the insurer's liability.

8.5.3. Each insurance policy required by this clause shall be endorsed to state that coverage shall not be canceled except after thirty (30) days prior written notice by certified mail, return receipt requested, has been given to the District.

8.5.4. The Department shall furnish the District with Certificates of insurance showing maintenance of the required insurance coverage and original

endorsements affecting general liability and automobile liability coverage. The endorsements are to be signed by a person authorized by that insurer to bind coverage on its behalf. All endorsements are to be received and approved by the District before Services commence.

9. **Limitation of District Liability.** Other than as provided in this Agreement, the District's financial obligations under this Agreement shall be limited to the payment of the compensation provided in this Agreement. Notwithstanding any other provision of this Agreement, in no event, shall the District be liable, regardless of whether any claim is based on contract or tort, for any special, consequential, indirect or incidental damages, including but not limited to, lost profits or revenue, arising out of or in connection with this Agreement for the services performed in connection with this Agreement.

10. The Foregoing has been agreed upon by the following:

Spencer Holtom, Superintendent
Oroville City Elementary School District

Date

Bill LaGrone, Chief of Police
Oroville Police Department

Date

David Pittman, Mayor
City of Oroville

Date

Scope of Services

The Oroville Police Department will provide the following services:

1. Under the Supervision of the Oroville Police Department, dedicate one (1) full-time School Resource Officer (SRO) to Oroville Elementary School District..
2. The SRO will coordinate enforcement details targeting truancy and assist faculty and staff in the development of a proactive truancy enforcement program.
3. The Oroville Police Department will provide all necessary training that would improve the effectiveness of the SRO.
4. The SRO will participate in home visits to student truants along with outreach workers and attend monthly meetings of the Truancy Team to coordinate with other truancy prevention related services.
5. The SRO will coordinate enforcement details with campus staff targeting students and problem areas involving vandalism, narcotics, weapons on school grounds, fighting, loitering etc. The SRO will work with staff and the surrounding business community to target problems on or off campus involving students.
6. The SRO will assist school staff with the development of yearly safety updates, practice drills and implementation of the school's safety plan.
7. The officer may participate in weekly school meetings and have weekly contact with school administrators.
8. The SRO may also participate in other activities not specifically covered in the MOU that are mutually agreed upon by the Participating Agencies that fall within the total authorized hours/cost.
9. The SRO will be available to assist staff with issues regarding mandated reporting and referrals to the Children's Services Department.
10. The SRO will provide quarterly reports regarding the number of citations, home visits, student and parent contacts, staff and classroom presentations, attend coalition meetings, and other related activities.
11. The term of this contract is five (5) years, beginning August 2023.
12. The Oroville Police Department will provide a quarterly invoice to the District for \$12,500.00 dollars for a total of \$50,000.00 dollars annually by June 30 each year, and the final invoice will include the End-of-Year Report. The billing to the District shall be invoiced reflecting the total number of hours worked by the SRO for duties requested or required as overtime or straight-time assignments.
13. Overtime will be contracted on an as needed basis and approved by the District prior to working the overtime.

CITY OF OROVILLE STAFF REPORT

TO: MAYOR PITTMAN AND COUNCIL MEMBERS

FROM: FRED MAYO, PUBLIC WORKS DIRECTOR

**RE: SECOND AMENDMENT TO AGREEMENT NO. 3387 FOR
PROFESSIONAL SERVICES WITH NORTHSTAR ENGINEERING**

DATE: SEPTEMBER 19, 2023

SUMMARY

The Council may consider a second amendment to an existing Agreement for Professional Services Contract with NorthStar Engineering No.3387 (“NorthStar”). The amendment would authorize adding City Engineer services to the original agreement.

DISCUSSION

The Council previously approved an Agreement for Professional Services with NorthStar of Chico for On-Call Civil Engineering and Planning Services on September 8, 2021. This agreement was later amended to add Quality Assurance / Quality Control services and Construction Management Services to existing Task Orders currently under contract. This second amendment would provide needed City Engineer services for the City until such time as a full time City Engineer can be found.

Some of the typical duties the Consultant City Engineer will perform are:

- Reviews, approves, and signs plans for City projects, and private developments.
- Assist with updating and developing City Public Works programs.
- Provide mentorship for City staff.
- Assists the City in finding funding sources for transportation project.

The Consultant City Engineer will be bill on an hourly basis and is not to exceed \$85,000 in total work.

FISCAL IMPACT

Funds in the amount of \$85,000.00 are to come Public Works Administration – Outside services – 100-1160-6360.

RECOMMENDATION

Staff recommends that the Council direct the City Administrator to approve amendment #2.

TO AGREEMENT FOR PROFESSIONAL SERVICES
BETWEEN CONSULTANT AND CLIENT

DATE: August 31, 2023

CLIENT: Brian Ring
City Administrator
City of Oroville
1735 Montgomery Street
Oroville, CA 95965
mthompson@cityoforoville.org

CONSULTANT: NorthStar
111 Mission Ranch Blvd., Suite 100
Chico, CA 95926
(530) 893-1600

PROJECT: PSA: On-Call Civil Engineering Services No. 3387 **NS#:** 21-103

A. CLIENT AND CONSULTANT AGREE AS FOLLOWS:

1. This agreement will serve as an additional work authorization to our previous Agreement, dated November 9th 2021. Work under this Agreement will be subject to the terms and conditions of our previous Agreement, except as noted below.
2. Consultant agrees to perform the additional services as set forth on Exhibit "A" attached hereto and incorporated herein by this reference ("Additional Scope of Services").
3. Client agrees (unless otherwise stated herein) to compensate Consultant for its Services according to the cost proposal attached hereto as Exhibit "B" and incorporated herein by this reference ("Cost Proposal for Additional Work").

B. GENERAL PROVISIONS:

1. **Timeline for Offer to Contract / Termination of Agreement.** This offer to contract for additional services is good for 14 days after the date shown below in the Consultant's signature block. If Client fails to sign this contract within 14 days, the offer for additional services shall be withdrawn making it null and void. Client may terminate this contract by giving notice to Consultant in writing and bringing all outstanding charges current prior to termination of Agreement.
2. **Liability Limits.** Client and Consultant have discussed the risks and rewards associated with this project, as well as Consultant's fee for services. Client and Consultant agree to allocate certain of the risks so that, to the fullest extent permitted by law, Consultant's total aggregate liability to Client and all contractors and subcontractors is limited to three times the contract amount for any and all injuries, damages, claims, losses, expenses or claim expenses (including attorneys' fees) arising out of this Agreement from any cause or causes. Such causes include, but are not limited to, Consultant's negligence, errors, omissions, strict liability, breach of contract, or breach of warranty.

Client further agrees to notify all contractors and sub-contractors of this limitation of Consultant's liability to them and require them to abide by this limitation of damages suffered by any contractor or subcontractor arising from Consultant's actions or inactions. Neither the contractor nor any subcontractor assumes any liability for damages to others which may arise on account of Consultant's actions or inactions.

3. **Preparation of Agreement.** By signing the Agreement, both parties consent that the Agreement has been prepared and negotiated equally by Client and Consultant.

EXHIBIT "A" SCOPE OF SERVICES

As requested NorthStar will provide the City Engineer/Surveyor services described below for one (1) year from September 1st, 2023. At such time, the contract may be extended with terms agreed upon by both the City of Oroville and NorthStar. The contract may be terminated by either party with a 30 day notice for any reason.

The services include:

Provide City Engineer services as requested by the City of Oroville City Administrator and Public Works Director. The general duties of the City Engineer may include the following:

- Performs the duties of the City Engineer as prescribed by State law and City ordinances, including overseeing the preparation of engineering plans and specifications, the construction of public projects, and the administration of professional service, construction, maintenance, and other contracts.
- Reviews, approves and signs plans and specifications for City infrastructure and facilities, assessment districts, subdivisions, and developments.
- Confers with and represents the Public Works Department, Engineering Department, and the City in meetings with members of the City Council, members of boards and commissions, various governmental agencies, developers, contractors, business and industrial groups and the public.
- Assists in the update and development of programs including but not limited to the Capital Improvement Program and other programs related to municipal infrastructure.
- Oversees traffic engineering, airport engineering, and transportation planning activities; develops local, state, and federal funding sources for such activities.
- Provide mentorship to city staff and documentation when needed.

Provide City Surveyor services as requested by the City of Oroville City Administrator and Public Works Director. The general duties of the City Surveyor may include the following:

- Review of Parcel and Final maps, and technical review of Tentative Maps, for consistency with the City of Oroville Municipal Code and Ordinances, the State of California Subdivision Map Act and acceptable engineering and surveying practices in the State of California for preparation of parcel and final maps.
- Review of maps for technical correctness includes review of title reports, closure calculations, deeds, adjoining deeds, relevant maps affecting the subdivision, easement locations, map format, dedications to the public, locations of proposed and existing monuments, consistency with the approved tentative map, conditions of approval, CEQA compliance, public improvement plans, on-site development plans and Town Right of Way needs.
- Review of plats and legal descriptions in conjunction with lot line adjustments, mergers, certificates of compliance, certificates of corrections, street and easement vacations, and other development related reviews, as assigned.

Robin Kampmann, PE will be the acting City Engineer and Mekena Galka, PE will be the primary point of contact for the City. Robin or a selected representative will perform services and attend meetings on an as needed basis up to thirty-two (32) hours per month. Regular hours at City Hall will not be included in this task. Robin, or a selected

Additional Work Authorization

NS#: 21-103

Page 3 of 5

representative will be available to attend any necessary City Council meetings, as determined by the City Administrator.

Robin will identify the need for additional NorthStar staff with consultation and approval of the City Administrator to ensure that the City's needs are being met. Additional staff may include, but is not limited to:

Fritz Mckinley, PE - Engineering

Michael Mays, LS – Land Surveying

Mekena Galka, PE – Engineering

Tim Alldrin, PLS – Land Surveying

Additional hours may be requested by the City Administrator. If necessary additional services, not listed in the scope of work, are requested NorthStar will provide the City with a Task Order with a description of the additional services such as land surveying or the development of construction documents. The exact scope of work will be established for each Task Order and will require approval by the City of Oroville prior to starting the work.

CITY OF OROVILLE STAFF REPORT

TO: MAYOR PITTMAN AND COUNCIL MEMBERS

**FROM: AMY BERGSTRAND, DIRECTOR
BUSINESS ASSISTANCE/HOUSING DEVELOPMENT**

**RE: PROFESSIONAL SERVICES AGREEMENT WITH EVIE FELDMAN,
BETTER HOMES AND GARDENS REAL ESTATE, FOR REAL ESTATE
BROKER SERVICES**

DATE: SEPTEMBER 19, 2023

SUMMARY

The Council may consider a Professional Services Agreement with Evie Feldman, Better Homes and Gardens Real Estate, for Real Estate Broker Services with a term of September 19, 2023 through September 30, 2025.

DISCUSSION

The City of Oroville wishes to enlist a local real estate broker/firm with qualified personnel who have previous experience in providing real estate brokerage services to governmental clients to sell real property located within the city-limits of Oroville. Additionally, staff would utilize the agent's services for other real estate transactions as they arise for a period of two years.

Services provided could include the following:

1. Perform Market Analysis,
2. Develop Strategies for the sale of city-owned properties,
3. Assist the City with Advertising the sale of select properties,
4. Participate in scheduled tours of city-owned properties with potential buyers,
5. Coordinate all customary activities required for the sale of city-owned properties (including inspections, appraisals, signings, closings),
6. Provide economic analysis of all offers and prepare report of such analysis,
7. Work with staff to negotiate purchases/trades of properties for future affordable housing projects,
8. Make presentations to the City Council, as needed.

City staff released the Request for Proposal on August 17, 2023, to be due by 3:30 p.m., on August 31, 2023. The City received four (4) proposals, one of which was received after 3:30 p.m. and was not considered. City staff reviewed all proposals and recommends entering into a Professional Services Agreement with Evie Feldman of Better Homes and Gardens Real

Estate. Ms. Feldman's proposal was well prepared, responsive to the City's needs and appeared to be the lowest cost to the City.

Fee Schedule

Listing and selling properties -5%

When properties are list on the Multiple Listing Service (MLS), 2.5% is offered to the agent who represents the buyer and the transaction closes successfully.

Purchasing properties on behalf of the City listed on the MLS, Better Homes and Gardens will accept the commission published in the MLS.

Purchasing properties on behalf of the City listed not on the MLS, Better Homes and Gardens will accept 2.5%.

FISCAL IMPACT

No General Fund Impact

Appropriation is available in the 2023-204 Housing Program Fund (220). The current/unencumbered balance as of June 30, 2023, is \$899,575.00

RECOMMENDATION

Adopt Resolution No. xxxx – A RESOLUTION OF OROVILLE CITY COUNCIL AUTHORIZING AND DIRECTING THE MAYOR TO EXECUTE A PROFESSIONAL SERVICES AGREEMENT WITH EVIE FELDMAN OF BETTER HOMES AND GARDENS REAL ESTATE FOR REAL ESTATE BROKER SERVICES FOR A PERIOD OF TWO YEARS.

ATTACHMENTS

A-Resolution No. xxxx

B-Agreement No. xxxx

AGREEMENT FOR PROFESSIONAL SERVICES
(Agreement No. xxxx)

This Agreement is made and entered into as of **September 19, 2023**, by and between the **City of Oroville**, a municipal corporation (“City”) and **Evie Feldman of Better Homes and Gardens Real Estate** (“Consultant”).

RECITALS

- 1) Consultant is experienced and competent to, provide real estate brokerage services to governmental clients to sell real property located within the city limits of Oroville; and
- 2) Consultant possesses the skill, experience, ability, background, license, certification, and knowledge to provide the services described in this Agreement on the terms and conditions described herein; and
- 3) City desires to retain Consultant to render the professional services as set forth in this Agreement.

AGREEMENT

- 1) SCOPE OF SERVICES. The Consultant shall furnish the following services in a professional manner: Consultant shall perform services by providing real estate brokerage services to the City of Oroville as described below:
 - a) Perform Market Analysis,
 - b) Develop Strategies for the sale of City owned properties,
 - c) Assist City in advertising the sale of select properties (this list is subject to change),

- d) Participate and schedule site tours of City-owned and/or Successor Agency-owned properties and potential buyers,
- e) Coordinate real estate appraisals, as necessary,
- f) Evaluate offers received and prepare narrative analysis of each offer including an economic analysis,
- g) Coordinate real estate transactions and closings,
- h) Work with City staff to negotiate land sales, buyers and prospects,
- i) Recommend best possible offer, providing backup, as necessary, to substantiate,
- j) Handle all customary activities and service associated with real estate transactions (including legal, survey and title work),
- k) Provide Monthly Reports on the status of the project, including timelines and action plans,
- l) Services may include consultation with City staff, and the City of Oroville's City Council and/or Successor Agency, relating to the sale of real estate. Presentations at public meetings may be required.

2. TIME OF PERFORMANCE. The services of Consultant are to commence upon execution of this Agreement and shall continue until **September 30, 2025.**

3. COMPENSATION. Compensation to be paid to Consultant shall be in accordance with the Schedule of Charges set forth in Exhibit A, which is attached hereto and incorporated herein by reference. Payment by City under this Agreement shall not be deemed a waiver of defects in Consultant's services, even if such defects were known to the City at the time of payment.

4. METHOD OF PAYMENT. Consultant shall submit monthly billings to City describing the work performed during the preceding month. Consultant's bills shall include a brief description of the services performed, the date the services were performed, the number of hours spent and by whom, and a description of any reimbursable expenditures. City shall pay Consultant no later than 30 days after approval of the monthly invoice by City staff. When payments made by City equal 90% of the maximum fee provided for this Agreement, no further payments shall be made for services until the final work for each audit under this Agreement has been accepted by City.

5. EXTRA WORK. At any time during the term of this Agreement, City may request that Consultant perform Extra Work. As used herein, "Extra Work" means any work which is determined by City to be necessary for the proper completion of Consultant's services, but which the parties did not reasonably anticipate would be necessary at the execution of this Agreement. Consultant Shall not perform, nor be compensated for, Extra Work without prior written authorization from City.

6. TERMINATION. This Agreement may be terminated by the City immediately for cause or by either party without cause upon fifteen days' written notice of termination. Upon termination, Consultant shall be entitled to compensation for services properly performed up to the effective date of termination.

7. OWNERSHIP OF DOCUMENTS. All plans, studies, documents and other writings prepared by and for Consultant, its officers, employees and agents and subcontractors in the course of implementing this Agreement, except working notes and internal documents, shall become the property of the City upon payment to Consultant for such

work, and the City shall have the sole right to use such materials in its discretion without further compensation to Consultant or to any other party. Consultant shall, at Consultant's expense, provide such reports, plans, studies, documents, and other writings to City within three (3) days after written request.

8. LICENSING OF INTELLECTUAL PROPERTY. This Agreement creates a nonexclusive and perpetual license for City to copy, use, modify, reuse, or sublicense any and all copyrights, designs, and other intellectual property embodied in documents or works of authorship fixed in any tangible medium of expression, including but not limited to, data magnetically or otherwise recorded on computer diskettes, which are prepared or caused to be prepared by Consultant under this Agreement ("Documents and Data"). Consultant shall require all subcontractors to agree in writing that City is granted a nonexclusive and perpetual license for any Documents and Data the subcontractor prepares under this Agreement.

Consultant represents and warrants that Consultant has the legal right to license any and all Documents and Data. Consultant makes no such representation and warranty in regard to Documents and Data which may be provided to Consultant by City. City shall not be limited in any way in its use of the Documents and Data at any time, provided that any such use not within the purposes intended by this Agreement shall be at City's sole risk.

9. CONFIDENTIALITY. All ideas, memoranda, specifications, plans, procedures, drawings, descriptions, computer program data, input record data, written information, and other documents and data either created by or provided to

Consultant in connection with the performance of this Agreement shall be held confidential by Consultant. Such materials shall not, without the prior written consent of City, be used by Consultant for any purposes other than the performance of the services under this Agreement. Nor shall such materials be disclosed to any person or entity not connected with the performance of the services under this Agreement. Nothing furnished to Consultant which is otherwise known to Consultant or is generally known, or has become known, to the related industry shall be deemed confidential. Consultant shall not use City's name or insignia, photographs relating to project for which Consultant's services are rendered, or any publicity pertaining to the Consultant's services under this Agreement in any magazine, trade paper, newspaper, television or radio production or other similar medium without the prior written consent of City.

10. LOBBYING

No Federal appropriated funds have been paid or will be paid, by or on behalf of it, to any person for influencing or attempting to influence an officer or employee of any agency, a Member of Congress in connection with the awarding of any Federal loan, the entering into of any cooperative agreement, and the extension, continuation, renewal, amendment, or modification of any Federal contract, grant, loan, or cooperative agreement.

11. CONSULTANT'S BOOKS AND RECORDS.

a. Consultant shall maintain any and all ledgers, books of account, invoices, vouchers, canceled checks, and other records or documents evidencing or relating to charges for services, expenditures and disbursements charged

to City for a minimum period of four (4) years, or for any longer period required by law, from the date of final payment to Consultant to this Agreement.

- b. Consultant shall maintain all documents and records which demonstrate performance under this Agreement for a minimum of three (3) years, or for any longer period required by law, from the date of termination or completion of this Agreement.
 - c. Any records or documents required to be maintained pursuant to this Agreement shall be made available for inspection or audit, at any time during regular business hours, upon written request by the City Administrator, City Attorney, City Finance Director, or a designated representative of these officers. Copies of such documents shall be provided to the City for inspection at City Hall when its practical to do so. Otherwise, unless an alternative is mutually agreed upon, the records shall be available at Consultant's address indicated for receipt of notices in this Agreement.
 - d. Where City has reason to believe that such records or documents may be lost or discarded due to dissolution, disbandment or termination of Consultant's business, City may, by written request by any of the above named officers, require that custody of the records be given to the City and that the records and documents be maintained by City Hall.
12. INDEPENDENT CONTRACTOR. It is understood that Consultant, in the performance of the work and services agreed to be performed, shall act as and be

an independent contractor and shall not act as an agent or employee of the City. Consultant shall obtain no rights to retirement benefits or other benefits which accrue to City's employees, and Consultant hereby expressly waives any claim it may have to any such rights.

13. INTEREST OF CONSULTANT. Consultant (including principals, associates, and professional employees) covenants and represents that it does not now have any investment or interest in real property and shall not acquire any interest, direct or indirect, in the area covered by this Agreement or any other source of income, interest in real property or investment which would be affected in any manner or degree by the performance of Consultant's services hereunder. Consultant further covenants and represents that in the performance of its duties hereunder no person having any such interest shall perform any services under this Agreement. Consultant is not a designated employee within the meaning of the Political Reform Act because Consultant:

1. will conduct research and arrive at conclusions with respect to its rendition of information, advice, recommendation, or counsel independent of the control and direction of the City or any City official, other than normal agreement monitoring; and
2. possesses no authority with respect to any City decision beyond rendition of information, advice, recommendation or counsel. (FPPC Reg. 18700(a)(2).)

14. PROFESSIONAL ABILITY OF CONSULTANT. City has relied upon the professional training and ability of Consultant to perform the services hereunder as a material inducement to enter into this Agreement. All work under this agreement shall be performed by Consultant and shall be in accordance with

applicable legal requirements and shall meet the standard of quality ordinarily to be expected of competent professionals in Consultant's field of expertise.

15. COMPLIANCE WITH LAWS. Consultant shall use the standard of care in its profession to comply with all applicable federal, state and local laws, codes, ordinances and regulations.
16. LICENSES. Consultant represents and warrants to City that it has all licenses, permits, qualifications, insurance and approvals of whatsoever nature which are legally required of Consultant to practice its profession. Consultant represents and warrants to City that Consultant shall, at its sole cost and expense, keep in effect or obtain at all times during the term of this Agreement, any licenses, permits, insurance and approvals which are required by the City for its business.
17. INDEMNITY. Consultant agrees to defend, indemnify and hold harmless the City, its officers, officials, agents, employees and volunteers from and against any and all claims, demands, actions, losses, damages, injuries, and liability, direct or indirect (including any and all costs and expenses in connection therein), arising from its performance of this Agreement or its failure to comply with any of its obligations contained in this Agreement, except for any such claim arising from the sole negligence or willful misconduct of the City, its officers, agents, employees or volunteers.
18. INSURANCE REQUIREMENTS. Consultant, at Consultant's own cost and expense, shall procure and maintain, for the duration of the Agreement, the insurance coverage and policies as set forth in Exhibit "B" attached hereto.
19. NOTICES. Any notice required to be given under this Agreement shall be in writing

and either served personally or sent prepaid, first class mail. Any such notice shall be addressed to the other party at the address set forth below. Notice shall be deemed communicated within 48 hours from the time of mailing if mailed as provided in this section.

If to City: **Business Assistance/Housing Development
Amy Bergstrand
City of Oroville
1735 Montgomery Street
Oroville, CA 95965-4897**

If to Consultant:

**Evie Feldman,
Better Homes and Gardens Real Estate
1453 Downer St. Suite B
Oroville CA 95965**

20. ENTIRE AGREEMENT. This Agreement constitutes the complete and exclusive statement of Agreement between the City and Consultant. All prior written and oral communications, including correspondence, drafts, memoranda, and representations are superseded in total by this Agreement.
21. AMENDMENTS. This Agreement may be modified or amended only by a written document executed by both Consultant and City and approved as to form by the City Attorney.
22. ASSIGNMENT AND SUBCONTRACTING. The parties recognize that a substantial inducement to City for entering into this Agreement is the professional reputation, experience and competence of Consultant. Assignments of any or all rights, duties or obligations of the Consultant under this Agreement will be permitted only with the express prior written consent of the City. Consultant shall not subcontract any portion of the work to be performed under this Agreement

without the prior written authorization of the City. If City consents to such subcontract, Consultant shall be fully responsible to City for the performance of the subcontractor. Nothing in this Agreement shall create any contractual relationship between City and subcontractor nor shall it create any obligation on the part of the City to pay or to see to the payment of any monies due to any such subcontractor other than as otherwise required by law.

23. WAIVER. Waiver of a breach or default under this Agreement shall not constitute a continuing waiver of a subsequent breach of the same or any other provision under this Agreement.
24. SEVERABILITY. If any term or portion of this Agreement is held to be invalid, illegal, or otherwise unenforceable by a court of competent jurisdiction, the remaining provisions of this Agreement shall continue in full force and effect.
25. CONTROLLING LAW VENUE. This Agreement and all matters relating to it shall be governed by the laws of the State of California and any action brought relating to this Agreement shall be held exclusively in a state court in the County of Butte.
26. LITIGATION EXPENSES AND ATTORNEY'S FEES. If either party to this Agreement commences any legal action against the other part arising out of this Agreement, the prevailing party shall be entitled to recover its reasonable litigation expenses, including court costs, expert witness fees, discovery expenses, and attorneys' fees.
27. MEDIATION. The parties agree to make a good faith attempt to resolve any disputes arising out of this Agreement through mediation prior to commencing litigation. The parties shall mutually agree upon the mediator and shall divide the

costs of mediation equally. If the parties are unable to agree upon a mediator, the dispute shall be submitted to American Arbitration Association (AAA) or its successor in interest. AAA shall provide the parties with the names of five qualified mediators. Each party shall have the option to strike two of the five mediators selected by AAA and thereafter the mediator remaining shall hear the dispute. If the dispute remains unresolved after mediation, either party may commence litigation.

28. EXECUTION. This Agreement may be executed in several counterparts, each of which shall constitute one and the same instrument and shall become binding upon the parties when at least one copy hereof shall have been signed by both parties hereto. In approving this Agreement, it shall not be necessary to produce or account for more than one such counterpart.
29. AUTHORITY TO ENTER AGREEMENT. Consultant has all requisite power and authority to conduct its business and to execute, deliver, and perform the Agreement. Each party warrants that the individuals who have signed this Agreement have the legal power, right, and authority to make this Agreement and to bind each respective party.
30. PROHIBITED INTERESTS. Consultant maintains and warrants that it has not employed nor retained any company or person, other than a bona fide employee working solely for Consultant, to solicit or secure this Agreement. Further, Consultant warrants that it has not paid nor has it agreed to pay any company or person, other than a bona fide employee working solely for Consultant, any fee, commission, percentage, brokerage fee, gift or other consideration contingent

upon or resulting from the award or making of this Agreement. For breach or violation of this warranty, City shall have the right to rescind this Agreement without liability. For the term of this Agreement, no member, officer or employee of City, during the term of his or her service with City, shall have any direct interest in this Agreement, or obtain any present or anticipated material benefit arising therefrom.

31. DISCRIMINATION ACTS AND ASSURANCES The Consultant during the performance of this Agreement assures that no otherwise qualified person, shall be excluded from participation or employ, denied program benefits, or be subjected to discrimination based on race, color, national origin, sex, age, or handicap, under any program or activity funded by this contract, as required by Title VI of the Civil Rights Act of 1964, Title I of the Housing and Community Development Act of 1974, as amended, and the Age Discrimination Act of 1975, and all implementing regulations.
32. SECTION 3 REQUIREMENTS The work to be performed under this contract is on a project assisted under a program assisted under a program providing direct Federal financial assistance from the Department of Housing and Urban Development and is subject to the requirements of Section 3 of the Housing and Urban Development Act of 1968, as amended, 12 U.S.C. 1701u. Section 3 requires that to the greatest extent feasible, opportunities for training and employment be given lower income residents of the project area and contracts for work in connection with the project be awarded to business concerns which are located in, or owned in substantial part by persons residing in the area of this project. The parties to this Agreement will comply with the provisions of said Section 3 and the

regulations issued pursuant thereto by the Secretary of Housing and Urban Development set forth in 24 CFR Part 135, and all applicable rules and orders of the Department issued thereunder prior to the execution of this contract. The parties to this contract certify and agree that they are under no contractual or other disability which would prevent them from complying with these requirements. The City at direction from the State, will take appropriate action pursuant to this contract upon a finding that the Consultant or its subcontractor(s) is in violation of regulations issued by the Secretary of Housing and Urban Development, 24 CFR Part 135.

33. NONDISCRIMINATION CLAUSE. During the performance of this contract, consultant and its subcontractors shall not unlawfully discriminate against any employee or applicant for employment because of race, religion, color, national origin, ancestry, physical handicap, medical condition, marital status, age (over 40) or sex. Consultant shall comply with the provisions of the Fair Employment and Housing Act (Government Code, Section 12900 et. seq.) And the applicable regulations promulgated thereunder (California Code of Regulation, Title 2, Section 7258.0 et. seq.) The applicable regulations of the Fair Housing Commission implementing the California Code of Regulations are incorporated into this contract by reference and made a part hereof as if set forth in full. Consultant shall give written notice of their obligation under this clause to labor organizations with which they may have a collective bargaining or other agreement. Consultant shall include the nondiscrimination and compliance provisions of this clause in all subcontracts to perform work under this contract.

34. EQUAL EMPLOYMENT OPPORTUNITY. In rendering the services contemplated by this agreement with CITY, Consultant shall not discriminate against any employee or applicant for employment because of race, color, creed, sex, age, or national origin. Consultant shall comply with Title IV of the Civil Rights Act of 1964 and shall provide such reports as may be required to carry out the intent of this section. Consultant shall also comply with Executive Order 11246, as amended by Executive Order 11375, and as supplemented in Department of Labor regulations (41 CFR, Part 60).

Furthermore:

- a. Consultant shall take affirmative action to insure that job applicants are employed and that employees are treated during employment without regard to race, religion, sex, color, age, national origin, or physical handicap. The term "affirmative action" shall include, but not be limited to: employment, upgrading, demotion or transfer; recruitment advertisement; layoff or termination; rates of pay or other forms of compensation; and selection for training, including apprenticeship.
- b. Consultant agrees to post such notices, to be provided, setting forth the provisions of this equal employment opportunity and affirmative action program.
- c. Consultant shall in all solicitations or advertisements for employees placed by or on behalf of the Consultant state that all qualified applicants will receive consideration to employment without regard to race, religion, sex, color, age, national origin, or physical handicap. Notification that Consultant

is an "Equal Opportunity Employer" or "EOE" constitutes satisfaction in this notice requirement.

35. FAIR EMPLOYMENT PRACTICES. Consultant will permit access to records of employment, employment advertisements, application forms, and other pertinent data and records by the State Fair Employment Practices Commission, or any other agency of the State of California designated by awarding authority, for the purposes of investigation to ascertain compliance with the Fair Employment Practices Provision. In the event of any violations by the Consultant of state fair employment laws, the State of California shall have the right to terminate this agreement either in whole or in part. In the event of such termination, any loss or damage sustained by the State of California and/or the City in securing the goods or services hereunder shall be borne and paid for by the Consultant and by their surety under performance bond, if any, and, in addition to other remedies, the State of California and the City may deduct from any monies due or that thereafter become due to the Consultant the difference between the price named in the particular agreements and the actual cost thereof to the State of California and the City.
36. COMPLIANCE WITH LABOR CODE OF STATE OF CALIFORNIA Pursuant to the provisions of Section 3700 of the Labor Code, Consultant will require every employer to be insured against liability for workman's compensation, or to undertake self-insurance in accordance with the provisions of that code, and will comply with such provisions before commencing the performance of the work of a particular agreement. Furthermore, Consultant shall also provide evidence of

workmen's compensation insurance, unemployment insurance and disability insurance to cover all of Consultant's employees.

37. THE CIVIL RIGHTS ACT, HCD, AGE DISCRIMINATION AND REHABILITATION ACTS ASSURANCE During the performance of this contract the Consultant assures that no otherwise qualified person shall be excluded from the participation or employment, denied program benefits, or be subject to discrimination based on race, color, national origin, sex, age or handicap, under any program or activity funded by this contract, as required by Title VI of the Civil Rights Act of 1964, Title I, of the Housing and Community Development Act of 1974, as amended, the Age Discrimination Act of 1975 and the Rehabilitation Act of 1973, and all implementing programs.
38. THE TRAINING, EMPLOYMENT AND CONTRACTING OPPORTUNITIES FOR BUSINESS AND LOWER INCOME PERSONS ASSURANCE OF COMPLIANCE
- a. The work to be performed under this contract is on a project assisted under a program providing direct federal financial assistance from the Department of Housing and Urban Development and is subject to the requirements of Section 3 of the Housing and Urban Development Act of 1968, as amended, 12 U.S.C., 1701 u. Section 3 requires that to the greatest extent feasible, opportunities for training and employment be given to lower income residents of the project area and contracts for work in connection with the project be awarded to business concerns which are located in, or owned in substantial part by persons residing in the area of the project.
 - b. The parties to this contract will comply with the provisions of said Section 3

and the regulations issued pursuant thereto by the Secretary of Housing and Urban Development set forth in 24 CFR Part 135, and all applicable rules and orders of the Department issued thereunder prior to the execution of this contract. The parties to this contract certify and agree that they are under no contractual or other disability which would prevent them from complying with these requirements.

- c. The Consultant will send to each labor organization or representative of workers with which there is a collective bargaining agreement or other contract or understanding, if any, a notice advertising the said labor organization or worker's representative of the commitment under this Section 3 Clause and shall post copies of the notice in conspicuous places available to employees and applicants for employment or training.
- d. The Consultant will include this Section 3 Clause in every subcontract for work in connection with the project and will, at the direction of the applicant for or recipient of federal financial assistance, take appropriate action pursuant to the subcontract upon finding the subcontractor is in violation of regulations issued by the Secretary of Housing and Urban Development, 24 CFR Part 135 and will not let any subcontract unless the subcontractor has first provided a preliminary statement of ability to comply with the requirements of these regulations.
- e. Compliance with the provisions of Section 3, the regulations set forth in 24 CFR Part 135, and all applicable rules and orders of the Department issued thereunder prior to the execution of the contract, shall be a condition of the

federal financial assistance provided to the project, binding upon the applicant or recipient for such assistance, its successors, and assigns. Failure to fulfill these requirements shall subject the applicant or recipient, its contractor or subcontractors, its successors, and assigns to those sanctions specified by the grant or loan agreement or contract through which federal assistance is provided, and to such sanctions as are specified by 24 CFR Part 135.

39. STATE NONDISCRIMINATION CLAUSE

- a. During the performance of this contract, Consultant and its subcontractors shall not lawfully discriminate against any employee or applicant for employment because of race, religion, color, national origin, ancestry, physical handicap, medical condition, marital status, age (over 40), or sex. Contractors and subcontractors shall ensure that the evaluation and treatment of their employees and applicants for employment are free of such discrimination. Contractors and subcontractors shall comply with the provisions of the Fair Employment and Housing Act (Government Code Section 12900 et seq.) and the applicable regulations promulgated thereunder (California Administrative Code Section 12990), set forth in Chapter 5 of Division 4 of Title 2 of the California Administrative Code, are incorporated into this contract by reference and made a part hereof as if set forth in full. Consultant and its subcontractors shall give written notice of their obligations under this clause to labor organizations with which they have a collective bargaining or other agreement.

- b. This Consultant shall include the nondiscrimination and compliance provisions of this clause in all subcontracts to perform work under this contract.

IN WITNESS WHEREOF, the parties have caused this Agreement to be executed on the date first written above.

- Exhibit C-Insurance Requirements for Consultants

Exhibit A

Scope of Services

The Consultant shall furnish the following services in a professional manner: Consultant shall perform services by providing real estate brokerage services to the City of Oroville as described below:

- a) Perform Market Analysis,
- b) Develop Strategies for the sale of City owned properties,
- c) Assist City in advertising the sale of select properties (this list is subject to change),
- d) Participate and schedule site tours of City-owned and/or Successor Agency-owned properties and potential buyers,
- e) Coordinate real estate appraisals, as necessary,
- f) Evaluate and recommend offers received and prepare narrative analysis of each offer including an economic analysis,
- g) Coordinate real estate transactions and closings,
- h) Work with City staff to negotiate land sales, buyers and prospects,
- i) Handle all customary activities and service associated with real estate transactions (including legal, survey and title work),
- j) Services may include consultation with City staff, and the City of Oroville's City Council and/or Successor Agency, relating to the sale of real estate. Presentations at public meetings may be required.

Exhibit B

Schedule of Charges

Listing and selling properties -5%

When properties are list on the Multiple Listing Service (MLS), 2.5% is offered to the agent who represents the buyer and the transaction closes successfully.

Purchasing properties on behalf of the City listed on the MLS, Better Homes and Gardens will accept the commission published in the MLS.

Purchasing properties on behalf of the City listed not on the MLS, Better Homes and Gardens will accept 2.5%.

Exhibit C

Insurance Requirements for Consultants

Consultant shall procure and maintain for the duration of the contract insurance against claims for injuries to persons or damages to property which may arise from or in connection with the performance of the work hereunder by the Consultant, his agents, representatives, or employees.

Minimum Scope of Insurance

Coverage shall be at least as broad as:

1. Insurance Services Office Form Number CA 0001 covering Automobile Liability, Code 1 (any auto).
2. Errors and Omissions Liability insurance appropriate to the consultant's profession. Architects' and engineers' coverage is to be endorsed to include contractual liability.

Minimum Limits of Insurance

Consultant shall maintain limits no less than:

1. Automobile Liability: \$300,000/\$500,000 per accident for bodily injury and property damage.
2. Errors and Omissions Liability: \$1,000,000 per occurrence.

Business License

Consultant must obtain a City of Oroville Business License, at their own expense.

Deductibles and Self-Insured Retentions

Any deductibles or self-insured retentions must be declared to and approved by the Entity. At the option of the Entity, either: the insurer shall reduce or eliminate such deductibles or self-insured retentions as respects the Entity, its officers, officials, employees and volunteers; or the Consultant shall provide a financial guarantee satisfactory to the Entity guaranteeing payment of losses and related investigations, claim administration and defense expenses.

Other Insurance Provisions

The commercial general liability and automobile liability policies are to contain, or be endorsed to contain, the following provisions:

- 1.The Entity, its officers, officials, employees and volunteers are to be covered as insureds as respects: liability arising out of work or operations performed by or on behalf of the Consultant; or automobiles owned, leased, hired or borrowed by the Consultant.
- 2.For any claims related to this project, the Consultant's insurance coverage shall be primary insurance as respects the Entity, its officers, officials, employees and volunteers. Any insurance or self-insurance maintained by the Entity, its officers, officials, employees or volunteers shall be excess of the Consultant's insurance and shall not contribute with it.
- 3.Each insurance policy required by this clause shall be endorsed to state that coverage shall not be canceled by either party, except after thirty (30) days' prior written notice by certified mail, return receipt requested, has been given to the Entity.
- 4.Coverage shall not extend to any indemnity coverage for the active negligence of the additional insured in any case where an agreement to indemnify the additional insured would be invalid under Subdivision (b) of Section 2782 of the Civil Code.

Acceptability of Insurers

Insurance is to be placed with insurers with a current A. M. Best's rating of no less than A:VII, unless otherwise acceptable to the Entity.

Verification of Coverage

Consultant shall furnish the Entity with original certificates and amendatory endorsements effecting coverage required by this clause. The endorsements should be on forms provided by the Entity or on other than the Entity's forms provided those endorsements conform to Entity requirements. All certificates and endorsements are to be received and approved by the Entity before work commences. The Entity reserves the right to require complete, certified copies of all required insurance policies, including endorsements effecting the coverage required by these specifications at any time.

CITY OF OROVILLE STAFF REPORT

TO: MAYOR PITTMAN AND COUNCIL MEMBERS

FROM: FRED MAYO, PUBLIC WORKS DIRECTOR

RE: FAA FLIGHT CHECK OF PRECISION APPROACH PATH INDICATOR (PAPI) SYSTEM FOR RUNWAYS 13/31 AND 02/20 FOLLOWING REPLACEMENT TO VERIFY CALIBRATION

DATE: SEPTEMBER 19, 2023

SUMMARY

The Council is requested to approve an estimated expenditure not to exceed \$28,274.00 to the FAA to provide a reconfiguration flight inspection of the Precision Approach Path Indicator (PAPI) system on runways 13/31 and 02/20 at Oroville Municipal Airport.

DISCUSSION

The City replaced the PAPI light fixtures on runways 13/31 and 02/20 in early 2022. Following replacement, it is a requirement of the FAA to perform flight check verifications / reconfiguration flights to verify that the lights are precisely adjusted following manual calibration performed by City staff. These lights are used during nighttime and poor weather / low visibility conditions to assist pilots during landing operations to verify proper “glide path” heights for approach. It is imperative that these lights are precisely adjusted and verified by the FAA to prevent landing incidents.

FISCAL IMPACT

This project is to be funded by through the Airport fund; outside government services.

RECOMMENDATION

Approve estimated expenditure of \$28,274.00 for reconfiguration flight check by FAA for PAPI verification

ATTENTION: This message originated from outside the **City of Oroville**. Please exercise judgment before opening attachments, clicking on links, or replying.

Good morning,

We estimate 7 hrs in a Challenger for a total estimate of \$28,274.40 to provide a reconfiguration flight inspection of the PAPIs on Rwy 13/31 & Rwy 02/20 at Oroville Municipal Airport (KOVE) Oroville, CA.

If the airport would like to proceed with the inspection, we require the following information to draft an agreement for review (allow 2 weeks upon receipt of the requested info):

- **Sponsor is the entity paying for the inspection - IMPORTANT NOTE:** For the sponsor, we require the complete address below, Tax ID, UEI, as it appears in SAM.gov. In addition, please complete the attached ACH, then return both the ACH & the sponsor's W9 or the system will reject setup. **Whoever is paying for the inspection should be the entity listed on the ACH form & W9 with the complete address, tax ID, etc – all info on these forms must be identical and must also match the info in SAM.gov**

***Upon receipt, we will use the ACH/W9 submitted for the refund on agreement AJW-ON-AAC-17-AC-001791 to update the sponsor in our system and for any refund due on back end if applicable.

- **SPONSOR NAME:**
- **ADDRESS:**
- **CITY, STATE, ZIP (9-DIGIT ZIP):**
- **Sponsor Tax ID Number:**
- **Sponsor UEI Number:**
- **Requirement:** provide a reconfiguration flight inspection of the PAPIs on Rwy 13/31 & Rwy 02/20 at Oroville Municipal Airport (KOVE) Oroville, CA. (PLEASE CONFIRM)
- **Sponsor/Agreement POC name, full mailing address, to include full 9-digit zip code (example: 73169-xxxx), phone & e-mail.** This is the person most knowledgeable about the requirement:
- **Invoice POC name, full mailing address, to include full 9-digit zip code (example: 73169-xxxx), phone & e-mail (if different).** This is the person(s) we will send the Explanation of Charges (EOC) after the work is complete. I will also work with them on the payment and any refund due:
- **Agreement signature authority name & title:**
- **Date mo/yr inspection anticipated:**
- **AIP GRANT:** Is this agreement in whole or in part funded with funding from an FAA Airport Improvement Project (AIP) grant? **YES/NO**. If so, the **FAA AIP grant date** is _____ and the **grant number** is _____ (No need to report if state or other local grant was received)

Note: POC for the actual inspection can be provided to our scheduler after the agreement and funding is complete when you/they place a call to request the inspection.

- **We also require an e-mail from the airport manager authorizing us to work with you to provide the inspection at their facility before we actually sign the agreement.**

AIRPORTS RESPONSIBILITY - The FAA requires current VGSI data prior to scheduling the inspection; therefore, **IF APPLICABLE, you must register, complete the online form, then submit Aeronautical Data through this site: [Lighting/RVR Data Form \(faa.gov\)](#). Data POC for ARKANSAS: Nicholas Jackson at 405-954-8292 or nicholas.jackson@faa.gov.**

It is best to start the agreement process 3-4 months prior to when the sponsor anticipates requiring the inspection to ensure the agreement and payment are in place by the time the inspection is requested. If we are already within that window, I will do my best to move it along in the process, however, please realize the agreement must be fully approved, signed, and prepayment received by the FAA prior to scheduling inspection.

Once the draft is prepared/reviewed and agreeable by the sponsor, let us know and we will formally coordinate within the FAA for approval THEN return a black and white version for sponsor's signature and request repayment at that time. Once the agreement is fully executed/funded, additional information will be provided for the sponsor to call the scheduler and request the inspection when ready. After we fly, we will review actual time used, provide an Explanation of Charges (EOC) for money spent, and initiate refund of any unused balance.

THESE ARE 5 YEAR AGREEMENTS, ONCE SIGNED/FUNDED, THE AIRPORT HAS 5 YEARS TO COMPLETE THE WORK.

One last thing - we recommend a technician/qualified individual be onsite during the inspection to make any adjustments necessary to ensure a successful inspection. You will be contacted for scheduling the inspection so you can make any necessary arrangements. Be advised that if the inspection is not successful due to unresolvable problems with the equipment or at the site, we will review the time/funds spent to determine if additional funds are necessary before making a return trip. If additional funds are necessary, we will amend the agreement to add time/funds before you can request a return trip - which is an extra delay and expense we would all like to avoid.

Non-Fed RA Process (in a nutshell):

1. Sponsor provides airport ident, requirements, and requests an estimate for FI.
2. Estimate prepared, sent, & information to prepare draft requested.
3. Sponsor provides draft information/UEI/ACH/W9/VGSI forms (allow 2 weeks for doc prep).
4. Both Draft RA & Business Case are created
5. Draft sent to sponsor for review (Review not to exceed 120 days).
6. Sponsor requests revisions and/or approves draft for internal approvals/coordination.
7. FAA coordination/approval submitted through internal systems (allow 2 weeks).
8. **Once approved, a black & white version of agreement sent to Sponsor for signature/prepayment requested (Pay.gov preferred method of payment – instructions included w/email). IMPORTANT NOTE: If agreement is not returned signed within 120 days from request, RA is null and void, and the process must start over causing delays (Reference Article 22, pg 8/8).**
9. Sponsor provides signed RA via email.
10. Signed RA sent for CO's signature (allow 1 week).
11. Once CO signs, executed RA sent to Sponsor / uploaded in Toolset.
12. Once payment is received, Sponsor is notified FI can be scheduled.
13. Sponsor contacts the scheduler to schedule FI. (Usually a minimum of 2-4 weeks to schedule)
14. Once FI occurs, an Explanation of Charges (EOC) is created (usually within a month of FI).
15. EOC is sent to the Sponsor as a final invoice disclosing refund due; to reflect incomplete status with remaining funds available and/or due for return trip(s); possible overrun balance due; or possible amendment to original agreement.
16. If refund is due, we will use the ACH form/W9 at setup to issue refund electronically.

- 17. Overrun payment is requested if FI took longer than originally estimated. Upon receipt of addl funds, final will be sent to Sponsor & RA submitted for closeout.
- 18. RA is closed once funds have been zeroed out.

Let me know of any questions, thank you!

You don't often get email from shelley.d.ochs@faa.gov. [Learn why this is important](#)

ATTENTION: This message originated from outside the City of Oroville. Please exercise judgment before opening attachments, clicking on links, or replying.

Cody,

I received your email on 8/21, however, incoming volume has doubled therefore, experiencing delays in overall workload. KOVE is next in que for estimate; I will get back you very soon.

Good morning Shelley,

Following up on my request for information below. Any input or direction on who would be best to contact would be greatly appreciated! Thank you in advance for your time!

Cody Nissen

CITY OF OROVILLE STAFF REPORT

TO: MAYOR PITTMAN AND COUNCIL MEMBERS

FROM: FRED MAYO, DIRECTOR OF PUBLIC WORKS

RE: PAVING PROJECT UPDATE

DATE: SEPTEMBER 19, 2023

SUMMARY

Staff will present an update to the Council regarding numerous important road projects that are currently in progress and set to begin construction in the fiscal years 2023/24 and 2024/25 for the City.

DISCUSSION

Staff has an updated list of pavement reconstruction projects that have been identified as priorities for the fiscal years 2023/24 and 2024/25 construction seasons. Specifically:

Highway 162 Project – The project scope includes the following elements: new sidewalk, curb, and gutter; ADA ramps; street lighting; high-visibility crosswalk striping; buffered bicycle lanes; an RRFB crosswalk enhancement; a multi-use trail connection to SR 162; and an enhanced pedestrian crossing with a signal (H.A.W.K.) upgrade. The main benefit of the project will be to provide improved safety and more inviting active transportation connections on the corridor.

Nelson Avenue at SB 70 Offramp – A large pavement failure exists at the end of the off ramp at Nelson Avenue. Staff believes that subsurface conditions are preventing conventional maintenance procedures from being successful. Maintenance staff has expended a significant amount of time and resources at this location. This project has been delayed to allow coordination with Thermalito Water Sewer District to complete their water main replacement project.

Montgomery Roundabout Improvements - Roundabout Evaluation Circulation and functionality of the roundabout will be assessed. A traffic study will be done to determine what optimizations can be made to the roundabout. Grind and remove: Existing 3-4" asphalt concrete repaved with new asphalt overlay. The roundabout will receive new thermoplastic striping for a clear delineation of traffic flow.

Historic Downtown Pavement Improvements – Staff are working to assess these roadways to identify the ones of highest priority that need maintenance/rehabilitation and will proceed with design as the budget allow maintenance solutions: roadways will receive, crack seal, dig outs, and resurfacing on an as needed basis to prolong their life and extend the need for costly reconstruction where possible. Identified projects include Montgomery Street resurfacing from

Meyers Street to the Montgomery Roundabout, Meyers Street Crack seal from Montgomery Street to High Street

Washington Ave Improvements - The Washington Ave paving project is currently in the design and engineering phase. This project involves several components, including roadway reconstruction, the potential addition of bike lanes, installation of illuminated crosswalk signage, and the potential removal of on-street parking (staff will seek direction). It's a crucial part of the long-range plan to enhance bike lane connectivity between north and south Oroville.

Yard Street at Bridge Street – Staff received a request to update the access ramps at the intersection. All four corners needed some level of reconstruction necessitating a significant reconstruction of the intersection. This project was completed August 2023.

Table Mountain Blvd - The Table Mountain/Washington Ave corridor project aims to revamp the area by connecting the city with a network of bike lanes and pedestrian pathways, including streetscape improvements, upgraded bus stops, sidewalk enhancements, and a connection from Table Mountain to Washington Ave at Highway 162.

Ophir Road - The project involves grinding down and replacing an existing roadway, covering approximately half a mile within the city limits. It is scheduled for construction in the 2024 season and will receive partial funding from the Community Development Block Grant Program (CDBG). Additionally, Butte County has plans to replace the roadway outside the city limits during the same 2024 construction season.

Linden Ave - The Linden Ave project involves installing curb and gutter, repaving, and widening the paved section of the road. Currently, Linden Ave has a narrow roadway with street parking on both sides. This setup allows for only 12 feet of clearance when vehicles are parked, which could hinder the ability of first responders and public work crews to perform their duties effectively.

Procurement of Asphalt Management Program – Staff recommends researching the purchase of a Pavement Management software platform. This software will help assess and track current roadway conditions, plan both short and long-term roadway reconstruction projects, and strategically address pavement issues.

FISCAL IMPACT

Funding sources vary for all of these projects, and include a variety of funds restricted for roads, grant funds and general purpose revenue.

RECOMMENDATION

Staff are seeking the following:

1. Input on the overall plans for FY 2023/24 and FY 2024/25;
2. Direction on Washington Avenue; and
3. Direction on Linden Ave.

ATTACHMENTS

PowerPoint presentation of projects

PUBLIC WORKS STREET DEPARTMENT PROJECTS FISCAL YEARS 23/24 and 24/25

Street Projects Programmed FY 23/24

Current Projects

HWY 162 Project

- Construction planned for early spring 2024 (City) sidewalk gap eliminations, improvements and underground streetlight infrastructure improvements RFP to advertised December 2023.

Nelson Road Pavement Restoration Project

- Spring 2024 project that may be pushed to late Spring to accommodate Thermalito water construction.

Montgomery Roundabout Improvements

- New pedestrian illuminated crossings, traffic calming, restriping bike lane improvements and connectivity to Washington Ave (Engineering and Design)

Historic Downtown Roadway Improvements – Phase 1 (base failures and slurry)

- Spring 2024 and outgoing years.

Washington Ave – design work

Yard and Bridge Streets project was completed July 2023 and accepted August 2023

Procurement of Asphalt Management Program (PCI pavement condition index)

- Winter 2023, estimated program implementation in FY 2024.

Planned Projects FY 24/25

Washington Ave Asphalt Replacement (construction)

- New bike lanes.
- Illuminated pedestrian crossings signage.
- Project Limits: U.P. bridge to Hwy 162.
- Removal of street parking.

Table Mountain Blvd Street Improvement:

- Bike lane connectivity north-south. Engineering/EIR
- Traffic calming measures, restriping.

Ophir Road Resurfacing.

Linden Ave Curb Asphalt Restoration:

- Drainage improvements.

Historic Downtown Roadway Improvements - Phase 2.

Highway 162 Frontage Improvement Project

This project represents a transformational endeavor for the Highway 162 frontage area.

Key elements of the project include:

- Installation of new sidewalks for gap elimination enhance pedestrian accessibility with bike lanes.
- Construction of curb and gutter systems for improved drainage.
- Implementation of storm drains to manage rainwater efficiently.
- Upgrades to driveway approaches for convenience and safety.
- Installation of new underground infrastructure.
- Next steps: Construction bid in December

Hwy 162

Project Budget Breakdown

Total Project Construction Cost: \$7.45 million

Funding sources:

- ATP Grants (Active Transportation Projects): \$3.4 million
- RSTP (Regional Surface Transportation Program): \$1.16 million
- LTF (Local Transportation Funds): \$923,000
- REAP Grant Funding: \$397,000
- SB1 Funding: \$488,000
- DWR Settlement Funds: \$500,000
- Measure U Revenues: \$530,000

While the project is budgeted to cover its costs with these funding sources, exploring additional or alternative funding sources is a prudent approach to ensure the successful completion of this significant transportation project.

Nelson Rd 4th Street Repair

- Grind and Removal: Existing asphalt and road base will be removed.
- New Road Base Installation: Two feet of new road base material will be installed to create a solid foundation.
- New Asphalt Overlay: The road will receive a new asphalt overlay.
- Thermoplastic Striping: The project will include the application of thermoplastic striping for clear and durable road markings.
- Next Steps: Work with TWSD and Knife River on timing

Nelson Ave Project Budget Breakdown

Funding Source: SB-1

- Amount: \$283,526.00

Project Scope:

- Removal and replacement of unraveling asphalt.
- Repair of damaged road base.
- Comprehensive rehabilitation of roadbed and surface.
- Installation of new striping.

Montgomery Street Roundabout

- Roundabout Evaluation: the Circulation and functionality of the roundabout will be assessed.
- Traffic Counts: A traffic study will be done to determine what optimizations can be made to the roundabout
- Grind and Remove: Existing 3-4" asphalt concrete.
- New Asphalt Overlay: The roundabout will be repaved with new asphalt overlay
- Thermoplastic Striping: The roundabout will receive new thermoplastic striping for a clear delineation of traffic flow
- Pedestrian and Bike Facilities: New signage and bike lane striping will be evaluated

Montgomery Street Roundabout Project Budget Breakdown

Montgomery Street Roundabout Rehabilitation and Improvements

- Construction estimated costs \$ 1.2 million
- Engineer design and project management \$37,000.

Identified Funding Sources:

- \$150,000 LTF
- \$600,000 Measure U Funds
- \$450,000 Traffic Impact Fees

Historic Downtown Roadway Improvement

Scope of Work:

Survey: An aerial survey has been compiled of the entire downtown area for current and future maintenance projects

Identifying Areas of Improvement: City Staff and Council will identify roadways that need maintenance/rehabilitation and will proceed with design as the budget allows

Maintenance Solutions: Roadways will receive, crack seal, dig outs, and resurfacing on an as needed basis to prolong their life and extend the need for costly reconstruction where possible.

Potential Projects for 2024

Montgomery Street: Resurfacing from Meyers Street to the Montgomery Roundabout

Meyers Street: Crack seal from Montgomery Street to High Street

Project Budget Breakdown

Historic Downtown Street Improvements - Phase One:

- Construction Budget: \$350,000.00
- Funding Source: SB-1 RMRA (Road Maintenance and Rehabilitation Account)

Washington Ave Project FY 24/25

Scope of Work:

- Resurfacing and repair of the roadway.
- Implementation of new bike lanes to benefit three schools in the program area.
- Installation of new illuminated sidewalk signage.

Project Limits:

- From UPRR (Union Pacific Railroad) to Hwy 162.
- This project aims to improve road quality, enhance safety for students attending nearby schools.

Washington Ave Project Budget Breakdown

Construction Estimated Costs: \$2.5 - \$3.0 million dollars

- Requested Funding Sources:
- BCAG-CMAQ (Butte County Association of Governments - Congestion Mitigation and Air Quality Improvement Program) for grant funding
- Possible funding streams from Measure U or Transportation Impact Fees
- Projected Year of Completion: FY 24/25

Securing funding from these sources will play a critical role in supporting this essential project, which will enhance transportation infrastructure and contribute to improved air quality in our community.

Pavement Management Software System

Scope of Work:

- **Pavement Assessment:** A third party company evaluates and catalogs all roadways within the City limits allowing staff to address improvement needs based on use, roadway condition, and budget
- **Strategically Address Pavement Issues:** Each roadway is evaluated to consider what condition they are in, what is needed to extend its lifespan, and how much the project cost will be:
- **Long Range Planning:** With a better understanding of the roadways in the city, and the future cost of maintenance/rehabilitation, the City can efficiently schedule and budget infrastructure projects based on the data received.
- **Results:** With the forecasting ability provided by the Pavement Management Software, the City can plan roadway projects years in advance and focus on the most pressing roadway issues.

Table Mountain Blvd Street Improvement

Item 10.

Goals of this project:

- Promote walking and biking
- Improve safety
- Beautification of the streetscape.
- Improvements proposed:
 - Curb, gutter, and sidewalk gap closures.
 - LED pedestrian crossing beacons.
 - Two-way cycle track.
 - Enhance bus stops with upgraded shelters and bus turnouts.
 - Landscaped medians.
 - Street trees.
 - Streetlights.
- Repave portions of TMB

Table Mountain Boulevard Complete Streets Project Timeline and Budget

Environmental Assessment (PA&ED)

- Start in FY 23/24
- Estimated Cost: \$100,000 (Local Funds)

Design Phase (PS&E)

- FY 24/25-25/26
- Estimated Cost: \$500,000 (Grant)
- Potential grant funding for design and construction (STIP, CMAQ, ATP, etc.)

Construction

- FY 25/26-26/27

Ophir Road Resurfacing

- Approximately one ½ mile section in City limits
- Grind and replace existing roadway
- 2024 Construction Season
- Partially funded by Community Development Block Grant Program (CDBG)
- Butte County plans to replace roadway outside City limits in 2024 Construction Season

Linden Ave Improvement Project

Existing Condition:

- 50 feet of right of way.
- 20 – 22 feet of pavement width with 6 feet of unpaved shoulder.
- Curb, gutter, and sidewalk only on west side of street.
- On- street parking on both sides.
- Stormwater pools and breaks down the pavement surface.

Proposed Mitigations:

- Repave.
- Widen paved roadway to 28 feet.
- Remove on-street parking on one side.

Project Budget Breakdown

Linden Ave Street Improvements

- Construction estimated costs \$ 200,000
- Local SB-1 funding
- Engineering design ready for 2024 construction season

Council Direction

- 1. Provide any general feedback on this FY 23/24 and 24/25 plan;
- 2. Provide direction on Washington Ave; and
- 3. Provide direction on Linden.

Public Works Stripping Program

- Public Works has completed 13 miles of road striping using our new equipment.
- The Streets department re-stripes all crosswalks and stop bars near schools every year.
- This is a new program implemented by our staff. The Street Department's striping plan involves re-marking the city streets on a 4-year cycle.

Rolls, Anderson and Rolls Projects

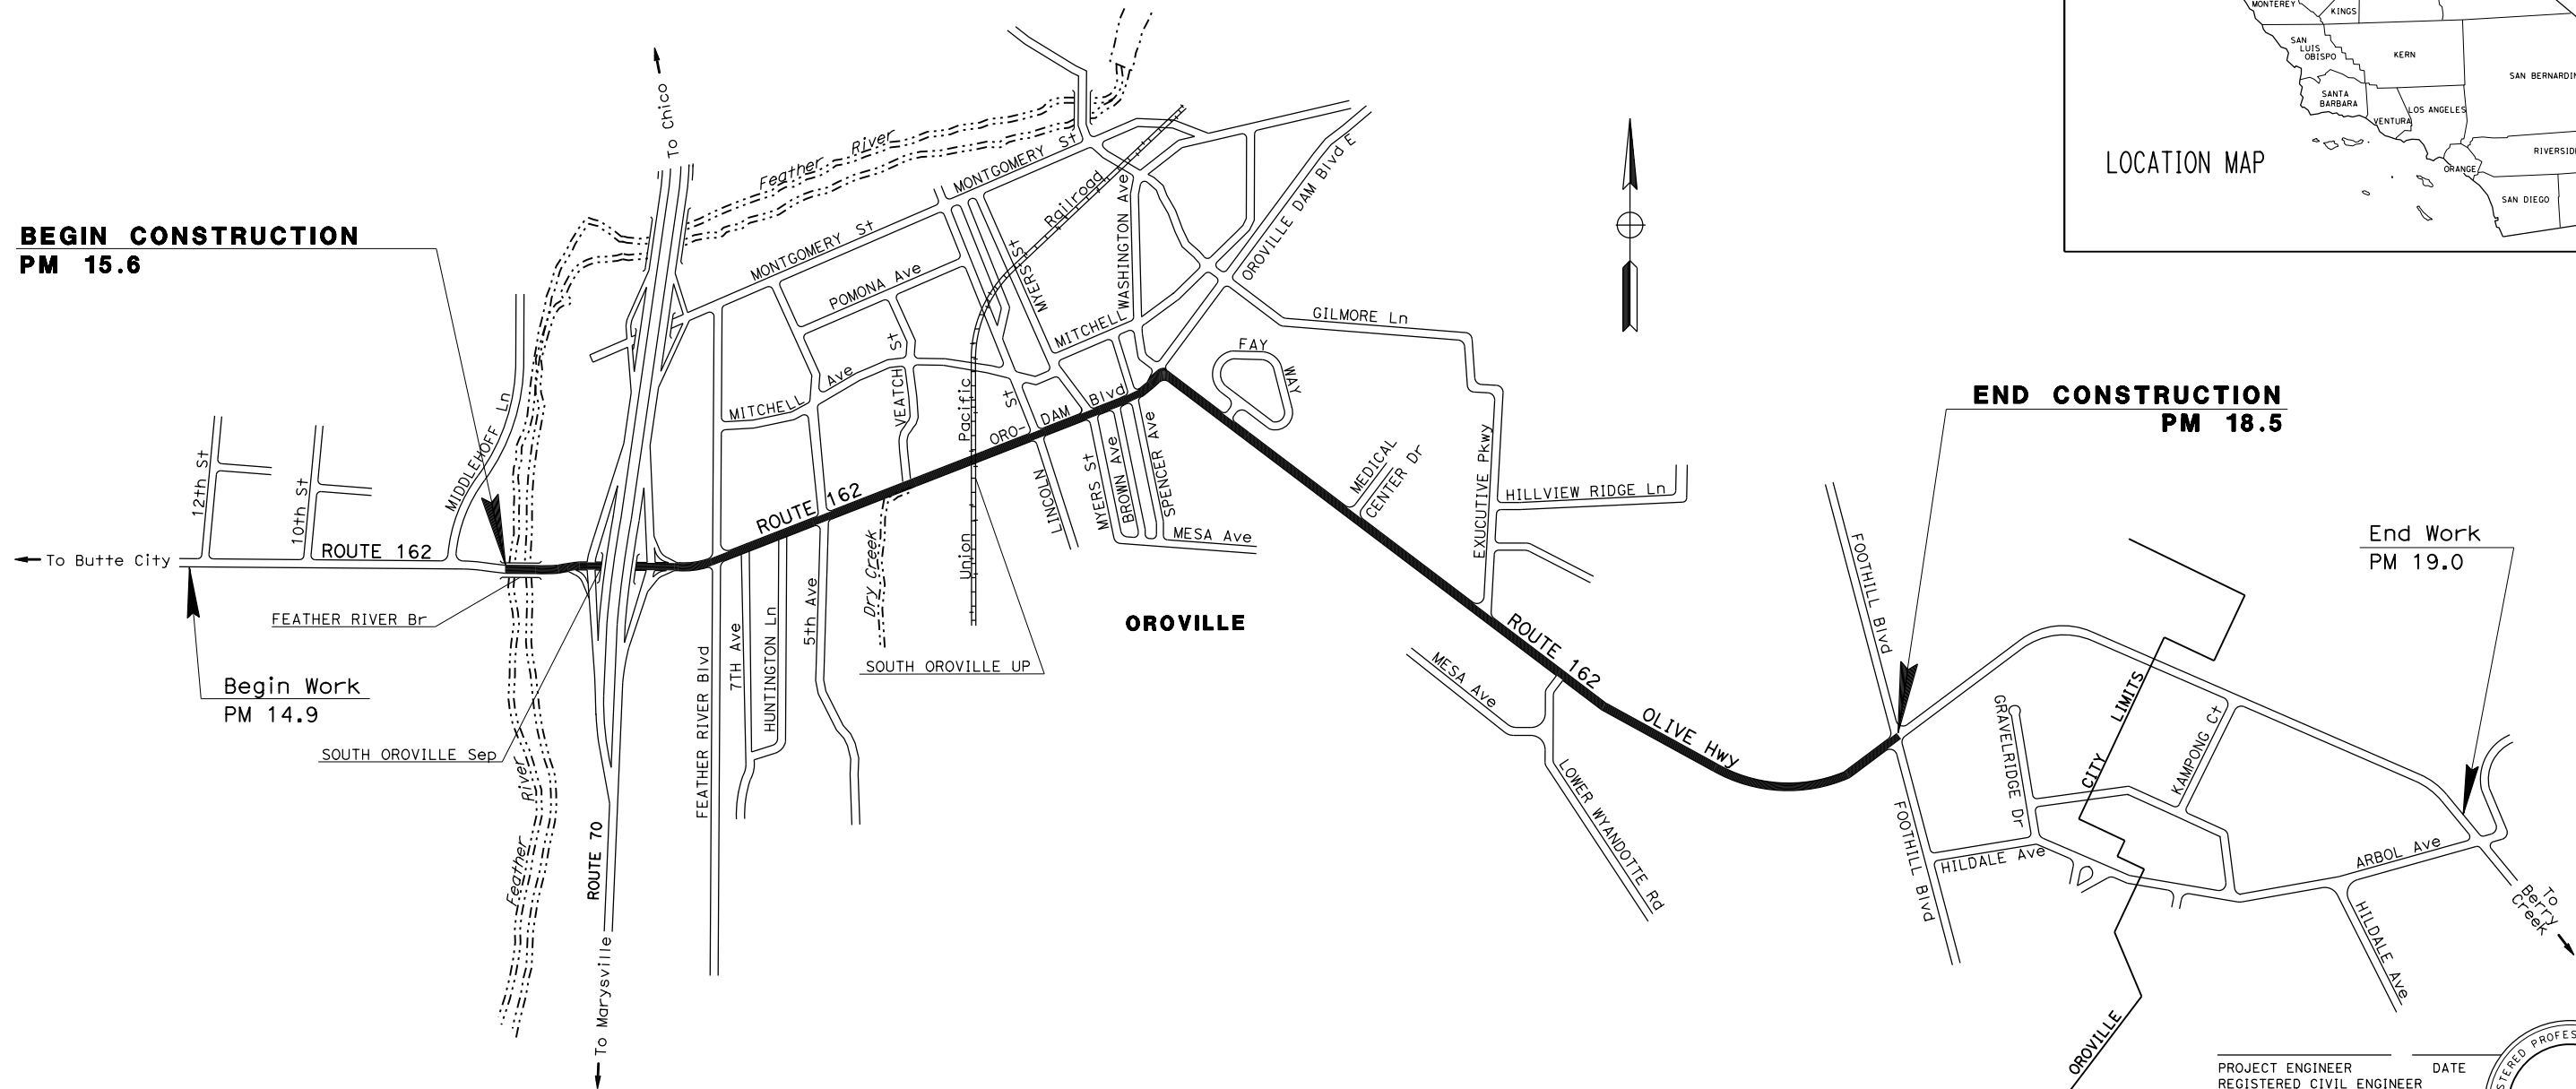

- Georgia Pacific Way - Feather River Boulevard to Baggett Marysville Road. Improvements to include Pavement reconstruction, ADA curb ramp compliance and drainage improvements. \$94,400.00.
- Oro Dam Boulevard East – Washington Avenue to Orange Avenue. Improvements to include Pavement reconstruction, ADA compliance, bike lanes, curb, gutter, and sidewalks. \$96,600.00
- Norton Avenue – Montgomery Street to Bridge Street. Improvements to include pavement reconstruction, drainage improvements, road widening, on street parking, curb, gutter, and ADA curb ramp compliance. \$51,050.00

Funding Sources

- The funds in the amount of \$191,000 will come from Measure U Funds for Georgia Pacific Way and Oro Dam Boulevard East (included in FY 23/24 budget)
- Norton Avenue \$26,050.00 will come from Transportation Impact Fees, and \$25,000.00 will come from Drainage Impact Fees.

Project Description

Caltrans proposes to preserve and extend the service life of the existing pavement on State Route (SR) 162, from Feather River Bridge (Bridge No. 12-0034) at post mile (PM) 15.6, to Foothill Boulevard at PM 18.5. The scope of work for this project will rehabilitate the roadway pavement, conform driveway connections, standardize Americans with Disabilities Act (ADA) features, provide continuous pedestrian routes, upgrade nonstandard mounted roadside signs, and rehabilitate drainage systems. In addition, the project will improve street lighting for pedestrians and vehicles, improve complete street elements, upgrade traffic signals with high mast Closed Circuit Television camera (CCTV), and upgrade traffic control systems. See **Attachment A, Preliminary Plans** to view the title sheet, preliminary layouts, and typical cross sections.

This project is programmed in the 2022 State Highway Operations Protection Program (SHOPP) for delivery in the 24/25 FY, under program code 20.XX.201.121 – Pavement Preservation (CAPM) Program. A summary of project information is below in **Table 1**.

CITY OF OROVILLE STAFF REPORT

TO: MAYOR PITTMAN AND COUNCIL MEMBERS

**FROM: BRIAN RING, CITY ADMINISTRATOR,
WES ERVIN, PRINCIPAL PLANNER**

**RE: FEATHER RANCH SUBDIVISION, INCLUDING AN OVERRULE OF THE
BUTTE COUNTY AIRPORT LAND USE COMMISSION'S
INCONSISTENCY DETERMINATION, AND THE SECOND READING OF
ORDINANCE 1873 TO REZONE 45-ACRE APN 030-230-098 TO 172
PARCELS ZONED R-1 (SINGLE FAMILY RESIDENTIAL),**

DATE: SEPTEMBER 19, 2023

SUMMARY

The City Council shall conduct a public hearing to consider an override of the Airport Land Use Commission inconsistency determination for a proposed 172-unit market rate single family subdivision at APN 030-230-098 off 20th Street between Feather Avenue and Biggs Avenue, and to rezone the land to R-1 (Single Family residential).

DISCUSSION

At its July 18, 2023, regular meeting the City Council took the following actions by a vote of 7-0:

1. Certified the project's EIR with Findings and a Statement of Overriding Considerations. The significant impacts included higher density than allowed, a technical noise significance, and a technical vehicle miles traveled significance.
2. Approved General Plan Amendment GPA 23-01 to Medium Low Density Residential.
3. Approved the first reading of Ordinance 1873 (Zone Change ZC 23-01) to R-1.
4. Voted to notify the Butte County Airport Land Use Commission and the Caltrans Division of Aeronautics of the Council's intent to Overrule the Butte County Airport Land Use Commission's September 21, 2022, inconsistency determination – at least 45 days in advance of actually overruling the determination.
5. Approved Tentative Subdivision Map TSM 22-01 with 172 single family lots averaging 7,400 square feet in size.
6. In a separate action, the Planning Commission approved Variance VAR23-01 to allow the higher density, subject to Council's subsequent actions.

All the above actions will take effect upon the Council's approval of the two remaining actions:

1. The Council must vote by a 2/3 majority to overrule of the Airport Land Use Commission's determination of inconsistency.
2. The Council must adopt Ordinance 1873 rezoning the 45-acre parcel into 172 single family lots.

Comments received regarding the Override.

On September 12, the 45th day of the comment period, we received a letter from the Butte County Airport Land Use Commission (Attachment 1), but none from Caltrans Aeronautics Division or from any other entity.

The Butte County Airport Land Use Commission recommends that development be limited to the density allowed in the Airport Land use Compatibility Plan (i.e. Less than 0.1 dwelling units per acre). Their reasons included potential safety issues and possibly limiting the airport's future viability. The project proposes a density of 3.74 dwelling units per acre.

Parkland Dedication

Applicant has requested that the Council accept a modified parkland dedication condition, which provides options in case the 0.95-acre wetland is needed for wetland mitigation during that permit process and thus cannot also be used for parkland dedication. In any event, applicant will either provide the required land and/or the proper in-lieu fee:

1. The parkland dedication requirement, per OMC 16.16.185, shall be fulfilled as follows:
 - a. A total of 2.15 acres of land are required to be dedicated for the 172 homes @ 2.5 persons per household¹ (172*2.5/1000*5).
 - b. If Lot A @ 0.95 acres is not required for wetland mitigation, the applicant shall dedicate the lot to the Feather River Recreation and Park District (FRRPD), which will annex the lot into the FRRPD Community Facilities District for FRRPD's development and maintenance as a community park accessible to the public.
 - c. Prior to constructing any of the 68 homes in Phase 1, applicant will develop a meandering trail/path on Lot A, plus any other amenities required by an agreement between applicant and FRRPD, and then dedicate the property.
 - d. In addition, applicant shall pay an in-lieu fee equal to the fair market value of an additional 1.20 acres of land, the value of which will be determined at time of filing the final map.
 - e. If Lot A is required for wetland or any other mitigation, applicant shall pay an in-lieu fee equal to the fair market value of 2.15 acres of land.

FISCAL IMPACT

None. The project is subject to all customary fees.

¹ Per Oroville's 2023-2030 Housing element, page 172.

RECOMMENDATION

Staff recommends the following actions:

1. **Conduct a Public Hearing** on the proposed project.
2. **Adopt Resolution No. xxxx – A RESOLUTION OF THE OROVILLE CITY COUNCIL TO FIND THAT THE PROPOSED FEATHER RANCH SUBDIVISION IS CONSISTENT WITH THE PURPOSES OF THE STATE AERONAUTICS ACT AND TO OVERRULE THE BUTTE COUNTY AIRPORT LAND USE COMMISSION’S INCONSISTENCY DETERMINATION FOR OROVILLE AIRPORT.**
3. **Waive Second Reading And Adopt ORDINANCE xxxx -- AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF OROVILLE APPROVING ZONING CHANGE ZC 23-01 TO REZONE ONE PARCEL OF APPROXIMATELY 45 ACRES OF LAND (APN 030-230-098) FROM AIRPORT BUSINESS PARK-- AIRPORT INFLUENCE OVERLAY (APB--AIO) TO 172 SINGLE FAMILY RESIDENTIAL (R-1) LOTS.**

Oroville, CA 95965

Subject: Resolution Overruling the Butte County Airport Land Use Commission Determination of Inconsistency for the Feather Ranch Subdivision General Plan Amendment (GPA 23-01), Zone Change (ZC 23-01) with Ordinance 1873, and Tentative Subdivision Map (TSM22-01)

Dear Council Members:

California Public Utilities Code Section 217676.5 provides the Butte County Airport Land Use Commission (ALUC) the opportunity to comment on the specific findings that a local agency intends to use when proposing to overrule an inconsistency determination by an Airport Land Use Commission.

On August 16, 2023, ALUC was presented with the findings that the city council intends to use to support an overrule of the Commission's inconsistency determination for the Feather Ranch Subdivision project. The project would convert 45 acres at APN: 030-230-098, off 20th Street, between Feather Avenue and Biggs Avenue and zoned Airport Business Park (ABP) into 172 single-family residential lots zoned MLDR (Medium Low Density Residential). The project proposes an overall residential density of 3.82 dwelling units per acre in the Oroville Municipal Airport's B1 and B2 compatibility zones. The Butte County Airport Land Use Compatibility Plan requires a residential density in the B1 zone of less than or equal to 0.1 dwelling units per acre and a density of 0.2 dwelling units per acre in the B2 zone.

ALUC has the following comments regarding the findings of fact included in the Oroville City Council Resolution No. 9152:

Response to Findings Regarding Impairing the Orderly, Planned Expansion of the Airport:

The Commission disagrees with the decision to amend the land use designation and zoning of the Feather Ranch Subdivision project site from ABP (Airport Business Park) to MLDR (Medium Low Density Residential). The ABP zone provides areas near the airport where businesses and commercial opportunities would be compatible with airport operations and takes advantage of the City's unique asset of a 6,000-foot runway. Airports and the businesses that rely on and support airports provide direct and indirect jobs and income to the city and region. Changing the

land use to a residential density above the thresholds established in the Airport Land Use Compatibility Plan and recommended by experts in the industry, inserts a land use incompatible with airport operations. Incompatible development near the airport, like the Feather Ranch Subdivision, can lead to a politically contentious relationship between the airport and the communities around it, resulting in complaints and demands for restrictions on airport operation, ultimately threatening the airport's ability to operate efficiently and serve its function to the local economy.

Response to Findings Regarding Adversely Affecting the Utility or Capacity of the Airport, Such as by Reducing Instrument Approach Procedure Minimums or Affecting Flight Patterns:

The Commission disagrees with the decision to place residential land uses with densities above the criteria established in the Butte County Airport Land Use Compatibility Plan. Inserting dense residential development will cause direct and indirect impacts on the safety of airport operations and create hazards to the residences on the ground, particularly in the approach and departure paths. During emergencies, aircraft failures or inexperienced pilots cannot follow the airport's advisory AirNav on take-offs and have a high likelihood of crashing into the heart of the proposed development. The destruction caused by such a crash in a residential area would only be exacerbated if it occurs in the evening when residents are home and asleep or if there is a fire and the aircraft has jet or high-octane fuel aboard. It would be more beneficial to the airport to have open spaces along the approach and departure paths available for safety purposes, as it provides pilots with other areas to crash or land aircraft during an emergency instead of a residential development.

Please be advised that California Public Utilities Code (PUC) Section 21678 states: With respect to a publicly owned airport that a public agency does not operate, if the public agency pursuant to Section 21676, 21676.5, or 21677 overrules a commission's action or recommendation, the operator of the airport shall be immune from liability for damages to property or personal injury caused by or resulting directly or indirectly from the public agency's decision to overrule the commission's action or recommendation.

We urge the City Council to seriously consider the concerns expressed by the Butte County Airport Land Use Commission when deciding whether to overrule.

Should you have any questions, please contact me at 530.552.3684 between 8:00 a.m. and 4:00 p.m., Monday through Friday, or by email at rhickel@buttecounty.net.

Sincerely,

Dr. Gene Kemper, Chair
Butte County Airport Land Use Commission

**CITY OF OROVILLE
ORDINANCE NO. 1873**

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF OROVILLE APPROVING ZONING CHANGE ZC 23-01 TO REZONE ONE PARCEL OF APPROXIMATELY 45 ACRES OF LAND (APN 030-230-098) FROM AIRPORT BUSINESS PARK- AIRPORT INFLUENCE OVERLAY (APB- AIO) TO 172 SINGLE FAMILY RESIDENTIAL (R-1) LOTS.

WHEREAS, the City of Oroville has determined that parcel APN 030-230-098 is currently zoned ABP-AIO in the 2015 adopted General Plan; and

WHEREAS, the city has determined that the parcels can be converted to residential purposes; and

WHEREAS, there is an existing adjacent subdivision called Calle Vista with very similar features; and

WHEREAS, the city is keenly interested in developing market rate housing to help meet its RHNA (Regional Housing Needs Allocation), which the city sorely needs; and

WHEREAS, MD3 Investments has proposed a 172-unit market rate subdivision with lots averaging 7,450 square feet in size at this location; and

WHEREAS, On July 18, 2023, the City Council certified the project's EIR with a Statement of Overriding Considerations, approved general plan amendment GPA 23-01, Tentative Subdivision Map TSM 22-01, and in addition the Planning Commission has approved Variance VAR 23-01, all of which are required to allow this developer to create the proposed housing; and

WHEREAS, On September 19, 2023, the City Council approved an override of the Airport Land Use Commission's determination of inconsistency with the Butte County Airport Land Use Compatibility Plan,

WHEREAS, at a duly noticed public hearing, the City Council considered the comments and concerns of public agencies, property owners, and members of the public who are potentially affected by the changes described herein, and also considered the Planning Commission's recommendations and the City's staff reports regarding the change.

The Council of the City of Oroville do ordain as follows:

Section 1. Pursuant to section 17.08.040 of the Code of the City of Oroville, approximately 45 acres of land (APN 030-230-098) are hereby rezoned into 172 Single Family Residential (R-1) lots in accordance with approved Tentative Parcel Map TSM 22-01.

Section 2. This ordinance shall become effective on October 30, 2023, or 30 days after the second reading is approved, whichever comes later.

Section 3. The City Clerk shall attest to the adoption of this ordinance.

PASSED AND ADOPTED by the City Council of the City of Oroville at a regular meeting held on September 19, 2023, by the following vote:

AYES:

Project Title: Feather Ranch Project

Project Applicant: MD3 INvestments

Project Location (include county): APN 030-230-098 in the City of Oroville in Butte County

Project Description:

The Project is the subdivision of a 44.97-acre parcel into 172 single-family lots averaging 7,450 square feet (APN 030-230-098). New General Plan land use designation is Medium Low Density Residential with an Airport Influence Area Overlay (AIA-O). The new Zone is Single Family Residential (R-1). The Site is currently vacant undeveloped land. Elevations range from 230 feet above mean sea level (AMSL) at the southwest corner of the Site to 190 feet AMSL at the northeast corner, generally sloping from west to

CITY OF OROVILLE STAFF REPORT

TO: MAYOR PITTMAN AND CITY COUNCIL MEMBERS

**FROM: BRIAN RING, CITY ADMINISTRATOR,
 WES ERVIN, PRINCIPAL PLANNER**

**RE: FEATHER RANCH SUBDIVISION, INCLUDING EIR CERTIFICATION,
 GENERAL PLAN AMENDMENT GPA 23-01, ZONING CHANGE ZC 23-01
 WITH ORDINANCE 1873, TENTATIVE SUBDIVISION MAP TSM 22-01,
 AND AN OVERRIDE OF THE BUTTE COUNTY AIRPORT LAND USE
 COMMISSION'S INCONSISTENCY DETERMINATION.**

DATE: JULY 18, 2023

SUMMARY

The City Council shall conduct a public hearing to consider adopting General Plan Amendment GPA 23-01, Zoning Change ZC 23-01, Tentative Subdivision Map TSM 22-01, and an override of the Airport Land Use Commission inconsistency determination for a proposed 172-unit market rate single family subdivision at APN 030-230-098 off 20th Street between Feather Avenue and Biggs Avenue.

DISCUSSION

The Council may consider approval of a Tentative Subdivision Map that would create 172 new market-rate housing units. MD3 Investments has applied to subdivide a 45-acre parcel currently zoned Airport Business Park – Airport Influence Overlay (ABP-AIO) into 172 single family lots to be zoned R-1 and averaging 7,450 square feet in size.

This project decision requires the City Council to balance the objectives of safety and noise, effective airport operations, and economic prosperity including the need for more market rate housing – all important considerations for Oroville's citizenry.

Because the project is discretionary and may create significant impacts, an Environmental Impact Report (EIR) was prepared and circulated in accordance with the California Environmental Quality Act (CEQA). Due to the significant and unavoidable environmental effects identified in the EIR, CEQA requires the City Council to approve a Statement of Overriding Considerations and certify the EIR if it ultimately approves the project.

The project's location in the Oroville Airport B1 and B2 overflight zones also requires an override of the inconsistency determination by the Butte County Airport Land Use

Commission (ALUC) for density. The density requirements in each zone are based on safety considerations supported by national crash statistics and noise contours. An override is a significant decision, so the state-mandated process for an override is lengthy and requires two 2/3 votes of the City Council at least 45 days apart.

It should also be noted that the Butte County Planning Commission at its June 22 meeting denied subdividing a nearby 22-acre parcel at Biggs and 18th Street into 110-unit single family lots solely because some of the housing was under the B2 overflight zone.

The current General Plan and zoning designation of ABP was created long ago when the city envisioned a modern industrial and research park surrounding the Airport. That vision started in the 1980's with the attraction of Spectra Physics¹ and several government office users. Now, due to the statewide housing shortage compounded locally by the nearby wildfires and spillway peril, there is much more pressure to build housing and very little demand for industrial or research space. This project would only use 45 of the 270 acres zoned ABP and would not threaten that original vision.

The Planning Commission reviewed the project at its June 22, 2023 meeting, and voted 6-0 to recommend an override of the ALUC's inconsistency determination and approval of the project. The Planning Commission also approved Variance VAR 23-01, subject to the Council's approval of the project.

Pages 3-17 of the attached June 22 Planning Commission staff report discuss in detail:

1. The required approvals:
 - a. EIR Certification with Findings and a Statement of Overriding Considerations.
 - b. General Plan Amendment GPA 23-01.
 - c. Zone Change ZC 23-01.
 - d. An Override of the Butte County Airport Land Use Commission's September 21, 2022, inconsistency determination.
 - e. Variance VAR23-01 (by the Planning Commission)
 - f. Tentative Subdivision Map TSM 22-01
2. The project's *three significant and unavoidable environmental impacts*:
 - a. Residential density in the Airport's area of influence. The proposed project with a density of 3.8 homes per acre is more than the allowed 1 home per 10 acres in the B1 Zone and 1 home per 5 acres in the B2 Zone.
 - b. Noise increase from ground activity. The project would increase ambient noise levels by more than 5 decibels -- the city's CEQA noise significance threshold. However, ambient noise levels would still be under 48 decibels and classified as "Quiet Urban Daytime". Ambient noise will need to exceed 65 decibels to be of concern.
 - c. Greenhouse gas emissions from Vehicle Miles Traveled. The project will generate 26.7 home based trips per resident, which is 140% of Oroville's average of 19.1 trips per day per resident. State law has determined that

¹ Spectra Physics was a high tech firm based in the Bay Area, which built the facility now occupied by the Northwest Lineman College.

any project exceeding 85% of the average must be considered significant under CEQA. 85% of 19.1 is 16.2 trips per day per resident.

3. The need for market rate housing. The recently certified Housing Element concludes that Oroville needs at least 375 new market rate units before 2030. This project would supply almost half that need.
4. The Airport -- it's importance to the city and the region, and what safety and operational effects the project may have. Staff have concluded that there will not likely be any significant effect on airport safety, operations, or its ability to expand. Nor will the public be exposed to excessive noise and safety hazards.

FISCAL IMPACT

None. The project is subject to all customary fees.

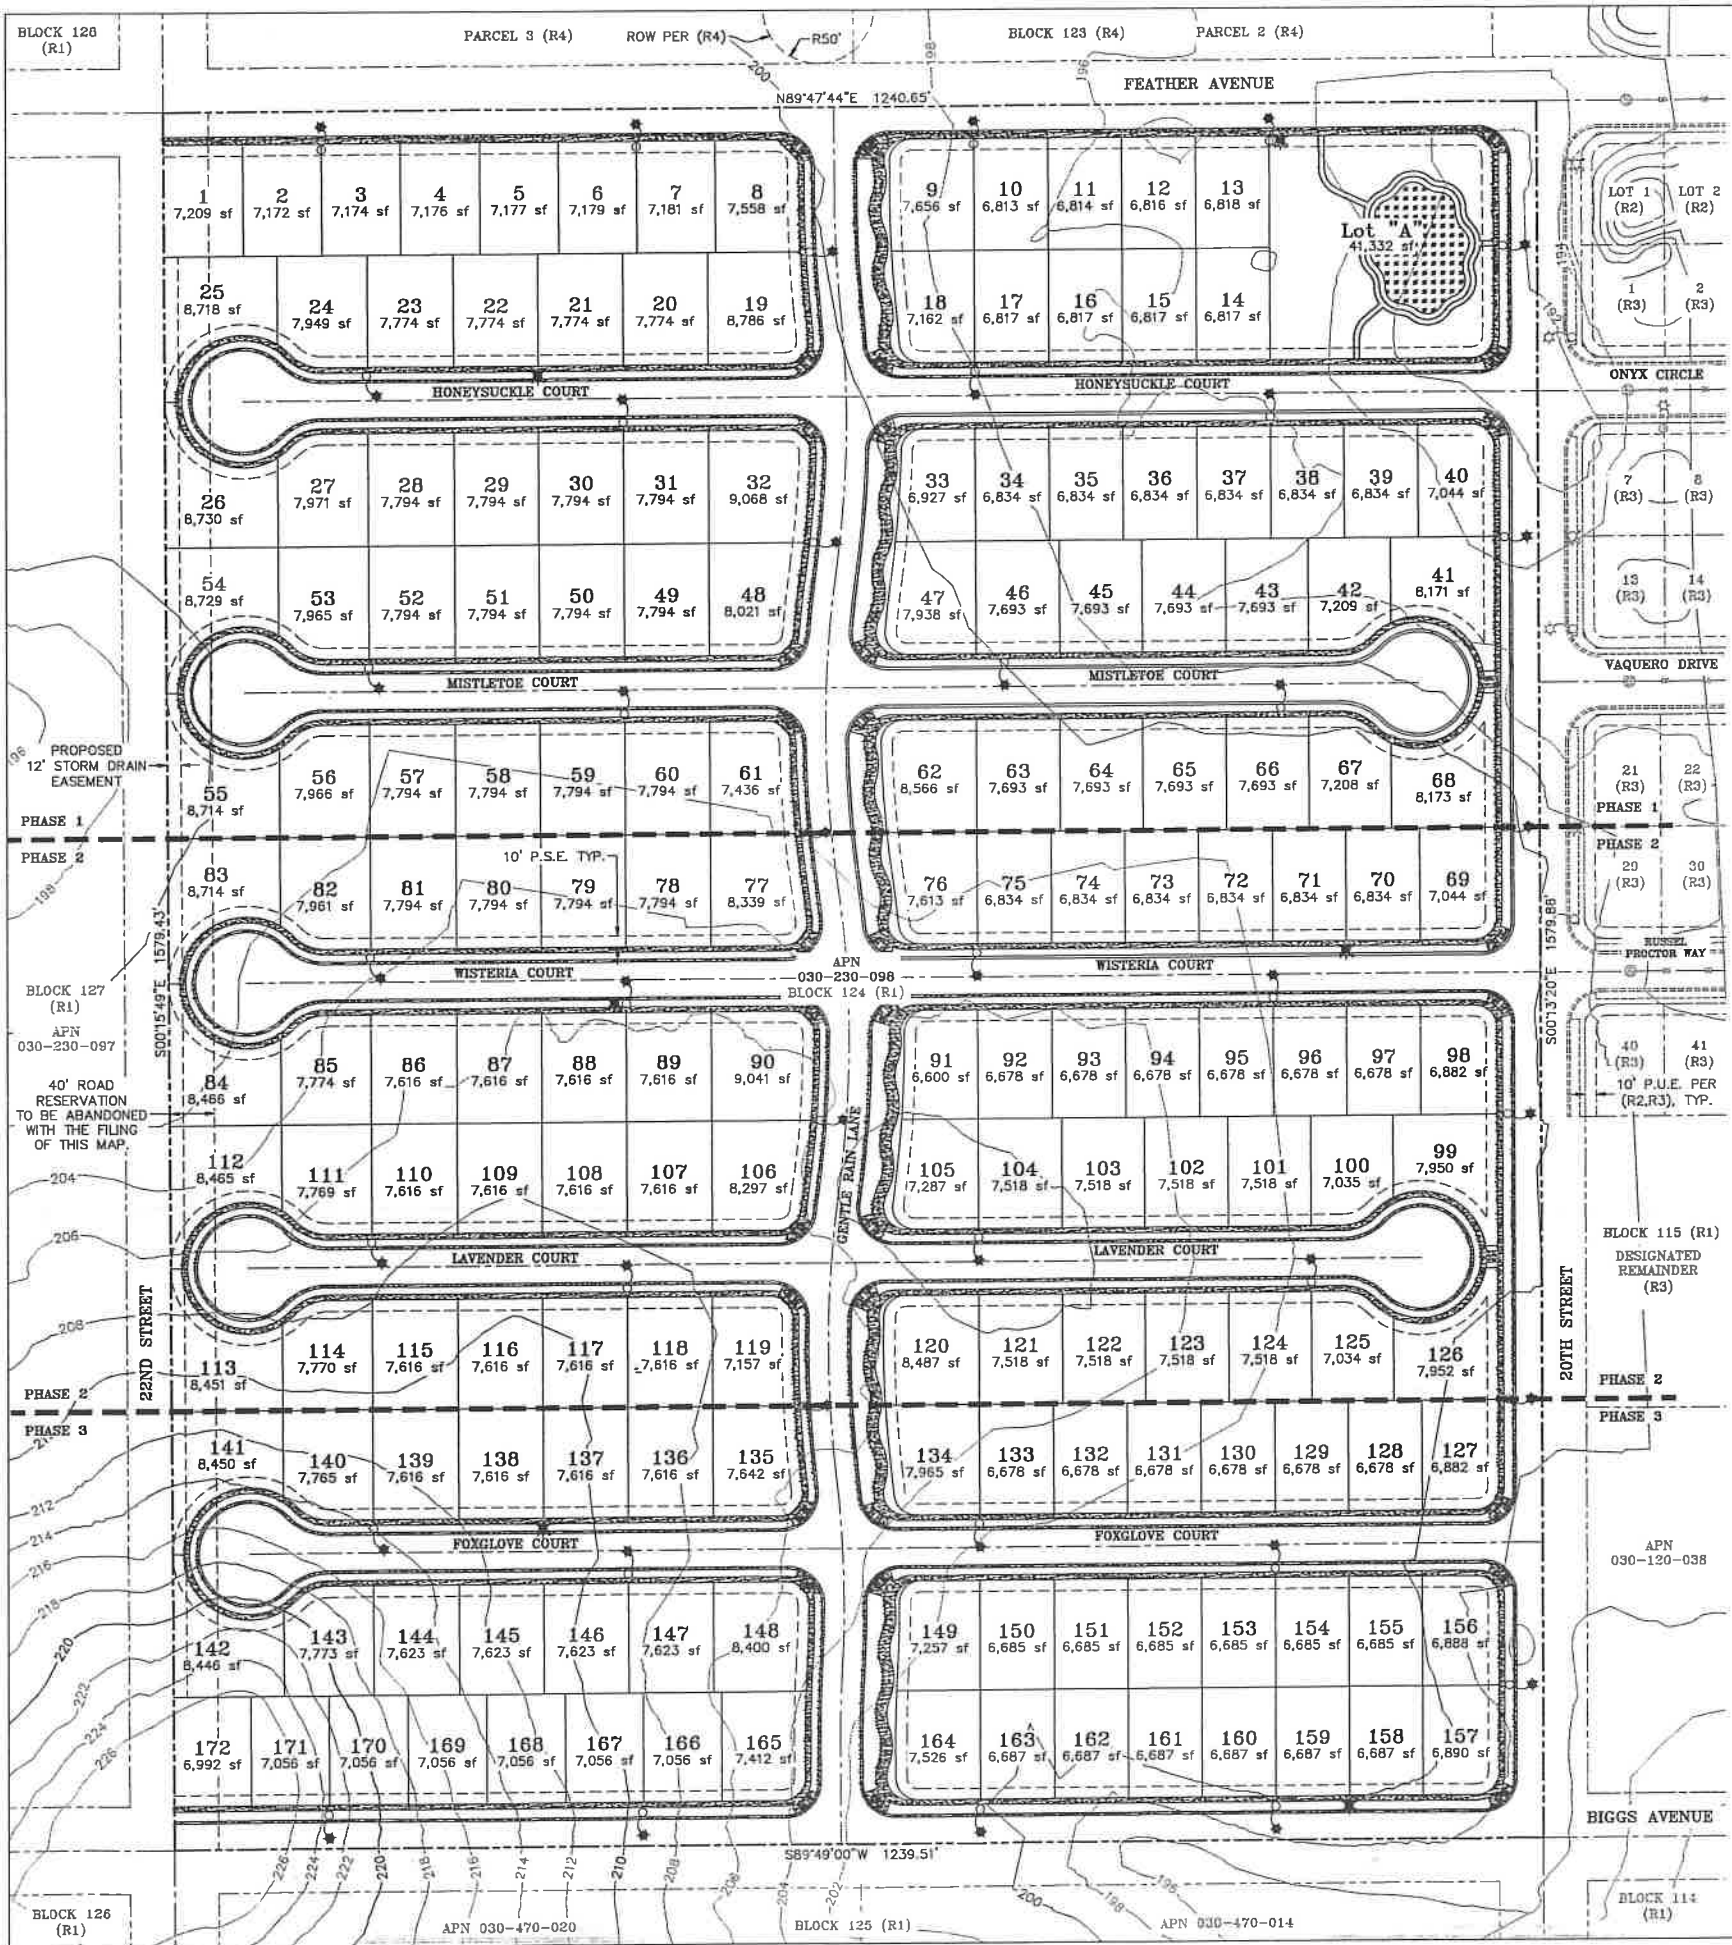

RECOMMENDATION

Staff recommends the following actions:

1. **Conduct a Public Hearing** on the proposed project.
2. **Adopt Resolution No. 9151 - A RESOLUTION OF THE OROVILLE CITY COUNCIL MAKING CERTAIN FINDINGS, REQUIRING CERTAIN MITIGATION MEASURES, AND ADOPTING A STATEMENT OF OVERRIDING CONSIDERATIONS FOR THOSE SIGNIFICANT AND UNAVOIDABLE IMPACTS IDENTIFIED IN THE FEATHER RANCH EIR.**
3. **Certify the adequacy of the Final Environmental Impact Report**
4. **Adopt Resolution No. 9152 - A RESOLUTION OF THE OROVILLE CITY COUNCIL TO NOTIFY THE BUTTE COUNTY AIRPORT LAND USE COMMISSION AND THE STATE DIVISION OF AERONAUTICS OF THE CITY'S INTENTION TO FIND THAT THE PROPOSED FEATHER RANCH SUBDIVISION IS CONSISTENT WITH THE PURPOSES OF THE STATE AERONAUTICS ACT AND TO OVERRULE THE BUTTE COUNTY AIRPORT LAND USE COMMISSION'S INCONSISTENCY DETERMINATION FOR OROVILLE AIRPORT.**
5. **Adopt Resolution No. 9153 -- A RESOLUTION OF THE OROVILLE CITY COUNCIL APPROVING GENERAL PLAN AMENDMENT GPA 23-01 AND TENTATIVE SUBDIVISION MAP TSM 22-01 FOR THE PROPOSED FEATHER RANCH SUBDIVISION AND MAKING CERTAIN FINDINGS TO THAT EFFECT.**
6. **Waive First Reading And Approve ORDINANCE 1873 -- AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF OROVILLE APPROVING ZONING CHANGE ZC 23-01 TO REZONE ONE PARCEL OF APPROXIMATELY 45 ACRES OF LAND (APN 030-230-098) FROM AIRPORT BUSINESS PARK-AIRPORT INFLUENCE OVERLAY (APB--AIO) TO SINGLE FAMILY RESIDENTIAL (R-1) ONCE TENTATIVE MAP TSM 22-01 FOR THE**

PLANNING COMMISSION STAFF REPORT

Thursday, June 22, 2023

RE: Feather Ranch Subdivision, including a General Plan Amendment (GPA 23-01), Zoning Change (ZC 23-01), Variance VAR23-01, Tentative Subdivision Map (TSM 22-01), and an Override of the Airport Land Use Commission Inconsistency Determination.

SUMMARY: The Oroville Planning Commission will review and consider recommending that the City Council approve General Plan Amendment GPA 23-01, Zoning Change ZC 23-01, Tentative Subdivision Map TSM 22-01, and the override of the Airport Land Use Commission inconsistency determination at a +-45 Acre parcel identified as APN 030-230-098 off 20th Street between Feather Avenue and Biggs Avenue.

RECOMMENDATION: Staff recommends the following actions:

1. **Conduct a Public Hearing** on the proposed project.
2. **Adopt Resolution No. P2023-14** recommending that the City Council certify the adequacy of the Final EIR, make certain findings regarding environmental effects and mitigation measures, adopt a Statement of Overriding Considerations, and adopt the Mitigation Monitoring and Reporting Program.
3. **Adopt Resolution No. P2023-15** recommending that the City Council approve General Plan Amendment GPA 23-01, Zoning Change ZC 23-01, approve the Tentative Subdivision Map TSM 22-01, and make certain findings to that effect.
4. **Adopt Resolution P2303-16** to approve Variance VAR23-01 to allow development at a density greater than that allowed in OMC 17.44.050 (AIA-O), subject to the relevant Council approvals, and make certain findings to that effect.
5. **Adopt Resolution No. P2023-13** recommending that the City Council override the Airport Land Use Commission’s determination of “not consistent” with the ALUCP and make certain findings to that effect.

APPLICANT: MD3 Investments

LOCATION: APN 030-230-098, west of 20th Street between Feather Avenue and Biggs Avenue

GENERAL PLAN: ABP (Airport Business Park)
ZONING: ABP (Airport Business Park)
FLOOD ZONE: Zone X

ENVIRONMENTAL DETERMINATION: An Environment Impact Report was prepared pursuant to Section 15120 of Title 14, California Code of Regulations.

<p>REPORT PREPARED BY:</p> <hr/> <p>Wes Ervin, Principal Planner Community Development Department</p>	<p>REVIEWED BY:</p> <hr/> <p>Dawn Nevers, Assistant Director Community Development Department</p>
-------------------------------------------------------------------------------------------------------------------------	---------------------------------------------------------------------------------------------------------------------

SUMMARY

The Planning Commission may consider approval of a Tentative Subdivision Map that would create 172 new market-rate housing units, a much-needed housing type for the City. MD3 Investments has applied to convert 45 acres that are currently zoned Airport Business Park (ABP) into 172 single family lots averaging 7,450 square feet in size.

This project decision requires the Planning Commission and City Council to balance the objectives of safety and noise, airport operations, and economic prosperity including the need for more housing – all important considerations for Oroville’s citizenry.

Approval requires a General Plan Amendment, a Zoning Change, and a Zoning Code Variance. Because the project is discretionary and may create significant impacts, an Environmental Impact Report (EIR) was prepared in accordance with the California Environmental Quality Act (CEQA). Due to the significant and unavoidable environmental effects identified in the EIR, CEQA requires the City Council to approve a Statement of Overriding Considerations if it ultimately approves the project.

The project’s location in the B1 and B2 overflight zones also requires an override of the inconsistency determination by the Butte County Airport Land Use Commission (ALUC) for density. The density requirements in each zone are based on safety considerations supported by national crash statistics and noise. An override is a significant event, so the state-mandated process for an override is lengthy and requires two 2/3 votes of the City Council at least 45 days apart.

The current General Plan and zoning designation of ABP was created long ago when the city envisioned a modern industrial and research park surrounding the Airport. That vision started in the 1980’s with the attraction of Spectra Physics¹ and several government office users. Now, due to the statewide housing shortage compounded locally by the nearby wildfires and spillway peril, there is much more pressure to build housing and very little demand for industrial or research space. This project would likely not threaten that original vision.

¹ Spectra Physics was a high tech firm based in the Bay Area, which built the facility now occupied by the Northwest Lineman College.

DETAILED DISCUSSION

MD3 Investments is proposing to subdivide and develop a 44.97-acre vacant and undeveloped parcel (APN 030-230-098) into 172 single-family detached residential lots immediately west of 20th Street with access points off Feather Avenue, Biggs Avenue, and 20th Street. The homes and streets would be developed on approximately 40.197 acres, with a 0.95-acre (41,332 s.f.) passive open space at the southwest corner of Feather Avenue and 20th Street, and a meandering multi-use path along the central roadway (Gentle Rain Lane) of the subdivision.

Improvements to 20th Street and abutting roadways include curbs, gutters and sidewalks adjacent to the project site. Sidewalks would front 20th Street, Biggs Avenue, and Feather Avenue as well as along all internal proposed roadways. Greenway space will be provided along internal sidewalks, around the proposed 0.95-acre combined storm drainage retention basin and open space at the northeastern corner of the site, and fronting 20th Street and Biggs Avenue. Storm drainage facilities are proposed throughout the project site, with connections tying in together internally, prior to tying into storm drainage facilities located within 20th street.

Required Approvals

Required approvals include a General Plan Amendment, a Zone Change, a Variance, a Tentative Subdivision Map, and an overrule of the Airport Land Use Commission's determination of Inconsistency with the Airport Land Use Compatibility Plan.

General Plan Amendment GPA 23-01

The current General Plan Land Use Designation for the site is Airport Business Park (ABP). The purpose of this land use designation is to allow for "light manufacturing, limited industrial, food processing, wholesale trade and offices" with limited retail and public assembly users to "provide for business and commercial opportunities that will neither be detrimental to the airport's growth, efficiency and safety nor create substantial conflict with the development of other industrial lands in the city...."

To allow for single-family residential construction, the Council must amend the General Plan to change the Land Use Designation from ABP to Medium Low Density Residential (MLDR). This designation would allow between 3 to 6 units per acre. This designation is identical to the neighboring Calle Vista subdivision to the east, and the parcels to the north across Feather Avenue. The tentative subdivision map proposes 172 parcels on an approximately 45 acres parcel for a project density of 3.82 units per acre, within the allowed density for the MLDR land use designation.

Over 172 acres of ABP land within city limits remain vacant or underutilized with no foreseeable buildout of these parcels. Staff continues to support the location and development of compatible industrial and office users within the ABP. However, with low industrial land absorption, much of the ABP will likely remain vacant through the rest of the 2030 General Plan planning horizon and beyond. A General Plan Amendment and Zoning Change to facilitate residential development on this 45-acre parcel should not adversely affect future industrial or office development opportunities within the ABP. Staff does not recommend allowing housing any closer to the airport than this.

Zoning Change ZC 23-01

The current zoning of the site is Airport Business Park (ABP). A zoning change from ABP to single-family residential (R-1) is needed to permit single-family residential development and correspond with the underlying General Plan Amendment to MLDR. This zoning change would match the zoning of the neighboring Calle Vista subdivision and the approved Village at Ruddy Creek subdivision further to the east. The minimum lot size for R-1 zoning is 5,000 s.f. for interior lots and 6,000 s.f. for corner lots. As proposed, the average lot size of the parcels within the subdivision will be 7,450 s.f.

Zoning Code Variance for Project Density

Once the Zoning Change is approved, Oroville's Airport Influence Overlay Code 17.44.050, including Table 17.44.050, has several density restrictions for Overflight Zones B1 and B2²: the restrictions are identical to the ALUCP's restrictions. Therefore, if the Council overrides the ALUC consistency determination, they should also grant a corresponding variance to the project.

Residential density: This residential project is proposed at a gross density of 3.82 units per acre, which exceeds the maximum allowable 0.1 and 0.2 units per acre in the B1 & B2 Overflight zones respectively.

Open land requirements: The 30% and 20% open land requirements in Table 17.44.050 are not met. Open land is about 3.5 acres³ including Gentle Rain Lane and the 0.95-acre Lot A set-aside, or about 8% of the entire property. The other streets do not qualify for size because of their widths.

Population density: Regarding population density, the project equates to an average gross population density of 430 people⁴ at 9.56 persons per acre, and an average single-acre density of 10.3 persons per acre. These residential concentrations are lower than would be allowed under the current ABP Zone for non-residential uses

The required findings for a variance can be found later in this staff report.

Tentative Subdivision Map TSM 22-01

The proposed map will subdivide the existing single parcel into 172 single-family detached residential lots. Lots would range in size from 6,600 s.f. up to 8,700 s.f.. The proposed subdivision is currently planned for development in three phases, with Phase 1 consisting of 68 lots, Phase 2 with 58 lots, and Phase 3 with the remaining 46 lots.

Among the project conditions is the requirement for Parkland dedication per OMC 16.16.185. The 172-unit project, with an estimated 500 residents @ 2.3 residents per

² The densities in the Airport Influence Area Overlay Ordinance are identical to the adopted Butte County Airport Land Use Compatibility Plan.

³ Average lot size in the Tentative map is 7,450 square feet, equating to 29.4 acres of residential land, or 65.3% of the total acreage. Most streets are under 75' wide, too narrow to qualify as open land in the Overlay Zone, but Gentle Rain Lane is wide enough as long as future streetlights and street trees provide at least a 75-foot width without any obstructions over 4 feet high. Gentle Rain Lane consists of about 2.5 acres of land.

⁴ Oroville has an average of 2.5 persons per household in 2021, per the recently Certified Oroville 2022-2030 Housing Element, Page 172.

household, will be required to dedicate 2.5 acres of parkland or pay an in-lieu fee. Discussions are ongoing between applicant, the city, and Feather River Recreation and Park District.

ALUCP Override

If the Council approves the proposed project, it must also override the ALUC's determination of inconsistency with the ALUCP. See below for a detailed discussion of that decision.

Draft Environmental Impact Report (DEIR)

The project's discretionary approvals triggered CEQA, which requires an EIR to be prepared if a project may have significant environmental impacts. ECORP Consulting of Chico completed the Initial Study in October 2022, which identified 15 potentially significant impacts⁵. The City circulated a notice of Preparation (NOP) for 30 days between November 1, 2022 and December 2, 2022, which gave agencies, citizens, and Native Tribes an opportunity to comment on the impacts which the EIR should study.

ECORP completed the DEIR, which was circulated for public review beginning on April 15, 2023 with comment ending on May 30, 2023. The DEIR concludes that all impacts would be less than significant by avoidance or mitigation measures, except:

- Hazards related to airport safety. The project could result in a safety hazard or excessive noise to people residing or working in the project area. This significant and unavoidable impact is due to the project's location under the B1 and B2 overflight zones north of Oroville Airport. The project's location and density exceeds those allowed by the Butte County Airport Land Use Compatibility Plan, is not consistent with Safety Policy 5.1 of the General Plan, and does not comply with Oroville Municipal Code 17.44.050 (AIA-O). These impacts are discussed in detail below.
- Noise related to traffic—not aircraft. The noise generated by traffic from the project's operations will increase ambient noise levels by more than 5 decibels in two segments of 20th Street and one of Feather Avenue⁶. This is a technical violation of Oroville's CEQA significance threshold. The ambient decibel level in these locations after the project is built will remain at or below 48 decibels. In spite of the technical threshold exceedance, these locations will continue as they are, an area of "Quiet Urban Daytime"⁷. Noise related to aircraft is discussed below.
- Traffic related to Vehicle Miles Traveled (VMT). The project would generate 120

⁵ The potential significant effects in the Initial Study included air quality, biological resources, cultural resources, energy, greenhouse gas emissions, hazards and hazardous materials, land use and planning, noise, paleontological resources, population and housing, public services, transportation, tribal cultural resources, utilities and service systems, and mandatory findings of significance.

⁶ Page 3.9-21 of the DEIR

⁷ Page 3.9-2 of the DEIR.

trips distributed among 20th, 18th, Feather, and Biggs during the A.M peak hour, and 162 trips during the P.M. peak hour. This equates 26.7 home-based trips per resident, or 140 percent of the current Oroville baseline average of 19.1 trips per resident. Since this trip generation exceeds the state mandated CEQA significance threshold of 85% of baseline (or 16.2 trips per resident), the impact is significant by definition. Oroville cannot mitigate this impact with enough transit, bike and walking paths in this rural location, so it remains significant⁸.

One of the key Mitigation measures in the DEIR is a recommendation to add a right turn lane on southbound 20th street at SR 162 to limit stacking by the 31 or so peak A.M. vehicles which would turn left onto SR162 from 20th street. The applicant has agreed to do so.

DEIR Comments Received by May 30

As of May 30, 2023, three comments were received, including:

- Caltrans Division of Aeronautics. The letter recommends Alternative 3 in the DEIR, which is within the density limits of the ALUCP. Otherwise recommends not approving the override or the General Plan Amendment. Notes that the need for housing does not
- A phone call from Patrick Waller of the California Pilot's Association. Mr. Waller wanted to know more about the project and stated that the Association had no position on the project, but that some local pilots may. He stated that he knew of several airports with housing closer to the runway than this proposed subdivision.
- Ted Runge, a neighbor, asked if his land could also be included in the General Plan amendment. He says he owns two 5-acre parcels immediately south of the project. Staff would oppose housing any closer to the airport than the project area.

These comments have been incorporated into the Final EIR.

Final Environmental Impact Report (FEIR)

The FEIR includes any changes to the DEIR as a result of comments received. No changes to the DEIR are considered necessary. An EIR can be certified if (1) it shows a good faith effort at full disclosure of environmental information, and (2) it provide sufficient analysis to allow decisions to be made regarding the project in contemplation of its environmental consequences.

Mitigation Monitoring and Reporting Plan (MMRP)

Table ES-1 of the FEIR contains a summary of proposed mitigation measures to render effects insignificant that would otherwise have been significant. All mitigation measures will be included in the final MMRRP required as conditions of approval.

Statement of Overriding Considerations

As noted above, three environmental effects are considered significant, unavoidable and potentially adverse project-specific effects that cannot be mitigated to levels of

⁸ Oroville is currently in the process of establishing its own CEQA VMT thresholds that is more suited to our rural/semi-rural environment.

insignificance by the adoption of mitigation measures. If the City Council approves the project, the Council must also find that these impacts will be mitigated to the maximum extent feasible but would remain significant and unavoidable. The Council would need to make findings and prepare a statement of overriding considerations that specific economic, social, or other benefits support the approval of the proposed project.

The Importance of the Project Towards Housing Needs

For the 6th Cycle Housing Element for the 2022-2030 Planning Period, the City's Regional Housing Needs Allocation (RHNA) for above-moderate income is 375 housing units. This proposed development will assist the city in facilitating the production of housing as our region and state experience a critical housing shortage. Assuming all homes are built at an above-moderate income level, this proposed development would provide 46% of the units needed out of the allocated 375 units. For comparison, during the 5th Cycle Housing Element for the 2014-2022 Planning Period, 250 units of above-moderate income housing were produced within the city out of an allocated 784 units, only 31.9% of the need.

The Vision Statement of the General Plan states that "Oroville residents will have a choice of housing to best suit their individual lifestyles," with the goals, actions, and policies of the Land Use Element and Open Space, Natural Resources and Conservation Element further affirming the need to provide a jobs-to-housing balance within the City. According to the Butte County Association of Governments 6th Cycle RHNA Plan published December 2020, Oroville has a jobs-to-housing balance of 1.74. A typical target relationship between jobs and housing is between 1.3 and 1.6 jobs for every one housing unit, meaning that Oroville has an excess of jobs and not enough housing. Given the immense local need for housing, this project as designed with the number of units proposed is a desirable product for the city, which will help ensure the sustainable growth of the city and will provide a critical housing option within the community.

Lastly, Butte County and the vicinity have experienced several recent fires, which eliminated thousands of homes in Paradise and several unincorporated towns. The housing loss created an instant and urgent need for housing in Oroville and nearby. Paradise is being rebuilt but will not recover its former housing inventory for decades. This project should help soften some of the strong regional demand, find some permanent housing for displaced residents, and encourage some to return to the area after expatriating. Anticipated employment gains from the Oroville Hospital expansion and new industrial and commercial development will need more local housing options.

Economic Importance of the Airport to the city

Business activity, employment, sales and investment at the airport are considerable and make up a significant portion of local employment, property and sales tax revenues. It is therefore in the best interest of the city to keep the airport and its vicinity active and unimpeded. This includes the airport itself within the fence, and the industrial surroundings which employ hundreds of local workers. Many of these establishments use the airport for flights in and out during regular business operations. In addition, about 30 aircraft are permanently based there, with the attendant property tax and fuel

sales. A new helicopter and fixed wing repair facility (Fixed Base Operator) is an indication that the airport is getting more attention from the flying community.

Safety and Noise – Possible Override of the Airport Land Use Commission’s Determination of Inconsistency

The property falls within the Airport Land Use Compatibility Plan (ALUCP) compatibility zone B1 and B2, adopted by the ALUC on November 15, 2017. The purpose of this plan is to promote compatibility with the airport and surrounding land uses. Compatibility zone B1 is generally set to encompass the airport’s projected 55 decibel (dB) Community Noise Equivalent Level (CNEL). Compatibility zone B2 encompasses the close-in, low altitude portions of traffic patterns. Much of the neighboring Calle Vista Estates subdivision also falls within these same compatibility zone classifications.

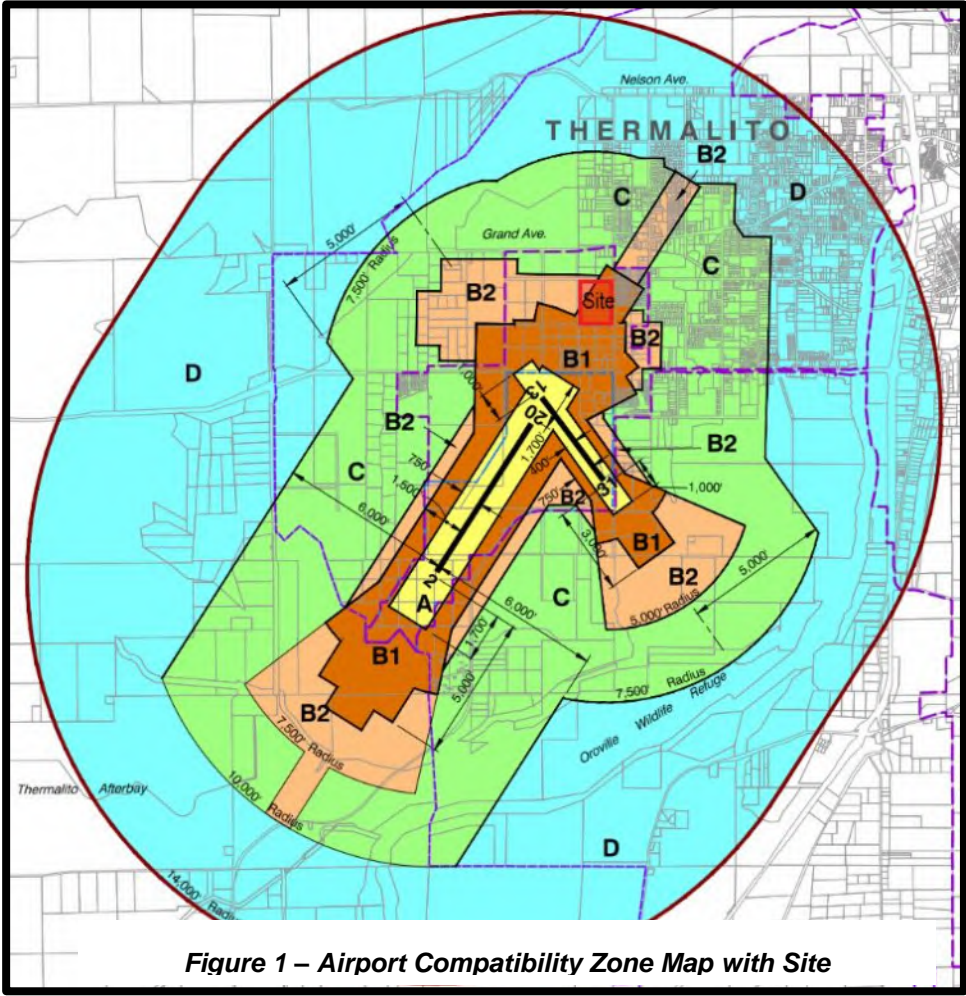

Figure 1 – Airport Compatibility Zone Map with Site

As required by the ALUCP and Section 21676(b) of the Public Utilities Code the project

applicant submitted the project to the ALUC for a consistency determination with the ALUCP. The ALUC conducted a hearing on the matter on September 21, 2022, and voted 7-0 -1⁹ to find the project inconsistent with the ALUCP based on the project density.

Pursuant to Public Utilities Code Section 21676, the City Council may choose to override the ALUC's determination of inconsistency by following a two-step process. The first step is to conduct a public hearing to adopt a resolution of intent to override, a copy of which would be sent to the ALUC and State Division of Aeronautics to provide formal notification of the City's intent.

The second step in the process is that at least 45-days after notification has been sent to the ALUC and State Division of Aeronautics, the City Council may conduct a second public hearing to consider adopting a resolution to override the ALUC. At this second public hearing the City Council may also consider the project entitlement and take final action on the application.

The following points are important to consider:

- The override must be adopted by two-thirds (2/3) of the City Council.
- Specific findings supported by substantial evidence must be adopted finding that the proposed project will not:
 - Impair the orderly, planned expansion of the airport.
 - Adversely affect the utility or capacity of the airport (such as by reducing instrument approach procedure minimums); or
 - Expose the public to excessive noise and safety hazards.

Public Utilities Code Section 21678 and the ALUCP statutes states that if the city overrules the ALUC, the operator of the airport shall be immune from liability for damages to property or personal injury caused by or resulting directly or indirectly from the City's decision to overrule the ALUC's compatibility determination or recommendation.

Airport Land use Compatibility Plan Density

Compatibility zone B1 has a maximum density of 0.1 dwelling units per acre and compatibility zone B2 has maximum density of 0.2 dwelling units per acre. The General Plan Amendment to MLDR has an allowable density range of 3 to 6 units per acre and the project is proposing 172 parcels on approximately 45 acres for a project density of 3.82 units per acre. The ALUCP Section 3.4.5 establishes criteria for determining the density of sites split by two or more compatibility zones. The portions of the property that fall within compatibility zone B1 are considered to be a separate site from the portions of the property that fall within compatibility zone B2.

According to the ALUC staff report, approximately 35.82 acres and a proposed 134 dwelling units fall within compatibility zone B1, for a density of 3.74 units per acre.

⁹ The vote was unanimous with one Commissioner recused himself since he lives very near the project area.

Approximately 9.15 acres and a proposed 38 dwelling units fall within compatibility zone B2, for a density of 4.15 units per acre. The ALUC consistency review listed five inconsistency findings for the project:

1. The MLDR General Plan Land Use Designation of up to 6 dwelling units (lots) per acre is inconsistent with the B1 maximum density of 0.1 dwelling units per acre and B2 maximum density of 0.2 dwelling units per acre.
2. The R-1 zoning allows up to 6 dwelling units (lots) per acre is inconsistent with the B1 maximum density of 0.1 dwelling units per acre and B2 maximum density of 0.2 dwelling units per acre.
3. The project's proposed density of 3.74 dwelling units per acre is inconsistent with the B1 Compatibility Zone density (0.1 or more dwelling units per acre).
4. The project's proposed density of 4.15 dwelling units per acre is inconsistent with the B2 Compatibility Zone density (0.2 dwelling units per acre).
5. Most of the parcel (approximately 80%) is in the B1 Compatibility Zone. The B2 Compatibility Zone portion does not have 65% of the project site within B2 Compatibility Zone with equal to, or greater than, the proposed project. The project does not meet the criteria for infill.

The City's 2030 General Plan Safety Element Goal SAF-5, Policy P5.2 states "*Protect the Overflight Zone by limiting residential densities to a maximum of six units per gross acre, with proposals consisting of four units per gross acre or more subject to Airport Land Use Commission (ALUC) review. Schools and other uses resulting in "large concentrations" of people shall be prohibited.*" The development proposal complies with the goals and policies of the General Plan for residential densities.

The project site is adjacent to an existing residential development to the east (Calle Vista Estates), which has a General Plan Land Use Designation of MLDR and zoning designation of R-1, identical to what is being proposed for this subdivision. In addition, the Calle Vista subdivision also falls within compatibility zones B1 and B2 and is located within the extended runway centerline zone. The ALUCP states that 30% of the land within the B1 compatibility zone, and 20% of the land within the B2 compatibility zone, should remain as open land. Approximately 240 acres of open undeveloped space is provided in the B1 compatibility zone north of the airport along runways 2-20 and 13-31. The project site has 35.82 acres within compatibility zone B1 that is proposed for development. Not counting the open space, parkland, and roads proposed for development within the subdivision, approximately 78% of the overall B1 zone would remain as undeveloped open space. Much of that land area is closest to the runways along SR 162.

Approximately 433 acres of land fall within the B2 compatibility zone north of the airport along runways 2-20 and 13-31. The project site has 9.15 acres within compatibility zone B2 that is proposed for development. Not counting open space, parkland, and roads proposed for development within the subdivision, approximately 70% of the overall B2 zone would remain as undeveloped open space.

Since the neighboring Calle Vista Estates subdivision was approved in 2005/2006, the ALUC adopted a new ALUCP in 2017 which significantly increased the footprint of the B1

and B2 compatibility zones to now include the Calle Vista Subdivision. However, no corresponding increases to airport operations have occurred and air traffic is still below projected figures.

Aircraft Operations¹⁰ at the Airport:

The City's Airport Master Plan prepared in 1990 showed about 55,000 annual aircraft operations in 1988 and projected a steady increase in operations from 61,050 in 1989 to 72,200 in 2010. Many of the historic aircraft operations were a result of the Louisiana Pacific Company Fleet, which is no longer operating in Oroville. As such, an increase in operations has not occurred as projected, and recent data in fact shows significantly fewer actual operations. In January 2016, the airport reported approximately 36,500 annual operations, a decrease from historic levels. According to AirNav, aircraft operations averaged 99/day for a 12-month period ending November 30, 2021. This is the same as reported in 2016¹¹.

Oroville Airport is fortunate to have very recent 2022 Annual flight data, collected by sensors/cameras at the airport. This information does not include all flights, only those who activate their transponders. However, a 2019 study estimated that 44 percent of pilots nationwide do not yet have the mandatory transponders installed in their planes¹².

¹⁰ An operation is either a takeoff or landing. For instance, if a pilot performs a "touch and go", that counts as two operations.

¹¹ AirNav uses data provided by airports, which in Oroville had not been updated since 2016. Since there is an expense involved in gathering actual flight data, it is common for small general aviation airports to have older data which tends to over-report actual operations.

¹² <https://generalaviationnews.com/2019/09/19/only-44-of-ga-aircraft-equipped-with-ads-b/>

OROVILLE AIRPORT OPERATIONS IN 2022					
Date range	1-1-22 thru 12-30/22				
Number of operations counted in	cy 2022	4,665	transponder flights		
Aircraft type	single prop	3,782	81.1%		
	multi prop	404	8.7%		
	jet	70	1.5%

	13 going north @ 3540'	918	19.7%	554	364
	31 going south @ 3540'	629	13.5%	385	244
	subtotal	3,041	65.2%		
	unspecified	1,624	34.8%		
		4,665	100%	49%	51%
	add 44% non-transponder flights	2,053	single engine, older planes, pioneers		
	Estimated Total operations per year	6,718	estimated annual operations at KOVE		
	Max annual flights northbound over Feather Ranch	614			
	Estimated flights straight out	307	50% or less		
	max flights per day over subdivisions	2	arrivals and departures		

Table 1

It should be noted that during emergency conditions, such as fires, evacuations, and other crises, airport operations increase significantly for selected periods of time. This was true during the fires in 2018 and after. The airport was actively used as a helicopter staging area for emergency operations.

Flight pattern on Runway 2-20: As the above data show, most flights to and from Runway 2-20 occur to the South, with only 7%, or no more than ~615 per year on Runway 2. Only some of these are straight out departures or straight in approaches over the proposed Feather Ranch Subdivision and the existing Calle Vista Subdivision. At a Cessna 172’s climb rate of 721 feet per minute, any departing small single engine plane under average temperature and wind conditions would be about 400 feet above ground by the time it reached the first house¹³. Furthermore, any pilot who encounters engine trouble or other adverse conditions should have ample time to veer leftward to avoid flying over either subdivision.

The Airport Master Plan also identified improvements – since completed -- to extend the south end of runway 2-20 to allow southerly departures to “be over City-owned property or the publicly owned Afterbay property, with aircraft approaching from the north higher

¹³ <https://aviation.stackexchange.com/questions/43394/is-it-possible-to-calculate-the-distance-to-climb-to-1000-ft-in-cessna-172s>

above private property north of State Route 162,” which will minimize constraints to development of the land to the north.

Prevailing winds are from the SSE, which is another reason most flights land and take off southward, into the wind.¹⁴

Aircraft Accident Occurrence:

The Caltrans Airport Land Use Planning Handbook, which was created by the State of California, Department of Transportation, Division of Aeronautics to serve as the primary tool for use by ALUC’s for airport and use planning indicates that accidents in which aircraft are under control are bunched relatively close to the runway ends—mostly within about 3,000 feet—both for arrivals and departures. Aircraft overflight of the site for both approaching or departing the airport will likely result from air traffic coming from Runway 2-20. The project site is located more than 4,000 feet from the nearest point of the airport runway. The areas within these 3,000 feet proximity to the north of the airport are largely undeveloped lands zoned ABP closest to SR162, and to the south of the airport is perpetual open space provided by the Thermalito Afterbay and Oroville Wildlife Refuge.

The RNAV¹⁵ for the airport lists a restriction not authorizing circling northeast of Runway 13-31¹⁶. In addition, takeoff minimums and departing procedures for the airport require air traffic to turn away from the more developed areas northeast of the airport with climbing left turns from Runways 2 and 31 and climbing right turns from Runways 13 and 20.

Aircraft Noise

While noise was not found to be inconsistent with the ALUCP, the city’s General Plan, zoning code, and the ALUCP establish regulations and criteria for noise within compatibility zones that is relevant to this project. As previously mentioned, within compatibility zone B1, the airport’s projected Community Noise Equivalent Level (CNEL) is 55 decibels (dBA). This CNEL system evaluates the degree to which lands around the airport are exposed to airport-related noise depicted by a set of contours. Generally, the maximum CNEL normally acceptable for residential uses in the vicinity of an airport is 60 dBA.

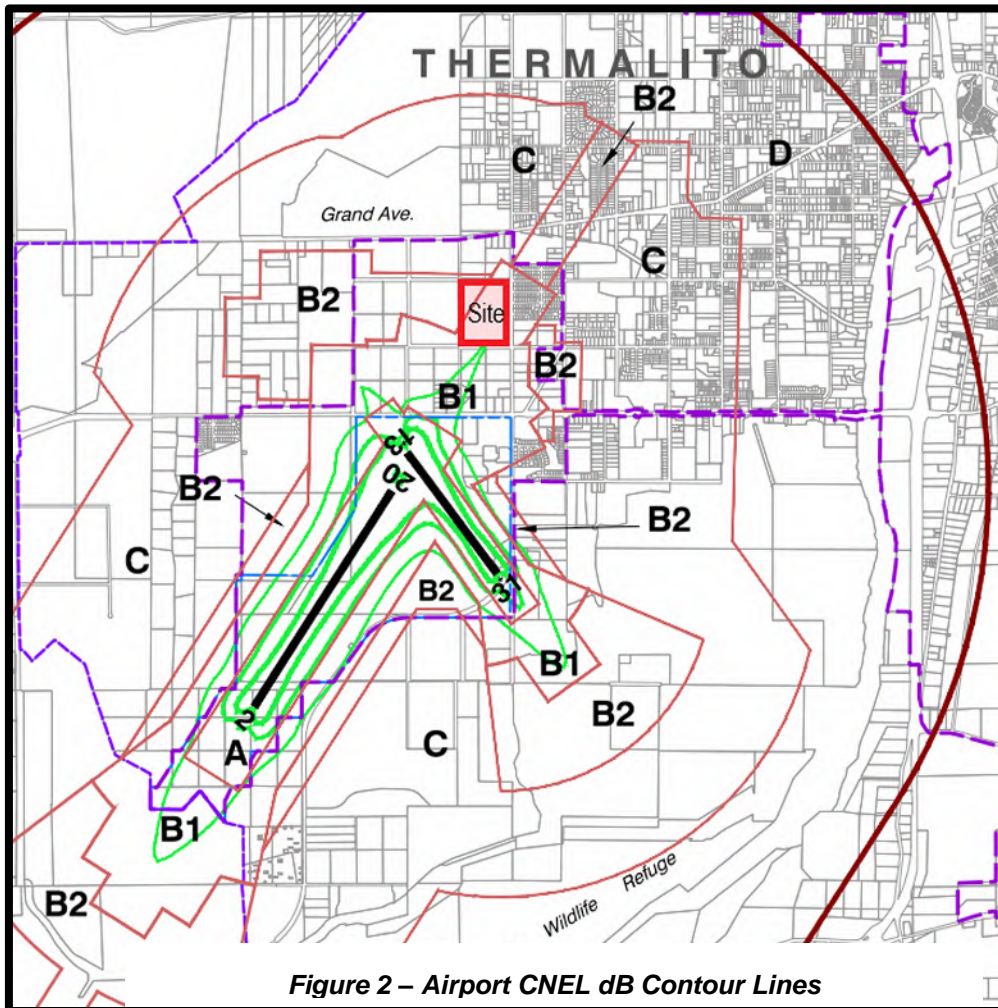

New structures located within compatibility zones B1 and B2 are required to incorporate sound attenuation design features sufficient to meet the interior noise level criteria of no greater than CNEL 45 dBA. As depicted in Figure 6-4 of the ALCUP, the subject property falls just outside of the 55 dBA CNEL contour based on 72,000 future annual aircraft operations. In addition, because the subject property falls within compatibility zones B1 and B2, all dwelling units constructed will be required to be designed to provide an interior ambient noise level that does not exceed 45 dBA. City Code Section 17.44.050 requires a minimum interior ambient noise level reduction of 20 dBA (*ex. 65 dB exterior – 20 dB sound attenuation = 45 dB interior ambient noise level*). Furthermore, OMC 17.44.050 requires a deed notice of airport proximity and the potential for aircraft overflights and

¹⁴ Oroville Airport Airport Layout Plan Sheet 3 of 9 dated April 16, 2013.

¹⁵ <http://www.airnav.com/airport/kove> and <https://aeronav.faa.gov/d-tpp/2305/SW2TO.PDF>

¹⁶ To turn right (northeast) from that runway is in direct conflict with the established traffic pattern.

noise for each property.

ALUC Override Conclusion

The project is consistent with the ALUCP for noise and for height restrictions, but not density. Because most aircraft accidents occur on landing and takeoff and relatively few during climbing or descent¹⁷, and because pilots are advised in Oroville’s AirNav posting to veer away from housing north of the airport, staff do not consider the risk of aircraft accidents over either the existing or proposed subdivisions to be considerable enough to warrant denial of the project. Additionally, noise attenuation for homes to an internal noise level of 45dBa will be a project condition.

Given the analysis above, the project does not appear to impair the orderly, planned expansion of the airport, adversely affect the utility or capacity of the airport (such as by

¹⁷ <https://www.cliffordlaw.com/aviation-accidents-and-incidents/>

reducing instrument approach procedure minimums), or expose the public to excessive noise and safety hazards based on the aforementioned information and the proposed conditions of approval on the project.

General Plan Consistency

As previously mentioned, the project is inconsistent with the following General Plan policy:

- Safety Element Policy 5.1, which requires consistency with the ALUCP. This exception will be addressed if the Council approves the proposed ALUCP Override, the proposed Statement of Overriding Considerations, and the Variance.

However, the project will further implement the following goals, policies, and actions of the General Plan:

From the Vision Statement:

- New residential growth, whatever the size or location, will be carefully regulated by the City and will be required to meet high standards for quality, appearance and integration with existing neighborhoods.

From the Guiding Principles:

- Ensure that future development enhances the existing character of our city as a whole, as well as its individual neighborhoods, and has a positive effect on our surroundings and quality of life.
- Enhance recreational opportunities and facilities in Oroville for local residents and visitors.

From the Community Design Element (Principles):

- **Block, Street, and Building.** At this scale, the details of the built environment—defined both by architectural and landscaping details—are proportioned to the scale of a pedestrian. Block dimensions and building designs place equal emphasis on pedestrian and vehicular uses. These more detailed design principles are addressed in Oroville’s Development Code and Design Guidelines.
- **High-Quality Development.** All types of development that follows smart growth principles can enhance the character of a neighborhood. In a smart growth neighborhood, retail buildings are located adjacent to sidewalks, framing the street’s public space and encouraging people to walk from shop to shop. They include architectural details that make the buildings more attractive and more compatible with the surrounding development. Single-family houses emphasize the front door frontage to the street rather than garages, and apartment buildings use varied building forms to give a sense of the individual dwelling units they contain. In addition, all types of development incorporate the

principles of Crime Prevention through Environmental Design (CPTED) by delineating private and public spaces, enhancing visibility, controlling property access, and ensuring adequate property maintenance.

From the Community Design Element (Goals, Policies, and Actions):

- Require compliance with the City of Oroville Design Guidelines as part of any project approval process.
- Encourage livable street design standards for new roadway development and for improvements or rehabilitation of existing roadways. Livable Street Design Standards for Arterials, Commercial Collectors, Residential Collectors and Local Streets are illustrated in Figure CD-2 and Figure CD-3.
- New residential development shall reflect the human scale and pedestrian-oriented character of existing neighborhoods in Oroville.

From the Circulation and Transportation Element (Goals, Policies, and Actions):

- New development shall ensure that safe and efficient emergency vehicle access is provided.
- Ensure the safe and convenient movement of pedestrians throughout the City and within neighborhoods.
- Design public and private facilities to aid and encourage pedestrian activity.
- Require installation of sidewalks and/or walking paths along all city streets in newly developing areas.
- New development in Oroville will encourage pedestrian accessibility and facilitate the use of non-automobile forms of transportation.
- New development shall meet the requirements of the Americans with Disabilities Act (ADA).
- Acquire and/or require dedication of an aviation easement within the Overflight and Extended Runway Centerline (ERC) zone, as a condition of subdivision approval.

From the Safety Element, Airport Operations (Goals, Policies, and Actions):

- Protect the Overflight Zone by limiting residential densities to a maximum of six units per gross acre, with proposals consisting of four units per gross acre or more subject to Airport Land Use Commission (ALUC) review. Schools and other uses resulting in “large concentrations” of people shall be prohibited.

From the Noise Element (Goals, Policies, and Actions):

- Include noise considerations in land use planning, transportation planning and project design decisions.
- When considering development proposals in the environs of the Oroville Municipal Airport, enforce the noise compatibility criteria and policies set forth in the adopted Butte County Airport Land Use Compatibility Plan. This includes restricting the development of residential or other noise sensitive receptor uses

within the 55 dB CNEL noise contour around the Oroville Municipal Airport.

From the Housing Element:

- Goal 1: Increase the availability of permanent housing for all community residents.
 - Policy 1.1: Encourage home ownership.
- Goal 3: Support and encourage the construction of new housing at a range of costs, types, and tenures and in quantities to meet the needs of all income groups, including the very low-, low and moderate-income groups.

Required Findings for TSM, Variance, and ALUCP Override

Required Findings for the Tentative Subdivision Map:

Pursuant to OMC Section 16.12.020(D), the City Engineer has reviewed TSM 22-01 and has deemed the map complete. The required Engineer's Report is attached.

Per OMC Section 16.12.020(F), the Planning Commission shall disapprove a tentative map if it determines that any of the following conditions apply:

1. The proposed subdivision is inconsistent with the general plan or applicable specific plans.

Assuming GPA 23-01 and ZC 23-01 are approved by the City Council, the subdivision will be consistent with the General Plan. There are no applicable specific plans encompassing this parcel.

2. The site is not physically suitable for the proposed density or type of development, or for the physical infrastructure required to support that development.

The site is immediately adjacent to single-family residential development. The current land use designation and zoning of ABP anticipates higher intensity and density for manufacturing, processing, office, or other industrial user. Infrastructure is available and adequately serving the similar residential development nearby and this project will be required to expand and/or improve the existing infrastructure to adequately serve the project.

3. The design of the land division or the proposed improvements are likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat.

Pursuant to CEQA, an EIR was prepared for the project. The EIR confirms that there are three significant and unavoidable effects, including inconsistency with the Butte County Airport Land Use Compatibility Plan, added traffic noise, and greenhouse gas effects from vehicle miles traveled. These impacts primarily relate to the human environment and not the natural environment. None of the project's other effects will cause environmental damage to fish or wildlife or their habitat, being either not significant or mitigated to insignificance.

4. The design of the subdivision or the type of improvement is likely to cause

serious public health problems.

The subdivision was designed in accordance with Oroville Municipal Code requirements and consultation of the Oroville Design Guidelines for site design to preserve view sheds and natural features, provide development with outdoor activity options, and connectivity to surrounding neighborhoods. The design of the subdivision is similar to neighboring development that has not been shown to cause public health problems. The three significant impacts in the EIR are likely to cause serious public health problems. The development in the Airport overflight zone is about 4,000 feet from Runway 2 and the development would be less dense than is allowed under the current zoning. The traffic noise impact is technically significant and still generally in the “quiet urban daytime” range below dBA. The State-mandated VMT impacts are not mitigatable in this rural environment, but denying the project on urban VMT greenhouse gas emissions thresholds is not reasonable. The project-generated emissions would not be concentrated enough to cause serious public health problems.

5. A preliminary soils report or geological hazard report indicates adverse soil or geological conditions, and the subdivider has failed to demonstrate to the satisfaction of the city engineer and planning commission that the conditions can be corrected.

The site has been shown to be safe to develop in the site’s soil types, and the City Engineer is satisfied with the findings of said report.

6. The design of the subdivision or the type of improvements will conflict with easements, acquired by the public at large, for access through or use of property within the proposed subdivision. However, the planning commission may approve an application if it finds that alternate easements for access or for use will be provided and that these will be substantially equivalent to ones previously acquired by the public. This subsection shall apply only to easements of record or to easements established by judgment of a court of competent jurisdiction.

There are no conflicting public easements. The subdivision will create new public and utility easements and improve to city standards three existing roadways (20th Street, Feather Ave and Biggs Ave) along the length of the project site.

7. The proposed subdivision violates the provisions of this Chapter and no exception has been granted.

The Engineer’s Report confirms that the proposed subdivision does not violate the provisions of this chapter and no exception has been granted.

8. The proposed subdivision violates any provision of the zoning code and no variance has been granted.

Should the City Council approve GPA 23-01 and ZC 23-01 and the proposed variance, the proposed subdivision will not violate any provisions of zoning code OMC 17.44.050 for density and open land requirements.

9. The proposed subdivision would violate any other city ordinance or any city code provision.

The proposed subdivision will not violate any other city ordinance or city code provision. Should the City Council adopt the override of the ALUCP determination and the variance, the proposed subdivision will comply with all applicable regulations and codes.

10. The discharge of waste from the proposed subdivision into a community sewer system would result in violation of existing requirements prescribed by a California Regional Water Quality Control Board pursuant to Division 7 (commencing with Section 13000 of the Water Code).

The Thermalito Sewer and Water (TWSD) Agency, which serves water and collects sewer discharges, is not operating under any corrective action or compliance orders.

Findings for the Variance:

As noted, the variance is a corresponding action by the City Council, which would be needed only if the Council approves the ALUC override. The planning commission shall grant a variance only upon finding all of the following, based on substantial evidence:

- a. The granting of the variance is not inconsistent with the general plan or any applicable specific plan.

As noted above, the granting of the variance is inconsistent with Safety Element Policy 5.1. However, if the City Council overrides the ALUC's determination of inconsistency with the ALUCP, that inconsistency will be moot.

- b. There are exceptional and extraordinary circumstances or conditions applying to the land, building or use referred to in the application that do not generally apply to other land, buildings or uses in the same district.

This subdivision project would be reviewed the same as other nearby uses with the exceptional circumstance of being in the B1 and B2 overflight zones, which other nearby properties were not at the time of approval. If the City Council overrides the ALUC's determination of inconsistency with the ALUCP, the Council should also grant the corresponding variance from OMC 17.44.050, whose text is identical to the ALUCP's with regard to allowable densities.

- c. The granting of the variance will not grant a special privilege to the property.

The granting of the variance will not grant a special privilege. If granted, all subsequent development will be reviewed and conditioned exactly as all other subdivisions throughout the city of Oroville.

d. The variance is necessary for the preservation and enjoyment of a substantial property right possessed by other property in the same vicinity and zoning district, and that would otherwise be denied to the property in question.

The variance would convey the same property rights – i.e. a subdivision entitlement -- as those previously enjoyed by adjacent and nearby properties including the Calle Vista and Ruddy Creek subdivisions, and including the proposed Grand Acres subdivision immediately to the north of this project. Without the variance, the project would not be viable, and would be denied similar property rights already enjoyed by the neighboring properties.

e. The granting of the variance will not be materially detrimental to the public welfare.

If the City Council grants the ALUC override, there are no detrimental safety or public welfare issues to consider.

f. The granting of the variance will not be injurious to, or incompatible with, any nearby property or improvements.

The project area is adjacent to and nearby several existing similar subdivisions, and would thus be compatible with many land uses in the surrounding area.

Findings for the ALUCP override

For an override of an inconsistency determination by the ALUC, specific findings supported by substantial evidence must be adopted finding that the proposed project will not:

- Impair the orderly, planned expansion of the airport,

The one-story homes and their distance at over 4,000 feet from the end of Runway 2 will not impair the orderly, planned expansion of the airport, all of which will occur on airport property and South of SR 162. The ABP zoning of the lands north of SR162 and closer to the airport than this subdivision are already anticipated for future industrial development in the General Plan, and are thus assumed to also not affect any future airport expansion plans.

- Adversely affect the utility or capacity of the airport (such as by reducing instrument approach procedure minimums) or affecting flight patterns.

Due to the distance from Runway 2, flight patterns, aircraft operational safety, or instrument approach procedures will not be affected. The subdivision is at the outer edge of the left traffic pattern for planes landing or taking off, so most of the estimated 780 flights per year will turn left before reaching any homes. Planes taking off to the north are advised to veer left away from existing development, which is not a difficult maneuver. Any plane flying straight north will likely be at

least 400 feet above ground level by the time it reaches either the existing Calle Vista or proposed Feather Ranch subdivisions.

- Expose the public to excessive noise and safety hazards.

Regarding exposing the public to excessive noise and safety hazards, because of the distance from Runway 2, the project is outside the airport's 55 decibel noise contour. All new residential structures will be conditioned to be constructed to limit interior noise levels to a maximum of 45 decibels. All new homeowners will be required to acknowledge they are buying property within 2 miles of an airport, and to sign an avigation easement or other appropriate instrument authorizing plane flights over their properties.

FISCAL IMPACT

None. The project is subject to all customary fees.

PUBLIC NOTICE

Several notices about this project were distributed:

- A Notice of Preparation for the DEIR was sent on November 1, 2022, to the State Clearinghouse, and to all agencies and tribes and nearby property owners that may have an interest in the project and its environmental effects. The posting included posting at City Hall and on the city's Web Site. Comments received are detailed in Table 1-3 on Page 1-5 of the DEIR.
- A public scoping meeting about the project and DEIR was conducted on November 17, 2022, in person and by Zoom.
- The DEIR was published for 45 days on April 15, 2023 with comment period ending May 30, 2023. The posting included the State Clearinghouse, to agencies who commented on the NOP, and to local property owners within 300 feet of the property. Comments received were detailed earlier in this staff report:
- A request for comments prior to the Planning Commission meeting was prepared and circulated to local and state agencies and surrounding property owners within 300 feet of the property. Additionally, the meeting date, time, and project description were published in the Oroville Mercury Register and posted at City Hall.

Attn: Wes Irvin

Subject: Feather Ranch Vesting Tentative Subdivision Map
(APN 030-230-098)

Dear Wes:

The following items are enclosed for use in determining the completeness of an application for The Feather Ranch Vesting Tentative Subdivision Map:

- Completed and signed Planning Division General Application
- Completed and signed Tentative Map Application
- Completed and signed Zone Change/General Plan Amendment
- Preliminary title report dated June 15, 2021
- Letter requesting waiver of preliminary soils investigation dated July 26, 2022
- Four (4) full-size copies and one (1) 11" by 17" copy of the Tentative Subdivision Map
- Check made out in the amount of \$16,212.37 for application fees.

Please review the attached information and return any comments to this office for processing. Thank you for your assistance.

Sincerely,

W. Gilbert Engineering

TENTATIVE MAP APPLICATION

(Please print clearly and fill in/provide all that apply)

REQUIRED FOR A COMPLETE APPLICATION		TYPE OF MAP - Please select all that apply:	
<input type="checkbox"/>	Completed and signed Application Forms	<input type="checkbox"/>	Tentative Parcel Map: \$3,500.34 (Deposit) + \$210.02 (6% Tech Fee) = \$3,710.36
<input type="checkbox"/>	Application Fee(s) Paid	<input checked="" type="checkbox"/>	Tentative Subdivision Map: \$4,041.06 (Deposit) + \$242.46 (6% Tech Fee) = \$4,283.52
*Additional fees from the Fire Department and Public Works Division may apply for their review.		<input type="checkbox"/>	Vesting Tentative Map: Same as Tentative Subdivision Map

MAP REQUIREMENTS

The tentative map shall be prepared in a manner acceptable to the city and shall be prepared by a registered civil engineer or licensed land surveyor. The tentative map shall be clearly and legibly drawn and shall contain not less than the following unless requested and specifically waived by the department director:

Four (4) 24" x 36' copies, folded to 8 1/2" x 11", and one (1) 8 1/2" x 11" copies of the tentative map and grading plan prepared by a Registered civil engineer, drawn to scale and containing the following:

- a. Name and address of property owner of record, subdivider and engineer.
- b. Project name, date prepared, north arrow, scale, and list of utility purveyors.
- c. Vicinity map.
- d. Existing zoning and land use.
- e. Existing topography, note contour interval of site to 100%, with 2 or 5 foot intervals for slopes greater than 10%.
- f. Type, location, and drip line of existing trees over 8 inches in diameter at breast height (DBH).
- g. Location of existing structures, including wells and septic system, with notation "to remain" or "to be abandoned / removed."
- h. Location, width, and direction of flow of each water course and any area subject to water inundation.
- i. Location, width and name of existing streets, right-of-way or pavement.
- j. Widths, location and identity of all existing and proposed easements.
- k. Proposed street location, grade, centerline and radius of curves, pavement, right-of-way width and street names. Show typical sections of all streets.
- l. Location and size of existing and proposed sanitary sewer mains, storm drains and fire hydrants.
- m. Lot layout and dimensions including parcel size.
- n. Proposed lot grading, building pad elevation, top and toe of cut and fill slopes, and approximate location of street grades. Include a separate grading plan for subdivisions.
- o. Proposed trails, parks, school sites, and common areas for public or private use.
- p. Phasing sequence, if any.
- q. The subdivider, or subdivider's designated agent, shall file a tentative parcel map application with the Zoning Administrator. The submitted material shall conform to the requirements of the Zoning Administrator as to form and content. Rules governing form and content shall conform to the requirements of Section 66445 of the Government Code and shall require enough information to ensure adequate consideration.
- r. The subdivider shall specify any deviation from city standards and the justification for such deviation.
- s. The name or names of any geologist or soils engineer whose services were required in the preparation of the design of the tentative map.

Upon the written request of the subdivider, the department may waive any of the above tentative map requirements if the department determines that the type of subdivision does not justify compliance with these requirements, or if the department determines that other circumstances justify a waiver. The department may require other drawings, data, or information as deemed necessary by the department to accomplish the purposes of the Subdivision Map Act.

Vesting Tentative Maps are processed in the same manner as regular tentative maps with the exception that all discretionary approvals required prior to issuance of the construction permits must be obtained prior to action of the tentative map. Vesting maps must comply with City requirements and Subdivision Map Act requirements. A Vesting Map protects the right to develop and obtain building permit(s) even if land use regulations change between the time when approvals are obtained and building permit(s) are issued.

REQUIRED DATA / REPORTS

The tentative map shall be accompanied by the following data and reports:

- 1. **Street Names.** A list of proposed street names for any unnamed street or alley for review by the city engineer.
- 2. **Soils Report.** A preliminary soils report prepared in accordance with the provisions of chapter 70 (Excavation and Grading) of the Uniform Building Code shall be submitted. If the preliminary soils report indicates the presence of critically expansive soils or other soil problems which, if not corrected, would lead to structural defects, the soils report accompanying the final map shall contain an investigation of each lot within the subdivision. *Waiver of Preliminary Soils report*
- 3. **Title Report.** Current Title Report, less than 6 months old.
- 4. **Environmental Review.** Information shall be submitted as required by the department to allow a determination on environmental review to be made in accordance with CEQA. The subdivider shall deposit and pay all fees as may be required for the preparation and processing of environmental review documents. *EIR to be Prepared*
- 5. **Preliminary Engineering Calculations.** Information shall be submitted as required by the standard engineering specifications to demonstrate the adequacy of the design of the proposed improvements. Such information shall include design parameters and engineering calculations.
- 6. **Phasing.** If the subdivider plans to file multiple final maps on the tentative map, he shall submit a written notice to this effect to the community development director.
- 7. **Arborist Report.** If oak trees exist on the property, 3 copies of an Arborist Report. *N/A No on-site trees*
- 8. **Other Reports.** Any other data or reports deemed necessary by the department.

An application will not be considered as complete until all of the information has been submitted to the Planning Department. Information required will vary by type of map (parcel / subdivision). Incomplete applications will not be processed.

REQUIRED DATA / REPORTS

By initialing below, I acknowledge and agree to the following:

- 1. The applicant shall defend, indemnify, and hold harmless the City, and each of its officers, employees and agents, from and against any and all claims, actions and proceedings, within the time period set forth in Government Code section 66499.37, to attack, set aside, void or annul any of the decisions or determinations which the City makes in connection with the approval of the tentative parcel map or with the adoption of any environmental document relating thereto under the California Environmental Quality Act (CEQA). The applicant shall reimburse the City and each of its officers, employees and agents for any costs, including but not limited to court costs, awards to plaintiff/ petitioner for costs and attorneys' fees and any other litigation expenses that the City may be required to pay to plaintiff/petitioner because of such approval or adoption. The City shall reasonably cooperate in the defense of any such litigation, which duty to cooperate shall include the following
 - a. The City shall notify the applicant promptly of any claim, action or proceeding of which it becomes aware.
 - b. The City shall have the right to retain legal counsel of its choice, at the sole cost and expense of the City, to defend the City in litigation, but such defense shall not relieve the applicant of any obligation imposed by this indemnity.
 - c. The applicant shall have the right to approve any settlement.

REASONS FOR PROPOSED CHANGE

To develop a 172 lot single-family residential subdivision and neighborhood park. The average lot size is 7,450 square feet. The subdivision improvements and amenities include streets improved with curb, gutter and sidewalk, a pedestrian/bike path along the major north-south street and a neighborhood park containing walking paths and storm water detention basin.

Subject: Feather Ranch Vesting Tentative Subdivision Map
(APN 030-230-098)

Dear Matt:

The purpose of this letter is to request a waiver of the preliminary soils report and geologic reconnaissance report for the Feather Ranch Vesting Tentative Subdivision Map. A soils report and geologic reconnaissance will be prepared for the subdivision map before starting the subdivision improvement plans.

Thank you for your consideration. Please call this office if you have any questions or need additional information.

Sincerely,

RESOLUTION NO. P2023-14

A RESOLUTION OF THE OROVILLE PLANNING COMMISSION RECOMMENDING THAT THE CITY COUNCIL CERTIFY THE FINAL ENVIRONMENTAL IMPACT REPORT FOR TENTATIVE SUBDIVISION MAP TSM 22-01 – THE PROPOSED FEATHER RANCH SUBDIVISION -- AND MAKE CERTAIN FINDINGS, REQUIRE CERTAIN MITIGATION MEASURES, AND ADOPT OF STATEMENT OF OVERRIDING CONSIDERATIONS FOR THOSE SIGNIFICANT AN UNAVOIDABLE IMPACTS IDENTIFIED IN THE EIR

WHEREAS, the application was filed by MD3 Investments for Tentative Subdivision Map TSM 22-01 to convert 45-acre APN 030-230-098 now zoned Airport Business Park (ABP) into 172 single family housing lots zoned Single Family Residential (R1); and

WHEREAS, the property is designated APB- AIO (Airport Influence Overlay) by the Oroville General Plan and Zoning Code, which limits development to a maximum density of 0.1 and 0.2 dwelling units per acre; and

WHEREAS, the proposed project has a density of 3.8 dwelling units per acre, which exceeds the limits in the Butte County Airport Land Use Plan (ALUCP); and

WHEREAS, an initial study was prepared, which identified several potentially significant effects, which triggered an Environmental Impact Report (EIR); and

WHEREAS, while the Environmental Impact Report concluded that most effects were less than significant or less than significant with mitigation, the document nevertheless identified three significant and unavoidable effects; and

WHEREAS, the EIR was circulated for the requisite 45-day comment period, three comments were received, and a Final Environmental Impact Report (FEIR) was duly prepared; and

WHEREAS, approval of the Tentative Subdivision Map first requires certification of a Final Environmental Impact Report for the project with Findings and a Statement of Overriding Considerations, General Plan Amendment GPA 23-01, Zoning Change ZC 23-01, Zoning Variance VAR 23-01, and an override by the Oroville City Council of the ALUC's inconsistency determination; and

WHEREAS, at a duly noticed public hearing, the Planning Commission considered the comments and concerns of public agencies, property owners, and members of the public who are potentially affected by the approval of Tentative Subdivision Map TSM 22-01 described herein, and also considered the City's staff report regarding the change.

NOW, THEREFORE, BE IT RESOLVED BY THE PLANNING COMMISSION as follows:

1. The Planning Commission recommends that the City Council:
 - a. Certify the Final Environmental Impact Report.
 - b. Adopt the attached Environmental findings, mitigation measures, and Statement of Overriding Considerations.
 - c. Approve General Plan Amendment GPA 23-01.
 - d. Approve Zoning Change ZC 23-01 with certain required findings.
 - e. Conduct a two-thirds vote to Intend to Override the ALUC's inconsistency determination.
 - f. Notify the Butte County ALUC and California Division of Aeronautics of the Council's intent to override the ALUC's inconsistency determination.
 - g. After the required 45-day waiting period for comments from the ALUC and Division of Aeronautics, Override the ALUC's inconsistency determination.
 - h. Approve Tentative Parcel Map TSM 22-01

2. Subject to approval of TSM 22-01 by the City Council, the Planning Commission approves Variance VAR 23-01 with the findings required by Section 17.44.050 of the Oroville City Code, as those findings are described in this Resolution.

I HEREBY CERTIFY that the foregoing resolution was duly introduced and passed at a special meeting of the Planning Commission of the City of Oroville held on the 22nd of June, 2023, by the following vote:

AYES:

NOES:

ABSTAIN:

ABSENT:

ATTEST:

APPROVE:

JACKIE GLOVER, ASSISTANT CITY CLERK

CARL DURLING, CHAIRPERSON

**CEQA FINDINGS
PROPOSED PROJECT
FEATHER RANCE SUBDIVISION, INCLUDING GENERAL PLAN AMENDMENT GPA
23-01, ZONE CHANGE ZC23-01, TENTATIVE SUBDIVISION MAP TSM 22-01,
VARIANCE VAR 23-01, AND AN OVERRIDE OF AN INCONSISTENCY
DETERMINATION OF THE BUTTE COUNTY AIRPORT LAND USE COMMISSION**

The City of Oroville (City), serving as the lead agency under the California Environmental Quality Act (CEQA), has prepared a project EIR (EIR) for the proposed Feather Ranch Subdivision, which is provided as part of the project documentation. The Tentative Subdivision Map would create 172 new market-rate housing units. MD3 Investments has applied to convert 45 acres currently zoned Airport Business Park (ABP) into 172 single family lots Zoned Single-family residential (R-1) and averaging 7,450 square feet in size.

Approval requires a General Plan Amendment, a Zoning Change, and a Zoning Code Variance. Due to the significant and unavoidable environmental effects identified in the Project EIR, CEQA requires the City Council to approve a Statement of Overriding Considerations if it ultimately approves the project.

1. **Findings with regard to effects not found to be significant.** The EIR discussed several environmental effects that were determined to result in less than significant impacts, and certain other effects that result in less than significant effects after implementation of mitigation measures. Those specific effects are described in Section ES.4 of the FEIR, with the final Summary of Impacts and Mitigation Measures located in the FEIR as Table ES-1.

2. **Findings with regard to effects found to be significant and unavoidable.**

Section 15126.2(c) of the State CEQA Guidelines require that an EIR describe any significant impacts, including those that can be mitigated but not reduced to a less than significant level. Where there are impacts that cannot be alleviated without imposing an alternative design, their implications, and the reasons why the project is being proposed, notwithstanding their effect, should also be described.

A significant and unavoidable impact is one that would cause a substantial adverse effect on the environment and for which no mitigation is available to reduce the impact to a less than significant level. Most of the impacts of the Proposed Project would be less than significant or would be mitigated to a less than significant level. The impacts summarized below are those that would remain significant and unavoidable after mitigation.

a. **Impacts HAZ-1 and HAZ-2:** The Project would result in a significant and unavoidable safety hazard impact and a cumulatively considerable and significant and unavoidable safety hazard impact for people residing or working in the Project Area because the Project is located within the OMA B1 and B2 Compatibility

Zones. The only mitigation possible would be to either eliminate the use of the airport or move the Project to a location outside of the B1 and B2 Compatibility Zones. Neither of these mitigations are feasible. As such, there is no feasible mitigation possible to mitigate the potential airport safety impacts.

Finding. The City finds that there are no feasible mitigation measures that the City could adopt at this time that would reduce the impacts to less than significant. To the extent that this adverse impact will not be substantially lessened or eliminated, the City finds that specific economic, social, and other benefits identified in the Statement of Overriding Considerations support the approval of the proposed project.

Facts and Reasoning that support the finding:

The property falls within the Airport Land Use Compatibility Plan (ALUCP) compatibility zone B1 and B2, adopted by the ALUC on November 15, 2017. The purpose of this plan is to promote compatibility with the airport and surrounding land uses. Compatibility zone B1 is generally set to encompass the airport's projected 55 decibel (dB) Community Noise Equivalent Level (CNEL). Compatibility zone B2 encompasses the close-in, low altitude portions of traffic patterns. Much of the neighboring Calle Vista Estates subdivision also falls within these same compatibility zone classifications.

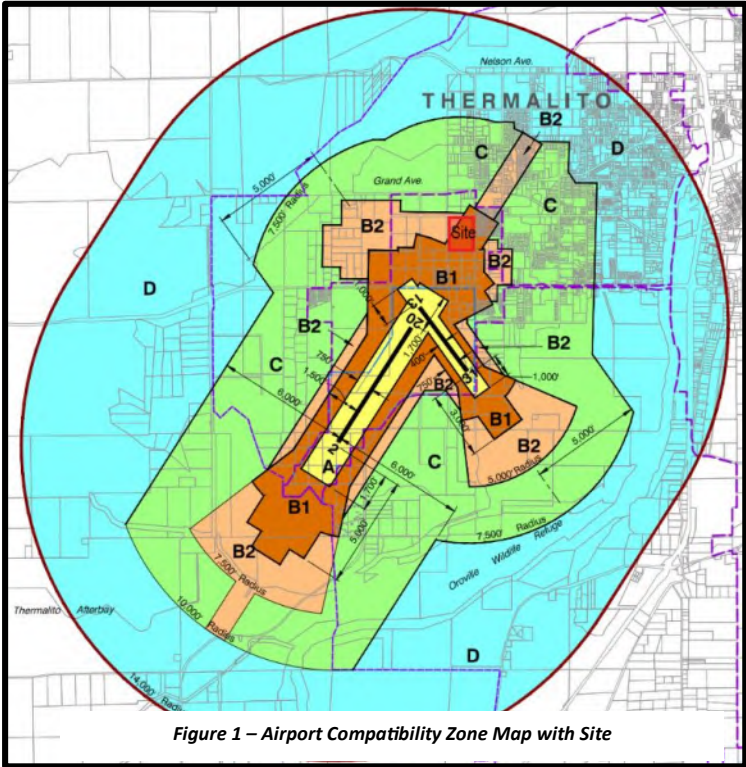

Figure 1 – Airport Compatibility Zone Map with Site

As required by the ALUCP and Section 21676(b) of the Public Utilities Code the project applicant submitted the project to the ALUC for a consistency determination with the ALUCP. The ALUC conducted a hearing on the matter on September 21, 2022, and voted 7-0 -1¹ to find the project inconsistent with the ALUCP based on the project density.

Pursuant to Public Utilities Code Section 21676, the City Council may choose to override the ALUC’s determination of inconsistency by following a two-step process. The first step is to conduct a public hearing to adopt a resolution of intent to override, a copy of which would be sent to the ALUC and State Division of Aeronautics to provide formal notification of the City’s intent.

The second step in the process is that at least 45-days after notification has been sent

¹ The vote was unanimous with one Commissioner recused himself since he lives very near the project area.

to the ALUC and State Division of Aeronautics, the City Council may conduct a second public hearing to consider adopting a resolution to override the ALUC. At this second public hearing the City Council may also consider the project entitlement and take final action on the application.

The following points are important to consider:

- The override must be adopted by two-thirds (2/3) of the City Council.
- Specific findings supported by substantial evidence must be adopted finding that the proposed project will not:
 - Impair the orderly, planned expansion of the airport.
 - Adversely affect the utility or capacity of the airport (such as by reducing instrument approach procedure minimums); or
 - Expose the public to excessive noise and safety hazards.

Public Utilities Code Section 21678 and the ALUCP statutes states that if the city overrules the ALUC, the operator of the airport shall be immune from liability for damages to property or personal injury caused by or resulting directly or indirectly from the City's decision to overrule the ALUC's compatibility determination or recommendation.

Airport Land use Compatibility Plan Density

Compatibility zone B1 has a maximum density of 0.1 dwelling units per acre and compatibility zone B2 has maximum density of 0.2 dwelling units per acre. The General Plan Amendment to MLDR has an allowable density range of 3 to 6 units per acre and the project is proposing 172 parcels on approximately 45 acres for a project density of 3.82 units per acre. The ALUCP Section 3.4.5 establishes criteria for determining the density of sites split by two or more compatibility zones. The portions of the property that fall within compatibility zone B1 are considered to be a separate site from the portions of the property that fall within compatibility zone B2.

According to the ALUC staff report, approximately 35.82 acres and a proposed 134 dwelling units fall within compatibility zone B1, for a density of 3.74 units per acre. Approximately 9.15 acres and a proposed 38 dwelling units fall within compatibility zone B2, for a density of 4.15 units per acre. The ALUC consistency review listed five inconsistency findings for the project:

1. The MLDR General Plan Land Use Designation of up to 6 dwelling units (lots) per acre is inconsistent with the B1 maximum density of 0.1 dwelling units per acre and B2 maximum density of 0.2 dwelling units per acre.
2. The R-1 zoning allows up 6 dwelling units (lots) per acre is inconsistent with the B1 maximum density of 0.1 dwelling units per acre and B2 maximum density of 0.2 dwelling units per acre.
3. The project's proposed density of 3.74 dwelling units per acre is inconsistent with the B1 Compatibility Zone density (0.1 or more dwelling units per acre).
4. The project's proposed density of 4.15 dwelling units per acre is inconsistent with

the B2 Compatibility Zone density (0.2 dwelling units per acre).

5. Most of the parcel (approximately 80%) is in the B1 Compatibility Zone. The B2 Compatibility Zone portion does not have 65% of the project site within B2 Compatibility Zone with equal to, or greater than, the proposed project. The project does not meet the criteria for infill.

The City's 2030 General Plan Safety Element Goal SAF-5, Policy P5.2 states "*Protect the Overflight Zone by limiting residential densities to a maximum of six units per gross acre, with proposals consisting of four units per gross acre or more subject to Airport Land Use Commission (ALUC) review. Schools and other uses resulting in "large concentrations" of people shall be prohibited.*" The development proposal complies with the goals and policies of the General Plan for residential densities.

The project site is adjacent to an existing residential development to the east (Calle Vista Estates), which has a General Plan Land Use Designation of MLDR and zoning designation of R-1, identical to what is being proposed for this subdivision. In addition, the Calle Vista subdivision also falls within compatibility zones B1 and B2 and is located within the extended runway centerline zone. The ALUCP states that 30% of the land within the B1 compatibility zone, and 20% of the land within the B2 compatibility zone, should remain as open land. Approximately 240 acres of open undeveloped space is provided in the B1 compatibility zone north of the airport along runways 2-20 and 13-31. The project site has 35.82 acres within compatibility zone B1 that is proposed for development. Not counting the open space, parkland, and roads proposed for development within the subdivision, approximately 78% of the overall B1 zone would remain as undeveloped open space. Much of that land area is closest to the runways along SR 162.

Approximately 433 acres of land fall within the B2 compatibility zone north of the airport along runways 2-20 and 13-31. The project site has 9.15 acres within compatibility zone B2 that is proposed for development. Not counting open space, parkland, and roads proposed for development within the subdivision, approximately 70% of the overall B2 zone would remain as undeveloped open space.

Since the neighboring Calle Vista Estates subdivision was approved in 2005/2006, the ALUC adopted a new ALUCP in 2017 which significantly increased the footprint of the B1 and B2 compatibility zones to now include the Calle Vista Subdivision. However, no corresponding increases to airport operations have occurred and air traffic is still below projected figures.

Aircraft Operations² at the Airport:

The City's Airport Master Plan prepared in 1990 showed about 55,000 annual aircraft operations in 1988 and projected a steady increase in operations from 61,050 in 1989 to 72,200 in 2010. Many of the historic aircraft operations were a result of the Louisiana Pacific Company Fleet, which is no longer operating in Oroville. As such, an increase in operations has not occurred as projected, and recent data in fact shows significantly fewer

² An operation is either a takeoff or landing. For instance, if a pilot performs a "touch and go", that counts as two operations.

actual operations. In January 2016, the airport reported approximately 36,500 annual operations, a decrease from historic levels. According to AirNav, aircraft operations averaged 99/day for a 12-month period ending November 30, 2021. This is the same as reported in 2016³.

Oroville Airport is fortunate to have very recent 2022 Annual flight data, collected by sensors/cameras at the airport. This information does not include all flights, only those who activate their transponders. However, a 2019 study estimated that 44 percent of pilots nationwide do not yet have the mandatory transponders installed in their planes⁴.

OROVILLE AIRPORT OPERATIONS IN 2022					
Date range	1-1-22 thru 12-30/22				
Number of operations counted in	cy 2022	4,665	transponder flights		
Aircraft type	single prop	3,782	81.1%		
	multi prop	404	8.7%		
	jet	70	1.5%		
	helicopter	386	8.3%

Table 1

It should be noted that during emergency conditions, such as fires, evacuations, and other crises, airport operations increase significantly for selected periods of time. This was true during the fires in 2018 and after. The airport was actively used as a helicopter staging area for emergency operations.

³ AirNav uses data provided by airports, which in Oroville had not been updated since 2016. Since there is an expense involved in gathering actual flight data, it is common for small general aviation airports to have older data which tends to over-report actual operations.

⁴ <https://generalaviationnews.com/2019/09/19/only-44-of-ga-aircraft-equipped-with-ads-b/>

Flight pattern on Runway 2-20: As the above data show, most flights to and from Runway 2-20 occur to the South, with only 7%, or no more than ~615 per year on Runway 2. Only some of these are straight out departures or straight in approaches over the proposed Feather Ranch Subdivision and the existing Calle Vista Subdivision. At a Cessna 172's climb rate of 721 feet per minute, any departing small single engine plane under average temperature and wind conditions would be about 400 feet above ground by the time it reached the first house⁵. Furthermore, any pilot who encounters engine trouble or other adverse conditions should have ample time to veer leftward to avoid flying over either subdivision.

The Airport Master Plan also identified improvements – since completed -- to extend the south end of runway 2-20 to allow southerly departures to “be over City-owned property or the publicly owned Afterbay property, with aircraft approaching from the north higher above private property north of State Route 162,” which will minimize constraints to development of the land to the north.

Prevailing winds are from the SSE, which is another reason most flights land and take off southward, into the wind.⁶

Aircraft Accident Occurrence:

The Caltrans Airport Land Use Planning Handbook, which was created by the State of California, Department of Transportation, Division of Aeronautics to serve as the primary tool for use by ALUC's for airport and use planning indicates that accidents in which aircraft are under control are bunched relatively close to the runway ends—mostly within about 3,000 feet—both for arrivals and departures. Aircraft overflight of the site for both approaching or departing the airport will likely result from air traffic coming from Runway 2-20. The project site is located more than 4,000 feet from the nearest point of the airport runway. The areas within these 3,000 feet proximity to the north of the airport are largely undeveloped lands zoned ABP closest to SR162, and to the south of the airport is perpetual open space provided by the Thermalito Afterbay and Oroville Wildlife Refuge.

The RNAV⁷ for the airport lists a restriction not authorizing circling northeast of Runway 13-31⁸. In addition, takeoff minimums and departing procedures for the airport require air traffic to turn away from the more developed areas northeast of the airport with climbing left turns from Runways 2 and 31 and climbing right turns from Runways 13 and 20.

Aircraft Noise

While noise was not found to be inconsistent with the ALUCP, the city's General Plan, zoning code, and the ALUCP establish regulations and criteria for noise within compatibility zones that is relevant to this project. As previously mentioned, within compatibility zone B1, the airport's projected Community Noise Equivalent Level (CNEL) is 55 decibels (dBA). This CNEL system evaluates the degree to which lands around the

Commented [CM1]: These improvements have already been completed and should be noted in the staff report as having been done

Commented [CM2]: Double check this with someone who knows airports and planes. Just took it from the AirNav site

⁶ Oroville Airport Airport Layout Plan Sheet 3 of 9 dated April 16, 2013.

⁷ <http://www.airnav.com/airport/kove> and <https://aeronav.faa.gov/d-tp/2305/SW2TO.PDF>

⁸ To turn right (northeast) from that runway is in direct conflict with the established traffic pattern.

airport are exposed to airport-related noise depicted by a set of contours. Generally, the maximum CNEL normally acceptable for residential uses in the vicinity of an airport is 60 dBA.

New structures located within compatibility zones B1 and B2 are required to incorporate sound attenuation design features sufficient to meet the interior noise level criteria of no greater than CNEL 45 dBA. As depicted in Figure 6-4 of the ALCUP, the subject property falls just outside of the 55 dBA CNEL contour based on 72,000 future annual aircraft operations. In addition, because the subject property falls within compatibility zones B1 and B2, all dwelling units constructed will be required to be designed to provide an interior ambient noise level that does not exceed 45 dBA. City Code Section 17.44.050 requires a minimum interior ambient noise level reduction of 20 dBA (ex. 65 dB exterior – 20 dB sound attenuation = 45 dB interior ambient noise level). Furthermore, OMC 17.44.050 requires a deed notice of airport proximity and the potential for aircraft overflights and noise for each property.

ALUC Override Conclusion

The project is consistent with the ALUCP for noise and for height restrictions, but not density. Because most aircraft accidents occur on landing and takeoff and relatively few during climbing or descent⁹, and because pilots are advised in Oroville's AirNav posting to veer away from housing north of the airport, staff do not consider the risk of aircraft accidents over either the existing or proposed subdivisions to be considerable enough to warrant denial of the project. Additionally, noise attenuation for homes to an internal noise level of 45dBA will be a project condition.

Given the analysis above, the project does not appear to impair the orderly, planned expansion of the airport, adversely affect the utility or capacity of the airport (such as by reducing instrument approach procedure minimums), or expose the public to excessive noise and safety hazards based on the aforementioned information and the proposed conditions of approval on the project.

- b. **Impacts NOI-1 and NOI-4:** The Project would result in a significant and unavoidable safety hazard impact and a cumulatively considerable and significant and unavoidable traffic noise impact. The roadway segment of 20th Street between Biggs Avenue and Feather Avenue would experience an increase of more than 5.0 dBA CNEL over existing conditions, which is beyond the City of Oroville noise standard. Similarly, the segment of Feather Avenue east of 20th Street would also experience an increase of more than 5.0dBA CNEL over existing conditions. There is no feasible mitigation available to reduce these impacts to less than significant. Lead agencies have limited remedies at their disposal to effectively reduce traffic related noise. Addressing traffic noise at the receiver rather than the source usually takes the form of noise barriers (i.e., sound walls). While constructing noise barriers along streets would reduce noise, the placement of sound walls between existing residences/businesses and local roadways would not be desirable as it would conflict with the community's aesthetic, design and character and is therefore deemed infeasible. Furthermore, such barriers would likely require property owner approval, which cannot be ensured. While measures such as encouraging ridesharing, carpooling, and alternative modes of transportation could reduce vehicle volumes, such measures can neither be mandated of residents nor have been shown to reduce vehicle trips to the extent needed to reduce vehicle noise levels below established thresholds. Therefore, no feasible mitigation measures exist to reduce the identified significant impact.

Finding. The City finds that there are no feasible mitigation measures that the City could adopt at this time that would reduce the impacts to less than significant. To the extent that this adverse impact will not be substantially lessened or eliminated, the City finds that specific economic, social, and other benefits identified in the Statement of Overriding Considerations support the approval of the proposed project.

⁹ <https://www.cliffordlaw.com/aviation-accidents-and-incidents/>

Facts and Reasoning that support the finding: The noise generated by traffic from the project's operations will increase ambient noise levels by more than 5 decibels in two segments of 20th Street and one of Feather Avenue¹⁰. This is a technical violation of Oroville's CEQA significance threshold. The ambient decibel level in these locations after the project is built will remain at or below 48 decibels. In spite of the technical threshold exceedance, these locations will continue as they are, an area of "Quiet Urban Daytime"¹¹.

- c. **Impacts TR-2 and TR-3:** The Project would also result in a significant and unavoidable impact related to VMT. Project would be expected to generate VMT at 140 to 145 percent of the baseline City of Oroville average. Mitigating VMT to a level which would be less than 85 percent of the baseline level would require a reduction of approximately 40 percent from pre-mitigation levels ($1 - [0.85 \div 1.45] = 0.414$). While the mitigation measures available to Oroville would reduce the impact of the Project on VMT, implementation of measures needed to achieve a 40 percent reduction is not considered feasible. As a result, even with implementation of mitigation measures TR-1 through TR-4, the impact of the Feather Ranch Project on VMT is considered to be significant and unavoidable.

Finding. The City finds that there are no feasible mitigation measures that the City could adopt at this time that would reduce the impacts to less than significant. To the extent that this adverse impact will not be substantially lessened or eliminated, the City finds that specific economic, social, and other benefits identified in the Statement of Overriding Considerations support the approval of the proposed project.

Facts and Reasoning that support the finding: The project would generate 120 trips distributed among 20th, 18th, Feather, and Biggs during the A.M. peak hour, and 162 trips during the P.M. peak hour. This equates 26.7 home-based trips per resident, or 140 percent of the current Oroville baseline average of 19.1 trips per resident. Since this trip generation exceeds the state mandated CEQA significance threshold of 85% of baseline (or 16.2 trips per resident), the impact is significant by definition.

The CEQA threshold is potentially possible in an urban setting with plenty of transit, bicycle, and walking options available as project mitigation. However, Oroville is in a rural setting. Neither the Project proponent nor the City can mitigate this impact with enough transit, bike, and walking paths in this rural location. This is confirmed by the Butte County Association of Governments' April 2021 study entitled "BCAG SB 743 Implementation—Mitigation Strategies—Assessing Feasibility".

¹⁰ Page 3.9-21 of the DEIR

¹¹ Page 3.9-2 of the DEIR.

OVERRIDING CONSIDERATIONS

Pursuant to Section 21081 of the California Public Resources Code and Section 15093 of the CEQA Guidelines, the City of Oroville adopts and makes the following statement of overriding considerations regarding the remaining significant unavoidable impacts of the project, as discussed above, and the anticipated economic, social, and other benefits of the project.

The City of Ceres finds and determines that (1) the majority of the significant impacts of the project will be reduced to acceptable levels by implementation of the mitigation measures recommended in these findings; (2) The City of Ceres's approval of the project as proposed will result in certain significant adverse environmental effects that cannot be avoided or reduced to a less-than-significant level even with the incorporation of all feasible mitigation measures into the project; and (3) there are no other feasible mitigation measures or feasible project alternatives that will further mitigate, avoid, or reduce to a less-than-significant level the remaining significant environmental effects.

In light of the environmental, social, economic, and other considerations identified in the findings for the project, and the considerations set forth below related to this project, City of Oroville chooses to approve the project because, in its view, the economic, social, technological, and other benefits resulting from the project substantially outweigh the project's significant and unavoidable adverse environmental effects.

The following statements identify the reasons why, in City of Oroville's judgment, the benefits of the project outweigh the significant and unavoidable effects. The substantial evidence supporting the enumerated benefits of the project can be found in the preceding findings, which are herein incorporated by reference; in the project itself; and in the record of proceedings as defined above. Each of the overriding considerations set forth below constitutes a separate and independent ground for finding that the benefits of the project outweigh its significant adverse environmental effects and is an overriding consideration warranting approval.

The City of Oroville finds that the project, as conditionally approved, will have the following economic, social, technological, and environmental benefits:

- The project would provide 172 market-rate housing units to serve the needs of households seeking housing that is of significantly limited availability in this medium low density housing category. The Oroville Housing Element, certified in April 2023, indicates the need for 450 housing units to serve moderate and above-moderate income levels. This project will provide a significant portion of that need.
- The Project will create short-term construction jobs that would provide income to local residents. The additional 400 permanent residents generated by the project will

spur an increase in demand for goods and services in the surrounding area, thereby expanding the local revenue base, and expanding the local labor force.

- The Project will result in additional paving of a number of designated city streets in the vicinity, including 20th, Biggs, and Feather Avenue. In addition, 20th street at SR 162 will be improved with a right turn lane, improving traffic circulation in the area.
- The Project would adopt energy conservation strategies in new development that would result in new development being more efficient than existing buildings in the region.

RESOLUTION NO. P2023-15

A RESOLUTION OF THE OROVILLE PLANNING COMMISSION RECOMMENDING THAT THE CITY COUNCIL APPROVE GENERAL PLAN AMENDMENT GPA 23-01, ZONING CHANGE ZC 23-01, AND TENTATIVE SUBDIVISION MAP TSM 22-01 FOR THE PROPOSED FEATHER RANCH SUBDIVISION.

WHEREAS, the City has received an application from MD3 Investments (Subdivider) to subdivide portions of a +-45-acre parcel identified as APN 030-230-098 (Property) into 172 lots for single-family homes; and

WHEREAS, the proposed map will also create a 0.95-acre Lot A for purposes of passive recreation with pedestrian pathways and wetland feature conservation and a meandering bicycle/pedestrian pathway along Gentle Rain Lane; and

WHEREAS, the design of the proposed subdivision is illustrated on the tentative subdivision map received by the City on August 8, 2022, which map has been assigned the file number TSM 22-01, and a copy of which is attached to this resolution as Exhibit "A"; and

WHEREAS, the Property is designated by Oroville's General Plan Diagram as *Airport Business Park* and the Zoning Map designation of this area is similarly *Airport Business Park*; and

WHEREAS, the Subdivider has also applied for a General Plan Amendment to amend the General Plan Land Use Designation from *Airport Business Park* to *Medium Low Density Residential (MLDR)* and a Zoning Change to change the zoning designation from *Airport Business Park* to *Single-Family Residential (R-1)* to allow residential development at a density not less than four and not more than six homes per acre; and

WHEREAS, the Subdivider is proposing 172 lots on 45 acres for a resulting density of 3.8 units per acre and an average lot size of 7,400 square feet; and

WHEREAS, Tentative Subdivision Map TSM 22-01 has been reviewed by the City Engineer, who has provided a set of conditions to meet prior to final map approval ; and

WHEREAS, the City Council may, after a public hearing, proposed to override the ALUC's determination by a two-thirds vote of the City Council if it makes specific findings that the project is consistent with California Public Utilities Code Section 20167 for the purpose of protecting public health, safety, and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards within areas around public airports to the extent that these areas are not already devoted to incompatible uses; and

WHEREAS, approval of the Tentative Subdivision Map first requires certification of a Final Environmental Impact Report for the project with Findings and a Statement of Overriding Considerations, General Plan Amendment GPA 23-01, Zoning Change ZC 23-01, Zoning Variance VAR 23-01, and an override by the Oroville City Council of the ALUC's inconsistency determination; and

WHEREAS, at a duly noticed public hearing, the Planning Commission considered the comments and concerns of public agencies, property owners, and members of the public who are potentially affected by the approval of Tentative Subdivision Map TSM 22-01 described herein, and also considered the City's staff report regarding the change.

NOW, THEREFORE, BE IT RESOLVED BY THE PLANNING COMMISSION as follows:

1. The Planning Commission recommends that the City Council:
 - a. Certify the Final Environmental Impact Report.
 - b. Adopt appropriate Environmental findings, mitigation measures, and Statement of Overriding Considerations.
 - c. Approve General Plan Amendment GPA 23-01.
 - d. Approve Zoning Change ZC 23-01 with certain required findings and Ordinance XXXX.
 - e. Conduct a two-thirds vote to Intend to Override the ALUC's inconsistency determination.
 - f. Notify the Butte County ALUC and California Division of Aeronautics of the Council's intent to override the ALUC's inconsistency determination.
 - g. After the required 45-day waiting period for comments from the ALUC and Division of Aeronautics, Override the ALUC's inconsistency determination.
 - h. Approve Tentative Parcel Map TSM 22-01

2. Subject to approval of TSM 22-01 by the City Council, the Planning Commission approves Variance VAR 23-01 with the findings required by Section 17.44.050 of the Oroville City Code, as those findings are described in this Resolution.

RECOMMENDED FINDINGS

Required Findings for the Tentative Subdivision Map:

Pursuant to OMC Section 16.12.020(D), the City Engineer has reviewed TSM 22-01 and has deemed the map complete. The required Engineer's Report is attached.

Per OMC Section 16.12.020(F), the Planning Commission shall disapprove a tentative map if it determines that any of the following conditions apply:

1. The proposed subdivision is inconsistent with the general plan or applicable specific plans.

Assuming GPA 23-01 and ZC 23-01 are approved by the City Council, the subdivision will be consistent with the General Plan. There are no applicable specific plans encompassing this parcel.

2. The site is not physically suitable for the proposed density or type of development, or for the physical infrastructure required to support that development.

The site is immediately adjacent to single-family residential development. The current land use designation and zoning of ABP anticipates higher intensity and density for manufacturing, processing, office, or other industrial user. Infrastructure is available and adequately serving the similar residential development nearby and this project will be required to expand and/or improve the existing infrastructure to adequately serve the project.

3. The design of the land division or the proposed improvements are likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat.

Pursuant to CEQA, an EIR was prepared for the project. The EIR confirms that there are three significant and unavoidable effects, including inconsistency with the Butte County Airport Land Use Compatibility Plan, added traffic noise, and greenhouse gas effects from vehicle miles traveled. These impacts primarily relate to the human environment and not the natural environment. None of the project's other effects will cause environmental damage to fish or wildlife or their habitat, being either not significant or mitigated to insignificance.

4. The design of the subdivision or the type of improvement is likely to cause serious public health problems.

The subdivision was designed in accordance with Oroville Municipal Code requirements and consultation of the Oroville Design Guidelines for site design to preserve view sheds and natural features, provide development with outdoor activity options, and connectivity to surrounding neighborhoods. The design of the subdivision is similar to neighboring development that has not been shown to cause public health problems. The three significant impacts in the EIR are likely to cause serious public health problems. The development in the Airport overflight zone is about 4,000 feet from Runway 2 and the development would be less dense than is allowed under the current zoning. The traffic noise impact is technically significant and still generally in the "quiet urban daytime" range below dBA. The State-mandated VMT impacts are not mitigatable in this rural environment, but denying the project on urban VMT greenhouse gas emissions thresholds is not reasonable. The project-generated emissions would not be concentrated enough to cause serious public health problems.

5. A preliminary soils report or geological hazard report indicates adverse soil or geological conditions, and the subdivider has failed to demonstrate to the satisfaction of the city engineer and planning commission that the conditions can

be corrected.

The site has been shown to be safe to develop in the site's soil types, and the City Engineer is satisfied with the findings of said report.

6. The design of the subdivision or the type of improvements will conflict with easements, acquired by the public at large, for access through or use of property within the proposed subdivision. However, the planning commission may approve an application if it finds that alternate easements for access or for use will be provided and that these will be substantially equivalent to ones previously acquired by the public. This subsection shall apply only to easements of record or to easements established by judgment of a court of competent jurisdiction.

There are no conflicting public easements. The subdivision will create new public and utility easements and improve to city standards three existing roadways (20th Street, Feather Ave and Biggs Ave) along the length of the project site.

7. The proposed subdivision violates the provisions of this Chapter and no exception has been granted.

The Engineer's Report confirms that the proposed subdivision does not violate the provisions of this chapter and no exception has been granted.

8. The proposed subdivision violates any provision of the zoning code and no variance has been granted.

Should the City Council approve GPA 23-01 and ZC 23-01 and the proposed variance, the proposed subdivision will not violate any provisions of zoning code OMC 17.44.050 for density and open land requirements.

9. The proposed subdivision would violate any other city ordinance or any city code provision.

The proposed subdivision will not violate any other city ordinance or city code provision. Should the City Council adopt the override of the ALUCP determination and the variance, the proposed subdivision will comply with all applicable regulations and codes.

10. The discharge of waste from the proposed subdivision into a community sewer system would result in violation of existing requirements prescribed by a California Regional Water Quality Control Board pursuant to Division 7 (commencing with Section 13000 of the Water Code).

The Thermalito Sewer and Water (TWSD) Agency, which serves water and collects sewer discharges, is not operating under any corrective action or compliance orders.

I HEREBY CERTIFY that the foregoing resolution was duly introduced and passed at a special meeting of the Planning Commission of the City of Oroville held on the 22nd of June 2023, by the following vote:

RESOLUTION NO. P2023-13

A RESOLUTION OF THE OROVILLE PLANNING COMMISSION RECOMMENDING THAT THE OROVILLE CITY COUNCIL NOTIFY THE BUTTE COUNTY AIRPORT LAND USE COMMISSION AND THE STATE DIVISION OF AERONAUTICS OF THE CITY'S INTENTION TO FIND THAT THE PROPOSED FEATHER RANCH SUBDIVISION IS CONSISTENT WITH THE PURPOSES OF THE STATE AERONAUTICS ACT AND TO OVERRULE THE BUTTE COUNTY AIRPORT LAND USE COMMISSION'S INCONSISTENCY DETERMINATION FOR OROVILLE AIRPORT.

WHEREAS, the application was filed by MD3 Investments for Tentative Subdivision Map TSM 22-01 to convert 45-acre APN 030-230-098 now zoned Airport Business Park (ABP) into 172 single family housing lots zoned Single Family Residential (R1); and

WHEREAS, the property is designated APB- AIO (Airport Influence Overlay) by the Oroville General Plan and Zoning Code, which limits development to a maximum density of 0.1 and 0.2 dwelling units per acre; and

WHEREAS, the proposed project has a density of 3.8 dwelling units per acre, which exceeds the limits in the Butte County Airport Land Use Plan (ALUCP); and

WHEREAS, Oroville's Zoning Code Section 17.44.050 and California Public Utilities Code Section 21676(b) require the city to refer the Project to the Butte County Airport Land Use Commission (ALUC) for a determination of the project's consistency with the ALUCP; and

WHEREAS, on September 21, 2022, the Butte County Airport Land Use Commission determined that the proposed project would be inconsistent with the ALUCP on the basis of density; and

WHEREAS, the City Council may, after a public hearing, can propose to override the ALUC's determination by a two-thirds vote of the City Council if it makes specific findings that the project is consistent with California Public Utilities Code Section 20167 for the purpose of protecting public health, safety, and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards within areas around public airports to the extent that these areas are not already devoted to incompatible uses; and

WHEREAS, approval of the Tentative Subdivision Map first requires certification of a Final Environmental Impact Report for the project with Findings and a Statement of Overriding Considerations, General Plan Amendment GPA 23-01, Zoning Change ZC 23-01, Zoning Variance VAR 23-01, and an override by the Oroville City Council of the ALUC's inconsistency determination; and

WHEREAS, at a duly noticed public hearing, the Planning Commission considered the comments and concerns of public agencies, property owners, and members of the public who are potentially affected by the approval of Tentative Subdivision Map TSM 22-01 described herein, and also considered the City's staff report regarding the change.

NOW, THEREFORE, BE IT RESOLVED BY THE PLANNING COMMISSION as follows:

1. The Planning Commission recommends that the City Council:
 - a. Conduct a two-thirds vote to Intend to Override the ALUC's inconsistency determination.
 - b. Notify the Butte County ALUC and California Division of Aeronautics of the Council's intent to override the ALUC's inconsistency determination.
 - c. After the required 45-day waiting period for comments from the ALUC and Division of Aeronautics, Override the ALUC's inconsistency determination.
 - d. After the Override decision, approve GPA 23-01, ZC 23-01, and TSM 22-01.

RECOMMENDED FINDINGS

For an override of an inconsistency determination by the ALUC, specific findings supported by substantial evidence must be adopted finding that the proposed project will not:

- Impair the orderly, planned expansion of the airport.
The new homes and their distance at over 4,000 feet from the end of Runway 2 will not impair the orderly, planned expansion of the airport, all of which will occur on airport property and South of SR 162. The ABP zoning of the lands north of SR162 and closer to the airport than this subdivision are already anticipated for future industrial development in the General Plan, and are thus assumed to also not affect any future airport expansion plans. The remaining vacant land areas will all be developed with densities consistent with the ALUCP.
- Adversely affect the utility or capacity of the airport (such as by reducing instrument approach procedure minimums) or affecting flight patterns.
Due to the distance from Runway 2, flight patterns, aircraft operational safety, or instrument approach procedures will not be affected. The subdivision is at the outer edge of the left traffic pattern for planes landing or taking off, so most of the estimated 780 flights per year will turn left before reaching any homes and will not likely fly over either subdivision. Planes taking off to the north are advised in AIRNAV to veer left away from existing development, which is not a difficult maneuver. In addition, any plane flying straight north will likely be at least 400 feet above ground level by the time it reaches either the existing Calle Vista or proposed Feather Ranch subdivisions.
- Expose the public to excessive noise and safety hazards.

Regarding exposing the public to excessive noise and safety hazards, first, because of the distance from Runway 2, the project is outside the airport's 55 decibel noise contour. Second, all new residential structures will be conditioned to be constructed to limit interior noise levels to a maximum of 45 decibels. Finally, all new homeowners will be required to acknowledge they are buying property within 2 miles of an airport, and to sign an avigation easement or other appropriate instrument authorizing plane flights over their properties. The safety hazard from aircraft accidents is always present, but is not considered excessive due to the distance of the proposed project from the Airport property and Runway 2.

I HEREBY CERTIFY that the foregoing resolution was duly introduced and passed at a special meeting of the Planning Commission of the City of Oroville held on the 22nd of June 2023, by the following vote:

AYES:

NOES:

ABSTAIN:

ABSENT:

ATTEST:

APPROVE:

JACKIE GLOVER, ASSISTANT CITY CLERK

CARL DURLING, CHAIRPERSON

RESOLUTION NO. P2023-16

A RESOLUTION OF THE OROVILLE PLANNING COMMISSION APPROVING VARIANCE VAR 23-01 FOR THE PROPOSED FEATHER RANCH SUBDIVISION, SUBJECT TO THE CITY COUNCIL'S APPROVAL OF TSM 22-01.

WHEREAS, the application was filed by MD3 Investments for Tentative Subdivision Map TSM 22-01 to convert 45-acre APN 030-230-098 now zoned Airport Business Park (ABP) into 172 single family housing lots zoned Single Family Residential (R1); and

WHEREAS, the property is designated APB- AIO (Airport Influence Overlay) by the Oroville General Plan and Zoning Code, which limits development to a maximum density of 0.1 and 0.2 dwelling units per acre; and

WHEREAS, the proposed project has a density of 3.8 dwelling units per acre, which exceeds the limits in the Butte County Airport Land Use Plan (ALUCP); and

WHEREAS, Oroville's Zoning Code Section 17.44.050 and California Public Utilities Code Section 21676(b) require the city to refer the Project to the Butte County Airport Land Use Commission (ALUC) for a determination of the project's consistency with the ALUCP; and

WHEREAS, on September 21, 2022, the Butte County Airport Land Use Commission determined that the proposed project would be inconsistent with the ALUCP on the basis of density; and

WHEREAS, the City Council may, after a public hearing, proposed to override the ALUC's determination by a two-thirds vote of the City Council if it makes specific findings that the project is consistent with California Public Utilities Code Section 20167 for the purpose of protecting public health, safety, and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards within areas around public airports to the extent that these areas are not already devoted to incompatible uses; and

WHEREAS, approval of the Tentative Subdivision Map first requires certification of a Final Environmental Impact Report for the project with Findings and a Statement of Overriding Considerations, General Plan Amendment GPA 23-01, Zoning Change ZC 23-01, Zoning Variance VAR 23-01, and an override by the Oroville City Council of the ALUC's inconsistency determination; and

WHEREAS, at a duly noticed public hearing, the Planning Commission considered the comments and concerns of public agencies, property owners, and members of the public who are potentially affected by the approval of Tentative

Subdivision Map TSM 22-01 described herein, and also considered the City's staff report regarding the change.

NOW, THEREFORE, BE IT RESOLVED BY THE PLANNING COMMISSION as follows:

1. Subject to approval by the City Council of TSM 22-01, GPA 23-01, ZC 23-01 and the override, the Planning Commission approves Variance VAR 23-01 with the findings required by Section 17.44.050 of the Oroville City Code, as those findings are described in this Resolution.

FINDINGS

Findings for the Variance:

As noted, the variance is a corresponding action by the City Council, which would be needed only if the Council approves the ALUC override. The planning commission shall grant a variance only upon finding all of the following, based on substantial evidence:

- a. The granting of the variance is not inconsistent with the general plan or any applicable specific plan.

As noted above, the granting of the variance is inconsistent with Safety Element Policy 5.1. However, if the City Council overrides the ALUC's determination of inconsistency with the ALUCP, that inconsistency will be moot.

- b. There are exceptional and extraordinary circumstances or conditions applying to the land, building or use referred to in the application that do not generally apply to other land, buildings or uses in the same district.

This subdivision project would be reviewed the same as other nearby uses with the exceptional circumstance of being in the B1 and B2 overflight zones, which other nearby properties were not at the time of approval. If the City Council overrides the ALUC's determination of inconsistency with the ALUCP, the Council should also grant the corresponding variance from OMC 17.44.050, whose text is identical to the ALUCP's with regard to allowable densities.

- c. The granting of the variance will not grant a special privilege to the property.

The granting of the variance will not grant a special privilege. If granted, all subsequent development will be reviewed and conditioned exactly as all other subdivisions throughout the city of Oroville.

d. The variance is necessary for the preservation and enjoyment of a substantial property right possessed by other property in the same vicinity and zoning district, and that would otherwise be denied to the property in question.

The variance would convey the same property rights – i.e. a subdivision entitlement -- as those previously enjoyed by adjacent and nearby properties including the Calle Vista and Ruddy Creek subdivisions, and including the proposed Grand Acres subdivision immediately to the north of this project. Without the variance, the project would not be viable, and would be denied similar property rights already enjoyed by the neighboring properties.

e. The granting of the variance will not be materially detrimental to the public welfare.

If the City Council grants the ALUC override, there are no detrimental safety or public welfare issues to consider.

f. The granting of the variance will not be injurious to, or incompatible with, any nearby property or improvements.

The project area is adjacent to and nearby several existing similar subdivisions, and would thus be compatible with many land uses in the surrounding area.

I HEREBY CERTIFY that the foregoing resolution was duly introduced and passed at a special meeting of the Planning Commission of the City of Oroville held on the 22nd of June 2023, by the following vote:

Community Development Department

RE: **Engineer’s Report**
Feather Ranch Vesting Tentative Subdivision Map 22-01

This office has reviewed the Feather Ranch Vesting Tentative Subdivision Map 22-01 and herewith submits the following findings and recommendations.

A. TIMING AND NATURE OF PUBLIC IMPROVEMENTS

The City Engineer will determine the nature, extent, timing and limits of required road/street public improvements to be constructed as part of any development (including phased development) versus payment of an in-lieu fee as well as reimbursements for construction of future Nexus/CIP facilities.

B. PUBLIC FACILITY CONSTRUCTION

1. Streets

- a) The Subdivider shall construct City standard streets and appurtenant facilities at the following locations in conformance with the typical sections. Street structural sections to be determined based upon findings from the Soils Report:
 - 1) Interior to subdivision – Full urban improvements.
 - 2) Adjacent to subdivision– Full urban improvements.
- b) All corner lots shall be subject to intersection sight distance criteria as established by the City Engineer. Appropriate easements shall be dedicated as needed on the Final Map.
- c) Street names shall be approved concurrent with the improvement plans and prior to recordation of the Final Map.

2. Storm Drainage

a) Facility Construction - The Subdivider shall design and install the following City standard storm drain facilities:

1) Interior to Subdivision - Curb, gutter, and an underground storm drain system with all appurtenances.

i. Future storm drainage needs outside of the project shall be examined to the extent that improvements to serve such areas need to be built within this subdivision. Said improvements shall be constructed by the Subdivider.

ii. Any publicly owned storm drain facilities shall have full vehicle access.

2) Adjacent to Subdivision - Curb, gutter and an underground storm drain system with all appurtenances along the subdivision frontage.

i. Future storm drainage needs outside of the project shall be examined to the extent that improvements to serve such areas need to be built adjacent to this subdivision. Said improvements shall be constructed by the Subdivider.

b) NPDES Requirements

1) The subdivision shall comply with all of the requirements of “State Water Resources Control Board (Board) Water Quality Order No. 2013-0001-DWQ National Pollutant Discharge Elimination System (NPDES) General Permit No. CAS000004, Waste Discharge Requirements (WDRs) for Storm Water Discharges from Small Municipal Separate Storm Sewer Systems (MS4s) (General Permit) or successor General Permits.

2) The development shall conform with section “E.12 Post Construction Water Management Program” of the General Permit.

3) Prior to construction a Storm Water Pollution Prevention Plan (SWPPP) shall be developed and implemented in accordance with the Board’s “National Pollutant Discharge Elimination System (NPDES) General Permit for Storm Water Discharges Associated with Construction and Land Disturbance Activities Order No. 2009-0009-DWQ NPDES No. CAS000002”

c) Storm Drainage Detention Facilities

Surface storm drainage detention facilities shall be landscaped with turf (or an approved alternate) and shall be provided with an irrigation system. Any surface water quality treatment facility shall be vegetated in accordance with a landscape plan approved by the City and shall also be suitably provided with adequate irrigation.

d) Storm Drainage Analysis

The storm drain analysis shall comply with Section B.2.b.2 of this report and shall establish tributary area, size, grade, depth, and location for all the following storm drain facilities:

- Underground pipes.
- Open, natural swales.
- Improved channels.
- Storm water runoff management facilities.
- Outfall facilities discharging to natural channels.
- Both ultimate and interim facilities serving streets exterior to the subdivision that are required to be constructed herein.

- e) The Subdivider shall pay a storm drain fee calculated in accordance with the current fee schedule under the requirements of the Oroville Municipal Code, prior to filing the final map.

3. Sanitary Sewer

a) Facility Construction

The Subdivider shall design and install the following sanitary sewer facilities:

- 1) Interior to Subdivision - An underground sanitary sewer system, with all appurtenances, serving all lots.
- 2) Adjacent to Subdivision - An underground sanitary sewer system, with all appurtenances, along the subdivision frontage.

4. Street Signs and Striping

The Subdivider shall install City standard street signs, regulatory signs, pavement striping and pavement markings on all streets, and bicycle facilities that they are required herein to construct.

5. Street Lights

The Subdivider shall install City standard streetlights with shielding on steel poles with concrete bases on all streets that they are required herein to construct.

6. Street Trees

Street trees shall be planted in accordance with the recommendation of the Community Development Department. The number, type, and sizes shall be as directed by the Community Development Department.

7. Landscaping

- a) The Subdivider shall install landscaping and an irrigation system at the following locations between the back of curb and property line on the following streets:
 - 1) Feather Avenue
 - 2) 20th Street
 - 3) Biggs Avenue
 - 4) Gentle Rain Lane

C. MAINTENANCE

- 1. Prior to filing the Final Map, the Subdivider shall be required to make provisions to fund the maintenance of certain public improvements. The improvements to be covered shall be:
 - a) Landscaped areas of Section B.7 noted above,
 - b) The detention pond (or alternatively underground storage galleries) and the balance of Lot A,
 - c) The district or alternate funding mechanism shall be complete and formed prior to recordation of the Final Map.

D. SUBDIVISION GRADING

1. Soils Report

The Subdivider shall submit a Geological and/or Soils Report, prepared by a registered engineer, that includes, but is not limited to, the following:

- a) An investigation of the nature, distribution and strength of existing soils.
- b) A description of site geology.
- c) Conclusions and recommendations covering the adequacy of the site for the proposed development, storm drainage disposal, grading procedures and corrective measures.
- d) Verification that the site is suited to proposed BMPs.

2. Grading Standards

All subdivision grading shall be in conformance with Chapter 15.88 “Grading, Excavation, and Sediment Control” et al, of the Oroville Municipal Code.

3. Grading Plan

The Subdivider's engineer shall submit a subdivision grading plan that includes, but is not limited to, the following:

- a) The subdivision limits, contours and details of existing terrain and drainage.
- b) Existing structures or other topographic features that are to remain undisturbed.

- c) The proposed subdivision lots and streets, together with a schematic layout of the proposed storm drain system.
- d) Existing ground elevations at all corners of proposed lots.
- e) Proposed finished lot corner grades and finished pad grades.
- f) Proposed lot grades indicating lot drainage.
- g) Pertinent recommendations from the above required Geological and/or Soils Report.
- h) Pertinent construction details to assure compliance with City of Oroville Grading Standards.
- i) All lots shall be graded to drain overland from back to front as depicted on the details shown on the map.
 - 1) Where overland flow can not be achieved, yard drains shall be provided. Yard drains shall connect directly to the storm drain, or discharge to the gutter via curb-face outlets. Discharge across the sidewalk will not be allowed.
 - 2) Cross-lot drainage easements, whether public or private, will not be permitted unless they are the only physical solution available.

4. Final Grading Report

Upon completion of the subdivision grading and prior to final inspection by the City, the Subdivider's engineer shall submit a Final Grading Report that certifies the following:

- a) That final grading complies with the approved grading plan or any approved revisions.
- b) That the subdivision grading complies with the recommendations included in the Geological and/or Soils Report. Any changes made during grading that affected these recommendations shall be assessed.
- c) That the subdivision soils are adequately compacted for their intended use, in conformance with City of Oroville Grading Standards. The results of all field density tests and all other substantiating data shall be included in the Final Grading Report.

The subdivision grading plan shall be submitted to the City Engineer for review and approval prior to the start of any work and shall be considered as part of the construction plans.

E. PROPERTY CONVEYANCES

1. Dedications

In conjunction with recordation of the Final Map for this subdivision, the Subdivider shall:

- a) Dedicate, acquire or bear the cost of acquisition of public rights of way or easements as necessary to construct the public improvements required.
- b) Convey to the City all abutter's rights of access from the abutting lots of the subdivision to the following streets: Feather Avenue, Biggs Avenue, and 18th Street.

- c) Unless otherwise found to be unnecessary, dedicate an Avigation Easement to the City over the existing lots within the subdivision boundary as required by the Community Services Director.
- d) Dedicate a 10-foot-wide public service easement adjacent to public rights of way.
- e) Dedicate a 3-foot-wide public utility easement adjacent to all side lot lines.
- f) Dedicate at least 1.2-acres for parklands including any required improvements thereon or pay an equivalent in-lieu fee.

F. LOT RESTRICTIONS

No restrictions are applicable currently. The Planning Commission has the discretion to impose restrictions.

G. OTHER PUBLIC SERVICES

1. Public Utilities

- a) **Underground Requirements** - The Subdivider shall install the following utilities underground:
 - 1) All new utilities serving this subdivision.
 - 2) All existing utilities in public rights-of-way that are within or adjacent to this subdivision.
- b) **Easement Obstructions** - All public utility and/or public service easements shall be kept free and clear of any and all obstructions, including but not limited to, structures, longitudinal fencing and/or sound walls, which may impede the construction, operation and maintenance of public utility facilities within such easements.

2. Fire Protection

The Subdivider shall pay for the installation of fire hydrants within the subdivision in conformance with the recommendations of the Fire Department, City of Oroville, or their successor.

3. United States Postal Service

The Subdivider shall install concrete pads for NDCBU delivery to the lots of this subdivision. The pads shall be depicted on the subdivision improvement plans and are subject to approval by both the local office of the United States Postal Service and the Planning Services Department.

H. PERMITS FROM OUTSIDE AGENCIES

The Subdivider shall obtain all required permits from outside agencies having pertinent jurisdiction prior to recordation of the Final Map for this subdivision.

I. Other Permits

The Subdivided shall submit a completed “Application Requesting Permission to Plant, Remove, Alter, or Disturb Public Trees” from to the Public Works Department. The Subdivider shall comply with any and all recommendations/requirements prior to commencing any construction activities on the site.

J. DESIGN CRITERIA AND IMPROVEMENT STANDARDS

All public and joint-use private improvements shall be designed in accordance with the Oroville Municipal Code, except as modified by the conditions of approval for this subdivision.

The Subdivider shall submit improvement plans, profiles, typical sections, details and specifications to the Public Works Department for review and approval prior to the start of any construction of public and joint-use private improvements.

All public and joint-use private improvements shall be constructed in conformance with the Oroville Municipal Code and in conformance with the details shown on the approved improvement plans.

When standard plans and specifications for any aspect of the project are not available, the Subdivider and the City Engineer may agree on the use of another agency’s standard plans and specifications.

K. ENVIRONMENTAL CLEARANCE

The developer shall work with the Planning Department to obtain the appropriate environmental clearance.

L. ADMINISTRATIVE REQUIREMENTS

1. Revised Tentative Map

The Subdivider shall prepare a Project Map, consisting of a copy of the Tentative Map modified to depict all requirements of this subdivision report or the resolution of approval that alter the street layout, the lot configuration, or any other substantive item depicted on the Tentative Map as originally submitted.

The revised tentative map shall be submitted, reviewed, and approved by the Community Development Department Director and the City Engineer prior to initial submittal of the improvement plans or Final Map for this subdivision.

2. Subdivision Improvement Agreement

Subdivider shall complete all public and joint-use private improvements prior to recordation of the Final Map. If Subdivider wishes to record prior to the completion of said improvements, Subdivider shall enter into a subdivision improvement agreement in conformance with Chapter 16.16.210 “Completion of Improvements” of the Oroville Municipal Code.

3. Subdivision Fees

a) Plan Checking Fee

The Subdivider shall pay to the City of Oroville a subdivision plan checking fee upon filing the Final Map and/or improvement plans and specifications for checking in the following amount:

An initial deposit of 1½% of the estimated cost of all public and/or joint use private improvements exclusive of private utility facilities (\$162.95 minimum). A final fee equal to actual City costs.

b) Inspection Fee

The Subdivider shall pay to the City of Oroville an inspection fee prior to commencing construction in the following amount:

An initial deposit of 3% of estimated cost of all public and/or joint use private improvements exclusive of private utility facilities (\$162.95 minimum). A final fee equal to actual City costs.

Matt Thompson, P.E.
Acting City Engineer

City of Oroville

COMMUNITY DEVELOPMENT DEPARTMENT

(530) 538-2430 FAX (530) 538-2426 www.cityoforoville.org

Approval Date To Be determined.

***** DRAFT *** LETTER OF APPROVAL**

RE: The Feather Ranch Subdivision Tentative Subdivision Map TSM 22-01

Dear Mr. Stoltey,

On _____, the Oroville City Council completed its last necessary action to approve Feather Ranch Subdivision Tentative Map TSM 22-01.

***** DRAFT *** CONDITIONS OF APPROVAL**

To be refined as project review progresses. Applicant and planning commissioners please comment.

Approved project: MD3 Investments plans to subdivide and develop a 44.97-acre vacant and undeveloped parcel (APN 030-230-098) into 172 single-family detached residential lots immediately west of 20th Street with access points off Feather Avenue, Biggs Avenue, and 20th Street. The homes and streets would be developed on approximately 40.197 acres, with a 0.95-acre (41,332 s.f.) passive open space at the southwest corner of Feather Avenue and 20th Street, and a meandering multi-use path along the central roadway (Gentle Rain Lane) of the subdivision.

Improvements to 20th Street and abutting roadways include curbs, gutters and sidewalks adjacent to the project site. Sidewalks would front 20th Street, Biggs Avenue, and Feather Avenue as well as along all internal proposed roadways. Greenway space will be provided along internal sidewalks, around the proposed 0.95-acre combined storm drainage retention basin and open space at the northeastern corner of the site, and fronting 20th Street and Biggs Avenue. Storm drainage facilities are proposed throughout the project site, with connections tying in together internally, prior to tying into storm drainage facilities located within 20th street.

Necessary discretionary approvals prior to approval of TSM 22-01:

- General Plan Amendment GPA 23-01, to change the Land Use Designation to Medium Low Density Residential.
- Zoning Change ZC 23-01, to change the Zoning to R-1.
- A Variance VAR 23-01 to allow the project to exceed airport overlay density requirements.
- An Override of the ALUC's inconsistency determination for density in the Airport Area of Influence.

TSM 22-01 and Engineer's Report

The Tentative Subdivision Map of August 8, 2022, has been approved subject to the conditions in the accompanying Engineer's Report dated June 7, 2023. All conditions must be met prior to approval of the Final Map.

The following specific conditions apply:

1. Applicant shall obtain a will-serve letter from the Thermalito Water and Sewer District prior to approval of the Tentative Subdivision Map and conduct a capacity study with SC-OR.
2. The applicant shall provide a parkland dedication of 2.5 acres either to the Feather River Recreation and Park District and/or an in-lieu fee. Details to be worked out prior to project approval by the City Council.
3. Applicant shall assist as needed the process of annexation of the subdivision into Community Facilities Districts CFO2006-1 and CFO2006-2.
4. Fencing around the perimeter of the subdivision shall be wood at a minimum of 6-feet high.
5. A deed notice is required to be included in any parcel transfer document, which puts the buyer on notice that the house is within the airport area of influence and may therefore encounter discomfort, inconvenience or annoyance from the noise generated by operations at the airport.
6. Each lot shall be developed with a detached single-family residence designed in accordance with the City's residential development, parking, and design standards in OMC 17.28.020, 17.12.070, and the City of Oroville Design Guidelines of 2015. Additional requirements are as follows:
 - a. No more than 172 lots for development with single family dwellings shall be created in this subdivision.
 - b. All conditions of approval of Tentative Subdivision Map 22-01 including access to and street improvements for 20th Street, Feather Avenue, Biggs Street, and all interior roads to the subdivision, shall be implemented.
 - c. Required lot development standards shall conform to the normal R-1 development standards and as follows:
 - 1) All homes shall include a 2-car garage.
 - 2) A minimum of 4 different floor plans shall be utilized throughout the subdivision.

- 3) All homes constructed on lots in this subdivision shall conform as practicable to the goals, site planning, building design, landscape design, accessory structure and lighting guidelines of the City's adopted Residential Design Guidelines.
 - 4) Home models shall vary within the subdivision with no two same floor plans being adjacent to each other unless the floor plan is "flipped" and the exterior façade treatment is different. The same floor plans shouldn't be built directly across from each other.
 - 5) Structures shall have the mass of the front elevation broken into a minimum of two planes (increasing setbacks from front property line).
 - 6) Colors: Hue variations in adjacent homes shall be provided to create diversity. No adjacent home shall have the same color scheme. The front elevation shall have a minimum of a four-color paint scheme.
 - 7) On corner lots, roof, window, and wall finish features shall be wrapped around to the street-side wall to continue the articulation of the front elevation and provide interest from the street.
 - 8) Fencing: Typical side yard fencing shall be solid and continuous wood fencing or equivalent, not greater than 6' in height. Fencing along the boundaries of the property shall be solid and continuous wood fencing not more than 6' in height, and subject to approval of the Planning Manager prior to installation.
 - 9) All fencing shall be installed by the contractor/developer prior to issuance of occupancy permits, weather permitting. In cases where weather may delay fencing and landscaping installation, occupancy may be permitted with approval of the City and the buyer. In such cases, fencing and landscaping shall be installed at the earliest possible time.
7. All site, building and landscaping plans shall be submitted to the Development Review Committee for review and approval prior to building plan submittal, and shall comply with the conditions in the ordinance approving Zoning Code ZC 20-02.

Environmental Mitigation Monitoring Plan

Applicant shall comply with the air quality, species survey, construction staging, and other requirements of the adopted Mitigation Monitoring Matrix found in the Final Environmental Impact Report

General Conditions

1. The applicant shall hold harmless the City, its Council members, Planning Commissioners, officers, agents, employees, and representatives from liability for any award, damages, costs, and/or fees incurred by the City and/or awarded to any plaintiff in an action challenging the validity of this permit or any environmental or other documentation related to approval of this permit. Applicant further agrees to provide a defense for the City in any such action.

2. The project shall remain in substantial conformance with the Conditions of Approval, as adopted and described above. Any subsequent minor changes in the project (as determined by the Zoning Administrator) may only occur subject to appropriate City review and approval. Any subsequent substantive changes in the project (as determined by the Zoning Administrator) may only occur subject to discretionary review by the Oroville Planning Commission or City Council, whichever is applicable.
3. The applicants shall have a current City of Oroville business license and any other applicable permit/license that may be required as part of their business operations.
4. Applicable construction plans, calculations, specifications, applications, forms, etc. shall be submitted to the Building Division for review prior to the start of any construction activities requiring a building permit. All applicable plan review and impact fees shall be paid at time of submittal.
5. All applicable development impact fees shall be paid prior to issuance of a building permit.
6. The applicant shall ascertain and comply with the requirements of all City, County, State, Federal, and other local agencies as applicable to the proposed project.
7. All grading, paving, excavation and site clearance, including that which is exempt from obtaining a permit, shall be performed in conformance with the City's Engineering Design Standards; the Municipal Code; the requirements of the State Regional Water Quality Control Board; and any other applicable local, state and federal requirements.
8. The project shall comply with the City's noise ordinance as found in the OMC Chapter 9.20.
9. All construction projects are required to implement dust control measures to reduce particulate matter emissions due to disturbance of exposed top-soils, such as watering of active areas where disturbance occurs, covering haul loads, maintaining clean access roads, and cleaning the wheels of construction vehicles accessing disturbed areas of the site. See the Mitigation Monitoring Matrix for specific mitigation requirements.
10. All grading and paving shall be conducted in compliance with the Butte County Air Quality Management District's Indirect Source Guidelines, in order to prevent degradation of ambient air quality. This includes using electrically powered construction equipment whenever possible.
11. Applicant hereby certifies that any and all statements and information provided as part of the application are true and correct to the best of their knowledge and belief. Any misinformation provided, whether intentional or unintentional, that was considered in the issuance of this permit may be grounds for revocation.

Additional Draft Subdivision Construction and Occupancy Conditions –Civil Design Standards are in the Engineer’s Report

Prior to site grading.

1. All grading, paving, excavation, and site clearance, including that which is exempt from obtaining a permit, shall be performed in conformance with the City’s Engineering Design Standards; the Municipal Code; the requirements of the State Regional Water Quality Control Board; and any other applicable local, state, and federal requirements.
2. A site grading, drainage and improvement plan shall be prepared by a Registered Civil Engineer, in conformance with City standards, and shall be submitted to and approved by the Public Works Department prior to any work on the site. This plan shall also show:
 - I. The design of the sanitary sewer service system including the type and size of the sanitary sewer line lateral, and the proposed point of connection the sewer main.
 - II. Existing and proposed easements.
 - III. Proposed elevations of finished improvements (parking area, onsite curbs, planters, etc.) within the project at an adequate level of detail to demonstrate drainage flow directions within the project boundaries.
 - IV. A drainage and detention/retention facility sufficient that there is no increase in pre-project peak stormwater discharge from the site for a 2-year, 10-year and 100-year storm event. On-site storm drainage shall be collected and retained/detained on-site and then transported via underground conduit to an approved drainage facility.
 - V. Drainage calculations to support the size of the detention or retention facility, and orifice calculations to support the design size of the stormwater flow control device.
 - VI. Frontage improvements to include curb, gutters and sidewalk constructed to ADA standards; asphaltic concrete pave out (1-foot minimum, or wider if necessary) along new curb, gutters and sidewalk adequate to provide proper street drainage along the project frontage.
 - VII. Location of streetlights to be constructed to City standards.
3. All construction projects are required to implement dust control measures to reduce particulate matter emissions due to disturbances of exposed top-soils, such as watering of active areas where disturbance occurs, covering haul loads, maintaining clean access roads, and cleaning the wheels of construction vehicles accessing disturbed areas of the site.
4. All grading and paving shall be conducted in compliance with the Butte County Air Quality Management District’s Indirect Source Guidelines in order to prevent degradation of ambient air quality.
5. The applicant shall comply with the mitigation monitoring program as approved for TSM 22-01

Prior to the issuance of building permits.

6. Applicable construction plans, calculations, specifications, applications, forms, etc. shall be submitted to the Building Division for review prior to the start of any construction activities

requiring a building permit. All applicable plan review and impact fees shall be paid at time of submittal.

7. Landscape plans shall be approved by the Parks and Trees Department.
 - I. Planting shall be provided in as much of the front setback as is practical, excluding any areas with paved driveways or pedestrian paths. In no case shall more than 75% of the front setback be paved.
 - II. Where a side or rear property line is adjacent to a street, the site shall include a planting area along the property line with a width of at least 5 feet. Any fence around the property shall be located behind the planting area.
 - III. Plantings shall be drought tolerant and MWELo standards will apply.
 - IV. Landscaping shall be installed around the detention basin where visible from the street and adjacent residences.
8. The building plans shall include an architecturally compatible method of screening any roof mounted HVAC system, or if the units are placed on the ground, the unit shall be screened by landscaping or a decorative fence.
9. Applicant shall annex into a Landscape and Lighting Maintenance Assessment District (LLMAD) and Benefit Assessment District (BAD) prior to issuance of building permits.

Prior to construction.

10. Obtain an encroachment permit from the City for any work in the public right-of-way.
11. All utilities shall be placed underground.
12. Developer will be responsible for the cost of all water improvements (meters, boxes, valves, lines, backflow devices, etc.), which are required to meet TWSD improvement standards. The cost of all fire lines and hydrants shall also be the developer's responsibility.
13. A Construction Storm Water Permit will be required by the State Water Resources Control Board if the project results in a disturbance (including clearing, excavation, filling and grading) of one or more acres. Construction activities that result in a land disturbance of less than one acre, but which are part of a larger common plan of development, also require a permit. The Permit must be obtained from the State Water Resources Control Board prior to construction.

Prior to occupancy.

14. All required landscaping and irrigation improvements shall be installed prior to issuance of a certificate of occupancy.
15. Buildings shall be addressed per City requirements. Building numbers shall comply with City Code 17.20.050(A).
16. Curb, gutter and sidewalk shall be constructed to City standards.

Other.

17. Street lighting shall be provided in accordance with City of Oroville requirements and accepted design criteria. A street lighting plan shall be submitted to the Public Works

Department. Streetlight poles shall be spun aluminum or other material as approved by the Public Works Department.

18. Home models shall vary within the subdivision with no two same floor plans being adjacent to each other unless the floor plan is “flipped” and the exterior façade treatment is different. The same floor plans shouldn’t be built directly across from each other.
19. Hue variations in adjacent homes shall be provided to create diversity. No adjacent home shall have the same color scheme.
20. Minor changes may be approved administratively by the Community Development Director or designee upon receipt of a written request by the applicant or designee. Changes deemed to be major or significant in nature shall require a formal application for amendment.
21. Pursuant to Section 17.12.010, the buildings shall conform to the performance standards of the Oroville Municipal Code to minimize any potential negative effects that the buildings, structures, lighting or use could have on its surroundings, and to promote compatibility with surrounding uses and areas.
22. The applicant shall ascertain and comply with the requirements of all City, County, State, Federal, and other local agencies as applicable to the proposed project.
23. Applicant hereby certifies that any and all statements and information provided as part of the application are true and correct to the best of their knowledge and belief. Any misinformation provided, whether intentional or unintentional, that was considered in the issuance of this permit may be grounds for revocation.

The applicant shall hold harmless the City, its Council members, Planning Commissioners, officers, agents, employees, and representatives from liability for any award, damages, costs, and/or fees incurred by the City and/or awarded to any plaintiff in an action challenging the validity of this permit or any environmental or other documentation related to approval of this permit. Applicant further agrees to provide defense for the City in any such acti.

Draft Environmental Impact Report

FEATHER RANCH PROJECT City of Oroville, California

CEQA Lead Agency:

City of Oroville
1735 Montgomery Street
Oroville, California 95965

Prepared by:

ECORP Consulting, Inc.
55 Hanover Lane
Chico, California 95973

April 2023

EXECUTIVE SUMMARY

ES-1 Introduction

This Draft Environmental Impact Report (DEIR, Draft EIR) evaluates the potential environmental effects of the proposed construction and operation of the Feather Ranch Project (Proposed Project) in the City of Oroville, Butte County, California. The City of Oroville is the Lead Agency responsible for preparation of this DEIR. This DEIR was prepared in accordance with the requirements of the California Environmental Quality Act (CEQA, Public Resources Code [PRC] Section 21000 et. seq.) and the CEQA Guidelines (California Code of Regulations [CCR], Title 14, Sections 15000 et seq). CEQA requires that the Lead Agency, in this case City of Oroville, consider the information contained in the DEIR prior to taking any discretionary action on the Project. The Lead Agency is the agency with primary responsibility for approval of a project. Other public agencies may also use this EIR to inform discretionary actions related to the Proposed Project.

This Summary has been prepared in accordance with the CEQA Guidelines Section 15123, which states that an EIR should contain a brief summary of the Proposed Project and its consequences, and should identify:

1. each significant effect with proposed mitigation measures and alternatives that would reduce or avoid that effect,
2. areas of public controversy known to the lead agency, including issues raised by the agencies and the public, and
3. issues to be resolved, including the choice among alternatives and how to mitigate the significant effects.

ES-2 Project Location and Setting

The Project is located directly southwest of the Feather Avenue/20th Street intersection in City of Oroville, California. Assessor's Parcel Number (APN) 030-230-098 (Figures 2.0-1 and 2.0-2). The Project is 44.97 acres in size. The Surrounding uses include single-family homes and vacant land to the east of the Project Site. Rural residential uses and vacant land lie to the north of the Project Site; vacant land lies to the west of the Site, with rural residential uses and vacant land to the south. The Oroville Municipal Airport (OMA) is approximately 0.75 mile to the south of the Project Site and the Thermalito Forebay is 0.5 mile to the north (Figure 2.0-3).

As shown in Figure 3, surrounding land uses include a mixture of vacant land, single-family residential neighborhoods, OMA, a school, and light industrial and commercial uses near the Project Site as described below.

North. The Project Site's northern boundary is generally bounded by a dirt access road with vacant land and a scattering of single-family residences fronting 21st Street off Grand Avenue.

East. The Project Site’s eastern boundary is generally bounded by 20th Street off Grand Avenue with a single-family residential neighborhood beyond the northern half of the eastern boundary, with vacant land beyond 20th Street on the southern half of the eastern boundary.

South. The Project Site’s southern boundary is generally bounded by a dirt access road with vacant land and a scattering of single-family residences fronting 20th Street beyond. CA State Route (SR) 162 is located approximately 1,570 feet from the Project Site’s southern boundary where 20th Street intersects. Beyond SR 162 (Oro Dam Boulevard West), and in the northeastern corner and abutting the OMA area, there is an industrial storage yard with commercial uses on either side and the Northwest Lineman College.

West. The Project’s western boundary is generally bounded by a dirt access road with vacant land beyond and a scattering of single-family residences fronting Gold Country Lane and Chardonnay Way.

ES-3 Description of Proposed Project

The Proposed Project is the subdivision of a 44.97-acre site into 172 single-family lots located at the southwest corner of the Feather Avenue/20th Street intersection in the City of Oroville, California. Figure 2.0-4 shows the Project Site Plan. Lots will range in size from 6,600 to 9,410 square feet (sf), and the average lot size is 7,450 sf. The subdivision is proposed as a phased map. Phase 1 proposes 68 lots, Phase 2 proposes 58 lots, and Phase 3 proposes 46 lots (Figure 2.0-4). Section 2.0 of this DEIR contains a detailed description of the Proposed Project.

ES-4 Project Objectives

The Feather Ranch Project includes the following objectives that encompass a variety of goals that aim to provide solutions to some of the state and city’s housing needs, while also considering the needs of future residents. The Project objectives area as follows:

- Develop an economically feasible housing plan that is compatible with the surrounding community in a low fire risk zone to provide permanent housing relief for the 50,000 displaced Paradise fire survivors.
- Fulfill the housing needs of the state, City of Oroville, and County of Butte by rezoning un-used isolated airport business park land to medium density residential homes to help address the current Regional Housing Needs Assessment (RHNA). The housing units will be market-rate for-sale units.
- Create a vibrant residential community by providing a like-kind residential project that further adds to western Oroville’s current and future neighborhoods. The Project will include lots of 6,000 sf or larger, setback and landscaping buffers.
- Provide a well-connected open space network that includes the addition of a neighborhood park, bicycle paths and pedestrian sidewalks, open space buffers, and a space for recreational activities.
- Incorporate the Building Code requirements for energy efficiencies and water savings.

ES-5 Project Alternatives

The CEQA Guidelines Section 15126.6 specifies that an EIR must describe and evaluate a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic project objectives but would avoid or substantially lessen any of the significant effects of the project. Chapter 5 of this DEIR describes the alternatives to the Proposed Project. These alternatives include:

- Alternative 1: No Project;
- Alternative 2: Reduced Project; and
- Alternative 3: Residential Densities Consistent with the Airport land Use Plan B1 Compatibility Zone.

ES-5.1 *Alternative 1: No Project*

Under CEQA, an EIR must include a comparative analysis of a No Project Alternative (CEQA Guidelines Section 15126.6(e)). This requirement encourages a lead agency to compare the environmental effects of approving a proposed project with the effects of not approving it. The No Project Alternative generally assumes that the land area affected by Project construction would remain in its existing state, while taking into account what would be reasonably expected to occur in the foreseeable future if the Project were not approved. No other development is proposed in the area or the Project Site. As such, Alternative 1 assumes that the Project Site would remain vacant for the foreseeable future.

ES-5.2 *Alternative 2: Reduce Project*

Alternative 2 would require a General Plan amendment and rezoning approval similar to the Proposed Project as the proposed uses under Alternative 2 are not allowed under the current General Plan land use designation and zoning district. As such, Alternative 2 would be a discretionary project pursuant to CEQA and require CEQA environmental review. Alternative 2 would be the development of the Project with the same proposed uses of the Project but on a reduced scale of approximately 75 percent of the Proposed Project's size. This reduction would result in 129 single family units on the same 44.97-acre parcel. Assuming that the average parcel size of 7,450 sf for the Proposed Project would also be used in Alternative 2, Alternative 2 would result in 7.3 more acres of open space than the Proposed Project¹.

ES-5.3 *Alternative 3: Smaller Project*

Alternative 3 would allow for residential densities consistent with the Oroville Airport B1 Compatibility Zone of 0.1 dwelling unit per acre (1 unit per 10 acres). Those portions of the Project that are within the B2 Compatibility Zone would be developed at residential densities proposed by the Project. According to information provided by the Butte County Department of Development Services, Planning Division,

¹ Proposed Project = 172 lots x 7,450 sf = 1,281,400 sf (29.4 acres). Alternative 2 = 129 lots x 7,450 s . = 961,050 sf (22.1 acres). 29.4 acres - 22.1 acres = 7.3 acres.

Airport Land Use Commission (2022), approximately 35.82 acres of the Project Site is within the B1 Compatibility Zone and 9.15 acres of the Site is within the B2 Compatibility Zone. Based on this information, 41 single family dwellings would be developed in Alternative 3 at the acreage and densities shown in Table 5.0-1. Three single family homes would have an average lot size of 11.94 acres and 38 homes with an average lot size of 10,488 square feet. However, note that these average lot sizes do not account for streets or any open space and are only rough estimates used for this alternative.

ES-6 Areas of Controversy/Issues to be Resolved by Lead Agency

CEQA Guidelines Section 15123(b)(2) requires an EIR to identify areas of controversy or public interest. Prior to the preparation of this EIR, ECORP prepared an Initial Study (IS) and Notice of Preparation (NOP) for the Project (Appendix 1.0). The City of Oroville distributed the IS and NOP for review and comment to the State Clearinghouse (SCH, #2022110054) and interested parties for a 33-day comment period from November 3 to December 5, 2022. Additionally, the City held a scoping meeting which was advertised with the publication of the NOP on November 3, 2022 and scheduled for November 17, 2022 in order to allow early public/agency input and comments about the Project, the IS and future environmental review. No members of the public and agencies attended this meeting. The City received six NOP comment letters, which are summarized in Table 1.0-3 of Section 1.0 of this DEIR.

ES-7 Summary of Impacts and Mitigation Measures

Table S.7-1 presents a summary of Project-specific environmental impacts analyzed and identified in this DEIR, the mitigation measures proposed for those impacts, and the level of significance after mitigation.

The analysis in this DEIR concludes that, although certain impacts are considered significant or potentially significant, the majority of these impacts could be avoided or reduced to less than significant with implementation of mitigation measures. All impacts would be less than significant after the implementation of mitigation measures, with the exception of hazards related to airport safety, noise related to traffic, and traffic related to Vehicle Mile Traveled (VMT), which would remain significant even as no feasible mitigation is possible. Therefore, the Proposed Project would result in significant and unavoidable impacts to hazards and hazardous materials, noise, and transportation.

Table ES-1. Summary of Proposed Project Impacts and Mitigation Measures		
Environmental Impacts	Mitigation Measures	Residual Impact (with Mitigation)
Notes: NI = No Impact, LTS = Less than Significant, SU = Significant, Unavoidable, CC = Cumulatively Considerable, LTCC = Less than Cumulatively Considerable		
BIOLOGICAL RESOURCES		
<p>BIO-1: Project implementation could have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS.</p> <p>Impact Determination: <i>Less than Significant with Mitigation</i></p>	<p>BIO-1: Implement Erosion Control Measures and BMPs. The Project proponent shall implement erosion control measures and BMPs to reduce the potential for sediment or pollutants at the Project site. Examples of appropriate measures are included below.</p> <ul style="list-style-type: none"> • Avoided aquatic resources should be clearly demarcated prior to construction. Avoidance buffers should be consistent with the City of Oroville requirements and/or requirements of regulatory permits. Erosion control measures should be placed between avoided aquatic resources and the outer edge of the impact limits prior to commencement of construction activities. Such identification and erosion control measures should be properly maintained until construction is completed and the soils have been stabilized. • Any fueling in the Study Area should use appropriate secondary containment techniques to prevent spills. <p>BIO-2: Worker Environmental Awareness Program. The Project proponent shall require a mandatory Worker Environmental Awareness Program provided by qualified biologist for all contractors, work crews, and any onsite personnel to aid workers in recognizing special status species and sensitive</p>	LTS

Table ES-1. Summary of Proposed Project Impacts and Mitigation Measures		
Environmental Impacts	Mitigation Measures	Residual Impact (with Mitigation)
Notes: NI = No Impact, LTS = Less than Significant, SU = Significant, Unavoidable, CC = Cumulatively Considerable, LTCC = Less than Cumulatively Considerable		
	<p>biological resources that may occur on-site prior to any construction or grading of the site. The program shall include identification of the special status species and their habitats, a description of the regulatory status and general ecological characteristics of sensitive resources, and review of the limits of construction and mitigation measures required to reduce impacts to biological resources within the work area.</p> <p>BIO-3: Special-Status Species – Plants. There is potential or low potential for 23 special-status plants to occur within the Study Area. The following mitigation measures are required to minimize potential impacts to special-status plants.</p> <ul style="list-style-type: none"> • Perform floristic plant surveys according to USFWS, CDFW, and CNPS protocols prior to construction. Surveys shall be conducted by a qualified biologist and timed according to the appropriate phenological stage for identifying target species. Known reference populations shall be visited and/or local herbaria records shall be reviewed, if available, prior to surveys to confirm the phenological stage of the target species. If no special-status plants are found within the Project site, no further measures pertaining to special-status plants are necessary. • If special-status plants are identified within 25-feet of the Project impact area, implement the following measures: 	

Table ES-1. Summary of Proposed Project Impacts and Mitigation Measures		
Environmental Impacts	Mitigation Measures	Residual Impact (with Mitigation)
Notes: NI = No Impact, LTS = Less than Significant, SU = Significant, Unavoidable, CC = Cumulatively Considerable, LTCC = Less than Cumulatively Considerable		
	<ul style="list-style-type: none"> If avoidance of special-status plants is feasible, establish and clearly demarcate avoidance zones for special-status plant occurrences prior to construction. Avoidance zones shall include the extent of the special-status plants plus a 25-foot buffer, unless otherwise determined by a qualified biologist, and shall be maintained until the completion of construction. A qualified biologist/biological monitor shall be present must occur within the avoidance buffer to ensure special-status plants are not impacted by the work. If avoidance of special-status plants is not feasible, mitigate for significant impacts to special-status plants. Mitigation measures shall be developed in consultation with CDFW. Mitigation measures may include permanent preservation of onsite or offsite habitat for special-status plants and/or translocation of plants or seeds from impacted areas to unaffected habitats. <p>BIO-4: Special-Status Species – Invertebrates. There is potential for three federally listed special-status invertebrates to occur within the Study Area. The following mitigation measure is required to minimize potential impacts to special-status invertebrates.</p> <ul style="list-style-type: none"> No Project construction shall proceed in areas supporting potential habitat for federally listed vernal pool invertebrates, or within adequate buffer areas (250 feet or 	

Table ES-1. Summary of Proposed Project Impacts and Mitigation Measures

foreseeable development in Butte County, result in a cumulatively considerable noise impact? Impact Determination: <i>Cumulative Considerable and Significant and Unavoidable</i>		
PUBLIC SERVICES		
PUB-1: Project implementation could result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for fire, police, schools, and/or other public facilities. Impact Determination: <i>Less than Significant with Mitigation</i>	PUB-1: Annexation into CFD 2006-01 and CFD 2006-02. Prior to recordation of the Final Map, the Project shall annex into both CFD 2006-01 and CFD 2006-02.	LTS
TRANSPORTATION		
TR-2: Project implementation could conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b). Impact Determination: <i>Significant and Unavoidable</i>	TR-1: Provide Pedestrian Network Improvements. Providing a pedestrian access network to link areas of the Project site encourages people to walk instead of drive. This mode shift results in people driving less and thus a reduction in VMT.	SU

Table ES-1. Summary of Proposed Project Impacts and Mitigation Measures		
Environmental Impacts	Mitigation Measures	Residual Impact (with Mitigation)
Notes: NI = No Impact, LTS = Less than Significant, SU = Significant, Unavoidable, CC = Cumulatively Considerable, LTCC = Less than Cumulatively Considerable		
	<p>The Project will provide a pedestrian access network that internally links all uses and connects to all existing or planned external streets and pedestrian facilities contiguous with the project site. The Project will minimize barriers to pedestrian access and interconnectivity. Physical barriers such as walls, landscaping, and slopes that impede pedestrian circulation will be eliminated. Some aspects of this measure are already included in the Proposed Project.</p> <p>Increasing the use of pedestrian improvements would further reduce Project-related VMT. The range of effectiveness of this measure as described by BCAG is from 0.5 percent to 5.7 percent.</p> <p>TR-2: Provide Traffic Calming Measures. Providing traffic calming measures encourages people to walk or use bicycles instead of using a vehicle. This mode shift will result in a decrease in VMT.</p> <p>Project design will include pedestrian/bicycle safety and traffic calming measures in excess of jurisdiction requirements. Roadways will be designed to reduce motor vehicle speeds and encourage pedestrian and bicycle trips with traffic calming features. Traffic calming features may include: marked crosswalks, curb extensions, speed tables, raised crosswalks, raised intersections, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips</p>	

Table ES-1. Summary of Proposed Project Impacts and Mitigation Measures

1.0 INTRODUCTION

1.1 Purpose of the Draft EIR

This Draft EIR identifies and evaluates the potential environmental impacts associated with the implementation of the Proposed Project. The Project entails the subdivision of a 44.97-acre site into 172 single-family lots in Oroville California.

As described in CEQA Guidelines Section 15121(a), an EIR is an informational document that informs agency decision makers and the general public of the potentially significant environmental impacts of a project, identifies ways to minimize the significant impacts, and describes a reasonable range of alternatives to the project. CEQA requires that an EIR be prepared by the agency with primary responsibility over the approval of a project (referred to as the Lead Agency). The City of Oroville (City) as the Lead Agency has prepared this DEIR in accordance with the CEQA (PRC Sections 21000 et. seq.) and the Guidelines for the Implementation of CEQA (CCR Title 14, Sections 15000 et seq.).

This DEIR is intended to provide information to public agencies and the general public regarding the potential direct, indirect, and cumulative environmental impacts associated with the Proposed Project. Public agencies are charged with the duty to consider and minimize environmental impacts of proposed development, where feasible, and are obligated to balance a variety of public objectives including economic, environmental, and social factors in their decision making. The City has determined that an EIR is the appropriate CEQA documentation due to the potential for significant environmental impacts that could result from approval of the requested actions and development of the Proposed Project. This Draft EIR evaluates the existing environmental conditions in the area, analyzes potential environmental impacts due to the implementation of the Project, and identifies feasible mitigation measures that could avoid or reduce the magnitude of those impacts. CEQA requires a Lead Agency neither approve nor implement a project unless significant environmental impacts have been reduced, or, if a Lead Agency approves the project even though significant impacts identified in the DEIR cannot be fully mitigated, the Lead Agency must state in writing the reasons for its action by adopting Findings and a Statement of Overriding Considerations (CEQA Guidelines Section 15091).

Agency	Permit or Approval
City of Oroville City Council	<ul style="list-style-type: none"> • Certification of the EIR, • Approval of a General Plan Amendment to change the land use designation for the site from Airport Business Park to Residential -Single Family, • Approval of a Rezoning from Airport Business Park (ABP)and Airport Influence Area Overlay (AIA-O) to Single Family Residential (R-1), and • Approval of the Tentative Subdivision map

1.2 Known Trustee and Responsible Agencies

Other public agencies may use this DEIR to issue approvals and permits related to the Proposed Project. For the purpose of CEQA, the term *trustee agency* means a state agency having jurisdiction by law over natural resources affected by a project which are held in trust for the people of California. In CEQA, the term *responsible agency* includes all public agencies other than the lead agency that may have approval authority in some regard associated with the Proposed Project. A list of agency approvals that may be required to implement the Proposed Project is provided in Table 1.2. The types of actions that these agencies, as well as other agencies not included on this list, may take in connection with the Proposed Project include, but may not be limited to the following:

- Approve, adopt, or amend applicable plans, policies, or programs,
- Make findings of consistency,
- Approve and issue permits,
- Approve agreements,
- Provide authorization and approval of funding, and
- Provide service.

Table 1.2. Potential Trustee and Responsible Agency Approvals and Reviews	
Agency	Review
Butte County Air Quality Management District (BCAQMD)	Dust control plan
Central Valley Regional Water Quality Control Board	Construction General Permit
Butte County Airport Land Use Commission	Review of the Feather Ranch Project for compliance with the Oroville Municipal Airport Land Use Plan

1.3 Type of Document

CEQA and the CEQA Guidelines identify several types of EIRs, each applicable to different project circumstances. This EIR is for a specific development project with defined parameters. As such, this EIR is a *project* EIR. Project EIRs are defined by CEQA Guidelines (Section 15161) as:

“The most common type of EIR examines the environmental impacts of a specific development project. This type of EIR should focus primarily on the changes in the environment that would result from the development project. The EIR shall examine all phases of the project including planning, construction, and operation.”

1.4 Intended Use of the EIR

This Draft EIR is intended to evaluate the environmental impacts of the Project based on an equal level analysis of the three proposed alternatives. This EIR in its final form will be used by the City in considering approval of the Proposed Project. In accordance with CEQA Guidelines Section 15126, the EIR will be used as the primary environmental document in consideration of all subsequent planning and permitting actions associated with the Project, to the extent such actions require CEQA compliance and as otherwise permitted under applicable law.

1.5 Draft EIR Organization

This DEIR is organized as follows:

- The Summary provides summary information on the Project location and setting, Project characteristics, areas of controversy and issues to be resolved, Project alternatives, and a summary of impacts and mitigation measures.
- Section 1.0 of the DEIR provides an introduction to the Proposed Project, the purpose of the DEIR, a description of the organization of the DEIR, the intended uses of the DEIR, and a description of the public review process.
- Section 2.0 provides a description of the Project location, Project objectives, and the elements of the Proposed Project.
- Section 3.0 provides the environmental analysis of the Proposed Project. This includes the description of the regulatory background, environmental setting (existing conditions), the analysis of environmental impacts, and a discussion of mitigation measures to reduce or eliminate any significant environmental impacts.
- Section 4.0 addresses other aspects of compliance with CEQA including a description of significant and unavoidable adverse impacts, effects found not to be significant, significant irreversible environmental changes, and growth-inducing impacts.
- Section 5.0 discusses the alternatives considered and rejected, alternatives considered and analyzed, and potential environmental impacts of implementing alternatives to the Proposed Project, including the No Project Alternative. This chapter also identifies the Environmentally Superior Alternative in accordance with CEQA Guidelines Section 15126.6(e)(2).
- Section 6.0 provides the references used to prepare the EIR.
- Section 7.0 provides a list of the DEIR preparers.
- Appendices contain information that supplements or supports the DEIR.

1.6 Environmental Review Process

1.6.1 Notice of Preparation and Initial Study

In accordance with the CEQA Guidelines, the City of Oroville, as Lead Agency, prepared an IS and NOP for an EIR on the Proposed Project. A copy of the IS and NOP are provided in Appendix 1.0-A1. The City of Oroville distributed the IS and NOP for review and comment to the SCH (#2022110054) and interested parties for a 33-day comment period from November 3 to December 5, 2022.

CEQA Guidelines Section 15063 (c) provides the purpose and use of an IS. Section 15063(c) is as follows:

- (c) Purposes. The purposes of an Initial Study are to:
- (1) Provide the Lead Agency with information to use as the basis for deciding whether to prepare an EIR or a Negative Declaration.
 - (2) Enable an applicant or Lead Agency to modify a project, mitigating adverse impacts before an EIR is prepared, thereby enabling the project to qualify for a Negative Declaration.
 - (3) Assist in the preparation of an EIR, if one is required, by:
 - (A) Focusing the EIR on the effects determined to be significant,
 - (B) Identifying the effects determined not to be significant,
 - (C) Explaining the reasons for determining that potentially significant effects would not be significant, and
 - (D) Identifying whether a program EIR, tiering, or another appropriate process can be used for analysis of the project's environmental effects.
 - (4) Facilitate environmental assessment early in the design of a project;
 - (5) Provide documentation of the factual basis for the finding in a Negative Declaration that a project will not have a significant effect on the environment;
 - (6) Eliminate unnecessary EIRs;
 - (7) Determine whether a previously prepared EIR could be used with the project.

The IS determined that the Proposed Project would have a less than significant impact or no impacts in the following IS analysis areas:

Aesthetics,	Mineral Resources,
Agriculture and Forest Resources,	Public Services (except for fire protection),
Geology and Soils,	Recreation,
Hazards and Hazardous Materials	Wildfires
(except for airport hazards),	Utilities (except for wastewater services).
Hydrology and Water Quality,	

1.6.2 Scoping Meeting

The scoping meeting was advertised with the publication of the NOP on November 3, 2022 and scheduled for November 17, 2022 in order to allow early public/agency input and comments about the Project, the

IS and future environmental review. No members of the public and agencies attended this meeting. The City received six NOP comment letters, summarized in Table 1-3. The comment letters are included in Appendix 1.0-A2. These comments were considered as a part of the EIR analysis.

Table 1-3. NOP Comments	
Name of Commenter/ Agency	Comment Summary
California Department of Fish and Wildlife	The comment letter provides CDFW's role in the protection of fish and wildlife in the state identifying CDFW as a trustee and responsible agency under CEQA. The letter also provides guidance for the assessment of biological resources including the information that should be provided in a Biological Assessment (BA). The comment letter continues and states that the EIR should provide a thorough discussion of the Project's potential direct, indirect, and cumulative impacts on biological resources and provides information that should be discussed in an EIR. The letter states that the EIR should include appropriate and adequate avoidance, minimization, and/or mitigation measures for all direct, indirect, and cumulative impacts that are expected to occur as a result of the construction and long-term operation and maintenance of the Project. The letter provides information on special-status species levels and the requirement for mitigation of impacts to these species. The letter also discusses the California Endangered Species Act (ESA), the Native Plant Protection Act (NPPA), the Lake and Streambed Alteration Program, and required filing fees.
Native American Heritage Commission	The comment letter provides the requirements for Native American consultation pursuant to Assembly Bill (AB) 52. The letter also provides information regarding mitigation for impacts to Tribal Cultural Resources (TCRs) and recommendations for cultural resources assessments.
Butte County Air Quality Management District	The comment letter provides information on air pollutant screening threshold for the air district and recommends using the latest version of California Emissions Estimator Model (CalEEMod) to perform modeling and quantification of pollutants created by construction and operational activities to estimate impacts of criteria air pollutants as well as greenhouse gases.
Washoe Tribe of Nevada and California	The response to the NOP states "At this time we have no interest in the project."
Butte County Public Works	The comment letter expresses concern about roadway improvements necessary to meet the transportation and safety demands associated with the project and that impact studies be performed, referencing the Butte County 2007 Thermalito Master Drainage Plans (updated in 2009), which provides drainage information in the area and provides a consistent area-wide analysis.
Jeanette Morton	The comment letter expresses opposition to the project unless the City does something to address the lack of adequate response in regard to fire in the area.

1.6.3 Draft EIR

As a result of the IS analysis, comments received during the NOP scoping meeting and public review period, the City determined that the Proposed Project could have significant environmental impacts to certain environmental resources and that an EIR should be prepared. These environmental resources

include air quality, biological resources, cultural resources, energy, greenhouse gas and climate change, hazards and hazardous materials (airport hazards only), noise, paleontological resources, population and housing, public services (fire protection only) , transportation, tribal cultural resources and utilities (wastewater services only). This Draft EIR provides this analysis.

This document constitutes the Draft EIR. The Draft EIR contains a description of the Project, a description of the environmental setting, identification of Project impacts, alternatives, and feasible mitigation measures for impacts found to be significant. Upon completion of the Draft EIR, the City will file the Notice of Completion (NOC) with the California Office of Planning and Research (OPR) to begin the public review period (PRC Section 21161).

1.6.4 Public Notice/Public Review

Concurrent with the NOC, the City will provide public notice of the availability of the Draft EIR for public review and invite comment from the general public, agencies, organizations, and other interested parties. The public review and comment period is 45 days. Notice of the time and location of any public meetings and hearings will be published prior to the meeting/hearing in accordance with applicable law. All comments or questions regarding the Draft EIR should be addressed to:

Wes Ervin, Principal Planner
City of Oroville
1735 Montgomery Street
Oroville, California 95965

Comments may also be sent to Mr. Ervin via e-mail at: wervin@cityoforoville.org

1.6.5 Response to Comments/Final EIR

Following the public review period, a Final EIR (FEIR) will be prepared. The FEIR will respond to all comments received during the public review period that raise significant environmental concerns and may contain any necessary revisions to the Draft EIR. The Draft EIR, as revised and combined with responses to comments, will constitute the Final EIR.

1.6.6 Certification of the EIR/Project Consideration

The City Council will review and consider the FEIR. If the City Council finds that the FEIR is *adequate and complete*, the City Council may certify the FEIR. Additionally, upon review and consideration of the FEIR, the Council may take action to approve, revise, or reject the Proposed Project. Any decision to approve the Project would be accompanied by written findings in accordance with CEQA Guidelines Sections 15091 and 15093. A Mitigation Monitoring and Reporting Program (MMRP), as described below, must also be adopted for mitigation measures that have been incorporated into or imposed on the Project to reduce or avoid significant effects on the environment. The MMRP will be designed to ensure that these measures are enforceable and carried out during Project implementation.

1.6.7 Mitigation Monitoring and Reporting Program

CEQA Section 21081.6(a) requires lead agencies to adopt an MMRP to describe measures that will be adopted and made a condition of Project approval in order to mitigate or avoid significant effects on the environment. The specific reporting or monitoring program required by CEQA is not required to be included in the EIR; however, it must be presented to the City Council for adoption.

Throughout the EIR, mitigation measures for potentially-significant environmental impacts have been clearly identified and presented in language that will facilitate establishment of an MMRP. Any mitigation measures adopted by the City Council as conditions for approval of the Project will be included in an MMRP to ensure enforceability and verify compliance.

THIS PAGE INTENTIONALLY LEFT BLANK

2.0 PROJECT DESCRIPTION

2.1 Project Location and Setting

The Project is located directly southwest of the Feather Avenue/20th Street intersection in City of Oroville, California. Assessor's Parcel Number (APN) 030-230-098 (Figures 2-1 and 2-2). The Project is 44.97 acres in size. The Surrounding uses include single-family homes and vacant land to the east of the Project Site. Rural residential uses and vacant land lie to the north of the Project Site; vacant land lies to the west of the Site, with rural residential uses and vacant land to the south. The Oroville Municipal Airport (OMA) is approximately 0.75 mile to the south of the Project Site and the Thermalito Forebay is 0.5 mile to the north (Figure 2-3).

2.2 Project Objectives

Project objectives are required to be provided in an EIR. CEQA Guidelines Section 15124(b) states that:

"[a] clearly written statement of objectives will help the lead agency develop a reasonable range of alternatives to evaluate in the EIR and will aid the decision makers in preparing findings or a statement of overriding considerations, if necessary. The statement of objectives should include the underlying purpose of the Project and may discuss the Project benefits."

The Project objectives area as follows:

- Develop an economically feasible housing plan that is compatible with the surrounding community in a low fire risk zone to provide permanent housing relief for the 50,000 displaced Paradise fire survivors.
- Fulfill the housing needs of the state, City of Oroville, and County of Butte by rezoning un-used isolated airport business park land to medium density residential homes to help address the current RHNA. The housing units will be market-rate for-sale units.
- Create a vibrant residential community by providing a like-kind residential project that further adds to eastern Oroville's current and future neighborhoods. The Project will include lots of 6,000 sf or larger, setback and landscaping buffers.
- Provide a well-connected open space network that includes the addition of a neighborhood park, bicycle paths and pedestrian sidewalks, open space buffers, and a space for recreational activities.
- Incorporate the Building Code requirements for energy efficiencies and water savings.

2.3 Project Description

The Proposed Project is the subdivision of a 44.97-acre site into 172 single-family lots located at the southwest corner of the Feather Avenue/20th Street intersection in the City of Oroville, California. Figure 2-4 provides the Project Site Plan. Lots will range in size from 6,600 to 9,410 sf, average lot size is 7,450 sf. The

subdivision is proposed as a phased map. Phase 1 proposes 68 lots, Phase 2 proposes 58 lots, and Phase 3 proposes 46 lots (Figure 2-4).

Lots within the Project will be served by a grid of internal cul-de-sac streets, including curbs, gutters and sidewalks. The Project's north/south running street (Street A) will be the connecting street for all of the cul-de-sac streets. The Project will also construct an extension of Feather Avenue on the north Project boundary and Biggs Avenue on the south Project boundary. These two streets, along with the existing 20th Street, will provide Project access. All streets will be built to City of Oroville roadway standards (Figure 2-5). Improvements to 20th Street include curbs, gutters and sidewalks adjacent to the Project Site.

The Project includes amenities such as a passive park on Lot A with pedestrian pathways and a storm drainage basin. The Project also includes the development of a bicycle/pedestrian meandering pathway along the east side of Street A separated from the street by greenway space and bicycle/pedestrian pathway connections from the east end of Project streets to 20th Street.

Storm drainage improvements will include the installation of underground storm drain pipes and storm water leach trenches beneath the curb, gutter and sidewalk to detain and percolate additional runoff generated by the Project improvements. Figures 2-5 through 2-8 show storm drain trench locations and detail. The Project storm drain system will connect to the existing City of Oroville storm drain facilities in 20th Street.

The Project Site is currently within the City of Oroville General Plan land use designation of Airport Business Park (ABP) and zoning district of ABP with an Airport Influence Area Overlay (AIA-O). None of these designations allow the development of residential uses at the density of 3.82 units per acre requested for the Proposed Project. As a part of the Project, a General Plan amendment changing the Project Site to Medium Low Density Residential (3 to 6 units per acre) and a rezoning to Single Family Residential (R-1) has been requested.

The Project Site is also within the B1 and B2 Compatibility Zones for the Oroville Municipal Airport Compatibility Land Use Plan. The B1 zone allows residential development of 0.1 units per acre and the B2 zone residential development of 0.5 units per acre. As such, these Compatibility Zones do not allow residential development at the density proposed for the Project. The consequence of the Project Site being within the B1 and B2 zones is explained further in Section 3.8 of this Draft EIR.

The Project Site is currently vacant undeveloped land. Elevations range from 230 feet Above Mean Sea Level (AMSL) at the southwest corner of the Project Site to 190 feet AMSL at the northeast corner, generally sloping from west to east.

City-required approvals include a General Plan amendment, rezone, and a tentative subdivision map.

2.3.1 Construction Timing

Construction is anticipated to start in 2024 and last through 2026. The construction will be phased as follows: Phase 1 (Lots 1-68) to occur in 2024, Phase 2 (Lots 69-126) in 2025, and Phase 3 (Lots 141-172) in 2026.

3.0 ENVIRONMENTAL SETTING, IMPACTS AND MITIGATION

3.0.1 Introduction

Chapter 3.0 of this DEIR provides separate sections for each environmental topic. Each section describes the environmental setting (existing conditions) and regulatory setting; direct, indirect, and cumulative impacts from the Proposed Project; and mitigation measures to reduce or avoid significant impacts.

As part of the scoping process described in Section 1.6, the City of Oroville prepared an IS and NOP for an EIR on the Proposed Project and received comments on the scope of the EIR from interested agencies, organizations and individuals (Appendix 1.0). As a result of the scoping process, the City determined that the environmental issue areas to be evaluated in the DEIR are:

- 3.1 Air Quality
- 3.2 Biological Resources
- 3.3 Cultural Resources
- 3.4 Energy
- 3.5 Geology, Soils and Paleontological Resources (paleontological resources only)
- 3.6 Greenhouse Gas and Climate Change
- 3.7 Hazards and Hazardous Materials (airport hazards only)
- 3.8 Land Use
- 3.9 Noise
- 3.10 Population and Housing
- 3.11 Public Services (fire protection only)
- 3.12 Transportation
- 3.13 Tribal cultural Resources
- 3.14 Utilities (wastewater and storm drainage services only)

Issues Not Included for Further Review in this DEIR

In addition to the resource subjects listed in Section 3.1, the City considered other resource subject areas in determining the potential of the Project to result in significant effects. CEQA Guidelines Section 15060(d) enables the lead agency to focus the EIR on the issue areas on which the Project could have significant effect, but the lead agency must provide a brief explanation of the reasons for determining that other effects would not be significant or potentially significant.

Specifically, CEQA contemplates using an IS to identify a project's insignificant and potentially significant effects, and then focuses the project EIR analysis on the areas where potentially significant effects have been identified:

"Effects dismissed in an Initial Study as clearly insignificant and unlikely to occur need not be discussed further in the EIR unless the Lead Agency subsequently receives information inconsistent with the finding in the Initial Study. A copy of the Initial Study may be attached to the EIR to provide the basis for limiting the impacts discussed." (CEQA Guidelines, § 15143.)

"An EIR shall contain a statement briefly indicating the reasons that various possible significant effects of a project were determined not to be significant and were therefore not discussed in detail in the EIR. Such a statement may be contained in an attached copy of an Initial Study" [CEQA Guidelines Section 15128. See also: PRC Sections 21002.1(e), 21100(c); CEQA Guidelines, Sections 15006(d), and 15063(c)(3)].

As discussed in Section 1.0, the City prepared and circulated the NOP and IS for this DEIR in November 2022. The NOP and IS are included with this DEIR as Appendix 1.0. The discussion below describes the resource subjects that were previously analyzed in the IS and determined to not require further analysis in this DEIR. For each of the issues listed, the 2022 IS found the Project to have no impact or a less-than-significant impact. Mitigation measures to reduce the level of impact were neither recommended nor required to avoid potentially significant impacts in each of these issue areas.

The decision not to pursue further evaluation in this DEIR considered all six comment letters on the NOP/IS.

Aesthetics

The City's General Plan identifies that views of the Feather River and Table Mountain are considered important scenic views in the City. However, as discussed in the IS, the construction of the Project would not result in any degradation of views of Table Mountain or the Feather River. Additionally, the Proposed Project is not located within the vicinity of an officially designated scenic highway. Further, the City's 2030 General Plan policies and the Design Guidelines would be effective in reducing the visual prominence and aesthetic impact of new development. Therefore, the Project would not substantially degrade the existing visual character or quality of public views of the site and its surroundings. Finally, adherence to the Design Guidelines and Municipal Code would reduce the impacts of daytime glare and nighttime lighting by requiring the design to limit lighting leakage and glare.

Agriculture and Forestry Resources

The Department of Conservation identifies the Project Site as Grazing Land. According to the California Important Farmland Finder, there is currently no designated Prime Farmland, Unique Farmland, or Farmland of Statewide Importance within the Project Site, nor within the Project vicinity. Additionally, none of the land within the Project Site or vicinity is under a Williamson Act contract. Finally, no identified forest lands exist on the Project Site or within the vicinity of the Project. As such, the Project would not have the potential to convert agricultural land or forest resources.

Geology and Soils

The Proposed Project Site is not located within an Alquist-Priolo Earthquake Zone. The Site is not within a currently established State of California Earthquake Fault Zone for surface fault rupture hazards. No active or potentially active faults are known to pass directly beneath the Project Site. Compliance with National Pollutant Discharge Elimination System (NPDES) and Stormwater Pollution Prevention Plan (SWPPP) requirements, as well as implementation of the General Plan Policies P1.2 and the California Building Code

(CBC), would ensure that soil erosion and related impacts would be less than significant. Finally, according to General Plan Figure SAF-2, the Project Site is located in an area that has a high potential for expansion. However, standard procedures used in the construction of concrete footings as required by the CBC and adherence General Plan Policy P1.2 requiring a site-specific geotechnical report, will reduce this potential impact to less than significant despite the shrink-swell potential identified for Project Site soils.

Hazards and Hazardous Materials

Project construction would involve the use of hazardous materials such as diesel fuel. The transport, storage, use, and disposal of such materials would be done in compliance with local, state, and federal regulation and in compliance with fuels and materials Best Management Practices to be established in the construction SWPPP that would be prepared for the Project and implemented during construction. Potential risks associated with the handling of fuels and other potentially hazardous materials during construction would be sufficiently addressed through such compliance and management and would not pose a substantial risk of exposure or significant environmental effects.

Hydrology and Water Quality

Oroville Municipal Code Section 15.88.060 *Standards for Grading, Excavation And Site Clearance* requires sedimentation and erosion control for all grading and site preparation activities. The Proposed Project would be required to prepare and comply with an approved SWPPP and Municipal Code Section 15.88.060. The Project would not use groundwater as a domestic water source. There are no creeks, streams or rivers on or near the Project Site. As such, siltation of on- or offsite waterways would not occur. Project compliance with General Plan policies and Section 16.16.130 of the Municipal Code would require stormwater facilities that would restrict stormwater flows from the Project Site. Federal Emergency Flood Management Agency flood hazard map 06007C0788E indicates that the entire Project Site is in unshaded Zone X. The Project Site is not located within a flood zone. According to Figure SAF-3 of the 2030 General Plan, the Project Site is within the inundation area of Lake Oroville and failure of the Oroville Dam could result in release of water held behind the dam, and inundation of much of the city and surrounding area. However, the California Department of Water Resources (DWR) is continually assessing Oroville Dam; the Oroville Dam is formally inspected multiple times each year by various entities. The dam is inspected twice a year by the California DWR's Division of Safety of Dams and annually by the Federal Energy Relicensing Commission Dam Safety Program. Therefore, an event such as the failure of Lake Oroville Dam has a low probability of occurring and is not considered to be a reasonably foreseeable event.

Land Use and Planning

The Project Site is located in the western area of the City. The only established residential community near the Project is a small subdivision located on the eastern boundary of the Project Site. The Project would be accommodated by existing roadways and would not require construction of new roadways that would preclude access to the surrounding area. As such, the Proposed Project would not physically divide an established community,

Mineral Resources

The Project site is not within a designated Mineral Resource Zone and would not have the potential to result in the loss of availability of valuable mineral resources.

Public Services

The Project would not result in substantial adverse physical impacts associated with the provision of new or physically altered police, schools, and parks facilities.

Recreation

The Project would be subject to Conservation Element Policy P3.1 requiring the dedication of land, the payment of in-lieu fees, or both for parks and recreational facilities . Therefore, Project impacts relating to parks and recreational facilities would be less than significant.

Utilities and Service Systems

Water

The Project includes the future development of 172 single-family homes and is anticipated to have an average water demand of 402 gallons per day (gpd) per housing unit or 69,066 gpd for the Project as a whole. The 69,066 gpd for the Project calculates to approximately 25.2 million gallons per year or 77.34 Acre-Feet (AF) Per Year (AFY) of water use. According to the Regional Water Quality Control Board (RWQCB), the Thermalito Water and Sewer District (TWSD) had a total demand of 2,295.75 AF of water in 2021. The addition of 77.34 AF from the Proposed Project would not result in an exceedance of the TWSD surface water supply of 8,200 AF. As such, there would be sufficient water supply available to adequately offset future water demands projected for the Proposed Project.

Storm Drainage

The Project's storm drain system is designed to control all site storm waters and not allow an increase of offsite storm water flow. As such, the Project would have a less than significant impact to storm drainage facilities. However, comments received during the public review of the IS provided further information regarding storm drainage in the vicinity of the Project. As such, this impact area is further discussed in this EIR.

Electric Power

Electricity is provided to the Project Site by Pacific Gas & Electric Company (PG&E). The electricity provider's ability to provide its services concurrently for each project is evaluated during the development review process. No new electric facilities will be required to provide electricity to the Project.

Wildfire

The Project Site is not in an area designated by the California Department of Forestry and Fire Protection (CAL FIRE) as a Fire Hazard Severity Zone. Furthermore, no Very High FHSZs are located nearby. Also, the

Project Site is not located in a State Responsibility Area (CAL FIRE 2022). The Project does not include any actions that would impair or physically interfere with an adopted emergency response plan or emergency evacuation plan. No construction activities would impede the use of surrounding roadways in an emergency evacuation. The Project would have no impact in this area.

3.0.2 Environmental Baseline

Pursuant to the State CEQA Guidelines (Section 15125(a)), the environmental setting used to determine the impacts associated with the Project normally is based on the environmental conditions that existed in the Project Area at the time the NOP was published. However, the CEQA Guidelines (Section 15125(a)) also says that where existing conditions change or fluctuate over time, a lead agency may define existing conditions by referencing historic conditions, conditions expected when a project becomes operational, or projected future conditions beyond the date of initial project operations, if doing so would meet CEQA's objective of giving the public and decisionmakers the most accurate and understandable picture practically possible of the project's likely near-term and long-term impacts.

For purposes of this EIR, *environmental baseline* is generally defined as conditions that existed within the Project Study Area at the time of NOP circulation, or November 3, 2022. This provides the basis for the determination of the majority of Project impacts, i.e., the changes to those conditions brought about by Project construction and operation either directly or indirectly. When the environmental baseline is substantially different than described above, the specific conditions and assumptions relied on for the issue area are described.

3.0.3 Impact and Mitigation Measure Terminology

This DEIR analyzes the potential direct, indirect, and cumulative environmental impacts of the Proposed Project. The determination of whether an impact is considered significant is based on specific significance criteria. Under CEQA, these criteria (also called Thresholds of Significance) are used to make a determination of significance for each environmental impact evaluated. An adverse impact that exceeds the significance criteria is considered *significant*, and an impact that does not exceed the criteria is considered *less than significant*. The CEQA significance criteria used in this DEIR are based on CEQA's mandatory findings of significance (as summarized in State CEQA Guidelines Section 15065); the checklist presented in Appendix G of the State CEQA Guidelines in effect when the Draft EIR was prepared; and where appropriate, factual or scientific data and regulatory standards of federal, state, and local agencies. For CEQA purposes, impacts in this DEIR are classified as:

- *No Impact* – There would not be any change to the environment as a result of the project.
- *Less than Significant Impact* - A project impact is considered less than significant if it would not exceed the threshold of significance and therefore would not cause a substantial adverse change in the environment. No mitigation is required for a less than significant impact.
- *Less than Significant Impact with Mitigation* - A project impact is considered significant if it results in a substantial adverse change in the physical conditions of the environment. Significant impacts are identified by the comparison of the project's effects to the established thresholds of

significance. Mitigation measures are identified, where feasible, to avoid, minimize, rectify, reduce, or compensate for significant impacts of the project, in accordance with the State CEQA Guidelines (Section 15126.4). If project impacts would be reduced to a less than significant level after the implementation of mitigation, the impact is classified as less than significant with mitigation.

- *Significant and Unavoidable Impact* - A project impact is considered significant and unavoidable if it would result in a substantial adverse change in the environment and if that impact would remain significant even after the implementation of mitigation. A lead agency can approve a project with significant unavoidable impacts if the specific economic, legal, social, technological, or other benefits of a proposed project outweigh the unavoidable adverse effects. In this case, the lead agency must adopt a statement of overriding considerations describing the specific reasons to support its action (State CEQA Guidelines Section 15093(b)).

3.0.4 Cumulative Impact Scenario

Section 15130(a) of the CEQA Guidelines requires a discussion of cumulative impacts of a project “when the project’s incremental effect is cumulatively considerable.” The CEQA Guidelines, Section 15355, defines a cumulative impact as “two or more individual effects which, when considered together, are considerable or which compound or increase other environmental impacts.” Cumulatively considerable impacts are defined in Section 15065(a)(3) of the CEQA Guidelines as the “incremental effects of an individual project are significant when viewed in connection with the effects of past projects, the effects of other current projects, and the effects of probable future projects.”

Section 15130(b) of the CEQA Guidelines states:

“[t]he discussion of cumulative impacts shall reflect the severity of the impacts and their likelihood of occurrence, but the discussion need not provide as great detail as is provided of the effects attributable to the project alone. The discussion should be guided by the standards of practicality and reasonableness and should focus on the cumulative impact to which the identified other project contribute rather than the attributes of other projects which do not contribute to the cumulative impact.”

To analyze the cumulative impacts of the Project in combination with other expected projects, the amount and location of development expected to occur must be predicted. Section 15130(b) of the CEQA Guidelines allows two methods of prediction:

“Either:

- (A) A list of relevant past, present and probable future projects producing related or cumulative impacts, including, if necessary, those projects outside the control of the agency, or
- (B) A summary of projections contained in adopted local, regional or statewide plan, or related planning document, that describes or evaluates conditions contributing to the cumulative effect...”

Other than the Proposed Project, no other development is pending or proposed in the City or the surrounding area. Therefore, for the purpose of this DEIR, the Oroville 2030 General Plan (2015a) growth projections are the basis of the cumulative analysis.

The City of Oroville adopted the Oroville 2030 General Plan on June 2, 2009. As a part of the 2009 update process, an EIR was certified by the City (SCH #2008022024). Within this EIR were development projections to the year 2030. These projections are provided in Table 3-1.

Table 3-1. 2008 General Plan EIR - Expected 2030 Development Under the 2030 General Plan			
Location	Residential (dwelling units)	Industrial (square feet)	Commercial (square feet)
City Limit (only)	9,300	6,800,000	12,200,000
Sphere of Influence (only)	18,300	1,900,000	9,000,000
Total:	27,600	8,700,000	21,200,000

Source: City of Oroville 2015b

In 2015, the City again updated the General Plan, in part to include some land use changes within the city limits. As a part of this process, the *Oroville Sustainability Update Draft Supplemental EIR* (SCH# 2014052001) was written and certified by the City in 2015. The Draft Supplemental EIR (Draft SEIR) also updated the expected growth in the City using the same methodology to estimate future development as used in the 2009 EIR. The 2015 Draft SEIR included changes to the 2030 development projections which resulted in increase to residential, industrial, and commercial development within the City limits as shown in Table 3-2. The 2030 development projections provide the basis for cumulative analysis in this DEIR.

Table 3-2. 2015 General Plan SEIR – Expected 2030 Development Under the 2030 General Plan				
Location		Residential (dwelling units)	Industrial (square feet)	Commercial (square feet)
City Limit (only)	Change	+385	+226,000	-32,000
	New Total	9,685	7,026,000	12,168,000
Sphere of Influence (only)		18,300	1,900,000	9,000,000
Total:		27,985	8,926,000	21,168,000

Source: City of Oroville 2015b

THIS PAGE INTENTIONALLY LEFT BLANK

3.1 Air Quality

This section evaluates the Project-related effects to air quality. This section is based on the *Air Quality and Greenhouse Gas Emissions Assessment* prepared for the Project (ECORP 2023, Appendix 3.2). The information provided below is an abridged version of this report. This analysis was prepared using methodologies and assumptions recommended by the BCAQMD. Regional and local existing conditions are presented, along with pertinent standards and regulations. The purpose of this assessment is to estimate Project-generated criteria air pollutant emissions attributable to the Project and to determine the level of impact the Project would have on the environment and to provide feasible mitigation measures for these impacts.

3.1.1 Environmental Setting

The City of Oroville and the Project Site are within the Northern Sacramento Valley Air Basin (NSVAB). The NSVAB consists of seven counties: Sutter, Yuba, Colusa, Butte, Glenn, Tehama, and Shasta. The NSVAB is bounded on the north and west by the Coastal Mountain Range and on the east by the southern end of the Cascade Mountain Range and the northern end of the Sierra Nevada. These mountain ranges reach heights in excess of 6,000 feet AMSL, with individual peaks rising much higher. The mountains form a substantial physical barrier to locally created pollution as well as to pollution transported northward on prevailing winds from the Sacramento metropolitan area (Sacramento Valley Air Quality Engineering and Enforcement Professionals [SVAQEPP] 2021).

The environmental conditions of Butte County are conducive to potentially adverse air quality conditions. The basin area traps pollutants between two mountain ranges to the east and west. This problem is exacerbated by a temperature inversion layer that traps air at lower levels below an overlying layer of warmer air. Prevailing winds in the area are generally from the south and southwest. Sea breezes flow over the San Francisco Bay Area and into the Sacramento Valley, transporting pollutants from the large urban areas. Growth and urbanization in Butte County have also contributed to an increase in emissions.

3.1.2 Ambient Air Quality Standards

Air quality standards are set at both the federal and state levels of government. The federal Clean Air Act (CAA) requires the U.S. Environmental Protection Agency (USEPA) to establish ambient air quality standards for six criteria air pollutants: ozone (O₃), carbon monoxide (CO), nitrogen dioxide (NO₂), sulfur dioxide (SO₂), lead, coarse particulate matter (PM₁₀), and fine particulate matter (PM_{2.5}). The California CAA also sets ambient air quality standards. The state standards are more stringent than the federal standards, and they include other pollutants in addition to those regulated by the federal standards. An area is considered to be in attainment of the standards when the concentrations of pollutants are below the maximum allowed standards in that area. The Butte County portion of the NSVAB is designated as a nonattainment area for the federal O₃ standard and is also a nonattainment area for the state standards for O₃, PM₁₀ and PM_{2.5} and (California Air Resources Board [CARB] 2018, 2020).

3.1.3 Toxic Air Contaminants

In addition to the criteria pollutants discussed above, Toxic Air Contaminants (TAC) are another group of pollutants of concern. TACs are considered either carcinogenic or noncarcinogenic based on the nature of the health effects associated with exposure to the pollutant. For regulatory purposes, carcinogenic TACs are assumed to have no safe threshold below which health impacts would not occur, and cancer risk is expressed as excess cancer cases per one million exposed individuals. Noncarcinogenic TACs differ in that there is generally assumed to be a safe level of exposure below which no negative health impact is believed to occur. These levels are determined on a pollutant-by-pollutant basis.

There are many types of TACs, with varying degrees of toxicity. Sources of TACs include industrial processes such as petroleum refining and chrome plating operations, commercial operations such as gasoline stations and dry cleaners, and motor vehicle exhaust. Public exposure to TACs can result from emissions from normal operations, as well as from accidental releases of hazardous materials during upset conditions. The health effects of TACs include cancer, birth defects, neurological damage, and death.

Most recently, CARB identified Diesel Particulate Matter (DPM) as a TAC. DPM differs from other TACs in that it is not a single substance but rather a complex mixture of hundreds of substances. Diesel exhaust is a complex mixture of particles and gases produced when an engine burns diesel fuel. DPM is a concern because it causes lung cancer; many compounds found in diesel exhaust are carcinogenic. DPM includes the particle-phase constituents in diesel exhaust. The chemical composition and particle sizes of DPM vary between different engine types (i.e., heavy-duty, light-duty), engine operating conditions (i.e., idle, accelerate, decelerate), fuel formulations (i.e., high/low sulfur fuel), and the year of the engine (USEPA 2002). Some short-term (acute) effects of diesel exhaust include eye, nose, throat, and lung irritation, and diesel exhaust can cause coughs, headaches, light-headedness, and nausea. DPM poses the greatest health risk among the TACs; due to their extremely small size, these particles can be inhaled and eventually trapped in the bronchial and alveolar regions of the lung.

3.1.4 Sensitive Receptors

Sensitive receptors are defined as facilities or land uses that include members of the population who are particularly sensitive to the effects of air pollutants, such as children, the elderly, and people with illnesses. Examples of these sensitive receptors are residences, schools, hospitals, and daycare centers. CARB has identified the following groups of individuals as the most likely to be affected by air pollution: the elderly over 65, children under 14, athletes, and persons with cardiovascular and chronic respiratory diseases such as asthma, emphysema, and bronchitis. The nearest sensitive receptors to the Project Site include residences directly adjacent to the northeast corner of the Project Site boundary, fronting 20th Street, approximately 75 feet distant.

3.1.5 Regulatory Framework

3.1.5.1 Federal

Clean Air Act

The CAA of 1970 and the CAA Amendments of 1971 required the USEPA to establish the National Ambient Air Quality Standards (NAAQS), with states retaining the option to adopt more stringent standards or to include other specific pollutants.

These standards are the levels of air quality considered safe, with an adequate margin of safety, to protect the public health and welfare. They are designed to protect those sensitive receptors most susceptible to further respiratory distress such as asthmatics, the elderly, very young children, people already weakened by other disease or illness, and persons engaged in strenuous work or exercise. Healthy adults can tolerate occasional exposure to air pollutant concentrations considerably above these minimum standards before adverse effects are observed.

The USEPA has classified air basins (or portions thereof) as being in attainment, nonattainment, or unclassified for each criteria air pollutant, based on whether or not the NAAQS have been achieved. If an area is designated unclassified, it is because inadequate air quality data were available as a basis for a nonattainment or attainment designation. Table 2-3 in Appendix 3.1 lists the federal attainment status of the SVAB for the criteria pollutants.

3.1.5.2 State

California Clean Air Act

The California Clean Air Act (CCAA) allows the State to adopt ambient air quality standards and other regulations provided that they are at least as stringent as federal standards. CARB, a part of the California Environmental Protection Agency (CalEPA), is responsible for the coordination and administration of both federal and state air pollution control programs within California, including setting the California Ambient Air Quality Standards (CAAQS). CARB also conducts research, compiles emission inventories, develops suggested control measures, and provides oversight of local programs. CARB establishes emissions standards for motor vehicles sold in California, consumer products (e.g., hairspray, aerosol paints, and barbecue lighter fluid), and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions. CARB also has primary responsibility for the development of California's State Implementation Plan (SIP), for which it works closely with the federal government and the local air districts.

California State Implementation Plan

The CCAA allows states to adopt ambient air quality standards and other regulations provided that they are at least as stringent as federal standards. CARB, a part of the CalEPA, is responsible for the coordination and administration of both federal and state air pollution control programs within California, including setting the CAAQS. CARB also conducts research, compiles emission inventories, develops suggested control measures, and provides oversight of local programs. CARB establishes emissions

standards for motor vehicles sold in California, consumer products (e.g., hairspray, aerosol paints, and barbecue lighter fluid), and various types of commercial equipment. It also sets fuel specifications to further reduce vehicular emissions. CARB also has primary responsibility for the development of California's SIP, for which it works closely with the federal government and the local air districts. The SIP is a living document that is periodically modified to reflect the latest emissions inventories, plans, and rules and regulations of air basins as reported by the agencies with jurisdiction over them. The CAA Amendments dictate that states containing areas violating the NAAQS revise their SIPs to include extra control measures to reduce air pollution. The SIP includes strategies and control measures to attain the NAAQS by deadlines established by the CAA. The USEPA has the responsibility to review all SIPs to determine if they conform to the requirements of the CAA.

State law makes CARB the lead agency for all purposes related to the SIP. Local air districts and other agencies prepare SIP elements and submit them to CARB for review and approval. CARB then forwards SIP revisions to the USEPA for approval and publication in the Federal Register. The *2021 Triennial Air Quality Attainment Plan* constitutes the current SIP for the Butte County portion of the NSVAB. The plan is updated on a triennial basis and was last updated in 2021. It presents comprehensive strategies to reduce the O₃ precursor pollutants (Reactive Organic Gas [ROG] and Oxides of Nitrogen [NO_x]) from stationary, area, mobile, and indirect sources.

Tanner Air Toxics Act & Air Toxics "Hot Spots" Information and Assessment Act

CARB's statewide comprehensive air toxics program was established in 1983 with AB 1807, the Toxic Air Contaminant Identification and Control Act (Tanner Air Toxics Act of 1983). AB 1807 created California's program to reduce exposure to air toxics and sets forth a formal procedure for CARB to designate substances as TACs. Once a TAC is identified, CARB adopts an Airborne Toxics Control Measure for sources that emit designated TACs. If there is a safe threshold for a substance at which there is no toxic effect, the control measure must reduce exposure to below that threshold. If there is no safe threshold, the measure must incorporate toxics best available control technology to minimize emissions.

CARB also administers the State's mobile source emissions control program and oversees air quality programs established by state statute, such as AB 2588, the Air Toxics "Hot Spots" Information and Assessment Act of 1987. Under AB 2588, TAC emissions from individual facilities are quantified and prioritized by the air quality management district or air pollution control district. High priority facilities are required to perform a Health Risk Assessment and, if specific thresholds are exceeded, required to communicate the results to the public in the form of notices and public meetings. In September 1992, the "Hot Spots" Act was amended by SB 1731, which required facilities that pose a significant health risk to the community to reduce their risk through a risk management plan.

3.1.5.3 Local

Butte County Air Quality Management District

The BCAQMD is the air pollution control agency for Butte County, including the Project Site. The agency's primary responsibility is ensuring that the federal and state ambient air quality standards are attained and maintained in the Butte County portion of the NSVAB. The BCAQMD, along with other air districts in the

NSVAB, has committed to jointly prepare and implement the NSVAB Air Quality Attainment Plan for the purpose of achieving and maintaining healthful air quality throughout the air basin. The BCAQMD is also responsible for adopting and enforcing rules and regulations concerning air pollutant sources, issuing permits for stationary sources of air pollutants, inspecting stationary sources of air pollutants, responding to citizen complaints, monitoring ambient air quality and meteorological conditions, awarding grants to reduce motor vehicle emissions, and conducting public education campaigns, as well as many other activities.

The BCAQMD has adopted a number of rules and regulations to implement its air quality plans, including permitting, prohibitions and limits to emissions from a variety of stationary resources, regulation of open burning, regulation of toxic air contaminants, and implementation of CAA requirements. The following is a list of noteworthy rules that are required of construction activities associated with the Proposed Project:

- *Rule 400: Permit Requirements.* The purpose of this rule is to require any person constructing, altering, or operating a source that emits or may emit air contaminants to request an Authority to Construct or Permit to Operate from the Air Pollution Control Officer and to provide an orderly procedure for application, review, and authorization of new sources and of the modification and operation of existing sources of air pollution. Stationary sources that are subject to Rule 1101-Title V-Federal Operating Permits of these Rules and Regulations shall also comply with the procedures specified in this Rule.
- *Rule 402: Nuisance.* No person shall discharge from any non-vehicular source such quantities of air contaminants or other material which causes injury, detriment, nuisance, or annoyance to any considerable number of persons or to the public or which endanger the comfort, repose, health or safety of any such persons or the public or which cause or have a natural tendency to cause injury or damage to business or property.
- *Rule 205: Fugitive Dust.* The purpose of this RULE is to reduce ambient concentrations and limit fugitive emissions of fine particulate matter (PM₁₀) from construction activities, bulk material handling and storage, carryout and track-out, and similar activities, weed abatement activities, unpaved parking lots, unpaved staging areas, unpaved roads, inactive disturbed land, disturbed open areas, and windblown dust.
- *Rule 230: Architectural Coatings.* The purpose of this rule is to limit the emissions of volatile organic compounds from the use of architectural coatings supplied, sold, offered for sale, applied, solicited for application, or manufactured for use within the district.

3.1.6 Environmental Impacts

3.1.6.1 Thresholds of Significance

The impact analysis provided below is based on the following CEQA Guidelines Appendix G thresholds of significance. The Project would result in a significant impact to air quality if it would do any of the following:

- 1) Conflict with or obstruct implementation of any applicable air quality plan.

- 2) Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is nonattainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors).
- 3) Expose sensitive receptors to substantial pollutant concentrations.
- 4) Result in other emissions (such as those leading to odors adversely affecting a substantial number of people).

Butte County Air Quality Management District Thresholds

The significance criteria established by the applicable air quality management or air pollution control district (BCAQMD) may be relied upon to make the above determinations. According to the BCAQMD, an air quality impact is considered significant if the proposed Project contributes substantially to an existing or projected air quality violation or exposes sensitive receptors to substantial pollutant concentrations. The BCAQMD has established thresholds of significance for air quality for construction and operational activities of land use development projects such as that proposed, as shown in Table 3.1-1.

Table 3.1-1. BCAQMD Regional Significance Thresholds			
Air Pollutant	Construction Activities		Operations
	Pounds per Day	Tons per Year	Pounds per day
Reactive Organic Gas	137	4.5	25
Carbon Monoxide	-	-	-
Nitrogen Oxide	137	4.5	25
Sulfur Oxide	-	-	-
Coarse Particulate Matter (PM ₁₀)	80	-	80
Fine Particulate Matter (PM _{2.5})	-	-	-

Source: BCAQMD 2014

By its very nature, air pollution is largely a cumulative impact. No single project is sufficient in size, by itself, to result in nonattainment of ambient air quality standards. Instead, a project's individual emissions contribute to existing cumulatively significant adverse air quality impacts. If a project's individual emissions exceed its identified significance thresholds, the project would be cumulatively considerable. Projects that do not exceed significance thresholds would not be considered cumulative considerable.

3.1.6.2 Methods of Analysis

Air quality impacts were assessed in accordance with methodologies recommended by the BCAQMD. Where criteria air pollutant quantification was required, emissions were modeled using CalEEMod, version 2022.1. CalEEMod is a statewide land use emissions computer model designed to quantify potential criteria pollutant emissions associated with both construction and operations from a variety of land use projects. Project construction-generated air pollutant emissions were calculated using CalEEMod model defaults for Butte County. Operational air pollutant emissions were based on the Project Site Plans and traffic trip generation rates from KD Anderson & Associates, Inc. (2023).

3.1.6.3 Project Impacts and Mitigation Measures

Impact AIR-1:	Air pollutant emissions associated with the Proposed Project could conflict with or obstruct the applicable air quality plan.
Impact Determination	No impact.
<i>Threshold</i>	<i>Conflict with or obstruct implementation of the applicable air quality plan.</i>

Impact Discussion

As part of its enforcement responsibilities, the USEPA requires each state with nonattainment areas to prepare and submit a SIP that demonstrates the means to attain the federal standards. The SIP must integrate federal, state, and local plan components and regulations to identify specific measures to reduce pollution in nonattainment areas, using a combination of performance standards and market-based programs. Similarly, under state law, the CCAA requires an air quality attainment plan to be prepared for areas designated as nonattainment with regard to the NAAQS and CAAQS. Air quality attainment plans outline emissions limits and control measures to achieve and maintain these standards by the earliest practical date.

The 2021 Triennial Air Quality Attainment Plan constitutes the current SIP for the Butte County portion of the NSVAB and is the most recent air quality planning document covering Butte County. Air quality attainment plans are a compilation of new and previously submitted plans, programs (e.g., monitoring, modeling, permitting), district rules, state regulations, and federal controls describing how the state will attain ambient air quality standards. State law makes CARB the lead agency for all purposes related to the Air Quality Attainment Plan. Local air districts prepare air quality attainment plans and submit them to CARB for review and approval. The 2021 Triennial Air Quality Attainment Plan includes forecast ROG and NO_x emissions (O₃ precursors) for the entire NSVAB through the year 2020. The plan also includes control strategies necessary to attain the California O₃ standard at the earliest practicable date, as well as

developed emissions inventories and associated emissions projections for the region showing a downtrend for both ROG and NO_x.

The consistency of the Project with the *2021 Triennial Air Quality Attainment Plan* is determined by Project-induced development's consistency with air pollutant emission projections in the plan. However, although the *2021 Triennial Air Quality Attainment Plan* provides estimated ROG and NO_x emissions for the entire NSVAB, they are not apportioned by local air district, county or municipality. The *2021 Triennial Air Quality Attainment Plan* is based on information derived from projected growth in Butte County in order to project future emissions and then determine strategies and regulatory controls for the reduction of emissions. Therefore, until such time as Butte County's applicable air quality plan provides the locally appropriate data necessary to evaluate the consistency of a project's potential air quality impacts (due to non-stationary sources) with the attainment plan's emission projections, the BCAQMD recommends that lead agencies and applicants evaluate a project's contribution to changes in population growth in relation to those projections made by the Butte County Association of Governments (BCAG, BCAQMD 2014).

BCAG has prepared the Butte County population and housing forecasts using professionally accepted methodologies for long-range forecasting. Utilizing a *top down* approach, long-term projections prepared by the California Department of Finance (DOF) were consulted for Butte County and used by BCAG to re-establish control totals for the region. Additionally, a variety of data sources, including input from local jurisdictions, were reviewed and inserted at the local jurisdiction level, therefore incorporating a *bottom up* approach. Adjustments were made to compensate for the redistribution and repopulation of the Camp Fire burn area (BCAG 2018). As such, projects that propose development consistent with the growth anticipated by BCAG would be consistent with the *2021 Triennial Air Quality Attainment Plan*.

According to the California DOF, the City currently contains a population of 18,863 people and a housing inventory of 7,783 houses (DOF 2022). Accounting for a home vacancy rate of 7.1 percent in Oroville, the DOF (2022) estimates an average of 2.49 people living within an occupied residence. The Proposed Project would create an additional 172 single-family lots, which could be expected to accommodate 428 people ($2.49 \times 172 = 428$), thereby increasing the City of Oroville population to 19,291 (this estimate conservatively assumes that all future residents at the Project would be new to Oroville) and housing stock to 7,955 units. BCAG projects the population of Oroville to range from 20,757 to 22,283 people in the year 2025, and the housing inventory to range from 7,841 to 8,301 units. Thus, the expected growth in population and housing as a result of the Proposed Project would not surpass BCAG's projections and therefore would not result in a conflict with the *2021 Triennial Air Quality Attainment Plan*. Additionally, as shown in Tables 2-5 and 2-6 of the *2021 Triennial Air Quality Attainment Plan*, all Project emissions would be under the BCAQMD significance thresholds, which were established to for reducing air pollution and related health effects, a primary goal of the *2021 Triennial Air Quality Attainment Plan*. It is further noted that according to Chapter Five of the Oroville Housing Element, Goal 3: Facilitate Development of New Housing to Meet the Needs of the Community, the City will maintain a goal to facilitate development of a range of housing that varies sufficiently in terms of cost, design, size, location, and tenure to meet the housing needs of all economic segments of the community at a level which can be supported by the utility, water, and street infrastructure. Thus, the Project complies with the anticipated housing needs in

Oroville and supports the goals of the General Plan. For these reasons, the Project would be consistent with the goals of local air quality planning.

Mitigation Measures

No mitigation measures are required.

Impact AIR-2:	Project implementation could result in a cumulatively considerable net increase of any criteria air pollutant for which the project region is non-attainment under an applicable federal or state ambient air quality standard.
Impact Determination:	Less Than Significant
<i>Threshold:</i>	<i>Result in a cumulatively considerable net increase of any criteria pollutant for which the Project region is nonattainment under an applicable federal or state ambient air quality standard (including releasing emissions which exceed quantitative thresholds for ozone precursors).</i>

Impact Discussion

Project Construction-Generated Criteria Air Quality Emissions

Construction-generated emissions are temporary and short-term but have the potential to represent a significant air quality impact. Three basic sources of short-term emissions will be generated through construction of the Proposed Project: operation of the construction vehicles (i.e., excavators, trenchers, dump trucks), the creation of fugitive dust during clearing and grading, and the use of asphalt or other oil-based substances during paving activities. Construction activities such as excavation and grading operations, construction vehicle traffic, and wind blowing over exposed soils would generate exhaust emissions and fugitive PM emissions that affect local air quality at various times during construction. Effects would be variable depending on the weather, soil conditions, the amount of activity taking place, and the nature of dust control efforts. The dry climate of the area during the summer months creates a high potential for dust generation.

Construction-generated emissions associated with the Proposed Project were calculated using the CARB-approved CalEEMod computer program, which is designed to model emissions for land use development projects, based on typical construction requirements. Attachment A provides more information regarding the construction assumptions, including construction equipment and duration, used in this analysis.

Predicted maximum daily construction-generated emissions for the Proposed Project are summarized in Table 3.1-2. Construction-generated emissions are short-term and of temporary duration, lasting only as long as construction activities occur, but would be considered a significant air quality impact if the volume of pollutants generated exceeds the BCAQMD's thresholds of significance.

Table 3.1-2. Construction-Related Emissions						
Construction Year	Pollutant					
	ROG	NO_x	CO	SO₂	PM₁₀	PM_{2.5}
Daily (pounds per day)						
Construction Year One	3.75	36.0	34.2	0.1	9.4	5.4
Construction Year Two	5.40	19.7	30.2	0.0	1.6	0.9
Construction Year Three	5.28	18.7	29.7	0.0	1.5	0.9
Construction Year Four	5.20	17.9	29.3	0.0	1.4	0.8
<i>BCAQMD Significance Threshold</i>	<i>137 pounds/day</i>	<i>137 pounds/day</i>	-	-	<i>80 pounds/day</i>	-
Exceed BCAQMD Threshold?	No	No	No	No	No	No
Annual (tons per year)						
Construction Year One	0.2	2.3	2.1	0.0	0.3	0.2
Construction Year Two	0.7	2.6	3.8	0.0	0.2	0.1
Construction Year Three	0.7	2.4	3.7	0.0	0.2	0.1
Construction Year Four	0.6	2.1	3.2	0.0	0.2	0.1
<i>BCAQMD Significance Threshold</i>	<i>4.5</i>	<i>4.5</i>	-	-	-	-
Exceed BCAQMD Threshold?	No	No	No	No	No	No

Source: CalEEMod version 2022.1. Refer to Attachment A for Model Data Outputs.

Notes: Emission reduction/credits for construction emissions are applied based on the required implementation of BCAQMD Rule 205. The specific Rule 205 measures applied in CalEEMod include sweeping/cleaning adjacent roadway access areas daily, water exposed surfaces twice daily. Emissions taken of the season, summer or winter, with the highest outputs. Building construction, paving, and painting assumed to occur simultaneously.

As shown in Table 3.1-2, emissions generated during Project construction would not exceed the BCAQMD’s daily or annual thresholds of significance.

Project Operations Criteria Air Quality Emissions

Implementation of the Project would result in long-term operational emissions of criteria air pollutants such as PM₁₀ and O₃ precursors such as ROG and NO_x. Operational-generated emissions associated with the Proposed Project were calculated using CalEEMod. Predicted maximum annual operational-generated emissions of criteria air pollutants for the Proposed Project are summarized in Table 3.1-3.

Table 3.1-3. Operational-Related Emissions						
Emission Source	Pollutant (pounds per day)					
	ROG	NO_x	CO	SO₂	PM₁₀	PM_{2.5}
Summer Emissions						
Area	8.6	0.1	9.8	0.0	0.0	0.0
Energy	0.0	0.7	0.3	0.0	0.1	0.1
Mobile	6.7	1.5	10.1	0.0	0.0	0.0
Total:	15.3	2.3	20.2	0.0	3.8	0.1
<i>BCAQMD Significance Threshold</i>	<i>25 pounds/day</i>	<i>25 pounds/day</i>	-	-	<i>80 pounds/day</i>	-
Exceed BCAQMD Threshold?	No	No	No	No	No	No
Winter Emissions						
Area	7.8	-	-	-	-	-
Energy	0.0	0.7	0.3	0.0	0.1	0.1
Mobile	5.5	1.7	15.1	0.0	0.0	0.1
Total:	13.3	2.4	15.4	0.0	0.1	0.2
<i>BCAQMD Significance Threshold</i>	<i>25 pounds/day</i>	<i>25 pounds/day</i>	-	-	<i>80 pounds/day</i>	-
Exceed BCAQMD Threshold?	No	No	No	No	No	No

Notes: Emission projections predominately based on CalEEMod model defaults for Butte County. Average daily vehicle trips provided by KD Anderson & Associates, Inc. (2023).

Source: CalEEMod version 2022.1. Refer to Attachment A for Model Data Outputs.

As shown in Table 3.1-3, daily emissions associated with Project operations would not exceed the BCAQMD significance thresholds.

Mitigation Measures

No mitigation measures are required.

Impact AIR-3:	Construction and/or operation of the Proposed Project could expose sensitive receptors to substantial pollutant concentrations.
Impact Determination:	Less than Significant.
Threshold:	<i>Exposure of sensitive receptors to substantial pollutant concentrations.</i>

Impact Discussion

As previously described, sensitive receptors are defined as facilities or land uses that include members of the population who are particularly sensitive to the effects of air pollutants, such as children, the elderly, and people with illnesses. Examples of these sensitive receptors are residences, schools, hospitals, and daycare centers. CARB has identified the following groups of individuals as the most likely to be affected by air pollution: the elderly over 65, children under 14, athletes, and persons with cardiovascular and chronic respiratory diseases such as asthma, emphysema, and bronchitis. The nearest sensitive receptors to the Project Site include residences directly adjacent to the northeast corner of the Project Site boundary, fronting 20th Street, approximately 75 feet distant.

Construction-Generated Air Contaminants

Construction-related activities would result in temporary, short-term Proposed Project-generated emissions of DPM, ROG, NO_x, CO, and PM₁₀ from the exhaust of off-road, heavy-duty diesel equipment for site preparation (e.g., clearing, grading); soil hauling truck traffic; paving; and other miscellaneous activities. The Butte County portion of the NSVAB is listed as a nonattainment area for the federal O₃ standard and is also a nonattainment area for the state standards for O₃, PM₁₀, and PM_{2.5}. Thus, existing O₃, PM₁₀ and PM_{2.5} levels in the NSVAB are at unhealthy levels during certain periods. However, as shown in Table 3.1-2 the Project would not exceed the BCAQMD significance thresholds for construction emissions.

The health effects associated with O₃ are generally associated with reduced lung function. Because the Project would not involve construction activities that would result in O₃ precursor emissions (ROG or NO_x) in excess of the BCAQMD thresholds, the Project is not anticipated to substantially contribute to regional O₃ concentrations and the associated health impacts.

CO tends to be a localized impact associated with congested intersections. In terms of adverse health effects, CO competes with oxygen, often replacing it in the blood, reducing the blood's ability to transport oxygen to vital organs. The results of excess CO exposure can include dizziness, fatigue, and impairment of central nervous system functions. The Project would not involve construction activities that would result in CO emissions in excess of the BCAQMD thresholds. Thus, the Project's CO emissions would not contribute to the health effects associated with this pollutant.

Particulate matter (PM₁₀ and PM_{2.5}) contains microscopic solids or liquid droplets that are so small that they can get deep into the lungs and cause serious health problems. Particulate matter exposure has been linked to a variety of problems, including premature death in people with heart or lung disease, nonfatal heart attacks, irregular heartbeat, aggravated asthma, decreased lung function, and increased respiratory symptoms such as irritation of the airways, coughing, or difficulty breathing. For construction activity, DPM is the primary TAC of concern. PM₁₀ exhaust is considered a surrogate for DPM as all diesel exhaust is considered to be DPM. As with O₃ and NO_x, the Project would not generate emissions of PM₁₀ or PM_{2.5} that would exceed the BCAQMD's thresholds. Accordingly, the Project's PM₁₀ and PM_{2.5} emissions are not expected to cause any increase in related regional health effects for these pollutants.

Operational Air Contaminants

Operation of the Proposed Project would not result in the development of any substantial sources of air toxins. There are no stationary sources associated with the operations of the Project; nor would the Project attract additional mobile sources that spend long periods queuing and idling at the site. Onsite Project emissions would not result in significant concentrations of pollutants at nearby sensitive receptors. The Project would not have a high carcinogenic or non-carcinogenic risk during operation

Carbon Monoxide Hot Spots

It has long been recognized that CO exceedances are caused by vehicular emissions, primarily when idling at intersections. Concentrations of CO are a direct function of the number of vehicles, length of delay, and traffic flow conditions. Under certain meteorological conditions, CO concentrations close to congested intersections that experience high levels of traffic and elevated background concentrations may reach unhealthy levels, affecting nearby sensitive receptors. Given the high traffic volume potential, areas of high CO concentrations, or "hot spots," are typically associated with intersections that are projected to operate at unacceptable levels of service during the peak commute hours. It has long been recognized that CO hotspots are caused by vehicular emissions, primarily when idling at congested intersections. However, transport of this criteria pollutant is extremely limited, and CO disperses rapidly with distance from the source under normal meteorological conditions. Furthermore, vehicle emissions standards have become increasingly stringent in the last 20 years. Currently, the allowable CO emissions standard in California is a maximum of 3.1 grams/mile for passenger cars (there are requirements for certain vehicles that are more stringent). With the turnover of older vehicles, introduction of cleaner fuels, and implementation of increasingly sophisticated and efficient emissions control technologies, CO concentration in the Sacramento County portion of the SVAB is designated as in attainment. Detailed modeling of Project-specific CO "hot spots" is not necessary and thus this potential impact is addressed qualitatively.

A CO "hot spot" would occur if an exceedance of the state one-hour standard of 20 Parts Per Million (ppm) or the 8-hour standard of 9 ppm were to occur. The analysis prepared for CO attainment in the South Coast Air Quality Management District's (SCAQMD) *1992 Federal Attainment Plan for Carbon Monoxide* in Los Angeles County and a Modeling and Attainment Demonstration prepared by the SCAQMD as part of the 2003 Air Quality Management Plan can be used to demonstrate the potential for CO exceedances of these standards. The SCAQMD is the air pollution control officer for much of Southern

California. The SCAQMD conducted a CO hot spot analysis as part of the *1992 CO Federal Attainment Plan* at four busy intersections in Los Angeles County during the peak morning and afternoon time periods. The intersections evaluated included Long Beach Boulevard and Imperial Highway (Lynwood), Wilshire Boulevard and Veteran Avenue (Westwood), Sunset Boulevard and Highland Avenue (Hollywood), and La Cienega Boulevard and Century Boulevard (Inglewood). The busiest intersection evaluated was at Wilshire Boulevard and Veteran Avenue, which has a traffic volume of approximately 100,000 vehicles per day. Despite this level of traffic, the CO analysis concluded that there was no violation of CO standards (SCAQMD 1992). In order to establish a more accurate record of baseline CO concentrations affecting the Los Angeles, a CO “hot spot” analysis was conducted in 2003 at the same four busy intersections in Los Angeles at the peak morning and afternoon time periods. This “hot spot” analysis did not predict any violation of CO standards. The highest 1-hour concentration was measured at 4.6 ppm at Wilshire Boulevard and Veteran Avenue and the highest 8-hour concentration was measured at 8.4 ppm at Long Beach Boulevard and Imperial Highway. Thus, there was no violation of CO standards.

Similar considerations are also employed by other air districts when evaluating potential CO concentration impacts. More specifically, the Bay Area Air Quality Management District, the air pollution control officer for the San Francisco Bay Area, concludes that under existing and future vehicle emission rates, a given project would have to increase traffic volumes at a single intersection by more than 44,000 vehicles per hour or 24,000 vehicles per hour where vertical and/or horizontal air does not mix in order to generate a significant CO impact.

The Proposed Project is anticipated to result in 1,622 daily traffic trips (KD Anderson & Associates, Inc. 2023). Thus, the Proposed Project would not generate traffic volumes at any intersection of more than 100,000 vehicles per day (or 44,000 vehicles per day) and there is no likelihood of the Project traffic exceeding CO values.

In summary, Project construction would not result in a potentially significant contribution to regional concentrations of nonattainment pollutants and would not result in a significant contribution to the adverse health impacts associated with those pollutants.

Mitigation Measures

No mitigation measures are required.

Impact AIR-4:	Project implementation could result in other emissions (such as those leading to odors) adversely affecting a substantial number of people.
Impact Determination:	Less than Significant.
<i>Threshold</i>	<i>Result in the release of other emissions (such as those leading to odors) adversely affecting a substantial number of people).</i>

Impact Discussion

Typically, odors are regarded as an annoyance rather than a health hazard. However, manifestations of a person's reaction to foul odors can range from psychological (e.g., irritation, anger, or anxiety) to physiological (e.g., circulatory and respiratory effects, nausea, vomiting, and headache).

With respect to odors, the human nose is the sole sensing device. The ability to detect odors varies considerably among the population and overall is quite subjective. Some individuals have the ability to smell minute quantities of specific substances; others may not have the same sensitivity but may have sensitivities to odors of other substances. In addition, people may have different reactions to the same odor; in fact, an odor that is offensive to one person (e.g., from a fast-food restaurant) may be perfectly acceptable to another. It is also important to note that an unfamiliar odor is more easily detected and is more likely to cause complaints than a familiar one. This is because of the phenomenon known as odor fatigue, in which a person can become desensitized to almost any odor and recognition only occurs with an alteration in the intensity.

Quality and intensity are two properties present in any odor. The quality of an odor indicates the nature of the smell experience. For instance, if a person describes an odor as flowery or sweet, then the person is describing the quality of the odor. Intensity refers to the strength of the odor. For example, a person may use the word *strong* to describe the intensity of an odor. Odor intensity depends on the odorant concentration in the air. When an odorous sample is progressively diluted, the odorant concentration decreases. As this occurs, the odor intensity weakens and eventually becomes so low that the detection or recognition of the odor is quite difficult. At some point during dilution, the concentration of the odorant reaches a detection threshold. An odorant concentration below the detection threshold means that the concentration in the air is not detectable by the average human.

During construction, the Proposed Project presents the potential for generation of objectionable odors in the form of diesel exhaust in the immediate vicinity of the site. However, these emissions are short-term in nature and will rapidly dissipate and be diluted by the atmosphere downwind of the emission sources. Additionally, odors would be localized and generally confined to the construction area. Therefore, construction odors would not adversely affect a substantial number of people to odor emissions.

According to the BCAQMD, land uses commonly considered to be potential sources of obnoxious odorous emissions include wastewater treatment plants, sanitary landfills, composting/green waste facilities, recycling facilities, petroleum refineries, chemical manufacturing plants, painting/coating operations, rendering plants, and food packaging plants. The Proposed Project does not include any uses identified by the BCAQMD as being associated with odors.

Mitigation Measures

No mitigation measures are required.

3.1.7 Cumulative Impacts

Impact AIR-5:	Would implementation of the Proposed Project, in combination with existing, approved, proposed, and reasonably foreseeable development in Butte County, result in a cumulatively considerable air quality impact?
Impact Determination:	Less Than Cumulatively Considerable
<i>Threshold</i>	<i>Would Implementation of the proposed project, along with any foreseeable development in the project vicinity, result in cumulative impacts to air quality?</i>

Impact Discussion

By its very nature, air pollution is largely a cumulative impact. No single project is sufficient in size, by itself, to result in nonattainment of ambient air quality standards. Instead, a project’s individual emissions contribute to existing cumulatively significant adverse air quality impacts. If a project’s individual emissions exceed its identified significance thresholds, the project would be cumulatively considerable. Projects that do not exceed significance thresholds would not be considered cumulatively considerable. As identified in the analysis above, the Project would not exceed significance thresholds or otherwise result in any project-level impact. Thus, the Project is considered less than cumulatively considerable in terms of air quality-related impacts.

Mitigation Measures

No mitigation measures are required.

3.2 Biological Resources

This section presents an evaluation of potential biological resources impacts associated with the Project. The section assesses whether construction and operation of the Project would result in significant impacts on terrestrial and aquatic biological resources. The City received one letter concerning biological resources as a part of the NOP for this DEIR. However, this letter, from the California Department of Fish and Wildlife (CDFW), did not include any specific comments about the Project Site, Proposed Project, or the biological analysis provided in the IS. This letter is included in Appendix 1.0-A.2.

This section includes a description of the existing environmental conditions, regulatory setting, an overview of the methods used for assessing impact, impact significance thresholds, and the impacts associated with constructing and operating each of the three Project Alternatives. Where significant impacts are identified, feasible and effective mitigation measures are presented to reduce those impacts to levels considered less than significant.

Resource information presented herein is based on the following technical studies:

- *Biological Resources Assessment for the Feather Ranch Project (BRA)* (ECORP 2023, Appendix 3.2-A);
- *The 20th Street Residential Development Jurisdictional Waters and Wetlands Delineation* (Rincon Consultants, Inc. 2021, Appendix 3.2-B).

Note the Project is located within APN 030-230-098-000. For the BRA, the Study Area was defined as the limits of this APN. The Study Area and Project Site represent the same area and are interchangeable in this section of the DEIR.

3.2.1 Environmental Setting

3.2.1.1 Site Characteristics and Land Use

The Study Area is located within gently rolling terrain situated at an elevational range of approximately 190 to 230 feet AMSL in the Sacramento Valley District of the California floristic province. The average winter low temperature in the vicinity of the Study Area is 39.4 degrees Fahrenheit (°F) and the average summer high temperature is 92.2°F; average annual precipitation is approximately 31.52 inches (National Oceanic and Atmospheric Administration [NOAA] 2022a).

The Study Area is currently undeveloped and idle rangeland. The vegetation community is a mixture of native and nonnative herbaceous plants. There are no trees or shrubs present. There are no perimeter fences, so this site is not used for livestock grazing but may have been in the past. Undeveloped dirt roads and a disced fire-break path surround the Study Area.

The surrounding lands include residential development to the east, rural residences to the north and south, and undeveloped rangeland to the west.

3.2.2 **Biological Setting**

3.2.2.1 **Soils**

According to the National Resources Conservation Soil Service Web Soil Survey (2022), one soil unit, or type, has been mapped within the Study Area, (603) Oroville-Thermalito-Fernandez-Thompsonflat complex, 0 to 9 percent slopes This soil unit is composed of Oroville, gravelly fine sandy loam, and similar soils (30 percent), Thermalito, sandy loam, and similar soils (25 percent), Fernandez, sandy loam, and similar soils (15 percent), Thompsonflat, fine sandy loam, and similar soils (15 percent), and minor components (15 percent). The Oroville series consists of moderately deep, poorly drained soils that formed in alluvium derived from metamorphic and igneous rocks. These soils are in swales on intermediate terraces. The Thermalito series consists of moderately deep, somewhat poorly drained soils that formed in alluvium derived from metamorphic and igneous rocks. These soils are on mounds on intermediate terraces. The Thompsonflat series consists of very deep, moderately well drained soils that formed in alluvium derived from metamorphic and igneous rocks. These soils are on intermediate and high terraces. The Fernandez series consists of very deep, moderately well drained soils that formed in alluvium derived from metamorphic and igneous rocks. These soils are on intermediate terraces. This soil unit is not derived from serpentinite or other ultramafic parent materials.

Vegetation Communities and Land Cover Types

The entire Study Area is comprised of nonnative annual grassland with scattered isolated seasonal wetland/vernal pool basin. The developed-disturbed land cover type found onsite consists of dirt roads and areas of repeated off-road vehicle use. These areas are largely denuded of any vegetation.

Nonnative Annual Grassland

The majority of the Study Area is comprised of nonnative annual grassland. This community is dominated by a variety of nonnative species such as medusahead grass (*Elymus caput-medusae*), wild oats (*Avena fatua*), Italian ryegrass (*Festuca perennis*), and filaree (*Erodium* sp.). This vegetation community onsite is not specifically classified in *A Manual of California Vegetation* (Sawyer et al. 2009) but is similar to some *Herbaceous Semi-Natural* alliances.

Seasonal Wetland/Vernal Pool

The seasonal wetlands/vernal pools are scattered throughout the Study Area in topographic depressions in the rolling terrain. These depressions collect seasonal runoff and direct rainfall during the wet season and remain inundated or saturated long enough during the growing season to support wetland vegetation, hydric soil, and wetland hydrology. Dominant plant species found in these wetland depressions include slender popcorn flower (*Plagiobothrys stipitatus*), toad rush (*Juncus bufonius*), smooth goldfields (*Lasthenia glaberrima*), and water-starwort (*Callitriche marginata*). This vegetation community onsite is not specifically classified in *A Manual of California Vegetation*. These wetlands are discussed in further detail in the Aquatic Resources section.

3.2.2.2 Aquatic Resources

Rincon Consultants, Inc. prepared the Jurisdictional Waters and Wetlands Delineation for the Study Area dated March 2021. As shown in Figure 3.2-1, Rincon delineated 78 depressional seasonal wetlands totaling 2.62 acres, as listed in Table 3.2-1.

Source: Rincon Consultants, Inc. 2021

These wetlands were categorized as seasonal wetlands by Rincon but some could be considered vernal pools by other wetland delineators. The USEPA defines vernal pools as “seasonal depressional wetlands that occur under Mediterranean climate conditions of the West Coast and in glaciated areas of the northeastern and midwestern states. They are covered by shallow water for variable periods from winter to spring but may be completely dry for most of the summer and fall” (USEPA 2022).

At present, there has been no verification or jurisdictional determination of these aquatic resources conducted by the United States Army Corps of Engineers (USACE).

When Rincon prepared the delineation report, the definition of Waters of the U.S. was based on the National Wetlands Protection Rule (NWPR). Under the NWPR, the wetlands onsite would probably not have been considered Waters of the U.S. as stated in the Rincon report. However, the NWPR was vacated and remanded in August 2021. In the current definition of Waters of the U.S. according to the pre-2015 regulatory regime, include the *Rapanos* Guidance, wetlands adjacent to nonnavigable tributaries that are not relatively permanent would require a significant nexus evaluation to establish federal jurisdiction. The wetlands onsite would require a significant nexus evaluation by the USACE in order to determine jurisdiction.

Regardless of federal jurisdiction, the wetlands delineated onsite would likely be considered Waters of the State under the *State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State* (State Water Resources Control Board 2019).

Site directions:
From Downtown Sacramento take CA-99 and CA-70 North to Exit 46 Oroville Dam Blvd/SR 162 West. At 1.9 miles turn right onto 20th Street. Site is 0.3 mile on the left.

3.2.2.3 Wildlife Observations

ECORP biologist Keith Kwan conducted a reconnaissance-level field survey for the Study Area on March 1, 2022. Wildlife observed within or flying over the Study Area by during the site reconnaissance includes mourning dove (*Zenaida macroura*), American crow (*Corvus brachyrhynchos*), savannah sparrow (*Passerculus sandwichensis*), Brewer’s blackbird (*Euphagus cyanocephalus*), and western meadowlark (*Sturnella neglecta*).

3.2.3 Evaluation of Special-Status Species Identified in the Literature Search

The BRA completed for the Project listed all the special-status plant and wildlife species identified in the literature review as potentially occurring within the vicinity of the Study Area. Included in this table are the listing status for each species, a brief habitat description, and an evaluation on the potential for each species to occur within the Study Area. Of these special-status species, 23 plants, three invertebrates, one amphibian, one reptile, and five birds have potential habitat in the Study Area. A list of special-status species potentially affected by the Proposed Project, their general habitat requirements, and an assessment of their potential to occur within the Study Area is provided in Table 3.2-2. A complete list of special-status species known to exist in the region and the results of the database queries are included in Appendix 3.2-A.

Table 3.2-2. Potentially Occurring Special-Status Species						
Common Name (Scientific Name)	Status			Habitat Description	Survey Period	Potential To Occur Onsite
	FESA	CESA/ NPPA	Other			
Plants						
Henderson’s bent grass (<i>Agrostis hendersonii</i>)	–	–	3.2	Vernal pools and mesic areas in valley and foothill grasslands (230’–1,000’).	April–June	Potential – there is suitable habitat onsite.
Depauperate milk-vetch (<i>Astragalus pauperculus</i>)	-	-	4.3	Occurs within vernal mesic and volcanic soils in chaparral, cismontane woodland, and valley and foothill grasslands (195’–3,985’)	March-June	Low Potential – There is marginally suitable habitat onsite.
Big-scale balsamroot (<i>Balsamorhiza macrolepis</i>)	–	–	1B.2	Chaparral, cismontane woodland, and valley and foothill grassland, sometimes on serpentinite soils (150’–5,100’).	March–June	Potential – there is suitable habitat onsite.

Table 3.2-2. Potentially Occurring Special-Status Species						
Common Name (Scientific Name)	Status			Habitat Description	Survey Period	Potential To Occur Onsite
	FESA	CESA/ NPPA	Other			
Valley brodiaea <i>(Brodiaea rosea ssp. vallicola)</i>	–	–	4.2	Occurs in old alluvial terraces and silt, sandy, or gravelly soils in vernal pools and swales within valley and foothill grassland (35'–1,100').	April–May	Potential – there is suitable habitat onsite.
Butte County calycadenia <i>Calycadenia oppositifolia</i>	-	-	4.2	Occurs on volcanic, granitic, and serpentinite areas of chaparral, cismontane woodland, lower montane coniferous forest, meadows, seeps and valley and foothill grassland. (295'–3,100')	April - July	Low Potential – There is marginally suitable habitat onsite.
Pink creamsacs <i>(Castilleja rubicundula var. rubicundula)</i>	–	–	1B.2	Serpentinite substrates in chaparral openings, cismontane woodland, meadows and seeps, and valley and foothill grassland (65'–2,985').	April–June	Low Potential – There is marginally suitable habitat onsite.
Recurved larkspur <i>(Delphinium recurvatum)</i>	–	–	1B.2	Chenopod scrub, cismontane woodland, and valley and foothill grasslands (10'–2,592').	March–June	Potential – there is suitable habitat onsite.
Hoover's spurge <i>(Euphorbia hooveri)</i>	FT	–	1B.2	Vernal pools (80'–820').	July–September	Potential – there is suitable habitat onsite.
Hogwallow starfish <i>(Hesperovax caulescens)</i>	–	–	4.2	Sometimes alkaline in mesic areas with clay soil within valley and foothill grassland and shallow vernal pools (0'–1,655').	March–June	Potential – there is suitable habitat onsite.
Ahart's dwarf rush <i>(Juncus leiospermus var. ahartii)</i>	–	–	1B.2	Mesic areas in valley and foothill grassland. Species has an affinity for slight disturbance such as farmed fields (U.S. Fish and Wildlife	March–May	Potential – there is suitable habitat onsite.

Table 3.2-2. Potentially Occurring Special-Status Species

Common Name (Scientific Name)	Status			Habitat Description	Survey Period	Potential To Occur Onsite

				Service [USFWS] 2005) (98'–751').		
Red Bluff dwarf rush <i>(Juncus leiospermus var. leiospermus)</i>	–	–	1B.1	Vernally mesic areas in chaparral, cismontane woodland, meadows and seeps, valley and foothill grassland, and vernal pools (115'–4,101').	March–June	Potential – there is suitable habitat onsite.
Colusa layia <i>(Layia septentrionalis)</i>	–	–	1B.2	Sandy or serpentinite soils in chaparral, cismontane woodland, and valley and foothill grasslands (328'–3,593').	April–May	Potential – there is suitable habitat onsite.
Bristly leptosiphon <i>(Leptosiphon acicularis)</i>	–	–	4.2	Chaparral, cismontane woodland, coastal prairie, valley and foothill grassland (180'–4,920').	April–July	Potential – there is suitable habitat onsite.
Serpentine leptosiphon <i>(Leptosiphon ambiguus)</i>	–	–	4.2	Usually serpentinite soils of Cismontane woodland, coastal scrub, and valley and foothill grassland (395'–3710').	March–June	Low Potential – There is marginally suitable habitat onsite.
Butte County meadowfoam <i>(Limnanthes floccosa ssp. californica)</i>	FE	CE	1B.1	Mesic valley and foothill grassland and vernal pools (150'–3,052').	March–May	Potential – there is suitable habitat onsite.
Woolly meadowfoam <i>(Limnanthes floccosa ssp. floccosa)</i>	–	–	4.2	Vernally mesic chaparral, cismontane woodland, valley and foothill grassland, and vernal pools(197'–4,380').	March–May	Potential – there is suitable habitat onsite.
Sylvan microseris <i>(Microseris sylvatica)</i>	–	–	4.2	Chaparral, cismontane woodland, Great Basin scrub, pinyon and juniper woodland, valley and foothill	March-June	Potential – there is suitable habitat onsite.

Table 3.2-2. Potentially Occurring Special-Status Species

Common Name (Scientific Name)	Status			Habitat Description	Survey Period	Potential To Occur Onsite
	FESA	CESA/ NPPA	Other			
				grassland; serpentinite (rarely) (150'-4,920')		
Veiny monardella (<i>Monardella venosa</i>)	-	-	1B.1	Heavy clay soils in cismontane woodland and valley and foothill grasslands (197'-1,345').	May-July	Low Potential - there is marginally suitable habitat onsite.
Tehama navarretia (<i>Navarretia heterandra</i>)	-	-	4.3	Mesic areas in valley and foothill grassland and vernal pools(98'-3,314').	April-June	Potential - there is suitable habitat onsite.
Slender Orcutt grass (<i>Orcuttia tenuis</i>)	FT	CE	1B.1	Vernal pools, often gravelly (115'-5,774').	May-September	Potential - there is suitable habitat onsite.
Ahart's paronychia (<i>Paronychia ahartii</i>)	-	-	1B.1	Well-drained rocky outcrops, often vernal pool edges, and volcanic upland (Hartman and Rabeler 2012) of cismontane woodland, valley and foothill grassland, and vernal pools (98'-1673').	February-June	Potential - there is suitable habitat onsite.
Butte County golden clover (<i>Trifolium jokerstii</i>)	-	-	1B.2	Mesic valley and foothill grassland and vernal pools (164'-1,575')	March-May	Potential - there is suitable habitat onsite.
Greene's tuctoria (<i>Tuctoria greenei</i>)	FE	CR	1B.1	Vernal pools (98'-3,510').	May-July	Potential - there is suitable habitat onsite.
Invertebrates						
Conservancy fairy shrimp (<i>Branchinecta conservatio</i>)	FE	-	-	Vernal pools/wetlands.	November-April	Potential-Suitable habitat present onsite.
Vernal pool fairy shrimp (<i>Branchinecta lynchi</i>)	FT	-	-	Vernal pools/wetlands.	November-April	Potential-Suitable habitat present onsite.

Table 3.2-2. Potentially Occurring Special-Status Species						
Common Name (Scientific Name)	Status			Habitat Description	Survey Period	Potential To Occur Onsite
	FESA	CESA/ NPPA	Other			
Vernal pool tadpole shrimp <i>(Lepidurus packardii)</i>	FE	-	-	Vernal pools/wetlands.	November- April	Potential-Suitable habitat present onsite.
Amphibians						
Western spadefoot <i>(Spea hammondi)</i>	-	-	SSC	California endemic species of vernal pools, swales, wetlands and adjacent grasslands throughout the Central Valley.	March-May	Potential-Suitable habitat is present onsite.
Reptiles						
Blainville's ("Coast") horned lizard <i>(Phrynosoma blainvillii)</i>	-	-	SSC	Formerly a wide-spread horned lizard found in a wide variety of habitats, often in lower elevation areas with sandy washes and scattered low bushes. Also occurs in Sierra Nevada foothills. Requires open areas for basking, but with bushes or grass clumps for cover, patches of loamy soil or sand for burrowing and an abundance of ants (Stebbins and McGinnis 2012).	Apr-Oct	Potential-There is suitable habitat onsite.
Birds						
Northern harrier <i>(Circus hudsonius)</i>	-	-	BCC, SSC	Nests on the ground in open wetlands, marshy meadows, wet/lightly grazed pastures, (rarely) freshwater/brackish marshes, tundra, grasslands, prairies, croplands, desert, shrub-steppe, and (rarely) riparian	April- September	Low Potential- There is marginal nesting habitat onsite.

Table 3.2-2. Potentially Occurring Special-Status Species

Common Name (Scientific Name)	Status			Habitat Description	Survey Period	Potential To Occur Onsite
	FESA	CESA/ NPPA	Other			
				woodland communities.		
Swainson's hawk <i>(Buteo swainsoni)</i>	-	CT	BCC	Nesting occurs in trees in agricultural, riparian, oak woodland, scrub, and urban landscapes. Forages over grassland, agricultural lands, particularly during disking/harvesting, irrigated pastures	March-August	Potential-There is suitable foraging habitat, but no nesting habitat onsite.
Burrowing owl <i>(Athene cunicularia)</i>	-	-	BCC, SSC	Nests in burrows or burrow surrogates in open, treeless, areas within grassland, steppe, and desert biomes. Often with other burrowing mammals (e.g. prairie dogs, California ground squirrels). May also use human-made habitat such as agricultural fields, golf courses, cemeteries, roadside, airports, vacant urban lots, and fairgrounds.	February-August	Potential-There is suitable habitat.
Loggerhead shrike <i>(Lanius ludovicianus)</i>	-	-	SSC	Found throughout California in open country with short vegetation, pastures, old orchards, grasslands, agricultural areas, open woodlands. Not found in heavily forested habitats.	March-July	Potential-There is suitable habitat.
Tricolored blackbird <i>(Agelaius tricolor)</i>	-	CT	BCC, SSC	Breeds locally west of Cascade-Sierra Nevada and southeastern deserts from Humboldt and Shasta	March-August	Potential-There is suitable foraging habitat, but no nesting habitat onsite.

- 0.3 Threat Rank/Not very threatened in California (<20% of occurrences threatened / low degree and immediacy of threat or no current threats known)
- Delisted Formally Delisted (delisted species are monitored for 5 years).

3.2.4 **Plants**

A total of 60 special-status plant species were identified as having the potential to occur in the vicinity of the Study Area based on the literature review (Table 1 of Appendix 3.2-A). Of those, 37 species were determined to be absent from the Study Area due to the lack of suitable habitat or due to the Study Area being outside of the known elevational range for the species. No further discussion of those species is provided in this assessment. A brief description of the remaining 23 species that have the potential or low potential to occur within the Study Area is presented below.

3.2.4.1 **Henderson's Bent Grass**

Henderson's bent grass (*Agrostis hendersonii*) is not listed pursuant to either the federal or California ESAs but is designated as a California Rare Plant Rank (CRPR) 3.2 species. This species is an herbaceous annual that occurs in vernal pools and in mesic areas in valley and foothill grasslands. Henderson's bent grass blooms from April through June and is known to occur at elevations between 230 to 1,000 feet AMSL. The current range of this species in California includes Butte, Calaveras, Merced, Napa, Shasta, Tehama, and Tuolumne counties; occurrence in Butte County confirmed, but possible extirpated.

There are no California Natural Diversity Database (CNDDDB) occurrences of Henderson's bent grass within 5 miles of the Study Area. The seasonal wetlands/vernal pools within the Study Area may provide suitable habitat for this species. Henderson's bent grass has potential to occur within the Study Area.

3.2.4.2 **Depauperate Milk-Vetch**

Depauperate milk-vetch (*Astragalus pauperculus*) is not listed pursuant to either the federal or California ESAs but is designated as a CRPR 4.3 species. This species is an herbaceous annual that occurs within vernal mesic and volcanic soils in chaparral, cismontane woodland, and valley and foothill grasslands. The blooming period for this species is from March through June and is known to occur at elevations 195 to 3,985 feet AMSL. Depauperate milk-vetch is endemic to California; its current range includes Butte, Shasta, and Tehama counties.

There are no CNDDDB occurrences of depauperate milk-vetch. The nonnative annual grassland within the Study Area may provide marginally suitable habitat for this species. Depauperate milk-vetch has low potential to occur within the Study Area.

3.2.4.3 **Big-Scale Balsamroot**

Big-scale balsamroot (*Balsamorhiza macrolepis*) is not listed pursuant to either the federal or California ESAs but is designated as a CRPR 1B.2 species. This species is an herbaceous perennial that occurs in chaparral, cismontane woodlands, valley and foothill grassland, and sometimes on serpentinite soils. Big-scale balsamroot blooms from March through June and is known to occur at elevations ranging from 150 to 5,100 feet AMSL. Big-scale balsamroot is endemic to California; the current range of this species includes Alameda, Amador, Butte, Colusa, El Dorado, Lake, Mariposa, Napa, Placer, Santa Clara, Shasta, Solano, Sonoma, Tehama, and Tuolumne counties.

There are no CNDDDB occurrences of big-scale balsamroot within 5 miles of the Study Area. The nonnative annual grassland within the Study Area may provide suitable habitat for this species. Big-scale balsamroot has potential to occur within the Study Area.

3.2.4.4 Valley Brodiaea

Valley brodiaea (*Brodiaea rosea* ssp. *vallicola*) is not listed pursuant to either the federal or California ESAs but is designated as a CRPR 4.2 species. This species is a bulbiferous perennial herb that occurs in old alluvial terraces and silty, sandy, or gravelly soils in vernal pools, swales, and valley and foothill grassland. Valley brodiaea blooms from April through May (sometimes June) and is known to occur at elevations ranging from 35 to 1,100 feet AMSL. Valley brodiaea is endemic to California; the current range of this species includes Butte, Calaveras, Nevada, Placer, Sacramento, San Joaquin, Sutter, and Yuba counties.

There are no CNDDDB occurrences of Valley brodiaea. However, the seasonal wetlands/vernal pools within the Study Area may provide suitable habitat for this species. Valley brodiaea has potential to occur within the Study Area.

3.2.4.5 Butte County Calycadenia

Butte County calycadenia (*Calycadenia oppositifolia*) is not listed pursuant to either the federal or California ESAs, but is designated as a CRPR 4.2 species. This species is an herbaceous annual that occurs on volcanic, granitic, and serpentinite areas of chaparral, cismontane woodland, lower montane coniferous forest, meadows, seeps, and valley and foothill grassland. Butte County calycadenia blooms from April through July and is known to occur at elevations ranging from 295 to 3,100 feet AMSL. This species is endemic to California; the current range includes Butte County.

There are no CNDDDB occurrences of Butte County calycadenia. However, the nonnative annual grassland within the Study Area may provide marginally suitable habitat for this species. Butte County calycadenia has low potential to occur within the Study Area.

3.2.4.6 Pink Creamsacs

Pink creamsacs (*Castilleja rubicundula* var. *rubicundula*) is not listed pursuant to either the federal or California ESAs, but is designated as a CRPR 1B.2 species. This species is a hemiparasitic herbaceous annual that occurs in serpentinite substrates in chaparral (openings), cismontane woodland, meadows and seeps, and valley and foothill grassland. Pink creamsacs blooms from April through June and is known to occur at elevations ranging from 65 to 2,985 feet AMSL. Pink creamsacs is endemic to California; its current range includes Butte, Colusa, Glenn, Lake, Napa, Santa Clara, Shasta, and Yolo counties.

There is one CNDDDB occurrence of pink creamsacs within 5 miles of the Study Area. The nonnative annual grassland within the Study Area may provide marginally suitable habitat for this species. Pink creamsacs has low potential to occur within the Study Area.

3.2.4.7 Recurved Larkspur

Recurved larkspur (*Delphinium recurvatum*) is not listed pursuant to either the federal or California ESAs, but is designated a CRPR 1B.2 species. This species is an herbaceous perennial that occurs in alkaline substrates in chenopod scrub, cismontane woodland, and valley and foothill grasslands. Recurved larkspur blooms from March through June and is known to occur at elevations ranging from 10 to 2,592 feet AMSL. Recurved larkspur is endemic to California; the current range of this species includes Alameda, Butte, Contra Costa, Colusa, Fresno, Glenn, Kings, Kern, Madera, Merced, Monterey, San Joaquin, San Luis Obispo, Solano, Sutter, and Tulare counties. The species is presumed extirpated from Butte and Colusa counties.

There are no CNDDDB occurrences of recurved larkspur within 5 miles of the Study Area. The nonnative annual grassland within the Study Area may provide suitable habitat for this species. Recurved larkspur has potential to occur within the Study Area.

3.2.4.8 Hoover's Spurge

Hoover's spurge (*Euphorbia hooveri*) is listed as threatened pursuant to the federal ESA, not listed as rare pursuant to the California ESA, and is also designated as a CRPR 1B.2 species. This species is an herbaceous annual that occurs in vernal pools. Hoover's spurge blooms from July through September and is known to occur at elevations ranging from 80 to 820 feet AMSL. Hoover's spurge is endemic to California; its current range includes Butte, Colusa, Glenn, Merced, Stanislaus, Tehama, and Tulare counties.

There are no CNDDDB occurrences of Hoover's spurge within 5 miles of the Study Area. The seasonal wetlands/vernal pools within the Study Area may provide suitable habitat for this species. Hoover's spurge has potential to occur within the Study Area.

3.2.4.9 Hogwallow Starfish

Hogwallow starfish (*Hesperevax caulescens*) is not listed pursuant to either the federal or California ESAs, but is designated as a CRPR 4.2 species. This species is an herbaceous annual that occurs in mesic, clay areas within valley and foothill grassland and shallow vernal pools, sometimes in alkaline areas. Hogwallow starfish blooms from March through June and is known to occur from 0 to 1,655 feet AMSL. Hogwallow starfish is endemic to California; the current range of this species includes Alameda, Amador, Butte, Colusa, Contra Costa, Fresno, Glenn, Kern, Mariposa, Merced, Monterey, Sacramento, San Diego, San Joaquin, San Luis Obispo, Solano, Sonoma, Stanislaus, Sutter, Tehama, Tuolumne, Yolo, and Yuba counties; however, it is presumed extirpated in San Diego County.

There are no CNDDDB occurrences of hogwallow starfish within 5 miles of the Study Area. The seasonal wetlands/vernal pools within the Study Area may provide suitable habitat for this species. Hogwallow starfish has potential to occur within the Study Area.

3.2.4.10 Ahart's Dwarf Rush

Ahart's dwarf rush (*Juncus leiospermus* var. *ahartii*) is not listed pursuant to either the federal or California ESAs, but is designated as a CRPR 1B.2 species. This species is an herbaceous annual that occurs in mesic areas in valley and foothill grasslands. This species also appears to have an affinity for slight disturbance since it has been found on farmed fields and gopher turnings (USFWS 2005). Ahart's dwarf rush blooms from March through May and is known to occur at elevations ranging from 98 to 751 feet AMSL (USFWS 2005). Ahart's dwarf rush is endemic to California; the current range of this species includes Butte, Calaveras, Placer, Sacramento, Tehama, and Yuba counties.

There are two CNDDDB occurrences of Ahart's dwarf rush within 5 miles of the Study Area. The seasonal wetlands/vernal pools within the Study Area may provide suitable habitat for this species. Ahart's dwarf rush has potential to occur within the Study Area.

3.2.4.11 Red Bluff Dwarf Rush

Red Bluff dwarf rush (*Juncus leiospermus* var. *leiospermus*) is not listed pursuant to either the federal or California ESAs, but is designated as a CRPR 1B.1 species. This species is an herbaceous annual that occurs in vernal mesic areas in chaparral, cismontane woodland, meadows, seeps, valley and foothill grasslands, and vernal pools. Red Bluff dwarf rush blooms from March through June and is known to occur at elevations ranging from 115 to 4,101 feet AMSL. Red Bluff dwarf rush is endemic to California; the current range of this species includes Butte, Placer, Shasta, and Tehama counties.

There is one CNDDDB occurrence of Red Bluff dwarf rush within 5 miles of the Study Area. The seasonal wetlands/vernal pools within the Study Area may provide suitable habitat for this species. Red Bluff dwarf rush has potential to occur within the Study Area.

3.2.4.12 Colusa Layia

Colusa layia (*Layia septentrionalis*) is not listed pursuant to either the federal or California ESAs, but is designated as a CRPR 1B.2 species. This species is an herbaceous annual that occurs in sandy or serpentinite soils in chaparral, cismontane woodland, and valley and foothill grasslands. Colusa layia blooms from April through May and is known to occur at elevations ranging from 328 to 3,593 feet AMSL. Colusa layia is endemic to California; the current range of this species includes Butte, Colusa, Glenn, Lake, Mendocino, Napa, Sonoma, Sutter, Tehama, and Yolo counties.

There are no CNDDDB occurrences of Colusa layia within 5 miles of the Study Area. The nonnative annual grassland within the Study Area may provide suitable habitat for this species. Colusa layia has potential to occur within the Study Area.

3.2.4.13 Bristly Leptosiphon

Bristly leptosiphon (*Leptosiphon acicularis*) is not listed pursuant to either the federal or California ESAs, but is designated as a CRPR 4.2 species. This species is an annual herb that occurs in chaparral, cismontane woodland, coastal prairie, and valley and foothill grassland. Bristly leptosiphon blooms from

April through July and is known to occur at elevations ranging from 180 to 4,920 feet AMSL. Bristly leptosiphon is endemic to California; the current range of this species includes Alameda, Butte, Colusa, Humboldt, Kern, Lake, Marin, Mendocino, Napa, Placer, San Benito, San Mateo, Santa Clara, Santa Cruz, Solano, Sonoma, and Yuba counties.

There are no CNDDDB occurrences of bristly leptosiphon within 5 miles of the Study Area. However, the nonnative annual grassland within the Study Area may provide suitable habitat for this species. Bristly leptosiphon has potential to occur within the Study Area.

3.2.4.14 Serpentine Leptosiphon

Serpentine leptosiphon (*Leptosiphon ambiguus*) is not listed pursuant to either the federal or California ESAs, but is designated as a CRPR 4.2 species. This species is an herbaceous annual that occurs usually in serpentinite soil within cismontane woodland, coastal scrub, valley and foothill grassland. Serpentine leptosiphon blooms from March through June and is known to occur at elevations ranging from 395 to 3,710 feet AMSL. Serpentine bird's-beak is endemic to California; its current range includes Alameda, Contra Costa, Merced, San Benito, Santa Clara, Santa Cruz, San Joaquin, San Mateo, and Stanislaus counties.

There are no CNDDDB occurrences of serpentine leptosiphon within 5 miles of the Study Area. The nonnative annual grassland within the Study Area may provide marginally suitable habitat for this species. Serpentine leptosiphon has low potential to occur within the Study Area.

3.2.4.15 Butte County Meadowfoam

Butte County meadowfoam (*Limnanthes floccosa* ssp. *californica*) is listed as endangered pursuant to both the federal and California ESAs, and is designated as a CRPR 1B.1 species. Butte County meadowfoam is an herbaceous annual that occurs in vernal pools and mesic areas of valley and foothill grasslands. Butte County meadowfoam blooms from March through May and is known to occur at elevations between 150 to 3,050 feet AMSL. Butte County meadowfoam is endemic to California; the current known range for this species includes Butte County.

There are two CNDDDB occurrences of Butte County meadowfoam within 5 miles of the Study Area. The seasonal wetlands/vernal pools within the Study Area may provide suitable habitat for this species. Butte County meadowfoam has potential to occur within the Study Area.

3.2.4.16 Woolly Meadowfoam

Woolly meadowfoam (*Limnanthes floccosa* ssp. *floccosa*) is not listed pursuant to either the federal or California ESAs, but is designated as a CRPR 4.2 species. This species is an herbaceous annual that occurs in vernal mesic chaparral, cismontane woodland, valley and foothill grassland, and vernal pools. Woolly meadowfoam blooms from March through May and is known to occur at elevations ranging from 197 to 4,380 feet AMSL. The current known range for this species in California includes Butte, Lake, Lassen, Napa, Shasta, Siskiyou, Tehama, and Trinity counties.

There are no CNDDDB occurrences of woolly meadowfoam within 5 miles of the Study Area. However, the seasonal wetlands/vernal pools within the Study Area may provide suitable habitat for this species. Woolly meadowfoam has potential to occur within the Study Area.

3.2.4.17 Sylvan Microseris

Sylvan microseris (*Microseris sylvatica*) is not listed pursuant to either the federal or California ESAs, but is designated as a CRPR 4.2 species. This species is an herbaceous perennial that occurs in chaparral, cismontane woodland, Great Basin scrub, pinyon juniper woodland, and valley and foothill grasslands; serpentine (rarely). Sylvan microseris blooms from March through June and is known to occur at elevations ranging from 150 to 4,920 feet AMSL. Sylvan microseris is endemic to California; its current range includes Alameda, Butte, Contra Costa, Fresno, Kern, Los Angeles, Napa, San Benito, Tulare, and Yolo counties. Occurrence confirmed but possibly extirpated in Los Angeles County.

There are no CNDDDB occurrences of Sylvan microseris within 5 miles of the Study Area. However, the nonnative annual grassland within the Study Area may provide suitable habitat for this species. Sylvan microseris has potential to occur within the Study Area.

3.2.4.18 Veiny Monardella

Veiny monardella (*Monardella venosa*) is not listed pursuant to either the federal or California ESAs, but is designated as a CRPR 1B.1 species. This species is an herbaceous annual that occurs on heavy clay soils in cismontane woodland and valley and foothill grasslands. Veiny monardella blooms from May through July and is known to occur at elevations ranging from 197 to 1,345 feet AMSL. Veiny monardella is endemic to California; the current range of this species includes Butte, Sutter, Tuolumne, and Yuba counties, but is believed to be extirpated from Sutter County.

There are no CNDDDB occurrences of veiny monardella within 5 miles of the Study Area. However, the nonnative annual grassland within the Study Area may provide marginally suitable habitat for this species. Veiny monardella has low potential to occur within the Study Area.

3.2.4.19 Tehama Navarretia

Tehama navarretia (*Navarretia heterandra*) is not listed pursuant to either the federal or California ESAs, but is designated as a CRPR 4.3 species. This species is an herbaceous annual that occurs in mesic areas in valley and foothill grassland and vernal pools. Tehama navarretia blooms between April and June and is known to occur at elevations ranging from 98 to 3,314 feet AMSL. The current range for Tehama navarretia in California includes Butte, Colusa, Lake, Napa, Shasta, Tehama, Trinity, and Yuba counties.

There are no CNDDDB occurrences of Tehama navarretia within 5 miles of the Study Area. The seasonal wetlands/vernal pools within the Study Area may provide suitable habitat for this species. Tehama navarretia has potential to occur within the Study Area.

3.2.4.20 Slender Orcutt Grass

Slender Orcutt grass (*Orcuttia tenuis*) is listed as threatened pursuant to the federal ESA, is listed as endangered pursuant to the California ESA, and is designated as a CRPR 1B.1 species. This species is an herbaceous annual that occurs in often gravelly soils in vernal pools primarily on substrates of volcanic origin. This species is known to occur in the same type of vernal pool complexes as Sacramento Orcutt grass in Sacramento County; however, these species have not been observed coexisting in the same vernal pool. The median area of pools occupied by populations studied by Stone et al. (1988, as cited in USFWS 2005) was 1.6 acres and ranged from 0.2 to 111.0 acres. Slender Orcutt grass blooms from May through September and is known to occur at elevations ranging from 115 to 5,774 feet AMSL. Slender Orcutt grass is endemic to California; the current range for this species includes Butte, Lake, Lassen, Modoc, Plumas, Sacramento, Shasta, Siskiyou, and Tehama counties.

There are two CNDDDB occurrences of slender Orcutt grass within 5 miles of the Study Area. The seasonal wetlands/vernal pools within the Study Area may provide suitable habitat for this species. Slender Orcutt grass has potential to occur within the Study Area.

3.2.4.21 Ahart's Paronychia

Ahart's Paronychia (*Paronychia ahartii*) is not listed as pursuant to either the federal or California ESAs, but is designated as a CRPR 1B.1 species. Ahart's paronychia is an annual herb that occurs in cismontane woodland, valley foothill and grassland and vernal pools. Ahart's paronychia blooms at elevations ranging from 98 to 1,673 feet AMSL. Ahart's paronychia is endemic to California; the current range of this species includes Butte, Shasta, and Tehama counties.

There are two CNDDDB occurrences of Ahart's paronychia within 5 miles of the Study Area. The seasonal wetlands/vernal pools and the nonnative annual grassland within the Study Area may provide suitable habitat for this species. Ahart's paronychia has potential to occur within the Study Area.

3.2.4.22 Butte County Golden Clover

Butte County golden clover (*Trifolium jokerstii*) is not listed pursuant to the federal and California ESAs, but is designated as a CRPR 1B.2 species. This species is an herbaceous annual that occurs in vernal pools and mesic areas in valley and foothill grassland. Butte County golden clover blooms between March and May and is known to occur at elevations ranging from 164 to 1,575 feet AMSL. Butte County golden clover is endemic to California; its current range includes Butte County.

There are five CNDDDB occurrences of Butte County golden clover within 5 miles of the Study Area. The seasonal wetlands/vernal pools within the Study Area may provide suitable habitat for this species. Butte County golden clover has potential to occur within the Study Area.

3.2.4.23 Greene's Tuctoria

Greene's tuctoria (*Tuctoria greenei*) is listed endangered pursuant to the ESA, is listed as rare pursuant to the California ESA, and is designated as a CRPR 1B.1 species. This species is an herbaceous annual that

occurs in vernal pools. Greene's tuctoria blooms from May through July and is known to occur at elevations ranging from 98 to 3,510 feet AMSL. Greene's tuctoria is endemic to California; the current range of this species includes Butte, Fresno, Glenn, Madera, Merced, Modoc, Shasta, San Joaquin, Stanislaus, Tehama, and Tulare counties. It is considered extirpated from Fresno, Madera, San Joaquin, Stanislaus, and Tulare counties.

There are two CNDDDB occurrences of Greene's tuctoria within 5 miles of the Study Area. The seasonal wetlands/vernal pools within the Study Area may provide suitable habitat for this species. Greene's tuctoria has potential to occur within the Study Area.

3.2.5 Invertebrates

A total of five special-status invertebrate species were identified as having the potential to occur in the vicinity of the Study Area based on the literature review (Table 1 of Appendix 3.2-A). Of those, two species were determined to be absent from the Study Area due to the lack of suitable habitat or due to the Study Area being outside of the known elevational range for the species. No further discussion of those species is provided in this assessment. A brief description of the remaining three special-status invertebrates that have the potential to occur within the Study Area is presented below.

3.2.5.1 Conservancy Fairy Shrimp

The conservancy fairy shrimp (*Branchinecta conservatio*) is listed as endangered pursuant to the federal Endangered Species Act. This fairy shrimp is endemic to California and is found in grasslands in the northern two thirds of the Central Valley (Eriksen and Belk 1999). The historic distribution of conservancy fairy shrimp is not known, but it likely occurred throughout a large portion of the Central Valley and Southern Coastal regions of California. Until recently, this species has only been known from a few disjunct populations in California, including four clustered populations in the Vina Plains area in Tehama and Butte Counties, Jepson Prairie Preserve in Solano County, the Sacramento National Wildlife Refuge in Glenn County, the Tule Ranch Unit of CDFW's Yolo Basin Wildlife Area in Yolo County, the Grasslands Ecological Area in Merced County, one location in Stanislaus County, three locations in the Southern Sierra Foothills Vernal Pool Region, and two locations near the Santa Barbara Vernal Pool Region (USFWS 2003, 2006). In April 2007, USFWS reported that a single conservancy fairy shrimp was documented in one vernal pool within the Mariner Conservation Bank in Placer County, near the town of Lincoln, California. The life cycle of conservancy fairy shrimp is reliant on the ephemeral conditions of its vernal habitat. It inhabits a variety of different landforms and soil types, and is often found in large, turbid pools with low conductivity, total dissolved solids, and alkalinity.

There are no CNDDDB occurrences of conservancy fairy shrimp within 5 miles of the Study Area. The seasonal wetlands/vernal pools within the Study Area may provide suitable habitat for this species. Conservancy fairy shrimp has potential to occur within the Study Area.

3.2.5.2 Vernal Pool Fairy Shrimp

The vernal pool fairy shrimp (*Branchinecta lynchi*) is listed as threatened pursuant to the federal ESA. Vernal pool fairy shrimp may occur in seasonal ponds, vernal pools, and swales during the wet season,

which generally occurs from December through May. This species can be found in a variety of pool sizes, ranging from less than 0.001 acre to more than 24.5 acres. The shrimp hatch from cysts when colder water (10°Celsius [°C] [50°F] or less) fills the pool and mature in as few as 18 days, under optimal conditions (Eriksen and Belk 1999). At maturity, mating takes place and cysts are dropped. Vernal pool fairy shrimp occur in disjunct patches dispersed across California's Central Valley from Shasta to Tulare counties, the central and southern Coast Ranges from northern Solano to Ventura counties, and three areas in Riverside County (USFWS 2003).

There are 12 CNDDDB occurrences of vernal pool fairy shrimp within 5 miles of the Study Area. The seasonal wetlands/vernal pools within the Study Area may provide suitable habitat for this species. Vernal pool fairy shrimp has potential to occur within the Study Area.

3.2.5.3 Vernal Pool Tadpole Shrimp

The vernal pool tadpole shrimp (*Lepidurus packardii*) is listed as endangered pursuant to the federal ESA. This species inhabits vernal pools containing clear to highly turbid water, ranging in size from 0.001 to 89.0 acres. Vernal pool tadpole shrimp are distinguished from other vernal pool branchiopods discussed in this document by a large, shield-like carapace that covers the anterior half of their body. Cysts hatch during the wet season and the shrimp reach maturity in a few weeks. This species matures slowly and is long-lived, relative to other species. Vernal pool tadpole shrimp will continue to grow as long as the pools they occur in remain inundated, and in some instances can survive for 6 months or longer. The geographic range of vernal pool tadpole shrimp extends from Shasta County to northern Tulare County in California's Central Valley, and in the central coast range from Solano County to Alameda County.

There are four CNDDDB occurrences of vernal pool tadpole shrimp within 5 miles of the Study Area. The seasonal wetlands/vernal pools within the Study Area may provide suitable habitat for this species. Vernal pool tadpole shrimp has potential to occur within the Study Area.

3.2.6 Fish

Four special-status fish species were identified as having potential to occur in the vicinity of the Study Area based on the literature review (Table 1 of Appendix 3.2-A). However, upon further analysis and after the site visit, all four species were considered to be absent from the Study Area due to the lack of suitable habitat and/or because the Study Area is outside of the known geographic range for these species. No further discussion of these species is provided within this assessment.

3.2.7 Amphibians

A total of three special-status amphibians were identified as having the potential to occur in the vicinity of the Study Area based on the literature review (Table 1 of Appendix 3.2-A). Of those, two species were determined to be absent from the Study Area due to the lack of suitable habitat or due to the Study Area being outside of the known elevational range for the species. No further discussion of those species is provided in this assessment. A brief description of the remaining special-status amphibian that has the potential to occur within the Study Area is presented below.

3.2.7.1 Western Spadefoot

The western spadefoot (*Spea hammondi*) is not listed pursuant to either the California or federal ESAs; however, it is designated as a CDFW Species of Special Concern (SSC). Necessary habitat components of the western spadefoot include loose friable soils in which to burrow in upland habitats and breeding ponds. Breeding sites include temporary rain pools, such as vernal pools and seasonal wetlands, or pools within portions of intermittent drainages (Jennings and Hayes 1994). Spadefoots spend most of their adult life within underground burrows or other suitable refugia, such as rodent burrows. In California, western spadefoot toads are known to occur from the Redding area, Shasta County southward to northwestern Baja California, at elevations below 4,475 feet AMSL.

There is one CNDDDB occurrence of western spadefoot within 5 miles of the Study Area. The seasonal wetlands/vernal pools and nonnative annual grassland within the Study Area supports potentially suitable habitat for this species. Western spadefoots have potential to occur in the Study Area.

3.2.8 Reptiles

A total of three special-status reptiles were identified as having the potential to occur in the vicinity of the Study Area based on the literature review (Table 1 of Appendix 3.2-A). Of those, two species were determined to be absent from the Study Area due to the lack of suitable habitat or due to the Study Area being outside of the known elevational range for the species. No further discussion of those species is provided in this assessment. A brief description of the remaining special-status reptile that has the potential to occur within the Study Area is presented below.

3.2.8.1 Blainville's Horned Lizard

Blainville's horned lizard (*Phrynosoma blainvillii*) is considered a CDFW SSC and is a relatively large (to 105 millimeters in snout-vent length), dorsoventrally flattened, rounded lizard found historically from Redding, California, to Baja, Mexico (Jennings and Hayes 1994). This diurnal species can occur within a variety of habitats including scrubland, annual grassland, valley-foothill woodlands and coniferous forests, though it is most common along lowland desert sandy washes and chaparral (Stebbins 2003). In the Central Valley, the species ranges from southern Tehama County southward. In the Sierra Nevada it occurs from Butte County south to Tulare County, and in the Coast Ranges it occurs from Sonoma County south into Baja California (California Department of fish and Game [CDFG] 1988). It occurs from sea level to 8,000 feet AMSL and an isolated population occurs in Siskiyou County.

There are no CNDDDB occurrences of Blainville's horned lizard within 5 miles of the Study Area (CDFW 2022a). However, the nonnative annual grassland within the Study Area may provide suitable habitat for this species. Blainville's horned lizard has potential to occur onsite.

3.2.9 Birds

A total of 21 special-status bird species were identified as having the potential to occur within the Study Area based on the literature review (Table 1 of Appendix 3.2-A). Of those, 16 species were determined to be absent from the Study Area due to the lack of suitable habitat and/or due to the Study Area being

outside of the known geographic range of the species. No further discussion of those species is provided in this assessment. A brief description of the remaining five species that have the potential to occur within the Study Area is presented below.

3.2.9.1 Northern Harrier

The northern harrier (*Circus hudsonius*) is not listed pursuant to either the California or federal ESAs; however, it is considered to be a USFWS Bird of Conservation Concern (BCC) and a CDFW SSC. This species is known to nest within the Central Valley, along the Pacific Coast, and in northeastern California. The northern harrier is a ground-nesting species, and typically nests in emergent wetland/marsh, open grasslands, or savannah communities usually in areas with dense vegetation. Foraging occurs within a variety of open environments such as marshes, agricultural fields, and grasslands. Nesting occurs during April through September.

There is one CNDDDB occurrence of northern harrier within 5 miles of the Study Area. The nonnative annual grassland represents marginally suitable nesting habitat for this species. Northern harrier have low potential to occur onsite.

3.2.9.2 Swainson's Hawk

The Swainson's hawk (*Buteo swainsoni*) is listed as a threatened species and are protected pursuant to the California ESA. This species nests in North America (Canada, western U.S., and Mexico) and typically winters from South America north to Mexico. However, a small population has been observed wintering in the Sacramento-San Joaquin River Delta. In California, the nesting season for Swainson's hawk ranges from mid-March to late August.

Swainson's hawk nest within tall trees in a variety of wooded communities including riparian, oak woodland, roadside landscape corridors, urban areas, and agricultural areas, among others. Foraging habitat includes open grassland, savannah, low-cover row crop fields, and livestock pastures. In the Central Valley, Swainson's hawks typically feed on a combination of California vole (*Microtus californicus*), California ground squirrel (*Otospermophilus beecheyi*), ring-necked pheasant (*Phasianus colchicus*), many passerine birds, and grasshoppers (*Melanoplus* species). Swainson's hawks are opportunistic foragers and will readily forage in association with agricultural mowing, harvesting, discing, and irrigating (Estep 1989). The removal of vegetative cover by such farming activities results in more readily available prey items for this species.

The nearest CNDDDB occurrence of Swainson's hawk is located between 5 and 6 miles south of the Study Area. There is no potentially suitable nesting habitat onsite. However, the nonnative annual grassland within the Study Area may provide suitable foraging habitat for this species. Swainson's hawk has potential to forage onsite.

3.2.9.3 Burrowing Owl

The burrowing owl (*Athene cunicularia*) is not listed pursuant to either the California or federal ESAs; however, it is designated as a BCC by the USFWS and an SSC by the CDFW. Burrowing owls inhabit dry

open rolling hills, grasslands, desert floors, and open bare ground with gullies and arroyos. They can also inhabit developed areas such as golf courses, cemeteries, roadsides within cities, airports, vacant lots in residential areas, school campuses, and fairgrounds. This species typically uses burrows created by fossorial mammals, most notably the California ground squirrel, but may also use manufactured structures such as concrete culverts or pipes; concrete, asphalt, or wood debris piles; or openings beneath concrete or asphalt pavement. The breeding season typically occurs between February 1 and August 31.

There is one CNDDDB occurrence of burrowing owl within 5 miles of the Study Area but none were observed during the site reconnaissance. The nonnative annual grassland within the Study Area may provide suitable habitat for this species. Burrowing owl has potential to occur within the Study Area.

3.2.9.4 Loggerhead Shrike

The loggerhead shrike (*Lanius ludovicianus*) is not listed pursuant to either the California or federal ESAs; but is considered an SSC by the CDFW. The loggerhead shrike nests throughout California except the northwestern corner, montane forests, and high deserts (Small 1994). The loggerhead shrike nest in small trees and shrubs in open country with short vegetation such as pastures, old orchards, mowed roadsides, cemeteries, golf courses, agricultural fields, riparian areas, and open woodlands (Yosef 2020). The nesting season extends from March through July.

There are no CNDDDB occurrences of loggerhead shrike within 5 miles of the Study Area. However, a small shrub along the northern boundary could provide suitable nesting habitat for this species. Loggerhead shrike have potential to occur onsite.

3.2.9.5 Tricolored Blackbird

The tricolored blackbird (*Agelaius tricolor*) was granted emergency listing for protection under the California ESA in December 2014 but the listing status was not renewed in June 2015. After an extensive status review, the California Fish and Game Commission listed tricolored blackbirds as a threatened species in 2018. In addition, it is currently considered a USFWS BCC and a CDFW SSC. This colonial nesting species is distributed widely throughout the Central Valley, Coast Range, and into Oregon, Washington, Nevada, and Baja California. Tricolored blackbirds nest in colonies that can range from several pairs to several thousand pairs, depending on prey availability, the presence of predators, or level of human disturbance. Tricolored blackbird nesting habitat includes emergent marsh, riparian woodland/scrub, blackberry thickets, densely vegetated agricultural and idle fields (e.g., wheat, triticale, safflower, fava bean fields, thistle, mustard, cane, and fiddleneck), usually with some nearby standing water or ground saturation. They feed mainly on grasshoppers during the breeding season but may also forage upon a variety of other insects, grains, and seeds in open grasslands, wetlands, feedlots, dairies, and agricultural fields. The nesting season is generally from March through August.

There are four CNDDDB occurrences of tricolored blackbird within 5 miles of the Study Area but there is no potentially suitable nesting habitat onsite. However, the nonnative annual grassland within the Study Area may provide suitable foraging habitat for this species. Tricolored blackbirds have potential to forage onsite.

3.2.9.6 Other Protected Birds

In addition to the above-listed special-status birds, all native or naturally occurring birds and their occupied nests/eggs are protected under the California Fish and Game Code and the federal Migratory Bird Treaty Act (MBTA). The Study Area supports potential nesting habitat for a variety of common birds protected under these regulations.

3.2.10 Mammals

Three special-status mammals were identified as having potential to occur in the vicinity of the Study Area based on the literature review (Table 1 of Appendix 3.2-A). However, upon further analysis and after the site visit, all three species are considered to be absent from the Study Area due to the lack of suitable habitat and/or because the Study Area is outside of the known geographic range for these species. No further discussion of these species is provided within this assessment.

3.2.11 Critical Habitat and Essential Fish Habitat

There are no Critical Habitats mapped within the Study Area. The Study Area is not Essential Fish Habitat.

3.2.12 Riparian Habitats and Sensitive Natural Communities

There are no riparian habitats present within the Study Area. Five other sensitive natural communities were identified as having potential to occur within the vicinity of the Study Area based on the literature review. These include Northern Hardpan Vernal Pool, Northern Basalt Flow Vernal Pool, Northern Volcanic Mud Flow Vernal Pool, Great Valley Cottonwood Riparian Forest, and Great Valley Willow Scrub. Upon further analysis and site reconnaissance, the seasonal wetlands delineated by Rincon onsite could be categorized as Northern Hardpan Vernal Pool. The seasonal wetlands onsite fit the general description of Northern Hardpan Vernal Pools.

3.2.13 Wildlife Movement/Corridors and Nursery Sites

The Study Area is located in close proximity to residential development and subject to some disturbances from offroad vehicle use. The Study Area does not fall within an Essential Habitat Connectivity area mapped by the CDFW and is not identified as a critical and noncritical winter and summer range, fall holding areas, fawning grounds, or migration corridors for mule deer (*Odocoileus hemionus*, CDFW 2022b). Therefore, the Study Area is not expected to support critical wildlife movement corridors or potential nursery sites. However, a variety of common bird species were observed within the Study Area during the site reconnaissance and other wildlife species also likely move through the Study Area.

For the purposes of this analysis, nursery sites include but are not limited to concentrations of nest or den sites such as heron rookeries or bat maternity roosts. This data is available through CDFW's Biogeographic Information and Observation System database or as occurrence records in the CNDDDB and is supplemented with the results of the site reconnaissance (CDFW 2022b). No nursery sites have been documented within the Study Area and none were observed during the site reconnaissance.

3.2.14 Regulatory Setting

3.2.14.1 Federal

Federal Endangered Species Act

The federal ESA protects plants and animals that are listed as endangered or threatened by the USFWS and the National Marine Fisheries Service (NMFS). Section 9 of the ESA prohibits the taking of listed wildlife, where take is defined as “harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, collect, or attempt to engage in such conduct” (50 Code of Federal Regulations [CFR] 17.3). For plants, this statute governs removing, possessing, maliciously damaging, or destroying any listed plant on federal land and removing, cutting, digging up, damaging, or destroying any listed plant on non-federal land in knowing violation of state law (16 U.S. Code [USC] 1538). Under Section 7 of the ESA, federal agencies are required to consult with the USFWS if their actions, including permit approvals or funding, could adversely affect a listed (or proposed) species (including plants) or its critical habitat. Section 10 of the ESA provides for issuance of incidental take permits where no other federal actions are necessary provided a habitat conservation plan (HCP) is developed.

Section 7

Section 7 of the ESA mandates that all federal agencies consult with USFWS and/or NMFS to ensure that federal agencies’ actions do not jeopardize the continued existence of a listed species or adversely modify Critical Habitat for listed species. If adverse effects to a species or its Critical Habitat are likely, the applicant must conduct a BA for the purpose of analyzing the potential effects of the project on listed species and critical habitat to establish and justify an *effect determination*. The federal agency reviews the BA; if it concludes that the project may adversely affect a listed species or its habitat, it prepares a Biological Opinion (BO). Through consultation and the issuance of a BO, the USFWS may issue an incidental take statement allowing take of the species that is incidental to an otherwise authorized activity provided the activity will not jeopardize the continued existence of the species. The BO may recommend *reasonable and prudent alternatives* to the project to avoid jeopardizing or adversely modifying habitat. If direct and/or indirect effects will occur to Critical Habitat that appreciably diminish the value of Critical Habitat for both the survival and recovery of a species, the adverse modifications will require formal consultation with USFWS or NMFS.

Section 10

When no discretionary action is being taken by a federal agency but a project may result in the take of listed species, an incidental take permit (ITP) under Section 10 of the ESA is necessary. The purpose of the ITP is to authorize the take of federally listed species that may result from an otherwise lawful activity, not to authorize the activities themselves. In order to obtain an ITP under Section 10, an application must be submitted that includes an HCP. In some instances, applicants, USFWS, and/or NMFS may determine that an HCP is necessary or prudent, even if a discretionary federal action will occur. The purpose of the HCP planning process associated with the permit application is to ensure that adequate minimization and mitigation for impacts to listed species and/or their habitat will occur.

Critical Habitat

Critical Habitat is defined in Section 3 of the ESA as:

1. the specific areas within the geographical area occupied by a species, at the time it is listed in accordance with the ESA, on which are found those physical or biological features essential to the conservation of the species and that may require special management considerations or protection; and
2. specific areas outside the geographical area occupied by a species at the time it is listed, upon a determination that such areas are essential for the conservation of the species.

For inclusion in a Critical Habitat designation, habitat within the geographical area occupied by the species at the time it was listed must first have features that are essential to the conservation of the species. Critical Habitat designations identify, to the extent known and using the best scientific data available, the physical or biological features needed for life processes. Physical and biological features that are essential to the conservation of the species may require special management considerations or protection. These include but are not limited to:

- space for individual and population growth and for normal behavior;
- food, water, air, light, minerals, or other nutritional or physiological requirements;
- cover or shelter;
- sites for breeding, reproduction, or rearing (or development) of offspring; or
- habitats that are protected from disturbance or are representative of the historic, geographical, and ecological distributions of a species.

Migratory Bird Treaty Act

The MBTA implements international treaties between the U.S. and other nations devised to protect migratory birds, any of their parts, eggs, and nests from activities such as hunting, pursuing, capturing, killing, selling, and shipping, unless expressly authorized in the regulations or by permit. As authorized by the MBTA, the USFWS issues permits to qualified applicants for the following types of activities: falconry, raptor propagation, scientific collecting, special purposes (e.g., rehabilitation, education, migratory game bird propagation, and salvage), take of depredating birds, taxidermy, and waterfowl sale and disposal. The regulations governing migratory bird permits can be found in 50 CFR part 13 General Permit Procedures and 50 CFR part 21 Migratory Bird Permits. The State of California has incorporated the protection of birds of prey in Sections 3800, 3513, and 3503.5 of the California Fish and Game Code.

Federal Clean Water Act

The purpose of the federal Clean Water Act (CWA) is to "...restore and maintain the chemical, physical, and biological integrity of the nation's waters." Section 404 of the CWA prohibits the discharge of dredged or fill material into Waters of the U.S. without a permit from the USACE. *Discharges of fill material* is defined as the addition of fill material into Waters of the U.S., including, but not limited to the following:

placement of fill that is necessary for the construction of any structure, or impoundment requiring rock, sand, dirt, or other material for its construction; site-development fills for recreational, industrial, commercial, residential, and other uses; causeways or road fills; and fill for intake and outfall pipes, and subaqueous utility lines [33 CFR Section 328.2(f)]. In addition, Section 401 of the CWA (33 USC 1341) requires any applicant for a federal license or permit to conduct any activity that may result in a discharge of a pollutant into Waters of the U.S. to obtain a certification that the discharge will comply with the applicable effluent limitations and water quality standards.

Substantial impacts to Waters of the U.S. (more than 0.5 acre of impact) may require an individual permit. Projects that only minimally affect Waters of the U.S. (less than 0.5 acre of impact) may meet the conditions of one of the existing Nationwide Permits. A Water Quality Certification or waiver pursuant to Section 401 of the CWA is required for Section 404 permit actions; this certification or waiver is issued by the RWQCB.

Rivers and Harbors Act

Section 10 of the Rivers and Harbors Act of 1899 requires authorization from the Secretary of the Army, acting through the USACE, for the construction of any structure in or over any navigable Waters of the U.S. Structures or work outside the limits defined for navigable Waters of the U.S. require a Section 10 permit if the structure or work affects the course, location, or condition of the water body. The law applies to any dredging or disposal of dredged materials, excavation, filling, re-channelization, or any other modification of a navigable Water of the U.S., and applies to all structures, from the smallest floating dock to the largest commercial undertaking. It further includes, without limitation, any wharf, dolphin, weir, boom breakwater, jetty, groin, bank protection (e.g., riprap, revetment, bulkhead), mooring structures such as pilings, aerial or subaqueous power transmission lines, intake or outfall pipes, permanently moored floating vessel, tunnel, artificial canal, boat ramp, aids to navigation, and any other permanent, or semi-permanent obstacle or obstruction. The alteration of a USACE-federally authorized civil works project requires a permit pursuant to Section 14 of the Act, as amended and codified in 33 USC 408. Projects with minimal impacts require approval by the USACE Sacramento District Construction Operations Group; however, projects with more substantial impacts may require USACE Headquarters review. Coordination with the Central Valley Flood Protection Board, who serve as the Non-Federal Sponsor, is required as a part of the process of obtaining a Section 408 permit.

3.2.14.2 State

California Endangered Species Act

The California ESA (California Fish and Game Code Sections 2050-2116) protects species of fish, wildlife, and plants listed by the State as endangered or threatened. Species identified as candidates for listing may also receive protection. Section 2080 of the California ESA prohibits the taking, possession, purchase, sale, and import or export of endangered, threatened, or candidate species, unless otherwise authorized by permit. Take is defined in Section 86 of the California Fish and Game Code as "hunt, pursue, catch, capture, or kill, or attempt to hunt, pursue, catch, capture, or kill." The California ESA allows for take incidental to otherwise lawful projects under permits issued by CDFW.

Fully Protected Species

The State of California first began to designate species as *fully protected* prior to the creation of the federal and California ESAs. Lists of fully protected species were initially developed to provide protection to those animals that were rare or faced possible extinction and included fish, amphibians and reptiles, birds, and mammals. Most fully protected species have since been listed as threatened or endangered under the federal and/or California ESAs. Fully protected species are identified in the California Fish and Game Code Sections 4700 for mammals, 3511 for birds, 5050 for reptiles and amphibians, and 5515 for fish.

These sections of the California Fish and Game Code provide that fully protected species may not be taken or possessed at any time, including prohibition of CDFW from issuing incidental take permits for fully protected species under the California ESA. CDFW will issue licenses or permits for take of these species for necessary scientific research or live capture and relocation pursuant to the permit and may allow incidental take for lawful activities carried out under an approved Natural Community Conservation Plan (NCCP) within which such species are covered.

Native Plant Protection Act

The NPPA of 1977 (California Fish and Game Code Sections 1900-1913) was established with the intent to “preserve, protect and enhance rare and endangered plants in this state.” The NPPA is administered by CDFW. The Fish and Game Commission has the authority to designate native plants as *endangered* or *rare*. The NPPA prohibits the take of plants listed under the NPPA, though the NPPA contains exemptions to this prohibition that have not been clarified by regulation or judicial rule. In 1984, the California ESA brought under its protection all plants previously listed as endangered under NPPA. Plants listed as rare under NPPA are not protected under the California ESA but are still protected under the provisions of NPPA. The Fish and Game Commission no longer lists plants under NPPA, reserving all listings to the California ESA.

California Fish and Game Code Special Protections for Birds

In addition to protections contained within the California ESA and California Fish and Game Code Section 3511 described above, the California Fish and Game Code includes a several sections that specifically protect certain birds:

- Section 3800 states that it is unlawful to take nongame birds, such as those occurring naturally in California that are not resident game birds, migratory game birds, or fully protected birds, except when in accordance with regulations of the California Fish and Game Commission or a mitigation plan approved by CDFW for mining operations.
- Section 3503 prohibits the take, possession, or needless destruction of the nest or eggs of any bird.
- Section 3503.5 protects birds of prey (which includes eagles, hawks, falcons, kites, ospreys, and owls) and prohibits the take, possession, or destruction of any birds and their nests.

- Section 3505 makes it unlawful to take, sell, or purchase egrets, ospreys, and several exotic nonnative species, or any part of these birds.
- Section 3513 specifically prohibits the take or possession of any migratory nongame bird as designated in the MBTA.

Porter-Cologne Water Quality Act

The RWQCB implements water quality regulations under the federal CWA and the State Porter-Cologne Water Quality Act. These regulations require compliance with the NPDES, including compliance with the California Storm Water NPDES General Construction Permit for discharges of storm water runoff associated with construction activities. General Construction Permits for projects that disturb one or more acres of land require development and implementation of a SWPPP. Under the Porter-Cologne Water Quality Act, the RWQCB regulates actions that would involve “discharging waste, or proposing to discharge waste, with any region that could affect the water of the state” (Water Code 13260(a)). Waters of the State are defined as “any surface water or groundwater, including saline waters, within the boundaries of the state” (Water Code 13050 (e)). The RWQCB regulates all such activities, as well as dredging, filling, or discharging materials into Waters of the State that are not regulated by the USACE due to a lack of connectivity with a navigable water body. The RWQCB may require issuance of Waste Discharge Requirements for these activities.

California Environmental Quality Act

In accordance with CEQA Guidelines Section 15380, a species or subspecies not specifically protected under the federal or California ESAs or NPPA may be considered endangered, rare, or threatened for CEQA review purposes if the species meets certain criteria specified in the Guidelines. These criteria parallel the definitions used in the ESA, California ESA, and NPPA. Section 15380 was included in the CEQA Guidelines primarily to address situations in which a project under review may have a significant effect on a species that has not been listed under the ESA, California ESA, or NPPA, but that may meet the definition of endangered, rare, or threatened. Animal species identified as SSC by CDFW, birds identified as BCC by USFWS, and plants identified by the CNPS as rare, threatened, or endangered may meet the CEQA definition of rare or endangered.

Species of Special Concern

The CDFW defines SSC as a species, subspecies, or distinct population of an animal native to California that are not legally protected under the federal ESA, California ESA, or California Fish and Game Code, but currently satisfies one or more of the following criteria:

- The species has been completely extirpated from the state or, as in the case of birds, it has been extirpated from its primary seasonal or breeding role.
- The species is listed as federally (but not state) threatened or endangered or meets the state definition of threatened or endangered but has not formally been listed.

- The species has or is experiencing serious (noncyclical) population declines or range retractions (not reversed) that, if continued or resumed, could qualify it for state threatened or endangered status.
- The species has naturally small populations that exhibit high susceptibility to risk from any factor that if realized, could lead to declines that would qualify it for state threatened or endangered status.
- SSC are typically associated with habitats that are threatened.

Depending on the policy of the lead agency, projects that result in substantial impacts to SSC may be considered significant under CEQA.

U.S. Fish and Wildlife Birds of Conservation Concern

The 1988 amendment to the Fish and Wildlife Conservation Act mandates USFWS “identify species, subspecies, and populations of all migratory nongame birds that, without additional conservation actions, are likely to become candidates for listing under ESA.” To meet this requirement, USFWS published a list of BCC for the U.S. (USFWS 2021). The list identifies the migratory and nonmigratory bird species (beyond those already designated as federally threatened or endangered) that represent USFWS’ highest conservation priorities. Depending on the policy of the lead agency, projects that result in substantial impacts to BCC may be considered significant under CEQA.

Sensitive Natural Communities

The CDFW maintains the California Natural Community List (CDFW 2021), which provides a list of vegetation alliances, associations, and special stands as defined in *A Manual of California Vegetation* (Sawyer et al. 2009), along with their respective state and global rarity ranks. Natural communities with a state rarity rank of S1, S2, or S3 are considered sensitive natural communities. Impacts to sensitive natural communities may be considered significant under CEQA depending on the policy of the lead agency.

California Rare Plant Ranks

The CNPS maintains the Inventory of Rare and Endangered Plants of California (CNPS 2022), which provides a list of plant species native to California that are threatened with extinction, have limited distributions, and/or low populations. Plant species meeting one of these criteria are assigned to one of six CRPRs. The rank system was developed in collaboration with government, academia, nongovernmental organizations, and private-sector botanists, and is jointly managed by CDFW and the CNPS. The CRPRs are currently recognized in the CNDDDB. The following are definitions of the CNPS CRPRs:

- Rare Plant Rank 1A – presumed extirpated in California and either rare or extinct elsewhere.
- Rare Plant Rank 1B – rare, threatened, or endangered in California and elsewhere.
- Rare Plant Rank 2A – presumed extirpated in California, but more common elsewhere.
- Rare Plant Rank 2B – rare, threatened, or endangered in California but more common elsewhere.

- Rare Plant Rank 3 – a review list of plants about which more information is needed.
- Rare Plant Rank 4 – a watch list of plants of limited distribution.

Additionally, CNPS has defined Threat Ranks that are added to the CRPR as an extension. Threat Ranks designate the level of threat on a scale of 1 through 3, with 1 being the most threatened and 3 being the least threatened. Threat Ranks are generally present for all plants ranked 1B, 2B, or 4, and for the majority of plants ranked 3. Plant species ranked 1A and 2A (presumed extirpated in California), and some species ranked 3, which lack threat information, do not typically have a Threat Rank extension. The following are definitions of the CNPS Threat Ranks:

- Threat Rank 0.1 – Seriously threatened in California (more than 80 percent of occurrences threatened/high degree and immediacy of threat).
- Threat Rank 0.2 – Moderately threatened in California (20 to 80 percent occurrences threatened/moderate degree and immediacy of threat).
- Threat Rank 0.3 – Not very threatened in California (less than 20 percent of occurrences threatened/low degree and immediacy of threat or no current threats known).

Factors such as habitat vulnerability and specificity, distribution, and condition of occurrences are considered in setting the threat rank; and differences in threat ranks do not constitute additional or different protection (CNPS 2022).

Depending on the policy of the lead agency, substantial impacts to plants ranked 1A, 1B, 2, and 3 are typically considered significant under CEQA Guidelines Section 15380. Significance under CEQA is typically evaluated on a case-by-case basis for plants ranked 4 and at the discretion of the CEQA lead agency.

California Environmental Quality Act Significance Criteria

Sections 15063-15065 of the CEQA Guidelines address how an impact is identified as significant. Generally, impacts to listed (e.g., rare, threatened, or endangered) species are considered significant. Assessment of *impact significance* to populations of non-listed species (e.g., SSC) usually considers the proportion of the species' range that will be affected by a project, impacts to habitat, and the regional and population level effects.

Specifically, Section 15064.7 of the CEQA Guidelines encourages local agencies to develop and publish the thresholds that the agency uses in determining the significance of environmental effects caused by projects under its review. However, agencies may also rely upon the guidance provided by the expanded Initial Study checklist contained in Appendix G of the CEQA Guidelines, which provides examples of impacts that would normally be considered significant.

An evaluation of whether an impact on biological resources would be substantial must consider both the resource itself and how that resource fits into a regional or local context. Substantial impacts would be those that would diminish, or result in the loss of, an important biological resource, or those that would obviously conflict with local, State, or federal resource conservation plans, goals, or regulations. Impacts are sometimes locally important but not significant under CEQA because although the impacts would

result in an adverse alteration of existing conditions, they would not substantially diminish or result in the permanent loss of an important resource on a population-wide or region-wide basis.

3.2.14.3 Local

Oroville 2030 General Plan

The Open Space, Natural Resources, and Conservation Element of the Oroville General Plan, adopted in 2015, is dedicated to preserving and improving the quantity, quality, and character of open space in Oroville. The Element includes Section E which addresses biological resources in the City. The following goals and policies from the Biological Resources section of the Element pertain to Project development:

Goal OPS-8: Preserve and protect all special-status species, species that are candidates for federal or state listing. State species of special concern, and CNPS listed plant species.

Policies:

- P8.1: Require a biological assessment of any proposed project site where federally-, or State-listed species or critical habitat may be present.*
- P8.2: Require a habitat-based site assessment during the project design phase to determine the potential for special-status species to occur within a proposed project area. If potential habitat for special-status plant or animal species is identified, additional focused surveys may need to be conducted during the appropriate season.*
- P8.3: Require agency consultation for proposed projects for which there is the potential to impact federal or State-listed species, or other appropriate agency assistance for non-listed special-status species.*
- P8.6: If special-status plant or animal species are found to be located within a development site, the developer shall mitigate project impacts in accordance with State and federal law. Examples of mitigation may include:*
- Redesign the proposed project to avoid and minimize impacts.*
 - Restrict construction to specific seasons based on project specific special-status species issues (e.g. minimizing impacts to special-status nesting birds by constructing outside of the nesting season).*
 - Confine construction disturbance to the minimum area necessary to complete the work. Mitigate for the loss of special-status species by purchasing credits at an approved conservation bank (if a bank exists for the species in question), funding restoration or habitat improvement projects at existing preserves in Butte County, or purchasing or donating mitigation lands.*
 - Maintain a minimum 100-foot buffer on each side of all riparian corridors, creeks and streams for special-status and common wildlife. Ruddy Creek would be an example of where this applies.*

- *Establish setbacks from the outer edge of special-status species habitat areas.*
- *Prohibit livestock grazing or drainage into the setback of special-status species habitat areas.*
- *Construction of barriers*

Goal OPS-9: Protect areas of significant wildlife habitat and sensitive biological resources to maintain biodiversity among plant and animal species in the City of Oroville and the surrounding area.

Policies:

- P9.2: Minimize loss of wetland value or acreage consistent with the needs of wildlife and humans, to the extent practicable and as regulated by State and federal law.*
- P9.5: Require the preparation of a site-specific tree management and preservation report by a certified arborist or urban forester for development proposals on sites that contain significant oak woodlands and related habitat. This report shall include recommendations for the retention of healthy mature trees wherever feasible and promote the concept of oak regeneration corridors within project design.*
- P9.6: Protect sensitive plant and wildlife habitat from destruction and intrusion by incompatible land uses where appropriate. All efforts to protect sensitive habitats should consider:*
- *Sensitive habitat and movement corridors in the areas adjacent to development sites, as well as on the development site itself.*
 - *Prevention of habitat fragmentation and loss of habitat connectivity.*
 - *Use of appropriate protection measures for sensitive habitat areas such as non-disturbance easements and open space zoning.*
 - *On-site or off-site habitat restoration as a potential mitigation, with a no net loss of habitat policy.*
 - *Potential mitigation or elimination of impacts through mandatory clustering of development, and/or project redesign.*
- P9.7: Protect native plant species in undisturbed portions of a development site and use native species for replanting in disturbed portions of the project site.*
- P9.10: Encourage the coordinated design of large projects to preserve on-site open space, cluster development (where feasible) and conserve natural communities and/or habitat for special-status species that have been identified in proposed project areas.*

3.2.15 Environmental Impacts

3.2.15.1 Thresholds of Significance

The following thresholds of significance are based on Appendix G of the CEQA Guidelines. For purposes of this EIR, implementation of the project would be considered to have a significant adverse impact on biological resources if it would:

- Have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS?
- Have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations or by CDFW or USFWS.
- Have a substantial adverse effect on state or federally protected wetlands, as defined by Section 404 of the CWA (including, but not limited to, marsh, vernal pool, coastal, etc.), either individually or cumulatively, through direct removal, filling, hydrological interruption, or other means.
- Interfere substantially with the movement of any resident or migratory fish or wildlife species or with established resident or migratory wildlife corridors or impede the use of wildlife nursery sites.
- Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.
- Conflict with the provisions of an adopted Habitat Conservation Plan, Natural Community Conservation Plan, or other approved local, regional, or state habitat conservation plan.

3.2.15.2 Methods of Analysis

Literature Review

The following resources were reviewed to determine the special-status species that have been documented within or in the vicinity of the Study Area.

- CDFW CNDDDB data for the "Oroville, California" 7.5-minute USGS quadrangle and the nine surrounding USGS quadrangles (CDFW 2022a).
- USFWS Information, Planning, and Consultation System Resource Report List for the Study Area (USFWS 2022).
- CNPS' electronic Inventory of Rare and Endangered Plants of California was queried for the "Oroville, California" 7.5-minute USGS quadrangles and the nine surrounding quadrangles (CNPS 2022).
- NMFS Resources data for the "Oroville, California" 7.5-minute USGS quadrangle (National Oceanic and Atmospheric Administration [NOAA] 2022b).

The results of the database queries are included in Appendix 3.2-A.

Aerial imagery and site or species-specific background information, as cited throughout this document, were reviewed to determine the potential for occurrence of sensitive biological resources within or in the vicinity of the Study Area.

Field Surveys Conducted

ECORP biologist Keith Kwan conducted a reconnaissance-level field survey for the Study Area on March 1, 2022. The reconnaissance survey entailed visual observation and documentation of onsite biological resources. Special attention was given to identifying those portions of the Study Area with the potential to support special-status species and sensitive habitats. During the field survey, biological communities occurring onsite were characterized and the following biological resource information was collected:

- Potential aquatic resources
- Vegetation communities
- Plant and animal species directly observed
- Animal evidence (e.g., scat, tracks)
- Existing active raptor nest locations
- Special habitat features
- Representative photographs

Special-Status Species Considered for the Study Area

Based on database queries, a list of special-status species that are considered to have the potential to occur within the vicinity of the Study Area was generated (Table 1). Each of the species was evaluated for its potential to occur within the Study Area through the literature review and field observations, and categorized based on the following criteria:

- **Present** - Species was observed during the site visit or is known to occur within the Study Area based on documented occurrences within the CNDDDB or other literature.
- **Potential to Occur** - Habitat (including soils and elevation requirements) for the species occurs within the Study Area.
- **Low Potential to Occur** - Marginal or limited amounts of habitat occurs and/or the species is not known to occur within the vicinity of the Study Area based on CNDDDB records and other available documentation.
- **Absent** - No suitable habitat (including soils and elevation requirements) and/or the species is not known to occur within the vicinity of the Study Area based on CNDDDB records and other documentation.

3.2.15.3 Project Impacts and Mitigation Measures

Impact BIO-1:	Project implementation could have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS.
Impact Determination:	Less than Significant with Mitigation
<i>Threshold:</i>	<i>Substantial adverse impact, either directly or through habitat modifications, on any plant fish or wildlife species identified as candidate, sensitive, or special-status species in local or regional plans, policies, or regulations, or by CDFW or USFWS.</i>

Impact Discussion

The Study Area supports potential habitat for special-status species within the impact area. Potential effects to special-status species are summarized in the following sections by taxonomic group or species.

Special-Status Plants

There is potential habitat for four federally or state-listed plant species in the Study Area, and there is potential or low potential for 19 other non-listed special-status plant species to occur. Project development would permanently remove or alter marginally suitable or suitable potential habitat for special-status plants, and in the chance that special-status plant populations occur onsite they may be directly or indirectly impacted by development.

Implementation of Mitigation Measures BIO-1, BIO-2, and BIO-3 would reduce potential impacts to special-status plants to a less than significant level.

Special-Status Aquatic Invertebrates

There is potential habitat for three federally listed invertebrate species within the Study Area. The seasonal wetlands present onsite represent potential habitat for listed aquatic invertebrates. Project development would permanently remove or alter suitable potential habitat for special-status aquatic invertebrates, and in the chance that special-status aquatic invertebrates occur onsite they may be directly or indirectly impacted by development. As such, mitigation of these potential impacts is required. Implementation of Mitigation Measures BIO-2 and BIO-4 would reduce potential impacts to special-status *aquatic invertebrates* to a less than significant level.

Special-Status Amphibians

There is no potential habitat for federally or state-listed amphibian species in the Study Area, but there is potential for one other non-listed special-status amphibian species to occur. Project development would permanently remove or alter suitable potential habitat for special-status amphibians, and in the chance that special-status amphibians occur onsite they may be directly or indirectly impacted by development. As such, mitigation of these potential impacts is required. Implementation of Mitigation Measures BIO-1, BIO-2, and BIO-5 would reduce potential impacts to special-status amphibians to a less than significant level.

Special-Status Reptiles

There is no potential habitat for federally or state-listed reptile species in the Study Area, but there is potential for one other non-listed special-status reptile species to occur, the Blainville's horned lizard. Project development would permanently remove or alter suitable potential habitat for special-status reptiles, and in the chance that special-status reptiles occur onsite they may be directly or indirectly impacted by development. As such, mitigation of these potential impacts is required. Implementation of Mitigation Measures BIO-1, BIO-2 and BIO-6 would reduce potential impacts to special-status reptiles to a less than significant level.

Special-Status and Other Protected Birds

There is potential foraging habitat for two state-listed bird species (Swainson's hawk and tricolored blackbird) in the Study Area, and there is low potential or potential for three non-listed special-status bird species and a variety of other birds that are protected under the MBTA and the California Fish and Game Code. Project development would permanently remove or alter potential foraging habitat for two state-listed birds (Swainson's hawk and tricolored blackbird) and a minimal amount of nesting habitat for other non-listed protected birds in the development area. As such, mitigation of these potential impacts is required. Implementation of Mitigation Measures BIO-2, BIO-7, and BIO-8 would reduce potential impacts to special-status birds and other protected birds to a less than significant level.

Mitigation Measures

The following mitigation measures shall apply to the Proposed Project.

BIO-1: Implement Erosion Control Measures and BMPs. The Project proponent shall implement erosion control measures and BMPs to reduce the potential for sediment or pollutants at the Project site. Examples of appropriate measures are included below.

- Avoided aquatic resources should be clearly demarcated prior to construction. Avoidance buffers should be consistent with the City of Oroville requirements and/or requirements of regulatory permits. Erosion control measures should be placed between avoided aquatic resources and the outer edge of the impact limits prior to commencement of construction activities. Such identification and erosion control measures should be properly maintained until construction is completed and the soils have been stabilized.

- Any fueling in the Study Area should use appropriate secondary containment techniques to prevent spills.

Timing/Implementation: Prior to and during grading and construction

Monitoring/Enforcement: Project proponent/City of Oroville Planning Division

BIO-2: Worker Environmental Awareness Program. The Project proponent shall require a mandatory Worker Environmental Awareness Program provided by qualified biologist for all contractors, work crews, and any onsite personnel to aid workers in recognizing special status species and sensitive biological resources that may occur on-site prior to any construction or grading of the site. The program shall include identification of the special status species and their habitats, a description of the regulatory status and general ecological characteristics of sensitive resources, and review of the limits of construction and mitigation measures required to reduce impacts to biological resources within the work area.

Timing/Implementation: Prior to grading and construction

Monitoring/Enforcement: Project proponent/City of Oroville Planning Division

BIO-3: Special-Status Species – Plants. There is potential or low potential for 23 special-status plants to occur within the Study Area. The following mitigation measures are required to minimize potential impacts to special-status plants.

- Perform floristic plant surveys according to USFWS, CDFW, and CNPS protocols prior to construction. Surveys shall be conducted by a qualified biologist and timed according to the appropriate phenological stage for identifying target species. Known reference populations shall be visited and/or local herbaria records shall be reviewed, if available, prior to surveys to confirm the phenological stage of the target species. If no special-status plants are found within the Project site, no further measures pertaining to special-status plants are necessary.
- If special-status plants are identified within 25-feet of the Project impact area, implement the following measures:
- If avoidance of special-status plants is feasible, establish and clearly demarcate avoidance zones for special-status plant occurrences prior to construction. Avoidance zones shall include the extent of the special-status plants plus a 25-foot buffer, unless otherwise determined by a qualified biologist, and shall be maintained until the completion of construction. A qualified biologist/biological monitor shall be present must occur within the avoidance buffer to ensure special-status plants are not impacted by the work.
- If avoidance of special-status plants is not feasible, mitigate for significant impacts to special-status plants. Mitigation measures shall be developed in consultation with CDFW. Mitigation measures may include permanent preservation of onsite or offsite

habitat for special-status plants and/or translocation of plants or seeds from impacted areas to unaffected habitats.

Timing/Implementation: *Prior to grading and construction*

Monitoring/Enforcement: *Project proponent/City of Oroville Planning Division*

BIO-4: Special-Status Species – Invertebrates. There is potential for three federally listed special-status invertebrates to occur within the Study Area. The following mitigation measure is required to minimize potential impacts to special-status invertebrates.

- No Project construction shall proceed in areas supporting potential habitat for federally listed vernal pool invertebrates, or within adequate buffer areas (250 feet or lesser distance deemed sufficiently protective by a qualified biologist with approval from USFWS), until incidental take authorization has been issued by USFWS under Section 7 (Biological Opinion) or Section 10 (HCP) of the ESA and the Project proponent has abided by conditions in the BO or HCP, including all conservation and minimization measures. Conservation and minimization measures shall include preparation of supporting documentation describing methods to protect existing vernal pools during and after project construction and compensatory mitigation for loss of suitable habitat.

Timing/Implementation: *Prior to grading and construction*

Monitoring/Enforcement: *Project proponent/City of Oroville Planning Division*

BIO-5: Western Spadefoot. Western spadefoot have potential to occur within the Study Area. Implementation of Mitigation Measures BIO-1, BIO-2, and the following mitigation measure would avoid and/or minimize potential adverse effects to western spadefoot.

- A qualified biologist shall conduct surveys for western spadefoot in areas of potential habitat that would be eliminated by the Project. The surveys shall be conducted at the appropriate time of year to detect western spadefoot, generally the breeding season, according to methods approved by CDFW. If western spadefoot is found in habitat that will be eliminated or made unsuitable for western spadefoot, a plan to collect and relocate adult and larval western spadefoot and egg masses to suitable habitat that will be preserved in perpetuity as required according to the BO in Mitigation Measure BIO-4.

Timing/Implementation: *Prior to grading and construction*

Monitoring/Enforcement: *Project proponent/City of Oroville Planning Division*

BIO-6: Blainville's Horned Lizard. Blainville's horned lizard have potential to occur within the Study Area. Implementation of Mitigation Measures BIO-1, BIO-2, and the following mitigation measure would avoid and/or minimize potential adverse effects to Blainville's horned lizard.

- A qualified biologist shall conduct a preconstruction Blainville's horned lizard survey in Project impact areas within 48 hours prior to construction activities. Any Blainville's horned lizard individuals discovered in the Project work area immediately prior to or during Project activities shall be allowed to move out of the work area of their own volition. If this is not feasible, consult with CDFW to develop avoidance and minimization measures, which may include, but not limited to, fencing avoidance areas, development of a relocation plan, and/or onsite monitoring during site construction.

Timing/Implementation: Prior to grading and construction

Monitoring/Enforcement: Project proponent/City of Oroville Planning Division

BIO-7: Special-Status Species – Birds. Three special-status birds and various other protected birds have the potential to nest within the Study Area. The following mitigation is required to minimize potential impacts to nesting birds:

- If construction is to occur during the nesting season (generally February 1 through August 31), conduct a preconstruction nesting bird survey of all suitable nesting habitat on the Project within 14 days of the commencement of construction. The survey shall be conducted within a 500-foot radius of Project work areas for raptors and within a 100-foot radius for other nesting birds. If any active nests are observed, these nests shall be designated a sensitive area and protected by an avoidance buffer established in coordination with CDFW until the breeding season has ended or until a qualified biologist has determined that the young have fledged and are no longer reliant upon the nest or parental care for survival. Preconstruction nesting surveys are not required for construction activity outside the nesting season.

Timing/Implementation: Prior to grading and construction

Monitoring/Enforcement: Project proponent/City of Oroville Planning Division

BIO-8: Swainson's Hawk and Tricolored Blackbird. The Study Area supports potential foraging habitat for two state-listed birds: Swainson's hawk and tricolored blackbird. The following mitigation is recommended to minimize potential impacts to foraging habitat:

- Mitigate for the loss of Swainson's hawk according to the 1994 CDFG's *Staff Report Regarding Mitigation for Impacts to Swainson's Hawks (Buteo swainsoni) in the Central Valley of California*. The required measures to address Swainson's hawk

foraging habitat impact and mitigation measure BIO-9 will be sufficient to mitigate impacts to tricolored blackbird foraging habitat.

Timing/Implementation: Prior to grading and construction

Monitoring/Enforcement: Project proponent/City of Oroville Planning Division

Residual Impact After Mitigation

Impacts would be less than significant after mitigation.

Impact BIO-2:	Project implementation could have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the CDFW or USFWS.
Impact Determination:	Less than Significant with Mitigation
Threshold:	Substantial adverse impact on any riparian habitat or sensitive natural community identified in local or regional plans, policies, or regulations, or by CDFW or USFWS.

Impact Discussion

There are no riparian habitats present within the Study Area. Five other sensitive natural communities were identified as having potential to occur within the vicinity of the Study Area based on the literature review (ECORP 2023). These include Northern Hardpan Vernal Pool, Northern Basalt Flow Vernal Pool, Northern Volcanic Mud Flow Vernal Pool, Great Valley Cottonwood Riparian Forest, and Great Valley Willow Scrub. Upon further analysis and site reconnaissance, the seasonal wetlands delineated by Rincon onsite could be categorized as Northern Hardpan Vernal Pool. The seasonal wetlands onsite fit the general description of Northern Hardpan Vernal Pools, which is a sensitive natural community. In addition to Mitigation Measures BIO-1 and BIO-2, implementation of Mitigation Measure BIO-9 would minimize potential impacts to Northern Hardpan Vernal Pools.

Mitigation Measures

Implement Mitigation Measures BIO-1, BIO-2, and BIO-9.

Residual Impact After Mitigation

Impacts would be less than significant after mitigation.

Impact BIO-3:	Project implementation could cause a substantial adverse effect on state or federally protected wetlands (i.e., including, but not limited to, marsh, vernal pool, coastal) through direct removal, filling, hydrological interruption, or other means.
Impact Determination:	Less than Significant with Mitigation
Threshold:	<i>Substantial adverse effect on state or federally protected wetlands.</i>

Impact Discussion

Rincon Consultants, Inc. prepared the Jurisdictional Waters and Wetlands Delineation, dated March 2021, for the Study Area. As shown in Figure 3.2-1, Rincon delineated 78 depressional seasonal wetlands totaling 2.62 acres, as listed in Table 3.2-1.

These wetlands were categorized as seasonal wetlands by Rincon but some could be considered vernal pools by other wetland delineators. The USEPA defines vernal pools as:

“seasonal depressional wetlands that occur under Mediterranean climate conditions of the West Coast and in glaciated areas of the northeastern and midwestern states. They are covered by shallow water for variable periods from winter to spring but may be completely dry for most of the summer and fall” (USEPA 2022).

At present, there has been no verification or jurisdictional determination of these aquatic resources conducted by the USACE.

When Rincon prepared the delineation report, the definition of Waters of the U.S. was based on the NWPR. Under the NWPR, the wetlands onsite would probably not have been considered Waters of the U.S. as stated in the Rincon report. However, the NWPR was vacated and remanded in August 2021. In the current definition of Waters of the U.S. according to the pre-2015 regulatory regime, include the *Rapanos* Guidance, wetlands adjacent to nonnavigable tributaries that are not relatively permanent would require a significant nexus evaluation to establish federal jurisdiction. The wetlands onsite would require a significant nexus evaluation by the USACE in order to determine jurisdiction.

Regardless of federal jurisdiction, the wetlands delineated onsite would likely be considered Waters of the State under the *State Wetland Definition and Procedures for Discharges of Dredged or Fill Material to Waters of the State* (State Water Resources Control Board 2019). As such, Mitigation Measures BIO-1, BIO-2, and BIO-9 are required to reduce this potential impact to less than significant.

Mitigation Measures

The following mitigation measures shall apply to the Proposed Project.

BIO-9: Sensitive Natural Communities. The Project site supports potential Waters of the U.S. and State. In addition to Mitigation Measures BIO-1 and BIO-2, the following mitigation measures are required for the protection of aquatic resources:

- Submit an aquatic resources delineation for the Project to the USACE and obtain a verification or Preliminary Jurisdictional Determination.
- File a request for authorization to fill Waters of the U.S. under the Section 404 of the federal CWA (Section 404 Permit) prior to discharging any dredged or fill materials into any Waters of the U.S. Mitigation measures will be developed as part of the Section 404 Permit process to ensure no net loss of wetland function and values. To facilitate such authorization, an application for a Section 404 Nationwide Permit (0.5 acre or less of impacts for Nationwide Permit 29-Residential Developments) or an Individual Permit for the Project should be prepared and submitted to USACE. Mitigation for impacts to Waters of the U.S. typically consists of a minimum of a 1:1 ratio for direct impacts; however final mitigation requirements will be developed in consultation with USACE.
- If necessary, file a request for a Water Quality Certification or waiver pursuant to Section 401 of the CWA must be obtained from the RWQCB for Section 404 permit actions.
- Pursuant to the Porter-Cologne Water Quality Act, a permit authorization from the RWQCB is required prior to the discharge of material in an area that could affect Waters of the State. Mitigation requirements for discharge to Waters of the State within the Project Site will be developed in consultation with the RWQCB.

Timing/Implementation: Prior to grading and construction

Monitoring/Enforcement: Project proponent/City of Oroville Planning Division

Residual Impact After Mitigation

Impacts would be less than significant after mitigation.

Impact BIO-4:	Project implementation could interfere substantially with the movement of any native resident or migratory fish or wildlife species with established native resident or migratory wildlife corridors or impede the use of native wildlife nursery sites.
Impact Determination:	No Impact
Threshold:	<i>Substantial interference with the movement of any native resident or migratory fish or wildlife species with established native resident or migratory wildlife corridors or substantially impede the use of wildlife nursery sites.</i>

Impact Discussion

The Project Site does not have any creeks, rivers or lakes that would support migrating fish. The Project Site is surrounded by urban development on three sides, SR 3 to the north and I-5 to the west. There are no trees or shrubs present. Undeveloped dirt roads and a disced fire-break path surround the Study Area. The BRA completed for the Project Site determined that the Project would have no impacts to wildlife movement, corridors, or nursery sites. Therefore, the Project would result in no impact in this area.

Mitigation Measures

No mitigation measures are required.

Impact BIO-5:	Project implementation could conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.
Impact Determination:	No Impact
Threshold:	<i>Conflict with any local policies or ordinances protecting biological resources, such as a tree preservation policy or ordinance.</i>

Impact Discussion

The Project Site does not have any trees. While the City does have policies protecting biological resources, the above analysis provides consistency with these policies and therefore, the Project would not conflict with these policies. The Project would have no impact in this area.

Mitigation Measures

No mitigation measures are required.

Impact BIO-6:	Project implementation could conflict with the provisions of an adopted Habitat Conservation Plan, or other approved local, regional, or state habitat conservation plans.
Impact Determination:	No Impact
Threshold:	<i>Conflict with the provisions of an adopted Habitat Conservation Plan, or other approved local, regional, or state habitat conservation plans.</i>

Impact Discussion

There is no adopted HCP or other approved local, regional, or state habitat conservation plans at or near the Project Site. The Project would have no impact in this area.

Mitigation Measures

No mitigation measures are required.

3.2.16 Cumulative Setting, Impacts, and Mitigation Measures

Section 3.0 provides the baseline for cumulative setting and is based on General Plan projections. While this is helpful for biological resources cumulative impacts, it does not necessarily provide a specific cumulative impact setting for these resources as the impacts to these resources are generally more site-specific. Therefore, the cumulative setting for biological resources includes the Project Site as well as the remaining undeveloped areas surrounding the Project Site where the impacts of urbanization and threats to biological diversity and sensitive biological resources are considered most serious. Cumulative impacts on biological resources are primarily the result of the area’s urbanization, habitat fragmentation, water pollution, and conversion of natural land to residential, commercial, and recreational use.

3.2.16.1 Cumulative Impacts and Mitigation Measures

Impact BIO-7:	Would implementation of the proposed project, in combination with existing, approved, proposed, and reasonably foreseeable development in the immediate area of the Proposed Project, result in the conversion of habitat and impact biological resources.
Impact Determination:	Less than cumulatively considerable
Threshold:	<i>Cumulatively result in the conversion of habitat and impact biological resources.</i>

Impact Discussion

Implementation of Mitigation Measures BIO-1 through BIO-8 will ensure impacts to special-status plant species are avoided. Mitigation Measure BIO-9 will reduce potential impacts to wetlands and sensitive natural communities though the development of the Proposed Project will act as a continuation of the existing commercialization and urbanization of the area. As discussed previously, the Project itself would cause few to no impacts to special-status species, riparian habitat or other sensitive natural communities, wetlands, or migratory wildlife. Implementation of Mitigation Measures BIO-1 through BIO-9 would reduce the only potential impacts to biological resources to a less than significant level. These factors have effectively reduced the Project's contribution to cumulative impacts. As a result, the Proposed Project would have a less than cumulatively considerable impact.

Mitigation Measures

No mitigation measures are required.

THIS PAGE INTENTIONALLY LEFT BLANK

3.3 Cultural Resources

This section evaluates the potential impacts of the Proposed Project on cultural resources. Cultural resources are defined as pre-contact (prehistoric) and historic sites, buildings, objects, structures, and districts or any other physical evidence associated with human activity considered important to a culture, or a community for scientific, traditional, or religious reasons. This section is based on the *Cultural Resources Inventory Report for the Feather Ranch Project* prepared by ECORP Consulting, Inc. (2022). The information provided below summarizes this report.

Due to the sensitive nature of cultural resources, which is restricted from public distribution by state and federal law, the cultural resources report is not included in the EIR appendices. Specific locations are not identified in the following analysis; however, all pertinent information necessary for impact determinations is included in this section.

While this section includes Native American pre-contact and historic information, TCRs (Section 3.14 of this Draft EIR) includes further analysis of the ethnography of the Project Site and potential Project impacts to TCRs.

3.3.1 Environmental Setting

The Project Site is located at the northeastern end of the Sacramento Valley at the foot of the Sierra Nevadas. The Feather River is 1.6 miles east of the Project Site. Thermalito Afterbay is 2.25 miles west. Thermalito Forebay is 0.6 mile north, at the foot of the Campbell Hills. The Oroville Wildlife Area, an open space wildlife preserve, is 1.5 miles southeast. Lake Oroville is 7 miles northeast. Elevations range from 190 to 230 feet AMSL.

The Project Site is an undeveloped lot on the western outskirts of the City of Oroville, with residential development to the north and east, undeveloped land to the west, and Oroville Municipal Airport to the south.

3.3.1.1 Regional Pre-Contact History

It is generally believed that human occupation of California began at least 10,000 years before present (BP). The archaeological record indicates that between approximately 10,000 and 8,000 BP, a predominantly hunting economy existed, characterized by archaeological sites containing numerous projectile points and butchered large animal bones. Animals that were hunted probably consisted mostly of large species still alive today. Bones of extinct species have been found but cannot definitively be associated with human artifacts. Although small animal bones and plant grinding tools are rarely found within archaeological sites of this period, small game and floral foods were probably exploited on a limited basis. A lack of deep cultural deposits from this period suggests that groups included only small numbers of individuals who did not often stay in one place for extended periods (ECORP 2022).

Around 8,000 BP, there was a shift in focus from hunting toward a greater reliance on plant resources. Archaeological evidence of this trend consists of a much greater number of milling tools (e.g., metates and manos) for processing seeds and other vegetable matter. This period, which extended until around

5,000 BP, is sometimes referred to as the Millingstone Horizon. Projectile points are found in archaeological sites from this period, but they are far fewer in number than from sites dating to 8,000 BP. An increase in the size of groups and the stability of settlements is indicated by deep, extensive middens at some sites from this period (ECORP 2022).

Archaeological evidence indicates that reliance on both plant gathering and hunting continued as in the previous period, with more specialized adaptation to particular environments in sites dating to after about 5,000 BP. Mortars and pestles were added to metates and manos for grinding seeds and other vegetable material. Flaked-stone tools became more refined and specialized, and bone tools were more common. New peoples from the Great Basin began entering Southern California during this period. These immigrants, who spoke a language of the Uto-Aztecan linguistic stock, seem to have displaced or absorbed the earlier population of Hokan-speaking peoples. During this period, known as the Late Horizon, population densities were higher than before, and settlement became concentrated in villages and communities along the coast and interior valleys. Regional subcultures also started to develop, each with its own geographical territory and language or dialect. These were most likely the basis for the groups that the first Europeans encountered during the 18th century. Despite the regional differences, many material culture traits were shared among groups, indicating a great deal of interaction. The presence of small projectile points indicates the introduction of the bow and arrow into the region sometime around 2,000 BP (ECORP 2022).

3.3.1.2 Local Pre-Contact History

This section provides a regional overview with contextual elements drawn from California's Central Valley Region, the Western Foothills Region, and from the transition zone where the Project lies. There has been more extensive research and study of Central Valley pre-contact history than that of the Sierra Nevada foothill zone, but a fair amount of cultural overlap exists within these regions. This section includes the most recent and readily available research of both regions and includes some reference to the climactic changes that swept the Sierra Nevada and being a catalyst for population movement that led to cultural change in the foothills.

California's Great Central Valley has long held the attention of archaeologists and was a focus of early research in California. While archaeologists have used different definitions of cultural chronology over the years, the most recent sequence was redefined by J. Rosenthal, G. White, and Mark Sutton in their 2007 study, *The Central Valley: A View from the Catbird's Seat*, In *California Prehistory: Colonization, Culture, and Complexity*. This study's recalibrated sequence is divided into three broad periods: The Paleoindian Period (11,550 cal. BC to 8550 cal. BC); the three-staged Archaic period, consisting of the Lower Archaic (8550 cal. BC to 5550 cal. BC), Middle Archaic (5550 cal. BC to 550 cal. BC), and Upper Archaic (550 cal. BC to cal. AD 1100); and the Emergent Period (cal. AD 1100 to Historic). The three divisions of the Archaic Period correspond to climate changes. This is the most recently developed sequence and is now commonly used to interpret Central California prehistory. The aforementioned periods are characterized by the following:

Paleoindian Period

This period began when the first people began to inhabit what is now known as the California culture area. It was commonly believed these first people (i.e., hunters and gatherers) subsisted on big game and minimally processed foods, presumably with no trade networks. More recent research indicates these people may have been more sedentary, relied on some processed foods, and traded (Rosenthal et al. 2007). Populations consisted of small groups traveling frequently to exploit plant and animal resources.

Archaic Period

This period was characterized by an increase in plant exploitation for subsistence, more elaborate burial accoutrements, and increase in trade network complexity (ECORP 2022). The three divisions that correspond to pre-contact climate change are characterized by the following aspects (Rosenthal et al. 2007):

Lower Archaic Period—This period is characterized by cycles of widespread floodplain and alluvial fan deposition. Artifact assemblages from this period include chipped-stone crescents and early wide-stemmed points, marine shell beads, eastern Nevada obsidian, and obsidian from the north Coast Ranges. These types of artifacts found on the sites dating to this period indicate trade was occurring in multiple directions. A variety of plant and animal species were also utilized, including acorns, wild cucumber, and manzanita berries.

Middle Archaic Period—This period is characterized by a drier climate period. Rosenthal et al. (2007:153) identified two distinct settlement/subsistence patterns in this period: the Foothill Tradition and the Valley Tradition. Functional artifact assemblages consisting primarily of locally sourced flaked-stone and groundstone cobbles characterize the foothills tradition, while the Valley Tradition was generally characterized by diverse subsistence practices and extended periods of sedentism.

Upper Archaic Period—This period is characterized by abrupt change to wetter and cooler environmental climate conditions. Much greater cultural diversity is evident from this period. More specialized artifacts, such as bone tools, ceremonial blades, polished and groundstone plummets, saucer and saddle *Olivella* shell beads, *Haliotis* shell ornaments, and a variety of groundstone implements are characteristic of this period.

Emergent Period

This period is most notably marked by the introduction of the bow and arrow, the emergence of social stratification linked to wealth, and more expansive trade networks signified by the presence of clam disk beads that were used as currency. The Augustine pattern (the distinct cultural pattern of the Emergent Period) is characterized by the appearance of small projectile points (largely obsidian), rimmed display mortars, flanged steatite pipes, flanged pestles, and chevron-designed bird-bone tubes. Large mammals and small seeded resources appear to have made up a larger part of the diet during this period (ECORP 2022).

The following discussion summarizes the cultural patterns and the different local developments represented in archaeological deposits in the region surrounding the Project Site.

The Windmill Pattern of the Early Horizon dates to the Middle Archaic (as defined by Rosenthal et al. 2007) and may be the most extensively studied of all the cultural patterns defined for the Central Valley. The temporal span for Windmill has been updated and reanalyzed several times in the archaeological literature. Multiple authors over time have presented the characteristics to identify the Windmill pattern (ECORP 2022). Most notable characteristics are:

- large, heavy stemmed and leaf-shaped projectile points commonly made of a variety of materials other than obsidian;
- perforate charmstones;
- *Haliotis* and *Olivella* shell beads and ornaments;
- trident fish spears;
- baked clay balls (presumably for cooking in baskets);
- flat slab milling stones;
- small numbers of mortars; and
- ventrally extended burials oriented toward the west.

The subsistence pattern of Windmill groups probably emphasized hunting and fishing, supplementing it with collection of seeds (possibly including acorns) (ECORP 2022).

Windmill groups acquired obsidian from at least two Coast Ranges and three trans-Sierran sources, *Haliotis* and *Olivella* shells and ornaments from the coast, and quartz crystals from the Sierra Nevada foothills. It is widely hypothesized that the bulk of these materials were acquired through trade; however, some may have been acquired as part of seasonal movements between the Central Valley and the Sierra Nevada foothills.

There is evidence for seasonal transhumance in the distribution of Windmill artifacts, sites, and burial patterns. Archeological work along the edge of the Sierra Nevada foothills suggests a link between Windmill groups of the Central Valley and the Sierra Nevada mortuary caves. In addition, analysis of Windmill burial orientation and skeletal analyses suggest a high percentage of winter death among Windmill groups. Incorporating all of this data, postulates that Windmill groups were exploiting the foothills of the Sierra Nevada during the summer and returning in the winter to villages in the Central Valley as early as 4,000 BP.

The succeeding Middle Horizon, namely the Cosumnes Culture, which has much less-published material, discusses the patterns defined for this era than does Windmill; nonetheless, some of the most notable characteristics are:

- tightly flexed burials with variable orientation;
- red ochre stains in burials;

- distinctive *Olivella* and *Haliotis* beads and ornaments;
- distinctive charmstones;
- cobble mortars and evidence of wooden mortars;
- numerous bone tools and ornaments;
- large, heavy foliate and lanceolate concave base projectile points made of materials other than obsidian; and
- objects of baked clay.

Further classification of the Middle Archaic into the Foothill Tradition and Valley Tradition helped to clarify the different types of cultural sequences, which occurred during these time periods. Functional artifact assemblages consisting primarily of locally sourced flaked-stone and groundstone cobbles characterize the Foothills Tradition, with very few trade goods. Sites that represent the Valley Tradition are much fewer in number and are generally characterized by much more diverse subsistence practices and extended periods of sedentism. Specialized tools, trade goods, and faunal refuse that indicate year-round occupation are evident on sites of the Valley Tradition. Distinct artifacts attributed to this tradition include one of the oldest dated shell bead lots in Central California and a particular type of pestle used with a wooden mortar.

The Sierra Nevada experienced significant climactic shifts and concomitant vegetation change throughout the Holocene, but pollen analysis and climactic records indicate that the current climate pattern and primary constituents of vegetation communities were in place by the Middle Archaic around 1,000 BC. Seasonal transhumance practiced by Indigenous populations of the Sierra may have become more consistent during this period of relative environmental stasis.

Paleobotanical analysis from sites of the Foothills Tradition confirm that acorns and pine nuts were preferred for subsistence. Sites near the Project Site associated with the Valley Tradition are rare in the early Middle Archaic (ca. 5,550 to 2,050 cal. BC). Sites associated with later portions of the Middle Archaic (post-2050 cal. BC) near the Project Site include elaborate material culture and diverse dietary and technological assemblages.

The next era in the region is identified as the Late Horizon, the Hotchkiss Culture, and the Augustine Pattern. The culture was formed by populations during the later Upper Archaic and Emergent periods and ranges in age from around 550 cal. BC to contact (dates vary between the different models of prehistory developed for the region). The Upper Archaic, as discussed above, corresponds with the late Holocene change in environmental conditions to a wetter and cooler climate. The Emergent Period and Late Horizon are markedly represented by the introduction of bow-and-arrow technology, as well as more pronounced cultural diversity as reflected in diversity of burial posturing, artifact styles, and material culture.

This era primarily represents both local innovation and the blending of new cultural traits introduced into the Central Valley. The Emergent Occupation (as defined by Rosenthal et al. 2007) coincides with the Augustine Pattern in the lower Sacramento Valley/Delta region, and with the Sweetwater and Shasta

complexes in the northern Sacramento Valley. The emergence of the Augustine Pattern appears to have been associated with the expansion of Wintun populations from the north, which appears to have led to an increase in settlements in the area after 550 BP.

During this period in the Sierra Nevada, paleoenvironmental data suggests severe droughts occurred from around AD 892 to 1112 and AD 1210 to 1350. These drier conditions surely affected the seasonal resource procurement rounds of the native populations during this time, and likely led to an influx of population movement and cultural blending into the foothills zone and Central Valley by Sierra Nevada groups.

Despite the varying designations, this emergent era is distinguished in the archaeological record by intensive fishing, extensive use of acorns, elaborate ceremonialism, social stratification, and cremation of the dead. Artifacts associated with the defined patterns (Augustine, Emergent, Hotchkiss) include bow-and-arrow technology (evidenced by small projectile points), mortars and pestles, and fish harpoons with unilaterally or bilaterally placed barbs in opposed or staggered positions. Mortuary patterns include flexed burials and cremations, with elaborate material goods found in association with prestigious individuals. A local form of pottery, Cosumnes brown ware, emerged in the lower Sacramento Valley. Human animal effigies are also a marker of this emergent era around the Project Site.

Regional History

The first European to visit California was Spanish maritime explorer Juan Rodriguez Cabrillo in 1542. The Viceroy of New Spain (Mexico) sent Cabrillo north to look for the Northwest Passage. Cabrillo visited San Diego Bay, Catalina Island, San Pedro Bay, and the northern Channel Islands. The English adventurer Francis Drake visited the Miwok Native American group at Drake's Bay or Bodega Bay in 1579. Sebastian Vizcaíno explored the coast as far north as Monterey in 1602. He reported that Monterey was an excellent location for a port.

Colonization of California began with the Spanish Portolá land expedition. The expedition, led by Captain Gaspar de Portolá of the Spanish army and Father Junipero Serra, a Franciscan missionary, explored the California coast from San Diego to the Monterey Bay Area in 1769. As a result of this expedition, Spanish missions to convert the native population, presidios (forts), and pueblos (towns) were established. The Franciscan missionary friars established 21 missions in Alta California (the area north of Baja California) beginning with Mission San Diego in 1769 and ending with the mission in Sonoma established in 1823. The purpose of the missions and presidios was to establish Spanish economic, military, political, and religious control over the Alta California territory. No missions were established in the Central Valley. The nearest missions were in the vicinity of San Francisco Bay and included Mission San Francisco de Asis (Dolores) established in 1776 on the San Francisco Peninsula, Mission Santa Clara de Asis at the south end of San Francisco Bay in 1777, Mission San Jose in 1797, Mission San Rafael, established as an *asistencia* in 1817 and a full mission in 1823, and Mission San Francisco Solano in Sonoma in 1823. Presidios were established at San Francisco and Monterey. The Spanish took little interest in the area and did not establish any missions or settlements in the Central Valley.

After Mexico became independent from Spain in 1821, what is now California became the Mexican province of Alta California with its capital at Monterey. In 1827, American trapper Jedediah Smith traveled

along the Sacramento River and into the San Joaquin Valley to meet other trappers of his company who were camped there, but no permanent settlements were established by the fur trappers.

The Mexican government closed the missions in the 1830s and former mission lands, as well as previously unoccupied areas, were granted to retired soldiers and other Mexican citizens for use as cattle ranches. Much of the land along the coast and in the interior valleys became part of Mexican land grants or ranchos. During the Mexican Period there were small towns at San Francisco (then known as Yerba Buena) and Monterey. The rancho owners lived in one of the towns or in an adobe house on the rancho. The Mexican Period includes the years 1821 to 1848.

John Sutter, a European immigrant, built a fort at the confluence of the Sacramento and American rivers in 1839 and petitioned the Mexican governor of Alta California for a land grant, which he received in 1841. Sutter built a flour mill and grew wheat near the fort. Gold was discovered in the flume of Sutter's lumber mill at Coloma on the South Fork of the American River in January 1848. The discovery of gold initiated the 1849 California Gold Rush, which brought thousands of miners and settlers to the Sierra foothills east and southeast of Sacramento.

The American Period began when the Treaty of Guadalupe Hidalgo was signed between Mexico and the U.S. in 1848. As a result of the treaty, Alta California became part of the U.S. as the territory of California. Rapid population increase occasioned by the Gold Rush of 1849 allowed California to become a state in 1850. Most Mexican land grants were confirmed to the grantees by U.S. courts, but usually with more restricted boundaries, which were surveyed by the U.S. Surveyor General's office. Land outside the land grants became federal public land, which was surveyed into sections, quarter-sections, and quarter-quarter sections. The federal public land could be purchased at a low fixed price per acre or could be obtained through homesteading (after 1862).

Project Area History

The Project Site is situated in Butte County. Butte County was one of the original 27 counties in California and originally encompassed a much larger area than it does today. It was named for the landform now known as the Sutter Buttes, located in present-day Sutter County to the south. In the latter part of the 19th century, the County land was primarily agricultural, with timber and mineral lands encompassing less than half of the County area. Captain Luis A. Argüello led an expedition to the region in 1820 and was likely the earliest nonnative to explore the area. Fur trappers of the Hudson Bay Company followed and traversed the region as early as 1828. Other hunters and settlers in the Sacramento Valley began to travel on the Hudson Bay Trail to Oregon and then south to California. John Bidwell came to Sutter's Fort in California using this route. He mapped the upper reaches of the Sacramento Valley. People used Bidwell's maps to identify land when applying for land grants from the Mexican Government.

In 1844, Edward A. Farwell and Thomas Fallon settled on the Farwell Grant, which was to be the first settlement in Butte County. John Bidwell discovered gold on the Feather River two months after James Marshall's first gold discovery at Sutter's Mill in Coloma. This led to an influx of gold seekers to the area, and the river was lined with countless mining camps. Some of these camps grew to prosper into towns; others were short-lived.

The County of Butte was organized after California gained statehood and counties were established under the Act of February 18, 1850. Butte County originally included the majority of lands in what is now Lassen, Plumas, Tehama, Colusa, and Sutter counties, including the Sutter Buttes. The boundaries were reconfigured within the next few months.

The Project Site land is part of the 17,806-acre Rancho Fernandez Land Grant granted to Dionisio Zenon Fernandez and Máximo Zenon Fernandez by Mexican Governor Pio Pico in 1846. The land grant was located along the western bank of the Feather River and encompassed the area of today's Oroville and Thermalito.

The Project Site is located within the City of Oroville, which began as a mining camp in 1849 called Ophir City. John Bidwell discovered gold in the Feather River in 1848 and the town gained importance and population. By 1856, its name was changed to Oroville and became the county seat over Bidwell's Bar by popular election. It burgeoned into a trading hub for mining towns in the surrounding areas north and south along the Feather River. Mining operations were the main industry in Oroville and on the Feather River in the 1850s; the river was rerouted to mine the gravel bed.

By 1850, a sizable population had arrived along the banks of the Feather River to pan for gold and engage in traditional forms of placer mining. Later, hydraulic mining and dredging were used to mine less-accessible deposits. Dredge operators targeted heavy gold particles that had been washed down to the valley floor by annual precipitation events in the Sierra and deposited in sediments on the riverside flats near Oroville. Hydraulic mining continued to be the chief mining activity in the Oroville area until the 1880s, when it was outlawed due to the deleterious effect it had on the landscape and environment. The gold dredging industry replaced the hydraulic mining almost immediately. Dredge operators targeted heavy gold particles that had been washed down to the valley floor by annual precipitation events in the Sierras and deposited in sediments on the riverside flats near Oroville.

Dredging in the Oroville Wildlife Area began with Wendell Hammon, who had developed the first successful bucket-line dredge operation in California by 1898. This set off a chain of events that resulted in the operation of 35 dredges south of Oroville by 1908. The apogee of dredge mining operations in the Oroville Wildlife Area occurred between 1903 and 1916. Dredging activities waxed and waned over subsequent decades, eventually coming to a close in 1952. The DWR constructed the Oroville-Thermalito Complex in the 1960s, which involved the creation of the interior channels within the Oroville Wildlife Area and the perimeter berm along the southeast bank of the Feather River in the immediate area. The area was primarily used for aggregate (sand and gravel) extraction from 1952 to 1968, and construction of the Thermalito Afterbay was completed in 1968. In the 1960s, the construction of Oroville dam used tailings from the Oroville dredge fields as fill.

3.3.2 Regulatory Setting

3.3.2.1 Federal

National Historic Preservation Act

The National Historic Preservation Act (NHPA) requires that the federal government list significant historic resources on the National Register of Historic Places (NRHP), which is the nation’s master inventory of known historic resources. The NRHP is administered by the National Park Service (NPS) and includes listings of buildings, structures, sites, objects, and districts that possess historic, architectural, engineering, archaeological, or cultural significance at the national, state, or local level.

Structures, sites, buildings, districts, and objects over 50 years of age can be listed in the NRHP as significant historic resources. However, properties under 50 years of age that are of exceptional importance or are contributors to a historic district can also be included in the NRHP. The criteria for listing in the NRHP include resources that:

- a) are associated with events that have made a significant contribution to the broad patterns of history;
- b) are associated with the lives of persons significant in our past;
- c) embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
- d) have yielded or may likely yield information important in prehistory or history.

3.3.2.2 State

California Register of Historical Resources

The State Historical Resources Commission designed the California Register of Historic Resources (CRHR) for use by state and local agencies, private groups, and citizens to identify, evaluate, register, and protect California’s historical resources. The CRHR is the authoritative guide to the state’s significant historical and archaeological resources. This program encourages public recognition and protection of resources of architectural, historical, archaeological, and cultural significance, identifies historical resources for state and local planning purposes, determines eligibility for state historic preservation grant funding, and affords certain protections under CEQA.

California Environmental Quality Act

Under CEQA, public agencies must consider the effects of their actions on both historical resources and unique archaeological resources. Pursuant to PRC Section 21084.1, a “project that may cause a substantial adverse change in the significance of an historical resource is a project that may have a significant effect on the environment.” Section 21083.2 requires agencies to determine whether proposed projects would have effects on unique archaeological resources.

Historical resource is a term with a defined statutory meaning (PRC Section 21084.1; determining significant impacts to historical and archaeological resources is described in CEQA Guidelines Section 15064.5[a], [b]). Under CEQA Guidelines Section 15064.5(a), historical resources include the following:

- A resource listed in, or determined to be eligible by the State Historical Resources Commission, for listing in the CRHR (PRC Section 5024.1).
- A resource included in a local register of historical resources, as defined in PRC Section 5020.1(k) or identified as significant in a historical resource survey meeting the requirements of PRC Section 5024.1(g), will be presumed to be historically or culturally significant. Public agencies must treat any such resource as significant unless the preponderance of evidence demonstrates that it is not historically or culturally significant.
- Any object, building, structure, site, area, place, record, or manuscript which a lead agency determines to be historically significant or significant in the architectural, engineering, scientific, economic, agricultural, educational, social, political, military, or cultural annals of California may be considered to be a historical resource, provided the lead agency's determination is supported by substantial evidence in light of the whole record. Generally, a resource will be considered by the lead agency to be *historically significant* if the resource meets the criteria for listing in the CRHR (PRC Section 5024.1), including the following:
 - a) Is associated with events that have made a significant contribution to the broad patterns of California's history and cultural heritage;
 - b) Is associated with the lives of persons important in our past;
 - c) Embodies the distinctive characteristics of a type, period, region, or method of construction, or represents the work of an important creative individual, or possesses high artistic values; or
 - d) Has yielded, or may be likely to yield, information important in prehistory or history.

The fact that a resource is not listed in, or determined to be eligible for listing in the CRHR, not included in a local register of historical resources (pursuant to PRC Section 5020.1(k)), or identified in a historical resources survey (meeting the criteria in PRC Section 5024.1(g)) does not preclude a lead agency from determining that the resource may be an historical resource as defined in PRC Sections 5020.1(j) or 5024.1.

Historic resources are usually 45 years old or older and must meet at least one of the criteria for listing in the CRHR, described above (such as association with historical events, important people, or architectural significance), in addition to maintaining a sufficient level of physical integrity.

Properties of local significance that have been designated under a local preservation ordinance (local landmarks or landmark districts) or that have been identified in a local historical resources inventory may be eligible for listing in the CRHR and are presumed to be historical resources for purposes of CEQA unless a preponderance of evidence indicates otherwise (PRC § 5024.1 and California Code of Regulations (CCR), Title 14, Section 4850). Unless a resource listed in a survey has been demolished, lost substantial

integrity, or there is a preponderance of evidence indicating that it is otherwise not eligible for listing, a lead agency should consider the resource to be potentially eligible for the CRHR.

For historic structures, CEQA Guidelines Section 15064.5(b)(3) indicates that a project that follows the *Secretary of the Interior's Standards for the Treatment of Historic Properties with Guidelines for Preserving, Rehabilitating, Restoring, and Reconstructing Historic Buildings*, or the *Secretary of the Interior's Standards for Rehabilitation and Guidelines for Rehabilitating Historic Buildings* (1995) is considered as mitigating impacts to a less than significant level.

As noted above, CEQA also requires lead agencies to consider whether projects will impact unique archaeological resources. PRC § 21083.2(g) states:

"Unique archaeological resource" means an archaeological artifact, object, or site about which it can be clearly demonstrated that, without merely adding to the current body of knowledge, there is a high probability that it meets any of the following criteria:

- Contains information needed to answer important scientific research questions and that there is a demonstrable public interest in that information.
- Has a special and particular quality such as being the oldest of its type or the best available example of its type.
- Is directly associated with a scientifically recognized important prehistoric or historic event or person."

Treatment options under PRC Section 21083.2 include activities that preserve such resources in place in an undisturbed state. Other acceptable methods of mitigation under Section 21083.2 include excavation and curation or study in place without excavation and curation (if the study finds that the artifacts would not meet one or more of the criteria for defining a unique archaeological resource).

Section 7050.5(b) of the California Health and Safety Code specifies protocol when human remains are discovered, as follows:

In the event of discovery or recognition of any human remains in any location other than a dedicated cemetery, there shall be no further excavation or disturbance of the site or any nearby area reasonably suspected to overlie adjacent remains until the coroner of the county in which the human remains are discovered has determined, in accordance with Chapter 10 (commencing with Section 27460) of Part 3 of Division 2 of Title 3 of the Government Code, that the remains are not subject to the provisions of Section 27492 of the Government Code or any other related provisions of law concerning investigation of the circumstances, manner and cause of death, and the recommendations concerning treatment and disposition of the human remains have been made to the person responsible for the excavation, or to his or her authorized representative, in the manner provided in Section 5097.98 of the Public Resources Code.

CEQA Guidelines Section 15064.5(e) requires that excavation activities stop whenever human remains are uncovered and that the county coroner be called in to assess the remains. If the county coroner

determines that the remains are those of Native Americans, the Native American Heritage Commission (NAHC) must be contacted within 24 hours. At that time, the lead agency must consult with the appropriate Native Americans, if any, as timely identified by the NAHC. Section 15064.5 directs the lead agency (or applicant), under certain circumstances, to develop an agreement with the Native Americans for the treatment and disposition of the remains.

In addition to the mitigation provisions pertaining to accidental discovery of human remains, the CEQA Guidelines also require that a lead agency make provisions for the accidental discovery of historical or archaeological resources, generally. Pursuant to Section 15064.5(f), these provisions should include:

“an immediate evaluation of the find by a qualified archaeologist. If the find is determined to be an historical or unique archaeological resource, contingency funding and a time allotment sufficient to allow for implementation of avoidance measures or appropriate mitigation should be available. Work could continue on other parts of the building site while historical or unique archaeological resource mitigation takes place.”

3.3.2.3 Local

Oroville 2030 General Plan

The Open Space, Natural Resources, and Conservation Element of the Oroville 2030 General Plan is dedicated to preserving and improving the quantity, quality, and character of open space in Oroville. The Element includes Section H, which addresses cultural resources in the City. Cultural resources in Oroville include both prehistoric and historic resources in the realms of archaeology, paleontology and historic structures, sites and areas that played important roles in local history. The following goals and policies from the Cultural Resources section of the Element pertain to Project development:

Goal OPS-14: Preserve Oroville’s cultural resources, including archaeological, historic and paleontological resources, for their aesthetic, scientific, educational and cultural values.

Policies

P14.1: Require consultation with the Northeast Information Center of the California Historical Resources Information System and completion of a records search as part of review of proposed development projects to determine whether the project site contains known prehistoric or historic cultural resources and/or to determine the potential for discovery of additional cultural resources and the necessity of further investigation.

P14.2: Require applicants for projects identified by the Northeast Information Center as potentially affecting cultural resource sites or in need of further investigation to hire a consulting archaeologist or historian (as applicable) to conduct inventory and evaluation studies and develop a cultural resources mitigation plan and monitor the project to ensure that mitigation measures are implemented, as necessary.

P14.3: Require that areas found during construction to contain significant historic or prehistoric archaeological artifacts be examined by a qualified consulting

archaeologist or historian for appropriate protection and preservation. Require that historic or prehistoric artifacts found during construction be examined by a qualified consulting archaeologist or historian to determine their significance and develop appropriate protection and preservation measures as necessary.

- P14.7: If cultural resources, including archaeological or paleontological resources, are uncovered during grading or other on-site excavation activities, construction shall stop until appropriate mitigation is implemented.*
- P14.8: If human remains are located during any ground disturbing activity, work shall stop until the County Coroner has been contacted, and, if the human remains are determined to be of Native American origin, the NAHC and most likely descendant have been consulted.*
- P14.9: Encourage development to avoid impacts to burial sites including:*
- Designing or clustering development to avoid archaeological deposits that typically contain human remains and to avoid any known cemeteries or other concentrations of human remains.*
 - Dedicating permanent conservation easements if subdivisions and other developments can be planned to provide for such protective easements.*

3.3.3 Environmental Impacts

3.3.3.1 Thresholds of Significance

The following thresholds of significance are based on Appendix G of the CEQA Guidelines. For purposes of this EIR, implementation of the Proposed Project would have a significant adverse impact on historical resources if it would result in any of the following:

- Cause a substantial adverse change in the significance of a historical resource pursuant to CEQA Guidelines Section 15064.5.
- Cause a substantial adverse change in the significance of an archeological resource pursuant to CEQA Guidelines Section 15064.5.
- Disturb any human remains, including those interred outside of formal cemeteries.

CEQA Guidelines Section 15064.5 defines *substantial adverse change* as physical demolition, destruction, relocation, or alteration of the resource or its immediate surroundings such that the significance of a historical resource is materially impaired.

CEQA Guidelines Section 15064.5(b)(2) defines *materially impaired* for purposes of the definition of substantial adverse change as follows:

The significance of an historical resource is materially impaired when a project:

- (A) Demolishes or materially alters in an adverse manner those physical characteristics of an historical resource that convey its historical significance and that justify its inclusion in, or eligibility for, inclusion in the California Register of Historical Resources; or
- (B) Demolishes or materially alters in an adverse manner those physical characteristics that account for its inclusion in a local register of historical resources pursuant to Section 5020.1(k) of the Public Resources Code or its identification in an historical resources survey meeting the requirements of Section 5024.1(g) of the Public Resources Code, unless the public agency reviewing the effects of the project establishes by a preponderance of evidence that the resource is not historically or culturally significant; or
- (C) Demolishes or materially alters in an adverse manner those physical characteristics of a Historical Resource that convey its historical significance and that justify its eligibility for inclusion in the California Register of Historical Resources as determined by a lead agency for purposes of CEQA.

CEQA requires that alternative plans or mitigation measures must be considered if a project would result in an effect that may cause a substantial adverse change in the significance of a historical resource or would cause significant effects on a unique archaeological resource. Therefore, prior to assessing effects or developing mitigation measures, the Lead Agency must determine if a historical resource or unique archaeological resource is present that may be affected by the Project. The steps that are normally taken in a cultural resources investigation for CEQA compliance are as follows:

- Identify potential historical resources and unique archaeological resources;
- Evaluate the significance of the potential historical resources; and
- Evaluate the effects of the project on eligible (significant) historical resources and unique archaeological resources.

3.3.3.2 Methods of Analysis

As a part of the Cultural Resources Inventory Report, ECORP requested a records search for the property at the Northeastern Information Center (NEIC) of the California Historical Resources Information System (CHRIS) at California State University, Chico on February 15, 2022. The purpose of the records search was to determine the extent of previous surveys within a 0.5-mile (800- meter) radius of the Proposed Project location, and whether previously documented pre-contact or historic archaeological sites, architectural resources, or traditional cultural properties exist within this area. The records search was completed by NEIC staff and returned to ECORP on March 10, 2022. In addition to the official records and maps for archaeological sites and surveys in Butte County, the following historic references were also reviewed: Built Environment Resource Directory; Historic Property Data File for Butte County; The National Register Information System (NPS), California Historical Landmarks, California Historical Landmarks, California Points of Historical Interest, Directory of Properties in the Historical Resources Inventory, California Department of Transportation (Caltrans) Local Bridge Survey, Caltrans State Bridge Survey, and Historic Spots in California. (ECORP 2022)

Other references examined include a RealQuest Property Search and historic General Land Office (GLO) land patent records. Historic maps reviewed include:

- 1856 BLM GLO Plat map for Township 19 North Range 3 East;
- 1891 U.S. Geological Survey (USGS) Chico, California topographic quadrangle map (1:250,000 scale);
- 1912 USGS Oroville, California topographic quadrangle map (1:31,680 scale);
- 1944 USGS Oroville, California topographic quadrangle map (1:62,500 scale);
- 1949 USGS Oroville, California topographic quadrangle map (1:62,500 scale); and
- 1970 (1973 edition) USGS Oroville, California topographic quadrangle map (1:24,000 scale).

ECORP reviewed historic aerial photos taken in 1952 and 1969 and more recent aerials from 1984, 1998, 2005, 2009, 2010, 2021, 2014, 2016, and 2018 for any indications of property usage and built environment. ECORP attempted a search within a local historical registry, but no such registry was available for Oroville.

Sacred Lands File Coordination Methods

In addition to the records search, ECORP contacted the California NAHC on February 16, 2022 to request a search of the Sacred Lands File for the Project Area. This search determines if the California Native American tribes within the Project Area have recorded Sacred Lands, because the Sacred Lands File is populated by members of the Native American community with knowledge about the locations of Tribal resources. In requesting a search of the Sacred Lands File, ECORP solicited information from the Native American community regarding TCRs, but the responsibility to formally consult with the Native American community lies exclusively with the federal and local agencies under applicable state and federal laws. The lead agencies have not delegated authority to ECORP to conduct Tribal consultation.

Other Interested Party Consultation Methods

ECORP mailed letters to the Butte County Historical Society on February 16, 2022 to solicit comments or obtain historical information that the repository might have regarding events, people, or resources of historical significance in the area.

Field Methods

ECORP subjected the Project Area to an intensive pedestrian survey on March 18, 2022 under the guidance of the *Secretary of the Interior's Standards for the Identification of Historic Properties* using 15-meter transects. ECORP spent one person-day in the field. During the survey, ECORP archaeologists examined the ground surface for indications of surface or subsurface cultural resources. The archaeologists inspected the general morphological characteristics of the ground surface for indications of subsurface deposits that may be manifested on the surface, such as circular depressions or ditches. Whenever possible, the archaeologists examined the locations of subsurface exposures caused by factors such as rodent activity, water or soil erosion, or vegetation disturbances for artifacts or for indications of buried deposits. No subsurface investigations or artifact collections were undertaken during the pedestrian survey.

3.3.3.3 Project Impacts and Mitigation Measures

Impact CUL-1:	Project implementation would cause a substantial adverse change in the significance of a historical resource pursuant to CEQA Guidelines Section 15064.5.
Impact Determination:	Less than Significant with Mitigation
<i>Threshold:</i>	<i>Substantial adverse change in the significance of a historical resource pursuant to CEQA Guidelines Section 15064.5?</i>

Impact Discussion

There were 17 previous cultural resource investigations conducted in or within a 0.5-mile radius of the property, covering approximately 80 percent of the total area surrounding the property within the records search radius. Of the 17 studies, four were conducted within the Project Area and the other 13 were within the 0.5-mile radius. The previous studies within the Project Area were conducted between 1979 and 2004 and vary in size from 27 to 118 acres.

The results of the records search indicate that 95 percent of the property has been previously surveyed for cultural resources; however, these studies were conducted in larger and smaller segments, at different times, by different consultants, between 18 and 43 years ago, and under obsolete standards. Therefore, ECORP conducted a pedestrian survey of the Area of Potential Effects (APE) for the Project under current protocols. Two of the past studies were conducted on the properties directly east and west of the Project Area and included a small portion of the Project Area. The four past studies did not result in the recording of cultural resources within the Project Area.

The records search also determined that seven previously recorded historic-era cultural resources are located within 0.5 mile of the Project Area. There are no previously recorded pre-contact resources within 0.5 mile of the Project Area. The previously historic-era resources included 1920s to 1940s structures, railroad and road grades, and the Oroville Division of the State Water Project facilities (Oroville Dam and Thermalito Forebay and Forebay Dam facilities). There are no previously recorded cultural resources within or adjacent to the Project Area.

ECORP's *Cultural Resources Inventory Report for the Feather Ranch Project* concluded that no historical resources were identified on the property as a result of the records search and field survey. Therefore, no known historical resources under CEQA will be affected by the Proposed Project. However, there always remains the potential for ground-disturbing activities to expose previously unrecorded cultural resources. CEQA requires the lead agency to address any unanticipated historical resource discoveries during Project construction. Therefore, Mitigation Measure CUL-1 has been included to reduce the potential impact to historical resources to be less than significant with mitigation incorporated.

Mitigation Measures

The following mitigation measures shall apply to the Proposed Project.

CUL-1: Cultural or Archaeological Resource Discovery. All subdivision improvement plans and grading plans shall include the following:

- If subsurface deposits believed to be cultural or human in origin are discovered during any roadway or future construction, all work must halt within a 100-foot radius of the discovery. A qualified professional archaeologist, meeting the Secretary of the Interior’s Professional Qualification Standards for prehistoric and historic archaeologist, shall be retained to evaluate the significance of the find, and shall have the authority to modify the no-work radius as appropriate, using professional judgment. The following notifications shall apply, depending on the nature of the find:
- If the professional archaeologist determines that the find does not represent a cultural resource, work may resume immediately, and no agency notifications are required.
- If the professional archaeologist determines that the find does represent a cultural resource from any time period or cultural affiliation, he or she shall immediately notify the City and landowner. If the find is determined to be eligible for inclusion in the NRHP or CRHR, the City shall consult on a finding of eligibility and implement appropriate treatment measures. Work may not resume within the no-work radius until the City, through consultation as appropriate, determines that the site either: 1) is not eligible for the NRHP or CRHR; or 2) that the treatment measures have been completed to its satisfaction.
- If the find includes human remains, or remains that are potentially human, he or she shall ensure reasonable protection measures are taken to protect the discovery from disturbance (AB 2641). The archaeologist shall notify the Butte County Coroner (in accordance with Section 7050.5 of the Health and Safety Code). The provisions of Section 7050.5 of the California Health and Safety Code, Section 5097.98 of the California PRC, and AB 2641 will be implemented. If the Coroner determines the remains are Native American and not the result of a crime scene, the Coroner will notify the NAHC, which then will designate a Native American Most Likely Descendant (MLD) for the project (Section 5097.98 of the PRC). The designated MLD will have 48 hours from the time access to the property is granted to make recommendations concerning treatment of the remains. If the landowner does not agree with the recommendations of the MLD, the NAHC can mediate (Section 5097.94 of the PRC). If no agreement is reached, the landowner must rebury the remains where they will not be further disturbed (Section 5097.98 of the PRC). This will also include either recording the site with the NAHC or the appropriate information center; using an open space or conservation zoning designation or easement; or recording a reinternment document with the county in which the

property is located (AB 2641). Work may not resume within the no-work radius until the lead agencies, through consultation as appropriate, determine that the treatment measures have been completed to their satisfaction.

Timing/Implementation: *During construction*

Monitoring/Enforcement: *The City of Oroville Planning Department and Project Construction Manager*

Residual Impact After Mitigation

Impacts would be less than significant after mitigation.

Impact CUL-2:	Project implementation could cause a substantial adverse change in the significance of an archeological resource pursuant to CEQA Guidelines Section 15064.5.
Impact Determination:	Less than Significant with Mitigation
<i>Threshold:</i>	<i>Substantial adverse change in the significance of an archaeological resource pursuant to CEQA Guidelines Section 15064.5?</i>

Impact Discussion

The *Cultural Resources Inventory Report for the Feather Ranch Project* concluded that archaeological resources were identified on the property as a result of the records search and field survey. Therefore, no known archaeological resources under CEQA will be affected by the Proposed Project. However, there always remains the potential for ground-disturbing activities to expose previously unrecorded archaeological resources. Therefore, Mitigation Measure CUL-1 has been included to reduce the potential impact to archaeological resources to be less than significant with mitigation incorporated.

Mitigation Measures

Implement Mitigation Measure CUL-1.

Residual Impact After Mitigation (note this section not needed if there are no mitigation measures)

Impacts would be less than significant after mitigation.

Impact CUL-3:	Project implementation could disturb any human remains, including those interred outside of formal cemeteries.
Impact Determination:	Less than Significant with Mitigation
<i>Threshold:</i>	<i>Disturbance of any human remains, including those interred outside of formal cemeteries.</i>

Impact Discussion

The *Cultural Resources Inventory Report for the Feather Ranch Project* indicates that there is little likelihood for burial sites to be present in the area. Regardless, there is a possibility of the unanticipated and accidental discovery of human remains during ground-disturbing Project-related activities. As such, Implementation of Mitigation Measure CUL-1 would assure that any discovery of human remains within the Project Area would be subject to these procedural requirements. Implementation of this mitigation measure would reduce impacts associated with the discovery/disturbance of human remains to be less than significant with mitigation incorporated.

Mitigation Measures

Implement Mitigation Measure CUL-1.

Residual Impact After Mitigation

Impacts would be less than significant after mitigation.

3.3.4 Cumulative Setting, Impacts, and Mitigation Measures

Section 3.0 provides the baseline for cumulative setting and is based on General Plan projections. While this is helpful for cultural resources cumulative impacts, it does not necessarily provide a specific cumulative impact setting for these resources as the impacts to these resources are generally more site-specific. Therefore, the cumulative setting for cultural resources includes the Project Site as well as the remaining undeveloped areas surrounding the Project Site where the impacts of urbanization and potential for impacts to cultural resources are considered most serious. Cumulative impacts on cultural resources are primarily the result of the area’s urbanization and conversion of undisturbed land to urban use. Developments and planned land uses, including the Proposed Project, would cumulatively contribute to impacts to known and unknown cultural resources in the area. As previously discussed, Section 3.3.1 Environmental Setting provides an overview of cultural resources and the history of the region.

3.3.4.1 Cumulative Impacts and Mitigation Measures

Impact CUL-4:	Would Implementation of the proposed project, along with any foreseeable development in the project vicinity, result in cumulative impacts to cultural resources (i.e., prehistoric sites, historic sites, and isolated artifacts and features)?
Impact Determination:	Less than Cumulatively Considerable
<i>Threshold:</i>	<i>Result in cumulative impacts to cultural resources.</i>

Impact Discussion

As mitigated, the direct impacts associated with the Project will be reduced to a less than significant level. While it is possible that grading and development will result in the discovery of cultural resources, mitigation measures and state and federal laws already in place will set in motion actions designed to mitigate these potential impacts. The Project is adjacent to existing residential developments and vacant land. Future development of the area may also affect cultural resources. However, mitigation proposed in this section, and existing federal and state laws would reduce the Project’s potential cultural resources impacts to a less than significant level. Therefore, the Project’s impact is considered less than cumulatively considerable.

3.3.4.2 Cumulative Mitigation Measures

None required.

3.4 Energy

This section describes the environmental setting for energy, including the existing site conditions and regulatory setting, impacts that would result from the Proposed Project, and, if significant impacts are identified, the mitigation measures that would reduce these impacts. This section is a summary of the *Energy Consumption Assessment*, provided as an Appendix 3.4 to this DEIR.

3.4.1 Environmental Setting

Energy relates directly to environmental quality. Energy use can adversely affect air quality and other natural resources. The vast majority of California’s air pollution is caused by burning fossil fuels. Consumption of fossil fuels is linked to changes in global climate and depletion of stratospheric ozone. Transportation energy use is related to the fuel efficiency of cars, trucks, and public transportation; choice of different travel modes (i.e., auto, carpool, and public transit); vehicle speeds; and miles traveled by these modes. Construction and routine operation and maintenance of transportation infrastructure also consume energy. In addition, residential, commercial, and industrial land uses consume energy, typically through the usage of natural gas and electricity. This analysis focuses on the four sources of energy that are relevant to the Proposed Project: electricity, natural gas, the equipment fuel necessary for Project construction, and the automotive fuel necessary for Project operations.

3.4.2 Energy Types and Resources

California relies on a regional power system comprised of a diverse mix of natural gas, renewable, hydroelectric, and nuclear generation resources. Natural gas provides California with a majority of its electricity, followed by renewables, large hydroelectric and nuclear (California Energy Commissions [CEC] 2022a). Pacific Gas & Electric Company (PG&E) provides electricity and natural gas to the City of Oroville. It generates or buys electricity from hydroelectric, nuclear, renewable, natural gas, and coal facilities. PG&E provides natural gas and electricity to most of the northern two-thirds of California, from Bakersfield and Barstow to near the Oregon, Nevada and Arizona state lines. It provides 5.2 million people with electricity and natural gas across 70,000 square miles. PG&E announced in 2019 that 100 percent of the company's delivered electricity comes from Greenhouse Gas (GHG) emission-free sources, including renewables, nuclear, and hydropower (PG&E 2019).

3.4.3 Existing Transmission and Distribution Facilities

The components of transmission and distribution systems include the generating facility, switching yards and stations, primary substation, distribution substations, distribution transformers, various sized transmission lines, and the customers. The United States contains over a quarter million miles of transmission lines, most of them capable of handling voltages between 115 and 345 kilovolts (kV), and a handful of systems of up to 500- and 765-kv capacity. Transmission lines are rated according to the amount of power they can carry, the product of the current (rate of flow), and the voltage (electrical pressure). Generally, transmission is more efficient at higher voltages. Generating facilities, hydro-electric dams, and power plants usually produce electrical energy at fairly low voltages, which is increased by transformers in substations. From there, the energy proceeds through switching facilities to the

transmission lines. At various points in the system, the energy is *stepped down* to lower voltages for distribution to customers. Power lines are either high voltage (115, 230, 500, and 765 kV) transmission lines or low voltage (12, 24, and 60 kV) distribution lines. Overhead transmission lines consist of the wires carrying the electrical energy (conductors), insulators, support towers, and grounded wires to protect the lines from lightening (called shield wires). Towers must meet the structural requirements of the system in several ways. They must be able to support both the electrical wires, the conductors, and the shield wires under varying weather conditions, including wind and ice loading, as well as a possible unbalanced pull caused by one or two wires breaking on one side of a tower. Every mile or so, a *dead-end* tower must be able to take the strain resulting if all the wires on one side of a tower break. Every change in direction requires a special tower design. In addition, the number of towers required per mile varies depending on the electrical standards, weather conditions, and the terrain. All towers must have appropriate foundations and be available at a fairly regular spacing along a continuous route accessible for both construction and maintenance. A right-of-way is a fundamental requirement for all transmission lines. A right-of-way must be kept clear of vegetation that could obstruct the lines or towers by falling limbs or interfering with the sag or wind sway of the overhead lines. If necessary, land acquisition and maintenance requirements can be substantial. The dimensions of a right-of-way depends on the voltage and number of circuits carried and the tower design. Typically, transmission line rights-of-way range from 100 to 300 feet in width. The electric power supply grid within Butte County is part of a larger supply network operated and maintained by PG&E that encompasses the entire Northern California region. This system ties into yet a larger grid known as the California Power Pool, which connects with the San Diego Gas and Electric and Southern California Edison companies. These companies coordinate the development and operation, as well as purchase, sale, and exchange of power throughout the State of California. Within Butte County, PG&E owns most of the transmission and distribution facilities.

The California Independent System Operator (CAISO) manages the flow of electricity across the high-voltage, long-distance power lines (high-voltage transmissions system) that make up 80 percent of California's and a small part of Nevada's grid. This nonprofit public benefit corporation keeps power moving to and throughout California by operating a competitive wholesale electricity market, designed to promote a broad range of resources at lower prices, and managing the reliability of the electrical transmission grid. In managing the grid, CAISO centrally dispatches generation and coordinates the movement of wholesale electricity in California. As the only independent grid operator in the western U.S., CAISO grants equal access to 26,000 circuit miles of transmission lines and coordinates competing and diverse energy resources into the grid where it is distributed to consumers. Every 5 minutes, CAISO forecasts electrical demand and dispatches the lowest cost generator to meet demand while ensuring enough transmission capacity for delivery of power.

CAISO conducts an annual transmission planning process that uses engineering tools to identify any grid expansions necessary to maintain reliability, lower costs or meet future infrastructure needs based on public policies. CAISO engineers design, run, and analyze complex formulas and models that simulate grid use under wide-ranging scenarios, such as high-demand days coupled with wildfires. This process includes evaluating power plant proposals submitted for study into the interconnection queue to determine viability and impact to the grid. The long-term comprehensive transmission plan, completed every 15 months, maps future growth in electricity demand and the need to meet state energy and

environmental goals that require the CAISO grid to connect to renewable-rich, but remote areas of the Western landscape. CAISO promotes energy efficiency through resource sharing. CAISO electricity distribution management strategy is designed so that an area with surplus electricity can benefit by sharing megawatts with another region via the open market. This allows the dispatch of electricity as efficiently as possible. By maximizing megawatts as the demand for electricity increases, CAISO helps keep electricity flowing during peak periods.

3.4.4 Energy Consumption

Electricity use is measured in kilowatt-hours (kWh), and natural gas use is measured in therms. Vehicle fuel use is typically measured in gallons (e.g. of gasoline or diesel fuel), although energy use for electric vehicles is measured in kWh.

The electricity consumption associated with all residential uses in Butte County from 2017 to 2021 is shown in Table 3.5-1. As indicated, the demand has decreased since 2017.

Table 3.5-1. Residential Electricity Consumption in Butte County 2017-2021	
Year	Electricity Consumption (kilowatt hours)
2021	757,195,036
2020	736,395,940
2019	662,643,253
2018	721,603,925
2017	764,450,593

Source: CEC 2022b

The natural gas consumption associated with all nonresidential uses in Butte County from 2017 to 2021 is shown in Table 3.5-2. As indicated, the demand has decreased since 2017.

Table 3.5-2. Residential Natural Gas Consumption in Butte County 2017-2021	
Year	Natural Gas Consumption (therms)
2021	21,822,501
2020	21,816,990
2019	22,698,185
2018	24,989,481
2017	27,189,926

Source: CEC 2022b

Automotive fuel consumption in Butte County from 2017 to 2021 is shown in Table 3.5-3. Fuel consumption has decreased between 2018 and 2022.

Table 3.5-3. Automotive Fuel Consumption in Butte County 2018-2022	
Year	Total Fuel Consumption (gallons)
2022	118,261,744
2021	118,122,078
2020	106,642,798
2019	121,842,862
2018	126,146,889

Source: CARB 2022

3.4.5 Regulatory Setting

3.4.5.1 State

Senate Bill 1389 Integrated Energy Policy Report

Senate Bill (SB) 1389 (Bowen, Chapter 568, Statutes of 2002) requires the CEC to prepare a biennial integrated energy policy report that assesses major energy trends and issues facing California’s electricity, natural gas, and transportation fuel sectors and provides policy recommendations to conserve resources; protect the environment; ensure reliable, secure, and diverse energy supplies; enhance the State’s economy; and protect public health and safety (PRC Section 25301a). The CEC prepares these assessments and associated policy recommendations every 2 years, with updates on alternate years, as part of the Integrated Energy Policy Report (IEPR).

The 2017 IEPR focuses on next steps for transforming transportation energy use in California. The 2017 IEPR addresses the role of transportation in meeting state climate, air quality, and energy goals; the transportation fuel supply; the Alternative and Renewable Fuel and Vehicle Technology Program; current and potential funding mechanisms to advance transportation policy; transportation energy demand forecasts; the status of statewide plug-in electric vehicle infrastructure; challenges and opportunities for electric vehicle infrastructure.

Executive Order B-55-18

In September 2018 Governor Edmund (Jerry) Brown Signed Executive Order (EO) B-55-18, which establishing a new statewide goal “to achieve carbon neutrality as soon as possible, and no later than 2045, and achieve and maintain net negative emissions thereafter.” Carbon neutrality refers to achieving a net-zero carbon dioxide emissions. This can be achieved by reducing or eliminating carbon emissions, balancing carbon emissions with carbon removal, or a combination of the two. This goal is in addition to existing statewide targets for greenhouse gas emission reduction. EO B-55-18 requires CARB to “work

with relevant state agencies to ensure future Scoping Plans identify and recommend measures to achieve the carbon neutrality goal.”

Senate Bill 1368

On September 29, 2006, Governor Arnold Schwarzenegger signed into law SB 1368 (Perata, Chapter 598, Statutes of 2006). The law limits long-term investments in baseload generation by the state's utilities to those power plants that meet an emissions performance standard jointly established by the CEC and the California Public Utilities Commission (CPUC).

The CEC has designed regulations that:

- establish a standard for baseload generation owned by, or under long-term contract to, publicly owned utilities, of 1,100 pounds carbon dioxide per megawatt hour (Mwh). This would encourage the development of power plants that meet California's growing energy needs while minimizing their emissions of GHG.
- Require posting of notices of public deliberations by publicly owned utilities on long-term investments on the CEC website. This would facilitate public awareness of utility efforts to meet customer needs for energy over the long term while meeting the State's standards for environmental impact.
- Establish a public process for determining the compliance of proposed investments with the Emissions Performance Standard (EPS) (Perata, Chapter 598, Statutes of 2006).

Renewable Energy Sources (Renewable Portfolio Standards)

Established in 2002 under SB 1078 and accelerated by SB 107 (2006) and SB 2 (2011), California's Renewables Portfolio Standard (RPS) obligates investor-owned utilities, energy service providers, and community choice aggregators to procure 33 percent of their electricity from renewable energy sources by 2020. Eligible renewable resources are defined in the 2013 RPS to include biodiesel; biomass; hydroelectric and small hydro (30 megawatts or less); Los Angeles Aqueduct hydro power plants; digester gas; fuel cells; geothermal; landfill gas; municipal solid waste; ocean thermal, ocean wave, and tidal current technologies; renewable derived biogas; multi-fuel facilities using renewable fuels; solar photovoltaic; solar thermal electric; wind; and other renewables that may be defined later. Governor Jerry Brown signed SB 350 on October 7, 2015, which expands the RPS by establishing a goal of 60 percent of the total electricity sold to retail customers in California per year by December 31, 2030. In addition, SB 350 includes the goal to double the energy efficiency savings in electricity and natural gas final end uses (e.g., heating, cooling, lighting, or class of energy uses upon which an energy efficiency program is focused) of retail customers through energy conservation and efficiency. The bill also requires the CPUC, in consultation with the CEC, establish efficiency targets for electrical and gas corporations consistent with this goal. SB 350 also provides for the transformation of the CAISO into a regional organization to promote the development of regional electricity transmission markets in the western states and to improve the access of consumers served by the CAISO to those markets, pursuant to a specified process. In 2018, SB 100 was signed by Governor Brown, codifying a goal of 60 percent renewable procurement by 2030 and 100 percent by the 2045 RPS.

3.4.6 Environmental Impacts

3.4.6.1 Thresholds of Significance

CEQA Guidelines Appendix G states that a project may have a significant effect on the environment if implementation would result in any of the following:

- Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation
- Conflict with or obstruct a state or local plan for renewable energy or energy efficiency
- The impact analysis focuses on the four sources of energy that are relevant to the Proposed Project: electricity, natural gas, the equipment fuel necessary for Project construction, and the automotive fuel necessary for Project operations. Addressing energy impacts requires an agency to make a determination as to what constitutes a significant impact. There are no established thresholds of significance, statewide or locally, for what constitutes a wasteful, inefficient, and unnecessary consumption of energy for a proposed land use. For the purpose of this analysis, the amount of electricity estimated to be consumed by the Project is quantified and compared to that consumed by all residential land uses in Butte County. Similarly, the amount of fuel necessary for Project construction and operations is calculated and compared to that consumed in Butte County.

3.4.6.2 Methods of Analysis

Construction- and operational-related energy consumption estimated to be consumed by the Project include the number of kWh of electricity and gallons of gasoline. Modeling was based on Project-specific information. The amount of total construction-related fuel used was estimated using ratios provided in the *Climate Registry's General Reporting Protocol for the Voluntary Reporting Program, Version 2.1*. Electricity consumption estimates were calculated using the *California Emissions Estimator Model (CalEEMod)*, version 2022.1 (Attachment A of Appendix 3.4, ECORP 2023). CalEEMod is a statewide land use computer model designed to quantify resources associated with both construction and operations from a variety of land use projects. Operational automotive fuel consumption has been calculated with EMFAC 2021, a mathematical model that was developed to calculate emission rates and rates of gasoline consumption from motor vehicles that operate on California's highways, freeways, and local roads.

3.4.6.3 Project Impacts and Mitigation Measures

Impact ENERGY-1:	Project implementation could result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction of operation.
Impact Determination:	Less than Significant.
Threshold:	<i>Result in potentially significant environmental impact due to wasteful, inefficient, or unnecessary consumption of energy resources, during project construction or operation.</i>

Impact Discussion

The impact analysis focuses on the four energy sources relevant to the proposed Project: electricity natural gas, the equipment-fuel necessary for Project construction, and the automotive fuel necessary for Project operations. Addressing energy impacts requires an agency to make a determination as to what constitutes a significant impact. There are no established thresholds of significance, statewide or locally, for what constitutes a wasteful, inefficient, and unnecessary consumption of energy for a proposed land use project. For the purpose of this analysis, the amount of electricity estimated to be consumed by the Project is quantified and compared to that consumed by all residential land uses in Butte County. Similarly, the amount of fuel necessary for Project construction and long-term operations is calculated and compared to that consumed in Butte County.

Table 3.5-4 summarizes energy consumption associated with the Proposed Project.

Table 3.5-4. Proposed Project Energy and Fuel Consumption		
Energy Type	Annual Energy Consumption	Percentage Increase Countywide
Building Energy Consumption		
Electricity Consumption ¹	1,509,195 kilowatt-hours	0.1993
Natural Gas Consumption ¹	29,077 therms	0.1332
Automotive Fuel Consumption (Gallons)		
Project Construction Year 1	34,778	0.0294
Project Construction Year 2	61,084	0.0516
Project Construction Year 3	60,000	0.0507
Project Construction Year 4	52,808	0.0447

Table 3.5-4. Proposed Project Energy and Fuel Consumption		
Energy Type	Annual Energy Consumption	Percentage Increase Countywide
Project Operations ³	437,514	0.3699

Source: ¹CalEEMod; ²Climate Registry 2016; ³EMFAC2021 (CARB 2022)

Notes: The Project increases in electricity consumption are compared with all of the residential buildings in Butte County in 2021, the latest data available. The Project increases in construction and operations automotive fuel consumption are compared with the countywide fuel consumption in 2021, the most recent full year of data.

As shown in Table 3.5-4, the annual electricity consumption due to operations would be 1,509,195 kWh, resulting in a negligible increase (0.1993 percent) in the typical annual electricity consumption attributable to all residential uses in Butte County. This is potentially a conservative estimate since in September 2018 Governor Brown Signed EO B-55-18, which established a new statewide goal “to achieve carbon neutrality as soon as possible, and no later than 2045, and achieve and maintain net negative emissions thereafter.” Carbon neutrality refers to achieving a net-zero carbon dioxide emissions. This can be achieved by reducing or eliminating carbon emissions, balancing carbon emissions with carbon removal, or a combination of the two. This goal is in addition to existing statewide targets for GHG emission reduction. Governor’s EO B-55-18 requires CARB to “work with relevant state agencies to ensure future Scoping Plans identify and recommend measures to achieve the carbon neutrality goal.” For these reasons, the Project would not result in the inefficient, wasteful, or unnecessary consumption of building energy.

Fuel necessary for Project construction would be required for the operation and maintenance of construction equipment and the transportation of materials to the Project Site. The fuel expenditure necessary to construct the physical building and infrastructure would be temporary, lasting only as long as Project construction. As further indicated in Table 3.5-4, the Project’s gasoline fuel consumption during the one-time construction period is estimated to be 34,778 gallons over the course of the first year of construction, 61,084 gallons in the second year of construction, 60,000 gallons in the third year of construction, and 52,808 in the fourth year of construction. This would increase the annual construction related fuel use in the county by 0.0294 percent, 0.0516 percent, 0.0507, and 0.0447 percent, respectively. As such, Project construction would have a nominal effect on local and regional energy supplies. No unusual Project characteristics would necessitate the use of construction equipment that would be less energy-efficient than at comparable construction sites in the region or the state. Construction contractors would purchase their own gasoline and diesel fuel from local suppliers and would judiciously use fuel supplies to minimize costs due to waste and subsequently maximize profits. Additionally, construction equipment fleet turnover and increasingly stringent state and federal regulations on engine efficiency combined with state regulations limiting engine idling times and requiring recycling of construction debris, would further reduce the amount of transportation fuel demand during Project construction. For these reasons, it is expected that construction fuel consumption associated with the Project would not be any more inefficient, wasteful, or unnecessary than other similar development projects of this nature.

The Project is estimated to generate approximately 1,622 daily trips (KD Anderson & Associates, Inc. [KDA] 2023). As indicated in Table 3.5-4, this would result in the consumption of approximately 437,514 gallons

of automotive fuel per year, which would increase the annual countywide automotive fuel consumption by 0.3699 percent. This analysis conservatively assumes that all of the automobile trips projected to arrive at the Project during operations would be new to Butte County. Fuel consumption associated with the vehicle trips generated by the Project during operations would not be considered inefficient, wasteful, or unnecessary in comparison to other similar developments in the region. For these reasons, this impact would be less than significant.

Mitigation Measures

No mitigation measures are required.

Impact ENERGY-2:	Project implementation could conflict with or obstruct a state or local plan for renewable energy or energy efficiency.
Impact Determination:	Less than Significant.
Threshold:	<i>Conflict with or obstruction of a state or local plan for renewable energy or energy efficiency.</i>

Impact Discussion

The Project would be designed in a manner that is consistent with relevant energy conservation plans designed to encourage development that results in the efficient use of energy resources. The Project will be built to the Energy Efficiency Standards for Residential and Nonresidential Buildings, as specified in Title 24, Part 6, of the CCR (Title 24). Title 24 was established in 1978 in response to a legislative mandate to reduce California’s energy consumption. Title 24 is updated approximately every 3 years; the 2019 Title 24 updates went into effect on January 1, 2020. The 2022 standards went into effect on January 1, 2023. The 2022 Energy Standards improve upon the 2019 Energy Standards for new construction of, and additions and alterations to, residential and nonresidential buildings. The 2022 update to the Energy Standards focuses on several key areas to improve the energy efficiency of newly constructed buildings and additions and alterations to existing buildings, encouraging better energy efficiency, strengthening ventilation standards, and more. The 2022 Energy Standards are a major step toward meeting Zero Net Energy. Buildings permitted on or after January 1, 2023 must comply with the 2022 Standards. Compliance with Title 24 is mandatory at the time new building permits are issued by city and county governments. Additionally, in January 2010, the State of California adopted the California Green Building Standards Code (CalGreen) that establishes mandatory green building standards for all buildings in California. The code was subsequently updated in 2013. The code covers five categories: planning and design, energy efficiency, water efficiency and conservation, material conservation and resource efficiency, and indoor environmental quality. With these building standards in place, the Project would not obstruct any state or local plan for renewable energy or energy efficiency. By building to be in compliance with Title 24 as well as the Green Building Standards Code, the Project achieves Goal OPS-17 of the City’s Open Space, Natural

Resources, and Conservation Element of their General Plan, encouraging the conservation of energy resources and promoting green building. For these reasons, this impact would be less than significant.

Mitigation Measures

No mitigation measures are required.

3.4.7 Cumulative Impacts

The cumulative setting associated with the Proposed Project includes approved, proposed, planned, and other reasonably foreseeable projects and development in the City of Oroville and Butte County. Developments and planned land uses, including the Proposed Project, would cumulatively contribute to impacts resulting in energy consumption. However, no other projects of this type are approved, proposed, planned, and other reasonably foreseeable at this time.

3.4.7.1 Cumulative Impacts and Mitigation Measures

Impact ENERGY-3:	Implementation of the proposed project, along with any foreseeable development in the project vicinity, could result in cumulative impacts to energy consumption.
Impact Determination:	Less than Significant.
<i>Threshold:</i>	<i>Cumulatively result in cumulative impacts to energy consumption?</i>

Impact Discussion

As previously described, the impact analysis contained herein focuses on the fuel consumption needed for Project implementation. As shown, Project fuel consumption would be negligible and would not be considered inefficient, wasteful, or unnecessary with regard to energy. Thus, the Proposed Project’s impacts are considered less than considerable contribution to cumulative impacts regarding energy consumption.

Mitigation Measures

No mitigation measures are required.

3.5 Geology, Soils, and Paleontological Resources

The purpose of this section is to disclose and analyze the potential impacts associated with the paleontological resources of the Project Site.

The IS completed for the Proposed Project determined that there were no impact or a less than significant impact to the majority of subjects listed in the Geology and Soil impact areas. These include the following:

- Directly or indirectly cause substantial adverse effects, including the risk of loss, injury, or death involving: the rupture of a known earthquake fault, strong seismic ground shaking, seismic-related ground failure, including liquefaction, and landslides;
- Result in substantial soil erosion or the loss of topsoil;
- Be located on a geologic unit or soil that is unstable, or that would become unstable as a result of the project, and potentially result in on or off-site landslide, lateral spreading, subsidence, liquefaction or collapse;
- Be located on expansive soil, as defined in Table 18-1-B of the Uniform Building Code (1994), creating substantial direct or indirect risks to life or property; and
- Have soils incapable of adequately supporting the use of septic tanks or alternative waste water disposal systems where sewers are not available for the disposal of waste water.

As such, these subjects will not be discussed further in this section.

3.5.1 Environmental Setting

3.5.1.1 Paleontological Resources

A paleontological records search was completed using the University of California Museum of Paleontology (UCMP) Locality Search website on January 27, 2022. The search included a review of the institution's paleontology specimen collection records for Butte County, including the Project Site and vicinity. The purpose of the assessment was to determine the sensitivity of the Project Site, whether or not known occurrences of paleontological resources are present within or immediately adjacent to the Project Site, and whether or not implementation of the Project could result in significant impacts to paleontological resources. Paleontological resources include mineralized (fossilized) or unmineralized bones, teeth, soft tissues, shells, wood, leaf impressions, footprints, burrows, and microscopic remains.

The results of the search of the UCMP indicated that 406 paleontological specimens were recorded from 318 identified localities and 88 unidentified localities in Butte County indicating that there is a potential for paleontological discoveries in the City. The vast majority of the fossilized remains are invertebrates, however, some plant fossilized remains are recorded for Butte County (UCMP 2022).

3.5.2 Regulatory Setting

3.5.2.1 Federal

Federal Land Policy and Management Act (43 USC 1701).

Federal law, including the Federal Land Policy and Management Act (FLPMA) of 1976 (43 USC 1701), includes objectives such as the evaluation, management, protection, and location of fossils on Bureau of Land Management- (BLM) managed lands, defines fossils, and lays out penalties for the destruction of significant fossils. Also, National Environmental Policy Act (NEPA) requires the preservation of "historic, cultural, and natural aspects of our national heritage." Most recently, the Omnibus Public Lands Act refines NEPA and FLPMA guidelines and outlines minimum punishments for removal or destruction of fossils from federal and public lands.

Paleontological Resources Preservation Act.

The Paleontological Resources Preservation Act (PRPA, Title VI, Subtitle D in the Omnibus Public Lands Act of 2009, Public Law 111-011 directs the Secretaries of Interior and Agriculture to manage and protect paleontological resources on federal land using scientific principles and expertise. With the passage of the PRPA, Congress officially recognized the importance of paleontological resources on federal lands by declaring that fossils from federal lands are federal property that must be preserved and protected using scientific principles and expertise.

Code of Federal Regulations, Title 43.

Under Title 43, CFR Section 8365.1-5, the collection of scientific and paleontological resources, including vertebrate fossils, on federal land is prohibited. The collection of a *reasonable amount* of common invertebrate or plant fossils for non-commercial purposes is permissible (43 CFR 8365.1-5).

3.5.2.2 Local

City of Oroville 2030 General Plan

The Open Space, Natural Resources, and Conservation Element (Element) of the Oroville General Plan, adopted in 2015, is dedicated to preserving and improving the quantity, quality, and character of open space in Oroville. The Element includes Section H, which addresses cultural resources in the City. Cultural resources in Oroville include both prehistoric and historic resources in the realms of archaeology, paleontology and historic structures, sites and areas that played important roles in local history. The following goals and policies from the Cultural Resources section of the Element pertain to paleontological resources and Project development:

Goal OPS-14: Preserve Oroville's cultural resources, including archaeological, historic and paleontological resources, for their aesthetic, scientific, educational and cultural values.

Policies

- P14.5: Consult with qualified paleontologists to identify and protect Oroville’s significant paleontological resources.*
- P14.7: If cultural resources, including archaeological or paleontological resources, are uncovered during grading or other on-site excavation activities, construction shall stop until appropriate mitigation is implemented.*

3.5.3 Environmental Impacts

3.5.3.1 Thresholds of Significance

The following thresholds of significance are based on Appendix G of the CEQA Guidelines. For purposes of this DEIR, implementation of the proposed project may have a significant adverse impact on paleontological resources if it would do any of the following:

- Project implementation could directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.

3.5.3.2 Methods of Analysis

For the purposes of this DEIR, information provided by the UCMP Locality Search website was analyzed to determine the potential for paleontological resources within the area of the Proposed Project. The search included a review of the institution’s paleontology specimen collection records for Siskiyou County, including the Project Area and vicinity. In addition, a query of the UCMP catalog records, ECORP completed a review of regional geologic maps from the California Geological Survey, a review of local soils data, and a review of existing literature on paleontological resources of Butte County

3.5.3.3 Project Impacts and Mitigation Measures

Impact GEO-1	Project implementation could directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.
Impact Determination	Less than Significant with Mitigation
Threshold	<i>Direct or indirect destruction of a unique paleontological resource.</i>

Impact Discussion

As described above, a search of the UCMP failed to indicate the presence of paleontological resources in the areas potentially affected by construction activities for the Proposed Project. Although paleontological resource sites were not identified in the areas affected by the Project, there is a possibility that unanticipated paleontological resources will be encountered during ground-disturbing Project

construction activities. As such, this is considered a potentially significant impact requiring mitigation. Implementation of Mitigation Measure PALEO-1, addresses the potential discovery of previously unknown unique paleontological resources and implements actions to avoid impact to those resources. For this reason, the impact is considered less than significant with mitigation incorporated.

Mitigation Measures

The following mitigation measures shall apply to the Proposed Project.

PALEO-1: Discovery of Unknown Paleontological Resources. If paleontological or other geologically sensitive resources are identified during any phase of Project development, the construction manager shall cease operation at the site of the discovery and immediately notify the City. The Project proponent shall retain a qualified paleontologist to evaluate the find and to prescribe mitigation measures to reduce impacts to a less than significant level. In considering any suggested mitigation proposed by the consulting paleontologist, the City shall determine whether avoidance is necessary and feasible in light of factors such as the nature of the find, project design, costs, land use assumptions, and other considerations. If avoidance is unnecessary or infeasible, other appropriate measures (e.g., data recovery) shall be instituted. Work may proceed on other parts of the project site while mitigation for paleontological resources is carried out.

Timing/Implementation: *During construction*

Monitoring/Enforcement: *The City of Oroville Planning Department and Project Construction Manager*

Residual Impact After Mitigation

Impacts would be less than significant after mitigation.

3.5.4 Cumulative Impacts

Section 3.0 provides the baseline for cumulative setting and is based on General Plan projections. While this is helpful for paleontological resources cumulative impacts, it does not necessarily provide a specific cumulative impact setting for these resources as the impacts to these resources are generally more site specific. Therefore, the cumulative setting for paleontological resources includes the Project Site as well as the remaining undeveloped areas surrounding the Project Site where the impacts of urbanization and potential for impacts to cultural resources are considered most serious. Cumulative impacts on cultural resources are primarily the result of the area's urbanization and conversion of undisturbed land to urban use. Developments and planned land uses, including the Proposed Project, would cumulatively contribute to impacts to known and unknown paleontological resources in the area. As previously discussed, Section 3.5.1 Environmental Setting provides an overview of paleontological resources of the region.

3.5.4.1 Cumulative Impacts and Mitigation Measures

Impact GEO-2	Would Implementation of the Proposed Project, along with any foreseeable development in the project vicinity, could result in cumulative impacts to paleontological resources?
Impact Determination	Less than Cumulatively Considerable
<i>Threshold</i>	<i>Result in cumulative impacts to cultural resources.</i>

Impact Discussion

The geologic area considered for the analysis of cumulative impacts related to paleontological resources is within the immediate Project vicinity. Temporary construction activities associated with the Proposed Project would involve construction activities such as trenching, excavation, and backfilling.

Cumulative impacts would only occur if other current or future projects in the area have the potential to cause, directly or indirectly, the impacts discussed above. The potential for impacts paleontological resources to occur during construction activities is less than significant with implementation of Mitigation Measure PALEO-1. Implementation of this mitigation measure would ensure that any potential impact on any previously unknown paleontological resources would be avoided. Therefore, the Proposed Project would have a less than considerable contribution to cumulative paleontological resources impacts.

Cumulative Mitigation Measures

None required.

THIS PAGE INTENTIONALLY LEFT BLANK

3.7 Hazards And Hazardous Materials

The purpose of this section is to disclose and analyze the potential impacts associated safety hazards related to a project located within an Airport Land Compatibility Use Plan (ALUCP).

The IS completed for the Proposed Project determined that there were no impact or a less than significant impact to the majority of subjects listed in the Hazards and Hazardous Materials impact areas. These include:

- Create a significant hazard to the public or the environment through the routine transport, use, or disposal of hazardous materials;
- Create a significant hazard to the public or the environment through reasonably foreseeable upset and accident conditions involving the release of hazardous materials into the environment;
- Emit hazardous emissions or handle hazardous or acutely hazardous materials, substances, or waste within one-quarter mile of an existing or proposed school;
- Be located on a site which is included on a list of hazardous materials sites compiled pursuant to Government Code Section 65962.5 and, as a result, would it create a significant hazard to the public or the environment;
- Impair implementation of or physically interfere with an adopted emergency response plan or emergency evacuation plan; and
- Expose people or structures, either directly or indirectly, to a significant risk of loss, injury or death involving wildland fires.

As such, these subjects will not be discussed further in this section.

3.7.1 Environmental Setting

According to information provided by the Butte County Department of Development Services, Planning Division, Airport Land Use Commission (2022), approximately 35.82 acres of the Project Site is within the B1 Compatibility Zone and 9.15 acres of the Site is within the B2 Compatibility Zone.

The Butte County ALUCP uses compatibility policies to determine, in part, the various land uses surrounding the airport and the compatibility of these land uses with airport operations. These Compatibility Zones are listed as A, B1, B2, C, and D, with A being the most restrictive, identifying that all urban development is incompatible with airport operations, and zone D, the least restrictive, identifying that most urban development is compatible with airport operations. Section 3.2.2 of the ALUCP defines land use compatibility as follows:

"3.2.2. Land Use Compatibility Criteria: The compatibility evaluations presented in Table 3A, Basic Compatibility Criteria, serve as the primary tool for determining whether a proposed Land Use Action is to be judged consistent with the Butte County ALUCP.

- (a) Table 3A lists general land use categories and indicates each use as being either “Normally Compatible,” “Conditional,” or “Incompatible” depending upon the *Compatibility Zone* or *Zones* in which it is located. The individual evaluations in the cells of the table are based upon the *Density*, *Intensity* and *Open Land* criteria shown in the table header, and the ability of a typical *Land Use Action* in a particular category to meet all criteria. The evaluation terms are defined to mean the following:
- (1) “Normally Compatible” means that normal examples of the use are presumed to comply with the noise, safety, airspace protection, and overflight criteria set forth in this Chapter. Atypical examples of a use may require review to ensure compliance with usage *Intensity*, lot coverage, and height limit criteria.
 - (2) “Conditional” means that the proposed land use is compatible if the indicated usage *Intensity*, open land, and other listed conditions are met. Complex projects with this determination may require more detailed evaluation using the specific noise, safety, airspace protection, and overflight compatibility policies set forth in Sections 3.3 through 3.6 and criteria for special circumstances outlined in Section 3.3 of this Chapter. For the purposes of these criteria, “avoid” is intended as cautionary guidance, not a prohibition of the use.
 - (3) “Incompatible” means that the use should not be permitted under any normal circumstances. Limited exceptions are possible for site-specific special circumstances.”

Criteria for identifying Compatibility Zones is based on a number of factors, two of which are safety and noise.

The Butte County ALUCP identifies the safety compatibility policies background information in formulating the safety compatibility criteria for the various Compatibility Zones in the ALUCP. According to the ALUCP, the intent of land use safety compatibility policies is to minimize the risks associated with an off-airport aircraft accident or emergency landing. The policies focus on reducing the potential consequences of such events should they occur. Risks both to people and property in the vicinity of an airport and to people on board the aircraft are considered (Butte County Airport Land Use Commission [ALUC] 2017),

According to the ALUCP, the ALUCP evaluates the risk that potential aircraft accidents pose to lands and people around the airport in terms of two parameters: where aircraft accidents are most likely to occur near the airport and the potential consequences if an accident occurs in one of those locations.

- The accident likelihood is measured in terms of the geographic distribution of where accidents have historically occurred around other airports having similar types of activity. Because aircraft accidents are infrequent occurrences, the pattern of accidents at any one airport cannot be used to predict where future accidents are most likely to happen around that airport. Reliance must be placed on data about aircraft accident locations at comparable airports nationally, refined with respect to information about the characteristics of aircraft use at the individual airport.

- The consequences component of the risk considers the number of people in harm's way and their ability to escape harm. For most nonresidential development, potential consequences are measured in terms of the usage *Intensity*—the number of people per acre on the site. Local development standards (e.g., floor area ratios, parking requirements) and building code occupancies can be used to calculate nonresidential usage *Intensities*. For residential development, *Density*—the number of dwelling units per acre—is substituted for *Intensity*. Additional criteria are applicable to specific types of uses (Butte County ALUC 2017).

Additionally, the following factors are considered in setting safety compatibility policies in the ALUCP:

- The runway length, approach categories, normal flight patterns, and aircraft fleet mix at the airports. These factors are reflected in the Compatibility Zones shapes and sizes.
- The locations, delineated with respect to the *airport* runway, where aircraft accidents typically occur near airports and the relative concentration of accidents within these locations. The most stringent land use controls are applied to the areas with the greatest potential accident exposure. The risk information utilized is the general aviation accident data and analyses contained in the *California Airport Land Use Planning Handbook* (Handbook, Caltrans 2011). The Handbook guidance regarding safety compatibility forms the basis for the safety component of the composite *Compatibility Zones* established for the *Airports* and the maximum usage intensities (people per acre) criteria indicated in Table 3A, *Basic Compatibility Criteria*.
- Handbook guidance regarding residential densities in rural and suburban areas. Residential *Density* limitations cannot be equated to the usage *Intensity* limitations for nonresidential uses. Consistent with pervasive societal views and as suggested by the *Handbook* guidelines, a greater degree of protection is warranted for residential uses.
- The presence of *Risk-Sensitive Land Uses*—uses having characteristics that represent safety concerns regardless of the number of people present; specifically: vulnerable occupants (children, elderly, disabled), hazardous materials, and critical community infrastructure.
- The extent to which development covers the ground and thus limits the options of where an aircraft in distress can attempt an emergency landing.
- The extent to which the occupied parts of a *Project* site are concentrated in a small area. Concentrated high *Intensities* heighten the risk to occupants if an aircraft should strike the location where the development is concentrated. To guard against this risk, limitations on the maximum concentrations of dwellings or people in a small area of a large *Project* site are appropriate.

3.7.2 Regulatory Setting

3.7.2.1 State

State Aeronautics Act

Protection of the public and public interests in aeronautics and aeronautical progress was first established under the California State Aeronautics Act in 1967, which was codified under the Public Utilities Code Section 21001-21709. The purpose of this Act was, in part, to foster and promote safety in aeronautics, assure that persons residing in the vicinity of airports are protected to the greatest possible extent against intrusions by unreasonable levels of aircraft noise, and develop, in cooperation with the private sector, airport management, local jurisdictions, federal authorities, and the general public, informational programs to increase the understanding of current air transportation issues. This includes, but is not limited to, aviation safety, planning, airport noise, airport development and management, and the role of aviation in the economic development of the state, as an integral part of the state's transportation system.

Although the law has been amended numerous times since, the fundamental purpose of ALUCs to promote land use compatibility around airports has remained unchanged. As expressed in the present statutes, this purpose is:

“...to protect public health, safety, and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards within areas around public airports to the extent that these areas are not already devoted to incompatible uses (Butte County ALUC 2017).

The statutes give ALUCs two principal powers by which to accomplish this objective.

- To prepare and adopt an airport land use plan; and
- Review the plans, regulations, and other actions of local agencies and airport operators for consistency with that plan.

3.7.2.2 Local

Butte County Airport Land Use Compatibility Plan

The basic function of the Butte County ALUCP is to promote compatibility between the airports in Butte County and the surrounding land uses. As adopted by the ALUC, the ALUCP serves as a tool for use by the ALUC in fulfilling its duty under the California Public Utilities Code to review airport and adjacent land use development proposals. Additionally, the ALUCP sets compatibility criteria applicable to local agencies in their preparation or amendment of land use plans and ordinances, as well as to land owners in new development design. The Oroville Municipal Airport is included in this plan.

Oroville 2030 General Plan

The Safety Element of the Oroville General Plan, adopted in 2015, provides information about risks in Oroville due to natural and human-made hazards and contains goals, policies, and actions designed to

protect the community and its property as much as possible from seismic hazards, flooding, fire, hazardous materials and electromagnetic fields. Section E of the Safety Element discusses airport operations and provides goals and policies regarding airport safety which pertain to Project development. Additionally, the General Plan Noise Element provides goals and policies related to airport noise. The Safety and Noise Elements goals and policies pertaining to the Project are as follows:

Safety Element

Goal SAF-5: Minimize risks associated with operations at the Oroville Municipal Airport.

Policies

- P5.1: Maintain land use and development patterns in the vicinity of the Oroville Municipal Airport that are consistent with the adopted Airport Land Use Compatibility Plan, including setbacks and height requirements.*
- P5.2: Protect the Overflight Zone by limiting residential densities to a maximum of six units per gross acre, with proposals consisting of four units per gross acre or more subject to Airport Land Use Commission (ALUC) review. Schools and other uses resulting in "large concentrations" of people shall be prohibited.*

Noise Element

Goal NOI-1: Minimize community exposure to excessive noise by ensuring compatible land uses relative to noise sources.

Policies

- P1.10: When considering development proposals in the environs of the Oroville Municipal Airport, enforce the noise compatibility criteria and policies set forth in the adopted Butte County Airport Land Use Compatibility Plan. This includes restricting the development of residential or other noise sensitive receptor uses within the 55 dB CNEL noise contour around the Oroville Municipal Airport.*

3.7.3 Environmental Impacts

3.7.3.1 Thresholds of Significance

The following airport-related thresholds of significance are based on Appendix G of the CEQA Guidelines. For the purposes of this EIR, implementation of the Proposed Project may result in a potentially significant impact associated with hazards and hazardous materials if it would do any of the following:

- For a project located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, would the Project result in a safety hazard or excessive noise for people reading or working in the Project Area.

3.7.3.2 Methods of Analysis

This impact analysis examines the potential for the construction and/or operation of the Proposed Project to result in release of hazardous materials into the environment. Implementation of the Project will comply with all applicable laws, permits, and legal requirements pertaining to hazards and hazardous materials, as discussed above.

3.7.3.3 Project Impacts and Mitigation Measures

Impact HAZ-1	If the Proposed Project is located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, the Proposed Project could result in a safety hazard or excessive noise for people residing or working in the Project Area.
Impact Determination	Significant and Unavoidable
<i>Thresholds</i>	<i>Location within an airport land use plan or within two miles of a public airport or public use airport for which an airport land use plan has not been adopted, and presence of significant safety hazard or excessive noise for people residing or working in the Project area.</i>

Impact Discussion

The Project Site is within the B1 and B2 Compatibility Zones for the Oroville Municipal ALUCP. Residential uses in the B1 and B2 Compatibility Zones are categorized as conditional in the ALUCP. These Compatibility Zones allow residential development at densities of a maximum 0.1 unit per acre in the B1 zone and a maximum 0.2 unit per acre in the B2 zone (Butte County ALUC 2017). As such, residential densities of 0.1 unit per acre equates to 1 unit per 10 acres while 0.2 unit per acre equates to 1 unit per 5 acres. For those areas of the Project within the B1 zone, the Project’s proposed density of 3.74 dwelling units per acre is inconsistent with the B1 compatibility zone density. For those areas of the Project within the B2 zone, the Project’s proposed density of 4.15 dwelling units per acre is inconsistent with the B2 Compatibility Zone density.

The Butte County ALUCP illustrates the noise contours caused by airport operations surrounding the Oroville Municipal Airport in *Exhibit 6-4 Comparability Factors Map: Noise*. As shown, the Project is outside of the 55-, 60- and 65-dB CNEL noise contours. As such, airport operations would not result in excessive noise for people residing or working in the Project Area.

Based on the compatibility zone safety criteria discussed above and the location of the Proposed Project within the B1 and B2 zones, the Project would result in a potential safety hazard for people residing within the Proposed Project as the Project does not meet the density restrictions for the B1 and B2 Compatibility

Zones and the Compatibility Zones are based, in part, on safety factors considered in formulating Compatibility Zones.

Mitigation Measures

The only possible mitigation would be to either eliminate the use of the airport or move the Project to a location outside of the B1 and B2 Compatibility Zones. Neither of these mitigations are feasible. As such, there is no feasible mitigation possible to mitigate the potential airport safety impacts.

Residual Impact After Mitigation

Impacts would be significant and unavoidable.

3.7.4 Cumulative Setting, Impacts, and Mitigation Measures

Section 3.0 provides the baseline for cumulative setting and is based on General Plan projections. While this is helpful for cumulative impacts regarding safety and airport operations, it does not necessarily provide a specific cumulative impact setting for these resources as the impacts to these resources are generally more site-specific. Therefore, the cumulative setting for hazards related to airport operations are projects located within the Compatibility Zones listed in the Oroville Municipal Airport ALUCP. This includes the Project Site as well as the remaining undeveloped areas surrounding the Project Site where the impacts of urbanization and potential for impacts to hazards from airport operations are considered most serious. Cumulative impacts on airport safety are primarily the result of the area surrounding the airport becoming more urbanized to the extent that the land use is considered incompatible with airport operations. As previously discussed, Section 3.7.1 Environmental Setting provides an overview of the existing airport land use Compatibility Zones of the Oroville Municipal Airport.

3.7.4.1 Cumulative Impacts and Mitigation Measures

Impact HAZ-2:	Would Implementation of the Proposed Project, along with any foreseeable development in the Project vicinity, result in cumulative impacts regarding safety hazard or excessive noise for people residing or working in the Project Area.
Impact Determination:	Cumulatively Considerable and Significant and Unavoidable
Threshold	Result in cumulative impacts regarding airport safety hazards and/or excessive noise for persons residing or working in the project.

Impact Discussion

As discussed previously, the Oroville Municipal Airport ALUCP identifies the acceptable land uses surrounding the airport by Compatibility Zones. The area considered for the analysis of cumulative impacts related to airport operations and safety are those areas within these airport Compatibility Zones.

The permitting of land uses that are not consistent with the Oroville ALUCP in these areas would increase the potential for cumulative impacts.

No other development projects that are inconsistent with the ALUCP have been proposed at this time. With the exception of the Proposed Project, which is requesting a General Plan land use designation change and rezoning, the current City of Oroville General Plan land use designations and zoning districts are consistent with the requirements of the Oroville ALUCP Compatibility Zones. Cumulative impacts would only occur if future projects would also request a land use designation and rezoning that is incompatible with the ALUCP. While this may never occur, the approval of the Proposed Project could set a precedent for future land use changes that may not be consistent with the ALUCP. However, while CEQA requires the mitigation of impacts, if possible, the only feasible mitigation would be to require that all future land development within the ALUCP area to be consistent with the ALUCP land uses. Neither the Project nor this Draft EIR has the authority to require the City of Oroville to implement and enforce this type of mitigation; therefore this mitigation would be infeasible. As such, the Project would have a cumulatively considerable and significant and unavoidable impact in this area.

Cumulative Mitigation Measures

No feasible mitigation possible.

Residual Impact After Mitigation

Impacts would be cumulatively considerable and significant and unavoidable.

3.8 Land Use And Planning

This section describes existing land uses on and near the Project Site. This section also describes plans and regulations pertaining to land use management in the Project Area and evaluates Project consistency with relevant land use plans, goals, and policies.

The IS completed for the Proposed Project determined that there were no impact to one of the two subjects listed in the Land Use impact areas. This includes:

- Physically divide an established community.

As such, this subject will not be discussed further in this section.

3.8.1 Environmental Setting

3.8.1.1 City of Oroville

Most households in Oroville reside in single-family dwelling units in the City. Within the city limits, single-family units are found mostly in the Historic Downtown, the Table Mountain Boulevard area, the Hammon Road area, and the Canyon Highlands area off of Oroville Dam Boulevard. Single-family parcels comprise approximately 1,338 acres in the City proper and approximately 5,600 acres in the City's Sphere of Influence (SOI). Multi-family units are scattered throughout the same areas as single-family neighborhoods, with a particular concentration of higher-density, multi-family buildings along the Table Mountain Boulevard corridor and the Oroville Dam Boulevard corridor. Multi-family parcels occupy 265 acres within the City limits. There are an additional 535 acres within the SOI. With few exceptions, multi-family residential buildings in the SOI consist of smaller projects that generally have less than five units. Mobile homes account for roughly 400 units within the Oroville City limits. Most are located in the City's 32 acres of mobile home parks. An additional 962 mobile home units are located within the 62 acres of mobile home parks in the SOI. Concentrations of mobile homes are located in Kelly Ridge and Thermalito.

Commercial uses in this category of existing land use include retail, office and service uses. There are 630 acres of land within the City limits in commercial use, with an additional 513 acres in Oroville's unincorporated SOI. Commercial and office uses are concentrated in four main areas: The Historic Downtown District, The Table Mountain Boulevard Corridor, The Feather River Boulevard Corridor, and the Oroville Dam Boulevard and Olive Highway area. Prevalent industrial uses include light manufacturing, heavy industrial, service and repair, processing and warehousing. There are currently approximately 416 acres in industrial use within the City limits, and approximate 336 acres in the SOI. Industrial uses are confined to two areas in the City of Oroville. The primary industrial zone in the City is located on the Southside, bounded by the Oroville Dam Boulevard on the north, the Western Pacific railroad tracks on the east, Ophir Road on the south, and Highway 70 on the west. Major uses include manufacturing, wood processing, and warehousing. The Airport Business Park is adjacent to OMA on the north and east. Uses include some light manufacturing/assembly operations as well as limited research and design

The Public/Quasi-Public category encompasses several types of uses, including all publicly owned parcels that are not parks or open space, and privately owned parcels that accommodate civic and institutional

uses such as churches and hospitals. Public and quasi-public uses account for approximately 1,122 acres within the City limits and 220 acres in the SOI. These include the OMA, City of Oroville government, Butte County Government Complex and institutional uses such as schools, hospitals, churches, cemeteries, and a fish hatchery. Parks and recreational facilities, such as playing fields and neighborhood parks, are fairly well distributed around the City, comprising 513 acres within the City limits. A few of the largest parks include River Bend Park (on Feather River), Mitchell Park (south of downtown), and Nelson Park and Recreational Center (north of Thermalito). Parks in Oroville provide a number of recreational opportunities for local residents, ranging from fishing, hiking, and river-rafting to sports fields and a new skate park near the Historic Downtown.

In addition to parks, Oroville has many open space resources that are protected by state agencies or conservation trusts. The 12,000-acre Oroville Wildlife Refuge is a riparian forest bordered by 12 miles of river channels and is important habitat for beavers, egrets, and river otters. Approximately 2,750 acres of the Oroville Wildlife Refuge are within the Planning Area. In addition to the Wildlife Area, the State of California manages a vast amount of land in the Lake Oroville State Recreation Area, including recreation areas and lands associated with the State Water Project, which begins at Oroville Dam and the Lake Oroville reservoir. South and North Thermalito Forebay comprise approximately 610 acres and Thermalito Afterbay is approximately 3,900 acres. Additionally, vacant land is defined as land with no structure or building improvement and that is not used for active agricultural production. Conversely, underutilized land is defined as land with the ability to accommodate additional density. Vacant land is interspersed throughout the City and comprises a significant portion of the Oroville area. Vacant land comprises 3,117 acres within the City limits and 5,805 acres of the land within the SOI. The average vacant parcel size is 2.83 acres. In addition to vacant land, underutilized land is also scattered throughout the City.

Agriculture is limited within the City limits of Oroville, accounting for only 17 acres. However, agriculture occupies approximately 1,563 acres of land within the SOI. Agricultural lands are typically used for field crops, orchards, and grazing. Grazing and pasture land account for most of the agriculture in the Oroville area, with much of the remainder is citrus and olive orchards. Small parcels of agricultural land can be found in Thermalito, as well as around Wyman Ravine in the southeast part of the SOI.

There are no Tribal lands within the City limits of Oroville, but one reserve is located in the SOI and another is located in the Planning Area. Both are anchored by casinos. Gold Country Casino occupies 92 acres in the SOI located off Olive Highway and is operated by the Tyme Maidu of Berry-Creek Rancheria. The Feather Falls Casino operated by the Concow Maidu of Mooretown Rancheria is located off Ophir Road, outside of the SOI but within the Planning Area (City of Oroville 2015).

3.8.1.2 Project Site

The 44.87-acre Site is within the City of Oroville 2030 General Plan land use designation of Airport Business Park and is zoned ABP with a zoning overlay of AIA-O. The 2030 General Plan identifies the Airport Business Park as follows:

“This designation allows for light manufacturing, limited industrial, food processing, wholesale trade and offices. Retail businesses and public services are permitted to a lesser

extent and would generally be allowed as an accessory use. Outdoor storage is only permitted in limited amounts if heavily screened. Projects must maintain architectural and landscape standards normally associated with the term “business park” rather than “industrial area.” FAR range in this designation ranges from 0.20 to 0.35. Maximum FAR is 0.30 in the area bounded by Feather Avenue on the north, Oroville Dam Boulevard West on the south, 20th Street on the east and 24th Street on the west. Maximum FAR is 0.35 in all other areas (City of Oroville 2015).”

The Oroville Municipal Code Title 17 Zoning Section 17.36.030 ABP—Airport Business Park, describes the purpose APB zone as:

“To provide for business and commercial opportunities near the Oroville Airport that will neither be detrimental to the airport’s growth, efficiency and safety nor create substantial conflict with the development of other industrial lands in the city, and that will be consistent with the general plan land use designation of Airport Business Park (City of Oroville 2022a)”.

Section 17.44.050 AIA-O—Airport influence area overlay, describes the intent of the AIA-O district as:

“This section identifies limitations on the density, intensity, height, and other aspects of the use of property within the Oroville Municipal Airport (OMA) overflight area that are necessary to protect persons on the ground and in the air from adverse impacts that may result from operation of an airport, in the manner described in the 1990 Master Plan for the OMA. The limitations established in this section are consistent with Airport Compatibility Criteria described in the Butte County Airport Land Use Commission’s 2000 Airport Land Use Compatibility Plan.” (City of Oroville 2022a)

The Project Site is within B1 and B2 Compatibility Zones of the Butte County ALUCP for the Oroville Municipal Airport. Public Utilities Code Section 21676 requires the Oroville 2030 General Plan land use designations to be consistent with the land use plans and policies of the adopted ALUCP (City of Oroville 2015).

Existing Land Use

The Project is located at the southwest corner of 20th Street and Feather Avenue in the City of Oroville, California (Figures 1-1 and 1-2). The Proposed Project is located on approximately 44.89-acres of land identified as APN 030-230-098. The Project proposes to subdivide the 44.89-acre Project Site into 199 single-family lots. Current General Plan land use designation is Airport Business Park (ABP) and zoning district is Airport Business Park (ABP) with an Airport Influence Area Overlay (AIA-O). None of these designations allow the development of residential uses at the densities requested of 3.82 units/acre for the Proposed Project. Therefore, a General Plan amendment and rezone will be required to approve the Project. The Proposed Project includes a request to change the General Plan land use designation to Medium Low Density Residential and a rezoning to R-1. The Oroville Municipal Airport is approximately 0.75 mile to the south of the Project Site and a 0.5 mile to the north is the Thermalito Forebay. The Project

Site is within the B1 and B2 Compatibility Zones for the OMA ALUCP. These Compatibility Zones do not allow residential development at the densities proposed for the Project.

Surrounding Land Use

The Project is located directly southwest of the Feather Avenue/20th Street intersection in City of Oroville, California. (Figures 2-1 and 2-2). Figure 2-3 shows surrounding land uses as described below:

- *North.* The Site's northern boundary is generally bound by a dirt access road with vacant land and a scattering of single-family residences fronting 21st Street off Grand Avenue.
- *East.* The Site's eastern boundary is generally bound by 20th Street off Grand Avenue with a single-family residential neighborhood beyond the northern half of the eastern boundary; with vacant land beyond 20th Street on the southern half of the eastern boundary.
- *South.* The Site's southern boundary is generally bound by a dirt access road with vacant land and a scattering of single-family residences fronting 20th Street beyond. CA 162 is located approximately 1,570 feet from the Site's southern boundary where 20th Street intersects. Beyond CA 162 (Oro Dam Boulevard West), and in the northeastern corner and abutting the OMA area, lies an industrial storage yard with commercial uses on either side and the Northwest Lineman College.
- *West.* The Project's western boundary is generally bound by a dirt access road with vacant land beyond and a scattering of single-family residences fronting Gold Country Lane and Chardonnay Way.

3.8.2 Regulatory Setting

3.8.2.1 State

California Planning and Zoning Law

The legal framework in which California cities and counties exercise local planning and land use functions is set forth in the California Planning and Zoning Law, Sections 65000 through 66499.58. Under State of California planning law, each city and county must adopt a comprehensive, long-term general plan. State law gives cities and counties wide latitude in how a jurisdiction may create a general plan, but there are fundamental requirements that must be met. These requirements include the inclusion of eight mandatory elements described in the Government Code: land use, circulation, housing, conservation, open space, noise, safety, and environmental justice (applicable to General Plans adopted or updated after January 1, 2018). Each of the elements must contain text and descriptions setting forth objectives, principles, standards, policies, and plan proposals; diagrams and maps that incorporate data and analysis; and mitigation measures.

To assist local governments in meeting this responsibility, the Governor's OPR is required to periodically revise guidelines for the preparation and content of local general plans pursuant to Government Code Section 65040.2. The General Plan Guidelines is advisory, not mandatory (ibid.). Nevertheless, it is the State's only official document explaining California's legal requirements for general plans. Planners,

decision-making bodies, and the public depend upon the General Plan Guidelines for help when preparing local general plans. The courts have periodically referred to the General Plan Guidelines for assistance in determining compliance with planning law. For this reason, the General Plan Guidelines closely adhere to statute and case law. It also relies upon commonly accepted principles of contemporary planning practice.

3.8.2.2 Local

Applicable land use plans, major policies and regulations that pertain to the Proposed Project are presented below.

Butte County Airport Land Use Compatibility Plan

The basic function of the Butte County ALUCP is to promote compatibility between the airports in Butte County and the surrounding land uses. As adopted by the ALUC, the ALUCP serves as a tool for use by the ALUC in fulfilling its duty under the California Public Utilities Code to review airport and adjacent land use development proposals. Additionally, the ALUCP sets compatibility criteria applicable to local agencies in the preparation or amendment of land use plans and ordinances and to land owners in their design of new development. This plan includes the OMA.

Oroville 2030 General Plan

The Land Use Element of the Oroville General Plan provides information about the future physical development of Oroville and is provided to preserve, protect and enhance the current livability and quality of life for Oroville's residents. The Land Use Element focuses on development that could potentially occur in both the existing City limits and the City's SOI.

The Safety Element of the Oroville General Plan provides information about risks in Oroville due to natural and manufactured hazards and contains goals, policies, and actions designed to protect the community and its property as much as possible from seismic hazards, flooding, fire, hazardous materials and electromagnetic fields. Section E of the Safety Element discusses airport operations and provides goals and policies regarding airport safety which pertain to Project development.

The General Plan goals and polices pertaining to land use and the Project are as follows:

Land Use Element

Goal LU-1: Provide for orderly, well-planned, and balanced growth consistent with the limits imposed by infrastructure and the City's ability to assimilate new growth.

Policies

P1.6: Ensure all new development conforms to current land use and zoning designations.

Goal LU-3: Provide housing in a range of residential densities and types to address the housing needs of all segments of the community, including all income groups expected to reside in Oroville.

Policies

P3.2: Promote the development of cohesive neighborhoods with distinct characters and with adequate park land and other neighborhood serving public facilities. For areas over 100 acres, the City may require the preparation of a Specific Plan.

P3.3: Discourage large residential development that has the look and feel of a single project; do not have variation in terms of densities, building typology and design, or lacks the distinct character of the surrounding neighborhood.

Safety Element

Goal SAF-5: Minimize risks associated with operations at the Oroville Municipal Airport.

Policies

P5.1: Maintain land use and development patterns in the vicinity of the Oroville Municipal Airport that are consistent with the adopted Airport Land Use Compatibility Plan, including setbacks and height requirements.

P5.2: Protect the Overflight Zone by limiting residential densities to a maximum of six units per gross acre, with proposals consisting of four units per gross acre or more subject to Airport Land Use Commission (ALUC) review. Schools and other uses resulting in "large concentrations" of people shall be prohibited.

3.8.3 Environmental Impacts

3.8.3.1 Thresholds of Significance

The following threshold of significance is based on Appendix G of the CEQA Guidelines. For purposes of this Draft EIR, implementation of the Proposed Project may have a significant adverse impact on land use and planning if it would:

- cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.

3.8.3.2 Methods of Analysis

Review of all applicable land use plans, policies and/or regulations adopted by agencies with jurisdiction over the Project for the purpose of avoiding or mitigating an environmental effect were reviewed to determine if Project consistency would ensure impact avoidance. Mitigation is recommended to reduce the impact to less than significant if a significant environmental effect could occur due to Project inconsistency.

3.8.3.3 Project Impacts and Mitigation Measures

Impact LU-1	Project implementation could cause a significant environmental impact due to a conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.
Impact Determination	Less than Significant
Threshold	<i>Conflict with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.</i>

Impact Discussion

As stated previously, The Project Site is within the City of Oroville 2030 General Plan land use designation of Airport Business Park and is zoned ABP with a zoning overlay of AIA-O. The Project proposes the development of 172 single-family lots. Single-family residential units are neither allowed in the APB zoning district nor are they a prescribed use in the General Plan land use designation of Airport Business Park, thus a General Plan amendment and rezone to a residential land use is required. Additionally, the Oroville Airport ALUCP of B1 and B2 Compatibility Zones only allows residential uses at one unit per ten acres for B1 and one unit per five acres for B2. The Proposed Project is inconsistent with the density requirements of both of these Compatibility Zones. However, the ALUCP Compatibility Zones, the General Plan land use designation, the City’s zoning of ABP and overlay of AIA-O, and the General Plan Land Use and Safety Element goals and polices do not establish that these designations, goals, and policies were adopted for the purpose of avoiding or mitigating an environmental effect. The development of a residential project that is inconsistent with land use designations or policies does not establish that the Project would also be inconsistent with land use designations or policy unless it can be shown that these land use designations or policies were adopted for the purpose of avoiding or mitigating an environmental effect. That is not the case in this instance. Therefore, the Proposed Project would have a less than significant impacts in this area.

Mitigation Measures

No mitigation measures are required.

3.8.4 Cumulative Setting, Impacts, and Mitigation Measures

Section 3.0 provides the baseline for cumulative setting and is based on General Plan projections. These General Plan projections are developed, in part, from the existing land use designations identified in the General Plan. As shown in Table 3-2, the anticipated growth in the City is expected to result in 9,685 new housing units, 7,026,000 sf of new industrial uses, and 12,168,000 sf of new commercial uses within the existing city limits by 2030.

3.8.4.1 Cumulative Impacts and Mitigation Measures

Impact LU-2-2	Would Implementation of the proposed project, along with any foreseeable development in the project vicinity, result in cumulative significant environmental impact due to a conflicts with any land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.
<i>Impact Determination</i>	<i>Less than Cumulatively Considerable</i>
<i>Threshold</i>	<i>Result in cumulative impacts to a land use plan, policy, or regulation adopted for the purpose of avoiding or mitigating an environmental effect.</i>

Impact Discussion

The Proposed Project is the only pending, proposed or foreseeable project to request a land use designation change or rezoning within the Oroville Airport Compatibility Zones. As discussed previously, the Oroville 2030 General Plan identifies land use and safety goals and policies related to the OMA. However, none of these goals and policies were adopted for the purpose of avoiding or mitigating an environmental effect. Additionally, while the Proposed Project would result in a land use change to a higher density that what is consistent the B1 and B2 Compatibility Zones of the Oroville ALUCP, neither of these zones were adopted to avoid or mitigate an environmental effect. Therefore, the Proposed Project would result in a less than cumulatively considerable impact in this issue area.

Cumulative Mitigation Measures

No mitigation required.

3.9 Noise

This section describes the environmental setting for noise, including the existing site conditions, and presents a noise evaluation as a comparison of the Project's predicted noise levels and compares them to the noise standards promulgated by the City of Oroville General Plan Noise Element. More information can be found in the *Noise Impact Assessment for the Feather Ranch Project* (ECORP 2023, Appendix 3.9).

3.9.1 Environmental Noise and Groundborne Vibration Analysis

3.9.1.1 Fundamentals of Noise and Environmental Sound

Addition of Decibels

The decibel (dB) scale is logarithmic, not linear, and therefore sound levels cannot be added or subtracted through ordinary arithmetic. Two sound levels 10 dB apart differ in acoustic energy by a factor of 10. When the standard logarithmic decibel is A-weighted (dBA), an increase of 10 dBA is generally perceived as a doubling in loudness. For example, a 70-dBA sound is half as loud as an 80-dBA sound and twice as loud as a 60-dBA sound. When two identical sources are each producing sound of the same loudness, the resulting sound level at a given distance would be three dB higher than one source under the same conditions (Federal Transit Administration [FTA] 2018). For example, a 65-dB source of sound, such as a truck, when joined by another 65-dB source results in a sound amplitude of 68 dB, not 130 dB (i.e., doubling the source strength increases the sound pressure by 3 dB). Under the decibel scale, three sources of equal loudness together would produce an increase of 5 dB.

Typical noise levels associated with common noise sources are depicted in Figure 3.9-1.

Sound Propagation and Attenuation

Noise can be generated by a number of sources, including mobile sources such as automobiles, trucks and airplanes, and stationary sources such as construction sites, machinery, and industrial operations. Sound spreads (propagates) uniformly outward in a spherical pattern, and the sound level decreases (attenuates) at a rate of approximately 6 dB (dBA) for each doubling of distance from a stationary or point source (Federal Highway Administration [FHWA] 2017). Sound from a line source, such as a highway, propagates outward in a cylindrical pattern, often referred to as cylindrical spreading. Sound levels attenuate at a rate of approximately 3 dBA for each doubling of distance from a line source, such as a roadway, depending on ground surface characteristics (FHWA 2017). No excess attenuation is assumed for hard surfaces like a parking lot or a body of water. Soft surfaces, such as soft dirt or grass, can absorb sound, so an excess ground-attenuation value of 1.5 dBA per doubling of distance is normally assumed. For line sources, an overall attenuation rate of three dB per doubling of distance is assumed (FHWA 2011).

Common Outdoor Activities	Noise Level (dBA)	Common Indoor Activities
<u>Jet Fly-over at 300m (1000 ft)</u>	110	<u>Rock Band</u>
<u>Gas Lawn Mower at 1 m (3 ft)</u>	100	
<u>Diesel Truck at 15 m (50 ft), at 80 km (50 mph)</u>	90	<u>Food Blender at 1 m (3 ft)</u>

Source: California Department of Transportation (Caltrans) 2020a

Noise levels may also be reduced by intervening structures; generally, a single row of detached buildings between the receptor and the noise source reduces the noise level by about five dBA (FHWA 2006), while a solid wall or berm generally reduces noise levels by 10 to 20 dBA (FHWA 2011). However, noise barriers or enclosures specifically designed to reduce site-specific construction noise can provide a sound reduction of 35 dBA or greater (Western Electro-Acoustic Laboratory, Inc. [WEAL] 2000). To achieve the most potent noise-reducing effect, a noise enclosure/barrier must physically fit in the available space, must completely break the *line of sight* between the noise source and the receptors, must be free of degrading holes or gaps, and must not be flanked by nearby reflective surfaces. Noise barriers must be sizable enough to cover the entire noise source and extend lengthwise and vertically as far as feasibly possible to be most effective. The limiting factor for a noise barrier is not the component of noise transmitted through the material, but rather the amount of noise flanking around and over the barrier. In general, barriers contribute to decreasing noise levels only when the structure breaks the *line of sight* between the source and the receiver.

The manner in which older homes in California were constructed generally provides a reduction of exterior-to-interior noise levels of about 20 to 25 dBA with closed windows (Caltrans 2002). The exterior-to-interior reduction of newer residential units is generally 30 dBA or more (Harris Miller, Miller & Hanson Inc. [HMMH] 2006). Generally, in exterior noise environments ranging from 60 dBA Community Noise Equivalent Level (CNEL) to 65 dBA CNEL, interior noise levels can typically be maintained below 45 dBA, a typical residential interior noise standard, with the incorporation of an adequate forced air mechanical ventilation system in each residential building, and standard thermal-pane residential windows/doors with a minimum rating of Sound Transmission Class (STC) 28. The STC is an integer rating of how well a building partition attenuates airborne sound. In the U.S., it is widely used to rate interior partitions, ceilings, floors, doors, windows, and exterior wall configurations. In exterior noise environments of 65 dBA CNEL or greater, a combination of forced-air mechanical ventilation and sound-rated construction methods is often required to meet the interior noise level limit. Attaining the necessary noise reduction from exterior to interior spaces is readily achievable in noise environments less than 75 dBA CNEL with proper wall construction techniques following CBC methods, the selections of proper windows and doors, and the incorporation of forced-air mechanical ventilation systems.

Noise Descriptors

The decibel scale alone does not adequately characterize how humans perceive noise. The dominant frequencies of a sound have a substantial effect on the human response to that sound. Several rating scales have been developed to analyze the adverse effect of community noise on people. Because environmental noise fluctuates over time, these scales consider that the effect of noise on people is largely dependent on the total acoustical energy content of the noise, as well as the time of day when the noise occurs. The noise descriptors most often encountered when dealing with traffic, community, and environmental noise include the average hourly noise level (in L_{eq}) and the average daily noise levels/community noise equivalent level (in L_{dn} /CNEL). The L_{eq} is a measure of ambient noise, while the L_{dn} and CNEL are measures of community noise. Each is applicable to this analysis and defined as follows:

- **Equivalent Noise Level (L_{eq})** is the average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they

deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.

- **Day-Night Average (L_{dn})** is a 24-hour average L_{eq} with a 10-dBA *weighting* added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the nighttime. The logarithmic effect of these additions is that a 60 dBA 24-hour L_{eq} would result in a measurement of 66.4 dBA L_{dn}.
- **Community Noise Equivalent Level (CNEL)** is a 24-hour average L_{eq} with a 5-dBA weighting during the hours of 7:00 p.m. to 10:00 p.m. and a 10-dBA weighting added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the evening and nighttime, respectively.

Table 3.9-1 provides a list of other common acoustical descriptors.

Table 3.9-1. Common Acoustical Descriptors	
Descriptor	Definition
Decibel, dB	A unit describing the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20.
Sound Pressure Level	Sound pressure is the sound force per unit area, usually expressed in micropascals (or 20 micronewtons per square meter), where 1 pascal is the pressure resulting from a force of 1 newton exerted over an area of 1 square meter. The sound pressure level is expressed in decibels as 20 times the logarithm to the base 10 of the ratio between the pressures exerted by the sound to a reference sound pressure (e.g., 20 micropascals). Sound pressure level is the quantity that is directly measured by a sound level meter.
Frequency, Hertz (Hz)	The number of complete pressure fluctuations per second above and below atmospheric pressure. Normal human hearing is between 20 Hz and 20,000 Hz. Infrasonic sounds are below 20 Hz and ultrasonic sounds are above 20,000 Hz.
A-Weighted Sound Level, dBA	The sound pressure level in decibels as measured on a sound level meter using the A-weighting filter network. The A-weighting filter de-emphasizes the very low and very high-frequency components of the sound in a manner similar to the frequency response of the human ear and correlates well with subjective reactions to noise.
Equivalent Noise Level, Leq	The average acoustic energy content of noise for a stated period of time. Thus, the Leq of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. For evaluating community impacts, this rating scale does not vary, regardless of whether the noise occurs during the day or the night.
Lmax, Lmin	The maximum and minimum A-weighted noise level during the measurement period.
L01, L10, L50, L90	The A-weighted noise levels that are exceeded 1%, 10%, 50%, and 90% of the time during the measurement period.
Day/Night Noise Level, Ldn or DNL	A 24-hour average Leq with a 10 dBA "weighting" added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the nighttime. The logarithmic effect of these additions is that a 60 dBA 24-hour Leq would result in a measurement of 66.4 dBA Ldn.

Table 3.9-1. Common Acoustical Descriptors	
Descriptor	Definition
Community Noise Equivalent Level, CNEL	A 24-hour average Leq with a 5 dBA “weighting” during the hours of 7:00 p.m. to 10:00 p.m. and a 10 dBA “weighting” added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the evening and nighttime, respectively. The logarithmic effect of these additions is that a 60 dBA 24-hour Leq would result in a measurement of 66.7 dBA CNEL.
Ambient Noise Level	The composite of noise from all sources near and far. The normal or existing level of environmental noise at a given location.
Intrusive	That noise which intrudes over and above the existing ambient noise at a given location. The relative intrusiveness of a sound depends on its amplitude, duration, frequency, and time of occurrence and tonal or informational content, as well as the prevailing ambient noise level.
Decibel, dB	A unit describing the amplitude of sound, equal to 20 times the logarithm to the base 10 of the ratio of the pressure of the sound measured to the reference pressure. The reference pressure for air is 20.

The dBA sound level scale gives greater weight to the frequencies of sound to which the human ear is most sensitive. Because sound levels can vary markedly over a short period of time, a method for describing either the average character of the sound or the statistical behavior of the variations must be utilized. Most commonly, environmental sounds are described in terms of an average level that has the same acoustical energy as the summation of all the time-varying events.

The scientific instrument used to measure noise is the sound level meter. Sound level meters can accurately measure environmental noise levels to within about ±1 dBA. Various computer models are used to predict environmental noise levels from sources, such as roadways and airports. The accuracy of the predicted models depends on the distance between the receptor and the noise source. Close to the noise source, the models are accurate to within about ±1 to 2 dBA.

Human Response to Noise

The human response to environmental noise is subjective and varies considerably from individual to individual. Noise in the community has often been cited as a health problem, not in terms of actual physiological damage, such as hearing impairment, but in terms of inhibiting general well-being and contributing to undue stress and annoyance. The health effects of noise in the community arise from interference with human activities, including sleep, speech, recreation, and tasks that demand concentration or coordination. Hearing loss can occur at the highest noise intensity levels.

Noise environments and consequences of human activities are usually well represented by median noise levels during the day or night or over a 24-hour period. Environmental noise levels are generally considered low when the CNEL or L_{dn} is below 60 dBA, moderate in the 60- to 70-dBA range, and high above 70 dBA. Examples of low daytime levels are isolated, natural settings with noise levels as low as 20 dBA and quiet, suburban, residential streets with noise levels around 40 dBA. Noise levels above 45 dBA at night can disrupt sleep. Examples of moderate-level noise environments are urban residential or semi-

commercial areas (typically 55 to 60 dBA) and commercial locations (typically 60 dBA). People may consider louder environments adverse, but most will accept the higher levels associated with noisier urban residential or residential-commercial areas (60 to 75 dBA) or dense urban or industrial areas (65 to 80 dBA). Regarding increases in A-weighted noise levels (dBA), the following relationships should be noted in understanding this analysis:

- Except in carefully controlled laboratory experiments, a change of 1 dBA cannot be perceived by humans.
- Outside of the laboratory, a 3-dBA change is considered a just-perceivable difference.
- A change in level of at least 5 dBA is required before any noticeable change in community response would be expected. An increase of 5 dBA is typically considered substantial.
- A 10-dBA change is subjectively heard as an approximate doubling in loudness and would almost certainly cause an adverse change in community response.

Effects of Noise on People

Hearing Loss

While physical damage to the ear from an intense noise impulse is rare, a degradation of auditory acuity can occur even within a community noise environment. Hearing loss occurs mainly due to chronic exposure to excessive noise but may be due to a single event such as an explosion. Natural hearing loss associated with aging may also be accelerated from chronic exposure to loud noise.

The Occupational Safety and Health Administration (OSHA) has a noise exposure standard that is set at the noise threshold where hearing loss may occur from long-term exposures. The maximum allowable level is 90 dBA averaged over 8 hours. If the noise is above 90 dBA, the allowable exposure time is correspondingly shorter.

Annoyance

Attitude surveys are used for measuring the annoyance felt in a community for noises intruding into homes or affecting outdoor activity areas. In these surveys, it was determined that causes for annoyance include interference with speech, radio and television, house vibrations, and interference with sleep and rest. The L_{dn} as a measure of noise has been found to provide a valid correlation of noise level and the percentage of people annoyed. People have been asked to judge the annoyance caused by aircraft noise and ground transportation noise. There continues to be disagreement about the relative annoyance of these various sources.

3.9.1.2 Fundamentals of Noise and Environmental Sound

Vibration Sources and Characteristics

Sources of earthborne vibrations include natural phenomena (e.g., earthquakes, volcanic eruptions, sea waves, landslides) or manufactured causes (e.g., explosions, machinery, traffic, trains, construction equipment). Vibration sources may be continuous (e.g., factory machinery) or transient (e.g., explosions).

Ground vibration consists of rapidly fluctuating motions or waves with an average motion of zero. Several different methods are typically used to quantify vibration amplitude. One is the Peak Particle Velocity (PPV); another is the Root Mean Square (RMS) velocity. The PPV is defined as the maximum instantaneous positive or negative peak of the vibration wave. The RMS velocity is defined as the average of the squared amplitude of the signal. The PPV and RMS vibration velocity amplitudes are used to evaluate human response to vibration.

PPV is generally accepted as the most appropriate descriptor for evaluating the potential for building damage. For human response, however, an average vibration amplitude is more appropriate because it takes time for the human body to respond to the excitation (the human body responds to an average vibration amplitude, not a peak amplitude). Because the average particle velocity over time is zero, the RMS amplitude is typically used to assess human response. The RMS value is the average of the amplitude squared over time, typically a 1-second period (FTA 2018).

Table 3.9-2 displays the reactions of people and the effects on buildings produced by continuous vibration levels. The annoyance levels shown in the table should be interpreted with care since vibration may be found to be annoying at much lower levels than those listed, depending on the level of activity or the sensitivity of the individual. To sensitive individuals, vibrations approaching the threshold of perception can be annoying. Low-level vibrations frequently cause irritating secondary vibration, such as a slight rattling of windows, doors, or stacked dishes. The rattling sound can give rise to exaggerated vibration complaints, even though there is little risk of actual structural damage. In high-noise environments, which are more prevalent where groundborne vibration approaches perceptible levels, this rattling phenomenon may also be produced by loud airborne environmental noise causing induced vibration in exterior doors and windows.

Ground vibration can be a concern in instances where buildings shake, and substantial rumblings occur. However, it is unusual for vibration from typical urban sources such as buses and heavy trucks to be perceptible. For instance, heavy-duty trucks generally generate groundborne vibration velocity levels of 0.006 PPV at 50 feet under typical circumstances, which as identified in Table 3.9-2 is considered very unlikely to cause damage to buildings of any type. Common sources for groundborne vibration are planes, trains, and construction activities such as earthmoving which requires the use of heavy-duty earth moving equipment.

Table 3.9-2. Human Reaction and Damage to Buildings for Continuous or Frequent Intermittent Vibration Levels			
Peak Particle Velocity (inches/second)	Approximate Vibration Velocity Level (VdB)	Human Reaction	Effect on Buildings
0.006–0.019	64–74	Range of threshold of perception	Vibrations unlikely to cause damage of any type
0.08	87	Vibrations readily perceptible	Threshold at which there is a risk of architectural damage to extremely fragile historic buildings, ruins, ancient monuments
0.1	92	Level at which continuous vibrations may begin to annoy people, particularly those involved in vibration sensitive activities	Threshold at which there is a risk of architectural damage to fragile buildings. Virtually no risk of architectural damage to normal buildings
0.25	94	Vibrations may begin to annoy people in buildings	Threshold at which there is a risk of architectural damage to historic and some old buildings
0.3	96	Vibrations may begin to feel severe to people in buildings	Threshold at which there is a risk of architectural damage to older residential structures
0.5	103	Vibrations considered unpleasant by people subjected to continuous vibrations	Threshold at which there is a risk of architectural damage to new residential structures and Modern industrial/commercial buildings

3.9.2 Existing Environmental Noise Setting

3.9.2.1 Noise Sensitive Land Uses

Noise-sensitive land uses are generally considered to include those uses where noise exposure could result in health-related risks to individuals, as well as places where quiet is an essential element of their intended purpose. Residential dwellings are of primary concern because of the potential for increased and prolonged exposure of individuals to both interior and exterior noise levels. Additional land uses such as hospitals, historic sites, cemeteries, and certain recreation areas are considered sensitive to increases in exterior noise levels. Schools, churches, hotels, libraries, and other places where low interior noise levels are essential are also considered noise-sensitive land uses. The nearest noise sensitive receptors to the Project Site include residences directly adjacent to the northeast corner of the Project Site boundary, fronting 20th Street, approximately 75 feet distant.

3.9.2.2 Existing Ambient Noise Environment

Existing Ambient Noise Measurements

The Project Site is bound by a combination of vacant lands and large lot residences to the north, vacant land to the west, vacant lands and large lot residences to the south with Oroville Dam Boulevard and the OMA beyond, and a combination of vacant land and residences to the east. In order to quantify existing ambient noise levels in the Project Area, ECORP Consulting, Inc. conducted three short-term noise measurements as well as one long-term measurement on the morning of December 19th, 2022; the long-term measurement lasted from December 19 to 20, 2022 (Attachment A). The 15-minute measurements were taken between 1:18 p.m. and 2:17 p.m. The average noise levels of noise measured at each location are listed in Table 3.9-3.

Table 3.9-3. Existing (Baseline) Noise Measurements						
Location Number	Location	CNEL dBA	L_{eq}	L_{min}	L_{max} dBA	Time
Long-Term Measurement						
Long Term 1	On Project Site	43.1	41.1	22.3	74.2	2:57 p.m. (12/19/22) – 2:57 p.m. (12/20/22)
Short-Term Measurements						
1	Adjacent to the residences southeast of the Project Site	N/A	48.6	27.6	76.8	1:18 p.m. – 1:33 p.m.
2	At the corner of 20th Street and Feather Avenue	N/A	47.3	26.1	72.8	1:41 p.m. – 1:56 p.m.
3	Adjacent to 1450 21st Street, north of the Project Site	N/A	36.2	26.8	53.2	2:02 p.m. – 2:17 p.m.

Source: Measurements were taken by ECORP Consulting, Inc. with a Larson Davis SoundExpert LxT precision sound level meter, which satisfies the American National Standards Institute for general environmental noise measurement instrumentation. Prior to the measurements, the SoundExpert LxT sound level meter was calibrated according to manufacturer specifications with a Larson Davis CAL200 Class I Calibrator. See Attachment A for noise measurement outputs.

Notes: L_{eq} is the average acoustic energy content of noise for a stated period of time. Thus, the L_{eq} of a time-varying noise and that of a steady noise are the same if they deliver the same acoustic energy to the ear during exposure. L_{min} is the minimum noise level during the measurement period and L_{max} is the maximum noise level during the measurement period.

As shown, the existing noise level within the Project-vicinity currently ranges from 36.2 to 48.6 dBA L_{eq} over the course the three short-term noise measurements were taken in the Project vicinity, and the 43.1 dBA CNEL for the long-term measurement. The most common noise in the Project vicinity is produced by automotive vehicles (e.g., cars, trucks, buses, motorcycles) on area roadways.

Existing Roadway Noise Levels

Existing roadway noise levels were calculated for the roadway segments in the Project vicinity. This task was accomplished using the FHWA Highway Traffic Noise Prediction Model (FHWA-RD-77-108) (Attachment B) and traffic volumes from the Project’s Traffic Impact Study (TIS) for the Feather Ranch

Project (KDA 2023). The model calculates the average noise level at specific locations based on traffic volumes, average speeds, roadway geometry, and site environmental conditions. The average vehicle noise rates (energy rates) used in the FHWA model have been modified to reflect average vehicle noise rates identified for California by Caltrans. The Caltrans data shows that California automobile noise is 0.8 to 1.0 dBA higher than national levels and that medium and heavy truck noise is 0.3 to 3.0 dBA lower than national levels. The average daily noise levels along these roadway segments are presented in Table 3.9-4.

Table 3.9-4. Existing Roadway Noise Levels		
Roadway Segment	Surrounding Uses	CNEL at 100 feet from Centerline of Roadway (dBA)
18th Street		
North of Grand Avenue	Residential	42.0
Between Grand Avenue & Feather Avenue	Residential	52.4

East of 20th Street	Vacant & Residential	34.5
Russel Proctor Way		
East of 20th Street	Vacant & Residential	35.7

Source: Traffic noise levels were calculated by ECORP using the FHWA roadway noise prediction model in conjunction with the trip generation rate identified by KDA (2023). Refer to Attachment 3.9 for traffic noise modeling assumptions and results.

As shown, the existing traffic-generated noise level on Project-vicinity roadways currently ranges from 34.5 to 62.9 dBA L_{dn} at a distance of 100 feet from the centerline. As previously described, L_{dn} is a 24-hour average L_{eq} with a 10-dBA *weighting* added to noise during the hours of 10:00 p.m. to 7:00 a.m. to account for noise sensitivity in the nighttime. It should be noted that the modeled noise levels depicted in Table 3.9-4 may differ from measured levels in Table 3.9-3 because the measurements represent noise levels at various locations around the Project Site. The short-term measurements are also reported in a

different noise metric (e.g., short-term noise measurements are the L_{eq} values and traffic noise levels are reported in L_{dn}).

3.9.3 Regulatory Framework

3.9.3.1 Federal

Occupational Safety and Health Act of 1970

OSHA regulates onsite noise levels and protects workers from occupational noise exposure. To protect hearing, worker noise exposure is limited to 90 dBA over an 8-hour work shift (29 CFR 1910.95). Employers are required to develop a hearing conservation program when employees are exposed to noise levels exceeding 85 dBA. These programs include provision of hearing protection devices and testing employees for hearing loss on a periodic basis.

National Institute of Occupational Safety and Health

A division of the US Department of Health and Human Services, the National Institute for Occupational Safety and Health (NIOSH) has established a construction-related noise level threshold as identified in the Criteria for a Recommended Standard: Occupational Noise Exposure prepared in 1998. NIOSH identifies a noise level threshold based on the duration of exposure to the source. The NIOSH construction-related noise level threshold starts at 85 dBA for more than 8 hours per day; for every 3-dBA increase, the exposure time is cut in half. This reduction results in noise level thresholds of 88 dBA for more than 4 hours per day, 92 dBA for more than 1 hour per day, 96 dBA for more than 30 minutes per day, and up to 100 dBA for more than 15 minutes per day. The intention of these thresholds is to protect people from hearing losses resulting from occupational noise exposure.

3.9.3.2 State

State of California General Plan Guidelines

The State of California regulates vehicular and freeway noise affecting classrooms, sets standards for sound transmission and occupational noise control, and identifies noise insulation standards and airport noise/land-use compatibility criteria. The State of California General Plan Guidelines (State of California 2003), published by the OPR, also provides guidance for the acceptability of projects within specific CNEL/ L_{dn} contours. The guidelines also present adjustment factors that may be used in order to arrive at noise acceptability standards that reflect the noise control goals of the community, the particular community's sensitivity to noise, and the community's assessment of the relative importance of noise pollution.

State Office of Planning and Research Noise Element Guidelines

The State OPR *Noise Element Guidelines* include recommended exterior and interior noise level standards for local jurisdictions to identify and prevent the creation of incompatible land uses due to noise. The Noise Element Guidelines contain a Land Use Compatibility table that describes the compatibility of various land uses with a range of environmental noise levels in terms of the CNEL.

California Department of Transportation

In 2020, Caltrans published the *Transportation and Construction Vibration Manual* (Caltrans 2020b). The manual provides general guidance on vibration issues associated with the construction and operation of projects concerning human perception and structural damage. Table 3.9-2 presents recommendations for levels of vibration that could result in damage to structures exposed to continuous vibration.

3.9.3.3 Local

City of Oroville General Plan Noise Element

The Noise Element of the City of Oroville General Plan provides policy direction for minimizing noise impacts on the community. By identifying noise-sensitive land uses and establishing compatibility guidelines for land use and noises, noise considerations will influence the general distribution, location, and intensity of future land uses. The result is that effective land use planning and mitigation can alleviate the majority of noise problems.

The Noise Element sets various goals and policies that would apply to projects within Oroville. The following policy provisions are applicable to the Proposed Project:

Goal NOI-1: Minimize community exposure to excessive noise by ensuring compatible land uses relative to noise sources.

Policy P1.1: Include noise considerations in land use planning, transportation planning and project design decisions.

Policy P1.6: For transportation noise sources in the City of Oroville the increases in noise specified in Table 3.9-5 represents a significant increase in ambient noise.

Table 3.9-5. Significant Increase in Transportation Noise	
Ambient Noise Level Without Project (L_{eq} or CNEL)	Significant Increase (dB)
< 60 dB	+5.0 or more
60 to 65 dB	+3.0 or more
> 65 dB	+1.5 or more

Source: City of Oroville 2015

Policy P1.7: Only allow land uses to exceed the noise exposure standards in Table 3.9-6 and Table 3.9-7 if the proposed use can be shown to serve the greater public interests of the citizens of Oroville.

Table 3.9-6. Maximum Allowable Noise Exposure to Transportation Noise Sources

Land Use	Exterior Noise Level Standard for Outdoor Activity Areas ¹	Interior Spaces	
	L _{dn} /CNEL (dB)	L _{dn} /CNEL (dB)	Leq (dB ²)
Residential	603	45	--
Transient Lodging	603	45	--
Hospitals, Nursing Homes	603	45	--

Source: City of Oroville 2015

Note: Each of the noise levels specified above shall be lowered by 5dB for simple tone noises, which are noises consisting primarily of speech, music or recurring impulsive noises. These noise-level standards do not apply to residential units established in conjunction with industrial or commercial uses (e.g. caretaker dwelling).

Policy P1.10: When considering development proposals in the environs of the Oroville Municipal Airport, enforce the noise compatibility criteria and policies set forth in the adopted Butte County Airport Land Use Compatibility Plan. This includes restricting the development of residential or other noise sensitive receptor uses within the 55 dB CNEL contour around the Oroville Municipal Airport.

Goal NOI-2: Reduce noise levels from sources such as domestic uses, construction, and mobile sources including motor vehicles and traffic.

Policy P2.2: Enforce provisions of the Community Noise Ordinance, which limits maximum permitted noise levels that cross property lines and impact adjacent land uses.

Policy P2.3: Limit noise generating construction activities located within 1,000 feet of residential uses to daytime hours between 7:00 a.m. and 6:00 p.m. on weekdays and non-holidays.

Policy P2.4: Require the following standard construction noise control measures to be included as requirements at construction sites in order to minimize construction noise impacts:

- *Equip all internal combustion engine driven equipment with intake and exhaust mufflers that are in good condition and appropriate for the equipment.*
- *Locate stationary noise generating equipment as far as possible from sensitive receptors when sensitive receptors adjoin or are near a construction project area.*
- *Utilize "quiet" air compressors and other stationary noise-generating equipment where appropriate technology exists and is feasible.*

- *The project sponsor shall designate a “noise coordinator” who would be responsible for responding to any local complaints about construction noise. The noise coordinator will determine the cause of the noise complaint (e.g. starting too early, bad muffler) and will require that reasonable measures warranted to correct the problem be implemented. The project sponsor shall also post a telephone number for excessive noise complaints in conspicuous locations in the vicinity of the project site. Additionally, the project sponsor shall send a notice to neighbors in the project vicinity with information on the construction schedule and the telephone number for noise complaints.*

Policy P2.6: Support efforts to reduce vehicle and equipment noise, e.g. through fleet and equipment modernization or retrofits, use of alternative fuel vehicles and installation of mufflers or other noise reducing equipment.

3.9.3.4 City of Oroville Municipal Code

Chapter 9.20 of the City of Oroville Municipal Code (City of Oroville 2022a) contains the Noise Ordinance which places limits on noise levels as well as hours of construction. Regulations relevant to the Project are described below.

Chapter 9.20.060, Exceptions – Designated

- *Daytime Exceptions. Any noise source which does not produce a noise level exceeding 70 dBA at a distance of 25 feet from the source under its most noisy condition of use shall be exempt from the provisions of Sections 9.20.030, 9.20.040 and 9.20.050 between the hours of 7:00 a.m. and 9:00 p.m. daily except Saturdays, Sundays and holidays, when the exemption herein shall apply between 10:00 a.m. and 6:00 p.m.*
- *Safety Devices. Aural warning devices, which are required by law to protect the health, safety, and welfare of the community shall not produce a noise level more than 3 dB above the standard or minimum level as provided by state law.*
- *Construction and Alteration of Structures. Notwithstanding any other provisions of this chapter, between the hours of 7:00 a.m. and 9:00 p.m. daily except Saturdays, Sundays and holidays, when the exemption herein shall apply between 10:00 a.m. and 6:00 p.m., construction, alteration or repair of structures shall be allowed if it meets at least one of the following noise limitations:*
 1. *No individual piece of equipment shall produce a noise level exceeding 83 dBA at a distance of 25 feet from the source. If the device is housed within a structure on the property, the measurement shall be made outside the structure at a distance as close to 25 feet from the equipment as possible;*
 2. *The noise level at any point outside of the property plane of the project shall not exceed 86 dBA;*
 3. *The provisions of paragraphs 1 and 2 of this subsection shall not be applicable to impact tools and equipment, provided that on and after a date 6 months after the effective date of*

this chapter, such impact tools and equipment shall have intake and exhaust mufflers recommended by the manufacturers thereof and approved by the city's director of public works as best accomplishing maximum noise attenuation, and that pavement breakers and jackhammers shall also be equipped with acoustically attenuating shields or shrouds recommended by the manufacturers thereof and approved by the city's director of public works as best accomplishing maximum noise attenuation. In the absence of manufacturer's recommendations, the director of public works may prescribe such means of accomplishing maximum noise attenuation as he or she may determine to be in the public interest.

3.9.4 Environmental Impacts

3.9.4.1 Thresholds of Significance

The impact analysis provided below is based on the following CEQA Guidelines Appendix G thresholds of significance. The Project would result in a significant noise-related impact if it would produce the following:

- 1) Generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.
- 2) Generation of excessive groundborne vibration or groundborne noise levels.
- 3) For a project located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, would the project expose people residing or working in the project area to excessive noise levels.

For purposes of this analysis and where applicable, the City's noise standards established in the General Plan Noise Element and the Municipal Code were used for evaluation of Project-related noise impacts for construction and operations.

3.9.4.2 Methods of Analysis

This analysis of the existing and future noise environments is based on noise prediction modeling and empirical observations. In order to estimate the worst-case construction noise levels that may occur at the nearest noise-sensitive receptors in the Project vicinity, predicted construction noise levels were calculated utilizing the FHWA's Roadway Construction Model (2006). Stationary noise sources are addressed qualitatively based on reference measurements taken by ECORP Consulting, Inc. The Project's contribution of traffic noise has been calculated with the FHWA Highway Traffic Noise Prediction Model (FHWA-RD-77-108) coupled with traffic data provided by KDA (2023). Groundborne vibration levels associated with construction-related activities were evaluated utilizing typical groundborne vibration levels associated with construction equipment based on the Caltrans guidelines set forth above. Potential groundborne vibration impacts related to structural damage and human annoyance are evaluated, taking into account the distance from construction activities to nearby land uses.

An assessment of the noise/land use compatibility to locate sensitive noise receptors within the existing noise environment, was completed by conducting existing ambient baseline noise measurements around and adjacent to the Project Site with the use of a Larson Davis SoundExpert LxT precision sound level meter, which satisfies the American National Standards Institute standard for general environmental noise measurement instrumentation. Prior to the measurements, the SoundExpert LxT sound level meter was calibrated according to manufacturer specifications with a Larson Davis CAL200 Class I Calibrator.

3.9.4.3 Project Impacts and Mitigation Measures

Impact NOI-1	Project implementation could result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.
Impact Determination	Significant and Unavoidable
Threshold	<i>Substantial increase in ambient noise levels in the project vicinity above levels existing without the project.</i>

Impact Discussion

Project Construction Noise

Onsite Construction Noise

Construction noise associated with the Proposed Project would be temporary and would vary depending on the nature of the activities being performed. Noise generated would primarily be associated with the operation of off-road equipment for onsite construction activities as well as construction vehicle traffic on area roadways. Construction noise typically occurs intermittently and varies depending on the nature or phase of construction (e.g., building construction, paving). Noise generated by construction equipment, including earthmovers, material handlers, and portable generators, can reach high levels. Typical operating cycles for these types of construction equipment may involve one or two minutes of full-power operation followed by three to four minutes at lower power settings. Other primary sources of acoustical disturbance would be random incidents, which would last less than one minute (such as dropping large pieces of equipment or the hydraulic movement of machinery lifts). During construction, exterior noise levels could negatively affect sensitive receptors in the vicinity of the construction site.

The nearest sensitive receptors to the Project Site include residences directly adjacent to the northeast corner of the Project Site boundary, fronting 20th Street, approximately 75 feet distant. As previously described, Section 9.20.60 of the City Municipal Code prohibits construction between the hours of 9:00 p.m. and 7:00 a.m. on weekdays and between 6:00 p.m. and 10:00 a.m. on Saturdays, Sundays and holidays. The City exempts construction noise from City noise standards so long as it does not exceed the

threshold of 86 dBA. Construction noise is temporary, short term, intermittent in nature, and would cease on completion of the Project. Additionally, construction would occur throughout the 44.97-acre Project site and would not be concentrated at one point. For the purposes of this analysis, the City’s threshold of 86 dBA L_{eq} is used as an acceptable threshold for construction noise at the nearby sensitive receptors.

The anticipated short-term construction noise levels generated for the necessary equipment were calculated using the Roadway Noise Construction Model for the site preparation, grading, building construction, paving and architectural coating phases. It is acknowledged that the majority of construction equipment is not situated at any one location during construction activities, but rather spread throughout the Project Site and at various distances from sensitive receptors. Therefore, this analysis employs the FTA guidance for calculating construction noise, which recommends measuring construction noise produced by all construction equipment operating simultaneously from the center of the Project Site (FTA 2018). In this case, the center of the Project Site is approximately 950 feet from the nearest sensitive receptor, the residences north of the Project Site.

The anticipated short-term construction noise levels generated for the necessary equipment is presented in Table 3.9-8.

Table 3.9-8. Construction Average (dBA) Noise Levels at Nearest Receptor			
Equipment	Estimated Exterior Construction Noise Level @950 feet (dBA)	Construction Noise Standards (dBA L_{eq})	Exceeds Standard at Nearest Receptor?
Site Preparation			
Rubber Tired Dozer (3)	52.1 (each)	86	No
Tractors/Loaders/Backhoes (4)	54.4 (each)	86	No

Grading			
Excavator (2)	51.2(each)	86	No
Grader	55.4 dBA	86	No
Rubber Tired Dozer	52.1 dBA	86	No
Scraper (2)	54.0(each)	86	No
Tractors/Loaders/Backhoes (2)	54.4(each)	86	No
Combined Grading Equipment:	62.6	86	No
Building Construction, Paving, Architectural Coating			
Crane	47.0	86	No
Forklifts (3)	53.8(each)	86	No
Generator Set	52.0	86	No

Table 3.9-8. Construction Average (dBA) Noise Levels at Nearest Receptor			
Equipment	Estimated Exterior Construction Noise Level @950 feet (dBA)	Construction Noise Standards (dBA L_{eq})	Exceeds Standard at Nearest Receptor?
Tractors/Loaders/Backhoes (3)	54.4(each)	86	No
Welders	44.4	86	No
Paver (2)	48.6 (each)	86	No
Pavement Scarifier (2)	56.9 (each)	86	No
Roller (2)	47.4 (each)	86	No
Air Compressor	48.1	86	No
Combined Building Construction Equipment:	64.9	86	No

Source: Construction noise levels were calculated by ECORP Consulting, Inc. using the FHWA Roadway Noise Construction Model (FHWA 2006). Refer to Attachment C of Appendix 3.9 for Model Data Outputs.

Notes: Construction equipment used during construction derived from California Emissions Estimator Model (CalEEMod 2022.1). CalEEMod is designed to calculate air pollutant emissions from construction activity and contains default construction equipment and usage parameters for typical construction projects based on several construction surveys conducted in order to identify such parameters. The distance to the nearest sensitive receptor was calculated from the center of the Project Site (approximately 950 feet).

As shown in Table 3.9-8, no individual or cumulative pieces of construction equipment would exceed the 86 dBA construction noise threshold during any phase of construction at the nearby noise-sensitive receptors.

Offsite Construction Traffic Noise

Project construction would result in additional traffic on adjacent roadways over the period that construction occurs. According to the CalEEMod, which is used to predict air pollutant emissions associated with Project construction based on several construction surveys conducted in order to identify such parameters, including those generated by worker commute trips and vendor trips, the maximum number of construction workers and vendors traveling to and from the Project Site on a single day would be 80 (62 worker trips and 18 vendor trips). According to the California Department of Transportation (Caltrans) *Technical Noise Supplement to the Traffic Noise Analysis Protocol* (2013), doubling of traffic on a roadway is required to result in an increase of 3 dB (outside of the laboratory, a 3-dBA change is considered a just-perceivable difference). The Project construction would not result in a doubling of traffic on the local transportation network, and therefore its contribution to existing traffic noise would not be perceptible.

3.9.4.4 Project Operational Noise

As previously described, noise-sensitive land uses are locations where people reside or where the presence of unwanted sound could adversely affect the use of the land. Residences, schools, hospitals,

guest lodging, libraries, and some passive recreation areas would each be considered noise sensitive and may warrant unique measures for protection from intruding noise. As previously described, the nearest noise sensitive receptors are the residences located across from the Project Site.

Project Land Use Compatibility

The City of Oroville uses the land use compatibility table presented in the General Plan Noise Element which provides the City with a tool to gauge the compatibility of new land users relative to existing noise levels. This table, presented as Table 3.9-6, identifies acceptable exterior and interior noise levels for various land uses, including residential land uses such as those proposed by the Project. In the case that the noise levels identified at the Proposed Project Site fall within levels presented in the General Plan, the Project is considered compatible with the existing noise environment. As previously stated, the Project is proposing the construction of 172 single-family dwelling units.

The long-term noise measurement taken on the Project Site from December 19th to December 20, 2022, shown in Table 3-10.3, identifies an ambient noise level of 43.1 dBA CNEL. According to noise/land use compatibility table, presented in Table 3.9-6, this falls within the acceptable exterior noise level standard (≤ 60 dBA) and interior noise level standard (≤ 45 dBA) for residential land uses.

Additionally, a separate data point of ambient noise at the Project Site, as provided by the FHWA Highway Traffic Noise Prediction Model coupled with trip generation rates provided by KDA (2023), identifies existing traffic noise levels on the roadway directly adjacent to the Project Site (20th Street) as potentially reaching 39.2 – 46.6 dBA CNEL at 100 feet from the centerline.

As all of the measured and modeled noise levels fall below the acceptable noise standards, the Project Site is considered an appropriate noise environment to locate the proposed land use.

Project Operational Offsite Traffic Noise

Future traffic noise levels throughout the Project vicinity for the Proposed Project were modeled based on the traffic volumes identified by KDA (2023) to determine the noise levels along Project vicinity roadways. Table 3.9-9 shows the calculated offsite roadway noise levels under existing traffic levels compared to future buildout of the Project. The calculated noise levels as a result of the Project at affected land uses are compared to the appropriate City of Oroville numeric noise thresholds.

The City has identified a substantial increase for transportation noise exposure as follows:

- If the existing ambient noise levels at existing and future noise-sensitive land uses (e.g. residential, etc.) are less than 60 dBA and the project creates a readily perceptible 5 dBA or greater noise level increase; or
- If the existing noise levels range from 60 to 65 dBA and the project creates a barely perceptible 3 dBA or greater noise level increase; or
- If the existing noise levels already exceed 65 dBA, and the project creates a community noise level increase of greater than 1.5 dBA.

Table 3.9-9. Proposed Project Predicted Traffic Noise Levels					
Roadway Segment	Surrounding Uses	CNEL at 100 feet from Centerline of Roadway (dBA)		City Noise Standard (dBA CNEL)	Exceed Standards?

Source: Traffic noise levels were calculated by ECORP using the FHWA roadway noise prediction model in conjunction with the trip generation rate identified by KDA (2023). Refer to Appendix 3.9 for traffic noise modeling assumptions and results.

As shown in Table 3.9-9, the roadway segments of 20th Street between Biggs Avenue and Feather Avenue and between Biggs Avenue and Oroville Dam Boulevard would experience an increase of more than 5.0 dBA CNEL over existing conditions, which is beyond the City of Oroville noise standard. Similarly, the segment of Feather Avenue east of 20th Street would also experience an increase of more than 5.0 dBA CNEL over existing conditions. There is no feasible mitigation available to reduce these impacts to less than significant. Lead agencies have limited remedies at their disposal to effectively reduce traffic-related noise. Addressing traffic noise at the receiver rather than the source usually takes the form of noise barriers (i.e., sound walls). While constructing noise barriers along streets would reduce noise, the placement of sound walls between existing residences/businesses and local roadways would not be desirable as it would conflict with the community's aesthetic, design and character and is therefore deemed infeasible. Furthermore, such barriers would likely require property owner approval, which cannot be ensured. While measures such as encouraging ridesharing, carpooling, and alternative modes of transportation could reduce vehicle volumes, such measures can neither be mandated of residents nor have been shown to reduce vehicle trips to the extent needed to reduce vehicle noise levels below established thresholds. Therefore, no feasible mitigation measures exist to reduce the identified significant impact.

Operational Stationary Noise

As previously described, the Project is proposing the construction of 172 single-family dwelling units. Therefore, the main onsite stationary noise sources related to long-term operation on the Project Site would be from the proposed residences. ECORP staff regularly conduct noise measurements within various land uses, at specific noise-generating events, and at individual pieces of noise-generating equipment in order to develop a wide sampling of potential noise levels associated with such. The main noise source generated from the residences on the Project Site would include mechanical equipment and other typical sources specific to residential neighborhoods such as barking dogs, internal traffic circulation, radios, and people talking. According to previous field noise measurements conducted by ECORP, mechanical heating, ventilation, and air conditioning equipment generates noise levels less than 45 dBA at 20 feet. This noise level is less than the City's daytime and nighttime noise standards for residential properties.

The Project proposes to place residential uses adjacent to existing residential uses. The most basic planning strategy to minimize adverse impacts on new land uses due to noise is to avoid designating certain land uses at locations within the community that would negatively affect noise sensitive land uses. The Project is consistent with the types, intensity, and patterns of land use envisioned for the Project Area, and as previously described, the Project is considered compatible with the existing noise environment. Operation of the Project would not result in a significant noise-related impact associated with onsite sources.

Mitigation Measures

Impacts are significant and unavoidable as a result of traffic noise related to the Project. As discussed previously, there is no feasible mitigation available to reduce these impacts to less than significant.

Residual Impact After Mitigation

Impacts would be significant and unavoidable.

Impact NOI-2:	Project implementation could generate excessive groundborne vibrations and groundborne noise during construction.
Impact Determination:	Less than Significant
<i>Threshold:</i>	<i>Exposure of persons to or generation of excessive groundborne vibration or groundborne noise levels.</i>

Impact Discussion

Construction-Generated Vibration

Excessive groundborne vibration impacts result from continuously occurring vibration levels. Increases in groundborne vibration levels attributable to the proposed Project would be primarily associated with short-term construction-related activities. Construction on the Project site would have the potential to result in varying degrees of temporary groundborne vibration, depending on the specific construction equipment used and the operations involved. Ground vibration generated by construction equipment spreads through the ground and diminishes in magnitude with increases in distance.

Construction-related ground vibration is normally associated with impact equipment such as pile drivers, jackhammers, and the operation of some heavy-duty construction equipment, such as dozers and trucks. It is not anticipated that pile drivers would be necessary during Project construction. Vibration decreases rapidly with distance and it is acknowledged that construction activities would occur throughout the Project site and would not be concentrated at the point closest to sensitive receptors. Groundborne vibration levels associated with construction equipment are summarized in Table 3.9-10.

Table 3.9-10. Representative Vibration Source Levels for Construction Equipment	
Equipment Type	PPV at 25 Feet (inches per second)
Large Bulldozer	0.089
Pile Driver	0.170
Caisson Drilling	0.089
Loaded Trucks	0.076
Rock Breaker	0.089

Table 3.9-10. Representative Vibration Source Levels for Construction Equipment	
Equipment Type	PPV at 25 Feet (inches per second)
Jackhammer	0.035
Small Bulldozer/Tractor	0.003
Vibratory Roller	0.210

Source: Caltrans 2020b; FTA 2018

The City of Oroville does not regulate vibrations associated with construction. However, a discussion of construction vibration is included for full disclosure purposes. For comparison purposes, the Caltrans (2020b) recommended standard of 0.3 inch per second PPV with respect to the prevention of structural damage for older residential buildings is used as a threshold. This is also the level at which vibrations may begin to annoy people in buildings. Consistent with FTA recommendations for calculating construction vibration, construction vibration was measured from the center of the Project Site (FTA 2018). The nearest structure of concern to the construction site is a portable office located east of the Project Site.

Based on the representative vibration levels presented for various construction equipment types in Table 3.9-10 and the construction vibration assessment methodology published by the FTA (2018), it is possible to estimate the potential Project construction vibration levels. The FTA provides the following equation:

$$PPV_{\text{equip}} = PPV_{\text{ref}} \times (25/D)^{1.5}$$

Table 3.9-11 presents the expected Project related vibration levels at a distance of 60 feet.

Table 3.9-11. Construction Vibration Levels at 60 Feet									
Receiver PPV Levels (inches/second)¹							Peak Vibration	Threshold	Exceed Threshold
Large Dozer	Pile Driver	Drilling & Rock Breaker	Loaded Trucks	Roller	Jack- hammer	Small Dozer			
0.024	0.046	0.024	0.020	0.057	0.009	0.001	0.057	0.3	No

As shown, groundborne vibrations attenuate rapidly from the source due to geometric spreading and material damping. Geometric spreading occurs because the energy is radiated from the source and spreads over an increasingly large distance while material damping is a property of the friction loss which occurs during the passage of a vibration wave. As shown in Table 3.9-11, the nearest structure 60 feet from the construction site would not experience groundborne levels in exceedance of standards.

Operational Groundborne Vibration

Project operations would not include the use of any stationary equipment that would result in excessive groundborne vibration levels.

Mitigation Measures

No mitigation measures are required.

Impact NOI-3:	If the Proposed Project is located within the vicinity of a private airstrip or an airport land use plan or, where such a plan has not been adopted, within two miles of a public airport or public use airport, the Proposed Project could expose people residing or working in the project area to excessive noise levels.
Impact Determination:	Less than Significant
<i>Threshold:</i>	<i>Exposure of excessive noise levels to people residing or working in the Project area due to proximity to an airport.</i>

Impact Discussion

The OMA is the closest airport to the Project Site and is located approximately 0.5 mile away. The Project is in compliance with Policy P1.10 of the City’s Noise Element, as the Project Site is located outside of the 55 dBA CNEL contour around the OMA. Thus, implementation of the Proposed Project would not affect airport operations nor result in increased exposure of people working at or visiting the Project Site to aircraft noise.

Mitigation Measures

No mitigation measures are required.

3.9.5 Cumulative Impacts and Mitigation Measures

Impact NOI-4:	Would implementation of the Proposed Project, in combination with existing, approved, proposed, and reasonably foreseeable development in Butte County, result in a cumulatively considerable noise impact?
Impact Determination:	Cumulatively considerable
<i>Threshold:</i>	<i>Would Implementation of the proposed project, along with any foreseeable development in the project vicinity, result in cumulative impacts related to noise?</i>

Cumulative Construction Noise

Construction activities associated with the Proposed Project and other construction projects in the area may overlap, resulting in construction noise in the area. However, construction noise impacts primarily

affect the areas immediately adjacent to the construction site. Construction noise for the Proposed Project was determined to be less than significant following compliance with the City’s construction noise threshold. Cumulative development in the vicinity of the Project Site could result in elevated construction noise levels at sensitive receptors in the Project Area. However, each project would be required to comply with the applicable noise limitations on construction. Therefore, the Project would not contribute to cumulative impacts during construction.

Cumulative Onsite Operational Noise

Cumulative long-term noise sources associated with development at the Project, combined with other cumulative projects, could cause local noise level increases. Noise levels associated with the Proposed Project and related cumulative projects together could result in higher noise levels than considered separately. Considering the Proposed Project is located across from existing residential uses, the Project would not result in any substantial changes in the noise environment due to onsite sources. Noise increase as a result of the Project would not exceed City standards. Therefore, the Project would not contribute to cumulative impacts during operations.

Cumulative Traffic Noise

Cumulative traffic noise levels throughout the Project vicinity (i.e., vicinity roadway segments that traverse noise-sensitive land uses) were modeled based on the traffic volumes identified by KDA (2023) to determine the noise levels along Project vicinity roadways. Table 3.9-12 shows the calculated offsite roadway noise levels under cumulative conditions without the Project (Cumulative No Project) compared to cumulative conditions plus future buildout of the Project (Cumulative Plus Project).

The calculated noise levels as a result of the Project at affected land uses are compared to the appropriate City numeric noise thresholds for evaluating the impact of increased traffic noise. The City’s measure of substantial increase for transportation noise exposure is as follows:

- If the existing ambient noise levels at existing and future noise-sensitive land uses (e.g. residential, etc.) are less than 60 dBA CNEL and the project creates a readily perceptible 5 dBA CNEL or greater noise level increase; or
- If the existing noise levels range from 60 to 65 dBA CNEL and the project creates a barely perceptible 3 dBA CNEL or greater noise level increase; or

If the existing noise levels already exceed 65 dBA CNEL, and the project creates a community noise level increase of greater than 1.5 dBA CNEL.

Source: Traffic noise levels were calculated by ECORP using the FHWA roadway noise prediction model in conjunction with the trip generation rate identified by KDA (2023). Refer to Attachment B for traffic noise modeling assumptions and results.

As shown in Table 3.9-12, the roadway segment of 20th Street between Biggs Avenue and Feather Avenue would experience an increase of more than 5.0 dBA CNEL over existing conditions, which is beyond the City of Oroville noise standard. Additionally, the segment of Feather Avenue east of 20th Street would also experience an increase of more than 5.0 dBA CNEL over existing conditions. As previously described, there is no feasible mitigation available to reduce these impacts to less than significant. Lead agencies have

limited remedies at their disposal to effectively reduce traffic-related noise. Addressing traffic noise at the receiver rather than the source usually takes the form of noise barriers (i.e., sound walls). While constructing noise barriers along streets would reduce noise, the placement of sound walls between existing residences/businesses and local roadways would not be desirable as it would conflict with the community's aesthetic, design and character and is therefore deemed infeasible. Furthermore, such barriers would likely require property owner approval, which cannot be ensured. While measures such as encouraging ridesharing, carpooling, and alternative modes of transportation could reduce vehicle volumes, such measures can neither be mandated of residents nor have been shown to reduce vehicle trips to the extent needed to reduce vehicle noise levels below established thresholds. Therefore, no feasible mitigation measures exist to reduce the identified significant impact.

Cumulative Mitigation Measures

No feasible mitigation possible.

Residual Impact After Mitigation

Impacts would be cumulatively considerable and significant and unavoidable.

3.10 Population and Housing

This section describes the environmental setting for population and housing, including the existing Site conditions and regulatory setting, impacts that would result from the Proposed Project, and, if significant impacts are identified, the mitigation measures that would reduce these impacts.

The IS completed for the Proposed Project determined that there were no impact to one of the two subjects listed in the Population and Housing impact areas. This includes:

- Displace substantial numbers of people or existing housing, necessitating the construction of replacement housing elsewhere.

As such, this subject will not be discussed further in this section.

3.10.1 Environmental Setting

According to the DOF, which provides estimated population and housing unit demographics by year throughout the state, the City's population increased 21.3 percent between 2010 and 2022, from 15,546 to 18,863. DOF estimates that there were 7,783 total housing units in the City in 2022, up from 6,194 in 2010 (DOF 2020). As of January 1, 2022, the City had a 7.1 percent vacancy rate (DOF 2022). As shown in Table 3-2, there are anticipated to be 9,685 residential dwelling units within City boundaries by 2030.

Currently, the Project Site is vacant land. No current housing exists on the Site.

3.10.2 Regulatory Setting

3.10.2.1 State

California General Plan Law

California General Plan Law California Housing Element law (Government Code Sections 65580 to 65589.8) includes provisions related to the requirements for housing elements of local government General Plans. Among these requirements are an assessment of housing needs and an inventory of resources and constraints relevant to meeting these needs. Additionally, to ensure that counties and cities recognize their responsibilities in contributing to the attainment of the State housing goals, the California Government Code calls for local jurisdictions to plan for, and facilitate the construction of, their fair share of the region's projected housing needs, known as the RHNA.

3.10.2.2 Local

City of Oroville General Plan

The City's General Plan was updated in 2015 and serves as the overall guiding policy document for land use, development, and environmental quality in the City. The Housing Element of the General Plan was updated in 2014 and includes an analysis of the City's demographic and housing characteristics and trends; an evaluation of land, financial, and administrative resources available to address the City's housing goals; a review of potential constraints, both governmental and non-governmental, to meeting

Oroville's identified housing needs; and the Housing Action Plan for addressing the City's identified housing needs, including housing goals, policies and programs. It also contains measures necessary to mitigate and alleviate problems for all economic segments of the community. While many of these policies and actions require the City to take certain actions, they are not related to development of a particular project. Those policies that pertain to the Proposed Project are listed below.

Goal 1: Expand Housing Opportunities and Accessibility

Policy 1.3: Continue to facilitate the provision of housing for persons with disabilities and for persons with limited or restricted mobility to enhance accessibility and mobility.

Goal 3: Facilitate Development of New Housing to Meet the Needs of the Community.

Policy 3.2: Provide technical assistance to developers, nonprofit organizations, or other qualified private sector interests in seeking federal and state financing for affordable housing, including units affordable to extremely-low-income households and supportive housing for persons with developmental disabilities.

Goal 6: Encourage Residential Energy Conservation.

Policy 6.1: Encourage residential energy conservation through required compliance with current building codes and incentives for voluntary conservation efforts.

3.10.3 Environmental Impacts

3.10.3.1 Thresholds of Significance

According to Appendix G of the CEQA Guidelines, a project may have a significant impact on the environment if it would:

- Induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure).

3.10.3.2 Project Impacts and Mitigation Measures

Impact POP-1	Project implementation could induce substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure).
Impact Determination	Less than Significant
<i>Threshold</i>	<i>Substantial unplanned population growth in an area, either directly (for example, by proposing new homes and businesses) or indirectly (for example, through extension of roads or other infrastructure).</i>

Impact Discussion

The Project poses both direct and indirect potential to increase population within the City. As discussed previously, the 44.97-acre site would potentially result in the construction of 172 single-family homes. Based on the 2022 DOF average number of persons per household of 2.49 for the City of Oroville in 2022, the projected population increase from the Proposed Project would be approximately 428 residents. With the addition of 428 new residents, the Proposed Project could increase the population by 2.3 percent when compared to the 2022 estimated population for the City. The additional 172 residential units represent a 1.8 percent increase over the 2030 projected residential dwelling units of 9,685.

The Project Site’s current General Plan land use designation and zoning district of ABP do not allow the construction of residential units, with the exception of a caretaker’s home in the ABP zone. Additionally, the site is within the OMA B1 and B2 Compatibility Zones. For those areas of the Project within the B1 zone, the Project’s proposed density of 3.74 dwelling units per acre is inconsistent with the B1 Compatibility Zone density (0.1 or more dwelling units per acre). Additionally, for those areas of the Project that are within the B2 zone, the project’s proposed density of 4.15 dwelling units per acre is inconsistent with the B2 Compatibility Zone density (0.2 dwelling units per acre). Finally, the City’s AIA-O zone only allows residential uses at one unit per 5 acres.

The Proposed Project is inconsistent with the existing land use plans and therefore would result in unplanned population growth. However, while this population growth has not been considered in the City’s General Plan, the estimated population from the Project represents only a 2.3 percent increase in the City’s 2022 population and a 2.2 percent increase in housing units over the existing 2022 housing units in the city. Additionally, the 172 units represent a 1.8 percent increase over the projected 2030 number of housing units provided in the General Plan Draft EIR. The Oroville ALUCP does not provide population growth estimates; therefore the Proposed Project is not inconsistent with growth scenarios for this plan. Based on these factors, the Project would not result in a substantial unplanned growth. Therefore, the Proposed Project would have a less than significant impact in this area.

Mitigation Measures

No mitigation measures are required.

3.10.4 Cumulative Setting, Impacts, and Mitigation Measures

Section 3.0 provides the baseline for cumulative setting and is based on General Plan projections. These General Plan projections are developed, in part, from the existing land use designations identified in the General Plan. As shown in Table 3-2, the anticipated growth in the City is expected to result in 9,685 new housing units, 7,026,000 sf of new industrial uses, and 12,168,000 sf of new commercial uses within the existing city limits by 2030 (City of Oroville 2015).

The BCAG is the official comprehensive planning agency for the Butte County region. BCAG produces long-term growth forecasts every 4 years for the region, which are used in preparation of BCAG’s Metropolitan Transportation Plan (MTP), SCS, Air Quality Conformity Determination, and Regional Housing Needs Plan. The current growth projections cover the period from 2018 to 2040, and were prepared in 2019 for the 2020 MTP/SCS. The 2040 growth forecast indicates that the population in the BCAG region is expected to grow by approximately 38,000 people between 2018 and 2040, for a 2040 population of 265,964. The updated forecasts show the need to accommodate approximately 16,000 new housing units, an increase of 16 percent, and 9,280 new employees, an increase of 11 percent, between 2018 and 2040 (BCAG 2020).

3.10.4.1 Cumulative Impacts and Mitigation Measures

Impact LU-2-2	Would Implementation of the proposed project, along with any foreseeable development in the project vicinity, result in cumulative significant environmental impact by inducing substantial unplanned population growth in an area.
Impact Determination	Less than Cumulatively Considerable
Threshold	Result in cumulative impacts by inducing substantial unplanned population growth in an area.

Impact Discussion

The Proposed Project is the only pending, proposed or foreseeable project which would result in development of an area at an increase of population over what has been planned for that area. The 44.87-acre Site is within the City of Oroville 2030 General Plan land use designation of Airport Business Park and is zoned ABP. With the exception of caretaker cottages, residential use is not an identified use allowed in Airport Business Park or ABP zoning district and as such, any increase in residential population to this area may be considered unplanned population growth. However, as stated above, the Project’s increase in population represents only a 2.3 percent increase in the City’s 2022 population and a 2.2 percent increase in housing units over the existing 2022 housing units in the city. Additionally, the 172 units represent a 1.8

percent increase over the projected 2030 number of housing units provided in the General Plan Draft EIR. Further, the Project's population represents only 0.16 percent of the BCAG 2040 population. None of this increase is considered substantial. Therefore, the Proposed Project would result in a less than cumulatively considerable impact in this issue area.

Cumulative Mitigation Measures

No mitigation required.

THIS PAGE INTENTIONALLY LEFT BLANK

3.11 Public Services

This section describes the environmental setting for public services, including the existing Project Site conditions and regulatory setting, impacts that would result from the Proposed Project, and the mitigation measures that would reduce identified significant impacts. The following section describes existing public services and evaluates the operation and capacity of these services with the development of the Proposed Project. Public services include fire protection, police protection, parks and recreation, and schools. Generally, impacts in these areas are related to an increase in population from a residential development. Levels of service are generally based on a service-to-population ratio, except for fire protection, which is usually based on response time.

The IS completed for the Proposed Project determined that there were less than significant impacts to four of the five public services listed in the Public Services impact areas. These public services include:

- police protection,
- schools,
- parks, and
- other public facilities.

Only fire protection was considered to be potentially impacted by the Project in the IS. As such, the above-listed public services will not be discussed further in this section.

3.11.1 Environmental Setting

3.11.1.1 Fire Services

The greater Oroville area receives fire protection and emergency services from two separate fire departments; the City of Oroville Fire Department (OFD) and CAL FIRE/Butte County Fire Department (BCFD). CAL FIRE/BCFD is the primary service provider for the unincorporated area surrounding the City. OFD is the primary service provider within the Oroville incorporated area including the Project Site (City of Oroville 2021). OFD operates out of Station 1 located at 2055 Lincoln Street, approximately 3 miles west of the Project site.

The OFD serves the approximate 12 square miles (7,680 acres) of the incorporated City of Oroville. Staffing for the OFD during Fiscal Year (FY) 2019-2020 consisted of 18 personnel, which included seven firefighters and six fire engineers. This number of personnel is slightly less than in previous years. As of FY20-21, the City budgeted for 21 OFD personnel in funded positions, including five fire engineers, four Staffing for Adequate Fire and Emergency Response (SAFER) fire fighters, three fire captains, and three fire lieutenants. Two OFD engines are staffed out of Station 1. OFD has five pieces of apparatus, shown in Table 3.11-1.

Table 3.11-1. Oroville Fire Department Apparatus	
Engine #	Description
1	2009 Smeal Type I firetruck
2	2009 Smeal Type I firetruck
5	2002 E-ONE Type I firetruck
10	2017 HME HXR Type III wildland firetruck
1	2001 American LaFrance 105-foot aerial ladder truck

Source: City of Oroville 2021

CAL FIRE/BCFD Station 63, located at 176 Nelson Avenue, currently serves emergency requests for the area north of the Feather River within the Thermalito area. This fire reporting district has historically had the third highest call responses for structure fires in the Oroville Planning area. The nearest staffed fire station, Station #63 at Nelson Avenue/County Center Drive, is located approximately 2.5 miles from the Project site (City of Oroville 2020).

The City and County maintain a mutual aid agreement in place, which would have both station crews respond to any emergency fire service call. Annexation of the property will change the primary fire respondent from Butte County to the City of Oroville. This change will not, however, have a significant effect or change the way fire protection services are delivered due to the existing cooperative agreement between City and County fire departments

Based on the General Plan, OFD is committed to meeting the needs of Oroville citizens by maintaining the service levels listed below. The times referenced are OFD’s Standards of Cover Guidelines that were adopted by the City Council and placed into the Safety Element of the General Plan.

- Placing a first-due unit at a scene within 5 minutes of travel time for 90 percent of City’s population.
- Locating and staffing department units so that an effective response of four units with, at minimum, eight personnel is available to all areas of the City within a maximum travel time of 10 minutes for 90 percent of all structure fires.

3.11.2 Regulatory Setting

3.11.2.1 Local

Oroville 2015 General Plan

The Public Facilities and Services Element addresses the changing public services and infrastructure needs in Oroville and presents information and policy guidance to ensure adequate provision and maintenance

of facilities and services in the City of Oroville. The Public Facilities and Services Element's goals and policies pertaining to the Project are as follows:

Goal PUB-2: Provide adequate fire protection and emergency response services.

Policies

- P2.1 Maintain and enhance strategies to ensure adequate first response travel time of three to five minutes to incidents and travel time of ten minutes or less for additional resources within 90 percent of the call volume.*
- P2.3 Enforce all relevant fire codes and ordinances.*
- P2.4 Require all new development to use fire-safe building materials and early warning systems, and install sufficient water supply systems for fire suppression, consistent with State Building Code.*
- P2.6 Ensure that new development incorporates adequate emergency water flow, fire resistant design and materials, and evacuation routes; is accessible to emergency vehicles; and does not affect the ability of service providers to provide adequate emergency response.*
- P2.7 No new development or redevelopment will be occupied until the water flow capacity and pressure systems conform to current standards.*
- P2.11 Ensure that new development incorporates adequate emergency water flow.*

3.11.3 Environmental Impacts

3.11.3.1 Thresholds of Significance

According to Appendix G of the CEQA Guidelines, public services impacts are considered significant if implementation of the Proposed Project would:

1. Result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for any of the public services:
 - Fire Protection

3.11.3.2 Methods of Analysis

Public service impacts related to Project construction and operational increases in population and land use intensity were evaluated based on information provided by the City fire department, planning department, General Plan and documentation of needed community service districts. This information addressed service capabilities, service ratios, response times, and performance objectives.

3.11.3.3 Project Impacts and Mitigation Measures

Impact PUB-1:	Project implementation could result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for fire, police, schools, and/or other public facilities.
Impact Determination:	Less than Significant with Mitigation
<i>Threshold:</i>	<i>Substantial adverse physical impacts associated with new or physically altered government facilities that are required as a result of Project implementation.</i>

Impact Discussion

3.11.3.4 Fire Protection

Development of the Project Site would result in a need for fire protection services to respond to any potential incidents that may occur at the site. The Project site is located in a somewhat sparsely developed part of the City, but it still receives fire service. However, according to the 2020 City of Oroville Municipal Services Review:

“In evaluating the efficiency and effectiveness of present operations for future growth, the most pressing need is that of a second fire station at the Airport Business Park (also referred to as the west side safety facility), based on continued development throughout the City and within the SOI. This station will alleviate growing and unevenly distributed service demands and potential occupancy risk through an increased concentration of personnel in this area. In 2008, the City approved a number of small to moderately sized subdivisions and the Oro Bay Specific Plan, which will include up to 2,400 dwellings, just west of the airport. This westernmost portion of the City is outside the OFD five-minute response contour. Currently, the low call volume for this area does not affect the goal of responding to 90 percent of its calls within 5 minutes but as the population increases this will become an issue (City of Oroville 2021).

The Oroville City Council adopted *Fire Department Standards of Coverage Guidelines* in order to guide future growth as outlined in the City’s General Plan. The goal statements include:

- Fire Department travel times should place a first-due unit at scene within five minutes travel time, for 90 percent of fire and medical incidents.

- Fire Department units shall be located and staffed such that an effective response force of four units with eight personnel minimum shall be available to all areas of the City within a maximum of ten minutes travel time, for 90 percent of all structure fires (City of Oroville 2015).

Additionally, Public Facilities and Services Element Policy P2.1 requires maintaining adequate first response travel time of 3 to 5 minutes to incidents and travel time of 10 minutes or less for additional resources within 90 percent of the call volume.

The Project is currently outside of a 5 minute response contour, and much of the west side of Oroville is not within the desired response time. The City of Oroville, formed two community facilities districts in September 2006: CFD No. 2006-1 Westside Public Safety Facilities; and CFD 2006-2 Public Safety Services. CFD 2006-1 was formed to provide a funding mechanism to mitigate the increased need for new public safety facilities, primarily a new fire station to be located in the vicinity of the OMA, which will include within it a small police substation. CFD 2006-2 was formed to fund ongoing fire, police, and code enforcement services that are needed as a result of additional development. To mitigate the impacts on fire and police services, all new development in the area that is essentially west of Highway 70 will be required to annex into both of these districts and will be subject to the collection of fees and revenues to fund additional public safety facilities and services. Therefore, upon implementation of Mitigation Measure PUB-1, the Project is not expected result in substantial adverse impacts associated with the provision of new or existing fire facilities; the need for new or physically altered fire facilities; or the ability to maintain acceptable service ratios or response times.

Mitigation Measures

The following mitigation measure shall apply to the Proposed Project.

PUB-1: Annexation into CFD 2006-01 and CFD 2006-02. Prior to recordation of the Final Map, the Project shall annex into both CFD 2006-01 and CFD 2006-02.

Timing/Implementation: Prior to approval of Final Map

Enforcement/Monitoring: City of Oroville Planning Department

Residual Impact After Mitigation

Impacts would be less than significant after mitigation.

3.11.4 Cumulative Setting, Impacts, and Mitigation Measures

Section 3.0 provides the baseline for cumulative setting and is based on General Plan projections. These General Plan projections are developed, in part, from the existing land use designations identified in the General Plan. As shown in Table 3-2, the anticipated growth in the City is expected to result in 9,685 new housing units, 7,026,000 sf of new industrial uses, and 12,168,000 sf of new commercial uses within the existing City limits by 2030 (Oroville 2015).

3.11.4.1 Cumulative Impacts and Mitigation Measures

Impact PUB-2:	Would Implementation of the proposed project, along with any foreseeable development in the project vicinity, result in cumulative significant environmental impact from the development of new or physically altered governmental facilities, need for new or physically altered governmental facilities?
Impact Determination:	Less than Cumulatively Considerable
Threshold:	<i>Result in cumulative impacts from the construction of new or physically altered governmental facilities, which could cause significant environmental impacts</i>

Impact Discussion

As stated previously, much of the west side of Oroville is not located within the desired fire response time. Additional, cumulative development in this area would result in the need for fire facilities. However, the City of Oroville anticipated this need resulting in the forming of CFDs 2006-1 and 2006-2. CFD 2006-1 was formed to provide a funding mechanism to mitigate the increased need for new public safety facilities, primarily a new fire station to be located in the vicinity of the OMA, which will include within it a small police substation. CFD 2006-2 was formed to fund ongoing fire, police, and code enforcement services needed as a result of additional development. To mitigate the cumulative impacts on fire and police services, all new development in the area that is essentially west of Highway 70 will be required to annex into both of these districts and will be subject to the collection of fees and revenues to fund additional public safety facilities and services. Within implementation of Mitigation Measure PUB-1, the Proposed Project would meet the City’s goal for providing additional fire protection on the west side of Highway 70. Therefore, the Project would have a less than cumulatively considerable impact in this area.

Cumulative Mitigation Measures

No mitigation required.

3.12 Transportation

This section describes the environmental setting for transportation, including the existing site conditions and regulatory setting, impacts that would result from the Proposed Project, and, if significant impacts are identified, the mitigation measures that would reduce these impacts. KDA completed a TIS for the Feather Ranch Project in January 2023. This TIS is used extensively in this transportation section for analysis of the Proposed Project's potential transportation impacts. The TIS is included in Appendix 3.12.

The IS completed for the Proposed Project determined that there was a less than significant impact to one of the four subjects listed in the Transportation impact areas:

- Result in inadequate emergency access.

As such, this subject will not be discussed further in this section.

3.12.1 Environmental Setting

3.12.1.1 Existing Street and Highway System

Access to the Proposed Project will be provided by Feather Avenue and 20th Street. Feather Avenue terminates at the eastern boundary of the Project Site where it connects to 20th Street. Regional access is provided by SR 70 and SR 163 (Oro Dam Boulevard), which links the site with the other communities to the north and south of the City of Oroville.

The Project Site is located southwest of the intersection of 20th Street and Feather Avenue. Figure 3.12-1 shows the location of the Project Site relative to the adjacent roadway network and those intersections analyzed in the TIS. The roadway network is described below.

20th Street

20th Street is a two-lane north-south local roadway adjacent to the eastern boundary of the Project Site. The portion of 20th Street adjacent to the Project Site has a northern terminus approximately 350 feet north of Feather Avenue and does not intersect with Grand Avenue. This portion of 20th Street provides access to single-family residential development east of 20th Street. There is also a discontinuous portion of 20th Street north of the Project Site between Grand and Nelson avenues. 20th Street intersects with Oroville Dam Boulevard and extends south of Oroville Dam Boulevard as Larkin Road. Larkin Road extends to the south and southwest to the City of Live Oak. The *Oroville Sustainability Updates – Draft Supplemental EIR for the City of Oroville* (City of Oroville 2015a) 2035 roadway classification for Larkin Road is a two-lane minor arterial.

THIS PAGE INTENTIONALLY LEFT BLANK

Source: KD Anderson and Associates, Inc.

Figure 3.12-1. Roadway Network and Intersections

THIS PAGE INTENTIONALLY LEFT BLANK

Feather Avenue

Feather Avenue is a two-lane east-west local roadway. The western terminus of Feather Avenue is at 20th Street, at the northeastern corner of the Project Site. The eastern terminus of this portion of Feather Avenue is at 10th Street. There are also short discontinuous portions of Feather Avenue between 10th Street and the Feather River.

Onyx Circle (Avery Court) and Russell Proctor Way

Onyx Circle (Avery Court) and Russell Proctor Way are short two-lane east-west local roadways that provide direct access to single-family residential development east of 20th Street. The western terminus of both roadways is at 20th Street. The eastern terminus of Onyx Circle is approximately 1,000 feet east of 20th Street. Russell Proctor Way includes a right angle turn to the south, and has an eastern terminus approximately 400 feet east of 20th Street.

Oroville Dam Boulevard

Oroville Dam Boulevard is a two-lane east-west roadway approximately one third mile south of the Project site. It is designated SR 162 and has an interchange with SR 70 approximately 1.8 miles east of the Project Site. East of SR 70, the roadway generally has a northeast-southwest alignment and continues to Lake Oroville. SR 162 continues approximately 100 miles west of the Oroville area, intersects with SR 99, and has interchanges with Interstate 5 and U.S. Highway 101. The *Oroville Sustainability Updates – Draft Supplemental EIR for the City of Oroville 2035* roadway classification for Oroville Dam Boulevard is a two-lane minor collector west of 20th Street and a two-lane major arterial east of east of 20th Street. There is a bicycle lane along the north side of Oroville Dam Boulevard from the Feather River to just west of 20th Street.

18th Street

18th Street is a two-lane local roadway with a generally north-south orientation approximately 0.25 mile east of the Project site. The southern terminus of 18th Street is at an intersection with Oroville Dam Boulevard. 18th Street has a northeast-southwest orientation immediately north of Oroville Dam Boulevard. There is also a discontinuous portion of 18th Street south of Oroville Dam Boulevard. 18th Street intersects with Grand Avenue, and the northern terminus of 18th Street is approximately 0.5 mile north of Grand Avenue.

The intersection of Oroville Dam Boulevard and 20th Street has exclusive left-turn lanes for both the eastbound-to-northbound and the westbound-to-southbound movements. The intersection of Oroville Dam Boulevard and 18th Street has an exclusive left-turn lane for the eastbound-to-northbound movement. There is a center-two-way left-turn lane along Oroville Dam Boulevard east of 18th Street. The intersection of Oroville Dam Boulevard and 18th Street is approximately 275 feet east of the intersection of Oroville Dam Boulevard and 20th Street (measured as centerline-to-centerline).

The limited distance between these two intersections constrains the lengths of both the westbound-to-southbound left-turn lane at the intersection of Oroville Dam Boulevard and 20th Street, and the eastbound-to-northbound left-turn lane at the intersection of Oroville Dam Boulevard and 18th Street.

3.12.1.2 Alternative Transportation Modes

Sidewalks

There are concrete and asphalt sidewalks at various locations along most City of Orland streets, but they become less prevalent in sparsely developed areas such as the Project Site. There are sidewalks on both sides of Feather Avenue and on the eastern side of 20th Street adjacent to the Project Site. There are no sidewalks on the site.

Bicycle Facilities

The City of Oroville Bicycle Transportation Plan was adopted by the City on August 3, 2010. This Plan identifies numerous existing and proposed bike trails and on-street lanes throughout the City. There are currently no bike lanes on the streets surrounding the site. However, 20th Street from Oro Dam Boulevard to Nelson Street is identified as a *second priority bikeway*. According to the Bicycle Transportation Plan, paths listed as first priority are considered necessary to facilitate bicycle transportation in the City limits. Second priority bikeways will be added to create connectivity in the regional area. All proposed bikeways are Class I or Class II, unless noted otherwise (City of Oroville 2010).

Public Transit

Public transportation in Oroville is provided through the area's public bus service, commercial bus services, shuttle service, taxi service and park-and-ride facilities. The BCAG operates the B-Line of the Butte Regional Transit system, which serves the residents of Oroville and provides intercity/regional and local fixed-route services. Oroville's B-Line service includes four local fixed transit routes within Oroville and three intercity/regional routes that provide commuter route service to Biggs, Chico, and Paradise. Greyhound provides commercial bus service; specifically, a limited service bus stop in Oroville at the ARCO gas station located at 410 Oroville Dam Boulevard with connections from Oroville to full-service stations located in the San Francisco Bay Area and the greater Sacramento area. Amtrak also provides commercial bus service. Amtrak offers daily bus service between Medford (Oregon), Redding, Sacramento and Stockton. Commercial shuttle service is provided by North Valley Shuttle with service to Sacramento International Airport. Taxi services are provided by Yellow Cab Company of Oroville and are available on demand or by reservation. Park-and-ride lots provide a place for commuters in single-occupant vehicles to transfer to public transit or carpools. Oroville has one park-and-ride facility, owned by Butte County, on Highway 70 at Grand Avenue (City of Oroville 2015a).

3.12.2 Study Area Intersections

The traffic-related effects of the Proposed Project were assessed for this TIS by analyzing traffic operations at intersections that would serve Project-related travel. The following study facilities were selected for analysis in consultation with City of Oroville staff. Figure 3.12-1 provides intersection locations. The numbers listed below correspond to the intersection numbers on this figure.

KDA analyzed the following six existing study intersections in the TIS:

1. Grand Avenue and 18th Street
2. Oroville Dam Boulevard and 20th Street/Larkin Road
3. Oroville Dam Boulevard and 18th Street
4. 20th Street and Feather Avenue
5. 20th Street and Onyx Circle/Street B
6. 20th Street and Russell Proctor Way/Street D

The following two intersections would only be present with construction of the Feather Ranch Project. As a result, these intersections were only analyzed under development conditions that included the Proposed Project:

7. 20th Street and Street F
8. 20th Street and Biggs Avenue

3.12.3 Existing Intersection Traffic Volumes And Levels Of Service

The following is a description of existing traffic operating conditions at the study intersections.

3.12.3.1 Traffic Volumes

Intersection turning movement count data at the study intersections were collected for this TIS on Tuesday March 1, 2022. Traffic count data collected for this TIS are presented in the technical appendix of the TIS. The peak period intersection turning movement count data were collected between 7:00 a.m. and 9:00 a.m. and from 4:00 p.m. to 6:00 p.m.. Volumes during the highest 1-hour periods were used for this TIS. Figure 3.12-2 presents the existing lane configurations and existing a.m. peak hour and p.m. peak hour traffic volumes at the existing study intersections.

3.12.3.2 Intersection Levels of Service

Table 3.12-1 presents existing a.m. peak hour and p.m. peak hour Level of Service (LOS) at the six existing study intersections. The worksheets presenting the calculation of LOS are included in the technical appendix of the TIS.

All six existing study intersections operate at acceptable LOS D or better during both the a.m. and the p.m. peak hours. No improvements are needed at these intersections to achieve acceptable LOS.

3.12.4 Regulatory Setting

3.12.4.1 State

Department of Transportation

Caltrans is responsible for the design, construction, maintenance, and operation of the California State Highway System, as well as that portion of the Interstate Highway System within the state's boundaries. Alone and in partnership with Amtrak, Caltrans is also involved in the support of intercity passenger rail service in California and is a leader in promoting the use of alternative modes of transportation.

Transportation facilities under the jurisdiction of Caltrans within the vicinity of the Project Site include Interstate 5 (I-5) (including on- and off-ramps) and Montague Road (SR-3).

Caltrans' Guide for the Preparation of Traffic Impact Studies contains the following policy pertaining to the LOS standards within Caltrans jurisdiction:

Caltrans endeavors to maintain a target LOS at the transition between LOS "C" and LOS "D" on State highway facilities, however, Caltrans acknowledges that this may not be always feasible and recommends that the lead agency consult with Caltrans to determine the appropriate target LOS.

Consistent with Caltrans practice, the TIS considered LOS "D" as the standard threshold acceptable operations for any intersection under Caltrans jurisdiction

3.12.4.2 Local

Oroville 2030 General Plan

The Circulation and Transportation Element of the Oroville General Plan (2015b) is concerned with the safe and efficient movement of people and goods in and around the City of Oroville by means of a wide range of transportation modes. The Element accounts for the critical link between land use patterns and transportation. This Element provides a number of goals and policies related to transportation within the Circulation and Transportation Element. The General Plan goals and policies pertaining to transportation and the Project are as follows:

Goal CIR-2: Create and maintain a roadway network that provides for the safe and efficient movement of people and goods throughout the City while maintaining the quality of life for residents.

Policies

P2.1: Maintain a Level of Service (LOS) D or better as defined in the most current edition of the Highway Capacity Manual or subsequent revisions for roadways and intersections, except as specified below:

City/County Roadways:

- *Lincoln Boulevard – Baggett Marysville Road to Ophir Road (LOS E)*

- *Ophir Road – Highway 70 to Lincoln Boulevard (LOS E)*
- *Ophir Road – Lincoln Boulevard to Lower Wyandotte Road (LOS F)*
- *Table Mountain Boulevard – Cottonwood Road to Garden Drive (LOS E)*

State Facilities:

- *Olive Highway – Oroville Dam Boulevard to Lower Wyandotte Road (LOS F)*
- *Olive Highway – Lower Wyandotte Road to Foothill Boulevard (LOS F)*
- *Olive Highway – Foothill Boulevard to Oakvale Avenue (LOS F)*
- *Olive Highway – Oakvale Avenue to Kelley Ridge Road (LOS E)*
- *Oroville Dam Boulevard – Feather River Boulevard to Olive Highway (LOS F)*

Additional exceptions to this policy may be allowed by the City Council on a case-by-case basis, where reducing the level of service would result in a clear public benefit. Such circumstances may include, but are not limited to, the following:

- *Preserving open space land*
- *Preserving scenic roadways/highways*
- *Avoiding adverse impacts to alternative transportation modes*
- *Right-of-way constraints would make improvements infeasible*

P2.5: Reduce the total vehicle miles traveled through designation of land uses that support multi-modal travel and provision of more direct routes to high activity locations.

Goal CIR-3: Promote the strategic development of new roadways that benefit and enhance the existing roadway network and improve access and mobility for all modes.

Policies

P3.1: Widths for new streets shall be limited to the minimum width necessary to adequately carry the volume of anticipated traffic and meet the City's LOS Policy of D, while allowing for adequate bicycle and pedestrian facilities, emergency access, and large vehicle access.

P3.2: Prohibit development of private streets in new residential projects, unless emergency access standards, maintenance agreements, and design standards are met to the satisfaction of the City Engineer and there are compelling circumstances that prohibit the streets from being designed to meet public standards.

P3.3: New development shall ensure that safe and efficient emergency vehicle access is provided.

P3.4: Ensure, through a combination of traffic impact fees and other funding mechanisms, that new development pays its fair share of the costs of circulation improvements.

P3.5: Provide transportation facilities based on a "Complete Streets" set of criteria that facilitates the balanced use of all travel modes (pedestrians, bicyclists, motorists, and transit users) meeting the transportation needs of all ages and abilities and providing mobility for a variety of trip purposes.

Goal CIR-6: Provide a bicycle network to encourage bicycling for both transportation and recreation.

Policies

P6.9: Coordinate the construction and improvement of the bicycle system with development projects adjacent to bikeways, and with park and recreational facilities, schools and residential subdivisions.

P6.10: Ensure that developments located along existing and future bikeways provide for bicycle use within and adjacent to project boundaries.

Goal CIR-7: Provide a pedestrian network that encourages walking for transportation and recreation.

Policies

P7.5: Require installation of sidewalks and/or walking paths along all city streets in newly developing areas.

P7.7: New development in Oroville will encourage pedestrian accessibility and facilitate the use of non-automobile forms of transportation.

Goal CIR-8: Facilitate the mobility of persons with accessibility needs.

Policies

P8.1: New development shall meet the requirements of the Americans with Disabilities Act (ADA).

3.12.5 Environmental Impacts

3.12.5.1 Thresholds of Significance

The impact analysis provided below is based on the following CEQA Guidelines Appendix G thresholds of significance. Transportation impacts are considered significant when the project would:

- Conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadways, bicycle and pedestrian facilities.
- Conflict or be inconsistent with CEQA Guidelines Section 1564.3, subdivision (b).

- Substantially increase hazards due to a geometric design feature (e.g. sharp curves or dangerous intersections) or incompatible uses (e.g., farm equipment).

3.12.5.2 Methods of Analysis

The following section outlines the analysis parameters and methodologies that were used in the TIS to quantify potential project impacts for the analysis scenarios.

Level of Service Analysis Procedures

The LOS analysis provides a basis for describing existing traffic conditions and for evaluating Project-related traffic effects. LOS measures the quality of traffic flow and is represented by letter designations from A to F, with a grade of A referring to the best conditions, and F representing the worst conditions. The characteristics associated with the various LOS for intersections are presented in Table 1 of the TIS.

The LOS was analyzed using methods presented in the *Highway Capacity Manual 6th Edition* (Transportation Research Board 2016). Methods described in the *Highway Capacity Manual 6th Edition* were used to provide a basis for describing traffic conditions and for evaluating project traffic effects. The Highway Capacity Manual 6th Edition methods, as implemented in the Synchro software package (Trafficware 2022), was used to analyze the study network (KDA 2023).

For two-way stop sign-controlled unsignalized intersections (or one-way stop-sign controlled "T" intersections), the *Highway Capacity Manual 6th Edition* method considers gap acceptance and average delay of motorists on minor streets and in turn lanes to establish LOS, which is based on the length of the delay experienced by motorists on the worst single approach, rather than the intersection as a whole. It should be noted that overall intersection average LOS at unsignalized intersections is better, often much better, than LOS on the worst single approach.

Worksheets and output reports for the calculation of LOS and vehicle queues for all scenarios analyzed for the TIS are presented in the technical appendix of the TIS (included as Appendix 3.12 of this Draft EIR).

Signal Warrants Procedures

Traffic signal warrants are a series of standards that provide guidelines for determining if a traffic signal is appropriate. Signal warrant analyses are typically conducted at intersections of uncontrolled major streets and stop sign-controlled minor streets. If one or more signal warrants are met, signalization of the intersection may be appropriate. However, a signal should not be installed if none of the warrants are met, because installation of signals would increase delays on the previously uncontrolled major street, resulting in an undesirable increase in overall vehicle delay at the intersection. Signalization may also increase the occurrence of certain types of accidents. Therefore, the detriment of increased accidents and overall delay may be greater than the benefit in traffic operating conditions on the single worst movement at the intersection if signals are installed where signal warrants are not met. Signal warrants, then, provide an industry-standard basis for identifying when the adverse effect on the worst movement is substantial enough to warrant signalization.

For the analysis conducted for this TIS, available data at unsignalized intersections are limited to a.m. and p.m. peak hour volumes. Thus, unsignalized intersections were evaluated using the Peak Hour Warrant (Warrant Number 3) from the Caltrans document *California Manual on Uniform Traffic Control Devices* (Caltrans 2021). This warrant was applied where the minor street experiences long delays in entering or crossing the major street for at least one hour of the day. The Peak Hour Warrant itself includes several components. Some of the components involve comparison of traffic volumes and vehicle delay to a series of standards. Another component involves comparison of traffic volumes to a nomograph.

Even if the peak hour warrant is met, a more detailed signal warrant study is recommended before a signal is installed. The more detailed study should consider volumes during the eight highest hours of the day, volumes during the four highest hours of the day, pedestrian traffic, and accident histories.

Signal warrant analysis worksheets for all stop sign-controlled intersections for all development conditions are presented in the technical appendix of the TIS.

Travel Forecasting

As noted earlier in the *Overall Analysis Approach* section of this TIS, future year cumulative conditions were analyzed for this study. Future year traffic volumes used in the analysis of cumulative conditions are based on the BCAG Regional Travel Demand Model (KDA 2023).

The BCAG Regional Travel Demand Model estimates both base year traffic volumes and forecasts of future year traffic volumes. Traffic volumes from the travel model were used to generate growth factors. These growth factors were applied to existing peak hour intersection turning movement traffic volumes. The development of future year intersection turning movement traffic volumes requires that the turning movements at each intersection *balance*. To achieve the balance, inbound traffic volumes must equal the outbound traffic volumes, and the volumes must be distributed among the various left-turn, through, and right-turn movements at each intersection. The *balancing* of future year intersection turning movement traffic volumes was conducted using methods described in the Transportation Research Board's National Cooperative Highway Research Program (NCHRP) Report 255, *Highway Traffic Data for Urbanized Area Project Planning and Design* (Transportation Research Board 1982). The NCHRP 255 method applies the desired peak hour directional volumes to the intersection turning movement volumes, using an iterative process to balance and adjust the resulting forecasts to match the desired peak hour directional volumes.

Vehicle Miles Traveled Significance Threshold

The OPR *Technical Advisory on Evaluating Transportation Impacts in CEQA* provides recommended thresholds for determining the significance of VMT impacts associated with land use development projects. Specific thresholds are provided for residential, office, and retail commercial types of development. The technical advisory generally recommends establishing a 15 percent reduction in VMT as a significance threshold, compared to a baseline. That is, if a project would result in a reduction of at least 15 percent in VMT, compared to a baseline, the project can be considered to have a less than significant impact. The significance threshold may be thought of as 85 percent of baseline conditions (100 percent less 15 percent equals 85 percent). A project that would not result in a reduction of at least 15 percent is considered to have a significant impact. The technical advisory notes,

“In summary, achieving 15 percent lower per capita (residential) or per employee (office) VMT than existing development is both generally achievable and is supported by evidence that connects this level of reduction to the State’s emissions goals.”

The 2030 General Plan supports the reduction of VMT. Policy P2.5 of the General Plan Circulation Element states:

“Reduce the total vehicle miles traveled through designation of land uses that support multi-modal travel and provision of more direct routes to high activity locations.”

The General Plan does not currently present quantitative significance thresholds or methods for assessing VMT.

The BCAG has prepared a series of documents to assist local member jurisdictions in the implementation of SB 743. One of the documents, *BCAG SB 743 Implementation – VMT Impact Significance Threshold – Assessing Lead Agency Choices* (KDA 2023), provides a method for conducting qualitative screening-level assessments of project-related VMT. The document and method include maps showing whether VMT generated by land use development in geographic areas would be above or below 85 percent of baseline conditions. The maps show data for both residential land use development and employment-generating land use development. For residential land use development, the maps show home-based VMT per resident compared to regional average VMT.

BCAG prepared an update to the Regional Travel Demand Model for the purpose of developing Traffic Analysis Zone (TAZ) level VMT estimates appropriate for SB 743 analysis (KDA 2023). Data from the Regional Travel Demand Model updated for VMT estimates were used to:

- estimate average baseline VMT generated by land use development in each city in Butte County and by development in the unincorporated Butte County area, and
- quantitatively assess VMT generated by land use development in each TAZ.

The Regional Travel Demand Model updated for VMT estimates was used to generate both jurisdiction average baseline VMT data, and for the TAZ-level VMT data for both residential land use development and employment-generating land use development. For residential land use development, the model was used to calculate:

- home-based production VMT per resident, and
- home-based production VMT per household.

For the TIS, guidance from the OPR *Technical Advisory on Evaluating Transportation Impacts in CEQA* was used as the significance threshold for project-related impacts on VMT. If a project would generate VMT at a level equal to or lower than 15 percent below baseline conditions (i.e., equal to or less than 85 percent of baseline conditions), the project will be considered to have a less-than-significant impact on VMT. If a project would generate VMT at a level above 15 percent below baseline conditions (i.e., greater than 85 percent of baseline conditions), the project will be considered to have a significant impact on VMT. KDA used the BCAG SB 743 Implementation – VMT Impact Significance Threshold – Assessing Lead Agency

Choices and the data from the Regional Travel Demand Model updated for VMT estimates to determine whether VMT generated by the Feather Ranch Project would exceed a level 15 percent below baseline conditions.

3.12.5.3 Project Impacts and Mitigation Measures

Impact TR-1	Project implementation could conflict with a program plan, ordinance or policy addressing the circulation system, including transit, roadways, bicycle and pedestrian facilities.
Impact Determination	Less than Significant
<i>Threshold</i>	<i>Conflict with a program, plan, ordinance or policy addressing the circulation system, including transit, roadways, bicycle and pedestrian facilities.</i>

Impact Discussion

Trip Generation

Development of the Feather Ranch Project would generate new vehicle trips and potentially affect traffic operations on study facilities. The number of vehicle trips expected to be generated by the Proposed Project has been estimated using typical trip generation rates that have been developed based on the nature and size of Project land uses. Data compiled by the Institute of Transportation Engineers (ITE) and presented in the publication *Trip Generation Manual, 11th Edition* (ITE 2021) is the source of trip generation rates.

The trip generation rates used in this TIS are presented in Table 3.12-2. The trip generation rates are applied to the amount of Project-related land uses. The resulting trip generation estimates are presented in Table 3.12-3.

As shown in Table 3.12-3, the Proposed Project would generate 120 trips during the a.m. peak hour and 162 trips during the p.m. peak hour.

Table 3.12-2. Trips Per Unit							
Land Use and ITE Land Use Code	Units	Trips Per Unit					
		AM Peak Hour			PM Peak Hour		
Single Family Detached Housing (ITE Code 210)	Dwelling Units	0.18	0.52	0.70	0.59	0.35	0.94

Note: Trip generation rates are based on average rates.
Source: KDA 2023

Table 3.12-3. Project Trip Generation Estimates							
Land Use and ITE Land Use Code	Quantity	Trips Generated					
		AM Peak Hour			PM Peak Hour		
Single Family Detached Housing (ITE Code 210)	172 Dwelling Units	31	89	120	101	60	162

Note: Total may not equal the sum of components due to rounding.
Source: KDA 2023

Trip Distribution

Project-related trips were geographically distributed over the study area roadway network. The geographical distribution of trips is based on the relative attractiveness or utility of possible destinations. Trip distribution percentages applied in this TIS are presented in Table 3.12-4.

Table 3.12-4. Proposed Project Trip Distribution Percentages		
Direction of Travel	Near-Term Background	Long-Term Cumulative Background
West on Grand Avenue	0.2	1.0
East on Grand Avenue	39.9	34.5
East on Feather Avenue	0.1	0.3
West on Oroville Dam Boulevard	9.1	7.8
South on Larkin Road	16.2	19.7
East on Oroville Dam Boulevard	34.5	36.7
Total:	100.0	100.0

Source: KDA 2023

The BCAG Regional Travel Demand Model was used to estimate trip distribution percentages. The travel demand model is considered to be a valid source for the trip distribution percentages because it directly addresses:

- the location of destinations of project-related trips,
- the magnitude of land uses that would attract project-related trips, and
- the quality of access to the destinations via the roadway network.

The TIS included an analysis of scenarios based on existing and cumulative background development conditions.

The travel demand model was used to estimate trip distribution percentages for each of these two background conditions. Background (non-Project) land uses are different in each of the two background conditions. The different land uses result in different geographic distributions of travel. As a result, the trip distribution percentages differ for each of the two background development conditions. Table 3.12-4 presents the trip distribution percentages for each of the two background development scenarios.

A *select link* analysis was conducted using the travel demand model to determine the geographic distribution of Project-related travel. The select link analysis identifies vehicle trips associated with the proposed Project Site, and identifies the direction of travel to and from the Project Site. Raw, pre-adjustment, traffic model results used in the development of trip distribution percentages are presented in the technical appendix of the TIS.

Trip Assignment

Traffic that would be generated by the Proposed Project was added to existing volumes. Figure 3.12-3 displays the Project-related-only traffic volumes for each study intersection in the a.m. and p.m. peak hours. Figure 3.12-4 displays the resulting Existing Plus Project traffic volumes anticipated for each study intersection in the peak hours.

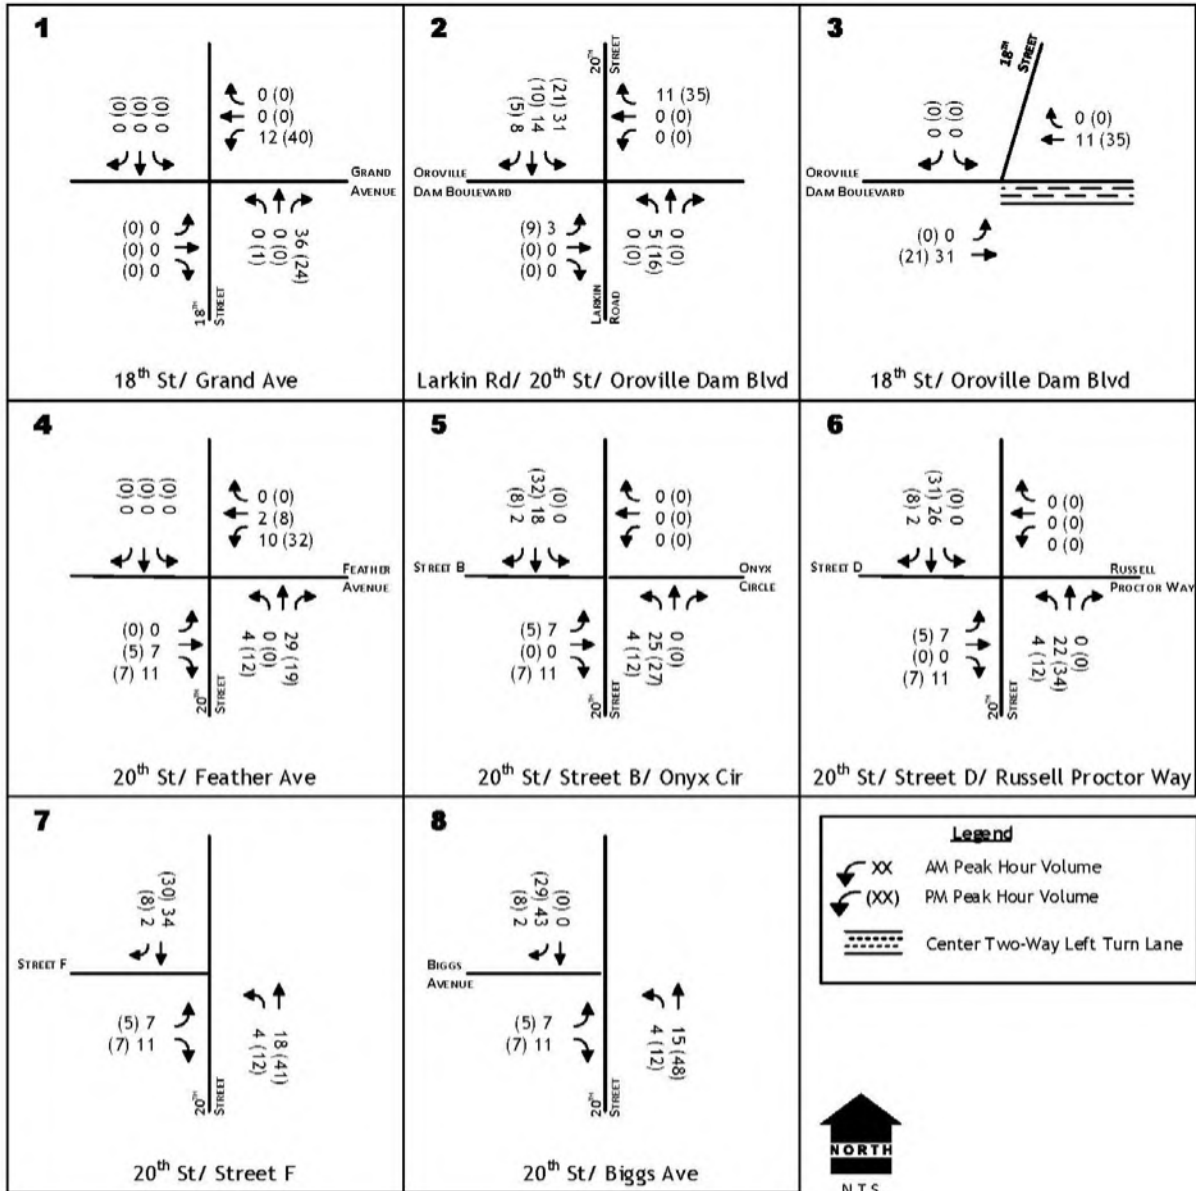

Intersection Levels Of Service

Table 3.12-5 presents the a.m. and p.m. peak hour LOS at each study intersection under Existing Plus Project conditions. The worksheets presenting the calculation of LOS are included in the technical appendix of the TIS.

Traffic volumes under Existing Plus Project conditions would be generally higher than under Existing conditions and, as a result, vehicle delay at study intersections under Existing Plus Project conditions would be higher than under Existing conditions.

Under Existing Plus Project conditions, LOS at seven of the eight study intersections would be at acceptable LOS B or better during both the a.m. and the p.m. peak hours. With the Feather Ranch Project, traffic operations at these intersections would be consistent with General Plan policies on LOS and no improvements are required.

Under Existing Plus Project conditions, the intersection of Oroville Dam Boulevard and 20th Street/Larkin Road would operate at unacceptable LOS E, which is considered to be inconsistent with the General Plan policy on LOS. Oroville Dam Boulevard is a Caltrans state highway (SR 162) at this location. Any improvements to this intersection would require approval by the City of Oroville and Caltrans. The southbound approach to this intersection would operate at LOS E with 42.0 seconds of delay during the a.m. peak hour, and LOS E with 38.0 seconds of delay during the p.m. peak hour.

Source: KDA 2023

Notes: LOS = Level of Service. Delay is measured in seconds per vehicle.

NB = northbound, WB = westbound, SB = southbound, EB = eastbound

Ave = Avenue, St = Street, Blvd = Boulevard

While LOS E is inconsistent with General Plan Policy P2.1 and would conflict with a program, plan, ordinance or policy addressing the circulation system, as of July 1, 2020, LOS is no longer to be considered a significant impact under CEQA. Pursuant to CEQA Guidelines, Section 15064.3, VMT is the most appropriate measure of transportation impacts. VMT refers to the amount and distance of automobile travel attributable to a project. Other relevant considerations may include the effects of the project on transit and non-motorized travel. Except as provided in subdivision 15064.3(b)(2) of the CEQA Guidelines, regarding roadway capacity, a project’s effect on automobile delay cannot constitute a significant environmental impact. As such, mitigation for the improvement of LOS is not required. However, the TIS does provide recommendations for improving the LOS at the Oroville Dam Boulevard & 20th Street/Larkin Road intersection as follows:

Recommended Improvement TRAF-1 – Widen the Southbound Approach at the Intersection of Oroville Dam Boulevard and 20th Street/Larkin Road, widening the southbound approach at the intersection of Oroville Dam Boulevard and 20th Street/Larkin Road would improve LOS to an acceptable level under Existing Plus Project conditions. The existing single-lane southbound approach should be replaced with an exclusive southbound-to- eastbound left-turn and a southbound combined through/right-turn lane.

Table 3.12-6 shows this intersection would operate at acceptable LOS D under Existing Plus Project conditions with implementation of this recommended improvement. The southbound approach to this intersection would operate at LOS D with 34.9 seconds of delay during the a.m. peak hour, and LOS D with 34.5 seconds of delay during the p.m. peak hour. LOS D is considered consistent with the General Plan policy on LOS. Impacts would be less than significant after mitigation.

Table 3.12-6. Level of Service – Existing Plus Project Conditions With Mitigation

EB Left-Turn			A	7.6	A	7.7
WB Left-Turn			A	8.2	A	8.0
NB Approach			B	10.8	B	12.9
SB Approach			D	34.9	D	34.5

Impact on Public Transit Service

As noted earlier under Public Transportation, the public transit stop closest to the Project Site is approximately 1 mile away. Because of the distance, implementation of the Feather Ranch Project is not expected to adversely affect existing public transit service. As a result, the Project would have a less than significant impact on public transit service. No mitigation measures would be required.

Land use development in the immediate vicinity of the Project Site is currently sparse. As a result, it is considered unlikely fixed route public transit service would be extended to the area in the near-term. Possible extension of public transit service to the area could be considered if future land use projects in the vicinity of the Project Site result in greater development density.

Impact on Bicycle and Pedestrian Facilities

Implementation of the Proposed Project would result in an increase in demand for bicycle and pedestrian facilities. Currently, there are sidewalks on both sides of Feather Avenue and on the eastern side of 20th Street adjacent to the Project Site. Project-related improvements to 20th Street and abutting Project vicinity roadways include curbs, gutters and sidewalks adjacent to the Project Site. Sidewalks would front 20th Street, Biggs Avenue, and Feather Avenue as well as along all internal proposed roadways.

Greenway space would be provided along internal sidewalks, around the proposed storm drainage retention basin at the northeastern corner of the Project site, and fronting 20th Street and Biggs Avenue. These facilities would provide bicycles and pedestrians with an option to avoid traveling adjacent to vehicle traffic. Because of these project-related improvements that would facilitate bicycle and pedestrian travel, the Feather Ranch Project is considered to have a less than significant impact on bicycle and pedestrian facilities. No mitigation measures are required. Mitigation measures to reduce the impact of the Feather Ranch Project on VMT would also encourage bicycle and pedestrian travel. While not required to reduce the impact of the Project on bicycle and pedestrian facilities, implementation of Mitigation Measures TR-1, TR-2 and TR-3 under Impact TR-2 would result in improvements to bicycle and pedestrian facilities.

Mitigation Measures

No mitigation measures are required.

Impact TR-2:	Project implementation could conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b).
Impact Determination:	Significant and Unavoidable
Threshold:	<i>Conflict or inconsistency with CEQA Guidelines Section 15064.3, subdivision (b).</i>

Impact Discussion

CEQA Guidelines Section 15064.3, subdivision (b) provides criteria for analyzing transportation impacts based on a VMT methodology instead of the now superseded (as of January 1, 2019) LOS methodology. Pertinent to the Proposed Project are those criteria identified in Section 15064.3(b)(1) Land Use Projects. According to this section:

“Vehicle miles traveled exceeding an applicable threshold of significance may indicate a significant impact. Generally, projects within one-half mile of either an existing major transit stop or a stop along an existing high quality transit corridor¹ should be presumed to cause a less than significant transportation impact. Projects that decrease vehicle miles traveled in the project area compared to existing conditions should be presumed to have a less than significant transportation impact.”

The impacts of the Proposed Project on VMT were evaluated in the TIS. As described earlier under the VMT Significance Threshold, the evaluation of the impacts of the Feather Ranch Project on VMT was conducted using:

- the BCAG document BCAG SB 743 Implementation – VMT Impact Significance Threshold – Assessing Lead Agency Choices (BCAG 2021a), and
- an update of the Regional Travel Demand Model prepared by BCAG for the purpose of developing TAZ-level VMT estimates appropriate for SB 743 analysis.

Figure 4-A of the *BCAG SB 743 Implementation – VMT Impact Significance Threshold – Assessing Lead Agency Choices* document shows the Project Site is located in an area where home-based VMT per

¹ *High-quality transit corridor* means an existing corridor with fixed route bus service with service intervals no longer than 15 minutes during peak commute hours. For the purposes of this Appendix, an “existing stop along a high-quality transit corridor” may include a planned and funded stop that is included in an adopted regional transportation improvement program.

resident would be greater than a level 15 below the baseline condition. That is, the method presented in this document indicates residential development in the Project site would result in the generation of VMT that is not below 85 percent of baseline conditions. The assessment presented in the BCAG SB 743 Implementation document is quantified in greater detail in data from the updated Regional Travel Demand Model. The Project Site is located in TAZ 911 of the travel demand model. This TAZ is bounded by Grand Avenue on the north, 20th Street on the east, Oroville Dam Boulevard on the south, and the northerly extension of Wes Barrett Lane on the west.

On a per-resident level, data from the travel demand model shows residential land use development in TAZ 911 would generate 26.7 home-base VMT per resident, while the average for the City of Oroville would be 19.1 home-based VMT per resident. Therefore, the Project Site would be expected to generate VMT at 140 percent of the baseline City of Oroville average ($26.7 \div 19.1 = 1.40$).

On a per-household level, data from the travel demand model shows residential land use development in TAZ 911 would generate 63.3 home-based VMT per household, while the average for the City of Oroville would be 43.6 home-based VMT per household. Therefore, the Project site would be expected to generate VMT at 145 percent of the baseline City of Oroville average ($63.3 \div 43.6 = 1.45$).

As shown in the *BCAG SB 743 Implementation – VMT Impact Significance Threshold – Assessing Lead Agency Choices* and in the updated travel demand model data, development of the Feather Ranch Project would generate VMT greater than 85 percent of baseline conditions. As a result, the impact of the Feather Ranch Project on VMT is considered significant and mitigation is required.

The *BCAG SB 743 Implementation – Mitigation Strategies* document (BCAG 2021b) is one of the documents in a series BCAG has prepared to assist local member jurisdictions in the implementation of SB 743. The document presents potential mitigation measures which reduce the impact of projects on VMT. The document presents a wide range of measures for:

- different types of land uses (e.g., residential versus employment-generating);
- different sizes of project; and
- different settings (e.g., urban core versus suburban).

A substantial portion of the measures presented in *BCAG SB 743 Implementation – Mitigation Strategies* apply only to employment-generating land use development projects and are, therefore, not applicable to the Proposed Project.

BCAG SB 743 Implementation – Mitigation Strategies also provides information on the feasibility of measures and whether sufficient evidence is available for use of the measure as a mitigation measure in CEQA documents. KDA reviewed the applicability, feasibility, and sufficiency of evidence for measures listed in *BCAG SB 743 Implementation – Mitigation Strategies* in the TIS to identify potential mitigation measures for the Project.

The VMT reducing descriptions provided in Mitigation Measures TR-2 and TR-3 include estimated ranges of effectiveness for each measure published in *BCAG SB 743 Implementation – Mitigation Strategies*. It should be noted the ranges of estimated effectiveness are not project-specific and would require

additional analysis and interpretation to be applied to specific projects, including the Proposed Project. In some cases, the high end of the ranges of effectiveness applies to large projects, projects in highly urban settings, and projects with substantial alternative transportation infrastructure, for example commuter rail facilities.

Mitigation Measures

TR-1: Provide Pedestrian Network Improvements. Providing a pedestrian access network to link areas of the Project site encourages people to walk instead of drive. This mode shift results in people driving less and thus a reduction in VMT.

The Project will provide a pedestrian access network that internally links all uses and connects to all existing or planned external streets and pedestrian facilities contiguous with the project site. The Project will minimize barriers to pedestrian access and interconnectivity. Physical barriers such as walls, landscaping, and slopes that impede pedestrian circulation will be eliminated. Some aspects of this measure are already included in the Proposed Project.

Increasing the use of pedestrian improvements would further reduce Project-related VMT. The range of effectiveness of this measure as described by BCAG is from 0.5 percent to 5.7 percent.

Timing/Implementation: Prior to approval of the Project.

Enforcement/Monitoring: City of Oroville

TR-2: Provide Traffic Calming Measures. Providing traffic calming measures encourages people to walk or use bicycles instead of using a vehicle. This mode shift will result in a decrease in VMT.

Project design will include pedestrian/bicycle safety and traffic calming measures in excess of jurisdiction requirements. Roadways will be designed to reduce motor vehicle speeds and encourage pedestrian and bicycle trips with traffic calming features. Traffic calming features may include: marked crosswalks, curb extensions, speed tables, raised crosswalks, raised intersections, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, and others. Some aspects of this measure are already included in the Proposed Project.

Increasing the use of traffic calming measures would further reduce Project-related VMT. The range of effectiveness of this measure as described by BCAG is from 0 to 1.7 percent.

Timing/Implementation: Prior to approval of the Project.

Enforcement/Monitoring: City of Oroville

TR-3: Contribute to a 20th Street Bicycle Facility. Providing bicycle facilities reduces VMT by encouraging use of non-vehicular forms of transportation. Connecting to existing bicycle facilities would provide access to Project site residents to a larger network of facilities.

The Project applicant shall contribute a fair share portion of the cost toward construction of the bikeway. Because the Bicycle Transportation Plan does not specify whether the 20th Street bikeway would be a Class I or Class II facility, it is not known whether the bikeway would be on 20th Street or separate from the roadway. For the same reason, it is not known what the cost of the bikeway would be. As such, the Project’s fair share portion shall be negotiated between the applicant and the City of Oroville.

Timing/Implementation: Prior to approval of the Project.

Enforcement/Monitoring: City of Oroville

Residual Impact After Mitigation

As noted above, development of the Project Site would be expected to generate VMT at 140 to 145 percent of the baseline City of Oroville average. Mitigating VMT to a level which would be less than 85 percent of the baseline level would require a reduction of approximately 40 percent from pre-mitigation levels ($1 - [0.85 \div 1.45] = 0.414$). While the following measures would reduce the impact of the Project on VMT, implementation of mitigations needed to achieve a 40 percent reduction is not considered feasible. As a result, even with implementation of Mitigation Measures TR-1, TR-2, and TR-3, the impact of the Feather Ranch Project on VMT is considered to be significant and unavoidable.

Impact TR-3	Project implementation could substantially increase hazards due to a geometric design feature (e.g., sharp curves or dangerous intersection) or incompatible uses (e.g., farm equipment).
Impact Determination	Less than Significant
<i>Threshold</i>	<i>Substantial increase in hazards due to geometric design feature or incompatible uses.</i>

Impact Discussion

As shown in Figure 2-2, the Project would be accessed via the existing 20th Street. Future access roadways to be developed as a part of the Project would include Feather Avenue and Biggs Avenue. The Project would also develop a number of internal streets. All new roadways would be required to be constructed according to the City of Oroville roadway standards. As such, the Project would not result in a substantial increase in hazards due to geometric design features or incompatible uses.

Mitigation Measures

No mitigation measures are required.

3.12.6 Cumulative Setting, Impacts, and Mitigation Measures

Cumulative conditions refer to the analysis scenarios that reflect future conditions represented by local and regional growth in approximately 20 years in the future. The Cumulative No Project condition represents a long-term future background condition. Future development of approved and planned land uses throughout the City of Oroville and County of Butte are assumed in this condition. The Cumulative No Project condition, therefore, serves as the baseline condition used to assess long-term Project-related traffic effects.

3.12.6.1 Traffic Volume Forecasts

As described in the Travel Forecasting section of the TIS, the BCAG Regional Travel Demand Model was used to develop forecasts of background increases in traffic volumes under Cumulative No Project conditions. The increases in traffic volumes reflect development of long-term future land use development.

Application of the methods described in the Travel Forecasting section results in the a.m. and p.m. peak hour traffic intersection volumes presented in Figure 3.12-5.

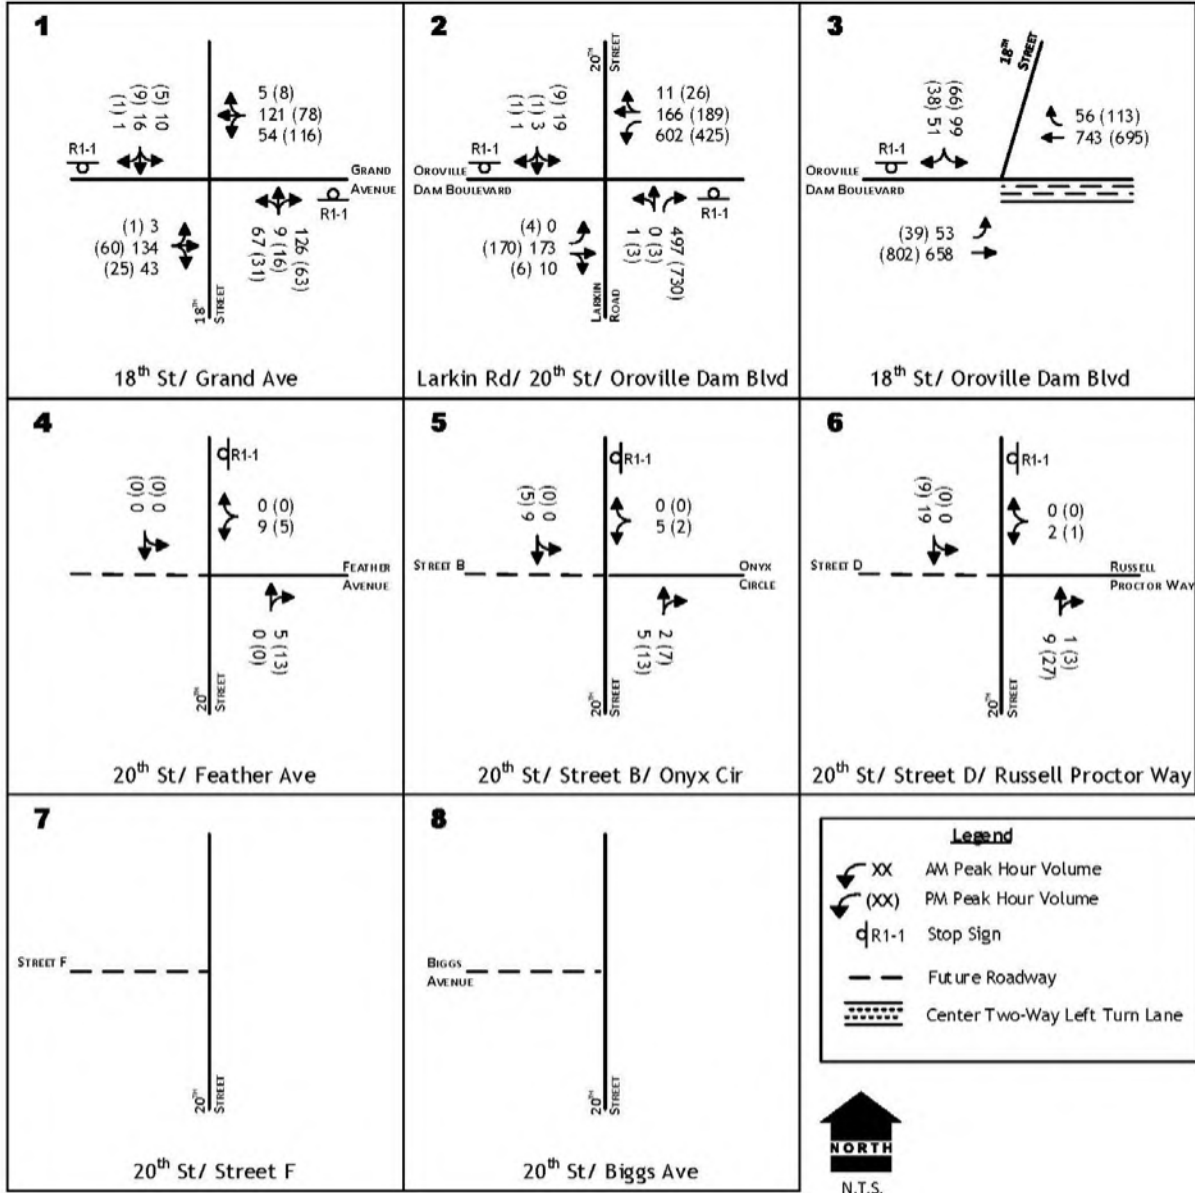

3.12.6.2 Intersection Levels Of Service

Table 3.12-7 provides the a.m. and p.m. peak hour LOS at each study intersection under Cumulative No Project conditions. The worksheets presenting the calculation of LOS are included in the technical appendix of the TIS.

Traffic volumes under Cumulative No Project conditions would be generally higher than under Existing conditions and, as a result, vehicle delay at study intersections under Cumulative No Project conditions would be higher than under Existing conditions.

Under Cumulative No Project conditions, four of the six study intersections would operate at acceptable LOS B or better during both the a.m. and p.m. peak hours and would be consistent with General Plan policy on LOS. No improvements are needed at these intersections to achieve acceptable LOS. Under Cumulative No Project conditions, two study intersections would operate at unacceptable LOS.

- At the intersection of Oroville Dam Boulevard and 20th Street, overall intersection LOS would be E during the a.m. peak hour and F during the p.m. peak hour. The northbound approach to this intersection would operate at LOS E with 49.0 seconds of delay during the p.m. peak hour. The southbound approach would operate at LOS F with 1,673.8 seconds of delay during the a.m. peak hour, and LOS F with 11,383.4 seconds of delay during the p.m. peak hour.

Source: KDA 2023

Notes: LOS = Level of Service. Delay is measured in seconds per vehicle.
NB = northbound, WB = westbound, SB = southbound, EB = eastbound
St = Street, Ave = Avenue, Blvd = Boulevard

As shown in Table 3.12-7, both the intersection of Oroville Dam Boulevard and 20th Street/Larkin Road and the intersection of Oroville Dam Boulevard and 18th Street would meet signal warrants under Cumulative No Project conditions. Signalization was considered to improve LOS at these intersections. However, signalization is considered to be infeasible because of:

- the relatively high traffic volumes on the westbound-to-southbound left-turn movement at the intersection of Oroville Dam Boulevard and 20th Street/Larkin Road, and
- the short space between the intersection of Oroville Dam Boulevard and 20th Street/Larkin Road and the intersection of Oroville Dam Boulevard and 18th Street.

The relatively high traffic volumes on the left-turn movement would require substantial vehicle storage for the queuing. The short spacing between the two intersections would prevent construction of adequate vehicle storage. The lack of adequate vehicle storage would result in queuing from the intersection of Oroville Dam Boulevard and 20th Street/Larkin Road interfering with the operation of the intersection of Oroville Dam Boulevard and 18th Street.

Installation of All-Way Stop-Control (AWSC) at the intersection of Oroville Dam Boulevard and 20th Street/Larkin Road and the intersection of Oroville Dam Boulevard and 18th Street was also considered. As described above for signalization, the problem of relatively high traffic volumes on the westbound-to-southbound left-turn movement at the intersection of Oroville Dam Boulevard and 20th Street/Larkin Road, and the short spacing between the intersection of Oroville Dam Boulevard and 20th Street/Larkin Road and the intersection of Oroville Dam Boulevard and 18th Street also would be present with AWSC. Construction of adequate vehicle storage for the queuing from the intersection of Oroville Dam Boulevard and 20th Street/Larkin Road would not be possible. As a result, installation of AWSC is also considered to be infeasible.

The TIS recommended the installation of a paired roundabout at the intersection of Oroville Dam Boulevard and 20th Street/Larkin Road and the intersection of Oroville Dam Boulevard and 18th Street. LOS at the intersection of Oroville Dam Boulevard and 20th Street/Larkin Road and the intersection of Oroville Dam Boulevard and 18th Street would be acceptable under Cumulative No Project conditions with implementation of the paired roundabout. This roadway improvement is considered necessary regardless of whether the Proposed Project were to be developed.

3.12.6.3 Cumulative Impacts and Mitigation Measures

Impact TR-4	Would the project, when considered with existing, proposed, planned, and approved development in the region, implementation of the proposed project would contribute to cumulative traffic volumes on local roadways that result in significant impacts to level of service and operations?
Impact Determination	Cumulatively Considerable and Significant and Unavoidable
<i>Threshold</i>	<i>Cumulatively contribute to cumulative traffic volumes on local roadways that result in significant impacts to level of service and operations.</i>

Impact Discussion

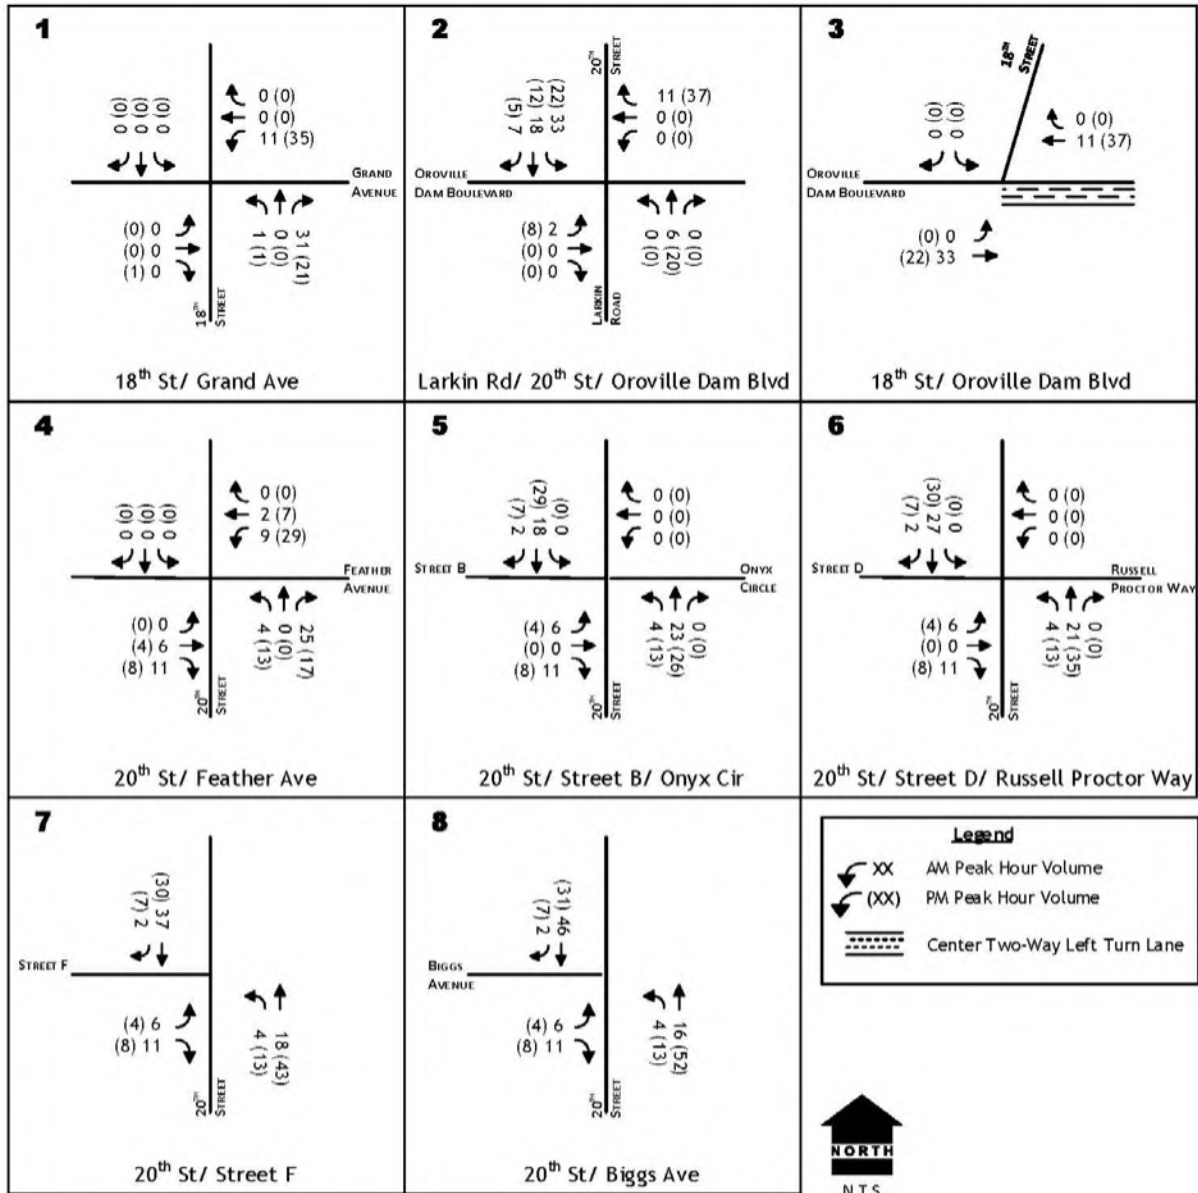

The analysis of Cumulative Plus Project conditions describes long-term future traffic operations assuming future development of planned land uses throughout the City of Oroville and Butte County, and also development of the Feather Ranch Project. Comparing traffic operations under Cumulative Plus Project conditions to traffic operations under Cumulative No Project conditions allows an identification of the long-term Project-related effects of the Proposed Project.

The development of the Feather Ranch Project would result in vehicle traffic to and from the Project Site. Methods used to estimate Project-related travel have been previously described in the Existing Plus Project Conditions section. Figure 3.12-6 displays the Project-related only traffic volumes for each study intersection in the a.m. and p.m. peak hours under long-term future Cumulative background conditions. Development of forecasts of future year background traffic volumes has been previously described in the Cumulative No Project Conditions. Cumulative Plus Project traffic volumes were calculated by adding Project-related-only traffic volumes under long-term future Cumulative conditions to Cumulative No Project background traffic volumes. Figure 3.12-7 displays the resulting Cumulative Plus Project traffic volumes anticipated for each study intersection in the peak hours.

Intersection Levels Of Service

Table 3.12-8 presents the a.m. and p.m. peak hour LOS' at each study intersection under Cumulative Plus Project conditions. The worksheets presenting the calculation of LOS are included in the technical appendix of the TIS.

Traffic volumes under Cumulative Plus Project conditions would be generally higher than under Cumulative No Project conditions and, as a result, vehicle delay under Cumulative Plus Project conditions would be higher than under Cumulative No Project conditions.

Figure 3.12-7. Cumulative Plus Project Traffic Volumes and Lane Configuration

Under Cumulative Plus Project conditions, six of the eight study intersections would operate at acceptable LOS B or better during both the a.m. and the p.m. peak hours and would be consistent with General Plan policy on LOS. No improvements are needed at these intersections to achieve acceptable LOS.

Under Cumulative Plus Project conditions, two study intersections would operate at unacceptable LOS, which is considered to be inconsistent with the General Plan policy on LOS.

- At the intersection of Oroville Dam Boulevard and 20th Street, overall intersection LOS would be F during the a.m. peak hour. The northbound approach to this intersection would operate at LOS E with 49.9 seconds of delay during the p.m. peak hour. The southbound approach would operate at LOS F with 4,424.4 seconds of delay during the a.m. peak hour, and LOS F with 61.0 seconds of delay during the p.m. peak hour.
- At the intersection of Oroville Dam Boulevard & 18th Street, the southbound approach would operate at LOS E with 43.7 seconds of delay during the a.m. peak hour.

As shown in Table 3.12-8, both the intersection of Oroville Dam Boulevard and 20th Street/Larkin Road and the intersection of Oroville Dam Boulevard and 18th Street would meet signal warrants under Cumulative Plus Project conditions. To improve LOS at these intersections, both signalization and AWSC were considered. However, both signalization and AWSC are considered to be infeasible. A description of the reasons signalization and AWSC are considered infeasible is presented previously under Cumulative No Project Conditions.

Notes: LOS = Level of Service. Delay is measured in seconds per vehicle.

NB = northbound, WB = westbound, SB = southbound, EB = eastbound

St = Street, Ave = Avenue, Blvd = Boulevard

LOS at the intersection of Oroville Dam Boulevard and 20th Street/Larkin Road and the intersection of Oroville Dam Boulevard and 18th Street would be acceptable under Cumulative Plus Project conditions with implementation of the TIS-recommended improvement to these intersections of a paired roundabout. Since the Project would add additional traffic to the area and affect these intersections,

substantially resulting in an LOS that is inconsistent and in conflict with the 2030 General Plan Policy P2.1, mitigation for the Project’s impact is required under cumulative conditions. However, as discussed previously, as of July 1, 2020, LOS cannot be used as a determining factor in traffic impacts. As such, inconsistency with LOS policies is not an environmental impact and mitigation for this inconsistency is not required. However, the TIS provides recommendations for improving the LOS at the Oroville Dam Boulevard and 20th Street/Larkin Road intersection and the Oroville Dam Road/18th Street intersection as follows:

Recommended Improvement Traf-5: Install a Paired Roundabout at the Intersection of Oroville Dam Boulevard & 20th Street / Larkin Road and the Intersection of Oroville Dam Boulevard & 18th Street.

Under Cumulative Plus Project conditions, a paired roundabout should be installed at the intersection of Oroville Dam Boulevard and 20th Street/Larkin Road and the intersection of Oroville Dam Boulevard and 18th Street. This is the same improvement recommended for these two intersections under Cumulative No Project conditions.

Table 3.12- 9 shows that the Oroville Dam Boulevard and 20th Street and the intersection and the Oroville Dam Boulevard and 18th Street intersection would operate at acceptable LOS B with the TIS-recommended improvement.

Mitigation Measures

Implement Mitigation Measures TR-1, TR-2, and TR-3.

Residual Impact After Mitigation

As noted previously, development of the Project Site would be expected to generate VMT at 140 to 145 percent of the baseline City of Oroville average. Mitigating VMT to a level that would be less than 85 percent of the baseline level would require a reduction of approximately 40 percent from pre-mitigation levels (1-[0.85÷1.45]=0.414). While mitigation measures TR-1, TR-2, and TR-3 would reduce the impact of the Project on VMT, implementation of mitigation measures needed to achieve a 40 percent reduction is not considered feasible. As a result, under cumulative conditions, even with implementation of Mitigation Measures TR-1, TR-2, and TR-3, the impact of the Feather Ranch Project on VMT would be cumulatively considerable and significant and unavoidable.

3.13 Tribal Cultural Resources

This section describes the affected environment and regulatory setting for TCRs in the Project Area. The following analysis of the potential environmental impacts related to TCRs is derived primarily from the *Cultural Resources Inventory Report for the Feather Ranch Project* prepared by ECORP Consulting, Inc. (2022). The information provided below summarizes this report. The reader is also referred to Section 3.4 Cultural Resources, which provides additional information on Native American pre-contact and historic information.

3.13.1 Environmental Setting

3.13.1.1 Ethnography

When European-Americans first arrived in the region, Indigenous groups speaking more than 100 different languages and occupying a variety of ecological settings inhabited California. Archaeologists recognized the uniqueness of California's Indigenous groups and classified them as belonging to the California culture area. California was subdivided by these archaeologists into four subculture areas: Northwestern, Northeastern, Southern, and Central. The Central area encompasses the current Project Area and includes the Maidu and Konkow.

The current Project Area falls within the ethnographic tribal territory of the Maidu, located in the lower foothills of the western slopes of the Sierra Nevada and in the periphery of the Northern Sacramento Valley. The Maidu, on the basis of cultural and linguistic differences, have been differentiated into three major related divisions (ECORP 2022): the Northeastern (Mountain Maidu), Northwestern (Konkow), and Southern (Nisenan). Because many believe the Mountain Maidu and Konkow to be so closely related, ethnographers tended to group them as one.

The Konkow occupied territory located immediately adjacent and to the southwest of the Mountain Maidu, along the Feather and Sacramento rivers, to their southern boundary at the Sutter Buttes. The Konkow were primarily located in the lower elevations of the Sierra Nevada and along the valley floor. Tribal territories adjacent to the Maidu and Konkow included the Atsugewi and Yana to the north, the Nomlaki and Patwin to the west, Paiute and Washoe to the east, and the Nisenan to the south.

The Maidu and Konkow languages and associated dialects are members of the Maidu language family of the California Penutian Linguistic Stock. Unlike the Maidu, whose dialects were unique to each of the four major regions of occupation, the Konkow spoke a large number of dialects, with each settlement area supporting more than one dialect (Shipley 1978). The Konkow called themselves ko'yo-mkawi, or *meadowland* (ECORP 2022).

Settlement patterns of the Maidu and Konkow were seasonal in nature. The Konkow inhabited a savanna-like habitat on the valley floor and in the lower elevations of the Sierra Nevada foothills. Resources exploited in this environment include wild rye, pine nuts, acorns, fish, and invertebrates (ECORP 2022). Summer hunting trips into the mountains provided deer meat, skins, and other items for food, clothing, and shelter for the winter months.

The village community was the primary settlement type among the Maidu and consisted of three to five small villages, each composed of about 35 members. Among the Mountain Maidu, village communities were well-defined and based on geography. In contrast, the Konkow were dispersed throughout the valley floor along river canyons and, as a result, village communities were less concentrated or definable. In terms of permanent occupation sites, both groups preferred slightly elevated locations that provided visibility of the surrounding area and were away from the water-laden marshes and meadows (ECORP 2022). The Mechoopda Village, formerly located near downtown Chico, was home to many Maidu well into historical times.

Among the villages, the male occupant of the largest kum, or semi-subterranean earth-covered lodge, governed the community. Two other types of ethnographically documented structures in use included the winter-occupied conical bark structure and the summer shade shelter (ECORP 2022).

Clothing, accessories, and other personal items were manufactured using elaborate basket-weaving techniques, shell and bone ornamenting, and by incorporating feathers, game skins, plant roots, and stems into objects. Shell, in the form of beads for currency or as valuable jewelry, was very desirable and was exchanged for food, obsidian, tobacco, and pigments. Contact between the Maidu and Western culture was initiated as early as 1808 by Spanish explorers and fur trappers. The effects of the introduction of new diseases notwithstanding, native cultures remained essentially unchanged until after the discovery of gold at Coloma in 1848. An outbreak of malaria in 1833, the 1848 Gold Rush, and subsequent massacre of Native Americans resulted in an upset of the ecological and social balance of local Native societies. As a direct result, aboriginal populations plummeted from 8,000 in 1846 to only 900 in 1910 (ECORP 2022).

In 1855, the U.S. Congress authorized treaties to set aside reservation lands for Native Americans, after which some Konkow were relocated to the Nome Lackee reservation in present-day Tehama County. Descendants of the Maidu and Konkow have revitalized their ancestral heritage and have dissociated into the Enterprise, Berry Creek, and Mooretown rancherias in Oroville; the Mechoopda Indian Tribe in Chico; the United Maidu Nation and Susanville Rancheria in Susanville; and the Greenville Rancheria in Plumas County.

3.13.2 Known Tribal Cultural Resources in the Project Area

Existing NEIC records document that all of the Project Site has been subjected to prior archeological investigation. Per the NEIC records, no prehistoric or historic era sites have been documented in the Project site (ECORP 2022). Additionally, The City of Oroville notified the 14 Tribes of the Proposed Project on August 18, 2022. One of these Tribes, Mooretown Rancheria, replied and has indicated that there were known TCRs on the Project Site.

3.13.3 Regulatory Framework

3.13.3.1 Federal

National Historic Preservation Act

The NHPA) requires that the federal government list significant historic resources on the NRHP, which is the nation's master inventory of known historic resources. The NRHP is administered by the NPS and includes listings of buildings, structures, sites, objects, and districts that possess historic, architectural, engineering, archaeological, or cultural significance at the national, state, or local level.

Structures, sites, buildings, districts, and objects over 50 years of age can be listed in the NRHP as significant historic resources. However, properties under 50 years of age that are of exceptional importance or are contributors to a historic district can also be included in the NRHP.¹ The criteria for listing in the NRHP include resources that:

- a) are associated with events that have made a significant contribution to the broad patterns of history;
- b) are associated with the lives of persons significant in our past;
- c) embody the distinctive characteristics of a type, period, or method of construction, or that represent the work of a master, or that possess high artistic values, or that represent a significant and distinguishable entity whose components may lack individual distinction; or
- d) have yielded or may likely yield information important in prehistory or history.

Additionally, the NRHP guidelines describe a type of cultural significance for which properties may be eligible for inclusion in the NRHP. A property with traditional cultural significance will be found eligible for the NRHP because it is associated with cultural practices or beliefs of a living community that:

- a) are rooted in that community's history, and
- b) are important in maintaining the continuity of the cultural identity of the community.

This type of significance is grounded in the cultural patterns of thought and behavior of a living community and refers specifically to the association between their cultural traditions and a historic property.

3.13.3.2 State

Assembly Bill 52

Effective July 1, 2015, AB 52 amended CEQA to require that:

¹ A [historic] district possesses a significant concentration, linkage, or continuity of sites, buildings, structures, or objects united historically or aesthetically by plan or physical development (ECORP 2022).

1. a lead agency provide notice to those California Native American tribes that requested notice of projects proposed by the lead agency; and
2. for any tribe that responded to the notice within 30 days of receipt with a request for consultation, the lead agency must consult with the tribe.

Topics that may be addressed during consultation include TCRs, the potential significance of project impacts, type of environmental document that should be prepared, and possible mitigation measures and Project alternatives.

Pursuant to AB 52, Section 21073 of the Public Resources Code defines California Native American tribes as “a Native American tribe located in California that is on the contact list maintained by the NAHC for the purposes of Chapter 905 of the Statutes of 2004.” This includes both federally and non-federally recognized tribes.

Section 21074(a) of the Public Resource Code defines TCRs for the purpose of CEQA as:

- 1) Sites, features, places, cultural landscapes (geographically defined in terms of the size and scope), sacred places, and objects with cultural value to a California Native American tribe that are either of the following:
 - a. included or determined to be eligible for inclusion in the California Register of Historical Resources; and/or
 - b. included in a local register of historical resources as defined in subdivision (k) of Section 5020.1; and/or
 - c. a resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Section 5024.1. In applying the criteria set forth in subdivision (c) of Section 5024.1 for the purposes of this paragraph, the lead agency shall consider the significance of the resource to a California Native American tribe.

Because criteria a and b also meet the definition of a Historical Resource under CEQA, a TCR may also require additional consideration as a Historical Resource. TCRs may or may not exhibit archaeological, cultural, or physical indicators.

Recognizing that California tribes are experts in their tribal cultural resources and heritage, AB 52 requires that CEQA lead agencies provide tribes that requested notification an opportunity to consult at the commencement of the CEQA process to identify TCRs. Furthermore, because a significant effect on a TCR is considered a significant impact on the environment under CEQA, consultation is used to develop appropriate avoidance, impact minimization, and mitigation measures.

In accordance with Section 21082.3(c)(1) of the PRC,

“... information, including, but not limited to, the location, description, and use of the tribal cultural resources, that is submitted by a California Native American tribe during the environmental review process shall not be included in the environmental document or otherwise disclosed by the lead agency or any other public agency to the public,

consistent with subdivision (r) of Section 6254 of, and Section 6254.10 of, the Government Code, and subdivision (d) of Section 15120 of Title 14 of the CCR, without the prior consent of the tribe that provided the information.”

Therefore, the details of Tribal consultation summarized herein are provided in a confidential administrative record and not available for public disclosure without written permission from the tribes.

3.13.3.3 Local

Oroville 2015 General Plan

The Open Space, Natural Resources, and Conservation Element of the Oroville General Plan, adopted in 2015, is dedicated to preserving and improving the quantity, quality, and character of open space in Oroville. The Element includes Section H, which addresses cultural resources in the City. Cultural resources in Oroville include both prehistoric and historic resources in the realms of archaeology, paleontology and historic structures, sites and areas that played important roles in local history. The following goals and policies from the Cultural Resources section of the Element pertain to Project development:

Goal OPS-14: Preserve Oroville’s cultural resources, including archaeological, historic and paleontological resources, for their aesthetic, scientific, educational and cultural values.

Policies

- P14.1: Require consultation with the Northeast Information Center of the California Historical Resources Information System and completion of a records search as part of review of proposed development projects to determine whether the project site contains known prehistoric or historic cultural resources and/or to determine the potential for discovery of additional cultural resources and the necessity of further investigation.*
- P14.2: Require applicants for projects identified by the Northeast Information Center as potentially affecting cultural resource sites or in need of further investigation to hire a consulting archaeologist or historian (as applicable) to conduct inventory and evaluation studies and develop a cultural resources mitigation plan and monitor the project to ensure that mitigation measures are implemented, as necessary.*
- P14.3: Require that areas found during construction to contain significant historic or prehistoric archaeological artifacts be examined by a qualified consulting archaeologist or historian for appropriate protection and preservation. Require that historic or prehistoric artifacts found during construction be examined by a qualified consulting archaeologist or historian to determine their significance and develop appropriate protection and preservation measures as necessary.*
- P14.7: If cultural resources, including archaeological or paleontological resources, are uncovered during grading or other on-site excavation activities, construction shall stop until appropriate mitigation is implemented.*
- P14.8: If human remains are located during any ground disturbing activity, work shall stop until the County Coroner has been contacted, and, if the human remains*

are determined to be of Native American origin, the NAHC and most likely descendant have been consulted.

P14.9: *Encourage development to avoid impacts to burial sites including:*

- *Designing or clustering development to avoid archaeological deposits that typically contain human remains and to avoid any known cemeteries or other concentrations of human remains.*
- *Dedicating permanent conservation easements if subdivisions and other developments can be planned to provide for such protective easements.*

3.13.4 Environmental Impacts

3.13.4.1 Thresholds of Significance

Following Appendix G of the CEQA Guidelines, TCR impacts are considered to be significant if the Project would result in any of the following:

1. Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in PRC § 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:
 - a. Listed or eligible for listing in the CRHR, or in a local register of historical resources as defined in PRC § 5020.1(k), or
 - b. A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of PRC § 5024.1. In applying the criteria set forth in subdivision (c) of PRC § 5024.1, the lead agency shall consider the significance of the resource to a California Native American Tribe?

3.13.4.2 Methods of Analysis

As a part of the Cultural Resources Inventory Report, ECORP requested a records search for the property at the NEIC of the CHRIS at California State University, Chico on February 15, 2022. The purpose of the records search was to determine the extent of previous surveys within a 0.5-mile (800-meter) radius of the Proposed Project location, and whether previously documented pre-contact or historic archaeological sites, architectural resources, or traditional cultural properties exist within this area. The records search was completed by NEIC staff and returned to ECORP on March 10, 2022. In addition to the official records and maps for archaeological sites and surveys in Butte County, the following historic references were also reviewed: Built Environment Resource Directory; Historic Property Data File for Butte County; The National Register Information System; California Historical Landmarks; California Historical Landmarks; California Points of Historical Interest; Directory of Properties in the Historical Resources Inventory; Caltrans Local Bridge Survey; Caltrans State Bridge Survey; and Historic Spots in California.

Other references examined include a RealQuest Property Search and historic GLO land patent records. Historic maps reviewed include the following:

- 1856 BLM GLO Plat map for Township 19 North Range 3 East;
- 1891 USGS Chico, California topographic quadrangle map (1:250,000 scale);
- 1912 USGS Oroville, California topographic quadrangle map (1:31,680 scale);
- 1944 USGS Oroville, California topographic quadrangle map (1:62,500 scale);
- 1949 USGS Oroville, California topographic quadrangle map (1:62,500 scale); and
- 1970 (1973 edition) USGS Oroville, California topographic quadrangle map (1:24,000 scale).

ECORP reviewed historic aerial photos taken in 1952 and 1969 and more recent aeriels from 1984, 1998, 2005, 2009, 2010, 2021, 2014, 2016, and 2018 for any indications of property usage and built environment. ECORP attempted a search within a local historical registry, but no such registry was available for Oroville.

Sacred Lands File Coordination Methods

In addition to the records search, ECORP contacted the California NAHC on February 16, 2022 to request a search of the Sacred Lands File for the Project Area. This search determines whether the California Native American tribes within the Project Area have recorded Sacred Lands, because the Sacred Lands File is populated by members of the Native American community with knowledge about the locations of Tribal resources. In requesting a search of the Sacred Lands File (SLF), ECORP solicited information from the Native American community regarding TCRs, but the responsibility to formally consult with the Native American community lies exclusively with the federal and local agencies under applicable state and federal laws. The results from the NAHC SLF search indicated a *positive* result for cultural resources on the Project Site. The response letter recommended the City contact the local tribes in the Project Vicinity to seek Tribal consultation. The City of Oroville has requested Tribal consultation from 14 local tribes in the area, with one response received. On August 25, 2022, the Mooretown Rancheria responded to the City's request for consultation indicating they were unaware of any known TCR's on the Project Site.

Other Interested Party Consultation Methods

ECORP mailed letters to the Butte County Historical Society on February 16, 2022 to solicit comments or obtain historical information that the repository might have regarding events, people, or resources of historical significance in the area.

Field Methods

ECORP subjected the Project Area to an intensive pedestrian survey on March 18, 2022 under the guidance of the *Secretary of the Interior's Standards for the Identification of Historic Properties* (ECORP 2022) using 15-meter transects. ECORP spent one person-day in the field. During the survey, ECORP archaeologists examined the ground surface for indications of surface or subsurface cultural resources. The archaeologists inspected the general morphological characteristics of the ground surface for indications of subsurface deposits that may be manifested on the surface, such as circular depressions or

ditches. Whenever possible, the archaeologists examined the locations of subsurface exposures caused by factors such as rodent activity, water or soil erosion, or vegetation disturbances for artifacts or for indications of buried deposits. No subsurface investigations or artifact collections were undertaken during the pedestrian survey.

3.13.5 Project Impacts and Mitigation Measures

Impact TCR-1	Project implementation would cause a substantial adverse change in the significance of a Tribal Cultural Resource
Impact Determination	Less than Significant with Mitigation
<i>Threshold</i>	<p><i>Would the project cause a substantial adverse change in the significance of a tribal cultural resource, defined in Public Resources Code Section 21074 as either a site, feature, place, cultural landscape that is geographically defined in terms of the size and scope of the landscape, sacred place, or object with cultural value to a California Native American tribe, and that is:</i></p> <ul style="list-style-type: none"> • <i>Listed or eligible for listing in the California Register of Historical Resources, or in a local register of historical resources as defined in Public Resources Code Section 5020.1(k), or</i> • <i>A resource determined by the lead agency, in its discretion and supported by substantial evidence, to be significant pursuant to criteria set forth in subdivision (c) of Public Resources Code Section 5024.1. In applying the criteria set forth in subdivision (c) of Public Resources Code Section 5024.1, the lead agency shall consider the significance of the resource to a California Native American Tribe?</i>

Impact Discussion

Based on the results of the records search and literature review, all of the property has been surveyed for cultural resources and according to the NAHC response letter dating May 4, 2022, the SLF search was *positive* for cultural resources in the Project Area. The City of Oroville contacted the 14 tribes on the list supplied by the NAHC. On August 25, 2022, the City received a response from one of the 14 tribes, the Mooretown Rancheria, indicating that the were unaware of any known TCRs on the Project Site. There exists a low to moderate potential for buried pre-contact archaeological sites in the Project Area due to its proximity to the Feather River, which is 1.6 miles to the east. Pre-contact archaeological sites are likely to be located along such perennial waterways. There was an unnamed creek or ephemeral drainage adjacent to the Project Area, depicted on 1890s maps; therefore, there is a low to moderate potential for encountering intact buried deposits within the Project Area. In addition, the Thermalito Forebay and

Oroville Dam was constructed north of the Project Area in the 1960s and changed the hydrology of the local waterways.

ECORP conducted the pedestrian survey on March 17, 2022 and observed that the land within the Project Area has been lightly utilized throughout the years. The Project Area contained gently rolling terrain west of 20th Street with overgrown grasses and weeds ranging from 1 to 2 feet tall. Overall, the surface visibility throughout the APE was poor to fair due primarily to the overgrown grasses and some exposed soil. The average surface visibility was 10 to 30 percent in most areas. Modern dirt access roads and fire breaks are present along the peripheries of the Project Area.

ECORP inspected rodent burrows and back dirt piles throughout the APE; however, they did not identify cultural materials or evidence of habitation from the exposed soil. As a result of the field survey and Tribal consultation, no resources were identified within the Project Area. Therefore, no known Historic Properties under Section 106 of the NHPA or Historical Resources under CEQA will be affected by the Proposed Project. However, until the lead agencies concur with the identification and evaluation of eligibility of cultural resources, no Project activity should occur.

There always remains the potential for ground-disturbing activities to expose previously unrecorded cultural resources. Both CEQA and Section 106 of the NHPA require the lead agency to address any unanticipated cultural resource discoveries during Project construction. Therefore, Mitigation Measure CUL-1 has been included to reduce the potential impact to historical resources to be less than significant with mitigation incorporated.

Mitigation Measures

Implementation of Mitigation Measure CUL-1.

Residual Impact After Mitigation

Impacts would be less than significant after mitigation.

3.13.6 Cumulative Setting, Impacts, and Mitigation Measures

3.13.6.1 Cumulative Setting

Section 3.0 provides the baseline for cumulative setting and is based on General Plan projections. While this is helpful for cultural resources cumulative impacts, it does not necessarily provide a specific cumulative impact setting for these resources as the impacts to these resources are generally more site-specific. Therefore, the cumulative setting for TCRs includes the Project Site as well as the remaining undeveloped areas surrounding the Project Site where the impacts of urbanization and potential for impacts to cultural resources are considered most serious. Cumulative impacts on TCRs are primarily the result of the area's urbanization and conversion of undisturbed land to urban use. Developments and planned land uses, including the Proposed Project, would cumulatively contribute to impacts to known and unknown TCRs in the area. As previously discussed, Section 3.13.1 Environmental Setting provides an overview of TCRs and the history of the region.

3.13.6.2 Cumulative Impacts and Mitigation Measures

Impact TCR-2	Would Implementation of the proposed project, along with any foreseeable development in the project vicinity, could result in cumulative impacts to tribal cultural resources?
Impact Determination	Less than Cumulatively Considerable
Threshold	Result in cumulative impacts to tribal cultural resources.

Impact Discussion

As mitigated, TCRs impacts associated with the Project will be reduced to a less than significant level. While it is possible that grading and development will result in the discovery of unknown resources, mitigation measures and state and federal laws already in place will set in motion actions designed to mitigate these potential impacts. The Project is adjacent to existing relatively sparse residential and commercial developments. Future development of the area may also affect TCRs. However, mitigation proposed in this section, and existing federal and state laws would reduce the Project’s potential cultural resources impacts to a less than significant level. Additionally, The City of Oroville notified 14 local tribes in the area of the Proposed Project on February 15, 2022. None of these tribes has indicated that there were known TCRs on the Project Site. Therefore, the Project’s impact is considered less than cumulatively considerable.

Cumulative Mitigation Measures

None required.

3.14 Utilities and Service Systems

This section describes the environmental setting for utilities and service systems, including the existing site conditions, regulatory setting, the impacts on utilities and service systems that would result from the Proposed Project, and the mitigation measures that would reduce these impacts. This section does not further address impacts found to be less than significant in the IS prepared for this Project (Appendix 1.0). These impact areas include the following:

- Require or result in the relocation or construction of new or expanded water, or storm water drainage, electric power, natural gas, or telecommunications facilities. Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities.
- Have sufficient water supplies available to serve the project and reasonably foreseeable future development during normal, dry and multiple dry years.
- Generate solid waste in excess of State or local standards, or in excess of the capacity of local infrastructure, or otherwise impair the attainment of solid waste reduction goals.

Through the IS analysis, it was determined that the Project may have an impact to wastewater treatment capacity and collection facilities. Additionally, comments received during the public review period for the IS resulted in the need to reexamine the Project's impact on storm water drainage facilities. As such, both of these areas are discussed in the following analysis. Refer to Appendix 1.0 and Section 3.0 of this DEIR for additional details on issues eliminated from further review in this DEIR.

3.14.1 Environmental Setting

3.14.1.1 Wastewater Services

The City of Oroville and the Planning Area are served by three wastewater collection agencies: the City of Oroville, TWSD, and the Lake Oroville Area Public Utility District. These three agencies have a Joint Powers Agreement with the Sewerage Commission-Oroville Region (SC-OR) to handle wastewater treatment and disposal (City of Oroville 2015a).

The Project Site is within the TWSD service area for wastewater collection. Developers are required to either upgrade existing infrastructure or install new infrastructure for new development within TWSD's SOI. TWSD provides wastewater collection services to approximately 1,985 customers or approximately 2,650 Equivalent Dwelling Units. Wastewater dry weather flows average 0.41 million gallons per day (mgd) presently and are expected to grow to 0.67 mgd within the next 20 years. Monthly instantaneous Peak Wet Weather Flows are 4 mgd. TWSD's collection system consists of 40 miles of sanitary sewer line with approximately 560 utility access holes and is generally in adequate condition. TWSD's collection system discharges into the SC-OR west interceptor pipe for treatment at their plant. On average, dry weather flows are at approximately 30 percent capacity and wet weather flows are at approximately 70 to 80 percent capacity. The system experiences the highest level of inflow and infiltration impact at the east

trunk line DURING extreme wet weather events. The east trunk line has almost overflowed during rainy days during major storm events. (City of Oroville 2015a).

SC-OR is responsible for the operation and maintenance of the wastewater treatment plant and three interceptor lines (or trunk lines) that collect wastewater discharges from the three member entities. Additionally, SC-OR is responsible for meeting the pollution discharge and water quality standard defined by the federal NPDES permit and State Regional Water Quality Waste Discharge Requirements.

SC-OR provides sewerage service for the City of Oroville, Lake Oroville Area Public Utility District, and TWSD, serving a population of approximately 40,855. The permitted average dry weather flow capacity of the SC-OR Wastewater Treatment Facility (WTF) is 6.5 mgd (RWQCB 2021). Based on the SC-OR Monthly Flows Report, the average daily wastewater flow at the treatment facility was 2.77 mgd in 2021. TWSD accounted for approximately, 0.507 mgd of this amount (SC-OR 2022). The highest daily wastewater flows during 2021 was 4.417 mgd, in December, leaving a surplus capacity of approximately 2.08 mgd under average dry weather flow (SC-OR 2021).

To plan for future growth, SC-OR recently completed a master plan, which provides for growth in Oroville over the next 20+ years. The plan calls for a \$45,000,000 modification to be completed as growth occurs and as new environmental regulations are imposed. New users will pay for plant expansions via connection fees, while plant modifications required by new regulations will be paid for by existing ratepayers using State Revolving Fund loans or bonds (SC-OR 2022).

The Proposed Project Site is currently vacant with no wastewater service infrastructure. The Project would construct internal sewage infrastructure to accommodate the increase in sewage associated with the residential units proposed. Each building onsite would consist of an underground sewer lateral, all connecting to a site-specific sewer main, prior to connecting to the existing sanitary sewer main within 20th Street, immediately east of the Project Site.

3.14.1.2 Storm Drainage

The City of Oroville currently maintains approximately 60 miles of storm water drainage pipes and trenches, thousands of utility access holes and drop inlets, plus six regional detention basins. Storm water drainage infrastructure is essential to the safety of Oroville's citizens and their property. The City's storm water infrastructure is designed and engineered to protect residents in the occurrence of an extreme hydrologic event or more commonly known as a 100-year storm event (City of Oroville 2022b).

Information provided by the Butte County Department of Public Works in response to the IS public review indicate that the Project is located within the 2007 Thermalito Master Drainage Plan (TMDP, Butte County 2009). The TMDP provides drainage information in the Project Area including a consistent area-wide analysis. According to the TMDP, the Project Site is located in area FA-06 of the Fresno Avenue Fork watershed, which is next to the Ruddy Creek watershed. Area FA-06 covers approximately 63.5 acres. The Fresno Avenue Fork, Ruddy Creek (A-4) drainage basin is generally west of 18th Street and mainly south of Grand Avenue. Drainage from this 420-acre basin joins the other forks of Ruddy Creek south of Fresno Avenue near 18th Street. The basin has newer high-density residential development (Butte County 2009). The TMDP includes areas of deficiencies within the exiting drainage system of the Fresno Avenue Fork,

Ruddy Creek (A-4) drainage basin and projects and estimated costs to remove these deficiencies. Projects in the Fresno Avenue Fork include improvements to the culvert under 18th Street near the intersection of 18th Street and Oro Dam Boulevard, and increasing conveyance in channels north and east of the intersection of Grand Avenue and 21st Street (Butte County 2009).

3.14.2 Regulatory Setting

3.14.2.1 Local

City of Oroville 2030 General Plan

The Oroville 2030 General Plan contains numerous policies regarding wastewater collection and treatment. All new development would be required to comply with the General Plan Public Facilities and Services Element policies. Goals and policies related to wastewater and stormwater drainage and applicable to the proposed residential development are as follows:

Goal PUB-7: Collect, treat and dispose of wastewater in ways that are safe, sanitary, environmentally acceptable, and financially sound.

- P6.10: Encourage the use of drought-resistant landscaping and the use of reclaimed wastewater for agriculture and landscape irrigation supply water. Ensure that all reclaimed wastewater complies with State wastewater treatment and reclamation regulations and standards.*
- P7.3: Require all development that is in areas that are currently served or could be feasibly served by sewers to be connected to a sewer conveying wastewater to the Sewerage Commission – Oroville Region’s (SC-OR) treatment plant.*
- P7.4: The approval of new urban development shall be conditioned on the availability of adequate long-term capacity for wastewater conveyance, treatment and disposal sufficient to service the proposed development. The agencies that provide services to new development will be primarily responsible for making determinations regarding adequate availability.*
- P7.5: If downstream lines are determined by the City to be inadequate, the developer shall provide facilities to convey the additional sewage expected to be generated by the development. New development shall not be permitted until adequate facilities are available to convey the additional sewage associated with the development. The developer must demonstrate that adequate facilities will be available at the time of Final Map approval.*
- P7.10: Ensure that all new and repaired sewer collection and transmission systems are designed and constructed in such a manner as to minimize potential inflow and infiltration.*
- P7.11: Installation of sewer lines should occur concurrently with construction of new roadways to maximize efficiency and minimize disturbance from construction activity.*

Goal PUB-8: Collect, store, and dispose of stormwater in ways that are safe, sanitary, environmentally acceptable, and financially sound.

- P8.1: Use a site-specific stormwater drainage plan or the stormwater drainage master plan to be prepared under A8.1 to determine whether to require storm drainage analysis for projects within the Planning Area, and, if necessary, make storm drainage improvements a condition of development approval.*
- P8.3: Encourage the utilization of Best Engineering Practices for stormwater collection and disposal.*
- P8.4: Require local storm drainage improvements be built to carry appropriate design-year flows resulting from buildout of the General Plan. Design storm drainage facilities for 2-, 10-, and 100-year discharges.*
- P8.5: Require that developers pay their fair share for construction of off-site drainage improvements, as determined by a site-specific stormwater drainage plan or the stormwater drainage master plan to be prepared under A8.1.*
- P8.8: Offer site-specific drainage plans prepared by applicants for peer review prior to review and approval by City Council.*
- P8.9: Require installation of temporary drainage facilities as necessary during construction activities in order to adequately mitigate stormwater impacts.*
- P8.10: Require the installation of stormwater collection systems concurrently with construction of new roadways to maximize efficiency and minimize disturbance due to construction activity.*

3.14.3 Environmental Impacts

3.14.3.1 Thresholds of Significance

The following thresholds of significance are based on Appendix G to the CEQA Guidelines. For purposes of this EIR, implementation of the Proposed Project would be considered to have a significant adverse impact on wastewater utilities if it would result in any of the following:

Require or result in the relocation or construction of new or expanded water, wastewater treatment or storm water drainage, electric power, natural gas, or telecommunications facilities, the construction or relocation of which could cause significant environmental effects.

Result in a determination by the wastewater treatment provider which serves or may serve the project that it has adequate capacity to serve the project's projected demand in addition to the provider's existing commitments.

3.14.3.2 Methods of Analysis

3.14.3.3 Project Impacts and Mitigation Measures

Impact UTIL-1:	Project implementation could require or result in the relocation or construction of new or expanded wastewater treatment or storm drainage facilities, the construction or relocation of which could cause significant environmental effects.
Impact Determination:	Less than Significant
<i>Thresholds:</i>	<i>Significant adverse environmental effect caused by the requirement or resulting from the relocation or construction of new or expanded wastewater treatment or storm drainage facilities.</i>

Impact Discussion

Wastewater

The average wastewater per person per day for a typical home is estimated to be between 45 and 90 gpd with an average of 70 gpd based on U.S. standards for water usage and sewage strength (Pollution Control Systems, Inc. 2022). Using this information and the projected population of 430 residents for the Project, the average wastewater flow would be between 19,350 and 38,700 gpd with an average of 30,100 gpd (0.0301 mgd) from the Project. While this is an estimate, it does provide an indication of how much wastewater would be produced by the Project and if this wastewater can be accommodated by the SC-OR WTF.

The Proposed Project Site is currently vacant with no wastewater service infrastructure. The Project would construct internal wastewater infrastructure to accommodate the increase in sewage associated with the residential units. All future uses would connect to onsite underground sewer infrastructure, prior to connecting to the existing TWSD wastewater collection system within 20th Street, immediately east of the Project Site. TWSD confirmed in their letter to the Project, dated July 12, 2022, that TWSD is able to serve the Project (TWSD 2022).

TWSD provides sewer collection services to Project Site which is then treated at the SC-OR WTF. The permitted average dry weather flow capacity of the SC-OR WTF is 6.5 mgd (RWQCB 2021). Based on the SC-OR Monthly Flows Report, the average daily wastewater flow at the treatment facility was 2.77 mgd in 2021. TWSD accounted for approximately, 0.507 mgd of this amount (SC-OR 2022). The highest daily wastewater flows at the SC-OR facility during 2021 was 4.417 mgd in December, leaving a surplus capacity of approximately 2.08 mgd under average dry weather flow (SC-OR 2021). The Proposed Project is anticipated to increase wastewater flows and may affect the local collection and treatment system

facilities. However, the Project’s estimated wastewater between 19,350 and 38,700 gpd would not exceed the surplus capacity of 2.08 mgd at the SC-OR WTF.

Consistent with 2030 General Plan policies P7.3, P7.4 and P7.5, the Project is required to contribute to the implementation of system improvements to ensure wastewater collection and treatment facilities have sufficient capacity to serve the Project.

TWSD has determined that sewer collection service can be provided by TWSD. While it appears that SC-OR has adequate capacity at the WTF to serve the Project, because SC-OR requires a Capacity Impact Study as a part of a service agreement for a new project, this WTF capacity will be assured. These conditions, as well as 2030 General Plan policies P7.3, P7.4, and P7.5, will ensure that the Project can be served. As such, the Project would have a less than significant impact in this area.

Storm Drainage Facilities

Storm drainage improvements for the Project will include the installation of underground storm drain pipes and storm water leach trenches beneath the curb, gutter and sidewalk to detain and percolate additional runoff generated by the Project improvements. See Figures 2-5 through 2-8 for storm drain trench locations and detail. The storm drain trenches are approximately 15 feet wide and extend 7 feet below ground surface. The design includes perforated piping to direct storm water into the trenches. The trenches include a thickness of 7 feet of 2- to 4-inch cobbles, and a trench perimeter wrapping (top, sides and bottom) of geo fabric to eliminate fine particles. The Project storm drain system will connect to the existing City of Oroville storm drain facilities in 20th Street. The trenches are designed to capture Project-Site stormwater to allow the metering of storm water to not exceed the pre-development stormwater runoff level. As such, the Project would have a less than significant impact in this area.

Mitigation Measures

No mitigation measures are required.

Impact UTIL-2:	Project implementation could result in a determination by the wastewater treatment provider which serves or may serve the project that it has inadequate capacity to serve the project’s projected demand in addition to the provider’s existing commitments.
Impact Determination:	Less than Significant
Threshold:	<i>Inadequate capacity to serve the project’s projected demand in addition to the provider’s existing commitments.</i>

Impact Discussion

As discussed previously, TWSD provides sewer collection services to Project Site which is then treated at the SC-OR WTF.

As a part of a new project seeking service, SC-OR requires, a site-specific Capacity Impact Study. SC-OR has determined that this is necessary to provide for the orderly planning and construction of additional collection system capacity needed to serve a proposed development. If the Capacity Impact Study determines that facility capacity must be increased to accommodate the development, the developer will be required to negotiate a Mitigation Agreement with SC-OR that will describe tasks for the developer to complete to receive sewer service to the Project.

Consistent with 2030 General Plan policies P7.3, P7.4, and P7.5, the Project is required to contribute to the implementation of system improvements to ensure wastewater collection and treatment facilities have sufficient capacity to serve the Project.

TWSD has determined that sewer collection service can be provided by TWSD for the Project. While it appears that SC-OR has adequate capacity at the WTF to serve the Project, because SC-OR requires a Capacity Impact Study as a part of a service agreement for a new project, this WTF capacity will be assured. These conditions as well as 2030 General Plan policies P7.3, P7.4 and P7.5 will ensure that the wastewater treatment capacity is available. As such, the Project would have a less than significant impact in this area.

Mitigation Measures

No mitigation measures are required.

3.14.4 Cumulative Setting, Impacts, and Mitigation Measures

Section 3.0 provides the baseline for cumulative setting and is based on General Plan projections. These General Plan projections are developed, in part, from the existing land use designations identified in the General Plan. As shown in Table 3.2, the anticipated growth in the City is expected to result in 9,685 new housing units, 7,026,000 sf of new industrial uses, and 12,168,000 sf of new commercial uses within the existing City limits by 2030 (City of Oroville 2015a).

3.14.4.1 Cumulative Impacts and Mitigation Measures

Impact UTIL-3:	Would Implementation of the proposed project, along with any foreseeable development in the project vicinity, result in cumulative impacts to wastewater collection and treatment or storm drainage facilities or providers?
Impact Determination:	Less than Cumulatively Considerable
Threshold:	<i>Result in cumulative impacts to wastewater collection and treatment facilities or providers.</i>

Impact Discussion

As discussed in Impacts UTIL-1 and 2, the wastewater collection and treatment impacts associated with the Project would result in a less than significant impact. Because SC-OR requires a Capacity Impact Study

as a part of new project development, existing and future capabilities of the SC-OR WTF to treat wastewater can be determined prior to exceeding the WTF capacity. This, as well as 2030 General Plan policies P7.3, P7.4, and P7.5, will ensure that the wastewater collection and treatment capacity is available for any projects in the vicinity in the foreseeable future. Therefore, the Project's impact is considered less than cumulatively considerable.

3.14.4.2 Cumulative Mitigation Measures

None required.

4.0 OTHER REQUIRED CEQA ANALYSIS

This section discusses additional topics statutorily required by CEQA, including growth-inducing impacts, significant environmental effects that cannot be avoided if the Proposed Project is implemented, and, significant irreversible environmental changes.

4.1 Growth-Inducing Impacts

According to CEQA Guidelines Section 15126.2(e), a project may induce economic or population growth, or additional housing, either directly or indirectly, in a geographic area if it would foster economic or population growth, or the construction of additional housing, either directly or indirectly, in the surrounding environment. Included in this are projects that would remove obstacles to population growth, such as extensions or expansion of infrastructure. CEQA does not automatically consider growth inducement to be a significant, adverse impact. Typically, the growth-inducing potential of a project is considered to be significant if it fosters growth in excess of what is assumed in adopted planning document. In December 2019, the California OPR updated the growth inducement question in the CEQA IS (CEQA Guidelines Appendix G) to clarify that effects from substantial growth inducement would be significant if the impacts were *unplanned* (emphasis added).

The State CEQA Guidelines do not provide specific methods for evaluating growth inducement and state that growth in any area is not “necessarily beneficial, detrimental, or of little significance to the environment” (State CEQA Guidelines Section 15126.2[e]). CEQA does not require separate mitigation for growth inducement as it is assumed that these impacts are already captured in the analysis of environmental impacts (see Chapter 3.0). According to the State CEQA Guidelines, a project would have potential to induce growth if it would result in either of the following.

- Remove obstacles to unplanned population growth (e.g., through the expansion of public services into an area that does not currently receive these services), or through the provision of new access to an area, or a change in a restrictive zoning or general plan land use designation.
- Result in economic expansion and population growth through employment opportunities and/or construction of new housing.

4.2 Significant and Unavoidable Impacts

Section 15126.2(c) of the State CEQA Guidelines require that an EIR describe any significant impacts, including those that can be mitigated but not reduced to a less than significant level. Where there are impacts that cannot be alleviated without imposing an alternative design, their implications and the reasons why the project is being proposed, notwithstanding their effect, should also be described.

A significant and unavoidable impact is one that would cause a substantial adverse effect on the environment and for which no mitigation is available to reduce the impact to a less than significant level. Most of the impacts of the Proposed Project would be less than significant or would be mitigated to a less than significant level. The impacts summarized below are those that would remain significant and unavoidable after mitigation.

The Project would result in a significant and unavoidable safety hazard impact and a cumulatively considerable and significant and unavoidable safety hazard impact for people residing or working in the Project Area because the Project is located within the OMA B1 and B2 Compatibility Zones. The only mitigation possible would be to either eliminate the use of the airport or move the Project to a location outside of the B1 and B2 Compatibility Zones. Neither of these mitigations are feasible. As such, there is no feasible mitigation possible to mitigate the potential airport safety impacts.

The Project would result in a significant and unavoidable safety hazard impact and a cumulatively considerable and significant and unavoidable traffic noise impact. As shown in Table 3.9-9, the roadway segment of 20th Street between Biggs Avenue and Feather Avenue would experience an increase of more than 5.0 dBA CNEL over existing conditions, which is beyond the City of Oroville noise standard. Similarly, the segment of Feather Avenue east of 20th Street would also experience an increase of more than 5.0 dBA CNEL over existing conditions. There is no feasible mitigation available to reduce these impacts to less than significant. Lead agencies have limited remedies at their disposal to effectively reduce traffic-related noise. Addressing traffic noise at the receiver rather than the source usually takes the form of noise barriers (i.e., sound walls). While constructing noise barriers along streets would reduce noise, the placement of sound walls between existing residences/businesses and local roadways would not be desirable as it would conflict with the community's aesthetic, design and character and is therefore deemed infeasible. Furthermore, such barriers would likely require property owner approval, which cannot be ensured. While measures such as encouraging ridesharing, carpooling, and alternative modes of transportation could reduce vehicle volumes, such measures can neither be mandated of residents nor have been shown to reduce vehicle trips to the extent needed to reduce vehicle noise levels below established thresholds. Therefore, no feasible mitigation measures exist to reduce the identified significant impact.

The Project would also result in a significant and unavoidable impact related to VMT. Project would be expected to generate VMT at 140 to 145 percent of the baseline City of Oroville average. Mitigating VMT to a level which would be less than 85 percent of the baseline level would require a reduction of approximately 40 percent from pre-mitigation levels ($1 - [0.85 \div 1.45] = 0.414$). While the following measures would reduce the impact of the Project on VMT, implementation of measures needed to achieve a 40 percent reduction is not considered feasible. As a result, even with implementation of mitigation measures TR-1 through TR-4, the impact of the Feather Ranch Project on VMT is considered to be significant and unavoidable.

4.2.1 Significant and Irreversible Environmental Effects

Section 15126.2(d) of the State CEQA Guidelines requires that an EIR address any significant irreversible changes that would result from a Proposed Project. The State CEQA Guidelines describe three distinct categories of significant irreversible changes, including changes in land use that would commit future generations to specific uses; irreversible changes from environmental accidents; and consumption of nonrenewable resources.

Implementation of the Proposed Project would result in an irretrievable commitment of renewable and nonrenewable resources including land, water, energy resources, and construction materials.

Nonrenewable and limited resources that would likely be consumed as part of Project construction and operation would include, but are not limited to, oil, gasoline and diesel fuel, lumber, sand and gravel, steel, and other materials use in the construction of improvements necessary for implementation of the Project. Operation of the Project includes, but is not limited to, possible natural gas (if natural gas will be available at the site), gasoline and diesel fuel, and energy consumption. However, the quantity of resources to be committed is not considered to be significant and are comparable to other developments of this type. No special construction materials or resources are anticipated to be needed as part of the Project.

While the Project will result in the construction of single-family homes, the Project does not change the site to the extent that redevelopment of the site to another use is not possible, such as a new reservoir or highway. As such, the Project would not commit future generations to specific use.

The Project is for the development of single-family residential uses. These types of uses are not known to result in significant environmental accidents or shown to irreversible changes from environmental accidents.

THIS PAGE INTENTIONALLY LEFT BLANK

5.0 ALTERNATIVES TO THE PROPOSED PROJECT

The alternatives analysis consists of the following components: An overview of CEQA requirements for alternatives analysis, descriptions of the alternatives evaluated, a comparison between the anticipated environmental effects of the alternatives and those of the Proposed Project, and identification of an environmentally superior alternative.

5.1 Introduction

The CCR Section 15126.6(a) (State CEQA Guidelines) requires EIRs to describe:

“a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project, and evaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project. Rather, it must consider a range of potentially feasible alternatives that will avoid or substantially lessen the significant adverse impacts of a project, and foster informed decision making and public participation. An EIR is not required to consider alternatives that are infeasible. The lead agency is responsible for selecting a range of project alternatives for examination and must publicly disclose its reasoning for selecting those alternatives. There is no ironclad rule governing the nature or scope of the alternatives to be discussed other than the rule of reason.”

This section of the State CEQA Guidelines also provides guidance regarding what the alternatives analysis should consider. Subsection (b) further states:

“[b]ecause an EIR must identify ways to mitigate or avoid the significant effects that a project may have on the environment (Public Resources Code [PRC] Section 21002.1), the discussion of alternatives shall focus on alternatives to the project or its location which are capable of avoiding or substantially lessening any significant effects of the project, even if these alternatives would impede to some degree the attainment of the project objectives, or would be more costly.”

The State CEQA Guidelines require that the EIR include sufficient information about each alternative to allow meaningful evaluation, analysis, and comparison with the Proposed Project. If an alternative would cause one or more significant effects in addition to those that would be caused by the project as proposed, the significant effects of the alternative must be discussed, but in less detail than the significant effects of the project as proposed (CCR Section 15126.6[d]).

The State CEQA Guidelines further require that the No Project Alternative be considered (CCR Section 15126.6[e]). The purpose of describing and analyzing the No Project Alternative is to allow decision makers to compare the impacts of approving a proposed project with the impacts of not approving the proposed project. If the No Project Alternative is the environmentally superior alternative, CEQA requires

that the EIR "...shall also identify an environmentally superior alternative among the other alternatives." (CCR Section 15126[e][2]).

In defining *feasibility* (e.g., "... feasibly attain most of the basic objectives of the project ..."), CCR Section 15126.6(f) (1) states, in part that:

"[a]mong the factors that may be taken into account when addressing the feasibility of alternatives are site suitability, economic viability, availability of infrastructure, general plan consistency, other plans or regulatory limitations, jurisdictional boundaries (projects with a regionally significant impact should consider the regional context), and whether the proponent can reasonably acquire, control or otherwise have access to the alternative site (or the site is already owned by the proponent). No one of these factors establishes a fixed limit on the scope of reasonable alternatives."

In determining what alternatives should be considered in the EIR, it is important to consider the objectives of the project, the project's significant effects, and unique project considerations. These factors are crucial to the development of alternatives that meet the criteria specified in Section 15126.6(a). Although, as noted above, EIRs must contain a discussion of potentially feasible alternatives, the ultimate determination as to whether an alternative is feasible or infeasible is made by the lead agency's decision-making body, in this case the City of Oroville. (See PRC Sections 21081.5, 21081[a] [3].)

5.2 Considerations for Selection of Alternatives

The purpose of the alternatives analysis is to determine if a variation of Proposed Project would reduce or eliminate significant Project impacts while attaining most of the Project's basic objectives.

5.2.1 Project Objectives

One of the key factors in considering project alternatives under CEQA is if they can feasibly attain most of the basic objectives of the project. As discussed previously in Section 2.0, the Proposed Project's objectives are as follows:

- Develop an economically feasible housing plan that is compatible with the surrounding community in a low fire risk zone to provide permanent housing relief for the 50,000 displaced Paradise fire survivors.
- Fulfill the housing needs of the State, City of Oroville, and County of Butte by rezoning unused isolated airport business park land to medium density residential homes to help address the current RHNA. The housing units will be market-rate for-sale units.
- Create a vibrant residential community by providing a like-kind residential project that further adds to the current and future neighborhoods of eastern Oroville. The Project will include lots of 6,000 sf or larger, setback and landscaping buffers.
- Provision a well-connected open space network that includes the addition of a neighborhood park, bicycle paths and pedestrian sidewalks, open space buffers, and a space for recreational activities.

- Incorporate the Building Code requirements for energy efficiencies and water savings.

5.2.2 *Significant Effects of the Proposed Project*

Impacts associated with implementation of the Proposed Project are evaluated in Chapters 3 and 4 of this EIR. The Proposed Project would have the potential to cause the following significant but mitigable environmental impacts:

- Impact BIO-1:** Project implementation could have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS.
- Impact BIO-2:** Project implementation could have a substantial adverse effect on any riparian habitat or other sensitive natural community identified in local or regional plans, policies, regulations, or by the CDFW or USFWS.
- Impact BIO-3:** Project implementation could cause a substantial adverse effect on state or federally protected wetlands (i.e., including, but not limited to, marsh, vernal pool, coastal) through direct removal, filling, hydrological interruption, or other means.
- Impact CUL-1:** Project implementation would cause a substantial adverse change in the significance of a historical resource pursuant to CEQA Guidelines Section 15064.5.
- Impact CUL-2:** Project implementation could cause a substantial adverse change in the significance of an archeological resource pursuant to CEQA Guidelines Section 15064.5.
- Impact CUL-3:** Project implementation could disturb any human remains, including those interred outside of formal cemeteries.
- Impact GEO-1:** Project implementation could directly or indirectly destroy a unique paleontological resource or site or unique geologic feature.
- Impact PUB-1:** Project implementation could result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for fire, police, schools, and/or other public facilities.
- Impact TCR-1:** Project implementation would cause a substantial adverse change in the significance of a Tribal Cultural Resource

As discussed in the technical sections of this EIR, all but five potentially significant impacts would be reduced to a less than significant level with mitigation under the Proposed Project. Three of those impact areas would remain significant and unavoidable and two would remain cumulatively considerable and significant and unavoidable as listed below:

- Impact HAZ-1:** If the Proposed Project is located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, the Proposed Project could result in a safety hazard or excessive noise for people residing or working in the Project Area.
- Impact HAZ-2:** Implementation of the Proposed Project, along with any foreseeable development in the Project vicinity, result in cumulative impacts regarding safety hazard or excessive noise for people residing or working in the Project Area.
- Impact NOI-1** Project implementation could result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies.
- Impact NOI-4:** Implementation of the Proposed Project, in combination with existing, approved, proposed, and reasonably foreseeable development in Butte County, result in a cumulatively considerable noise impact.
- Impact TR-2:** Project implementation could conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b).

5.3 Alternatives Considered and Eliminated from Further Evaluation

The State CEQA Guidelines Section 15126.6(a) state that an EIR should identify alternatives that were initially considered by the lead agency but were rejected as infeasible. Section 15126.6(a) of the CEQA Guidelines states:

“An EIR shall describe a range of reasonable alternatives to the project, or to the location of the project, which would feasibly attain most of the basic objectives of the project but would avoid or substantially lessen any of the significant effects of the project and evaluate the comparative merits of the alternatives. An EIR need not consider every conceivable alternative to a project. Rather it must consider a reasonable range of potentially feasible alternatives that will foster informed decision making and public participation. An EIR is not required to consider alternatives which are infeasible. The lead agency is responsible for selecting a range of project alternatives for examination and must publicly disclose its reasoning for selecting those alternatives. There is no ironclad rule governing the nature or scope of the alternatives to be discussed other than the rule of reason.”

CEQA Guidelines Section 15126.6(f)(2)(A) states:

“[o]nly locations that would avoid or substantially lessen any of the significant effects of the project need be considered for inclusion in the EIR.” Further, CEQA Guidelines Section 15126.6(f)(2)(B) states in part, “[i]f the lead agency concludes that no feasible alternative locations exist, it must disclose the reasons for this conclusion, and should include the reasons in the EIR...”

In preparing this DEIR, ECORP considered alternatives for review but eliminated them from further analysis because it was determined they did not meet the guidelines set forth in Section 15126.6(a). Alternatives considered but eliminated from further analysis in this DEIR are discussed below.

5.3.1 *Alternate Site Alternative*

The proposed uses for the Project could be accommodated under the R-1 zoning district in the City. There are a number of parcels within the City boundaries that are vacant and zoned for R-1 able to accommodate this type of development. However, while these parcels are zoned correctly for the type of use proposed for the Proposed Project, these parcels were considered but rejected for a number of reasons including the fact that purchasing and assembling properties in another location that are of the necessary acreage for the Project would be cost prohibitive and infeasible, lack of existing infrastructure, and the Project developer has no control over these parcels at this time. As such, this alternative is eliminated from further evaluation.

5.3.2 *Development of Site Consistent with General Plan Land Use Designations Alternative*

The Project Site is within the 2030 General Plan land use designation of ABP and zoning district of APB with an AIA-O. For this alternative, the Project Site would be developed consistent with the General Plan land use designation and zoning. According to the 2030 General Plan, Airport Business Park allows for light manufacturing, limited industrial, food processing, wholesale trade and offices. Retail businesses and public services are permitted to a lesser extent and would generally be allowed as an accessory use. Outdoor storage is only permitted in limited amounts if heavily screened. The APB zoning district allows for a variety of uses such as a carnival, circus or fair, caretaker dwelling, food and beverage sales, general retail, office, manufacturing, and solar energy system. Other than a caretakers cottage, residential uses are not allowed in this zoning district. As such, this alternative does not meet the objectives of the Proposed Project and therefore is eliminated from further evaluation.

5.4 Alternatives Considered for Detailed Evaluation

5.4.1 *Description of Alternatives*

5.4.1.1 *Alternative 1: No Project*

Under CEQA, an EIR must include a comparative analysis of a No Project Alternative (CEQA Guidelines Section 15126.6(e)). This requirement encourages a Lead Agency to compare the environmental effects of

approving a proposed project with the effects of not approving it. The No Project Alternative generally assumes that the land area affected by Project construction would remain in its existing state, while taking into account what would be reasonably expected to occur in the foreseeable future if the Project were not approved. No other development is proposed in the area or the Project Site. As such, Alternative 1 assumes that the Project Site would remain vacant for the foreseeable future.

5.4.1.2 Alternative 2: Reduced Project

Alternative 2 would require a General Plan amendment and rezoning approval similar to the Proposed Project as the proposed uses under Alternative 2 are not allowed under the current General Plan land use designation and zoning district. As such, Alternative 2 would be a discretionary project pursuant to CEQA and require CEQA environmental review. Alternative 2 would be the development of the Project with the same proposed uses of the Project but on a reduced scale of approximately 75 percent of the Proposed Project’s size. This reduction would result in 129 single-family units on the same 44.97-acre parcel. Assuming that the average parcel size of 7,450 sf for the Proposed Project would also be used in Alternative 2, Alternative 2 would result in 7.3 more acres of open space than the Proposed Project¹.

5.4.1.3 Alternative 3: Residential Densities Consistent with the B1 Compatibility Zone

Alternative 3 would allow for residential densities consistent with the Oroville Airport B1 Compatibility Zone of 0.1 dwelling unit per acre (1 unit per 10 acres). Those portions of the Project that are within the B2 Compatibility Zone would be developed at residential densities proposed by the Project. According to information provided by the Butte County Department of Development Services, Planning Division, Airport Land Use Commission (2022), approximately 35.82 acres of the Project Site is within the B1 Compatibility Zone and 9.15 acres of the Site is within the B2 Compatibility Zone. Based on this information, 41 single-family dwellings would be developed in Alternative 3 at the acreage and densities shown in Table 5-1. Three single family homes would have an average lot size of 11.94 acres and 38 homes with an average lot size of 10,488 sf. However, note that these average lot sizes do not account for streets or any open space and are only rough estimates used for this alternative.

Table 5-1. Alternative 3 Residential Development			
Compatibility Zone	Acres (approximate)	Dwelling Units	Density
B1	35.82	3	0.08/acre
B2	9.15	38	4.15/acre

5.4.2 Analysis of Alternatives

Because the IS determined that only certain impact analysis areas were to be analyzed in this EIR, each alternative is compared to the Proposed Project using the analysis presented in this DEIR. The Project

¹ Proposed Project = 172 lots x 7,450 sf = 1,281,400 sf (29.4 acres). Alternative 2 = 129 lots x 7,450 sf = 961,050 sf (22.1 acres). 29.4 acres - 22.1 acres = 7.3 acres.

alternatives are evaluated in less detail than those of the Proposed Project, and the impacts are described in terms of difference in outcome compared with implementing the Proposed Project. Table 5-2 at the end of this section provides an at-a-glance comparison of the environmental impacts of each alternative. Table 5-3 compares how the alternatives meet the Project Objectives as compared to the Proposed Project.

5.4.2.1 Alternative 1: No Project

The No Project Alternative assumes that the Project Site would remain as undeveloped land for the foreseeable future. No construction on the site would occur.

Air Quality

The analysis provided in Section 3.1 determined that the Proposed Project would not result in substantial impacts to air quality; therefore no mitigation is necessary.

Alternative 1 would not exceed any air quality thresholds as the Project Site would remain in its existing condition and therefore no impact to air quality would occur. As such, the impacts to air quality under this alternative are less than the Proposed Project.

Biological Resources

As discussed in Section 3.3, the Proposed Project would result in potential impacts to special-status species, sensitive natural communities, and wetlands. However, Mitigation Measures BIO-1 through BIO-9 would reduce these potential impacts to a less than significant level.

As no new construction or other uses are proposed with Alternative 1, this alternative would not result in impacts to biological resources beyond those currently existing. As such, Alternative 1 is considered superior to the Proposed Project with regard to impacts to biological resources as the impacts to these resources would be greater with the Proposed Project than with Alternative 1.

Cultural Resources

As discussed in Section 3.4, the Proposed Project would result in potential impacts to unknown/undiscovered historical, and archaeological cultural resources. However, Mitigation Measure CUL-1 would reduce these potential impacts to a less than significant level.

As no new construction is proposed with Alternative 1, this alternative would not result in impacts to cultural resources. As such, the impacts to cultural resources under this alternative are less than the Proposed Project and Alternative 1 is considered superior to the Proposed Project with regard to impacts to cultural resources.

Energy

As discussed in Section 3.5, it was determined that construction fuel consumption associated with the Project would not be any more inefficient, wasteful, or unnecessary than other similar development projects of this nature.

However, as Alternative 1 would not result in any change to existing conditions, it would not increase energy use beyond what is currently being used. As such, Alternative 1 is considered superior to the Proposed Project with regard to impacts to energy.

Geology, Soils, and Paleontology

The Proposed Project would result in potential impacts to unknown paleontological resources. However, as defined in the Section 3.6, Mitigation Measure GEO-1 would reduce this potential impact to a less than significant level.

Because no new infrastructure or other ground disturbing construction is proposed with Alternative 1, this alternative would not result in the potential for paleontological impacts. As such, the potential impacts to paleontological resources under this alternative are less than the Proposed Project and Alternative 1 Alternative 1 is considered superior to the Proposed Project with regard to impacts to paleontological resources.

Greenhouse Gases

Project construction and operations would result in the generation of 620 metric tons of CO₂e annually during construction and 3,792 metric tons of CO₂e during operation annually, However, as discussed in Section 3.7, the Proposed Project's GHG emissions were determined to be less than significant because, while the Project results in GHG emissions the Project, expected growth in population and housing as a result of the Proposed Project would not surpass BCAG's growth projections and therefore would not result in a conflict with the 2020 RTP/SCS.

Alternative 1 would have no change in existing conditions and therefore no increase of GHG emissions would occur. As such, Alternative 1 is considered superior to the Proposed Project with regard to impacts from GHG and climate change.

Hazards and Hazardous Materials

The Proposed Project would result in a significant and unavoidable and cumulatively considerable airport safety hazard for people residing within the Proposed Project as the Project does not meet the density restrictions for the B1 and B2 Compatibility Zones. The only mitigation possible would be to either eliminate the use of the airport or move the Project to a location outside of the B1 and B2 Compatibility Zones. Neither of these mitigations are feasible. As such, there is no feasible mitigation possible to mitigate the potential airport safety impacts.

Alternative 1 would have no change in existing conditions; therefore no airport safety hazards would occur. As such, Alternative 1 is considered superior to the Proposed Project with regard to airport safety hazard impacts.

Land Use and Planning

The Proposed Project would not have an impact to land use and planning because it can be shown that no General Plan land use designations or policies were adopted for the purpose of avoiding or mitigating

an environmental effect. Therefore, the Proposed Project would have a less than significant impact in this area.

Alternative 1 would have no change in existing conditions; therefore no impacts to land use or planning would occur. As such, Alternative 1 is considered superior to the Proposed Project with regard to land use and planning impacts.

Noise

The Proposed Project would result in a significant and unavoidable and cumulatively considerable impacts as a result of traffic noise related to the Project. As discussed in Impacts NOI-1 and NOI-4, there is no feasible mitigation available to reduce these impacts to less than significant.

Alternative 1 would have no change in existing conditions; therefore no increase of noise levels would occur. As such, Alternative 1 is considered superior to the Proposed Project with regard to impacts from noise.

Population and Housing

The Proposed Project is inconsistent with the existing land use plans and therefore would result in unplanned population growth. However, while this population growth has not been considered in the City's General Plan, the estimated population from the Project represents only a 2.3 percent increase in the City's 2022 population and a 2.2 percent increase in housing units over the existing 2022 housing units in the city. Additionally, the 172 units represent a 1.8 percent increase over the projected 2030 number of housing units provided in the General Plan Draft EIR. The Oroville ALUCP does not provide population growth estimates and as such, the Proposed Project is not inconsistent with growth scenarios for this plan. Based on these factors, the Project would not result in a substantial unplanned growth. Therefore, the Proposed Project would have a less than significant impact in this area.

Alternative 1 would have no change in existing conditions; therefore no impacts to population and housing would occur. As such, Alternative 1 is considered superior to the Proposed Project with regard to population and housing impacts.

Public Services

The City determined that future fire and police department facilities will be needed for those areas west of Highway 70 and formed two community facilities districts to provide funding for future facilities. Because the location of the Project Site is west of Highway 70, annexation into these community facilities districts is necessary. Mitigation Measure PUB-1 requires this annexation and implementation would result in a less than significant impact to public services.

Alternative 1 would have no change in existing conditions; therefore no impacts to public services would occur. As such, Alternative 1 is considered superior to the Proposed Project in this area.

Transportation and Circulation

Development of the Project Site would be expected to generate VMT at 140 to 145 percent of the baseline City of Oroville average. Mitigating VMT to a level that would be less than 85 percent of the

baseline level would require a reduction of approximately 40 percent from pre-mitigation levels ($1 - [0.85 \div 1.45] = 0.414$). While Mitigation Measures TR-1, TR-2, and TR-3 would reduce the impact of the Project on VMT, implementation of mitigations needed to achieve a 40 percent reduction is not considered feasible. As a result, even with implementation of the mitigation measures, the impact of the Feather Ranch Project on VMT is considered to be significant and unavoidable.

Alternative 1 would have no change in existing conditions; therefore no impacts to transportation and circulation would occur. As such, Alternative 1 is considered superior to the Proposed Project in this area.

Tribal Cultural Resources

As discussed in Section 3.14, the Proposed Project would result in potential impacts to unknown or undiscovered TCRs. However, Mitigation Measure CUL-1 would reduce these potential impacts to a less than significant level.

As no new construction is proposed with Alternative 1, this alternative would not result in impacts to TCRs. As such, the impacts to TCRs under this alternative are less than the Proposed Project and Alternative 1 is considered superior to the Proposed Project with regard to impacts to TCRs.

Utilities and Service Systems

TWSD has determined that sewer collection service can be provided by TWSD for the Project. While it appears that SC-OR has adequate capacity at the WTF to serve the Project, because SC-OR requires a Capacity Impact Study as a part of a service agreement for a new project, this WTF capacity will be assured. These conditions as well as 2030 General Plan policies P7.3, P7.4, and P7.5 will ensure that the wastewater treatment capacity is available. As such, the Project would have a less than significant impact in this area.

Alternative 1 would have no change in existing conditions; therefore no impacts to wastewater or other utility services would occur. As such, Alternative 1 is considered superior to the Proposed Project in this area.

5.4.2.2 Alternative 2: Reduced Project

Alternative 2 would be the development of the Project with the same proposed uses of the Project but on a reduced scale of approximately 75 percent of the Proposed Project's size. This reduction would result in 129 single-family units on the same 44.97-acre parcel.

Air Quality

The analysis provided in Section 3.1 determined that the Proposed Project would not result in substantial impacts to air quality; therefore no mitigation is necessary.

Alternative 2 would also result in an increase in air quality emissions in the area but to a lesser degree than the Proposed Project. Because Alternative 2 would be approximately 75 percent the size of the Proposed Project and the Proposed Project did not result in substantial impacts to air quality, Alternative 2 would also not result in impacts to air quality. However, because Alternative 2 is for the

development of 129 single-family homes compared to the Project's 172 homes, construction and operational air quality emissions would be less than those for the Project. Therefore, the impacts to air quality under this alternative are less than the Proposed Project.

Biological Resources

As discussed in Section 3.3, the Proposed Project would result in potential impacts to special-status species, sensitive natural communities, and wetlands. However, Mitigation Measures BIO-1 through BIO-9 would reduce these potential impacts to a less than significant level.

While Alternative 2 would result in less construction and more open space than the Proposed Project, because Alternative 2 is on the same site as the Proposed Project, Alternative 2 would have similar potential impacts to special-status species, sensitive natural communities, and wetlands. As such, this Alternative would require mitigation to protect these resources. This mitigation would also reduce impacts to these species to a less than significant impact similar to the Proposed Project. Alternative 2 is considered equivalent to the Proposed Project with regard to potential impacts to biological resources.

Cultural Resources

As discussed in Section 3.4, the Proposed Project would result in potential impacts to unknown/undiscovered historical, and archaeological cultural resources. However, Mitigation Measure CUL-1 would reduce these potential impacts to a less than significant level.

Alternative 2 would include the construction of similar uses to the Project but at a lesser density. However, Alternative 2 would be on the same site and therefore have similar potential impacts to unknown or undiscovered historical, archaeological cultural resources to the Project. While Alternative 2 may result in less ground-disturbing construction than the Project, because Alternative 2 is on the same site as the Proposed Project, Alternative 2 would have similar potential impacts to cultural resources. As such, Alternative 2 would require mitigation to protect these resources. This mitigation would also reduce impacts to these species to a less than significant impact similar to the Proposed Project. Alternative 2 is considered similar to the Proposed Project with regard to potential impacts to cultural resources.

Energy

As discussed in Section 3.5, it was determined that construction fuel consumption associated with the Project would not be any more inefficient, wasteful, or unnecessary than other similar development projects of this nature.

With fewer single-family homes being developed for Alternative 2, Alternative 2 would use less energy during construction and operation than the Proposed Project. Although the Project would have a less than significant impact on energy, Alternative 2 would have the same level of impact but use less energy than the Project. Therefore, this Alternative would be considered superior to the Project with regard to energy use.

Geology, Soils, and Paleontology

The Proposed Project would result in potential impacts to unknown paleontological resources. However, as defined in the Section 3.6, Mitigation Measure GEO-1 would reduce this potential impact to a less than significant level.

Alternative 2 would also result in the development of the site and therefore have similar potential impacts to unknown or undiscovered paleontological resources to the Project. As such, Alternative 2 would require mitigation to protect these resources. This mitigation would also reduce impacts to these resources to a less than significant impact similar to the Proposed Project. Alternative 2 is considered equivalent to the Proposed Project with regard to potential impacts to paleontological resources.

Greenhouse Gases

Project construction and operations would result in the generation of 620 metric tons of CO₂e annually during construction and 3,792 metric tons of CO₂e during operation annually. However, as discussed in Section 3.7, the Proposed Project's GHG emissions were determined to be less than significant because, while the Project does result in GHG emissions the Project, expected growth in population and housing as a result of the Proposed Project would not surpass BCAG's growth projections and therefore would not result in a conflict with the 2020 RTP/SCS.

While Alternative 2 would be a less intense development, Alternative 2 would have a similar result with respect to GHG emissions and their impact to the Scoping Plan. However, because Alternative 2 would be a smaller project than the Proposed Project, the GHG emissions would be less and, environmentally speaking, Alternative 2 would be superior to the Proposed Project with regard to GHG emissions.

Hazards and Hazardous Materials

The Proposed Project would result in a significant and unavoidable and cumulatively considerable airport safety hazard for people residing within the Proposed Project as the Project does not meet the density restrictions for the B1 and B2 Compatibility Zones. The only mitigation possible would be to either eliminate the use of the airport or move the Project to a location outside of the B1 and B2 Compatibility Zones. Neither of these mitigations are feasible. As such, there is no feasible mitigation possible to mitigate the potential airport safety impacts.

Alternative 2 would result in the construction of 129 single-family homes, which is 43 homes fewer than the Project. Alternative 2 overall density would be 2.87 units per acre which, like the Project, exceeds the B1 and B2 Compatibility Zone density requirements. As such, Alternative 2 would also result in a significant and unavoidable airport safety impact, as no mitigation is feasible, and be similar to the Project.

Land Use and Planning

The Proposed Project would not have an impact on land use and planning because it can be shown that no General Plan land use designations or policies were adopted for the purpose of avoiding or mitigating an environmental effect. Therefore, the Proposed Project would have a less than significant impacts in this area.

Alternative 2 would also require a General Plan Amendment and rezoning. However, as with the Project, these changes would not result in a land use and planning impact because it can be shown that no General Plan land use designations or policies were adopted for the purpose of avoiding or mitigating an environmental effect. Therefore, the Alternative 2 would have a less than significant impact in this area and be similar to the Proposed Project.

Noise

The Proposed Project would result in a significant and unavoidable and cumulatively considerable as a result of traffic noise related to the Project. As discussed in Impacts NOI-1 and NOI-4, there is no feasible mitigation available to reduce these impacts to less than significant.

Alternative 2 would reduce the amount of project-related traffic by approximately 25 percent. This would also reduce the amount of traffic noise. However, because the existing area is relatively quiet, it is fairly easy to increase noise related to traffic beyond the General Plan transportation noise level thresholds indicated in Noise Element Policy P1.6. As shown in Table 3.9-9, the Project-related traffic noise increases traffic noise in the area by 10.3 dBA on 20th street between Biggs and Feather avenues, which exceeds the General Plan transportation noise threshold. Alternative 2 is a smaller project; however, a reduction of 25 percent in traffic would not reduce traffic-related noise to less than the 5 dB increase threshold. As such, similar to the Project, while Alternative 2 would have less traffic noise, Alternative 2 would still exceed the General Plan noise threshold of 5 db. As no mitigation is feasible, Alternative 2 traffic noise impact would also be significant and unavoidable.

Population and Housing

The Proposed Project is inconsistent with the existing land use plans and therefore would result in unplanned population growth. However, while this population growth has not been considered in the City's General Plan, the estimated population from the Project represents only a 2.3 percent increase in the City's 2022 population and a 2.2 percent increase in housing units over the existing 2022 housing units in the City. Additionally, the 172 units represent a 1.8 percent increase over the projected 2030 number of housing units provided in the General Plan Draft EIR. The Oroville ALUCP does not provide population growth estimates and as such, the Proposed Project is not inconsistent with growth scenarios for this plan. Based on these factors, the Project would not result in a substantial unplanned growth. Therefore, the Proposed Project would have a less than significant impact in this area.

Alternative 2 would also be inconsistent with the existing land use plans and therefore would result in unplanned population growth. However, similar to the Project, this growth would not be substantial to the point of causing a significant impact. As such, Alternative 2 is considered similar to the Proposed Project with regard to population and housing impacts.

Public Services

The City determined that future fire and police department facilities will be needed for those areas west of Highway 70 and formed two community facilities districts to provide funding for future facilities. Because the location of the Project Site is west of Highway 70, annexation into these community facilities districts

is necessary. Mitigation Measure PUB-1 requires this annexation. and implementation would result in a less than significant impact to public services.

Because Alternative 2 is in the same location as the Project, Alternative 2 would also require mitigation for annexation into the two community facilities districts. As such, Alternative 2 is considered similar to the Proposed Project in this area.

Transportation and Circulation

Development of the Project Site would be expected to generate VMT at 140 to 145 percent of the baseline City of Oroville average. Mitigating VMT to a level that would be less than 85 percent of the baseline level would require a reduction of approximately 40 percent from pre-mitigation levels ($1 - [0.85 \div 1.45] = 0.414$). While Mitigation Measures TR-1, TR-2, and TR-3 would reduce the impact of the Project on VMT, implementation of mitigations needed to achieve a 40 percent reduction is not considered feasible. As a result, even with implementation of the mitigation measures, the impact of the Feather Ranch Project on VMT is considered to be significant and unavoidable.

VMT is based on location. Figure 4-A of the *BCAG SB 743 Implementation – VMT Impact Significance Threshold – Assessing Lead Agency Choices* document shows the Project Site is located in an area where home-based VMT per resident would be greater than a level 15 below the baseline condition. That is, the method presented in this document indicates residential development in the Project Site would result in the generation of VMT that is not below 85 percent of baseline conditions. On a per-resident level, data from the travel demand model shows residential land use development in TAZ 911 would generate 26.7 home-base VMT per resident, while the average for the City of Oroville would be 19.1 home-based VMT per resident. Therefore, the Project Site would be expected to generate VMT at 140 percent of the baseline City of Oroville average ($26.7 \div 19.1 = 1.40$). Because Alternative 2 would be located on the same site as the Project, Alternative 2 would have the same impact on VMT. Therefore, Alternative 2 would also result in a significant and unavoidable impact. As such, Alternative 2 is considered similar to the Proposed Project in this area.

Tribal Cultural Resources

As discussed in Section 3.14, the Proposed Project would result in potential impacts to unknown or undiscovered TCRs. However, Mitigation Measure CUL-1 would reduce these potential impacts to a less than significant level.

Alternative 2 would include the construction of similar uses to the Project but at a lesser density. However, Alternative 2 would be on the same site and therefore have similar potential impacts to unknown or undiscovered TCRs to the Project. While Alternative 2 may result in less ground disturbing construction than the Project, because Alternative 2 is on the same site as the Proposed Project, Alternative 2 would have similar potential impacts to TCRs. As such, Alternative 2 would require mitigation to protect these resources. This mitigation would also reduce impacts to these species to a less than significant impact similar to the Proposed Project. Alternative 2 is considered similar to the Proposed Project with regard to potential impacts to TCRs.

Utilities and Service Systems

TWSD has determined that sewer collection service can be provided by TWSD for the Project. While it appears that SC-OR has adequate capacity at the WTF to serve the Project, because SC-OR requires a Capacity Impact Study as a part of a service agreement for a new project, this WTF capacity will be assured. These conditions as well as 2030 General Plan policies P7.3, P7.4, and P7.5 will ensure that the wastewater treatment capacity is available. As such, the Project would have a less than significant impact in this area.

Alternative 2 would also be served by TWSD and SC-OR for wastewater collection and treatment. Alternative 2 would also be required by SC-OR to complete a Capacity Impact Study for Project development. As such, Alternative 2 would result in a less than significant impact and is considered similar to the Proposed Project in this area.

5.4.2.3 Alternative 3: Residential Densities Consistent with the B1 Compatibility Zone

Alternative 3 would allow for residential densities consistent with the Oroville Airport B1 Compatibility Zone of 0.1 dwelling unit per acre (1 unit per 10 acres). Those portions of the Project that are within the B2 Compatibility Zone would be developed at residential densities proposed by the Project. Based on this, 41 single-family dwellings would be developed in Alternative 3. Three single-family homes with an average lot size of 11.94 acres and 38 homes with an average lot size of 10,488 sf. However, note that these average lot sizes do not account for streets or any open space and are just rough estimates used for this alternative.

Air Quality

The analysis provided in Section 3.1 determined that the Proposed Project would not result in substantial impacts to air quality: therefore no mitigation is necessary.

Alternative 3 would also result in an increase in air quality emissions in the area but to a much lesser degree than the Proposed Project. Because Alternative 3 would result in the development of 41 single-family homes. The Proposed Project, with its 172 homes, did not result in substantial impacts to air quality, Alternative 2 would also not result in impacts to air quality. However, because Alternative 3 is for the development of 41 single-family homes compared to the Project's 172 homes, construction and operational air quality emissions would be less than those of the Proposed Project. Therefore, the impacts to air quality under this alternative are less than the Proposed Project.

Biological Resources

As discussed in Section 3.3, the Proposed Project would result in potential impacts to special-status species, sensitive natural communities, and wetlands. However, Mitigation Measures BIO-1 through BIO-9 would reduce these potential impacts to a less than significant level.

While Alternative 3 would result in less construction and more open space than the Proposed Project, because Alternative 3 is on the same site as the Proposed Project, Alternative 3 would have potential impacts to special-status species, sensitive natural communities, and wetlands. However, because much of

the 44.97-acre site for Alternative 3 would only be occupied by three homes (35.82 acres), the ability to not impact wetlands and areas of sensitive natural communities would be much less with Alternative 3 than the Proposed Project. In any case, this Alternative would also require mitigation to protect biological resources. These mitigations would also reduce impacts to these species to a less than significant impact similar to the Proposed Project. Because Alternative 3 would have substantially more open space than the Project, Alternative 3 is considered superior to the Proposed Project with regard to potential impacts to biological resources.

Cultural Resources

As discussed in Section 3.4, the Proposed Project would result in potential impacts to unknown or undiscovered historical, and archaeological cultural resources. However, Mitigation Measure CUL-1 would reduce these potential impacts to a less than significant level.

Alternative 3 would include the construction of similar uses to the Project but at a much lower density. However, Alternative 3 would be on the same site and therefore have similar potential impacts to unknown/undiscovered historical, archaeological cultural resources to the Project. While Alternative 3 may result in less ground-disturbing construction than the Project, because Alternative 3 is on the same site as the Proposed Project, Alternative 3 would have similar potential impacts to cultural resources. As such, Alternative 3 would require mitigation to protect these resources. This mitigation would also reduce impacts to these species to a less than significant impact similar to the Proposed Project. Alternative 3 is considered similar to the Proposed Project with regard to potential impacts to cultural resources.

Energy

As discussed in Section 3.5, it was determined that construction fuel consumption associated with the Project would not be any more inefficient, wasteful, or unnecessary than other similar development projects of this nature.

With fewer single-family homes being developed for Alternative 3, Alternative 3 would use less energy during construction and operation than the Proposed Project. Although the Project would have a less than significant impact on energy, Alternative 3 would have the same level of impact but use less energy than the Project. Therefore, Alternative 3 would be considered superior to the Project with regard to energy use.

Geology, Soils, and Paleontology

The Proposed Project would result in potential impacts to unknown paleontological resources. However, as defined in the Section 3.6, Mitigation Measure GEO-1 would reduce this potential impact to a less than significant level.

Alternative 3 would also result in the development of the site and therefore have similar potential impacts to unknown or undiscovered paleontological resources to the Project. As such, Alternative 3 would require mitigation to protect these resources. This mitigation would also reduce impacts to these resources to a less than significant impact similar to the Proposed Project. Alternative 3 is considered equivalent to the Proposed Project with regard to potential impacts to paleontological resources.

Greenhouse Gases

Project construction and operations would result in the generation of GHG emissions. However, as discussed in Section 3.7, the Proposed Project's GHG emissions were determined to be less than significant because, while the Project results in GHG emissions the Project, expected growth in population and housing as a result of the Proposed Project would not surpass BCAG's growth projections and therefore would not result in a conflict with the 2020 RTP/SCS.

While Alternative 3 would be less development, Alternative 3 would have a similar result with respect to GHG emissions and their impact to the Scoping Plan. However, because Alternative 3 would be a smaller project than the Proposed Project, the GHG emissions would be less and, environmentally speaking, Alternative 3 would be superior to the Proposed Project with regard to GHG emissions.

Hazards and Hazardous Materials

The Proposed Project would result in a significant and unavoidable and cumulatively considerable airport safety hazard for people residing within the Proposed Project as the Project does not meet the density restrictions for the B1 and B2 Compatibility Zones. The only mitigation possible would be to either eliminate the use of the airport or move the Project to a location outside of the B1 and B2 Compatibility Zones. Neither of these mitigations are feasible. As such, there is no feasible mitigation possible to mitigate the potential airport safety impacts.

Alternative 3 would result in the construction of 41 single-family homes. Alternative 3 overall density would meet the densities required for the B1 Compatibility Zone but would exceed B2 Compatibility Zones density requirements. As such, Alternative 3 would also result in a significant and unavoidable airport safety impact in the B2 Compatibility Zone area. However, because Alternative 3 would meet the B1 Compatibility Zone density, Alternative 3 would be superior to the Project with regard to airport safety hazards.

Land Use and Planning

The Proposed Project would not have an impact to land use and planning because it can be shown that no General Plan land use designations or policies were adopted for the purpose of avoiding or mitigating an environmental effect. Therefore, the Proposed Project would have a less than significant impacts in this area.

Alternative 3 would also require a General Plan Amendment and rezoning. However, as with the Project, these changes would not result in a land use and planning impact because it can be shown that no General Plan land use designations or policies were adopted for the purpose of avoiding or mitigating an environmental effect. Therefore, the Alternative 3 would have a less than significant impact in this area and be similar to the Proposed Project.

Noise

The Proposed Project would result in a significant and unavoidable and cumulatively considerable as a result of traffic noise related to the Project. As discussed in Impacts NOI-1 and NOI-4, there is no feasible mitigation available to reduce these impacts to less than significant.

Alternative 3 would reduce the amount of Project-related traffic by a substantial amount when compared to the Proposed Project since only 41 single-family homes would be developed. This would also substantially reduce the amount of traffic noise. Because the existing area is relatively quiet, it is fairly easy to increase traffic-related noise to beyond the General Plan transportation noise level thresholds indicated in Noise Element Policy P1.6. As shown in Table 3.9-9, the Project-related traffic noise increases traffic noise in the area by 10.3 dBA on 20th street between Biggs Avenue and Feather Avenue, which exceeds the General Plan transportation noise threshold. Alternative 3 is a much smaller development than the Proposed Project, approximately 24 percent in the number of dwelling units. As such, Alternative 3 would have much less traffic noise and would most likely not exceed the General Plan's noise levels. Therefore, the Alternative 3 would have a less than significant impact in this area and be superior to the Proposed Project.

Population and Housing

The Proposed Project is inconsistent with the existing land use plans and therefore would result in unplanned population growth. However, while this population growth has not been considered in the City's General Plan, the estimated population from the Project represents only a 2.3 percent increase in the City's 2022 population and a 2.2 percent increase in housing units over the existing 2022 housing units in the City. Additionally, the 172 units represent a 1.8 percent increase over the projected 2030 number of housing units provided in the General Plan Draft EIR. The Oroville ALUCP does not provide population growth estimates and as such, the Proposed Project is not inconsistent with growth scenarios for this plan. Based on these factors, the Project would not result in a substantial unplanned growth. Therefore, the Proposed Project would have a less than significant impact in this area.

Alternative 3 would also be inconsistent with the existing land use plans and therefore would result in unplanned population growth. However, similar to the Project, this growth would not be substantial to the point of causing a significant impact. As such, Alternative 3 is considered similar to the Proposed Project with regard to population and housing impacts.

Public Services

The City determined that future fire and police department facilities will be needed for those area west of Highway 70 and formed two community facilities districts to provide funding for future facilities. Because Project Site is located west of Highway 70, annexation into these community facilities districts is necessary. Mitigation Measure PUB-1 requires this annexation and implementation would result in a less than significant impact to public services.

Because Alternative 3 is in the same location as the Project, Alternative 3 would also require mitigation for annexation into the two community facilities districts. As such, Alternative 3 is considered similar to the Proposed Project in this area.

Transportation and Circulation

Development of the Project Site would be expected to generate VMT at 140 to 145 percent of the baseline City of Oroville average. Mitigating VMT to a level which would be less than 85 percent of the baseline level would require a reduction of approximately 40 percent from pre-mitigation levels

$(1 - [0.85 \div 1.45] = 0.414)$). While Mitigation Measures TR-1, TR-2, and TR-3 would reduce the impact of the Project on VMT, implementation of mitigation needed to achieve a 40 percent reduction is not considered feasible. As a result, even with implementation of the mitigation measures, the impact of the Feather Ranch Project on VMT is considered to be significant and unavoidable.

VMT is based on location. Figure 4-A of the *BCAG SB 743 Implementation – VMT Impact Significance Threshold – Assessing Lead Agency Choices* document shows the Project Site is located in an area where home-based VMT per resident would be greater than a level 15 below the baseline condition. That is, the method presented in this document indicates residential development in the Project Site would result in the generation of VMT that is not below 85 percent of baseline conditions. On a per-resident level, data from the travel demand model shows residential land use development in TAZ 911 would generate 26.7 home-base VMT per resident, while the average for the City of Oroville would be 19.1 home-based VMT per resident. Therefore, the Project Site would be expected to generate VMT at 140 percent of the baseline City of Oroville average ($26.7 \div 19.1 = 1.40$). Because Alternative 3 would be located on the same site as the Project, Alternative 3 would have the same impact on VMT. Therefore, Alternative 3 would also result in a significant and unavailable impact. As such, Alternative 3 is considered similar to the Proposed Project in this area.

Tribal Cultural Resources

As discussed in Section 3.14, the Proposed Project would result in potential impacts to unknown or undiscovered TCRs. However, Mitigation Measure CUL-1 would reduce these potential impacts to a less than significant level.

Alternative 3 would include the construction of similar uses to the Project but at a lower density. However, Alternative 3 would be on the same site and therefore have similar potential impacts to unknown or undiscovered TCRs to the Project. While Alternative 3 may result in less ground-disturbing construction than the Project, because Alternative 3 is on the same site as the Proposed Project, Alternative 3 would have similar potential impacts to TCRs. As such, Alternative 3 would require mitigation to protect these resources. This mitigation would also reduce impacts to these species to a less than significant impact similar to the Proposed Project. Alternative 3 is considered similar to the Proposed Project with regard to potential impacts to TCRs.

Utilities and Service Systems

The TWSD has determined that sewer collection service can be provided by TWSD for the Project. While it appears that SC-OR has adequate capacity at the WTF to serve the Project, because SC-OR requires a Capacity Impact Study as a part of a service agreement for a new project, this WTF capacity will be assured. These conditions as well as 2030 General Plan policies P7.3, P7.4, and P7.5 will ensure that the wastewater treatment capacity is available. As such, the Project would have a less than significant impact in this area.

Alternative 3 would also be served by TWSD and SC-OR for wastewater collection and treatment. Alternative 3 would also be required by SC-OR to complete a Capacity Impact Study for Project

development. As such, Alternative 3 would result in a less than significant impact and is considered similar to the Proposed Project in this area.

5.5 Environmentally Superior Alternative

An EIR must describe a reasonable range of alternatives to a project that would feasibly attain the basic project objectives while avoiding or reducing one or more of the project's significant effects (CEQA Guidelines Section 15126.6(a)).

Table 5.0-2 summarizes the potential impacts of the alternatives evaluated in this section, as compared with the potential impacts of the Proposed Project. Table 5-3 identifies how well an alternative meets the Project objectives. As shown in Table 5-2, Alternative 1 No Project, would be the environmentally superior alternative as it would result in no impact to the environment. However, CEQA requires that when the environmentally superior alternative is the No Project Alternative, another alternative be identified as the environmentally superior alternative [CEQA Guidelines Section 15126.6(e)(2)].

An EIR must describe a reasonable range of alternatives to a project that would feasibly attain the basic project objectives while avoiding or reducing one or more of the project's significant effects (CEQA Guidelines Section 15126.6(a)). The Proposed Project has five objectives. Table 5-2 illustrates a comparison of the alternatives to the basic Project objectives. As shown in this table, Alternative 1 does not meet any of the Project objectives, and Alternatives 2 and 3 both meet four of the five Project objectives.

Alternative 3 would reduce one of the three Project impacts whereas Alternative 2 would not reduce any of the Project's significant and unavoidable impacts. Based on the evaluation contained in Section 5.4 and Tables 5-2 and 5-3, Alternative 3 would be the environmentally superior alternative, as it would result in fewer impacts to one resource category when compared to the Proposed Project and still meet the majority of Project objectives.

Table 5-2. Comparison of the Environmental Impacts of the Alternatives in Relation to the Proposed Project

Environmental Topic	Level of Environmental Impact (Impact Comparison to Proposed Project)			
	Proposed Project	Alt 1 No Project	Alt 2 Reduced Project	Alt 3 B1 Compatible
Air Quality	LTS	NI (Less)	LTS (Less)	LTS (Less)
Biological Resources	LTSM	NI (Less)	LTSM (Similar)	LTSM (Less)
Cultural Resources	LTSM	NI (Less)	LTSM (Similar)	LTSM (Similar)
Energy	LTS	NI (Less)	LTS (Less)	LTS (Less)
Geology, Soils, and Paleontology	LTS	NI (Less)	LTS (Similar)	LTS (Similar)
Greenhouse Gas	LTS	NI (Less)	LTS (Less)	LTS (Less)
Hazards and Hazardous Materials	SU	NI (Less)	SU (Similar)	SU (Less)
Land Use and Planning	LTS	NI (Less)	LTS (Similar)	LTS (Less)
Noise	SU	NI (Less)	SU (Similar)	LTS (Less)
Population and Housing	LTS	NI (Less)	LTS (Similar)	LTS (Less)
Public Services	LTSM	NI (Less)	LTSM (Similar)	LTS (Similar)
Transportation and Circulation	SU, CC	NI (Less)	SU, CC (Similar)	SU, CC (Similar)
Tribal Cultural Resources	LTSM	NI (Less)	LTSM (Similar)	LTSM (Similar)
Utilities and Service Systems	LTS	NI (Less)	LTS (Similar)	LTS (Similar)

Notes: NI = No Impact, LTS = Less than Significant, LTSM = Less than Significant with Mitigation, SU = Significant and Unavoidable, CC = Cumulatively Considerable
 Less = Alternative is environmentally superior, impacts are less than those of the Proposed Project,
 Greater = Alternative is environmentally inferior, impacts are greater than those of the Proposed Project,
 Similar = Alternative is environmentally the same, impacts similar to those of the Proposed Project, or no better or worse

Table 5-3. Comparison of Alternatives by Project Objectives			
Project Objective	Alternatives		
	1	2	3
Develop an economically feasible housing plan that is compatible with the surrounding community in a low fire risk zone to provide permanent housing relief for the 50,000 displaced Paradise fire survivors.	-	-	-
Fulfill the housing needs of the State, City of Oroville, and County of Butte by rezoning unused isolated airport business park land to medium density residential homes to help address the current Regional Housing Needs Assessment (RHNA). The housing units will be market-rate for-sale units.	-	+	+
Create a vibrant residential community by providing a like-kind residential project that further adds to the current and future neighborhoods of eastern Oroville. The project will include lots of 6,000 square feet or larger, setback and landscaping buffers.	-	+	+
Provision a well-connected open space network that includes the addition of a neighborhood park, bicycle paths and pedestrian sidewalks, open space buffers, and a space for recreational activities.	-	+	+
Incorporate the Building Code requirements for energy efficiencies and water savings.	-	+	+
Total Project Objectives Met:	0	4	4

Notes: - = Does not meet objective, + = Meets objective

EXECUTIVE SUMMARY

ES.1 Purpose and Scope of the Final EIR

This Environmental Impact Report (EIR) will provide an analysis of the potential environmental effects associated with the implementation of the Feather Ranch Project, pursuant to the California Environmental Quality Act (CEQA).

This EIR analysis focuses on potentially significant environmental impacts arising from the Project. The EIR adopts this approach in order to provide a credible worst-case scenario of the impacts resulting from Project implementation.

ES.2 Project Characteristics

The Proposed Project is the subdivision of a 44.97-acre site into 172 single-family lots located at the southwest corner of the Feather Avenue/20th Street intersection in the City of Oroville, California. Figure 2-4 provides the Project Site Plan. Lots will range in size from 6,600 to 9,410 sf, average lot size is 7,450 sf. The subdivision is proposed as a phased map. Phase 1 proposes 68 lots, Phase 2 proposes 58 lots, and Phase 3 proposes 46 lots.

The Project includes a General Plan amendment, a rezone, and a tentative subdivision map. The Project Site is currently within the City of Oroville General Plan land use designation of Airport Business Park (ABP) and zoning district of ABP with an Airport Influence Area Overlay (AIA-O). None of these designations allow the development of residential uses at the density of 3.82 units per acre requested for the Proposed Project. As a part of the Project, a General Plan amendment changing the Project Site to Medium Low Density Residential (3 to 6 units per acre) and a rezoning to Single Family Residential (R-1) has been proposed.

The Project includes amenities such as a passive park on Lot A with pedestrian pathways and a storm drainage basin. The Project also includes the development of a bicycle/pedestrian meandering pathway along the east side of Street A separated from the street by greenway space and bicycle/pedestrian pathway connections from the east end of Project streets to 20th Street.

The Project Site is also within the B1 and B2 Compatibility Zones for the Oroville Municipal Airport Compatibility Land Use Plan. The B1 zone allows residential development of 0.1 units per acre and the B2 zone residential development of 0.5 units per acre. As such, these Compatibility Zones do not allow residential development at the density proposed for the Project.

ES.3 Project Alternatives

CEQA requires an evaluation of the comparative effects of a reasonable range of alternatives to the Proposed Project that would feasibly attain most of the project's basic objectives and that would avoid or substantially lessen any of the significant impacts of the Proposed Project. In this case, the majority of the significant impacts of the Proposed Project would be mitigated to a less-than-significant by the measures included in the Proposed Project. Nonetheless, three alternatives were evaluated to determine their impacts as compared to those of the Proposed Project: the No Project Alternative (Alternative 1), the Reduced Project Alternative (Alternative 2), and the Residential Densities Consistent with the B1 Compatibility Zone Alternative (Alternative 3). All alternatives were deemed feasible and reasonable alternatives to the Proposed Project. However, Alternative 1 does not meet any of the Project objectives, and Alternatives 2 and 3 both meet four of the five Project objectives.

Alternative 3 would reduce one of the three Project impacts whereas Alternative 2 would not reduce any of the Project's significant and unavoidable impacts. Based on the evaluation contained in Section 5.4 of the DRAFT EIR, Alternative 3 would be the environmentally superior alternative, as it would result in fewer impacts to one resource category when compared to the Proposed Project and still meet the majority of the Project objectives.

ES.4 Effects Found not to be Significant

CEQA Guidelines Section 15128 requires an EIR to briefly describe any possible significant effects that were determined not to be significant and were therefore not discussed in detail in the Draft EIR. For purposes of this Final EIR, the following topics were eliminated from further evaluation of the environmental analysis through the Initial Study review process: aesthetics; agriculture, geology and soils (not including impacts to paleontological resources); hazards and hazardous materials (not including airports hazard impacts); hydrology and water quality; land use and planning (not including physically dividing an established community impacts); mineral resources; public services (not including fire protection impacts) recreation; utilities (not including impacts to wastewater and storm drainage services); and wildfire.

As a result of the findings of the Initial Study, the City determined that an EIR level of analysis was required for specific impact areas. Those areas include air quality (project and cumulative); biological resources (project and cumulative); cultural and paleontological resources (project and cumulative); energy (project and cumulative); geology and soils (project and cumulative); greenhouse gas and climate change (project and cumulative); hazards and hazardous materials (project and cumulative); land use and planning (project and cumulative); noise (project and cumulative); population and housing (project and cumulative); transportation (project and cumulative), and tribal cultural resources (project and cumulative); and utilities and services (project and cumulative). All mitigation measures identified in these sections, as shown in **Table ES-1**, will be included as mitigation in the EIR and in the MMRP.

ES.5 Areas of Controversy

No known areas of controversy exist for the Proposed Project.

ES.6 Summary of Impacts and Mitigation Measures

Table ES-1 presents a summary of environmental impacts analyzed and identified in the Initial Study and this Draft EIR, the mitigation measures proposed for those impacts (if required), and the level of significance after mitigation.

Table ES-1. Summary of Impacts and Mitigation Measures

Table ES-1. Summary of Proposed Project Impacts and Mitigation Measures		
Environmental Impacts	Mitigation Measures	Residual Impact (with Mitigation)
Notes: NI = No Impact, LTS = Less than Significant, SU = Significant, Unavoidable, CC = Cumulatively Considerable, LTCC = Less than Cumulatively Considerable		
BIOLOGICAL RESOURCES		
<p>BIO-1: Project implementation could have a substantial adverse effect, either directly or through habitat modifications, on any species identified as a candidate, sensitive, or special status species in local or regional plans, policies, or regulations, or by the CDFW or USFWS. Impact Determination: <i>Less than Significant with Mitigation</i></p>	<p>BIO-1: Implement Erosion Control Measures and BMPs. The Project proponent shall implement erosion control measures and BMPs to reduce the potential for sediment or pollutants at the Project site. Examples of appropriate measures are included below.</p> <ul style="list-style-type: none"> • Avoided aquatic resources should be clearly demarcated prior to construction. Avoidance buffers should be consistent with the City of Oroville requirements and/or requirements of regulatory permits. Erosion control measures should be placed between avoided aquatic resources and the outer edge of the impact limits prior to commencement of construction activities. Such identification and erosion control measures should be properly maintained until construction is completed and the soils have been stabilized. • Any fueling in the Study Area should use appropriate secondary containment techniques to prevent spills. <p>BIO-2: Worker Environmental Awareness Program. The Project proponent shall require a mandatory Worker Environmental Awareness Program provided by qualified biologist for all contractors, work crews, and any onsite personnel to aid workers in recognizing special status species and sensitive biological resources that may occur on-site prior to any construction or grading of the site. The program shall include identification of the special status species and their habitats, a</p>	LTS

Table ES-1. Summary of Proposed Project Impacts and Mitigation Measures		
Environmental Impacts	Mitigation Measures	Residual Impact (with Mitigation)
Notes: NI = No Impact, LTS = Less than Significant, SU = Significant, Unavoidable, CC = Cumulatively Considerable, LTCC = Less than Cumulatively Considerable		
	<p>description of the regulatory status and general ecological characteristics of sensitive resources, and review of the limits of construction and mitigation measures required to reduce impacts to biological resources within the work area.</p> <p>BIO-3: Special-Status Species – Plants. There is potential or low potential for 23 special-status plants to occur within the Study Area. The following mitigation measures are required to minimize potential impacts to special-status plants.</p> <ul style="list-style-type: none"> • Perform floristic plant surveys according to USFWS, CDFW, and CNPS protocols prior to construction. Surveys shall be conducted by a qualified biologist and timed according to the appropriate phenological stage for identifying target species. Known reference populations shall be visited and/or local herbaria records shall be reviewed, if available, prior to surveys to confirm the phenological stage of the target species. If no special-status plants are found within the Project site, no further measures pertaining to special-status plants are necessary. • If special-status plants are identified within 25-feet of the Project impact area, implement the following measures: • If avoidance of special-status plants is feasible, establish and clearly demarcate avoidance zones for special-status plant occurrences prior to construction. Avoidance zones shall include the extent of the special-status plants plus a 25-foot buffer, unless otherwise determined by a qualified biologist, and shall be maintained until the completion of construction. A qualified biologist/biological monitor shall 	

Table ES-1. Summary of Proposed Project Impacts and Mitigation Measures		
Environmental Impacts	Mitigation Measures	Residual Impact (with Mitigation)
Notes: NI = No Impact, LTS = Less than Significant, SU = Significant, Unavoidable, CC = Cumulatively Considerable, LTCC = Less than Cumulatively Considerable		
	<p>be present must occur within the avoidance buffer to ensure special-status plants are not impacted by the work.</p> <ul style="list-style-type: none"> If avoidance of special-status plants is not feasible, mitigate for significant impacts to special-status plants. Mitigation measures shall be developed in consultation with CDFW. Mitigation measures may include permanent preservation of onsite or offsite habitat for special-status plants and/or translocation of plants or seeds from impacted areas to unaffected habitats. <p>BIO-4: Special-Status Species – Invertebrates. There is potential for three federally listed special-status invertebrates to occur within the Study Area. The following mitigation measure is required to minimize potential impacts to special-status invertebrates.</p> <ul style="list-style-type: none"> No Project construction shall proceed in areas supporting potential habitat for federally listed vernal pool invertebrates, or within adequate buffer areas (250 feet or lesser distance deemed sufficiently protective by a qualified biologist with approval from USFWS), until incidental take authorization has been issued by USFWS under Section 7 (Biological Opinion) or Section 10 (HCP) of the ESA and the Project proponent has abided by conditions in the BO or HCP, including all conservation and minimization measures. Conservation and minimization measures shall include preparation of supporting documentation describing methods to protect existing vernal pools during and after project construction and compensatory mitigation for loss of suitable habitat. 	

Table ES-1. Summary of Proposed Project Impacts and Mitigation Measures		
Environmental Impacts	Mitigation Measures	Residual Impact (with Mitigation)
Notes: NI = No Impact, LTS = Less than Significant, SU = Significant, Unavoidable, CC = Cumulatively Considerable, LTCC = Less than Cumulatively Considerable		
	<p>BIO-5: Western Spadefoot. Western spadefoot have potential to occur within the Study Area. Implementation of Mitigation Measures BIO-1, BIO-2, and the following mitigation measure would avoid and/or minimize potential adverse effects to western spadefoot.</p> <ul style="list-style-type: none"> A qualified biologist shall conduct surveys for western spadefoot in areas of potential habitat that would be eliminated by the Project. The surveys shall be conducted at the appropriate time of year to detect western spadefoot, generally the breeding season, according to methods approved by CDFW. If western spadefoot is found in habitat that will be eliminated or made unsuitable for western spadefoot, a plan to collect and relocate adult and larval western spadefoot and egg masses to suitable habitat that will be preserved in perpetuity as required according to the BO in Mitigation Measure BIO-4. <p>BIO-6: Blainville’s Horned Lizard. Blainville’s horned lizard have potential to occur within the Study Area. Implementation of Mitigation Measures BIO-1, BIO-2, and the following mitigation measure would avoid and/or minimize potential adverse effects to Blainville’s horned lizard.</p> <ul style="list-style-type: none"> A qualified biologist shall conduct a preconstruction Blainville’s horned lizard survey in Project impact areas within 48 hours prior to construction activities. Any Blainville’s horned lizard individuals discovered in the Project work area immediately prior to or during Project activities shall be allowed to move out of the work area of their own volition. If this is not feasible, consult with CDFW 	

Table ES-1. Summary of Proposed Project Impacts and Mitigation Measures		
Environmental Impacts	Mitigation Measures	Residual Impact (with Mitigation)

	<p>archaeologist, shall be retained to evaluate the significance of the find, and shall have the authority to modify the no-work radius as appropriate, using professional judgment. The following notifications shall apply, depending on the nature of the find:</p> <ul style="list-style-type: none"> • If the professional archaeologist determines that the find does not represent a cultural resource, work may resume immediately, and no agency notifications are required. • If the professional archaeologist determines that the find does represent a cultural resource from any time period or cultural affiliation, he or she shall immediately notify the City and landowner. If the find is determined to be eligible for inclusion in the NRHP or CRHR, the City shall consult on a finding of eligibility and implement appropriate treatment measures. Work may not resume within the no-work radius until the City, through consultation as appropriate, determines that the site either: 1) is not eligible for the NRHP or CRHR; or 2) that the treatment measures have been completed to its satisfaction. • If the find includes human remains, or remains that are potentially human, he or she shall ensure reasonable protection measures are taken to protect the discovery from disturbance (AB 2641). The archaeologist shall notify the Butte County Coroner (in accordance with Section 7050.5 of the Health and Safety Code). The provisions of Section 7050.5 of the California Health and Safety Code, Section 5097.98 of the California PRC, and AB 2641 will be implemented. If the Coroner determines the remains are Native American and not the result of a crime scene, the 	

Table ES-1. Summary of Proposed Project Impacts and Mitigation Measures		
Environmental Impacts	Mitigation Measures	Residual Impact (with Mitigation)
Notes: NI = No Impact, LTS = Less than Significant, SU = Significant, Unavoidable, CC = Cumulatively Considerable, LTCC = Less than Cumulatively Considerable		
	Coroner will notify the NAHC, which then will designate a Native American Most Likely Descendant (MLD) for the project (Section 5097.98 of the PRC). The designated MLD will have 48 hours from the time access to the property is granted to make recommendations concerning treatment of the remains. If the landowner does not agree with the recommendations of the MLD, the NAHC can mediate (Section 5097.94 of the PRC). If no agreement is reached, the landowner must rebury the remains where they will not be further disturbed (Section 5097.98 of the PRC). This will also include either recording the site with the NAHC or the appropriate information center; using an open space or conservation zoning designation or easement; or recording a reinternment document with the county in which the property is located (AB 2641). Work may not resume within the no-work radius until the lead agencies, through consultation as appropriate, determine that the treatment measures have been completed to their satisfaction.	
CUL-2: Project implementation could cause a substantial adverse change in the significance of an archeological resource pursuant to CEQA Guidelines Section 15064.5. Impact Determination: <i>Less than Significant with Mitigation</i>	Implement CUL-1	LTS
CUL-3: Project implementation could disturb any human remains, including those interred outside of formal cemeteries. Impact Determination: <i>Less than Significant with Mitigation</i>	Implement CUL-1	LTS

Table ES-1. Summary of Proposed Project Impacts and Mitigation Measures		
Environmental Impacts	Mitigation Measures	Residual Impact (with Mitigation)
Notes: NI = No Impact, LTS = Less than Significant, SU = Significant, Unavoidable, CC = Cumulatively Considerable, LTCC = Less than Cumulatively Considerable		
GEOLOGY, SOILS AND PALEONTOLOGICAL RESOURCES		
<p>GEO-1: Project implementation could directly or indirectly cause potential substantial adverse effects, including the risk of loss, injury, or death involving rupture of a known earthquake fault, strong seismic ground shaking, seismic-related ground failure, or landslides. Impact Determination: <i>Less than Significant with Mitigation</i></p>	<p>PALEO-1: Discovery of Unknown Paleontological Resources. If paleontological or other geologically sensitive resources are identified during any phase of Project development, the construction manager shall cease operation at the site of the discovery and immediately notify the City. The Project proponent shall retain a qualified paleontologist to evaluate the find and to prescribe mitigation measures to reduce impacts to a less than significant level. In considering any suggested mitigation proposed by the consulting paleontologist, the City shall determine whether avoidance is necessary and feasible in light of factors such as the nature of the find, project design, costs, land use assumptions, and other considerations. If avoidance is unnecessary or infeasible, other appropriate measures (e.g., data recovery) shall be instituted. Work may proceed on other parts of the project site while mitigation for paleontological resources is carried out.</p>	LTS
HAZARDS AND HAZARDOUS MATERIALS		
<p>HAZ-1: If the Proposed Project is located within an airport land use plan or, where such a plan has not been adopted, within 2 miles of a public airport or public use airport, the Proposed Project could result in a safety hazard or excessive noise for people residing or working in the Project Area.</p>	No feasible mitigation possible.	SU
<p>HAZ-2: Implementation of the proposed project, along with any foreseeable development in the project vicinity, result in cumulative</p>	No feasible mitigation possible.	CC and SU

Table ES-1. Summary of Proposed Project Impacts and Mitigation Measures		
Environmental Impacts	Mitigation Measures	Residual Impact (with Mitigation)
Notes: NI = No Impact, LTS = Less than Significant, SU = Significant, Unavoidable, CC = Cumulatively Considerable, LTCC = Less than Cumulatively Considerable		
impacts regarding safety hazard or excessive noise for people residing or working in the Project area. Impact Determination: <i>Cumulatively Considerable and Significant and Unavoidable</i>		
NOISE		
NOI-1: Project implementation could result in generation of a substantial temporary or permanent increase in ambient noise levels in the vicinity of the project in excess of standards established in the local general plan or noise ordinance, or applicable standards of other agencies. Impact Determination: <i>Significant and Unavoidable</i>	No feasible mitigation possible.	SU
NOI-4: Would implementation of the Proposed Project, in combination with existing, approved, proposed, and reasonably foreseeable development in Butte County, result in a cumulatively considerable noise impact? Impact Determination: <i>Cumulative Considerable and Significant and Unavoidable</i>	No feasible mitigation possible.	CC and SU
PUBLIC SERVICES		
PUB-1: Project implementation could result in substantial adverse physical impacts associated with the provision of new or physically altered governmental facilities, need for new or physically altered governmental facilities, the construction of which could cause	PUB-1: Annexation into CFD 2006-01 and CFD 2006-02. Prior to recordation of the Final Map, the Project shall annex into both CFD 2006-01 and CFD 2006-02.	LTS

Table ES-1. Summary of Proposed Project Impacts and Mitigation Measures		
Environmental Impacts	Mitigation Measures	Residual Impact (with Mitigation)
Notes: NI = No Impact, LTS = Less than Significant, SU = Significant, Unavoidable, CC = Cumulatively Considerable, LTCC = Less than Cumulatively Considerable		
significant environmental impacts, in order to maintain acceptable service ratios, response times, or other performance objectives for fire, police, schools, and/or other public facilities. Impact Determination: <i>Less than Significant with Mitigation</i>		
TRANSPORTATION		
<p>TR-2: Project implementation could conflict or be inconsistent with CEQA Guidelines Section 15064.3, subdivision (b). Impact Determination: <i>Significant and Unavoidable</i></p>	<p>TR-1: Provide Pedestrian Network Improvements. Providing a pedestrian access network to link areas of the Project site encourages people to walk instead of drive. This mode shift results in people driving less and thus a reduction in VMT.</p> <p>The Project will provide a pedestrian access network that internally links all uses and connects to all existing or planned external streets and pedestrian facilities contiguous with the project site. The Project will minimize barriers to pedestrian access and interconnectivity. Physical barriers such as walls, landscaping, and slopes that impede pedestrian circulation will be eliminated. Some aspects of this measure are already included in the Proposed Project.</p> <p>Increasing the use of pedestrian improvements would further reduce Project-related VMT. The range of effectiveness of this measure as described by BCAG is from 0.5 percent to 5.7 percent.</p> <p>TR-2: Provide Traffic Calming Measures. Providing traffic calming measures encourages people to walk or use bicycles instead of using a vehicle. This mode shift will result in a decrease in VMT.</p> <p>Project design will include pedestrian/bicycle safety and traffic calming measures in excess of jurisdiction requirements.</p>	SU

Table ES-1. Summary of Proposed Project Impacts and Mitigation Measures		
Environmental Impacts	Mitigation Measures	Residual Impact (with Mitigation)
Notes: NI = No Impact, LTS = Less than Significant, SU = Significant, Unavoidable, CC = Cumulatively Considerable, LTCC = Less than Cumulatively Considerable		
	<p>Roadways will be designed to reduce motor vehicle speeds and encourage pedestrian and bicycle trips with traffic calming features. Traffic calming features may include: marked crosswalks, curb extensions, speed tables, raised crosswalks, raised intersections, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, and others. Some aspects of this measure are already included in the Proposed Project. Increasing the use of traffic calming measures would further reduce Project-related VMT. The range of effectiveness of this measure as described by BCAG is from 0 to 1.7 percent.</p> <p>TR-3: Contribute to a 20th Street Bicycle Facility. Providing bicycle facilities reduces VMT by encouraging use of non-vehicular forms of transportation. Connecting to existing bicycle facilities would provide access to Project site residents to a larger network of facilities.</p> <p>The Project applicant shall contribute a fair share portion of the cost toward construction of the bikeway. Because the Bicycle Transportation Plan does not specify whether the 20th Street bikeway would be a Class I or Class II facility, it is not known whether the bikeway would be on 20th Street or separate from the roadway. For the same reason, it is not known what the cost of the bikeway would be. As such, the Project's fair share portion shall be negotiated between the applicant and the City of Oroville.</p>	
TR-4: Would the project, when considered with existing, proposed, planned, and approved development in the region, implementation of the proposed project would contribute to cumulative traffic	Implement TR-1, TR-2, and TR-3	CC and SU

Table ES-1. Summary of Proposed Project Impacts and Mitigation Measures

INTRODUCTION

This Final Environmental Impact Report (FEIR) was prepared in accordance with the California Environmental Quality Act (CEQA) and the State CEQA Guidelines (Section 15132). The City of Oroville (City) is the lead agency for the environmental review of the proposed Feather Ranch Project (Proposed Project, Project). The City has the principal responsibility for approving the Project. This FEIR assesses the expected environmental impacts resulting from approval and implementation of the proposed project, as well as responds to comments received on the Draft EIR.

1.1 Background and Purpose of the EIR

1.1.1 Overview of CEQA Requirements For Preparation of an EIR

The City, serving as the lead agency, has prepared this EIR to provide the public and responsible and trustee agencies with information about the potential environmental effects of the proposed project. As set forth in the provisions of CEQA and implementing regulations, public agencies are charged with the duty to consider the environmental impacts of proposed development and to minimize these impacts where feasible while carrying out an obligation to balance a variety of public objectives, including economic, environmental, and social factors.

State CEQA Guidelines Section 15121(a) states that an EIR is an informational document for decision-makers and the general public that analyzes the significant environmental effects of a project, identifies possible ways to minimize significant effects, and describes reasonable alternatives to the project that could reduce or avoid its adverse environmental impacts. Public agencies with discretionary authority are required to consider the information in the EIR, along with any other relevant information, in making decisions on the project.

CEQA requires the preparation of an Environmental Impact Report prior to approving any project that may have a significant effect on the environment. For the purposes of CEQA, the term *project* refers to the whole of an action which has the potential for resulting in a direct physical change or a reasonably foreseeable indirect physical change in the environment (CEQA Guidelines Section 15378[a]). With respect to the Proposed Project, the County has determined that the proposed Feather Ranch Project is a project within the definition of CEQA.

1.1.2 Background of Environmental Review Process of the Project

The following is an overview of the environmental review process for the proposed Feather Ranch Project that has led to the preparation of this FEIR.

Initial Study

On November 1, 2022, the Feather Ranch Initial Study (IS, State Clearinghouse (SCH)#2019059077) was circulated by the City for a 30-day public review period.

Based on the findings of the IS, the City determined that an EIR level of analysis was required for specific impact areas. Those areas include air quality (project and cumulative), biological resources (project and cumulative), cultural resources (project and cumulative), energy (project and cumulative), geology/soils/paleontological resources (project and cumulative), greenhouse gas and climate change (project and cumulative), hazards and hazardous materials (project and cumulative), land use (project and cumulative), noise (project and cumulative), population and housing (project and cumulative), public services (project and cumulative), transportation (project and cumulative), tribal cultural resources (project and cumulative), and utilities (project and cumulative). All other impact analysis areas defined in Appendix G of the CEQA Guidelines are not included in this EIR. All mitigation measures identified in the Executive Summary will be included as mitigation in this EIR and in the Mitigation Monitoring and Reporting Program (MMRP).

Notice of Preparation

In accordance with CEQA Guidelines § 15082, the City prepared a Notice of Preparation (NOP) of an EIR for the Proposed Project that was distributed to responsible agencies and the public for a 30-day comment period, beginning on November 1, 2023, and concluding on December 2, 2023.

Draft EIR

The Draft EIR (Draft EIR) was released for public and agency review on April 15, 2023, and the review period ended on May 30, 2023. The DEIR contains a description of the Project, description of the environmental setting, identification of Project impacts, and mitigation measures for impacts found to be significant, as well as an analysis of Project alternatives. The Draft EIR was provided to interested public agencies and the public and was made available for review at the Oroville City Hall and on the City's website.

Final EIR

The City received three (3) comment letters from interest groups, government agencies, and the public regarding the Draft EIR. This document responds to the written comments received as required by CEQA. As explained in Section 3.0, Minor Revisions to the EIR, no revisions to the EIR were necessary as all comments received did not result in changes to the EIR. This document constitutes the FEIR.

Certification of the Final EIR/Project Consideration

The City will review and consider the FEIR. If the City finds that the FEIR is "adequate and complete," the City may certify the FEIR. The rule of adequacy generally holds that the EIR can be certified if (1) it shows a good faith effort at full disclosure of environmental information, and (2) it provides sufficient analysis to allow decisions to be made regarding the project in contemplation of its environmental consequences.

Upon review and consideration of the Final EIR, the City may take action to adopt, revise, or reject the Proposed Project. A decision to approve the Proposed Project would be accompanied by written findings in accordance with State CEQA Guidelines Section 15091 and Section 15093. Public Resources Code Section 21081.6 also requires lead agencies to adopt a Mitigation Monitoring and Reporting Program (MMRP) to describe measures that have been adopted or made a condition of project approval in order

to mitigate or avoid significant effects on the environment. The MMRP for the Proposed Project is located under separate cover.

1.2 Intended Use of the EIR

This EIR is intended to evaluate the environmental impacts of the Feather Ranch Project. This EIR in its final form will be used by the City of Oroville in considering approval of the Proposed Project. In accordance with CEQA Guidelines § 15126, the EIR will be used as the primary environmental document in consideration of all subsequent planning and permitting actions associated with the project, to the extent such actions require CEQA compliance and as otherwise permitted under applicable law.

City of Oroville

The EIR is intended to be used by the City as a tool in evaluating the Proposed Project's environmental impacts and can be further used to modify, approve, or deny approval of the Proposed Project based on the analysis provided in the EIR. A description of any requested entitlements and subsequent approvals associated with approval and implementation of the Proposed Project are described in Section 2.0, Project Description, of the Draft EIR.

Known Trustee And Responsible Agencies

For the purpose of CEQA, the term *trustee agency* means a state agency having jurisdiction by law over natural resources affected by a project which are held in trust for the people of the State of California. In CEQA, the term *responsible agency* includes all public agencies other than the lead agency that may have approval authority in some regard associated with the Proposed Project. Interested agencies may have a general interest in the proposal with respect to issues germane to their organization. The following agencies have been identified as potential responsible, trustee, or interested agencies with direct or indirect interest in the Project:

- Butte County Air Quality Management District (BCAQMD)
- Butte County Airport Land Use Commission (BCALUC)
- Central Valley Regional Water Quality Control Board, Region 5 (RWQCB)

This EIR may also be used by other public agencies to issue approvals and permits related to the Proposed Project.

1.3 Organization and Scope of the Final EIR

This document is organized in the following manner:

Section ES – Executive Summary

Section ES includes an updated Executive Summary that provides a brief project description and presents a summary table of probably environmental effects of the project.

Section 1.0 – Introduction

Section 1.0 provides an overview of the EIR process to date and what the FEIR is required to contain.

Section 2.0 – Comments and Responses to Comments on the Draft EIR

Section 2.0 provides a list of commenters, copies of written comments (coded for reference), and the responses to those written comments made on the Draft EIR.

Section 3.0 – Minor Revisions to the Draft EIR

Section 3.0 provides a list of minor edits, if necessary, made to the Draft EIR as a result of comments received and other staff-initiated changes.

Comments and Responses to Comments on the Draft EIR

2.1 Introduction

This Final Environmental Impact Report (FEIR) was prepared in accordance with the California Environmental Quality Act (CEQA) (California Public Resources Code Section 21000, et seq.) and State CEQA Guidelines (California Code of Regulations Section 15000, et seq.). The City of Oroville is the lead agency for the environmental review of the Proposed Project and has the principal responsibility for approving the Project. This FEIR assesses the expected environmental impacts resulting from the approval and implementation of the proposed project and responds to comments received on the Draft EIR (referred to as Draft EIR or DEIR).

2.2 List of Commenters

The following individuals and representatives of organizations and agencies submitted written comments on the Draft EIR. To assist in referencing comments and responses, the following coding system is used:

- Agency and service provider comment letters are coded by letters and each issue raised in the comment letter is assigned a number (e.g., Comment Letter A, comment 1 is referred to as A-1).
- Individual and interest group comment letters are coded by numbers and each issue raised in the comment letter is assigned a number (e.g., Comment Letter 1, comment 1 is referred to as 1-1).

Table 2-1. List of Comment Letters

Letter	Agency, Organization, or Individual	Date
A	California Department of Transportation, Division of Aeronautics, Tiffany A. Martinez	5/30/2023
1	Ted Runge	5/15/2023
2	California Pilots Association, Region 1, Patrick Waller	5/30/2023

2.3 Requirements for Responding to Comments on the Draft EIR

State CEQA Guidelines Section 15088 requires that lead agencies evaluate all comments on environmental issues received on the Draft EIR and prepare a written response. The written response must address the significant environmental issue raised and must be detailed, especially when specific comments or suggestions (e.g., additional mitigation measures) are not accepted. In addition, there must be a good faith and reasoned analysis in the written response. However, lead agencies need only respond to significant environmental issues associated with the project and do not need to provide all the information requested by commenters, as long as a good faith effort at full disclosure is made in the EIR (State CEQA Guidelines 15204).

State CEQA Guidelines Section 15204 recommends that commenters provide detailed comments that focus on the sufficiency of the Draft EIR in identifying and analyzing the possible impacts on the environment and ways in which the significant effects of the project might be avoided or mitigated. State CEQA Guidelines Section 15204 also notes that commenters should provide an explanation and evidence

supporting their comments. Pursuant to State CEQA Guidelines Section 15064, an effect shall not be considered significant in the absence of substantial evidence supporting such a conclusion.

State CEQA Guidelines Section 15088 also recommends that where a response to comments results in revisions to the Draft EIR, those revisions be incorporated as a revision to the Draft EIR or as a separate section of the Final EIR.

2.4 Responses to Comments

Each comment letter received for the Project and the individual responses to each comment are included in this document. Comment letters were received from California Department of Transportation (Caltrans) and the Governor's Office of Planning and Research (OPR) The comments included in these letters are individually addressed below. No revisions to the document were necessary based on the content of the comment letters received.

Letter A: California Department of Transportation Division of Aeronautics

Letter A

CALIFORNIA STATE TRANSPORTATION AGENCY

GAVIN NEWSOM, GOVERNOR

California Department of Transportation

DIVISION OF AERONAUTICS – M.S. #40

Re: 2022110054, Proposed Feather River Ranch Subdivision Project, Butte County

Dear Mr. Ervin:

The California Department of Transportation, Division of Aeronautics has reviewed the Draft EIR for the City of Oroville Proposed Feather River Ranch Subdivision Project. One of the goals of the California Department of Transportation (Caltrans), Division of Aeronautics (Division), is to assist cities, counties, and Airport Land Use Commissions or their equivalent (ALUC), to understand and comply with the State Aeronautics Act pursuant to the California Public Utilities Code (PUC), Section 21001 et seq. Caltrans encourages collaboration with our partners in the planning process and thanks you for including the Division in the review of the Draft Environmental Impact Report.

A-1

The proposed Project is listed as a land use designation of Airport Business Park (ABP) in the General Plan and a zoning district of Airport Business Park (ABP) with an Airport Influence Area Overlay (AIA-O). Moreover, the proposed Site is within the B1 and B2 compatibility zones of the Butte County Airport Land Use Compatibility Plan (ALUCP) for the Oroville Municipal Airport. These designations do not allow for the development of residential uses at the densities requested of the proposed Project.

A-2

Per the California Public Utilities Code Section 21001 et seq. relating to the State Aeronautics Act, Section 21676(b) prior to the amendment of a general plan...within the planning boundary established by the airport land use commission pursuant to Section 21675, the local agency shall first refer the proposed action to the commission. If the commission determines that the proposed action is inconsistent with the commission's plan, the referring agency shall be notified. Any proposed development in the defined safety zones, therefore, must adhere to the safety criteria and restrictions defined in the Airport Land Use Compatibility Plan formed by the ALUC pursuant to the PUC, Section 21674.

A-3

"Provide a safe and reliable transportation network that serves all people and respects the environment"

Wes Ervin, Principal Planner
May 30, 2023
Page 2

Caltrans recommends that the City of Oroville strongly consider its project alternative ES-5.3: Residential Densities Consistent with the Airport Land Use Plan B1 Compatibility Zone. The ALUCP is crucial in minimizing noise nuisance and safety hazards around airports while promoting the orderly development of airports, as declared by the California Legislature. Caltrans also recommends that the City work with its ALUC in this ongoing process to determine best measures.

A-4

The Division recognizes that the City is seeking to meet RHNA housing objectives and is looking for new areas to accommodate residential developments by rezoning undeveloped land. The Division notes that new laws regarding the provision of housing do not supersede existing laws, including Section 21670 of the California Public Utilities Code, which requires counties to establish ALUCs and compatibility plans to protect public health, safety, and welfare.

A-5

If you have any questions or need additional information, please contact me at my email address: tiffany.martinez@dot.ca.gov.

Sincerely,

Tiffany A. Martinez
Transportation Planner, Division of Aeronautics

Cc: State Clearinghouse

"Provide a safe and reliable transportation network that serves all people and respects the environment"

Letter A - Tiffany A. Martinez, California Department of Transportation Division of Aeronautics

Comment A-1: The comment states that one of the goals of the California Department of Transportation (Caltrans), Division of Aeronautics (Division), is to assist cities, counties, and Airport Land Use Commissions or their equivalent (ALUC), to understand and comply with the State Aeronautics Act.

Response A-1: This comment does not contain specific comments on the content or adequacy of the DEIR. Comment noted.

Comment A-2: The comment provides the General Plan land use designation, zoning district, and compatibility zones of the Butte County Airport Land Use Compatibility Plan (ALUCP) for the Oroville Municipal Airport for the Proposed Project. Additionally, the comment states that the B1 and B2 compatibility zones do not allow for the development of residential uses at the densities requested of the Proposed Project.

Response A-2: This comment does not contain specific comments on the content or adequacy of the DEIR. This information is identified and evaluated in the DEIR.

Comment A-3: The comment provides the required procedure for amending a General Plan within a planning boundary established by the airport land use commission pursuant to Public Utility Code (PUC) Section 21675 requiring the local agency to first refer the proposed action to the commission. If the commission determines that the proposed action is inconsistent with the commission's plan, the referring agency shall be notified. Any proposed development in the defined safety zones, therefore, must adhere to the safety criteria and restrictions defined in the Airport Land Use Compatibility Plan formed by the ALUC pursuant to the PUC, Section 21674.

Response A-3: This comment does not contain specific comments on the content or adequacy of the DEIR. Comment noted. The City of Oroville referred the Project to the Butte County ALUC as a part of the Project review process. The Butte County ALUC reviewed the Project on September 21, 2022 and determined that the Project was inconsistent with the 2017 ALUCP for the Oroville Municipal Airport. The potential for ALUCP inconsistency is discussed in Sections 3.7 Hazards, 3.8 Land Use, and 3.9 Noise of the DEIR. The DEIR determined that the Project would result in a significant and unavoidable impact with regard to airport safety.

As a point of clarification, PUC Section 21674 does not require proposed development to adherence of safety criteria and restrictions defined in the Airport Land Use Compatibility Plan. Section 21674 only provides the powers and duties of an ALUC.

Further, Section 21675.1(d) provides for the ability of a local jurisdiction, if it makes specific findings, to overrule a ALUC consistency determination. Section 21675(d) is as follows:

(d) If the commission disapproves an action, regulation, or permit, the commission shall notify the city or county. The city or county may overrule the commission, by a two-thirds vote of its governing body, if it makes specific findings that the proposed action, regulation, or permit is consistent with the purposes of this article, as stated in Section 21670.

Additionally, PUC Section 21674.7(b) also illustrates a local jurisdiction ability to overrule an ALUC. Section 21674.7(b) is as follows:

(b) It is the intent of the Legislature to discourage incompatible land uses near existing airports. Therefore, prior to granting permits for the renovation or remodeling of an existing building, structure, or facility, and before the construction of a new building, it is the intent of the Legislature that local agencies shall be guided by the height, use, noise, safety, and density criteria that are compatible with airport operations, as established by this article, and referred to as the Airport Land Use Planning Handbook, published by the division, and any applicable federal aviation regulations, including, but not limited to, Part 77 (commencing with Section 77.1) of Title 14 of the Code of Federal Regulations, to the extent that the criteria has been incorporated into the plan prepared by a commission pursuant to Section 21675. This subdivision does not limit the jurisdiction of a commission as established by this article. *This subdivision does not limit the authority of local agencies to overrule commission actions or recommendations pursuant to Sections 21676, 21676.5, or 21677 (italics added).*

Finally, of note, the Butte County Airport Land Use Commission did not provide any comments on the DEIR.

Comment A-4: The comment provides Caltrans' recommendation that the City of Oroville strongly consider the Project Alternative 2: Residential Densities Consistent with the Airport land Use Plan B1Compatibility Zone. Caltrans also recommends that the City work with its ALUC in this ongoing process to determine best measures.

Response A-4: This comment does not contain specific comments on the content or adequacy of the DEIR. Comment noted.

Comment A-5: The comment provides Caltrans understanding that the City seeking to meet RHNA housing objectives but notes that new laws regarding the provision of housing do not supersede existing laws, including Section 21670 of the California Public Utilities Code, which requires counties to establish ALUCs and compatibility plans to protect public health, safety, and welfare.

Response A-5: This comment does not contain specific comments on the content or adequacy of the DEIR. Comment noted.

VICINITY MAP

PROJECT DESCRIPTION:

TSM 22-01 (Feather Ranch) - The City of Oroville Planning Commission will conduct a public hearing to consider a tentative subdivision map for the parcel located west of 20th Street between Biggs and Feather Avenue (APNs: 030-230-098). The parcel would require a General Plan Amendment and rezone of the property to R-1 zoning for the development of single-family homes consistent with the City's General Plan. The current zoning and General Plan land use designation for the parcel is Airport Business Park (ABP). The proposal is to subdivide and develop approximately 45 acres into 172 lots for single-family residences.

Letter 1 - Ted Runge

3.0 MINOR REVISIONS TO THE EIR

This section typically includes minor revisions made to the EIR. These modifications result from comments received during the Draft EIR public review period as well as staff-initiated changes. Any revisions may not result in new significant environmental impacts, may not constitute significant new information, and may not alter the conclusions of the environmental analysis.

3.1 Minor Changes to the EIR

No revisions to the EIR were deemed necessary. The comment letters received did not present any comments that required a revision to the Draft EIR. This section was included in this Final EIR to indicate that no changes were required to the Draft EIR.

This page is intentionally left blank

MITIGATION MONITORING AND REPORTING PROGRAM

CEQA Environmental Impact Report

Feather Ranch Project

THIS PAGE IS INTENTIONALLY LEFT BLANK

SECTION 1.0 INTRODUCTION

In accordance with CEQA, an EIR that identifies adverse impacts related to the construction activities for the Feather Ranch Project was prepared. The EIR identifies mitigation measures that would reduce or eliminate these impacts.

Section 21081.6 of the Public Resources Code and Sections 15091(d) and 15097 of the State CEQA Guidelines require public agencies to adopt a reporting and monitoring program for changes to the project which it has adopted or made a condition of project approval in order to mitigate or avoid significant effects on the environment. An EIR is required for the Proposed Project because the EIR identified potentially significant adverse impacts related to construction activity, and mitigation measures have been identified to mitigate these impacts. Adoption of the MMRP will occur along with approval of the Proposed Project.

1.1 Purpose of the Mitigation Monitoring and Reporting Program

This MMRP has been prepared to ensure that all required mitigation measures are implemented and completed according to schedule and maintained in a satisfactory manner during the construction and operation of the Proposed Project, as required. The MMRP may be modified by the City of Oroville during Project implementation, as necessary, in response to changing conditions or other Project refinements. Table 1-1 has been prepared to assist the responsible parties in implementing the MMRP. This table identifies the category of significant environmental impact(s), individual mitigation measures, monitoring and mitigation timing, responsible person/agency for implementing the measure, monitoring and reporting procedure, and notation space to confirm implementation of the mitigation measures. The numbering of the mitigation measures follows the numbering sequence in the EIR.

1.2 ROLES AND RESPONSIBILITIES

The City of Oroville, as Lead Agency, is responsible for oversight of compliance of the mitigation measures in the MMRP.

1.3 MITIGATION MONITORING AND REPORTING PLAN

The column categories identified in the MMRP table (Table 1-1) are described below.

- **Mitigation Measure** – This column lists the mitigation measures by number.
- **Monitoring Activity/Timing/Frequency/Schedule** – This column lists the activity to be monitored for each mitigation measure, the timing of each activity, and the frequency/schedule of monitoring for each activity.
- **Implementation Responsibility/Verification** – This column identifies the entity responsible for complying with the requirements of the mitigation measure, and provides space for verification initials and date.
- **Responsibility for Oversight of Compliance/Verification** – This column provides the agency responsible for oversight of the mitigation implementation, and is to be dated and initialed by the agency representative based on the documentation provided by the construction contractor or through personal verification by agency staff.
- **Outside Agency Coordination** – this column lists any agencies with which the City may coordinate for implementation of the mitigation measure.
- **Comments** – this column provides space for written comments, if necessary.

MITIGATIONS	MONITORING AND REPORTING PROGRAM				
	Documentation of Compliance [Project Applicant/Proponent Responsibility]		Documentation of Compliance [Lead Agency Responsibility]		
	Monitoring Activity/Timing/ Frequency/ Schedule	Implementation Responsibility/ Verification	Responsibility for Oversight of Compliance/ Verification	Outside Agency Coordination	Comments
Biological Resources					
<p>BIO-1: Implement Erosion Control Measures and BMPs. The Project will implement erosion control measures and BMPs to reduce the potential for sediment or pollutants at the Project Site. Measures may include the following:</p> <ul style="list-style-type: none"> • Avoided aquatic resources should be clearly demarcated prior to construction. Avoidance buffers should be consistent with the City of Oroville requirements and/or requirements of regulatory permits. Erosion control measures should be placed between avoided aquatic resources and the outer edge of the impact limits prior to commencement of construction activities. Such identification and erosion control measures should be properly maintained until construction is completed and the soils have been stabilized. • Any fueling in the Study Area should use appropriate secondary containment techniques to prevent spills. 	<p>Activity: Implement erosion control measures and BMPs.</p> <p>Timing: Prior to and during grading and construction.</p> <p>Frequency: Ongoing during construction.</p>	<p>Contractor</p> <hr/> <p>Initials</p> <hr/> <p>Date</p>	<p>City of Oroville</p> <hr/> <p>Initials</p> <hr/> <p>Date</p>		
<p>BIO-2: Worker Environmental Awareness Program. The Project proponent shall require a mandatory Worker Environmental Awareness Program provided by qualified biologist for all contractors, work crews, and any onsite personnel to aid workers in recognizing special status species and sensitive biological resources that may occur on-site prior to any construction or grading of the site. The program shall include identification of the special status species and their habitats, a description of the regulatory status and general ecological characteristics of sensitive resources, and review of the limits of construction and mitigation</p>	<p>Activity: Conduct a preconstruction worker environmental awareness program. northwestern pond turtle survey in the Project Area within 48 hours prior to construction activities.</p> <p>Timing: Prior to grading and construction.</p>	<p>Contractor</p> <hr/> <p>Initials</p> <hr/> <p>Date</p>	<p>City of Oroville</p> <hr/> <p>Initials</p> <hr/> <p>Date</p>

measures required to reduce impacts to biological resources within the work area.	Frequency: Ongoing during construction.				
<p>BIO-3: Special-Status Species – Plants . There is potential or low potential for 23 special-status plants to occur within the Study Area. The following mitigation measures are required to minimize potential impacts to special-status plants:</p> <ul style="list-style-type: none"> • Perform floristic plant surveys according to USFWS, CDFW, and CNPS protocols prior to construction. Surveys shall be conducted by a qualified biologist and timed according to the appropriate phenological stage for identifying target species. Known reference populations shall be visited and/or local herbaria records shall be reviewed, if available, prior to surveys to confirm the phenological stage of the target species. If no special-status plants are found within the Project site, no further measures pertaining to special-status plants are necessary. • If special-status plants are identified within 25-feet of the Project impact area, implement the following measures: • If avoidance of special-status plants is feasible, establish and clearly demarcate avoidance zones for special-status plant occurrences prior to construction. Avoidance zones shall include the extent of the special-status plants plus a 25-foot buffer, unless otherwise determined by a qualified biologist, and shall be maintained until the completion of construction. A qualified biologist/biological monitor shall be present must occur within the avoidance buffer to ensure special-status plants are not impacted by the work. 	<p>Activity: A qualified biologist shall conduct a pre-construction survey for special-status plant species before construction commences.</p> <p>Timing: Prior to grading and construction.</p> <p>Frequency: Ongoing during construction.</p>	<p>Contractor</p> <hr/> <p>Initials</p> <hr/> <p>Date</p>	<p>City of Oroville</p> <hr/> <p>Initials</p> <hr/> <p>Date</p>

	Documentation of Compliance [Project Applicant/Proponent Responsibility]		Documentation of Compliance [Lead Agency Responsibility]		
	Monitoring Activity/Timing/ Frequency/ Schedule	Implementation Responsibility/ Verification	Responsibility for Oversight of Compliance/ Verification	Outside Agency Coordination	Comments
<ul style="list-style-type: none"> If avoidance of special-status plants is not feasible, mitigate for significant impacts to special-status plants. Mitigation measures shall be developed in consultation with CDgFW. Mitigation measures may include permanent preservation of onsite or offsite habitat for special-status plants and/or translocation of plants or seeds from impacted areas to unaffected habitats. 					
<p>BIO-4: Special-Status Species – Invertebrates. There is potential for three federally listed special-status invertebrates to occur within the Study Area. The following mitigation measure is required to minimize potential impacts to special-status invertebrates:</p> <ul style="list-style-type: none"> No Project construction shall proceed in areas supporting potential habitat for federally listed vernal pool invertebrates, or within adequate buffer areas (250 feet or lesser distance deemed sufficiently protective by a qualified biologist with approval from USFWS), until incidental take authorization has been issued by USFWS under Section 7 (Biological Opinion) or Section 10 (HCP) of the ESA and the Project proponent has abided by conditions in the BO or HCP, including all conservation and minimization measures. Conservation and minimization measures shall include preparation of supporting documentation describing methods to protect existing vernal pools during and after project construction and compensatory mitigation for loss of suitable habitat. 	<p>Activity: A qualified biologist shall conduct a pre-construction survey for special-status invertebrates and the permittee shall acquire an incidental take authorization before construction commences.</p> <p>Timing: Prior to construction.</p> <p>Frequency: Ongoing during construction.</p>	<p>Contractor</p> <hr/> <p>Initials</p> <hr/> <p>Date</p>	<p>City of Oroville</p> <hr/> <p>Initials</p> <hr/> <p>Date</p>		
<p>BIO-5: Western Spadefoot . Western spadefoot has potential to occur within the Study Area.</p>	<p>Activity:</p>	<p>Contractor</p>	<p>City of Oroville</p>	<p>If roosting bats are found, consultation</p>	

MITIGATIONS	MONITORING AND REPORTING PROGRAM				
	Documentation of Compliance [Project Applicant/Proponent Responsibility]		Documentation of Compliance [Lead Agency Responsibility]		
	Monitoring Activity/Timing/ Frequency/ Schedule	Implementation Responsibility/ Verification	Responsibility for Oversight of Compliance/ Verification	Outside Agency Coordination	Comments
<p>Implementation of Mitigation Measures BIO-1, BIO-2, and the following mitigation measure would avoid and/or minimize potential adverse effects to western spadefoot:</p> <ul style="list-style-type: none"> A qualified biologist shall conduct surveys for western spadefoot in areas of potential habitat that would be eliminated by the Project. The surveys shall be conducted at the appropriate time of year to detect western spadefoot, generally the breeding season, according to methods approved by CDFW. If western spadefoot is found in habitat that will be eliminated or made unsuitable for western spadefoot, a plan to collect and relocate adult and larval western spadefoot and egg masses to suitable habitat that will be preserved in perpetuity as required according to the BO in Mitigation Measure BIO-4. 	<p>A qualified biologist shall conduct a pre-construction survey for western spadefoot (in addition to mitigation measures BIO-1, BIO-2, and if habitat for western spadefoot located, BIO-4) before construction commences.</p> <p>Timing: Prior to construction.</p> <p>Frequency: Ongoing during construction.</p>	<p>Initials</p> <hr/> <p>Date</p>	<p>Initials</p> <hr/> <p>Date</p>	<p>with CDFW prior to initiation of construction activities may be required.</p>	
<p>Blainville's Horned Lizard. Blainville's horned lizards have potential to occur within the Study Area. Implementation of Mitigation Measures BIO-1, BIO-2, and the following mitigation measure would avoid and/or minimize potential adverse effects to Blainville's horned lizard:</p> <ul style="list-style-type: none"> A qualified biologist shall conduct a preconstruction Blainville's horned lizard survey in Project impact areas within 48 hours prior to construction activities. Any Blainville's horned lizard individuals discovered in the Project work area immediately prior to or during Project activities shall be allowed to move out of the work area of their own volition. If this is not feasible, consult with CDFW to develop avoidance and minimization measures, which may include, but not limited to, fencing avoidance areas, 	<p>Activity: A qualified biologist shall conduct a pre-construction survey within 48 hours prior to grading and construction.</p> <p>Timing: Prior to construction.</p> <p>Frequency: Ongoing during construction.</p>

development of a relocation plan, and/or onsite monitoring during site construction.					
<p>BIO-7: Special-Status Species – Birds. Three special-status birds and various other protected birds have the potential to nest within the Study Area. The following mitigation is required to minimize potential impacts to nesting birds:</p> <ul style="list-style-type: none"> If construction is to occur during the nesting season (generally February 1 through August 31), conduct a preconstruction nesting bird survey of all suitable nesting habitat on the Project within 14 days of the commencement of construction. The survey shall be conducted within a 500-foot radius of Project work areas for raptors and within a 100-foot radius for other nesting birds. If any active nests are observed, these nests shall be designated a sensitive area and protected by an avoidance buffer established in coordination with CDFW until the breeding season has ended or until a qualified biologist has determined that the young have fledged and are no longer reliant upon the nest or parental care for survival. Preconstruction nesting surveys are not required for construction activity outside the nesting season. 	<p>Activity: A qualified biologist shall conduct a preconstruction nesting bird survey of all suitable nesting habitat on the Project Site within 14 days of the commencement of construction.</p> <p>Timing: Prior to construction (if construction occurring during nesting season).</p> <p>Frequency: Ongoing during construction.</p>				
<p>BIO-8: Swainson’s Hawk and Tricolored Blackbird. The Study Area supports potential foraging habitat for two state-listed birds: Swainson’s hawk and tricolored blackbird. The following mitigation is recommended to minimize potential impacts to foraging habitat:</p> <ul style="list-style-type: none"> Mitigate for the loss of Swainson’s hawk according to the 1994 CDFG’s Staff Report Regarding Mitigation for Impacts to Swainson’s Hawks (Buteo 	<p>Activity: A qualified biologist shall conduct a preconstruction Swainson’s Hawk and Tricolored Blackbird survey of all suitable nesting habitat on the Project Site prior to the</p>

swainsoni) in the Central Valley of California. The required measures to address Swainson’s hawk foraging habitat impact and mitigation measure BIO-9 will be sufficient to mitigate impacts to tricolored blackbird foraging habitat.	<p>commencement of construction.</p> <p>Timing: Prior to construction</p> <p>Frequency: Ongoing during construction.</p>				
<p>BIO-9: Sensitive Natural Communities. The Project site supports potential Waters of the U.S. and State. In addition to Mitigation Measures BIO-1 and BIO-2, the following mitigation measures are required for the protection of aquatic resources:</p> <ul style="list-style-type: none"> • Submit an aquatic resources delineation for the Project to the USACE and obtain a verification or Preliminary Jurisdictional Determination. • File a request for authorization to fill Waters of the U.S. under the Section 404 of the federal CWA (Section 404 Permit) prior to discharging any dredged or fill materials into any Waters of the U.S. Mitigation measures will be developed as part of the Section 404 Permit process to ensure no net loss of wetland function and values. To facilitate such authorization, an application for a Section 404 Nationwide Permit (0.5 acre or less of impacts for Nationwide Permit 29-Residential Developments) or an Individual Permit for the Project should be prepared and submitted to USACE. Mitigation for impacts to Waters of the U.S. typically consists of a minimum of a 1:1 ratio for direct impacts; however final mitigation requirements will be developed in consultation with USACE. 	<p>Activity: A qualified biologist shall conduct a preconstruction aquatic resources delineation.</p> <p>Timing: Prior to construction.</p> <p>Frequency: Ongoing during construction.</p>

<p>PUB-1: Annexation into CFD 2006-01 and CFD 2006-02. Prior to recordation of the Final Map, the Project shall annex into both CFD 2006-01 and CFD 2006-02.</p>	<p>Activity: Annexation of the Project.</p> <p>Timing: Prior to approval of Final Map.</p> <p>Frequency: Single occurrence.</p>				
Transportation					
<p>TR-1: Provide Pedestrian Network Improvements. Providing a pedestrian access network to link areas of the Project site encourages people to walk instead of drive. This mode shift results in people driving less and thus a reduction in VMT.</p>	<p>Activity: Provide a pedestrian access network linking areas of the Project site to encourage walking.</p>				

MITIGATIONS	MONITORING AND REPORTING PROGRAM				
	Documentation of Compliance [Project Applicant/Proponent Responsibility]		Documentation of Compliance [Lead Agency Responsibility]		
	Monitoring Activity/Timing/ Frequency/ Schedule	Implementation Responsibility/ Verification	Responsibility for Oversight of Compliance/ Verification	Outside Agency Coordination	Comments
<p>The Project will provide a pedestrian access network that internally links all uses and connects to all existing or planned external streets and pedestrian facilities contiguous with the project site. The Project will minimize barriers to pedestrian access and interconnectivity. Physical barriers such as walls, landscaping, and slopes that impede pedestrian circulation will be eliminated. Some aspects of this measure are already included in the Proposed Project. Increasing the use of pedestrian improvements would further reduce Project-related VMT. The range of effectiveness of this measure as described by BCAG is from 0.5 percent to 5.7 percent.</p>	<p>Timing: Prior to approval of Project.</p> <p>Frequency: Single occurrence.</p>				
<p>TR-2: Provide Traffic Calming Measures. Providing traffic calming measures encourages people to walk or use bicycles instead of using a vehicle. This mode shift will result in a decrease in VMT. Project design will include pedestrian/bicycle safety and traffic calming measures in excess of jurisdiction requirements. Roadways will be designed to reduce motor vehicle speeds and encourage pedestrian and bicycle trips with traffic calming features. Traffic calming features may include: marked crosswalks, curb extensions, speed tables, raised crosswalks, raised intersections, median islands, tight corner radii, roundabouts or mini-circles, on-street parking, planter strips with street trees, chicanes/chokers, and others. Some aspects of this measure are already included in the Proposed Project. Increasing the use of traffic calming measures would further reduce Project-related VMT. The range of effectiveness of this measure as described by BCAG is from 0 to 1.7 percent.</p>	<p>Activity: Provide traffic calming measures to encourage walking and bicycling to reduce VMT.</p> <p>Timing: Prior to approval of Project.</p> <p>Frequency: Single occurrence.</p>				

MITIGATIONS	MONITORING AND REPORTING PROGRAM				
	Documentation of Compliance [Project Applicant/Proponent Responsibility]		Documentation of Compliance [Lead Agency Responsibility]		
	Monitoring Activity/Timing/ Frequency/ Schedule	Implementation Responsibility/ Verification	Responsibility for Oversight of Compliance/ Verification	Outside Agency Coordination	Comments
<p>TR-3: Contribute to a 20th Street Bicycle Facility. Providing bicycle facilities reduces VMT by encouraging use of non-vehicular forms of transportation. Connecting to existing bicycle facilities would provide access to Project site residents to a larger network of facilities. The Project applicant shall contribute a fair share portion of the cost toward construction of the bikeway. Because the Bicycle Transportation Plan does not specify whether the 20th Street bikeway would be a Class I or Class II facility, it is not known whether the bikeway would be on 20th Street or separate from the roadway. For the same reason, it is not known what the cost of the bikeway would be. As such, the Project’s fair share portion shall be negotiated between the applicant and the City of Oroville.</p>	<p>Activity: Provide traffic calming measures to encourage walking and bicycling to reduce VMT.</p> <p>Timing: Prior to approval of Project.</p> <p>Frequency: Single occurrence.</p>

**CITY OF OROVILLE
ORDINANCE NO. XXXX**

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF OROVILLE APPROVING ZONING CHANGE ZC 23-01 TO REZONE ONE PARCEL OF APPROXIMATELY 45 ACRES OF LAND (APN 030-230-098) FROM AIRPORT BUSINESS PARK (APB) TO SINGLE FAMILY RESIDENTIAL (R-1) ONCE TENTATIVE MAP TSM 22-01 FOR THE PROPOSED FEATHER RANCH SUBDIVISION IS APPROVED.

WHEREAS, the City of Oroville has determined that this parcel is currently zoned ABP in the 2015 adopted General Plan; and

WHEREAS, the city has determined that the parcels can be converted to residential purposes; and 1600

WHEREAS, there is an existing adjacent subdivision with very similar features; and

WHEREAS, the city is keenly interested in developing market rate housing to help meet its RHNA (Regional Housing Needs Allocation), which the city sorely needs; and

WHEREAS, MD3 Investments has proposed a 172-unit market rate subdivision with lots averaging 7,450 square feet in size at this location; and

WHEREAS, the City has initiated general plan amendment GPA 23-01 and Zone Change ZC 23-01 to allow this developer to create the proposed housing; and

WHEREAS, at a duly noticed public hearing, the City Council considered the comments and concerns of public agencies, property owners, and members of the public who are potentially affected by the changes described herein, and also considered the City's staff report regarding the change.

The Council of the City of Oroville do ordain as follows:

Section 1. Pursuant to section 17.08.040 of the Code of the City of Oroville, approximately 45 acres of land (APN 030-230-098) is hereby rezoned to Single Family Residential (R-1), subject to the City Council's approval of Tentative Subdivision Map TAM 22-01.

Section 2. This ordinance shall become effective on October 30, 2023, or 30 days after the second reading is approved, whichever comes later.

Section 3. The City Clerk shall attest to the adoption of this ordinance.

PASSED AND ADOPTED by the City Council of the City of Oroville at a regular meeting held on _____, by the following vote:

AYES:

NOES:

ABSENT:

ABSTAIN:

Mayor, David Pittmen

APPROVED AS TO FORM: ATTEST:

City Attorney, Scott E Huber

City Clerk, Jackie Glover

RESOLUTION NO. 9151

A RESOLUTION OF THE OROVILLE CITY COUNCIL MAKING CERTAIN FINDINGS, REQUIRING CERTAIN MITIGATION MEASURES, AND ADOPTING A STATEMENT OF OVERRIDING CONSIDERATIONS FOR THOSE SIGNIFICANT AND UNAVOIDABLE IMPACTS IDENTIFIED IN THE FEATHER RANCH ENVIRONMENTAL IMPACT REPORT.

WHEREAS, an application was filed by MD3 Investments for Tentative Subdivision Map TSM 22-01 to subdivide 45-acre APN 030-230-098 now zoned Airport Business Park –Airport Influence Overlay (ABP--AIO) into 172 single family housing lots zoned Single Family Residential (R1); and

WHEREAS, the property is designated APB- AIO (Airport Influence Overlay) by the Oroville General Plan and Zoning Code, which limits development to a maximum density of 0.1 and 0.2 dwelling units per acre; and

WHEREAS, the proposed project has a density of 3.8 dwelling units per acre, which exceeds the limits in the Butte County Airport Land Use Plan (ALUCP) and Oroville Municipal Code 17.44.050; and

WHEREAS, an initial study was prepared, which identified several potentially significant effects, which triggered an Environmental Impact Report (EIR); and

WHEREAS, while the Environmental Impact Report concluded that most effects were less than significant or less than significant with mitigation, the document nevertheless identified three significant and unavoidable effects; and

WHEREAS, the city circulated the Draft EIR to the public and affected agencies for the requisite 45-day comment period, three comments were received, and a Final Environmental Impact Report (FEIR) was duly prepared; and

WHEREAS, approval of the Tentative Subdivision Map first requires certification of a Final Environmental Impact Report for the project with Findings, a Statement of Overriding Considerations, General Plan Amendment GPA 23-01, Zoning Change ZC 23-01, Zoning Variance VAR 23-01, and an override by the Oroville City Council of the ALUC's inconsistency determination; and

WHEREAS, at a duly noticed public hearing, the City Council considered the comments and concerns of public agencies, property owners, and members of the public who are potentially affected by the approval of Tentative Subdivision Map TSM 22-01 described herein, and also considered the Planning Commission's recommendations and the City's staff report regarding the change.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL as follows:

1. The City Council hereby Adopts the attached Environmental findings, mitigation measures, and Statement of Overriding Considerations:

PASSED AND ADOPTED by the City Council of the City of Oroville at a regular meeting on July 18, 2023, by the following vote:

AYES:

NOES:

ABSTAIN:

**CEQA FINDINGS
PROPOSED PROJECT
FEATHER RANCH SUBDIVISION, TO CREATE 172 SINGLE FAMILY HOMES ON
APN 030-230-098 INCLUDING MITIGATION MEASURES AND A STATEMENT OF
OVERRIDING CONSIDERATIONS**

The City of Oroville (City), serving as the lead agency under the California Environmental Quality Act (CEQA), has prepared a project EIR (EIR) for the proposed Feather Ranch Subdivision, which is provided as part of the project documentation. The Tentative Subdivision Map would create 172 new market-rate housing units. MD3 Investments has applied to convert 45 acres currently zoned Airport Business Park— Airport Influence Overlay (ABP--AIO) into 172 single family lots Zoned Single-family residential (R-1) and averaging 7,450 square feet in size.

Approval requires a General Plan Amendment, a Zoning Change, a Zoning Code Variance, and an override of the Butte Airport Lan Use Commission's (ALUC's) inconsistency determination. Due to the significant and unavoidable environmental effects identified in the Project EIR, CEQA requires the City Council to approve a Statement of Overriding Considerations if it ultimately approves the project.

1. **Findings with regard to effects not found to be significant.** The EIR discussed several environmental effects that were determined to result in less than significant impacts, and certain other effects that result in less than significant effects after implementation of mitigation measures. Those specific effects are described in Section ES.4 of the FEIR, with the final Summary of Impacts and Mitigation Measures located in the FEIR and the Mitigation Monitoring and Reporting Program (MMRP).
2. **Findings with regard to effects found to be significant and unavoidable.**

Section 15126.2(c) of the State CEQA Guidelines require that an EIR describe any significant impacts, including those that can be mitigated but not reduced to a less than significant level. Where there are impacts that cannot be alleviated without imposing an alternative design, their implications, and the reasons why the project is being proposed, notwithstanding their effect, should also be described.

A significant and unavoidable impact is one that would cause a substantial adverse effect on the environment and for which no mitigation is available to reduce the impact to a less than significant level. Most of the impacts of the Proposed Project would be less than significant or would be mitigated to a less than significant level. The impacts summarized below are those that would remain significant and unavoidable after mitigation.

- a. **Impacts HAZ-1 and HAZ-2:** The Project would result in a significant and unavoidable safety hazard impact and a cumulatively considerable and significant and unavoidable safety hazard impact for people residing or working in the Project Area because the Project is located within the Airport's B1 and B2 Compatibility

Zones. The only mitigation possible would be to: 1) eliminate the use of the airport; 2) move the Project to a location outside of the B1 and B2 Compatibility Zones; or 3) reduce the project's density. None of these mitigations are feasible. As such, there is no feasible mitigation possible to mitigate the potential airport safety impacts.

Finding. The city finds that there are no feasible mitigation measures that the city could adopt at this time that would reduce the impacts to less than significant. To the extent that this adverse impact will not be substantially lessened or eliminated, the City finds that specific economic, social, and other benefits identified in the Statement of Overriding Considerations support the approval of the proposed project.

Facts and Reasoning that support the finding:

The property falls within the Airport Land Use Compatibility Plan (ALUCP) compatibility zone B1 and B2, adopted by the ALUC on November 15, 2017. The purpose of this plan is to promote compatibility with the airport and surrounding land uses. Compatibility zone B1 is generally set to encompass the airport's projected 55 decibel (dB) Community Noise Equivalent Level (CNEL). Compatibility zone B2 encompasses the close-in, low altitude portions of traffic patterns. Much of the neighboring Calle Vista Estates subdivision also falls within these same compatibility zone classifications.

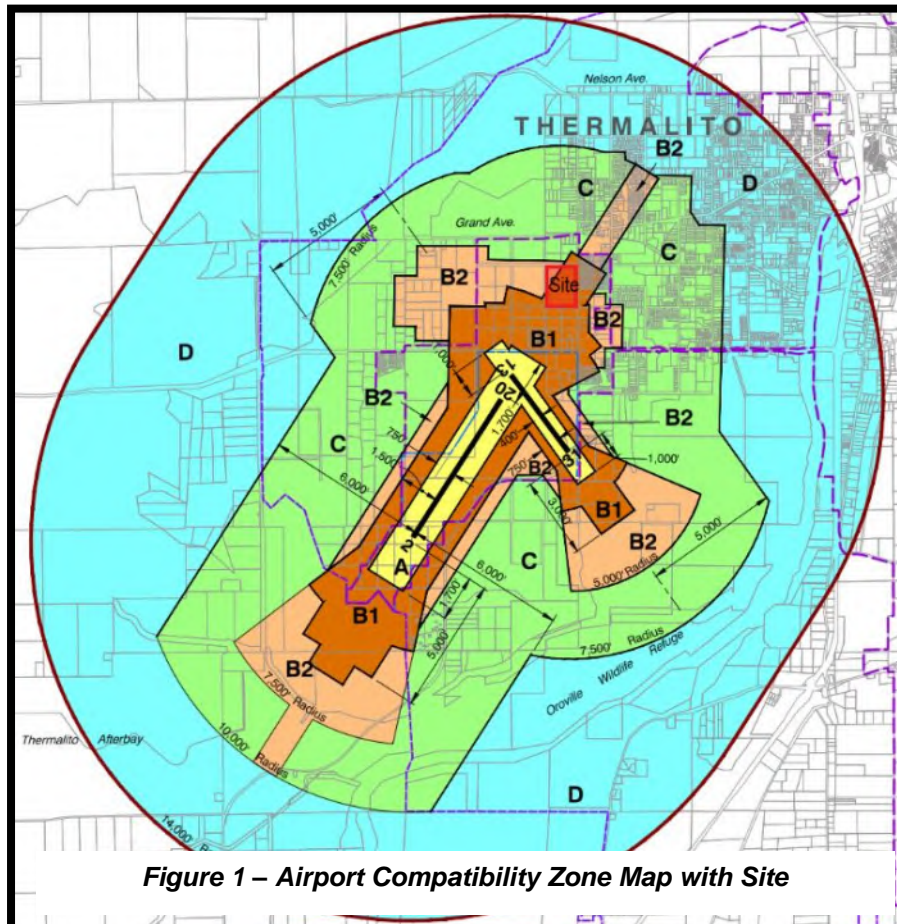

Figure 1 – Airport Compatibility Zone Map with Site

As required by the ALUCP and Section 21676(b) of the Public Utilities Code the project applicant submitted the project to the ALUC for a consistency determination with the ALUCP. The ALUC conducted a hearing on the matter on September 21, 2022, and voted 7-0 -1¹ to find the project inconsistent with the ALUCP based on the project density.

Pursuant to Public Utilities Code Section 21676, the City Council may choose to override the ALUC's determination of inconsistency by following a two-step process. The first step is to conduct a public hearing to adopt a resolution of intent to override, a copy of which would be sent to the ALUC and State Division of Aeronautics to provide formal notification of the City's intent.

The second step in the process is that at least 45-days after notification has been sent to the ALUC and State Division of Aeronautics, the City Council may conduct a second public hearing to consider adopting a resolution to override the ALUC. At this second public hearing the City Council may also consider the project entitlement and take final action on the application.

The following points are important to consider:

- The override must be adopted by two-thirds (2/3) of the City Council.
- Specific findings supported by substantial evidence must be adopted finding that the proposed project will not:
 - Impair the orderly, planned expansion of the airport.
 - Adversely affect the utility or capacity of the airport (such as by reducing instrument approach procedure minimums); or
 - Expose the public to excessive noise and safety hazards.

Public Utilities Code Section 21678 and the ALUCP statutes states that if the city overrules the ALUC, the operator of the airport shall be immune from liability for damages to property or personal injury caused by or resulting directly or indirectly from the City's decision to overrule the ALUC's compatibility determination or recommendation.

Airport Land use Compatibility Plan Density

Compatibility zone B1 has a maximum density of 0.1 dwelling units per acre and compatibility zone B2 has maximum density of 0.2 dwelling units per acre. The General Plan Amendment to MLDR (Medium Low Density Residential) has an allowable density range of 3 to 6 units per acre and the project is proposing 172 parcels on approximately 45 acres for a project density of 3.82 units per acre. The ALUCP Section 3.4.5 establishes criteria for determining the density of sites split by two or more compatibility zones. The

¹ The vote was unanimous with one Commissioner recused himself since he lives very near the project area.

portions of the property that fall within compatibility zone B1 are considered to be a separate site from the portions of the property within compatibility zone B2.

According to the ALUC staff report, approximately 35.82 acres and a proposed 134 dwelling units fall within compatibility zone B1, for a density of 3.74 units per acre. Approximately 9.15 acres and a proposed 38 dwelling units fall within compatibility zone B2, for a density of 4.15 units per acre. The ALUC consistency review listed five inconsistency findings for the project:

1. The MLDR General Plan Land Use Designation of up to 6 dwelling units (lots) per acre is inconsistent with the B1 maximum density of 0.1 dwelling units per acre and B2 maximum density of 0.2 dwelling units per acre.
2. The R-1 zoning allows up to 6 dwelling units (lots) per acre is inconsistent with the B1 maximum density of 0.1 dwelling units per acre and B2 maximum density of 0.2 dwelling units per acre.
3. The project's proposed density of 3.74 dwelling units per acre is inconsistent with the B1 Compatibility Zone density (0.1 or more dwelling units per acre).
4. The project's proposed density of 4.15 dwelling units per acre is inconsistent with the B2 Compatibility Zone density (0.2 dwelling units per acre).
5. Most of the parcel (approximately 80%) is in the B1 Compatibility Zone. The B2 Compatibility Zone portion does not have 65% of the project site within B2 Compatibility Zone with equal to, or greater than, the proposed project. The project does not meet the criteria for infill.

The City's 2030 General Plan Safety Element Goal SAF-5, Policy P5.2 states "*Protect the Overflight Zone by limiting residential densities to a maximum of six units per gross acre, with proposals consisting of four units per gross acre or more subject to Airport Land Use Commission (ALUC) review. Schools and other uses resulting in "large concentrations" of people shall be prohibited.*" The development proposal complies with the goals and policies of the General Plan for residential densities.

The project site is adjacent to an existing residential development to the east (Calle Vista Estates), which has a General Plan Land Use Designation of MLDR and zoning designation of R-1, identical to what is being proposed for this subdivision. In addition, the Calle Vista subdivision also falls within compatibility zones B1 and B2 and is located within the extended runway centerline zone. The ALUCP states that 30% of the land within the B1 compatibility zone, and 20% of the land within the B2 compatibility zone, should remain as open land. Approximately 240 acres of open undeveloped space is provided in the B1 compatibility zone north of the airport along runways 2-20 and 13-31. The project site has 35.82 acres within compatibility zone B1 that is proposed for development. Not counting the open space, parkland, and roads proposed for development within the subdivision, approximately 78% of the overall B1 zone would remain as undeveloped open space. Much of that land area is closest to the runways along SR 162.

Approximately 433 acres of land fall within the B2 compatibility zone north of the airport along runways 2-20 and 13-31. The project site has 9.15 acres within compatibility zone B2 that is proposed for development. Not counting open space, parkland, and roads proposed for development within the subdivision, approximately 70% of the overall B2 zone would remain as undeveloped open space.

Since the neighboring Calle Vista Estates subdivision was approved in 2005/2006, the ALUC adopted a new ALUCP in 2017 which significantly increased the footprint of the B1 and B2 compatibility zones to now include the Calle Vista Subdivision. However, no corresponding increases to airport operations have occurred and air traffic is still below projected figures.

Aircraft Operations² at the Airport:

The City's Airport Master Plan prepared in 1990 showed about 55,000 annual aircraft operations in 1988 and projected a steady increase in operations from 61,050 in 1989 to 72,200 in 2010. Many of the historic aircraft operations were a result of the Louisiana Pacific Company Fleet, which is no longer operating in Oroville. As such, an increase in operations has not occurred as projected, and recent data in fact shows significantly fewer actual operations. In January 2016, the airport reported approximately 36,500 annual operations, a decrease from historic levels. According to AirNav, aircraft operations averaged 99/day for a 12-month period ending November 30, 2021. This is the same as reported in 2016³.

Oroville Airport is fortunate to have very recent 2022 Annual flight data, collected by sensors/cameras at the airport. This information does not include all flights, only those who activate their transponders. However, a 2019 study estimated that 44 percent of pilots nationwide do not yet have the mandatory transponders installed in their planes⁴.

The following table uses the 2022 data to estimate the number of aircraft likely to fly over the new subdivision and/or the existing Calle Vista subdivision.

² An operation is either a takeoff or landing. For instance, if a pilot performs a "touch and go", that counts as two operations.

³ AirNav uses data provided by airports, which in Oroville had not been updated since 2016. Since there is an expense involved in gathering actual flight data, it is common for small general aviation airports to have older data which tends to over-report actual operations.

⁴ <https://generalaviationnews.com/2019/09/19/only-44-of-ga-aircraft-equipped-with-ads-b/>

OROVILLE AIRPORT OPERATIONS IN 2022						
Date range	1-1-22 thru 12-30/22					
Number of operations counted in	cy 2022	4,665	transponder flights

	31 going south @ 3540'	629	13.5%		385	244
	subtotal	3,041	65.2%			
	unspecified	1,624	34.8%		563	1,061
		4,665	100%		49%	51%
	add 44% non-transponder flights	2,053	single engine, older planes, pioneers			
	Estimated Total operations per year	6,718	estimated annual operations at KOVE			
	Max annual flights northbound over Feather Ranch	614				
	Estimated flights straight out max flights per day over subdivisions	307	50% or less arrivals and departures			
		2				

It should be noted that during emergency conditions, such as fires, evacuations, and other crises, airport operations increase significantly for selected periods of time. This was true during the fires in 2018 and after when the airport was actively used as a helicopter staging area for emergency operations.

Flight pattern on Runway 2-20: As the above data show, most flights to and from Runway 2-20 occur to the South, with only 7%, or no more than ~614 per year on Runway 2. Only some of these are straight out departures or straight in approaches over the proposed Feather Ranch Subdivision and the existing Calle Vista Subdivision. At a Cessna 172’s climb rate of 721 feet per minute, any departing small single engine plane under average temperature and wind conditions would be about 400 feet above ground by the time it reached the first house⁵. Furthermore, any pilot who encounters engine trouble or other adverse conditions should have ample time to veer leftward to avoid flying over either subdivision.

The Airport Master Plan also identified improvements – since completed -- to extend the south end of runway 2-20 to allow southerly departures to “be over City-owned property or the publicly owned Afterbay property, with aircraft approaching from the north higher

⁵ <https://aviation.stackexchange.com/questions/43394/is-it-possible-to-calculate-the-distance-to-climb-to-1000-ft-in-cessna-172s>

above private property north of State Route 162,” which will minimize constraints to development of the land to the north.

Prevailing winds are from the SSE, which is another reason most flights land and take off southward, into the wind.⁶

Aircraft Accident Occurrence:

The Caltrans Airport Land Use Planning Handbook, which was created by the State of California, Department of Transportation, Division of Aeronautics to serve as the primary tool for use by ALUC's for airport and use planning indicates that accidents in which aircraft are under control are bunched relatively close to the runway ends—mostly within about 3,000 feet—both for arrivals and departures. Aircraft overflight of the site for both approaching or departing the airport will likely result from air traffic coming from Runway 2-20. The project site is located more than 4,000 feet from the nearest point of the airport runway. The areas within these 3,000 feet proximity to the north of the airport are largely undeveloped lands zoned ABP closest to SR162, and to the south of the airport is perpetual open space provided by the Thermalito Afterbay and Oroville Wildlife Refuge.

The RNAV⁷ for the airport lists a restriction not authorizing circling northeast of Runway 13-31⁸. In addition, takeoff minimums and departing procedures for the airport require air traffic to turn away from the more developed areas northeast of the airport with climbing left turns from Runways 2 and 31 and climbing right turns from Runways 13 and 20.

Aircraft Noise

While noise was not found to be inconsistent with the ALUCP, the city's General Plan, zoning code, and the ALUCP establish regulations and criteria for noise within compatibility zones that is relevant to this project. As previously mentioned, within compatibility zone B1, the airport's projected Community Noise Equivalent Level (CNEL) is 55 decibels (dBA). This CNEL system evaluates the degree to which lands around the airport are exposed to airport-related noise depicted by a set of contours. Generally, the maximum CNEL normally acceptable for residential uses in the vicinity of an airport is 60 dBA.

New structures located within compatibility zones B1 and B2 are required to incorporate sound attenuation design features sufficient to meet the interior noise level criteria of no greater than CNEL 45 dBA. As depicted in Figure 6-4 of the ALCUP, the subject property falls just outside of the 55 dBA CNEL contour based on 72,000 future annual aircraft operations. In addition, because the subject property falls within compatibility zones B1 and B2, all dwelling units constructed will be required to be designed to provide an interior ambient noise level that does not exceed 45 dBA. City Code Section 17.44.050 requires a minimum interior ambient noise level reduction of 20 dBA (ex. 65 dB exterior – 20 dB sound attenuation = 45 dB interior ambient noise level). Furthermore, OMC 17.44.050 requires a deed notice of airport proximity and the potential for aircraft overflights and noise for each property.

⁶ Oroville Airport Airport Layout Plan Sheet 3 of 9 dated April 16, 2013.

⁷ <http://www.airnav.com/airport/kove> and <https://aeronav.faa.gov/d-tpp/2305/SW2TO.PDF>

⁸ To turn right (northeast) from that runway is in direct conflict with the established traffic pattern.

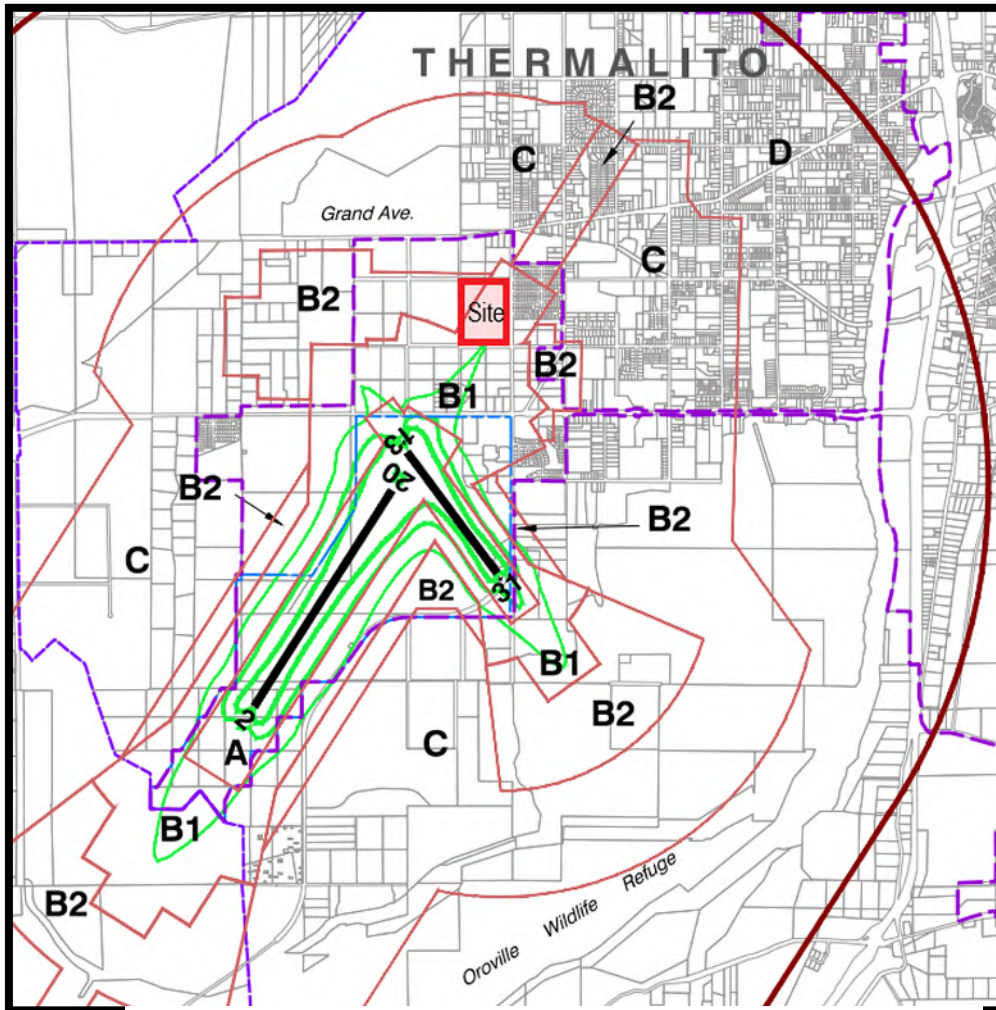

Figure 2 – Airport CNEL dB Contour Lines

ALUC Override Conclusion

The project is consistent with the ALUCP for noise and for height restrictions, but not density. Because most aircraft accidents occur on landing and takeoff and relatively few during climbing or descent⁹, and because pilots are advised in Oroville's AirNav posting to veer left away from housing north of the airport, staff do not consider the risk of aircraft accidents over either the existing or proposed subdivisions to be considerable enough to warrant denial of the project. Additionally, noise attenuation for homes to an internal noise level of 45dBa will be a project condition.

Given the analysis above, the project does not appear to impair the orderly, planned expansion of the airport, adversely affect the utility or capacity of the airport (such as by reducing instrument approach procedure minimums), or expose the public to excessive noise and safety hazards based on the aforementioned information and the proposed conditions of approval on the project.

⁹ <https://www.cliffordlaw.com/aviation-accidents-and-incidents/>

- b. **Impacts NOI-1 and NOI-4:** The Project would result in a significant and unavoidable safety hazard impact and a cumulatively considerable and significant and unavoidable traffic noise impact. The roadway segment of 20th Street between Biggs Avenue and Feather Avenue would experience an increase of more than 5.0 dBA CNEL over existing conditions, which is beyond the City of Oroville noise standard. Similarly, the segment of Feather Avenue east of 20th Street would also experience an increase of more than 5.0dBA CNEL over existing conditions. There is no feasible mitigation available to reduce these impacts to less than significant. Lead agencies have limited remedies at their disposal to effectively reduce traffic related noise. Addressing traffic noise at the receiver rather than the source usually takes the form of noise barriers (i.e., sound walls). While constructing noise barriers along streets would reduce noise, the placement of sound walls between existing residences/businesses and local roadways would not be desirable as it would conflict with the community's aesthetic, design and character and is therefore deemed infeasible. Furthermore, such barriers would likely require property owner approval, which cannot be ensured. While measures such as encouraging ridesharing, carpooling, and alternative modes of transportation could reduce vehicle volumes, such measures can neither be mandated of residents nor have been shown to reduce vehicle trips to the extent needed to reduce vehicle noise levels below established thresholds. Therefore, no feasible mitigation measures exist to reduce the identified significant impact.

Finding. The city finds that there are no feasible mitigation measures that the city could adopt at this time that would reduce the impacts to less than significant. To the extent that this adverse impact will not be substantially lessened or eliminated, the City finds that specific economic, social, and other benefits identified in the Statement of Overriding Considerations support the approval of the proposed project.

Facts and Reasoning that support the finding: The noise generated by traffic from the project's operations will increase ambient noise levels by more than 5 decibels in two segments of 20th Street and one of Feather Avenue¹⁰. This is a technical violation of Oroville's CEQA significance threshold. The ambient decibel level in these locations after the project is built will remain at or below 48 decibels. In spite of the technical threshold exceedance, these locations will continue as they are, an area of "Quiet Urban Daytime"¹¹.

- c. **Impacts TR-2 and TR-3:** The Project would also result in a significant and unavoidable impact related to VMT (Vehicle Miles Traveled). The project would be expected to generate VMT at 140 to 145 percent of the baseline City of

¹⁰ Page 3.9-21 of the DEIR

¹¹ Page 3.9-2 of the DEIR.

Oroville average. Mitigating VMT to a level which would be less than 85 percent of the baseline level would require a reduction of approximately 40 percent from pre-mitigation levels ($1 - [0.85 \div 1.45] = 0.414$). While the mitigation measures available to Oroville would reduce the impact of the Project on VMT, implementation of measures needed to achieve a 40 percent reduction is not considered feasible. As a result, even with implementation of mitigation measures TR-1 through TR-4, the impact of the Feather Ranch Project on VMT is considered to be significant and unavoidable.

Finding. The City finds that there are no feasible mitigation measures that the City could adopt at this time that would reduce the impacts to less than significant. To the extent that this adverse impact will not be substantially lessened or eliminated, the City finds that specific economic, social, and other benefits identified in the Statement of Overriding Considerations support the approval of the proposed project.

Facts and Reasoning that support the finding: The project would generate 120 trips distributed among 20th, 18th, Feather, and Biggs during the A.M. peak hour, and 162 trips during the P.M. peak hour. This equates 26.7 home-based trips per resident, or 140 percent of the current Oroville baseline average of 19.1 trips per resident. Since this trip generation exceeds the state mandated CEQA significance threshold of 85% of baseline (or 16.2 trips per resident), the impact is significant by definition.

Meeting the CEQA threshold is potentially possible in an urban setting with plenty of transit, bicycle, and walking options available as project mitigation. However, Oroville is in a rural setting. Neither the project proponent nor the city can reasonably mitigate this impact with enough transit, bike, and walking paths in this rural location. This is confirmed by the Butte County Association of Governments' April 2021 study entitled "BCAG SB 743 Implementation—Mitigation Strategies—Assessing Feasibility".

OVERRIDING CONSIDERATIONS

Pursuant to Section 21081 of the California Public Resources Code and Section 15093 of the CEQA Guidelines, the City of Oroville adopts and makes the following statement of overriding considerations regarding the remaining significant unavoidable impacts of the project, as discussed above, and the anticipated economic, social, and other benefits of the project.

The City of Oroville finds and determines that (1) the majority of the significant impacts of the project will be reduced to acceptable levels by implementation of the mitigation measures recommended in these findings; (2) The City of Oroville's approval of the project as proposed will result in certain significant adverse environmental effects that cannot be avoided or reduced to a less-than-significant level even with the incorporation of all feasible mitigation measures into the project; and (3) there are no other feasible mitigation measures or feasible project alternatives that will further mitigate, avoid, or reduce to a less-than-significant level the remaining significant environmental effects.

In light of the environmental, social, economic, and other considerations identified in the findings for the project, and the considerations set forth below related to this project, City of Oroville chooses to approve the project because, in its view, the economic, social, technological, and other benefits resulting from the project substantially outweigh the project's significant and unavoidable adverse environmental effects.

The following statements identify the reasons why, in City of Oroville's judgment, the benefits of the project outweigh the significant and unavoidable effects. The substantial evidence supporting the enumerated benefits of the project can be found in the preceding findings, which are herein incorporated by reference; in the project itself; and in the record of proceedings as defined above. Each of the overriding considerations set forth below constitutes a separate and independent ground for finding that the benefits of the project outweigh its significant adverse environmental effects and is an overriding consideration warranting approval.

The City of Oroville finds that the project, as conditionally approved, will have the following economic, social, technological, and environmental benefits:

- The project would provide 172 market-rate housing units to serve the needs of households seeking housing that is of significantly limited availability in this medium low density housing category. The Oroville Housing Element, certified in April 2023, indicates the need for 450 housing units to serve moderate and above-moderate income levels. This project will provide a significant portion of that need.
- The Project will create short-term construction jobs that would provide income to local residents. The additional 400 permanent residents generated by the project will

spur an increase in demand for goods and services in the surrounding area, thereby expanding the local revenue base, and expanding the local labor force.

- The Project will result in additional paving of a number of designated city streets in the vicinity, including 20th, Biggs, and Feather Avenue. In addition, 20th street at SR 162 will be improved with a right turn lane, improving traffic circulation in the area.
- The Project would adopt energy conservation strategies in new development that would result in new development being more efficient than existing buildings in the region.

RESOLUTION NO. 9152

A RESOLUTION OF THE OROVILLE CITY COUNCIL TO NOTIFY THE BUTTE COUNTY AIRPORT LAND USE COMMISSION AND THE STATE DIVISION OF AERONAUTICS OF THE CITY'S INTENTION TO FIND THAT THE PROPOSED FEATHER RANCH SUBDIVISION IS CONSISTENT WITH THE PURPOSES OF THE STATE AERONAUTICS ACT AND TO OVERRULE THE BUTTE COUNTY AIRPORT LAND USE COMMISSION'S INCONSISTENCY DETERMINATION FOR OROVILLE AIRPORT.

WHEREAS, an application was filed by MD3 Investments for Tentative Subdivision Map TSM 22-01 to convert 45-acre APN 030-230-098 now zoned Airport Business Park (ABP) into 172 single family housing lots zoned Single Family Residential (R1); and

WHEREAS, the property is designated APB--AIO (Airport Business Park -- Airport Influence Overlay) by the Oroville General Plan and Zoning Code, which limits development to a maximum density of 0.1 and 0.2 dwelling units per acre; and

WHEREAS, the proposed project has a density of 3.8 dwelling units per acre, which exceeds the limits in the Butte County Airport Land Use Plan (ALUCP); and

WHEREAS, Oroville's Zoning Code Section 17.44.050 and California Public Utilities Code Section 21676(b) require the city to refer the Project to the Butte County Airport Land Use Commission (ALUC) for a determination of the project's consistency with the ALUCP; and

WHEREAS, on September 21, 2022, the Butte County Airport Land Use Commission determined that the proposed project would be inconsistent with the ALUCP on the basis of density; and

WHEREAS, the City Council may, after a public hearing, propose to override the ALUC's determination by a two-thirds vote of the City Council if it makes specific findings that the project is consistent with California Public Utilities Code Section 20167 for the purpose of protecting public health, safety, and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards within areas around public airports to the extent that these areas are not already devoted to incompatible uses; and

WHEREAS, approval of the Tentative Subdivision Map first requires certification of a Final Environmental Impact Report for the project with Findings and a Statement of Overriding Considerations, General Plan Amendment GPA 23-01, Zoning Change ZC 23-01, Zoning Variance VAR 23-01, and an override by the Oroville City Council of the ALUC's inconsistency determination; and

WHEREAS, at a duly noticed public hearing, the City Council considered the comments and concerns of public agencies, property owners, and members of the public

who are potentially affected by the approval of Tentative Subdivision Map TSM 22-01 described herein, and also considered the Planning Commission's recommendations and the City's staff report regarding the change.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL as follows:

1. The City Council:
 - a. Has conducted a two-thirds vote and has determined to Override the ALUC's September 21, 2022 inconsistency determination.
 - b. Directs staff to notify the Butte County ALUC and California Division of Aeronautics of the Council's intent to override the ALUC's inconsistency determination.
 - c. Will again consider overriding the ALUC's inconsistency determination after the required 45-day waiting period for comments from the ALUC and Division of Aeronautics, and.
 - d. May also, if the Council overrides, approve GPA 23-01, ZC 23-01, and TSM 22-01.

FINDINGS

For an override of an inconsistency determination by the ALUC, specific findings supported by substantial evidence must be adopted finding that the proposed project will not:

- Impair the orderly, planned expansion of the airport.
The new homes and their distance at over 4,000 feet from the end of Runway 2 will not impair the orderly, planned expansion of the airport, all of which will occur on airport property and South of SR 162. The ABP zoning of the lands north of SR162 and closer to the airport than this subdivision are already anticipated for future industrial development in the General Plan, and are thus assumed to also not affect any future airport expansion plans. The remaining vacant land areas will all be developed with densities consistent with the ALUCP.
- Adversely affect the utility or capacity of the airport (such as by reducing instrument approach procedure minimums) or affecting flight patterns.
Due to the distance from Runway 2, flight patterns, aircraft operational safety, or instrument approach procedures will not be significantly affected. The subdivision is at the outer edge of the left traffic pattern for planes landing or taking off, so most of the estimated 780 flights per year in that area will turn left before reaching any homes and will not likely fly over either subdivision. Planes taking off to the north are advised in AIRNAV to veer left away from existing development, which is not a difficult maneuver. In addition, any plane flying straight north will likely be at least 400 feet above ground level by the time it reaches either the existing Calle Vista or proposed Feather Ranch subdivisions.
- Expose the public to excessive noise and safety hazards.

Regarding exposing the public to excessive noise and safety hazards, first, because of the distance from Runway 2, the project is outside the airport's 55 decibel noise contour. Second, all new residential structures will be conditioned to be constructed to limit interior noise levels to a maximum of 45 decibels. Finally, all new homeowners will be required to acknowledge they are buying property within 2 miles of an airport, and to sign an avigation easement or other appropriate instrument authorizing plane flights over their properties. The safety hazard from aircraft accidents is always present but is not considered excessive due to the distance of the proposed project from the Airport property and Runway 2.

RESOLUTION NO. 9153

A RESOLUTION OF THE OROVILLE CITY COUNCIL APPROVING GENERAL PLAN AMENDMENT GPA 23-01 AND TENTATIVE SUBDIVISION MAP TSM 22-01 FOR THE PROPOSED FEATHER RANCH SUBDIVISION AND MAKING CERTAIN FINDINGS TO THAT EFFECT.

WHEREAS, the City has received an application from MD3 Investments (Subdivider) to subdivide portions of a 45-acre parcel identified as APN 030-230-098 (Property) into 172 lots for single-family homes; and

WHEREAS, the proposed map will create a 0.95-acre Lot A for purposes of passive recreation with pedestrian pathways and wetland feature conservation, and will also create a meandering bicycle/pedestrian pathway along Gentle Rain Lane; and

WHEREAS, the design of the proposed subdivision is illustrated on the tentative subdivision map received by the City on August 8, 2022, which map has been assigned the file number TSM 22-01, and a copy of which is attached to this resolution as Exhibit "A"; and

WHEREAS, the Property is designated by Oroville's General Plan Diagram as *Airport Business Park* and the Zoning Map designation of this area is similarly *Airport Business Park- Airport Influence Overlay*; and

WHEREAS, the Subdivider has also applied for a General Plan Amendment to amend the General Plan Land Use Designation from *Airport Business Park* to *Medium Low Density Residential (MLDR)* and a Zoning Change to change the zoning designation from *Airport Business Park* to *Single-Family Residential (R-1)* to allow residential development at a density not less than three and not more than six homes per acre; and

WHEREAS, the Subdivider is proposing 172 lots on 45 acres for a resulting density of 3.8 units per acre and an average lot size of 7,400 square feet; and

WHEREAS, Tentative Subdivision Map TSM 22-01 has been reviewed by the City Engineer, who has provided a set of conditions to meet prior to final map approval; and

WHEREAS, the City Council may, after a public hearing, proposed to override the ALUC's determination by a two-thirds vote of the City Council if it makes specific findings that the project is consistent with California Public Utilities Code Section 20167 for the purpose of protecting public health, safety, and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards within areas around public airports to the extent that these areas are not already devoted to incompatible uses; and

WHEREAS, approval of the Tentative Subdivision Map first requires certification of a Final Environmental Impact Report for the project with Findings and a Statement of Overriding Considerations, General Plan Amendment GPA 23-01, Zoning Change ZC 23-01, Zoning Variance VAR 23-01, and an override by the Oroville City Council of the ALUC's inconsistency determination; and

WHEREAS, at a duly noticed public hearing, the City Council has considered the comments and concerns of public agencies, property owners, and members of the public who are potentially affected by the approval of Tentative Subdivision Map TSM 22-01 described herein, and also considered the Planning Commission's recommendations and the City's staff report regarding the change.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL as follows:

1. The City Council hereby approves General Plan Amendment GPA 23-01 and Tentative Parcel Map TSM 22-01, subject to a final two-thirds vote to override the ALUC's inconsistency determination.

FINDINGS

Required Findings for the Tentative Subdivision Map:

Pursuant to OMC Section 16.12.020(D), the City Engineer has reviewed TSM 22-01 and has deemed the map complete. The required Engineer's Report is attached.

Per OMC Section 16.12.020(F), the Planning Commission shall disapprove a tentative map if it determines that any of the following conditions apply:

1. The proposed subdivision is inconsistent with the general plan or applicable specific plans.

Assuming GPA 23-01 and ZC 23-01 are approved by the City Council, the subdivision will be consistent with the General Plan. There are no applicable specific plans encompassing this parcel.

2. The site is not physically suitable for the proposed density or type of development, or for the physical infrastructure required to support that development.

The site is immediately adjacent to a similar single-family residential development. The current land use designation and zoning of ABP anticipates higher intensity and density for manufacturing, processing, office, or other industrial uses. Infrastructure is available and adequately serving the similar residential development nearby and this project will be required to expand and/or improve the existing infrastructure to adequately serve the project.

3. The design of the land division or the proposed improvements are likely to cause substantial environmental damage or substantially and avoidably injure fish or wildlife or their habitat.

Pursuant to CEQA, an EIR was prepared for the project. The EIR confirms that there are three significant and unavoidable effects, including inconsistency with the Butte County Airport Land Use Compatibility Plan, added traffic noise, and greenhouse gas effects from vehicle miles traveled. These impacts primarily relate to the human environment and not the natural environment. None of the project's other effects will cause environmental damage to fish or wildlife or their habitat, being either not significant or mitigated to insignificance.

4. The design of the subdivision or the type of improvement is likely to cause serious public health problems.

The subdivision was designed in accordance with Oroville Municipal Code requirements and consultation of the Oroville Design Guidelines for site design to preserve view sheds and natural features, provide development with outdoor activity options, and connectivity to surrounding neighborhoods. The design of the subdivision is similar to neighboring development that has not been shown to cause public health problems. The three significant impacts in the EIR are not likely to cause serious public health problems. The development in the Airport overflight zone is about 4,000 feet from Runway 2 and the development would be less dense than is allowed under the current zoning. The traffic noise impact is technically significant and still generally in the "quiet urban daytime" range below 65 dBA. The State-mandated VMT impacts are not mitigatable in this rural environment, but denying the project on urban VMT greenhouse gas emissions thresholds is not reasonable. The project-generated emissions would not be concentrated enough to cause serious public health problems.

5. A preliminary soils report or geological hazard report indicates adverse soil or geological conditions, and the subdivider has failed to demonstrate to the satisfaction of the city engineer and planning commission that the conditions can be corrected.

The site has been shown to be safe to develop in the site's soil types, and the City Engineer is satisfied with the findings of said report.

6. The design of the subdivision or the type of improvements will conflict with easements, acquired by the public at large, for access through or use of property within the proposed subdivision. However, the planning commission may approve an application if it finds that alternate easements for access or for use will be provided and that these will be substantially equivalent to ones previously acquired by the public. This subsection shall apply only to easements of record or to easements established by judgment of a court of competent jurisdiction.

There are no conflicting public easements. The subdivision will create new public and utility easements and improve to city standards three existing roadways (20th Street, Feather Ave and Biggs Ave) along the length of the project site.

7. The proposed subdivision violates the provisions of this Chapter and no exception has been granted.

The Engineer's Report confirms that the proposed subdivision does not violate the provisions of this chapter and no exception has been granted.

- 8. The proposed subdivision violates any provision of the zoning code and no variance has been granted.

Should the City Council approve GPA 23-01 and ZC 23-01 and the Planning Commission approve proposed variance VAR 23-01, the proposed subdivision will not violate any provisions of Oroville Municipal Code 17.44.050 for density and open land requirements.

- 9. The proposed subdivision would violate any other city ordinance or any city code provision.

The proposed subdivision will not violate any other city ordinance or city code provision. Should the City Council adopt the override of the ALUCP determination and the variance, the proposed subdivision will comply with all applicable regulations and codes.

- 10. The discharge of waste from the proposed subdivision into a community sewer system would result in violation of existing requirements prescribed by a California Regional Water Quality Control Board pursuant to Division 7 (commencing with Section 13000 of the Water Code).

The Thermalito Sewer and Water (TWSD) Agency, which serves water and collects sewer discharges, is not operating under any corrective action or compliance orders.

**CITY OF OROVILLE
ORDINANCE NO. 1873**

AN ORDINANCE OF THE CITY COUNCIL OF THE CITY OF OROVILLE APPROVING ZONING CHANGE ZC 23-01 TO REZONE ONE PARCEL OF APPROXIMATELY 45 ACRES OF LAND (APN 030-230-098) FROM AIRPORT BUSINESS PARK- AIRPORT INFLUENCE OVERLAY (APB- AIO) TO SINGLE FAMILY RESIDENTIAL (R-1) ONCE TENTATIVE MAP TSM 22-01 FOR THE PROPOSED FEATHER RANCH SUBDIVISION IS APPROVED.

WHEREAS, the City of Oroville has determined that parcel APN 030-230-098 is currently zoned ABP-AIO in the 2015 adopted General Plan; and

WHEREAS, the city has determined that the parcels can be converted to residential purposes; and

WHEREAS, there is an existing adjacent subdivision called Calle Vista with very similar features; and

WHEREAS, the city is keenly interested in developing market rate housing to help meet its RHNA (Regional Housing Needs Allocation), which the city sorely needs; and

WHEREAS, MD3 Investments has proposed a 172-unit market rate subdivision with lots averaging 7,450 square feet in size at this location; and

WHEREAS, the applicant has also proposed general plan amendment GPA 23-01, Zone Change ZC 23-01, an override of the Airport Land Use Commission’s determination of inconsistency with the Butte County Airport Land Use Compatibility Plan, and Variance VAR 23-01, which are prerequisites to approving Tentative Subdivision Map TSM 22-01 to allow this developer to create the proposed housing; and

WHEREAS, at a duly noticed public hearing, the City Council considered the comments and concerns of public agencies, property owners, and members of the public who are potentially affected by the changes described herein, and also considered the Planning Commission’s recommendations and the City’s staff report regarding the change.

The Council of the City of Oroville do ordain as follows:

Section 1. Pursuant to section 17.08.040 of the Code of the City of Oroville, approximately 45 acres of land (APN 030-230-098) is hereby rezoned to Single Family Residential (R-1), subject to the City Council’s approval of Tentative Subdivision Map TSM 22-01.

Section 2. This ordinance shall become effective on October 30, 2023, or 30 days after the second reading is approved, whichever comes later.

Section 3. The City Clerk shall attest to the adoption of this ordinance.

RESOLUTION NO. 9185

A RESOLUTION OF THE OROVILLE CITY COUNCIL TO FIND THAT THE PROPOSED FEATHER RANCH SUBDIVISION IS CONSISTENT WITH THE PURPOSES OF THE STATE AERONAUTICS ACT AND TO OVERRULE THE BUTTE COUNTY AIRPORT LAND USE COMMISSION'S INCONSISTENCY DETERMINATION FOR OROVILLE AIRPORT.

WHEREAS, an application was filed by MD3 Investments for Tentative Subdivision Map TSM 22-01 to convert 45-acre APN 030-230-098 now zoned Airport Business Park (ABP) into 172 single family housing lots zoned Single Family Residential (R1); and

WHEREAS, the property is designated APB--AIO (Airport Business Park -- Airport Influence Overlay) by the Oroville General Plan and Zoning Code, which limits development to a maximum density of 0.1 and 0.2 dwelling units per acre; and

WHEREAS, the proposed project has a density of 3.74 dwelling units per acre, which exceeds the limits in the Butte County Airport Land Use Plan (ALUCP); and

WHEREAS, Oroville's Zoning Code Section 17.44.050 and California Public Utilities Code Section 21676(b) require the city to refer the Project to the Butte County Airport Land Use Commission (ALUC) for a determination of the project's consistency with the ALUCP; and

WHEREAS, on September 21, 2022, the Butte County Airport Land Use Commission determined that the proposed project would be inconsistent with the ALUCP on the basis of density; and

WHEREAS, on July 18, 2023, the City Council voted 7-0 to notify the Butte County Airport Land Use Commission and Caltrans Aeronautics Division of the Council's intent to overrule the inconsistency determination; and

WHEREAS, the City Council may, after a public hearing, overrule the ALUC's determination by a two-thirds vote of the City Council if it makes specific findings that the project is consistent with California Public Utilities Code Section 20167 for the purpose of protecting public health, safety, and welfare by ensuring the orderly expansion of airports and the adoption of land use measures that minimize the public's exposure to excessive noise and safety hazards within areas around public airports to the extent that these areas are not already devoted to incompatible uses; and

WHEREAS, on July 18, 2023, subject to approving the overrule, the Council also certified the Final Environmental Impact Report for the project with Findings and a Statement of Overriding Considerations, approved General Plan Amendment GPA 23-01 and Zoning Change ZC 23-01 and Tentative Subdivision Map TSM 22-01, and the Planning Commission also approved Zoning Variance VAR 23-01; and

WHEREAS, at a duly noticed public hearing, the City Council considered the comments and concerns of public agencies, property owners, and members of the public who are potentially affected by the approval of Tentative Subdivision Map TSM 22-01 described herein, and also considered the Planning Commission's recommendations and the City's staff report regarding the change.

NOW, THEREFORE, BE IT RESOLVED BY THE CITY COUNCIL as follows:

1. The City Council:
 - a. Has by a two-thirds vote determined to overrule the ALUC's September 21, 2022, inconsistency determination with the findings below:
 - b. Also confirms approval of the other actions it has taken related to this project.

FINDINGS

For an overrule of an inconsistency determination by the ALUC, specific findings supported by substantial evidence must be adopted finding that the proposed project will not:

- Impair the orderly, planned expansion of the airport.
The new homes and their distance at over 4,000 feet from the end of Runway 2 will not impair the orderly, planned expansion of the airport, all of which will occur on airport property and South of SR 162. The ABP zoning of the lands north of SR162 and closer to the airport than this subdivision are already anticipated for future industrial development in the General Plan, and are thus assumed to also not affect any future airport expansion plans. The remaining vacant land areas will all be developed with densities consistent with the ALUCP.
- Adversely affect the utility or capacity of the airport (such as by reducing instrument approach procedure minimums) or affecting flight patterns.
Due to the distance from Runway 2, flight patterns, aircraft operational safety, or instrument approach procedures will not be significantly affected. The subdivision is at the outer edge of the left traffic pattern for planes landing or taking off, so most of the estimated 780 flights per year in that area will turn left before reaching any homes and will not likely fly over either subdivision. Planes taking off to the north are advised in AIRNAV to veer left away from existing development, which is not a difficult maneuver. In addition, any plane flying straight north will likely be at least 400 feet above ground level by the time it reaches either the existing Calle Vista or proposed Feather Ranch subdivisions.
- Expose the public to excessive noise and safety hazards.
Regarding exposing the public to excessive noise and safety hazards, first, because of the distance from Runway 2, the project is outside the airport's 55 decibel noise contour. Second, all new residential structures will be conditioned to be constructed to limit interior noise levels to a maximum of 45 decibels. Finally, all new homeowners will be required to acknowledge they are buying

property within 2 miles of an airport, and to sign an avigation easement or other appropriate instrument authorizing plane flights over their properties. The safety hazard from aircraft accidents is always present but is not considered excessive due to the distance of the proposed project from the Airport property and Runway 2.

9/7/23

Oroville City Council, Staff, and, any and all Interested Parties,

RE: North Star rebranding issue

Having developed a skeptical distrust about the value of out of town consultants after years of close observation, I am sharing a list of questionable decisions that fueled my distrust and distaste. The first four (costing us \$185,000) could have been easily prepared by staff members, council members, high-schoolers, maybe even grammar schoolers

First, \$14,000- Bryce Group... contracted to list 10 cities of similar economic demographics for comparison. Only two, Marysville and Red Bluff were similar. Others had two and three times the median household income and average home costs. Not a very good comparison.

Second, \$39,000- SCI ...contracted to promote legalization of marijuana. The report covered general information, states and dates where marijuana (medical and/or recreational) became legal, five categories of the marijuana business, and other cities SCI consults with. Over priced.

Third, \$40,000- William Berry...contracted to persuade voters to approve sales tax Measure U. He suggested to make a single change to the failed Measure R from two years earlier. Eliminate the six year sunset clause in order to make the tax increase permanent. I bet he laughed all the way home to Sacramento after cashing the check.

Fourth, \$92,000- ACE...contracted to put some lines on a map to encircle Oroville's museums with a panhandle that included the State Theater. This created borders for a district to be dedicated to "Arts, Culture, and Entertainment." I have no idea what purpose is served.

Fifth, (not the most expensive, however, definitely, in my opinion, the most outrageous) \$25,000 CAL FIRE/ OFD cost comparison, insisted on by councilor David Pittman. The reason he insisted on a consultant was not to gain information. It was because he did not have enough of his colleagues on board to win the vote. He was attempting to bolster his side of the argument. When the consultant agreed with majority of the council, rather than Pittman, he still refused to accept defeat. He fought to the bitter end, even after wasting our money by insisting on a consultant he refused to listen to.

I have no opposition to councilors using their own money to secure advice from consultants. I hope everyone understands my objection to using the people's money. I complained about the first four incidents because I didn't think we got our money's worth. It should be easy to understand why some would think the fifth example might qualify as an abuse of power.
